Letter to the Editor of the <i>Pall Mall Gazette</i>	206
--	-----

PREFACE.

THE following letters were written to Mr. Thomas Dixon, a working cork-cutter of Sunderland, during the agitation for reform in the spring of the present year. They contain, in the plainest terms I could use, the substance of what I then desired to say to our English workmen, which was briefly this:—"The reform you desire may give you more influence in Parliament; but your influence there will of course be useless to you,—perhaps worse than useless,—until you have wisely made up your minds as to what you wish Parliament to do for you; and when you *have* made up your minds about that, you will find, not only that you can do it for yourselves, without the intervention of Parliament; but that eventually nobody *but* yourselves can do it. And to help you, as far as one of your old friends may, in so making up your minds, such and such things are what it seems to me you should ask for, and, moreover, strive for, with your heart and might."

The letters now published relate only to one division of the laws which I desired to recommend to the consideration of our operatives,—those, namely, bearing upon honesty of work, and honesty of exchange. I hope in the course of next year that I may be able to complete

the second part of the series, which will relate to the possible comforts and wholesome laws of familiar household life, and the share which a labouring nation may attain in the skill, and the treasures, of the higher arts.

The letters are republished as they were written, with here and there correction of a phrase, and omission of one or two passages of merely personal or temporary interest; the headings only are added, in order to give the reader some clue to the general aim of necessarily desultory discussion; and the portions of Mr. Dixon's letters in reply, referred to in the text, are added in the Appendix; and will be found well deserving of attention.

DENMARK HILL, *December 14, 1867.*

TIME AND TIDE,
BY WEARE AND TYNE.

Letter 1.

The two kinds of Co-operation.—In its highest sense it is not yet thought of.

DENMARK HILL, February 4, 1867.

MY DEAR FRIEND—You have now everything I have yet published on political economy; but there are several points in these books of mine which I intended to add notes to, and it seems little likely I shall get that soon done. So I think the best way of making up for the want of these is to write you a few simple letters, which you can read to other people, or send to be printed, if you like, in any of your journals where you think they may be useful.

I especially want you, for one thing, to understand the sense in which the word “co-operation” is used in my books. You will find I am always pleading for it; and

yet I don't at all mean the co-operation of partnership (as opposed to the system of wages) which is now so gradually extending itself among our great firms. I am glad to see it doing so, yet not altogether glad; for none of you who are engaged in the immediate struggle between the system of co-operation and the system of mastership know how much the dispute involves; and none of us know the results to which it may finally lead. For the alternative is not, in reality, only between two modes of conducting business—it is between two different states of society. It is not the question whether an amount of wages, no greater in the end than that at present received by the men, may be paid to them in a way which shall give them share in the risks, and interest in the prosperity of the business. The question is, really, whether the profits which are at present taken, as his own right, by the person whose capital, or energy, or ingenuity, has made him head of the firm, are not in some proportion to be divided among the subordinates of it.

I do not wish, for the moment, to enter into any inquiry as to the just claims of capital, or as to the proportions in which profits ought to be, or are in actually existing firms, divided. I merely take the one assured and essential condition, that a somewhat larger income

will be in co-operative firms secured to the subordinates, by the diminution of the income of the chief. And the general tendency of such a system is to increase the facilities of advancement among the subordinates; to stimulate their ambition; to enable them to lay by, if they are provident, more ample and more early provision for declining years; and to form in the end a vast class of persons wholly different from the existing operative—members of society, possessing each a moderate competence; able to procure, therefore, not indeed many of the luxuries, but all the comforts of life; and to devote some leisure to the attainments of liberal education, and to the other objects of free life. On the other hand, by the exact sum which is divided among them, more than their present wages, the fortune of the man who, under the present system, takes all the profits of the business, will be diminished; and the acquirement of large private fortune by regular means, and all the conditions of life belonging to such fortune, will be rendered impossible in the mercantile community.

Now, the magnitude of the social change hereby involved, and the consequent differences in the moral relations between individuals, have not as yet been thought of,—much less estimated,—by any of your writers on commercial subjects; and it is because I do

not yet feel able to grapple with them that I have left untouched, in the books I send you, the question of co-operative labour. When I use the word "co-operation," it is not meant to refer to these new constitutions of firms at all. I use the word in a far wider sense, as opposed, not to masterhood, but to *competition*. I do not mean for instance, by co-operation, that all the master bakers in a town are to give a share of their profits to the men who go out with the bread; but that the masters are not to try to undersell each other, nor seek each to get the other's business, but are all to form one society, selling to the public under a common law of severe penalty for unjust dealing, and at an established price. I do not mean that all bankers' clerks should be partners in the bank; but I do mean that all bankers should be members of a great national body, answerable as a society for all deposits; and that the private business of speculating with other people's money should take another name than that of "banking." And, for final instance, I mean by "co-operation" not only fellowships between trading *firms*, but between trading *nations*; so that it shall no more be thought (as it is now, with ludicrous and vain selfishness) an advantage for one nation to undersell another, and take its occupation away from it; but that the primal and eternal law of vital com-

merce shall be of all men understood—namely, that every nation is fitted by its character, and the nature of its territories, for some particular employments or manufactures; and that it is the true interest of every other nation to encourage it in such specialty, and by no means to interfere with, but in all ways forward and protect its efforts, ceasing all rivalry with it, so soon as it is strong enough to occupy its proper place. You see, therefore, that the idea of co-operation, in the sense in which I employ it, has hardly yet entered into the minds of political inquirers; and I will not pursue it at present; but return to that system which is beginning to obtain credence and practice among us. This, however, must be in a following letter.

Letter 2.

Co-operation, as hitherto understood, is perhaps not expedient.

February 4, 1867.

LIMITING the inquiry, then, for the present, as proposed in the close of my last letter, to the form of co-operation which is now upon its trial in practice, I would beg of you to observe that the points at issue, in the comparison of this system with that of mastership, are by no means hitherto frankly stated; still less can they as yet be fairly brought to test. For all mastership is not alike in principle; there are just and unjust masterships; and while, on the one hand, there can be no question but that co-operation is better than unjust and tyrannous mastership, there is very great room for doubt whether it be better than a just and benignant mastership.

At present you—every one of you—speak, and act, as if there were only one alternative; namely, between a system in which profits shall be divided in due proportion among all; and the present one, in which the workman is paid the least wages he will take, under the pressure of

competition in the labour-market. But an intermediate method is conceivable; a method which appears to be more prudent, and in its ultimate results more just, than the co-operative one. An arrangement may be supposed, and I have good hope also may one day be effected, by which every subordinate shall be paid sufficient and regular wages, according to his rank; by which due provision shall be made out of the profits of the business for sick and superannuated workers; and by which the master, *being held responsible, as a minor king or governor, for the conduct as well as the comfort of all those under his rule*, shall, on that condition, be permitted to retain to his own use the surplus profits of the business, which the fact of his being its master may be assumed to prove that he has organized by superior intellect and energy. And I think this principle of regular wage-paying, whether it be in the abstract more just, or not, is at all events the more prudent; for this reason mainly, that in spite of all the cant which is continually talked by cruel, foolish, or designing persons about "the duty of remaining content in the position in which Providence has placed you," there is a root of the very deepest and holiest truth in the saying, which gives to it such power as it still retains, even uttered by unkind and unwise lips, and received into doubtful and embittered hearts.

If, indeed, no effort be made to discover, in the course of their early training, for what services the youths of a nation are individually qualified; nor any care taken to place those who have unquestionably proved their fitness for certain functions, in the offices they could best fulfil,—then, to call the confused wreck of social order and life brought about by malicious collision and competition an arrangement of Providence, is quite one of the most insolent and wicked ways in which it is possible to take the name of God in vain. But if, at the proper time, some earnest effort be made to place youths, according to their capacities, in the occupations for which they are fitted, I think the system of organization will be finally found the best, which gives the least encouragement to thoughts of any great future advance in social life.

The healthy sense of progress, which is necessary to the strength and happiness of men, does not consist in the anxiety of a struggle to attain higher place or rank, but in gradually perfecting the manner, and accomplishing the ends, of the life which we have chosen, or which circumstances have determined for us. Thus, I think the object of a workman's ambition should not be to become a master; but to attain daily more subtle and exemplary skill in his own craft, to save from his wages enough to enrich and complete his home gradually with more deli-

cate and substantial comforts ; and to lay by such store as shall be sufficient for the happy maintenance of his old age (rendering him independent of the help provided for the sick and indigent by the arrangement pre-supposed), and sufficient also for the starting of his children in a rank of life equal to his own. If his wages are not enough to enable him to do this, they are unjustly low ; if they are once raised to this adequate standard, I do not think that by the possible increase of his gains under contingencies of trade, or by divisions of profits with his master, he should be enticed into feverish hope of an entire change of condition ; and as an almost necessary consequence, pass his days in an anxious discontent with immediate circumstances, and a comfortless scorn of his daily life, for which no subsequent success could indemnify him. And I am the more confident in this belief, because, even supposing a gradual rise in sociable rank possible for all well-conducted persons, my experience does not lead me to think the elevation itself, when attained, would be conducive to their happiness.

The grounds of this opinion I will give you in a future letter ; in the present one, I must pass to a more important point, namely, that if this stability of condition be indeed desirable for those in whom existing circumstances might seem to justify discontent, much

more must it be good and desirable for those who already possess everything which can be conceived necessary to happiness. It is the merest insolence of selfishness to preach contentment to a labourer who gets thirty shillings a week, while we suppose an active and plotting covetousness to be meritorious in a man who has three thousand a year. In this, as in all other points of mental discipline, it is the duty of the upper classes to set an example to the lower; and to recommend and justify the restraint of the ambition of their inferiors, chiefly by severe and timely limitation of their own. And, without at present inquiring into the greater or less convenience of the possible methods of accomplishing such an object (every detail in suggestions of this kind necessarily furnishing separate matter of dispute), I will merely state my long fixed conviction, that one of the most important conditions of a healthful system of social economy, would be the restraint of the properties and incomes of the upper classes within certain fixed limits. The temptation to use every energy in the accumulation of wealth being thus removed, another, and a higher ideal of the duties of advanced life would be necessarily created in the national mind; by withdrawal of those who had attained the prescribed limits of wealth from commercial competition, earlier worldly

success, and earlier marriage, with all its beneficent moral results, would become possible to the young; while the older men of active intellect, whose sagacity is now lost or warped in the furtherance of their own meanest interests, would be induced unselfishly to occupy themselves in the superintendence of public institutions, or furtherance of public advantage.

And out of this class it would be found natural and prudent always to choose the members of the legislative body of the Commons; and to attach to the order also some peculiar honors, in the possession of which such complacency would be felt as would more than replace the unworthy satisfaction of being supposed richer than others, which to many men is the principal charm of their wealth. And although no law of this purport would ever be imposed on themselves by the actual upper classes, there is no hindrance to its being gradually brought into force from beneath, without any violent or impatient proceedings; and this I will endeavour to show in my next letter.

Letter 3.

*Of True Legislation. That every Man may be a Law
to himself.*

February 17, 1867.

No, I have not been much worse in health; but I was asked by a friend to look over some work in which you will all be deeply interested one day, so that I could not write again till now. I was the more sorry, because there were several things I wished to note in your last letter; one especially leads me directly to what I in any case was desirous of urging upon you. You say, "In vol. 6th of *Frederick the Great* I find a great deal that I feel quite certain, if our Queen or Government could make law, thousands of our English workmen would hail with a shout of joy and gladness." I do not remember to what you especially allude, but whatever the rules you speak of may be, unless there be anything in them contrary to the rights of present English property, why should you care whether the Government makes them law or not? Can you not.

you thousands of English workmen, simply make them a law to yourselves, by practising them?

It is now some five or six years since I first had occasion to speak to the members of the London Working Men's College on the subject of Reform, and the substance of what I said to them was this: "You are all agape, my friends, for this mighty privilege of having your opinions represented in Parliament. The concession might be desirable,—at all events courteous,—if only it were quite certain you had got any opinions to represent. But have you? Are you agreed on any single thing you systematically want? Less work and more wages, of course; but how much lessening of work do you suppose is possible? Do you think the time will ever come for everybody to have *no* work and *all* wages? Or have you yet taken the trouble so much as to think out the nature of the true connection between wages and work, and to determine, even approximately, the real quantity of the one, that can, according to the laws of God and nature, be given for the other; for, rely on it, make what laws you like, that quantity only can you at last get?"

"Do you know how many mouths can be fed on an acre of land, or how fast those mouths multiply; and have you considered what is to be done finally with unfeedable mouths? 'Send them to be fed elsewhere,' do

you say? Have you, then, formed any opinion as to the time at which emigration should begin, or the countries to which it should preferably take place, or the kind of population which should be left at home? Have you planned the permanent state which you would wish England to hold, emigrating over her edges, like a full well, constantly? How full would you have her be of people, first; and of what sort of people? Do you want her to be nothing but a large workshop and forge, so that the name of 'Englishman' shall be synonymous with 'ironmonger,' all over the world; or would you like to keep some of your lords and landed gentry still, and a few green fields and trees?

"You know well enough that there is not one of these questions, I do not say which you can answer, but which you have ever *thought* of answering; and yet you want to have voices in Parliament! [Your voices are not worth a rat's squeak, either in Parliament or out of it, till you have some ideas to utter with them; and when you have the thoughts, you will not want to utter them, for you will see that your way to the fulfilling of them does not lie through speech.] You think such matters need debating about? By all means debate about them; but debate among yourselves, and with such honest helpers of your thoughts as you can find. If that way you cannot get at

the truth, do you suppose you could get at it sooner in the House of Commons, where the only aim of many of the members would be to refute every word uttered in your favor; and where the settlement of any question whatever depends merely on the perturbations of the balance of conflicting interests?"

That was, in main particulars, what I then said to the men of the Working Men's College; and in this recurrent agitation about Reform, that is what I would steadfastly say again. [Do you think it is only under the lacquered splendours of Westminster,—you working men of England,—that your affairs can be rationally talked over? You have perfect liberty and power to talk over, and establish for yourselves, whatever laws you please, so long as you do not interfere with other people's liberties or properties. Elect a parliament of your own. Choose the best men among you, the best at least you can find, by whatever system of election you think likeliest to secure such desirable result.] Invite trustworthy persons of other classes to join your council; appoint time and place for its stated sittings, and let this parliament, chosen after your own hearts, deliberate upon the possible modes of the regulation of industry, and - advisablest schemes for helpful discipline of life; and so lay before you the best laws they can devise, which such

of you as were wise might submit to, and teach their children to obey. And if any of the laws thus determined appeared to be inconsistent with the present circumstances or customs of trade, do not make a noise about them, nor try to enforce them suddenly on others, nor embroider them on flags, nor call meetings in parks about them, in spite of railings and police; but keep them in your thoughts and sight, as objects of patient purpose, and future achievement by peaceful strength.

For you need not think that even if you obtained a majority of representatives in the existing parliament, you could immediately compel any system of business, broadly contrary to that now established by custom. If you could pass laws to-morrow, wholly favourable to yourselves, as you might think, because unfavourable to your masters, and to the upper classes of society,—the only result would be, that the riches of the country would at once leave it, and you would perish in riot and famine.

Be assured that no great change for the better can ever be easily accomplished, nor quickly; nor by impulsive, ill-regulated effort, nor by bad men; nor even by good men, without much suffering. The suffering must, indeed, come, one way or another, in all greatly critical periods; the only question, for us, is whether we will reach our ends (if we ever reach them) through a chain

of involuntary miseries, many of them useless, and all ignoble; or whether we will know the worst at once, and deal with it by the wisely sharp methods of God-sped courage.]

This, I repeat to you, it is wholly in your own power to do, but it is in your power on one condition only, that of steadfast truth to yourselves, and to all men. If there is not, in the sum of it, honesty enough among you to teach you to frame, and strengthen you to obey, *just* laws of trade, there is no hope left for you. No political constitution can ennoble knaves; no privileges can assist them; no possessions enrich them. Their gains are occult curses; comfortless loss their truest blessing; failure and pain Nature's only mercy to them. Look to it, therefore, first, that you get some wholesome honesty for the foundation of all things. Without the resolution in your hearts to do good work, so long as your right hands have motion in them; and to do it whether the issue be that you die or live, no life worthy the name will ever be possible to you, while, in once forming the resolution that your work is to be well done, life is really won, here and for ever. And to make your children capable of such resolution, is the beginning of all true education, of which I have more to say in a future letter.

Letter 4.

The Expenses for Art and for War.

February 19, 1867.

IN the *Pall Mall Gazette* of yesterday, second column of second page, you will find, close to each other, two sentences which bear closely on matters in hand. The first of these is the statement, that in the debate on the grant for the Blacas collection, "Mr. Bernal Osborne got an assenting cheer, when he said that 'whenever science and art were mentioned it was a sign to look after the national pockets.'" I want you to notice this fact, *i. e.* (the debate in question being on a *total* grant of 164,000*l.* of which 48,000*l.* only were truly for art's sake, and the rest for shop's sake), in illustration of a passage in my *Sesame and Lilies*, pp. 81 and 82,* to which I shall have again to refer you, with some further comments, in the sequel of these letters. The second passage is to the effect that "The Trades' Union Bill was read a second time, after a claim from Mr. Hadfield, Mr. Osborne, and Mr. Samuelson, to admit working men into the commission; to

* Appendix 1.

which Mr. Watkins answered ‘that the working men’s friend was too conspicuous in the body;’ and Mr. Roebuck, ‘that when a butcher was tried for murder it was not necessary to have butchers on the jury.’”

Note this second passage with respect to what I said in my last letter, as to the impossibility of the laws of work being investigated in the House of Commons. What admixture of elements, think you, would avail to obtain so much as decent hearing (how should we then speak of impartial judgment?) of the cause of working men, in an assembly which permits to one of its principal members this insolent discourtesy of language, in dealing with a preliminary question of the highest importance; and permits it as so far expressive of the whole colour and tone of its own thoughts, that the sentence is quoted by one of the most temperate and accurate of our daily journals, as representing the total answer of the opposite side in the debate? No; be assured you can do nothing yet at Westminster. You must have your own parliament, and if you cannot detect enough honesty among you to constitute a justly-minded one, for the present matters must take their course, and that will be, yet awhile, to the worse.

I meant to have continued this subject, but I see two other statements in the *Pall Mall Gazette* of to-day, with:

which, and a single remark upon them, I think it will be well to close my present letter.

1. "The total sum asked for in the army estimates, published this morning, is 14,752,200*l.*, being an increase of 412,000*l.* over the previous year."

2. "Yesterday the annual account of the navy receipts and expenditure for the year ending 31st March, 1866, was issued from the Admiralty. The expenditure was 10,268,215*l.* 7*s.*"

Omitting the seven shillings, and even the odd hundred thousands of pounds, the net annual expenditure for army and navy appears to be twenty-four millions.

The "grant in science and art," two-thirds of which was not in reality for either, but for amusement and shop interests in the Paris Exhibition—the grant which the House of Commons feels to be indicative of general danger to the national pockets—is, as above stated, 164,000*l.* Now, I believe the three additional ciphers which turn thousands into millions produce on the intelligent English mind usually, the effect of—three ciphers. But calculate the proportion of these two sums, and then imagine to yourself the beautiful state of rationality of any private gentleman, who, having regretfully spent 164*l.* on pictures for his walls, paid willingly 24,000*l.* annually to the

policemen who looked after his shutters! You practical English!—will you ever unbar the shutters of your brains, and hang a picture or two in *those* state chambers?

Letter 3.

The Corruption of Modern Pleasure.—(Covent Garden Pantomime.)

February 25, 1867.

THERE is this great advantage in the writing real letters, that the direct correspondence is a sufficient reason for saying, in or out of order, everything that the chances of the day bring into one's head, in connection with the matter in hand; and as such things very usually go out of one's head again, after they get tired of their lodging, they would otherwise never get said at all. And thus to-day, quite out of order, but in very close connection with another part of our subject, I am going to tell you what I was thinking on Friday evening last, in Covent Garden Theatre, as I was looking, and not laughing, at the pantomime of *Ali Baba and the Forty Thieves*.

When you begin seriously to consider the question referred to in my second letter, of the essential, and in the outcome inviolable, connection between quantity of wages, and quantity of work, you will see that "wages" in the

full sense don't mean "pay" merely, but the reward, whatever it may be, of pleasure as well as profit, and of various other advantages, which a man is meant by Providence to get during life, for work well done. Even limiting the idea to "pay," the question is not so much what quantity of coin you get, as—what you can get for it when you have it. Whether a shilling a day be good pay or not, depends wholly on what a "shilling's worth" is; that is to say, what quantity of the things you want may be had for a shilling. And that again depends on what you *do* want; and a great deal more than that depends, besides, on "what you want." If you want only drink, and foul clothes, such and such pay may be enough for you; if you want good meat and good clothes, you must have larger wage; if clean rooms and fresh air, larger still, and so on. You say, perhaps, "every one wants better things." So far from that, a wholesome taste for cleanliness and fresh air is one of the final attainments of humanity. There are now not many European gentlemen, even in the highest classes, who have a pure and right love of fresh air. They would put the filth of tobacco even into the first breeze of a May morning.

But there are better things even than these, which one may want. Grant, that one has good food, clothes, lodg

ing, and breathing, is that all the pay one ought to have for one's work? Wholesome means of existence, and nothing more? Enough, perhaps, you think, if everybody could get these. It may be so; I will not, at this moment, dispute it; nevertheless, I will boldly say that you should sometimes want more than these; and for one of many things more, you should want occasionally to be amused!

You know the upper classes, most of them, want to be amused all day long. They think

“One moment *unamused* a misery
Not made for feeble men.”

Perhaps you have been in the habit of despising them for this; and thinking how much worthier and nobler it was to work all day, and care at night only for food and rest, than to do no useful thing all day, eat unearned food, and spend the evening as the morning, in “change of follies and relays of joy.” No, my good friend, that is one of the fatallest deceptions. It is not a noble thing, in sum and issue of it, not to care to be amused. It is indeed a far higher *moral* state, but it is a much lower *creature* state than that of the upper classes.

Yonder poor horse, calm slave in daily chains at the railroad siding, who drags the detached rear of the train

to the front again, and slips aside so deftly as the buffers meet; and, within eighteen inches of death every ten minutes, fulfils his dexterous and changeless duty all day long, content for eternal reward with his night's rest, and his champed mouthful of hay;—anything more earnestly moral and beautiful one cannot imagine—I never see the creature without a kind of worship. And yonder musician, who used the greatest power which (in the art he knew) the Father of spirits ever yet breathed into the clay of this world;—who used it, I say, to follow and fit with perfect sound the words of the *Zauberflöte* and of *Don Giovanni*—basest and most monstrous of conceivable human words and subjects of thought—for the future “amusement” of his race!—No such spectacle of unconscious (and in that unconsciousness all the more fearful) moral degradation of the highest faculty to the lowest purpose can be found in history. That Mozart is nevertheless a nobler creature than the horse at the siding; nor would it be the least nearer the purpose of his Maker that he, and all his frivolous audiences, should evade the degradation of the profitless piping, only by living, like horses, in daily physical labour for daily bread.

[There are three things to which man is born*—labour,

* I ask the reader's thoughtful attention to this paragraph, on which much of what else I have to say depends.

and sorrow, and joy. Each of these three things has its baseness and its nobleness. There is base labour, and noble labour. There is base sorrow, and noble sorrow. There is base joy, and noble joy. But you must not think to avoid the corruption of these things by doing without the things themselves.] Nor can any life be right that has not all three. Labour without joy is base. Labour without sorrow is base. Sorrow without labour is base. Joy without labour is base.

I dare say you think I am a long time in coming to the pantomime; I am not ready to come to it yet in due course, for we ought to go and see the Japanese jugglers first, in order to let me fully explain to you what I mean. But I can't write much more to-day; so I shall merely tell you what part of the play set me thinking of all this, and leave you to consider of it yourself, till I can send you another letter. The pantomime was, as I said, *Ali Baba and the Forty Thieves*. The forty thieves were girls. The forty thieves had forty companions, who were girls. The forty thieves and their forty companions were in some way mixed up with about four hundred and forty fairies, who were girls. There was an Oxford and Cambridge boat ~~race~~ in which the Oxford and Cambridge men were girls. There was a transformation scene, with a forest,

in which the flowers were girls, and a chandelier, in which the lamps were girls, and a great rainbow, which was all of girls.

Mingled incongruously with these seraphic, and, as far as my boyish experience extends, novel, elements of pantomime, there were yet some of its old and fast-expiring elements. There were, in speciality, two thoroughly good pantomime actors—Mr. W. H. Payne and Mr. Frederick Payne. All that these two did, was done admirably. There were two subordinate actors, who played subordinately well, the fore and hind legs of a donkey. And there was a little actress, of whom I have chiefly to speak, who played exquisitely the little part she had to play. The scene in which she appeared was the only one in the whole pantomime in which there was any dramatic effort, or, with a few rare exceptions, any dramatic possibility. It was the home scene, in which Ali Baba's wife, on washing day, is called upon by butcher, baker, and milkman, with unpaid bills; and in the extremity of her distress hears her husband's knock at the door, and opens it for him to drive in his donkey, laden with gold. The children, who have been beaten instead of getting breakfast, presently share in the raptures of their father and mother; and the little lady I spoke of—

eight or nine years old—dances a *pas-de-deux* with the donkey.

She did it beautifully and simply, as a child ought to dance. She was not an infant prodigy; there was no evidence, in the finish or strength of her motion, that she had been put to continual torture through half her eight or nine years. She did nothing more than any child, well taught, but painlessly, might easily do. She caricatured no older person,—attempted no curious or fantastic skill. She was dressed decently,—she moved decently,—she looked and behaved innocently,—and she danced her joyful dance with perfect grace, spirit, sweetness, and self-forgetfulness. And through all the vast theatre, full of English fathers and mothers and children, there was not one hand lifted to give her sign of praise but mine.

Presently after this, came on the forty thieves, who, as I told you, were girls; and, there being no thieving to be presently done, and time hanging heavy on their hands, arms, and legs, the forty thief-girls proceeded to light forty cigars. Whereupon the British public gave them a round of applause. Whereupon I fell a-thinking; and saw little more of the piece, except as an ugly and disturbing dream.

Letter 6.

The Corruption of Modern Pleasure.—(The Japanese Jugglers.)

February 28, 1867.

I HAVE your pleasant letter with references to Frederick. I will look at them carefully.* Mr. Carlyle himself will be pleased to hear this letter when he comes home. I heard from him last week at Mentone. He is well, and glad of the light and calm of Italy. I must get back to the evil light, and uncalm, of the places I was taking you through.

(Parenthetically, did you see the article in *The Times* of yesterday on bribery, and the conclusion of the commission—"No one sold any opinions, for no one had any opinions to sell.")

Both on Thursday and Friday last I had been tormented by many things, and wanted to disturb my course of thought any way I could. I have told you what entertainment I got on Friday, first, for it was then that I

* Appendix 2.

began meditating over these letters; let me tell you now what entertainment I found on Thursday.

You may have heard that a company of Japanese jugglers has come over to exhibit in London. There has long been an increasing interest in Japanese art, which has been very harmful to many of our own painters, and I greatly desired to see what these people were, and what they did. Well, I have seen Blondin, and various English and French circus work, but never yet anything that surprised me so much as one of these men's exercises on a suspended pole. Its special character was a close approximation to the action and power of the monkey, even to the prehensile power in the foot; so that I asked a sculptor-friend who sat in front of me, whether he thought such a grasp could be acquired by practice, or indicated difference in race. He said he thought it might be got by practice. There was also much inconceivably dexterous work in spinning of tops—making them pass in balanced motion along the edge of a sword, and along a level string, and the like;—the father performing in the presence of his two children, who encouraged him continually with short, sharp cries, like those of animals. Then there was some fairly good sleight-of-hand juggling of little interest; ending with a dance by the juggler, first as an animal, and then as a goblin. Now, there was

this great difference between the Japanese masks used in this dance and our common pantomime masks for beasts and demons,—that our English masks are only stupidly and loathsomely ugly, by exaggeration of feature, or of defect of feature. But the Japanese masks (like the frequent monsters of Japanese art) were inventively frightful, like fearful dreams; and whatever power it is that acts on human minds, enabling them to invent such, appears to me not only to deserve the term “demoniacal,” as the only word expressive of its character; but to be logically capable of no other definition.

The impression, therefore, produced upon me by the whole scene, was that of being in the presence of human creatures of a partially inferior race, but not without great human gentleness, domestic affection, and ingenious intellect; who were, nevertheless, as a nation, afflicted by an evil spirit, and driven by it to recreate themselves in achieving, or beholding the achievement, through years of patience, of a certain correspondence with the nature of the lower animals.

These, then, were the two forms of diversion or recreation of my mind possible to me, in two days when I needed such help, in this metropolis of England. I might, as a rich man, have had better music, if I had so chosen, though, even so, not rational or helpful; but a

poor man could only have these, or worse than these, if he cared for any manner of spectacle. (I am not at present, observe, speaking of pure acting, which is a study, and recreative only as a noble book is; but of means of *mere* amusement.)

Now, lastly, in illustration of the effect of these and other such "amusements," and of the desire to obtain them, on the minds of our youth, read *The Times* correspondent's letter from Paris, in the tenth page of the paper, to-day;* and that will be quite enough for you to read, for the present, I believe.

* Appendix 3.

Letter 7.

Of the various Expressions of National Festivity.

March 4, 1867.

THE subject which I want to bring before you is now branched, and, worse than branched, reticulated, in so many directions, that I hardly know which shoot of it to trace, or which knot to lay hold of first.

I had intended to return to those Japanese jugglers, after a visit to a theatre in Paris; but I had better, perhaps, at once tell you the piece of the performance which, in connection with the scene in the English pantomime, bears most on matters in hand.

It was also a dance by a little girl—though one older than Ali Baba's daughter (I suppose a girl of twelve or fourteen). A dance, so-called, which consisted only in a series of short, sharp contractions and jerks of the body and limbs, resulting in attitudes of distorted and quaint ugliness, such as might be produced in a puppet by sharp twitching of strings at its joints; these movements being made to the sound of two instruments, which between them accomplished only a quick vibratory beating and

strumming, in nearly the time of a hearth-cricket's song, but much harsher, and of course louder, and without any sweetness; only in the monotony and unintended aimless construction of it, reminding one of various other insect and reptile cries or warnings; partly of the cicala's hiss; partly of the little melancholy German frog which says "Mu, mu, mu," all summer-day long, with its nose out of the pools by Dresden and Leipsic; and partly of the deadened quivering and intense continuousness of the alarm of the rattlesnake.

While this was going on, there was a Bible text repeating itself over and over again in my head, whether I would or no:—"And Miriam the prophetess, the sister of Aaron, took a timbrel in her hand, and all the women went out after her with timbrels and with dances." To which text and some others, I shall ask your attention presently; but I must go to Paris first.

Not at once, however, to the theatre, but to a book-seller's shop, No. 4, Rue Voltaire, where, in the year 1858, was published the fifth edition of Balzac's *Contes Drôlatiques*, illustrated by 425 designs by Gustave Doré.

Both text and illustrations are as powerful as it is ever in the nature of evil things to be—(there is no *final* strength but in rightness.) Nothing more witty, nor

more inventively horrible, has yet been produced in the evil literature, or by the evil art, of man; nor can I conceive it possible to go beyond either in their specialities of corruption. The text is full of blasphemies, subtle, tremendous, hideous in shamelessness, some put into the mouths of priests; the illustrations are, in a word, one continuous revelry in the most loathsome and monstrous aspects of death and sin, enlarged into fantastic ghastliness of caricature, as if seen through the distortion and trembling of the hot smoke of the mouth of hell. Take this following for a general type of what they seek in death: one of the most laboured designs is of a man cut in two, downwards, by the sweep of a sword—one-half of him falls towards the spectator; the other half is elaborately drawn in its section—giving the profile of the divided nose and lips; cleft jaw—breast—and entrails; and this is done with farther pollution and horror of intent in the circumstances, which I do not choose to describe—still less some other of the designs which seek for fantastic extreme of sin, as this for the utmost horror of death. But of all the 425, there is not one which does not violate every instinct of decency and law of virtue or life, written in the human soul.

Now, my friend, among the many “Signs of the Times” the production of a book like this is a significant

one: but it becomes more significant still when connected with the farther fact, that M. Gnstave Doré, the designer of this series of plates, has just been received with loud acclaim by the British Evangelical Public; as the fittest and most able person whom they could at present find to illustrate, to their minds, and recommend with graciousness, of sacred art, their hitherto unadorned Bible for them.

Of which Bible and of the use we at present make of it in England, having a grave word or two to say in my next letter (preparatory to the examination of that verse which haunted me through the Japanese juggling, and of some others also), I leave you first this sign of the public esteem of it to consider at your leisure.

Letter 8.

The Four Possible Theories respecting the Authority of the Bible.

March 7, 1867.

I HAVE YOUR yesterday's letter, but must not allow myself to be diverted from the business in hand for this once, for it is the most important of which I have to write to you.

You must have seen long ago that the essential difference between the political economy I am trying to teach, and the popular science, is, that mine is based on *presumably attainable honesty* in men, and conceivable respect in them for the interests of others, while the popular science founds itself wholly on their supposed constant regard for their own, and on their honesty only so far as thereby likely to be secured.]

It becomes, therefore, for me, and for all who believe anything I say, a great primal question on what this presumably attainable honesty is to be based.

“Is it to be based on religion?” you may ask. “Are we to be honest for fear of losing heaven if we are dis-

honest, or (to put it as generously as we may) for fear of displeasing God? Or, are we to be honest on speculation, because honesty is the best policy; and to invest in virtue as in an undepreciable stock?"

And my answer is—not in any hesitating or diffident way (and you know, my friend, that whatever people may say of me, I often do speak diffidently; though when I am diffident of things, I like to avoid speaking of them, if it may be; but here I say with no shadow of doubt)—your honesty is *not* to be based either on religion or policy. Both your religion and policy must be based on *it*. Your honesty must be based, as the sun is, in vacant heaven; poised, as the lights in the firmament, which have rule over the day and over the night. } If you ask why you are to be honest—you are, in the question itself, dishonoured. “Because you are a man,” is the only answer; and therefore I said in a former letter that to make your children *capable of honesty* is the beginning of education. Make them men first, and religious men afterwards, and all will be sound; but a knave’s religion is always the rottenest thing about him. }

It is not, therefore, because I am endeavouring to lay down a foundation of religious concrete on which to build piers of policy, that you so often find me quoting Bible texts in defence of this or that principle or assertion.

But the fact that such references are an offence, as I know them to be, to many of the readers of these political essays, is one among many others, which I would desire you to reflect upon (whether you are yourself one of the offended or not), as expressive of the singular position which the mind of the British public has at present taken with respect to its worshipped Book. The positions, honestly tenable, before I use any more of its texts, I must try to define for you.

All the theories possible to theological disputants respecting the Bible are resolvable into four, and four only.

1. The first is that of the comparatively illiterate modern religious world, namely, that every word of the book known to them as “The Bible” was dictated by the Supreme Being, and is in every syllable of it His “Word.” This theory is of course tenable, though honestly, yet by no ordinarily well-educated person.

2. The second theory is, that although admitting verbal error, the substance of the whole collection of books called the Bible is absolutely true, and furnished to man by Divine inspiration of the speakers and writers of it; and that every one who honestly and prayerfully seeks for such truth in it as is necessary for salvation, will infallibly find it there.

[This theory is that held by most of our good and up-

right clergymen, and the better class of the professedly religious laity.

3. The third theory is that the group of books which we call the Bible were neither written nor collected under any Divine guidance, securing them from substantial error; and that they contain, like all other human writings, false statements mixed with true, and erring thoughts mixed with just thoughts; but that they nevertheless relate, on the whole, faithfully, the dealings of the one God with the first races of man, and His dealings with them in aftertime through Christ; that they record true miracles, and bear true witness to the resurrection of the dead, and the life of the world to come.

This is a theory held by many of the active leaders of modern thought in England.

4. The fourth, and last possible theory is that the mass of religious Scripture contains merely the best efforts which we hitherto know to have been made by any of the races of men towards the discovery of some relations with the spiritual world; that they are only trustworthy as expressions of the enthusiastic visions or beliefs of earnest men oppressed by the world's darkness, and have no more authoritative claim on our faith than the religious speculations and histories of the Egyptians, Greeks, Persians, and Indians; but are, in common with all these, to be rev-

erently studied, as containing the best wisdom which human intellect, earnestly seeking for help from God, has hitherto been able to gather between birth and death. 7

This has been, for the last half century, the theory of the leading scholars and thinkers of Europe.

There is yet indeed one farther condition of incredulity attainable, and sorrowfully attained, by many men of powerful intellect—the incredulity, namely, of inspiration in any sense, or of help given by any Divine power, to the thoughts of men. But this form of infidelity merely indicates a natural incapacity for receiving certain emotions; though many honest and good men belong to this insentient class.

The educated men, therefore, who may be seriously appealed to, in these days, on questions of moral responsibility, as modified by Scripture, are broadly divisible into three classes, severally holding the three last theories above stated.

Now, whatever power a passage from the stately authoritative portions of the Bible may have over the mind of a person holding the fourth theory, it will have a proportionately greater over that of persons holding the third or the second. I, therefore, always imagine myself speaking to the fourth class of theorists. If I can persuade or influence *them*, I am logically sure of the others

I say "logically," for in the actual fact, strange as it may seem, no persons are so little likely to submit to a passage of Scripture not to their liking, as those who are most positive on the subject of its general inspiration.

Addressing, then, this fourth class of thinkers, I would say to them, when asking them to enter on any subject of importance to national morals, or conduct, "This book, which has been the accepted guide of the moral intelligence of Europe for some 1,500 years, enforces certain simple laws of human conduct which you know have also been agreed upon in every main point by all the religious and by all the greatest profane writers, of every age and country. This book primarily forbids pride, lasciviousness, and covetousness; and you know, that all great thinkers, in every nation of mankind, have similarly forbade these mortal vices. This book enjoins truth, temperance, charity, and equity; and you know that every great Egyptian, Greek, and Indian, enjoins these also. You know besides, that through all the mysteries of human fate and history, this one great law of fate is written on the walls of cities, or in their dust,—written in letters of light and letters of blood,—that where truth, temperance, and equity have been preserved, all strength, and peace, and joy have been preserved also;—that were lying, lasciviousness, and covetousness have been practised, there has

followed an infallible, and for centuries irrecoverable, ruin. And you know, lastly, that the observance of this common law of righteousness, commending itself to all the pure instincts of men, and fruitful in their temporal good, is by the religious writers of every nation, and chiefly in this venerated Scripture of ours, connected with some distinct hope of better life, and righteousness, to come.

“Let it not then offend you if, deducing principles of action first from the laws and facts of nature, I nevertheless fortify them also by appliance of the precepts, or suggestive and probable teachings of this Book, of which the authority is over many around you, more distinctly than over you, and which, confessing to be divine, *they*, at least, can only disobey at their moral peril.”

On these grounds, and in this temper, I am in the habit of appealing to passages of Scripture in my writings on political economy; and in this temper I will ask you to consider with me some conclusions which appear to me derivable from that text about Miriam, which haunted me through the jugglery; and from certain others.

Letter 9.

The Use of Music and Dancing under the Jewish Theocracy, compared with their Use by the Modern French.

March 10, 1867.

HAVING, I hope, made you now clearly understand with what feeling I would use the authority of the book which the British public, professing to consider sacred, have lately adorned for themselves with the work of the boldest violator of the instincts of human honour and decency known yet in art-history, I will pursue by the help of that verse about Miriam, and some others, the subject which occupied my mind at both theatres, and to which, though in so apparently desultory manner, I have been nevertheless very earnestly endeavouring to lead you.

The going forth of the women of Israel after Miriam, with timbrels and with dances, was, as you doubtless remember, their expression of passionate triumph and thankfulness, after the full accomplishment of their deliv-

erance from the Egyptians. That deliverance had been by the utter death of their enemies, and accompanied by stupendous miracle; no human creatures could in an hour of triumph be surrounded by circumstances more solemn. I am not going to try to excite your feelings about them. Consider only for yourself what that seeing of the Egyptians “dead upon the sea-shore” meant to every soul that saw it. And then reflect that these intense emotions of mingled horror, triumph, and gratitude were expressed, in the visible presence of the Deity, by music and dancing. If you answer that you do not believe the Egyptians so perished, or that God ever appeared in a pillar of cloud, I reply, “Be it so—believe or disbelieve, as you choose;—This is yet assuredly the fact, that the author of the poem or fable of the Exodus supposed that under such circumstances of Divine interposition as he had invented, the triumph of the Israelitish women would have been, and ought to have been, under the direction of a prophetess, expressed by music and dancing.”

Nor was it possible that he should think otherwise, at whatever period he wrote; both music and dancing being among all great ancient nations an appointed and very principal part of the worship of the gods.

And that very theatrical entertainment at which I

sate thinking over these things for you—that pantomime, which depended throughout for its success on an appeal to the vices of the lower London populace, was in itself nothing but a corrupt remnant of the religious ceremonies which guided the most serious faiths of the Greek mind, and laid the foundation of their gravest moral and didactic—more forcibly so because at the same time dramatic—literature. Returning to the Jewish history, you find soon afterwards this enthusiastic religious dance and song employed in their more common and habitual manner, in the idolatries under Sinai; but beautifully again and tenderly, after the triumph of Jephthah, “And behold his daughter came out to meet him with timbrels and with dances.” Again, still more notably at the triumph of David with Saul, “the women came out of all the cities of Israel singing and dancing, to meet King Saul with tabrets, with joy, and with instruments of music.” And you have this joyful song and dance of the virgins of Israel not only incidentally alluded to in the most solemn passages of Hebrew religious poetry (as in Psalm lxxviii., 24, 25, and Psalm cxlix., 2, 3), but approved, and the restoration of it promised as a sign of God’s perfect blessing, most earnestly by the saddest of the Hebrew prophets, and in one of the most beautiful of all his sayings.

“The Lord hath appeared of old unto me saying, ‘Yea, I have loved thee with an everlasting love. Therefore, with loving-kindness have I drawn thee.—I will build thee, and thou shalt be built, O Virgin of Israel; thou shalt again be adorned with thy tabrets, and shalt go forth in the dances with them that make merry” (Jerem. xxxi., 3, 4; and compare v. 13). And finally, you have in two of quite the most important passages in the whole series of Scripture (one in the Old Testament, one in the New), the rejoicing in the repentance from, and remission of sins, expressed by means of music and dancing, namely, in the rapturous dancing of David before the returning ark; and in the joy of the Father’s household at the repentance of the prodigal son.

I could put all this much better and more convincingly before you, if I were able to take any pains in writing at present; but I am not, as I told you; being weary and ill; neither do I much care now to use what, in the very truth, are but tricks of literary art, in dealing with this so grave subject. You see I write you my letter straight-forward, and let you see all my scratchings out and puttings in; and if the way I say things shocks you, or any other reader of these letters, I cannot help it; this only I know, that what I tell you is true, and written more earnestly than anything I ever wrote with my best

literary care; and that you will find it useful to think upon, however it be said. Now, therefore, to draw towards our conclusion. Supposing the Bible inspired, in any of the senses above defined, you have in these passages a positively Divine authority for the use of song and dance, as a means of religious service, and expression of national thanksgiving. Supposing it not inspired, you have (taking the passages for as slightly authoritative as you choose) record in them, nevertheless, of a state of mind in a great nation producing the most beautiful religious poetry and perfect moral law hitherto known to us, yet only expressible by them, to the fulfilment of their joyful passion, by means of processional dance and choral song.

Now I want you to contrast this state of religious rapture with some of our modern phases of mind in parallel circumstances. You see that the promise of Jeremiah's, "Thou shalt go forth in the dances of them that make merry," is immediately followed by this, "Thou shalt yet *plant vines* upon the mountains of Samaria." And again, at the yearly feast to the Lord in Shiloh, the dancing of the virgins was in the midst of the vineyards (Judges xxi., 21), the feast of the vintage being in the south, as our harvest-home in the north, a peculiar occasion of joy and thanksgiving.

I happened to pass the autumn of 1863 in one of the great vine districts of Switzerland, under the slopes of the outlying branch of the Jura which limits the arable plain of the Canton Zurich, some fifteen miles north of Zurich itself. That city has always been a renowned stronghold of Swiss Protestantism, next in importance only to Geneva; and its evangelical zeal for the conversion of the Catholics of Uri, and endeavours to bring about that spiritual result by stopping the supplies of salt they needed to make their cheeses with, brought on (the Uri men reading their Matt. v. 13, in a different sense) the battle of Keppel, and the death of the reformer, Zwinglius. The town itself shows the most gratifying signs of progress in all the modern arts and sciences of life. It is nearly as black as Newcastle—has a railroad station larger than the London terminus of the Chatham and Dover—fouls the stream of the Limmat as soon as it issues from the lake, so that you might even venture to compare the formerly simple and innocent Swiss river (I remember it thirty years ago—a current of pale green crystal) with the highly educated English streams of Weare or Tyne; and, finally, has as many French prints of dissolute tendency in its principal shop windows, as if they had the privilege of opening on the Parisian Boulevards. I was

somewhat anxious to see what species of thanksgiving or exultation would be expressed, at *their* vintage, by the peasantry in the neighbourhood of this much enlightened evangelical and commercial society. It consisted in two ceremonies only. During the day, the servants of the farms where the grapes had been gathered, collected in knots about the vineyards, and slowly fired horse-pistols, from morning to evening. At night they got drunk, and staggered up and down the hill paths, uttering at short intervals yells and shrieks, differing only from the howling of wild animals by a certain intended and insolent discordance, only attainable by the malignity of debased human creatures. I must not do the injustice to the Zurich peasantry of implying that this manner of festivity is peculiar to them. A year before, in 1862, I had formed the intention of living some years in the neighbourhood of Geneva, and had established myself experimentally on the eastern slope of the Mont Salève; but I was forced to abandon my purpose at last, because I could not endure the rabid howling, on Sunday evenings, of the holiday-makers who came out from Geneva to get drunk in the mountain village. By the way, your last letter, with its extracts about our traffic in gin, is very valuable. I will come to that part of the business in a little

while. Meantime, by friend, note this, respecting what I have told you, that in the very centre of Europe, in a country which is visited for their chief pleasure by the most refined and thoughtful persons among all Christian nations—a country made by God's hand the most beautiful in the temperate regions of the earth, and inhabited by a race once capable of the sternest patriotism and simplest purity of life, your modern religion, in the very stronghold of it, has reduced the song and dance of ancient virginal thanksgiving to the howlings and staggerings of men betraying, in intoxication, a nature sunk more than half way towards the beasts; and you will begin to understand why the Bible should have been "illustrated" by Gustave Doré.

One word more is needful, though this letter is long already. The peculiar ghastliness of this Swiss mode of festivity is in its utter failure of joy; the paralysis and helplessness of a vice in which there is neither pleasure, nor art. But we are not, throughout Europe, wholly thus. There is such a thing, yet, as rapturous song and dance among us, though not indicative by any means of joy over repentant sinners. You must come back to Paris with me again. I had an evening to spare there, last summer, for investigation of theatres; and as there

was nothing at any of them that I cared much about seeing, I asked a valet-de-place at Meurice's, what people were generally going to. He said, "All the English went to see the *Lanterne Magique*." I do not care to tell you what general entertainment I received in following, for once, the lead of my countrymen; but it closed with the representation of the characteristic dancing of all ages of the world; and the dance given as characteristic of modern time was the Cancan, which you will see alluded to in the extract given in the note at page 92 of *Sesame and Lilies*. "The ball terminated with a Devilish Chain and a Cancan of Hell, at seven in the morning." It was led by four principal dancers (who have since appeared in London in the *Huguenot Captain*), and it is many years since I have seen such perfect dancing, as far as finish and accuracy of art and fulness of animal power and fire are concerned. Nothing could be better done, in its own evil way, the object of the dance throughout being to express in every gesture the wildest fury of insolence and vicious passions possible to human creatures. So that you see, though for the present we find ourselves utterly incapable of a rapture of gladness or thanksgiving, the dance which is presented as characteristic of modern civilization is still rapturous enough—but it is with rapture of blasphemy. Now, just read from the 17th to the 20th page of the pre

face to Sesame and Lilies, and I will try to bring all these broken threads into some warp and woof, in my next two letters—if I cannot in one.

Letter 10.

The Meaning, and Actual Operation, of Satanic or Demoniacal Influence.

March 16, 1867.

I AM afraid my weaving, after all, will be but rough work—and many ends of threads ill-knotted—but you will see there's a pattern at last, meant by them all.

You may gather from the facts given you in my last letter, that as the expression of true and holy gladness was in old time stately offered up by men for a part of worship to God their Father—so the expression of false and unholy gladness is in modern times, with as much distinctness and plainness, asserted by them openly to be offered to another spirit: “Chain of the Devil, and Cancan of Hell” being the names assigned to these modern forms of joyous procession.

Now, you know that among the best and wisest of our present religious teachers, there is a gradual tendency to disbelieve, and to preach their disbelief, in the commonly received ideas of the Devil, and of his place, and his work. While, among some of our equally well-meaning, but far

less wise, religious teachers, there is, in consequence, a panic spreading, in anticipation of the moral dangers which must follow on the loss of the help of the Devil. One of the last appearances in public of the author of the *Christian Year* was at a conclave of clergymen assembled in defence of faith in damnation. The sense of the meeting generally was, that there *must* be such a place as hell, because no one would ever behave decently upon earth unless they were kept in wholesome fear of the fires beneath it: and Mr. Keble especially insisting on this view, related a story of an old woman, who had a wicked son, and who having lately heard with horror of the teaching of Mr. Maurice and others, exclaimed pathetically, “My son is bad enough as it is, and if he were not afraid of hell, what would become of him!” (I write from memory, and cannot answer for the words, but I can for their purport.)

Now, my friend, I am afraid that I must incur the charge of such presumption as may be involved in variance from *both* these systems of teaching.

[I do not merely *believe* there is such a place as hell. I *know* there is such a place; and I know also that when men have got to the point of believing virtue impossible but through dread of it, they have got *into* it.]

I mean, that according to the distinctness with which they hold such a creed, the stain of nether fire has passed

upon them. In the depth of his heart Mr. Keble could not have entertained the thought for an instant; and I believe it was only as a conspicuous sign to the religious world of the state into which they were sinking, that this creed, possible in its sincerity only to the basest of them, was nevertheless appointed to be uttered by the lips of the most tender, gracious, and beloved of their teachers.

“Virtue impossible but for fear of hell”—a lofty creed for your English youth—and a holy one! And yet, my friend, there was something of right in the terrors of this clerical conclave. For, though you should assuredly be able to hold your own in the straight ways of God, without always believing that the Devil is at your side, it is a state of mind much to be dreaded, that you should not *know* the Devil when you *see* him there. For the probability is, that when you see him, the way you are walking in is not one of God’s ways at all, but is leading you into quite other neighbourhoods than His. On His way, indeed, you may often, like Albert Durer’s Knight, see the Fiend behind you, but you will find that he drops always farther and farther behind; whereas if he jogs with you at your side, it is probably one of his own by-paths you are got on. And, in any case, it is a highly desirable matter that you should know him when you set eyes on him, which we are very far from doing in these

days, having convinced ourselves that the graminivorous form of him, with horn and tail, is extant no longer. But in fearful truth, the Presence and Power of him *is* here ; in the world, with us, and within us, mock as you may ; and the fight with him, for the time, sore, and widely unprosperous.

Do not think I am speaking metaphorically, or rhetorically, or with any other than literal and earnest meaning of words. Hear me, I pray you, therefore, for a little while, as earnestly as I speak.

Every faculty of man's soul, and every instinct of it by which he is meant to live, is exposed to its own special form of corruption : and whether within Man, or in the external world, there is a power or condition of temptation which is perpetually endeavouring to reduce every glory of his soul, and every power of his life, to such corruption as is possible to them. And the more beautiful they are, the more fearful is the death which is attached as a penalty to their degradation.

Take for instance that which, in its purity, is the source of the highest and purest mortal happiness—Love. Think of it first at its highest—as it may exist in the disciplined spirit of a perfect human creature ; as it has so existed again and again, and does always, wherever it truly exists at all, as the *purifying* passion of the soul.

I will not speak of the transcendental and imaginative intensity in which it may reign in noble hearts, as when it inspired the greatest religious poem yet given to men; but take it in its true and quiet purity in any simple lover's heart—as you have it expressed, for instance, thus, exquisitely, in the *Angel in the House*:—

“And there, with many a blissful tear,
 I vowed to love and prayed to wed
 The maiden who had grown so dear;—
 Thanked God, who had set her in my path
 And promised, as I hoped to win,
 I never would sully my faith
 By the least selfishness or sin;
 Whatever in her sight I'd seem
 I'd really be; I ne'er would blend,
 With my delight in her, a dream
 'Twould change her cheek to comprehend;
 And, if she wished it, would prefer
 Another's to my own success;
 And always seek the best for her
 With unofficial tenderness.”

Take this for the pure type of it in its simplicity; and then think of what corruption this passion is capable. I will give you a type of that also, and at your very doors. I cannot refer you to the time when the crime happened:

but it was some four or five years ago, near Newcastle, and it has remained always as a ghastly landmark in my mind, owing to the horror of the external circumstances. The body of the murdered woman was found naked, rolled into a heap of ashes, at the mouth of one of your pits.

Take those two limiting examples, of the Pure Passion, and of its corruption. Now, whatever influence it is, without or within us, which has a tendency to degrade the one towards the other, is literally and accurately "Satanic." And this treacherous or deceiving spirit is perpetually at work, so that all the worst evil among us is a betrayed or corrupted good. Take religion itself: the desire of finding out God, and placing one's self in some true son's or servant's relation to Him. The Devil, that is to say, the deceiving spirit within us, or outside of us, mixes up our own vanity with this desire; makes us think that in our love to God we have established some connection with Him which separates us from our fellow-men, and renders us superior to them. Then it takes but one wave of the Devil's hand; and we are burning them alive for taking the liberty of contradicting us.

Take the desire of teaching—the entirely unselfish and noble instinct for telling to those who are ignorant, the truth we know, and guarding them from the errors we

see them in danger of;—there is no nobler, no more constant instinct in honourable breasts; but let the Devil formalise, and mix the pride of a profession with it—get foolish people entrusted with the business of instruction, and make their giddy heads giddier by putting them up in pulpits above a submissive crowd—and you have it instantly corrupted into its own reverse; you have an alliance *against* the light, shrieking at the sun, and moon, and stars, as profane spectra:—a company of the blind, beseeching those they lead to remain blind also. “The heavens and the lights that rule them are untrue; the laws of creation are treacherous; the poles of the earth are out of poise. But *we* are true. Light is in us only. Shut your eyes close and fast, and we will lead you.”

Take the desire and faith of mutual help; the virtue of vowed brotherhood for the accomplishment of common purpose (without which nothing can be wrought by multitudinous bands of men); let the Devil put pride of caste into it, and you have a military organization applied for a thousand years to maintain that higher caste in idleness by robbing the labouring poor; let the Devil put a few small personal interests into it, and you have all faithful deliberation on national law rendered impossible in the parliaments of Europe, by the antagonism of parties.

Take the instinct for justice, and the natural sense of indignation against crime; let the Devil colour it with personal passion, and you have a mighty race of true and tender-hearted men living for centuries in such bloody feud that every note and word of their national songs is a dirge, and every rock of their hills is a grave-stone. Take the love of beauty, and power of imagination, which are the source of every true achievement in art; let the Devil touch them with sensuality, and they are stronger than the sword or the flame to blast the cities where they were born, into ruin without hope. Take the instinct of industry and ardour of commerce, which are meant to be the support and mutual maintenance of man; let the Devil touch them with avarice, and you shall see the avenues of the exchange choked with corpses that have died of famine.

Now observe—I leave you to call this deceiving spirit what you like—or to theorise about it as you like. All that I desire you to recognise is the fact of its being here, and the need of its being fought with. If you take the Bible's account of it, or Dante's, or Milton's, you will receive the image of it as a mighty spiritual creature, commanding others, and resisted by others; if you take *Æschylus's* or *Hesiod's* account of it, you will hold it for a partly elementary and unconscious adversity of fate,

and partly for a group of monstrous spiritual agencies, connected with death, and begotten out of the dust; if you take a modern rationalist's, you will accept it for a mere treachery and want of vitality in our own moral-nature exposing it to loathsomeness of moral disease, as the body is capable of mortification or leprosy. I do not care what you call it,—whose history you believe of it,—nor what you yourself can imagine about it; the origin, or nature, or name may be as you will, but the deadly reality of the thing is with us, and warring against us, and on our true war with it depends whatever life we can win. Deadly reality, I say. The puff-adder or horned asp are not more real. Unbelievable,—*those*,—unless you had seen them; no fable could have been coined out of any human brain so dreadful, within its own poor material sphere, as that blue-lipped serpent—working its way sidelong in the sand. As real, but with sting of eternal death—this worm that dies not, and fire that is not quenched, within our souls, or around them. Eternal death, I say—sure, that, whatever creed you hold;—if the old Scriptural one, Death of perpetual banishment from before God's face; if the modern rationalist one, Death eternal for *us*, instant and unredeemable ending of lives wasted in misery.

That is what this unquestionably present—this, ac-

ording to his power, *omni*-present—fiend, brings us to daily. *He* is the person to be “voted” against, my working friend; it is worth something, having a vote against *him*, if you can get it! Which you can, indeed; but not by gift from Cabinet Ministers; you must work warily with your own hands, and drop sweat of heart’s blood, before you can record that vote effectually.

Of which more in next letter.

Letter 11.

The Satanic Power is mainly Twofold; the Power of causing Falsehood and the Power of causing Pain. The Resistance is by Law of Honour and Law of Delight.

March 19, 1867.

You may perhaps have thought my last three or four letters mere rhapsodies. They are nothing of the kind; they are accurate accounts of literal facts, which we have to deal with daily. This thing, or power, opposed to God's power, and specifically called "Mammon" in the Sermon on the Mount, is in deed and in truth a continually present and active enemy, properly called "*Arch-enemy*," that is to say, "Beginning and Prince of Enemies," and daily we have to record our vote for, or against him. Of the manner of which record we were next to consider.

This enemy is always recognisable, briefly in two functions. He is pre-eminently the Lord of *Lies* and the Lord of *Pain*. Wherever lies are, he is; wherever pain is, he has been—so that of the Spirit of Wisdom

(who is called God's Helper, as Satan His Adversary) it is written, not only that by her Kings reign, and Princes decree justice, but also that her ways are ways of Pleasantness, and all her paths Peace.

Therefore, you will succeed, you working men, in recording your votes against this arch-enemy, precisely in the degree in which you can do away with falsehood and pain in your work and lives; and bring truth into the one, and pleasure into the other; all education being directed to make yourselves and your children *capable of Honesty*, and *capable of Delight*; and to rescue yourselves from iniquity and agony. And this is what I meant by saying in the preface to Unto this Last that the central requirement of education consisted in giving habits of gentleness and justice; "gentleness" (as I will show you presently) being the best single word I could have used to express the capacity for giving and receiving true pleasure; and "justice," being similarly the most comprehensive word for all kind of honest dealing.

Now, I began these letters with the purpose of explaining the nature of the requirements of justice first, and then those of gentleness, but I allowed myself to be led into that talk about the theatres, not only because the thoughts could be more easily written as they came, but also because I was able thus to illustrate for you more

directly the nature of the enemy we have to deal with. You do not perhaps know, though I say this diffidently (for I often find working men know many things which one would have thought were out of their way), that music was among the Greeks, quite the first means of education; and that it was so connected with their system of ethics and of intellectual training, that the God of Music is with them also the God of Righteousness;—the God who purges and avenges iniquity, and contends with their Satan as represented under the form of Python, “the corrupter.” And the Greeks were incontrovertibly right in this. Music is the nearest at hand, the most orderly, the most delicate, and the most perfect, of all bodily pleasures; it is also the only one which is equally helpful to all the ages of man,—helpful from the nurse’s song to her infant, to the music, unheard of others, which often, if not most frequently, haunts the deathbed of pure and innocent spirits. And the action of the deceiving or devilish power is in *nothing* shown quite so distinctly among us at this day,—not even in our commercial dishonesties, nor in our social cruelties,—as in its having been able to take away music, as an instrument of education, altogether; and to enlist it almost wholly in the service of superstition on the one hand, and of sensuality on the other.

This power of the Muses, then, and its proper influence over your workmen, I shall eventually have much to insist upon with you; and in doing so I shall take that beautiful parable of the Prodigal Son (which I have already referred to), and explain as far as I know, the significance of it, and then I will take the three means of festivity, or wholesome human joy, therein stated—fine dress, rich food, and music;—(“bring forth the fairest robe for him,”—“bring forth the fatted calf, and kill it;” “as he drew nigh, he heard music and dancing;”) and I will show you how all these three things, fine dress, rich food, and music (including ultimately all the other arts) are meant to be sources of life, and means of moral discipline, to all men; and how they have all three been made, by the Devil, the means of guilt, dissoluteness, and death. But first I must return to my original plan of these letters, and endeavour to set down for you some of the laws which in a true Working Men’s Parliament must be ordained in defence of Honesty.

Of which laws (preliminary to all others, and necessary above all others), having now somewhat got my ravelled threads together again, I will begin to talk in my next letter.

Letter 12.

The necessity of Imperative Law to the Prosperity of States.

March 19, 1867.

I HAVE your most interesting letter,* which I keep for reference, when I come to the consideration of its subject in its proper place, under the head of the abuse of Food. I do not wonder that your life should be rendered unhappy by the scenes of drunkenness which you are so often compelled to witness ; nor that this so gigantic and infectious evil should seem to you the root of the greater part of the misery of our lower orders. I do not wonder that Sir Walter Trevelyan has given his best energy to its repression ; nor even that another friend, George Cruikshank, has warped the entire current of his thoughts and life, at once to my admiration and my sorrow, from their natural field of work, that he might spend them, in struggle, for the poor lowest people whom he knows so well, with this fiend who grasps his victims by the throat first, and then by the heart. I wholly sympathise with you in indignation at the methods of tempta-

* Appendix 4.

tion employed, and at the use of the fortunes made, by the vendors of death; and whatever immediately applicable legal means there might be of restricting the causes of drunkenness, I should without hesitation desire to bring into operation. But all such appliance I consider temporary and provisionary; nor, while there is record of the miracle at Cana (not to speak of the sacrament) can I conceive it possible, without (logically) the denial of the entire truth of the New Testament, to reprobate the use of wine as a stimulus to the powers of life. Supposing we did deny the words and deeds of the Founder of Christianity, the authority of the wisest heathens, especially that of Plato in the *Laws*, is wholly against abstinence from wine; and much as I can believe, and as I have been endeavouring to make you believe also, of the subtlety of the Devil, I do not suppose the vine to have been one of his inventions. Of this, however, more in another place. By the way, was it not curious that in the *Manchester Examiner*, in which that letter of mine on the abuse of dancing appeared, there chanced to be in the next column a paragraph giving an account of a girl stabbing her betrayer in a ball room; and another paragraph describing a Parisian character, which gives exactly the extreme type I wanted, for example of the abuse of food? *

* Appendix 5.

I return, however, now to the examination of possible means for the enforcement of justice, in temper and in act, as the first of political requirements. And as, in stating my conviction of the necessity of certain stringent laws on this matter, I shall be in direct opposition to Mr Stuart Mill; and more or less in opposition to other professors of modern political economy, as well as to many honest and active promoters of the privileges of working men (as if privilege only were wanted, and never restraint!), I will give you, as briefly as I can, the grounds on which I am prepared to justify such opposition.

When the crew of a wrecked ship escape in an open boat, and the boat is crowded, the provisions scanty, and the prospect of making land distant, laws are instantly established and enforced which no one thinks of disobeying. An entire equality of claim to the provisions is acknowledged without dispute; and an equal liability to necessary labour. No man who can row is allowed to refuse his oar; no man, however much money he may have saved in his pocket, is allowed so much as half a biscuit beyond his proper ration. Any riotous person who endangered the safety of the rest would be bound, and laid in the bottom of the boat, without the smallest compunction for such violation of the principles of individual liberty; and on the other hand, any child, or woman, or

aged person, who was helpless, and exposed to greater danger and suffering by their weakness, would receive more than ordinary care and indulgence, not unaccompanied with unanimous self-sacrifice, on the part of the labouring crew.

There is never any question, under circumstances like these, of what is right and wrong, worthy and unworthy, wise or foolish. If there *be* any question, there is little hope for boat or crew. The right man is put at the helm; every available hand is set to the oars; the sick are tended, and the vicious restrained, at once, and decisively; or if not, the end is near.

Now, the circumstances of every associated group of human society, contending bravely for national honours, and felicity of life, differ only from those thus supposed, in the greater, instead of less, necessity for the establishment of restraining law. There is no point of difference in the difficulties to be met, nor in the rights reciprocally to be exercised. Vice and indolence are not less, but more, injurious in a nation than in a boat's company; the modes in which they affect the interests of worthy persons being far more complex, and more easily concealed. The right of restraint, vested in those who labour, over those who would impede their labour, is as absolute in the large as in the small society; the equal

claim to share in whatever is necessary to the common life (or commonwealth) is as indefeasible; the claim of the sick and helpless to be cared for by the strong with earnest self-sacrifice, is as pitiful and as imperative; the necessity that the governing authority should be in the hands of a true and trained pilot is as clear, and as constant. In none of these conditions is there any difference between a nation and a boat's company. The only difference is in this, that the impossibility of discerning the effects of individual error and crime, or of counteracting them by individual effort, in the affairs of a great nation, renders it tenfold more necessary than in a small society that direction by law should be sternly established. Assume that your boat's crew is disorderly and licentious, and will, by agreement, submit to no order;—the most troublesome of them will yet be easily discerned; and the chance is that the best man among them knocks him down. Common instinct of self-preservation will make the rioters put a good sailor at the helm, and impulsive pity and occasional help will be, by heart and hand, here and there given to visible distress. Not so in the ship of the realm. The most troublesome persons in *it* are usually the least recognized for such, and the most active in its management; the best men mind their own business patiently, and are never thought of; the good helms-

man never touches the tiller but in the last extremity; and the worst forms of misery are hidden, not only from every eye, but from every thought. On the deck, the aspect is of Cleopatra's galley—under hatches, there is a slave-hospital; while, finally (and this is the most fatal difference of all), even the few persons who care to interfere energetically, with purpose of doing good, can, in a large society, discern so little of the real state of evil to be dealt with, and judge so little of the best means of dealing with it, that half of their best efforts will be misdirected, and some may even do more harm than good. Whereas it is the sorrowful law of this universe that evil, even unconscious and unintended, never fails of *its* effect; and in a state where the evil and the good, under conditions of individual "liberty," are allowed to contend together, not only every *stroke* on the Devil's side tells—but every *slip* (the mistakes of wicked men being as mischievous as their successes); while on the side of right, there will be much direct and fatal defeat, and, even of its measures of victory, half will be fruitless.

It is true, of course, that, in the end of ends, nothing but the right conquers: the prevalent thorns of wrong, at last, crackle away in indiscriminate flame: and of the good seed sown, one grain in a thousand, at last, verily comes up—and somebody lives by it; but most of our

great teachers, not excepting Carlyle and Emerson themselves, are a little too encouraging in their proclamation of this comfort, not, to my mind, very sufficient, when for the present our fields are full of nothing but nettles and thistles, instead of wheat; and none of them seem to me yet to have enough insisted on the inevitable power and infectiousness of all evil, and the easy and utter extinguishableness of good. Medicine often fails of its effect—but poison never: and while, in summing the observation of past life, not unwatchfully spent, I can truly say that I have a thousand times seen patience disappointed of her hope, and wisdom of her aim, I have never yet seen folly fruitless of mischief, nor vice conclude but in calamity.

There is, however, one important condition in national economy, in which the analogy of that of a ship's company is incomplete: namely, that while labour at oar or sail is necessarily united, and can attain no independent good, or personal profit, the labour properly undertaken by the several members of a political community is necessarily, and justly, within certain limits, independent; and obtains for them independent advantage, of which, if you will glance at the last paragraph of the first essay in *Munera Pulveris*,* you will see I should be the last

* Appendix 6.

person to propose depriving them. This great difference, in final condition involves necessarily much complexity in the system and application of general laws; but it in no wise abrogates,—on the contrary, it renders yet more imperative,—the necessity for the firm ordinance of such laws, which, marking the due limits of independent agency, may enable it to exist in full energy, not only without becoming injurious, but so as more variously and perfectly to promote the entire interests of the commonwealth.

I will address myself, therefore, in my next letter, to the statement of some of these necessary laws.

Letter 13.

*The Proper Offices of the Bishop and Duke; or,
"Overseer" and "Leader."*

March 21, 1867.

I SEE, by your last letter, for which I heartily thank you, that you would not sympathise with me in my sorrow for the desertion of his own work by George Cruikshank, that he may fight in the front of the temperance ranks. But you do not know what work he has left undone, nor how much richer inheritance you might have received from his hand. It was no more *his* business to etch diagrams of drunkenness than it is mine at this moment to be writing these letters against anarchy. It is "the first mild day of March" (high time, I think, that it should be!), and by rights I ought to be out among the budding banks and hedges, outlining sprays of hawthorn, and clusters of primrose. This is *my* right work; and it is not, in the inner gist and truth of it, right nor good, for you, or for anybody else, that Cruikshank with his great gift, and I with my weak, but yet thoroughly clear and definite one, should both of us be tormented by agony of

indignation and compassion, till we are forced to give up our peace, and pleasure, and power; and rush down into the streets and lanes of the city, to do the little that is in the strength of our single hands against their uncleanness and iniquity. But, as in a sorely besieged town, every man must to the ramparts, whatsoever business he leaves, so neither he nor I have had any choice but to leave our household stuff, and go on crusade, such as we are called to; not that I mean, if Fate may be anywise resisted, to give up the strength of my life, as he has given his; for I think he was wrong in doing so; and that he should only have carried the fiery cross his appointed leagues, and then given it to another hand: and, for my own part, I mean these very letters to close my political work for many a day; and I write them, not in any hope of their being at present listened to, but to disburden my heart of the witness I have to bear, that I may be free to go back to my garden lawns, and paint birds and flowers there.

For these same statutes which we are to consider to-day, have indeed been in my mind now these fourteen years, ever since I wrote the last volume of the *Stones of Venice*, in which you will find, in the long note on Modern Education (p. 212), most of what I have been now in detail writing to you, hinted in abstract; and, at the

close of it, this sentence, of which I solemnly now avouch (in thankfulness that I was permitted to write it), every word:—"Finally, I hold it for indisputable, that the first duty of a state is to see that every child born therein shall be well housed, clothed, fed, and educated, till it attain years of discretion. But in order to the effecting this the Government must have an authority over the people of which we now do not so much as dream."

That authority I did not then endeavour to define, for I knew all such assertions would be useless, and that the necessarily resultant outcry would merely diminish my influence in other directions. But now I do not care about influence any more, it being only my concern to say truly that which I know, and, if it may be, get some quiet life, yet, among the fields in the evening shadow.

There is, I suppose, no word which men are prouder of the right to attach to their names, or more envious of others who bear it, when they themselves may not, than the word "noble." Do you know what it originally meant, and always, in the right use of it, means? It means a "known" person; one who has risen far enough above others to draw men's eyes to him, and to be known (honorably) for such and such an one. "Ignoble," on the other hand, is derived from the same root as the word "ignorance." It means an unknown, inglorious person.

And no more singular follies have been committed by weak human creatures than those which have been caused by the instinct, pure and simple, of escaping from this obscurity. Instinct, which, corrupted, will hesitate at no means, good or evil, of satisfying itself with notoriety—instinct, nevertheless, which, like all other natural ones, has a true and pure purpose, and ought always in a worthy way to be satisfied.

All men ought to be in this sense “noble;” known of each other, and desiring to be known. And the first law which a nation, desiring to conquer all the devices of the Father of Lies, should establish among its people, is that they *shall* be so known.

Will you please now read the forty-fifth and forty-sixth pages of *Sesame and Lilies*.* The reviewers in the ecclesiastical journals laughed at them, as a rhapsody, when the book came out; none having the slightest notion of what I meant (nor, indeed, do I well see how it could be otherwise!). Nevertheless, I meant precisely and literally what is there said, namely, that a bishop's duty being to watch over the *souls* of his people, and give account of every one of them, it becomes practically necessary for him first to give some account of their *bodies*. Which he was wont to do in the early days of Christi

* Appendix 7.

anity by help of a person called "deacon" or "ministering servant," whose name is still retained among preliminary ecclesiastical dignities, vainly enough! Putting, however, all question of forms and names aside, the thing actually needing to be done is this—that over every hundred (or some not much greater number) of the families composing a Christian State, there should be appointed an overseer, or bishop, to render account, to the State, of the life of every individual in those families; and to have care both of their interest and conduct to such an extent as they may be willing to admit, or as their faults may justify; so that it may be impossible for any person, however humble, to suffer from unknown want, or live in unrecognised crime;—such help and observance being rendered without officiousness either of interference or inquisition (the limits of both being determined by national law), but with the patient and gentle watchfulness which true Christian pastors now exercise over their flocks; only with a higher legal authority, presently to be defined, of interference on due occasion.

And with this farther function, that such overseers shall be not only the pastors, but the biographers, of their people; a written statement of the principal events in the life of each family being annually required to be rendered

by them to a superior State officer. These records, laid up in public offices, would soon furnish indications of the families whom it would be advantageous to the nation to advance in position, or distinguish with honour, and aid by such reward as it should be the object of every Government to distribute no less punctually, and far more frankly, than it distributes punishment (compare *Munera Pulveris*, Essay IV., in paragraph on Critic Law), while the mere fact of permanent record being kept of every event of importance, whether disgraceful or worthy of praise, in each family, would of itself be a deterrent from crime, and a stimulant to well-deserving conduct, far beyond mere punishment or reward.

Nor need you think that there would be anything in such a system un-English, or tending to espionage. No uninvited visits should ever be made in any house, unless law had been violated; nothing recorded, against its will, of any family, but what was inevitably known of its publicly visible conduct, and the results of that conduct. What else was written should be only by the desire, and from the communications, of its head. And in a little while it would come to be felt that the true history of a nation was indeed not of its wars, but of its households; and the desire of men would rather be to obtain some conspicuous place in these honourable

annuals, than to shrink behind closed shutters from public sight. Until at last, George Herbert's grand word of command would hold not only on the conscience, but the actual system and outer economy of life,

“Think the King sees thee still, for *his* King does.”

Secondly, above these bishops or pastors, who are only to be occupied in offices of familiar supervision and help, should be appointed higher officers of State, having executive authority over as large districts as might be conveniently (according to the number and circumstances of their inhabitants) committed to their care; officers, who, according to the reports of the pastors, should enforce or mitigate the operation of too rigid general law, and determine measures exceptionally necessary for public advantage. For instance, the general law being that all children of the operative classes, at a certain age, should be sent to public schools, these superior officers should have power, on the report of the pastors, to dispense with the attendance of children who had sick parents to take charge of, or whose home-life seemed to be one of better advantage for them than that of the common schools; or who for any other like cause might justifiably claim remission. And it being the general law that the entire body of the public should contribute.

to the cost, and divide the profits, of all necessary public works and undertakings, as roads, mines, harbour protections, and the like, and that nothing of this kind should be permitted to be in the hands of private speculators, it should be the duty of the district officer to collect whatever information was accessible respecting such sources of public profit; and to represent the circumstances in Parliament: and then, with parliamentary authority, but on his own sole personal responsibility, to see that such enterprises were conducted honestly, and with due energy and order.

The appointment to both these offices should be by election, and for life; by what forms of election shall be matter of inquiry, after we have determined some others of the necessary constitutional laws.

I do not doubt but that you are already beginning to think it was with good reason I held my peace these fourteen years,—and that, for any good likely to be done by speaking, I might as well have held it altogether!

It may be so: but merely to complete and explain my own work, it is necessary that I should say these things finally; and I believe that the imminent danger to which we are now in England exposed by the gradually accelerated fall of our aristocracy (wholly their own fault), and the substitution of money-power for their

martial one; and by the correspondently imminent prevalence of mob-violence here, as in America; together with the continually increasing chances of insane war, founded on popular passion, whether of pride, fear, or acquisitiveness,—all these dangers being further darkened and degraded by the monstrous forms of vice and selfishness which the appliances of recent wealth, and of vulgar mechanical art, make possible to the million,—will soon bring us into a condition in which men will be glad to listen to almost any words but those of a demagogue, and to seek any means of safety rather than those in which they have lately trusted. So, with your good leave, I will say my say to the end, mock at it who may.

P.S.—I take due note of the regulations of trade proposed in your letter just received*—all excellent. I shall come to them presently, "Cash payment" above all. You may write that on your trade-banners in letters of gold, wherever you would have them raised victoriously.

* Appendix 8.

Letter 14.

The First Group of Essential Laws.—Against Theft by False Work, and by Bankruptcy.—Necessary Publicity of Accounts.

March 26, 1867.

I FEEL much inclined to pause at this point, to answer the kind of questions and objections which I know must be rising in your mind, respecting the authority supposed to be lodged in the persons of the officers just specified. But I can neither define, nor justify to you, the powers I would desire to see given to them, till I state to you the kind of laws they would have to enforce: of which the first group should be directed to the prevention of all kinds of thieving; but chiefly of the occult and polite methods of it; and, of all occult methods, chiefly, the making and selling of bad goods. No form of theft is so criminal as this—none so deadly to the State. If you break into a man's house and steal a hundred pounds' worth of plate, he knows his loss, and there is an end (besides that you take your risk of punishment for your

gain, like a man). And if you do it bravely and openly, and habitually live by such inroad, you may retain nearly every moral and manly virtue, and become a heroic rider and reiver, and hero of song. But if you swindle me out, of twenty shillings'-worth of quality, on each of a hundred bargains, I lose my hundred pounds all the same, and I get a hundred untrustworthy articles besides, which will fail me and injure me in all manner of ways, when I least expect it; and you, having done your thieving basely, are corrupted by the guilt of it to the very heart's core.

This is the first thing, therefore, which your general laws must be set to punish, fiercely, immitigably, to the utter prevention and extinction of it, or there is no hope for you. No religion that ever was preached on this earth of God's rounding, ever proclaimed any salvation to sellers of bad goods. If the Ghost that is in you, whatever the essence of it, leaves your hand a juggler's, and your heart a cheat's, it is not a Holy Ghost, be assured of that. And for the rest, all political economy, as well as all higher virtue, depends *first on sound work*.

Let your laws then, I say, in the beginning, be set to secure this. You cannot make punishment too stern for subtle knavery. Keep no truce with this enemy, whatever pardon you extend to more generous ones. For

light weights and false measures, or for proved adulteration or dishonest manufacture of article, the penalty should be simply confiscation of goods and sending out of the country. The kind of person who desires prosperity by such practices, could not be made to "emigrate" too speedily. What to do with him in the place you appointed to be blessed by his presence, we will in time consider.

Under such penalty, however, and yet more under the pressure of such a right public opinion as could pronounce and enforce such penalty, I imagine that sham articles would become speedily as rare as sound ones are now. The chief difficulty in the matter would be to fix your standard. This would have to be done by the guild of every trade in its own manner, and within certain easily recognizable limits; and this fixing of standard would necessitate much simplicity in the forms and kinds of articles sold. You could only warrant a certain kind of glazing or painting in china, a certain quality of leather or cloth, bricks of a certain clay, loaves of a defined mixture of meal. Advisable improvements or varieties in manufacture would have to be examined and accepted by the trade guild: when so accepted, they would be announced in public reports; and all puffery and self-proclamation, on the part of tradesmen, absolutely forbidden,

as much as the making of any other kind of noise or disturbance.

But observe, this law is only to have force over tradesmen whom I suppose to have joined voluntarily in carrying out a better system of commerce. Outside of their guild, they would have to leave the rogue to puff and cheat as he chose, and the public to be gulled as they chose. All that is necessary is that the said public should clearly know the shops in which they could get warranted articles; and, as clearly, those in which they bought at their own risk.

And the above-named penalty of confiscation of goods should of course be enforced only against dishonest members of the trade guild. If people chose to buy of those who had openly refused to join an honest society, they should be permitted to do so at their pleasure and peril: and this for two reasons; the first, that it is always necessary, in enacting strict law, to leave some safety valve for outlet of irrepressible vice (nearly all the stern lawgivers of old time erred by oversight in this; so that the morbid elements of the State, which it should be allowed to get rid of in a cutaneous and openly curable manner, were thrown inwards, and corrupted its constitution, and broke all down); the second, that operations of trade and manufacture conducted under and guarded by

severe law, ought always to be subject to the stimulus of such erratic external ingenuity as cannot be tested by law, or would be hindered from its full exercise by the dread of it; not to speak of the farther need of extending all possible indulgence to foreign traders who might wish to exercise their industries here without liability to the surveillance of our trade guilds.

Farther, while for all articles warranted by the guild (as above supposed) the prices should be annually fixed for the trade throughout the kingdom; and the producing workmen's wages fixed, so as to define the master's profits within limits admitting only such variation as the nature of the given article of sale rendered inevitable;—yet, in the production of other classes of articles, whether by skill of applied handicraft, or fineness of material above the standard of the guild, attaining, necessarily, values above its assigned prices, every firm should be left free to make its own independent efforts and arrangements with its workmen, subject always to the same penalty, if it could be proved to have consistently described or offered anything to the public for what it was not: and finally, the state of the affairs of every firm should be annually reported to the guild, and its books laid open to inspection, for guidance in the regulation of prices in the subsequent year; and any firm whose liabilities exceeded its

assets by a hundred pounds should be forthwith declared bankrupt. And I will anticipate what I have to say in succeeding letters so far as to tell you that I would have this condition extend to every firm in the country, large or small, and of whatever rank in business. And thus you perceive, my friend, I shall not have to trouble you or myself much with deliberations respecting commercial "panics," nor to propose legislative cures for *them*, by any laxatives or purgatives of paper currency, or any other change of pecuniary diet.

Letter 15.

The Nature of Theft by Unjust Profits.—Crime can finally be arrested only by Education.

29th March.

THE first methods of polite robbery, by dishonest manufacture, and by debt, of which we have been hitherto speaking, are easily enough to be dealt with and ended, when once men have a mind to end them. But the third method of polite robbery, by dishonest *acquisition*, has many branches, and is involved among honest arts of acquisition, so that it is difficult to repress the one without restraining the other.

Observe, first, large fortunes cannot honestly be made by the work of *one* man's hands or head. If his work benefits multitudes, and involves position of high trust, it may be (I do not say that it *is*) expedient to reward him with great wealth or estate; but fortune of this kind is freely given in gratitude for benefit, not as repayment for labour. Also, men of peculiar genius in any art, if the public can enjoy the product of their genius, may set

it at almost any price they choose; but this, I will show you when I come to speak of art, is unlawful on their part, and ruinous to their own powers. Genius must not be sold; the sale of it involves, in a transcendental, but perfectly true sense, the guilt both of simony and prostitution. Your labour only may be sold; your soul must not.

Now, by fair pay for fair labour, according to the rank of it, a man can obtain means of comfortable, or if he needs it, refined life. But he cannot obtain large fortune. Such fortunes as are now the prizes of commerce can be made only in one of three ways:—

1. By obtaining command over the labour of multitudes of other men, and taxing it for our own profit.

2. By treasure-trove,—as of mines, useful vegetable products, and the like,—in circumstances putting them under our own exclusive control.

3. By speculation (commercial gambling).

The two first of these means of obtaining riches are, in some forms and within certain limits, lawful, and advantageous to the State. The third is entirely detrimental to it; for in all cases of profit derived from speculation, at best, what one man gains another loses; and the net result to the State is zero (pecuniarily), with the loss of the time and ingenuity spent in the transac-

tion; besides the disadvantage involved in the discouragement of the losing party, and the corrupted moral natures of both. This is the result of speculation at its best. At its worst, not only B. loses what A. gains (having taken his fair risk of such loss for his fair chance of gain), but C. and D., who never had any chance at all, are drawn in by B.'s fall, and the final result is that A. sets up his carriage on the collected sum which was once the means of living to a dozen families.

Nor is this all. For while real commerce is founded on real necessities or uses, and limited by these, speculation, of which the object is merely gain, seeks to excite imaginary necessities and popular desires, in order to gather its temporary profit from the supply of them. So that not only the persons who lend their money to it will be finally robbed, but the work done with their money will be for the most part useless, and thus the entire body of the public injured as well as the persons concerned in the transaction. Take, for instance, the architectural decorations of railways throughout the kingdom,—representing many millions of money for which no farthing of dividend can ever be forthcoming. The public will not be induced to pay the smallest fraction of higher fare to Rochester or Dover because the ironwork of the bridge which carries them over the Thames is covered with floral

cockades, and the piers of it edged with ornamental cornices. All that work is simply put there by the builders that they may put the per-centage upon it into their own pockets; and, the rest of the money being thrown into that floral form, there is an end of it, as far as the shareholders are concerned. Millions upon millions have thus been spent, within the last twenty years, on ornamental arrangements of zigzag bricks, black and blue tiles, cast-iron foliage, and the like; of which millions, as I said, not a penny can ever return into the shareholders' pockets, nor contribute to public speed or safety on the line. It is all sunk forever in ornamental architecture, and (trust me for this!) *all that architecture is bad*. As such, it had incomparably better not have been built. Its only result will be to corrupt what capacity of taste or right pleasure in such work we have yet left to us! And consider a little, what other kind of result than that might have been attained if all those millions had been spent usefully: say, in buying land for the people, or building good houses for them, or (if it had been imperatively required to be spent decoratively) in laying out gardens and parks for them,—or buying noble works of art for their permanent possession,—or, best of all, establishing frequent public schools and libraries! Count what those lost millions would have so accom-

plished for you! But you left the affair to “supply and demand,” and the British public had not brains enough to “demand” land, or lodging, or books. It “demanded” cast-iron cockades and zigzag cornices, and is “supplied” with them, to its beatitude for ever more.

Now, the theft we first spoke of, by falsity of workmanship or material, is, indeed, so far worse than these thefts by dishonest acquisition, that there is no possible excuse for it on the ground of self-deception; while many speculative thefts are committed by persons who really mean to do no harm, but think the system on the whole a fair one, and do the best they can in it for themselves. But in the real fact of the crime, when consciously committed, in the numbers reached by its injury, in the degree of suffering it causes to those whom it ruins, in the baseness of its calculated betrayal of implicit trust, in the yet more perfect vileness of the obtaining such trust by misrepresentation, only that it *may* be betrayed, and in the impossibility that the crime should be at all committed, except by persons of good position and large knowledge of the world,—what manner of theft is so wholly unpardonable, so inhuman, so contrary to every law and instinct which binds or animates society?

And then consider farther, how many of the carriages that glitter in our streets are driven, and how many of

the stately houses that gleam among our English fields are inhabited by this kind of thief!

I happened to be reading this morning (29th March) some portions of the Lent services, and I came to a pause over the familiar words, "And with Him they crucified two thieves." Have you ever considered (I speak to you now as a professing Christian), why, in the accomplishment of the "numbering among transgressors," the transgressors chosen should have been especially thieves—not murderers, nor, as far as we know, sinners by any gross violence? Do you observe how the sin of theft is again and again indicated as the chiefly antagonistic one to the law of Christ? "This he said, not that he cared for the poor, but because he was a thief, and had the bag" (of Judas). And again, though Barabbas was a leader of sedition, and a murderer besides—(that the popular election might be in all respects perfect)—yet St. John, in curt and conclusive account of him, fastens again on the theft. "Then cried they all again saying, Not this man, but Barabbas. Now Barabbas was a robber." I believe myself the reason to be that theft is indeed, in its subtle forms, the most complete and excuseless of human crimes. Sins of violence usually have passion to excuse them: they may be the madness of moments; or they may be apparently the only means of extrication from

calamity. In other cases, they are the diseased habits of lower and brutified natures. But theft involving deliberative intellect, and absence of passion, is the purest type of wilful iniquity, in persons capable of doing right. Which being so, it seems to be fast becoming the practice of modern society to crucify its Christ indeed, as willingly as ever, in the persons of His poor; but by no means now to crucify its thieves beside Him! It elevates its thieves after another fashion; sets them upon an hill, that their light may shine before men, and that all may see their good works, and glorify their Father, in—the Opposite of Heaven.

I think your trade parliament will have to put an end to this kind of business somehow! But it cannot be done by laws merely, where the interests and circumstances are so extended and complex. Nay, even as regards lower and more defined crimes, the assigned punishment is not to be thought of as a preventive means; but only as the seal of opinion set by society on the fact. Crime cannot be hindered by punishment; it will always find some shape and outlet, unpunishable or unclosed. Crime can only be truly hindered by letting no man grow up a criminal—by taking away the *will* to commit sin; not by mere punishment of its commission. Crime, small and great, can only be truly stayed

by education—not the education of the intellect only, which is, on some men, wasted, and for others mischievous; but education of the heart, which is alike good and necessary for all. So, on this matter, I will try to say one or two things of which the silence has kept my own heart heavy this many a day, in my next letter.

Letter 16.

*Of Public Education irrespective of Class-distinction.—
It consists essentially in giving Habits of Mercy, and
Habits of Truth.*

March 30, 1867.

THANK you for sending me the pamphlet containing the account of the meeting of clergy and workmen, and of the reasonings which there took place. I cannot promise you that I shall read much of them, for the question to my mind most requiring discussion and explanation is not, why workmen don't go to church, but—why other people do. However, this I know, that if, among our many spiritual teachers, there are indeed any who heartily and literally believe that the wisdom they have to teach, "is more precious than rubies, and all the things thou canst desire are not to be compared unto her," and if, so believing, they will further dare to affront their congregations by the assertion; and plainly tell them they are not to hunt for rubies or gold any more, at their peril, till they have gained that which cannot be gotten for gold, nor silver

weighed for the price thereof,—such believers, so preaching, and refusing to preach otherwise till they are in that attended to, will never want congregations, both of working men, and every other kind of men.

Did you ever hear of anything else so ill-named as the phantom called the “Philosopher’s” Stone? A talisman that shall turn base metal into precious metal, nature acknowledges not; nor would any but fools seek after it. But a talisman to turn base souls into noble souls, nature has given us! and that is a “Philosopher’s” Stone indeed, but it is a stone which the builders refuse.

If there were two valleys in California or Australia, with two different kinds of gravel in the bottom of them; and in the one stream bed you could dig up, occasionally and by good fortune, nuggets of gold; and in the other stream bed, certainly and without hazard, you could dig up little caskets, containing talismans which gave length of days and peace; and alabaster vases of precious balms, which were better than the Arabian Dervish’s ointment, and made not only the eyes to see, but the mind to know, whatever it would—I wonder in which of the stream beds there would be most diggers?

“Time is money”—so say your practised merchants

and economists. None of them, however, I fancy, as they draw towards death, find that the reverse is true and that “money is time”? Perhaps it might be better for them in the end if they did not turn so much of their time into money, as no re-transformation is possible. There are other things, however, which in the same sense are money, or can be changed into it, as well as time. Health is money, wit is money, knowledge is money; and all your health, and wit, and knowledge may be changed for gold; and the happy goal so reached, of a sick, insane, and blind, auriferous old age; but the gold cannot be changed in its turn back into health and wit.

“Time is money,” the words tingle in my ears so that I can’t go on writing. Is it nothing better, then? If we could thoroughly understand that time was—*itself*,—would it not be more to the purpose? A thing of which loss or gain was absolute loss, and perfect gain. And that it was expedient also to buy health and knowledge with money, if so purchaseable; but not to buy money with *them*?

And purchaseable they are, at the beginning of life, though not at its close. Purchaseable, always, for others, if not for ourselves. You can buy, and cheaply, life, endless life, according to your Christian’s creed—(there’s

a bargain for you!) but—long years of knowledge, and peace, and power, and happiness of love—these assuredly, and irrespectively of any creed or question—for all those desolate and haggard children about your streets.

“That is not political economy, however.” Pardon me; the all-comfortable saying, “What he layeth out, it shall be paid him again,” is quite literally true in matters of education; no money-seed can be sown with so sure and large return at harvest-time as that; only of this money-seed, more than of flesh-seed, it is utterly true, “That which thou sowest is not quickened, except it *die*.” You must forget your money, and every other material interest, and educate for education’s sake only! or the very good you try to bestow will become venomous, and that and your money will be lost together.

And this has been the real cause of failure in our efforts for education hitherto—whether from above or below. There is no honest desire for the thing itself. The cry for it among the lower orders is because they think that, when once they have got it, they must become upper orders. There is a strange notion in the mob’s mind, now-a-days (including all our popular economists and educators, as we most justly may, under that brief term, “mob”), that *everybody* can be uppermost; or at least, that a state of general scramble, in which everybody in

his turn should come to the top, is a proper Utopian constitution; and that, once give every lad a good education, and he cannot but come to ride in his carriage (the methods of supply of coachmen and footmen not being contemplated). And very sternly I say to you—and say from sure knowledge—that a man had better not know how to read or write, than receive education on such terms.

The first condition under which it can be given usefully is, that it should be clearly understood to be no means of getting on in the world, but a means of staying pleasantly in your place there. And the first elements of State education should be calculated equally for the advantage of every order of person composing the State. From the lowest to the highest class, every child born in this island should be required by law to receive these general elements of human discipline, and to be baptized—not with a drop of water on its forehead—but in the cloud and sea of heavenly wisdom and of earthly power.

And the elements of this general State education should be briefly these :

First.—The body must be made as beautiful and perfect in its youth as it can be, wholly irrespective of ulterior purpose. If you mean afterwards to set the creature to business which will degrade its body and

shorten its life, first, I should say, simply,—you had better let such business alone;—but if you must have it done, somehow, yet let the living creature whom you mean to kill, get the full strength of its body first, and taste the joy, and bear the beauty of youth. After that, poison it, if you will. Economically, the arrangement is a wiser one, for it will take longer in the killing than if you began with it younger; and you will get an excess of work out of it which will more than pay for its training.

Therefore, first teach—as I said in the preface to *Unto this Last*—“The Laws of Health, and exercises enjoined by them;” and to this end your schools must be in fresh country, and amidst fresh air, and have great extents of land attached to them in permanent estate. Riding, running, all the honest personal exercises of offence and defence, and music, should be the primal heads of this bodily education.

Next to these bodily accomplishments, the two great mental graces should be taught, Reverence and Compassion: not that these are in a literal sense to be “taught,” for they are innate in every well-born human creature, but they have to be developed, exactly as the strength of the body must be, by deliberate and constant exercise. I never understood why Goethe (in the plan of education

in *Wilhelm Meister*) says that reverence is not innate, but must be taught from without; it seems to me so fixedly a function of the human spirit, that if men can get nothing else to reverence they will worship a fool, or a stone, or a vegetable.* But to teach reverence rightly is to attach it to the right persons and things; first, by setting over your youth masters whom they cannot but love and respect; next, by gathering for them, out of past history, whatever has been most worthy, in human deeds and human passion; and leading them continually to dwell upon such instances, making this the principal element of emotional excitement to them; and, lastly, by letting them justly feel, as far as may be, the smallness of their own powers and knowledge, as compared with the attainments of others.

Compassion, on the other hand, is to be taught chiefly by making it a point of honour, collaterally with courage, and in the same rank (as indeed the complement and evidence of courage), so that, in the code of unwritten school law, it shall be held as shameful to have done a cruel thing as a cowardly one. All infliction of pain on weaker creatures is to be stigmatized as unmanly crime;

* By steadily preaching against it, one may quench reverence, and bring insolence to its height; but the instinct cannot be wholly uprooted.

and every possible opportunity taken to exercise the youths in offices of some practical help, and to acquaint them with the realities of the distress which, in the joyfulness of entering into life, it is so difficult for those who have not seen home suffering, to conceive.

Reverence, then, and compassion, we are to teach primarily, and with these, as the bond and guardian of them, truth of spirit and word, of thought and sight. Truth, earnest and passionate, sought for like a treasure and kept like a crown.

This teaching of truth as a habit will be the chief work the master has to do; and it will enter into all parts of education. First, you must accustom the children to close accuracy of statement; this both as a principle of honour, and as an accomplishment of language, making them try always who shall speak truest, both as regards the fact he has to relate or express (not concealing or exaggerating), and as regards the precision of the words he expresses it in, thus making truth (which, indeed, it is) the test of perfect language, and giving the intensity of a moral purpose to the study and art of words: then carrying this accuracy into all habits of thought and observation also, so as always to *think* of things as they truly are, and to *see* them as they truly are, as far as in us rests. And it *does* rest much in our power, for all

false thoughts and seeings come mainly of our thinking of what we have no business with, and looking for things we want to see, instead of things that ought to be seen.

“Do not talk but of what you know; do not think but of what you have materials to think justly upon; and do not look for things only that you like, when there are others to be seen”—this is the lesson to be taught to our youth, and inbred in them; and that mainly by our own example and continence. Never teach a child anything of which you are not yourself sure; and, above all, if you feel anxious to force anything into its mind in tender years, that the virtue of youth and early association may fasten it there, be sure it is no lie which you thus sanctify. There is always more to be taught of absolute, incontrovertible knowledge, open to its capacity, than any child can learn; there is no need to teach it anything doubtful. Better that it should be ignorant of a thousand truths, than have consecrated in its heart a single lie.

And for this, as well as for many other reasons, the principal subjects of education, after history, ought to be natural science and mathematics; but with respect to these studies, your schools will require to be divided into three groups; one for children who will probably have to live in cities, one for those who will live in the country,

and one for those who will live at sea; the schools for these last, of course, being always placed on the coast. And for children whose life is to be in cities, the subjects of study should be, as far as their disposition will allow of it, mathematics and the arts; for children who are to live in the country, natural history of birds, insects, and plants, together with agriculture taught practically; and for children who are to be seamen, physical geography, astronomy, and the natural history of sea fish and sea birds.

This, then, being the general course and material of education for all children, observe farther that in the preface to *Unto this Last* I said that every child, besides passing through this course, was at school to learn "the calling by which it was to live." And it may perhaps appear to you that after, or even in the early stages of education such as this above described, there are many callings which, however much called to them, the children might not willingly determine to learn or live by. "Probably," you may say, "after they have learned to ride, and fence, and sing, and know birds and flowers, it will be little to their liking to make themselves into tailors, carpenters, shoemakers, blacksmiths, and the like." And I cannot but agree with you as to the exceeding probability of some such reluctance on their part, which

will be a very awkward state of things indeed (since we can by no means get on without tailoring and shoemaking), and one to be meditated upon very seriously in next letter.

P.S.—Thank you for sending me your friend's letter about Gustave Doré; he is wrong, however, in thinking there is any good in those illustrations of Elaine. I had intended to speak of them afterwards, for it is to my mind quite as significant—almost as awful—a sign of what is going on in the midst of us, that our great English poet should have suffered his work to be thus contaminated, as that the lower Evangelicals, never notable for sense in the arts, should have got their Bibles dishonoured. Those Elaine illustrations are just as impure as anything else that Doré has done; but they are also vapid, and without any one merit whatever in point of art. The illustrations to the *Contes Drolatiques* are full of power and invention; but those to Elaine are merely and simply stupid; theatrical *bêtises*, with the taint of the charnel-house on them besides.

Letter 17.

The Relations of Education to Position in Life.

April 3, 1867.

I AM not quite sure that you will feel the awkwardness of the dilemma I got into at the end of last letter, as much as I do myself. You working men have been crowing and peacocking at such a rate lately; and setting yourselves forth so confidently for the cream of society, and the top of the world, that perhaps you will not anticipate any of the difficulties which suggest themselves to a thorough-bred Tory and Conservative, like me. Perhaps you will expect a youth properly educated—a good rider—musician—and well-grounded scholar in natural philosophy, to think it a step of promotion when he has to go and be made a tailor of, or a coalheaver? If you do, I should very willingly admit that you might be right, and go on to the farther development of my notions without pausing at this stumbling-block, were it not that, unluckily, all the wisest men whose sayings I ever heard or read, agree in expressing (one way or another) just

such contempt, for those useful occupations, as I dread on the part of my foolishly refined scholars. Shakspeare and Chaucer,—Dante and Virgil,—Horace and Pindar,—Homer, Æschylus, and Plato,—all the men of any age or country who seem to have had Heaven's music on their lips, agree in their scorn of mechanic life. And I imagine that the feeling of prudent Englishmen, and sensible as well as sensitive Englishwomen, on reading my last letter—would mostly be—"Is the man mad, or laughing at us, to propose educating the working classes this way? He could not, if his wild scheme were possible, find a better method of making them acutely wretched."

It may be so, my sensible and polite friends; and I am heartily willing, as well as curious, to hear you develope your own scheme of operative education, so only that it be universal, orderly, and careful. I do not say that I shall be prepared to advocate my athletics and philosophies instead. Only, observe what you admit, or imply, in bringing forward your possibly wiser system. You imply that a certain portion of mankind must be employed in degrading work; and that, to fit them for this work, it is necessary to limit their knowledge, their active powers, and their enjoyments, from childhood upwards, so that they may not be able to conceive of any state better than the one they were born in, nor possess any

knowledge or acquirements inconsistent with the coarseness, or disturbing the monotony, of their vulgar occupation. And by their labour in this contracted state of mind, we superior beings are to be maintained; and always to be curtsied to by the properly ignorant little girls, and capped by the properly ignorant little boys, whenever we pass by.

Mind, I do not say that this is *not* the right state of things. Only, if it be, you need not be so over-particular about the slave-trade, it seems to me. What is the use of arguing so pertinaciously that a black's skull will hold as much as a white's, when you are declaring in the same breath that a white's skull must not hold as much as it cau, or it will be the worse for him? It does not appear to me at all a profound state of slavery to be whipped into doing a piece of low work that I don't like; but it is a very profound state of slavery, to be kept, myself, low in the forehead, that I may not dislike low work.

You see, my friend, the dilemma is really an awkward one, whichever way you look at it. But, what is still worse, I am not puzzled only, at this part of my scheme, about the boys I shall have to make *workmen* of; I am just as much puzzled about the boys I shall have to make *nothing* of! Grant, that by hook or crook, by reason or rattan, I persuade a certain number of the roughest ones

into some serviceable business, and get coats and shoes made for the rest,—what is the business of “the rest” to be? Naturally, according to the existing state of things, one supposes they are to belong to some of the gentlemanly professions; to be soldiers, lawyers, doctors, or clergymen. But alas, I shall not want any soldiers, of special skill or pugnacity? *All* my boys will be soldiers. So far from wanting any lawyers, of the kind that live by talking, I shall have the strongest possible objection to their appearance in the country. For doctors, I shall always entertain a profound respect; but when I get my athletic education fairly established, of what help to them will my respect be? They will all starve! And for clergymen, it is true, I shall have a large number of episcopates—one over every hundred families—and many positions of civil authority also, for civil officers, above them and below), but all these places will involve much hard work, and be anything but covetable; while, of clergymen’s usual work, admonition, theological demonstration, and the like, I shall want very little done indeed, and that little done for nothing! for I will allow no man to admonish anybody, until he has previously earned his own dinner by more productive work than admonition.

Well, I wish, my friend, you would write me a word or

two in answer to this, telling me your own ideas as to the proper issue out of these difficulties. I should like to know what you think, and what you suppose others will think, before I tell you my own notions about the matter.

Letter 18.

The harmful Effects of Servile Employments.—The possible Practice and Exhibition of sincere Humility by Religious Persons.

April 7, 1867.

I HAVE been waiting these three days to know what you would say to my last questions; and now you send me two pamphlets of Combe's to read! I never read anything in spring-time (except the Ai, Ai, on the "sanguine flower inscribed with woe"); and besides if, as I gather from your letter, Combe thinks that among well-educated boys there would be a per-centage constitutionally inclined, to be cobblers, or looking forward with unction to establishment in the oil and tallow line, or fretting themselves for a flunkey's uniform, nothing that he could say would make me agree with him. I know, as well as he does, the unconquerable differences in the clay of the human creature: and I know that, in the outset, whatever system of education you adopted, a large number of children could be made nothing of, and would necessarily fall out of the ranks, and supply candidates

enough for degradation to common mechanical business. but this enormous difference in bodily and mental capacity has been mainly brought about by difference in occupation, and by direct mal-treatment; and in a few generations, if the poor were cared for, their marriages looked after, and sanitary law enforced, a beautiful type of face and form, and a high intelligence, would become all but universal, in a climate like this of England. Even as it is, the marvel is always to me, how the race resists, at least in its childhood, influences of ill-regulated birth, poisoned food, poisoned air, and soul, neglect. I often see faces of children, as I walk through the black district of St. Giles's (lying, as it does, just between my own house and the British Museum), which, through all their pale and corrupt misery, recall the old "Non Angli," and recall it, not by their beauty, but by their sweetness of expression, even though signed already with trace and cloud of the coming life,—a life so bitter that it would make the curse of the 137th Psalm true upon our modern Babylon, though we were to read it thus, "*Happy shall thy children be, if one taketh and dasheth them against the stones.*"

Yes, very solemnly I repeat to you that in those worst treated children of the English race, I yet see the making of gentlemen and gentlewomen—not the making of

dog-stealers and gin-drinkers, such as their parents were; and the child of the average English tradesman or peasant, even at this day, well schooled, will show no innate disposition such as must fetter him for ever to the clod or the counter. You say that many a boy runs away, or would run away if he could, from good positions to go to sea. Of course he does. I never said I should have any difficulty in finding sailors, but I shall in finding fishmongers. I am at no loss for gardeners neither, but what am I to do for greengrocers?

The fact is, a great number of quite necessary employments are, in the accuratest sense, “servile,” that is, they sink a man to the condition of a serf, or unthinking worker, the proper state of an animal, but more or less unworthy of men; nay, unholy in some sense, so that a day is made “holy” by the fact of its being commanded, “Thou shalt do no *servile* work therein.” And yet, if undertaken in a certain spirit, such work might be the holiest of all. If there were but a thread or two of sound fibre here and there left in our modern religion, so that the stuff of it would bear a real strain, one might address our two opposite groups of evangelicals and ritualists somewhat after this fashion:—“Good friends, these differences of opinion between you cannot but be painful to your Christian charity,

and they are unseemly to us, the profane; and prevent us from learning from you what, perhaps, we ought. But, as we read your Book, we, for our part, gather from it that you might, without danger to your own souls, set an undivided example to us, for the benefit of ours. You, both of you, as far as we understand, agree in the necessity of humility to the perfection of your character. We often hear you, of Calvinistic persuasion, speaking of yourselves as 'sinful dust and ashes,'—would it then be inconsistent with your feelings to make yourselves into 'serviceable' dust and ashes? We observe that of late many of our roads have been hardened and mended with cinders; now, if, in a higher sense, you could allow us to mend the roads of the world with *you* a little, it would be a great proof to us of your sincerity. Suppose only for a little while, in the present difficulty and distress, you were to make it a test of conversion that a man should regularly give Zacheus's portion, half his goods, to the poor, and at once adopt some disagreeable and despised, but thoroughly useful, trade? You cannot think that this would finally be to your disadvantage; you doubtless believe the texts, 'He that giveth to the poor lendeth to the Lord,' and 'He that would be the chief among you, let him be your servant.' The more you parted with, and the

lower you stooped, the greater would be your final reward, and final exaltation. You profess to despise human learning and worldly riches; leave both of these to *us*; undertake for us the illiterate and ill-paid employments which must deprive you of the privileges of society, and the pleasures of luxury. You cannot possibly preach your faith so forcibly to the world by any quantity of the finest words, as by a few such simple and painful acts; and over your counters, in honest retail business, you might preach a gospel that would sound in more ears than any that was ever proclaimed over pulpit cushions or tabernacle rails. And, whatever may be your gifts of utterance, you cannot but feel (studying St. Paul's Epistles as carefully as you do) that you might more easily and modestly emulate the practical teaching of the silent Apostle of the Gentiles than the speech or writing of his companion. Amidst the present discomforts of your brethren you may surely, with greater prospect of good to them, seek the title of Sons of Consolation, than of Sons of Thunder, and be satisfied with Barnabas's confession of faith (if you can reach no farther), who, 'having land, sold it, and brought the money and laid it at the Apostles' feet.'

“To you, on the other hand, gentlemen of the embroidered robe, who neither despise learning nor the arts, we

know that sacrifices such as these would be truly painful, and might at first appear inexpedient. But the doctrine of self-mortification is not a new one to you: and we should be sorry to think—we would not, indeed, for a moment dishonour you by thinking—that these melodious chants, and prismatic brightnesses of vitreous pictures, and floral graces of deep-wrought stone, were in any wise intended for your own poor pleasures, whatever profane attraction they may exercise on more fleshly-minded persons. And as you have certainly received no definite order for the painting, carving, or lighting up of churches, while the temple of the body of so many poor living Christians is so pale, so mis-shapen, and so ill-lighted; but have, on the contrary, received very definite orders for the feeding and clothing of such sad humanity, we may surely ask you, not unreasonably, to humiliate yourselves in the most complete way—not with a voluntary, but a sternly *involuntary* humility—not with a show of wisdom in will-worship, but with practical wisdom, in all honour, to the satisfying of the flesh; and to associate yourselves in monasteries and convents for the better practice of useful and humble trades. Do not burn any more candles, but mould some; do not paint any more windows, but mend a few, where the wind comes in, in winter time, with substantial clear glass and putty. Do

not vault any more high roofs, but thatch some low ones ; and embroider rather on backs which are turned to the cold, than only on those which are turned to congregations. And you will have your reward afterwards, and attain, with all your flocks thus tended, to a place where you may have as much gold, and painted glass, and singing, as you like.”

Thus much, it seems to me, one might say, with some hope of acceptance, to any very earnest member of either of our two great religious parties, if, as I say, their faith could stand a strain. I have not, however, based any of my imaginary political arrangements on the probability of its doing so ; and I trust only to such general good nature and willingness to help each other, as I presume may be found among men of the world ; to whom I should have to make quite another sort of speech, which I will endeavour to set down the heads of, for you, in next letter.

Letter 19.

The General Pressure of Excessive and Improper Work, in English Life.

April 10, 1867.

I CANNOT go on to-day with the part of my subject I had proposed, for I was disturbed by receiving a letter last night, which I herewith enclose to you, and of which I wish you to print, here following, the parts I have not underlined:—

1, PHENE-STREET, CHELSEA, April 8, 1867.

MY DEAR R——: It is long since you have heard of me, and now I ask your patience with me for a little. I have but just returned from the funeral of my dear, dear friend ——, the first artist friend I made in London—a loved and prized one. For years past he had lived in the very humblest way, fighting his battle of life against mean appreciation of his talents, the wants of a rising family, and frequent attacks of illness, crippling him for months at a time, the wolf at the door meanwhile.

But about two years since his prospects brightened * * * and he had but a few weeks since ventured on removal to a larger house. His eldest boy of seventeen years, a very intelligent youth, so strongly desired to be a civil engineer that Mr. ——, not being

able to pay the large premium required for his apprenticeship, had been made very glad by the consent of Mr. Penn, of Milwall, to receive him without a premium after the boy should have spent some time at King's College in the study of mechanics. The rest is a sad story. About a fortnight ago Mr. ——— was taken ill, and died last week, the doctors say, of sheer physical exhaustion, not thirty-nine years old, leaving eight young children, and his poor widow expecting her confinement, and so weak and ill as to be incapable of effort. This youth is the eldest, and the other children range downwards to a babe of eighteen months. There is not one who knew him, I believe, that will not give cheerfully, to their ability, for his widow and children; but such aid will go but a little way in this painful case, but it would be a real boon to this poor widow if some of her children could be got into an Orphan Asylum. * * *

If you are able to do anything I would send particulars of the age and sex of the children. * * *

I remain, dear sir, ever obediently yours,

FRED. J. SHIELDS.

P.S.—I ought to say that poor ——— has been quite unable to save, with his large family; and that they would be utterly destitute now, but for the kindness of some with whom he was professionally connected.

Now this case, of which you see the entire authenticity, is, out of the many, of which I hear continually, a *notably* sad one only in so far as the artist in question has died of distress while he was catering for the public

amusement. Hardly a week now passes without some such misery coming to my knowledge; and the quantity of pain, and anxiety of daily effort, through the best part of life, ending all at last in utter grief, which the lower middle classes in England are now suffering, is so great that I feel constantly as if I were living in one great churchyard, with people all round me clinging feebly to the edges of the open graves, and calling for help, as they fall back into them, out of sight.

Now I want you to observe here, in a definite case, the working of your beautiful modern political economy of "supply and demand." Here is a man who could have "supplied" you with good and entertaining art—say for fifty good years—if you had paid him enough for his day's work to find him and his children peacefully in bread. But you like having your prints as cheap as possible—you triumph in the little that your laugh costs—you take all you can get from the man, give the least you can give to him—and you accordingly kill him at thirty-nine; and thereafter have his children to take care of, or to kill also, whichever you choose: but now, observe, you must take care of *them* for nothing, or not at all; and what you might have had good value for, if you had given it when it would have cheered the father's heart, you now can have no return for at all, to yourselves; and what you

give to the orphans, if it does not degrade them, at least afflicts, coming, not through their father's hand, its honest earnings, but from strangers.

Observe farther, whatever help the orphans may receive, will not be from the public at all. It will not be from those who profited by their father's labours; it will be chiefly from his fellow-labourers; or from persons whose money would have been beneficially spent in other directions, from whence it is drawn away to this need, which ought never to have occurred—while those who waste their money without doing any service to the public, will never contribute one farthing to this distress.

Now it is this double fault in the help—that it comes too late, and that the burden of it falls wholly on those who ought least to be charged with it, which would be corrected by that institution of overseers of which I spoke to you in the twelfth of these letters, saying, you remember, that they were to have farther legal powers, which I did not then specify, but which would belong to them chiefly in the capacity of public almoners, or help-givers, aided by their deacons, the reception of such help, in time of true need, being not held disgraceful, but honourable; since the fact of its reception would be so entirely public that no impostor or idle person could ever obtain it surreptitiously.

(11th April.) I was interrupted yesterday, and I am glad of it, for here happens just an instance of the way in which the unjust distribution of the burden of charity is reflected on general interests; I cannot help what taint of ungracefulness you or other readers of these letters may feel that I incur, in speaking, in this instance, of myself. If I could speak with the same accurate knowledge of any one else, most gladly I would; but I also think it right that, whether people accuse me of boasting or not, they should know that I practise what I preach. I had not intended to say what I now shall, but the coming of this letter last night just turns the balance of the decision with me. I enclose it with the other; you see it is one from my bookseller, Mr. Quaritch, offering me Fischer's work on the *Flora of Java*, and Latour's on *Indian Orchidaceæ*, bound together, for twenty guineas. Now, I am writing a book on botany just now, for young people, chiefly on wild flowers, and I want these two books very much; but I simply cannot afford to buy them, because I sent my last spare twenty guineas to Mr. Shields yesterday for this widow. And though you may think it not the affair of the public that I have not this book on Indian flowers, it is their affair finally, that what I write for them should be founded on as broad knowledge as possible; whatever value my own book

may or may not have, it will just be in a given degree worth *less* to them, because of my want of this knowledge.

So again—for having begun to speak of myself I will do so yet more frankly—I suppose that when people see my name down for a hundred pounds to the Cruikshank Memorial, and for another hundred to the Eyre Defence Fund, they think only that I have more money than I know what to do with. Well, the giving of those subscriptions simply decides the question whether or no I shall be able to afford a journey to Switzerland this year, in the negative; and I wanted to go, not only for health's sake, but to examine the junctions of the molasse sandstones and nagelfluh with the Alpine limestone, in order to complete some notes I meant to publish next spring on the geology of the great northern Swiss valley; notes which must now lie by me at least for another year; and I believe this delay (though I say it) will be really something of a loss to the travelling public, for the little essay was intended to explain to them, in a familiar way, the real wonderfulness of their favourite mountain, the Righi; and to give them some amusement in trying to find out where the many-coloured pebbles of it had come from. But it is more important that I should, with some stoutness, assert my respect for the genius and earnest

patriotism of Cruikshank, and my much more than disrespect for the Jamaica Committee, than that I should see the Alps this year, or get my essay finished next spring; but I tell you the fact, because I want you to feel how, in thus leaving their men of worth to be assisted or defended only by those who deeply care for them, the public more or less cripple, to their own ultimate disadvantage, just the people who could serve them in other ways; while the speculators and money-seekers, who are only making their profit out of the said public, of course take no part in the help of anybody. And even if the willing bearers could sustain the burden anywise adequately, none of us would complain; but I am certain there is no man, whatever his fortune, who is now engaged in any earnest offices of kindness to these sufferers, especially of the middle class, among his acquaintance, who will not bear me witness that for one we can relieve, we must leave three to perish. I have left three, myself, in the first three months of this year. One was the artist Paul Gray, for whom an appeal was made to me for funds to assist him in going abroad out of the bitter English winter. I had not the means by me, and he died a week afterwards. Another case was that of a widow whose husband had committed suicide, for whom application was made to me at the same time; and the third was a per

sonal friend, to whom I refused a sum which he said would have saved him from bankruptcy. I believe six times as much would not have saved him; however, I refused, and he is ruined.

And observe, also, it is not the mere crippling of my means that I regret. It is the crippling of my temper, and waste of my time. The knowledge of all this distress, even when I can assist it,—much more when I cannot,—and the various thoughts of what I can and cannot, or ought and ought not, to do, are a far greater burden to me than the mere loss of the money. It is peremptorily not my business—it is not my gift, bodily or mentally, to look after other people's sorrow. I have enough of my own; and even if I had not, the sight of pain is not good for me. I don't want to be a bishop. In a most literal and sincere sense, "*nolo episcopari.*" I don't want to be an almoner, nor a counsellor, nor a Member of Parliament, nor a voter for Members of Parliament. (What would Mr. Holyoake say to me if he knew that I have never voted for anybody in my life, and never mean to do so!) I am essentially a painter and a leaf dissector; and my powers of thought are all purely mathematical, seizing ultimate principles only—never accidents; a line is always, to me, length without breadth; it is not a cable or a crowbar; and though I can almost infal-

libly reason out the final law of anything, if within reach of my industry, I neither care for, nor can trace, the minor exigencies of its daily appliance. So, in every way, I like a quiet life; and I don't like seeing people cry, or die; and should rejoice, more than I can tell you, in giving up the full half of my fortune for the poor, provided I knew that the public would make Lord Overstone also give the half of his, and other people who were independent give the half of theirs; and then set men who were really fit for such office to administer the fund, and answer to us for nobody's perishing innocently; and so leave us all to do what we chose with the rest, and with our days, in peace.

Thus far of the public's fault in the matter. Next, I have a word or two to say of the sufferers' own fault—for much as I pity them, I conceive that none of them *do* perish altogether innocently. But this must be for next letter.

Letter 20.

*Of Improvidence in Marriage in the Middle Classes;
and of the advisable Restrictions of it.*

April 12, 1867.

It is quite as well, whatever irregularity it may introduce in the arrangement of the general subject, that yonder sad letter warped me away from the broad inquiry, to this speciality, respecting the present distress of the middle classes. For the immediate cause of that distress, in their own imprudence, of which I have to speak to you to-day, is only to be finally vanquished by strict laws, which, though they have been many a year in my mind, I was glad to have a quiet hour of sunshine for the thinking over again, this morning. Sunshine which happily rose cloudless; and allowed me to meditate my tyrannies before breakfast, under the just-opened blossoms of my orchard, and assisted by much melodious advice from the birds; who (my gardener having positive orders never to trouble any of them in anything, or object to their eating even my best pease if they like their flavour) rather now get *into* my way, than out of it, when

they see me about the walks; and take me into most of their counsels in nest-building.

The letter from Mr. Shields, which interrupted us, reached me, as you see, on the evening of the 9th instant. On the morning of the 10th, I received another, which I herewith forward to you, for verification. It is—characteristically enough—dateless, so you must take the time of its arrival on my word. And substituting M. N. for the name of the boy referred to, and withholding only the address and name of the writer, you see that it may be printed word for word—as follows:—

SIR,—May I beg for the favour of your presentation to Christ's Hospital for my youngest son, M. N. I have nine children, and no means to educate them. I ventured to address you, believing that my husband's name is not unknown to you as an artist.

Believe me to remain faithfully yours,

To John Ruskin, Esq.

* * *

Now this letter is only a typical example of the entire class of those which, being a governor of Christ's Hospital, I receive, in common with all the other governors, at a rate of about three a day, for a month or six weeks from the date of our names appearing in the printed list of the governors who have presentations for the current year. Having been a governor now some twenty-five years, I have documentary evidence enough to found

some general statistics upon: from which there have resulted two impressions on my mind, which I wish here specially to note to you, and I do not doubt but that all the other governors, if you could ask them, would at once confirm what I say. My first impression is, a heavy and sorrowful sense of the general feebleness of intellect of that portion of the British public which stands in need of presentations to Christ's Hospital. This feebleness of intellect is mainly shown in the nearly total unconsciousness of the writers that anybody else may want a presentation, beside themselves. With the exception here and there, of a soldier's or a sailor's widow, hardly one of them seems to have perceived the existence of any distress in the world but their own; none know what they are asking for, or imagine, unless as a remote contingency, the possibility of its having been promised at a prior date. The second most distinct impression on my mind is, that the portion of the British public which is in need of presentations to Christ's Hospital, considers it a merit to have large families, with or without the means of supporting them!

Now it happened also (and remember, all this is strictly true, nor in the slightest particular represented otherwise than as it chanced; though the said chance brought thus together exactly the evidence I wanted for

my letter to you) it happened, I say, that on this same morning of the 10th April, I became accidentally acquainted with a case of quite a different kind: that of a noble girl, who, engaged at sixteen, and having received several advantageous offers since, has remained for ten years faithful to her equally faithful lover; while, their circumstances rendering it, as they rightly considered, unjustifiable in them to think of marriage, each of them simply and happily, aided and cheered by the other's love, discharged the duties of their own separate positions in life.

In the nature of things, instances of this kind of noble life remain more or less concealed (while imprudence and error proclaim themselves by misfortune), but they are assuredly not unfrequent in our English homes. Let us next observe the political and national result of these arrangements. You leave your marriages to be settled by "supply and demand," instead of wholesome law. And thus among your youths and maidens, the improvident, incontinent, selfish, and foolish ones marry whether you will or not; and beget families of children, necessarily inheritors in a great degree of these parental dispositions; and for whom supposing they had the best dispositions in the world, you have thus provided, by way of educators, the foolishest fathers and mothers you could find (the only

rational sentence in their letters, usually, is the invariable one, in which they declare themselves “incapable of providing for their children’s education”). On the other hand, whosoever is wise, patient, unselfish, and pure, among your youth, you keep maid or bachelor; wasting their best days of natural life in painful sacrifice, forbidding them their best help and best reward, and carefully excluding their prudence and tenderness from any offices of parental duty.

Is this not a beatific and beautifully sagacious system for a Celestial Empire, such as that of these British Isles?

I will not here enter into any statement of the physical laws which it is the province of our physicians to explain; and which are indeed at last so far beginning to be understood, that there is hope of the nation’s giving some of the attention to the conditions affecting the race of man, which it has hitherto bestowed only on those which may better its races of cattle.

It is enough, I think, to say here that the beginning of all sanitary and moral law is in the regulation of marriage, and that, ugly and fatal as is every form and agency of license, no licentiousness is so mortal as licentiousness in marriage.

Briefly, then, and in main points, subject in minor ones

to such modifications in detail as local circumstances and characters would render expedient, these following are laws such as a prudent nation would institute respecting its marriages. Permission to marry should be the reward held in sight of its youth during the entire latter part of the course of their education; and it should be granted as the national attestation that the first portion of their lives had been rightfully fulfilled. It should not be attainable without earnest and consistent effort, though put within the reach of all who were willing to make such effort; and the granting of it should be a public testimony to the fact, that the youth or maid to whom it was given had lived within their proper sphere, a modest and virtuous life, and had attained such skill in their proper handicraft, and in arts of household economy, as might give well-founded expectations of their being able honourably to maintain and teach their children.

No girl should receive her permission to marry before her 17th birthday, nor any youth before his 21st; and it should be a point of somewhat distinguished honour with both sexes to gain their permission of marriage in the 18th and 22d year; and a recognized disgrace not to have gained it at least before the close of their 21st and 24th. I do not mean that they should in any wise hasten actual marriage; but only that they should hold it a point of

honour to have the right to marry. In every year there should be two festivals, one on the first of May, and one at the feast of harvest home in each district, at which festivals their permissions to marry should be given publicly to the maidens and youths who had won them in that half year; and they should be crowned, the maids by the old French title of *Rosières*, and the youths, perhaps by some name rightly derived from one supposed signification of the word "bachelor" "laurel fruit," and so led in joyful procession, with music and singing, through the city street or village lane, and the day ended with feasting of the poor: but not with feasting theirs, except quietly, at their homes.

And every bachelor and *rosière* should be entitled to claim, if they needed it, according to their position in life, a fixed income from the State, for seven years from the day of their marriage, for the setting up of their homes; and however rich they might be by inheritance, their income should not be permitted to exceed a given sum, proportioned to their rank, for the seven years following that in which they had obtained their permission to marry, but should accumulate in the trust of the State, until that seventh year, in which they should be put (on certain conditions) finally in possession of their property; and the men, thus necessarily not before their twenty-eighth,

nor usually later than their thirty-first year, become eligible to offices of State. So that the rich and poor should not be sharply separated in the beginning of the war of life; but the one supported against the first stress of it long enough to enable them by proper forethought and economy to secure their footing; and the other trained somewhat in the use of moderate means, before they were permitted to have the command of abundant ones. And of the sources from which these State incomes for the married poor should be supplied, or of the treatment of those of our youth whose conduct rendered it advisable to refuse them permission to marry, I defer what I have to say till we come to the general subjects of taxation and criminal discipline, leaving the proposals made in this letter to bear, for the present, whatever aspect of mere romance and unreliable vision they probably may, and to most readers, such as they assuredly will. Nor shall I make the slightest effort to redeem them from these imputations; for though there is nothing in all their purport which would not be approved, as in the deepest sense “practical”—by the “Spirit of Paradise”—

Which gives to all the self-same bent,
Whose lives are wise and innocent,

—and though I know that national justice in conduct,

and peace in heart, could by no other laws be so swiftly secured, I confess with much *dispeace* of heart, that both justice and happiness have at this day become, in England, “roman‘ic impossibilities.”

.

-

Letter 21.

*Of the Dignity of the Four Fine Arts; and of the
Proper System of Retail Trade.*

April 15, 1867.

I RETURN now to the part of the subject at which I was interrupted—the inquiry as to the proper means of finding persons willing to maintain themselves and others by degrading occupations.

That, on the whole, simply manual occupations *are* degrading, I suppose I may assume you to admit; at all events, the fact is so, and I suppose few general readers will have any doubt of it.*

* Many of my working readers have disputed this statement eagerly, feeling the good effect of work in themselves; but observe, I only say, *simply* or *totally* manual work; and that, alone, *is* degrading, though often in measure refreshing, wholesome, and necessary. So it is highly necessary and wholesome to eat sometimes; but degrading to eat all day, as to labour with the hands all day. But it is not degrading to think all day—if you can. A highly bred court lady, rightly interested in politics and literature, is a much finer type of the human creature than a servant of all work, however clever and honest.

Granting this, it follows as a direct consequence that it is the duty of all persons in higher stations of life, by every means in their power, to diminish their demand for work of such kind, *and to live with as little aid from the lower trades* as they can possibly contrive.

I suppose you see that this conclusion is not a little at variance with received notions on political economy? It is popularly supposed that it benefits a nation to invent a want. But the fact is, that the true benefit is in extinguishing a want—in living with as few wants as possible.

I cannot tell you the contempt I feel for the common writers on political economy, in their stupefied missing of this first principle of all human economy—individual or political—to live, namely, with as few wants as possible, and to waste nothing of what is given you to supply them.

This ought to be the first lesson of every rich man's political code. "Sir," his tutor should early say to him, "you are so placed in society—it may be for your misfortune, it *must* be for your trial—that you are likely to be maintained all your life by the labour of other men. You will have to make shoes for nobody, but some one will have to make a great many for you.

You will have to dig ground for nobody, but some one will have to dig through every summer's hot day for you. You will build houses and make clothes for no one, but many a rough hand must knead clay, and many an elbow be crooked to the stitch, to keep that body of yours warm and fine. Now remember, whatever you and your work may be worth, the less your keep costs, the better. It does not cost money only. It costs degradation. You do not merely employ these people. You also tread upon them. It cannot be helped;—you have your place, and they have theirs; but see that you tread as lightly as possible, and on as few as possible. What food, and clothes, and lodging, you honestly need, for your health and peace, you may righteously take. See that you take the plainest you can serve yourself with—that you waste or wear nothing vainly;—and that you employ no man in furnishing you with any useless luxury.” That is the first lesson of Christian—or human—economy; and depend upon it, my friend, it is a sound one, and has every voice and vote of the spirits of Heaven and earth to back it, whatever views the Manchester men, or any other manner of men, may take respecting “demand and supply.” Demand what you deserve, and you shall be supplied with it, for your good. Demand what

you do *not* deserve, and you shall be supplied with something which you have not demanded, and which Nature perceives that you deserve, quite to the contrary of your good. That is the law of your existence, and if you do not make it the law of your resolved acts—so much, precisely, the worse for you and all connected with you.

Yet observe, though it is out of its proper place said here, this law forbids no luxury which men are not degraded in providing. You may have Paul Veronese to paint your ceiling, if you like, or Benvenuto Cellini to make cups for you. But you must not employ a hundred divers to find beads to stitch over your sleeve. (Did you see the account of the sales of the Esterhazy jewels the other day?)

And the degree in which you recognize the difference between these two kinds of services, is precisely what makes the difference between your being a civilized person or a barbarian. If you keep slaves to furnish forth your dress—to glut your stomach—sustain your indolence—or deck your pride, you are a barbarian. If you keep servants, properly cared for, to furnish you with what you verily want, and no more than that—you are a “civil” person—a person capable of the qualities of citizenship. (Just look to the note on Liebig’s idea that civilization

means the consumption of coal, page 200 to 201 of the Crown of Wild Olive,* and please observe the sentence at the end of it, which signifies a good deal of what I have to expand here,—“Civilization is the making of civil persons.”)

Now, farther, observe that in a truly civilized and disciplined state, no man would be allowed to meddle with any material who did not know how to make the best of it. In other words, the arts of working in wood; clay, stone, and metal, would all be *fine* arts (working in iron for machinery becoming an entirely distinct business). There would be no joiner's work, no smith's, no pottery nor stone-cutting, so debased in character as to be entirely unconnected with the finer branches of the same art; and to at least one of these finer branches (generally in metal work) every painter and sculptor would be necessarily apprenticed during some years of his education. There would be room, in these four trades alone, for nearly every grade of practical intelligence and productive imagination.

But it should not be artists alone who are exercised early in these crafts. It would be part of my scheme of physical education that every youth in the State—from the King's son downwards—should learn to do some-

thing finely and thoroughly with his hand, so as to let him know what *touch* meant; and what stout craftsmanship meant; and to inform him of many things besides, which no man can learn but by some severely accurate discipline in doing. Let him once learn to take a straight shaving off a plank, or draw a fine curve, without faltering, or lay a brick level in its mortar; and he has learned a multitude of other matters which no lips of man could ever teach him. He might choose his craft, but whatever it was, he should learn it to some sufficient degree of true dexterity: and the result would be, in after life, that among the middle classes a good deal of their house furniture would be made, and a good deal of rough work, more or less clumsily, but not ineffectively, got through, by the master himself and his sons, with much furtherance of their general health and peace of mind, and increase of innocent domestic pride and pleasure, and to the extinction of a great deal of vulgar upholstery and other mean handicraft.

Farther. A great deal of the vulgarity, and nearly all the vice, of retail commerce, involving the degradation of persons occupied in it, depends simply on the fact that their minds are always occupied by the vital (or rather mortal) question of profits. I should at once put an end to this source of baseness by making all retail dealers

merely salaried officers in the employ of the trade guilds; the stewards, that is to say, of the saleable properties of those guilds, and purveyors of such and such articles to a given number of families. A perfectly well-educated person might without the least degradation hold such an office as this, however poorly paid; and it would be precisely the fact of his being well educated which would enable him to fulfil his duties to the public without the stimulus of direct profit. Of course the current objection to such a system would be that no man, for a regularly paid salary, would take pains to please his customers; and the answer to that objection is, that if you can train a man to so much unselfishness as to offer himself fearlessly to the chance of being shot, in the course of his daily duty, you can most assuredly, if you make it also a point of honour with him, train him to the amount of self-denial involved in looking you out with care such a piece of cheese or bacon as you have asked for.

You see that I have already much diminished the number of employments involving degradation; and raised the character of many of those that are left. There remain to be considered the necessarily painful or mechanical works of mining, forging, and the like: the unclean, noisome, or paltry manufactures—the various

kinds of transport—(by merchant shipping, etc.)—and the conditions of menial service.

It will facilitate the examination of these if we put them for the moment aside, and pass to the other division of our dilemma, the question, namely, what kind of lives our gentlemen and ladies are to live, for whom all this hard work is to be done.

Letter 22.

Of the normal Position and Duties of the Upper Classes.

—General Statement of the Land Question.

April 17. 1867.

IN passing now to the statement of conditions affecting the interests of the upper classes, I would rather have addressed these closing letters to one of themselves than to you, for it is with their own faults and needs that each class is primarily concerned. As however, unless I kept the letters private, this change of their address would be but a matter of courtesy and form, not of any true prudential use; and as besides I am now no more inclined to reticence—prudent or otherwise; but desire only to state the facts of our national economy as clearly and completely as may be, I pursue the subject without respect of persons.

Before examining what the occupation and estate of the upper classes ought, as far as may reasonably be conjectured, finally to become, it will be well to set down in brief terms what they actually have been in past ages:

for this, in many respects, they must also always be. The upper classes, broadly speaking, are always originally composed of the best-bred (in the merely animal sense of the term), the most energetic, and most thoughtful, of the population, who either by strength of arm seize the land from the rest, and make slaves of them, or bring desert land into cultivation, over which they have therefore, within certain limits, true personal right; or by industry, accumulate other property, or by choice devote themselves to intellectual pursuits, and, though poor, obtain an acknowledged superiority of position, shown by benefits conferred in discovery, or in teaching, or in gifts of art. This is all in the simple course of the law of nature; and the proper offices of the upper classes, thus distinguished from the rest, become, therefore, in the main threefold:—

(A) Those who are strongest of arm have for their proper function the restraint and punishment of vice, and the general maintenance of law and order; releasing only from its original subjection to their power that which truly deserves to be emancipated.

(B) Those who are superior by forethought and industry, have for their function to be the providences of the foolish, the weak, and the idle; and to establish such systems of trade and distribution of goods as shall preserve

the lower orders from perishing by famine, or any other consequence of their carelessness or folly, and to bring them all, according to each man's capacity, at last into some harmonious industry.

(C) The third class, of scholars and artists, of course have for function the teaching and delighting of the inferior multitude.

The office of the upper classes, then, as a body, is to keep order among their inferiors, and raise them always to the nearest level with themselves of which those inferiors are capable. So far as they are thus occupied, they are invariably loved and revered intensely by all beneath them, and reach, themselves, the highest types of human power and beauty.

This, then, being the natural ordinance and function of aristocracy, its corruption, like that of all other beautiful things under the Devil's touch, is a very fearful one. Its corruption is, that those who ought to be the rulers and guides of the people, forsake their task of painful honourableness; seek their own pleasure and pre-eminence only; and use their power, subtlety, conceded influence, prestige of ancestry, and mechanical instrumentality of martial power, to make the lower orders toil for them, and feed and clothe them for nothing, and become in various ways their living property, goods, and

chattels, even to the point of utter regardlessness of whatever misery these serfs may suffer through such insolent domination, or they themselves, their masters, commit of crime to enforce it.

And this is especially likely to be the case when means of various and tempting pleasure are put within the reach of the upper classes by advanced conditions of national commerce and knowledge: and it is *certain* to be the case as soon as position among those upper classes becomes any way purchaseable with money, instead of being the assured measure of some kind of worth (either strength of hand, or true wisdom of conduct, or imaginative gift). It has been becoming more and more the condition of the aristocracy of Europe, ever since the fifteenth century; and is gradually bringing about its ruin, and in that ruin, checked only by the power which here and there a good soldier or true statesman achieves over the putrid chaos of its vain policy, the ruin of all beneath it; which can be arrested only, either by the repentance of that old aristocracy (hardly to be hoped), or by the stern substitution of other aristocracy worthier than it. Corrupt as it may be, it and its laws together, I would at this moment, if I could, fasten every one of its institutions down with bands of iron and trust for all progress and help against its tyranny simply to the

patience and strength of private conduct. And if I had to choose, I would tenfold rather see the tyranny of old Austria triumphant in the old and new worlds, and trust to the chance (or rather the distant certainty) of some day seeing a true Emperor born to its throne, than, with every privilege of thought and act, run the most distant risk of seeing the thoughts of the people of Germany and England become like the thoughts of the people of America.*

* My American friends, of whom one, Charles Eliot Norton, of Cambridge, is the best I have in the world, tell me I know nothing about America. It may be so, and they must do me the justice to observe that I, therefore, usually *say* nothing about America. But this I *say*, because the Americans as a nation set their trust in liberty and in equality, of which I detest the one, and deny the possibility of the other; and because, also, as a nation, they are wholly undesirous of Rest, and incapable of it; irreverent of themselves, both in the present and in the future; discontented with what they are, yet having no ideal of anything which they desire to become, as the tide of the troubled sea, when it *cannot* rest.

Some following passages in this letter, containing personal references which might, in permanence, have given pain or offence, are now omitted—the substance of them being also irrelevant to my main purpose. These few words about the American war, with which they concluded, are, I think, worth retaining:—"All methods of right Government are to be communicated to foreign nations by perfectness of example and gentleness of patiently expanded power, not suddenly, nor

But, however corrupted, the aristocracy of any nation may thus be always divided into three great classes. First, the landed proprietors and soldiers, essentially one political body (for the possession of land can only be maintained by military power); secondly, the monied men and leaders of commerce; thirdly, the professional men and masters in science, art, and literature.

And we were to consider the proper duties of all these, and the laws probably expedient respecting them. Whereupon, in the outset we are at once brought face to face with the great land question.

Great as it may be, it is wholly subordinate to those we have hitherto been considering. The laws you make regarding methods of labour, or to secure the genuineness of the things produced by it, affect the entire moral state of the nation, and all possibility of human happiness for them. The mode of distribution of the land only affects their numbers. By this or that law respecting land, you at the bayonet's point. And though it is the duty of every nation to interfere, at bayonet point, if they have the strength to do so, to save any oppressed multitude, or even individual, from manifest violence, it is wholly unlawful to interfere in such matter, except with sacredly pledged limitation of the objects to be accomplished in the oppressed person's favour, and with absolute refusal of all selfish advantage and *increase of territory or of political power* which might otherwise accrue from the victory."

decide whether the nation shall consist of fifty or of a hundred millions. But by this or that law respecting work, you decide whether the given number of millions shall be rogues, or honest men;—shall be wretches, or happy men. And the question of numbers is wholly immaterial, compared with that of character; or rather, its own materialness depends on the prior determination of character. Make your nation consist of knaves, and, as Emerson said long ago, it is but the case of any other vermin—“the more, the worse.” Or, to put the matter in narrower limits, it is a matter of no final concern to any parent whether he shall have two children, or four; but matter of quite final concern whether those he has, shall, or shall not, deserve to be hanged. The great difficulty in dealing with the land question at all arises from the false, though very natural, notion on the part of many reformers, and of large bodies of the poor, that the division of the land among the said poor would be an immediate and everlasting relief to them. An *immediate* relief it would be to the extent of a small annual sum (you may easily calculate how little, if you choose) to each of them; on the strength of which accession to their finances, they would multiply into as much extra personality as the extra pence would sustain, and at that point be checked by starvation, exactly as they are now.

Any other form of pillage would benefit them only in like manner; and in reality the difficult part of the question respecting numbers is, not where they shall be arrested, but what shall be the method of their arrest.

An island of a certain size has standing room only for so many people; feeding ground for a great many fewer than could stand on it. Reach the limits of your feeding ground, and you must cease to multiply, must emigrate, or starve. The modes in which the pressure is gradually brought to bear on the population depend on the justice of your laws; but the pressure itself must come at last, whatever the distribution of the land. And arithmeticians seem to me a little slow to remark the importance of the old child's puzzle about the nails in the horseshoe—when it is populations that are doubling themselves, instead of farthings.

The essential land question then is to be treated quite separately from that of the methods of restriction of population. The land question is—At what point will you resolve to stop? It is separate matter of discussion how you are to stop at it.

And this essential land question—"At what point will you stop?"—is itself twofold. You have to consider first, by what methods of land distribution you can maintain the greatest number of healthy persons; and

secondly, whether, if by any other mode of distribution and relative ethical laws, you can raise their character, while you diminish their numbers, such sacrifice should be made, and to what extent? I think it will be better, for clearness sake, to end this letter with the putting of these two queries in their decisive form, and to reserve suggestions of answer for my next.

Letter 23.

*Of the Just Tenure of Lands: and the proper
Functions of high Public Officers.*

20th April, 1867.

I MUST repeat to you, once more, before I proceed, that I only enter on this part of our inquiry to complete the sequence of its system and explain fully the bearing of former conclusions, and not for any immediately practicable good to be got out of the investigation. Whatever I have hitherto urged upon you, it is in the power of all men quietly to promote, and finally to secure, by the patient resolution of personal conduct; but no action could be taken in redistribution of land, or in limitation of the incomes of the upper classes, without grave and prolonged civil disturbance.

Such disturbance, however, is only too likely to take place, if the existing theories of political economy are allowed credence much longer. In the writings of the vulgar economists, nothing more excites my indig-

nation than the subterfuges by which they endeavour to accommodate their pseudo-science to the existing abuses of wealth by disguising the true nature of rent. I will not waste time in exposing their fallacies, but will put the truth for you into as clear a shape as I can.

Rent, of whatever kind, is, briefly, the price continuously paid for the loan of the property of another person. It may be too little, or it may be just, or exorbitant, or altogether unjustifiable, according to circumstances. Exorbitant rents can only be exacted from ignorant or necessitous rent payers; and it is one of the most necessary conditions of state economy that there should be clear laws to prevent such exaction.

I may interrupt myself for a moment to give you an instance of what I mean. The most wretched houses of the poor in London often pay ten or fifteen per cent. to the landlord; and I have known an instance of sanitary legislation being hindered, to the loss of many hundreds of lives, in order that the rents of a nobleman, derived from the necessities of the poor, might not be diminished. And it is a curious thing to me to see Mr. J. S. Mill foaming at the mouth, and really afflicted conscientiously, because he supposes one man to have been unjustly hanged, while by his own failure

(I believe, *wilful* failure) in stating clearly to the public one of the first elementary truths of the science he professes, he is aiding and abetting the commission of the cruellest possible form of murder on many thousands of persons yearly, for the sake simply of putting money into the pockets of the landlords. I felt this evil so strongly that I bought, in the worst part of London, one freehold and one leasehold property, consisting of houses inhabited by the lowest poor; in order to try what change in their comfort and habits I could effect by taking only a just rent, but that firmly. The houses of the leasehold pay me five per cent.; the families that used to have one room in them have now two; and are more orderly and hopeful besides; and there is a surplus still on the rents they pay, after I have taken my five per cent., with which, if all goes well, they will eventually be able to buy twelve years of the lease from me. The freehold pays three per cent., with similar results in the comfort of the tenant. This is merely an example of what might be done by firm State action in such matters.

Next, of wholly unjustifiable rents. These are for things which are not, and which it is criminal to consider as, personal or exchangeable property. Bodies of men, land, water, and air, are the principal of these things.

Parentetically, may I ask you to observe, that though a fearless defender of some forms of slavery, I am no defender of the slave *trade*. It is by a blundering confusion of ideas between *governing* men, and *trading in* men, and by consequent interference with the restraint, instead of only with the sale, that most of the great errors in action have been caused among the emancipation men. I am prepared, if the need be clear to my own mind, and if the power is in my hands, to throw men into prison, or any other captivity—to bind them or to beat them—and force them for such periods, as I may judge necessary, to any kind of irksome labour; and on occasion of desperate resistance, to hang or shoot them. But I will not *sell* them.

Bodies of men, or women, then (and much more, as I said before, their souls), must not be bought or sold. Neither must land, nor water, nor air.

Yet all these may on certain terms be bound, or secured in possession, to particular persons under certain conditions. For instance, it may be proper at a certain time, to give a man permission to possess land, as you give him permission to marry; and farther, if he wishes it and works for it, to secure to him the land needful for his life, as you secure his wife to him; and make both utterly his own, without in the least admitting his

right to buy other people's wives, or fields, or to sell his own.

And the right action of a State respecting its land is, indeed, to secure it in various portions to those of its citizens who deserve to be trusted with it, according to their respective desires, and proved capacities; and after having so secured it to each, to exercise only such vigilance over his treatment of it as the State must give also to his treatment of his wife and servants; for the most part leaving him free, but interfering in cases of gross mismanagement or abuse of power. And in the case of great old families, which always ought to be, and in some measure, however decadent, still truly are, the noblest monumental architecture of the kingdom, living temples of sacred tradition and hero's religion, so much land ought to be granted to them in perpetuity as may enable them to live thereon with all circumstances of state and outward nobleness; *but their income must in no wise be derived from the rents of it*, nor must they be occupied (even in the most distant or subordinately administered methods), in the exaction of rents. That is not noblemen's work. Their income must be fixed, and paid them by the State, as the King's is.

So far from their land being to them a source of income, it should be on the whole costly to them, being

kept over great part of it in conditions of natural grace, which return no rent but their loveliness; and the rest made, at whatever cost, exemplary in perfection of such agriculture as develops the happiest peasant life; agriculture which, as I will show you hereafter, must reject the aid of all mechanism except that of instruments guided solely by the human hand, or by animal, or directly natural forces; and which, therefore, cannot compete for profitableness with agriculture carried on by aid of machinery.

And now for the occupation of this body of men, maintained at fixed perennial cost of the State.

You know I said I should want no soldiers of special skill or pugnacity, for all my boys would be soldiers. But I assuredly want *captains* of soldiers, of special skill and pugnacity. And also, I said I should strongly object to the appearance of any lawyers in my territory. Meaning, however, by lawyers, people who live by arguing about law—not people appointed to administer law; and people who live by eloquently misrepresenting facts—not people appointed to discover and plainly represent them.

Therefore, the youth of this landed aristocracy are to be trained in my schools to these two great callings, not *by* which, but *in* which, they are to live.

They are to be trained, all of them, in perfect science

of war, and in perfect science of essential law. And from their body are to be chosen the captains and the judges of England, its advocates, and generally its State officers, all such functions being held for fixed pay (as already our officers of the Church and army are paid), and no function connected with the administration of law ever paid by casual fee. And the head of such family should, in his own right, having passed due (and high) examination in the science of law, and not otherwise, be a judge, law-ward or Lord, having jurisdiction both in civil and criminal cases, such as our present judges have, after such case shall have been fully represented before, and received verdict from, a jury, composed exclusively of the middle or lower orders, and in which no member of the aristocracy should sit. But from the decision of these juries, or from the Lord's sentence, there should be a final appeal to a tribunal, the highest in the land, held solely in the King's name, and over which, in the capital, the King himself should preside, and therein give judgment on a fixed number of days in each year; and in other places and at other times, Judges appointed by election (under certain conditions) out of any order of men in the State (the election being national, not provincial), and all causes brought before these judges should be decided, without appeal, by their own authority; not by

juries. This, then, recasting it for you into brief view, would be the entire scheme of State authorities:—

1. The King: exercising, as part both of his prerogative and his duty, the office of a supreme judge at stated times in the central court of appeal of his kingdom.

2. Supreme judges appointed by national election; exercising sole authority in courts of final appeal.

3. Ordinary judges, holding the office hereditarily under conditions; and with power to add to their number (and liable to have it increased if necessary by the King's appointment): the office of such judges being to administer the national laws under the decision of juries.

4. State officers charged with the direction of public agency in matters of public utility.

5. Bishops, charged with offices of supervision and aid, to family by family, and person by person.

6. The officers of war, of various ranks.

7. The officers of public instruction, of various ranks.

I have sketched out this scheme for you somewhat prematurely, for I would rather have conducted you to it step by step, and as I brought forward the reasons for the several parts of it; but it is on other grounds desirable that you should have it to refer to, as I go on.

Without depending anywise upon nomenclature, yet

holding it important as a sign and record of the meanings of things, I may tell you further that I should call the elected supreme Judges, "Princes;" the hereditary Judges, "Lords;" and the officers of public guidance, "Dukes;" and that the social rank of these persons would be very closely correspondent to that implied by such titles under our present constitution; only much more real and useful. And in conclusion of this letter, I will but add, that if you, or other readers, think it idle of me to write or dream of such things; as if any of them were in our power, or within possibility of any near realisation, and above all, vain to write of them to a workman at Sunderland: you are to remember what I told you at the beginning, that I go on with this part of my subject in some fulfilment of my long-conceived plan, too large to receive at present any deliberate execution from my failing strength (being the body of the work to which "*Munera Pulveris*" was intended merely for an introduction); and that I address it to you because I know that the working men of England must for some time be the only body to which we can look for resistance to the deadly influence of monied power.

I intend, however, to write to you at this moment one more letter, partly explanatory of minor details necessarily omitted in this, and chiefly of the proper

office of the soldier; and then I must delay the completion of even this poor task until after the days have turned, for I have quite other work to do in the brightness of the full-opened spring.

P.S.—As I have used somewhat strong language, both here and elsewhere, of the equivocations of the economists on the subject of rent, I had better refer you to one characteristic example. You will find in paragraph 5th and 6th of Book II., chap. 2, of Mr. Mill's "Principles," that the right to tenure of land is based, by his admission, only on the proprietor's being its improver.

Without pausing to dwell on the objection that land cannot be improved beyond a certain point, and that, at the reaching of that point, farther claim to tenure would cease, on Mr. Mill's principle,—take even this admission, with its proper subsequent conclusion, that "in no sound theory of private property was it ever contemplated that the proprietor of land should be merely a sinecurist quartered on it." Now, had that conclusion been farther followed, it would have compelled the admission that all rent was unjustifiable which normally maintained any person in idleness; which is indeed the whole truth of the matter. But Mr. Mill instantly retreats from this perilous admission; and after three or four pages of discussion (quite accurate

for *its* part) of the limits of power in management of the land itself (which apply just as strictly to the peasant proprietor as to the cottier's landlord), he begs the whole question at issue in one brief sentence, slipped cunningly into the middle of a long one which appears to be telling all the other way, and in which the fatal assertion (of the right to rent) nestles itself, as if it had been already proved,—thus I italicise the unproved assertion in which the venom of the entire falsehood is concentrated.

“Even in the case of cultivated land, a man whom, though only one among millions, the law permits to hold thousands of acres as his single share, is not entitled to think that all this is given to him to use and abuse, and deal with it as if it concerned nobody but himself. *The rents or profits which he can obtain from it are his, and his only;* but with regard to the land, in everything which he abstains from doing, he is morally bound, and should, whenever the case admits, be legally compelled, to make his interest and pleasure consistent with the public good.”

I say, this sentence in italics is slipped *cunningly* into the long sentence, as if it were of no great consequence; and above I have expressed my belief that Mr. Mill's equivocations on this subject are wilful. It is

a grave accusation; but I cannot, by any stretch of charity, attribute these misrepresentations to absolute dulness and bluntness of brain, either in Mr. Mill or his follower, Mr. Fawcett. Mr. Mill is capable of immense involuntary error; but his involuntary errors are usually owing to his seeing only one or two of the many sides of a thing: not to 'obscure sight of the side he *does* see. Thus, his "Essay on Liberty" only takes cognisance of facts that make for liberty, and of none that make for restraint. But in its statement of all that can be said for liberty, it is so clear and keen that I have myself quoted it before now as the best authority on that side. And if arguing in favour of Rent, absolutely, and with clear explanation of what it was, he had then defended it with all his might, I should have attributed to him only the honest shortsightedness of partisanship; but when I find his defining sentences full of subtle entanglement and reserve—and that reserve held throughout his treatment of this particular subject—I cannot, whether I utter the suspicion or not, keep the sense of wilfulness in the misrepresentation from remaining in my mind. And if there be indeed ground for this blame, and Mr. Mill, for fear of fostering political agitation,* *has* disguised what he knows to be

* With at last the natural consequences of cowardice,—nitroglyc

facts about rent, I would ask him as one of the leading members of the Jamaica Committee, which is the greater crime, boldly to sign warrant for the sudden death of one man, known to be an agitator, in the immediate outbreak of such agitation, or by equivocation in a scientific work, to sign warrants for the deaths of thousands of men in slow misery, for *fear* of an agitation which has not begun; and if begun, would be carried on by debate, not by the sword?

erine and fireballs! Let the upper classes speak the truth about themselves boldly, and they will know how to defend themselves fearlessly. It is equivocation in principle, and dereliction from duty, which melt at last into tears in a mob's presence.—(Dec. 16th, 1867.)

Letter 24.

The Office of the Soldier.

April 22, 1867.

I MUST once more deprecate your probable supposition that I bring forward this ideal plan of State government, either with any idea of its appearing, to our present public mind, practicable even at a remote period, or with any positive and obstinate adherence to the particular form suggested. There are no wiser words among the many wise ones of the most rational and keen-sighted of old English men of the world, than these:—

“For forms of government let fools contest;
That which is best administered is best.”

For, indeed, no form of government is of any use among bad men; and any form will work in the hands of the good; but the essence of all government among good men is this, that it is mainly occupied in the *production and recognition of human worth*, and in the detection and extinction of human unworthiness; and every Government which produces and recognizes worth, will also inevitably use the worth it has found to govern with;

and therefore fall into some approximation to such a system as I have described. And, as I told you, I do not contend for names, nor particular powers—though I state those which seem to me most advisable; on the contrary, I know that the precise extent of authorities must be different in every nation at different times, and ought to be so, according to their circumstances and character; and all that I assert with confidence is the necessity, within afterwards definable limits, of *some such* authorities as these; that is to say,

I. An *observant* one:—by which all men shall be looked after and taken note of.

II. A *helpful* one, from which those who need help may get it.

III. A *prudential* one, which shall not let people dig in wrong places for coal, nor make railroads where they are not wanted; and which shall also, with true providence, insist on their digging in right places for coal, in a safe manner, and making railroads where they *are* wanted.

IV. A *martial* one, which will punish knaves, and make idle persons work.

V. An *instructive* one, which shall tell everybody what it is their duty to know, and be ready pleasantly to answer questions if anybody asks them.

VI. A *deliberate* and *decisive* one, which shall judge by law, and amend or make law ;

VII. An *exemplary* one, which shall show what is loveliest in the art of life.

You may divide or name those several offices as you will, or they may be divided in practice as expediency may recommend ; the plan I have stated merely puts them all into the simplest forms and relations.

You see I have just defined the martial power as that "which punishes knaves and makes idle persons work." For that is indeed the ultimate and perennial soldiery ; that is the essential warrior's office to the end of time. "There is no discharge in that war." To the compelling of sloth, and the scourging of sin, the strong hand will have to address itself as long as this wretched little dusty and volcanic world breeds nettles, and spits fire. The soldier's office at present is indeed supposed to be the defence of his country against other countries ; but that is an office which—Utopian as you may think the saying—will soon now be extinct. I say so fearlessly, though I say it with wide war threatened, at this moment, in the East and West. For observe what the standing of nations on their defence really means. It means that, but for such armed attitude, each of them would go and rob the other ; that is to say, that the majority of active

persons in every nation are at present—thieves. I am very sorry that this should still be so; but it will not be so long. National exhibitions, indeed, will not bring peace; but national education will, and that is soon coming. I can judge of this by my own mind, for I am myself naturally as covetous a person as lives in this world, and am as eagerly-minded to go and steal some things the French have got, as any housebreaker could be, having clue to attractive spoons. If I could by military incursion carry off Paul Veronese's "Marriage in Cana," and the "Venus Victrix" and the "Hours of St. Louis," it would give me the profoundest satisfaction to accomplish the foray successfully; nevertheless, being a comparatively educated person, I should most assuredly not give myself that satisfaction, though there were not an ounce of gunpowder, nor a bayonet; in all France. I have not the least mind to rob anybody, however much I may covet what they have got; and I know that the French and British public may and will, with many other publics, be at last brought to be of this mind also; and to see farther that a nation's real strength and happiness do not depend on properties and territories, nor on machinery for their defence; but on their getting such territory as they *have*, well filled with none but respectable persons. Which is a way of *infinitely* enlarging one's

territory, feasible to every potentate; and dependent no wise on getting Trent turned, or Rhine-edge reached.

Not but that, in the present state of things, it may often be soldiers' duty to seize territory, and hold it strongly; but only from banditti, or savage and idle persons.

Thus, both Calabria and Greece ought to have been irresistibly occupied long ago. Instead of quarrelling with Austria about Venice, the Italians ought to have made a truce with her for ten years, on condition only of her destroying no monuments, and not taxing Italians more than Germans; and then thrown the whole force of their army on Calabria, shot down every bandit in it in a week, and forced the peasantry of it into honest work on every hill side, with stout and immediate help from the soldiers in embanking streams, building walls, and the like; and Italian finance would have been a much pleasanter matter for the King to take account of by this time; and a fleet might have been floating under Garganus strong enough to sweep every hostile sail out of the Adriatic, instead of a disgraced and useless remnant of one, about to be put up to auction.

And similarly, *we* ought to have occupied Greece instantly, when they asked us, whether Russia liked it or not; given them an English king, made good roads for

them, and stout laws; and kept them, and their hills and seas, with righteous shepherding of Arcadian fields, and righteous ruling of Salaminian wave, until they could have given themselves a Greek king of men again; and obeyed him, like men.

April 24.

It is strange that just before I finish work for this time, there comes the first real and notable sign of the victory of the principles I have been fighting for, these seven years. It is only a newspaper paragraph, but it means much. Look at the second column of the 11th page of yesterday's *Pall Mall Gazette*. The paper has taken a wonderful fit of misprinting lately (unless my friend John Simon has been knighted on his way to Weimar, which would be much too right and good a thing to be a likely one); but its straws of talk mark which way the wind blows perhaps more early than those of any other journal—and look at the question it puts in that page, “Whether political economy be the sordid and materialistic science some account it, or almost the noblest on which thought can be employed?” Might not you as well have determined that question a little while ago, friend Public? and known what political economy *was*, before you talked so much about it?

But, hark, again—"Ostentation, parental pride, and a host of moral" (immoral?) "qualities must be recognized as among the springs of industry; political economy should not ignore these, but, to discuss them, it must abandon its pretensions to the precision of a pure science."

Well done the *Pall Mall*! Had it written "Prudence and parental affection," instead of "Ostentation and parental pride," "must be recognized among the springs of industry," it would have been still better; and it would then have achieved the expression of a part of the truth, which I put into clear terms in the first sentence of "Unto this Last," in the year 1862—which it has thus taken five years to get half way into the public's head.

"Among the delusions which at different periods have possessed themselves of the minds of large masses of the human race, perhaps the most curious—certainly the least creditable—is the modern *soi-disant* science of political economy, based on the idea that an advantageous code of social action may be determined, irrespectively of the influence of social affection."

Look also at the definition of skill, p. 87.

"Under the term 'skill' I mean to include the united force of experience, intellect, and passion, in their

operation on manual labour, and under the term 'passion' to include the entire range of the moral feelings."

I say half way into the public's head, because you see, a few lines further on, the *Pall Mall* hopes for a pause "half way between the rigidity of Ricardo and the sentimentality of Ruskin."

With one hand on their pocket, and the other on their heart! Be it so for the present; we shall see how long this statuesque attitude can be maintained; meantime, it chanced strangely—as several other things have chanced while I was writing these notes to you—that they should have put in that sneer (two lines before) at my note on the meaning of the Homeric and Platonic sirens, at the very moment when I was doubting whether I would or would not tell you the significance of the last song of Ariel in the *Tempest*.

I had half-determined not, but now I shall. And this was what brought me to think of it—

Yesterday afternoon I called on Mr. H. C. Sorby, to see some of the results of an inquiry he has been following all last year, into the nature of the colouring matter of leaves and flowers.

You most probably have heard (at all events, may with little trouble hear) of the marvellous power which

chemical analysis has received in recent discoveries respecting the laws of light.

My friend showed me the rainbow of the rose, and the rainbow of the violet, and the rainbow of the hyacinth, and the rainbow of forest leaves being born, and the rainbow of forest leaves dying.

And, last, he showed me the rainbow of blood. It was but the three hundredth part of a grain, dissolved in a drop of water: and it cast its measured bars, for ever recognisable now to human sight, on the chord of the seven colours. And no drop of that red rain can now be shed, so small as that the stain of it cannot be known, and the voice of it heard out of the ground.

But the seeing these flower colours, and the iris of blood together with them, just while I was trying to gather into brief space the right laws of war, brought vividly back to me my dreaming fancy of long ago, that even the trees of the earth were "capable of a kind of sorrow, as they opened their innocent leaves in vain for men; and along the dells of England her beeches cast their dappled shades only where the outlaw drew his bow, and the king rode his careless chase; amidst the fair defiles of the Apennines, the twisted olive-trunks hid the ambushes of treachery, and on their meadows, day

by day, the lilies which were white at the dawn were washed with crimson at sunset."

And so also now this chance word of the daily journal, about the sirens, brought to my mind the divine passage in the *Cratylus* of Plato, about the place of the dead:—

"And none of those who dwell there desire to depart thence,—no, not even the Sirens; but even they, the seducers, are there themselves beguiled, and they who lulled all men, themselves laid to rest—they, and all others—such sweet songs doth death know how to sing to them."

So also the Hebrew.

"And desire shall fail, because man goeth to his long home." For you know I told you the Sirens were not pleasures, but desires; being always represented in old Greek art as having human faces, with birds' wings and feet, and sometimes with eyes upon their wings; and there are not two more important passages in all literature, respecting the laws of labour and of life, than those two great descriptions of the Sirens in Homer and Plato, —the Sirens of death, and Sirens of eternal life, representing severally the earthly and heavenly desires of men; the heavenly desires singing to the motion of circles of the spheres, and the earthly on the rocks of

fatallest shipwreck. A fact which may indeed be regarded "sentimentally," but it is also a profoundly important politico-economical one.

And now for Shakespeare's song.

You will find if you look back to the analysis of it, given in "Munera Pulveris," that the whole play of the *Tempest* is an allegorical representation of the powers of true, and therefore spiritual, Liberty, as opposed to true, and therefore carnal and brutal Slavery. There is not a sentence nor a rhyme, sung or uttered by Ariel or Caliban, throughout the play, which has not this undermeaning.

Now the fulfilment of all human liberty is in the peaceful inheritance of the earth, with its "herb yielding seed, and fruit tree yielding fruit" after his kind; the pasture, or arable, land, and the blossoming, or wooded and fruited, land uniting the final elements of life and peace, for body and soul. Therefore, we have the two great Hebrew forms of benediction, "His eyes shall be red with wine, and his teeth white with milk," and again, "Butter and honey shall he eat, that he may know to refuse the evil and choose the good." And as the work of war and sin has always been the devastation of this blossoming earth, whether by spoil or idleness, so the work of peace and virtue is also that of the first

day of Paradise, to “Dress it and to keep it.” And that will always be the song of perfectly accomplished Liberty, in her industry, and rest, and shelter from troubled thoughts in the calm of the fields, and gaining, by migration, the long summer’s day from the shortening twilight:—

Where the bee sucks, there suck I;
In a cowslip’s bell I lie;
There I couch when owls do cry.
On the bat’s back I do fly,
After summer merrily;
Merrily, merrily, shall I live now
Under the blossom that hangs on the bough.

And the security of this treasure to all the poor, and not the ravage of it down the valleys of the Shenandoah, is indeed the true warrior’s work. But, that they may be able to restrain vice rightly, soldiers must themselves be first in virtue; and that they may be able to compel labour sternly, they must themselves be first in toil, and their spears, like Jonathan’s at Beth-aven, enlightenere of the eyes.

Letter 25.

Of inevitable Distinction of Rank, and necessary Submission to Authority.—The Meaning of Pure-Heartedness.—Conclusion.

I WAS interrupted yesterday, just as I was going to set my soldiers to work; and to-day, here comes the pamphlet you promised me, containing the Debates about Church-going, in which I find so interesting a text for my concluding letter that I must still let my soldiers stand at ease for a little while. Look at its twenty-fifth page, and you will find, in the speech of Mr. Thomas (carpenter), this beautiful explanation of the admitted change in the general public mind, of which Mr. Thomas, for his part, highly approves (the getting out of the unreasonable habit of paying respect to anybody). There were many reasons to Mr. Thomas's mind why the working classes did not attend places of worship; one was, that "the parson was regarded as an object of reverence. In the little town he came from, if a poor man did not make a bow to the parson he was a marked man. This was no doubt wearing away to a great extent" (the base habit of

making bows), “because, the poor man was beginning to get education, and to think for himself. It was only while the priest kept the press from him that he was kept ignorant, and was compelled to bow, as it were, to the parson. . . . It was the case all over England. The clergyman seemed to think himself something superior. Now he (Mr. Thomas) did not admit there was any inferiority” (laughter, audience throughout course of meeting mainly in the right), “expect, perhaps, on the score of his having received a classical education, which the poor man could not get.”

Now, my dear friend, here is the element which is the veriest devil of all that have got into modern flesh; this infidelity of the nineteenth-century St. Thomas in there being anything better than himself, alive; coupled, as it always is, with the farther resolution—if unwillingly convinced of the fact—to seal the Better living thing down again out of his way, under the first stone handy. I had not intended, till we entered on the second section of our inquiry, namely, into the influence of gentleness (having hitherto, you see, been wholly concerned with that of justice), to give you the clue out of our dilemma about equalities produced by education; but by this speech of our superior carpenter’s, I am driven into it at once, and it is perhaps as well.

The speech is not, observe, without its own root of truth at the bottom of it, nor at all, as I think, ill intended by the speaker; but you have in it a clear instance of what I was saying in the sixteenth of these letters,—that, education *was desired by the lower orders because they thought it would make them upper orders*, and be a leveller and effacer of distinctions. They will be mightily astonished, when they really get it, to find that it is, on the contrary, the fatallest of all discerners and enforcers of distinctions; piercing, even to the division of the joints and marrow, to find out wherein your body and soul are less, or greater, than other bodies and souls, and to sign deed of separation with unequivocal seal.

Education is, indeed, of all differences not divinely appointed, an instant effacer and reconciler. Whatever is undivinely poor, it will make rich; whatever is undivinely maimed, and halt, and blind, it will make whole, and equal, and seeing. The blind and the lame arc to it as to David at the siege of the Tower of the Kings, “hated of David’s soul.” But there are other divinely appointed differences, eternal as the ranks of the everlasting hills, and as the strength of their ceaseless waters. And these, education does *not* do away with; but measures, manifests, and employs.

In the handful of shingle which you gather from the

sea-beach, which the indiscriminate sea, with equality of fraternal foam, has only educated to be, every one, round, you will see little difference between the noble and mean stones. But the jeweller's trenchant education of them will tell you another story. Even the meanest will be better for it, but the noblest so much better that you can class the two together no more. The fair veins and colours are all clear now, and so stern is Nature's intent regarding this, that not only will the polish show which is best, but the best will take the most polish. You shall not merely see they have more virtue than the others, but see that more of virtue more clearly; and the less virtue there is, the more dimly you shall see what there is of it.

And the law about education, which is sorrowfullest to to vulgar pride, is this—that all its gains are at compound interest; so that, as our work proceeds, every hour throws us farther behind the greater men with whom we began on equal terms. Two children go to school hand in hand, and spell for half an hour over the same page. Through all their lives, never shall they spell from the same page more. One is presently a page ahead,—two pages, ten pages,—and evermore, though each toils equally, the interval enlarges—at birth nothing, at death, infinite.

And by this you may recognise true education from

false. False education is a delightful thing, and warms you, and makes you every day think more of yourself. And true education is a deadly cold thing, with a Gorgon's head on her shield, and makes you every day think worse of yourself.

Worse in two ways, also, more's the pity. It is perpetually increasing the personal sense of ignorance and the personal sense of fault. And this last is the truth which is at the bottom of the common evangelical notions about conversion, and which the Devil has got hold of, and hidden, until, instead of seeing and confessing personal ignorance and fault, as compared with the sense and virtue of others, people see nothing but corruption in human nature, and shelter their own sins under accusation of their race (the worst of all assertions of equality and fraternity). And so they avoid the blessed and strengthening pain of finding out wherein they are fools, as compared with other men, by calling everybody else a fool too; and avoid the pain of discerning their own faults, by vociferously claiming their share in the great capital of original sin.

I must also, therefore, tell you here what properly ought to have begun the next following section of our subject—the point usually unnoticed in the parable of the Prodigal Son.

First, have you observed that all Christ's main teachings, by direct order, by earnest parable, and by his own permanent emotion, regard the use and misuse of *money*? We might have thought, if we had been asked what a divine teacher was most likely to teach, that he would have left inferior persons to give directions about money; and himself spoken only concerning faith and love, and the discipline of the passions, and the guilt of the crimes of soul against soul. But not so. He speaks in general terms of these. But he does not speak parables about them for all men's memory, nor permit himself fierce indignation against them, in all men's sight. The Pharisees bring Him an adulteress. He writes her forgiveness on the dust of which He had formed her. Another, despised of all for known sin, He recognized as a giver of unknown love. But he acknowledges no love in buyers and sellers in His house. One should have thought there were people in that house twenty times worse than they;—Caiaphas and his like—false priests, false prayer-makers, false leaders of the people—who needed putting to silence, or to flight, with darkest wrath. But the scourge is only against the traffickers and thieves. The two most intense of all the parables: the two which lead the rest in love and in terror (this of the Prodigal, and of Dives) relate, both of them, to management of riches.

The practical order given to the only seeker of advice, of whom it is recorded that Christ "loved him," is briefly about his property. "Sell that thou hast."

And the arbitrament of the day of Last Judgment is made to rest wholly, neither on belief in God, nor in any spiritual virtue in man, nor on freedom from stress of stormy crime, but on this only, "I was an hungered and ye gave me drink; naked, and ye clothed me; sick, and ye came unto me."

Well, then, the first thing I want you to notice in the parable of the Prodigal Son (and the last thing which people usually *do* notice in it), is—that it is about a Prodigal! He begins by asking for his share of his father's goods; he gets it, carries it off, and wastes it. It is true that he wastes it in riotous living, but you are not asked to notice in what kind of riot: He spends it with harlots—but it is not the harlotry which his elder brother accuses him of mainly, but of having devoured his father's living. Nay, it is not the sensual life which he accuses himself of—or which the manner of his punishment accuses him of. But the *wasteful* life. It is not said that he had become debauched in soul, or diseased in body, by his vice; but that at last he would fain have filled his belly with husks, and could not. It is not said that he was struck with remorse for the conse-

quences of his evil passions, but only that he remembered there was bread enough and to spare, even for the servants, at home.

Now, my friend, do not think I want to extenuate sins of passion (though, in very truth, the sin of Magdalene is a light one compared to that of Judas); but observe, sins of passion, if of *real* passion, are often the errors and back-falls of noble souls; but prodigality is mere and pure selfishness, and essentially the sin of an ignoble or undeveloped creature; and I would rather, ten times rather, hear of a youth that (certain degrees of temptation and conditions of resistance being understood) he had fallen into any sin you chose to name, of all the mortal ones, than that he was in the habit of running bills which he could not pay:

Farther, though I hold that the two crowning and most accursed sins of the society of this present day are the carelessness with which it regards the betrayal of women, and brutality with which it suffers the neglect of children, both these head and chief crimes, and all others, are rooted first in abuse of the laws, and neglect of the duties, concerning wealth. And thus the love of money, with the parallel (and, observe, *mathematically commensurate* looseness in management of it), the "mal tener," followed necessarily by the "mal dare," is, indeed, the root of all evil

Then, secondly, I want you to note that when the prodigal comes to his senses, he complains of nobody but himself, and speaks of no unworthiness but his own. He says nothing against any of the women who tempted him—nothing against the citizen who left him to feed on husks—nothing of the false friends of whom “no man gave unto him”—above all, nothing of the “corruption of human nature,” or the corruption of things in general. He says that *he himself* is unworthy, as distinguished from honourable persons, and that *he himself* has sinned, as distinguished from righteous persons. And *that* is the hard lesson to learn, and the beginning of faithful lessons. All right and fruitful humility, and purging of Heart, and seeing of God, is in that. It is easy to call yourself the chief of sinners, expecting every sinner round you to decline—or return—the compliment; but learn to measure the real degrees of your own relative baseness, and to be ashamed, not in heaven’s sight, but in man’s sight; and redemption is indeed begun. Observe the phrase, I have sinned “*against* heaven,” against the great law of that, and *before* thee, visibly degraded before my human sire and guide, unworthy any more of being esteemed of his blood, and desirous only of taking the place I deserve among his servants.

Now, I do not doubt but that I shall set many a

reader's teeth on edge by what he will think my carnal and material rendering of this "beautiful" parable. But I am just as ready to spiritualize it as he is, provided I am sure first that we understand it. If we want to understand the parable of the sower, we must first think of it as of literal husbandry; if we want to understand the parable of the prodigal, we must first understand it as of literal prodigality. And the story has also for us a precious lesson in this literal sense of it, namely this, which I have been urging upon you throughout these letters, that all redemption must begin in subjection, and in the recovery of the sense of Fatherhood and authority, as all ruin and desolation begin in the loss of that sense. The lost son began by claiming his rights. He is found when he resigns them. He is lost by flying from his father, when his father's authority was only paternal. He is found by returning to his father, and desiring that his authority may be absolute, as over a hired stranger.

And this is the practical lesson I want to leave with you, and all other working men.

You are on the eve of a great political crisis; and every rascal with a tongue in his head will try to make his own stock out of you. Now this is the test you must try them with. Those that say to you, "Stand up for your

rights—get your division of living—be sure that you are as well off as others, and have what they have!—don't let any man dictate to you—have not you all a right to your opinion?—are you not all as good as everybody else?—let us have no governors, or fathers—let us all be free and alike.” Those, I say, who speak thus to you, take Nelson's rough order for—and hate them as you do the Devil, for they *are* his ambassadors. But those, the few, who have the courage to say to you, “My friends, you and I, and all of us, have somehow got very wrong; we've been hardly treated, certainly; but here we are in a piggery, mainly by our own fault, hungry enough, and for ourselves, anything but respectable; we *must* get out of this; there are certainly laws we may learn to live by, and there are wiser people than we in the world, and kindly ones, if we can find our way to them; and an infinitely wise and kind Father, above all of them and us, if we can but find our way to *Him*, and ask *Him* to take us for servants, and put us to any work He will, so that we may never leave *Him* more.” The people who will say that to you, and (for by *no* saying, but by their fruits, only, you shall finally know them) who are themselves orderly and kindly, and do their own business well,—take *those* for your guides, and trust them; on ice and rock alike, tie yourselves well together with them, and with much scrup-

tiny, and cautious walking (perhaps nearly as much back as forward, at first), you will verily get off the glacier, and into meadow land, in God's time.

I meant to have written much to you respecting the meaning of that word "hired servants," and to have gone on to the duties of soldiers, for you know "Soldier" means a person who is paid to fight with regular pay—literally with "soldi" or "sous"—the "penny a day" of the vineyard labourers: but I can't now: only just this much, that our whole system of work must be based on the nobleness of soldiership—so that we shall all be soldiers of either ploughshare or sword; and literally, all our actual and professed soldiers, whether professed for a time only, or for life, must be kept to hard work of hand, when not in actual war; their honour consisting in being set to services of more pain and danger than others; to lifeboat service; to redeeming of ground from furious rivers or sea—or mountain ruin; to subduing wild and unhealthy land, and extending the confines of colonies in the front of miasm and famine, and savage races.

And much of our harder home work must be done in a kind of soldiership, by bands of trained workers sent from place to place and town to town; doing with strong and sudden hand what is needed for help, and setting all things in more prosperous courses for the future.

Of all which I hope to speak in its proper place, after we know what offices the higher arts of gentleness have among the lower ones of force, and how their prevalence may gradually change spear to pruning-hook, over the face of all the earth.

And now—but one word more—either for you, or any other readers who may be startled at what I have been saying as to the peculiar stress laid by the Founder of our religion on right dealing with wealth. Let them be assured that it is with no fortuitous choice among the attributes or powers of evil, that “Mammon” is assigned for the direct adversary of the Master whom they are bound to serve. You cannot, by any artifice of reconciliation, be God’s soldier, and his. Nor while the desire of gain is within your heart, can any true knowledge of the Kingdom of God come there. No one shall enter its stronghold,—no one receive its blessing, except, “he that hath clean hands and a pure heart;” clean hands, that have done no cruel deed;—pure heart, that knows no base desire. And, therefore, in the highest spiritual sense that can be given to words, be assured, not respecting the literal temple of stone and gold, but of the living temple of your body and soul, that no redemption, nor teaching, nor hallowing, will be anywise possible for it, until these two verses have been, for it also, fulfilled:—

“And He went into the temple, and began to cast out them that sold therein, and them that bought. And He taught daily in the temple.”

APPENDICES

APPENDIX 1.

Page 18.—*Expenditure on Science and Art.*

THE following is the passage referred to. The fact it relates is so curious, and so illustrative of our national interest in science, that I do not apologize for the repetition :—

“Two years ago there was a collection of the fossils of Solenhofen to be sold in Bavaria; the best in existence, containing many specimens unique for perfectness, and one, unique as an example of a species (a whole kingdom of unknown living creatures being announced by that fossil). This collection, of which the mere market worth, among private buyers, would probably have been some thousand or twelve hundred pounds, was offered to the English nation for seven hundred: but we would not give seven hundred, and the whole series would have been in the Munich museum at this moment, if Professor Owen* had not, with loss of his own time, and patient tormenting of the British public in the person of its representatives, got leave to give four hundred pounds at once, and himself become answerable for the other three!—which the said public will doubtless pay him eventually, but sulkily, and caring nothing about the matter all the while; only always ready to cackle if any credit comes of it. Consider, I beg of you, arithmetically, what this fact means. Your annual expenditure for public purposes (a third of it for mili-

* I originally stated this fact without Professor Owen's permission; which, of course, he could not with propriety have granted had I asked it; but I considered it so important that the public should be aware of the fact, that I did what seemed to me right though rude.

tary apparatus) is at least fifty millions. Now seven hundred pounds is to fifty million pounds roughly, as seven pence to two thousand pounds. Suppose then, a gentleman of unknown income, but whose wealth was to be conjectured from the fact that he spent two thousand a year on his park walls and footmen only, professes himself fond of science; and that one of his servants comes eagerly to tell him that an unique collection of fossils, giving clue to a new era of creation, is to be had for the sum of sevenpence sterling; and that the gentleman, who is fond of science, and spends two thousand a year on his park, answers after keeping his servant waiting several months, 'Well! I'll give you fourpence for them, if you will be answerable for the extra threepence yourself till next year!'

APPENDIX 2.

Page 29.—*Legislation of Frederick the Great.*

THE following are the portions of Mr. Dixon's letters referred to:—

"Well, I am now busy with Frederick the Great; I am not now astonished that Carlyle calls him Great, neither that this work of his should have had such a sad effect upon him in producing it, when I see the number of volumes he must have had to wade through to produce such a clear terse set of utterances; and yet I do not feel the work as a book likely to do a reader of it the good that some of his other books will do. It is truly awful to read these battles after battles, lies after lies, called Diplomacy; it's fearful to read all this, and one wonders how he that set himself to this,—He, of all men,—could have the rare patience to produce such a laboured, heart-rending piece of work. Again, when one reads of the stupidity, the shameful waste of our monies by our forefathers, to see that our National Debt (the curse to our labour now, the millstone to our commerce, to our fair chance of competition in our day) thus created, and for what? Even Carlyle cannot tell; then how are we to tell? Now, who will deliver us? that is the question; who will help us in those days of *idle or no work*, while our foreign neighbours have plenty and are

actually selling their produce to our men of capital cheaper than we can make it! House-rent getting dearer, taxes getting dearer, rates, clothing, food, &c. Sad times, my master, do seem to have fallen upon us. And the cause of nearly all this lies embedded in that Frederick; and yet, so far as I know of it, no critic has yet given an exposition of such laying there. For our behoof, is there no one that will take this, that there lies so woven in with much other stuff so sad to read, to any man that does not believe man was made to fight alone, to be a butcher of his fellow man? Who will do this work, or piece of work, so that all who care to know how it is that our debt grew so large, and a great deal more that we ought to know?—that clearly is one great reason why the book was written and was printed. Well, I hope some day all this will be clear to our people, and some man or men will arise and sweep us clear of these hindrances, these sad drawbacks to the vitality of our work in this world.”

“57, Nile Street, Sunderland, Feb. 7, 1867.

“DEAR SIR,—I beg to acknowledge the receipt of two letters as additions to your books, which I have read with deep interest, and shall take care of them, and read them over again, so that I may thoroughly comprehend them, and be able to think of them for future use. I myself am not fully satisfied with our co-operation, and never have been; it is too much tinged with the very elements that they complain of in our present systems of trade—selfishness. I have for years been trying to direct the attention of the editor of the *Co-operator* to such evils that I see in it. Now, further, I may state that I find you and Carlyle seem to agree quite on the idea of the *Masterhood* qualification. There, again, I find you both feel and write as all working men consider just. I can assure you there is not an honest, noble, working man that would not by far serve under such *masterhood*, than be the employée or workman of a co-operative store. Working men do not as a rule make good masters; neither do they treat each other with that courtesy as a noble master treats his working man. George Fox shadows forth some such treatment that Friends ought to make law and guidance for their working men and

slaves, such as you speak of in your letters. I will look the passage up, as it is quite to the point, so far as I now remember it. In Vol. VI. of *Frederick the Great*, I find a great deal there that I feel quite certain, if our Queen or Government could make law, thousands of English working men would hail it with such a shout of joy and gladness as would astonish the Continental world. These changes suggested by Carlyle, and placed before the thinkers of England, are the noblest, the truest utterances on real kinghood, that I have ever read; the more I think over them, the more I feel the truth, the justness, and also the fitness of them, to our nation's present dire necessities; yet this is the man, and these are the thoughts of his, that our critics seem never to see, or if seen, don't think worth printing or in any way wisely directing the attention of the public thereto, alas! All this and much more fills me with such sadness that I am driven almost to despair. I see from the newspapers, Yorkshire, Lancashire, and other places are sternly endeavouring to carry out the short-time movement until such times as trade revives, and I find the masters and men seem to adopt it with a good grace and friendly spirit. I also beg to inform you I see a Mr. Morley, a large manufacturer at Nottingham, has been giving pensions to all his old workmen. I hope such a noble example will be followed by other wealthy masters. It would do more to make a master loved, honoured, and cared for, than thousands of pounds expended in other ways. The Government Savings Bank is one of the wisest acts of late years done by our Government. I, myself, often wish the Government held all our banks instead of private men; that would put an end to false speculations, such as we too often in the provinces suffer so severely by, so I hail with pleasure and delight the shadowing forth by you of these noble plans for the future: I feel glad and uplifted to think of the good that such teaching will do for us all.

"Yours truly,

"THOMAS DIXON."

"57, Nile Street, Sunderland, Feb. 24, 1867.

"DEAR SIR,—I now give you the references to *Frederick the Great*, Vol. VI.: Land Question, 365 page, where he increases the number

of small farmers to 4,000 (202, 204). English soldiers and T. C.'s remarks on our system of purchase, &c. His law (620, 623, 624), State of Poland and how he repaired it (487, 488, 489, 490). I especially value the way he introduced all kinds of industries therein, and so soon changed the chaos into order. Again, the schoolmasters also are given (not yet in England, says T. C.). Again, the use he made of 15,000*l.* surplus in Brandenburg; how it was applied to better his staff of masters. To me, the Vol. VI. is one of the wisest pieces of modern thought in our language. I only wish I had either your power, C. Kingsley, Maurice, or some such able pen-generalship, to illustrate and show forth all the wise teaching on law, government, and social life I see in it, and shining like a star through all its pages. I feel also the truth of all you have written, and will do all I can to make such men or women that care for such thoughts, see it, or read it. I am copying the letters as fast and as well as I can, and will use my utmost endeavour to have them done that justice to they merit.

“Yours truly,

“THOMAS DIXON.”

APPENDIX 3.

Page 32.—*Effect of Modern Entertainments on the Mind of Youth.*

THE letter of the *Times* correspondent referred to contained an account of one of the most singular cases of depravity ever brought before a criminal court; but it is unnecessary to bring any of its details under the reader's attention, for nearly every other number of our journals has of late contained some instances of atrocities before unthought of, and, it might have seemed, impossible to humanity. The connection of these with the modern love of excitement in the sensation novel and drama may not be generally understood, but it is direct and constant; all furious pursuit of pleasure ending in actual desire of horror and delight in death. I entered into some

fuller particulars on this subject in a lecture given in the spring at the Royal Institution, which will be shortly published in a form accessible to the readers of these Letters, and I therefore give no extracts from it.

APPENDIX 4.

Page 68.—*Drunkenness as the Cause of Crime.*

THE following portions of Mr. Dixon's letter referred to, will be found interesting:—

“DEAR SIR,—Your last letters I think will arouse the attention of thinkers more than any of the series, it being on topics they in general feel more interested in than the others, especially as in these you do not assail their pockets so much as in the former ones. Since you seem interested with the notes or rough sketches on gin, G * * * of Dublin was the man I alluded to as making his money by drink, and then giving the results of such traffic to repair the Cathedral of Dublin. It was thousands of pounds. I call such charity robbing Peter to pay Paul! Immense fortunes are made in the *Liquor Traffic*, and I will tell you why; it is all paid for in cash, at least such as the poor people buy; they get credit for clothes, butchers' meat, groceries, &c., while they give the gin-palace keeper *cash*; they never begrudge the price of a glass of gin or beer, they never haggle over *its* price, never once think of doing that; but in the purchase of almost every other article they haggle and begrudge its price. To give you an idea of its profits—there are houses here whose average weekly takings in cash at their bars, is 50*l.*, 60*l.*, 70*l.*, 80*l.*, 90*l.*, to 150*l.* per week! Nearly all the men of intelligence in it, say it is the curse of the *working classes*. Men whose earnings are, say 20*s.* to 30*s.* per week, spend on the average 3*s.* to 6*s.* per week (some even 10*s.*). It's my mode of living to supply these houses with corks, that makes me see so much of the drunkenness; and that is the cause why I never really cared for *my trade*, seeing the misery that was entailed on my fellow men and women by the use of this

stuff. Again, a house with a licence to sell spirit, wine, and ale, to be consumed on the premises, is worth two to three times more money than any other class of property. One house here worth nominally 140*l.* sold the other day for 520*l.*; another one worth 200*l.* sold for 800*l.* I know premises with a licence that were sold for 1,300*l.*, and then sold again two years after for 1,800*l.*; another place was rented for 50*l.* now rents at 100*l.*—this last is a house used by working men and labourers chiefly! No, I honour men like *Sir W. Trevelyn*, that are teetotallers, or total abstainers, as an example to poor men, and to prevent his work people being tempted, will not allow any public-house on his estate. If our land had a few such men it would help the cause. We possess one such a man here, a banker. I feel sorry to say the progress of temperance is not so great as I would like to see it. The only religious body that approaches to your ideas of political economy is Quakerism as taught by George Fox. Carlyle seems deeply tinged with their teachings. *Silence* to them is as valuable as to him. Again, why should people howl and shriek over the law that the Alliance is now trying to carry out in our land, called the Permissive Bill? If we had just laws we then would not be so miserable or so much annoyed now and then with cries of Reform and cries of Distress. I send you two pamphlets;—one gives the working man's reasons why he don't go to church; in it you will see a few opinions expressed very much akin to those you have written to me. The other gives an account how it is the poor Indians have died of *Famine*, simply because they have destroyed the very system of Political Economy, or one having some approach to it, that you are now endeavouring to direct the attention of thinkers to in our country. The *Sesame and Lilies* I have read as you requested. I feel now fully the aim and object you have in view in the Letters, but I cannot help directing your attention to that portion where you mention or rather exclaim against the Florentines pulling down their *Ancient Walls* to build a *Boulevard*. That passage is one that would gladden the hearts of all true *Italians*, especially men that love *Italy and Dante!*

APPENDIX 5.

Page 69.—*Abuse of Food.*

PARAGRAPHS cut from *Manchester Examiner* of March 15, 1867:—

“A PARISIAN CHARACTER.—A celebrated character has disappeared from the Palais Royal. RÉNÉ Lartique was a Swiss, and a man of about sixty. He actually spent the last fifteen years in the Palais Royal—that is to say, he spent the third of his life at dinner. Every morning at ten o'clock he was to be seen going into a restaurant (usually Tissat's), and in a few moments was installed in a corner, which he only quitted about three o'clock in the afternoon, after having drunk at least six or seven bottles of different kinds of wine. He then walked up and down the garden till the clock struck five, when he made his appearance again at the same restaurant, and always at the same place. His second meal, at which he drank quite as much as at the first, invariably lasted till half-past nine. Therefore, he devoted nine hours a day to eating and drinking. His dress was most wretched—his shoes broken, his trousers torn, his paletôt without any lining, and patched, his waistcoat without buttons, his hat a rusty red from old age, and the whole surmounted by a dirty white beard. One day he went up to the *comptoir*, and asked the presiding divinity there to allow him to run in debt for one day's dinner. He perceived some hesitation in complying with the request, and immediately called one of the waiters, and desired him to follow him. He went into the office, unbuttoned a certain indispensable garment, and, taking off a broad leather belt, somewhat startled the waiter by displaying two hundred gold pieces, each worth one hundred francs. Taking up one of them, he tossed it to the waiter, and desired him to pay whatever he owed. He never again appeared at that restaurant, and died a few days ago of indigestion.”

“REVENGE IN A BALL-ROOM.—A distressing event lately took place at Castellaz, a little commune of the Alpes-Maritimes, near Mentone. All the young people of the place being assembled in a

dancing-room, one of the young men was seen to fall suddenly to the ground, whilst a young woman, his partner, brandished a poniard, and was preparing to inflict a second blow on him, having already desperately wounded him in the stomach. The author of the crime was at once arrested. She declared her name to be Maria P—, twenty-one years of age, and added that she had acted from a motive of revenge, the young man having led her astray formerly with a promise of marriage, which he had never fulfilled. In the morning of that day she had summoned him to keep his word, and, upon his refusal, had determined on making the dancing-room the scene of her revenge. She was at first locked up in the prison of Mentone, and afterwards sent on to Nice. The young man continues in an alarming state."

APPENDIX 6.

Page 74.—*Law of Property.*

THE following is the paragraph referred to:—

"The first necessity of all economical government is to secure the unquestioned and unquestionable working of the great law of property—that a man who works for a thing shall be allowed to get it, keep it, and consume it, in peace; and that he who does not eat his cake to-day, shall be seen, without grudging, to have his cake to-morrow. This, I say, is the first point to be secured by social law; without this, no political advance, nay, no political existence, is in any sort possible. Whatever evil, luxury, iniquity, may seem to result from it, this is nevertheless the first of all equities: and to the enforcement of this, by law and by police-truncheon, the nation must always primarily set its mind—that the cupboard-door may have a firm lock to it, and no man's dinner be carried off by the mob, on its way home from the baker's."

APPENDIX 7.

Page 79.—*Ambition of Bishops.*

“NEARLY all the evils in the Church have arisen from bishops desiring power more than light. They want authority, not outlook. Whereas their real office is not to rule, though it may be vigorously to exhort and rebuke; it is the king’s office to rule; the bishop’s office is to oversee the flock, to number it, sheep by sheep, to be ready always to give full account of it. Now it is clear he cannot give account of the souls, if he has not so much as numbered the bodies, of his flock. The first thing, therefore, that a bishop has to do is at least to put himself in a position in which, at any moment, he can obtain the history, from childhood, of every living soul in his diocese, and of its present state. Down in that back street, Bill and Nancy knocking each other’s teeth out!—Does the bishop know all about it? Has he had his eye upon them? Can he circumstantially explain to us how Bill got into the habit of beating Nancy about the head? If he cannot, he is no bishop, though he had a mitre as high as Salisbury steeple; he is no bishop—he has sought to be at the helm instead of the mast-head; he has no sight of things. ‘Nay,’ you say, ‘it is not his duty to look after Bill in the “back street.”’ What! the fat sheep that have full fleeces—you think it is only those he should look after, while (go back to your Milton) ‘the hungry sheep look up, and are not fed,’ besides what the grim wolf, ‘with privy paw’ (bishops knowing nothing about it) ‘daily devours apace, and nothing said?’ ‘But that’s not our idea of a bishop.’ Perhaps not; but it was St. Paul’s, and it was Milton’s. They may be right, or we may be; but we must not think we are reading either one or the other by putting our meaning into their words.”—*Sesame and Lilies*, p. 45.

APPENDIX 8.

Page 84.—*Regulations of Trade.*

I PRINT portions of two letters of Mr. Dixon's in this place one referring to our former discussion respecting the sale of votes.

"57, Nile Street, Sunderland, March 21, 1867.

"I only wish I could write in some tolerable good style, so that I could idealize, or rather realize to folks, the life, and love, and marriage of a working man and his wife. It is in my opinion a working man that really does know what a true wife is, for his every want, his every comfort in life depends on her; and his children's home, their daily lives and future lives, are shaped by her. Napoleon wisely said, 'France needs good mothers more than brave men. Good mothers are the makers or shapers of good and brave men.' I cannot say that these are the words, but it is the import of his speech on the topic. We have a saying amongst us: 'The man may spend and money lend, if his wife be *ought*,'—*i. e.*, good wife;—'but he may work and try to save, but will have *nought*, if his wife be nought,'—*i. e.*, bad or thriftless wife.

"Now, since you are intending to treat of the working man's parliament and its duties, I will just throw out a few suggestions of what I consider should be the questions or measures that demand an early inquiry into and debate on. That guilds be established in every town, where masters and men may meet, so as to avoid the temptations of the public-house and *drink*. And then, let it be made law that every lad should serve an apprenticeship of not less than seven years to a trade or art, before he is allowed to be a member of such guild; also, that all wages be based on a rate of so much *per hour*, and not day, as at present; and let every man prove his workmanship before such a guild; and then allow to him such payment per hour as his craft merits. Let there be three grades, and then let there be trials of skill in workmanship every year; and then, if the workman of the third grade prove that he has made progress in his craft, reward him accord-

ingly. Then, before a lad is put to any trade, why not see what he is naturally fitted for? Combe's book, entitled *The Constitution of Man*, throws a good deal of truth on to these matters. Now, here are two branches of the science of life that, so far, have never once been given trial of in this way. We certainly use them after a *crime* has been committed, but not till then.

"Next to that, cash payment for all and everything needed in life. *Credit is a curse* to him that gives it, and he that takes it. He that lives by credit lives in general carelessly. If there was no credit, people then would have to live on what they earned! Then, after that, the Statute of Limitations of Fortune you propose. By the hour system, not a single man *need be idle*; it would give employment to all, and even two hours per day would realize more to a man than *breaking stones*. Thus you would make every one self-dependent—also no fear of being out of work altogether. Then let there be a Government fund for all the savings of the working man. I am afraid you will think this a wild, discursive sort of a letter.

"Yours truly,

"THOMAS DIXON."

"I have read your references to the *Times* on 'Bribery.' Well, that has long been my own opinion; they simply have a vote to sell, and sell it the same way as they sell potatoes, or a coat, or any other saleable article. Voters generally say, 'What does this gentleman want in Parliament? Why, to help himself and his family or friends; he does not spend all the money he spends over his election for pure good of his country! No: it's to benefit his pocket, to be sure.' 'Why should I not make a penny with my vote, as well as he does with his in Parliament?' I think that if the system of canvassing or election agents were done away with, and all personal canvassing for votes entirely abolished, it would help to put down bribery. Let each gentleman send to the electors his political opinions in a circular, and then let papers be sent, or cards, to each elector, and then let them go and record their votes in the same way they do for a councillor in the Corporation. It would save a great deal of expense, and prevent

those scenes of drunkenness so common in our towns during elections *Bewick's opinions* of these matters are quite to the purpose, I think (see page 201 of *Memoir*). Again, respecting the Paris matter referred to in your last letter, I have read it. Does it not manifest plainly enough that Europeans are also in a measure possessed with that same *demoniacal spirit like the Japanese?*"

APPENDIX 9.

Page 144.—*Greatness Coal-begotten.*

"HERE is a bit of paper in my hand,* a good one too, and an honest one; quite representative of the best common public thought of England at this moment; and it is holding forth in one of its leaders upon our 'social welfare,'—upon our 'vivid life,'—upon the 'political supremacy of Great Britain.' And what do you think all these are owing to? To what our English sires have done for us, and taught us, age after age? No: not to that. To our honesty of heart, or coolness of head, or steadiness of will? No: not to these. To our thinkers, or our statesmen, or our poets, or our captains, or our martyrs, or the patient labour of our poor? No: not to these; or at least not to these in any chief measure. Nay, says the journal, 'more than any agency, it is the cheapness and abundance of our coal which have made us what we are.' If it be so, then 'ashes to ashes' be our epitaph! and the sooner the better. I tell you, gentlemen of England, if ever you would have your country breathe the pure breath of heaven again, and receive again a soul into her body,

* A saying of Baron Liebig's, quoted at the head of a leader on the same subject in the *Daily Telegraph* of January 11, 1866, summarily digests and presents the maximum folly of modern thought in this respect. "Civilization," says the Baron, "is the economy of power, and English power is coal." Not altogether so, my chemical friend. Civilization is the making of civil persons, which is a kind of distillation of which alembics are incapable, and does not at all imply the turning of a small company of gentlemen into a large company of ironmongers. And English power (what little of it may be left) is by no means coal, but in lead, of that which, "when the whole world turns to coal, then chiefly lives."

instead of rotting into a carcase, blown up in the belly with carbonic acid (and great that way), you must think, and feel, for your England, as well as fight for her: you must teach her that all the true greatness she ever had, or ever can have, she won while her fields were green and her faces ruddy;—that greatness is still possible for Englishmen, even though the ground be not hollow under their feet, nor the sky black over their heads.”—*Crown of Wild Olive*, p. 200.

APPENDIX 10.

THE following letter did not form part of the series written to Mr. Dixon; but is perhaps worth reprinting. I have not the date of the number of the *Gazette* in which it appeared, but it was during the tailors' strike in London.

“*To the Editor of the Pall Mall Gazette:*

“SIR,—In your yesterday's article on strikes you have very neatly and tersely expressed the primal fallacy of modern political economy—to wit, that ‘the value of any piece of labour cannot be defined’—and that ‘all that can be ascertained is simply whether any man can be got to do it for a certain sum.’ Now, sir, the ‘value’ of any piece of labour, that is to say, the quantity of food and air which will enable a man to perform it without losing actually any of his flesh or his nervous energy, is as absolutely fixed a quantity as the weight of powder necessary to carry a given ball a given distance. And within limits varying by exceedingly minor and unimportant circumstances, it is an ascertainable quantity. I told the public this five years ago—and under pardon of your politico-economical contributors—it is not a ‘sentimental,’ but a chemical, fact.

“Let any half-dozen of recognized London physicians state in precise terms the quantity and kind of food, and space of lodging, they consider approximately necessary for the healthy life of a labourer in any given manufacture, and the number of hours he may, without shortening his life, work at such business daily if so sustained.

“And let all masters be bound to give their men a choice between an order for that quantity of food and lodging, or such wages as the market may offer for that number of hours' work.

“Proper laws for the maintenance of families would require further concession—but, in the outset, let but *this* law of wages be established, and if then we have any more strikes you may denounce them without one word of remonstrance either from sense or sensibility.

“I am, Sir,

“Your faithful servant,

“JOHN RUSKIN.”

P R E F A C E

THE greater part of the following treatise remains in the exact form in which it was read at Manchester; but the more familiar passages of it, which were trusted to extempore delivery, have been since written with greater explicitness and fulness than I could give them in speaking; and a considerable number of notes are added, to explain the points which could not be sufficiently considered in the time I had at my disposal in the lecture-room.

Some apology may be thought due to the reader, for an endeavour to engage his attention on a subject of which no profound study seems compatible with the work in which I am usually employed. But profound study is not, in this case, necessary either to writer or reader, while accurate study, up to a certain point, is necessary for us all. Political economy means, in plain English, nothing more than "citizens' economy;" and its first principles ought, therefore, to be understood by all who mean to take the responsibility of citizens, as those of household economy by all who take the responsibility of householders. Nor are its first principles in the least obscure: they are, many of them, disagreeable

in their practical requirements, and people in general pretend that they cannot understand, because they are unwilling to obey them; or rather, by habitual disobedience, destroy their capacity of understanding them. But there is not one of the really great principles of the science which is either obscure or disputable—which might not be taught to a youth as soon as he can be trusted with an annual allowance, or to a young lady as soon as she is of age to be taken into counsel by the housekeeper.

I might, with more appearance of justice, be blamed for thinking it necessary to enforce what everybody is supposed to know. But this fault will hardly be found with me, while the commercial events recorded daily in our journals, and still more the explanations attempted to be given of them, show that a large number of our so-called merchants are as ignorant of the nature of money as they are reckless, unjust, and unfortunate in its employment.

The statements of economical principle given in the text, though I know that most, if not all, of them are accepted by existing authorities on the science, are not supported by references, because I have never read any author on political economy, except Adam Smith, twenty years ago. Whenever I have taken up any modern book upon this subject, I have usually found it encumbered with inquiries into accidental or minor commercial results, for the pursuit of which an ordinary reader could have no leisure, and, by the complication of which, it seemed to me, the authors themselves had been not unfrequently prevented from seeing to the root of the business.

Finally, if the reader should feel inclined to blame me for too sanguine a statement of future possibilities in political practice, let him consider how absurd it would have appeared in the days of Edward I. if the present state of social economy had been then predicted as necessary, or even described as possible. And I believe the advance from the days of Edward I. to our own, great as it is confessedly, consists, not so much in what we have actually accomplished, as in what we are now enabled to conceive.

POLITICAL ECONOMY OF ART.

LECTURE I.

AMONG the various characteristics of the age in which we live, as compared with other ages of this not yet *very* experienced world, one of the most notable appears to me to be the just and wholesome contempt in which we hold poverty. I repeat, the *just* and *wholesome* contempt; though I see that some of my hearers look surprised at the expression. I assure them, I use it in sincerity; and I should not have ventured to ask you to listen to me this evening, unless I had entertained a profound respect for wealth—true wealth, that is to say; for, of course, we ought to respect neither wealth nor anything else that is false of its kind: and the distinction between real and false wealth is one of the points on which I shall have a few words presently to say to you. But true wealth I hold, as I said, in great honour; and sympathize, for the most part, with that extraordinary feeling of the present age which publicly pays this honour to riches. I cannot, however, help noticing how extraordinary it is, and how this epoch of ours differs from all bygone epochs in having no philosophical nor religious worshippers of the ragged godship of poverty. In the classical ages, not only were there people who voluntarily lived in tubs, and who used gravely to maintain the superiority of tub-life to town-life, but the Greeks and Latins

scem to have looked on these eccentric, and I do not scruple to say, absurd people, with as much respect as we do upon large capitalists and landed proprietors; so that really, in those days, no one could be described as purse proud, but only as empty-purse proud. And no less distinct than the honour which those curious Greek people pay to their conceited poor, is the disrespectful manner in which they speak of the rich; so that one cannot listen long either to them, or to the Roman writers who imitated them, without finding oneself entangled in all sorts of plausible absurdities; hard upon being convinced of the uselessness of collecting that heavy yellow substance which we call gold, and led generally to doubt all the most established maxims of political economy. Nor are matters much better in the middle ages. For the Greeks and Romans contented themselves with mocking at rich people, and constructing merry dialogues between Charon and Diogenes or Menippus, in which the ferrymen and the cynic rejoiced together as they saw kings and rich men coming down to the shore of Acheron, in lamenting and lamentable crowds, casting their crowns into the dark waters, and searching, sometimes in vain, for the last coin out of all their treasures that could ever be of use to them. But these Pagan views of the matter were indulgent, compared with those which were held in the middle ages, when wealth seems to have been looked upon by the best of men not only as contemptible, but as criminal. The purse round the neck is, then, one of the principal signs of condemnation in the pictured inferno; and the Spirit of Poverty is revered with subjection of heart, and faithfulness of affection, like that of a loyal knight for his lady, or a loyal subject for his queen. And truly, it requires some boldness to quit ourselves of these feelings, and to confess their partiality or their error, which, nevertheless, we are certainly bound to do. For wealth is simply one of the greatest powers which can be entrusted to human hands: a power, not indeed to be envied, because it seldom

makes us happy; but still less to be abdicated or despised; while, in these days, and in this country, it has become a power all the more notable, in that the possessions of a rich man are not represented, as they used to be, by wedges of gold or coffers of jewels, but by masses of men variously employed, over whose bodies and minds the wealth, according to its direction, exercises harmful or helpful influence, and becomes, in that alternative, Mammon either of Unrighteousness or of Righteousness.

Now, it seemed to me that since, in the name you have given to this great gathering of British pictures, you recognise them as Treasures—that is, I suppose, as part and parcel of the real wealth of the country—you might not be uninterested in tracing certain commercial questions connected with this particular form of wealth. Most persons express themselves as surprised at its quantity; not having known before to what an extent good art had been accumulated in England: and it will, therefore, I should think, be held a worthy subject of consideration, what are the political interests involved in such accumulations; what kind of labour they represent, and how this labour may in general be applied and economized, so as to produce the richest results.

Now, you must have patience with me, if in approaching the specialty of this subject, I dwell a little on certain points of general political science already known or established: for though thus, as I believe, established, some which I shall have occasion to rest arguments on are not yet by any means universally accepted; and therefore, though I will not lose time in any detailed defence of them, it is necessary that I should distinctly tell you in what form I receive, and wish to argue from them; and this the more, because there may perhaps be a part of my audience who have not interested themselves in political economy, as it bears on ordinary fields of labour, but may yet wish to hear in what way its principles can be applied to Art. I shall, therefore, take leave to trespass on your patience with a few elementary statements in

the outset, and with the expression of some general principles, here and there, in the course of our particular inquiry.

To begin, then, with one of these necessary truisms: all economy, whether of states, households, or individuals, may be defined to be the art of managing labour. The world is so regulated by the laws of Providence, that a man's labour, well applied, is always amply sufficient to provide him during his life with all things needful to him, and not only with those, but with many pleasant objects of luxury; and yet farther, to procure him large intervals of healthful rest and serviceable leisure. And a nation's labour, well applied, is in like manner amply sufficient to provide its whole population with good food and comfortable habitation; and not with those only, but with good education besides, and objects of luxury, art treasures, such as these you have around you now. But by those same laws of Nature and Providence, if the labour of the nation or of the individual be misapplied, and much more if it be insufficient,—if the nation or man be indolent and unwise,—suffering and want result, exactly in proportion to the indolence and improvidence,—to the refusal of labour, or to the misapplication of it. Wherever you see want, or misery, or degradation, in this world about you, there, be sure, either industry has been wanting, or industry has been in error. It is not accident, it is not Heaven-commanded calamity, it is not the original and inevitable evil of man's nature, which fill your streets with lamentation, and your graves with prey. It is only that, when there should have been providence, there has been waste; when there should have been labour, there has been lasciviousness; and wilfulness, when there should have been subordination.¹

Now, we have warped the word "economy" in our English language into a meaning which it has no business whatever to bear. In our use of it, it constantly signifies merely sparing or

¹ Proverbs xiii. 23, "Much food is in the tillage of the poor, but there is that is destroyed for want of judgment."

saving; economy of money means saving money—economy of time, sparing time, and so on. But that is a wholly barbarous use of the word—barbarous in a double sense, for it is not English, and it is bad Greek; barbarous in a treble sense, for it is not English, it is bad Greek, and it is worse sense. Economy no more means saving money than it means spending money. It means, the administration of a house; its stewardship; spending or saving that is, whether money or time, or anything else, to the best possible advantage. In the simplest and clearest definition of it, economy, whether public or private, means the wise management of labour; and it means this mainly in three senses: namely, first, *applying* your labour rationally; secondly, *preserving* its produce carefully; lastly, *distributing* its produce seasonably.

I say first, applying your labour rationally; that is, so as to obtain the most precious things you can, and the most lasting things, by it: not growing oats in land where you can grow wheat, nor putting fine embroidery on a stuff that will not wear. Secondly, preserving its produce carefully; that is to say, laying up your wheat wisely in storehouses for the time of famine, and keeping your embroidery watchfully from the moth; and lastly, distributing its produce seasonably; that is to say, being able to carry your corn at once to the place where the people are hungry, and your embroideries to the places where they are gay; so fulfilling in all ways the Wise Man's description, whether of the queenly housewife or queenly nation: "She riseth while it is yet night, and giveth meat to her household, and a portion to her maidens. She maketh herself coverings of tapestry, her clothing is silk and purple. Strength and honour are in her clothing, and she shall rejoice in time to come."

Now, you will observe that in this description of the perfect economist, or mistress of a household, there is a studied expression of the balanced division of her care between the two great objects of utility and splendour; in her right hand, food and flax,

for life and clothing ; in her left hand, the purple and the needle-work, for honour and for beauty. All perfect housewifery or national economy is known by these two divisions ; wherever either is wanting, the economy is imperfect. If the motive of pomp prevails, and the care of the national economist is directed only to the accumulation of gold, and of pictures, and of silk and marble, you know at once that the time must soon come when all these treasures shall be scattered and blasted in national ruin. If, on the contrary, the element of utility prevails, and the nation disdains to occupy itself in any wise with the arts of beauty or delight, not only a certain quantity of its energy calculated for exercise in those arts alone must be entirely wasted, which is bad economy, but also the passions connected with the utilities of property become morbidly strong, and a mean lust of accumulation, merely for the sake of accumulation, or even of labour, merely for the sake of labour, will banish at least the serenity and the morality of life, as completely, and perhaps more ignobly, than even the lavishness of pride, and the lightness of pleasure. And similarly, and much more visibly, in private and household economy, you may judge always of its perfectness by its fair balance between the use and the pleasure of its possessions. You will see the wise cottager's garden trimly divided between its well-set vegetables, and its fragrant flowers ; you will see the good housewife taking pride in her pretty table-cloth, and her glittering shelves, no less than in her well-dressed dish, and her full storeroom ; the care in her countenance will alternate with gaiety ; and though you will reverence her in her seriousness, you will know her best by her smile.

Now, as you will have anticipated, I am going to address you, on this and our succeeding evening, chiefly on the subject of that economy which relates rather to the garden than the farm-yard. I shall ask you to consider with me the kind of laws by which we shall best distribute the beds of our national garden, and raise in it the sweetest succession of trees pleasant to the sight, and (in no

forbidden sense) to be desired to make us wise. But, before proceeding to open this specialty of our subject, let me pause for a few moments to plead with you for the acceptance of that principle of government or authority which must be at the root of all economy, whether for use or for pleasure. I said, a few minutes ago, that a nation's labour, well applied, was amply sufficient to provide its whole population with good food, comfortable clothing, and pleasant luxury. But the good, instant, and constant application is everything. We must not, when our strong hands are thrown out of work, look wildly about for want of something to do with them. If ever we feel that want, it is a sign that all our household is out of order. Fancy a farmer's wife, to whom one or two of her servants should come at twelve o'clock at noon, crying that they had got nothing to do; that they did not know what to do next: and fancy still farther, the said farmer's wife looking hopelessly about her rooms and yard, they being all the while considerably in disorder, not knowing where to set the spare hand-maidens to work, and at last complaining bitterly that she had been obliged to give them their dinner for nothing. That's the type of the kind of political economy we practise too often in England. Would you not at once assert of such a mistress that she knew nothing of her duties? and would you not be certain, if the household were rightly managed, the mistress would be only too glad at any moment to have the help of any number of spare hands; that she would know in an instant what to set them to;—in an instant what part of to-morrow's work might be most serviceably forwarded, what part of next month's work most wisely provided for, or what new task of some profitable kind undertaken? and when the evening came, and she dismissed her servants to their recreation or their rest, or gathered them to the reading round the work-table, under the eaves in the sunset, would you not be sure to find that none of them had been overtasked by her, just because none had been left idle; that everything had been accomplished because all

had been employed; that the kindness of the mistress had aided her presence of mind, and the slight labour had been entrusted to the weak, and the formidable to the strong; and that as none had been dishonoured by inactivity, so none had been broken by toil?

Now, the precise counterpart of such a household would be seen in a nation in which political economy was rightly understood. You complain of the difficulty of finding work for your men. Depend upon it the real difficulty rather is to find men for your work. The serious question for you is not how many you have to feed, but how much you have to do; it is our inactivity, not our hunger, that ruins us: let us never fear that our servants should have a good appetite—our wealth is in their strength, not in their starvation. Look around this island of yours, and see what you have to do in it. The sea roars against your harbourless cliffs—you have to build the breakwater, and dig the port of refuge; the unclean pestilence ravins in your streets—you have to bring the full stream from the hills, and to send the free winds through the thoroughfare; the famine blanches your lips and eats away your flesh—you have to dig the moor and dry the marsh, to bid the morass give forth instead of engulfing, and to wring the honey and oil out of the rock. These things, and thousands such, we have to do, and shall have to do constantly, on this great farm of ours; for do not suppose that it is anything else than that. Precisely the same laws of economy which apply to the cultivation of a farm or an estate apply to the cultivation of a province or of an island. Whatever rebuke you would address to the improvident master of an ill-managed patrimony, precisely that rebuke we should address to ourselves, so far as we leave our population in idleness and our country in disorder. What would you say to the lord of an estate who complained to you of his poverty and disabilities, and, when you pointed out to him that his land was half of it overrun with weeds, and that his fences were all in ruin, and that his cattle-sheds were roofless, and his labourers lꝝ-

ing under the hedges faint for want of food, he answered to you that it would ruin him to weed his land or to roof his sheds—that those were too costly operations for him to undertake, and that he knew not how to feed his labourers nor pay them? Would you not instantly answer, that instead of ruining him to weed his fields, it would save him; that his inactivity was his destruction, and that to set his labourers to work was to feed them? Now you may add acre to acre, and estate to estate, as far as you like, but you will never reach a compass of ground which shall escape from the authority of these simple laws. The principles which are right in the administration of a few fields, are right also in the administration of a great country from horizon to horizon: idleness does not cease to be ruinous because it is extensive, nor labour to be productive because it is universal.

Nay, but you reply, there is one vast difference between the nation's economy and the private man's: the farmer has full authority over his labourers; he can direct them to do what is needed to be done, whether they like it or not; and he can turn them away if they refuse to work, or impede others in their working, or are disobedient, or quarrelsome. There is this great difference; it is precisely this difference on which I wish to fix your attention, for it is precisely this difference which you have to do away with. We know the necessity of authority in farm, or in fleet, or in army; but we commonly refuse to admit it in the body of the nation. Let us consider this point a little.

In the various awkward and unfortunate efforts which the French have made at the development of a social system, they have at least stated one true principle, that of fraternity or brotherhood. Do not be alarmed; they got all wrong in their experiments, because they quite forgot that this fact of fraternity implied another fact quite as important—that of paternity, or fatherhood. That is to say, if they were to regard the nation as one family, the condition of unity in that family consisted no less in their hav-

ing a head, or a father, than in their being faithful and affectionate members, or brothers. But we must not forget this, for we have long confessed it with our lips, though we refuse to confess it in our lives. For half an hour every Sunday we expect a man in a black gown, supposed to be telling us truth, to address us as brethren, though we should be shocked at the notion of any brotherhood existing among us out of church. And we can hardly read a few sentences on any political subject without running a chance of crossing the phrase "paternal government," though we should be utterly horror-struck at the idea of governments claiming anything like a father's authority over us. Now, I believe those two formal phrases are in both instances perfectly binding and accurate, and that the image of the farm and its servants which I have hitherto used, as expressing a wholesome national organization, fails only of doing so, not because it is too domestic, but because it is not domestic enough; because the real type of a well-organized nation must be presented, not by a farm cultivated by servants who wrought for hire, and might be turned away if they refused to labour, but by a farm in which the master was a father, and in which all the servants were sons; which implied, therefore, in all its regulations, not merely the order of expediency, but the bonds of affection and responsibilities of relationship; and in which all acts and services were not only to be sweetened by brotherly concord, but to be enforced by fatherly authority.¹

Observe, I do not mean in the least that we ought to place such an authority in the hands of any one person, or of any class, or body of persons. But I do mean to say that as an individual who conducts himself wisely must make laws for himself which at some time or other may appear irksome or injurious, but which, precisely at the time they appear most irksome, it is most necessary he should obey, so a nation which means to conduct itself

¹ See note 1st, in Addenda.

wisely, must establish authority over itself, vested either in kings, councils, or laws, which it must resolve to obey, even at times when the law or authority appears irksome to the body of the people, or injurious to certain masses of it. And this kind of national law has hitherto been only judicial; contented, that is, with an endeavour to prevent and punish violence and crime; but, as we advance in our social knowledge, we shall endeavour to make our government paternal as well as judicial; that is, to establish such laws and authorities as may at once direct us in our occupations, protect us against our follies, and visit us in our distresses: a government which shall repress dishonesty, as now it punishes theft; which shall show how the discipline of the masses may be brought to aid the toils of peace, as discipline of the masses has hitherto knit the sinews of battle; a government which shall have its soldiers of the ploughshare as well as its soldiers of the sword, and which shall distribute more proudly its golden crosses of industry—golden as the glow of the harvest, than now it grants its bronze crosses of honour—bronzed with the crimson of blood.

I have not, of course, time to insist on the nature or details of government of this kind; only I wish to plead for your several and future consideration of this one truth, that the notion of Discipline and Interference lies at the very root of all human progress or power; that the "Let alone" principle is, in all things which man has to do with, the principle of death; that it is ruin to him, certain and total, if he lets his land alone—if he lets his fellow-men alone—if he lets his own soul alone. That his whole life, on the contrary, must, if it is healthy life, be continually one of ploughing and pruning, rebuking and helping, governing and punishing; and that therefore it is only in the concession of some great principle of restraint and interference in national action that he can ever hope to find the secret of protection against national degradation. I believe that the masses have a right to claim education from their government; but only so far as they acknow-

ledge the duty of yielding obedience to their government. I believe they have a right to claim employment from their governors; but only so far as they yield to the governor the direction and discipline of their labour; and it is only so far as they grant to the men whom they may set over them the father's authority to check the childishness of national fancy, and direct the waywardness of national energy, that they have a right to ask that none of their distresses should be unrelieved, none of their weaknesses unwatched; and that no grief, nor nakedness, nor peril should exist for them, against which the father's hand was not outstretched, or the father's shield uplifted.¹

Now, I have pressed this upon you at more length than is needful or proportioned to our present purposes of inquiry, because I would not for the first time speak to you on this subject of political economy without clearly stating what I believe to be its first grand principle. But its bearing on the matter in hand is chiefly to prevent you from at once too violently dissenting from me when what I may state to you as advisable economy in art appears to imply too much restraint or interference with the freedom of the patron or artist. We are a little apt, though on

¹ Compare Wordsworth's Essay on the Poor-Law Amendment Bill. I quote one important passage:—But, if it be not safe to touch the abstract question of man's right in a social state to help himself even in the last extremity, may we not still contend for the duty of a Christian government, standing *in loco parentis* towards all its subjects, to make such effectual provision that no one shall be in danger of perishing either through the neglect or harshness of its legislation? Or, waiving this, is it not indisputable that the claim of the State to the allegiance, involves the protection of the subject? And, as all rights in one party impose a correlative duty upon another, it follows that the right of the State to require the services of its members, even to the jeoparding of their lives in the common defence, establishes a right in the people (not to be gainsaid by utilitarians and economists) to public support when, from any cause, they may be unable to support themselves."—(See note 2nd, in Addenda.)

the whole a prudent nation, to act too immediately on our impulses, even in matters merely commercial; much more in those involving continual appeals to our fancies. How far, therefore, the proposed systems or restraints may be advisable, it is for you to judge; only I pray you not to be offended with them merely because they *are* systems and restraints. Do you at all recollect that interesting passage of Carlyle, in which he compares, in this country and at this day, the understood and commercial value of man and horse; and in which he wonders that the horse, with its inferior brains and its awkward hoofiness, instead of handiness, should be always worth so many tens or scores of pounds in the market, while the man, so far from always commanding his price in the market, would often be thought to confer a service on the community by simply killing himself out of their way? Well, Carlyle does not answer his own question, because he supposes we shall at once see the answer. The value of the horse consists simply in the fact of your being able to put a bridle on him. The value of the man consists precisely in the same thing. If you can bridle him, or which is better, if he can bridle himself he will be a valuable creature directly. Otherwise, in a commercial point of view, his value is either nothing, or accidental only. Only, of course, the proper bridle of man is not a leathern one; what kind of texture it is rightly made of, we find from that command, "Be ye not as the horse or as the mule which have no understanding, whose mouths must be held in with bit and bridle." You are not to be without the reins, indeed; but they are to be of another kind; "I will guide thee with mine Eye." So the bridle of man is to be the Eye of God; and if he rejects that guidance, then the next best for him is the horse's and the mule's, which have no understanding; and if he rejects that, and takes the bit fairly in his teeth, then there is nothing more left for him than the blood that comes out of the city, up to the horsebridles.

Quitting, however, at last these general and serious laws of government—or rather bringing them down to our own business in hand—we have to consider three points of discipline in that particular branch of human labour which is concerned, not with procuring of food, but the expression of emotion; we have to consider respecting art; first, how to apply our labour to it; then, how to accumulate or preserve the results of labour; and then, how to distribute them. But since in art the labour which we have to employ is the labour of a particular class of men—men who have special genius for the business, we have not only to consider how to apply the labour, but first of all how to produce the labourer; and thus the question in this particular case becomes fourfold: first, how to get your man of genius; then, how to employ your man of genius; then, how to accumulate and preserve his work in the greatest quantity; and lastly, how to distribute his work to the best national advantage. Let us take up these questions in succession.

I. DISCOVERY.—How are we to get our men of genius: that is to say, by what means may we produce among us, at any given time, the greatest quantity of effective art-intellect? A wide question, you say, involving an account of all the best means of art education. Yes, but I do not mean to go into the consideration of those; I want only to state the few principles which lie at the foundation of the matter. Of these, the first is that you have always to find your artist, not to make him; you can't manufacture him, any more than you can manufacture gold. You can find him, and refine him: you dig him out as he lies nugget-fashion in the mountain-stream; you bring him home; and you make him into current coin, or household plate, but not one grain of him can you originally produce. A certain quantity of art-intellect is born annually in every nation, greater or less according to the nature and cultivation of the nation, or race of men; but a perfectly fixed

quantity annually, not increasable by one grain. You may lose it, or you may gather it; you may let it lie loose in the ravine, and buried in the sands, or you may make kings' thrones of it, and overlay temple gates with it, as you choose; but the best you can do with it is always merely sifting, melting, hammering, purifying—never creating. And there is another thing notable about this artistical gold; not only is it limited in quantity, but in use. You need not make thrones or golden gates with it unless you like, but assuredly you can't do anything else with it. You can't make knives of it, nor armour, nor railroads. The gold won't cut you, and it won't carry you: put it to a mechanical use, and you destroy it at once. It is quite true that in the greatest artists, their proper artistical faculty is united with every other; and you may make use of the other faculties, and let the artistical one lie dormant. For aught I know there may be two or three Leonardo da Vincis employed at this moment in your harbours and railroads: but you are not employing their Leonardesque or golden faculty there, you are only oppressing and destroying it. And the artistical gift in average men is not joined with others; your born painter, if you don't make a painter of him, won't be a first-rate merchant, or lawyer; at all events, whatever he turns out, his own special gift is unemployed by you; and in no wise helps him in that other business. So here you have a certain quantity of a particular sort of intelligence, produced for you annually by providential laws, which you can only make use of by setting it to its own proper work, and which any attempt to use otherwise involves the dead loss of so much human energy. Well then, supposing we wish to employ it, how is it to be best discovered and refined. It is easily enough discovered. To wish to employ it is to discover it. All that you need is, a school of trial¹ in every important town, in which those idle farmers' lads whom their masters never can keep out of mischief, and those stupid

¹ See note 3d, in Addenda.

tailors' 'prentices who are always stitching the sleeves in wrong way upwards, may have a try at this other trade; only this school of trial must not be entirely regulated by formal laws of art education, but must ultimately be the workshop of a good master painter, who will try the lads with one kind of art and another, till he finds out what they are fit for. Next, after your trial school, you want your easy and secure employment, which is the matter of chief importance. For, even on the present system, the boys who have really intense art capacity, generally make painters of themselves; but then, the best half of their early energy is lost in the battle of life. Before a good painter can get employment, his mind has always been embittered, and his genius distorted. A common mind usually stoops, in plastic chill, to whatever is asked of it, and scrapes or daubs its way complacently into public favour.¹ But your great men quarrel with you, and you revenge yourselves by starving them for the first half of their lives. Precisely in the degree in which any painter possesses original genius, is at present the increase of moral certainty that during his early years he will have a hard battle to fight; and that just at the time when his conceptions ought to be full and happy, his temper gentle, and his hopes enthusiastic—just at that most critical period, his heart is full of anxieties and household cares; he is chilled by disappointments, and vexed by injustice; he becomes obstinate in his errors, no less than in his virtues, and the arrows of his aims are blunted, as the reeds of his trust are broken.

What we mainly want, therefore, is a means of sufficient and unagitated employment: not holding out great prizes for which young painters are to scramble; but furnishing all with adequate support, and opportunity to display such power as they possess without rejection or mortification. I need not say that the best

¹ See note 4th, in Addenda.

field of labour of this kind would be presented by the constant progress of public works involving various decorations; and we will presently examine what kind of public works may thus, advantageously for the nation, be in constant progress. But a more important matter even than this of steady employment, is the kind of criticism with which you, the public, receive the works of the young men submitted to you. You may do much harm by indiscreet praise and by indiscreet blame; but remember, the chief harm is always done by blame. It stands to reason that a young man's work cannot be perfect. It *must* be more or less ignorant; it must be more or less feeble; it is likely that it may be more or less experimental, and if experimental, here and there mistaken. If, therefore, you allow yourself to launch out into sudden barking at the first faults you see, the probability is that you are abusing the youth for some defect naturally and inevitably belonging to that stage of his progress; and that you might just as rationally find fault with a child for not being as prudent as a privy councillor, or with a kitten for not being as grave as a cat. But there is one fault which you may be quite sure is unnecessary, and therefore a real and blameable fault: that is haste, involving negligence. Whenever you see that a young man's work is either bold or slovenly, then you may attack it firmly; sure of being right. If his work is bold, it is insolent; repress his insolence: if it is slovenly, it is indolent; repress his indolence. So long as he works in that dashing or impetuous way, the best hope for him is in your contempt: and it is only by the fact of his seeming not to seek your approbation that you may conjecture he deserves it.

But if he does deserve it, be sure that you give it him, else you not only run a chance of driving him from the right road by want of encouragement, but you deprive yourselves of the happiest privilege you will ever have of rewarding his labour. For it is only the young who can receive much reward from men's praise: the old, when they are great, get too far beyond and above you to

care what you think of them. You may urge them then with sympathy, and surround them then with acclamation; but they will doubt your pleasure, and despise your praise. You might have cheered them in their race through the asphodel meadows of their youth; you might have brought the proud, bright scarlet into their faces, if you had but cried once to them "Well done," as they dashed up to the first goal of their early ambition. But now, their pleasure is in memory, and their ambition is in heaven. They can be kind to you, but you never more can be kind to them. You may be fed with the fruit and fulness of their old age, but you were as the nipping blight to them in their blossoming, and your praise is only as the warm winds of autumn to the dying branches.

There is one thought still, the saddest of all, bearing on this withholding of early help. It is possible, in some noble natures, that the warmth and the affections of childhood may remain unchilled, though unanswered; and that the old man's heart may still be capable of gladness, when the long-withheld sympathy is given at last. But in these noble natures it nearly always happens, that the chief motive of earthly ambition has not been to give delight to themselves, but to their parents. Every noble youth looks back, as to the chiefest joy which this world's honour ever gave him, to the moment when first he saw his father's eyes flash with pride, and his mother turn away her head, lest he should take her tears for tears of sorrow. Even the lover's joy, when some worthiness of his is acknowledged before his mistress, is not so great as that, for it is not so pure—the desire to exalt himself in her eyes mixes with that of giving her delight; but he does not need to exalt himself in his parents' eyes: it is with the pure hope of giving them pleasure that he comes to tell them what he has done, or what has been said of him; and therefore he has a purer pleasure of his own. And this purest and best of rewards you keep from him if you can: you feed him in his

tender youth with ashes and dishonour; and then you come to him, obsequious, but too late, with your sharp laurel crown, the dew all dried from off its leaves; and you thrust it into his languid hand, and he looks at you wistfully. What shall he do with it? What can he do, but go and lay it on his mother's grave?

Thus, then, you see that you have to provide for your young men: first, the searching or discovering school; then the calm employment; then the justice of praise: one thing more you have to do for them in preparing them for full service—namely, to make, in the noble sense of the word, gentlemen of them; that is to say, to take care that their minds receive such training, that in all they paint they shall see and feel the noblest things. I am sorry to say, that of all parts of an artist's education this is the most neglected among us; and that even where the natural taste and feeling of the youth have been pure and true, where there was the right stuff in him to make a gentleman of, you may too frequently discern some jarring rents in his mind, and elements of degradation in his treatment of subject, owing to want of gentle training, and of the liberal influence of literature. This is quite visible in our greatest artists, even in men like Turner and Gainsborough; while in the common grade of our second-rate painters the evil attains a pitch which is far too sadly manifest to need my dwelling upon it. Now, no branch of art economy is more important than that of making the intellect at your disposal pure as well as powerful; so that it may always gather for you the sweetest and fairest things. The same quantity of labour from the same man's hand, will, according as you have trained him, produce a lovely and useful work, or a base and hurtful one; and depend upon it, whatever value it may possess, by reason of the painter's skill, its chief and final value, to any nation, depends upon its being able to exalt and refine, as well as to please; and that the picture which most truly deserves the name of an art-treasure, is that which has been painted by a good man.

You cannot but see how far this would lead, if I were to enlarge upon it. I must take it up as a separate subject some other time; only noticing at present that no money could be better spent by a nation than in providing a liberal and disciplined education for its painters, as they advance into the critical period of their youth; and that also, a large part of their power during life depends upon the kind of subjects which you, the public, ask them for, and therefore the kind of thoughts with which you require them to be habitually familiar. I shall have more to say on this head when we come to consider what employment they should have in public buildings.

There are many other points of nearly as much importance as these, to be explained with reference to the development of genius; but I should have to ask you to come and hear six lectures instead of two if I were to go into their detail. For instance, I have not spoken of the way in which you ought to look for those artificers in various manual trades, who, without possessing the order of genius which you would desire to devote to higher purposes, yet possess wit, and humour, and sense of colour, and fancy for form—all commercially valuable as quantities of intellect, and all more or less expressible in the lower arts of iron-work, pottery, decorative sculpture, and such like. But these details, interesting as they are, I must commend to your own consideration, or leave for some future inquiry. I want just now only to set the bearings of the entire subject broadly before you, with enough of detailed illustration to make it intelligible; and therefore I must quit the first head of it here, and pass to the second, namely, how best to employ the genius we discover. A certain quantity of able hands and heads being placed at our disposal, what shall we most advisably set them upon?

II. APPLICATION.—There are three main points the economist has to attend to in this.

First, To set his men to various work.

Secondly, To easy work.

Thirdly, to lasting work.

I shall briefly touch on the first two, for I want to arrest your attention on the last.

I say first, to various work. Supposing you have two men of equal power as landscape painters—and both of them have an hour at your disposal. You would not set them both to paint the same piece of landscape. You would, of course, rather have two subjects than a repetition of one.

Well, supposing them sculptors, will not the same rule hold? You naturally conclude at once that it will; but you will have hard work to convince your modern architects of that. They will put twenty men to work, to carve twenty capitals; and all shall be the same. If I could show you the architects' yards in England just now, all open at once, perhaps you might see a thousand clever men, all employed in carving the same design. Of the degradation and deathfulness to the art-intellect of the country involved in such a habit, I have more or less been led to speak before now; but I have not hitherto marked its definite tendency to increase the price of *work*, as such. When men are employed continually in carving the same ornaments, they get into a monotonous and methodical habit of labour—precisely correspondent to that in which they would break stones, or paint house-walls. Of course, what they do so constantly, they do easily; and if you excite them temporarily by an increase of wages you may get much work done by them in a little time. But, unless so stimulated, men condemned to a monotonous exertion, work—and always, by the laws of human nature, *must* work—only at a tranquil rate, not producing by any means a maximum result in a given time. But if you allow them to vary their designs, and thus interest their heads and hearts in what they are doing, you will find them become eager, first, to get their

ideas expressed, and then to finish the expression of them; and the moral energy thus brought to bear on the matter quickens, and therefore cheapens, the production in a most important degree. Sir Thomas Deane, the architect of the new Museum at Oxford, told me, as I passed through Oxford on my way here, that he found that, owing to this cause alone, capitals of various design could be executed cheaper than capitals of similar design (the amount of hand labour in each being the same) by about 30 per cent.

Well, that is the first way, then, in which you will employ your intellect well; and the simple observance of this plain rule of political economy will effect a noble revolution in your architecture, such as you cannot at present so much as conceive. Then the second way in which we are to guard against waste is by setting our men to the easiest, and therefore the quickest, work which will answer the purpose. Marble, for instance, lasts quite as long as granite, and is much softer to work; therefore, when you get hold of a good sculptor, give him marble to carve—not granite. That, you say, is obvious enough. Yes; but it is not so obvious how much of your workmen's time you waste annually in making them cut glass, after it has got hard, when you ought to make them mould it while it is soft. It is not so obvious how much expense you waste in cutting diamonds and rubies, which are the hardest things you can find, into shapes that mean nothing, when the same men might be cutting sandstone and freestone into shapes that mean something. It is not so obvious how much of the artists' time in Italy you waste, by forcing them to make wretched little pictures for you out of crumbs of stone glued together at enormous cost, when the tenth of the time would make good and noble pictures for you out of water-colour. I could go on giving you almost numberless instances of this great commercial mistake; but I should only weary and confuse you. I therefore commend also this head of our subject to your own

meditation, and proceed to the last I named—the last I shall task your patience with to-night. You know we are now considering how to apply our genius; and we were to do it as economists, in three ways:—

To *various* work;

To *easy* work;

To *lasting* work.

This lasting of the work, then, is our final question.

Many of you may, perhaps, remember that Michael Angelo was once commanded by Pietro di Medici to mould a statue out of snow, and that he obeyed the command.* I am glad, and we have all reason to be glad, that such a fancy ever came into the mind of the unworthy prince, and for this cause: that Pietro di Medici then gave, at the period of one great epoch of consummate power in the arts, the perfect, accurate, and intensest possible type of the greatest error which nations and princes can commit, respecting the power of genius entrusted to their guidance. You had there, observe, the strongest genius in the most perfect obedience; capable of iron independence, yet wholly submissive to the patron's will; at once the most highly accomplished and the most original, capable of doing as much as man could do, in any direction that man could ask. And its governor, and guide, and patron sets it to build a statue in snow—to put itself into the service of annihilation—to make a cloud of itself, and pass away from the earth.

Now this, so precisely and completely done by Pietro di Medici, is what we are all doing, exactly in the degree in which we direct the genius under our patronage to work in more or less perishable materials. So far as we induce painters to work in fading colours, or architects to build with imperfect structure, or in any other way consult only immediate ease and cheapness in the

* See the noble passage on this tradition in "Casa Guidi Windows."

production of what we want, to the exclusion of provident thought as to its permanence and serviceableness in after ages; so far we are forcing our Michael Angelos to carve in snow. The first duty of the economist in art is, to see that no intellect shall thus glitter merely in the manner of hoar-frost; but that it shall be well vitrified, like a painted window, and shall be set so between shafts of stone and bands of iron, that it shall bear the sunshine upon it, and send the sunshine through it, from generation to generation.

I can conceive, however, some political economist to interrupt me here, and say, "If you make your art wear too well, you will soon have too much of it; you will throw your artists quite out of work. Better allow for a little wholesome evanescence—beneficent destruction: let each age provide art for itself, or we shall soon have so many good pictures that we shall not know what to do with them."

Remember, my dear hearers, who are thus thinking, that political economy, like every other subject, cannot be dealt with effectively if we try to solve two questions at a time instead of one. It is one question, how to get plenty of a thing; and another, whether plenty of it will be good for us. Consider these two matters separately; never confuse yourself by interweaving one with the other. It is one question, how to treat your fields so as to get a good harvest; another, whether you wish to have a good harvest, or would rather like to keep up the price of corn. It is one question, how to graft your trees so as to grow most apples; and quite another, whether having such a heap of apples in the storeroom will not make them all rot.

Now, therefore, that we are talking only about grafting and growing, pray do not vex yourselves with thinking what you are to do with the pippins. It may be desirable for us to have much art, or little—we will examine that by and by; but just now, let us keep to the simple consideration how to get plenty of good art if we want it. Perhaps it might be just as well that a man of mode-

rate income should be able to possess a good picture, as that any work of real merit should cost 500*l.* or 1000*l.*; at all events, it is certainly one of the branches of political economy to ascertain how, if we like, we can get things in quantities—plenty of corn, plenty of wine, plenty of gold, or plenty of pictures.

It has just been said, that the first great secret is to produce work that will last. Now, the conditions of work lasting are twofold: it must not only be in materials that will last, but it must be itself of a quality that will last—it must be good enough to bear the test of time. If it is not good, we shall tire of it quickly, and throw it aside—we shall have no pleasure in the accumulation of it. So that the first question of a good art-economist respecting any work is, Will it lose its flavour by keeping? It may be very amusing now, and look much like a work of genius. But what will be its value a hundred years hence?

You cannot always ascertain this. You may get what you fancy to be work of the best quality, and yet find to your astonishment that it won't keep. But of one thing you may be sure, that art which is produced hastily will also perish hastily; and that what is cheapest to you now, is likely to be dearest in the end.

I am sorry to say, the great tendency of this age is to expend its genius in perishable art of this kind, as if it were a triumph to burn its thoughts away in bonfires. There is a vast quantity of intellect and of labour consumed annually in our cheap illustrated publications; you triumph in them; and you think it so grand a thing to get so many woodcuts for a penny. Why, woodcuts, penny and all, are as much lost to you as if you had invested your money in gossamer. More lost, for the gossamer could only tickle your face, and glitter in your eyes; it could not catch your feet and trip you up: but the bad art can, and does; for you can't like good woodcuts as long as you look at the bad ones. If we were at this moment to come across a Titian woodcut, or a Durer woodcut, we should not like it—those of us at least who are accustomed

to the cheap work of the day. We don't like, and can't like, *that* long; but when we are tired of one bad cheap thing, we throw it aside and buy another bad cheap thing; and so keep looking at bad things all our lives. Now, the very men who do all that quick bad work for us are capable of doing perfect work. Only, perfect work can't be hurried, and therefore it can't be cheap beyond a certain point. But suppose you pay twelve times as much as you do now, and you have one woodcut for a shilling instead of twelve; and the one woodcut for a shilling is as good as art can be, so that you will never tire of looking at it; and is struck on good paper with good ink, so that you will never wear it out by handling it; while you are sick of your penny each cuts by the end of the week and have torn them mostly in half too. Isn't your shilling's worth the best bargain?

It is not, however, only in getting prints or woodcuts of the best kind that you will practise economy. There is a certain quality about an original drawing which you cannot get in a woodcut, and the best part of the genius of any man is only expressible in original work, whether with pen and ink—pencil or colours. This is not always the case; but in general the best men are those who can only express themselves on paper or canvass: and you will, therefore, in the long run, get most for your money by buying original work; proceeding on the principle already laid down, that the best is likely to be the cheapest in the end. Of course, original work cannot be produced under a certain cost. If you want a man to make you a drawing which takes him six days, you must, at all events, keep him for six days in bread and water, fire and lodging; that is the lowest price at which he can do it for you, but that is not very dear: and the best bargain which can possibly be made honestly in art—the very ideal of a cheap purchase to the purchaser—is the original work of a great man fed for as many days as are necessary on bread and water, or perhaps we may say with as many onions as will keep him in good humour. That is

the way by which you will always get most for your money; no mechanical multiplication or ingenuity of commercial arrangements will ever get you a better penny's worth of art than that.

Without, however, pushing our calculations quite to this prison-discipline extreme, we may lay it down as a rule in art-economy, that original work is, on the whole, cheapest and best worth having. But precisely in proportion to the value of it as a production, becomes the importance of having it executed in permanent materials. And here we come to note the second main error of the day, that we not only ask our workmen for bad art, but we make them put it into bad substance. We have, for example, put a great quantity of genius, within the last twenty years, into water-colour drawing, and we have done this with the most reckless disregard whether either the colours or the paper will stand. In most instances, neither will. By accident, it may happen that the colours in a given drawing have been of good quality, and its paper uninjured by chemical processes. But you take not the least care to ensure these being so; I have myself seen the most destructive changes take place in water-colour drawings within twenty years after they were painted; and from all I can gather respecting the recklessness of modern paper manufacture, my belief is, that though you may still handle an Albert Durer engraving, two hundred years old, fearlessly, not one-half of that time will have passed over your modern water-colours, before most of them will be reduced to mere white or brown rags; and your descendants, twitching them contemptuously into fragments between finger and thumb, will mutter against you, half in scorn and half in anger, "Those wretched nineteenth century people! they kept vapouring and fuming about the world, doing what they called business, and they couldn't make a sheet of paper that wasn't rotten." And note that this is no unimportant portion of your art economy at this time. Your water-colour painters are becoming every day capable of expressing greater and better things; and their material is especially

adapted to the turn of your best artists' minds. The value which you could accumulate in work of this kind would soon become a most important item in the national art-wealth, if only you would take the little pains necessary to secure its permanence. I am inclined to think, myself, that water-colour ought not to be used on paper at all, but only on vellum, and then, if properly taken care of, the drawing would be almost imperishable. Still, paper is a much more convenient material for rapid work; and it is an infinite absurdity not to secure the goodness of its quality, when we could do so without the slightest trouble. Among the many favours which I am going to ask from our paternal government when we get it, will be that it will supply its little boys with good paper. You have nothing to do but to let the government establish a paper manufactory, under the superintendence of any of our leading chemists, who should be answerable for the safety and completeness of all the processes of the manufacture. The government stamp on the corner of your sheet of drawing-paper, made in the perfect way, should cost you a shilling, which would add something to the revenue; and when you bought a water-colour drawing for fifty or a hundred guineas, you would have merely to look in the corner for your stamp, and pay your extra shilling for the security that your hundred guineas were given really for a drawing, and not for a coloured rag. There need be no monopoly or restriction in the matter; let the paper manufacturers compete with the government, and if people like to save their shilling, and take their chance, let them; only, the artist and purchaser might then be sure of good material, if they liked, and now they cannot be.

I should like also to have a government colour manufactory; though that is not so necessary, as the quality of colour is more within the artist's power of testing, and I have no doubt that any painter may get permanent colour from the respectable manufacturers, if he chooses. I will not attempt to follow the subject out

at all as it respects architecture, and our methods of modern building; respecting which I have had occasion to speak before now.

But I cannot pass without some brief notice our habit—continually, as it seems to me, gaining strength—of putting a large quantity of thought and work, annually, into things which are either in their nature necessarily perishable, as dress; or else into compliances with the fashion of the day, into things not necessarily perishable, as plate. I am afraid almost the first idea of a young rich couple setting up house in London, is, that they must have new plate. Their father's plate may be very handsome, but the fashion is changed. They will have a new service from the leading manufacturer, and the old plate, except a few apostle spoons, and a cup which Charles the Second drank a health into their pretty ancestress, is sent to be melted down, and made up with new flourishes and fresh lustre. Now, so long as this is the case—so long, observe, as fashion has influence on the manufacture of plate—so long *you cannot have a goldsmith's art in this country*. Do you suppose any workman worthy the name will put his brains into a cup or an urn, which he knows is to go to the melting pot in half a score years? He will not; you don't ask or expect it of him. You ask of him nothing but a little quick handicraft—a clever twist of a handle here, and a foot there, a convolvulus from the newest school of design, a pheasant from Landseer's game cards; a couple of sentimental figures for supporters, in the style of the signs of insurance offices, then a clever touch with the burnisher, and there's your epergne, the admiration of all the footmen at the wedding-breakfast, and the torment of some unfortunate youth who cannot see the pretty girl opposite to him, through its tyrannous branches.

But you don't suppose that *that's* goldsmith's work? Goldsmith's work is made to last, and made with the men's whole heart and soul in it; true goldsmith's work, when it exists, is

generally the means of education of the greatest painters and sculptors of the day. Francia was a goldsmith; Francia was not his own name, but that of his master the jeweller; and he signed his pictures almost always, "Francia, the goldsmith," for love of his master; Ghirlandajo was a goldsmith, and was the master of Michael Angelo; Verrocchio was a goldsmith, and was the master of Leonardo da Vinci. Ghiberti was a goldsmith, and beat out the bronze gates which Michael Angelo said might serve for gates of Paradise.¹ But if ever you want work like theirs again, you must keep it, though it should have the misfortune to become old fashioned. You must not break it up, nor melt it any more. There is no economy in that; you could not easily waste intellect more grievously. Nature may melt her goldsmith's work at every sunset if she chooses; and beat it out into chased bars again at every sunrise; but you must not. The way to have a truly noble service of plate, is to keep adding to it, not melting it. At every marriage, and at every birth; get a new piece of gold or silver if you will, but with noble workmanship on it, done for all time, and put it among your treasures; that is one of the chief things which gold was made for, and made incorruptible for. When we know a little more of political economy, we shall find that none but partially savage nations need, imperatively, gold for their currency;² but gold has been given us, among other things, that we might put beautiful work into its imperishable splendour, and that the

¹ Several reasons may account for the fact that goldsmith's work is so wholesome for young artists; first, that it gives great firmness of hand to deal for some time with a solid substance; again, that it induces caution and steadiness—a boy trusted with chalk and paper suffers an immediate temptation to scrawl upon it and play with it, but he dares not scrawl on gold, and he cannot play with it; and, lastly, that it gives great delicacy and precision of touch to work upon minute forms, and to aim at producing richness and finish of design correspondent to the preciousness of the material.

² See note in Addenda on the nature of property.

artists who have the most wilful fancies may have a material which will drag out, and beat out, as their dreams require, and will hold itself together with fantastic tenacity, whatever rare and delicate service they set it upon.

So here is one branch of decorative art in which rich people may indulge themselves unselfishly ; if they ask for good art in it. they may be sure in buying gold and silver plate that they are enforcing useful education on young artists. But there is another branch of decorative art in which I am sorry to say we cannot, at least under existing circumstances, indulge ourselves, with the hope of doing good to anybody, I mean the great and subtle art of dress.

And here I must interrupt the pursuit of our subject for a moment or two, in order to state one of the principles of political economy, which, though it is, I believe, now sufficiently understood and asserted by the leading masters of the science, is not yet, I grieve to say, acted upon by the plurality of those who have the management of riches. Whenever we spend money, we of course set people to work : that is the meaning of spending money ; we may, indeed, lose it without employing anybody ; but, whenever we spend it, we set a number of people to work, greater or less, of course, according to the rate of wages, but, in the long run, proportioned to the sum we spend. Well, your shallow people, because they see that however they spend money they are always employing somebody, and, therefore, doing some good, think and say to themselves, that it is all one *how* they spend it—that all their apparently selfish luxury is, in reality, unselfish, and is doing just as much good as if they gave all their money away, or perhaps more good ; and I have heard foolish people even declare it as a principle of political economy, that whoever invented a new want¹ conferred a good on the community. I have not words strong enough—at least I could not, without shocking you, use

¹ See note 5th in Addenda.

the words which would be strong enough—to express my estimate of the absurdity and the mischievousness of this popular fallacy. So, putting a great restraint upon myself, and using no hard words, I will simply try to state the nature of it, and the extent of its influence.

Granted, that whenever we spend money for whatever purpose, we set people to work; and passing by, for the moment, the question whether the work we set them to is all equally healthy and good for them, we will assume that whenever we spend a guinea we provide an equal number of people with healthy maintenance for a given time. But, by the way in which we spend it, we entirely direct the labour of those people during that given time. We become their masters or mistresses, and we compel them to produce, within a certain period, a certain article. Now, that article may be a useful and lasting one, or it may be a useless and perishable one—it may be one useful to the whole community, or useful only to ourselves. And our selfishness and folly, or our virtue and prudence, are shown, not by our spending money, but by our spending it for the wrong or the right thing; and we are wise and kind, not in maintaining a certain number of people for a given period, but only in requiring them to produce, during that period, the kind of things which shall be useful to society, instead of those which are only useful to ourselves.

Thus, for instance: if you are a young lady, and employ a certain number of sempstresses for a given time, in making a given number of simple and serviceable dresses, suppose, seven; of which you can wear one yourself for half the winter, and give six away to poor girls who have none, you are spending your money unselfishly. But if you employ the same number of sempstresses for the same number of days, in making four, or five, or six beautiful flounces for your own ball-dress—flounces which will clothe no one but yourself, and which you will yourself be unable to wear at more than one ball—you are employing your money selfishly

You have maintained, indeed, in each case, the same number of people ; but in the one case you have directed their labour to the service of the community ; in the other case you have consumed it wholly upon yourself. I don't say you are never to do so ; I don't say you ought not sometimes to think of yourselves only, and to make yourselves as pretty as you can ; only do not confuse coquettishness with benevolence, nor cheat yourselves into thinking that all the finery you can wear is so much put into the hungry mouths of those beneath you : it is not so ; it is what you yourselves, whether you will or no, must sometimes instinctively feel it to be—it is what those who stand shivering in the streets, forming a line to watch you as you step out of your carriages, *know* it to be ; those fine dresses do not mean that so much has been put into their mouths, but that so much has been taken out of their mouths. The real politico-economical signification of every one of those beautiful toilettes, is just this ; that you have had a certain number of people put for a certain number of days wholly under your authority, by the sternest of slave-masters,—hunger and cold ; and you have said to them, “I will feed you, indeed, and clothe you, and give you fuel for so many days ; but during those days you shall work for me only : your little brothers need clothes, but you shall make none for them : your sick friend needs clothes, but you shall make none for her : you yourself will soon need another, and a warmer dress ; but you shall make none for yourself. You shall make nothing but lace and roses for me ; for this fortnight to come, you shall work at the patterns and petals, and then I will crush and consume them away in an hour.” You will perhaps answer—“It may not be particularly benevolent to do this, and we won't call it so ; but at any rate we do no wrong in taking their labour when we pay them their wages : if we pay for their work we have a right to it.” No ;—a thousand times no. The labour which you have paid for, does indeed become, by the act of purchase, your own

labour : you have bought the hands and the time of those workers ; they are, by right and justice, your own hands, your own time. But, have you a right to spend your own time, to work with your own hands, only for your own advantage?—much more, when, by purchase, you have invested your own person with the strength of others ; and added to your own life, a part of the life of others ? You may, indeed, to a certain extent, use their labour for your delight ; remember, I am making no general assertions against splendour of dress, or pomp of accessories of life ; on the contrary, there are many reasons for thinking that we do not at present attach enough importance to beautiful dress, as one of the means of influencing general taste and character. But I *do* say, that you must weigh the value of what you ask these workers to produce for you in its own distinct balance ; that on its own worthiness or desirableness rests the question of your kindness, and not merely on the fact of your having employed people in producing it : and I say farther, that as long as there are cold and nakedness in the land around you, so long there can be no question at all but that splendour of dress is a crime. In due time, when we have nothing better to set people to work at, it may be right to let them make lace and cut jewels ; but, as long as there are any who have no blankets for their beds, and no rags for their bodies, so long it is blanket-making and tailoring we must set people to work at—not lace.

And it would be strange, if at any great assembly which, while it dazzled the young and the thoughtless, beguiled the gentler hearts that beat beneath the embroidery, with a placid sensation of luxurious benevolence—as if by all that they wore in waywardness of beauty, comfort had been first given to the distressed, and aid to the indigent ; it would be strange, I say, if, for a moment, the spirits of Truth and of Terror, which walk invisibly among the masques of the earth, would lift the dimness from our erring thoughts, and show us how—inasmuch as the sums exhausted for

that magnificence would have given back the failing breath to many an unsheltered outcast on moor and street—they who wear it have literally entered into partnership with Death; and dressed themselves in his spoils. Yes, if the veil could be lifted not only from your thoughts, but from your human sight, you would see—the angels do see—on those gay white dresses of yours, strange dark spots, and crimson patterns that you knew not of—spots of the inextinguishable red that all the seas cannot wash away; yes, and among the pleasant flowers that crown your fair heads, and glow on your wreathed hair, you would see that one weed was always twisted which no one thought of—the grass that grows on graves.

It was not, however, this last, this clearest and most appalling view of our subject, that I intended to ask you to take this evening; only it is impossible to set any part of the matter in its true light, until we go to the root of it. But the point which it is our special business to consider is, not whether costliness of dress is contrary to charity; but whether it is not contrary to mere worldly wisdom: whether, even supposing we knew that splendour of dress did not cost suffering or hunger, we might not put the splendour better in other things than dress. And, supposing our mode of dress were really graceful or beautiful, this might be a very doubtful question; for I believe true nobleness of dress to be an important means of education, as it certainly is a necessity to any nation which wishes to possess living art, concerned with portraiture of human nature. No good historical painting ever yet existed, or ever can exist, where the dresses of the people of the time are not beautiful: and had it not been for the lovely and fantastic dressing of the 13th to the 16th centuries, neither French, nor Florentine, nor Venetian art could have risen to anything like the rank it reached. Still, even then, the best dressing was never the costliest; and its effect depended much more on its beautiful and, in early times,

modest, arrangement, and on the simple and lovely masses of its colour, than on gorgeousness of clasp or embroidery. Whether we can ever return to any of those more perfect types of form is questionable; but there can be no question, that all the money we spend on the forms of dress at present worn, is, so far as any good purpose is concerned, wholly lost. Mind, in saying this, I reckon among good purposes the purpose which young ladies are said sometimes to entertain—of being married; but they would be married quite as soon (and probably to wiser and better husbands) by dressing quietly as by dressing brilliantly; and I believe it would only be needed to lay fairly and largely before them the real good which might be effected by the sums they spend in toilettes, to make them trust at once only to their bright eyes and braided hair for all the mischief they have a mind to. I wish we could, for once, get the statistics of a London season. There was much complaining talk in Parliament last week of the vast sum the nation has given for the best Paul Veronese in Venice—£14,000: I wonder what the nation meanwhile has given for its ball-dresses! Suppose we could see the London milliners' bills, simply for unnecessary breadths of slip and flounces, from April to July; I wonder whether £14,000 would cover *them*. But the breadths of slip and flounces are by this time as much lost and vanished as last year's snow; only they have done less good: but the Paul Veronese will last for centuries, if we take care of it; and yet we grumble at the price given for the painting, while no one grumbles at the price of pride.

Time does not permit me to go into any farther illustration of the various modes in which we build our statue out of snow, and waste our labour on things that vanish. I must leave you to follow out the subject for yourselves, as I said I should, and proceed, in our next lecture, to examine the two other branches of our subject, namely, how to accumulate our art, and how to distribute it. But, in closing, as we have been much on the topic of good

government, both of ourselves and others, let me just give you one more illustration of what it means, from that old art of which, next evening, I shall try to convince you that the value, both moral and mercantile, is greater than we usually suppose.

One of the frescoes by Ambrozio Lorenzetti, in the town-hall of Siena, represents, by means of symbolical figures, the principles of Good Civic Government and of Good Government in general. The figure representing this noble Civic Government is enthroned, and surrounded by figures representing the Virtues, variously supporting or administering its authority. Now, observe what work is given to each of these virtues. Three winged ones—Faith, Hope, and Charity—surrounded the head of the figure, not in mere compliance with the common and heraldic laws of precedence among Virtues, such as we moderns observe habitually, but with peculiar purpose on the part of the painter. Faith, as thus represented, ruling the thoughts of the Good Governor, does not mean merely religious faith, understood in those times to be necessary to all persons—governed no less than governors—but it means the faith which enables work to be carried out steadily, in spite of adverse appearances and expediencies; the faith in great principles, by which a civic ruler looks past all the immediate checks and shadows that would daunt a common man, knowing that what is rightly done will have a right issue, and holding his way in spite of pullings at his cloak and whisperings in his ear, enduring, as having in him a faith which is evidence of things unseen. And Hope, in like manner, is here not the heavenward hope which ought to animate the hearts of all men; but she attends upon Good Government, to show that all such government is *expectant* as well as *conservative*; that if it ceases to be hopeful of better things, it ceases to be a wise guardian of present things: that it ought never, as long as the world lasts, to be wholly content with any existing state of institution or possession, but to be hopeful still of more wisdom and power; not clutching at it restlessly or

lastly, but feeling that its real life consists in steady ascent from high to higher: conservative, indeed, and jealously conservative of old things, but conservative of them as pillars not as pinnacles—as aids, but not as Idols; and hopeful chiefly, and active, in times of national trial or distress, according to those first and notable words describing the queenly nation. “She riseth, *while it is yet night.*” And again, the winged Charity which is attendant on Good Government has, in this fresco, a peculiar office. Can you guess what? If you consider the character of contest which so often takes place among kings for their crowns, and the selfish and tyrannous means they commonly take to aggrandize or secure their power, you will, perhaps, be surprised to hear that the office of Charity is to crown the King. And yet, if you think of it a little, you will see the beauty of the thought which sets her in this function: since in the first place, all the authority of a good governor should be desired by him only for the good of his people, so that it is only Love that makes him accept or guard his crown: in the second place, his chief greatness consists in the exercise of this love, and he is truly to be revered only so far as his acts and thoughts are those of kindness; so that Love is the light of his crown, as well as the giver of it: lastly, because his strength depends on the affections of his people, and it is only their love which can securely crown him, and for ever. So that Love is the strength of his crown as well as the light of it.

Then, surrounding the King, or in various obedience to him, appear the dependent virtues, as Fortitude, Temperance, Truth, and other attendant spirits, of all which I cannot now give account, wishing you only to notice the one to whom are entrusted the guidance and administration of the public revenues. Can you guess which it is likely to be? Charity, you would have thought, should have something to do with the business; but not so, for she is too hot to attend carefully to it. Prudence, perhaps, you think of in the next place. No, she is too timid, and loses oppor-

tunities in making up her mind. Can it be Liberality then? No: Liberality is entrusted with some small sums; but she is a bad accountant, and is allowed no important place in the exchequer. But the treasures are given in charge to a virtue of which we hear too little in modern times, as distinct from others; Magnanimity: largeness of heart: not softness or weakness of heart, mind you—but capacity of heart—the great *measuring* virtue, which weighs in heavenly balances all that may be given, and all that may be gained; and sees how to do noblest things in noblest ways: which of two goods comprehends and therefore chooses the greatest: which of two personal sacrifices dares and accepts the largest: which, out of the avenues of beneficence, treads always that which opens farthest into the blue fields of futurity: that character, in fine, which, in those words taken by us at first for the description of a Queen among the nations, looks less to the present power than to the distant promise; “Strength and honour are in her clothing,—and she shall rejoice IN TIME TO COME.”

LECTURE II.

THE heads of our subject which remain for our consideration this evening are, you will remember, the accumulation and the distribution of works of art. Our complete inquiry fell into four divisions—first, how to get our genius; then, how to apply our genius; then, how to accumulate its results; and lastly, how to distribute them. We considered, last evening, how to discover and apply it;—we have to-night to examine the modes of its preservation and distribution.

And now, in the outset, it will be well to face that objection which we put aside a little while ago; namely, that perhaps it is not well to have a great deal of good art; and that it should not be made too cheap.

“Nay,” I can imagine some of the more generous among you, exclaiming, “we will not trouble you to disprove that objection; of course it is a selfish and base one: good art, as well as other good things, ought to be made as cheap as possible, and put as far as we can within the reach of everybody.”

Pardon me, I am not prepared to admit that. I rather side with the selfish objectors, and believe that art ought not to be made cheap, beyond a certain point; for the amount of pleasure that you can receive from any great work, depends wholly on the quantity of attention and energy of mind you can bring to bear upon it. Now, that attention and energy depend much more on the freshness of the thing than you would at all suppose; unless you very carefully studied the movements of your own minds. If you see things of the same kind and of equal value very fre

quently, your reverence for them is infallibly diminished, your powers of attention get gradually wearied, and your interest and enthusiasm worn out; and you cannot in that state bring to any given work the energy necessary to enjoy it. If, indeed, the question were only between enjoying a great many pictures each a little, or one picture very much, the sum of enjoyment being in each case the same, you might rationally desire to possess rather the larger quantity, than the small; both because one work of art always in some sort illustrates another, and because quantity diminishes the chances of destruction. But the question is not a merely arithmetical one of this kind. Your fragments of broken admirations will not, when they are put together, make up one whole admiration; two and two, in this case, do not make four, nor anything like four. Your good picture, or book, or work of art of any kind, is always in some degree fenced and closed about with difficulty. You may think of it as of a kind of cocoa-nut, with very often rather an unseemly shell, but good milk and kernel inside. Now, if you possess twenty cocoa-nuts, and being thirsty, go impatiently from one to the other, giving only a single scratch with the point of your knife to the shell of each, you will get no milk from all the twenty. But if you leave nineteen of them alone, and give twenty cuts to the shell of one, you will get through it, and at the milk of it. And the tendency of the human mind is always to get tired before it has made its twenty cuts; and to try another nut; and moreover, even if it has perseverance enough to crack its nuts, it is sure to try to eat too many, and so choke itself. Hence, it is wisely appointed for us that few of the things we desire can be had without considerable labour, and at considerable intervals of time. We cannot generally get our dinner without working for it, and that gives us appetite for it; we cannot get our holiday without waiting for it, and that gives us zest for it; and we ought not to get our picture without paying for it, and that gives us a mind to look at it.

Nay, I will even go so far as to say, that we ought not to get books too cheaply. No book, I believe, is ever worth half so much to its reader as one that has been coveted for a year at a bookstall, and bought out of saved half-pence; and perhaps a day or two's fasting. That's the way to get at the cream of a book. And I should say more on this matter, and protest as energetically as I could against the plague of cheap literature, with which we are just now afflicted, but that I fear your calling me to order, as being unpractical, because I don't quite see my way at present to making everybody fast for their books. But one may see that a thing is desirable and possible, even though one may not at once know the best way to it—and in my island of Barataria, when I get it well into order, I assure you no book shall be sold for less than a pound sterling; if it can be published cheaper than that, the surplus shall all go into my treasury, and save my subjects taxation in other directions; only people really poor, who cannot pay the pound, shall be supplied with the books they want for nothing, in a certain limited quantity. I haven't made up my mind about the number yet, and there are several other points in the system yet unsettled; when they are all determined, if you will allow me, I will come and give you another lecture, on the political economy of literature.¹

Meantime, returning to our immediate subject, I say to my generous hearers, who want to shower Titians and Turners upon us, like falling leaves, "Pictures ought not to be too cheap;" but in much stronger tone I would say to those who want to keep up the prices of pictorial property, that pictures ought not to be too dear, that is to say, not as dear as they are. For, as matters at present stand, it is wholly impossible for any man in the ordinary circumstances of English life to possess himself of a piece of great art. A modern drawing of average merit, or a first-class engraving

¹ See note 6th in Addenda.

may perhaps, not without some self-reproach, be purchased out of his savings by a man of narrow income; but a satisfactory example of first-rate art—master-hands' work—is wholly out of his reach. And we are so accustomed to look upon this as the natural course and necessity of things, that we never set ourselves in any wise to diminish the evil; and yet it is an evil perfectly capable of diminution. It is an evil precisely similar in kind to that which existed in the middle ages, respecting good books, and which everybody then, I suppose, thought as natural as we do now our small supply of good pictures. You could not then study the work of a great historian, or great poet, any more than you can now study that of a great painter, but at heavy cost. If you wanted a book, you had to get it written out for you, or to write it out for yourself. But printing came, and the poor man may read his Dante and his Homer; and Dante and Homer are none the worse for that. But it is only in literature that private persons of moderate fortune can possess and study greatness: they can study at home no greatness in art; and the object of that accumulation which we are at present aiming at, as our third object in political economy, is to bring great art in some degree within the reach of the multitude; and, both in larger and more numerous galleries than we now possess, and by distribution, according to his wealth and wish, in each man's home, to render the influence of art somewhat correspondent in extent to that of literature. Here, then, is the subtle balance which your economist has to strike: to accumulate so much art as to be able to give the whole nation a supply of it, according to its need, and yet to regulate its distribution so that there shall be no glut of it, nor contempt.

A difficult balance, indeed, for us to hold, if it were left merely to our skill to poise; but the just point between poverty and profusion has been fixed for us accurately by the wise laws of Providence. If you carefully watch for all the genius you can detect, apply it to good service, and then reverently preserve what it pro

duces, you will never have too little art; and if, on the other hand, you never force an artist to work hurriedly, for daily bread, nor imperfectly, because you would rather have showy works than complete ones, you will never have too much. Do not force the multiplication of art, and you will not have it too cheap; do not wantonly destroy it, and you will not have it too dear.

“But who wantonly destroys it?” you will ask. Why, we all do. Perhaps you thought, when I came to this part of our subject, corresponding to that set forth in our housewife’s economy by the “keeping her embroidery from the moth,” that I was going to tell you only how to take better care of pictures, how to clean them, and varnish them, and where to put them away safely when you went out of town. Ah, not at all. The utmost I have to ask of you is, that you will not pull them to pieces, and trample them under your feet. “What,” you will say, “when do we do such things? Haven’t we built a perfectly beautiful gallery for all the pictures we have to take care of?” Yes, you have, for the pictures which are definitely sent to Manchester to be taken care of. But there are quantities of pictures out of Manchester which it is your business, and mine too, to take care of no less than of these, and which we are at this moment employing ourselves in pulling to pieces by deputy. I will tell you what they are, and where they are, in a minute; only first let me state one more of those main principles of political economy on which the matter hinges.

I must begin a little apparently wide of the mark, and ask you to reflect if there is any way in which we waste money more in England, than in building fine tombs? Our respect for the dead, when they are *just* dead, is something wonderful, and the way we show it more wonderful still. We show it with black feathers and black horses; we show it with black dresses and bright heraldries; we show it with costly obelisks and sculptures of sorrow, which spoil half of our most beautiful cathedrals. We show it with frightful gratings and vaults, and lids of dismal stone, in the midst of the

quiet grass; and last, not least, we show it by permitting ourselves to tell any number of lies we think amiable or credible, in the epitaph. This feeling is common to the poor as well as the rich; and we all know how many a poor family will nearly ruin themselves, to testify their respect for some member of it in his coffin, whom they never much cared for when he was out of it; and how often it happens that a poor old woman will starve herself to death, in order that she may be respectably buried.

Now, this being one of the most complete and special ways of wasting money;—no money being less productive of good, or of any percentage whatever, than that which we shake away from the ends of undertakers' plumes—it is of course the duty of all good economists, and kind persons, to prove and proclaim continually, to the poor as well as the rich, that respect for the dead is not really shown by laying great stones on them to tell us where they are laid; but by remembering where they are laid without a stone to help us; trusting them to the sacred grass and saddened flowers; and still more, that respect and love are shown to them, not by great monuments to them which we build with *our* hands, but by letting the monuments stand, which they built with *their own*. And this is the point now in question.

Observe, there are two great reciprocal duties concerning industry, constantly to be exchanged between the living and the dead. We, as we live and work, are to be always thinking of those who are to come after us; that what we do may be serviceable, as far as we can make it so, to them, as well as to us. Then, when we die, it is the duty of those who come after us to accept this work of ours with thanks and remembrance, not thrusting it aside or tearing it down the moment they think they have no use for it. And each generation will only be happy or powerful to the pitch that it ought to be, in fulfilling these two duties to the Past and the Future. Its own work will never be rightly done, even for itself—never good, or noble, or pleasurable to its own eyes—if it

does not prepare it also for the eyes of generations yet to come. And its own possessions will never be enough for it, and its own wisdom never enough for it, unless it avails itself gratefully and tenderly of the treasures and the wisdom bequeathed to it by its ancestors.

For, be assured, that all the best things and treasures of this world are not to be produced by each generation for itself; but we are all intended, not to carve our work in snow that will melt, but each and all of us to be continually rolling a great white gathering snowball, higher and higher—larger and larger—along the Alps of human power. Thus the science of nations is to be accumulative from father to son: each learning a little more and a little more; each receiving all that was known, and adding its own gain: the history and poetry of nations are to be accumulative; each generation treasuring the history and the songs of its ancestors, adding its own history and its own songs; and the art of nations is to be accumulative, just as science and history are; the work of living men not superseding, but building itself upon the work of the past. Nearly every great and intellectual race of the world has produced, at every period of its career, an art with some peculiar and precious character about it, wholly unattainable by any other race, and at any other time; and the intention of Providence concerning that art, is evidently that it should all grow together into one mighty temple; the rough stones and the smooth all finding their place, and rising, day by day, in richer and higher pinnacles to heaven.

Now, just fancy what a position the world, considered as one great workroom—one great factory in the form of a globe—would have been in by this time, if it had in the least understood this duty, or been capable of it. Fancy what we should have had around us now, if, instead of quarrelling and fighting over their work, the nations had aided each other in their work, or if even in their conquests, instead of effacing the memorials of those they

succeeded and subdued, they had guarded the spoils of their victories. Fancy what Europe would be now, if the delicate statues and temples of the Greeks,—if the broad roads and massy walls of the Romans,—if the noble and pathetic architecture of the middle ages, had not been ground to dust by mere human rage. You talk of the scythe of Time, and the tooth of Time: I tell you, Time is scytheless and toothless; it is we who gnaw like the worm—we who smite like the scythe. It is ourselves who abolish—ourselves who consume: we are the mildew, and the flame, and the soul of man is to its own work as the moth, that frets when it cannot fly, and as the hidden flame that blasts where it cannot illumine. All these lost treasures of human intellect have been wholly destroyed by human industry of destruction; the marble would have stood its two thousand years as well in the polished statue as in the Parian cliff; but we men have ground it to powder, and mixed it with our own ashes. The walls and the ways would have stood—it is we who have left not one stone upon another, and restored its pathlessness to the desert; the great cathedrals of old religion would have stood—it is we who have dashed down the carved work with axes and hammers, and bid the mountain-grass bloom upon the pavement, and the sea-winds chaunt in the galleries.

You will perhaps think all this was somehow necessary for the development of the human race. I cannot stay now to dispute that, though I would willingly; but do you think it is *still* necessary for that development? Do you think that in this nineteenth century it is still necessary for the European nations to turn all the places where their principal art-treasures are into battle-fields? For that is what they are doing even while I speak; the great firm of the world is managing its business at this moment, just as it has done in past times. Imagine what would be the thriving circumstances of a manufacturer of some delicate produce—suppose glass, or china—in whose workshop and exhibition

rooms all the workmen and clerks began fighting at least once a day, first blowing off the steam, and breaking all the machinery they could reach; and then making fortresses of all the cup boards, and attacking and defending the show-tables, the victorious party finally throwing everything they could get hold of out of the window, by way of showing their triumph, and the poor manufacturer picking up and putting away at last a cup here and a handle there. A fine prosperous business that would be, would it not? and yet that is precisely the way the great manufacturing firm of the world carries on its business.

It has so arranged its political squabbles for the last six or seven hundred years, that no one of them could be fought out but in the midst of its most precious art; and it so arranges them to this day. For example, if I were asked to lay my finger, in a map of the world, on the spot of the world's surface which contained at this moment the most singular concentration of art-teaching and art-treasure, I should lay it on the name of the town of Verona. Other cities, indeed, contain more works of carriageable art, but none contain so much of the glorious local art, and of the springs and sources of art, which can by no means be made subjects of package or portorage, nor, I grieve to say, of salvage. Verona possesses, in the first place, not the largest, but the most perfect and intelligible Roman amphitheatre that exists, still unbroken in circle of step, and strong in succession of vault and arch: it contains minor Roman monuments, gateways, theatres, baths, wrecks of temples, which give the streets of its suburbs a character of antiquity unexampled elsewhere, except in Rome itself. But it contains, in the next place, what Rome does not contain—perfect examples of the great twelfth-century Lombardic architecture, which was the root of all the mediæval art of Italy, without which no Giotto, no Angelico, no Raphael would have been possible; it contains that architecture, not in rude forms, but in the most perfect and loveliest types it ever attained—contains those, not in

ruins, nor in altered and hardly decipherable fragments, but in churches perfect from porch to apse, with all their carving fresh, their pillars firm, their joints unloosened. Besides these, it includes examples of the great thirteenth and fourteenth-century Gothic of Italy, not merely perfect, but elsewhere unrivalled. At Rome, the Roman—at Pisa, the Lombard, architecture may be seen in greater or in equal nobleness; but not at Rome, nor Pisa, nor Florence, nor in any city of the world, is there a great mediæval Gothic like the Gothic of Verona. Elsewhere, it is either less pure in type or less lovely in completion: only at Verona may you see it in the simplicity of its youthful power, and the tenderness of its accomplished beauty. And Verona possesses, in the last place, the loveliest Renaissance architecture of Italy, not disturbed by pride, nor defiled by luxury, but rising in fair fulfilment of domestic service, serenity of effortless grace, and modesty of home seclusion; its richest work given to the windows that open on the narrowest streets and most silent gardens. All this she possesses, in the midst of natural scenery such as assuredly exists nowhere else in the habitable globe—a wild Alpine river foaming at her feet, from whose shores the rocks rise in a great crescent, dark with cypress, and misty with olive: illimitably, from before her southern gates, the tufted plains of Italy sweep and fade in golden light; around her, north and west, the Alps crowd in crested troops, and the winds of Benacus bear to her the coolness of their snows.

And this is the city—such, and possessing such things as these—at whose gates the decisive battles of Italy are fought continually: three days her towers trembled with the echo of the cannon of Arcola; heaped pebbles of the Mincio divide her fields to this hour with lines of broken rampart, whence the tide of war rolled back to Novara; and now on that crescent of her eastern cliffs, whence the full moon used to rise through the bars of the cypresses in her burning summer twilights, touching with soft

increase of silver light the rosy marbles of her balconies, along the ridge of that encompassing rock, other circles are increasing now, white and pale; walled towers of cruel strength, sable-spotted with cannon-courses. I tell you, I have seen, when the thunderclouds came down on those Italian hills, and all their crags were dipped in the dark, terrible purple, as if the winepress of the wrath of God had stained their mountain-vestment—I have seen the hail fall in Italy till the forest branches stood stripped and bare as if blasted by the locust; but the white hail never fell from those clouds of heaven as the black hail will fall from the clouds of hell, if ever one breath of Italian life stirs again in the streets of Verona.

Sad as you will feel this to be, I do not say that you can directly prevent it; you cannot drive the Austrians out of Italy, nor prevent them from building forts where they choose, but I do say,*

* The reader can hardly but remember Mrs. Browning's beautiful appeal for Italy, made on the occasion of the first great Exhibition of Art in England:—

O Magi of the east and of the west,
 Your incense, gold, and myrrh are excellent!—
 What gifts for Christ, then, bring ye with the rest?
 Your hands have worked well. Is your courage spent
 In handwork only? Have you nothing best,
 Which generous souls may perfect and present,
 And He shall thank the givers for? no light
 Of teaching, liberal nations, for the poor,
 Who sit in darkness when it is not night?
 No cure for wicked children? Christ,—no cure,
 No help for women, sobbing out of sight
 Because men made the lawe? no brothel-lure
 Burnt out by popular lightnings? Hast thou found
 No remedy, my England, for such woes?
 No outlet, Austria, for the scourged and bound,
 No call back for the exiled? no repose,
 Russia, for knouted Poles worked under ground.

that you, and I, and all of us, ought to be both acting and feeling with a full knowledge and understanding of these things, and that, without trying to excite revolutions or weaken governments, we may give our own thoughts and help, so as in a measure to prevent needless destruction. We should do this, if we only realized the thing thoroughly. You drive out day by day through your own pretty suburbs, and you think only of making, with what money you have to spare, your gateways handsomer, and your carriage-drives wider—and your drawing-rooms more splendid, having a vague notion that you are all the while patronizing and advancing art, and you make no effort to conceive the fact, that within a few hours' journey of you, there are gateways and drawing-rooms which might just as well be yours as these, all built already; gateways built by the greatest masters of sculpture that ever struck marble; drawing-rooms painted by Titian and Veronese; and you won't accept, nor save these as they are, but you will rather fetch the house-painter from over the way, and let Titian and Veronese house the rats. "Yes," of course, you answer; "we want nice houses here, not houses in Verona. What should we do with houses in Verona?" And I answer, do precisely what you do with the most expensive part of your possessions here: take pride in them—only a noble pride. You know well, when you examine

And gentle ladies bleached among the snows?
 No mercy for the slave, America?
 No hope for Rome, free France, chivalric France?
 Alas, great nations have great shames, I say.
 No pity, O world! no tender utterance
 Of benediction, and prayers stretched this way
 For poor Italia, baffled by mischance?
 O gracious nations, give some ear to me!
 You all go to your Fair, and I am one
 Who at the roadside of humanity
 Beseech your alms,—God's justice to be done,
 So prosper!

your own hearts, that the greater part of the sums you spend on possessions are spent for pride. Why are your carriages nicely painted and finished outside? You don't see the outsides as you sit in them—the outsides are for other people to see. Why are your exteriors of houses so well finished, your furniture so polished and costly, but for other people to see? You are just as comfortable yourselves, writing on your old friend of a desk, with the white cloudings in his leather, and using the light of a window which is nothing but a hole in the brick wall. And all that is desirable to be done in this matter, is merely to take pride in preserving great art, instead of in producing mean art; pride in the possession of precious and enduring things, a little way off, instead of slight and perishing things near at hand. You know, in old English times, our kings liked to have lordships and dukedoms abroad, and why should not you, merchant princes, like to have lordships and estates abroad? Believe me, rightly understood, it would be a prouder, and in the full sense of our English word, more “respectable” thing to be lord of a palace at Verona, or of a cloister full of frescos at Florence, than to have a file of servants dressed in the finest liveries that ever tailor stitched, as long as would reach from here to Bolton:—yes, and a prouder thing to send people to travel in Italy, who would have to say every now and then, of some fair piece of art, “Ah! this was *kept* here for us by the good people of Manchester,” than to bring them travelling all the way here, exclaiming of your various art treasures, “These were *brought* here for us (not altogether without harm) by the good people of Manchester.” “Ah!” but you say, “the Art Treasures Exhibition will pay; but Veronese palaces won't.” Pardon me. They *would* pay, less directly, but far more richly. Do you suppose it is in the long run good for Manchester, or good for England, that the Continent should be in the state it is? Do you think the perpetual fear of revolution, or the perpetual repression of thought and energy that clouds and

encumbers the nations of Europe, is eventually profitable for *us*? Were we any the better of the course of affairs in '48; or has the stabling of the dragoon horses in the great houses of Italy, any distinct effect in the promotion of the cotton-trade? Not so. But every stake that you could hold in the stability of the Continent, and every effort that you could make to give example of English habits and principles on the Continent, and every kind deed that you could do, in relieving distress and preventing despair on the Continent, would have tenfold reaction on the prosperity of England, and open and urge, in a thousand unforeseen directions, the sluices of commerce and the springs of industry.

I could press, if I chose, both these motives upon you, of pride and self-interest, with more force, but these are not motives which ought to be urged upon you at all. The only motive that I ought to put before you is simply that it would be right to do this; that the holding of property abroad, and the personal efforts of Englishmen to redeem the condition of foreign nations, are among the most direct pieces of duty which our wealth renders incumbent upon us. I do not—and in all truth and deliberateness I say this—I do not know anything more ludicrous among the self-deceptions of well-meaning people than their notion of patriotism, as requiring them to limit their efforts to the good of their own country;—the notion that charity is a geographical virtue, and that what it is holy and righteous to do for people on one bank of a river, it is quite improper and unnatural to do for people on the other. It will be a wonderful thing, some day or other, for the Christian world to remember, that it went on thinking for two thousand years that neighbours were neighbours at Jerusalem, but not at Jericho; a wonderful thing for us English to reflect, in after-years, how long it was before we could shake hands with anybody across that shallow salt wash, which the very chalk-dust of its two shores whitens from Folkstone to Ambleteuse.

Nor ought the motive of gratitude, as well as that of Mercy, to

be without its influence on you, who have been the first to ask to see, and the first to show to us, the treasures which this poor lost Italy has given to England. Remember all these things that delight you here were hers—hers either in fact or in teaching; hers, in fact, are all the most powerful and most touching paintings of old time that now glow upon your walls; hers in teaching are all the best and greatest of descendant souls—your Reynolds and your Gainsborough never could have painted but for Venice; and the energies which have given the only true life to your existing art were first stirred by voices of the dead, that haunted the Sacred Field of Pisa.

Well, all these motives for some definite course of action on our part towards foreign countries rest upon very serious facts; too serious, perhaps you will think, to be interfered with; for we are all of us in the habit of leaving great things alone, as if Providence would mind them, and attending ourselves only to little things which we know, practically, Providence doesn't mind unless we do. We are ready enough to give care to the growing of pines and lettuces, knowing that they don't grow Providentially sweet or large unless we look after them; but we don't give any care to the good of Italy or Germany, because we think that they will grow Providentially happy without any of our meddling.

Let us leave the great things, then, and think of little things; not of the destruction of whole provinces in war, which it may not be any business of ours to prevent; but of the destruction of poor little pictures in peace, from which it surely would not be much out of our way to save them. You know I said, just now, we were all of us engaged in pulling pictures to pieces by deputy, and you did not believe me. Consider, then, this similitude of ourselves. Suppose you saw (as I doubt not you often do see) a prudent and kind young lady sitting at work, in the corner of a quiet room, knitting comforters for her cousins, and that just out

side, in the hall, you saw a cat and her kittens at play among the family pictures; amusing themselves especially with the best Vandykes, by getting on the tops of the frames, and then scrambling down the canvasses by their claws; and on some one's informing the young lady of these proceedings of the cat and kittens, suppose she answered that it wasn't her *cat*, but her sister's, and the pictures weren't hers, but her uncle's, and she couldn't leave her work, for she had to make so many pairs of comforters before dinner. Would you not say that the prudent and kind young lady was, on the whole, answerable for the additional touches of claw on the Vandykes? Now, that is precisely what we prudent and kind English are doing, only on a larger scale. Here we sit in Manchester, hard at work, very properly, making comforters for our cousins all over the world. Just outside there in the hall—that beautiful marble hall of Italy—the cats and kittens and monkeys are at play among the pictures: I assure you, in the course of the fifteen years in which I have been working in those places in which the most precious remnants of European art exist, a sensation, whether I would or no, was gradually made distinct and deep in my mind, that I was living and working in the midst of a den of monkeys;—sometimes amiable and affectionate monkeys, with all manner of winning ways and kind intentions;—more frequently selfish and malicious monkeys, but, whatever their disposition, squabbling continually about nuts, and the best places on the barren sticks of trees; and that all this monkeys' den was filled, by mischance, with precious pictures, and the witty and wilful beasts were always wrapping themselves up and going to sleep in pictures, or tearing holes in them to grin through; or tasting them and spitting them out again, or twisting them up into ropes and making swings of them; and that sometimes only, by watching one's opportunity, and bearing a scratch or a bite, one could rescue the corner of a Tintoret, or Paul Veronese, and push it through the bars into a

place of safety. Literally, I assure you, this was, and this is, fixed impression on my mind of the state of matters in Italy. And see how. The professors of art in Italy, having long followed a method of study peculiar to themselves, have at last arrived at a form of art peculiar to themselves; very different from that which was arrived at by Correggio and Titian. Naturally, the professors like their own form the best; and, as old pictures are generally not so startling to the eye as modern ones, the dukes and counts who possess them, and who like to see their galleries look new and fine (and are persuaded also that a celebrated chef-d'œuvre ought always to catch the eye at a quarter of a mile off), believe the professors who tell them their sober pictures are quite faded, and good for nothing, should all be brought bright again; and accordingly, give their sober pictures to the professors, to be put right by their rules. Then, the professors repaint the old pictures in all the principal places, leaving perhaps only a bit of background to set off their own work. And thus the professors come to be generally figured in my mind, as the monkeys who tear holes in pictures, to grin through. Then the picture-dealers, who live on the pictures, cannot sell them to the English in their old and proper state; all the good work must be covered with new paint, and finished so as to look like one of the professorial pictures in the great gallery, before it is saleable. And thus the dealers come to be imaged, in my mind, as the monkeys who make ropes of the pictures, to swing by. Then, every now and then, in some stable, or wine-cellar, or timber-shed, behind some forgotten wood or faggots, somebody finds a fresco of Perugino's or Giotto's but doesn't think much of it, and has no idea of having people coming into his cellar, or being obliged to move his faggots; so he whitewashes the fresco, and puts the faggots back again, and these kind of persons, therefore, come generally to be imagined in my mind, as the monkeys who taste the pictures, and so

them out, not finding them nice. While, finally, the squabbling for nuts and apples (called in Italy "bella libertà") goes on all day long.

Now, all this might soon be put an end to, if we English, who are so fond of travelling in the body, would also travel a little in soul: We think it a great triumph to get our packages and our persons carried at a fast pace, but we never take the slightest trouble to put any pace into our perceptions; we stay usually at home in thought, or if we ever mentally see the world, it is at the old stage-coach or waggon rate. Do but consider what an odd sight it would be, if it were only quite clear to you how things are really going on—how, here in England, we are making enormous and expensive efforts to produce new art of all kinds, knowing and confessing all the while that the greater part of it is bad, but struggling still to produce new patterns of wall-papers, and new shapes of tea-pots, and new pictures, and statues, and architecture; and pluming and cackling if ever a tea-pot or a picture has the least good in it;—all the while taking no thought whatever of the best possible pictures, and statues, and wall-patterns already in existence, which require nothing but to be taken common care of, and kept from damp and dust: but we let the walls fall that Giotto patterned, and the canvasses rot that Tintoret painted, and the architecture be dashed to pieces that St. Louis built, while we are furnishing our drawing-rooms with prize upholstery, and writing accounts of our handsome warehouses to the country papers. Don't think I use my words vaguely or generally: I speak of literal facts. Giotto's frescos at Assisi are perishing at this moment for want of decent care; Tintoret's pictures in San Sebastian at Venice, are at this instant rotting piecemeal into grey rags; St. Louis's chapel, at Carcassonne, is at this moment lying in shattered fragments in the market-place. And here we are all cawing and crowing, poor little half-fledged daws as we are, about the pretty sticks and wool in our own nests. There's hardly

a day passes, when I am at home, but I get a letter from some well-meaning country clergyman, deeply anxious about the state of his parish church, and breaking his heart to get money together that he may hold up some wretched remnant of Tudor tracery, with one niche in the corner and no statue—when all the while the mightiest piles of religious architecture and sculpture that ever the world saw are being blasted and withered away, without one glance of pity or regret. The country clergyman does not care for *them*—he has a sea-sick imagination that cannot cross channel. What is it to him, if the angels of Assisi fade from its vaults, or the queens and kings of Chartres fall from their pedestals? They are not in his parish.

“What!” you will say, “are we not to produce any new art, nor take care of our parish churches?” “No, certainly not, until you have taken proper care of the art you have got already, and of the best churches out of the parish. Your first and proper standing is not as churchwardens and parish overseers, in an English county, but as members of the great Christian community of Europe. And as members of that community (in which alone, observe, pure and precious ancient art exists, for there is none in America, none in Asia, none in Africa), you conduct yourselves precisely as a manufacturer would, who attended to his looms, but left his warehouse without a roof. The rain floods your warehouse, the rats frolic in it, the spiders spin in it, the choughs build in it, the wall-plague frets and festers in it, and still you keep weave, weave, weaving at your wretched webs, and thinking you are growing rich, while more is gnawed out of your warehouse in an hour than you can weave in a twelvemonth.

Even this similitude is not absurd enough to set us rightly forth. The weaver would, or might, at least, hope that his new woof was as stout as the old ones, and that, therefore, in spite of rain and ravage, he would have something to wrap himself in when he needed it. But *our* webs rot as we spin. The very fact that we

despise the great art of the past shows that we cannot produce great art now. If we could do it, we should love it when we saw it done—if we really cared for it, we should recognise it and keep it; but we don't care for it. It is not art that we want; it is amusement, gratification of pride, present gain—anything in the world but art: let it rot, we shall always have enough to talk about and hang over our sideboards.

You will (I hope) finally ask me what is the outcome of all this practicable to-morrow morning by us who are sitting here? These are the main practical outcomes of it: In the first place, don't grumble when you hear of a new picture being bought by Government at a large price. There are many pictures in Europe now in danger of destruction which are, in the true sense of the word, priceless; the proper price is simply that which it is necessary to give to get and to save them. If you can get them for fifty pounds, do; if not for less than a hundred, do; if not for less than five thousand, do; if not for less than twenty thousand, do; never mind being imposed upon: there is nothing disgraceful in being imposed upon; the only disgrace is in imposing; and you can't in general get anything much worth having, in the way of Continental art, but it must be with the help or connivance of numbers of people, who, indeed, ought to have nothing to do with the matter, but who practically have, and always will have, everything to do with it; and if you don't choose to submit to be cheated by them out of a ducat here and a zecchin there, you will be cheated by them out of your picture; and whether you are most imposed upon in losing that, or the zecchins, I think I may leave you to judge; though I know there are many political economists, who would rather leave a bag of gold on a garret-table, than give a porter sixpence extra to carry it downstairs.

That, then, is the first practical outcome of the matter. Never grumble, but be glad when you hear of a new picture being bought at a large price. In the long run, the dearest pictures are always

the best bargains; and, I repeat (for else you might think I said it in mere hurry of talk, and not deliberately), there are some pictures which are without price. You should stand, nationally, at the edge of Dover cliffs—Shakespeare's—and wave blank cheques in the eyes of the nations on the other side of the sea, freely offered, for such and such canvasses of theirs.

Then the next practical outcome of it is—Never buy a copy of a picture, under any circumstances whatever. All copies are bad; because no painter who is worth a straw ever *will* copy. He will make a study of a picture he likes, for his own use, in his own way; but he won't and can't copy; whenever you buy a copy, you buy so much misunderstanding of the original, and encourage a dull person in following a business he is not fit for, besides increasing ultimately chances of mistake and imposture, and farthering, as directly as money *can* farther, the cause of ignorance in all directions. You may, in fact, consider yourself as having purchased a certain quantity of mistakes; and, according to your power, being engaged in disseminating them.

I do not mean, however, that copies should never be made. A certain number of dull persons should always be employed by a Government in making the most accurate copies possible of all good pictures; these copies, though artistically valueless, would be historically and documentarily valuable, in the event of the destruction of the original picture. The studies also made by great artists for their own use, should be sought after with the greatest eagerness; they are often to be bought cheap; and in connection with mechanical copies, would become very precious; tracings from frescos and other large works are all of great value; for though a tracing is liable to just as many mistakes as a copy, the mistakes in a tracing are of one kind only, which may be allowed for, but the mistakes of a common copyist are of all conceivable kinds: finally, engravings, in so far as they convey certain facts about the pictures, are often serviceable and valuable. I can't, of course,

enter into details in these matters just now ; only this main piece of advice I can safely give you—never to buy copies of pictures (for your private possession) which pretend to give a *facsimile* that shall be in any wise representative of, or equal to, the original. Whenever you do so, you are only lowering your taste, and wasting your money. And if you are generous and wise, you will be ready rather to subscribe as much as you would have given for a copy of a great picture, towards its purchase, or the purchase of some other like it, by the nation. There ought to be a great National Society instituted for the purchase of pictures ; presenting them to the various galleries in our great cities, and watching there over their safety : but in the meantime, you can always act safely and beneficially by merely allowing your artist friends to buy pictures for you, when they see good ones. Never buy for yourselves, nor go to the foreign dealers ; but let any painter whom you know be entrusted, when he finds a neglected old picture in an old house, to try if he cannot get it for you ; then, if you like it, keep it ; if not, send it to the hammer, and you will find that you do not lose money on pictures so purchased.

And the third and chief practical outcome of the matter is this general one : Wherever you go, whatever you do, act more for *preservation* and less for *production*. I assure you, the world is, generally speaking, in calamitous disorder, and just because you have managed to thrust some of the lumber aside, and get an available corner for yourselves, you think you should do nothing but sit spinning in it all day long—while, as householders and economists, your first thought and effort should be, to set things more square all about you. Try to set the ground floors in order, and get the rottenness out of your granaries. *Then* sit and spin, but not till then.

IV. DISTRIBUTION.—And now, lastly, we come to the fourth great head of our inquiry, the question of the wise distribution of

the art we have gathered and preserved. It must be evident to us, at a moment's thought, that the way in which works of art are on the whole most useful to the nation to which they belong, must be by their collection in public galleries, supposing those galleries properly managed. But there is one disadvantage attached necessarily to gallery exhibition, namely, the extent of mischief which may be done by one foolish curator. As long as the pictures which form the national wealth are disposed in private collections, the chance is always that the people who buy them will be just the people who are fond of them; and that the sense of exchangeable value in the commodity they possess, will induce them, even if they do not esteem it themselves, to take such care of it as will preserve its value undiminished. At all events, so long as works of art are scattered throughout the nation, no universal destruction of them is possible; a certain average only are lost by accidents from time to time. But when they are once collected in a large public gallery, if the appointment of curator becomes in any way a matter of formality, or the post is so lucrative as to be disputed by place-hunters, let but one foolish or careless person get possession of it, and perhaps you may have all your fine pictures repainted, and the national property destroyed, in a month. That is actually the case at this moment in several great foreign galleries. They are the places of execution of pictures: over their doors you only want the Dantesque inscription, "Lasciate ogni speranza, voi che entrate."

Supposing, however, this danger properly guarded against, as it would be always by a nation which either knew the value, or understood the meaning, of painting,* arrangement in a public gallery is the safest, as well as the most serviceable, method of

* It would be a great point gained towards the preservation of pictures if it were made a rule that at every operation they underwent, the exact spots in which they have been re-painted should be recorded in writing.

exhibiting pictures ; and it is the only mode in which their historical value can be brought out, and their historical meaning made clear. But great good is also to be done by encouraging the private possession of pictures ; partly as a means of study, (much more being always discovered in any work of art by a person who has it perpetually near him than by one who only sees it from time to time,) and also as a means of refining the habits and touching the hearts of the masses of the nation in their domestic life.

For these last purposes the most serviceable art is the living art of the time ; the particular tastes of the people will be best met, and their particular ignorances best corrected, by painters labouring in the midst of them, more or less guided to the knowledge of what is wanted by the degree of sympathy with which their work is received. So then, generally, it should be the object of government, and of all patrons of art, to collect, as far as may be, the works of dead masters in public galleries, arranging them so as to illustrate the history of nations, and the progress and influence of their arts ; and to encourage the private possession of the works of *living* masters. And the first and best way in which to encourage such private possession is, of course, to keep down the price of them as far as you can.

I hope there are not a great many painters in the room ; if there are, I entreat their patience for the next quarter of an hour : if they will bear with me for so long, I hope they will not, finally, be offended by what I am going to say.

I repeat, trusting to their indulgence in the interim, that the first object of our national economy, as respects the distribution of modern art, should be steadily and rationally to limit its prices, since by doing so, you will produce two effects ; you will make the painters produce more pictures, two or three instead of one, if they wish to make money ; and you will, by bringing good pictures within the reach of people of moderate income, excite the

general interest of the nation in them, increase a thousandfold the demand for the commodity, and therefore its wholesome and natural production.

I know how many objections must arise in your minds at this moment to what I say; but you must be aware that it is not possible for me in an hour to explain all the moral and commercial bearings of such a principle as this. Only, believe me, I do not speak lightly; I think I have considered all the objections which could be rationally brought forward, though I have time at present only to glance at the main one, namely, the idea that the high prices paid for modern pictures are either honourable, or serviceable, to the painter. So far from this being so, I believe one of the principal obstacles to the progress of modern art to be the high prices given for good modern pictures. For observe first the action of this high remuneration on the artist's mind. If he "gets on," as it is called, catches the eye of the public, and especially of the public of the upper classes, there is hardly any limit to the fortune he may acquire; so that, in his early years, his mind is naturally led to dwell on this worldly and wealthy eminence as the main thing to be reached by his art; if he finds that he is not gradually rising towards it, he thinks there is something wrong in his work; or, if he is too proud to think that, still the bribe of wealth and honour warps him from his honest labour into efforts to attract attention; and he gradually loses both his power of mind and his rectitude of purpose. This, according to the degree of avarice or ambition which exists in any painter's mind, is the necessary influence upon him of the hope of great wealth and reputation. But the harm is still greater, in so far as the possibility of attaining fortune of this kind tempts people continually to become painters who have no real gift for the work; and on whom these motives of mere worldly interest have exclusive influence;—men who torment and abuse the patient workers, eclipse or thrust aside all delicate and good

pictures by their own gaudy and coarse ones, corrupt the taste of the public, and do the greatest amount of mischief to the schools of art in their day which it is possible for their capacities to effect; and it is quite wonderful how much mischief may be done even by small capacity. If you could by any means succeed in keeping the prices of pictures down, you would throw all these disturbers out of the way at once.

You may perhaps think that this severe treatment would do more harm than good, by withdrawing the wholesome element of emulation, and giving no stimulus to exertion; but I am sorry to say that artists will always be sufficiently jealous of one another, whether you pay them large or low prices; and as for stimulus to exertion, believe me, no good work in this world was ever done for money, nor while the slightest thought of money affected the painter's mind. Whatever idea of pecuniary value enters into his thoughts as he works, will, in proportion to the distinctness of its presence, shorten his power. A real painter will work for you exquisitely, if you give him, as I told you a little while ago, bread and water and salt; and a bad painter will work badly and hastily, though you give him a palace to live in, and a principedom to live upon. Turner got, in his earlier years, half-a-crown a day and his supper (not bad pay, neither); and he learned to paint upon that. And I believe that there is no chance of art's truly flourishing in any country, until you make it a simple and plain business, providing its masters with an easy competence, but rarely with anything more. And I say this, not because I despise the great painter, but because I honour him; and I should no more think of adding to his respectability or happiness by giving him riches, than, if Shakspeare or Milton were alive, I should think we added to *their* respectability, or were likely to get better work from them, by making them millionaires.

But, observe, it is not only the painter himself whom you injure, by giving him too high prices; you injure all the inferior painters

of the day. If they are modest, they will be discouraged and depressed by the feeling that their doings are worth so little, comparatively, in your eyes;—if proud, all their worst passions will be aroused, and the insult or opprobrium which they will try to cast on their successful rival will not only afflict and wound him, but at last sour and harden him: he cannot pass through such a trial without grievous harm.

That, then, is the effect you produce on the painter of mark, and on the inferior ones of his own standing. But you do worse than this; you deprive yourselves, by what you give for the fashionable picture, of the power of helping the younger men who are coming forward. Be it admitted, for argument's sake, if you are not convinced by what I have said, that you do no harm to the great man by paying him well; yet certainly you do him no special good. His reputation is established, and his fortune made; he does not care whether you buy or not: he thinks he is rather doing you a favour than otherwise by letting you have one of his pictures at all. All the good you do him is to help him to buy a new pair of carriage horses; whereas, with that same sum which thus you cast away, you might have relieved the hearts and preserved the health of twenty young painters; and if among those twenty, you but chanced on one in whom a true latent power had been hindered by his poverty, just consider what a far-reaching, far-embracing good you have wrought with that lucky expenditure of yours. I say, "Consider it" in vain; you cannot consider it, for you cannot conceive the sickness of the heart with which a young painter of deep feeling toils through his first obscurity;—his sense of the strong voice within him, which you will not hear;—his vain, fond, wondering witness to the things you will not see;—his far away perception of things that he could accomplish if he had but peace and time, all unapproachable and vanishing from him, because no one will leave him peace or grant him time: all his friends falling back from him; those whom he would

most reverently obey rebuking and paralysing him; and last and worst of all, those who believe in him the most faithfully suffering by him the most bitterly;—the wife's eyes, in their sweet ambition, shining brighter as the cheek wastes away; and the little lips at his side parched and pale which one day, he knows, though he may never see it, will quiver so proudly when they name his name, calling him "our father." You deprive yourselves, by your large expenditure for pictures of mark, of the power of relieving and redeeming *this* distress; you injure the painter whom you pay so largely;—and what, after all, have you done for yourselves, or got for yourselves? It does not in the least follow that the hurried work of a fashionable painter will contain more for your money than the quiet work of some unknown man. In all probability, you will find, if you rashly purchase what is popular at a high price, that you have got one picture you don't care for, for a sum which would have bought twenty you would have delighted in. For remember always that the price of a picture by a living artist, never represents, never *can* represent, the quantity of labour or value in it. Its price represents, for the most part, the degree of desire which the rich people of the country have to possess it. Once get the wealthy classes to imagine that the possession of pictures by a given artist adds to their "gentility," and there is no price which his work may not immediately reach, and for years maintain; and in buying at that price, you are not getting value for your money, but merely disputing for victory in a contest of ostentation. And it is hardly possible to spend your money in a worse or more wasteful way; for though you may not be doing it for ostentation yourself, you are, by your pertinacity, nourishing the ostentation of others; you meet them in their game of wealth, and continue it for them; if they had not found an opposite player, the game would have been done; for a proud man can find no enjoyment in possessing himself of what nobody disputes with him. So that by every farthing you give for a picture beyond

its fair price—that is to say, the price which will pay the painter for his time—you are not only cheating yourself and buying vanity, but you are stimulating the vanity of others; paying, literally, for the cultivation of pride. You may consider every pound that you spend above the just price of a work of art, as an investment in a cargo of mental quick-lime or guano, which, being laid on the fields of human nature, is to grow a harvest of pride. You are in fact ploughing and harrowing, in a most valuable part of your land, in order to reap the whirlwind; you are setting your hand stoutly to Job's agriculture, "Let thistles grow instead of wheat, and cockle instead of barley."

Well, but you will say, there is one advantage in high prices, which more than counterbalances all this mischief, namely, that by great reward we both urge and enable a painter to produce rather one perfect picture than many inferior ones: and one perfect picture (so you tell us, and we believe it) is worth a great number of inferior ones.

It is so; but you cannot get it by paying for it. A great work is only done when the painter gets into the humour for it, likes his subject, and determines to paint it as well as he can, whether he is paid for it or not; but bad work, and generally the worst sort of bad work, is done when he is trying to produce a showy picture, or one that shall appear to have as much labour in it as shall be worth a high price.*

* When this lecture was delivered, I gave here some data for approximate estimates of the average value of good modern pictures of different classes; but the subject is too complicated to be adequately treated in writing, without introducing more detail than the reader will have patience for. But I may state roughly, that prices above a hundred guineas are in general extravagant for water-colours, and above five hundred for oils. An artist almost always does wrong who puts more work than these prices will remunerate him for into any single canvass—his talent would be better employed in painting two pictures than one so elaborate. The water-colour painters

There is, however, another point, and a still more important one, bearing on this matter of purchase, than the keeping down of prices to a rational standard. And that is, that you pay your prices into the hands of living men, and do not pour them into coffins.

For observe that, as we arrange our payment of pictures at present, no artist's work is worth half its proper value while he is alive. The moment he dies, his pictures, if they are good, reach double their former value; but that rise of price represents simply a profit made by the intelligent dealer or purchaser on his past purchases. So that the real facts of the matter are, that the British public, spending a certain sum annually in art, determines that, of every thousand it pays, only five hundred shall go to the painter, or shall be at all concerned in the production of art; and that the other five hundred shall be paid merely as a testimonial to the intelligent dealer, who knew what to buy. Now, testimonials are very pretty and proper things, within due limits; but testimonial to the amount of a hundred per cent. on the total expenditure is not good political economy. Do not, therefore, in general, unless you see it to be necessary for its preservation, buy the picture of a dead artist. If you fear that it may be exposed to contempt or neglect, buy it; its price will then, probably, not be high: if you want to put it into a public gallery, buy it; you are sure, then, that you do not spend your money selfishly: or, if you loved the man's work while he was alive, and bought it then, buy it also now, if you can see no living work equal to it. But if you did not buy it while the man was living, never buy it after he is

also are getting into the habit of making their drawings too large, and in a measure attaching their price rather to breadth and extent of touch than to thoughtful labour. Of course marked exceptions occur here and there, as in the case of John Lewis, whose drawings are wrought with unflinching precision throughout, whatever their scale. Hardly any price can be remunerative for such work.

dead : you are then doing no good to him, and you are doing some shame to yourself. Look around you for pictures that you really like, and by buying which you can help some genius yet unperished—that is the best atonement you can make to the one you have neglected—and give to the living and struggling painter at once wages, and testimonial.

So far then of the motives which should induce us to keep down the prices of modern art, and thus render it, as a private possession, attainable by greater numbers of people than at present. But we should strive to render it accessible to them in other ways also—chiefly by the permanent decoration of public buildings; and it is in this field that I think we may look for the profitable means of providing that constant employment for young painters of which we were speaking last evening.

The first and most important kind of public buildings which we are always sure to want, are schools : and I would ask you to consider very carefully, whether we may not wisely introduce some great changes in the way of school decoration. Hitherto, as far as I know, it has either been so difficult to give all the education we wanted to our lads, that we have been obliged to do it, if at all, with cheap furniture in bare walls ; or else we have considered that cheap furniture and bare walls are a proper part of the means of education ; and supposed that boys learned best when they sat on hard forms, and had nothing but blank plaster about and above them whereupon to employ their spare attention ; also, that it was as well they should be accustomed to rough and ugly conditions of things, partly by way of preparing them for the hardships of life, and partly that there might be the least possible damage done to floors and forms, in the event of their becoming, during the master's absence, the fields or instruments of battle. All this is so far well and necessary, as it relates to the training of country lads, and the first training of boys in general. But there certainly comes a period in the life of a well educated youth, in which one

of the principal elements of his education is, or ought to be, to give him refinement of habits; and not only to teach him the strong exercises of which his frame is capable, but also to increase his bodily sensibility and refinement, and show him such small matters as the way of handling things properly, and treating them considerately. Not only so, but I believe the notion of fixing the attention by keeping the room empty, is a wholly mistaken one: I think it is just in the emptiest room that the mind wanders most for it gets restless, like a bird, for want of a perch, and casts about for any possible means of getting out and away. And even if it be fixed, by an effort, on the business in hand, that business becomes itself repulsive, more than it need be, by the vileness of its associations; and many a study appears dull or painful to a boy, when it is pursued on a blotted deal desk, under a wall with nothing on it but scratches and pegs, which would have been pursued pleasantly enough in a curtained corner of his father's library, or at the lattice window of his cottage. Nay, my own belief is, that the best study of all is the most beautiful; and that a quiet glade of forest, or the nook of a lake shore, are worth all the schoolrooms in Christendom, when once you are past the multiplication table; but be that as it may, there is no question at all but that a time ought to come in the life of a well trained youth, when he can sit at a writing table without wanting to throw the inkstand at his neighbour; and when also he will feel more capable of certain efforts of mind with beautiful and refined forms about him than with ugly ones. When that time comes he ought to be advanced into the decorated schools; and this advance ought to be one of the important and honourable epochs of his life.

I have not time, however, to insist on the mere serviceableness to our youth of refined architectural decoration, as such; for I want you to consider the probable influence of the particular kind of decoration which I wish you to get for them, namely, historical

painting. You know we have hitherto been in the habit of conveying all our historical knowledge, such as it is, by the ear only, never by the eye; all our notions of things being ostensibly derived from verbal description, not from sight. Now, I have no doubt that, as we grow gradually wiser—and we are doing so every day—we shall discover at last that the eye is a nobler organ than the ear; and that through the eye we must, in reality, obtain, or put into form, nearly all the useful information we are to have about this world. Even as the matter stands, you will find that the knowledge which a boy is supposed to receive from verbal description is only available to him so far as in any underhand way he gets a sight of the thing you are talking about. I remember well that, for many years of my life, the only notion I had of the look of a Greek knight was complicated between recollection of a small engraving in my pocket Pope's Homer, and reverent study of the Horse-Guards. And though I believe that most boys collect their ideas from more varied sources, and arrange them more carefully than I did; still, whatever sources they seek must always be ocular: if they are clever boys, they will go and look at the Greek vases and sculptures in the British Museum, and at the weapons in our armouries—they will see what real armour is like in lustre, and what Greek armour was like in form, and so put a fairly true image together, but still not, in ordinary cases, a very living or interesting one. Now, the use of your decorative painting would be, in myriads of ways, to animate their history for them, and to put the living aspect of past things before their eyes as faithfully as intelligent invention can; so that the master shall have nothing to do but once to point to the schoolroom walls, and for ever afterwards the meaning of any word would be fixed in a boy's mind in the best possible way. Is it a question of classical dress—what a tunic was like, or a chlamys, or a peplus? At this day, you have to point to some vile woodcut, in the middle of a dictionary page, represent-

ing the thing hang upon a stick; but then, you would point to a hundred figures, wearing the actual dress, in its fiery colours, in all the actions of various stateliness or strength; you would understand at once how it fell round the people's limbs as they stood, how it drifted from their shoulders as they went, how it veiled their faces as they wept, how it covered their heads in the day of battle. *Now*, if you want to see what a weapon is like, you refer, in like manner, to a numbered page, in which there are spear-heads in rows, and sword-hilts in symmetrical groups; and gradually the boy gets a dim mathematical notion how one scymitar is hooked to the right and another to the left, and one javelin has a knob to it and another none: while one glance at your good picture would show him,—and the first rainy afternoon in the schoolroom would for ever fix in his mind,—the look of the sword and spear as they fell or flew; and how they pierced, or bent, or shattered—how men wielded them, and how men died by them. But far more than all this, is it a question not of clothes or weapons, but of men? how can we sufficiently estimate the effect on the mind of a noble youth, at the time when the world opens to him, of having faithful and touching representations put before him of the acts and presences of great men—how many a resolution, which would alter and exalt the whole course of his after-life, might be formed, when in some dreamy twilight he met, through his own tears, the fixed eyes of those shadows of the great dead, unescapable and calm, piercing to his soul; or fancied that their lips moved in dread reproof or soundless exhortation. And if but for one out of many this were true—if yet, in a few, you could be sure that such influence had indeed changed their thoughts and destinies, and turned the eager and reckless youth, who would have cast away his energies on the race-horse or the gambling-table, to that noble life-race, that holy life-hazard, which should win all glory to himself and all good to

his country—would not that, to some purpose, be “political economy of art?”

And observe, there could be no monotony, no exhaustibleness, in the scenes required to be thus portrayed. Even if there were, and you wanted for every school in the kingdom, one death of Leonidas; one battle of Marathon; one death of Cleobis and Bito; there need not therefore be more monotony in your art than there was in the repetition of a given cycle of subjects by the religious painters of Italy. But we ought not to admit a cycle at all. For though we had as many great schools as we have great cities (one day I hope we *shall* have), centuries of painting would not exhaust, in all the number of them, the noble and pathetic subjects which might be chosen from the history of even one noble nation. But, beside this, you will not, in a little while, limit your youths' studies to so narrow fields as you do now. There will come a time—I am sure of it—when it will be found that the same practical results, both in mental discipline, and in political philosophy, are to be attained by the accurate study of mediæval and modern as of ancient history; and that the facts of mediæval and modern history are, on the whole, the most important to us. And among these noble groups of constellated schools which I foresee arising in our England, I foresee also that there will be divided fields of thought; and that while each will give its scholars a great general idea of the world's history, such as all men should possess—each will also take upon itself, as its own special duty, the closer study of the course of events in some given place or time. It will review the rest of history, but it will exhaust its own special field of it; and found its moral and political teaching on the most perfect possible analysis of the results of human conduct in one place, and at one epoch. And then, the galleries of that school will be painted with the historical scenes belonging to the age which it has chosen for its special study.

So far, then, of art as you may apply it to that great series of public buildings which you devote to the education of youth. The next large class of public buildings in which we should introduce it, is one which I think a few years more of national progress will render more serviceable to us than they have been lately. I mean, buildings for the meetings of guilds of trades.

And here, for the last time, I must again interrupt the course of our chief inquiry, in order to state one other principle of political economy, which is perfectly simple and indisputable; but which, nevertheless, we continually get into commercial embarrassments for want of understanding; and not only so, but suffer much hindrance in our commercial discoveries, because many of our business men do not practically admit it.

Supposing half a dozen or a dozen men were cast ashore from a wreck on an uninhabited island, and left to their own resources, one of course, according to his capacity, would be set to one business and one to another; the strongest to dig and to cut wood, and to build huts for the rest: the most dexterous to make shoes out of bark and coats out of skins; the best educated to look for iron or lead in the rocks, and to plan the channels for the irrigation of the fields. But though their labours were thus naturally severed, that small group of shipwrecked men would understand well enough that the speediest progress was to be made by helping each other,—not by opposing each other: and they would know that this help could only be properly given so long as they were frank and open in their relations, and the difficulties which each lay under properly explained to the rest. So that any appearance of secrecy or separateness in the actions of any of them would instantly, and justly, be looked upon with suspicion by the rest, as the sign of some selfish or foolish proceeding on the part of the individual. If, for instance, the scientific man were found to have gone out at night, unknown to the rest, to alter the chances, the others would think, and in all probability rightly think,

that he wanted to get the best supply of water to his own field; and if the shoemaker refused to show them where the bark grew which he made the sandals of, they would naturally think, and in all probability rightly think, that he didn't want them to see how much there was of it, and that he meant to ask from them more corn and potatoes in exchange for his sandals than the trouble of making them deserved. And thus, although each man would have a portion of time to himself in which he was allowed to do what he chose without let or inquiry,—so long as he was working in that particular business which he had undertaken for the common benefit, any secrecy on his part would be immediately supposed to mean mischief; and would require to be accounted for, or put an end to: and this all the more because, whatever the work might be, certainly there would be difficulties about it which, when once they were well explained, might be more or less done away with by the help of the rest; so that assuredly every one of them would advance with his labour not only more happily, but more profitably and quickly, by having no secrets, and by frankly bestowing, and frankly receiving, such help as lay in his way to get or to give.

And, just as the best and richest result of wealth and happiness to the whole of them, would follow on their perseverance in such a system of frank communication and of helpful labour;—so precisely the worst and poorest result would be obtained by a system of secrecy and of enmity; and each man's happiness and wealth would assuredly be diminished in proportion to the degree in which jealousy and concealment became their social and economical principles: It would not, in the long run, bring good, but only evil, to the man of science, if, instead of telling openly where he had found good iron, he carefully concealed every new bed of it, that he might ask, in exchange for the rare ploughshare, more corn from the farmer, or in exchange for the rude needle, more labour from the sempstress: and it would not ultimately bring

good, but only evil, to the farmers, if they sought to burn each other's cornstacks, that they might raise the value of their grain, or if the sempstresses tried to break each other's needles, that each might get all the stitching to herself.

Now, these laws of human action are precisely as authoritative in their application to the conduct of a million of men, as to that of six or twelve. All enmity, jealousy, opposition, and secrecy are wholly, and in all circumstances, destructive in their nature—not productive; and all kindness, fellowship, and communicativeness are invariably productive in their operation,—not destructive; and the evil principles of opposition and exclusiveness are not rendered less fatal, but more fatal, by their acceptance among large masses of men; more fatal, I say, exactly in proportion as their influence is more secret. For though the opposition does always its own simple, necessary, direct quantity of harm, and withdraws always its own simple, necessary, measurable quantity of wealth from the sum possessed by the community, yet, in proportion to the size of the community, it does another and more refined mischief than this, by concealing its own fatality under aspects of mercantile complication and expediency, and giving rise to multitudes of false theories based on a mean belief in narrow and immediate appearances of good done here and there by things which have the universal and everlasting nature of evil. So that the time and powers of the nation are wasted, not only in wretched struggling against each other, but in vain complaints, and groundless discouragements, and empty investigations, and useless experiments in laws, and elections, and inventions; with hope always to pull wisdom through some new-shaped slit in a ballot-box, and to drag prosperity down out of the clouds along some new knot of electric wire; while all the while Wisdom stands calling at the corners of the streets, and the blessing of heaven waits ready to rain down upon us, deeper than the rivers and broader than the dew, if only we will obey the first plain principles of humanity, and the first

plain precepts of the skies; "Execute true judgment, and show mercy and compassion, every man to his brother; and let none of you imagine evil against his brother in your heart."*

Therefore, I believe most firmly, that as the laws of national prosperity get familiar to us, we shall more and more cast our toil into social and communicative systems; and that one of the first means of our doing so, will be the re-establishing guilds of every important trade in a vital, not formal, condition;—that there will be a great council or government house for the members of every trade, built in whatever town of the kingdom occupies itself principally in such trade, with minor council halls in other cities; and to each council-hall, officers attached, whose first business may be

* It would be well if, instead of preaching continually about the doctrine of faith and good works, our clergymen would simply explain to their people a little what good works mean. There is not a chapter in all the book we profess to believe, more specially, and directly written for England, than the second of Habakkuk, and I never in all my life heard one of its practical texts preached from. I suppose the clergymen are all afraid, and know that their flocks, while they will sit quite politely to hear syllogisms out of the epistle to the Romans, would get restive directly if they ever pressed a practical text home to them. But we should have no mercantile catastrophes, and no distressful pauperism, if we only read often, and took to heart, those plain words: "Yea, also, because he is a proud man, neither keepeth at home, who enlargeth his desire as hell, and cannot be satisfied,—Shall not all these take up a parable against him, and a taunting proverb against him, and say, 'Woe to him that increaseth that which is not his: and to him that *ladeth himself with thick clay.*'" (What a glorious history, in one metaphor, of the life of a man greedy of fortune.) "Woe to him that coveteth an evil covetousness that he may set his nest on high. Woe to him that buildeth a town with blood, and stablisheth a city by iniquity. Behold, is it not of the Lord of Hosts that the people shall labour in the very fire, and the people shall weary themselves for very vanity."

The Americans, who have been sending out ships with sham bolt-heads or their timbers, and only half their bolts, may meditate on that "buildeth a town with blood."

to examine into the circumstances of every operative, in that trade, who chooses to report himself to them when out of work, and to set him to work, if he is indeed able and willing, at a fixed rate of wages, determined at regular periods in the council-meetings; and whose next duty may be to bring reports before the council of all improvements made in the business, and means of its extension: not allowing private patents of any kind, but making all improvements available to every member of the guild, only allotting, after successful trial of them, a certain reward to the inventors.

For these, and many other such purposes, such halls will be again, I trust, fully established, and then, in the paintings and decorations of them, especial effort ought to be made to express the worthiness and honourableness of the trade for whose members they are founded. For I believe one of the worst symptoms of modern society to be, its notion of great inferiority, and ungentlemanliness, as necessarily belonging to the character of a tradesman. I believe tradesmen may be, ought to be—often are, more gentlemen than idle and useless people: and I believe that art may do noble work by recording in the hall of each trade, the services which men belonging to that trade have done for their country, both preserving the portraits, and recording the important incidents in the lives, of those who have made great advances in commerce and civilization. I cannot follow out this subject, it branches too far, and in too many directions; besides, I have no doubt you will at once see and accept the truth of the main principle, and be able to think it out for yourselves. I would fain also have said something of what might be done, in the same manner, for almshouses and hospitals, and for what, as I shall try to explain in notes to this lecture, we may hope to see, some day, established with a different meaning in their name than that they now bear—workhouses; but I have detained you too long already, and cannot permit myself to trespass further on your patience except only to

recapitulate, in closing, the simple principles respecting wealth, which we have gathered during the course of our inquiry; principles which are nothing more than the literal and practical acceptance of the saying, which is in all good men's mouths; namely, that they are stewards or ministers of whatever talents are entrusted to them. Only, is it not a strange thing, that while we more or less accept the meaning of that saying, so long as it is considered metaphorical, we never accept its meaning in its own terms? You know the lesson is given us under the form of a story about money. Money was given to the servants to make use of: the unprofitable servant dug in the earth, and hid his Lord's money. Well, we, in our poetical and spiritual application of this, say, that of course money doesn't mean money, it means wit, it means intellect, it means influence in high quarters, it means everything in the world except itself. And do not you see what a pretty and pleasant come-off there is for most of us, in this spiritual application? Of course, if we had wit, we would use it for the good of our fellow-creatures. But we haven't wit. Of course, if we had influence with the bishops, we would use it for the good of the Church; but we haven't any influence with the bishops. Of course, if we had political power, we would use it for the good of the nation; but we have no political power; we have no talents entrusted to *us* of any sort or kind. It is true we have a little money, but the parable can't possibly mean anything so vulgar as money; our money's our own.

I believe, if you think seriously of this matter, you will feel that the first and most literal application is just as necessary a one as any other—that the story does very specially mean what it says—plain money; and that the reason we don't at once believe it does so, is a sort of tacit idea that while thought, wit, and intellect, and all power of birth and position, are indeed *given* to us, and, therefore, to be laid out for the Giver,—our wealth has not been given to us; but we have worked for it, and have a right to spend

it as we choose. I think you will find that is the real substance of our understanding in this matter. Beauty, we say, is given by God—it is a talent; strength is given by God—it is a talent; position is given by God—it is a talent; but money is proper wages for our day's work—it is not a talent, it is a due. We may justly spend it on ourselves, if we have worked for it.

And there would be some shadow of excuse for this, were it not that the very power of making the money is itself only one of the applications of that intellect or strength which we confess to be talents. Why is one man richer than another? Because he is more industrious, more persevering, and more sagacious. Well, who made him more persevering and more sagacious than others? That power of endurance, that quickness of apprehension, that calmness of judgment, which enable him to seize the opportunities that others lose, and persist in the lines of conduct in which others fail—are these not talents?—are they not in the present state of the world, among the most distinguished and influential of mental gifts? And is it not wonderful, that while we should be utterly ashamed to use a superiority of body, in order to thrust our weaker companions aside from some place of advantage, we unhesitatingly use our superiorities of mind to thrust them back from whatever good that strength of mind can attain. You would be indignant if you saw a strong man walk into a theatre or a lecture-room, and, calmly choosing the best place, take his feeble neighbour by the shoulder, and turn him out of it into the back seats, or the street. You would be equally indignant if you saw a stout fellow thrust himself up to a table where some hungry children were being fed, and reach his arm over their heads and take their bread from them. But you are not the least indignant if when a man has stoutness of thought and swiftness of capacity, and, instead of being long-armed only, has the much greater gift of being long-headed—you think it perfectly just that he should use his intellect to take the bread out of the mouths of all the other

men in the town who are of the same trade with him ; or use his breadth and sweep of sight to gather some branch of the commerce of the country into one great cobweb, of which he is himself to be the central spider, making every thread vibrate with the points of his claws, and commanding every avenue with the facets of his eyes. You see no injustice in this.

But there is injustice ; and, let us trust, one of which honourable men will at no very distant period disdain to be guilty. In some degree, however, it is indeed not unjust ; in some degree it is necessary and intended. It is assuredly just that idleness should be surpassed by energy ; that the widest influence should be possessed by those who are best able to wield it ; and that a wise man, at the end of his career, should be better off than a fool. But for that reason, is the fool to be wretched, utterly crushed down, and left in all the suffering which his conduct and capacity naturally inflict ?—Not so. What do you suppose fools were made for ? That you might tread upon them, and starve them, and get the better of them in every possible way ? By no means. They were made that wise people might take care of them. That is the true and plain fact concerning the relations of every strong and wise man to the world about him. He has his strength given him, not that he may crush the weak, but that he may support and guide them. In his own household he is to be the guide and the support of his children ; out of his household he is still to be the father, that is, the guide and support of the weak and the poor ; not merely of the meritoriously weak and the innocently poor, but of the guiltily and punishably poor ; of the men who ought to have known better—of the poor who ought to be ashamed of themselves. It is nothing to give pension and cottage to the widow who has lost her son ; it is nothing to give food and medicine to the workman who has broken his arm, or the decrepit woman wasting in sickness. But it is something to use your time and strength to war with the waywardness and thoughtlessness of mankind ; to keep

the erring workman in your service till you have made him an unerring one; and to direct your fellow-merchant to the opportunity which his dulness would have lost. This is much; but it is yet more, when you have fully achieved the superiority which is due to you, and acquired the wealth which is the fitting reward of your sagacity, if you solemnly accept the responsibility of it, as it is the helm and guide of labour far and near. For you who have it in your hands, are in reality the pilots of the power and effort of the State. It is entrusted to you as an authority to be used for good or evil, just as completely as kingly authority was ever given to a prince, or military command to a captain. And, according to the quantity of it that you have in your hands, you are the arbiters of the will and work of England; and the whole issue, whether the work of the State shall suffice for the State or not, depends upon you. You may stretch out your sceptre over the heads of the English labourers, and say to them, as they stoop to its waving, "Subdue this obstacle that has baffled our fathers, put away this plague that consumes our children; water these dry places, plough these desert ones, carry this food to those who are in hunger; carry this light to those who are in darkness; carry this life to those who are in death;" or on the other side you may say to her labourers: "Here am I; this power is in my hand; come, build a mound here for me to be throned upon, high and wide; come, make crowns for my head, that men may see them shine from far away; come, weave tapestries for my feet, that I may tread softly on the silk and purple; come, dance before me, that I may be gay; and sing sweetly to me, that I may slumber; so shall I live in joy, and die in honour." And better than such an honourable death, it were that the day had perished wherein we were born, and the night in which it was said there is a child conceived.

I trust that in a little while, there will be few of our rich men who, through carelessness or covetousness, thus forfeit the glorious office which is intended for their hands. I said, just now, that

wealth ill-used was as the net of the spider, entangling and destroying: but wealth well used, is as the net of the sacred fisher who gathers souls of men out of the deep. A time will come—I do not think even now it is far from us—when this golden net of the world's wealth will be spread abroad as the flaming meshes of morning cloud are over the sky; bearing with them the joy of light and the dew of the morning, as well as the summons to honourable and peaceful toil. What less can we hope from your wealth than this, rich men of England, when once you feel fully how, by the strength of your possessions—not, observe, by the exhaustion, but by the administration of them and the power—you can direct the acts,—command the energies—inform the ignorance,—prolong the existence, of the whole human race; and how, even of worldly wisdom, which man employs faithfully, it is true, not only that her ways are pleasantness, but that her paths are peace; and that, for all the children of men, as well as for those to whom she is given, Length of days are in her right hand, *as* in her left hand Riches and Honour?

A D D E N D A .

Note, p. 20.—“*Fatherly authority.*”

THIS statement could not, of course, be heard without displeasure by a certain class of politicians; and in one of the notices of these lectures given in the Manchester journals at the time, endeavour was made to get quit of it by referring to the Divine authority, as the only Paternal power with respect to which men were truly styled “brethren.” Of course it is so, and, equally of course, all human government is nothing else than the executive expression of this Divine authority. The moment government ceases to be the practical enforcement of Divine law, it is tyranny; and the meaning which I attach to the words, “paternal government,” is in more extended terms, simply this—“The executive fulfilment, by formal human methods, of the will of the Father of mankind respecting His children.” I could not give such a definition of Government as this in a popular lecture; and even in written form, it will necessarily suggest many objections, of which I must notice and answer the most probable.

Only, in order to avoid the recurrence of such tiresome phrases as “it may be answered in the second place,” and “it will be objected in the third place,” &c., I will ask the reader’s leave to arrange the discussion in the form of simple dialogue, letting *O.* stand for objector, and *R.* for response.

O.—You define your paternal government to be the executive fulfilment, by formal human methods, of the Divine will. But, assuredly, that will cannot stand in need of aid or expression from human laws. It cannot fail of its fulfilment.

R.—In the final sense it cannot; and in that sense, men who

are committing murder and stealing are fulfilling the will of God as much as the best and kindest people in the world. But in the limited and present sense, the only sense with which *we* have anything to do, God's will concerning man is fulfilled by some men, and thwarted by others. And those men who either persuade or enforce the doing of it, stand towards those who are rebellious against it exactly in the position of faithful children in a family, who, when the father is out of sight, either compel or persuade the rest to do as their father would have them, were he present; and in so far as they are expressing and maintaining, for the time, the paternal authority, they exercise, in the exact sense in which I mean the phrase to be understood, paternal government over the rest.

O.—But, if Providence has left a liberty to man in many things in order to prove him, why should human law abridge that liberty, and take upon itself to compel what the great Lawgiver does not compel?

R.—It is confessed, in the enactment of any law whatsoever, that human lawgivers have a right to do this. For, if you have no right to abridge any of the liberty which Providence has left to man, you have no right to punish any one for committing murder or robbery. You ought to leave them to the punishment of God and Nature. But if you think yourself under obligation to punish, as far as human laws can, the violation of the will of God by these great sins, you are certainly under the same obligation to punish, with proportionately less punishment, the violation of His will in less sins.

O.—No; you must not attempt to punish less sins by law, because you cannot properly define nor ascertain them. Everybody can determine whether murder has been committed or not, but you cannot determine how far people have been unjust or cruel in minor matters, and therefore cannot make or execute laws concerning minor matters.

R.—If I propose to you to punish faults which cannot be defined, or to execute laws which cannot be made equitable, reject the laws I propose. But do not generally object to the principle of law.

O.—Yes; I generally object to the principle of law as applied to minor things; because, if you could succeed (which you can-

not) in regulating the entire conduct of men by law in little things as well as great, you would take away from human life all its probationary character, and render many virtues and pleasures impossible. You would reduce virtue to the movement of a machine, instead of the act of a spirit.

R.—You have just said, parenthetically, and I fully and willingly admit it, that it is impossible to regulate all minor matters by law. Is it not probable, therefore, that the degree in which it is *possible* to regulate them by it, is also the degree in which it is *right* to regulate them by it? Or what other means of judgment will you employ, to separate the things which ought to be formally regulated from the things which ought not? You admit that great sins should be legally repressed; but you say that small sins should not be legally repressed. How do you distinguish between great and small sins; and how do you intend to determine, or do you in practice of daily life determine, on what occasion you should compel people to do right, and on what occasion you should leave them the option of doing wrong?

O.—I think you cannot make any accurate or logical distinction in such matters; but that common sense and instinct have, in all civilized nations, indicated certain crimes of great social harmfulness, such as murder, theft, adultery, slander, and such like, which it is proper to repress legally; and that common sense and instinct indicate also the kind of crimes which it is proper for laws to let alone, such as miserliness, ill-natured speaking, and many of those commercial dishonesties which I have a notion you want your paternal government to interfere with.

R.—Pray do not alarm yourself about what my paternal government is likely to interfere with, but keep to the matter in hand. You say that “common sense and instinct” have, in all civilized nations, distinguished between the sins that ought to be legally dealt with and that ought not. Do you mean that the laws of all civilized nations are perfect?

O.—No; certainly not.

R.—Or that they are perfect at least in their discrimination of what crimes they should deal with, and what crimes they should let alone?

O.—No; not exactly.

R.—What *do* you mean then?

O.—I mean that the general tendency is right in the laws of civilized nations; and that, in due course of time, natural sense and instinct point out the matters they should be brought to bear upon. And each question of legislation must be made a separate subject of inquiry as it presents itself: you cannot fix any general principles about what should be dealt with legally, and what should not.

R.—Supposing it to be so, do you think there are any points in which our English legislation is capable of amendment, as it bears on commercial and economical matters, in this present time?

O.—Of course I do.

R.—Well, then, let us discuss these together quietly; and if the points that I want amended seem to you incapable of amendment, or not in need of amendment, say so: but don't object, at starting, to the mere proposition of applying law to things which have not had law applied to them before. You have admitted the fitness of my expression, "paternal government:" it only has been, and remains a question between us, how far such government should extend. Perhaps you would like it only to regulate, among the children, the length of their lessons; and perhaps I should like it also to regulate the hardness of their cricket-balls: but cannot you wait quietly till you know what I want it to do, before quarrelling with the thing itself?

O.—No; I cannot wait quietly: in fact I don't see any use in beginning such a discussion at all, because I am quite sure from the first, that you want to meddle with things that you have no business with, and to interfere with healthy liberty of action in all sorts of ways; and I know that you can't propose any laws that would be of real use.*

* If the reader is displeased with me for putting this foolish speech into his mouth, I entreat his pardon; but he may be assured that it is a speech which would be made by many people, and the substance of which would be tacitly felt by many more, at this point of the discussion. I have really tried, up to this point, to make the objector as intelligent a person as it is possible for an author to imagine anybody to be, who differs with him

R.—If you indeed know that, you would be wrong to hear me any farther. But if you are only in painful doubt about me, which makes you unwilling to run the risk of wasting your time, I will tell you beforehand what I really do think about this same liberty of action, namely, that whenever we can make a perfectly equitable law about any matter, or even a law securing, on the whole, more just conduct than unjust, we ought to make that law; and that there will yet, on these conditions, always remain a number of matters respecting which legalism and formalism are impossible; enough, and more than enough, to exercise all human powers of individual judgment, and afford all kinds of scope to individual character. I think this; but of course it can only be proved by separate examination of the possibilities of formal restraint in each given field of action; and these two lectures are nothing more than a sketch of such a detailed examination in one field, namely, that of art. You will find, however, one or two other remarks on such possibilities in the next note.

Note 2nd, p. 22.—“*Right to public support.*”

It did not appear to me desirable, in the course of the spoken lecture, to enter into details or offer suggestions on the questions of the regulation of labour and distribution of relief, as it would have been impossible to do so without touching on many disputed or disputable points, not easily handled before a general audience. But I must now supply what is wanting to make my general statement clear.

I believe, in the first place, that no Christian nation has any business to see one of its members in distress without helping him, though, perhaps, at the same time punishing him: help, of course—in nine cases out of ten—meaning guidance, much more than gift, and, therefore, interference with liberty. When a peasant mother sees one of her careless children fall into a ditch, her first proceeding is to pull him out; her second, to box his ears; her third, ordinarily, to lead him carefully a little way by the hand,

or send him home for the rest of the day. The child usually cries, and very often would clearly prefer remaining in the ditch and if he understood any of the terms of politics, would certainly express resentment at the interference with his individual liberty: but the mother has done her duty. Whereas the usual call of the mother nation to any of her children, under such circumstances, has lately been nothing more than the foxhunter's,—“Stay still there; I shall clear you.” And if we always *could* clear them, their requests to be left in muddy independence might be sometimes allowed by kind people, or their cries for help disdained by unkind ones. But we can't clear them. The whole nation is, in fact, bound together, as men are by ropes on a glacier—if one falls, the rest must either lift him or drag him along with them* as dead weight, not without much increase of danger to themselves. And the law of right being manifestly in this, as, whether manifestly or not, it is always, the law of prudence, the only question is, how this wholesome help and interference are to be administered.

The first interference should be in education. In order that men may be able to support themselves when they are grown, their strength must be properly developed while they are young; and the state should always see to this—not allowing their health to be broken by too early labour, nor their powers to be wasted for want of knowledge. Some questions connected with this matter are noticed farther on under the head “*trial schools*.” one point I must notice here, that I believe all youths of whatever rank, ought to learn some manual trade thoroughly; for it is quite wonderful how much a man's views of life are cleared by the attainment of the capacity of doing any one thing well with his hands and arms. For a long time, what right life there was in the upper classes of Europe depended in no small degree on the

* It is very curious to watch the efforts of two shopkeepers to ruin each other, neither having the least idea that his ruined neighbour must eventually be supported at his own expense, with an increase of poor rates; and that the contest between them is not in reality which shall get everything for himself, but which shall first take upon himself and his customers the gratuitous maintenance of the other's family.

necessity which each man was under of being able to fence; at this day, the most useful things which boys learn at public schools are, I believe, riding, rowing, and cricketing. But it would be far better that members of Parliament should be able to plough straight, and make a horseshoe, than only to feather oars neatly or point their toes prettily in stirrups. Then, in literary and scientific teaching, the great point of economy is to give the discipline of it through knowledge which will immediately bear on practical life. Our literary work has long been economically useless to us, because too much concerned with dead languages; and our scientific work will yet, for some time, be a good deal lost, because scientific men are too fond or too vain of their systems, and waste the student's time in endeavouring to give him large views, and make him perceive interesting connections of facts; when there is not one student, no, nor one man, in a thousand, who can feel the beauty of a system, or even take it clearly into his head; but nearly all men can understand, and most will be interested in, the facts which bear on daily life. Botanists have discovered some wonderful connection between nettles and figs, which a cowboy who will never see a ripe fig in his life need not be at all troubled about; but it will be interesting to him to know what effect nettles have on hay, and what taste they will give to porridge; and it will give him nearly a new life if he can be got but once, in a spring-time, to look well at the beautiful circlet of the white nettle blossom, and work out with his schoolmaster the curves of its petals, and the way it is set on its central mast. So, the principle of chemical equivalents, beautiful as it is, matters far less to a peasant boy, and even to most sons of gentlemen, than their knowing how to find whether the water is wholesome in the back-kitchen cistern, or whether the seven-acre field wants sand or chalk.

Having, then, directed the studies of our youth so as to make them practically serviceable men at the time of their entrance into life, that entrance should always be ready for them in cases where their private circumstances present no opening. There ought to be government establishments for every trade, in which all youths who desired it should be received as apprentices on their leaving school; and men thrown out of work received at all times. At

these government manufactories the discipline should be strict, and the wages steady, not varying at all in proportion to the demand for the article, but only in proportion to the price of food; the commodities produced being laid up in store to meet sudden demands, and sudden fluctuations in prices prevented:—that gradual and necessary fluctuation only being allowed which is properly consequent on larger or more limited supply of raw material and other natural causes. When there was a visible tendency to produce a glut of any commodity, that tendency should be checked by directing the youth at the government schools into other trades; and the yearly surplus of commodities should be the principal means of government provision for the poor. That provision should be large, and not disgraceful to them. At present there are very strange notions in the public mind respecting the receiving of alms: most people are willing to take them in the form of a pension from government, but unwilling to take them in the form of a pension from their parishes. There may be some reason for this singular prejudice, in the fact of the government pension being usually given as a definite acknowledgment of some service done to the country;—but the parish pension is, or ought to be, given precisely on the same terms. A labourer serves his country with his spade, just as a man in the middle ranks of life serves it with his sword, pen, or lancet; if the service is less, and therefore the wages during health less, then the reward, when health is broken, may be less, but not, therefore, less honourable; and it ought to be quite as natural and straightforward a matter for a labourer to take his pension from his parish, because he has deserved well of his parish, as for a man in higher rank to take his pension from his country, because he has deserved well of his country. If there be any disgrace in coming to the parish, because it may imply improvidence in early life, much more is there disgrace in coming to the government; since improvidence is far less justifiable in a highly educated than in an imperfectly educated man; and far less justifiable in a high rank, where extravagance must have been, luxury, than in a low rank, where it may only have been comfort. So that the real fact of the matter is, that people will take alms delightfully, consisting of a carriage and footmen, because those

do not look like alms to the people in the street; but they will not take alms consisting only of bread and water and coals, because everybody would understand what those meant. Mind, I do not want any one to refuse the carriage who ought to have it; but neither do I want them to refuse the coals. I should indeed be sorry if any change in our views on these subjects involved the least lessening of self-dependence in the English mind; but the common shrinking of men from the acceptance of public charity is not self-dependence, but mere base and selfish pride. It is not that they are unwilling to live at their neighbours' expense, but that they are unwilling to confess they do; it is not dependence they wish to avoid, but gratitude. They will take places in which they know there is nothing to be done—they will borrow money they know they cannot repay—they will carry on a losing business with other people's capital—they will cheat the public in their shops, or sponge on their friends at their houses; but to say plainly they are poor men, who need the nation's help, and go into an almshouse—this they loftily repudiate, and virtuously prefer being thieves to being paupers.

I trust that these deceptive efforts of dishonest men to appear independent, and the agonizing efforts of unfortunate men to remain independent, may both be in some degree checked by a better administration and understanding of laws respecting the poor. But the ordinances for relief and the ordinances for labour must go together; otherwise distress caused by misfortune will always be confounded, as it is now, with distress caused by idleness, unthrift, and fraud. It is only when the state watches and guides the middle life of men, that it can, without disgrace to them, protect their old age, acknowledging in that protection that they have done their duty, or at least some portion of their duty, in better days.

I know well how strange, fanciful, or impracticable these suggestions will appear to most of the business men of this day; men who conceive the proper state of the world to be simply that of a vast and disorganized mob, scrambling each for what he can get, trampling down its children and old men in the mire, and doing what work it finds *must* be done with any irregular squad of labour-

ers it can bribe or inveigle together, and afterwards scatter to starvation. A great deal may, indeed, be done in this way by a nation strong-elbowed and strong-hearted as we are—not easily frightened by pushing, nor discouraged by falls. But it is still not the right way of doing things, for people who call themselves Christians. Every so named soul of man claims from every other such soul, protection and education in childhood—help or punishment in middle life—reward or relief, if needed, in old age; all of these should be completely and unstintingly given, and they can only be given by the organization of such a system as I have described.

Note 3rd, p. 25.—“*Trial Schools.*”

It may be seriously questioned by the reader how much of painting talent we really lose on our present system,* and how much

* It will be observed that, in the lecture, it is *assumed* that works of art are national treasures; and that it is desirable to withdraw all the hands capable of painting or carving from other employments, in order that they may produce this kind of wealth. I do not, in assuming this, mean that works of art add to the monetary resources of a nation, or form part of its wealth, in the vulgar sense. The result of the sale of a picture in the country itself is merely that a certain sum of money is transferred from the hands of B. the purchaser, to those of A. the producer; the sum ultimately to be distributed remaining the same, only A. ultimately spending it instead of B., while the labour of A. has been in the meantime withdrawn from productive channels; he has painted a picture which nobody can live upon, or live in, when he might have grown corn or built houses: when the sale therefore is effected in the country itself, it does not add to, but diminishes, the monetary resources of the country, except only so far as it may appear probable, on other grounds, that A. is likely to spend the sum he receives for his picture more rationally and usefully than B. would have spent it. If, indeed, the picture, or other work of art, be sold in foreign countries, either the money or the useful products of the foreign country being imported in exchange for it, such sale adds to the monetary resources of the selling, and diminishes those of the purchasing nation. But sound political economy, strange as it may at first appear to say so, has nothing whatever to do with separations between national interests. Political economy means the management of the affairs of *citizens*; and it either regards exclusively the administration of the affairs of one nation, or the administration of the affairs of the world considered as one nation. See

we should gain by the proposed trial schools. For it might be thought, that as matters stand at present, we have more painters than we ought to have, having so many bad ones, and that all youths who had true painters' genius forced their way out of obscurity.

when a transaction between individuals which enriches A., impoverishes B. in precisely the same degree, the sound economist considers it an unproductive transaction between the individuals; and if a trade between two nations which enriches one, impoverishes the other in the same degree, the sound economist considers it an unproductive trade between the nations. It is not a general question of political economy, but only a particular question of local expediency, whether an article in itself valueless, may bear a value of exchange in transactions with some other nation. The economist considers only the actual value of the thing done or produced; and if he sees a quantity of labour spent, for instance, by the Swiss, in producing woodwork for sale to the English, he at once sets the commercial impoverishment of the English purchaser against the commercial enrichment of the Swiss seller; and considers the whole transaction productive only so far as the woodwork itself is a real addition to the wealth of the world. For the arrangement of the laws of a nation so as to procure the greatest advantages to itself, and leave the smallest advantages to other nations, is not a part of the science of political economy, but merely a broad application of the science of fraud. Considered thus in the abstract, pictures are not an *addition* to the monetary wealth of the world, except in the amount of pleasure or instruction to be got out of them day by day: but there is a certain protective effect on wealth exercised by works of high art which must always be included in the estimate of their value. Generally speaking, persons who decorate their houses with pictures, will not spend so much money in papers, carpets, curtains, or other expensive and perishable luxuries as they would otherwise. Works of good-art, like books, exercise a conservative effect on the rooms they are kept in; and the wall of the library or picture gallery remains undisturbed, when those of other rooms are re-papered or re-panelled. Of course this effect is still more definite when the picture is on the walls themselves, either on canvass stretched into fixed shapes on their panels, or in fresco; involving, of course, the preservation of the building from all unnecessary and capricious alteration. And generally speaking, the occupation of a large number of hands in painting or sculpture in any nation may be considered as tending to check the disposition to indulge in perishable luxury. I do not, however, in my assumption that works of art are treasures, take much into consideration this collateral monetary result. I consider them treasures, merely as a permanent means of pleasure and instruction; and having at other times tried to show the several ways in which they can please and teach, assume here that they are thus useful; and that it is desirable to make as many painters as we can.

This is not so. It is difficult to analyse the characters of mind which cause youths to mistake their vocation, and to endeavour to become artists, when they have no true artist's gift. But the fact is, that multitudes of young men do this, and that by far the greater number of living artists are men who have mistaken their vocation. The peculiar circumstances of modern life, which exhibit art in almost every form to the sight of the youths in our great cities, have a natural tendency to fill their imaginations with borrowed ideas, and their minds with imperfect science; the mere dislike of mechanical employments, either felt to be irksome, or believed to be degrading, urges numbers of young men to become painters, in the same temper in which they would enlist or go to sea; others, the sons of engravers or artists, taught the business of the art by their parents, and having no gift for it themselves, follow it as the means of livelihood, in an ignoble patience; or, if ambitious, seek to attract regard, or distance rivalry, by fantastic, meretricious, or unprecedented applications of their mechanical skill; while finally, many men earnest in feeling, and conscientious in principle, mistake their desire to be useful for a love of art, and their quickness of emotion for its capacity, and pass their lives in painting moral and instructive pictures, which might almost justify us in thinking nobody could be a painter but a rogue. On the other hand, I believe that much of the best artistical intellect is daily lost in other avocations. Generally, the temper which would make an admirable artist is humble and observant, capable of taking much interest in little things, and of entertaining itself pleasantly in the dullest circumstances. Suppose, added to these characters, a steady conscientiousness which seeks to do its duty wherever it may be placed, and the power, denied to few artistical minds, of ingenious invention in almost any practical department of human skill, and it can hardly be doubted that the very humility and conscientiousness which would have perfected the painter, have in many instances prevented his becoming one; and that in the quiet life of our steady craftsmen—sagacious manufacturers, and uncomplaining clerks—there may frequently be concealed more genius than ever is raised to the direction of our public works, or to be the mark of our public praises.

It is indeed probable, that intense disposition for art will conquer the most formidable obstacles, if the surrounding circumstances are such as at all to present the idea of such conquest to the mind; but we have no ground for concluding that Giotto would ever have been more than a shepherd, if Cimabue had not by chance found him drawing; or that among the shepherds of the Apennines there were no other Giottos, undiscovered by Cimabue. We are too much in the habit of considering happy accidents as what are called "special Providences;" and thinking that when any great work needs to be done, the man who is to do it will certainly be pointed out by Providence, be he shepherd or sea-boy; and prepared for his work by all kinds of minor providences, in the best possible way. Whereas all the analogies of God's operations in other matters prove the contrary of this; we find that "of thousand seeds, He often brings but one to bear," often not one; and the one seed which He appoints to bear is allowed to bear crude or perfect fruit according to the dealings of the husbandman with it. And there cannot be a doubt in the mind of any person accustomed to take broad and logical views of the world's history, that its events are ruled by Providence in precisely the same manner as its harvests; that the seeds of good and evil are broadcast among men, just as the seeds of thistles and fruits are; and that according to the force of our industry, and wisdom of our husbandry, the ground will bring forth to us figs or thistles. So that when it seems needed that a certain work should be done for the world, and no man is there to do it, we have no right to say that God did not wish it to be done; and therefore sent no man able to do it. The probability (if I wrote my own convictions, I should say certainty) is, that He sent many men, hundreds of men, able to do it; and that we have rejected them, or crushed them; by our previous folly of conduct or of institution, we have rendered it impossible to distinguish, or impossible to reach them; and when the need for them comes, and we suffer for the want of them, it is not that God refuses to send us deliverers, and specially appoints all our consequent sufferings; but that He has sent, and we have refused, the deliverers; and the pain is then wrought out by His eternal law, as surely as famine is wrought out by eternal

law for a nation which will neither plough nor sow. No less are we in error in supposing, as we so frequently do, that if a man be found, he is sure to be in all respects fitted for the work to be done, as the key is to the lock: and that every accident which happened in the forging him, only adapted him more truly to the wards. It is pitiful to hear historians beguiling themselves and their readers, by tracing in the early history of great men, the minor circumstances which fitted them for the work they did, without ever taking notice of the other circumstances which assuredly unfitted them for it; so concluding that miraculous interposition prepared them in all points for everything, and that they did all that could have been desired or hoped for from them: whereas the certainty of the matter is that, throughout their lives, they were thwarted and corrupted by some things as certainly as they were helped and disciplined by others; and that, in the kindest and most reverent view which can justly be taken of them, they were but poor mistaken creatures, struggling with a world more profoundly mistaken than they;—assuredly sinned against, or sinning in thousands of ways, and bringing out at last a maimed result—not what they might or ought to have done, but all that could be done against the world's resistance, and in spite of their own sorrowful falsehood to themselves.

And this being so, it is the practical duty of a wise nation, first to withdraw, as far as may be, its youth from destructive influences;—then to try its material as far as possible, and to lose the use of none that is good. I do not mean by “withdrawing from destructive influences” the keeping of youths out of trials; but the keeping them out of the way of things purely and absolutely mischievous. I do not mean that we should shade our green corn in all heat, and shelter it in all frost, but only that we should dyke out the inundation from it, and drive the fowls away from it. Let your youth labour and suffer; but do not let it starve, nor steal, nor blaspheme.

It is not, of course, in my power here to enter into details of schemes of education; and it will be long before the results of experiments now in progress will give data for the solution of the most difficult questions connected with the subject, of which the principal one is

the mode in which the chance of advancement in life is to be extended to all, and yet made compatible with contentment in the pursuit of lower avocations by those whose abilities do not qualify them for the higher. But the general principle of trial schools lies at the root of the matter—of schools, that is to say, in which the knowledge offered and discipline enforced shall be all a part of a great assay of the human soul, and in which the one shall be increased, the other directed, as the tried heart and brain will best bear, and no otherwise. One thing, however, I must say, that in this trial I believe all emulation to be a false motive, and all giving of prizes a false means. All that you can depend upon in a boy, as significative of true power, likely to issue in good fruit, is his will to work for the work's sake, not his desire to surpass his school-fellows; and the aim of the teaching you give him ought to be, to prove to him and strengthen in him his own separate gift, not to puff him into swollen rivalry with those who are everlastingly greater than he: still less ought you to hang favours and ribands about the neck of the creature who is the greatest, to make the rest envy him. Try to make them love him and follow him, not struggle with him.

There must, of course, be examination to ascertain and attest both progress and relative capacity; but our aim should be to make the students rather look upon it as a means of ascertaining their own true positions and powers in the world, than as an arena in which to carry away a present victory. I have not, perhaps, in the course of the lecture, insisted enough on the nature of relative capacity and individual character, as the roots of all real *value* in Art. We are too much in the habit, in these days, of acting as if Art worth a price in the market were a commodity which people could be generally taught to produce, and as if the *education* of the artist, not his *capacity*, gave the sterling value to his work. No impression can possibly be more absurd or false. Whatever people can teach each other to do, they will estimate, and ought to estimate, only as common industry; nothing will ever fetch a high price but precisely that which cannot be taught, and which nobody can do but the man from whom it is purchased. No state of society, nor stage of knowledge, ever does away with the natural

pre-eminence of one man over another; and it is that pre-eminence, and that only, which will give work high value in the market, or which ought to do so. It is a bad sign of the judgment, and bad omen for the progress, of a nation, if it supposes itself to possess many artists of equal merit. Noble art is nothing less than the expression of a great soul; and great souls are not common things. If ever we confound their work with that of others, it is not through liberality, but through blindness.

Note 4th, p. 26.—“*Public favour.*”

There is great difficulty in making any short or general statement of the difference between great and ignoble minds in their behaviour to the “public.” It is by no means *universally* the case that a mean mind, as stated in the text, will bend itself to what you ask of it: on the contrary, there is one kind of mind, the meanest of all, which perpetually complains of the public, contemplates and proclaims itself as a “genius,” refuses all wholesome discipline or humble office, and ends in miserable and revengeful ruin; also, the greatest minds are marked by nothing more distinctly than an inconceivable humility, and acceptance of work or instruction in any form, and from any quarter. They will learn from everybody, and do anything that anybody asks of them, so long as it involves only toil, or what other men would think degradation. But the point of quarrel, nevertheless, assuredly rises some day between the public and them, respecting some matter, not of humiliation, but of Fact. Your great man always at last comes to see something the public don’t see. This something he will assuredly persist in asserting, whether with tongue or pencil, to be as *he* sees it, not as *they* see it; and all the world in a heap on the other side, will not get him to say otherwise. Then, if the world objects to the saying, he may happen to get stoned or burnt for it, but that does not in the least matter to him: if the world has no particular objection to the saying, he may get leave to mutter it to himself till he dies, and be merely taken for an idiot; that also does not matter to him—mutter it he will, according to what he

perceives to be fact, and not at all according to the roaring of the walls of Red sea on the right hand or left of him. Hence the quarrel, sure at some time or other, to be started between the public and him; while your mean man, though he will spit and scratch spiritedly at the public, while it does not attend to him, will bow to it for its clap in any direction, and say anything when he has got its ear, which he thinks will bring him another clap; and thus, as stated in the text, he and it go on smoothly together.

There are, however, times when the obstinacy of the mean man looks very like the obstinacy of the great one; but if you look closely into the matter, you will always see that the obstinacy of the first is in the pronunciation of "I;" and of the second, in the pronunciation of "It."

Note 5th, p. 41.—"*Invention of new wants.*"

It would have been impossible for political economists long to have endured the error spoken of in the text,* had they not been

* I have given the political economists too much credit in saying this. Actually, while these sheets are passing through the press, the blunt, broad, unmitigated fallacy is enunciated, formally and precisely, by the common councilmen of New York, in their report on the present commercial crisis. Here is their collective opinion, published in the *Times* of November 23rd, 1857:—"Another erroneous idea is that luxurious living, extravagant dressing, splendid turn-outs and fine houses, are the cause of distress to a nation. No more erroneous impression could exist. Every extravagance that the man of 100,000 or 1,000,000 dollars indulges in adds to the means, the support, the wealth of ten or a hundred who had little or nothing else but their labour, their intellect, or their taste. If a man of 1,000,000 dollars spends principal and interest in ten years, and finds himself beggared at the end of that time, he has actually made a hundred who have catered to his extravagance, employers or employed, so much richer by the division of his wealth. He may be ruined, but the nation is better off and richer, for one hundred minds and hands, with 10,000 dollars apiece, are far more productive than one with the whole."

Yes, gentlemen of the common council; but what has been doing in the time of the transfer? The spending of the fortune has taken a certain number of years (suppose ten), and during that time 1,000,000 dollars worth of

confused by an idea, in part well founded, that the energies and refinements, as well as the riches of civilized life, arose from imaginary wants. It is quite true, that the savage who knows no needs but those of food, shelter, and sleep, and after he has snared his venison and patched the rents of his hut, passes the rest of his time in animal repose, is in a lower state than the man who labours incessantly that he may procure for himself the luxuries of civilization; and true also, that the difference between one and another nation in progressive power depends in great part on vain desires; but these idle motives are merely to be considered as giving exercise to the national body and mind; they are not sources of wealth, except so far as they give the habits of industry and acquisitiveness. If a boy is clumsy and lazy, we shall do good if we can persuade him to carve cherry-stones and fly kites; and this use of his fingers and limbs may eventually be the cause of his becoming a wealthy and happy man; but we must not therefore argue that cherry-stones are valuable property, or that kite-flying is a profitable mode of passing time. In like manner, a nation always wastes its time and labour *directly*, when it invents a new want of a frivolous kind, and yet the invention of such a want may be the sign of a healthy activity, and the labour undergone to satisfy the new want may lead, *indirectly*, to useful discoveries or to noble arts; so that a nation is not to be discouraged in its fancies when it is either too

work has been done by the people, who have been paid that sum for it. Where is the product of that work? By your own statement, wholly consumed; for the man for whom it has been done is now a beggar. You have given therefore, as a nation, 1,000,000 dollars worth of work, and ten years of time, and you have produced, as ultimate result, one beggar! Excellent economy, gentlemen; and sure to conduce, in due sequence, to the production of *more* than one beggar. Perhaps the matter may be made clearer to you, however, by a more familiar instance. If a schoolboy goes out in the morning with five shillings in his pocket, and comes home at night penniless, - having spent his all in tarts, principal and interest are gone, and fruiterer and baker are enriched. So far so good. But suppose the schoolboy, instead, has bought a book and a knife; principal and interest are gone, and bookseller and cutler are enriched. But the schoolboy is enriched also, and may help his schoolfellows next day with knife and book, instead of lying in bed and incurring a debt to the doctor.

weak or foolish to be moved to exertion by anything but fancies, or has attended to its serious business first. If a nation will not forge iron, but likes distilling lavender, by all means give it lavender to distil; only do not let its economists suppose that lavender is as profitable to it as oats, or that it helps poor people to live, any more than the schoolboy's kite provides him his dinner. Luxuries, whether national or personal, must be paid for by labour withdrawn from useful things; and no nation has a right to indulge in them until all its poor are comfortably housed and fed.

The enervating influence of luxury, and its tendencies to increase vice, are points which I keep entirely out of consideration in the present essay: but, so far as they bear on any question discussed, they merely furnish additional evidence on the side which I have taken. Thus, in the present case, I assume that the luxuries of civilized life are in possession harmless, and in acquirement, servicable as a motive for exertion; and even on these favourable terms, we arrive at the conclusion that the nation ought not to indulge in them except under severe limitations. Much less ought it to indulge in them if the temptation consequent on their possession, or fatality incident to their manufacture, more than counterbalances the good done by the effort to obtain them.

Note 6th, p. 52.—“*Economy of Literature.*”

I have been much impressed lately by one of the results of the quantity of our books; namely, the stern impossibility of getting anything understood, that required patience to understand. I observe always, in the case of my own writings, that if ever I state anything which has cost me any trouble to ascertain, and which, therefore, will probably require a minute or two of reflection from the reader before it can be accepted,—that statement will not only be misunderstood, but in all probability taken to mean something very nearly the reverse of what it does mean. Now, whatever faults there may be in my modes of expression, I know that the words I use will always be found, by Johnson's dic

tionary, to bear, first of all, the sense I use them in; and that the sentences, whether awkwardly turned or not, will, by the ordinary rules of grammar, bear no other interpretation than that I mean them to bear; so that the misunderstanding of them must result, ultimately, from the mere fact that their matter sometimes requires a little patience. And I see the same kind of misinterpretation put on the words of other writers, whenever they require the same kind of thought.

I was at first a little despondent about this; but, on the whole, I believe it will have a good effect upon our literature for some time to come; and then, perhaps, the public may recover its patience again. For certainly it is excellent discipline for an author to feel that he must say all he has to say in the fewest possible words, or his reader is sure to skip them; and in the plainest possible words, or his reader will certainly misunderstand them. Generally, also, a downright fact may be told in a plain way; and we want downright facts at present more than anything else. And though I often hear moral people complaining of the bad effects of want of thought, for my part, it seems to me that one of the worst diseases to which the human creature is liable is its disease of thinking. If it would only just *look** at a thing instead of thinking what it must be like, or *do* a thing, instead of thinking it cannot be done, we should all get on far better.

* There can be no question, however, of the mischievous tendency of the hurry of the present day, in the way people undertake this very *looking*. I gave three years' close and incessant labour to the examination of the chronology of the architecture of Venice; two long winters being wholly spent in the drawing of details on the spot; and yet I see constantly that architects who pass three or four days in a gondola going up and down the grand canal, think that their first impressions are just as likely to be true as my patiently wrought conclusions. Mr. Street, for instance, glances hastily at the façade of the Ducal Palace—so hastily that he does not even see what its pattern is, and misses the alternation of red and black in the centres of its squares—and yet he instantly ventures on an opinion on the chronology of its capitals, which is one of the most complicated and difficult subjects in the whole range of Gothic archæology. It may, nevertheless, be ascertained with very fair probability of correctness by any person who will give a month's hard work to it, but it can be ascertained no otherwise.

Note 7th, p. 93.—“*Pilots of the State.*”

While, however, undoubtedly, these responsibilities attach to every person possessed of wealth, it is necessary both to avoid any stringency of statement respecting the benevolent modes of spending money, and to admit and approve so much liberty of spending it for selfish pleasures as may distinctly make wealth a personal *reward* for toil, and secure in the minds of all men the right of property. For although, without doubt, the purest pleasures it can procure are not selfish, it is only as a means of personal gratification that it will be desired by a large majority of workers; and it would be no less false ethics than false policy to check their energy by any forms of public opinion which bore hardly against the wanton expenditure of honestly got wealth. It would be hard if a man who had passed the greater part of his life at the desk or counter could not at last innocently gratify a caprice; and all the best and most sacred ends of almsgiving would be at once disappointed, if the idea of a moral claim took the place of affectionate gratitude in the mind of the receiver.

Some distinction is made by us naturally in this respect between earned and inherited wealth; that which is inherited appearing to involve the most definite responsibilities, especially when consisting in revenues derived from the soil. The form of taxation which constitutes rental of lands places annually a certain portion of the national wealth in the hands of the nobles, or other proprietors of the soil, under conditions peculiarly calculated to induce them to give their best care to its efficient administration. The want of instruction in even the simplest principles of commerce and economy, which hitherto has disgraced our schools and universities, has indeed been the cause of ruin or total inutility of life to multitudes of our men of estate; but this deficiency in our public education cannot exist much longer, and it appears to be highly advantageous for the State that a certain number of persons distinguished by race should be permitted to set examples of wise expenditure, whether in the advancement of science, or in patronage of art and literature; only they must see to it that they take

their right standing more firmly than they have done hitherto for the position of a rich man in relation to those around him is, in our present real life, and is also contemplated generally by political economists as being, precisely the reverse of what it ought to be. A rich man ought to be continually examining how he may spend his money for the advantage of others; at present others are continually plotting how they may beguile him into spending it apparently for his own. The aspect which he presents to the eyes of the world is generally that of a person holding a bag of money with a staunch grasp, and resolved to part with none of it unless he is forced, and all the people about him are plotting how they may force him; that is to say, how they may persuade him that he wants this thing or that; or how they may produce things that he will covet and buy. One man tries to persuade him that he wants perfumes; another that he wants jewellery; another that he wants sugarplums; another that he wants roses at Christmas. Anybody who can invent a new want for him is supposed to be a benefactor to society; and thus the energies of the poorer people about him are continually directed to the production of covetable, instead of serviceable things; and the rich man has the general aspect of a fool, plotted against by all the world. Whereas the real aspect which he ought to have is that of a person wiser than others, entrusted with the management of a larger quantity of capital, which he administers for the profit of all, directing each man to the labour which is most healthy for him, and most serviceable for the community.

Note 8th, p. 93.—“*Silk and Purple.*”

In various places throughout these lectures I have had to allude to the distinction between productive and unproductive labour, and between true and false wealth. I shall here endeavour, as clearly as I can, to explain the distinction I mean.

Property may be divided generally into two kinds; that which produces life, and that which produces the objects of life. That which produces or maintains life consists of food, in so far as it is

nourishing; of furniture and clothing, in so far as they are protective or cherishing; of fuel; and of all land, instruments, or materials, necessary to produce food, houses, clothes, and fuel. It is specially and rightly called useful property.

The property which produces the objects of life consists of all that gives pleasure or suggests and preserves thought: of food, furniture, and land, in so far as they are pleasing to the appetite or the eye; of luxurious dress, and all other kinds of luxuries; of books, pictures, and architecture. But the modes of connection of certain minor forms of property with human labour render it desirable to arrange them under more than these two heads. Property may therefore be conveniently considered as of five kinds.

1st. Property necessary to life, but not producible by labour, and therefore belonging of right, in a due measure, to every human being as soon as he is born, and morally inalienable. As for instance, his proper share of the atmosphere, without which he cannot breathe, and of water, which he needs to quench his thirst. As much land as he needs to feed from is also inalienable; but in well regulated communities this quantity of land may often be represented by other possessions, or its need supplied by wages and privileges.

2. Property necessary to life, but only producible by labour, and of which the possession is morally connected with labour, so that no person capable of doing the work necessary for its production has a right to it until he has done that work;—"he that will not work, neither should he eat." It consists of simple food, clothing, and habitation, with their seeds and materials, or instruments and machinery, and animals used for necessary draught or locomotion, &c. It is to be observed of this kind of property, that its increase cannot usually be carried beyond a certain point, because it depends not on labour only, but on things of which the supply is limited by nature. The possible accumulation of corn depends on the quantity of corn-growing land possessed or commercially accessible; and that of steel, similarly, on the accessible quantity of coal and ironstone. It follows from this natural limitation of supply that the accumulation of property of this kind

in large masses at one point, or in one person's hands, commonly involves, more or less, the scarcity of it at another point and in other persons' hands; so that the accidents or energies which may enable one man to procure a great deal of it, may, and in all likelihood will partially prevent other men procuring a sufficiency of it, however willing they may be to work for it; therefore, the modes of its accumulation and distribution need to be in some degree regulated by law and by national treaties, in order to secure justice to all men.

Another point requiring notice respecting this sort of property is, that no work can be wasted in producing it, provided only the kind of it produced be preservable and distributable, since for every grain of such commodities we produce we are rendering so much more life possible on earth.* But though we are sure, thus, that we are employing people well, we cannot be sure we might not have employed them *better*; for it is possible to direct labour to the production of life, until little or none is left for that of the objects of life, and thus to increase population at the expense of

* This point has sometimes been disputed; for instance, opening Mill's Political Economy the other day, I chanced on a passage in which he says that a man who makes a coat, if the person who wears the coat does nothing useful while he wears it, has done no more good to society than the man who has only raised a pine-apple. But this is a fallacy induced by endeavour after too much subtlety. None of us have a right to say that the life of a man is *of* no use to *him*, though it may be of no use to *us*; and the man who made the coat, and thereby prolonged another man's life, has done a gracious and useful work, whatever may come of the life so prolonged. We may say to the wearer of the coat, "You who are wearing coats, and doing nothing in them, are at present wasting your own life and other people's;" but we have no right to say that his existence, however wasted, is wasted *away*. It may be just dragging itself on, in its thin golden line, with nothing dependent upon it, to the point where it is to strengthen into good chain cable, and have thousands of other lives dependent on it. Meantime, the simple fact respecting the coat-maker is, that he has given so much life to the creature, the results of which he cannot calculate; they may be—in all probability will be—infinite results in some way. But the raiser of pines, who has only given a pleasant taste in the mouth to some one, may see with tolerable clearness to the end of the taste in the mouth, and of all conceivable results therefrom.

civilization, learning, and morality: on the other hand, it is just as possible—and the error is one to which the world is, on the whole, more liable—to direct labour to the objects of life till too little is left for life, and thus to increase luxury or learning at the expense of population. Right political economy holds its aim poised justly between the two extremes, desiring neither to crowd its dominions with a race of savages, nor to found courts and colleges in the midst of a desert.

3. The third kind of property is that which conduces to bodily pleasures and conveniences, without directly tending to sustain life; perhaps sometimes indirectly tending to destroy it. All dainty (as distinguished from nourishing) food, and means of producing it; all scents not needed for health; substances valued only for their appearance and rarity (as gold and jewels); flowers of difficult culture; animals used for delight (as horses for racing), and such like, form property of this class; to which the term “luxury, or luxuries,” ought exclusively to belong.

Respecting which we have to note, first, that all such property is of doubtful advantage even to its possessor. Furniture tempting to indolence, sweet odours, and luscious food, are more or less injurious to health: while, jewels, liveries, and other such common belongings of wealthy people, certainly convey no pleasure to their owners proportionate to their cost.

Farther, such property, for the most part, perishes in the using. Jewels form a great exception—but rich food, fine dresses, horses and carriages, are consumed by the owner's use. It ought much oftener be brought to the notice of rich men what sums of interest of money they are paying towards the close of their lives, for luxuries consumed in the middle of them. It would be very interesting, for instance, to know the exact sum which the money spent in London for ices, at its desserts and halls, during the last twenty years had it been saved and put out at compound interest, would at this moment have furnished for useful purposes.

Also, in most cases, the enjoyment of such property is wholly selfish, and limited to its possessor. Splendid dress and equipage, however, when so arranged as to produce real beauty of effect, may often be rather a generous than a selfish channel of expenditure

They will, however, necessarily in such case involve some of the arts of design; and therefore take their place in a higher category than that of luxuries merely.

4. The fourth kind of property is that which bestows intellectual or emotional pleasure, consisting of land set apart for purposes of delight more than for agriculture, of books, works of art, and objects of natural history.

It is, of course, impossible to fix an accurate limit between property of the last class and of this class, since things which are a mere luxury to one person are a means of intellectual occupation to another. Flowers in a London ball-room are a luxury; in a botanical garden, a delight of the intellect; and in their native fields, both; while the most noble works of art are continually made material of vulgar luxury or of criminal pride; but, when rightly used, property of this fourth class is the only kind which deserves the name of *real* property; it is the only kind which a man can truly be said to "possess." What a man eats, or drinks, or wears, so long as it is only what is needful for life, can no more be thought of as his possession than the air he breathes. The air is as needful to him as the food; but we do not talk of a man's wealth of air, and what food or clothing a man possesses more than he himself requires, must be for others to use (and, to him, therefore, not a real property in itself, but only a means of obtaining some real property in exchange for it). Whereas the things that give intellectual or emotional enjoyment may be accumulated and do not perish in using; but continually supply new pleasures and new powers of giving pleasures to others. And these, therefore, are the only things which can rightly be thought of as giving "wealth" or "well being." Food conduces only to "being," but these to "*well* being." And there is not any broader general distinction between lower and higher orders of men than rests on their possession of this real property. The human race may be properly divided by zoologists into "men who have gardens, libraries, or works of art; and who have none;" and the former class will include all noble persons, except only a few who make the world their garden or museum; while the people who have not, or, which is the same thing, do not care for gardens or libraries,

but care for nothing but money or luxuries, will include none but ignoble persons: only it is necessary to understand that I mean by the term "garden" as much the Carthusian's plot of ground, fifteen feet square between his monastery buttresses, as I do the grounds of Chatsworth or Kew; and I mean by the term "art" as much the old sailor's print of the Arethusa bearing up to engage the Belle Poule, as I do Raphael's "Disputa," and even rather more; for when abundant, beautiful possessions of this kind are almost always associated with vulgar luxury, and become then anything but indicative of noble character in their possessors. The ideal of human life is a union of Spartan simplicity of manners with Athenian sensibility and imagination, but in actual results, we are continually mistaking ignorance for simplicity, and sensuality for refinement.

5. The fifth kind of property is representative property, consisting of documents or money, or rather documents only, for money itself is only a transferable document, current among societies of men, giving claim, at sight, to some definite benefit or advantage, most commonly to a certain share of real property existing in those societies. The money is only genuine when the property it gives claim to is real, or the advantages it gives claim to certain; otherwise, it is false money, and may be considered as much "forged" when issued by a government, or a bank, as when by an individual. Thus, if a dozen of men, cast ashore on a desert island, pick up a number of stones, put a red spot on each stone, and pass a law that every stone marked with a red spot shall give claim to a peck of wheat;—so long as no wheat exists, or can exist, on the island, the stones are not money. But the moment so much wheat exists as shall render it possible for the society always to give a peck for every spotted stone, the spotted stones would become money, and might be exchanged by their possessors for whatever other commodities they chose, to the value of the peck of wheat which the stones represented. If more stones were issued than the quantity of wheat could answer the demand of, the value of the stone coinage would be depreciated, in proportion to its increase above the quantity needed to answer it.

Again, supposing a certain number of the men so cast ashore

were set aside by lot, or any other convention, to do the rougher labour necessary for the whole society, they themselves being maintained by the daily allotment of a certain quantity of food, clothing, &c. Then, if it were agreed that the stones spotted with red should be signs of a Government order for the labour of these men; and that any person presenting a spotted stone at the office of the labourers, should be entitled to a man's work for a week or a day, the red stones would be money; and might—probably would,—immediately pass current in the island for as much food, or clothing, or iron, or any other article as a man's work for the period secured by the stone was worth. But if the Government issued so many spotted stones that it was impossible for the body of men they employed to comply with the orders; as, suppose, if they only employed twelve men, and issued eighteen spotted stones daily, ordering a day's work each, then the six extra stones would be forged or false money; and the effect of this forgery would be the depreciation of the value of the whole coinage by one-third, that being the period of shortcoming which would, on the average, necessarily ensue in the execution of each order. Much occasional work may be done in a state or society, by help of an issue of false money (or false promises) by way of stimulants; and the fruit of this work, if it comes into the promiser's hands, may sometimes enable the false promises at last to be fulfilled: hence the frequent issue of false money by governments and banks, and the not unfrequent escapes from the natural and proper consequences of such false issues, so as to cause a confused conception in most people's minds of what money really is. I am not sure whether some quantity of such false issue may not really be permissible in a nation, accurately proportioned to the minimum average produce of the labour it excites; but all such procedures are more or less unsound; and the notion of unlimited issue of currency is simply one of the absurdest and most monstrous that ever came into disjointed human wits.

The use of objects of real or supposed value for currency, as gold, jewellery, &c., is barbarous; and it always expresses either the measure of the distrust in the society of its own government, or the proportion of distrustful or barbarous nations with whom it

has to deal. A metal not easily corroded or imitated, is a desirable medium of currency for the sake of cleanliness and convenience, but were it possible to prevent forgery, the more worthless the metal itself, the better. The use of worthless media, unrestrained by the use of valuable media, has always hitherto involved, and is therefore supposed to involve necessarily, unlimited, or at least improperly extended, issue; but we might as well suppose that a man must necessarily issue unlimited promises because his words cost nothing. Intercourse with foreign nations must, indeed, for ages yet to come, at the world's present rate of progress, be carried on by valuable currencies; but such transactions are nothing more than forms of barter. The gold used at present as a currency is not, in point of fact, currency at all, but the real property* which the currency gives claim to, stamped to measure its quantity, and mingling with the real currency occasionally by barter.

The evils necessarily resulting from the use of baseless currencies have been terribly illustrated while these sheets have been passing through the press; I have not had time to examine the various conditions of dishonest or absurd trading which have led to the late "panic" in America and England; this only I know, that no merchant deserving the name ought to be more liable to "panic" than a soldier should; for his name should never be on more paper than he can at any instant meet the call of, happen what will. I do not say this without feeling at the same time how difficult it is to mark, in existing commerce, the just limits between the spirit of enterprise and of speculation. Something of

* Or rather, equivalent to such real property, because everybody has been accustomed to look upon it as valuable; and therefore everybody is willing to give labour or goods for it. But real property does ultimately consist only in things that nourish the body or mind; gold would be useless to us if we could not get mutton or books for it. Ultimately all commercial mistakes and embarrassments result from people expecting to get goods without working for them, or waiting them after they have got them. A nation which labours, and takes care of the fruits of labour, would be rich and happy; though there were no gold in the universe. A nation which is idle, and wastes the produce of what work it does, would be poor and miserable, though all its mountains were of gold, and had glens filled with diamonds instead of glaciers.

the same temper which makes the English soldier do always all that is possible, and attempt more than is possible, joins its influence with that of mere avarice in tempting the English merchant into risks which he cannot justify, and efforts which he cannot sustain; and the same passion for adventure which our travellers gratify every summer on perilous snow wreaths, and cloud-encompassed precipices, surrounds with a romantic fascination the glittering of a hollow investment, and gilds the clouds that curl round gulfs of ruin. Nay, a higher and a more serious feeling frequently mingles in the motley temptation; and men apply themselves to the task of growing rich, as to a labour of providential appointment, from which they cannot pause without culpability, nor retire without dishonour. Our large trading cities bear to me very nearly the aspect of monastic establishments in which the roar of the mill-wheel and the crane takes the place of other devotional music: and in which the worship of Mammon and Moloch is conducted with a tender reverence and an exact propriety: the merchant rising to his Mammon matins with the self-denial of an anchorite, and expiating the frivolities into which he may be beguiled in the course of the day by late attendance at Mammon vespers. But, with every allowance that can be made for these conscientious and romantic persons, the fact remains the same, that by far the greater number of the transactions which lead to these times of commercial embarrassment may be ranged simply under two great heads,—gambling and stealing; and both of these in their most culpable form, namely, gambling with money which is not ours, and stealing from those who trust us. I have sometimes thought a day might come, when the nation would perceive that a well-educated man who steals a hundred thousand pounds, involving the entire means of subsistence of a hundred families, deserves, on the whole, as severe a punishment as an ill-educated man who steals a purse from a pocket, or a mug from a pantry. But without hoping for this success of clear-sightedness, we may at least labour for a system of greater honesty and kindness in the minor commerce of our daily life; since the great dishonesty of the great buyers and sellers is nothing more than the natural growth and outcome from the little dishonesty of the little buyers

and sellers. Every person who tries to buy an article for less than its proper value, or who tries to sell it at more than its proper value—every consumer who keeps a tradesman waiting for his money, and every tradesman who bribes a consumer to extravagance by credit, is helping forward, according to his own measure of power, a system of baseless and dishonourable commerce, and forcing his country down into poverty and shame. And people of moderate means and average powers of mind would do far more real good by merely carrying out stern principles of justice and honesty in common matters of trade, than by the most ingenious schemes of extended philanthropy, or vociferous declarations of theological doctrine. There are three weighty matters of the law—justice, mercy, and truth; and of these the Teacher puts truth last, because that cannot be known but by a course of acts of justice and love. But men put, in all their efforts, truth first, because they mean by it their own opinions; and thus, while the world has many people who would suffer martyrdom in the cause of what they call truth, it has few who will suffer even a little inconvenience in that of justice and mercy.
