#### OF THE

# SPANISH SETTLEMENTS

#### I N

# A M E R I C A.

#### IN FOUR PARTS.

- I. An account of the difcovery of America by the celebrated Christopher Columbus; with a defcription of the Spanith infulan colonies in the West Indies.
- II. Their fettlements on the continent of North America.
- III. Their fettlements in Peru, Chili, Paraguay, and Rio de La Plata.
- IV. Their fetttlements in Terra Firma. Of the different countries in South America fiill possefied by the Indians, &c. With a description of the Canary iflands.

#### EACH PART CONTAINS

An accurate defeription of the fettlements in it, their fituation, extent, climate, foil, produce, former and prefent condition, trading commodities, manufactures, the genius, diffolition, and number of their inhabitants, their government, both civil and ecclefiallic; together with a concife account of their chief cities, ports, bays, rivers, lakes, mountains, minerals, fortifications, &c.; with a very particular account of the trade carried on betwixt them and Old Spain.

#### To which is annexed,

A fuccinft account of the climate, produce, trade, manufactures, &c. of OLD SPAIN.

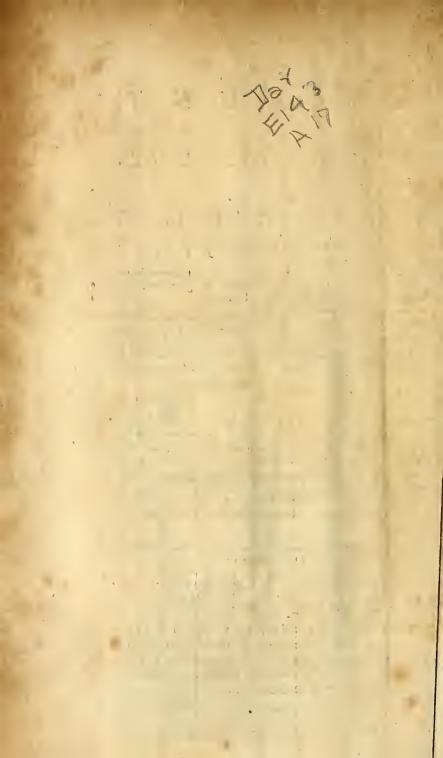

#### Illustrated with a MAP of AMERICA.

#### E D I N B U R G H:

Finted by A. DONALDSON and J. REID. For the Author, and A. DONALDSON.

Sold by A. MILLAR, J DODSLEY, J. RICHARDSON, E. DILLY, and T. DURHAM, London; and Meff. EWINGS, Duklin.

MERICA is by far the largest of the four grand divisions of the world, and is now become of the greatest importance to the maritime' powers of Europe, the affairs of which have lately engaged-a great deal of the public attention. Before the laft war there were but very few who made the history of that quarter of the world any part of their itudy, though the matter is certainly very curious in itielf, and extremely interesting to us as a trading people.

It has fuch a variety of climates, and fuch abundance of the most valuable productions, that all the principal European powers have been very attentive to their particular interests and connections in this part of the globe, which they have colonifed with great affiduity, and cultivated with amazing fuccefs.

The Spaniards owe all their former grandeur, and present existence, to their possessions in Mexico, Peru, Chili, and other American fettlements. The Portuguese have aggrandised their nation by the settlements they have ettablished in the Brazils. Great Britain is indebted to her colonies in North America, and her islands in the West Indies, for the great augmentation of her trade, the increase of her wealth, and the fupport of her potent navy. . The Dutch receive no inconfiderable advantage from Surinam in Guiana, and their islands adjacent to the Spanish main. France has also extended her commerce, fo as to rank herfelf a maritime power, by means of her late possessions in Canada, Louisiana, Cayenne, in South America, and the Leeward islands; but by her ambition, and openly grafping at what belonged to her neighbours, she has lately loft the greatest part of her settlements in the western world. And as a repre-

a 2

fentation

fentation of the caufes of the prefent war between Great Britain and France, and our late remarkable fucceffes in America, will naturally lead us to account for the prefent rupture between Spain and us; we thall therefore, in as concife a manner as possible, give a brief detail of the rife and progress of the prefent war.

Notwithstanding of the great extent, and the vast advantages which the French reaped from their colonies and fisheries in North America, yet that reftless nation, which never loss fight of universal monarchy, foon began to make inroads upon the British fettlements.

After the treaty of Utrecht, concluded in the year 1713, they openly incroached upon the country of the Iroquois, which lies within the territories of New York, and built feveral fortreffes there, namely, one between the lakes of Erie and Ontario, on the eaft fide of the great falls of Niagara, to command the Indians that fhould pais by the fouth fide of the lake. They erected a fecond at the weit end of lake Erie; and another very ftrong one at the fouth end of lake Iroquois, called *Crocon-point*, which commands the lake, ferved for a barrier to Montreal, and as a magazine and place of fendezvous whenever the French or their Indians made any incurfion into the colony of New York, the weftern parts of Maffachufets bay, or New Hampfhire.

The treaty of Aix-la-Chapelle, concluded in 1748, was no fooner figned, and the French put in poffession of Cape Breton, than they were defirous allo of becoming masters of Nova Scotia, a country fo advantageously fituated, that it could not fail of highly promoting their commercial interest in the new world. In order therefore to obtain this important article, they erected forts in 1749, at the mouth of St John's river. This proceeding, however, was so far from being being agreeable to the British ministry, that Colonel Cornwallis was ordered to deftroy the fortifications. Accordingly, he dispatched Major Lawrence to St John's river; but he not having with him a sufficient number of troops, was repulsed by the French. Both courts remonstrated against these proceedings, and commissions were appointed to terminate the affair, and fix the boundaries of a country, which all the world knew had been long before fettled by the treaties of Utrecht and Aix-la-Chapelle.

About the fame time feveral merchants and planters of Virginia and Penfylvania, induced by the advantages they flattered themfelves of enjoying from an inland trade, formed themfelves into a company, and determined to fettle in that delightful country near the river Ohio, and thence called themfelves *the Ohio company*. Accordingly they procured a charter for a large tract of land, and commenced an extensive and lucrative trade with the Indians.

But thefe proceedings alarmed the French, knowing, that if the Ohio company were permitted to put their fcheme in execution, they would foon become mafters of the greateft part of the fur-trade, and therefore determined to nip them in the bud. With this view a body of troops was difpatched to feize every perfon found trading in those parts, under pretence that the country belonged to his Most Christian Majefty, though they knew that thefe lands lay within the limits of Virginia.

Thefe repeated infults only produced remonstrances, and the French ministry, in order to protract a negotiation fo greatly to their interest, promised to remove the cause of complaint, by fixing the limits betwixt the colonies of the two nations; but, at the same time, exerted themselves with the utmost vigour in effecting a scheme long projected, namely, the erecting a chain of forts from Canada to the mouth of the river river Milifippi, in order to exclude us from all intercourfe with the Indians, whom they had found means to gain over to their intereft; and, at the fame time, excited theie favage barbarians to commit the moft horrid ravages upon our back fettlements, and perpetrate the moft fhocking murders on the innocent inhabitants. Nor was this the utmoft extent of their diabolical project; they had obferved that our colonies were diftracted with inteftine divisions, and therefore flattered themfelves, that when their chain of forts was completed, and the extensive lands on the Ohio fufficiently peopled, the British colonies would become an eafy conquest.

Such were the intentions of our treacherous foes, who continued to fortify the countries they had ununjuftly uturped, and obftinately perfevered in their glaring incroachments, till the British spirit was at laft roufed from the bed of indolence to chaftife their daring perfidy.

The conteft however was long doubtful, and, by our supineness and bad conduct, the French were every where victorious and triumphant. Our measures for carrying on the war were but poorly planned, and as indifferently executed, (witnefs the defeat of Braddock, and the fhameful retreat of Byng, Gc.), fo that the face of our affairs for a confiderable time wore a melancholy and gloomy afpect. But after bribery and corruption were banished from the throne, and a perfon of integrity, untainted virtue, and deep penetration, (who will for ever be held in the greatest estimation by all the true lovers of our country), was put at the head of the public administration, the British affairs foon took a more favourable turn, and put on a more lovely countenance; proper methods for profecuting the just war with vigour were speedily planued, and Providence was pleafed to grant remarkable fuccefs to

our

our arms in every quarter of the world, both by fea and land.

An expedition was fent against Cape Breton under the command of the brave Adm. Boscawen, in confequence of which the important fortrefs of Louisburg furrendered to his Majefty's arms in July 1758. Our army on the continent of America now acted with conduct and intrepidity, fo that all the forts they had erected on our property were fpeedily reduced, and the links of that chain which was intended to enflave this country, were quickly cut afunder. In September 1759, Quebec, the capital of Canada, was taken by our victorious arms, and with it fell all that extensive trast of country. This gave the finishing ftroke to the French empire in America, and at once difconcerted all their deep-laid ichemes; for, by the fall of their capital, they were obliged to abandon the country, and furrender the whole of it to the victorious Britons. Our arms were no less fuccessful in the West Indies; witness the fall of Guadalupe, Marigalante, &c. In Africa the conquest of Senegal and Goree, and the fall of Pondicherry, &c. are a fufficient testimony of our success in the eastern climes. The French being thus dispossefield of most of their foreign fettlements, at last threatened us with an invalion, as the last expedient, and, for this purpole, made great preparations in feveral parts of the kingdom : but their fleet destined to carry their armies, which were to ravage the fertile fields of Britain, was blocked up in Breft harbour for feveral months. Ar last the important moment arrived, a ftrong westerly wind blew Sir Edward Hawke from his station into Torbay; they feized the favourable moment, and left. their fortified alylum, and fteered for the bay of Quiberon: but they did not long purfue their courfe infafety; for, on the 20th of November 1759, the brave British Admiral came up with them off the fouth end of

of Belleifle, when a defperate engagement enfued, and the French armament was entirely defeated, which put a final period to their boafted invafion.

But it is necessary to observe, that, during this bloody war with France, the Spaniards fhewed great partialities to that kingdom, which were quite inconfiftent with their boafted neutrality, and repeatedly infulted us in the most audacious manner; witness the ftory of the Antigallican's prize, and the loss of one of his Majesty's floops of war, taken within foundings, and even within gun-fhot of the Spanish forts. They also allifted them in taking prizes : and we are informed from undoubted authority, that the inhabitants of St Lucar, and other ports, got French committions, by virtue of which, when they found any British vefiels of fmall force, within foundings; or a league off the land, they with one Frenchman on board put off their floops and rowboats, and made prizes. But to return : The French at last, through a repeated feries of misfortunes and difappointments, grew weary of the war, and, in order to put an end to it, proposed overtures of peace to the court of Great Britain. Accordingly M. Buffy came to London, and Mr Stanley was fent to Paris to carry on the negotiation.

With regard to the affairs of North America, M. Buffy offered to cede Canada, on condition that the bounds of Louifiana fhould be enlarged and ceded to France; and, as a fecurity for our colonies, they agreed to give a barrier to them. He further infifted for liberty to fifth on the banks and coafts of Newfoundland, and to have the ifland of Sable for the conveniency of drying their fifth.

Thefe articles were the hinges on which the negotiation turned, and which the Spanish ministry thought fo reasonable; and in a memorial which they prefented by the French ambasilador, threatened us with a war if we did not comply with them; they further further demanded for themfelves a fhare in the Newfoundland fifhery, and to have the whole logwood trade fecured to them !

For the Spanish court thus infolently to interfere in our contest with France, was an infult not to be passed with impunity. Were they fo foolish as to imagine, that we should wantonly fling away the important conquests we had acquired at the expense of fo much blood and treasure, especially as it is evident beyond all contradiction, that we were not the first aggressions, merely to oblige them?

In the mean time his Catholic Majefty entered into an infidious treaty, or family-compact with the French King, our profeffed enemy, which was concluded on the 15th of August 1761, the ratifications of which were exchanged on the 8th of September following.

The visible and avowed defign of this new alliance was, to establish a lasting and perpetual union between the feveral branches of the ambitious house of Bourbon, fo that the political views of any of the princes of this house shall be at all times promoted and supported by the conjunction of all their forces against any and all opponents. This alliance is directly contrary to the fpirit both of the treaty of Utrecht and that of Aix-la-Chapelle. It was also a glaring teftimony of the good faith and fincerity with which the crown of France acted in the late negotiation, fince it is evident beyond all dispute, that the pacific negotiation at London, and that for the conclusion of this family-compact, went on pari passu. It likewise fhews very plainly what we have hereafter to expect. We must live upon good terms, not only with one; but all the branches of the houfe of Bourbon, or we must refolve to break with them all, if we are dispofed to refent the injuries received from any one of them.

In consequence of this engagement contracted be-

tween

tween the courts of Verfailles and Madrid, and the military preparations that were making in all the ports of Spain, my Lord Briftol, then ambaffador at the court of Madrid, was defired to afk a very fober and cuftomary queftion, viz. Whether his Catholic Majefty intended to join the French, our enemies, and to act hoftily againft Great Britain? The anfwer given to this queftion, modeft as it was, was perhaps the moft aftonifhing ever heard, namely, that the very queftion itfelf was a declaration of war.

Spain having thus demonfrated herfelf to have the most hoftile intentions against us, notwithstanding of the truly equitable and wife conduct of the court of Great Britain, his Britannic Majesty therefore figned a declaration of war against the King of Spain the 2d day of January last, which was published with the usual formalities.

It is very natural to fuppofe, feeing we are thus engaged in a bloody war with Spain, that most people will be fond of being acquainted with the flate and fituation of her foreign colonies : but then there is a general complaint, that the hiftories of the Spanish fettlements in America are either too fhort and imperfect, or fo blended with other fubjects, that many people have not fufficient time to confult them; to remove therefore this evil was the defign of the following fheets, in which are given a very particular defcription of their feveral fettlements, both on the continent and islands of America, with a diffinct view of their produce and trading commodities; the manner of carrying on the trade to thefe diltant climes, and the vaft treafures the Spaniards annually receive from The appendix contains a fuccinet account of them. the strength and policy of the Spanish nation; the most remarkable revolutions that have happened these, and the bad œconomy of the Spanish monarchs with regard to the management of their American colonies.

lonies. And if, in treating fo many things in fo concife a manner, we have been guilty of omiffions or miftakes, (which is undoubtedly the cafe), they are fubmitted to the cenfure of the candid reader; who, it is hoped, will be the lefs fevere, when he reflects on the difficulty of the tafk, and on the great variety of curious and entertaining particulars which are here collected together; and it is expected, that fmall imperfections will not deprive us of that reward, which, of all others, is deareft to perfons of integrity, namely, the approbation of the public.

b 2

CON-

#### PART I.

An account of the difcovery of America; with a defcription of the Spanish insulan colonies in the West Indies.

Chap. I. A general defeription of America; with a brief account of its difeovery by the celebrated Chriftopher Columbus in the year 1492 P. I Chap. II. Of Spanifh America in general 25

Chap. III. Of the island of Cuba; its situation and extent; climate and foil; produce and trade 29

Chap. IV. A defcription of the island of Hispaniola, or St Domingo 43

Chap. V. The island of Porto-Rico; its climate and foil; produce and trade, &c. 56

#### PART II.

The Spanish settlements on the continent of North America.

betwixt it and Europe. The flota, &c. 141 Chap. XII. Observations on the Spanish American trade. The register-ships and guarda-costas 146

Chap. XIII. I bree forts of people in New Spain; the whites, Indians, and negroes; the characters of thefe: the clergy, their character; the civil government, its character 151

#### PART III.

- The Spanish fettlements in Peru, Chili, Paraguay, and Riode-la-Plata.
- Chap. I. Of South America in general. The difeovery and conquest of Peru by Pizarro and Almagro 157
- Chap. II. The extent and boundaries of Peru. The nature of the foil and climate, with a defcription of the Andes or Cordillera mountains, and of the South fea. An account of the lakes, fprings, and rivers of Peru, and the commoditics of the country for export 179
- Chap. III. The wines of Peru; the wool; the lamas and vicunnas, sheep of Peru. The bezoar stone found in the stomachs of the wild cattle. Jesuit's bark. Guinea pepper. Quickslever mines. The surprising plenty of European cattle, &c. in Peru, and the manner of bunting and killing the wild cattle there 195
- Chap. IV. An account of the three grand divisions of Pcru, with a description of their cities and principal towns; their fituation, trade, and number of inhabitants 212.
- Chap. V. A fort account of the ancient Peruvians, their government, cuftoms, and religion. Peru at prefent in the poffeffion of a different fort of people; their characters. The flavery of the Indians. Honours paid to the defeendents of the yncas, an Indian feftival, &c. 244.
- Chap. VI. A description of the principal islands upon the coast of Peru; as also of the Gallapagos, and the islands of Solomon 254.

Chap. VII. The discovery and invasion of Chili by Don Diego de Almagro; his expedition, and death. The second expedition under Don Pedro Baldivia; the settlements which he estaklished,

XIII

blifhed, his war with the Indians, and death. Velagra continued the war against Caupolican the Indian general, but with little fuccefs. The war undertaken by Don Garcia Hurtado de Mendoza; he defeats the Indians, and puts their general Caupolican to death. How the Dutch and English attempted to settle in Chili. Peace concluded between the Spaniards and Chilesians. The number of inhabitants in Chili, with a short account of the Indians 261

- Chap. VIII. The extent and boundaries, climate and foil of Chili; its vegetables, mines, animals, and produce. A general view of the trade of Chili, with the method of travelling from it to Buenos Ayres, &c. 274
- Chap. 1X. An account of the three grand divisions of Chili, with a description of their chief cities and principal towns; their situation, government, and trade, &c. 287
- Chap. X. A short account of the islands on the coasts of Chili, with a description of the islands of Juan Fernandez 306
- Chap. X1. A general description of Paraguay, or Rio de la Plata. The extent and nature of the country; with fome account of the Indians. How the Portuguele first invaded this country, under Alexius Garcia. The discoveries made here by Schastian Cabot. The Spaniards made their first fettlements in this country under Mendoza, &c. Remarks on the Jesuits of Paraguay, the fix districts, or fubdivisions of this extensive province 316
- Chap. XII. A brief account of the provinces of Tucuman, and Rio de la Plata; their principal towns, trade, &c.; but more particularly of the commerce of Buenos Ayres, and of the alliento treaty for furnishing it with negroes. The great importance of that settlement were it annexed to the British territories 324
- Chap. XIII. The provinces of Uraguay, Parana, and Guayra; their principal towns, rivers, and trade, &c.: 336
- Chap. XIV. An account of the territory of the Jefuits in Paraguay Proper; their manner of fettling and governing it; the obedience of the people 338

#### PAR'T IV.

The Spanish fettlements in Terra Firma. Of the different countries in South America still possessed by the Indians, Ec.; with a description of the Canary islands.

Chap. I. A general description of the extensive province of. Terra

Terra Firma; its boundaries, extent, climate, and foil.	
The difcovery of it, and the fettlements made there by the	
Spaniards; its division into eight provinces or districts	348
Chap. II. The extent, climate, foil, produce, rivers, chief	340
towns, and trade of the province of New Andalusia	353

<del></del><u></u>

# PART I.

An account of the difcovery of America; with a defcription of the Spanish infulan colonies in the West Indies.

# CHAP. I.

A general description of America; with a brief account of its discovery, by the celebrated Christopher Columbus, in the year 1492.

Ccording to the rules of geography, the terreftrial globe, confifting of land and water, is 360 degrees, each de-General divifion of the terreftrial globe.

gree containing 60 miles; fo that the whole circumference of the globe is 21,600 geographical miles, and the diameter 7200. But if the com-A putation

## An Account of the

Ž.

Part I.

putation is made by English miles, the globe will be 25,020 miles round, and 8340 in diameter; becaufe  $69\frac{1}{2}$  English miles are equal to one degree, or 60 geographical milés. It is fupposed, that, at least, two thirds of this globe confift of water, and the remainder of earth. The waters are divided into three extensive oceans, called the Atlantic, Pacific, and Indian bceans, befides the Mediterranean, and other leffer feas. The land is divided into two great continents; the one called the Eastern or Old World; the other, the Western or New World; feparated from each other by the Atlantic and Pacific oceans. The Atlantic ocean is about 2000 miles wide from Africa to South America, and about the fame breadth from North America to Europe: the Pacific is upwards of 9000 miles wide, from America to Afia. The Eaftern continent is fubdivided into three parts, viz. Europe on the north-weft, Afia on the northeast, and Africa on the fouth. But the Western continent confifts only of America, which is divided into North and South.

America is by far the largeft part of the four Extent and grand dvisions of the world, lyboundaries of ing between the parallels of 35° and America. 145 degrees of western longitude; between 80° north, and 58 degrees of fouth latitude. It is bounded by the lands and feas about the arctic pole, on the north; on the cast by the Atlantic ocean, which separates it from the eastern continent; on the fouth by the great fouthern ocean; and on the west by

# Chap. I. Spanish Settlements in America.

3

by the Pacific, which divides it from Afia: fo that it is between 8 and 9000 miles in length from north to fouth; and between 3 and 4000 miles in breadth. Though the ifthmus which joins North to South America is not 60 miles over, yet from thence both parts of this continent ftretch themfelves out from east to weft, till they make the above-mentioned breadth; to which may be added the feveral islands in the fouth and north feas adjacent to the coafts of America.

A country of fuch great extent, not only on each fide of the equinox, but Climate and extending fo far beyond each of the foil. tropics, must necessarily be supposed to have as great a variety of foils, as it has of climates: though upon the whole, excepting the most northern and fouthern parts, (which are gene-rally cold and barren), the reft is an immense treasury of nature, productive of most, if not of all the plants, grains, fruits, trees, and minerals, that are found in the other parts of the world; not only in as great quantities, but many of them more fo, and in much greater perfection: befides, it has a variety of others peculiar to itfelf, which will not grow or flourish in any other country. But these are nothing in comparison to the nume-rous and inexhaustible mines of gold and precious and filver, which are fo far from stones. being impoverished, that they feem rather to want fome fresh supplies of hands to draw out their endless treasures, and gorge the infatiable avarice A 2

## An Account of the

Part I.

avarice of mankind, notwithstanding all the art and labour of men has been employed in endeavouring to drain them for these two last centuries. Gold and filver are, however, far from being the only precious commodities which this country produces: for here are to be found great abundance of diamonds, pearls, emeralds, amethyfts, and other valuable ftones; which are fent into Europe in fuch quantities, as to render their value very inconfiderable, in com-parison of what they were formerly. To these may be added a great number of other ufeful commodities, fuch as the conftant and plentiful fupplies of fugar, tobacco, cochineal, indigo, anatto, logwood, brazil wood, fustic, lignum vitæ, ginger, pimento, cocoa, cotton, redwood; all kinds of valuable timber, furs, hides, ambergris, balfams of Peru and Tolu, Jesuits bark, mechoacan, sassaria, farsaparilla, cassia, tamarinds, with many other kinds of other woods and plants, to which the Europeans were quite strangers before the discovery of this new world, or were obliged to purchase them at an extravagant price from Afia and Africa, perhaps at the third or fourth hand.

America also abounds in excellent fruits, Fruits. that grow in the greatest plenty and perfection, such as pine-apples, pomegranates, citrons, lemons, oranges, limes, malicatons, cherries, pears, apples, figs, and many others, with abundance of culinary, medicinal, and other herbs, roots, and plants. To all these may be added the furprising fecundity dity of the foil, which makes it nourifh many exotic productions in as great perfection, as their own native foil. Coffee and rice are a pregnant proof of this, which have been lately cultivated there with remarkable fuccefs, and might be extended to many other vegetables, that Europeans are obliged to bring from Afia and Africa, at extravagant prices.

Yet, with all this variety and plenty, the Americans laboured under the want of many very neceffary and useful commo ities: for the Europeans, on their first landing there, found neither corn, wine, nor oil, the inhabitants making their bread of fome kind of pulfe or roots ; their drink too was altogether common : and they were totally unacquainted with the use of money, though they had gold and filver in the greatest abundance. Notwithstanding the land in America abounded with the most luxuriant pastures, yet, before the arrival of the Spaniards amongst them, they had neither cattle, horfes, affes, sheep, goats, or hogs; and it is faid, that the very fight of any of thefe animals, especially a horse, would throw a whole troop of these wild inhabitants into a panic. And we may obferve, that it was greatly owing to this, together with their want of fire-arms, that a handful of Spaniards fo foon conquered the greatest part of their dominions. But the want of these useful animals, with all kinds of poultry, is long fince fupplied ; for the Spaniards fent thither all forts of European animals, which have propagated to fuch an immenfe degree, 6

gree, that their numbers are incredible. However, inftead of these European animals, the Americans had several kinds of others, equally useful and valuable, which were unknown to Europeans. The same may be said of that prodigious number of birds which are to be seen there, many of them greatly surpassing all that can be found in any other parts of the world, for their beautiful shapes and plumage. Besides, there are surprising quantities of fish of all kinds, both in their sea and rivers.

America in general is not a mountainous Mountains. country, yet it can boaft of the great-eft mountains in the univerfe. The Andes, or Cordilleras, of amazing altitude, run from north to fouth along the coast of the Pacific ocean. Though for the most part within the torrid zone, yet their lofty fummits are perpetually covered with fnow. In the province of St Martha, in Terra Firma, are likewife very high mountains, which communicate with the former. In North America we know of none confiderable, but that long ridge, which is fituated on the back of our fettlements, called the Apalachian or Allegeny mountains; they have upon one fide a pretty, steep declivity, but upon the other are nearly on a level with the reft of the country.

America without all comparison is that part Rivers. of the world which is best watered, and that not only for the support of life, but also for the conveniency of trade, and the intercourse of each part with the other. In

## Chap. I. Spanish Settlements in America.

In North America, the great river Miffifippi, rifing from unknown fources, runs an immenfe courfe from north to fouth, and receives the vast tribute of the Ohio, Ouabache, and other great rivers, fcarcely to be postponed to the Rhine or the Danube, navigable almost to their very fources, and laying open the inmost recesses of this large continent. Near the heads of these rivers are five great lakes, or rather feas of fresh water, communicating with each other, and all of them communicating with the ocean by means of the river St Lawrence, which paffes through them. Thefe afford fuch an inlet for commerce, as must produce the greatest advantages, whenever the country adjacent shall come to be fully inhabited by an industrious and civilized people. The eastern side of North America, which is our portion, have the noble rivers of Hudson, Delaware, Sufquehanna, Potomack, which fupply feveral others of great depth, length, and commodious navigation. Several parts of our settlements are fo interfected with navigable rivers and creeks, that many of the planters may be faid to have each a harbour at his door.

South America, if poffible, is in this refpect even more fortunate. It fupplies the largeft rivers in the known world, (befides innumerable leffer ones), viz. the river of the Amazons, and Rio de la Plata. The first rifing in Peru, not far from the South sea, passes from west to east almost quite through the continent of South America, navigable for fome fort of vessels all the

17

An Account of the

PartI

the way, and receiving into its bofom a prodigious number of other rivers, all navigable in the fame manner, and fome of them fo great, that perfons are at a lofs to determine the main channel. The Rio de la Plata, or Plate river, rifing in the heart of the country, directs its course to the south-east, and discharges such an immense quantity of water into the sea, that it makes it tafte fresh, for several leagues from the shore: The Oroonoquo is likewife a vast river, and might be ranked the foremost amongst any; except the American rivers.

Various are the conjectures about the first Conjectures about the peopling of this diftant country: for the Indians having no written rica. rica.

antiquities; the most learned men among Europeans being quite ignorant of every original thing relative to America. The stature, form, and features of the Americans are fimilar to those among the Europeans; only their complexion is browner, or more upon the olive colour : the frame and turn of their minds are the fame with the ancient Europeans; they adored the fame fupreme Goo, crected temples, and facrificed to him in the fame manner. They / retained a tradition, that their continent was gradually peopled from a finall number. Their tary weapons, fuch as fwords, fpears, lances, flings, and darts, were like those used formerly by Europeans; with this difference on-ly, that as they had loft the use of iron, their wooden

## Chap. I. Spanifs Settlements in America.

wooden fwords were edged with fharp flints, while their spears, &c. were pointed with the bones of fish, or other animals. However, it is highly probable that America was early peopled, not only becaufe the inhabitants were ex-tremely numerous, but were alfo ignorant of almost every art and science, when the Spaniards came among them.

9

There is some reason to imagine, that America joins either to the north part of Afia, or Europe, or perhaps to both ; which made feveral writers conceive, that this continent was originally peopled from Tartary, the land of Jesso, or some other tracts by way of the north pole: but there is greater reafon to believe that America was peopled by fea, either by the Phænicians or Carthaginians, who were the best navigators amongst the ancients. It is certain, that part of the western coasts of Africa, and the Canary islands, were planted by the Carthaginians five hundred years before the Christian æra; and as the Carthaginian ships carried fometimes a thoufand people, and were probably crouded with men, women, and children, when they fent colonies to these islands, as ours are when we fend colonies to America, it is very natural to fuppofe that fome of them should miss these islands, and be driven to the west beyond their intended port; and if this ever happened, (which is highly probable), they must of necessity be carried to America, which is but about three weeks failing from thefe iflands; from whence it was impoffible for them . to

## An Account of the

io

Part I:

to return to the eastern continent, the tradewinds blowing conftantly against them; which, is the reason that we never heard any thing of that world until we had the use of the compass, and the art of navigation was improved, whereby a way was found out of failing in higher latitudes, out of the way of the trade-winds, in order to return to the eastern continent. For the Carthaginian state being destroyed by the Romans, all their difcoveries and plantations were loft and ruined by the neglect of navigation; fo that when the Spaniards made a new difcovery of the Canaries in the fourteenth century, the natives could not tell from whence to derive their original, and, like the Americans, imagined they were the only people in the world. We have reason therefore to conclude, that the two great empires of Mexico and Peru were originally fettled by the Carthaginians from Africa. Before the fourteenth century, the generality of mankind were fo far from imagining that there could be any fuch continent, that the very thought of fuch a thing was looked upon as extravagant; for it was believed, that the land terminated at the Canary islands, and that all beyond to the westward was fea, though indeed fome of the ancients gave hints to the contrary. But after the difcovery of the Azores, Cape-Verd, and Canary islands, a ftrong notion prevailed of there being a continent, or at least more islands to the west of. . these. None, however, undertook to verify the truth of this, till Christopher Columbus appeared,

Chap. I. Spanish Settlements in America.

peared, who began and perfected his difcoveries in a flort space of time.

This celebrated navigator was a native of Genoa, but of what family is unknown. From his youth he was addicted to the ftudy of mathematics and navigation, and was foon confidered as one of the ableft feamen of the age, having vifited most parts of the known world, and made the most useful observations on the winds, currents,  $\mathfrak{E}c$ . where-ever he went.

This renowned perfon, being fully perfuaded that there was another continent to the weft, or, at leaft, that he fhould, by fteering to the weftward, reach the eaftern fhore of the Indies; he therefore first applied to the ftate of Genoa for affistance to carry his

project into execution, but had the mortification to fee his propofals not only rejected, but ridiculed. Fired with the ungrateful return he met with from his countrymen, he determined to leave the place of his nativity, in order to propofe his fcheme to fome foreign potentate: accordingly he came to France, and made application to that court; but again found himfelf difappointed.

He next offered his fervice to the King of Portugal, in whofe dominions he had for feveral years refided, and urged his requeft fo warmly, that commiffaries were appointed to treat with him: but he found, that every objection, which either ignorance or envy could invent, was proposed and urged against him. Incensed

Part I.

at fuch ungenerous ufage, he left the court of Portugal, and went into Spain, and immediately made application to that court, and continued his folicitations for feveral years, notwithftanding of the many repeated difappointments

ftanding of the many repeated difappointments He agrees he had to encounter with. At laft, with the court after urging his fuit for about eight of Spain. years, Queen Ifabella, a princefs famous for her wifdom and courage, agreed with him upon his own terms, which were very confiderable, and fuch as fhewed the great confidence he had of fucceeding in his noble attempt. This agreement was foon ratified after the taking of the city Granada from the Moors, whereby they were totally driven out of Spain, part of which they had poffeffed feven hundred and feventy years. So that two of the moft fortunate events which ever happened to the Spamith monarchy, namely, the total expulsion of the Moors, and the difcovery of the Indies, happened in the fame year.

Columbus was furnished with three carvels, Set fail the and one hundred and twenty men, month of Au- at Pallas de Maguere. Martin Pingult 1492. fon was pilot of one, Francis Pinfon of another, and Ditus Pinfon of the third, all three brothers. They fet fail the 3d day of August 1492. The first land they touched at was Gomera, one of the Canary islands, where they refreshed, took in provisions, and afterwards stood to the westward. In this noble enterprise Columbus had no guide but his own genius, nor any thing to comfort and appease his his companions, difcouraged and mutinous with the length and hopeleffnefs of the voyage, but fome indications which he drew from the ufual appearances of birds and floating fea-weeds; moft of them little to be depended upon, but which this wife commander, well acquainted with the human heart, always knew how to turn to the beft advantage.

In this expedition the variation of the compass was first observed, which made a great impreffion on Columbus's pilots. Indeed a difcovery of this kind, made in an unknown ocean, far from the tracks of all former navigators, was fufficient to strike terror into the most undaunted breaft; for nature itfelf feemed to be altered, and the only guide he had left appeared to be on the point of forfaking them. Columbus endeavoured to give a phylical reafon for this uncommon phænomenon, and his genius was fo fertile in expedients, that he turned every occurrence to his advantage; but use rendered them at last ineffectual. His crew grew mutinous, and infifted on his returning, with loud and infolent fpeeches, and even talked of throwing him overboard. His own invention, and almost his hopes were near exhausted, when the only thing that could appeale them happened, namely, the difcovery of land, after a tedious voyage of thirty-three days, during which time they had feen nothing but the fea and fky.

They landed on an ifland called Guinaya, one of the Lucaios or Bahama iflands, remarkable for

## An Account of the Part I.

for nothing but this event. Columbus, after thanking GOD for his fuccefs, for-Lands on the mally took pofferfion of the ifland, island of Guinaya, and difin the name of their Catholic Majecovers most of fties, by erecting a crofs upon the the Weft-Indian islands. shore, great multitudes of the inhabitants looking on quite unconcerned at a ceremony intended to deprive them of their natural liberty. He did not stay long here; but immediately directed his course to the fouthward, and after fome difficulty difcovered the ifland of Hispaniola, situated in a good climate, and abounding in commodious harbours, inhabited by a humane and hospitable people, and affording confiderable quantities of gold. Columbus therefore determined to make this island the centre of his defigns, and to plant a colony in But in order to carry thefe fchemes into it. execution, he judged it proper to return first to Spain, to get himfelf equipped with a properforce. After he had erected a fort, in which he left thirty-eight of his men, charging them to be very careful to preferve the friendship of the Indians, and having collected a fufficient quantity of gold to place the merit of his difcoveries in an advantageous point of light, and at the fame time felected fuch a number of curiofities of various kinds, as could not fail of working powerfully on the minds of a gazing multitude, he then departed the ifland, carrying along with him fome of the Indians.

On his return homewards he touched at feveral islands to the fouthward, and difcovered

the

#### Chap. I. Spanish Settlements in America.

the Caribbees, of the barbarities of whofe inhabitants he had heard terrible accounts at Hifpaniola. He had before landed on Cuba; fo that in his firft voyage he had gained a general knowledge of most of the islands, which in fuch vast numbers lie in that great fea, which divides North from South America. But hitherto he neither knew, nor suspected any continent betwixt him and China; the discovery of this was referved for his third and fourth voyage.

He arrived in Europe after an abfence of more than fix months, and was dri- Arrives in ven by a great florm to Lifbon; but Europe. having taken in the refreshments he wanted, failed from Lifbon, to Barcelona, which he entered in a kind of triumph, being every where followed by prodigious crouds of people, who flocked from all parts to see him.

It was indeed a pleafing, and at the fame time an innocent triumph; for he had not deftroyed, but difcovered nations. The Americans he had brought with him dreffed in their country-manner, the animals, and the various curiofities he had collected in the new world, exhibited a fight at once curious and delightful; the admiral himfelf clofed the procession, and was received by the King and Queen with the greatest marks of regard.

But these honours were far from fatisfying Columbus. A second voyage engaged his whole attention; and the voyage. fucces of the first removing every difficulty he

fuccefs of the first removing every difficulty, he was

Part I:

was fpeedily furnished with seventeen fail of ships, loaded with necessaries for making settlements, and having on board fifteen hundred men, some of them descended from the best families in Spain. With this sheet he failed on his second voyage, the 25th of September 1493. On his arrival at Hispaniola, he found, that the fort he had formerly erected was totally demolished, and the whole men he left in it flain.

This was a very mortifying ftroke to Columbus, but he knew that this was not a proper time to make a ftrict inquiry into the caufes of this tragical fcene; the only method for retrieving his affairs, was to take more effectual meafures for the future. Accordingly he fixed upon a more advantageous part of the ifland, and built a town, which he called *Ifabella*, in honour of the Queen his royal patronefs.

Perhaps there never was a man better quali-Columbus fied for the great defigns he underfalfely accu- took; but the gravity of his behafed. viour, and the severe discipline he maintained, raifed him enemies among fuch a mutinous and licentious fet of people; and while he was thus exerting all his faculties to reduce this wealthy island, and lay the foundation of the Spanish grandeur in America, his enemies were trying every artifice to ruin his interest in Spain. Some of the principal leaders in the mutiny returned to Spain, while he was failed from the island to make difcoveries, and, in order to justify their own conduct, and gratify their malice, accused the admiral of neglecting the

### Chap. I. Spanish Settlements in America. 17

the colony, and deceiving their Majefties and the adventurers. Nor were these complaints destitute of effect; for an officer was sent from Spain to inspect his actions. Columbus wifely considering, that to stay longer in the Indies under such disagreeable circumstances would be labouring to no purpose; he therefore judged it expedient to return to Spain, in order to support his interest, and vindicate his character so falsely injured.

As foon as he appeared in Spain, all the accufations and prejudices against him vanished. He took care to bring fuch testimonies of his fidelity and good behaviour as stopped the mouth of envy; and the large quantities of gold and pearls he produced, abundantly refuted all that had been artfully propagated against him, with regard to the poverty of the Indies. But though his enemies were filenced, yet they were not fubdued; they faw it was in vain to oppose him openly, and therefore determined to make their attacks in fecret, which did not prove altogether fruitlefs; fo that the admiral had the mortification to experience a thousand His third delays and disappointments before he voyage. was able to fet fail on his third voyage, though on a difcovery of the utmost importance to the Spanish nation. The first land he made in this voyage was the island of Trinidad, or Trinity, on the coaft of Terra Firma; he afterwards touched at feveral places on the continent, where he traded with the inhabitants, who appeared. to have gold and pearls in tolerable plenty.

C

During

The fatigues he endured, and the bad treatment he met with.

During this voyage the admiral underwent fuch prodigious fatigues, that his brother, who was left at Hispaniola, hardly knew him at his return. Nor was he like to enjoy more repofe at land, than before at fea. For on his arrival he found the colony divided into two parties, a rebellion having foon broke out after his departure for Spain, which had caufed an entire separation. The rebels appointed one Francis Roldan for their chief, who had gained over the Indians to their party, by pretending to be the affertors of their liberty. Columbus, however, by using mild and prudent methods, foon quelled this dangerous rebellion, and reftored peace and tranquillity in the island again. In the mean time his enemies in Spain were not idle, but continued their malicious perfecutions, and being joined by fome of the late rebels, who returned in the fleet from America, prefented fresh complaints against him to the King; falfely alleging, that he was doing every thing in his power to gain the friendship of the Indians, and making himfelf popular among that people, in order to fet up for himfelf, and deprive the Spanish nation of the advantages that might accrue from these discoveries. These malicious clamours arofe to fuch a height in Spain, that the King and Queen were obliged to fend a judge with authority to inquire into the admiral's conduct. This man, who was deftitute of every virtue, and whofe extreme indi-gence had induced him to undertake the office, began

#### Spanish Settlements in America. Chap. I.

began by feizing the admiral's effects, and fending him and his brother into Spain loaded with irons.

The court, on his arrival, were shocked at the difgrace of their admiral, difavowed the proceedings of their governor, and highly blamed his conduct. They acquitted him of every charge, and promised him ample reftitution, for the injuries he had fuffered at Hifpaniola. So that he was foon prevailed upon to undertake a fourth voyage, being very defirous of arriving at the East Indies, by a western course, and returning by the Cape of Good Hope, to furround the globe.

With this defign he failed on his fourth voyage, in the month of May 1502. His laft voy-But knowing that his ships were age to Ameri-not fit for so long a voyage, he in- ca. tended to put in at Hifpaniola, and there exchange them for fuch as were more properly adapted for executing his defign. In this however he was difappointed, the governor not permitting him to enter the harbour, though this unparallelled refufal did not hinder him from doing every thing in his power to promote the interest of his Majesty. Columbus, whilft he navigated and refided in the Weft Indies, was extremely diligent in his observations upon the nature predicted the Columbus of the air, the feafons, the meteapproach of a ors, &c. and how much each of terrible hurri-cane. these feemed to affect the other;

nor was he lefs fagacious in drawing progno-C 2 ftics

IQ

flics from the remarkable appearances in all. At this time he judged from obfervations, that a great hurricane was approaching ; and although Obando the governor refufed him admittance into the harbour, yet perceiving that the fleet was on the point of failing for Spain, he generoufly notified the apprehentions he had of the hurricane, and therefore defired him to defer their failing for fome days. But this requeft was ridiculed, and the fleet failed immediately from Hifpaniola.

In the mean time Columbus drew his little fleet as near the fhore as poffible; and, in the night-time, one of the most terrible hurricanes ever known in that part of the world, came on. The fleet confifting of twenty thips, which had failed contrary to his request, suffered the punishment due to their temerity, four only cfcaping, while the other fixteen perifhed. But Columbus's little fleet fuffered very little damage, providence on this occafion interpofing, in a very remarkable manner, in the defence of injured innocence. His character was highly raifed by the prediction of this ftorm, and by his behaviour in it; for to his, and his brother's good conduct, under God, the fafety of his little fleet was justly attributed. After he had weathered the ftorm, he left the ifland in purfuit of further difcoveries; and in this laft

He discovered the continent of South America.

voyage he difcovered all the coaft of Terra Firma, as far as the ifthmus of Darien, where he hoped to have found a paffage into the South feas. In

## Chap. I. Spanish Settlements in America,

In this, however, he was disappointed, but not in the other part of his project; for every where as he advanced, he became more fenfible of the value of his discoveries on the continent. He found the people more civilized, and their country abounding in greater plenty of gold than the islanders. He entered a harbour, which from its excellency he called Porto-bello, well known fince as one of the greatest openings, by which the Spanish commerce is carried on between the two worlds. Although the difcoveries he made in this laft voyage were of the utmost importance to the Spanish nation, yet it was the most unfortunate Columbus ever knew : for he was obliged to put in at the island of Jamaica, (which he discovered in his fecond voyage), and his ships being incapable of repairs, he might have fpent his life there in exile, had not a private perfon at Hispaniola, from a real efteem of his merit, fitted out a ship for his relief, after the governor had refused him any affistance.

On his arrival at Hispaniola, he found the colony filled with new disputes and diforders; but being unwilling to engage any more in affairs of this kind, he hastened every thing for his departure for Spain, where he at last arrived, after suffering the greatest hardships and distrefs.

He was now grown old, and feverely afflicted with the gout. The Queen his patronefs was dead; and the King, of a clofe and diffembling difpolition, and a nar-

TOW

row mind, was the only perfon he had to footh his misfortunes, or pay the rewards due to his labours. But he received neither comfort nor reward. The performance of his contract was deferred upon frivolous pretences; and he employed the latter part of his life, as he had done the active part of it, in a court-folicitation, the most grievous of all employments to any man, the most hopelefs to an old man. Vanquished at last by years, fatigues, and disappointments, he died at Valladolid the 20th of May 1506.

As foon as the court heard of his death, orders were given for his being interred with the utmost pomp and splendour. But the admiral himself had given some directions concerning his interment, which ferved to perpetuate the memory of his unjust treatment; for he ordered the irons which he had wore, to be put into his coffin with him. His epitaph devised, as some historians fay, by King Ferdinand himself, fuited the dignity of the person, and the fervice he had done to the Spanish nation. It consists only of two lines, in English thus:

> Caffile and Leon to Columbus owe That world his wifdom only could beflow.

After the difcoveries of Columbus had enlarged the fphere of induftry to active minds, fuch a fpirit of enterprife went abroad, that the Spaniards, in a fhort fpace of time, (namely, from the first departure of Columbus in 1492, to the entire conquest of Chili, which happened in 1541), conquered no lefs than feven great kingdoms,

### Chap. I. Spanish Settlements in America.

kingdoms, inhabited by a vaft number of warlike and wealthy nations, and made them bow under the Spanish yoke.

Though nobody doubts of Columbus's being the first discoverer of the new world, yet he had not the honour of its name; for, Americus Vein the year 1498, Americus Velpu-. fputius vifits tius, a Florentine, having procured the continent of America, a Spanish commission, together with and calls it by the charts of Columbus, failed to by his own name. the West Indies, and visited the coaft of America, though it is uncertain whether he made any new difcoveries. But being a man of addrefs and great confidence, as well as an able feaman and excellent geographer, he found a method of arrogating to himfelf the first discovery of the continent of America, and called it by his own name; which it has ever fince retained. The report of the many and great advantages accruing to Spain from the va-luable difcoveries made by Columbus, raifed an earnest defire in other great princes to make fome experiments of the fame kind; among the reft, King Henry VII. of England, who employed a foreigner then refiding in his dominions. This foreigner was called John Cabot, by birth a Venetian, a perfon of a Cabot difcobold and enterprising genius, and vers the contiwithal well versed in navigation. nent of North America. His Majesty being sensible of the great advantages that might accrue to his fubjects by making discoveries in the new world, therefore granted letters patent to Cabot and

his

-Part I.

his three fons, and gave orders for fitting him out with all neceffaries without lofs of time. Those bore date the 5th of March 1496, be-ing the eleventh year of that King's reign. Immediately after obtaining these he failed from Briftol, and, in the month of June 1497, difcovered the ifland of Newfoundland; from thence he ftood over to the continent, and failed all along the coast of North America, from Nova Scotia to Florida, taking poffession of it in name of the British monarch. Cabot may therefore be justly reputed the first discoverer of the continent of North America.

Peter Alvarez Capralis, admiral of a fleet

Brazils.

I.

Alvarez Ca-pralis acci-dentally dif-covers the Brazils. belonging to Emanuel King of Por-tugal, fteering for the Eaft Indies dentally dif-driven upon the coaft of Brazil, which he first discovered, and which

has fince proved of fuch immense value to that crown. Hence we may infer, that if Columbus had not gone expressly in fearch of the new world eight years before, it would have been discovered by chance by this Portuguese admiral.

It is not my intention to purfue the difcoveries of America any further here, as we intend to give a fhort account of the difcovery and conquest of the several Spanish kingdoms and provinces as we proceed in our description of them.

This prodigious tract of land is now divided between feveral powers of Europe. The Spaniards,

### Chap. II. Spanish Settlements in America.

25

niards, who first discovered it, have by far the largest and richest share, and indeed much more than they have been able to people or cultivate. Their preposterous conduct when they first fubdued America, almost depopulated it, and gave the natives so horrid an idea of their new masters, that the greatest part of those that escaped, fled to the mountains and forests of that extensive country, where their descendents still continue, and often fally out on their tyrannical masters, making severe reprisals for the injuries they formerly suffered. By this means, several vast provinces are almost destitute of inhabitants, and some of the richest countries in the world continue uncultivated.

#### C H A P. II.

# Of Spanish America in general.

THE common opinion, that the King of Spain hath the largeft dominions of any prince in the world, is fo well founded, that no perfon hitherto has ventured to contradict it. His American territories only are fufficient to juftify this notion; and in truth, when one confiders the vaft extent and prodigious riches of thefe provinces, he cannot but wonder that his Catholic Majefty is not much more powerful than he appears to be. Without doubt this is owing to nothing but errors in government, which fhould incline other nations to beware of falling into a like condition, through luxury

Part I.

and corruption; and fhould alfo put them upon their guard, with refpect to a potentate poffeffed of fuch mighty advantages, who may have, in fome future period, a ministry capable of using and improving them.

In order to be convinced of the truth of what I have advanced, we need only confider, that, upon the difcovery of America, the Spaniards poffeffed themfelves of the most extensive parts of it, and those which mostly abounded in opulence; from whence they have annually derived fuch immense treasures, that it may well be faid, the kingdom of Old Spain is entirely dependent on New Spain for the support of her finances, so as to owe all her former grandeur, and her prefent existence, to her American colonies.

They have in North America all that part of Florida lying to the fouth of the British plantations. 2. All New Mexico. 3. Old Mexico, or New Spain, which, on account of its extent, is divided into three audiences or governments, and each of these governments subdivided into feveral provinces. They likewise posses the largest and most valuable islands in the West Indies, viz. Cuba, part of Hispaniola, and Porto-Rico.

Befides thefe, they are in poffeffion, or at leaft lay claim to all South America, except the Brazils and Guiana, the former being the property of the Portuguefe, and the French and Dutch have feveral fettlements in the latter. The natives, however, are ftill in poffeffion of feveral large large countries in this fouthern part of America, of which afterwards. In a word, the Spaniards command in the South feas the most extended coast in the new world, that is, from Cape St Sebastian, the most northern point of California, to the streights of Magellan, at least 2000 leagues, or between 0 and 7000 miles.

It is an opinion commonly received amongst us, that the Spanish West Indies are very unwholefome; but, like many other general propositions, this may be faid to be true and false at the fame time. It is true, a very confiderable part of Mexico and Peru is fituated in the torrid zone; yet where they have the advantages of a favourable fituation, they are both healthy and pleafant. But, befides these, there are many fine provinces in both the temperate zones; neither can the habitable world boaft of more delightful or fruitful regions than those of New Mexico in the north, and in Chili and about Buenos-Ayres in the fouth, as the reader will be informed of afterwards. The truth is, that great part of Terra Firma, and about Porto Bello, is extremely unwholesome and difagreeable, and to is great part of the fea-coaft of Peru, occafioned by the great rains which fall there at certain seasons; and from hence we form an idea of the reft, though very unjuftly Perhaps too the luxury of the Spaniards, and the inactivity of their lives, may contribute to fhorten their days, and thereby difcredit the places they inhabit. But as it is certain, that the Indians before their arrival lived to a good old age, and D 2 many

many who are temperate do fo ftill, hence we may conclude, that if an active and industrious fet of people were fettled in these countries, they would not be much incommoded by the climate.

As to the foil of thefe countries in general, it is wonderfully rich and fruitful, producing corn in abundance, and fuch paftures as are no where elfe to be feen; trees for fruit, beauty, and ufe; fhrubs odoriferous, and of phyfical virtues; herbs and roots in plenty; and, in fhort, every thing that can be fought for, either grows naturally, or may with very little pains be produced here.

If the Spanish councils were turned for the encouragement of trade and manufactures, there is in these countries such a vast variety of valuable commodities, as might, one would think, furnish the people possessed of them with inexhaustible treasures.

Having now fpoken of Spanish America in general, we will next defcend to particulars, and treat diffinctly of its feveral kingdoms and provinces, beginning with the Spanish islands in the West Indies; shall next proceed to defcribe their fettlements on the continent of North America, as they lie in order from north to fouth; and the third and fourth part will contain an account of their large and rich possififions in South America,  $\mathfrak{Sc}$ .

Part I.

CHAP.

#### C H A P. III.

Of the island of Cuba; —its situation and extent; —climate and soil; —produce and trade.

IN that part of the Atlantic ocean, commonly called *the North fea*, which divides North from South America, there are fcattered a great multitude of iflands, to which the Spaniards have given the general name of *Antilles*, and they ufually divide them into larger and leffer; among the former are Cuba, Hifpaniola, and Porto-Rico, which are to make the fubject of this and the two following chapters.

Cuba, the most confiderable of the great Antilles, and, to fay the truth, one of the finest in the universe, lies between the latitudes of 19 deg. 50 min. and 23 deg. 20 min. north, and between 73 deg. 50 min. and 85 deg. 20 min. west longitude. It is about 680 miles from Cape St Antonio on the fouth-west to Cape Mayze on the south-east, but very narrow in proportion, not being in some-places above forty miles in breadth, and where widest not exceeding 120. It lies about fixty miles to the west of Hispaniola, or St Domingo, and seventyfive to the northward of Jamaica, commanding the gulfs of Mexico and Florida, and the windward passe; whence it has been, with great propriety, called the key of the West Indies.

It was discovered by the famous Columbus in 1492, who called it Ferdinandina, from King Ferdinand

Part L.

Ferdinand V. from whom he had his commiffion, but it foon recovered its American name,

towards the Indians.

The Spa- viz. Cuba. This island was not nifth cruelty conquered till 1511, when the Spaniards cut off near five millions of the natives, by the most horrid barbarities that ever stained the page of history. We may, in fome measure, form an idea of those cruelties from a reply that was made to the Spaniards by one of the Indian caciques, whom they had condemned to be burnt alive. The worthy Bishop of Chiapa (who was an eve-witness to their shocking barbarities, and published an account of them) informs us, that when they were tying this prince to the stake, a Franciscan friar told him, "That if he would " embrace their religion, he fhould go to hea-" ven; but if not, he must burn in hell for " ever. Whereupon the prince asked, if there " were any Spaniards in heaven. The friar an-" swered in the affirmative. He then replied,

" If it be fo, I will rather be with the devils in " hell than with the Spaniards in heaven; for " their cruelty is fuch, that none can be more " miferable than where they are."

The true reason, in all probability, why the Spaniards deftroyed, with fo little pity, fo vaft a number of innocent people, was a covetous defire of posseffing the whole island, with all its real and supposed riches; for at this time they fancied, that the parts of the island possefied by the natives were exceffively rich in gold, of which, while they fuffered them to live, the Spaniards

#### Chap. III. Spanish Settlements in America. 31

Spaniards did really receive a very confiderable fhare : but fince the extirpation of the Indians there has been very little, and at prefent there is fearce any gold to be found at all, which fome confider as a judgment on the Spaniards for their unparallelled inhumanity. However, this much is certain, that, by the extirpation of the natives, the greatest part of the island lies wafte and uncultivated, there being no proportion between the number of the inhabitants and the extent of the island.

The only winter known here is in the months of July and August, when the fun · Seafons. is almost vertical; then they have great rains, and often violent ftorms, which greatly mitigate the extreme heat of the climate. The fairest seafon is when the sun is fartheft removed from them, and then it is hotteft in the morning; for towards noon a fea-breeze fprings up, which blows pretty brifk till the evening; fo that the Europeans, who are generally troubled with the fcorching heat of thefe climates, confess themselves agreeably refreshed by these cooling gales. The trade-winds in those feas blow from the north-east. At the full and change of the moon, from October to April, they have brifk winds at north and northweft, which in December and January often turn into ftorms, though this is called their fair feafon.

As to the foil, it is faid to have in general the best land of any island in America, and is capable of producing prodiducts.

gious

gious quantities of all the commodities furnished by that quarter of the world; particularly, ginger, long pepper, and other fpices; caffia, maftic, aloes, large cedars, and other odoriferous trees; oaks, pines, palm-trees, cotton-trees, with abundance of large vines, and excellent tobacco; befides plenty of pine-apples, plan-tains, bananas, guavas, and lemons : here are alfo many large walks of cacao-trees, and good fugarworks, worked by horfe and water mills, and are faid to make the best fugars in the West Indies, though in no great quantity, for want of hands to cultivate the canes : here are mines of copper, which furnish the Spanish plantations with metal for all their brass guns; and golddust being frequently found in the fands of the rivers, it is conjectured that there are mines of gold, if not of filver too, in the mountains, of which there runs a large ridge from the east to the west end of the island; but the Spaniards having deftroyed all the natives, they either never discovered where these mines were, or never opened them for fear of an invalion.

From thefe hills there run down to the north and fouth many rivers; and amongft them are two pretty confiderable ones, which, befides their beftowing verdure and coolnefs as they pafs, are full of fifh, and thofe very large and good. The feas and rivers here alfo abound with great numbers of alligators; it is thought that there are more of this deftructive fpecies of creatures here than in any other part of the known world.

Part I.

#### Chap. III. Spanish Settlements in America.

Adjacent to this island are great conveniencies both for making falt and catching fifh. It also abounds with horses, mules, sheep, wild boars, hogs, and cattle of a larger and better breed than in any other part of America, with prodigious multitudes of parrots, partridges with blue heads, and all manner of tame and wild fowls, as also large tortoises.

33

The black cattle brought hither formerly by the Spaniards have multiplied to fuch a prodigious degree, that large herds of them run wild in the woods, and are killed purely for their hides and tallow, which they fend to Spain, and the flesh being cut in pieces is cured, which ferves as provisions for ships. Here are quarries of flints, and fountains of bitumen, which is used in chalking thips inftead of pitch, as well as in medicinal compositions.

Tobacco is one of the principal commodities in this island, abundance of which, Trading both in leaf and fnuff, is exported commodities. from the Havannah to New Spain, Cofta-Rica, and the South Sea, befides what is shipped off for Old Spain. Another of its trading commodities is Campeachy wood, which the merchants here import from the bay of the fame name, and Honduras, which they put on board the flota for Spain, together with their hides, tallow, fugar, tobacco, Sc.

The commerce of this island, Hispaniola, and Porto-Rico, with the Spanish continent, is carried on by the barlevento, fleet, confifting of fix thips of good burden and force, who annually

E

Part I.

nually make the tour of these islands, and the coast of Terra Firma, not only to carry on the commerce between those places, but to clear the sea of pirates and illicit traders. Now and then too a register-ship from Old Spain is bound to one or other of these islands.

Upon the whole, Cuba is a very pleafant, rich, and fertile ifland, but has at prefent more churches than farms, more priefts than planters, and more lazy bigots than ufeful labourers : and to this it is owing that the largeft ifland in the Weft Indies, with a luxuriant foil, befides food for its inhabitants, which is eafier produced and obtained here than perhaps in any other part of the world, does not produce for exportation, including even their hides and tallow, tobacco and fnuff, near the value of our little ifland of Antigua. So great is the difference between floth and induftry, tyranny and liberty.

The ifland has feveral towns; and St Jago, The Havan- though a finall place, is called the nah. capital, it being the fee of the bifhop, though he generally refides at the Havannah, which is the chief and most important place on the island.

The Havannah is fituated near the mouth of an excellent harbour, on the north-weft coaft of the ifland. It was built by Diego de Velasquez, in the beginning of the fixteenth century. According to the lateft maps of these parts, it lies in 23 deg. 12 min. of north latitude, confequently within 20 min. of the tropic of Cancer, and in 82°. 13. of weft longitude, about

#### Chap. III. Spanish Settlements in America.

about 190 miles almost direct fouth of Cape Florida, and confequently commands the gulf of that name.

35

This city stands in the most fruitful part of the ifland, and the only part where there are any farms, the reft being almost destitute of inhabitants. It is built on the west fide of the harbour, in a delightful plain along the fhore, which curves fo much, that above half of it is washed by the fea, and the rest by two branches of the river Lagida. The stone buildings are elegant, but not lofty; the ftreets are narrow, but straight and clean; and the houses very handfome, but ill furnished. Here are eleven churches and monasteries, and two handfome hospitals. Near the middle of the town is a spacious square, furrounded with uniform buildings. The churches are rich and magnificent; the lamps, candlefticks, and ornaments of the altar, being of gold and filver. Some of the lamps are faid to be of the most curious workmanship, and weigh near a hundred weight. The recollects church, which ftands on the beft ground in the city, has twelve beautiful chapels in it; and in the monastery are cells for fifty fathers. The church of St Clare has feven altars, all adorned with plate, and the nunnery contains an hundred women and fervants, all clothed in blue. The church belonging to the Augustines has thirteen altars, that of St John de Dios nine, with an hospital for foldiers, of 12,000 pieces of eight revenue. This city is the feat of the governor and

E 2

captain-

Part I.

captain-general of Cuba, and of the royal officers, as well as of an affefior for the affiftance of the governor and captain-general of the Indies.

It is computed that the number of inhabitants here is upwards of 26,000. They are reprefented as a more polite and fociable people, than the inhabitants of any of the ports on the continent; and of late imitate the French, both in their drefs and manners. One part of the ifland is under the jurifdiction of this city, as the other is under that of St Jago; but the diffrict belonging to the Havannah is by far the beft cultivated, and has most towns and villages in it.

The port of the Havannah is faid to be the most frequented of any belonging to the Spaniards, and one of the finest in the world. It is so large that a thousand fail of ships may ride in it commodiously and fafely, no wind being capable to hurt them, so that there is hardly any occasion for anchors or cables. At the fame time it is so deep, that the largest vessels commonly anchor close under the shore, where there is about fix fathoms water : the entrance, which has neither bar nor shoals to obstruct it, is by a channel about three quarters of a mile in length, but so narrow that only one ship can go in at a time. The harbour into which it leads, is a long square, lying almost north and south.

This city and port is, in fact, of the greatest importance to the Spaniards of all their cities in America, as being the place of rendezvous for

## Chap. III. Spanish Settlements in America. 37

for all their fleets in their return from that quarter of the world to Spain, as it lies at the mouth of the gulf of ance and for-Florida, through which they are all

obliged to pass. Here the navy of Spain, stationed in the Indies, ride ; and here the galleons, flota, and other merchant-ships from other ports, both of the continent and islands, meet in September, to take in provisions and water, with part of their lading, and for the convenience of returning to Spain in a body. A continual fair is held here till their departure, which generally happens before the end of the month, when proclamation is made, forbidding any belonging to the fleet to flay in town on pain of death, and accordingly, on firing a warninggun, they all retire on board. This fleet is reckoned the richeft in the world, carrying with them a cargo worth near feven millions Sterling.

As this place is of fuch great importance, it is natural to imagine, that it fhould be properly fortified, in order to render it capable of making a ftrong defence, in cafe of an attack by a powerful enemy.

The Spaniards were fettled here for a confiderable time, befor they did any thing in order to render it a place of ftrength: for, in the year 1536, it was taken by a French pirate, and was of fo inconfiderable a value, that it was ranfomed for feven hundred pieces of eight. It was foon after taken by the Englifh cruifers, and a fecond time by the French:

nor

Part I:

nor was the importance of it thoroughly underftood, or any care taken to fortify it, till the reign of Philip II. of Spain. What was then done, proved not fufficient; and most of the fortifications were in a bad condition, when Francis Coreal was there in 1666, and were very little better when he visited it again twenty years afterwards. But fince the acceffion of the house of Bourbon to the throne of Spain, more pains have been taken about it, as will appear by the following account of its present condition.

On the land-fide, the city has a wall fortified with baftions, and a caftle on the fide towards the harbour, at the mouth of which are also two other strong castles, supposed fufficient to defend the passage against any number of ships.

The chief and ftrongeft of these castles is called *El-Morro*, the headland, from the point on which it ftands on the east fide of the entrance of the harbour, but the British failors call it *Moor Castle*, and others *El-muro*, the wall. It is fituated at the foot of two hills, and built on a rock, in which a ditch is cut, filled with sea-water. It is of a triangular figure, with three large bastions, and mounted with forty pieces of cannon, twenty-four pounders. From this castle there runs a wall or line mounted with twelve very long pieces of cannon, lying almost level with the water; these are all thirty-fix pounders, and most of them brass, being called, by way of eminence,

the

### Chap. III. Spanish Settlements in America. 39

the twelve apofiles. At the point betwixt this caftle and the fea, ftands a tower, having a round lantern at' the top, where a centinel continually watches, to fee what ships are approaching the harbour, and of which he gives notice by hoifting as many flags as they are in number. The fecond caftle at the mouth of the harbour is called the Pontal, and by fome authors Mosa de Maria, the Virgin Mary's table. It stands on a plain ground, on the fide of the entrance opposite to the former, is a regular fortification, with four bastions, and well mounted with cannon. The third fortification is called by the Spaniards El-Fuerty, or the fort, by way of eminence, to diftinguish it from the other two. It is a fmall, but ftrong work, near the end of the narrow channel on the west fide of the harbour, having four regular baftions, and a platform, mounted with about fixty large pièces of brass cannon. Besides these three forts there are two others, of twelve guns each, fituated on the fhore four or five miles from the port. That on the east fide is called *Cajemar*, and the other on the west Chorrera.

From the preceding account it is evident, that though the Havannah is well The practifortified, and perhaps ftronger than cability of taany other place belonging to the king it. Spaniards in the Weft Indies, yet it is far from being impregnable, as fome have pretended. A few regiments, if landed on the weft fide of the city, would, in all probability, foon become mafters of it, as the walls on the land-fide

are

### An Account of the Part I.

are low and feeble. Nor could either of the caftles aboved efcribed prevent their approaches.

On the north fide of the entrance of the harbour is a hill that commands the town, and which might be very eafily fecured, as there was very lately no fortification upon it. From this hill therefore the town might foon be reduced, and then the forts could not long defend themfelves, when attacked from the land by the army, and from the fea by the fhips.

The lofs of this place would ruin the Spanish trade, and all their ports on the east fide of the continent would easily fall into the hands of the conquerors, if they pursued the blow with resolution and intrepidity.

With the Havannah all Cuba would fall with it; and were we in fuch a condition at the conclution of the war, as to infift upon having it yielded to us at a peace, it would fully repay our expense, and fufficiently supply us with sugar for home-confumption and exportation.

Befides, our poffeffions in the Weft Indies, as well as our trade thither, are fo greatly interefted in the poffeffion of this port, that the conqueft of it would prove of the higheft advantage to our commercial intereft. The prefervation of Jamaica makes this more efpecially highly requifite; for being fituate between Cuba, Hifpaniola, and the continent, it is liable to be invaded from these quarters at once; and its fecurity is the more precarious, as the French are also possefield of the west part of Hifpaniola. On

#### Spanifb Settlements in America. 41 Chap. IV.

On the other hand, were we posseffed of the Havannah; our fhips both there and at Jamaica would be always ready to pick up the ftraggling ships of the Spaniards, as they could not eafily keep in a body without the help of this port.

The other places in this ifland, are, 1. Santa Cruz, fixty-three miles east of the Santa Crúz. Havannah; on the fame coaft; it has a very good harbour, at the bottom of the bay of Matazos. 2. Porto-del-principe, a fea-port town on the northern coaft, Porto-del-300 miles fouth-east of the Havanprincipe. nah, and 186 north-west of Baracoa. It was formerly a large and rich town, but being taken by Capt. Morgan with his bucaneers, after à stout resistance, it never has recovered itfelf fince. 3. Baracoa, at Baracoa. the north-east part of the island, has a good harbour for fmall veffels, but will not admit large ships. 4. Cumberland Cumberland harbour in the fouth-east part of the harbour. illand, was formerly called Walthe-

nam, but Adm. Vernon and Gen. Wentworth, who arrived here in July 1741, with a fquadron and land-forces, made an encampment, and erected a fort on the shore, and gave it the prefent name, in honour of the Duke of Cum-' berland, which it has ever fince retained. This is an excellent harbour, capable of fheltering the largeft fleet, and supplied with a fine freshwater river navigable feveral leagues up; the country round it is healthy, and abounds with cattle and provisions. This harbour is about F twenty

Part I.

twenty leagues east from St Jago de Cuba. The British forces continued here till the end of November, without effecting any thing, and then

returned to Jamaica. 5. St Jago, -St Jago. the capital, though not the chief place on the island, stands at the bottom of a spacious bay, on the fouth-east fide of the island, about two leagues from the fea. The entrance of the bay is narrow for feveral miles, but within are many little islands, which form a commodious harbour, and shelter from storms. It was built by Velafquez, the first conqueror, who made it the feat of his bloody government, and there maffacred many thousands of the poor Indians. The city is still in being as a bishop's fee, with a cathedral, where the canons refide, but the bishop lives at the Havannah. The trade is now wholly removed from this place, and the city turned into a poor village.

Befides thefe there is another fpacious harbour, which lies to the weft of the Havanah, called *Honda*, and is very little inferior to the former in any refpect, though, like the reft formerly mentioned, it is very little frequented. There are alfo many creeks around the ifland, which might eafily be improved into better ports than moft on the continent, but for want of inhabitants they are neglected. For the fame reafon the copper mines are not wrought to any confiderable advantage, and perhaps would not be wrought at all, were it not for this reafon, that out of them is taken the metal requifite for making the brafs cannon, not only for the fortifications Chap. IV. Spanifb Settlements in America. 43

fortifications here, but throughout the West Indies.

## CHAP. IV.

# A description of the island of Hispaniola, or St Domingo.

His island was called by the natives Hayti; but the Spaniards, when Columbus difcovered it in 1492, called it Hifpaniola, or Little Spain. But Columbus built a city in 1494, which he called St Domingo. That name was first extended to that quarter of the island, and in process of time to the whole, so that it is now generally called St Domingo. It is fituated between Cuba and Porto-Rico, having the former on the north-weft, Jamaica on the fouth-weft, and Porto-Rico on the east, from which it is feparated only by a narrow channel. It lies between the latitudes of 17 deg. 37 min. and 20 deg. north, and between 67 deg. 35 min. and 74 deg. 15 min. of west longitude, being about 400 miles in length from east to west, and upwards of 120 where broadeft; and about 1,500 in circuit. The climate here is very hot, but greatly mitigated by the trade-winds, and friendly fea-breezes. It also rains exceffively at fome times, but not in all places alike. Although the climate agrees but indifferently with Arangers, yet the inhabitants live in good health, and to a great age, many of them exceeding F 2 eighty,

. Part I.

eighty, and fome reaching to one hundred and twenty.

This island, if we except Cuba, justly claims the precedency of all the other islands in the West Indies, both with respect to extent and fertility: all the commodities found in that quarter of the world, are produced here in the greatest plenty and perfection. Here are extensive forrests of cabbage-trees; and the mountainous parts of the island are covered with stately oaks, palms, elms, pines, and other trees taller and larger than in the other islands. The fruits here are not only pleasant to the eye, but most delicious to the taste, particularly the ananas, bananas, grapes, oranges, lemons, citrons, toronias, limes, dates, and apricots,  $\mathfrak{Sc}.$ 

This country has likewife prodigious fine plains of vaft extent, and extreme fertility, either covered with noble and beautiful forefts of timber and fruit trees, or paftured by vaft numbers of horned cattle, fheep, and hogs. The hunters fhoot the beeves here, as they do in Cuba, for their hides and tallow; and with regard to the pork, they ftrip the flefh from the bones, and jerk it, as is done at Jamaica. This ifland is admirably well watered with rivulets as well as navigable rivers, which are well ftored with various kinds of excellent fifh, as the coaft is with crocodiles and tortoifes.

The Spaniards by degrees conquered the na-The cruel. tives, and in battle and cold blood ty of the Spa- deftroyed no lefs than three milniards. lions of men, women, and children. While

## Chap. IV. Spanifb Settlements in America. 45

While the natives enjoyed their poffeffions, they cultivated their lands for the Spaniards, fupplied them with fifh, and fome quantities of gold; during which time the Spaniards lived much happier, and in greater affluence, than they have done ever fince; whereas now the far greater part of what the Spaniards elaim, rather than poffers, is defert, and yields little or nothing for want of cultivation.

As this ifland was among the first discovered by the Spaniards, so it was the centre of their commerce in that part of the world for a confiderable time, and was in a very thriving condition; but after the conquest of Peru and Chili, and the large additions made to their territories on the continent of North America, they neglected this island; which encouraged the French, about the middle of the last century, to fix themselves on the western part of it, which they effected in the following manner.

After the Spaniards had ruined the first colony at St Chriftopher's, they brought The French upon themfelves, by this act, a very fix themfelves in the weft part heavy revenge for the injuffice of it. of this island. Several of the French inhabitants, who were expelled from this ifland, being reduced to great indigence, began to think of defperate courfes; and entering into a confederacy with fome vagrant English, Dutch, and other outcafts of all nations, but at the fame time refolute fellows, and not destitute of men of capacity amongst them, they began a piratical

An Account of the Part I.

tical war upon the Spaniards. At first they fatisfied themfelves with taking their ships, and destroying their trade, which they did effectually; but being encouraged and ftrengthened by this fuccefs, they landed upon the continent of New Spain and Terra Firma, burning and plundering the open country. Their boldness and number increasing with their fuccess, they affaulted and took fome of their strongest fortreffes, and most opulent towns. They took Porto-Bello, Campeachy, Maracaibo, and the fortrefs of Chagra, and they even took the city of Panama by ftorm, after defeating an army which came to beat them off. In all which places they gained an incredible booty, and committed the most terrible cruelties. Another party of these pirates passed the streights of Magellan, and entering the South feas, turned the whole coast of Peru, Chili, and Mexico into one fcene of defolation; every where attended with fuccefs, becaufe every where acting with a bravery and conduct, that in any other caufe had merited the highest honours.

The pirates, whom we called bucaneers improperly, the French denominated flibustiers, from the Dutch fly-boats, in which they made . their first expeditions. The bucaneers are no more than perfons who hunt wild cattle in America for their hides and tallow. Some of these joined the flibustiers in their first expeditions, and from them we named the whole body bucaneers. It is furprifing to think upon the many brave and heroic exploits performcd

#### Chap. IV. Spanish Settlements in America. 47

ed by a fmall body of thefe bucaneers, when we confider what armaments from England, Holland, and France have been fent at different times to America, whole remains mostly returned without honour or advantage. These people brought their prizes and plunder frequently into Jamaica, by which they greatly enriched that island. Others finding that the Spaniards were very weak in Hifpaniola, and that they had in a manner deferted a confiderable part of the ifland, made it a place of rendezvous. They who hunted the cattle, faw the hideous deferts left by the Spanish tyranny a proper place for exercifing their profession. To these two forts of people were soon added a third, who were fome of the French in the Leffer Antilles, who finding how much might be made by fupplying a fort of people who expended largely, and were not very exact in their bargains, and perceiving that no part of America afforded a better soil, passed over to this island, and exercised here their business of planters and merchants. These three forts of people, mutually in want of each other, lived in very good harmony. The Spaniards diflodged them feveral times; but they still returned, and with new strength; fo that it was with difficulty, and after a long difpute, that the Spaniards were able to retain one part of the ifland.

The court of France faw the progrefs of thefe people filently. Whenever complaints were made, they difavowed their proceedings, and An Account of the Part I.

and refolved not to break meafures with Spain for the fake of an object which they were not fure they could hold, and the advantages of which were yet doubtful; but when they found the French in Hifpaniola numerous, ftrong, and wealthy, they owned them as fubjects, fent them a governor and regular forces to keep them fo, and to defend them in what they had done : the old method of piracy was ftill connived at, whilft their trade increafed, and the plantations extended.

And though the Spaniards were glad to live upon good terms with them, yet they always looked upon them as ufurpers. And to fay the truth, the French had no legal right to any part of it till the year 1697, when the Spaniards yielded that part of the ifland to them, to the weft of Monte Chrifto on the north, and Cape Mongon on the fouth, by the treaty of Ryfwick, and the boundaries betwixt thefe two nations were fettled by a line drawn acrofs the country from north to fouth.

The French here are faid to equal, if not outnumber the Spaniards in the other part of the ifland, and have improved their fettlement to great perfection, which indeed is the beft they have in the Weft Indies. They have fo many horfes here, that they formerly fupplied their neighbouring colonies with them; befides, they have plenty of wild horfes and wild hogs, of the breed first brought over from Spain. In the barren and rocky parts of the island are mines of gold, but are not worked now, though it

÷ #8

it is judged, they not only contain those of gold, but mines of filver, copper, and iron: but the French wisely think, that their labour is better bestowed on the culture of the plains for these rich commodities, which vend so well in Europe, than in the pursuit of mines, really more precarious in their profits, and which yield a wealth after all of a less useful kind.

For many years its principal trade confifted in tobacco, which employed a great Trading number of ships; but sugar is now commodities. become the staple commodity, which is reckoned extraordinary fine, and generally fells dearer than any other fugar produced in the neigh-bouring iflands. The French have increased fo quickly here, that in the year 1726 they rec-koned, that on this island they had no less than 100,000 negroes, and 30,000 whites; that they made 60,000 hogsheads of sugar of 500 weight each; that the indigo was half as much in value as the fugar; that they exported large quantities of cotton, and that they had fent befides to France cacao and ginger in tolerable plenty. Since that time they have raifed coffee here to a very great amount; and not this article only, but every other branch of their commercial products has increased to a degree truly aftonishing. Towards the conclusion of the last war, a Spanish writer, who was well informed, reckons the produce of the plantations near Cape Françoife, the capital of French Hifpaniola, and which were exported from that fingle town, at 30,000 tons in sugar, indigo, tobacco, and G

and coffee. This export, at the lowest calculation, cannot be of lefs value than 600,000 pounds Sterling. If to this we add the exports of the two port-towns of Leogane and Petit Guaves, and the other inferior ones, which certainly do not fend out lefs than the capital, on this low estimation we find the exported produce of this island to be worth 1,200,000 pounds annually; which, great as it is, is certainly under-rated. But there is another branch of their trade, if poffible, more advantageous to the mother-country, the contraband, which they carry on with the Spaniards, wholly in the manufactures of France, and for which they receive their returns in filver. The above-mentioned author, from the most authentic information, tells us, that this trade returns annually to France no lefs than two millions of dollars.

The most noted places in the French part of the island, as they lie from south-west to northeast, are,

1. St Lewis, about fix leagues to the north-Theifland of eaft of the ifle of Vache, and twen-St Lewis. ty-five from Petit Guaves, is a fmall ifland, having a good harbour, where they erected a fort about fifty years ago. This ifland is feparated from the main land of St Domingo by a channel not three quarters of a mile in breadth. The town and fort was deftroyed in the year 1737 by a dreadful hurricane, but is fince repaired.

2. Vache, or Cows Island, is about three leagues

## Chap. IV. Spanish Settlements in America. 51

leagues diftant from the main land of the great ifland, is about five or fix leagues in length; its foil is very good, and has feveral tolerable harbours, fome of which are capable of receiving large fhips.

3. Donna Maria bay, at the weft end of the ifland, is fix leagues north-eaft of The bay of Cape Tiberon. Here the King's fhips Donna Maria. generally ftop for wood and water. All the weft part of this ifland, from this place to Cape St Nicholas, abounds with fine bays and commodious harbours, fome of which are as good as any in England.

4. Petit Guaves is a port-town, fituated on a large bay on the west part of the Petit Guaves. island. Here the French carry on a very confiderable trade.

5. Leogane, which gives name to a principality, is another port on the fame Leogane. bay, where the French built a new town about half a league from the fea. This town is the refidence of the governor-general, the intendant, and other officers; the feat of the royal judicature of the fuperior council of this part of the island. The French also erected a fort on the shore to defend the shipping. There are feveral defert islands in this bay, the chief of which is Gonave, about feven or eight leagues in length, is very habitable, having a rich foil and a pure air, but is attended with this difadvantage, of having not a drop of water upon it but what falls from the heavens.

6. Port-

#### An Account of the

· Part L

6. Port-Paix was formerly the refidence of

Port-Paix. the governor, and the most considerable place in the west part of the island, till it was entirely ruined in the reign of King William by the English and Spaniards. This was the first place the French took after they had fettled on the ifland of Tortuga, which lies opposite to it. This island is about twenty miles diftant from Port-Paix, and is pretty large, producing excellent timber; and the foil, where duly cultivated, abundantly prolific. Columbus named it Tortuga, on account of the vast number of tortoifes he found there.

7. There is one place still to be mentioned, Cape Fran. namely, Cape Françoife, which is fituated on the northern part of the çoife. island, upon a very fine harbour. The French often call it the Cape, by way of eminence. It was twice destroyed by the English and Spa-niards in the beginning of King William's reign, but is fince elegantly rebuilt, and contains about 8000 inhabitants, blacks and whites. The country adjacent to this town is remarkably fertile, and exceeding pleafant, producing prodigious quantities of indigo and fugar, &c.

The east part of this charming island is still St Domingo. in the hands of the Spaniards, who posses the largest and best share of it. Their capital town is St Domingo; it is feated on the fouth fide of the illand, at the mouth of the river Hayna, in a fine plain, which renders it extremely pleafant, and shews it to great advantage from the fea. It is a large well-built

city,

#### Chap. IV. Spanish Settlements in America.

city, and contains feveral edifices more magnificent than is usual in the Indies. It has a fine cathedral, feven large monasteries, and two nunneries. The governor-general of the Spa-nish islands refides here, as also the judges of the royal courts; which makes it the supreme feat of justice, and thereby fecures it from falling into ruin, as otherwife it would certainly do through the loss of trade. Befides, it is also the feat of an archbishop, to whom the bishops of the Conception in this island, of St John de Porto-Rico, of St Jago de Cuba, of Venezuela in New Castile, and of Honduras, are fuffragans; whence it is eafy to conceive, that its principal inhabitants are lawyers and clergy. It has a good port, and the greatest part of the trade that is carried on by the Spaniards is here. Its fituation is vaftly delightful, having a large navigable river on the west, the ocean on the fouth, and a pleafant fruitful country on the north and east. In the year 1586 this city was taken by Sir Francis Drake, who kept poffeffion of it a whole month, and then burnt a part of it, but spared the rest, on the inhabitants agreeing to give him 60,000 pieces of eight, by way of ranfom. It quickly recovered its lustre, and would have maintained it if trade had not decayed; as it is it makes a good appearance, and the number of its inhabitants, including people of all complexions, negroes as well as Spaniards, is thought to exceed 25,000, and fome fay there are many more. There were other cities in this part of the island, which

53

which formerly made a confiderable figure, fuch as that of the Conception, which is a bifhop's fee, St Jago Cavalleros, inhabited by bucaneers or hunters; and then as to ports, they had Puerta-de-la-Plata, and many others, which were fo often deftroyed by pirates, that at length they funk into fifting villages, no longer worth taking. Of late years, however, it is faid, the Spanifh affairs in this ifland are on the mending hand.

During the usurpation of Oliver Cromwell, an armament was fent against Hispaniola in order to reduce it. The generals appointed for this expedition, were Penn and Venables, the former for the marine and the latter for the land fervice : and a number of commissioners were added, as a check upon both. They embarked at Portfmouth, and at length arrived before Hifpaniola; but their place for landing on that island was ill. chofen. The army had forty miles to march before they could come to action, and the foldiers without order, without heart, fainting and dying by the exceffive heat of the climate, and the want of necessary provisions. They were also disheartened, by the animolity between the generals and commissioners: and the cowardice and discontent of their officers afforded an eafy victory to a handful of Spaniards; fo that they were obliged to retire with great ignominy and lofs.

But the principal commanders, a little reconciled by their misfortunes, and fearing to return to England without effecting any thing, refolved

54

## Chap. IV. Spanifs Settlements in America. 55

refolved to make an attempt on Jamaica. They accordingly laid fiege to St Jago de la Vega, now Spanish-town, the capital of the island; and after a long fiege, in the 1656, the town, with the whole island, furrendered; which madeample amends for the failure of the former.

Here we may obferve, that animofities and quarrels between the principal commanders of an army or navy are generally attended with bad confequences, namely, lofs and ignominy. Witnefs the unhappy ftory of Matthews and Leftock, Vernon and Wentworth, with many other inftances which might have been mentioned. We may likewife obferve, that our remarkable fucceffes fince the commencement of this prefent war, have in a great meafure been owing to the beautiful harmony and unanimity which has upon all occafions fubfifted between our officers and principal commanders.

Before we leave this ifland, it will be neceffary to take notice of one particular not yet mentioned, namely, the The windward paffage. ftreight between the iflands of Cuba and Hifpaniola, which is about eighteen leagues over, and well known to us by the name of the windward paffage; by which our fhips fometimes return from Jamaica. But as this paffage is both difficult and dangerous, it is feldom they make choice of it; but, on, the contrary, fail quite round the ifland of Cuba, and fo through the gulf of Florida.

Hence, in a few words, the importance of keeping

## An Account of the

Part I.

keeping these passages free and open is made evident; for otherwise, not only our navigation suffers, but by degrees the inhabitants of Jamaica must be ruined, and that valuable island be in danger of being taken from us.

## CHAP. V.

## The island of Porto-Rico; its climate and foilproduce and trade, &c.

ST John de Porto-Rico, though it be less than either Cuba or Hispaniola, is however a very fine island. Its length, from east to west, is about 150 miles, and its breadth about 50. The middle part of the island is in the latitude of 18 deg. 14 min. north, and is distant about forty miles to the east of Hispaniola. The Indian name of it was Borinquen; and Columbus, who discovered it in the year 1493, called it St John the Baptist: but the chief town being afterwards built upon a harbour called Rico, or rich, which fome suppose was fo named from its excellence, the whole island ever fince has been called Porto-Rico.

It coft the Spaniards a good deal of trouble

The Spaniards conquer and extipate the natives. By degrees, however, and by the mighty advantages they had over them in the art of war, thefe new comers not only conquered, but entirely extirpated the natives, though

at

# Chap. V. Spanifs Settlements in America. 57

at their first arrival they were not lefs than 600,000. We are informed by a certain Spanish writer, that they hunted these unhappy people with dogs, trained up for the purpofe; and that they often fet them on to tear men, women, and children for their pastime, if they would not fubmit to all the drudgery they put upon them. The natural confequence of fuch inhumane conduct was foon visible; for the deftruction of the natives proved the ruin of the island; and there is no longer any confiderable quantity of gold to be met with here, which formerly was found in vaft quantities, and for the fake of which thefe innocent people were flaughtered, and fuch effects muft in the nature of things always attend on fuch bafe and bloody expedients.

The rains which generally render the feafon unhealthy, fall in June, July, and Seafons. August, when the weather would be otherwife extremely hot. About midfummer and the beginning of harvest violent hurricanes (the general fcourge of these climes) are frequent, when the plants fuffer greatly by the north-east wind.

The foil, which is beautifully diversified with woods, hills, valleys, and plains, Soil and prois extremely fertile, abounding with ducts. excellent meadows, well ftored with cattle, which were originally brought from Spain. A ridge of mountains runs through the island from east to west, from whence iffue many brooks and rivers, which water the plains, and clothe them

H

Part I.

them with the fineft of paftures. The defcents of thefe hills are covered with trees of various kinds, proper for building fhips and other ufeful purpofes.

The capital of the island is the city of Porto-Porto-Rico. Rico, which stands on the north fide of it, on a small island joined to the continent by a caufey, which runs directly crofs the harbour. The city is both large and well built; it is the fee of a bishop, and the refidence of the King of Spain's governor, and is better inhabited than most Spanish cities; the true reason of which is its being the centre of the illicit trade carried on by the British and French with the King of Spain's fubjects, notwithstanding the feverity of the laws, and the many precautions taken to prevent it. There is a ftrong citadel built on the fouth-west fide of the city, which commands and defends it; befides, there is a very ftrong castle, which protects the port. The harbour is very good, and the largest ships may lie in it with the utmost safety. In the year 1595, Sir Francis Drake was here, who burnt all the ships; but forefeeing, that he could not be able to keep the place without abandoning all his other defigns, therefore left it. Three years Taken by the afterwards the Earl of Cumberland Earl of Cum- reduced it, and had fome thoughts berland. of keeping pofieffion of the fame; but lohng 400 of his men-in the space of a month by a contagious difease, he was glad to depart, carrying with him feventy pieces of cannon,

58

#### Chap. V. Spanish Settlements in America.

59

non, and an immense booty in plate. In the year 1615, the Dutch sent a strong fleet hither, but with no great fuccess; for they only took and plundered the city, not being able to reduce the castle, which with the other forts are now in a better condition than ever, as the Spaniards of late have taken several stress towards the better settlement of this island.—The city of Porto-Rico is situated in 18 deg. 20 min. north, and 65 deg. 35 min. west longitude.

The 'principal' commodities in which the traders of Porto-Rico deal, are, fu- Trading gar, ginger, hides, cotton-thread, commodities. caffia, mastic, &c. They have also great quantities of falt, and make a confiderable profit of the fale of their oranges and lemons, as fruit, and in fweetmeats. They have a great many good veffels, in which they trade to various parts of Amerića. Besides Porto-Rico, there are feveral confiderable towns, fuch as Arezibo, Guadiamila, St Germain, &c. The genius of the people,' and the convenient fituation of this ifland, would render it a most flourishing colony, if fome great inconveniencies did not keep the people under. These are principally three: great droughts, which are but too frequent, and which bring the inhabitants often to the point of ftarving : hurricanes likewife are very frequent, which do incredible mischief, both at fea and on land : and laftly, the deicents of privateers, which have been fo frequent and fo fatal, that all the fea-ports have been ruined over and over; and perhaps this is one reafon H 2 why why

Part I.

why the guarda costas fitted out from this place, are so remarkably cruel.

It is not eafy to fix the number of people upon this ifland; but fome who pretend to be well acquainted therewith, affure us that they do not exceed 10,000.

The other places of note in this and the neighbouring finall islands, are,

I. Port-del-Aguada on the north-west part Port-del-A. of the island, where the galleons guada. and flota usually stop, to take in fresh provisions and water when they come from Spain.

2. Bomba d'Inferno, or, as the French call it, Coffremort, is a fmall ifland, about three leagues in length, on the fouth fide of Porto-Rico ifland, but is remarkable only for the fifhing of tortoifes.

3. Crabs island on the fouth corner of the Crabs island. great one, (fo called by the bucaneers, on account of the great number of these creatures found there), is pretty large, and abundantly fertile, planted with oranges, citrons, and other fruits. The English settled here in the year 1718; but it is at present destitute of inhabitants, for the Spaniards not chusing such neighbours, surprised and took the place in the year 1720, and carried away the colony to Porto-Rico, and St Domingo.

4. To the eaft of Porto-Rico, lie a clufter of The Virgin finall iflands, about twelve or more in illes. number, called the *Virgins*. Though the

60

#### Chap. V. Spanifs Settlements in America. 61

the paffage through them is reckoned difficult and dangerous, yet Sir Francis Drake paffed fafely through them, in his way to St Domingo. Thefe too belong to Spain, but are of little value, being moftly barren, fandy, cragged, and uninhabited.

Laftly, the ifland of Mona, which lies between Porto-Rico and Hifpaniola, is but fmall; however, it is faid to be very fruitful and well peopled. It is well watered, and produces excellent fruits in great abundance, and has a governor in it appointed by the King of Spain.

Thus having finished our description of the Spanish infulan colonies in the West Indies, we shall next proceed to describe their settlements on the continent of North America, which will be the subject of the second part.

#### PART

An Account of the

Part II.

## PART II.

The Spanish settlements on the continent of North America.

## · C H A P. I.

Of Florida. A defcription of the town and fort of St Augustine; the advantages that would attend the taking of it, if annexed to the British dominions, &c.

HE general name of *Florida* was given by the Spaniards to all that part of North America lying to the north of the gulf of Mexico, and bordering on the Atlantic ocean to the eaft. But at prefent it has different names; for within these limits are comprised our colonies of Georgia and Carolina, and that immense country to the west of these, called by the French *Louissana*, into which they have lately intruded themselves, though at the fame time they had not the least right or title to it.

At prefent the Spanish province of Florida is but narrow and inconfiderable, being little more than that peninsula, fituated between Georgia and Cape Florida; lying between the latitudes of 25 and 30 deg. north, and between 81 and 85 deg. welt longitude, having the gulf of Mexico on the west, and the Atlantic occan on the

#### Chap. 1. Spanifs Settlements in America. 63

the east, and the streights of Bahama on the fouth. Its length from north to fouth is 300 miles, and about 100 where broadest.

This country is bleffed with a pure air, and a prolific foil, equal to any of our Climate and North-American colonies in fertili- foil. ty and pleafantnefs, producing all forts of excellent timber, dying-woods, shrubs, herbs, together with all forts of grain, and excellent grapes. Here may be raifed great quantities of wine and filk, as the foil and climate are admirably well adapted for the production of these valuable commodities; fo that nothing is wanting to render this province as profitable as it is pleasant, but industrious inhabitants to cultivate its luxuriant foil. The many rivers with which it is watered, not only abound in fifh, but render it inferior to no country in the world; the meadows are clothed with excellent grafs, and these are pastured with numerous herds of cattle; the woods fwarm with deer, goats, and other animals. Here are incredible numbers of turkies, and every other fort of the winged fpecies common in America. Although the climate be naturally warm, being but a few degrees to the north of the tropic, yet the great heat is much mitigated by the fea-breezes, and towards the Apalachian mountains the air is generally cool and refreshing.

The natives of this country are of an olive colour, robuft, agile, and extremely well proportioned; they go naked, both men and women, except only a deer-fkin round their middle; but

## An Account of the Part II.

but to preferve themfelves from the injuries of the weather they are painted with certain juices, which leave indelible marks. The weapons they use are bows and arrows, which they manage with great dexterity. As to religion, they are bigotted idolaters, worfhipping the fun and moon as fupreme deities, and bearing an irreconcileable hatred to all Christians.

. 64

The Spaniards, as they have always lived in a ftate of war with thefe Indians, fo they have conftantly reprefented them in the blackeft colours; though fuch of our countrymen as have had any thing to do with them, affirm they are not fo bad, except as to their fubtilty, and propenfity to fraud, of which they have more than any other natives of America.

The only towns or places of ftrength which St Augustine. the Spaniards are possessed of in Flo-rida, are St Augustine and St Mattheo. As to the former, it is feated in north latitude, 29 deg. 48 min. about eighty leagues from the mouth of the gulf of Florida, or channel of Bahama, thirty fouth of the river Alatamacha, and forty-feven from the town of Savannah in Georgia. It is built along the fhore at the bottom of a hill shaded with trees, in the form of an oblong fquare, and is divided into four ftreets, cutting each other at right angles. About a mile north from the town Fortifications. stands the castle, called St John's fort, built of foft stone, with four bastions; it has a curtain of fixty yards long, a parapet of nine feet thick, and a rampart twenty feet high. The

#### Chap. I. Spanifs Settlements in America. 6;

The fort is mounted with fifty pieces of cannon, fixteen of which are brafs, and fome of them twenty-four pounders. The harbour is formed by an island, and a long point of land, divided from the continent by a river. The ifland, which is called Eustatia, is long and narrow; the northern part of it is due east from the caftle, and extends about ten miles fouth along the coaft, leaving a channel betwixt it and the main land, which at the fouthern extremity of the island is not a mile over, but not fo much at the northern. It is necessary to obferve, that the fea on this coast is so shallow that no fhips of great force can come within three leagues either of the town or caftle.

In the year 1586, this place was taken by Sir Francis Drake, when the Spa- Taken by Sir niards fled, and left him fourteen Fran. Drake. brass cannon; besides a chest of 2000 pounds, and other booty. In 1665 it was again taken and plundered by Capt. Davis at the head of the bucaneers.

In the year 1702, the people of Carolina formed a defign of conquering what The English the Spaniards fill hold in Florida, attack it under Col.Moor.but and actually undertook it under the difappointed. command of Col. Moor their governor: He ruined the villages and farms in the open country, and befieged the town of St Augustine for three months; but on the approach of some Spanish vessels to its relief, he raifed the fiege with precipitation, and marched back to Charlestown, 300 miles, by land. The laft

#### An Account of the

66

#### Part II.

last siege of this place was by Gen. Oglethorpe in 1740, when he marched to it with a confiderable body of English forces, and a much larger of Indians, and took fome advanced pofts; but the Spanish governor, it seems, was a man of great experience, and having early intelligence of the vifit intended him, had increafed his forces to near a thoufand men. The Englifh feemed to have taken poffession of too many places, fome of which were probably abandoned to them with that view. This afforded the Spanish officer an opportunity of cutting off about 130 men, who were posted in the negro fort under the command of Col. Palmer. This difaster, together with the apparent impoffibility of doing any great execution by the batteries which had been raifed on the ifland of Eustatia, being at too great a distance, occasioned the'raifing of the fiege towards the latter end of June, and thereby put an end to the high expectations which had been raifed from this undertaking, which, if it had fucceeded, muft have been attended with very great advantages to the British nation.

The only place in this peninfula of any con-St Mattheo. fequence to the Spaniards, next to St Augustine, is St Mattheo, about fifteen leagues to the north. This is the frontier-town of Florida; next to Georgia. It was belieged by the English when we were last at war with the Spaniards, but with little advantage.

Both these towns, as well as Georgia, are within

#### Chap. I. Spanifb Settlements in America.

within the limits of South Carolina, though unjustly detained from us by the Spaniards; for by the charter granted by King Charles II. in 1666, the fouthern limits of Carolina were fixed at north latitude 29. The Spaniards indeed fay, that this grant was an invation upon their right; but if the first discovery gives a title, which is the general pretention of the Spaniards to their American dominions, we fhall find it belongs to us, and we had an undoubted title to all that part of Florida which borders on the gulf of Mexico ever fince the reign of Henry VII. by whole commission (as was formerly observed) Cabot difcovered all this coaft fronting the Atlantic ocean, from north latitude 28. to north latitude 50. twenty years before it had been vi-fited by any other European. At the fame time it must be acknowledged, that Juan Pontio-de-Leon made afterwards a fuller difcovery of it in the year 1512, and took possession of the country for the King of Spain; however, this by no means destroys our prior title to it.

St Augustine in time of war is a nest of privateers, which, if not destroyed, will greatly distress our North-American and Jamaica trade. Although our attempt upon it in the year 1740, with an irregular body of militia, failed, yet it would foon have fallen by a regular force well conducted; for the town is small, and the fort not able to result the usual force employed in a fiege.

If this place was taken, all Florida would fall with it, which would be of great fervice to

our

67

#### An Account of the

Part II.

our trade, not only by depriving the Spaniards

of a port, from whence they might The importannoy us on this fide, but, on the ance of St Aucontrary, enable us to diftress them, gustine. by cruifing on their homeward-bound fhips co-. ming from the gulf of Florida, and the streights. of Bahama. And if we were to add to it the conquest of Louisiana, (which every one reckons to be in our power), and the war ending profperoufly, we might then make the Miffifippi our western boundary, and the gulfs of Florida and Mexico our southern. This would effectually fettle our confines in North America, and put a final period to future difputes both with France and Spain in this refpect; this would also entirely subject the Indians to us, and put a perpetual ftop to the horrid ravages they formerly committed upon our planters, through the infligation of the French and Spaniards.

#### C H A P. II.

New Mexico. Its extent, climate, foil, and products.

His extensive country, which the Spaniards-fometimes call the kingdom, and fometimes the province of New Mexico, was fo called, as being later difcovered than Old Mexico, or New Spain. It is bounded on the north by high mountains, beyond which is a country altogether unknown; by Louifiana on the east, by fome of the provinces of New Spain,

#### Chap. II. Spanish Settlements in America.

6.9

Spain, and the gulf of Mexico, on the fouth; on the weft by the Vermilion fea, and the Rio Colorado, which feparates it from California. The extent of this country is very uncertain; even the Spanifh writers feem to difagree in this point. Some place it between the parallels of 27 and 50 deg. north latitude, and between 100 and 115 of weft longitude. However, this may be affirmed, that what has been difcovered extends upwards of 1000 miles in a northern direction from New Bifcay in New Spain; and the breadth from California to the Miffifippi is little inferior.

Some geographers divide it into fifteen, many of the Spanish writers into eighteen provinces, of which they give us only the names; but the latest maps seem to divide it only into five.

This delightful country lies for the most part within the temperate zone, and has a most pleafant climate, every way agreeable to Euroropean constitutions.

As to the foil, it is wonderfully good, abounding with fruit and timber trees, and Soil and probeautifully interfperfed with rifing duct. grounds, and plains, with rivers and purling ftreams. All forts of wild and tame cattle, efpecially cows, are found here in great abundance, with plenty of fowls and fifh. In a word, this is as pleafant, plentiful, and rich a country as in America, or in any other part of the world; for, befides the many valuable commodities the foil is capable of producing, it contains alfo in its bowels

#### An Account of the Part II.

bowels many rich mines of filver, and fome of gold, which are worked more and more every day; and it affords precious ftones of feveral kinds; but it labours under one great inconvenience, namely, of having no direct intercourfe with Europe. This country is but little known to Europeans, and the Spanish fettlements in it are faid to be weak; however, they are every day increasing in proportion, as they discover mines which are faid not to be inferior to any that have been discovered in America.

70

Although there are but few rivers of note in Rivers. this extensive tract of country, yet it is extremely well watered, with innumerable fmall rivers and beautiful ftreams : the only remarkable ones here are, Rio Salada, and Rio del Norte, or the north river, which runs the whole length of the country, and then bending east, passes through the province of New Leon, where it falls into the Mexican gulf. There are also feveral rivers of less note, which run into the fea of Mexico; and there are feveral bays and creeks on that coast, which might easily be converted into harbours.

The greatest part of this country is still in the hands of the original inhabitants, who, though they are represented as an easy, peaceable, and hospitable people, yet were not only more numerous, but better provided for their defence than any other people of the new world, which the Spaniards had to encounter with. The Indians there were well clothed, cultivated their lands, had large flocks of cattle, tolerable huts

in

## Chap. II. Spanish Settlements in America. 71

in their villages, and ftately ftone houses in their towns, when the Spaniards came among them, which was in the year 1539. However, they were grofs idolaters, worfhipping the fun and moon; as to government, they had petty princes or caciques, whom they elected for their wifdom and valour. Thefe Indians shewed a greater readiness to embrace the Christian religion than any other of the American nations, but did not difcover any willingness to part with their liberty, which in a great measure they still retain. Spanish writers make mention of a great variety of nations in this country; but the principal are the Apaches, who are a very brave and warlike people. About the latter end of the last century, these conceiving themselves aggrieved by the Spanish governor, made a general infurrection, and did a great deal of mifchief, but were at last overpowered, and ftronger garrifons have been kept there fince to keep them in awe.

The capital of all this country, is the city of Santa Fe, feated on the Rio del The city of Norte, in north latitude 36. It is Santa Fe. faid to be a well-built rich city; but standing at the distance of 130 leagues from the fea, it cannot be expected, that we should have a good account of it. Besides this, the Spaniards have many considerable towns here; but as we know very little about them, it would be unnecessary for us to mention them. The whole is under one governor, who resides at Santa Fe, and ought always to have a standing army of 600 horse,

## An Account of the Part II:

He, for which he receives conftant pay from he crown. The Spaniards export their plate, precious flones, and the other commodities of this country by land to Mexico, on horfes and mules, and affect a great deal of caution whenever they write of this country ; whether it be that they are apprehensive of the natives, or afraid that strangers should attempt any thing by making defcents on the fide next to California, is uncertain. The Spaniards are naturally cautious, and fometimes exceed in that refpect: but in this cafe they are certainly in the right; for Dampier frequently mentions the poffibility of penetrating to the gold and filver mines, by making defcents on the fhore opposite to California. On the other fide, if the French be allowed to refide in Louifiana, the Spaniards will run no fmall hazard from their neighbourhood.' This must readily appear to any perfon, who confiders, with what address they have fixed themfelves in the island of Hifpaniola.

The governor of New Mexico only enjoys his post for five years, and then has a successfor fent him; which is probably the reason that he is so much devoted to his own interest, and so careless of that of the public.

In paffing-we may observe, that when King Charles I. made a grant of that part of Florida to the west of Carolina, great part of New Mexico as well as Louisiana was included in it. For the extent of this grant specified in the charter, was all the continent to the west of Carolina, from north latitude 29. to north latitude

#### Chap. III: Spanifb Settlements in America. 73

titude 36. extending in longitude from faid place to the great South fea.

#### CHAP. III.

#### The peninfula of California described .- The British claim to it.

His is the most northern part of the new world discovered, and in any degree possefied by the Spaniards. The southern parts of this peninfula were known to that nation foon after the difcovery of Mexico; but it remained, for the fpace of 120 years after that, a matter of dispute, whether it was an island, or a peninfula. It used to be laid down in the best maps as an island, with a pretty wide fea betwixt it and the continent of New Mexico: but in the latest maps it is laid down as a peninfula, which it really is, though it did not appear to be a certainty, till it was discovered to be fuch, by Father Caino a German Jefuit, who landed in California, and paffed into New Mexico, without croffing any other water, than Rio Azul, or Blue'river, about north latitude 35. So that this matter is now out of difpute, after having long exercised the conjectures of the learned about it.

According to the beft maps we have, California extends from 23 to 45 deg. of north latitude; that is, from the ftreight difcovered by Martin Aquilar, to Cape St Lucas; fo that it is about 800 miles from fouth to north : its K breadth.

#### An Account of the

74

Part II.

breadth is very unequal, being near 200 miles towards the northern parts, but tapers away towards the fouthern extremity, where it is hardly fifty miles over. It is bounded on the north, by an unknown continent; on the east. by New Mexico, and the gulf of California, commonly called the Vermilion fea; and on the west and south by the Pacific ocean. Though it lies for the most part within the temperate zone, yet there are great heats on the coast in the summer-time, but the inland parts are very temperate; and though the winter is pretty cold, yet it is judged to be a healthy and an agreeable country. As to the foil, the mountains are clothed with woods, and the plains plentifully watered, abounding with fruit-trees, and pro-ducing, where planted, all the kinds of grain which grow in Europe. Here are deer, of which two kinds are peculiar to the country; here are all forts of fowls and birds common either in Europe or the West Indies, with amazing quantities of fea and river fifh; and in a word, a more plentiful country cannot be wifhed for. That there are mines here, is very probable, though not certain; but it is well known, that here is one of the finest pearl-fisheries in the whole world. This country is watered with many fmall rivers, befides two pretty confiderable, viz. Rio Colorado, and Rio du Carmel. On both fides of the peninfula are many fine ports, with innumerable bays, creeks, and roads. The natives of this country have been very differently characterifed by our writers, and alfo

## Chap. III. Spanifly Settlements in America.

75

alfo by the Spaniards; but it is fafeft to rely on what Father Caino tells us concerning them, because he conversed longer with them, and more familiarly than any other perfon who has left us memoirs. He informs us, that these people, who are tolerably well made, and very ingenious, live without houses, contenting themfelves with the shade afforded them by trees in the fummer, and dwelling in caves in the winter. They are not altogether void of religion, fince they have been obferved to kneel and pray on the first appearance of the new moon; and to shew a great docility in receiving the principles of the Christian religion, which however no great pains has been taken to propagate amongst them. As to government, they are absolutely in a state of nature, every man is both a fovereign and a legiflator in his own family; which is attended with great inconveniencies, there being continual feuds amongst them, which frequently end in broils and bloodflied. The men go for the most part naked, except a fillet of fine cloth about their temples, and bracelets of pearl which are very beautifully wrought. The women are better clothed; for, befides an ornament upon their heads, they wear generally a mantle of fkins over their shoulders, a piece of cloth girt round their bodies, and chains of pearls on their necks and arms. Such as live on the eaftern fide, on the shore of the Vermilion sea, are enemies to the Spaniards, who very probably have given them caufe. But in other parts of the country, they K 2 feen

#### An Account of the

76

Part II.

fecm extremely well difpofed to entertain any ftrangers, and might, without much difficulty, be converted and civilized : but as they are very numerous, and their country of great extent, one may reafonably fuppofe, that the Spaniards have declined fending miffionaries, through fear that the pcople, when civilized, might either prove dangerous neighbours, or by cultivating their lands, invite ftrangers to fettle amongft them.

There are two things very obfervable in this country, namely, that after the rainy feafon is over, a great quantity of dew falls in the mornings, in the months of April, May, and June, which not only renders the ground exceeding prolific, but fettling upon rofe-leaves, candies, and hardens like manna, is fweet as fugar, though not fo white, and pleafant to the eye.

2. In the heart of the country are plains of falt, quite firm and clear as cryftal, which (confidering the vaft quantities of fifh of all forts that are found here) might prove of great advantage to any civilized people, who were poffeffed of the country. But the natives do not feem to make use of this falt for curing their fifh, which they generally eat raw, as they do alfo flefh and roots.

The Spaniards for a long tract of time wholly neglected this valuable peninfula, and it is but of late they had any fettlements there. At prefent they have only a village in its fouthern extremity near Cape St Lucas. The Manila fhips fometimes

## Chap. III. Spanish Settlements in America. 77

fometimes touch here in their way to Acapulco; and this, no doubt, in process of time, will become a very confiderable place, by their trading with the Indians for pearl.

There are feveral small islands on the coasts of California, both in the Pacific ocean, and in the Vermilion sea; but those which are best known, are those three lying off Cape St Lucas, towards the Mexican coast, called *Las tres Ma*rias, the three Marys; they are but small, but have good wood and water, abundance of game, and falt pits as in California. These islands were much frequented by the English and French pirates, when cruising in the South sea, and fometimes they wintered there.

Our famous admiral and navigator Sir Francis Drake landed in California, and took poffeffion of it in the year 1578, for his miftrefs Queen Elifabeth, by the name of New Albion; and he not only took poffeffion, but obtained the beft right in the world to the poffeffion, the principal king of the country having formally invefted him with the fovereignty, and prefented him with his own crown of beautiful feathers. However, we do not find, that ever the Britifh nation had any thought of afferting that right fince his time.

CHAP.

An Account of the Part II.

78

## CHAP. IV.

The extent and situation, climate and soil, &c. of Old Mexico or New Spain, its division into three audiences; with a description of the di-Ariet of Guadalajara.

This vast kingdom, which lies between the parallels of 7 deg. 30 min. and 30 deg. 30 min. north latitude, is bounded on the north-west by New Mexico, on the north-east by the gulf of Mexico, on the fouth-east by the isthmus of Darien, and on the fouth-west by the great South fea. It is upwards of 2000. miles from north-west to south-east; but its breadth is very unequal, occafioned by its ma-ny indentures by feveral bays; the broadeft part is on the frontiers of New Mexico, where it extends from the gulf of California on the west, to the borders of Louisiana on the east, about 620 miles. It gradually grows narrower, till we come to the great bay of Campeachy, where it forms a kind of ifthmus: then it fpreads from the South fea to Cape Cotoche in the province of Ycatan near 600 miles. It is again contracted by the gulf of Honduras; and east from Nicaragua it forms another ifthmus, till it reaches the frontiers of Darien, which feparates it from South America.

This was the first country the Spaniards conquered and fettled on the continent of America, and it still continues their principal fettle-

ment,

## Chap. IV. Spanish Settlements in America. 79

ment, whether we confider its number of inhabitants, its natural wealth, or extended traffic.

· Notwithstanding the great extent, and the innumerable inhabitants of this large empire, yet, it is amazing to confider how foon it was con-quered by a handful of Spaniards. Hernando Cortes, a native of Old Spain, a man of great bravery and conduct, being fent by the governor of Cuba with a finall fleet, and a few troops, in order to make discoveries on the coast of the continent, arrived at La Vera Cruz, and there having received information of the vaft wealth of the King of Mexico, the news of it fpeedily determined him to pay the Mexican monarch a visit. Accordingly Cortes set out on his journey the 16th of August 1520, only with five hundred foot, fifteen horfe, and a thousand Indians to carry their baggage. With this little army, and a fmall reinforcement he afterwards received from Cuba, Cortes foon fubdued the whole Mexican empire, which ever fince has been poffeffed and governed by the Spaniards.

As this extensive region lies for the most partwithin the torrid zone, it is extremely hot, and on the eastern coast, where the land is low, marshy, and constantly flooded in the rainy seafons; it is likewise very unwholesome; neither is the coast pleasant in any respect, being incumbered for the most part with impenetrable forests of mangrove trees, which extend into the water for a considerable way. But the inland country assures a more agreeable assert, and the the air is of a better temperament. Here the tropical fruits grow in great abundance and perfection. Here the land is generally fruitful, and would not refufe any fort of grain, if the number or industry of the inhabitants were in any measure proportioned to the luxuriancy of the foil. The land on the western fide is not fo low as on the eastern, is much better in quality, and full of plantations.

It is probable that the Spaniards, for wife ends, leave the eastern coasts of this country in its prefent state of rudeness and defolation, judging that a defert and unwholesome frontier is a better defence against a foreign enemy than fortifications and armies, to be maintained at a vast expense. In general, few countries under the fame afpect of the heavens enjoy more of the benefits of nature, and the neceffaries of life; but, like all the tropical countries, it is rather more abundant in fruits than in grain. Pine-apples, pomegranates, oranges, lemons, citrons, figs, and cacao-nuts, are produ-ced here in furprifing plenty. The number of their horned cattle is incredible; fome private perfons are faid to have upwards of 40,000 head; many run wild in the woods, and a very confiderable trade is driven in their hides and tallow. Hogs are equally numerous, and their lard is much in request all over the country, where it is used instead of butter. Although Mexico produces prodigious herds of sheep, yet their wool is but a very inconfiderable article in their trade; nor is it probable that it is of a good

80

#### Chap. IV. Spanish Settlements in America. 81

good kind, as it is fcarcely ever found useful between the tropics.

This kingdom is divided into three diffricts or governments, called *audiences*, that is, fovereign courts; which, though under the infpection of him who is appointed viceroy of Mexico by the King of Spain, decide all matters whatfoever, civil or criminal; and this is fo ordered for the conveniency of the people, who otherwife would be obliged upon all fuits to repair to the city of Mexico from the most diftant parts; whereas by this means they have fovereign courts to determine all controverfies, and direct all affairs relating to the government within reafonable diffances.

The names of these three audiences are Guadalajara, Mexico, and Guatimala; each audience is subdivided into several counties or provinces.

We fhall briefly treat of thefe three in order as they lie, from north to fouth, beginning with that of Guadalajara, which is also called the kingdom of New Galicia.

This audience, which extends from north latitude 20. to north latitude 30-is The audibounded on the north by New Me-ence of Guaxico, on the weft by the Pacific dalajara. ocean, and the gulf of California; on the fouth and east it has Panuco, and feveral provinces of Mexico. Its extension along the fea-coast from north-west to fouth-east is about 200 leagues, but its interior parts are very unequal, yet in fome places 500 miles wide.

The

## An Account of the Part II.

The climate of this diffrict differs very much, being partly within the torrid and partly within the temperate zone; however, it is reckoned wholefome, and is far more temperate than any other part of New Spain. The ground is generally mountainous and woody, but at the fame time abundantly fruitful where duly cultivated, producing Indian and European grain, alfo many valuable drugs, with very rich mines of filver, together with a very good pearl-fifhery on the coaft.

This audience is divided into feven large pro-The province vinces. The first of these on the north-west is Cinaloa, which lies next to the kingdom of New Mexico, along the shore of the Californian sea. It is about 300 miles from north-west to fouth-east, but does not exceed 120 where broadeft. Here the air is ferene and pleafant; and befides fine pastures abounding with cattle, the foil bears all forts of fruits and grain. The capital of this province is the city of St John, at a small distance from the coast, on a small river that runs into the gulf of California. This city is about 300 leagues north-west from the capital of New Spain: the Spaniards have no other towns of note here, but fome forts of the Indians, which they have repaired to keep them in fubjection.

2. To the east of the last-mentioned pro-New Bifcay. vince lies that of New Bifcay, which has no communication with the fea. However, the inhabitants of it are very rich, not

#### Chap. IV. Spanish Settlements in America. 83

not only in corn, cattle, and other commodities, but also in filver. There are very rich mines in the neighbourhood of St John of Bifcay, its capital; befides which there are two other confiderable towns, called St Barbara and Ende.

2. To the fouthward of New Bifcay lies that of Zacatecas, fo called from its an-Zacatecas. cient inhabitants. This is alfo an inland province, but is well peopled, and abounds with large boroughs : it is about 100 leagues in length, and forty-five in breadth. The western parts of it are barren as to foil, but rich in mines; however, the eaftern parts are very fertile in fruits and corn.

The capital of the fame name lies almost under the tropic, about forty leagues north from Guadalajara, and eighty from Mexico. A little to the north of Zacatecas stands the town of Nombre-de-dios, which is both large and populous. Durango, about ten leagues to the north-west of Nombre-de-dios, is a bishop's fee, feated at the conflux of feveral rivers, which makes it a very convenient fituation for trade.

4. The next maritime province to the fouth of Cinaloa is Culiacan, about fixty Culiacan, leagues in length, and fifty in breadth; it abounds with all kinds of delicious fruits, and is watered with many fine rivers, whofe banks are extremely fertile, and the province in general is clofely inhabited.

5. The province of Chiametlan lies under the tropic, one half of it being in Chiametlan. L 2

the

Part II.

the torrid zone, and the other half in the temperate. On the weft it is washed by the Pacific ocean, and is about thirty-feven leagues in length, and as much in breadth. This province is bleffed with a rich foil; besides corn and fruits, it yields great quantities of honey, wax, and filver. The chief town is St Sebastrian, situated on a river of the same name, the inhabitants of which carry on a considerable trade.

6. The most fouthern province on the coast

Xalifeo. is that of Xalifeo, which is wafhed by the South fea on the fouth and weft, and is about fifty leagues either way. Though Xalifeo, an ancient city, is the capital, yet that which is the moft confiderable in the province is Compostella, near the South fea, about thirty leagues to the north of the former. This is a very flourishing town, and has many rich mines in its neighbourhood, particularly at St Pecaque, where the Spaniards keep great numbers of flaves to work them. The town of St Pecaque was plundered by the bucaneers in 1656, when they carried off a rich booty.

7. Guadalajara Proper, which is the principal Guadalajara province, and gives name to the Proper. whole audience, is bounded on the east and fouth by the province of Mechoacan, on the north by that of Xalisco, and a corner of it is washed by the South sea on the west. This province is very temperate, exceeding fruitful, producing not only good timber, but European and Indian wheat, with plenty of fruits; besides, vast Chap. IV. Spanish Settlements in America. 85

vast treasures of filver are taken out of the mines.

Its capital of the fame name, (which is the head of the whole audience, the feat of the royal courts of juffice, and a bifhop's fee of confiderable revenue), is a large, populous, and elegant city, ftanding very pleafantly on the banks of the river Baraja, proceeding from the lake of Mechoacan, from whence it goes with a rapid ftream to the north-weft. The lake of Chapala, which is faid to be forty leagues in compafs, lies on the fouth fide of this city.

There is another province still to be taken notice of, called *New Leon*, which our best maps place betwixt New

Bifcay and the gulf of Mexico; but all the account we find of it is in Martiniere. He calls it a kingdom, and bounds it on the north by the Rio-del-Norte, which falls into the gulf above mentioned; on the fouth by the province of Panuco, and on the weft by New Bifcay; but fays, it has no towns, nor any confiderable fettlement, yet has many mountains, in which are many rich mines.

It must be owned, that this is but a very short and dry description of so large and populous a country; yet this may be the more easily excused, when it is confidered, that very few of our writers fay any thing of it at all, and even the Spanish writers treat it very superficially, because, as they report, it is a part of their dominions which has but very little trade, though we we have reason to believe that their filence proceeds from wifer motives.

The ground of thefe precautions is not only the filver mines which have been already mentioned, but alfo fome of gold, lately found in the neighbourhood of Compostella, of very great value, the ore of which they transport by mules to Mexico, not chusing to expose fo valuable a commerce to be intercepted by foreigners, which might often happen, if they ventured to fend it in small vessels by fea.

The Spaniards are not very numerous throughout this whole audience, except in the two great cities of Guadalajara and Compostella. The Mestizoes, however, make a confiderable figure in point of number and eftate; but the bulk of the people are the natives, who are, generally fpeaking, well treated here, becaufe they are not of a temper to be used otherwise; and the effects are answerable to so good a cause, fince they are vifibly braver and politer than any of their countrymen, and are faid to be well affected to the Spaniards, chiefly through the inftigation of their priefts, for whom they have a great efteem. Not only the natives, but the Spaniards live here to great ages; and as they drain the marishes, and thin the woods, it is observed the climate grows daily better, infomuch that many remove hither from other parts of the Mexican empire.

CHAP.

Chap. V. Spanish Settlements in America.

#### CHAP. V.

Of the audience of Mexico. A description of its several provinces and principal towns, &c.

This audience, which is the nobleft part of the Spanish dominions in New Spain, has the South sea on the west and south-west; on the south-east side it joins the provinces of Chiapa and Soconusco in the government of Guatimala. It lies for the most part under the torrid zone, between 17 and 23 deg. of north latitude, and its greatest length from north to fouth is 200 leagues. This country is rich in all forts of desirable commodities, gold, filver, and precious stones not excepted. But in order to have a just notion of it, it will be necessary to confider it a little more particularly, and at the same time we shall do it with all possible brevity.

This audience is alfo divided into feven provinces, viz. 1. Panuco. 2. Tlafcala. 3. Mechoacan. 4. Mexico Proper. 5. Guaxaca. 6. Tabafco. 7. Ycatan.

6. Tabaíco. 7. Ycatan. 1. Panuco is fituated between the province of New Leon and Tlaícala. This The province province is both extensive and fine- of Panuco. ly fituated; it was one of the first discoveries of the famous Cortes, who took a great deal of pains to conquer and plant it, though the country be rather fruitful and pleafant than rich. Its inhabitants made a flout refisfance, and were

87

not eafily fubdued; however, by the building of feveral cities and forts, they have been fince thoroughly fubjected, which is perhaps one reafon why fo many of them retired into Florida, rather than remain flaves in their native country. On this account we find that this province is but thinly inhabited, and little notice taken of it by feveral authors, notwithftanding its having an extensive fea-coast along the Mexican gulf, with feveral roads and creeks, though no great ports.

Its capital hath the fame name with the province, as alfo hath the river upon which it ftands, and is navigable for large fhips a confiderable diftance above the city; but the harbour has fo large a bar before it, that no fhips of burden can enter it, which has proved of bad confequence to the commerce of the place.

The city of Panuco, which is a bifhop's fee, lies in north latitude 23 deg. 5 min. at the diftance of about twenty leagues from the fea, containing near 500 families; the houfes are neat and well built of ftone, and thatched with palmetto leaves.

2. Tlafcala is bounded on the north by part

Tlafcala. of the laft-mentioned province, on the eaft by the gulf of Mexico, on the fouth-weft by the Pacific ocean, and on the weft by Mexico Proper. So that it has the advantage of lying both on the north and fouth feas; being above 100 leagues from the one to the other, and about eighty where broadeft, which is along the Mexican gulf. As it is perhaps

# Chap. V. Spanifs Settlements in America.

.89

haps the best feated, fo it is, beyond question, the most populous country in all America; which is, owing to many causes. In the first place we may observe, that the Tlascalans never were conquered; but as they were originally the allies of Cortes, fo, by his recommendation', they have ever fince been confidered in that light by the Spaniards, which is perhaps the only true point of policy they have purfued. By this means the villages and towns fwarm with Indians, who are quite different people from their neighbours: for whereas the latter are grown fenfeless and stupid through the long continuance of flavery and oppression, these have all the fire and spirit that is natural to a free people; they speak the Spanish tongue, and fcarce any other, being perfectly reconciled to the Spanish customs, and grateful for the countenance and refpect shewed them. It is really furprifing that the Spaniards, having fuch an instance before their eyes, do not treat the Indians in general better, which would, no doubt, be attended with equal advantages.

This province was anciently a monarchy, till civil wars arifing among the inhabitants, they formed themfelves into an ariftocracy of many princes, in order to get ride of one. They divided their towns into different diffricts, each of which nominated one of their chiefs to refide in the court of Tlafcala, where they formed a fenate, whofe refolutions were a law to the whole. Under this form of government, they maintained themfelves a long time againft the M kings An Account of the Part II.

kings of Mexico, and continued in it, till their reception of the Spaniards among them.

There are many large and rich towns in this province; the chief of which are,

1. Tlascala, anciently the capital of the pro-The town of vince, now no more than an Indian town, which ftands very pleafantly Tlafcala. on the banks of a river running into the South fea; but is mostly inhabited by Indians, who are generally very rich, being free from all taxes and duties. Gage fays, that, in his time, there were no lefs than twenty towns and villages fubject to this city. Heylin fays, that when the Spaniards first arrived here, it contained 1 50,000 families; and Acosta, that it had a marketplace big enough to hold 30,000 buyers and fellers. But Gemelli, who was there in the year 1698, fays, it was then become an ordinary village, with a parish-church, in which is hung the picture of the ship that brought Cortes to Vera Cruz.

2. The prefent capital of the province, and Puebla de los much the fineft place in it, is Pue-Angelos. bla de los Angelos, *i. e.* the city of Angels. It even vies for beauty and magnificence with the city of Mexico; and the wealth of the place, or rather of the clergy, may be gueffed at from the yearly revenue of the cathedral, which amounts to 300,000 pieces of eight. It flands in a delightful plain, fifteen leagues fouth from Tlafcala, on the road from Vera Cruz to Mexico, 130 miles from the former, and 60 from the latter. The buildings are

90

# Chap. V. Spanish Settlements in America. 91

are for the most part of stone; the streets, which are regular, crofs each other, eaft, weft, north, and fouth, meeting in the centre, where they form a great fquare, which fome have thought to be finer than that of Mexico. It is adorned on three fides with uniform porticoes, where are rich shops of all forts of commodities, and chefts full of pieces of eight, piled one upon another to the very ceilings. On the other fide is a stately cathedral, which has a most beautiful front, and two high towers built all of stone. The houses are computed at about fixteen or feventeen hundred, and the families about 2000. Here vast numbers of merchants refide, who repair to La Vera Cruz, when the flota arrives, and then return after the fair is

over, with the European goods they purchafe. 3. The city of La Vera Cruz, which is the great port of New Spain on the La Vera Cruz. north fea, ftands alfo in this province, and very well deferves a particular defcription, which shall be given, when we come to treat of the trade of Mexico to Europe by that famous port.

3. Mechoacan lies to the fouth of Guadalajara, having the Pacific ocean on the Mechoacan, weft, and Mexico Proper on the eaft.

This province is of very confiderable extent, the climate is fo remarkably good, that people of weak constitutions retire thither from other parts of Mexico to recover their health. The foil is wonderfully fertile, producing all forts of grain;  $M_{2}$ 

Part II.

grain; here are many lakes, rivers, and rivulets of clear brackifh water, which are of great ufe; for though the meadows through which they pafs produce a rank kind of grafs, yet it is never found to prejudice their cattle, but like other falt marfhes makes them extraordinary fat and fine. They have alfo a numerous breed of fine horfes, fit both for the faddle and draught. No place in the world is better furnifhed with fruit and timber trees. Here are mines of filver, and fome of gold and copper; among its numerous productions are the cacao, or chocolate nut, the root mechoacan, feveral odoriferous gums, and balfams, farfaparilla, ambergris, vanillas, caffia,  $\mathfrak{Sc}$ .

At the time Cortes fubdued the kingdom of Mexico, Mechoacan was an independent king- 1 dom, and its fovereign of fuch power as to be formidable to the Mexicans, to whom he was an inveterate enemy; but was fo much intimidated, when he heard of the deftruction of that empire by the Spaniards, that he fubmitted of his own accord, fo that Cortes gained this province by his reputation only. The natives being now incorporated with the Spaniards, learn all kinds of trades, and are particularly curious . in making cabinets, and weaving filk. But the number of the Indians is very much diminished, not fo much through any feverity of the Spaniards, as by their introducing of luxury among them, which was unknown in former times: for these people being of a weaker conftitution than Europeans, are lefs able to fupport

#### Chap. V. Spanish Settlements in America.

port exceffes, to which however they are naturally too much inclined.

93

At prefent the cities in this province are numerous; but the principal of them is that of Mechoacan, which ftands very pleafantly on the banks of a large river, and not far from a confiderable lake of the fame. name, about 120 miles weft of Mexico. It is a large populous place, having a fine cathedral, and many elegant houfes belonging to the Spaniards, who are owners of the filver mines of Guanaxato, diftant about twenty-feven leagues to the north; about fifteen leagues farther north, there are other mines, ftill richer than the former. The Spaniards carry on the greatest part of the trade of this province by land, having no good ports to do it by fea.

4. Mexico Proper has on the north the province of Panuco, Mechoacan on the weft, the Pacific ocean on the fouth, and Tlafcala on the eaft.

This is not only the moft confiderable, but alfo the fineft province in the whole empire. The climate is indeed variable; however, Europeans of found conftitutions agree that it is both pleafant and temperate. The foil is extremely fruitful; and though the Mexicans are as luxurious in their tempers, and have as much money wherewith to indulge their luxury, as any other people in the world, yet all the neceffaries of life are furprifingly cheap, which is a pregnant proof of the great plenty that abounds there. As to the commodities of this province, province, they are much the fame with those of Mechoacan and Tlascala, only the mines here afford a much greater quantity of filver, and this filver fometimes contains a confiderable quantity of gold. The royal city of Mexico is the capital of this province, of the audience, and of all New Spain; which, with the famous port of Acapulco, will be afterwards defcribed, when treating of the trade of Mexico to the East Indies, by the faid port.

5. The next province is that of Guaxaca,

Guaxaca. which reaches from the bay of Me-

xico to the South fea, having the province of Tlafcala on the north-weft, and those of Chiapa and Tabasco on the fouth-east. It extends about ninety-five leagues along the South south fea, fifty along the Mexican bay, and 120 along the confines of Tlascala: but not above fifty along those of Chiapa and Tabasco.

The air here is tolerably good, and the foil fertile, efpecially in mulberry-trees, on which account it produces more filk than any province in America. If we except the charming valley of Guaxaca, the reft of the province is generally mountainous, abounding with wheat, cattle, fugar, cotton, honey, cacao, plantains, and other fruits. Here are rich mines of gold, filver, and lead, and all its rivers have gold in their fands. It abounds alfo in caffia, cocheneal, cryftal, and copper ; fo that if the people in this province were induftrious, they might be the richeft in the Weft Indies : but they are fo much

# Chap. V. Spanish Settlements in America. 95

much accustomed to indolence and lazines, that the Indians purchase provisions by the gold which their women pick up in the lands of the rivers.

The vinello, a drug, ufed as a perfume to give chocolate a flavour, is the produce of Guaxaca; it grows indeed in divers parts of New Spain, but no where fo plentifully as in this province. This vinello is a little pod full of black finall feeds; it is four or five inches long, and when dried, refembles the ftem of a tobacco leaf. It grows on a fine fort of vine, which climbs and clafps about trees; the flower is yellow, which turns to a pod. It is firft green, but when ripe turns yellow; then the Indians, who manufacture and fell it to the Spaniards at a very eafy rate, gather it, and expofe it to the fun, which renders it foft, and it changes into a chefnut colour. The principal ufe of this perfume is to give a flavour to chocolate, and fometimes tobacco, in both which it is extremely agreeable.

This province was formerly reckoned to contain 150 confiderable towns, befides 300 villages, but at prefent it is faid to be thinly inhabited.

The city of Guaxaca is the capital of the province, beautifully fitnated in the valley of the fame name. This delightful valley is forty miles in length, and twenty in breadth; the city contains feveral thoufand families, which are partly Spaniards and partly Indians; it is the fee of a bifhop, and the refidence of a governor. It lies

Part II

lies about 230 miles fouth of Mexico, and 132 from Vera Cruz; it is much frequented by ftrangers, being on the road leading through Chiapa to Guatimala. The inhabitants of this city carry on a brifk trade both by the North and South feas. The river on which the city ftands is not fortified, fo that fmall veffels might eafily fail up and fubdue the country. The beft chocolate in America is made here by the nuns, and exported from thence to Spain. In this fertile valley are vaft numbers of fine horfes, with great herds of black cattle and fheep, which furnifh the clothiers of Los Angelos with wool, and Spain with hides. Befides this city of Guaxaca, which ftands in north latitude 18 deg. 2 min. there are many more in this extensive valley, which are faid to be both rich and magnificent.

6. East from Guaxaca lies the province of

Tabafco. Tabafco, firetched along the gulf of Mexico, and of very inconfiderable extent. As it is a narow flip by the fea-fhore, neither its foil nor its climate are much to be boafted of, the one being far from wholefome, and the other not over fruitful. Our logwood cutters were wont to frequent this coaft much, and procured great advantages to themfelves by trading with the Spaniards, who are very glad of any fupplies of European commodities, having no ports of their own, and lying at a confiderable diftance from La Vera Cruz. There are no mines here, which is one reafon perhaps why it is fomewhat neglected; yet the people have

96

## Chap. V. Spanish Settlements in America. 97

have good farms, well flocked with cattle, which yield them confiderable profit; and, befides, they have great plenty of cacao, which they fend leaden on mules to Vera Cruz. The only town of note is in the eaftern corner of the province, and is called by the Spaniards Noftra Sennora de la Vittoria, Our lady of victory.

7. The last province in the audience of Mexico is that of Ycatan, or Jucatan. Jucatan. It is a peninfula, furrounded on the north and on the west by the gulf of Mexico, on the east by the gulf of Honduras, on the fouth by part of the audience of Guatimala, and the province of Tabasco. It extends from north latitude 17. to 21. 30. and from 91 to 95 deg. of west longitude.

This is in all respects a most noble country, and as fuch defervedly commended by Herrera, and all the Spanish writers. The climate is pretty warm in the fummer, which begins in the month of April, and ends in that of September. The winter-feason is indifferently cool, excepting the months of January and February, which are almost as hot as in the midst of fummer; yet on the whole the country is wholesome, especially a sort of mountainous tract which runs acrofs it from west to east, and where the natives live to a great age. The fouth fide of this ridge is but thinly peopled, and very indifferently cultivated, as they have little water; but the northern parts are very populous, being rendered pleafant by the refreshing fea-breezes, though the fun is very hot. The "

The foil, where duly cultivated, produces plenty of corn, cotton, and indigo; but its principal commodity is logwood, for which the bay of Campeachy is defervedly famous: but as no mines have been discovered in this country, the Spaniards are not fond of making fettlements here, which, without doubt, is one great caufe of its abounding fo much with Indians. Thefe however live in fubmiffive obedience to the Spaniards. In the bay of Campeachy they are made use of in making falt, which is a very laborious employment, the poor creatures being forced to endure all extremities of weather, without either house or hut to protect them; they likewife keep their cattle, and do every other fervile office, though unwillingly; for when an opportunity offers, they are fure to run away into the woods, or elfe take shelter in some uninhabited island. This peninfula has very. few rivers, but plenty of wells; and where-

few rivers, but plenty of wells; and wherefoever they dig up the land, abundance of fhells are found, which, with the lownefs of the country, and the fhallownefs of the fea about it, has induced many to think that the greatest part of it has once been under water.

There are in this province feveral little towns, but four only of any confiderable bignefs.

The first of these is Mereda the capital, which

Mereda. is the feat of a governor, and the fee of a bishop. It stands near the north fide of the peninfula, about twelve leagues from the fea.

2. South-

Part II.

#### Chap. V. Spanish Settlements in America. 99

2. South-east from Mereda lies Valladolid, at no great diftance from the bay of Honduras. It is a fair town, and pleafantly fituated, but withal very little known to ftrangers.

3. In the ifthmus, or neck of land, which joins this peninfula to the continent Salamanca. of New Spain, ftands the town of Salamanca, fmall indeed, but well built, and at prefent in a very thriving condition.

4. But the most remarkable place in this province is the town of Campeachy, Campeachy. or, as it is called by the Spaniards, San Francisco de Campechy. It is a fair town ftanding on the shore in a small bending of the land, and is the only town on all this coaft, even from Cape Cotoche to La Vera Cruz, that stands open to the sea. It makes a fine show, being built all with good stone. There is a ftrong citadel or fort at one end, mounted with many guns, where the governor refides, with a finall garrifon to defend it. Though this fort commands the town and harbour, yet it has been twice taken; first by Sir Christopher Mims, in the year 1659, who took it by ftorm, only with fmall arms. In the year 1678 it was again taken by the English and French bucaneers; but fince has remained pretty quiet.

N 2

CHAP.

Part II.

# C H A P. VI.

# The audience of Guatimala. A short account of its provinces and principal towns, &c.

His is the laft audience in the kingdom of New Spain, and is little interior to that of Mexico laft defcribed, both in fruitfulnefs of foil, and rich mines, and is as capable of improvement as any part in the Spanish empire of America.

It is bounded on the north by the audience of Mexico, and the bay of Honduras; on the eaft by the North fea, and the ifthmus of Darien; and on the fouth and weft by the Pacific ocean: fo that it enjoys as advantageous a fituation for trade as could be wifhed. It is computed to be 300 leagues in length upon the South fea, but of an unequal breadth, occafioned by fo many large bays both on the North and South feas, fo that in fome places it is no more than thirty leagues, and where broadeft does not exceed 150.

It is divided into eight provinces, of which we shall give a very brief account.

1. The first province we shall mention is

Chiapa. that of Chiapa, of a triangular form, and fo fituated, that though it come very near the fea, yet no part of it reaches it. It lies between Tlafcala and Jucatan, having the provinces of Vera Paz and Soconufco on the fouth. The middle part of it lies fixty

#### Chap. VI. Spanifs Settlements in America. 101:

fixty leagues from either of the feas; which renders the air cool and dry, but at the fame time very healthy. The foil is diversified, and generally fruitful, especially in corn and timber, with abundance of pears, apples, and quinces; cochineal grows wild, and there is likewife plenty of cacao and cotton : but that which is the peculiar glory of this province, is its breed of horfes, which 'are thought the very beft in all New Spain. Heretofore there was a great deal of gold found in this province, but for the want of Indians, and from the difcovery of richer mines in other places, this is now come to nothing. In the hilly part, near the middle of Chiapa, there is fuch a variety of vaft and venomous ferpents that few will venture to travel in those parts.

There are two remarkable cities in this province, both of its own name. The Chiapa of first is, for distinction's fake, called the Indians. Chiapa de los Indos, Chiapa of the Indians, because it is inhabited by the natives of the country, who are beyond exception the wittiest, wifeft, and most civilized people in all the Spanish dominions; of which, if we had no other proof, this might feem fufficient, that, by a fpecial grant from the King of Spain, the citizens have the privilege of chuing their own magiftrates. The other city is called Cividad Real. Cividad Real, the Royal city, inhabited by Spaniards. It is a bishop's fee, and reputed both rich and pleafant. .

2. The province of Soconucco lies next to that

that of Chiapa, extending along the coaft of the Soconusco. South seas for the space of thirty-five

leagues. The air here is far from being agreeable; ftorms are frequent, and the rainy feafon continues long and troublefome; the foil too is none of the beft, and produces little corn, but this is in fome meafure compenfated by the vaft abundance of cacao. This province is moftly in the hands of the natives, who are faid to be a proud, quarrelfome, and malicious fet of people. The only place of confequence here is the town of Guevitlan, which ftands on the fhore of the South fea; a few Spaniards are fettled here, though they will fcarce venture themfelves in any other part of the province.

3. To the eaft of the last-mentioned pro-Guatimala vince lies that of Guatimala Proper, Proper. which extends along the coast of the South sea upwards of 100 leagues; having on the north the two provinces of Vera Paz and Honduras.

It feldom rains here, but when it does, it falls very plentifully, and often continues for feveral days. Some places here are accounted as pleafant and healthy as any in New Spain, but in general the climate is not good. The foil however is excellent and fruitful beyond comparison, especially in corn and delicious fruits. Cotton is one of its staple commodities, as also honey and wax. The pastures are fo large and fine, that it is almost impossible to form

# Chap. VI. Spanish Settlements in America. 103

form an idea of the vaft numbers of cattle which are fed in them.

The ancient city of Guatimala, (which was one of the fineft in New Spain), was entirely deftroyed in the year 1541, by a hurricane, whereby 120,000 Spaniards loft their lives. The day before this tragical scene happened, some Indians acquainted the bishop, that they heard a prodigious noife under the burning mountain feated above the city, which information he treated with contempt. At midnight, however, a terrible noife was heard as if in the bowels of the earth, and immediately a mighty torrent of water iffued out of the mountain, which carried all before it, while a dreadful earthquake heightened the horror of the scene, and hindered any of the miferable inhabitants from making their escape.

The new city of Guatimala, which is not only the capital of this province, but alfo of the audience, a place where the prefident and the royal courts refide, the feat of a rich bifhop, and the centre of commerce in thefe parts, ftands in a fine plain, at a good diftance from the vulcano, which was fatal to the old city; however, it is far from being altogether out of danger from earthquakes, which are ftill frequent in those parts. This city is both neatly built and well inhabited, the citizens carrying on a great trade, not only through all the provinces of Mexico, but even into Peru, whereby fome become extraordinary rich, who then generally leave the place, and go to refide at Mexico.

The

104 . An Account of the Part II.

The chief commodities in which they deal, are hides, indigo, anatta, cochineal, cacao, cotton,  $\mathfrak{C}c.$ ; and indeed no city can be more conveniently fituated for an extensive commerce than this. It ftands about eight leagues from the South sea, and forty from the gulf of Mexico, by which the inhabitants carry on a great trade, having several ports and bays on both feas.

4. The province of Vera Paz lies between Vera Paz. Guatimala and the gulf of Honduras; on the north it has that gulf and the province of Chiapa, and on the east the province of Honduras. It is but of fmall extent, and in figure a kind of oval; in length forty-eight leagues, and in breadth twentyeight.

As to the climate, Spanish writers affirm, that one half of the province is very pleasant and wholesome, whereas the other is extremely hot and the air noxious. The foil is none of the best, the country being very rough and mountainous, producing little corn, but plenty of cedar-trees, drugs, and physical gums, &c.

This province had its name from the following accident: Being brought under the obedience of the Spaniards by the preaching of certain monks, hence it was called *Vera Paz*, that is to fay, the land of true peace.

The capital of this province is the city of Vera Paz, a bishop's fee, rather neatly than elegantly built. All the rivers here run into the Gulfo Dulce, which at length forms a lake, and then

# Chap. VI. Spanish Settlements in America. 104

then runs into the bay of Honduras, having a little port at its mouth, where there are many fifting-veffels.

5. The province of Honduras is the largeft in the audience, lying from weft to east along the bay of the fame name, above 100 leagues in length, and near eighty in breadth. It is bounded on the north by the bay of the fame name, on the weft by Vera Paz, on the fouth by the provinces of Nicaragua and Guatimala.

The air in general is pretty agreeable, and the foil where duly cultivated extremely fertile, abounding both with European and Indian corn; its paftures are rich and fine, and confequently maintains vaft herds of cattle. The rivers in this province moftly overflow at certain feafons like the Nile, and contribute thereby to the richnefs of the foil. Its principal commodities are cotton, wax, hides, Vigonia wool, logwood, befides gold and filver.

The principal city here is that of Valladolid, which ftands at a great diftance from the fea, not far from the confines of the province of Guatimala. It is now the fee of a bifhop, which was removed from Truxillo in 1558. Befides this there is the aforefaid port of Truxillo.

Towards the western extremity of the province there is another port, called *Porto-Ca*vallo. The town is small, but famous for being the port of the city of Guatimala, to and from which all commodities are carried, by a road

cut

C.

cut immediately through the rocks, on horfeback. The town is but thinly inhabited, except occafionally when a register-ship arrives from Europe, when there is a fort of fair held here; but of late this rarely happens.

6. Nicaragua is the next province, which Nicaragua. lies both on the North and South feas. The air here is reckoned the beft and cleareft in the whole kingdom of Merxico, and the foil is remarkably good. It abounds with corn, fruits, and fugar; as alfowith very fine timber, wax, cordage, tar, &c.

The inhabitants carry on a confiderable trade to Panama, and Nombre-de-dios. This province is fo pleafant, as well as fruitful, that it may be juftly called the garden of America; the hills and rivers are full of gold, the trees and woods perfumed; fo that when the Spaniards firft fettled in it, they called it *Mahomet's paradife*. What adds much to its beauty, is the noble lake of the fame name, which is near 130 leagues in circumference; it comes within twenty miles of the South fea, and iffues into the North fea by a canal, at the mouth of which is the port of St John. This lake abounds with fifh, which are fo much the better on account of its having a flux and reflux, like the fea.

The Spaniards employ themfelves generally either in commerce or farming, for both which no country can be more happily fituated. Its native commodities are of great value, particularly cacao, of which though they have not the

# Chap. VI. Spanish Settlements in America. 107

the greatest plenty, yet the cacáo of Nicaragua is the largest and finest in the world.

The city of Leon is the capital of the province; it ftands on the banks of the The city of lake formerly mentioned, about thir-

ty miles east from the South sea. It is situated in a fine plain, surrounded with meadows; the houses are not high, but strong and large, with gardens about them. The inhabitants are rich and numerous, having plenty of fish and sless at a easy rates. In the year 1685, it was taken and plundered by the bucaneers, who burnt it to the ground, but is fince rebuilt and fortified.

Its port on the fouth is called *Rialexa*, which is a very good one, capable of receiving 200 veffels. Here the King of Spain's fhips for the South feas were formerly built. The town ftands on a plain by a fmall river, and ferves not only for carrying on the trade of Leon, but alfo of Guatimala. Here are noble warehoufes near the fea, and many factors refide therein; but the town is but thinly peopled, on account of the bad air, and alfo having fuffered fo much by the defcents of the bucaneers.

On the fouth fide of the lake, about fixty leagues from Leon, stands the city Granada. of Granada; this town is more populous and better built than Leon, and is defended by a castle; the inhabitants trade both to the North and South feas. It is very much frequented, as the merchants of Guatimala dispatch their goods from hence to Carthagena, O 2 thinking

thinking it fafer to fend them this way, than by the gulf of Honduras. The country betwixt this city and Leon is very fruitful and pleafant, and produces great quantities of fugar, where the Spaniards have mills for making it.

7. The next province to the east is called Costa-Rica, Costa-Rica, the rich coast. It lies upon both feas, and yet the communication betwixt them is much obstructed by the roughness of the country, and by a long chain of mountains which run across it from east to weft. Its climate is far from being good; and its foil is still worse, being mountainous, woody, and barren, yet in fome places the foil is good : but gold and filver, which the Spaniards value most, are found here in great plenty; the mines of Tinsigal are so rich, that they are preferred by the Spaniards to those of Potosi in Peru.

The capital of this province is Carthago, or Carthage, fituated in the heart of the country, about ten leagues from the North, and seventeen from the South fea, having the port of Nicoya on the latter, and that of St John on the North fea. Mr Gage fays, that in his time there were rich merchants here, who traded by land to Porto-Bello, Carthagena, Panama, and other places; that it had a Spanish governor, and was a bishop's see.

8. The last province in the audience of Gua-

timala is that of Veragua, of no Veragua. great extent, but excellent in its fituation. It lies on both feas, which bound it on

## Chap. VI. Spanish Settlements in America. 109

on north and fouth; on the weft it has the laftmentioned province; on the caft, part of Terra Firma, and the government of Panama.

The country is very mountainous and woody, affording very little either of arable or pafture lands. But then it abounds in what the Spaniards regard much more than even the neceflaries of life, that is, inexhaustible mines of gold and filver, of which there are more in this little province, than in any of all New Spain, which is chiefly got out of their rivers, especially after hard rains and storms.

La Conception is the capital of the province, feated near the end of a bay that runs into the North fea, forty-eight miles north from Santa Fe. It is both a large and rich city, where the governor and other of the King's officers refide.

In the heart of the country is the town of Santa Fe, feated at the head of a river, which runs into the North fea; here the King of Spain keeps officers for cafting and refining the gold.

Having now finished our short description of the feveral provinces of New Spain, we shall next proceed to give an account of the gold and filver mines, which make the glory of this country; the manner of purifying those metals, and of the quantities produced in the Spanish West Indies. After that we shall speak of those comdities which are produced here of most importance in foreign commerce, such as cochineal, indigo, cacao, of which chocolate is made, logwood, &c. We shall also give an account of

Part II.

of the trade of Mexico, both with Europe and the East Indies.

#### C H A P. VII.

The gold and filver mines. The manner of purifying those metals; and of the quantity of them produced in the Spanish West Indies.

T is certain that most of the provinces of New Spain produce mines either of gold or filver. The kingdom of New Mexico also produces confiderable quantities of these metals, and of late they have difcovered feveral mines there of great value; the ore of which they transport by land to the city of Mexico. It is however allowed, that the chief mines of gold are found in the provinces of Veragua, and New Granada confining upon Darien and Terra Firma. Those of filver are both rich and numerous; few provinces either in New Spain or New Mexico wanting fome of it, either in larger or lesser quantities, but in none fo much as in that of Mexico Proper. All the mines, whether of gold or filver, are generally found in the mountainous and most barren parts of the country; nature often making amends one way for her failures in another.

Gold is either found in the fands of rivers, native, and in fmall grains, or is dug out of the earth in the fame condition in fmall bits, almost wholly metallic, and of a tolerable purity; or it is found like the ore of other metals, in an aggregate

#### Chap. VII. Spanish Settlements in America. 111

aggregate opaque mass, in a mixture of earth, ftone, fulphur, and other metals. In this ftate it is of all colours, red, white, blackish, and making little or no oftentation of the riches it contains. Sometimes it forms part of the ornament of fome beautiful stones, which are of various lively colours, interfected with filaments of this metal. But gold, however found, whether native, or in what is called the ore, is feldom or never without a mixture of other metals, generally filver or copper.

The gold mines, though they contain the richest of all metals, yet often disappoint the hopes and ruin the fortunes of those who engage in them, though neither the labouring of the mine, nor the purifying the metal, is attended with fuch an expense, as what those are obliged to, who work mines of inferior metal. For the vein is, of all others, the most unequal, fometimes very large, full, and rich, then it often decays by a quick gradation, and is fometimes fuddenly loft. But the ends of the veins are, on the other hand, often extremely rich; they are called the neft or purfe of the vein; and when the miner is fo happy as to fall upon one of these purses, his fortune is made all at once.

When the ore is dug out, the moft ufual method is to break it to pieces in a mill, in this manner: A millftone is fet on end, and made to turn in a circular channel of ftone; and the ore being laid in this channel, the turning of the millftone bruifes it fmall. When the ore is thus broke.

broke, and the gold fomewhat feparated from the impure mass, they add to the whole a quantity of quickfilver. Quickfilver has, of all other bodies, the greatest attraction with gold, which therefore immediately breaks the links which held it to the former earth, and clings close to this congenial fubstance. Next, a rapid ftream of water is let into the channel, which fcouring, through a hole made for the purpofe, the lighter earth, by the brifknefs of its current, leaves the gold and mercury, precipitated by its weight, at the bottom. This paste is put into a linen cloth, and fqueezed, fo as to make the quickfilver feparate and run out. To complete this feparation, it is necessary to fuse the metal, and then all the mercury evaporates and flies off in fumes.

But in many parts of Spanish America another way of getting and purifying gold is practifed. When by fure tokens they know that gold lies in the bed of a rivulet, they turn the current into the inward angles, which time and the stream have formed ; whilst this runs, they dig and turn up the earth to make it the more eafily diffolved and carried off. When the furface is thus completely washed away, and they are come to a fort of stiff earth, which is the receptacle of gold, they return the ftream into its former channel, and dig up the earth as they find it, which they carry to a little balin, fomewhat in the form of a fmith's bellows. Into this they turn a small, but a brisk stream, to carry off the useless matter, whilft they facilitate

Part II.

# Chap. VII. Spanish Settlements in America. 113

tate the operation by ftirring the mass with an iron hook, which diffolves the earth, and gathers up the fiones, which are carefully thrown out, that they may not interrupt the paffages that carry off the earth. By this means the gold loofened from the groß matter which adhered to it, falls to the bottom, but mixed fo clofely with a black heavy fand, that none of the gold can be perceived, unlefs it happens to be a pretty large grain. To separate it from this fand, it is put into a wooden platter; this they fill with water, and turning the mass about quickly with their hands for fome time, the fand paffes over the edges, and leaves the gold in fmall grains, pure, and of its genuine colour, in the hollow at the bottom. Thus gold is re-fined without fire or mercury, merely by washing. The places where this is performed are called therefore Lavadores by the Spaniards.

Silver is the metal next in rank, but first in confequence in the Spanish traffic, as their mines yield a much greater quantity of the latter than of the former. It is found under the earth in different forms, as indeed the ore of all metal is. Such is the diversity of ores in this refpect, that nothing but a long experience in this particular branch can exactly afcertain the fpecies of the metal, which almost any ore contains at first view. Sometimes filver almost pure twins itfelf about a white stone, penetrating into the vacuities in the fame manner that the roots of trees enter into the rocks, and twift themselves about them. Some are of an ash-co-P loured

loured appearance, others fpotted, of a red and blue, fome of changeable colours, and many almost black; but it is feldom or never found in grains or fand, native, as gold is.

The manner of refining filver does not differ effentially from the process which is employed for gold. They are both purified upon the fame principle; by clearing as much of the earth as poffible with water; by uniting or amalgamating it with mercury; and afterwards by clearing off the mercury itfelf, by ftraining and evaporation. But the management of filver in this respect is much more difficult than that of gold. Becaufe this metal is more clofely united to foreign matters with which it is found in the mine, and its attraction with mercury is much weaker; therefore there is great care taken in uniting of them, and it is a long time before they are perfectly mixed. But no filver is had by mere washing, without mercury.

Of the plenty of gold and filver which the mines of Mexico afford, great things have been faid, and with juffice, as this, with the other Spanish colonies in America, in a manner furnish the whole world with filver, and bear a great proportion in gold to the whole of what the world produces. An ingenious author fays, that the revenues of Mexico can hardly fall short of twenty-four millions Sterling. He founds this affertion upon a return made by the bishops of their tenths, which without doubt were not over-rated, and that these amounted to one million and a half; that these are about

114

Part II.

2

#### Chap. VIII. Spanish Settlements in America. 115

a fourth of the revenues of the clergy, which, at that rate, amount to fix millions; and that the effates of the clergy are about the fourth part of the whole revenues of the kingdom, which, at that rate, amount to twenty-four millions Britifh money in whole. He takes another method of computing the wealth of this great empire, which is by the fifth paid to the King of the gold and filver dug out of their mines. This, he obferves, in the year 1730 amounted to one million of marks in filver, each mark equivalent to eight ounces; fo that if we compute this filver at five fhillings *per* ounce, then the inhabitants receive from their mines yearly ten millions in money.

What a prodigious idea muft this calculation give us of the united product of all the American mines? For the quantities of gold and filver produced in New Spain and New Mexico, are far inferior to the immenfe quantities of those metals produced in South America, of which the reader will be informed when treating of that country.

# C H A P. 'VIII.

## Of cochineal, cacao, and filk.

Ochineal, the next commodity for value which they export, is ufed in dying all the feveral kinds of the finess fearlet, crimson, and purple. After much dispute about the nature of this curious drug, it feems at last agreed, P 2 that

Part II.

that it is of the animal kind, an infect of the fpecies of the gall infects. This animal is found adhering to various plants, but there is only one which communicates to it the qualities which make it valuable in medicine and manufactures. This plant is called *opuntia* by the botanifts; it confifts wholly of thick fueculent leaves joined end to end, and fpreading out in the fides in various ramifications. The flower is large, and the fruit in fhape refembling a fig; this fruit is full of a crimfon juice, and to this juice it is that the cochineal infect owes its colour.

When the rainy feafon comes on, they who cultivate this plant cut off those heads which abound most with such infects as are not yet at their full growth, and preferve them very carefully from the weather and all other injuries. These branches, though separated from their parent ftocks, preferve their freshness and juices a long time; and this enables the infect not only to outlive the rains, but to grow to full fize, and be in readinefs to bring forth its young as foon as the inclemency of the feafon is over, When this time approaches, they are brought out and placed upon the proper plants, difpofed in little nefts of some mofily substance. As son as they feel the enlivening influence of the fresh air, they bring forth in three or four days from their exposure at farthest. The young, fearce bigger than a mite, run about with wonderful celerity, and the whole plantation is immediately peopled; yet what is very remarkable, this animal, fo lively in its infancy, quickly lofes all its

116

# Chap. VIII. Spanish Settlements in America. 117

its activity, and attaching itfelf to fome of the leaft exposed and most fucculent part of the leaf, it clings there for life, without ever moving, not wounding the leaf for its fustenance, but fucking with a proboscis, with which nature hath furnished it.

What is not lefs remarkable than the life of ? this animal, is the nature of the male, which has no appearance of belonging to the fame fpecies; far from being fixed to a fpot, he has wings, and is, like the butterfly, continually in motion: they are fmaller than the cochineal, and conftantly feen among them, and walking over them, without being fufpected, by thofe who take care of the infect, of being a creature of the fame kind, though they believe that the cochineals are impregnated by them. But it is the female cochineal only which is gathered for ufe.

They make four gatherings a-year, which are fo many generations of this animal. When they are fufficiently careful, they brufh off the infects one by one with a fort of hair pencils, and take them as they fall; but they often brufh the whole plant in a carelefs manner, fo that fragments of it are mixed with the cochineals, and themfelves mixed, the old and young together, which careleffnefs abates much of the value. But what chiefly makes the goodnefs of this commodity, is the manner of killing and drying the cochineals, which is performed three ways: I. By dipping the bafket in which they are gathered into boiling water, and afterwards drying

ing them in the fun; this the Spaniards call renegrida. 2. The fecond method is by drying them in ovens made for the purpofe; this is called *jafpeade*. 3. The third manner is, when the Indians dry them on their cakes of maize, which are baked on flat flones; this laft is the worft kind, as it is generally overbaked, and fomething burned; they call it negra.

This drug has a very uncommon good quality, and the more extraordinary as it belongs to the animal kingdom, and to the most perishable of that kind, yet it never decays. : Without any other than having been put by in a box, fome of them have been known to keep fixty years, fome even upwards of 100 years, and as fit for the purposes of medicine or manufacture as ever they were: It is used in medicine as a cordial and fudorific, in which intentions few things anfwer better. And indeed as it anfwers fuch good purpofes in medicine, is fo effential in trade, and produced only in this country, it may be confidered in all markets as equivalent to gold or filver, by the certainty and quickness of the fale. It is computed they annually export no less than 900,000 pound weight of this ufeful commodity.

The cocao, or cacao, of which chocolate is made, is likewife a confiderable article in the commerce of New Spain. It grows upon a tree of a middling fize; the wood is fpungy and porous, the bark finooth, and of a cinnamon colour; the flower grows in bunches between the ftalk and the wood, of the form of rofes, but

but fmall, and without any fcent. The fruit is a fort of pod, which contains the cacao, much about the fize and fhape of a cucumber. Within these is a pulp of a most refreshing acid taste, which fills up the interffices between the nuts before they are ripe; but when they fully ripen, these nuts are packed up wonderfully close, and in a most regular and elegant order. They have a pretty tough shell, and within this is the oily rich substance, of which chocolate is made. This fruit grows differently from our European fruits, which always hang upon the fmall branches; but this grows along the great ones, principally at the joints. This cacao is a very tender tree, equally impatient of the wind, heat, or cold, and will flourish only in the shade; for which reafon, in the cacao-walks, they always plant a palm-tree for each one of cacao. This tree is not confined to Mexico only, but grows in many places within the tropics, and in fome of the provinces of Terra Firma it flourishes in the greatest plenty and perfection. Their foreign and domeftic commerce in this article is immenfe, and the profits fo great, that a small garden of the cacaos is faid to produce 20,000 crowns a-year. At home it makes the principal part of their diet, and is found wholefome, nutritious, and fuitable to the climate. They likewife export vaft quantities of it, not only to Europe, but through most parts of America. It is neceffary to obferve, that this valuable fruit is often confounded with the cocoa-nut, which is a fpecies wholly different.

In

# 120 An Account of the Part II.

In fome of the provinces of New Spain, as we formerly obferved, they raife filk, but in no great quantities, though no climate under the fun is better adapted for producing this ufeful commodity. The foil too is capable of producing great quantities of fugar, indigo, and tobacco; but the Spaniards are generally fo lazy and unactive, and depend fo much on their mines of gold and filver, that they greatly neglect the cultivation of thefe, and many other valuable commodities.

# C H A P. IX.

Of the manner of cutting the logwood in the bays of Campeachy and Honduras, and of the right the British nation have to that trade.

Pormerly we cut logwood in the bay of Campeachy, which is fituated in the fouthweft fide of the peninfula of Jucatan, and continued to do fo for a long tract of time, without much interruption, till the year 1722, when the Spaniards put an effectual ftop to this lucrative trade. They fitted out five ftout frigates, who took or burnt twelve Englifh fhips belonging to our North-American colonies, deftroyed all the logwood they had cut, and put the cutters to the fword; they alfo built forts, and made fettlements there to prevent the Englifh from returning.

Being thus expelled from Campeachy, the logwood cutters fettled upon the gulf of Honduras,

duras, on the fouth-east fide of the fame peninfula, where they are in fome fort established, and have a fort to protect them.

Thefe logwood-cutters are a very odd kind of people, composed mostly of vagabonds and fugitives from different parts of North America, and their way of life is faid to be fuitable. They live in a lawlefs manner, though they elect one amongst them whom they call their king, and to him they pay as much obedience as they think proper. The country they poffefs is very low and extremely marfhy; the inhabitants are terribly molefted with muskettoes, and the waters dangerous by reason of vast numbers of alligators; however, a life of licentiousnefs, plenty of brandy and other liquors, large gains, and a want of thought, have perfectly reconciled them to the hardships of their employment, and the unwholefomenefs of the climate. They go always well armed, and in number are about fifteen hundred.

In the dry feafon, when they cut the logwood, they penetrate a confiderable way into the country, following the logwood, which runs amongft the other trees in the foreft like the vein of a mineral in the earth. When the rains have overflowed the most of the country, they have marks by which they know where the logwood is deposited. This wood being weighty, finks into the water; however, it is easily buoyed up, one diver being able to lift very large beams, which they carry by favour of the landfloods into the river, to a place which they call Q Barcaderas,

Barcaderas, or Port, where they meet the ships that come upon this trade. The failors also bring down quantities of it in the night-time in flat-bottomed boats for the purpose, and put it on board in the day-time.

In the 1716, when the debate concerning our right to this branch of commerce was revived, the Lords of Trade reported, " That be-" fore the year 1676 we had a number of. " people fettled, and carrying on this trade on the peninfula of Jucatan; that we always " confidered this as our right, and were fup-" ported in it by our kings; and that this right was confirmed (if it had wanted any confir-mation) by a clause of *Uti possibility* in the treaty of peace which was concluded with " Spain and the court of London in 1676; and " that we were in full possession of those fettle-" ments, and that trade, long before the time " of that treaty. Upon the whole, they con- . " cluded, that it was an affair well worth " the attention of the government, as in fome " years it employed near 6000 tons of ship-" ping, found employment for a number of " feamen proportionable, confumed a good deal " of our manufactures, and was of confiderable " use in fabricating many others; and that the " whole value of returns were not lefs than " 60,000 pounds Sterling yearly."

The Spaniards of late have greatly interrupted us in this trade, and committed many cruel ravages upon our logwood-cutters; however, as we are now engaged in a war with that nation,

122

it

Part II

it is expected, that our right to these places, and to that trade, will be ascertained, either by force or treaty.

The logwood-trade is generally carried on by veffels from New England, New York, and Penfylvania, who take up the goods they want in Jamaica.

#### C H A P. X.

The trade of Mexico. An account of that city, as alfo of the town and port of Acapulco. The trade of Mexico by that port to and from the East Indies; with a short account of the discovery and settlement of the Philippine islands.

THE trade of Mexico may be confidered as confifting of three great branches, by which it communicates with the whole world, viz. The trade with Europe by La Vera Cruz; the trade with the East Indies by Acapulco; and the commerce of the South sease by the fame port.

Mexico the capital of the kingdom, the refidence of the viceroy, the feat of the first audience, or chamber of justice, and an archbishopric, is certainly one of the richest and most splendid cities, not only in America, but in the whole world. This famous city is feated at the foot of a chain of mountains, in the midst of a great lake, called from hence the lake of Mexico. In point of regularity, it is the best built city perhaps

Q 2

in •

Part II.

in the univerfe, the ftreets being fo ftraight, and fo exactly difpofed, that from any part thereof the whole is vifible. There are five entrances into it, over as many caufeys. All the buildings are convenient, fome of them very magnificent, though not lofty, efpecially the cathedral, churches, monafteries, and nunneries; of the former there are twenty-nine, and of the latter twenty-two. We may form an idea of the riches of thefe, from the revenue of the cathedral, which amounts to at leaft 70,000 pounds yearly, out of which, the archbifhop receives annually 15,000 pounds, befides prodigious fums that accrue to him by way of perquifites.

The city is faid to be upward of fix miles in circumference, and to contain 100,000 inhabitants, But what is remarkable, it has neither gates, walls, nor artillery, and is in fuch a weak pofture of defence, that four or five thoufand good troops properly conducted might eafily make themfelves mafters of it. It is furprifing that the Spaniards fuffer it to continue in fuch a defencelefs flate, confidering that it is not much above 100 miles from the eaftern flore, and confequently within five or fix days march, the road from La Vera Cruz to Mexico being exceeding good.

But though Mexico be not a fea-port town, nor communicating with the fea by any navigable river, yet it has a prodigious commerce, and is itfelf the centre of all that is carried on between America and Europe on the one hand, and between America and the Eaft Indies on the other :

124

other : for here the principal merchants refide, the greatest part of business is transacted; and the goods that pass from Acapulco to La Vera Cruz, or from La Vera Cruz to Acapulco, for the use of the Philippines, and in great measure for Peru and Lima, all pass through this city, and employ an incredible number of horses and mules in the carriage. The most valuable commodities of the East and West Indies, together with those of Europe, are daily exposed to fale in their markets. Hither all the gold and filver come to be coined ; here the King's fifth is depofited; and here is wrought all that immenfe quantity of utenfils and ornaments in plate which are fent every year into Europe, Every thing here has the greatest air of magnificence and wealth; the fhops glitter upon all fides, with the exposure of gold, filver, and jewels, and furprife yet more to fee the treafures which fill great chefts, piled up to the ceilings, whilft they wait the time of being fent into Old Spain by the flota. It is faid that the negro wenches, who run by the coaches of the ladies here, wear bracelets of gold, pearl necklaces, and jewels in their ears; whilft the black foot-boys are all over covered with lace and embroidery. Notwithstanding the wealth and grandeur of this place,' the military ftrength of it is incredibly low; the viceroy has not about his perfon above four or five hundred men, which is perhaps owing to the jealoufy of the government at home: but at the fame time it must be owned. there would be a great rifk run in putting arms into into the hands of fuch an unruly people as the bulk of the inhabitants really are, who, on the flighteft grievances, threaten their viceroys to burn them in their palaces, or to tear them in pieces if they flir out, and who have feveral times fhown an inclination to be as good as their words.

The port nearest to this city upon the South

fea is Acapulco, from which it is Acapulco. distant about 200 miles. It is allowed to be an excellent harbour, far fuperior to any on the coast, and is fo fafe and spacious that feveral hundred ships may ride in it, without the hazard of damaging one another. The mouth of the harbour is defended by a low island, about a mile and a half long, and half a mile broad, leaving a wide and deep channel at each end. They must enter with the fea-wind, and go out with a land-wind; but thefe feldom or never fail to fucceed each other in their proper feason day and night. The westermost channel is the narrowest, but fo deep, that there is no anchoring, and the Manila ships pass into the harbour that way, but those from Lima enter through the fouth-west channel.

The town of Acapulco ftands on the northweft fide of the harbour clofe by the fea, and at the end of the town is a platform mounted with guns. Opposite to the town on the eaft fide, ftands a high ftrong caftle, faid to have forty guns upon it of a very great fize. Ships commonly ride near the bottom of the harbour, under the command both of the caftle and platform.

126

The

The commerce of this place with Peru is not, as many have miftaken, confined only to one annual fhip from Lima; for at all other feafons of the year, except that when the Acapulco fhips arrive, the trade is open, and fhips from Peru come here frequently to fell their own commodities, and carry back those of Mexico.

But as the great importance of Acapulco is chiefly owing to its trade with the Philippines, we fhall therefore first give a brief account of the discovery and settlement of these islands, and then speak of the trade carried on betwixt them.

The celebrated circumavigator Frederick Magellan, who was an officer in the King of Portugal's fervice, having received fome difguft from that court, either by the defalcation of his pay, or that his parts, as he conceived, were too cheaply confidered, entered into the fervice of the King of Spain, and being a man of great ab lity, was defirous of fignalifing his talents by fome enterprife, which might vex his former masters, and teach them to estimate his worth by the greatness of the mischief he did them; this being the most natural and obvious principle of all fugitives, and more especially of those, who being really men of capacity, have quitted their country by reafon of the fmall account that has been made of them. Magellan, in purfuance of these vindictive views, and knowing that the Portuguese confidered the possession of their fpice-iflands as the most important acquifitions in the East Indies, refolved to inftigate

gate the court of Spain to an enterprife, which, by still purfuing their discoveries, would entitle them to interfere both in the property and commerce of these renowned Portuguese settlements; and the King of Spain approving this project, Magellan, in 1519, fet fail from the port of Seville, in order to execute his defigns. He had with him a confiderable force, confifting of five ships, with 234 men, with which he stood for the coast of South America; and ranging along the fhore, he, at last, towards the end of October 1520, had the good fortune to difcover these streights, now called from him the streights of Magellan, which opened him a paffage into the Pacific ocean. And this first part of his scheme being thus happily accomplished, he, after a short stay on the coast of Peru, fet fail again to the westward, with a view of falling in with the fpice-iflands. In this extensive run, he first discovered the La-

The Ladrone iflands difcovered. the largeft, is forty miles long and twelve broad; here the Spaniards at prefent have a fort and a fmall garrifon of thirty or forty men, and here the fhips from Acapulco to Manila ftop to take in provisions. These islands were full of inhabitants when the Spaniards discovered them, and are faid to be vaftly fruitful, and the climate extremely agreeable. Commodore Anfon, in his voyage round the world, landed upon Tinian one of these islands in the year 1742, and ftaid

upon

upon it for a confiderable time, till he refreshed his fickly crew. This island is twelve miles in length and fix in breadth, lying in 15 deg. 8 min. north latitude, and 114 deg. 50 min. west from Acapulco. But to return : From these islands, Magellan continued his course, till he arrived at the Philippines, which are the most eastern part of all Asia; and there venturing too rashly on the stream of the manner, he was flain in a stream of the Indians.

By the death of the brave Magellan the original project of fecuring fome of the fpice-iflands was defeated ; for those who were left in command after him, contented themfelves with ranging through them, and purchasing some spices from the natives; after which they returned home by the cape of Good Hope, being the first fhips which ever had failed round the world, and thereby demonstrated the reality of its being of a fpherical figure. But though Spain did not hereby acquire the property of any of the fpiceislands, yet the discovery made in this expedition of the Philippine islands was thought too confiderable to be neglected ; for these were not far from them, being well fituated for the Chinefe trade, and for the commerce of other parts of India; and therefore a communication was foon established and carefully supported between those islands and the Spanish colonies on the coaft of Peru; fo that the city Manila, which was built on the island of Luconia, the chief of the Philippines, foon became the mart of all Indian R

Part II.

Indian commodities which were bought up by the inhabitants, and were annually fent to America, to be there vended on their account; and the return of this commerce to Manila being chiefly made in filver, the place by degrees became extremely opulent and confiderable, while its trade fo far increafed as to engage the attention of the court of Spain, and to be frequently controlled and regulated by royal edicts.

In the infancy of this trade it was carried on from the port of Callao in Peru to the city Manila, in which voyage the trade-winds continually favoured them; fo that, notwithstanding these places were distant between three and four thousand leagues, the voyage was often made in little more than two months : but then the return from Manila was extremely troublefome and tedious, and is faid fometimes to have taken them up above twelve months, which, if they pretended, to ply, up within the limits of the trade-wind, it is not at all to be wondered at; and it is certain, that in their first voyages they were fo imprudent or unskilful as to attempt this courfe. However, that route was foon laid afide by the advice of a Jefuit, who perfuaded them to fteer to the northward, till they got clear of the trade-wind, and then, by the favour of the westerly winds, which generally prevail in high latitudes, to ftretch away to the coaft of California. This has been the practice for at least 160 years past; for Sir Thomas Cavendish, in 1586, engaged off the fouth end of California a veffel bound from Manila to the

130

the American coaft. And it was in compliance with this new plan of navigation, and to fhorten the run both backwards and forwards, that the ftaple of this commerce was removed from Callao, on the coaft of Peru, to Acapulco, on the coaft of Mexico, where it continues fixed at this time.

Such was the commencement, and fuch were the early regulations of this commerce; but its prefent condition being a more interefting fubject, we beg leave to be indulged in a more particular narration, beginning with a defcription of the iflands, particularly that of Luconia, and the port and bay of Manila.

The Philippine islands, though first discovered in 1521, yet no attempt was made to subdue and settle them till 1564, when they were both conquered and planted, and were so called in honour of Philip II. then King of Spain, and are at prefent in a most flourishing condition.

They are computed to be 1200 in number, and extend from north latitude 6 to near 20 deg. and from east longitude 114 to 126, of which five or fix hundred are pretty confiderable. They are about 400 leagues from the Ladrones, and 120 fouth-east of China.

The chief of these islands is Luconia, or Manila, which, though situated in Luconia. north latitude 15 deg. yet is esteemed to be in general extremely healthy, and the water found there is faid to be as good as any on the globe. It produces all the fruits of the warm countries, and the Spaniards have intro-

duced

R 2

Part II.

duced feveral American fruits, fuch as the cacao, and many others, which profper well. It a-bounds in a most excellent breed of horses, sup-posed to be carried thither originally from Spain. In the woods are plenty of all kinds of wild beasts, particularly buffaloes, which the Spaniards kill for their hides. The orange and lemon trees yield twice a-year; and an author who was there, affirms, that he never faw fuch a verdant foil, and fuch plenty of every thing neceffary for life. However, these happy islands are not without their inconveniencies; for, be-fides many noxious creatures and poifonous herbs, they are very fubject to dreadful earth-quakes. This ifland is very well fituated for the Indian and Chinese trade: the bay and port of Manila, which lie on its western fide, are perhaps the most remarkable in the whole world; the bay being a large circular bafin near ten leagues in diameter, and great part of it entirely land-locked. On the east fide of this bay ftands the city of Manila, which is very large and populous, and which, at the beginning of the last Spanish war in 1739; was only an open place, its principal defence being a fmall fort, which was, in a great measure, furrounded on every fide by houses ; but they have lately. made confiderable additions to its fortifications: The pert belonging to the city is called Cabite, which lies near two leagues to the fouthward; and in this port all the fhips employed in the Acapulco trade are ufually stationed.

The city of Manila is in a very healthy fituation,

tion, is well watered, and in the neighbourhood of a very fruitful and pleafant country: but as the principal bufinefs of, this place is its trade to Acapulco, it lies under fome difadvantage, from the difficulty there is in getting to fea to the eaftward; for the paffage is among iflands, and through channels, where the Spaniards fpend much time, and are often in danger; however, they have free accefs to China and the neighbouring iflands, not being obliged to ply to the eaftward.

The trade carried on from this place to China, and different parts of India, is principally for fuch commodities as are intended to fupply the kingdoms of Mexico and Peru, which confifts in fpices; from Ceylon they purchase cinnamon; from Sumatra and Java, pepper; from the Molucca and Banda isles, cloves; from Borneo, camphire; from China, all forts of filk manufactures, particularly filk flockings, of which, it is faid, no lefs than 50,000 pairs are shipped aboard the annual ships, besides vast quantities of Indian stuffs, callicoes, chintz, which are much worn in America, together with other minuter articles, as goldsmith's work, &c. which is principally done at the city of Manila by the Chinefe, there being fettled, as fervants, manufacturers, or brokers, at least 20,000 of that nation.

All these different commodities are collected at Manila, thence to be transported annually to the port of Acapulco. But this trade to Acapulco is not laid open to all the inhabitants of Manila,

Manila, but is confined to very particular regulations, fomewhat analagous to those by which the trade of the register-ships from Cadiz to the West Indies is restrained. The ships employed herein are found by the King of Spain, who pays the officers and failors; and their profits are so large, that in one voyage they are capable of making easy fortunes. The tonnage is divided into a certain number of bales, all of the fame fize; these are distributed among the convents of Manila, but principally to the Jesuits, as a donation for the support of their mission for the propagation of the Catholic faith. Those convents have hereby a right to embark fuch a quantity of goods on board the Manila ships'as the tonnage of their bales amounts to; or, if they chufe not to be concerned in trade themfelves, they have the power of felling the privilege to others; and as the merchants to whom they grant their thares are often unprovided with a stock, it is usual for the convents to lend them confiderable fums of money on bottomry.

The trade is, by the royal edicts, limited to a certain value, which the annual charges ought not to exceed. Some Spanish manufcripts mention this limitation to be 600,000 dollars; but doubtless the charge far exceeds that fum; and the return is reckoned not far short of three millions of dollars.

It is abundantly obvious, that the greatest part of the treasure returned from Acapulco to Manila does not remain in that place, but is again

Part II.

again difperfed into different parts of India. As all European nations have generally efteemed it good policy to keep their American fettlements in an immediate dependence on their mothercountry, without permitting them to carry on directly any gainful traffic with other powers; these confiderations have occasioned many remonstrances to be prefented to the court of Spain against the Indian trade, allowed to the kingdoms of Peru and Mexico, it having been urged, that the filk manufactures of Valencia, and other parts of Spain, are hereby greatly prejudiced, and the linens carried from Cadiz are much injured in their fale, fince the Chinefe filks, coming almost directly to Acapulco, can be afforded much cheaper there than any European manufacture of equal goodness; and the cottons from the Coromandel coaft make the Europeans linens of little value; fo that the Manila trade renders both Mexico and Peru lefs dependent upon Spain for a fupply of their neceffities than they ought to be, and exhaufts these countries of confiderable quantities of filver, the greatest part of which, were this trade prohibited, would centre in Spain, either in payment for Spanish commodities, or in gains to the Spanish merchants; whereas now the only advantage arifing from it is enriching the Jesuits, and a few particular perfons befides, at the other extremity of the world. These arguments fo far influenced Don Joseph Patinho, who was then prime minister of state, but no friend to the Jesuits, that about 1725-he had resolved to abolifh

135-

abolish this trade, and to have permitted no Indian commodities to be introduced into any of the Spanish ports in the West Indies, but what were carried thither in the register-ships from Europe; but the powerful intrigues of the Jesuits prevented this regulation from taking place.

This trade from Manila to Acapulco, and back again, is ufually carried on in one, or at most in two annual ships, which set fail from Manila about July, and arrive at Acapulco in December, January, or February following; and having there disposed of their effects, return for Manila fome time in March, where they generally arrive in June; fo that the whole voyage takes up very near an entire year. For this reafon, though there is often no more than one fhip employed at a time, yet there is one always ready for the fea when the other arrives; and therefore the commerce at Manila are provided with three or four flout ships, that, in cafe of any accident, the trade may not be fufpended. The largest of these ships is little less than one of our first-rate men of war, and has at least 1000 men on board. Their other ships, though far inferior in wealth to this, are yet, ftout large veffels, of 1200 tons burden, and generally carry between five, and fix hundred hands, passengers included, with fifty guns. As thefe are all King's ships, commissioned and paid by him, one of the captains is usually styled the General, who carries the royal standard of Spain at the maintop-gallant-maft head.

Thefe

Part II.

136.

These ships having received their cargo on board, and fitted for fea, generally weigh from Cabite about the middle of July, taking the advantage of the western monfoon, which then fets in, to carry them to fea. As the voyage is ufually fix months, the ships deeply laden with goods, and crouded with people, it may appear wonderful how they can well be fupplied with a ftock of water for fo long a time; and indeed their method is fingular; they have no other recourse but to the goodness of heaven for this fupply. They meet with the rains between the latitude of 30° and 40° north, and to fave it, fpread mats floping against the gunwale of the ship, the lower edges of which mats rest on a large split bamboe, into which the water drains, and by this is conveyed into jars, as by a trough; for in the South feas the Spaniards use jars, and not cafks. These jars are not only stowed thick between decks, but hung in the shrouds and stays, fo as to exhibit at a distance a very odd appearance. This manner of fupply, cafual as it feems, is never known to fail them; fo that it is common, when their voyage is a little longer than ufual, to fill all their water-jars a fecond time. This voyage being of much longer continuance than any other navigation, occafions an inveterate fcurvy among the crew; and one caufe of the duration of this voyage is the ignorance as well as the indolence, with the unnecefiary caution of the Spanish failors, and concern for fo rich a prize; for they feldom or never fet the main-fail in the night, and often

S

lie

137

Part II.

lie to unneceffarily; fo that they are more apprehenfive of too ftrong a gale, though favourable, than for the fickness and mortality ever attending fo long a voyage, which might be con-tracted by altering their courfe, and steering at first north-east and by north, into the latitude of 40 or 45 deg. in part of which course they would be greatly affisted by the trade-winds, and also meet in the higher latitudes with steadier and brifker wefterly winds than in 30 deg. of latitude. Nor is this a matter of fpeculation; for a French ship, in 1721, by purfuing this course, ran from the coast of China to that of Mexico in forty-nine days. To proceed : The Manila ship having stood fo far to the northward as to meet a wefterly wind, ftretches away nearly in the fame latitude of 30 deg. for the coaft of California; and when the has run into the longitude of 96 deg. from Cape Espiritu Sancto, they meet with a plant floating in the fea, which the Spaniards call porra, being a fpecies of fea-leek. On the fight of this they confider themfelves fufficiently near the Californian shore, and immediately stand to the southward; and after reaching Cape St Lucas on that coaft, they proceed next to Cape Corientes, after which they coast along for the port of Acapulco.

The moft usual time for the arrival of the galleon at Acapulco is towards the middle of January; but this navigation is fo uncertain, that the fometimes gets in a month fooner, and at other times has been detained at fea longer.

When

When the galleon arrives in port, fhe is moored on its western fide, and her cargo is delivered with all expedition. And now the town of Acapulco, from almost a folitude, is immediately thronged with merchants from all parts of New Spain. About the fame time the annual ship from Lima arrives, laden with the richest commodities of Peru, and at least two millions of pieces of eight; thefe are laid out in the purchase of Indian commodities at the fair of this town, which lafts fometimes thirty days, and at which fuch as come from the East Indies furnish themselves with all forts of European goods, brought hither over land from the port of La Vera Cruz. When the fair is over, the goods belonging to the Mexican merchants are transported over land by mules to Mexico, and other places; those which are defigned for Peru, are laden not only in the annual ship, but many others. Heretofore the Lima ship was of very inconfiderable force, but of late they never employ any fhips in this trade carrying lefs than forty guns, and fhe alfo is allowed a tender, sometimes two.

The cargo of the Manila fhip being thus difpofed upon, they immediately make preparation for her return; and having received her loading on board, which confifts chiefly in filver, cochineal, fweetmeats, together with European millinery ware for the women at Manila, and fome Spanish wines, fuch as tent, sherry,  $\mathfrak{C}c$ . The forthwith leaves the port of Acapulco, and fteers for the latitude of 13° or 14°, and runs on S 2 that that parallel till fhe gets fight of Guam, where fhe ftays fome time, and then proceeds to the port of Cabite, which is the port of the city of Manila, and the conftant ftation of all the fhips employed in this commerce to Acapulco. The galleon in her return to Manila being not fo deep laden, and having a fair wind the whole way, performs her voyage in twelve or thirteen weeks, and fometimes lefs. Upon her arrival there, all expedition is ufed, in order to make her ready for her return to Acapulco.

This commerce to fo vaft a value, though carried on directly between the King of Spain's own dominions, enriches them in proportion but very little; the far greater part of every thing that comes from the Philippines, being the produce or fabric of other countries.

The town of Acapulco being furrounded on each fide with high mountains renders the place very unhealthy; from the end of November to the end of May, they have no rain, and it is fo hot in January, when the fair begins, that the merchants are obliged to transfact all the business they can in the mornings. So that when the fair is over the town is almost deferted, and few continue in it, but blacks and mulattoes: and it mostly continues in this folitary condition, till the return of the next fair.

CHAP.

# C H A P. XI,

Of the town and port of La Vera Cruz, the trade betwixt it and Europe. The flota, &c.

A Vera Cruz is not only the beft, but the only port the Spaniards have of confequence in all New Spain on the North feas.

When Cortes landed on this coaft, in order to undertake the conquest of Mexico, he founded the city of Old Vera Cruz, which he fo named, becaufe he landed there on Good Friday in 1518, but fince that time great alterations have happened, and this city is partly decayed, and partly deftroyed. In the first place, the port was found to be bad, the air about the city unwholefome; it also proved to be very weak and defenceless. At about fixteen miles diftance a very ftrong and fafe, though not capacious port was discovered, capable of being protected by a fort built upon a triangular rock, which fort, when erected, was called St John de Ulua. By degrees the Spaniards erected a town in the neighbourhood of this fort, which in procefs of time drained the old town, and was thence called New Vera Cruz. It is fituated in north latitude 19 deg. 16 min. about 120 miles from the city of Mexico. The town is not very confiderable either in point of fize, or the magnificence of its buildings : for on the one fide being exposed to vast clouds of dry fand, and on the other to the exhalations of very rank bogs

bogs and marshes, it is fo very unwholefome, that fcarce any Spaniards of note refide there constantly. It always was, and is at prefent a place of very little strength, as appears by its having been taken and plundered by fome French and Dutch bucaneers in the year 1683, and the apprehensions its inhabitants are in on the appearance of any strange strength for the strength of the strengt of the strength of the strength of t

In point of trade however it is one of the moft confiderable places not only in the New, but perhaps in the whole world. From this port it is that the great wealth of Mexico is poured out upon the old world; and it is from it alone, that they receive the numberlefs luxuries and neceffaries that the old world yields them in return. To this port the annual fleet from Cadiz, called *the flota*, arrives about the latter end of November, after a paffage of nine weeks.

This fleet, which fails from Cadiz, only con-The flota. fifts of three men of war as a convoy, and fixteen large merchantthips, from 500 to 1000 tuns burden. They are loaded almost with every fort of goods which Europe produces for export; particularly all forts of woollens, linens, filks, velvets, laces, glass, paper, cutlery, all forts of wrought iron, watches, clocks, quickfilver, horfe-furniture, shoes, stockings, books, pictures, military stores, wines, and fruits, Sc. So that all the trading parts of Europe are greatly interested in the cargo of this fleet. Spain itfelf fends

out little more than the wine and fruit. This,

142

Part II.

with

with the freight and commiffions to the merchant, and the duty to the King, is almost all the advantage which that kingdom derives from her commerce with the Indies. It is ftrictly prohibited to load any commodities on board this fleet without entering the goods, the value, and the owner's name, in the India houfe at Seville; and when they return, they must bring a certificate from the proper officer there, that the goods were duly landed, and in the proper port. They are not permitted to break bulk upon any account until they arrive at La Vera Cruz; nor are they fuffered to take in any other than Spanish passengers, nor them without a licence first obtained at the India house.

This fleet fails generally from Cadiz in the month of September, that, by favour of the winds which reign about November, they may the more eafily purfue their voyage to La Vera Cruz. In their paffage they call at Porto-Rico, to take in water and fresh provisions, then pass in fight of Hispaniola, Jamaica, and Cuba; and according to the featon of the year, and nature of the winds, pass either by the coast of Jucatan, or higher through the gulf, to La Vera Cruz, which lies at the bottom of it. The run of this fleet, according to the courfe we have mentioned, has been thus computed. From Cadiz to the Canaries, 250 leagues in ten days; from thence to the Antilles, 800 leagues in twenty days; to the most westerly part of Cuba, 500 leagues in twenty days; from thence to La Vera Cruz, 260

260 leagues in about twelve days; in all 1810 leagues in fixty-two days.

Part II)

As the flota is defigned to furnish not only New Spain but the Philippines also with European goods, they are obliged to stay a confiderable time at Vera Cruz, and generally winter in that port.

On the arrival of this fleet, the merchants from all parts of New Spain repair to this place; and there is held a great fair, which lafts for a confiderable time, till the whole of the goods be difpofed of; during the time of the fair, the afpect of this city is quite changed, for at other times it is comparatively deferted, on account of its difagreeable climate, but, during this period, it is one of the most populous places in the whole world.

When all the goods are landed, and difpofed of at La Vera Cruz, the fleet takes in her return for Old Spain, which are the plate, precious ftones, cochineal, indigo, cacao, tobacco, fugar, hides, and fome East-India goods brought by the Manila galleon, and carried over land from Acapulco to this place. After taking in water and other neceffaries, they make ready to depart, which fometimes happens in May, but more frequently in August. From La Vera Cruz they fail to the Havannah in the isle of Cuba, which is the place of rendezvous where they meet the galleons; another fleet which carries on all the trade of Terra Firma by Carthagena, and of Peru by Panama and Porto-Bello, in the fame manner that the flota ferves for

144

for that of New Spain. When they arrive at this port, and join the galleons and the registerships that collect at the same port from all quarters, fome of the cleanest and best failing of their veffels are difpatched to Spain, with advice of the contents of these several fleets, as well as with the treasure and goods of their own, that the court may judge what duty is proper to be laid on them, and what convoy is neceffary for their fafety. These ships are call ed by the Spaniards, with propriety enough, the flotilla, or little fleet. The flota and the reft of the fleet generally make fome ftay at the Havannah, before all the ships that compose them are collected and ready to fail. As foon as this happens, they quit the Havannah, and beat through the gulf of Florida, and paffing between the Bahama islands, they hold their courfe to the north-east, until they come to the height of St Augustine; and then steer away to Old Spain.

When the flota has left La Vera Cruz, it has no longer the appearance of a place of confequence, being a town in a very unhealthy fituation, inhabited fcarcely by any but Indians, meztezes, or negroes. All the merchants of any consequence reside at some distance, particularly at the city of Los Angelos, a place little inferior to Mexico itfelf for beauty and riches. The whole of the inhabitants of Vera Cruz, including flaves, Indians, and mulattoes, are computed to amount to about 3000, and the compass of the city is about half a Spanish league.  $\mathbf{T}$

Part II.

# C H A P. XII.

# Observations on the Spanish America trade. The register-ships and guarda-costas.

Ealoufy is the glaring character of the court J of Spain, in whatever regards their American empire ; and they often facrifice the profperity to an exceffive regard to the fecurity of their possefions. They attend in this trade principally to two objects; viz. first, the exclusion of all strangers from any share in it; 2dly, the keeping up the market for such goods as they fend; and they think both these ends best anfivered by fending out only one annual fleet, and that from only one port in Spain, and to one port only in New Spain. These views, which would be impolitic in any nation in Europe befides, are judicious enough in Spain; becaufe the goods they fend belonging mostly to strangers, and the profits upon the fale in the Indies being the only thing that really accrues to themfelves, it is certainly right to confult primarily how they shall get the greatest returns upon the smallest quantity of goods. It would be quite otherwife, if all, or most of what they fend abroad, were their own produce or manufacture. They are undoubtedly right too in keeping the trade very carefully to themfelves, though perhaps the means taken to attain that end, will not be thought fo rational. By fuffering all the trade to be carried on only between two

two ports, they difcourage in the old world all their other fea-port towns from that emulation, which would not only enable them to traffic in foreign commodities, but in time to fet up fabrics of their own ; whereas now, with regard . to the export of their commodities, they stand upon the level of strangers : they cannot carry their produce directly to the best market; and it is very certain, that even trifling difcouragements operate very powerfully where the commercial fpirit is weak, and the trade in its infancy. Again, in the new world, this confinement of trade encourages interlopers, and an illicit commerce, too gainful for any regulation to prevent, and which may afford fuch bribes as will difarm the most rigid justice, and lull the most attentive vigilance. So that in reality it may greatly be doubted, whether the precautions, fo fystematically purfued, and improved from time to time with fo much care and forefight, are at the bottom of most advantage or prejudice to that nation.

It was probably fome confideration of this kind that first gave rife to the custom of regifter-fhips; it was found that this confined commerce fupplied its extensive object very imper-. fectly, and that those who were at the watch to pour in contraband goods, would take advantage of this want of a regular fupply from Spain.

A register-ship is fo called, from its being regiftered with all the effects embark- Register thips. ed in Spain, in the books kept for that purpose in the chamber of Seville: and T 2 the

the commerce carried on by these sin the following manner.

When a company of merchants having, as they conceive, just grounds to imagine that European goods are greatly wanted at fome particular ports in the West Indies, they draw up accordingly a memorial or petition, containing these reasons in the concisest and most conspicuous terms, and lay it before the council of. the Indies. The prayer of this petition is, that they may have leave to fend a ship of three or four hundred tuns, or under, to the port fpeci-fied in the petition. When liberty is granted, they pay a certain fum to the crown, which is generally about thirty or forty thousand pieces of eight, befides presents of a confiderable value to the King's officers from the highest to the loweft. That this however may not induce any fuspicion of fraud, they register their ship and loading, that it may appear confiftent with their petition and licence; and yet this ship of 300 tuns generally carries upwards of 600 tuns of goods, belides accommodation for passengers. Copies from the register are transmitted to the governor and royal officers at the port to which fhe is bound; and fuch is their diligence, fuch their integrity, that when the fhip comes to anchor in the port, they make a narrow inquiry; and yet there is feldom or never any fraud difcovered, but, on the contrary, this ship of six or feven hundred tuns returns into Europe with an authentic certificate from all the King of Spain's officers, that fhe does not carry quite

148

300

Part II.

300 tuns, together with a bill of lading, in the fame firain of computation. This may ferve as a fpecimen of the integrity of these officers.

By these register-ships there is sometimes made a gain of no less than 300 per cent. which enables the owners to pay so largely for cheating the King, having first procured the money by robbing his subjects.

Thefe fhips go to Buenos Ayres on the river Plate, St Martha in Terra Firma, Porto-Cavallo in the audience of Guatimala, and to many other. places to which neither the galleons nor flota come; yet generally they return with thefe fleets, as they fometimes go out with them, but part in certain latitudes. The Spanifh grandees often intereft themfelves in procuring licences for thefe fhips; and fome people do not fcruple to fay, that they find their account in it.

The profits accruing from this fort of commerce, making those concerned in it immensfely rich in a short time, induced the English and Dutch, without the ceremony of a licence, to deal in this way; and for many years they fucceeded in it to their wish, partly by the connivance of Spanish governors, and partly by employing force. At length this evil grew so flagrant, that the court of Spain determined to put an end to it, and, in order thereto, fent new governors into America, with very precise orders on this head, declaring at the fame time, that they should be carried fully into execution.

Thefe.

Part IL.

These instructions gave rise to the guarda-The guarda- costas, or guard-ships, which, before the last war with Spain, made fo coftas. much noife. It cannot be denied but that the original ground for equipping them was good, fince the English, in some measure, and the Dutch more openly, began to carry on an illi-cit trade by force. The Dutch ships employed in this trade were generally from twenty to thirty-fix guns, and therefore valued nothing the governor of Carthagena could do to prevent their trading on that coast: but when the guard their trading on that coaft: but when the guardships were stationed here, they for some time put an end to that evil; for, falling in with fome of these interlopers, they such and took two, the cargoes of which were worth more than 100,000 pounds Sterling; nay, find-ing on board them sixteen Spanish merchants, who, on a fignal given, were come off to trade, they hanged them all without mercy. The conduct of the Spaniards in this respect could not be condemned; for, without doubt, these illicit traders not only prejudiced the King of Spain, but even the fair traders of their own nation, by the clandestine commerce they carried on.

The captains of thefe guard-fhips, however, foon altered their conduct, and inftead of taking contraband traders, infefted the British commerce, and took, without diffinction, all that came in their way, at first under very frivolous pretences, and at last without any pretence at all. As the governors reaped a confiderable

derable profit from the prizes which these privateers, or rather pirates, brought into their ports, they were ready to send deceitful accounts to the court of Spain, which produced that spirit of obstinacy, whereby they drew on themselves the last war; and in order to chassifie them for these unjust captures, the brave Admiral Vernon was sent into those parts with a squadron, who read them severe lectures before the ports of Carthagena and Porto-Bello, which it is to be presumed they have not yet forgot.

### C H A P. XIII.

t

Three forts of people in New Spain; the whites, Indians, and negroes; the characters of thefe. The clergy; their character: the civil government, its character.

THE inhabitants of New Spain are compofed of people of three different races, whites, Indians, and negroes, or the feveral mixtures of those. The whites are either born in Old Spain, or they are creoles, that is, born in America, but of Spanish parents; those who are native Spaniards are mostly in offices, or in trade, and have the same character and manners with the Spaniards in Europe; the same gravity of behaviour, the same natural fagacity and good sense; the same indolence, and yet a greater share of pride and stateliness; for here they look upon being natives of Old Spain as a very honourable distinction, and are in return looked An Account of the Part II.

looked upon by the creoles with no finall fhare of hatred and envy. The latter have little of that firmnefs and patience which makes one of the fineft parts of the character of the native Spaniards. They have little courage, and are univerfally weak and effeminate. Living, as they do, in a conftant enervating heat, furfeited with wealth, and giving up their whole time to loitering and inactive pleafures, they have nothing bold or manly to fit them for making a figure in active life, and few or none have any tafte for the fatisfaction of a learned retirement. Luxurious without variety or elegance, and expenfive with great parade, and little conveniency, their general character is no more than a grave and fpecious infignificance.

The clergy are extremely numerous, and their wealth and influence cannot be doubted among fo rich and fuperstitious a people. It is faid, that they actually poffers a fourth of the revenues of that whole kingdom, which, after all abatements, certainly amounts to feveral millions. And as to their numbers, it is not extravagant to fay, that priefts, monks, and nuns of all orders, are upwards of one fifth of all the white people, both here and in other parts of Spanish America. But the clergy here being too ignorant in general to be able inftructors by their preaching, and too loofe and debauched in their own manners to inftruct by their example, the people are little the better for their numbers, wealth, or influence. Many of them are no other than adventurers from Old

152

Old Spain, who, without regard to their character or their vows, study nothing but how to raife a fudden fortune, by abufing the ignorance and extreme credulity of the people. A great deal of attention is paid to certain mechanical methods of devotion. Moral duties are little talked of. An extreme veneration for faints, lucrative to the orders they have founded, or are fuppofed to patronize, is strongly inculcated, and makes the general fubject of their fermons, defigned rather to raife a stupid admiration of their miracles, than an imitation of the fanctity of their lives. Francisco de Coreal, a Spanish writer, relates a very strange story concerning the frauds and impolitions of the Spanish clergy in the Indies, of which he was eye-witnefs; and as it is both entertaining, and may help us to form an idea of the character of these clergymen, we shall therefore transcribe it precifely in his own words.

" It has been," fays he, " a cuftom time out of mind with the clergy in the Indies, to oblige the poor natives to carry pictures to the church; thefe pictures are always of fome faint, and they perfuade them, that this devotion will prove a means of making them both rich and happy. And the reafon affigned for it is, that as foon as it is fet or hung up in the church, the foul of the faint defeends to inhabit it, and remains there fo long as the Indian who brought it behaves as he ought to do. The priefts make it their U "vantage,

" vantage, by rendering it a means of extorting money from the poor ignorant deluded " people. In the first place, he must be well " paid for making the foul of the faint de-" fcend; then there must be annual offerings " to keep the faint in good humour with his Indian patron, and his family. But to my " ftory. It happened at Coban, in the pro-" vince of Vera Paz, as I paffed through it, " that a certain Indian had paid his prieft for " placing a picture of St Dominic in a particular place of the church ; it also happened, 66 " that another Indian, who was jealous of this man, and thought he would fucceed too well 66 " if his faint had fo advantageous a place, came to the prieft, and offered him double as much 66 if he would place his favourite there, who was St Ignatius. Whether the latter faint 66 66 " was more in the prieft's good graces, or whether it was purely out of respect to the mo-66 ney, is uncertain; but fo it was, that St Do-66 minic was forced to let St Ignatius take his 66 place. Upon this a quarrel commenced be-66 66 tween the Indians, which quickly fpread it-" felf into two parties, who, after a sharp battle " of words, fell to blows, and feveral were left. " dead on the fpot; at the fame time neither " of the faints appeared in the field, but re-" mained as quiet in the church as if nothing " had happened." From which it is evident, that even the inquifition itself cannot hinder fenfible Spaniards from treating the frauds of their churchmen with a just contempt.

The.

154

The native Indians are faid now to be humble, dejected, timorous, and docile, and are quite altered from what they were formerly, being generally treated with the greatest indignity. The state of all people subjected to another people, is infinitely worfe than what they fuffer from the preffure of the worft form, or the worft administration of any government of their own.

The blacks here, as they are imported from Africa, have the fame character as the blacks of our colonies, who are generally faid to be a flubborn hardy generation.

Such are the characters of the people, not only of New Spain, but of all Spanish America.

The civil government is administered by tribunals, which here are called audiences, confifting of a certain number of judges, divided into different chambers, more refembling the parliaments in France than our courts. At the head of the chief of these chambers the viceroy himfelf prefides when he fees fit. His employment is one of the greatest trust and power the King of Spain has in his gift, and is perhaps the richeft government entrusted to any fubject in the world. All employments here are held only by native Spaniards, and by them but for a certain limited time, most not above three years. Jealoufy, in this respect, as in all other things relative to the Indies, is the fpirit that influences all their regulations; and it has this very bad effect, that every officer, from the higheft U 2

higheft to the loweft, has the avidity which a new and lucrative poft infpires; ravenous becaufe his time is fhort, he oppreffes the people, and defrauds the crown; another fucceeds him with the fame difpofitions, and no man is careful to eftablifh any thing ufeful in his office, knowing that his fucceffor will be fure to trample upon every regulation that is not fubfervient to his own interefts. Thus thefe enflaved people are obliged to fubmit to be drained by a conftant fucceffion of hungry and impatient harpies, who not only ruin the revenues, but difcourage induftry, and extirpate all public fpirit.

There are fome troops kept in New Spain, and a good revenue appropriated for their maintenance, and for the fupport of the fortifications there; but the foldiers are faid to be few, ill clothed, ill paid, and worfe difciplined. The military here keep pace with the civil and ecclefiaftical administration; fo that every one in office here have their own interest more at heart than that of their King or fellow-fubjects.

PART

# PART III.

# The Spanish fettlements in Peru, Chili, Paraguay, and Rio-de-la-Plata.

## CHAP. I.

Of South America in general. The difcovery and conquest of Peru by Pizarro and Almagro.

His vaft country of South America is a kind of triangular peninfula, joined to North America by the ifthmus of Darien or Panama, and on every fide is furrounded by the ocean. On the north it hath the little Antilles, and that part of the Atlantic ocean, commonly called *the North fea*; on the eaft the Atlantic, and on the welt the Pacific ocean, or great South fea. On this fide the Spanish settlements reach from the isthmus of Darien, to the streights of Magellan, which is a tract of no lefs than fixty degrees; but they are far from reaching from the fea-coast to the heart of the country. On the North fea, their territories extend no farther fouth than the equinoctial line on the one fide, and commence again at the Rio-de-la-Plata on the other fide; the large country of Brazil, and that of the Amazons taking up the middle space. From the river Plate the Spaniards claim rather than poffefs all the coaft to the Magellanic streights. The

## An Account of the Part III.

The large kingdoms of Terra Firma, and Peru, lie entirely within the torrid zone, and are confequently extremely hot in many places; the country of Chili and Terra Magellanica lie in the fouth temperate zone, and are very pleafant and healthy. All the provinces in general are, in point of foil, abundantly fruitful; and if we confider the immense quantities of gold, filver, and precious stones, which have been extracted out of its bowels, it may well be confidered the richeft country on the globe. Of which the reader will be more particularly informed as we advance in our description of that extensive region; but at present we shall proceed to give a brief account of the difcovery and conquest of the Peruvian empire.

Columbus having difcovered all the coaft of Terra Firma, as far as the ifthmus of Darien, and having reprefented it, as it really was, a country abounding in gold and other valuable commodities, encouraged Vasco Nunez de Balboa to make further discoveries on these coasts. He was a man of a graceful appearance, had got a liberal education, and was of a hardy conftitution. He first furrounded Cuba, and discovered it to be an island; but left the gleanings of this field to those who had less ambition, not finding the treasures there he expected. He therefore went in purfuit of new land, and followed the tracks of Columbus to Darien, where he gained the friendship of some of the caziques, and conquered others. He was the first European who travelled over the ifthmus, and thereby

thereby difcovered the South fea. He fettled a colony upon that coaft, and laid the foundation of the famous city of Panama. On his arrival here he received an imperfect account of the great empire of Peru, which opened a new field for difcoveries; being in itfelf a much greater exploit than any of his countrymen had yet undertaken. But the Indians, who raifed his hopes by reporting prodigious things of the wealth of the great kingdom, as they called it, at the fame time greatly embaraffed him by pofitively afferting, that the inhabitants of this country were a numerous and warlike people; and that it was in vain for him to think of the conqueft of that country, with a handful of men.

-

Upon this information, Nunez refolved to attempt nothing, till fuch time as he received a commission and a reinforcement from Spain: but Peter Arias was fent over as governor by King Ferdinand, who also appointed Nunez lieutenant of the South feas. This naturally produced bad confequences, as Nunez and Arias were always at variance; however, they came to a reconciliation, and Nunez was fent with 300 men to make discoveries in the South feas. The confidence the Spaniards had in the conduct of this commander, occasioned every thing to go on very cheerfully, and great expectations were formed from the fuccess of this enterprise, when he was fuddenly recalled to Darien, where he was brought to a formal trial, upon a charge of treasonable expressions, supported by false witneffes,

# An Account of the Part III.

witneffes, whole perjury gave Arias a colour for ftriking off the head of Nunez his rival, though at the fame time he blafted the hopes and broke the fpirits of his people.

Soon after the unjust death of Nunez de Balboa, Pedraria was appointed governor over his conquests; and his lieutenants reduced all that large tract which is now called *Terra Firma*, committing barbarities worthy of the man under whose authority they acted. Amongst all the adventurers who acted under his commission, none have made themselves so famous, as those of whom we are going to speak.

The Spaniards being now become acquainted with the fame and wealth of Peru, this report induced three citizens of Panama, private men, and advanced in years, to undertake the conquest of it. The names of these three adventurers were, Francis Pizarro, Almagro, and Ferdinand Lucques a prieft, and a man of confiderable fortune. They entered into this engage-ment in the most folemn manner. Lucques faid mass, an oath of mutual fidelity was plighted, the facrament was divided into three parts, Lucques took one, and delivered the other two to his confederates. The first expedition, in confequence of this confederacy, was made under extraordinary difficulties, and with very little fuccefs. Pizarro', who commanded, fpent two years in the fhort navigation between Panama and the northern extremity of Peru, a voyage now made frequently in two weeks, fince the winds and currents are known. He landed

landed in the year 1525, and found that the wealth of the country was as great as he imagined; and that the refistance he was like to meet in endeavouring to poffefs himfelf of it, would be full as confiderable. This he put to the proof very early, by taking the rash step of attacking the inhabitants at his first landing, and thus letting them fee all at once the worft of his intentions. The difficulties he met with, and the refistance his ill conduct occasioned in the country, obliged him to return without effecting any thing confiderable. But neither he, nor his affociates, after fuch a length of time, or fuch greatnefs of expense, were deterred from the profecution of their scheme. It was agreed that Pizarro fhould go into Spain, to obtain an exemption from the government of Pedraria, and to get for themfelves the grant of whatever they should conquer. Pizarro (who, though not the monied man, was the foul of the enterprife) was to be chief governor, with the property of 200 leagues along the fea-coaft. Almagro they agreed should be adelantado, or King's lieutenant; and Lucques, who was a prieft, was to be first bishop, and protector of the Indians. The other profits of the enterprise were to be equally divided. But as this was an enterprise of ambitious avarice, there was little faith observed. Pizarro solicited only his own fuit in Spain, and obtained for himfelf alone the property of the land, the government, the lieutenancy, and every thing which he was capable as a layman of taking; Almagro was forgot, and

Part III.

and to Lucques was left his eventual bishopric.

On his return, this too early difcovery of breach of faith was like to ruin all; but Pizarro, who knew how to retreat as well as to advance, yielded up to Almagro every thing he could reafonably defire; and nothing now obftructed the embarkation, which, after all, did not exceed 180 men.

Before we proceed, it may not be unneceffary to fay fomething of the perfons who had the conduct of this grand undertaking. Francis

The character of Pizarro and Almagro. Pizarro was the natural fon of a gentleman of good family. His education was as irregular as his birth, he could not even read: but then he

had a great deal of that capacity and fitnels for the world, which is obtained by much ftruggling in it, and by being early made dependent on a man's own induftry; hardened to life, dexterous in affairs, never fetting his heart upon a part of his defigns, whilft the total was at ftake, of a penetrating fagacity into the nature of man, artful, bold, diffembling, and cruel. Almagro had likewife enough of that defperate bravery and roughnels of body and mind, fo neceflary in a defign of this fort. In their birth there was no confiderable difference; Pizarro was a baftard, and Almagro a foundling. Pizarro owed nothing to education, Almagro depended wholly upon his natural parts.

The great empire of Peru was governed by a race of kings which they called *Yncas*. The twelfth

twelfth in fucceffion was then upon the throne. The first of this race, named Mango Capac, was a prince of great genius, with that mixture of enthusiafm, Peru.

which fits a man to make great changes, and to be the legiflator of a forming nation. He obferved that the people of Peru were naturally fuperstitious, and had principally a veneration for the He therefore pretended that he was defun. fcended from that luminary, whole authority he was defigned to bear, and whofe worship he was by that authority to enforce. By this perfuafion, eafily received by a credulous people, he brought a large territory under his jurifdiction; a larger was fubdued by his arms; fo that he made use of deceit and force in order to accomplish his defigns. By this means he united and civilized the difperfed and barbarous people; he bent them to laws and arts, he foftened them by the inftitutions of a benevolent religion, though of a false kind : in short, there was no part of America in which agriculture and the arts were fo much and fo well cultivated, nor where the people were of a milder nature, and more ingenious manners. The yncas, descended, as they imagined, or at last pretended, from fo facred an original, were themfelves respected as divinities. In none, even of the Afiatic countries, was there fo entire an obedience to the royal authority. But here it was rather filial than flavish. As to the character of the Peruvians themfelves, they feem to have had a ftrong refemblance to the ancient Egyp-X 2 tians :

tians: like them, under a fky conftantly ferene, they were a people industrious and ingenious; cultivating the arts, but without bringing them to perfection; inclined to fuperstition, and of a foft unwarlike temper.

The Ynca Guaiana Capac having conquered the province of Quito, which now makes a part of Spanish Peru, to secure himself in the posselfion, married the daughter of the natural prince of the country. By her he had a fon called Atabalipa. By a former marriage he had a fon named Huescar, heir of his other dominions. On his death Huescar, his eldest son, claims his whole dominions, both hereditary and acquired. Atabalipa, the youngeft, without pre-tending to the reft, would keep as his right by the double title of fon to the conqueror, and to her whole inheritance that kingdom was, 'fortified befides by the will which the dying ynca had made in his favour. This difpute kindled a civil war, which, after feveral turns of fortune, ended at last in favour of Atabalipa; he not only routed his brother's armies, and over-run his dominions, but actually held him a prifoner in the tower of Cufco.

Such was the pofture of affairs when the Spaniards arrived in Peru, whofe remarkable appearance and furprifing feats of arms were every where fpread about the country, and caufed a general alarm.

Atabalipa, newly feated on a precarious throne, was not the leaft alarmed at this event; for a new-erected power has every thing to fear from whatever

Part III.

whatever fets the people's minds, ftill unfettled, upon a new motion. He therefore refolved, if poffible, that his enemies should take no advantage of the arrival of those strangers, by enga-ging them by all means to his own interest. He therefore received the ambaffadors which Pizarro had fent with the greatest marks of honour; though their difcourse to him was very impertinent. He even went out to meet Pizarro with a vast number of attendants, to whom he gave the firicteft charge upon no account to offer the least injury to the strangers; but Pizarro, who advanced with other notions, foon convinced him that a contrary caution was more neceffary. They met near a celebrated temple, where the Spaniards were drawn up in order of battle. The first perfon who addressed the ynca was a friar, who advanced to him with a crofs in his hand, and began a most unseafonable discourse upon the birth and miracles of Christ, exhorting him to become a Christian, on the pain of eternal punishment. The ynca, though utterly aftonished at so unaccountable jargon, behaved with decency and gravity, telling him, that he believed that he and his companions were children of the fun, recommended himfelf and his fubjects to their protection, and made no doubt but they would behave to them in a manner worthy the offspring of fo beneficent a deity.

Whilft these discourses continued, the Spanish foldiers, whose least business to Peru was to listen to fermons, observing a confiderable quantity

Part III.

quantity of gold in the neighbouring temple, had their zeal immediately ftirred up, and a party of them began to pillage it. The priefts made fome opposition; but a diffurbance and a great noise ensued, which so alarmed our adventuring apostle, that he let fall his cross and breviary in a fright, and turned his back upon his intended proselyte. The Spaniards who were

Atabalipa's attendants maffacred, and himfelf taken prifoner.

not concerned in the pillage, feeing him fly, either that they judged the Heathens had offered their prieft fome violence, or that Pizarro made use of this fignal to them to fall on

and execute the orders he had previoufly given, the Spaniards inftantly fired the great guns amongst the thickest of the Indians, and the musketeers made a terrible discharge, the drums beat, the trumpets founded, and the horfe fell in three feveral ways among the unfufpecting and unrefifting people, defenceless through a religious obedience to their fovereign's command, and, with every circumstance of the most deliberate and shocking barbarity, flaughtered 5000, which was near the whole number of the Indians, who fell without any anxiety for their own lives, preffing forward, with all the zeal and officiousness of a most heroic loyalty, to the chair of their prince, to expire at his feet; and as fast as one set of supporters were slain, the others fucceeded with eagerness to supply their places, and share their fate. At last Pizarro with fifteen chofen men marched up to the chair on which Atabalipa was carried, where he flew

flew those that supported it, feized the ynca, and took him prisoner.

Pizarro conveyed Atabalipa to his own quarters, where he directed the plunder to be brought, which was immenfely rich, confifting of large gold and filver veficls and utenfils, fine garments, with jewels and ornaments belonging to the ynca, the royal family, and the principal officers. This maffacre of the Indians happened the 3d day of May 1533, though Pizarro celebrated it with a feftival, as if it had been a glorious victory. The next day he fent out a detachment to plunder the ynca's camp, which was incredibly rich; and this he gave to his foldiers as a reward for their barbarity.

Atabalipa was very defirous of obtaining his liberty, and having obferved the infatiable avarice of the Spaniards for gold and filver, he promifed to give them 10,000 bars of gold for his ranfom, with as much filver, in feveral forts of vefiels, as would fill a great room in the caftle of Caxamalca, besides many valuable jewels, and his friendship upon all occasions. Pizarro promifed the ynca his liberty upon delivering of the treasure; in consequence of which Atabalipa fent orders to the governors of Cufco, and his other principal cities, to bring a fufficient quantity of gold and filver for his ranfom. Whilft these were preparing, three Spaniards who were fent to Cufco to fuperintend in the work, had means of conferring with Huefcar; who quickly finding their foible, and the ufe his brother had made of it, made bitter complaints

#### An Account of the Part III.

plaints of the injuries he had fuffered, begging the Spaniards, as the patrons of the opprefied, to embrace his caufe, promifing threefold the treasure for their affistance which Atabalipa was to pay for his ranfom. He received a very favourable answer. Mean-time the Spaniards treated the ynca with all manner of civility, admitted his attendants to him, but no talk of his liberty. As foon as Pizarro had been apprifed of Huescar's negotiation with the Spaniards, and Almagro's arrival with an additional force, he began to be under great apprehen-Huefcar af- fions. To eafe himfelf upon one fide, he fent immediate orders to faffinated. have Huefcar put to death; and accordingly he was privately affaffinated.

The arrival of Almagro, on the other hand, caufed fome embarrafiment in Pizarro's affairs. This commander, finding that Pizarro had feized the ynca with immenfe treafures, and having already experienced his ill faith, confulted with his principal officers about leaving Pizarro's part to himfelf, and feeking their fortune elfewhere. Whilft this was in agitation, his fecretary, moved by fome refentment to his mafter, gave Pizarro notice of the defign. In an inftant Pizarro faw how difadvantageous fuch a ftep muft prove to him, with fo finall a force, all refources at a diftance, and the country exafperated by the deteftable action he had lately committed. He faw that all depended upon removing every fufpicion from the breaft of Almagro. For this purpofe, and as fomething of

an

an ill mind in his most masterly actions, he began by facrificing the fecretary, and informed Almagro of his treachery. Next, though gold was the great object of his undertakings, yet he knew how to relinquish fome part to fecure the rest. He agreed to divide the spoil between Almagro and himself, and to make no distinction between the foldiers of either in the distribution. This made an entire and hearty reconciliation, which was no fooner concluded than the ynca's ransfom came in.

But this vaft treasure, the capital object of all their labours and villanies, no fooner came into their possession, but its confequence was very near proving the utter ruin of their affairs. It is faid, and not improbably, that the whole exceeded the fum of 1,500,000 pounds Sterling. a fum vaft at the prefent time, then a prodigy. On the dividend, after deducting a fifth for the Emperor, and the shares for the chief commanders and officers, each private foldier had above 2000 pounds English money. They had now made a fortune even beyond their imaginations; but the foldiery were ruined, and the greateft part of them infifted upon being difcharged, that they might enjoy their fortunes in quiet. This propofal ill fuited with the ambitious views of the commanders. Almagro was for proceeding in the ufual way to enforce obedience by the feverity of military discipline; but Pizarro opposed him: " Let them go," fays he, " they cannot do us better fervice ; " here we shall have them mutinous and cow-" ardly

Part III.

" ardly foldiers, at home they will act for us as " recruiting officers with great fuccefs; for " when it fhall be feen that common foldiers " have made fuch large fortunes, we fhall not " long want better men to fupply their places." In due time the prophecy of Pizarro was accomplifhed, and their army never wanted reinforcements.

Though Atabalipa had paid a prodigious fum Charge against for his liberty, as before related, yet Pizarro was determined to put him the ynca. to death. However, to justify his conduct in this barbarous proceeding, he caufed a formal charge to be drawn up against him, digested under several heads: 1st, For being an idolater. 2dly, For having many concubines. 3dly, For walting the treasures of the kingdom, and rai-fing taxes fince the arrival of the Spaniards. And, lastly, for the murder of his brother Hue-fcar. An attorney-general was appointed to manage the accusation, and an advocate appointed from amongst themselves assigned for his defence. In vain did the more numerous and better part of the army protest against this proceeding, and lodge an appeal to Spain; in vain did they allege their want of power to judge a foreign prince for any crimes, and the abfurdity of the crimes with which this prince was charged. Before fuch judges, and with His fentence. fuch an advocate to defend him, the ynca was condemned to be burnt alive. When death was pronounced against the royal victim, he bitterly exclaimed against the injustice

injustice of the fentence, demanding what he, his wives, or his children had done, to be fo cruclly treated ? He likewife defired to be fent over to Spain, to be tried before the Emperor; and faid, if the court of Spain could find him guilty of any crime, he fhould cheerfully fubmit to their fentence. But the cruel hearts of the judges were inexorable, although they had no better authority to judge and condemn this prince, or even his fubjects, than pirates and banditti have to take away the lives of their unhappy captives. To complete this violation and mockery of all laws, human and divine, the fame Father Vincent, who had fignalized himfelf upon a former occasion, was fent to comfort and inftruct him in his last moments. The chief argument used to convert him to Christianity was, that on his embracing the faith, instead of being burnt, his sentence should be mitigated to strangling. This prince fubmitted to baptifm, and was im-His death. mediately strangled in prifon. Pizarro gave the final stroke to his hardened and fhameless villany, by giving him a magnificent funeral, and going into mourning. But the un-

just death of Atabalipa was afterwards revenged on his two judges, who both perished by their own diffensions; Almagro being formally condemned to die by Pizarro, who was afterwards affaffinated by the fon of the former.

The death of the ynca was no fooner fpread abroad, than the principal nobility at Cufco elected Huana Capac, the brother and heir of Y 2 Huefcar,

Huescar,

Part III.

Huescar, for their Emperor. Pizarro fet up the fon of Atabalipa, called Toparpa, and two generals of the Peruvians fet up for themselves. Thus was this wretched country torn in pieces at once by foreigners, and by a domestic war amongst themselves.

Pizarro being alarmed and apprehenfive at thefe commotions, came to a refolution of poffeffing himfelf of the capital city of Cufco, and began his march with all his forces, confifting of about 400 Spaniards, befides confederate Indians.

Atauchi, Atabalipa's brother, furprised the Spaniards upon their march to Cufco, killing fome of them, and making feveral prifoners; however, Pizarro continued his march, being attacked by many parties of Indians, at fome difficult paffes in the mountains. Several thoufands of Indians were destroyed in these engagements, among which was the new ynca Toparpa; which convinced them that they were incapable of refifting the artillery and horfes of their enemies, therefore they fled to their capital city, which was foon abandoned by its numerous inhabitants, who fied in the utmost confternation to the woods and mountains, leaving the Spaniards to enter their metropolis without any opposition, in the month of October 1534, where they found a prodigious booty, notwithstanding the citizens had fufficient time to remove the greatest part of their treasure, and had put fire to fome parts of the city, which was foon extinguished by the Spaniards. Pizarro

Pizarro permitted his men to plunder, but with a reftriction, that all fhould be divided in common after a fifth was deducted for his Catholic Majefty. They found fuch quantities of gold and filver, made into veffels, bars, or other kinds of ornaments, that was aftonifhing; for when the fifth was taken out for the King, the treafure was divided into 480 parts, each of which amounted to 4000 pieces of eight, being 344,000 pounds Sterling in the whole, exclufive of the King's fifth.

Pizarro took possession of the magnificent city of Cufco, with the greatest folemnity, for his Catholic Majefty; establishing a council and forming a colony. Quizquiz, and fome other Peruvian generals, were fo exasperated to see the Spaniards in the possession of their imperial city, that they affembled a numerous army with which they agreed to attack their enemy; lamenting their deplorable fate, and complaining of their gods, who had permitted their religion, temples, and all things facred to be overthrown ; their estates ruined, themselves banished, their wives and children made captives, and fuch multitudes of men flain ; they fighed for their yncas; but upbraided the memories of Huefcar and Atabalipa, by whole diffentions a few invaders had an opportunity of poffeffing themselves of fo extensive and populous an empire. The Indians made two attacks upon the Spaniards, who marched out of Cufco to meet them, and both times defeated them ; after which the Peruvian generals retreated into the province of Quito,

Quito, and took possession of the capital city; which obliged Pizarro to fend a detachment there, under the command of Sebastian Belalcazar, who defeated the Indians, took their capital city, and would have brought the whole province into subjection, if he had not been interrupted by the arrival of a large body of Spaniards from Mexico, under the command of Don Pedro de Alvarado, who landed 800 men in Peru. Alvarado was one of the principal officers that accompanied Cortez in the conquest of Mexico, and had obtained the government of Guatimala, from whence he fet fail, with the hopes of acquiring great quantities of gold and filver in Peru. Almagro was fent by Pizarro to reinforce Belalcazar, and oppose Alvarado; but all hostilities were prevented by a conference between Almagro and Alvarado, wherein it was agreed, " That Pizarro shoud pay the latter " near 18,000 l. Sterling; that fuch of the of-" ficers and foldiers who came with Alvarado, " as defired it, should ferve under Pizarro in " Peru; and that Alvarado should return to his " government of Guatimala;" which was accordingly put into execution, after an interview between Pizarro and Alvarado.

The troops left by Alvarado made the Peruvians defpair of emancipating themfelves from the Spaniards, to whom they generally fubmitted as their conquerors. Pizarro then employed himfelf in building towns, and eftablishing colonies, on the fea-coaft; particularly he built the cities of Lima and Truxillo; dividing the country

country about them among his officers and foldiers, together' with the native Indians upon those lands, who held what the Spaniards were pleafed to allow them, by the bafeft tenures, being obliged to manure and cultivate their lands, carry burthens like horfes or mules, and perform fuch other fervile offices, in their fields and houfes, as rendered their condition no better than an abfolute flavery; for they were tranfferred with the lands to any purchaser, obliged to work in the mines, fish for pearls, and to undergo fuch rigorous labour, that many thoufands of them perished, whereby the country in a few years was almost depopulated.

The court of Spain received the treasures fent by Pizarro for his Catholic Majefty, who conferred the title of Marquis upon that general, and honoured Almagro with the title of Marshal of Peru, as also with the government of that part of the country which extended 600 miles to the fouthward of the government affigned to the Marquis Pizarro. Upon this intelligence, Almagro affumed the title of governor of Cuíco, and acted no more in fubordination to the Marquis; whose brothers entered into a formal war against Almagro, which was foon terminated by the prefence of the Marquis, who afterwards fent the Marshal on an expedition to Chili; wherein he was pretty fuccefsful, but returned to claim his right to the government of Cusco, which the Marquis Pizarro had conferred upon his brother Ferdinand.

The ynca Manca Capac was confined like a prifoner

#### An Account of the Part III.

prisoner by the Spaniards, in the castle of Cufco, from whence he escaped, and raised a general infurrection among the Indians, who affembled three armies, to cut off Almagro in Chili, to invest Lima, and besiege Cusco; the latter of which was undertaken by the ynca himfelf in perfon, at the head of 200,000 men: but though the ynca took the caftle of Cuíco, he was obliged to abandon it by the fury of the Spanish artillery, which destroyed feveral thoufands of the Indians, and deterred them from reattempting the fiege. Another party undertook the fiege of Lima, but were equally unfuccefsful: however, they destroyed feveral detachments of the Spaniards, and continued in arms for feveral years, before they were entirely suppressed, which happened on the death of their ynca.

In the mean time Almagro took poffession of Cusco, and defeated a party which was fent by Pizarro to disposses him: but Pizarro afterwards defeated Almagro, took him prisoner, and ordered him to be strangled privately in

Almagro firangled in prifon. his father's death, by affaffinating the marquis Pizarro affaffinated in his own palace. prifon, and his body was afterwards beheaded publicly on a fcaffold. Almagro's fon foon after revenged in his own palace, where he killed him and his brother-in-law Don Francis de Alcantara.

Thus fell these two conquerors of Peru ; who with 400 Spaniards conquered upwards of four millions of Indians ; whereby they obtained the possefion

poffeffion of the richeft country in the world; lived in the ftate of fovereign princes, and were fuperior in wealth to the richeft monarchs in Europe; though it is obferved; that both of them were of mean extraction, and had received little or no advantage from education; they alfo died and were buried, with the fame obfcurity in which they were born.

177

The young Almagro was immediately proclaimed governor of Peru; but Vaca de Caftro, arrived from Spain, with that title, defeated Almagro, and beheaded him ; whereby his party became totally extirpated. The new governor endeavoured to check the licentioufness of the Spaniards, and to grant many indulgences to the Indians; which offended his foldiers; fo as to give Gonzalo Pizarro an opportunity of raifing a mutiny; and of afpiring to become the fole fovereign of the empire of Peru, without any dependence on the crown of Spain; in which he fucceeded to far; as to make the Spanish miniftry imagine; that he had usurped the fovereign authority over Peru, and would extend it all over America. Upon this occasion, his Catholic Majefty fent Don Gasco over, with the title of prefident of the royal court ; who arrived at Panama in August 1546, when he prevailed on Hinojofo, who commanded the fleet kept there by Pizarro; to revolt, and declare for his Ma-. jefty; which was followed by the defection of feveral of the land-forces. Pizarro, however, was determined to defend his usurpation, and mustered 900 well-armed veterans in Lima only, befides  $\mathbb{Z}$ 

Part IIF.

befides the forces he had at Cufco, La-Plata, and other places; which he collected together, and, in October 1547, defeated 800 men commanded by Don Centeno, one of the royal generals: but, in April 1548, the prefident Gafco began his march towards Cufco, at the head of 1600 veteran Spaniards, with 10,000 Indians, attended by a fine train of artillery; whom Pizarro marched againft, and met near Cufco; when his troops deferted to the royalifts, and Pizarro was obliged to furrender himfelf a prifoner; after which he was carried to Cufco, and formally beheaded as a traitor.

The death of Gonzalo Pizarro was far from terminating the diffentions among the Spaniards of Peru; which obliged Gasco to divide his forces, and fend fome of them upon other expeditions; particularly he fent Don Pedro Baldivia to finish the conquest of Chili. His Catholic Majefty published an order, that the Indians should be treated as freemen, and paid for their labour in the mines; which occasioned feveral infurrections, wherein fome of the viceroys, who fucceeded Gafco, were murdered. The principal revolt was conducted by Hernandez Giron, who had a confiderable army; with which he at first defeated the royalists, but was afterwards taken prifoner, and beheaded at Lima, as a traitor, which put an end to the rebellion : and from that time, being the month of November 1554, the Spaniards may be properly faid to have been in the peaceable posseffion of Peru; though the fubduing the first turbulent

bulent adventurers, who endeavoured to render themfelves independent of the crown of Spain,' proved a much more difficult task than the conquest of the defenceless Indians.

## CHAP. II.

The extent and boundaries of Peru. The nature of the foil and climate, with a description of the Andes or Cordillera mountains, and of the South fea. An account of the lakes, fprings, and rivers of Peru, and the commodities of the country for export.

HE conquest of Peru, achieved in so extra-ordinary a manner, brought into the power of Spain a country not lefs wealthy nor extensive than New Spain, but far fuperior to it for the conveniency of habitation, and agreeablenefs of the climate. Like Mexico it is within the torrid zone; yet having on one fide the South fea, and on the other the great ridge of the Andes through its whole length, the joint effects of the ocean and its mountains temper the equinoctial heat in a manner equally agreeable and iurprifing.

Before the Spaniards invaded this country, it was separated into two grand divisions : the northern limits terminated at the river Paffao, or the Azure river, almost under the equator : the fouthern boundaries extended as far as the country of the Araucoes, a nation of Chili, in 40 deg. of fouth latitude, or at least as far as the river 'L 2

Part III.

river Maule in 35 deg. The Andes were the eastern confines, and the western part was bounded by the South sea, or Pacific ocean.

The limits of modern Peru are much the fame now as formerly, except on the fouth; for the Spaniards ftill bound it on the north by the province of Popayan, which extends to the equator, by the Andian mountains on the eaft, by Chili on the fouth, and the Pacific ocean on the weft; whereby it extends from the equator to about 25 deg. of fouth latitude, or about 1500 miles from north to fouth; but as the land runs very irregular from north-weft to fouth-eaft, it muft be near 1800 in length; it is alfo generally about 160 miles in breadth from weft to eaft, but in the fouthern parts its breadth extends to 4 or 500 miles.

The face of the country is very different, as it is more or lefs diftant from the fea; the whole is generally divided into three long flips: *1/t*, The Lanos, which are fandy plains, running along the fea-coaft, about thirty miles broad. *2dly*, The Sierras, which are hills beyond those plains, intermixed with beautiful valleys, being about feventy-five miles broad. *3dly*, The Andes, or Cordillera mountains, ftill farther within the land, which are fteep craggy mountains, far furpaffing all the reft in height, and are about eighty-five miles broad.

The Andes and Sierras are two ridges of The Andes mountains that run from north to and Sierras. fouth, parallel to each other, for above 3000 miles; but beyond the city of Cufco, in

in latitude 13 deg. 30 min. fouth, these two ridges of mountains expand into a greater diftance from each other, and inclose betwixt them a fruitful and extensive plain, which is called *the province of Callao*, watered with many rivers, and by the great lake of Titicaca, faid to be 240 leagues in circuit, into which most of these rivers fall.

The Andes are cold barren mountains, where fnow continues most part of the year. The Sierras, although they have the appearance of a general sterility, yet there are fine valleys between them, yielding great plenty of grain, and variety of excellent fruits. The Lanos are very barren, except a few valleys into which the inhabitants turn finall winding streams.

The Andes are one of the greatest prodigies of nature, both with respect to their extent and altitude, being about 5000 miles long, and in fome places 120 broad, with many intermediate valleys, which are habitable as far as the tropics, but not beyond them, because of the perpetual fnows with which they are always covered. The height of these mountains along the coast of Peru is unparallelled, and the ascent is fo prodigious, that three or four days must be fpent in arriving at the top of them, and as many more in the descent, that is, what may be properly called, from and to the bottom of the mountain; for otherwife it may be affirmed, that paffengers begin to afcend even from the fea-fide, the whole way rifing gradually to the very foot of these astonishing mountains, on which

## An Account of the Part III.

which account the rivers run with furprifing rapidity, efpecially near their fources.

Herrera fays, there are two chains of mountains in the Andes, one being much lower than the other, covered with fpacious woods and beautiful groves, which is owing to the fine temperature of the air; but the cold is fo fe-\*\* vere upon the higher, that they are defitute even of bushes and grass, or any kind of plant, though there are feveral kinds of animals on both chains. The yncas of Peru caufed two grand highways to be cut through the Andes, one of them 2700 miles in length, from Posto to Chili, and twenty-five feet broad, being wellpaved, and having noble buildings at the distance of every twelve miles, some of which are still existing; for there are places called Tambos, fomewhat like European inns, where every thing neceffary is to be found for the fupport of travellers. The other way went by the plain, at the foot of the mountains, being alfo twenty-five feet broad, with the fame proportion of buildings, having streams and rivulets brought there by art for the refreshment of travellers.

When travellers afcend the higheft point of the mountains, it is with much difficulty they can breathe, by reafon of the purenefs and frigidity of the air. The cold on thefe mountains is fo piercing, that many have perifhed in going over them to Chili; and others who have efcaped with their lives, have loft their fingers and toes. In order therefore to avoid thefe dangers,

dangers, the Spaniards, who formerly paffed this way into Chili, go now either by fea or by the fide of these mountains.

Herrera alfo obferves, that people go through thefe mountains as if they were treading upon clouds, fometimes feeing the valleys without any oppofition to their fight, but when they look up cannot fee the heavens for clouds; whereas, when they reach their lofty fummits, they can no longer perceive the earth for the clouds beneath them; but the heavens above them are one clear and unclouded expanfe, through which the fun darts out his cheering rays : nor is it lefs admirable, while they travel over thefe hills, and perceive tempefts and ftorms falling into the valleys at a diftance, while the ferenity over their heads is fo great, that no cloud is to be feen to difcompofe the beautiful profpect.

There are many vulcanoes in this chain of mountains, of which there are no lefs than fixteen betwixt the latitudes of 26 and 46 deg. fouth, which, at feveral times have opened with fuch terrible explosions as to caufe very dreadful and aftonishing effects to all the circumjacent countries. These are faid to be as terrible as the eruptions of mount Ætna in Sicily, or Vesuvius in Naples.

However these mountains are faid to be very rich in mines, but two causes may be affigned why these riches are not discovered; the first, being that general and inviolable maxim among the Indians, of concealing all their treasures from

Part III.

from any other nations; for if any among them, either out of intereft, or a motive of conveniency; fhould difcover any thing of this kind, his death would be inevitable, and no power on earth could fave him from the revenge of his countrymen. The other reafon for not feeking after thefe mines, is the great plenty of gold and filver they find in the rivers and valleys; however, if thefe were exhausted, it is probable that the Spaniards, in some future period, may seek for the mines and treasures conceased in the bowels of thefe mountains:

There are many frightful precipices and deep rivers at the fides of the narrow paffes in the Andes, which frequently occafion the lofs of mules and travellers. The ftreams run with fuch violence, and fo far below the roads, that they caufe a dizzinefs in the head of the fpectator. The afcents and defcents are fo fteep, that they are difficult to pafs on foot; but the difficulty of the way is fomewhat alleviated by the beautiful cafcades which the water forms in the rocks; befides, the water naturally fprings up to a great height in fome of the valleys, like artificial fountains, among odoriferous plants and beautiful flowers; which yield a delightful profpect.

The only fea that washes the coast of Peru is

The Pacific ocean, or great South fea. the South fea, or Pacific ocean; the fhore is generally high and bold, where there is no landing, except at the ports, or in fome particular bays. This vaft ocean, bordering upon Peru and Chili, is alfo

also called the South fea, because it lies towards the antarctic pole, from whence the fouth wind blows, in opposition to the North, which reigns in the ocean as far as the arctic pole; fo that a fouth wind is efteemed as favourable in Peru and Chili as the north wind is in Europe; which made Ovalle call the Europeans fons of the north, and the natives of South America children of the fouth. The South fea is also called the Pacific ocean, on account of that conftant ferenity of weather which reigns there from 4 to 30 or 35 deg. of fouth latitude, along the greatest part of the coasts of Peru and Chili, as also indefinitely from the American shore to the East Indies. But it might also have been called the Pacific ocean, on account of the fingular tranquillity of its navigation, which, Ovalle fays, is feldom interrupted by other Europeans ;. though, both before and fince his time, the English, Dutch, and French have made the Spaniards fenfible, that they could navigate in thefe feas, and convince them of their infecurity.

Herrera obferves, that the motive which induced Magellan to call this *the Pacific ocean*, was, becaufe there was not in all that element a more fpacious career for the wind and tide; and becaufe there reigns fo ftrong and fteady a levant between the tropics, that the feamen, for feveral days together, have no occafion to handle their fails, or the fteerfman to move his helm, failing through thefe extensive feas, as if they were paffing along a river or canal.

The most frequent navigations of the South

Aa

fea

Part III.

fea are from Peru to Panama, and from thence to New Spain, and the Philippines, but those from Peru to Chili are lefs used; by which it appears, that the greatest part of the commerce carried on in these feas is between the tropics, where the fun has fo much force as to keep the winds from being furious, and from making fuch continued ftorms as are raifed without the tropics, and in parts nearer the poles. However, Ovalle fays, the South fea does not deferve the name of Pacific fouthwards beyond the tropic of Capricorn, becaufe navigators undergo great hardships between the 26th degree of fouth latitude and Cape Horn, (which is the most fouthern extremity of America); for as foon as the winter begins, the fea cannot be navigated without manifest danger; and about the island of Chiloe, in 43 deg. fouth, the fea is very dangerous even in fummer. It is impoflible to conceive any thing more terrible than the ftorms and hurricanes which always happen about the fouthern extremity of America in the winter-feafon, of which we have the most dreadful accounts in the history of Lord Anfon's voyage to the South feas, who doubled that ftormy cape, and underwent the most incredible hardships and dangers.

That part of the Pacific ocean which wafnes the coafts of Peru and Chili, fwells and runs with long high furges at the new and full moon; but at the fame time fhips are fafe enough at fea, as thefe waves never break there, though, where they fall in upon the flore, they make

make it very dangerous landing. At Guiaquil, in 3 deg. of fouth latitude, the tide runs very ftrong, and rifes fixteen or eighteen feet perpendicular; but it does not rife fo high on any part of the coaft to the fouthward, where there are not fuch bays, or fo many rivers as here; for the tides always run ftrongeft and rife higheft in gulfs or bays of the fea, and up the mouths of rivers. Funnel observes, that the winds in the Peruvian feas, and on all the western fide of America, from 38 deg. fouth to 7 deg. north are always foutherly two points upon the fhore, fo that where the coast runs north and fouth, the wind is at S.S.W. and where the coast runs S.S.E. the wind is due fouth, except it is in the night, when the feawind generally ceases, and there comes a fine moderate gale from the land, which they call the land-breeze. Dampier remarks, that the foutherly winds on the coaft of Peru continue to blow in that direction for 140 or 150 leagues from the fhore before they alter, but then they may be perceived to veer about more eafterly; and about 200 leagues to the weftward of that shore, the true trade-winds set in at E.S.E. which never alters till they have paffed the Pacific ocean, and arrive at the East Indies. Both Dampier and Funnel relate, that at Arica, which lies on the coaft of Peru, in 18 deg. of fouth latitude, and for near 100 leagues to the fouthward, this fea is very fubject to calms within thirty-five or forty leagues of the fhore, but that these calms are not usual on any other

part

part of the coaft. It is also observed, that when the fun is in the northern figns, viz. from March to September, the fky is generally bright and clear, though, when he returns back to the fouthern figns, the weather is fo thick and hazy that they cannot take an observation, notwithftanding they have no rain at fea, or upon the coaft.

The weather in Peru is various according to Climate and the fituation of the lands. In the lanos and valleys it never rains, and foil. the fky for the most part is cloudy, which shield the inhabitants from the vertical rays of the fun; but every night a foft benign dew broods upon the earth, which refreshes the grass and plants fo as to produce in fome parts the greatest fertility; what the dew wants in perfecting this, is wrought by the vast number of streams, to which the frequent rains and the daily melting of the fnow on the mountains give rife. Along the fea-coaft the foil is generally barren and fandy, except by the banks of the rivers and ftreams we have mentioned, where it is extremely fertile, as are all the valleys in the hilly country.

The caufe of the want of rain in all the flat country of Peru, is difficult to be affigned;
though the agents in it are not improbably the conftant fouth-weft wind, that prevails there for the greateft part of the year; and the immenfe height of the mountains, cold with a conftant fnow. The plain country between, refreshed as it is on the one hand by the cool winds,

winds, that blow without any variation from the frigid regions of the fouth, and heated as uniformly by the direct rays of the equinoctial fun, preferves fuch an equal temper, that the vapour once elevated, can hardly ever defcend in rain : but in the mountainous part of the country, by the alternate contraction and dilatation of the air from the daily heats and fucceeding colds, which the fnows communicate in the abfence of the fun, as well as from the unequal temper of the air which prevails in all hilly places, the rain falls very plentifully : the climate in the mountainous countries is extremely changeable, and the changes fudden.

All along the coaft of Peru, a current fets ftrongly to the north; further out to fea, it paffes with equal rapidity to the fouth. This current probably moves eddywife; for having run as far as its moving caule impels it, it na-turally paffes back again where it has leaft refistance. The ignorance of this double current made the navigation in the South feas originally very uncertain and fatiguing; but now the course is, for those who pass from Chili to Peru, to keep in to the shore in their passage to Callao, and on their return to stand out a great many leagues to fea, and take the fouthern current homewards. The fame method, but reverfed, is observed in the voyages between Panama, and all the other northern countries, and the ports of Peru.

There are feveral extensive lakes in Peru, particularly that of Titicaça, formerly mentioned, situated

Part III.

fituated in the valley of Callao, the middle of Lakes and it being in 16 deg. 40 min. fouth latitude, and in 68 deg. 20 min. of rivers, Bc. west longitude. This lake, like the adjacent sea, is navigated by ships, and other veffels, but is fometimes fubject to ftorms; and the first ship which the Spaniards built upon it, was drove on shore by a tempest, and broken to pieces. This lake abounds with fish, and wild fowls; befides, the towns and villages bordering upon the lake, are effecemed the most agreeable dwellings in Peru. From this lake iffues a large stream to the fouthward, which forms another lake, called Paria, not much inferior to the former in its dimensions, with several islands in it: and on the banks of these lakes are rich favannahs, or meadows, that feed great herds of cattle. There are alfo many lakes upon the mountains, which are the fources of many large rivers.

There is a great variety of fprings in that part of the country which is remote from the fea, but very few on the fandy plains near the shore. Acosta mentions one of a very extraordinary nature, near the quickfilver mines in Guancavitica, which, he fays, thows out hot water, that, in running a little way, turns into stone, and forms a rock, soft, light, yet very durable, fo as to ferve the inhabitants for building their houses. There are also at Cape St Helena, and feveral other places of Peru, fountains of liquid matter, called coppey, refembling tar or pitch, and put to the fame uses by mariners, for

#### Chap. II. Spanish Settlements in America. 191.

for the prefervation of their ropes, planks, and tackle: this is not only afferted by Acofta, but is alfo corroborated by Dampier and Funnel. At a farm near the city of Cufco, is a fountain whofe waters are naturally converted into falt, which would be very beneficial to the proprietor, if falt was not fo plentiful in the country.

The rivers of South America generally rife in the Andes, and particularly those of Peru as well as those of Chili. Some of these rivers bend their courfe to the eastward, and discharge their water into the North sea, or Atlantic ocean; and others run in a westerly direction, and fallinto the South fea. The former have an extenfive courfe, and fome of them the largest rivers in the world: but the latter are rather torrents than rivers, made by the annual rains, which commonly fall on the mountains between May and September, and are perfectly dried up; before January, the freams being fo shallow and rapid, that fcarce any of them are navigable. The rivers which rife to the east of the Andes, will be defcribed, when we come to treat of the countries through which they run.

There are about thirty rivers which rife on the west fide of the Andes, and, after passing through the empire of Peru, fall into the Pacific ocean.

As to the natural productions of Peru, they are rich, ufeful, and neceffary, ei- Trading ther as to vegetables, minerals, or commodities. animals: and the commodities for export may be reduced chiefly to thefe articles. I. Gold, filver.

2.

#### Part III.

filver, and precious stones. 2. Wine, oil, and brandy. 3. Vigonia wool. 4. Jefuits bark. 5. Guinea or Jamaica pepper. 6. Quickfilver. Of the first of these articles we have already treated in our defcription of New Spain, and there gave an account of the manner of procuring and purifying these metals, so shall not refume it here; only we may observe, that the mines of gold in Peru are mostly in the northern parts of it, not far diftant from Lima, but those of filver are mostly in the fouthern provinces. Gold and filver were fo plentiful in Peru, in the 16th century, that de la Vega relates, there had been exported from thence to Spain every year, for twenty-five years fucceffively, the value of 13,000,000 of pieces of eight, or 2,340,000 l. Sterling; befides what had paffed without account. And although many old mines are exhausted, yet they are daily opening new ones, fo that these commodities are at present as plentiful as formerly. The towns shift with the mines, a rich mine is always the founder of a town in proportion to its produce; the town which it fubfifts, when the mine is exhausted, difappears.

These mines belong to the person who first discovers them, who immediately presents a petition to the magistrates, to have such a piece of ground for his own, which is immediately granted; when they measure 80 Spanish yards in length, and 40 in breadth, for the discoverer, who chuses what place he thinks fit, and does what he pleases with it. The same quantity is then measured

#### Chap. II. Spanish Settlements in America. 193

meafured for the King, and fold to the beft purchafer : though if any other perfon is inclinable to work part of the mine himfelf, he bargains with the proprietor for a particular vein ; when all that he digs out is his own property, after paying the royal duty, which is the twentieth part for gold, and a fifth for filver.

It is very fuppofable, that thefe metals generate in the earth, like all other inanimate things; and it is likewife certain, from the Spanish accounts, that gold and filver, as well as other metals, are continually growing, and-forming themfelves in the bowels of their natural earths; which opinion is verified by experience in the mountains of Potofi, where feveral mines have fallen in, and buried the workmen, with their tools, whose bones, and some pieces of wood, have been afterwards discovered, with veins of filver actually running through them.

The working of these mines has proved very destructive to the Indians; for the Spaniards. oblige, this unfortunate people to fend annually a certain number from the villages of the country adjacent to the mines, who are compelled to work for a limited time, but afterwards may return. It is incredible to think how these mines (the most terrible fcourge with which God could afflict the inhabitants) have contributed to depopulate this country. Worfe they are than fword or pestilence, equally fatal to their lives; and where those escape, they are embittered by the circumstance of an ignominious flavery, without any profpect of end or mitiga-́В́Ъ tion.

194

tion. The effects of this fervitude would be still more fatal, if it were not for the use of an herb which the inhabitants call coca, to which they afcribe the most extraordinary virtues, and which they constantly use. Its qualities seem. to be of the opiate kind, and to have fome refemblance to those of tobacco; for it produces a kind of stupid composure. It is an antidote against poisons and poisonous effluvia, and makes those who use it subsist a long time without food. Though neceffary to those only who work in the mines, it is used for pleasure by all the Indians, who chew it constantly, though it makes those who use it, stink in a most offensive manner. This herb is gathered by the Indians. with many superstitious ceremonies, to which they attribute its virtues.

They make use of another prefervative, an infusion of the herb paraguay; fomething of the nature of tea. The confumption of this in Peru by all ranks of people is prodigious. Above 18,000 hundred weight is annually brought into Chili and Peru, and is worth, when the duty is paid, not lefs than 80,000 pounds Sterling. The finest of this species of tea comes from the country of the Jesuits in Paraguay.

CHAP.

Part III.

# C H A P. III.

The wines and fruits of Peru. The wool. The lamas and vicunnas, sheep of Peru. The be-zoar stone found in the stomachs of the wild cattle. Jesuits bark. Guinea pepper. Quick-silver mines. The surprising plenty of European cattle, &c. in Peru, and the manner of hunting and killing the wild cattle there.

THE fouthern part of Peru which lies with-out the tropic of Capricorn, Wines. produces wine in great plenty, but not in perfection proportionable. The Spaniards diflike and leave it to the Indians and negroes, chusing rather, what may feem odd, to regale in the brandy of the fame wine, which is likewife made and exported in large quantities, not only to all parts of Peru, but to Panama, and the ports of New Spain. The greatest quantity is made near a place otherwife of no confequence, called Moguaga; here it is faid they make annually of wine and brandy 100,000 jars, which M. Frezier reckons at 3,200,000 Paris pints; a vast quantity in a small territory. Wine is made in a great many places befides this, but of a goodness not superior. Francis de Caravantes, a nobleman of Toledo, planted the first vines in Peru, which he imported from the Canaries; but the Indians preferred their own liquor, made of Indian corn, to any wine made of grapes. They water their vineyards in all parts of

B b 2

Part III.

of Peru, chiefly by turning rivulets through them, or letting in the water from fome adjacent river or refervoir; for the country is fo hot and dry, that their vines will yield no grapes if they are not watered: therefore, when they would have them bear fruit, they water the vines, and have grapes at what time of the year they pleafe.

Wheat and barley were first imported into Peru about the year 1540, which thrive here extremely well, and yield a great increase in many parts of this large kingdom. Olives have been also carried over here, where

Olives have been alto carried over here, where Fruits. they never profper fo well as other European plants; though they are found very agreeable to the foil of Chili; however, Peru abounds in fugar canes, oranges, lemons, figs, cherries, apples, pears, quinces, nectarines, peaches, apricots, plumbs, and pomegranates; none of which were to be found here before the arrival of the Spaniards: but there were plenty of cocoa-nuts, cacao-nuts, pine-apples, guavas, plantains, and other fruits. The Indians had neither lettuce, radifles,

The Indians had neither lettuce, radiflies, turnips, garlick, onions, beets, fpinage, afparagus, melons, cucumbers, peafe, beans, or rice, of all which there are now greaty plenty; as there are alfo of rofes, jeffamines, and many odoriferous flowers, that were never feen there till they were imported from Europe. But the Indians had feveral forts of herbs, roots, and flowers unknown to the Europeans, particularly the caffavi root, which ferved the natives of

great

# Chap. III. Spanish Settlements in America. 197

great part of North and South America, inftead of bread. In the plains of Truxillo, there is a fort of tree which bears twenty or thirty flowers, all of them different in form, and of feveral colours, hanging together like a bunch of grapes, which is called *flor del paradifo*, or the flower of paradife.

Befides many gums and drugs common to America, it produces a famous bal- The balfam fam; which is peculiar to this coun- of Peru. try, and from thence called the balfam of Peru. This proceeds from the trunk and branches of a little tree. There are three forts of this drug : the first is called the balfam by incision, and is a white liquor. The fecond is called the balfam of the shell, which drops from the ends of the branches that are cut, where they hang fmall flafks to receive it, and thus it is drawn off till the tree will yield no more. But the third is a black balfam, which is made by boiling the bark, branches, and leaves of thefe little trees in water, and after they have boiled fome time, the fat, or fcum, that fwims on the top, is taken off, being of a dark brown colour, and, like the others, called balfam of Peru. The last is gcnerally used, as well in physic, as for perfumes; it ought to be vifcous, and of a turpentine confiftence, of a fweet agreeable tafte, and having fome refemblance of ftorax.

Wool makes one of the moft valuable commodities of the growth of this country; and is not more remarkable for its fine long staple than for the fingularity of the

the animal which produces it. It is fheared The lamas from a fort of fheep which they

The lamas. call lamas and vicunnas. The lamas have fmall heads, refembling, in fome measure, both an horfe and a sheep; their upper lip is cleft like that of a hare, through which, when they are enraged, they fpit about five or fix yards, against any thing that gives them offence, a fort of invenomed juice, which, when it falls upon the skin, causes a red spot and great itching. The neck is long like that of a camel, the body refembles that of a sheep, but the legs are much longer in proportion. Their height is about four feet and a half, and they are fo gentle and tractable that a child may govern them. This animal has a difagreeable finell; but its flesh, when young, is tender and delicate eating, being fo wholefome and inoffenfive, that it is preferred before chickens for the food of fick perfons. This animal is extremely useful, not only for the wool, which is very long and fine, but as it is a beaft of burden, ftrong, patient, and kept at a very fmall expense. Herrera observes, that 500 or 1000 of them go in a body, laden with any fort of goods, attended only by a few Indians, every fheep carrying one hundred weight, or at most a hundred and a quarter, but then it carries that weight a vast way without tiring; and they are fo fure-footed, that they will carry their burdens over rocks and precipices, when a man must travel on foot with difficulty. As foon as night approaches, the lama lies down, and no blows will force

198

Part III.

## Chap. III. Spanish Settlement's in America. 199

force him to move one foot after the time he deftines for his reft and food; it is true, they eat but little, and very feldom drink; befides, they never require fhoeing, becaufe they are cloven-footed, and have a callous fpungy matter at the bottom of their feet. The Spaniards alfo make ufe of them in the mines to carry the ore to the mills, and as foon as they are loaded, they go without any guide to the place where they ufe to be unloaded. It fhould be obferved, that they have a kind of fpur above the foot, which makes them fo fure-footed among the rocks, becaufe they make ufe of it to hold in paths of danger.

The vicunna is an animal refembling the lama, pretty much as the dromedary The vicunnas. does the camel. He is fmaller and fwifter, with a far finer wool, but otherwife exactly like the lama in all respects. Besides thefe, they have great numbers of wild sheep, of a leffer kind, which refort to the mountainous and defert parts of the country. The wool of these creatures is almost as fine as filk, of which the natives make feveral forts of ftuffs for cloathing, and dye it of various colours that never change or fade. It is not easy to ascertain what quantity of this wool is exported, manufactured or raw, out of Peru, either into New or Old Spain, but there is abundant reason to think that it is a very confiderable article of their trade.

There are feveral kinds of wild cattle in Peru, particularly on the Andes. Herrera and Acosta relate,

Part III.

relate, that the bezoar stone is found in the sto-The bezoar machs and bellies of moft of thefe, wild animals, there being fometimes ftone. two, three, or four together, of different shapes, fize, and colour, as black, dark, gray, white, and green, fome looking as if they were gilded, and covered with feveral coats or skins; some as big as filberts, others of the fize of walnuts; or pigeons eggs, many as large as hens eggs, and a few as big as oranges. All the beafts that engender the bezoar Rone chew the cud, and ufually feed among the rocks in the fnow. It is found both in the male and female, who eat or drink of fome pasture and waters that have been poifoned by particular herbs and venomous reptiles; but there is one herb which the vicunnas, and other beafts that engender this ftone, run to by inftinct, when they find themfelves poifoned, and by that means expel the infection; which makes the Indians of opinion; that the ftone in the ftomach of these animals is compounded of this herb, from whence it derives its virtues against poifons, and produces many other surprising effects. The stones are frequently formed in the stomach upon little pieces of wood, or shells which are found in the centre of the ball; but the Indians fay, that the cattle fent from Europe will not breed the bezoar, because they never eat that extraordinary herb. Herrera observes, that the value of this ftone confifts in its being of fingular fervice against infectious distempers, the spotted fever, and other dificafes; as alfo for the pleurify, ftopping of blood.

200

#### Chap. III. Spanish Settlements in America. 201

blood, and epilepfies. What the Indians relate of this matter feems to agree with what Pliny fays of the mountain-goats, which fed upon poifonous herbs, without fuffering any damage. Befides, it is well known that the bezoar stone is found intermixed with the dung of an animal of the goat-kind, called pazan, in feveral parts of the East Indies, particularly at Golconda and Cananor, the buds of a certain shrub which the animal uses to browfe being generally found in the middle of it, and is supposed to be the bafis on which this formation is made. A stone of one ounce in the East Indies is fold for about five pounds Sterling, and one of four ounces for about 100 pounds fame money; fo that the value of the stone is augmented according to its magnitude, the price increasing like that of a diamond : but the occidental bezoar is of a much inferior value to the oriental, being heavier, more brittle, of an impurer colour, and not fo gloffy. Bezoar is eafily fophiflicated, and the deceit as eafily discovered. The methods for proving it are, 1st, To steep it three or four hours in lukewarm water, when, if the water is not tinged, and the bezoar has loft none of its weight, it is pure. 2 dly, To try it with a fharp red-hot iron, when, if it enters the ftone, and the heat makes it fry and shrivel, it is fictitious. 3 dly, To rub it over a paper fmeared with chalk or lime, when, if it leaves a yellow taint on the former, or a green on the latter, it is good and valuable.

The fourth great article of their trade is Je-C c fuits

suits bark, so well known in medicine, as a spe-

cific in intermitting diforders, and Jefuits bark. the many other valuable purpofes which experience daily finds it to answer. The tree which produces this valuable bark grows in feveral parts of Peru; but the best and finest is found on the mountains in the province of Quito, and about forty miles round the city of Loxa. The tree is tall, and about the thickness of a cherry-tree, tapering from the root up-wards, but is destitute of branches till near the top, where they grow regular as if topped by art, and its leaves are round and indented. It bears a long reddifh flower, from whence arifes a kind of pod, in which is contained a kernel like an almond, clothed with a flight rind. The bark is blackish on the outside, but sometimes mixed with white fpots. Emery observes, that there are two forts of this tree, the one cultivated, the other wild; but the former is much preferred to the latter; that the best bark is of the most lively colour, refembling dark cinnamon. Bernard fays, that the bark which comes from the trees at the bottom of the mountains is thickest, because it receives most nourishment from the earth, being smooth, of a whitish yellow without, and a palish yellow within; that which comes from the trees at the top of the mountains, is abundantly more delicate; but the best kind grows in the middle of the mountains, where it has neither too much nor too little nourishment. There is also another kind of this bark which comes from the

## Chap. III. Spanish Settlements in America. 203

the mountains of Potofi, that is more brown, bitter, and aromatic than the former, but much fcarcer than any of the reft.

According to the most authentic accounts, the Spaniards diftinguish four forts of this precious bark; as, the cafcarilla colorada, or reddish bark; amarylla, or yellowish; crespilla, or curling; and blanca, or whitish. The colorada and amarylla are reputed the beft; the crefpilla is the produce of the fame fort of tree, only growing in a cold climate, which impairs the quality of the bark, and renders it whitish on the outfide, cinnamon-coloured within, and unfit for medicinal use; but the blanca is procured from another species of the tree, of a much larger trunk, and the leaves of a lighter green colour; the bark being a very thick fpongeous fubstance, whitish on the outside, and so tough as to require the force of an axe to flice it from the tree.

The feafon for cutting the bark is in August, when the country is dry; and the cutters are Indians, provided each with a large knife and bag. When they have fliced down the bark as high as they can reach, they fasten short sticks with withs to the tree, at proper distances, like the steps of a ladder, whereby they ascend and flice to the very top, till the bag is full, when they carry it to the low country to dry in an adjacent hut, which is done by spreading it in the open air, and turning it frequently; but if it happens to be cut wet, they carry it imme-C c 2 diately

Part III,

diately to the low country, otherwife it lofes its colour, turns black, and rots.

After a tree has been thus barked, it requires eighteen or twenty years to grow again; and there is an opinion, that the better fort of bark will foon be exhausted; or at least inacceffible, either on account of its distance from any inhabited place, and the impenetrability of the woods where it grows, or by the want of Indians to cut it, whose race, through the cruelties of the Spaniards, is like to be totally extinct.

This bark was but little known in Europe till the year 1640. The Jesuits of Rome first brought it into reputation in Spain and Italy in the year 1649; and in 1650, the Cardinal de Lago, of that order, introduced it into France, where it was at first fold for its weight in gold, though at prefent it is fold for about half a crown or three shillings Sterling per pound at Amsterdam. When reduced into a powder, it is called the cardinal's powder by foreigners, but more usually the Jesuits powder, or pulvis patrum. The Spaniards fay, that the use of this bark was accidentally difcovered by an Indian, who was in a fever, and drank the water of a lake wherein feveral of these trees were fallen, whereby he was cured; which incited fome curious perfons to inquire into the occafion, and thereby discovered this ineftimable medicine. It however met with great opposition at first, when Chiflet and Plempius diftinguished themfelves against it; but it is now almost univerfally allowed to be one of the best and greatest . remedies

204

## Chap. III: Spanish Settlements in America. 205

remedies within the whole province of medicine, especially for the cure of intermitting fevers, for which purpose it is given in substance, tincture, or infusion. The demand for this bark through all the kingdoms of Europe is very great, for which reason it makes a very confiderable and valuable part of the cargo of the galleons.

Guinea pepper, Agi, or, as we call it, Cayenne pepper, is a very confiderable article Guinea pepin the trade of this kingdom, as it per. is used all over Spanish America in almost every thing they eat. This is produced in the greatest quantity in the vale of Arica, a district in the fouthern parts of Peru, from whence they export to the annual amount of 600,000 crowns. The diffrict which produces this pepper in fo great abundance is but finall, and naturally barren; its fertility in pepper, as well as in grain and fruits, is owing to the advantage of a fpecies of extraordinary manure, brought from' an island called Iquiqua. This is a fort of yellowish earth, of a fætid smell. It is generally thought to be the dung of birds, because of the fimilitude of the fcent, and becaufe feathers have been found very deep in it, and that vaft numbers of fea-fowls appear upon that and all the adjacent coafts. But, on the other hand, whether we look upon this fubstance as the dung of these fea-fowls, or as a particular species of earth, it is almost equally difficult to conceive how the fmall island of Iquiqua, not above two miles in circuit, could fupply fuch immenfe

immenfe quantities, and yet after fupplying upwards of twelve ships loads annually for a century together for the distant parts, and a vassival larger quantity for the neighbourhood, it cannot be observed that it is in the least diminished, or that the height of the island is at all leffened.

Another part of the riches of Peru con-Quickfilver fifts in their quickfilver or mermines. cury, of which they have feveral mines in the audience of Lima; particularly in the mountains of Oropeza, and Guancavilca, near the city of Guamanga. Mercury denotes a fluid mineral matter, perfectly refembling filver in fufion, and is found under three feveral forms: 1. In ruddy glebes or clods, called *cinnabar*. 2. In hard ftony glebes; or a mineral fubftance, of a faffron and fometimes a blackifh colour. 3. It is alfo found pure; for, upon opening holes in the beds of ftones, there fometimes gufhes a vein, or ftream of pure mercury: which is the beft fort for chymical preparations.

There are mines of Mercury in Hungary, Spain, and Italy, of all the above-mentioned kinds; but the Peruvian quickfilver is generally made from the cinnabar, which is a mineral ftone, red, heavy, and brilliant; being efteemed as marcafite of quickfilver; or rather as quickfilver petrified, and fixed, by means of fulphur and a fubterraneous heat: for it can be chymically reduced, without much trouble or lofs, to the nature of mercury; and each pound of

Part III.

Chap. III. Spanifs Settlements in America. 207

of good cinnabar will yield fourteen ounces of mercury.

The native Indians wrought these mines a confiderable time before the Spaniards fettled in their country, without understanding the nature or value of the mineral; for as the cinnabar yields a vermilion, they only fought after this ftone, which they called *limpi*; and ufed it like the ancient Romans, or modern Ethiopians, for painting their faces and bodies on festivals and rejoicing times; or elfe to beautify the images of their deities. Nor were these quickfilver mines difcovered by the Spaniards, till the year 1567. When Henrique Garcias, a native of Portugal, happened to fee a piece of ore, which the Indians called limpi, when he imagined that this must be the same as the European vermilion, which he knew was extracted out of the fame ore with quickfilver ; therefore he went to the mines to make the experiment, and found it to be according as he had conjectured. Upon this discovery, a great number of labourers were immediately employed to draw the quickfilver out of the mines in the neighbourhood of Guamanga, one of which is defcribed by Acofta to be a rock of hard ftone, intermixed with quickfilver, extending about eighty yards in length, forty in breadth, and 140 in depth, being fo capacious that 300 men might work in it together.

The refining or feparating of quickfilver from the ore, is done in the following manner. The ftone, or hard ore wherein it is found, is beat to powder, and put into the fire in earthen pots well luted and clofed. When the ftone is melted by the heat of the fire, the quickfilver feparates itfelf, and afcends till it reach the top of the pot, where it congeals. Though if it was fuffered to pafs out, without meeting any hard fubftance, it would afcend till it became cold, and then congealing it would fall down again ; but, as the ore is melted in earthen pots, it congeals at the top of them, which they unftop, and draw out the metal when it is cold; for if there remains any fume or vapour, it endangers the lives of the workmen; who at leaft will lofe their teeth, or the ufe of their limbs.

Quickfilver is the heavieft of all metals, except gold, to which it is as 13,943 to 19,640, to lead as 13,943 to 11,356, and to filver as 13,943 to 10,091.

Mercury is fold at Amfterdam for about one pound fourteen fhillings, where it fhould be chofen white, fluid, clean, quick, and of a beautiful water-colour; but if the colour is brown and leady, if it fticks to the hands, or runs in minute globules, it is a fign that it is not pure, that there is fome mixture of lead, and confequently that it is good for nothing.

The uses of mercury are very confiderable in refining gold and filver, in gilding, making looking-glasses, and especially in medicine. But the Spaniards never refined their Peruvian filver with mercury, before the year 1571, when Ferdinandez de Valesco came there from Mexico, and put them into this method : after which

they

#### Chap. III. Spanish Settlements in America. 209

they conveyed their quickfilver in fkins to the port of Arica, by fea, and from thence by landcarriage to the mines of Potofi; where they extracted much greater quantities of filver from their ore by mercury, than they were capable of doing alone by fire: for thefe mines annually confume about feven thoufand quintals \* of mercury, in refining filver, exclusive of the confumption of other mines. The men who work in the mines of this mineral, are yet more fubject to difeafes than thofe who toil in the others, and they make use of the fame prefervatives of Paraguay tea and coca.

We do not find that any other part of the Spanish dominions in America produces this mineral, except this province. Mexico and Terra Firma are supplied with it from Old Spain, which is brought on the King's account only, except that some arrives from Peru in a contraband manner. In Peru likewise it is monopolized by the crown.

Before the Spaniards established themselves in this country, the Peruvians had no horses, cows, assesses or other creatures of the European species; but these were afterwards carried over, and have multiplied amazingly.

The first horses and mares were carried over about the year 1495, from Andalusia in Spain, to Cuba and Hispaniola; from whence they were transported to Mexico and Peru, where they

\* A quintal is equal to one hundred pound weight.

were

were of great fervice to the Spaniards in the conquefts of these countries. They were at first usually fold for about 450 pounds Sterling apiece; but this exorbitant price was soon abated, for the horses multiplied here in a surprising manner, and were turned loose into the fields,

where they have proved a better race than their Spanish fires, being broke, and made fit for fervice at three years of age.

Cows and oxen were alfo highly valued, on their firft importation, being fold for 200 crowns ahead; but, in 1554, the price was reduced to 100, and in 1590 they were fo prodigioufly increafed as to be fold for twenty or thirty fhillings. They were afterwards fuffered to run wild in the mountains, where they are hunted and killed for their hides, which make part of the cargoes for fuch fhips as fail to Spain; but they are at prefent in fuch plenty, that their flefh is little valued either by the Spaniards or Indians.

The Spaniards have a particular manner of Method of hunting and hamftringing the wild hunting the bulls and cows that are found in the wild cattle. forefts and meadows; which, according to Dampier, is done as follows. The hockfer is a perfon who is conftantly employed, and becomes very expert in this way of hunting. He is mounted on a good horfe, bred up to the fport, who knows when to advance or retreat, without giving his rider any trouble to manage him. The hunter carries a pole about fifteen feet long, to which the hockfing-iron is fixed

## Chap. III. Spanish Settlements in America. 211

fixed by a focket, being made in the shape of a femicircle with a very fharp edge, and the corners about fix or feven inches afunder. When the hockfer is mounted, he lays the pole over the head of his horfe, with the iron forward, and then rides after his game, which he ftrikes just above the hock with his iron, and hamftrings the beaft; who immediately faces about, and makes at the huntfman with all his force ; but the horfe is taught to wheel off to the left, and is too fwift for the wounded animal. If the hamstring is not quite cut asunder by the stroke, the beast breaks it, by continually springing out his leg, when he can go but on three legs, yet still jumps forward to be revenged on his enemy. The huntiman then rides up foftly to him, and ftrikes his iron into the knee of one of his forelegs, when the prey immediately tumbles down; upon which the hockfer difmounts, and with a ftrong fharp-pointed knife quickly difpatches him. The hunter immediately mounts again, and rides in purfuit of more game, leaving the skinners that follow him, to take off the hide, which is all they regard in Peru, where the wild beef is fo plentiful. The Spaniards only hunt the bulls and old cows, leaving the young cattle to breed; whereby they always preferve their flock entire.

All kinds of European animals are at prefent to be found in the greatest plenty throughout all parts of Peru. The Indians had only one fort of tame fowl before the arrival of the Spaniards, called *nunna*, or the fucker, which is D d 2 between

Part III.

between the fize of a goofe and a duck : but the Spaniards have introduced all kinds of European poultry, which have increased in a wonderful manner; however, the Indians had a great variety of wild-fowl, and birds, both on land and on water; particularly eagles, hawks, parrots, herons, wild ducks, wild geese, fwans, partridges, wood-pigeons, and turtle-doves, &c.

The South fea, along the coaft of Peru, is well replenished with all manner of fish; and particularly a kind of pilchards, which are the principal subsistance of those people who inhabit the places near the fea. But the Peruvian rivers scarce afford any kind of fish, which is attributed to the rapidity of their course from the Andes, and the scale of the source of the sourc

#### C H A P. IV.

An account of the three grand divisions of Peru, with a description of their cities and principal towns; their situation, trade, and number of inhabitants.

His extensive country is divided into three audiences or jurifdictions, which are, Quito; Lima, or Los Reyes; Los Charcas, or La Plata.

1. Quito is the most northerly province of Quito. Peru, and is bounded on the north by Popayan, on the east by part of

the country of the Amazons, on the fouth by the province of Lima, and on the weft by the South

## Chap. IV. Spanifb Settlements in America. 213

South fea. It extends in length from north to fouth about 420 miles, and from west to east 360 in fome places, in others more, but generally lefs. The Spaniards have also subdivided this audience into the three diffricts of Quito Proper, Los Quixos, and Los Pacamores. The climate is immoderately hot, and very unwholefome in many places. The foil is commonly fandy and barren; but there are fome fpots of tolerable good ground, which are well cultivated. They have abundance of kine and sheep, though there are few of the lamas or Peruvian sheep, because the inhabitants make them carry too heavy loads, and fuffer them to perifh with too much labour. There is a great deal of faltpetre in feveral parts of this province where the foil is marshy, which makes very good gunpowder; there is alfo excellent fulphur, which is of a gold colour, and as clear as the faltpetre, being gathered out of the veins that are near the gold mines, of which there are feveral in the country, as well as of filver, quickfilver, and copper, befides emeralds, and many kinds of medicinal drugs.

The principal cities and remarkable places in this province are,

1. Quito, which gives name to, and is the metropolis of the whole audience, is The city of fituated in a valley at the foot of Quito. very high mountains, in weft longitude 77 deg. and 20 min. of fouth latitude, about 720 miles north of Lima, and 120 eaft of the fea. It is a populous and opulent city, built after the Spanifh

Part III.

nish model, with four squares, a cathedral, two other churches, and feveral monasteries, being the fee of a bishop, who is fuffragan to the metropolitan of Lima, and has above 50,000 tributary Indians in his diocefe, divided into eighty-feven diftricts. There are about 3000 Spaniards in the city, and 30,000 Indians. The prefident and all the other officers of the audience refide here, where wine, oil, fpices, and European merchandifes are first brought from the South fea, by the river of Guiaquil, and then by land in carts. There is a grand manufacture here of cloth and ferges, which make the cloathing of the common people all over Peru. The inhabitants also draw immense riches from the adjacent mountains, where there are many lavaderoes of gold. Befides, the Indians have their fairs and markets, where they bring their fruits, cattle, cheefe, cloths of cotton, wool, and flax, cables and leather, which they fell by way of exchange, and not by any certain weight or meafure. It is faid that the Indians who live near this city are more civilized, ingenious, and industrious than all the other nations of Peru: It is usual for the inhabitants to quit this province, when they have accumulated fufficient fortunes, and fettle in other places, becaufe of

the inclemency of the climate here. 2. Tacunga is about twenty miles fouth of Tacunga. Quito, and is a populous town, whose inhabitants weave woollen cloth, in which they carry on a confiderable trade.

3. Baeza

214

## Chap. IV. Spanifs Settlements in America. 215

3. Baeza is about fifty miles fouth-east of Quito, being the principal town of the province called Quixos, and the refidence of its governor.

4. Zamora is 210 miles fouth of Quito, and 120 eaft of the South fea. It is a fine city, elegantly built with ftone and timber, having gold mines in its neighbourhood, with plenty of cattle, fresh water, fish, corn, herbs, falt, and honey.

5. Loxa is fifty miles west of Zamora, situated in the pleafant valley of Caxibamba, on the banks of the river Catumayo, in 4 deg. 15 min. of south latitude; but it is of no confequence as a place of trade.

6. Paita is a sea-port town, built on the fand clofe by the fea, in a fmall bay un-Paita. der a hill, having its fituation in 80 deg. of west longitude, and 5 deg. 12 min. fouth latitude, about 325 miles fouth-west from Quito. It contains about 200 families, whole houses are only ground-floors, the walls built of fplit cane and mud, and the roofs thatched with leaves; but these flight buildings are sufficient for a climate where rain is not feen in many years, and is always confidered as a prodigy. The inhabitants are principally Indians and negro flaves, or at leaft a mixed breed, the whites being very few. In the middle of the town is a square, on one fide of which is a fort mounted with eight cannon, and on the other fide is the governor's house: but during the last war the fort had neither ditch nor outwork, being furrounded

furrounded only with a plain brick wall, and the garrifon confifting only of one weak company; which made it fall an eafy conqueft to Commodore Anfon on the 11th of November 1741, who loft only one man in the attack, obtained a great booty, which the Spaniards valued at a million and a half of dollars, or 268,750 pounds Sterling, and burnt the whole town to afhes, except the two churches, which were at a diffance, and where he had confined his prifoners.

The country about Paita is mountainous and barren, having neither wood nor water; butthe port, though in reality little better than a bay, is efteemed the best on that part of the coaft, and is indeed a very fecure and commodious harbour, where there is room enough fora fleet of fhips, and good anchoring in any depth, from fix to twenty fathom water, op-polite to the town; upon which account it is frequented by all veffels coming from the north, because the ships from Acapulco, Sansonnate, and Panama can touch no where elfe for refreshments in their passage to Callao, and the length of these voyages tenders it imposible to perform them without calling upon the coaft for a fupply of fresh water. Besides, the port of Paita is the usual place for difembarking those passengers that are bound to Lima from Acapulco or Panama; for, as it is 200 leagues from Paita to Callao, and as the wind is generally contrary, the paffage by fea is very tedious; but by land there is a tolerable good road parallel

## Chap. IV. Spanish Settlements in America. 217

parallel to the coaft, with many flations and villages for the accommodation of travellers.

7. Guiaquil is fituated in 2 deg. 30 min. fouth latitude, about 185 miles fouth-weit of Quito, and 565 north of Lima.

It is built on both fides of a navigable river of the fame name, about twenty miles from the mouth of it, part of it lying on the afcent of a steep hill, and the other part in low marshy ground. It is divided into the old and new town, and confifts chiefly of one ftreet, about one mile and a half in length. Here are five churches, feveral convents, and 500 houfes at least, besides houses built of bamboe canes for the common people; the whole being defended by three forts, two of which are upon the fides of the river, and the other upon the hill. The town is governed by a corregidor appointed by the King; and there is also a council for managing the affairs of the government, and determining caufes of confequence.

The mouth of the river Guiaquil is about two miles wide, is navigable fourteen leagues above the town for large veffels, and the tide flows twenty leagues beyond; but the country on both fides of it is low and marfhy, incumbered with fhrubs and mangroves; however, there are feveral villages and farmhoufes on its banks, which fupply the town with plenty ofprovifions. There is a low ifland in the river about a mile long, and four miles below the town, which divides the ftream into two very fair channels for fhips to pafs up and down. E e The

Part III.

The river is almost a league over about this island, in which spacious place ships of the greatest burden may ride associates but the best place for ships is nearest to that part of the land where the town stands, which is feldom without shipping.

There is plenty of timber brought from the ifland of Gallo, and other places, to Guiaquil, on which account a great number of fhips are built there for his Catholic Majefty. The inhabitants carry on a confiderable trade, efpecially in exporting timber, cocao, cotton, rice, falt, falt-fifh, dried beef, hides, tallow, farfaparilla, and other drugs. They are fupplied with flour from Truxillo, and other fouthern parts; with woollen cloth and ftrong bays from Quito, where they are manufactured. They receive wine, brandy, oil, olives, and fugar, from Pifco, and other towns to the fouthward; befides, a market is daily held in boats and barklogs on the river, where all forts of provisions are fold very cheap.

The Spaniards have a confiderable garrifon in Guiaquil, yet no town has fuffered more from the depredations of the bucaneers. Dampier and his companions furprifed it in 1685; but it was actually taken and plundered in 1687 by the French, who took the governor and 700 prifoners, from whom they exacted 46,958 pounds Sterling. And Capt. Rogers took it by florm in 1709, when he plundered it, and obliged the Spaniards to pay 11,125 pounds Sterling

218

Chap. IV. Spanish Settlements in America. 219

ling to ranfom the town and fhips in the harbour.

There are a great many other towns and villages in this audience, where the Spaniards carry on a confiderable trade, and where the inhabitants have valuable manufactures.

2. The audience of Lima, or the royal audience, is bounded on the north by The audience that of Quito, on the east by the of Lima. Cordillera mountains, and on the fouth by the audience of Los Charcas, being about 750 miles in length from north to fouth; but its breadth is very unequal, on account of the bending of the coaft, and becaufe it is pent in by the mountains in feveral places. The country abounds with mines of gold, filver, quickfilver, vermilion, and falt. There is plenty of cattle, fowl, fifh, with all provisions common to Europe, except butter, inftead of which they always use lard. They have great quantities of oil, wine, and brandy, though not fo good as in Europe. Though it never rains here, yet the want of this is fupplied by refreshing dews in the nocturnal feation; fo that they have as good corn and fruits as in Europe, or anywhere elfe. In the valleys near the fea the climate is very fcorching, but tempered with breezes from the fea and mountains; far up the country in the mountainous parts it is very rainy and like winter, when it is very dry weather, and like fummer, in the plains.

The most remarkable cities and other places in this province are,

E e 2

1. Lima,

1. Lima, the capital of the audience, and The city of the metropolis of all South America, is fituated in a beautiful plain, Lima. on the banks of a river of the fame name, in 12 deg. 6 min. of fouth latitude, five miles east from the port of Callao, which is its port. It was founded by Francis Pizarro the conqueror of Peru, on the 18th of January 1535, who called it *Cividad de los Reyes*, or, The city of the Kings, the plan of which is extremely well contrived, the ftreets perfectly ftraight, and of a convenient breadth. It extends in length about four miles, and two broad, furrounded with walls twenty feet high, which are ornamented with baftions; but they cannot fupport the weight of cannons, and could be of no de-fence against any European enemies.

Its distant appearance, from the multitude of lofty fpires and cupolas, is extremely majeftic; and when you enter it, you fee the ftreets laid out with the utmost regularity, cutting each other at equal diffances, and at right angles : the houfes, on account of the equality of the climate, are flightly roofed, as they are built low, and of light materials, to avoid the confequences of earthquakes, frequent and dreadful in this country; but they are elegantly plastered and painted on the outfide, fo as to have all the appearance of free stone. The form of the city is triangular, the bafe or longest fide extending along the banks of the river. It has in its whole circuit feven gates and three poiterns. What adds greatly to the beauty and convenience

#### Chap. IV. Spanifs Settlements in America. 221

convenience of this city is, that most of the houfes have a garden, watered by canals drawn from the river, fo that each family commands a little running stream for his own use, which, in a dry and hot country like this, is no fmall matter of convenience and delight. Here is a grand walk by the river-fide, of confiderable length, confifting of five rows of fine orangetrees. To this the company reforts in the evening, drawn in their coaches and calashes. Such is the opulence of this city, that, exclusive of coaches, there are kept in it upwards of 5000 of these carriages. The calash is drawn by a fingle horfe or mule, and goes on a fingle pair of wheels; yet fometimes, by the gilding and other decorations, the price of one of them amounts to 1000 crowns.

In the midft of the city is a grand fquare, which may be justly accounted the finest in the world ; on the east fide of it stands the cathedral; on the north the palace of the viceroy; on the weft feveral elegant edifices ; and on the fouth are piazzas, with handfome fhops of all forts. Lima has fifty-four churches, taking in the cathedral, the parochial, and conventual; thirteen monasterie's of men, (besides six colleges of Jesuits), one of which contains 700, and another 500 friars and fervants; twelve nunneries, the principal of which has not lefs than 300 nuns; and twelve hospitals, besides foundations for the portioning of poor girls. All the churches, both conventual and parochial, as alfo the chapels, are large, and partly constructed of ftone,

ftone, and adorned with paintings and other ornaments of great value : particularly the cathedral, the churches of St Dominico, St Francis, St . Augustine, the fathers of mercy, and that of the Jefuits, are fo fplendidly adorned as to furpafs description, a full idea of which can only be obtained from the light of them. The altars, from their bases to the borders of the paintings, are covered with maffive filver wrought into various ornaments. The walls of the churches are also hung with velvet, or tapestry of equal value, adorned with gold and filver fringes; (all which in this country is remarkably dear), and on these are suspended pieces of plate in various figures. If the eye be directed from the pillars, the walls, and the ceiling to the lower part of the church, it is equally dazzled with glittering objects prefenting themfelves on all tides : among which are the candlefticks of maffive gold and filver fix or feven feet high, placed in two rows along the nave of the church ; emboffed tables of the fame metal, fupporting fmaller candlefticks; and in the intervals between them, pedeftals, on which ftand the ftatues of angels. In fine, the whole churches are covered with plate, or fomething equal to it in value. So that divine fervice in these churches is performed with a magnificence fearcely to be imagined.

If fuch incredible riches are bestowed on the body of the church, how can imagination itself form an idea of those more immediately used in divine worship, such as the facred vessels, the chalices?

# Chap. IV. Spanifs Settlements in America. 223

chalices? Ec. In the the richnefs of which there is a fort of emulation between the feveral churches. In thefe the gold is covered with diamonds, pearls, and gems, fo as to dazzle the eyes of the fpectator. The gold and filver ftuffs for veftments, and other ornaments, are always the richeft of the kind that can poflibly be procured.

The magnificence of the inhabitants of Lima on public folemnities is difplayed, with a peculiar dignity: fo that among all those observed in America, the public entrance of the viceroy is the most fplendid, and in which the amazing pomp of Lima is particularly exhibited. Nothing is then to be feen but rich coaches and calashes, laces, jewels, and fplendid equipage, in which the nobility carry their emulation to an aftonishing height.

They tell a very remarkable fact, that may help us to fome idea of the vaft wealth of this city. When their viceroy the Duke de la Palata made his public entry in 1682, they caufed two of the principal firgets to be paved with ingots of filver that had paid the fifth to the King; of between twelve and fifteen inches long, four or five in breadth, and two or three in thicknefs; the whole of which could not amount to lefs than fixteen or feventeen millions Sterling.

Befides the ceremony of this public entry, attended by the feveral bodies of the city, civil and ecclefiaftic, in a very grand proceffion, and very fumptuous collations, &c. there are alfo alfo other folemnities, fome of which are annual; and on thefe occafions the riches and liberalities of the inhabitants are no lefs confpicuous, particularly on new-year's day, and on the twelfth day in the morning.

The tide of this vaft wealth is fed from very copious fources, this city being the grand magazine for almost all the plate of Peru, which is coined here; and for the large manufactures and natural products of that kingdom, for those of Chili, and for all the luxuries and conveniencies brought from Europe and Afia.

The number of Spaniards in this city, according to the lowest computation, is faid to amount to 30,000, and the whole of the inhabitants of all casts and colours do not fall short of 70,000 fouls.

All ranks of people here greatly affect fine cloaths, and drefs in a most extravagant manner; and it may be faid, that the finest stuffs are more generally seen at Lima, than in any other place; vanity and oftentation being under no restraint.

Lima is the ufual refidence of the viceroy of Peru, who is as abfolute as a king, in the courts here, as alfo of Los Charcas, Quito, Chili, Panama, and Terra Firma, being governor and captain-general of all the kingdoms and provinces in South America. Although this government is only triennial, yet, at the expiration of that term, the fovereign, if he pleafes, may prolong it. This office is of fuch importance, the viceroy enjoys all the privi-

224

# Chap. IV. Spanish Settlements in America. 225

leges of royalty. He is abfolute in all affairs, whether political, military, civil, criminal, or relating to the revenue, having officers and tribunals under him, for executing the feveral branches of government; fo that the grandeur of this post is in every particular equal to the title. For the fafety of his perfon, and to maintain the dignity of his office, he has two bodies of guards, one of horfe, confifting of 160 private men, a captain and a lieutenant : their uniform is blue, turned up with red, and laced with filver. This troop confifts entirely of picked men, and all Spaniards. These do duty at the principal gate of the palace; and when the viceroy goes abroad, he is attended with a piquet guard, confifting of eight of thefe troopers. The fecond is that of the halberdiers, confifting of fifty men, who are likewife all Spaniards, dreffed in blue uniform, and crimfon velvet waiftcoats laced with gold. Thefe do duty in the rooms leading to the chamber of audience, and private apartments. They alfo attend the viceroy when he appears in public, or vifits the officers and the tribunals. The only officer of this body is a captain, whole poft is reckoned very eminent. Befides these there is another guard within the palace, confifting of 100 men, a captain, a lieutenant, and fublieutenant, being a detachment from the garrifon of Callao. These are occasionally employed in executing the governor's orders, and the decrees of the tribunals, after they have received the fanction of his affent.

Ff

The

Part III.

The viceroy, befides affifting at the courts of juftice, and the councils relating both to the finances and war, gives every day public audience to all forts of perfons; for which purpofe there are in the palace three very grand and fpacious rooms. In the firft, which is adorned with the portraits of all the viceroys, he receives the Indians and other cafts; in the fecond, he gives audience to the Spaniards; and in the third, where, under a rich canopy, are placed pictures of the King and Queen then reigning, he receives thofe ladies who defire to fpeak to him in private, without being known.

It is reported, that the viceroy can raife 100,000 foot, and 20,000 horfe, throughout the whole extent of the kingdom; but it is certain, that he cannot arm the fifth of them. The garrifon of Lima confifts of the militia of the city; being fourteen companies of Spanish infantry, feven companies of the corporation of commerce, eight companies of Indians, and fix companies of mulattoes, of 100 men each; with ten troops of Spanish horfe, of fifty men each, being 4000 in all.

The fettled appointment of the viceroy is 40,000 pieces of eight, or 7166 pounds Sterling, befides occafional falaries, which amount to twice as much, and perquifites which exceed all computation. For as often as he goes to Callao, he is entitled to 3000 pieces of eight for that little airing; he has 10,000 for every progrefs into more diftant parts; he has the fole difpofal of above à hundred great magiftracies; and,

## Chap. IV. Spanish Settlements in America. 227

and, in fhort, the granting of all triennial employments, both civil and military, throughout the extent of his ample jurifdiction.

Is is impoffible to conceive a more pleafant and delightful climate, than that where Lima is fituated. The temperature of the air here differs very widely from that of Carthagena, though in the fame latitude with it, namely, the one in the northern, and the other in the fouthern hemisphere: for though that of Carthagena is hot to a degree of inconvenience, this of Lima is perfectly agreeable; and the difference of the four feafons is fenfible; all of them are moderate, and none of them troublesome. The inhabitants enjoy all the advantages of the feafons at once; for the products of all parts are brought here; fo that the markets of Lima have all kinds of fruit the whole year round in full perfection. There are variety of pleafant valleys in its neighbourhood, watered either naturally, or artificially, by living streams, adorned with orange-groves, and whatever elfe can render them pleafing or elegant. But with all thefe bleflings and advantages, which greatly exceed most places in the world, it is fubject to many inconveniencies : particularly, during the fummer, the citizens are most terribly tormented with fleas and bugs, from which the utmost care is not fufficient to free the inhabitants. Their prodigious increase is partly owing to the dust of that dung with which the streets are continually covered; and partly to the flatnefs of the roofs, where the fame duft, wafted thi-

Ff2

ther

ther by the winds, produces these troublesome infects, which are continually dropping through the crevices of the boards into the apartments; and by that means render it impossible for the inhabitants, notwithstanding all their pains, to keep their houses free from them. The mosquitos are likewise very troublesome, but much less so than the former.

The next, and indeed a moft dreadful circumstance, is that of earthquakes, to which this country is fo fubject, that the inhabitants are under continual apprehensions of being buried in the ruins of their houses. Several deplorable instances of this kind have happened in this city, and lately proved the total destruction of its buildings. These terrible concussions of nature are not regular, either with regard to their continuance or violence; but the interval between them is never of a length fufficient to obliterate the remembrance of them.

Thefe earthquakes, though fo fudden, have their prefages. One of the principal of which is a rumbling noife in the bowels of the earth, fome time before the fhocks are felt : and this noife does not continue in the place where it was first produced; but feems to pervade all the adjacent fubterraneous parts. This is followed by difinal howling of dogs, which feem to have the first perception of the approaching danger. On thefe portents the terrified inhabitants fly from their houses into the streets, with such precipitation, that if it happens in the night, they appear quite naked; fear, and the urgency of

#### Chap. IV. Spanish Settlements in America. 229

of the danger, banishing at once all fense of decency.

This fudden concourfe is accompanied with the cries of children waked out of their fleep, blended with the lamentations of the women, whofe agonizing prayers to the faints increafe the common fear and confusion. The men are alfo too much affected to refrain from giving vent to their terror; fo that the whole city exhibits one dreadful fcene of confternation and horror. Nor does this end with the fhock, none venturing to return to their houses, through fear of a repetition, which frequently demolishes those buildings which had been weakened by the first.

The nature of this country is fo adapted to earthquakes, that all ages have feen their terrible devastations.

Since the year 1582, there have happened about fifteen concuffions, befides that on the 28th of October 1746, at half an hour after ten at night, five hours and three quarters before the full of the moon; which began with fuch violence, that, in little more than three minutes, the greatest part, if not all the buildings, great and small, in the whole city, were destroyed; burying under the ruins those inhabitants who had not made sufficient haste into the streets and squares, the only places of fastery in those terrible convulsions of nature. At length the dreadful effects of the first shock ceased, but the tranquillity was of short duration : concufsions returning so repeatedly, that the inhabitants.

tants, according to the account fent of it, computed 200 in the first twenty-four hours : and to the 24th of February the following year (1747), when the narrative was dated, no less than 450 shocks were observed; some of which, if less permanent, were equal to the first in violence.

The fort of Callao (about five miles weft of Lima) at the very fame hour tumbled into ruins. · But what it fuffered from the earthquake in its buildings, was inconfiderable, when compared with the terrible catastrophe which followed. For the fea, as is usual on fuch occasions, receding to a confiderable distance, returned in mountainous waves, foaming with the violence of the agitation, and fuddenly turned Callao and the neighbouring country into a fea. This was not however totally performed by the first fwelling of the waves. For the fea retiring further, returned with still greater impetuosity, the flupendous water covering both the walls, and other buildings of the place; fo that whatever had escaped the first, was now totally overwhelmed by those terrible mountains of waves; and nothing remained, except a piece of the wall of the fort of Santa Cruz, as a memorial of this terrible devastation. Here were then twenty-three ships and vesiels, great and small, in the harbour, of which nineteen were funk, and the other four carried by-the force of the waters to a confiderable distance up the country. Here the number of inhabitants exceeded 4000, of which only a few escaped. And it was com-1 20 puted

# Chap. IV. Spanifs Settlements in America. 231

puted that the number of people who loft their lives at Lima at the fame time amounted to no lefs than 18,000. However, as the port of Callao is fo excellent, and as it is that by which the trade of Lima wholly, and that of all Peru in a great meafure, must be carried on, we cannot doubt, but that a new city is already built there; and that Lima is reftored to its former luftre; efpecially as this latter is the centre of fo vaft a trade, and the feat of fo great a government.

2. Callao, the harbour of Lima, extends along the coaft, on a low flat point of land; being the largeft, faireft, Callao.

and most fecure road in the South fea; for ships anchor in what depth of water they pleafe, and without any apprehension of danger. The island of St Lawrence breaks the furges that come from the fouth-weft, being fituated to the north-west of the little island of Callao, which lies before the town: but in the opening between thefe iflands, there are fome other fmall isles or rocks. The town contains 500 families, and was fortified in the reign of King Philip IV. with an inclosure flanked by ten baftions on the land-fide, as also by fome redans and plain baftions on the edge of the fea, where there were four batteries to command the port and road : but at prefent the garrifon and fortifications are faid to be very inconfiderable.

All the conveniencies and neceffaries for navigation are to be found in this port, particularly wooding and watering. It has an extensive trade: here they import from Chili cordage, leather,

Part III.

leather, tallow, hides, dried fish, and corn; from Chiloe cedar planks, woollen manufactures, particularly carpets; fugars, cocoa, and naval ftores from Guiaquil, and other places of Peru; as also the commodities of Mexico, and the East Indies from Acapulco.

Befides the annual ships to Acapulco, there are two flotas which annually fail from Callao, the one for Arica, and the other for Panama. The former fails about the end of February, and receives at Arica the filver fent from Potofi, and returns towards the end of March. The latter fails for Panama the beginning of May, with the wealth brought from Potofi and Chili; as alfo with the King's revenue, and merchandifes from all parts of Peru: and on the return of this fleet, laden with European commodities, they are difposed of from hence, partly by sea, and partly by land, to all the different places to which they are deftined.

3. Cufco, anciently the capital of Peru, and

Cufco. the feat of the yncas, is fituated in west longitude 71 deg. 30 fec. and 13 deg. 15 min. of fouth latitude about 360 miles to the eaftward of Lima. It ftands in an uneven country furrounded with mountains on every fide, near the rivers of Yncay and Apurina; still retaining some marks of its former magnificence, being fuch as will always strike intelligent strangers with a just idea of the wildom, opulence, and potency of the ancient monarchs of the country; notwithstanding of all the pains which the Spaniards have taken to pull down and deftroy

#### Chap. IV. Spanish Settlements in America. 233

destroy the royal palaces, and magnificent temples, out of whofe ruins they have built their own houses.

De la Vega compares ancient Cufco to ancient Rome : for, 1/t, Like Rome, he observes, it was founded by its own kings; and, 2dly, Was the metropolis of many nations subjected to its empire. 3dly, It might be compared to Rome for the excellency of its laws; and, 4tbly, For the admirable virtues and endowments of its citizens, who were remarkable for their political virtues, as well as military discipline. However, he fays, it must be confessed, that Rome had one great advantage in her knowledge of letters, which rendered her fame immortal, whereas poor Cufco had only memory and tradition to deliver its great actions to posterity.

The city is now entirely built after the Spanish manner, being thrown into large squares with piazzas, from whence the principal ftreets, which are very long and broad, run in direct lines, and these again are crossed by other streets at right angles. Befides the cathedral, there are feveral churches, monasteries, and nunneries, as also some hospitals. It contains about 40,000 inhabitants, three parts of which are Indians, who are very industrious and ingenious. Though little inftructed in the art, a tafte for painting prevails, and fome performances of the Indians of Cufco have met with applause in Italy. An incredible quantity of pictures are painted here, which are difperfed all over Peru and Chili. They have here likewife manufactures of

An Account of the Part III.

of bays and cotton, and they work largely in leather, in most of the ways in which it is used.

The air of Cusco is very fresh and healthy; the valleys about the city abound with corn and fruit, where the Spaniards have their gardens and country-feats.

4. Arequipa is fituated in the valley of Quil-

Arequipa. ca, in 16 deg. 40 min. fouth latitude, about 380 miles fouth-east of

Lima, and 240 fouth-weft of Cufco. Here the air is very temperate, and the town exceeding pleafant, containing four or five hundred houfes; but it is very ill fortified, confidering its importance; for the greateft part of the filver from Los Charcas, Potofi, and Porco, is brought here, to be fent to Callao, and from thence to Panama. The adjacent country abounds in corn and wine, but there is a dreadful vulcano near the town, which frequently caufes very terrible earthquakes. Frezier fays, the town is feventytwo miles from the fea, and that its port is called Quilca, which is little reforted to, becaufe there is no fecure anchorage.

5. Pisco, or Pisca, is a port-town, situated

Pifco. about a quarter of a league from the fea, in 13 deg. 50 min. of fouth latitude, about 123 miles fouth of Lima. The whole town confifts of 300 families, among which are fome whites, but the most of them are messively a corregidor, and negroes, who are governed by a corregidor, and a council for the administration of justice. The road of Pisco is large

#### Chap. IV. Spanifb Settlements in America. 235

large enough to contain a royal navy, being open to the northward, from whence no dangerous winds blow in that latitude, and the ships are sheltered from the usual winds, which blow from the S. S. W. The neighbouring country is almost entirely planted with vines,. of which excellent wine is made, to be fent to Lima, and other places. All the ships that fail from Callao for the northern or fouthern coafts take their provisions of wine and brandy here, and fome veffels take their loading of them for Panama, which is afterwards fent by land to Porto-Bello, and from thence to Carthagena.

6. Yca, Valverde, or the green vale, is about forty-one miles fouth-west of Pisco, yca. being a beautiful and opulent town,

inhabited by about 500 Spaniards, who are governed by a lieutenant appointed by his Catholic Majesty. The town has a port, about eighteen miles from it, called Porto Quemado, where the Spaniards carry the wine which is made in the adjacent valley, from whence it is transported to Lima, and other places.

7. Guamanca is an inland city, fituated in 13 deg. of fouth latitude, about 150 Guamanca. miles north-east of Pisco, and 180 east of Lima, being seated at the foot of a high mountain, in a very agreeable country, fruitful in all forts of provisions. It is both large, and populous, confifting of more than 10,000 inhabitants, and the number of the Indians who pay tribute in the diffrict of this city are reckoned Gg2 to

# An Account of the ... Part III.

to amount to 30,000. Here are three fpacious churches, feveral convents, and a fine hofpital, the houfes being built with ftone, and covered with pantiles. The inhabitants carry on a very confiderable trade, and have feveral valuable manufactures. The fields produce excellent corn, and the paftures feed large herds of cattle, being watered by feveral brooks and rivulets.

8. Truxillo is fituated about fix miles from

Truxillo. the fea, on the banks of a little river, in fouth latitude 8 deg. 16 min.

about 250 miles north-weft from Lima. It is juftly reckoned one of the principal cities in Peru, being not only at prefent the refidence of the royal officers of this diftrict, within which there are 50,000 tributary Indians, but alfo having formerly 500 houfes and four monafteries, which have lately been on the decline ; yet the town was fo ftrong when Dampier was there in 1684, that it deterred his companions from attacking it, after they had made the neceffary preparations. The inhabitants have a great trade of flax, brandy, fugar, wine, and marmalade, of which they export feveral fhip-loads annually to fupply the city of Panama. Guanchaco ferves Truxillo for a port, being a fmall fifher-town, about fix miles weft of the other.

There are many other towns in this audience, as Caxamalca, Guanca Velica, Santa, or La Parilla, Camana, Cotambas, Nafca, Otoca, Tanuo, Campas, Comabos, Chancay, Caxatombo, and many others of lefs importance, which would be too tedious to defcribe.

3. The

#### Chap. IV. Spanish Settlements in America. 227

3. The audience of Los Charcas, or La Plata, is bounded by the audience of Lima on the north, by Paraguay on the of Los Chareaft, by Chili and Tucuman on the cas.

fouth. It extends along the fea-coaft from Rio Tamma in 17 deg. 10 min. of fouth latitude to the 25th deg. fo that its length in a straight line is 570 miles; but confidering the windings of the coaft, it may be reckoned above 600; and its greatest extent, from east to west, is about 400, though much lefs in fome places. The climate is indifferent; for it is exceffive hot on the coaft, whereas the interior parts of the country partake much of the other extreme however, the foil is generally fruitful, being rendered fo by art in the valleys, and made fo by mature among the mountains; for the inland parts are fufficiently watered, though there are few rivers upon the coaft. The commodities of the country are filver and gold, as alfo pimento which grows upon the coaft.

The principal cities and most remarkable places in this province are,

1. La Plata, called alfo Chaquifaca, is the capital of the province, and received its name from the filver mines in its neighbourhood, which were the first that were wrought by the Spaniards. It is fituated in a fine plain on one of the fources of the great river Plate, in 65 deg. 30 min. of west longitude, and 19 deg. 33 min. of fouth latitude, being about 250 miles distant from the sea, and 780 fouth-east of Lima. This city is the residence

# An Account of the Part III.

dence of the governor of the province, and an archiepifcopal fee, erected by Pope Paul V. in 1605, to which the Bifhops of La Paz, St Miguel de Eftero, St Cruz de la Sierra, Affumption in Paraguay, and La Trinidad de Buenos Ayres are fuffragans. The houfes are well built, and the cathedral is very magnificent; befides which there are fourteen churches and feveral convents; for the town is fo large that it formerly contained 800 natural Spaniards, with 60,000 tributary natives under its jurifdiction; but, it has been greatly diminifhed in fplendour fince feveral of its mines have been abandoned, upon the difcovery of those of Potofi. \_2. Potofi takes its name from the mountain

238

2. Potofi takes its name from the mountain Potofi. at the bottom of which it ftands, being fituated in 66 deg. 16 min. of weft longitude, and in 20 deg. 26 min. of fouth latitude, about fixty miles diftant from La Plata, in one of the most barren countries of America, where there are neither trees, grafs, nor fhrubs to be found, but the richeft filver mines that ever were difcovered, which has brought fuch multitudes of people there, that it is become one of the largeft and most populous towns in Peru; nor is it ill fupplied with provisions from all the adjacent countries within 100 miles of the place, where they bring all kinds of commodities and provisions, which meet with a very beneficial market.

very beneficial market. The town is about fix miles in circumference, the buildings are beautiful, and the churches elegant. The Spanish inhabitants are faid to amount

#### Chap. IV. Spanifb Settlements in America. 239

amount to 10,000, and Frezier fays, there are above 60,000 Indians; for the King of Spain obliges the neighbouring parifhes to fend a certain number of Indians yearly to Potofi to work in the mines, where 1500 or 2000 of them are conftantly employed, at the price of two rials, or-ten pence halfpenny Sterling, a-day; but though the generality of them go to this fervitude with the utmost reluctance, they foon forget their former habitations, and continue fettled at Potofi, which makes it fo populous. The Spaniards and Creolians are poffefied of immenfe riches; their churches dazzle the eyes of the fpectator, by reason of the great quantities of gold and filver with which they are decorated. The cloaths of the citizens are of gold and filver stuffs; their kitchen-furniture all of filver, and the household furniture of the meanest inhabitants fumptuous to excefs; but provisions are very dear, efpecially firing, which is entirely of charcoal, brought from a great distance, at least upwards of 100 miles.

The mines of Porco were wrought in the time of the yncas, but they never knew those of Potosi, which were accidentally discovered by an Indian in 1545, and afterwards wrought by the Spaniards. The earth is of a dark red colour, and the mountain in the form of a cone, being three miles in circumference at the bottom, and three quarters of a mile at the top, as also three quarters of a mile in ascent; but naturally dry, cold, and barren; for it is generally obferved, that where the earth is enriched with this 240

Part III.

this kind of treasure, there are no fruitful fields or verdant pastures. The mines of Potofi were rendered the more valuable, because the miners were never prevented by water from carrying on their work, as frequently happens in other mines, though they have funk them to a great deep; these mines are the inheritance of ages; and, after having enriched the world for cen-turies, ftill continue the inexhauftible fources of new treasures. They are not however quite fo valuable now as formerly; not fo much from any failure of the vein, as from the immense depth to which they have purfued it, which, by the greater labour neceffary, leffens the profit on what it yields, in proportion as they defcend; befides, new mines are daily opened, which are worked at a lefs expense. The poor flaves who toil in these subterraneous passages, receive neither light nor heat from the fun, which makes the air fo cold and unwholefome, that a perfon, at his first entrance into them, is feized with a diforder refembling the fea-ficknefs; the labourers work alternately night and day, which is equally the fame to them, as they are conftantly employed by candle-light, and entirely naked, to prevent them from concealing any of the treasure. In Frezier's time there were upwards of 70,000 fouls employed in these mines; but it is faid, their number is confiderably abated fince.

3. Santa Cruz de la Sierra, or the holy crofs Santa Cruz de of the mountain, is the capital of a la Sierra. little province of the fame name, to

the

## Chap. IV. Spanish Settlements in America. 241

the eaft, and under the jurifdiction of Los Charcas; fituated at the foot of a mountain, on the banks of a rivulet called *Guapay*, in 18 deg. of fouth latitude; the river flows from a rock, and runs through the town into a lake full of delicious fifh. The houfes are of ftone, covered with palm-trees: it is the fea of a bifhop, where there is a cathedral. The Indians in the neighbourhood of this place were formerly fo poor, that they ufed to clothe themfelves with oftrich feathers; but the Spaniards have taught them the ufe of cotton, with which they now carry on a confiderable trade.

4. Mifque is about twenty-five miles fouth of Santa Cruz, being a fmall town, but abounding in vineyards, whofe wine is fent to Potofi.

5. Porco is fituated twenty-five miles weft of Potofi, and was remarkable for its Porco. filver mines, before those of Potofi were discovered; for the latter being richer, and not incommoded by water, drew all the undertakers and workmen from the former; but if those of Potofi were decayed or exhausted, it is probable those of Porco will be reforted to again.

6. La Paz, the city of peace, is feated in a fruitful plain, near the fpring-head La Paz. of a river, called *Cajana*, being about 210 miles north-weft of La Plata, and 125 east from the fea. The adjacent country is full of fprings, fruit-trees, and fields of maize; with rich gold mines, and good falt pits; ha-H h ving

ving also a temperate air, except from the beginning of December till March, when the continual rains occasion fevers.

7. Arica is fituated in 70 deg. 20 min. west

longitude, and 18 deg. 27 min. fouth latitude, being a port to Po-Arica. tofi, though it is above 245 miles distant from it to the north-weft. The shore is full of great ftones, has little water and always rough: fo that boats cannot fet any thing alhore, except in three little creeks, the beft of which is at the foot of the headland. It was a ftrong and populous town in 1680, when Dampier and his companions, commanded by Captain Watling, were repulfed with great lofs by the inhabitants: but Frezier, who was there in 1712, fays, it has fallen to decay, and deferves only the name of a village; for the earthquakes have depopulated the town, which now confifts only of about 150 families of blacks, mulattoes, and Indians, with a few whites. The houfes are but meanly built, and mostly covered with mats. The parish-church is tolerably handsome; befides, there are two monasteries and an hospital.

Father Feuille obferves, that formerly the filver was brought by land from Potofi to Arica, where it was fhipped off for Lima, which greatly contributed to the enrichment of Arica : but fince Sir Francis Drake took three barks in this port, in one of which there were 1140 pounds weight of filver, the Spaniards for fome time would not expose fuch treasures to be plundered; and therefore came to the resolution of fending

242

# Chap. IV. Spanifs Settlements in America. 243

fending all their filver to Lima by land, though it is a very tedious and expensive journey. However, they now continue to bring the filver by fea; for which purpofe the flota from Callao comes here annually in order to convey it to Lima and Panama.

The vale of Arica is about three miles wide next the fea; about three miles up the vale, is the village of St Michael de Sapa, where they begin to cultivate the Agi, or Guinea pepper, which is fown throughout all the higher part of the vale; and there are many farms, that have no other produce but this pepper; of which the Spaniards are fo fond, that abundance of merchants come down every year, and carry all away that grows in the vales of Arica, Sama, Taena, Locumba, and others about thirty miles diftant; from whence it is reckoned, that there are annually exported to the value of 107,500 pounds Sterling.

There are many other towns both on the coafts, and in the interior parts of this country, but not of fuch importance as to merit a particular defeription. Though it is neceffary to mention that there is a conftant intercourfe between the mines and the port of Arica: for the conveniency of which, there are inns at every twelve miles; and it is computed that there are 200 perfons employed as carriers, or in the management of the inns; yet this is nothing in comparifon of the numbers employed in the fame way, with refpect to the inland commerce of the mines; for as this extends H h 2 through

Part III.

through all South America, there are no lefs than 10,000 people concerned therein, who are continually in motion; and befides all this, there is a communication, both by land and water, between Potofi and Buenos Ayres, near the mouth of the river Plate, by which, if the crown of Spain thought fit, the filver might, with great eafe, be brought into Europe.

## C H A P. V.

A fhort account of the ancient Peruvians; their government, cuftoms, and religion.—Peru at prefent in the possession of a different fort of people; their characters. The flavery of the Indians. Honours paid to the descendents of the yncas, an Indian festival, &c.

HE Peruvians, like other Indians, were generally of a middle ftature, and an olive complexion; but of a perfect copper colour near the equator; their hair, like that of all the other people between the tropics, was black; most of them had their heads fluaved, and their beards pulled off with tweezers, from time to time.

Before the yncas fubdued all the country, there was no kingdom of any confequence among the Peruvians; they either lived abfolutely free, or under petty princes or lords, like the caziques of most part of America. The feveral nations were chiefly distinguished by their head-dreffes; for some wore whole pieces of cotton

## Chap. V. Spanifs Settlements in America.

cotton linen wrapped about their heads, like turbans; others had only a fingle piece of linen tied about their heads; fome wore a kind of hats; others caps in the form of a fugar-loaf; with feveral other different fashions, which never altered, continuing the fame in their respective nations and tribes, from generation to generation. But this is to be underftood of the better fort of people, for those of an inferior rank went bare-headed. The head-drefs cap, or turban, feems to have been granted to their chiefs, as a mark of diffinction.

Blas Valera fays of the Peruvians, that they exceeded most nations in the world for vivacity of wit, and folidity of judgment. If they had any thing that feemed flocking to the Europeans, it proceeded not from the want of parts, or endowments of mind; but from their being unpractifed in the politer cuftoms of Europe, and from their want of masters to instruct them in the liberal sciences : as a proof of this, those Indians who had the advantage of fuch inftruction, after the arrival of the Spaniards, became greater proficients than the Spaniards themfelves, and would imitate any thing they faw fo exactly, without being taught, that it furprifed the European artifts.

Though the Peruvians had no knowledge of letters, characters, or other fort of writing, any more than the reft of the American Indians; yet they had methods to preferve their ancient histories, and the maxims and rules relating to their government. For this purpose, they were verv

245

very exact in their traditions, which the youth received from their elders, and delivered to their children, as a thing facred, and religioufly to be obferved : befides, they had a fort of pictures to fupply the want of writing; but the most wonderful and unintelligible things to the Spaniards were what the Indians called *quipos*, which confisted of abundance of twists, or threads put together, full of variety of knots, and diversity of colours; every one of them fignifying fomething, fo that a bunch of these threads ferved them instead of a book, whereby they told all things in their history, knew their laws and ceremonies, and kept accounts to admiration.

Acosta relates, that the yncas (which, in the Indian language, fignifies King or Emperor) began to reign about three or four hundred years before the arrival of the Spaniards; but for a long time, their dominions did not extend above fixteen or twenty miles round the city of Cufco, where they had their original, and gradually stretched farther over all the country of Peru, from above Quito in the north, to the fouthermost boundaries of Chili, being a tract of ground almost 3000 miles long. In breadth their kingdom extended from the South fea on the weft, to the great plains beyond the Andian mountains on the east, where stood the Yncas Pacara, being a fortrefs erected to fecure the frontiers on that fide; but they went no farther there, because of the great waters, morasses, lakes, and rivers, that were in the way to obftruct

#### Chap. V. Spanish Settlements in America. 247

ftruct their paffage. These yncas furpassed all the other nations of America in the art of government and politics; but much more in courage and martial discipline. In the first chapter of this part, we gave a short account of the rife and grandeur of these yncas, so shall not refume it here; only observe, that they, by wife and prudent methods, soon civilized the greatest part of the Peruvian empire, and reduced the wandering and uncivilized Indians to the happiness of society. They taught them how to cultivate their lands; enacted many excellent laws, and governed their subjects by justice and equity.

Garcillaffo de la Vega obferves, that the yncas divided their dominions into four parts, and all the people were fo diffributed, that there were officers to every ten, every fifty, every hundred, and every thoufand; who were to fee that they wanted for nothing, and committed no offence; fo that the ynca knew exactly the number of his fubjects. In every village there were judges, who decided all controverfies without appeal; but the ynca himfelf determined all difputes between provinces. The people paid the greateft honour imaginable to their fovereigns, who had fecret emiffaries in all parts, to give them intelligence of any mifdemeanor, which they caufed to be feverely punifhed.

Although the yncas were abfolute over the eftates and perfons of their fubjects, yet they did not opprefs them. Special care was taken that that the fields fhould be tilled and fown, which was divided into three parts; the first belonged to the temples of the fun, the next to the ynca, and the third to the perfon who cultivated the farm. The ynca exacted no other duty from his fubjects than the fowing, reaping, and carrying in of his corn to the granaries, with the cloaths and armour for his foldiers; for the Emperor received gold and filver from his fubjects as a prefent, not as a duty; becaufe they had no other use of those metals than to adorn their temples and palaces.

The yncas farther affirmed, that they only had the true religion, and knew how GoD ought to be worfhipped and ferved; for which reafon they were commiffioned to inftruct all their fubjects; and accordingly they infifted fo much on their rites and ceremonies, that they had above 400 places of worfhip in Cufco; and as they extended their conquefts, they introduced their religion.

The principal object of their adoration was Viracocha pachayacha ha hic, that is, the Creator of the world, and next to him the fun, who, as well as all their other quaras, or idols, they faid had their virtue and being from GoD, with whom they interceded. Next to the fun they worfhipped thunder, pretending that it was a man in heaven who had power over the rain, hail, thunder, and every thing in the region of the air, upon which account they offered him feveral forts of facrifices; but Viracocha, the fun, and the thunder, were worfhipped in a different

#### Chap. V. Spanifb Settlements in America. 249

different manner from the other deities, which were the moon, the morning-ftar, the Pleiades, the rainbow, the earth, and the fea. The shepherds also worshipped the star called lyra, which they faid was a sheep of different colours, that preferved their cattle; and others adored a ftar, which they imagined had charge over inakes. The forecited author fays, that they gave or offered nothing to GoD, because he is Lord of all; but they offered facrifices of fheep, corn, garments, and other things to the fun, for which purpose they had many priest, one of. whom was the chief of the reft. They confe-crated virgins to the fun at eight years of age, like the Roman vestals, of which there were about 1000 in the city of Cusco, who never went abroad, but were employed in fpinning for the King and Queen. They also made the bread used at facrifices, with the liquor called aca, for the use of the ynca and his family to drink on feftivals; all the veffels they used being either of filver or gold.

Coreal relates, that these virgins were to make a vow of chaftity for life, and were kept in a convent, from whence they were not fuffered to stir upon pain of death. They were guarded by priests appointed for that purpose only; and if any of these virgins proved pregnant, she was punished with death, unless the would fwear that the owed her pregnancy to the facred influence of the fun, which was an infallible device to fave the mother, the child, and the prieft, by whofe ministry the fun had Ιi vouchfafed

Part III.

vouchfafed to operate on the veftal. This divine pregnancy, fays La Martiniere, which was afcribed to the pretended intercourfe of the fun with a virgin, was no doubt the fource of many irregularities; and further adds, that by this means the fun had a multitude of children.

Although the houfes of the Indians in general were very mean, built of mud, in the form of an arbour, covered with ftraw on the mountains, and in the plains with fedge; yet their public ftructures were extraordinary great, where they very artificially laid ftones of a furprifing magnitude, which was done by perfeverance of labour and multitude of people; for there was one principal guaca or temple in every province, befides fome that were univerfal for all the dominions of the yncas, particularly two, which were much more magnificent than the reft; the one being about twelve miles from Lima, and the other at Cufco, called *the temple of Pachiamac*, where was an idol of the fun all in pure gold, and richly ornamented with jewels.

Thus thefe yncas reigned for a long period of time over this extensive empire, till the arrival of the Spaniards amongst them in the fifteenth century, who foon reduced them and their subjects to a state of abject flavery, under which they at prefent groan.

The number of inhabitants in this great kingdom, which hiftorians reprefent by millions, is vaftly diminished fince the conquest by the Spaniards, whose works at the mines have principally contributed towards this depopulation; befides,

250

# Chap. V. Spanifs Settlements in America. 251

befides, the cruelties of the corregidors and curates, have also induced many to go and join the neighbouring Indian nations that are unconquered, not being able any longer to endure the tyrannical dominion of the Spaniards. It is true, the common people of Peru were vaffals and flaves to their yncas before the Spaniards conquered their country; but their princes treated them with the lenity of parents, whereas the Spaniards exercifed upon them all the feverity of tyrants. However, some of the poor Indians were benefited by this alteration of government, at least imagined themselves to be fo at first; for the Spaniards gave many of them their freedom, and made use of them in reducing the reft of their countrymen to flavery; but when the conquest was completed, these Indians were not much better treated than the reft, till the Kings of Spain, by their repeated edicts, compelled the adventurers and planters to treat the Indians as fubjects, and not as flaves; fince which time the Spaniards introduced great numbers of African flaves to work in the mines, and perform other laborious fervices : befides, the horfes, oxen, and mules, that have been transported to Peru, have made it less necessary to exact the fame fevere and laborious fervices from the Indians as formerly, fuch as carrying the aggage, and drawing the carriages of the Spar ards, which occasioned the destruction of great multitudes of them.

Peru is now in the poffeffion of a very different fet of people than it was at the time of I i 2 the the Spanish conquests: for, besides the native Indians, there are the descendents of many Europeans, as also of many African negroes of both fexes, who have been transported there in great numbers; and whose mixed embraces have given rise to another race, which is a compound of all three, having different features and different complexions from the people of any of the three parts of the world from whence they are derived.

Only those who were born in Spain are called Spaniards. If any perfon is born of a Spanish father and mother in America, he is called a Creolian, as are also the children of the Peruvian negroes; and it is faid, that this term of Creole came first from the negroes, who gave this denomination to their children that were born there, as a distinction from the native Africans. The children procreated between a Spaniard and an Indian, or between a Spaniard and a negro are called mestizoes; those born of a negro and an Indian are called mulattoes, or molatas; and the children of these inulatioes are called cholo by the Spaniards, which fignifies a dog of a mongrel breed, nor are they held in much better estimation.

The manners of the Spaniards and Creolians in Peru refemble, with little difference, thofe of the Spaniards and Creolians of Mexico. Divifion is the great inftrument in which the Spaniards truft for the prefervation of their colonies. The native Spaniard has all the lucrative offices, civil, ecclefiaftic, and military. He defpifes

## Chap. V. Spanish Settlements in America. 253

fpifes the Creolian; the Creolian hates and envies him: both contemn and abufe the Indians, who, on their fide, are not infenfible of the indignities they fuffer. The blacks are encouraged to trample on the Indians, and to confider their interefts as altogether opposite; whilft the Indians, in their nominal freedom, look with an envious difdain upon the flavery of the negroes.

Frezier reports, that, notwithstanding the wars, and the destruction of the Indians by the Spaniards, there is still a family of the race of the yncas living at Lima, whose chief is acknowledged by the King of Spain as a defcend-ent of the Emperors of Peru, and as fuch his Catholic Majesty gives him the title of coufin, ordering the viceroy, at his entering into Lima, to pay him a fort of public homage. Thus, at every change of a viceroy, they externally ho-nour the memory of the fovereignty of that Emperor, whom they have unjuftly deprived of his dominions. What is ftill more extraordinary, the Spaniards fuffer the Indians to celebrate an annual festival, in which plays are reprefented, commemorating the overthrow of their own state. These are acted with all the horrid and aggravating circumstances which attended this event, and the people are at that time fo enraged, that the Spaniards find it dangerous to go abroad. In the city of Lima there is annually celebrated a feftival of this kind with a grand proceffion, wherein they carry, in a fort of triumph, the remaining defcendent of the yncas

254

Part III.

yncas of Peru, and his wife, who, at that time, receive all imaginable honours in the moft melancholy pomp, from a race bowed down with the fenfe of the common bondage of prince and people. This throws the moft affecting gloom over the feftival, that renews the image of their former freedom.

The religion of all Peru appears to be the fame, from what nation or mixture of nations foever the prefent inhabitants are defcended; which is owing to the inquifition that reigns here with greater terror than in any other part of the world, whereby both Indians and negroes are compelled to profefs themfelves Catholics.

As to the characters of the magistrates and clergy here, and of the government, both civil and ecclefiaftic, they are much the fame with those of New Spain, of which an account was given when treating of that kingdom.

#### C H A P. VI.

A defcription of the principal islands upon the coast of Peru; as also of the Gallapagos, and the islands of Solomon.

Here are feveral islands upon the coast of Peru; but the most remarkable are those of Lobos, Puna, and Plata.

1. The ifles of Lobos, or Seals, according to The iflands Dampier, are two little iflands, each of Lobos. of them about a mile round, and of an indifferent height, fituated in 6 deg. 20 min.

of

## Chap. VI. Spanish Settlements in America. 255

of fouth latitude, being about 135 miles northwest of Truxillo. The same author distinguishes them by the names of Lobos de la mer, and Lobos de la terra, between which, he fays, there is a finall channel, fit for boats only, and that there are feveral rocks lying on the north fide of the islands, a little way from the shore. There is a finall cove or fandy bay, fheltered from the winds, at the west end of the most easterly island, where ships may careen, but the reft of the coaft is rocky and dangerous. Within land they are both of them rocky, and partly fandy, being barren, without fresh water, tree, shrubs, grafs, herbs, or any land-animals, except fowls, of which there are great multitudes, particularly boobies and penguins; befides, great numbers of feals and fea-lions come afhore upon both islands. He further adds, that there is good riding between the eastermost island and the rocks, in ten, twelve, or fourteen fathom; for the wind here commonly blows from the fouth, and the island lying east and west, shelters that road.

2. The ifland of Puna is fituated in the bay of Guiaquil in 3 deg. of fouth latitude; it is flat and low, ftretching eaft and weft about thirteen or fourteen leagues; and was formerly very populous, but now there is only one town upon the ifland, which is alfo called *Puna*, lying on the fouth fide, clofe by the fea, about feven leagues from Guiaquil, and the fame diftance from Punta Arena, or Sandy

Point,

Part III.

Point, which is the moft wefterly part of the ifland. The town of Puna is chiefly inhabited by Indians, who are all feamen, and are the only pilots in thefe feas, particularly for the river of Guiaquil. The thips bound for this river anchor at Punta Arena, and wait for a pilot; becaufe the entrance is very dangerous for ftrangers. The tide runs remarkably ftrong all about the ifland, but fo many different ways, on account of creeks and rivers, which run into the fea near it, that it cafts up many dangerous fhoals on all fides of it. The beft place for anchoring, is juft before the middle of the town, where there is five fathom water within a cable's length of the fhore, and good foft deep ooze where fhips may careen or hale afhore.

3. The island of Plata, or Plate, lies in 1 deg. The island 10 min. fouth latitude, 79 deg. of of Plata. west longitude, about eight or ten miles from the continent. The island received its name from the Spaniards, after Sir Francis Drake took the Cacafogo, and ship chiefly laden with plate, which he brought here, and divided with his men. It is about four miles long, and one and one half broad; being furrounded with high steep clifts, except at one place on the east tide. The foil is generally fo dry and fandy, that the trees it produces, which are of three or four forts, unknown to Europeans, are small bodied, low, and overgrown with long moss; however, there is good grass in fome places; but there is no water on the island, except at one place, on the east fide, close by the

## Chap. VI. Spanish Settlements in America. 257

the fea, where it glides flowly down from the rocks, and may be received into vefiels.

The anchoring-place is on the eaft fide, near the middle of the ifland, clofe by the fhore, within two cables length of the fandy bay; having eighteen or twenty fathom of water, and a good faft oozy ground, and fmooth water. There is good landing on the fandy bay, oppofite to the anchoring-place, from whence there is a paffage into the ifland, and at no place befides.

There are also the islands of Salango, and St Claro, a few leagues to the fouth of Plata. The island of St Roch, in 7 deg. 20 min. fouth latitude; the isle St Gallant near Pisco; Gouanne in 20 deg. 40 min. fouth latitude; and some others upon the coast of Peru, which require no particular description: but there are the Gallapagos, and the islands of Solomon, in the Pacific ocean westward of Peru, that are worthy of observation.

1. The Gallapagos, or Gallapago islands, that is, of tortoifes, are a clufter of The Gallafmall uninhabited islands, lying un- pago islands. der, and on both fides of the equator, in west longitude 90; being about 110 leagues from the northern part of Peru, almost opposite to the town of Quito. The Spaniards, who first discovered them, have never fent any colonies thither, yet they report them to be very numerous, ftretching north-west from the line, as far as five degrees north: but Dampier fays, he only faw about fourteen or fifteen; fome of K k which

which were about eight leagues long, and three or four broad; being pretty high and flat on the top. Four or five of the most easterly islands are rocky, hilly, and barren, producing neither trees nor grafs, except by the fea-fide, and a few dildo trees within land, which are green prickly shrubs, that grow about eight or ten feet high, without leaf or fruit, and not fo much as fit to burn : fome other of thefe illands are mostly plain, and low, the land more fertile, and producing trees of feveral forts, unknown to Europeans; particularly fome of the most westerly islands, which are nine or ten leagues long, and fix or feven broad; having a deep and black mould, that produces trees of great tall bodies, especially mamee-trees, which grow here in extensive groves. The mamee is a large, tall, and ftraight-bodied tree, without knots or limbs, for fixty or feventy feet and upwards. The head fpreads abroad in many finall limbs, which grow pretty thick and close together. In some of these larger islands, there are pleafant rivers; and there are brooks and rivulets of good water in feveral of the leffer ones. The Spaniards, upon the first discovery of these islands, found multitudes of guanos and tortoifes, or land-turtles; and Dampier fays, he be-lieves no place in the world is fo plentifully ftored with them. The guano is an animal like the lizard, but much larger, and of the bignefs of a man's leg, with a tail tapering to the end, which is very fmall. They lay eggs, as most of these amphibious animals do, and are very

## Chap. VI. Spanish Settlements in America. 259

very good to eat. Their flefh is much efteemed by the privateers, who commonly drefs them for their fick men, and they make very good broth; they are of divers colours, and they all live as well in the water as on land. The Gallapago guanos are very large and fat, and fo tame, that one may knock down twenty of them in an hour's time with a club. The land-turtles are here very numerous; they are extraordinary large and fat, and eat as delicate as the flefh of a pullet. One of the largeft among thefe will weigh 150 or 200 weight; and fome of them are two feet, and two feet and a half over the belly. Here is great plenty of turtle-doves, and fo tame, that four or five dozen of them may be killed in a forenoon with a flick; they are fomething lefs than a pigeon, are commonly fat, and very good meat.

Between thefe iflands are good wide channels fit for fhips to pafs, and thoal water in fome places, producing plenty of turtle-grafs; fo that thefe iflands are plentifully flored with fea-turtles of that fort called the green turtle. There are four kinds of fea-turtle, viz. the trunk-turtle, the loggerhead, the hawkfbill, and the green turtle; the latter is fo called, becaufe its thell is greener than any other, and one of them will weigh between two and three hundred pound weight. Thefe, and all other turtles, lay their eggs in the fand, between May and July, and this three times in a feafon, and at each time eighty or ninety eggs, which are as big as thofe of a hen, but very round, and on-K k 2 ly

#### Part III.

ly covered with a white tough fkin. When the fhe turtle finds a place above high-water mark fit for her purpofe, fhe makes a hole with her fins in the fand, where fhe lays her eggs, then covers them two feet deep with the fame fand, when fhe returns to the fea again. The air of the Gallapagos is temperate enough, confidering the climate. Here is conftantly a frefh fea-breeze all day, and cooling refrefhing winds in the night: the heat, therefore, is not fo violent here as in most places near the equator. The rainy feason is in November, December, and January; in which months there is often very hard tempestuous weather, mixed with a deal of thunder and lightning.

2. The islands of Solomon are a cluster of The islands islands, fituated in the Pacific ocean, of Solomon. between 130 and 140 deg. of weft longitude, and between 7 and 12 deg. of fouth latitude; they were originally difcovered by Alvaro de Mendoza, under the orders of the licentiate Lopez Garcia de Castro, in 1567, which was then efteemed a very important matter. However, as the Spaniards are flow in their motions, and being frightened, for fome time, on account of the expedition made by Sir Francis Drake, who actually visited the South feas in 1578, the further discovery was difcontinued. As foon as the Spaniards were recovered from this fright, and were in a condition of thinking of fuch matters again, the project of difcovering the iflands of Solomon was revived, but was again defeated, by the arrival

260

# Chap. VII. Spanish Settlements in America. 261.

rival of Admiral Cavendish in the South feas, in 1586. However, in 1595, Don Alvaro de Miranda was fent with four thips upon this difcovery; but, though they could not find the islands of Solomon, they found other islands near them, of equal or greater value, where they behaved fo ill, that they compelled the natives to have recourfe to arms, by whom they were driven out, and obliged to fly for fhelter to the Philippines. Ferdinand de Guiros laboured hard to get this project refumed in 1610, but the Spaniards have not applied themfelves to it : fo that it is probable the difcovery of thefe illands, and of the fouthern unknown continent, may be referved for fome other nation. Thefe iflands are reported to be worth the feeking and poffeffing, as being large and pleafant, with excellent ports, and great quantities of filver; yet, in the fpace of 188 years, these valuable countries have fcarce been feen, and never fettled or conquered.

#### C H A P. VII.

The difcovery and invafion of Chili by Don Diego de Almagro; his expedition, and death. The fecond expedition under Don Pedro Baldivia; the fettlements which he established, his war with the Indians, and death. Velagra continued the war against Caupolican the Indian general, but with little fucces. The war undertaken by Don Garcia Hurtado de Mendoza; he defeats the Indians, and puts their general Caupolican

Part III.

lican to death. How the Dutch and English attempted to settle in Chili. Peace concluded between the Spaniards and Chilesians. The number of inhabitants in Chili, with a short account of the Indians.

His charming country of Chili was first discovered by Don Diego de Almagro, who began the conquest of it about the year 1535. The first account that the Spaniards received of this country, was from the Peruvians, who fubdued the northern part of that kingdom, in the reign of their tenth ynca ; but afterwards met with fuch a powerful opposition from the confederated Chilesians, that the yncas determined to make the river Maule the utmost bounds of their empire; and accordingly fortified the banks of it against the invasions of the barbarians, as they called the Chilefians. Almagro obtained a grant from his Catholic Majesty, of all the country between Las Chincas in Peru, and the streights of Magellan, which included half of Peru and all Chili, being then called by the Spaniards the new kingdom of Toledo. This Almagro was one of the three adventurers with Pizarro and Lucques, who undertook the conquest of Peru, after Peter de Anas had abandoned his enterprife in 1525. When Almagro received the above-mentioned grant, he infifted that the government of Cufco, the an-cient capital of Peru, was under his jurifdiction, and fet out accordingly to take possession of it; however, he defifted from that attempt, and

#### Chap. VII. Spanish Settlements in America. 263

and turned his arms towards Chili; for which purpofe he amaffed a prodigious treafure, and diffributed it among his men, to buy horfes and arms, promifing that what they conquered should be equally divided among them.

Almagro had an army of 200 horfe, 300 Spanish foot, and a great number of Indians, who accompanied one of their princes, befides a multitude of flaves, with which he entered Chili, but met with a brave opposition from the natives; who, at first, were much intimidated at the Spanish horses, though, at last, after they had killed fome of them in an engagement, they took a folemn oath by the great. fun, either to die or kill them all. The Spaniards being obliged to march through a defert country, fuffered great distrefs by want of provisions; but their affliction was fo much increafed in paffing the Andes, that they loft 150 men, and thirty horfes, besides 10,000 Indians, who came from Peru. However Almagro defcended into the plain of Copiapo, where he found an opportunity of rendering himfelf popular among the Chilefians, by putting an ufurper to death, who had deprived a young prince of his government, and oppreffed his fubjects. He then proceeded to the Promocas, a nation who inhabited the banks of the river Maule, where they bravely opposed him, and killed abundance of his men; but were obliged. to give way at last to his horse and artillery; fo that, in all probability, he would have foon conquered the whole kingdom, if he had not returned

### An Account of the Part III.

turned to Peru, in 1537, to take possefilion of Cusco, by virtue of a royal patent, which he received by a messenger sent on purpose. This put a stop to the Spanish conquests in Chili for that time, and proved fatal to Almagro, who took Cusco by force; but was afterwards defeated, and taken prisoner by Pizarro, who put him to death as a criminal.

The next Spanish general who entered Chili, was Don Pedro Baldivia, or Valdivia: he had borne arms in Italy and Peru, with reputation; and was therefore thought a fit perfon to finish this important conquest : for which purpose he obtained a permission in 1539 from Pizarro and the viceroy of Peru. He fpent a whole year in making preparations for this expedition, and began it in 1540, with a confiderable army of Spaniards and Indians, who, after great difficulties, arrived in the valley of Copiapo. The first opposition he met with, was at Quillota, where the Indians skirmished with him conftantly, but were unable to retard his progrefs; fo that he advanced as far as St Jago, where he erected a fort, and founded the town of that name, as a place of defence against the Indians, who killed fo many of his men, that they talked of returning again to Peru; but Baldivia eafily compofed the mutiny, by putting his men in hopes of acquiring immense stores of gold, which they foon difcovered at the mines of Quillota, where he erected another fort to . protect his workmen. He then fent for more affiftance f.om Peru, which as foon as he received.

### Chap. VII. Spanish Settlements in America. 265

ved, he purfued his conquefts further, particularly against the Promocas, with whom he had feveral skirmishes, which obliged him to fend for further affistance from Peru.

Baldivia in the mean time founded the city of Coquimbo, and fortified it for the fecurity of his men; but, inftead of receiving any fupplies from Peru, his affiftance was defired there by the governor, against whom one of the brothers of Pizarro had revolted.

During the abfence of Baldivia from Chili, he left Francis de Velagra for his lieutenant, who had a mifunderstanding with Pedro Sanchez de Hoz, to whom his Catholic Majesty had granted the government of the farther part of Peru and Chili; but Velagra made him prifoner, and beheaded him. It is uncertain whether this was done by Baldivia's orders or not; however, he appeared well fatisfied with his death, because this rival had great pretensions to most of his conquest, and considered Baldivia only as an usurper.

While the Spaniards were thus engaged in civil diffentions, both in Peru and Chili, the Chilefians made their advantage of them, by furprifing the Spanish garrifons of Copiapo and Coquimbo, putting them to the fword, and demolishing both the towns. Baldivia, however, returning from Peru with a good army, foon retrieved his affairs, by driving the Indians from the valleys of Copiapo and Coquimbo again, and rebuilt the towns which they had deftroyed.

He next marched against the Promocas, and L 1 founded

Part III.

founded the city of Conception in 1550, where he alfo erected a fort, and fent out detachments to make further difcoveries. He then proceeded fouthward with the main body of his army, and fubdued fuch of the natives as made any opposition, and in the year 1551 founded the cities of Imperial, Baldivia, and Villa Rica, in order to keep the Indians in obedience.

Baldivia loft many of his men in this expedition, and underwent great hardships and fatigues; and after building feveral forts, which he garrifoned to preferve his new conquests, he applied himfelf to the working of the gold mines, in hopes of accumulating great treasure, which he intended to carry over to Spain, not doubting, by thus adding the weight of his gold to his merit, he fhould eafily obtain fuch titles of honour, as that court had bestowed upon other conquerors, and to return with fuch a force as might enable him to enlarge his conquests. For this purpose he employed 20,000 Indians in digging the mines of Quilacoya and Angol, which had never been opened before, and thereby enriched both himfelf and his foldiers. He then marched farther fouthward, where he difcovered fo many rich mines, that he employed 50,000 Indians in working them; but his foldiers grew fo indolent and luxurious, and the Indians being greatly exafperated by being compelled to dig in the mines, and by affembling fo many of them together for that laborious employment, that they gave the Indians an oppor-tunity of forming a confpiracy against them. Accordingly

## Chap. VII. Spanish Settlements in America. 267

Accordingly the Araucans, who were the braveft nation among the Chilefians, took the advantage of Baldivia's abfence, and engaged the whole country in the confpiracy. The whole Chilefian army, which confifted of about 80,000 men, affembled at a kind of feftival, when it was unanimoufly agreed to rife againft the Spaniards, and recover their country from flavery. After fome debate about the choice of a commander, they at laft concurred in electing Caupolican, as the braveft foldier and the ableft chief, to whom they all fwore obedience, and promifed to execute his orders, for the promotion of their common intereft.

The Spaniards had one of their caftles near the place of this rendezvous, which the Indians were impatient to attack openly, but were prevented by their general, who took it by ftratagem. Baldivia foon received intelligence of this infurrection, and returned with great expedition to the valley of Arauca, depending fo much on his own courage and fortune, that he would not wait for reinforcements from the other garrifons.

Caupolican with 20,000 men met Baldivia, where, after forming his army in proper order, and encouraging his foldiers to bravery and intrepidity, his first battalion engaged the Spanish horse with great boldness, and held the engagement for a confiderable time; after which they retired, and were succeeded by another battalion, who followed the example of the first, and were also succeeded by others in the fame man- $L_1 2$  ner.

Part III.

ner, for feven or eight hours without intermiffion, till the Spaniards began to faint and give way. Baldivia then attempted to make a precipitate retreat, but was prevented by the Indians; who, being animated with fuccefs, and exhorted to intrepidity by their general, attack-ed them fo furioufly, that they foon cut all the Spaniards to pieces, except Baldivia, whom they took prisoner, bound his hands behind him, and conducted him to their general Caupolican. He ordered Baldivia to be tied to a tree, that he might be executed with more ceremony than those who died in the field. The Spanish general petitioned for his life, which Caupolican would have granted him, out of efteem for his courage, but one of the confederate caciques was to much incenfed at fuch a propofal, that he gave Baldivia a violent blow on the head with a club; after which they ferved him as the Parthians did Craffus, by pouring melted gold down his throat, at the fame time bidding him content himfelf in this manner with his infatiable thirst after that metal.

When the Spaniards received the fatal news of the defeat of Baldivia, Velagra his lieutenant affembled all the Spanish forces which were dispersed in the several provinces of Chili, and was joined by a great number of their Indian allies. With these he marched to the valley of Arauca, to give battle to Caupolican. He accordingly attacked the Indian army; and the battle was bravely disputed on both fides, till the Spaniards were

## Chap. VII. Spanish Settlements in America. 269

were obliged to retreat, which they did fighting and defending themfelves all the way.

The governor of Peru being informed of this difagreeable news, and being apprehenfive that all Chili would be loft, fent his fon Don Garcia Hurtado de Mendoza, with a powerful reinforcement to oppose the confederate Indians. Mendoza had feveral bloody battles with the Indians, in which the latter were obliged to retire with great lofs; notwithstanding they still continued the war, and bravely ftruggled for their natural liberty against the violence of their invaders. Caupolican the brave Indian general, who defeated Baldivia, and put him to death, was at last taken prifoner by the Spaniards, and underwent the fame fate. Baldivia petitioned for his life to the Indians, fo did Caupolican to the Spaniards, who were equally unmerciful; for after this Indian hero had promifed to caufe all the country to fubmit to the King of Spain, his cruel and unrelenting enemies publicly fentenced him to be empaled alive, and shot to death with arrows, for a terror to the reft of the Indians.

But the death of Caupolican only contributed to render the hatred of the Indians more implacable to the Spaniards, to make the wound almost incurable, and rekindle the war with more animosity. The Chilesians being determined to preferve their independency, although the forces, and attacked the Spanish colonies, fome of which were taken and retaken feveral times; fo that the war continued to be carried on with great

great obstinacy and cruelty for upwards of fifty years, when it appears by the Spaniards own relation, that they were driven with great flaughter from many of their fettlements in Chili.

The Chilefians being fo enraged, and at the

The Dutch fent a fquadron under Capt. Brewer in 1642, in order to fettle colonies on the coaft of Chili,but failed in the attempt.

fame time fo fuccefsful against the Spaniards, encouraged the Dutch West-India company, in 1642, to fit out a squadron, under the command of Capt. Brewer, who was ordered to fail to the coast of Chili, and settle colonies there; because they imagined he might easily posfess himself of some of the gold

mines; concluding, that all nations who were enemies to the Spaniards would be received as friends by the Chilefians. The Dutch defeated a body of Spaniards, and took the town of Carelmappa, which they burnt, and retired to their fhips. They afterwards took the town of Castro, on the island of Chiloe, and intended to reduce the whole country of Chili under the dominion of the States-General of the United Provinces; for which purpose they contracted a friendship with some of the caciques', who readily entered into an alliance against the Spaniards, and permitted the Dutch to erect a fort at Baldivia; but they ruined the whole fcheme by their own indifcretion. For when the Dutch proposed a commercial intercourse with the Chilefians, and to exchange arms and other necessaries for their gold, the caciques immediately

Part III.

#### Chap. VII. Spanifs Settlements in America. 271

mediately appeared jealous of their new allies, declaring they had no gold mines, and that there was no fuch thing as gold in use among the natives. They also refused to supply the Dutch with provisions, whereby they were under a neceffity of relinquishing the expedition, and of returning to Brazil, which was then under their fubjection.

The court of England was afterwards defirous of making fome fettlements in Chili, to which the ministry of King Charles II. was encouraged by the intelligence they received from an old Spaniard, who had formerly refided in South America, importing, that the Spaniards had almost abandoned Chili, and that it would not be difficult for the English to cultivate a good understanding with the

natives, as they were fo dreadfully incenfed against the barbarous proceedings of the Spaniards. He also obferved, that it would not be a difficult task to establish a very advantageous trade with them, whofe principal returns would be in gold. He likewife pointed out Baldivia as the port where there would be the greateft probability of fuccefs in fuch an enterprife. In confequence of this information, a man of war of thirty-fix guns and a pink were fitted out, under the command of Sir John Narborough, who failed from England on the 26th of September 1669, and arrived at Baldivia on the 15th of December 1670. He was expressly commanded

The English fent two ships in 1670, under the command of Sir John Narborough, in order to fettle colonies in Chili, and to eftablish a trade with the natives.

Ĵ,

An Account of the Part III.

commanded to give no moleftation to the Spaniards in their fettlements, nor to commit any. acts of hostility against Spain : but the Spa-niards would not permit him to trade with the Indians, and feized his lieutenant with three of his men, whom they detained as prifoners. Sir John, upon this occasion, thought of refcuing them by force, but foon altered this refolution, either because his force was insufficient, or else, that he recollected the fate of the renowned Sir Walter Raleigh, who loft his head for attacking the Spaniards in America without exprefs orders. Upon these confiderations, and perceiving that his force was infufficient for fettling colonies here, especially as his orders restricted him from attacking the Spaniards, he therefore left the coaft, and returned to England.

The Chilesians still continued their opposi-

The Chilefians concluded a treaty of peace with the Spaniards.

tion against the Spaniards till the year 1690, when they entered into a treaty of peace, whereby they acknowledged the King of Spain for their lawful fovereign, and the Spa-

niards agreed to permit them to live in a peaceable manner, according to their laws and cuftoms. However, thefe Indians entertain an hereditary averfion to the Spaniards, who have never been able to reduce them to their fubjection by the force of arms, or to gain them to their intereft by the effect of prefents. They have traditionary relations of the cruelties committed by the Spaniards on their anceftors; they glow,

# Chap. VII. Spanifb Settlements in America. 273

glow, on every feafonable occafion, with a warm fpirit of refentment against the invaders of their country, and they still retain their primitive love for liberty; fo that there is the highest probability they would readily join with any other European powers to expel the Spaniards out of their dominions.

Though the country of Chili be of prodigious extent, yet, according to the lateft and beft accounts, the number of inhabitants is very difproportionable to fuch an extent of territory. The Spaniards throughout the whole are not computed to exceed 20,000 men capable of bearing arms. The meftizoes, mulattoes, and negroes are between 70 and 80,000; but the bulk of the inhabitants are Indians, fome of whom are ftyled free, and others fubjected.

The free Indians acknowledge the King of Spain as their fovereign, but pay him no tribute; these amount to many thousands, and inhabit the greatest part of the country, especially towards the mountains, being governed by their respective chiefs, called *caciques*.

The fubjected Indians are about 15,000, who belong to the Spaniards, live among them, and ferve them in the condition of a kind of vaffalage, not in a ftate of flavery.

Part III.

## An Account of the

## C H A P. VIII.

The extent and boundaries, climate and foil of Chili; its vegetables, mines, animals, and produce. A general view of the trade of Chili, with the method of travelling from it to Buenos Ayres, &c.

COme writers, particularly Ovalle, extend ) this country fouthwards as far as the The extent ftreights of Magellan; others also include the island of Terra del Fogo, ries of Chili. and part of Patagonia in this di-. strict, making it run from 26 to 57 deg. of fouth latitude; but its real bounds are far from being fo extensive : for the proper division of Chili lies in a long narrow flip along the coaft of the South fea, in the fouth temperate zone, between the parallels of 26 and 45 deg. of fouth latitude, and between 47 and 54 deg. of west longitude, being bounded by Peru on the north, the province of La Plata on the east, by Pata-. gonia on the fouth, and the Pacific ocean on the weft; fo that it is about 1200 miles long, and 600 broad in fome places. For though the country properly called Chili is not above ninety miles from the fea to the Andian mountains, yet his Catholic Majesty, in the division of the bounds of the feveral governments in America, added to Chili the large plains of Cuyo, or Chicuito, which lie to the east of these mountains.

The face of this country is remarkably beautiful,

## Chap. VIII. Spanish Settlements in America. 275

tiful, being diversified with pleasant hills and fruitful plains; the air is furpri- Climate and fingly clear and ferene, fcarce any foil.

changes happening for three parts of the year; and very little rain falls during that period, but the benign dews every night, and the many rivulets which the neighbourhood of the Andes fupply them, fertilize the plain country in a wonderful manner, and make it produce as much corn, wine, oil, and fruits, as the number of the inhabitants, which is very fmall, or their industry, which is but very moderate, will fuffer them to cultivate. If it were under the direction of a more favourable government, and better peopled, there is fcarcely any part of the world that could enter into competition with this: for at the fame time that it enjoys a very falubrious air, and is warmed by a heat nowife oppreflive, it bears many of the tropical fruits that would thrive no where elfe out of the torrid zone. It is luxuriant on the furface with every thing for profit or delight, and beneath it is rich to profusion with veins of gold, filver, copper, lead, quickfilver, and iron. But those of gold are most wrought; and what is furprising, there is fcarce a rivulet in the country in which gold is not found either in smaller or greater plenty.

As this country lies far to the fouth of the equinox, the feafons here are oppofite to those in the northern parts of the hemisphere; for the spring in Chili begins about the middle of August, and continues to the middle of November, when the summer M m 2 commences,

276

Part III.

commences, which lafts till the middle of February, when the autumn begins, and holds till the middle of May, being fucceeded by winter, which strips the trees of their verdant cloathing, and covers the earth with white frost : however, during this feafon, there is little fnow in the valleys, but fuch immense quantities fall upon the mountains, fo as fometimes to fill up all the hollow places to a great height; from whence it ftreams out, and fupplies many rivers and fprings, which refresh the neighbouring plains, and render them vastly prolific. Thunder is fometimes heard, but is at fo great a diftance, . up in the mountains, that the low country is free from lightning. There is no hail in fpring or fummer, nor are there fo many cloudy days in winter as in other places; but generally, after the rain has continued two or three days, the fky clears up with great ferenity: for as foon as the north wind ceafes, the fouth wind fucceeds, and in a few hours drives away the rain; or, if it happens during the night, the dew falls, and the fun rifes with additional luftre. Some trees lofe their foliage in winter, but others preserve a perennial verdure; for though they are covered with ice and fnow, the cold is fo far from injuring them, that, when the fun diffolves the froft, they appear more green and beautiful.

The heavens and ftars here appear remarkably clear and beautiful. If the ftars of the arctic pole appear with more magnitude than those of the antarctic, yet, as to their fplendour, their numbers,

## Chap. VIII. Spanish Settlements in America. 277

numbers, the light they afford, and the purity of the heavens where they are, the advantage is on the antarctic; which is owing to the temperature of the climate; for as the country of Chili inclines to drinefs, rather than humidity, the fun raifes few vapours, therefore the air is clearer, and the brightnefs of the ftars more confpicuous: fo that thofe who fail from Peru to Chili, are fenfible when they come to the height of the latter, by the azure beauty of the horizon, which they perceive difengaged from clouds, gilded and glorious, with its refulgence increafing every day, as they advance in a fouthern direction. Whereas, when they fail for the line from Chili, the nearer they approach to the tropic, that light and fplendour grows duller and weaker.

The country of Chili has still another advantage, which confifts in its being free from poifonous creatures ; fuch as vipers, fnakes, fcorpions, and toads; nor are there any tygers, panthers, or other rapacious animals, except fome lions of a fmall kind, which fometimes prey upon flocks of sheep, or herds of goats; but always shun the appearance of men, not only in cultivated lands, but in woods and folitudes. But it is neceffary to observe, that all this must be understood of the countries which lie to the west of the Andes; for what is beyond these mountains, as the land of Cuyo, Tucuman, and Buenos Ayres, though fituated in the fame latitude with Chili, are very different from

from it in climate, and many other respects, which will be afterwards taken notice of.

Part III.

This country is watered with great numbers

Rivers. of rivers and fprings, of which there are upwards of fifty, which rife in the Andes, and run through Chili into the South fea, being joined by many other leffer ftreams, which fall into them in their courfe; but few of them are navigable, for veffels of any burthen, far beyond their mouths, becaufe they run only a courfe of about ninety miles from their fources; all those rivers which flow from the Andes westward, and fall into the South fea, being rapid torrents, generally occasioned by the melting of the fnows, and the declivity of the ground.

There are numerous fprings, lakes, and falutary fountains in the plains and valleys of Chili; fome of these lakes are of fresh water, and others of falt, which have a communication with the sea, fome part of the year.

The appearance of the country to the eaft of the Andes, is very different from that on the weft; for on the fummits of the mountains both horizons may be difcovered; that towards the eaft being inveloped with fuch thick vapours, as to prevent the flow of light, and overfhadow all the country; while the heavens are fo bright and placid towards the weft, as to give infinite pleafure to the eye of the beholder. There is alfo a difference in the trees, plants, and animals on each fide of the mountains. In going down to the eaftward, the fountains and rivers

## Chap. VIII. Spanifs Settlements in America. 279

rivers are few and muddy, the face of the land melancholy, and few trees or verdure to recreate the fight, unlefs in those parts where the heats begin to be exceffive : but as foon as travellers defcend to the weftward, they meet / with lovely fprings, umbrageous trees, fragrant groves, and charming valleys; the mildnefs of the fea-air is felt from the foot of the mountains; the harmony of the birds is delightful to the ears, and many other objects pleafant to the eye.

With regard to the produce of Chili, it is to be observed, that the fruits of Mexi-Fruits.

co and Peru are very far from coming to perfection here, but those of Europe thrive furprifingly; especially apples, pears, apricots, peaches, and quinces, which bear to such a degree, that, if care is not taken to leffen the quantity of fruit while it is young, it is impoffible for the boughs to fustain the weight of them; they are also obliged to support the branches with poles, before they are fit to be gathered. The fruit that exceeds all the rest in bearing, is the apple of all kinds, of which there are many very extensive orchards; but fruit is feldom fold here, becaufe any perfon may step into a garden or orchard, and eat what he pleases, without any interruption, except ftrawberries, which, when cultivated, are fold very dear, and they are faid to be of an extraordinary big kind. Here are great quantities of olives and grapes, particularly the muscadel grape, which yields a noble and generous wine ; the

the branches of the vines are very thick, and the bunches of grapes vaftly large; but there is fuch plenty of them, that it proves a grievance, becaufe there is no vent for fuch quantities, and the Indians frequently kill themfelves by drinking to excefs.

The principal forest trees of this country, are the cyprefs, cedar, oak, paraqua, Foreft trees. cinnamon, gayac, thorn-bush, fandal, and palm. The cyprefs most commonly grows in the precipices of the Cordillera, being large and lofty, yielding a fine odorous fmell; and though it be very plentiful, yet it fells dear, especially in Peru, where it is transported, and used in building, particularly for the infide of their churches. The cedars are larger than the cyprefs; the colour of the wood, when first worked, is red, but it gradually lofes that lively colour, and refembles the complexion of the walnut-tree wood. The oaks thrive exceedingly, grow thick, and yield very large planks. The cinnamon tree is fo called, from its having fome refemblance to the true cinnamon of the island of Ceylon, but the bark is deftitute both of the fine finell and tafte of the real cinnamon. The gayac wood is almost as hard, and as heavy as iron, being good for many infirmities, when taken by way of decoction. The thornbush ferves for fewel, and they also make charcoal of it for the forges. The fandal-tree is very odoriferous, being reputed as a prefervative against the plague. The palm-tree grows generally in the mountains, very thick and lofty; all the tree

## Chap. VIII. Spanish Settlements in America. 281

tree is naked to the top, and is quite difencumbered of fuch boughs as grow out of the fides of other trees. Befides thefe, this country produces vaft quantities of wild trees, feveral kinds of plants, flowers, and medicinal herbs, which would be too tedious to mention.

The Chilefians had great plenty of maize or Indian corn, before the arrival of Corn and the Spaniards among them; but they roots. had neither wheat, barley, oats, anife, cumin, coriander-feed, lint-feed, flax, hemp, peafe, cabbage, lettuce, radifhes, cucumbers, parfley, garlick, or onions, all which they have now in the greatest plenty and perfection, and their roots in general grow to a prodigious fize.

We formerly obferved, that no country in the world produced more excellent Mines. mines than Chili; yet few of them are wrought, not even the filver mines, becaufe those of gold are less expensive, upon which account the inhabitants have turned their industry towards them.

The gold mines are fo numerous and rich, that from the confines of Peru to the extremeft part of Chili, even as far as the ftreights of Magellan, there is no part of the country, in which fome of thefe mines have not been difcovered. All the authors who have wrote any thing relating to this country, greatly extol it, for its opulence and fecundity.

The Chilefians, as well as the other natives of America, had no great variety of quadrupeds, till their country was

Nn

discovered

difcovered and poffeffed by the Spaniards, who, upwards of 200 years ago, transported thither almost every species of European animals, part of which were suffered to run wild in the forests, where they multiplied so greatly, that the Chilessian now bring a body of 10 or 12,000 horse into the field at a short warning.

The cows have increased to fuch a prodigious degree, that it is amazing to see what numerous herds of them are always feeding in the great plains of Tucuman, Chicuito, and Chili Proper, without any owner; being the property of any perfon who is able to catch them. Their numbers are so great, that, according to Ovalle, a murrain is thought a necessary purge to less of the foil fattens them to such a degree, that 150 pounds weight of tallow is frequently taken out of one cow; and the propagation of their species is incredible.

Such is the difference of the prefent flate of Chili to what it was formerly, that Herrera fays, when the fettlement first began, a horfe was commonly fold for a thoufand pieces of eight, or 180 pounds Sterling: but Ovalle fays, he faw horfes accoutred for war, fold in the territory of St Jago for ten fhillings Sterling apiece, that were equal to the Neapolitan breed for fhape, courage, and good qualities. He alfo obferves, that the cows were first bought at an exceflive price, but are now fold for a crown apiece,

## Chap. VIII. Spanifs Settlements in America. 283

apiece, and a sheep for three pence or four pence.

The sheep of Chili, or vicunas, which are proper to the country, are of the shape of camels; but thefe we defcribed when treating of the Peruvian animals. Here are also vast numbers of wild animals of different kinds, together with great plenty of wild fowls, which are much the fame with those of Peru.

The lakes and rivers abound in good fifh, as well as the adjacent feas: all along . Sca-animals. the coaft, are found great numbers of whales and grampufes,' which are of no finall value on account of the ambergris they cast on shore, as also for their oil. Here are likewife fea-lions of great bignefs; and the feawolves, or feals, are as big as calves, and are found in prodigious numbers all along the coaft.

As for the product made by the industry of the inhabitants of Chili, it confifts principally in the breed of their cattle, whofe tallow, hides, and dried flesh, are fent to Lima, where having first retained the necessary proportion for themfelves, the merchants distribute the rest all over Peru; the hides particularly are fent to Potofi, and all that inland tract of mines, where most of their cloathing comes from Chili: they are alfo carried to Panama, Carthagena, and other parts of that continent.

The fecond product is the cordage and tackling, with which all the fhips of the South feas are furnished; for hemp grows no where in the Spanish West Indies, but in Chili, and there is

Nn 2

Part III.

is also pack-thread exported, with other smaller cordage.

The third product confifts of mules, which are fent to Potofi, through the defert of Aracama.

The fourth product is the cocoa-nuts, which are the fruit of the palm-trees; which are not indeed produced by induftry, but grow wild and thick in the mountains, without any cultivation. Almonds, and the product of gardens, which are not found in Peru, are likewife carried thither with great profit. The merchants who trade from Chili to Peru make very great profits, amounting fometimes to two or three hundred per cent. However, the Chilefians labour under a great misfortune, namely, the want of vent for their valuable commodities; for the land is fo luxuriant, and produces every thing in fuch plenty, that they cannot get a fufficient market to difpofe of them.

Upon this foundation it is generally affirmed, that no country in America has a more folid eftablifhment than Chili; for, in proportion to the increafe of the inhabitants of Peru, Chili must alfo increafe in riches, fince it is able to fupply any great confumption, and yet have enough for its own, in all kinds of corn, wine, flefh, oil, falt, fruits, pulfe, wool, flax, hides, tallow, leather, ropes, timber, medicinal remedies, fifh of all kinds, metals of all forts, and amber,  $\mathfrak{Sc}$ .

Throughout the whole kingdom the herbage and the fifting are common, as alfo hunt-

ing,

## Chap. VIII. Spanish Settlements in America. 285

ing, with the woods for fewel and timber; and the fame is practifed as to the falt mines. Befides, there is no imposition on trade, every one being free to transport what goods he pleases, either within or without the kingdom. The Chilesians are furnished with all kinds

The Chilefians are furnished with all kinds of European and East-India goods from Lima; they also receive fome European commodities by way of Buenos Ayres, to which place they carry on a confiderable trade, in the following manner.

Those employed in this trade travel in covered carts and waggons, made almost as commodious as a house, with the doors to shut, and windows on each fide to give free admittance to the fresh air; laying beds or mattreffes on the floor, on which they fleep. These waggons are drawn by oxen, who fet out two hours before fun-fet, travelling all night, till the fun is an hour high next morning ; when the paffengers reft, and eat the provisions they carry with them, or take in hunting by the way; for those who are disposed for rural sports, take horses and dogs with them, by the affiftance of which, they take great numbers of wild flieep and goats, with other game; from whence a perfon might feem inclined to think, that it must be a very pleafant journey from Chili to Buenos Ayres; but travellers inform us, that they are fubject to many inconveniencies, which very much abate the pleafure of it; particularly great heats, which obliges them to keep under the covert of their waggons, during the meridian

Part III.

dian fplendour; and this is all the defence they have, both against the heat and rain. Another inconvenience is the want of water, which is not met with, fometimes, for feveral days journey, which obliges the travellers to carry water both for themfelves and their cattle: however, all this might be remedied, if the country through which they pass was inhabited, for they meet with fprings in many places, within a few vards of the furface; and the rains alone, which happen frequently in fummer, might be preferved in cifterns and refervoirs, if there were any towns or villages in the country. When these merchants arrive at Buenos Ayres, they difpose of their commodities, or barter them for European goods, with which they return to Chili.

We shall conclude this chapter by observing, that the Chilesian Indians only, of all the people of America, can fay they are gainers by being acquainted with the Spaniards; for most of them still retain their liberties, and have acquired the possibility of European cattle, fowls, grain, and fruits, which they formerly wanted. They have also learned feveral arts and sciences of the Europeans, and in many instances are faid to excel their masters.

286

CHAP.

Chap. IX. Spanish Settlements in America. 287

#### C H A P. IX.

An account of the three grand divisions of Chili, with a description of their chief cities and principal towns; their situation, government, and trade, &c.

H Aving now given an account of the climate and produce of Chili, we shall proceed to the geographical description of the country, which is entirely under the government of its president, the viceroy of Peru seldom interfering with this province, as it is at so great a distance from Lima. For the more easy distribution of justice, it is divided into three provinces or audiences.

1. The bifhopric of St Jago or Chili Proper. 2. The province of Imperial or Conception. Both these provinces are situated between the South feas and the Cordillera mountains, being what is properly called *Ckili*. 3. The large province of Cuyo, which lies to the east of these mountains.

1. The diffrict of St Jago extends from the frontiers of Peru in latitude 25. to the river Maule in 35 deg. of fouth latitude, containing the following confiderable cities, fea-port towns, and other places.

 St Jago, or James the apoftle, the capital of all Chili, is fituated in 69 deg. St Jago.
 40 min. weft longitude, and 33 deg.
 12 min. fouth latitude, about fifty-four miles

eaft

eaft of the Pacific ocean, ftanding in a beautiful plain of about feventy-five miles in extent, and watered by three rivers, the principal of which is the Maypocho. This river is fwelled in fummer by the melting of the fnow in the Cordillera, and in winter by the exceflive rains, yet is for the most part fordable.

For preventing inundations, the inhabitants have built a wall and a dyke, by means of which the waters are at all times conveyed for watering their gardens, and cooling the ftreets. Befides thefe, they draw larger ftreams for driving the mills in the feveral parts of the city. The . ftreets are laid out according to the four cardinal points; they are exactly in a line, and neat-ly paved with finall ftones. It was founded in the year 1541 by Peter Baldivia, who caufed the plan of it to be marked out in fquares; each of these squares of houses was divided into four parts, for every perfon to have a commodious apartment. Though, in process of time, that fpace was farther divided into feveral other parts, yet they have still fo much room that there is fearce a house in the town without a court before it and a garden behind it.

The earthquakes, which are frequent here, have greatly endamaged the city, particularly those of 1647 and 1657; the former almost overturned the whole town, and left such noxious vapours that many of the inhabitants died. Since that time there has been some alteration in the plan, by the enlarging of monasteries, some of which have extended beyond the ftraight lines.

Part III.

## Chap. IX. Spanish Settlements in America. 289

lines. About the middle of the city is the Placa Real, or Royal fquare, with eight avenues leading to it, and in the centre is a fountain with a brafs bafin. The weft fide contains the cathedral and the bifhop's palace; the north fide the prefident's new palace, the royal court, the council-houfe, and prifon; the fouth fide is a row of porticoes, or uniform arches, for the convenience of merchants, with a gallery over thefe for feeing the bull-fights.

The houfes, as is usual throughout Chili, have only a ground-floor built with unburnt bricks, and here they are handfomer than elfewhere, and the churches richer in gilding, but the whole architecture is generally mean and of ' an ill tafte. All the churches have a fmall area for proceffions, most of them are built with bricks, but fome are of free ftone, and others of pebbles from a fmall rock, called *St Lucy's bill*, east of the city, from the top of which is a full view of the city and parts adjacent.

The governor has the titles of Prefident and Captain-General, on account of his two employments of the gown and the fword. He prefides in the royal court, which is composed of four judges and two fifcals, one of whom has the charge of protecting the Indians, and of the affairs of the croifade; alfo a head ferjeant of the court, with other officers. No appeal lies from a judgment on a writ of error, or review upon a royal decision, which only takes cognifance of matters of moment, unlefs it be the royal council of the Indies: other matters

0 0

are

are decided in the council-houfe, which is compoled of two judges, a royal enfign, a head

Part III.

ferjeant, and fix aldermen. Though the prefident here be fubordinate to the viceroy of Peru, yet the diftance very much leffens the fubordination, fo that he may be confidered in Chili as viceroy himfelf during the time his government continues.

The ecclefiaftic ftate, as well as the fecular, has a dependence on Lima; but the Bifhop's power here is very much circumfcribed, the laws not allowing him the difpofal of any cure, even the Pope has not his turn here. There are eight monafteries of men, three of Francifcans, two of Jefuits, one of the order of Mercy, one of the brethren of St John, and one of Dominicans, which are the only orders eftablifhed throughout all Chili. There are alfo five nunneries; and all thefe communities are numerous, fome of them containing above 200 perfons.

The tribunal of the inquifition of Chili is alfo fettled at St Jago, where the commiflarygeneral refides, with his officers, who are the informers; and other commiflaries are difperfed throughout all the towns and villages fubordinate to him, who apply themfelves to the difcovery of fuch unhappy perfons as they think proper to fubject to the inhuman proceedings of this diabolical court.

The number of inhabitants of St Jago is computed about 8000 whites, and between 20 and 30,000 Indians and mulattoes. The citizens are generally rich, and fome of them are continually

290

## Chap. IX. Spanifs Settlements in America. 291

continually accumulating fortunes, by being concerned in the gold mines at Tiltil, which are about half-way between St Jago and the fea, as alfo in feveral lavaderoes nearer the city, which are extremely rich.

2. Valparaifo is fituated on the South fea, in 32 deg. 35 min. of fouth latitude, Valparaifo: about ninety miles north-west of St Jago, which it ferves in nature of a port.

This is one of the most confiderable havens in these feas, being constantly frequented by vessels from Callao and Panama, which come here to load corn. The harbour is tolerably good, especially in the summer-months, but not to secure in time of winter, by reason of its lying open to the north winds; which obliges them to run the schors on the secure that they have three anchors on the land made fast to stores or piles, at which distance they have still eight or ten fathom water.

Formerly the fort here was of little fignification, both becaufe it was ill built, and becaufe the road it defends is near other creeks, which afford the fame conveniencies as here, particularly the creek of Quintero, which is defencelefs, and but five leagues from Valparaifo. It is true, that the bay of Valparaifo, as being neareft to the capital, is the most frequented in Chili; for which reafon the Spaniards have judged it proper to fecure it against the infults of the British and Dutch, who have often ranged thefe coafts.

The town flands at the foot of the fortrefs, O o 2 confifting

Part III.

confifting of about 100 houfes, without any order, and of feveral heights, ftretching along the fea, where are the granaries and ftorehoufes for corn; it contains about 150 families, but few of them are whites, being mostly blacks, mulattoes, and meftizoes.

The shipping from Lima and Panama generally arrive here in October, and return in March, in order to avoid the north winds; these furnish all the harbours of Chili with European goods, fuch as cloth, filk, and other things which the Chilefians want; their returns confift chiefly in grain of all forts, wine, hides, tallow, &c. Commodore Anfon, in September 1741, took a vessel of 450 tuns, called the Carmelo, bound from Callao to this port; she had on board fifty-three failors and twenty-five paffengers; her lading confifted chiefly in fugars, great quantities of blue cloth, feveral bales of cotton, and fome trunks of wrought plate. The Trial floop, in her station off Valparaifo, took another prize of 600 tons, proceeding on the fame voy-age, and with much the fame cargo as the Carmelo.

3. La Serena, or Coquimbo, was founded

La Serena. by Baldivia in 1554, and is fituated in 29 deg. 50 min. of fouth latitude, at the mouth of the river Coquimbo, about 260 miles north from St Jago. It is feated at the lower part of the vale of Coquimbo, a quarter of a league from the fea, on a rifing ground; the first street forms a pleafant walk, which commands a prospect of the whole bay and the country

## Chap. IX. Spanish Settlements in America. 293

country adjacent. The streets, like St Jago, are all exactly in a straight line from one end to the other, from east to west, and from north to fouth. The most confiderable part of the city is taken up by two fquares, and fix monasteries, without reckoning the parish-church and the chapel of St Agnes. Baldivia, who founded this city, called it La Serena, on account of the deliciousness of the climate, the sky here being continually ferene and pleafant. Here too a conftant verdure reigns, without ftorms, without parching heat, or any cold that is inconvenient. The foil is fruitful, and all the country about it abounds with the neceffaries of life, especially corn, wine, and oil, exquisite in their kind, and exceffively cheap; there is the fame plenty of cattle, tame and wild fowl, and in the adjacent valley there is a remarkable fine breed of horses. The trade of this place confists in fending four or five ships yearly to Lima, laden with flour, wine, and other provisions, in return for which they receive all forts of European goods; which are transported from hence into other parts of Chili. They also supply St Jago with wine and oil, which is reckoned the best along the coaft.

About three leagues north-east from this town there are excellent copper mines, which supply the whole coasts of Chili and Peru with utenfils for the kitchen, but they use fewer of that than of earthen-ware, or silver. In the winter-feafon, when the rains are violent, all the little brooks bring down gold, of which, if they had hands 294

Part III.

hands enough, a great profit might be made; but the difcovery of the mines of Copiapo, and the feverities of the chief magistrates, daily contribute towards the unpeopling of this place, whose inhabitants at present are faid not to exceed 12,000 perfons in whole.

4. Copiapo is fituated in 70 deg. 30 min. west

Copiapo. longitude, and 27 deg. of fouth latitude, 500 miles north of St Jago,

at the mouth of a river of the fame name, which, with an ifland that lies before it, forms a tolerable harbour. This town lies about 180 miles north from La Serena; but the country between them is one of the worft in the world, having neither town, village, tree or fhrub, river or brook, fo that the cattle upon the road frequently perifh for want of refrefhment; however, there are feveral mines of copper and tin in this unhofpitable country.

The port of Caldera belongs to the town of Copiapo, having a tolerably fafe road, and would probably be much frequented, if wood and water were not fo fcarce.

Copiapo lies about fourteen leagues to the eaftward of Port Caldera, in a very miferable country; its houfes do not ftand in any order, but lie feattered up and down, being a place of little confequence till the year 1710, when it began to be confidered in another light. A Spanifh writer fays, it is now one of the richeft places in the world, and that its foundations are of gold, meaning, that the town ftands upon a gold mine, which is exceffively rich; however,

this

## Chap. IX. Spanifs Settlements in America. 295

this is not wrought at prefent, becaufe they have difcovered ftill richer mines about fix miles diftant, from whence they bring the ore on mules to the mills, which are within the town.

It is uncertain what thefe mines might produce if properly managed; in 1720 a thouland hands were employed in working them, the number of their mills increased to twelve, and then it was computed that they annually produced to the value of 80,000 pounds Sterling.

Befides those of gold, there are also feveral mines of iron, brafs, tin, and lead about Copiapo, which the inhabitants have not thought proper to work as yet; though the lead mines about fixty miles fouth of the town are fuppofed, by fome intelligent perfons, to be as valuable as the gold ones, because fome people who have visited them have picked up, on the furface of the earth, feveral pounds of lapis lazuli, one of the most valuable commodities in the world, being a fort of precious stone, of a blue colour, veined and fpotted with white and yellow; and it is affirmed, that this Chilesian stone is not at all inferior to that which is brought from Persia and Siam, but is rather of a deeper blue with fewer veins.

In the Cordillera mountains, about 100 miles to the fouth-eaft, there are mines of the fineft fulphur that can be feen, which is taken pure from a vein two feet wide, without requiring to be cleanfed. In fhort, all the country is full of mines of falgem, or rock-falt, for which reafon fweet water is very fearce. Saltpetre is no lefs

Part III.

lefs plentiful, it being found in the vale an inch thick on the ground, which alone would be fufficient to attract a trade in any other country.

Between Copiapo and La Serena is no town or village of any confideration, only a few farms; nor are there any other inland towns of note in the diocefe of St Jago except the capital of that name.

2. The most foutherly province possefield by The bishopric the Spaniards, is the bishopric of of Imperial. Imperial, or Conception, which extends from the river Maule in 35 deg. to the river Gallego in 46 deg. 20 min. of fouth latitude: the climate of this province is much like that of Old Spain.

This dioces  $\hat{e}$  contains in it the following cities, fea-port towns,  $\Im c$ .

1. The city of Imperial, which gives name The city of to the diffrict, is fituated in 72 deg. Imperial. 15 min. weft longitude, and 38 deg. 30 min. fouth latitude, in one of the most agreeeble fituations in the whole country, on a pleafant river, anciently called Cauten, but now Imperial, from the city. . It is about 130 miles distant from Conception, ten and twelve from the fea, 330 from St Jago, and feventy north from Baldivia. The whole diftrict round the city is very fertile, producing corn, and all forts of fruit and pulfe. The country is partly hills and partly valleys; the former are of a gentle and eafy afcent, with good pasture and shelter for cattle. The ground does not require much watering,

#### Chap. IX. Spanifb Settlements in America. 297

watering, as being fertilized with frequent and plentiful dews.

This was an epifcopal fee, and at its first establishment promised to be a large and populous city, on account of the excellency of the foil and fituation; but having been destroyed by the Indians, it declined greatly, and the epifcopal fee was removed to Conception.

The river Imperial is large, runs a great way up into the country, and its banks are well inhabited by Indians; but it is necessary to obferve, that its mouth affords no good harbour to fhips of burden, because of the flats, which are only about three and a half fathoms in depth.

2. The city of Conception, by the Indians called *Penco*, is fituated on the edge Conception Conception. of the fea at the bottom of a bay of the fame name. It lies in 37 deg. fouth latitude, and 78 deg. 41 min. of west longitude! It was feveral times destroyed by the powerful confederacy of the Indians under their general Caupolican, and as many times repaired. In 1730 it was deftroyed by an earthquake, and fince that time rebuilt.

Father Feuillee, who refided fome time in this city, gives the following account of it. " It is feated in a little valley, called Penco, on " the fea-fhore; having on the east high " mountains, from which defcend little rivers, " that run acrofs the town. On the north it " has the entrance of the bay, the bay itfelf on " the weft, and the river Biobio on the fouth. P p " The

Part IIL

"The ftreets, like those of all the towns in the Spanish dominions, are drawn by a line, and most of the houses are built with earth in the form of oblong squares, only one story high, and covered with pantiles: they are large, but ill furnished. Each house has a garden belonging to it, well furnished with all forts of fruit-trees, which produce such prodigious quantities of fruit, that they are obliged to thin them, otherwise the branches would break, nor could the fruit come to

" maturity." There are fix monafteries in this city. Towards the middle of the town, is a large fquare, on the fouth fide of which ftands the parifhchurch. On the east fide stood the bishop's palace; and on the two other fides are shops, where the women go in the night-time to buy fuch necessaries as they want for their families; it being contrary to the custom of this country, for women of any reputation to go abroad in the day; which is a very fingular, though confiderable abuse. The country in which the town of Conception is feated, abounds in all things, not only to supply the necessaries of life, but also containing infinite wealth. Gold is found in most parts of the country; and if it was inhabited by a laborious people, it might be had in a thousand places, only by washing the earth in water, and separating it from the gold.

The inhabitants of this city are a regular militia, trained to arms from their childhood, and must be always ready on the first alarm, for fear

# Chap. IX. Spanish Settlements in America. 299.

of the fudden or unexpected incursions of the Indians; the town is open on all fides, and commanded by five eminences, among which that of the hermitage advances almost to the middle, and overlooks it all. It has no other defence than a low battery, on the edge of the fea; and this commands only the anchoringplace before the town; nor is this want of fortifications well supplied by men or able officers. The security of the town confists in its trade, which keeps a confiderable number of ships in the bay; and this intimidates the Indians from attempting any thing against the inhabitants, who, from a confidence therein, live in ease and indolence.

The island of Quiriquina lies at the mouth of Conception, being fomewhat lower than the continent, with which it forms two paffages into the bay; that to the W. S. W. is not very good for large ships, though passable in cafe of necessity. The north-east passage is half a league wide, and quite free from any danger. The bay itself is two leagues wide from east to west, but three from north to fouth. There are every where conveniencies for wooding and watering; as also for building of ships.

The incurfions of the Indians have occafioned the removing of the royal court of chancery which was established at Conception in 1567, to the city of St Jago. But fince the Indians have posseful themselves of Imperial, this city has become the see of a bishop, who is suffragan to the archbishop of Lima.

P p 2

There

There is a beneficial trade carried on by the inhabitants of this city, with the Indians behind them, who trade with the Spaniards in a very peculiar manner, though they have never nego-tiated any peace with Spain. These Indians are called Aucaes, and inhabit the mountains, where they retain the primitive cuftoms and manners of their anceftors. When a Spaniard comes to trade with them, he addreffes himfelf to the cacique, or chief; who, on perceiving the stranger, cries out, What, are you come? The Spa-niard answers, Yes, I am come. Then the chief replies, Well, what have you brought me ? The merchant answers, A present ; and the prince replies, Then you are welcome. He then provides a lodging for the merchant near his own, where all the family go to vifit the ftranger, in hopes of some present; and in the mean time a horn is founded to give notice to the Indians who are abroad, that a merchant is arrived. This foon affembles them together about the mer-chant, who exhibits his goods, confifting of knives, fciffars, pins, needles, ribands, fmall looking-glaffes, and other toys, which the Indians carry away after fettling the price, without giving any thing in exchange : but after a certain time is elapfed, the horn is founded again, by the direction of the cacique, when the Indians immediately return, and punctually perform their respective engagements: the goods they deal in being cattle, furs, and fome gold; but they bring very fmall quantities of the latter, as they are fenfible how dear the poffession of that

300

#### Chap. IX. Spanish Settlements in America. 301

that metal cost their ancestors and neighbours.

3. Baldivia, or rather Valdivia, is fituated in 72 deg. of west longitude, and 39 Baldivia. deg. 40 min. south latitude, 300 miles fouth of St Jago, and 140 miles northeast of the island of Chiloe. It was first founded by Peter Baldivia in the year 1552, in a plain about four or five fathoms above the furface of the fea; near which was a fort to keep the Indians in awe ; but these people were so enraged at the tyrannical government of the Spaniards, that they took up arms, killed Baldivia, and freed themfelves from the yoke of Spanish flavery. They also plundered and destroyed the town; but it was afterwards rebuilt, a little higher up the land, on an eminence at the point of a peninfula, formed by two rivers, which, with the islands before it, make it the most fecure and fpacious harbour on the coaft of Chili.

The town is inclofed with walls, built with earth, and defended by twelve pieces of cannon; which are fixteen pounders; but it has only one parifh-church, and a convent of Jefuits.

The harbour, or port of this town, is fo advantageously fituated, that it has engaged the Spaniards to build feveral forts to defend the entrance of it against strangers; because they look upon it as the key of the South seas.

The paffage up to the town, for great fhips, is on the eaft fide, being about fix leagues; but it is not above two leagues from the fea; by another

Land Lower

An Account of, the Part III.

another paffage on the west fide, where the fmall veffels go up.

The Dutch were desirous of settling here, in 1643, to fecure a convenient place for facilitating their entrance into the South feas, and accordingly made themselves masters of it; but, upon the death of their general and other miffortunes, they were obliged to retire, leaving behind them their baggage, and thirty pieces of cannon.

Commodore Anfon, in 1741, intended to attack it, in purfuance of the refolution of a council of war, and an article contained in his Majefty's instructions to him to endeavour to fecure fome port in the South feas, where the ships of the squadron might be careened and refitted. As Baldivia is the principal frontier of Chili, Lord Anfon proposed, that the reduction of fuch an important place should be his first attempt after his arrival in the South feas; in confequence of which, new inftructions were given to the captains of the squadron, with respect to the course they were to steer, and where to rendezvous, in cafe of feparation : but the total and almost instantaneous separation of the squadron, in passing round the island of Terra del Fogo, which was owing to the unfeafonable time of the year when this gallant commander was fent upon the expedition, prevented his intended attack upon Baldivia.

The white people of Peru and Chili who are banished for their crimes, are sent to this port, as well as to the town, where they are employed.

302

## Chap. IX. Spanifb Settlements in America. 303

employed about the fortifications, and other fervices of the garrifon. The viceroy fends annually 300,000 pieces of eight to keep up the fortifications, and maintain the garrifon. The rains here generally continue for fix months every winter. The number of inhabitants of Baldivia is computed to amount to between two and three thousand; but its commerce is not fo confiderable now as formerly, becaufe feveral gold mines in its neighbourhood are at prefent neglected. However, there are still eight or ten veffels of between four and five hundred tuns, which are employed in carrying on the trade between this port and Lima, where they export hides, goat-fkins tanned, cordouan leather, falt-meat, corn, and fome gold; bringing back chocolate, fpices, fugar, and all forts of European goods.

4. Oforno is an inland town, fituated about fifty miles fouth of Baldivia, in fouth latitude 30 deg. and as many eaft from the fea-coaft. The adjacent country is not fruitful, and produces few of the neceffaries of life; but it is remarkably rich in gold mines, for which reafon the town is very populous, and is faid to be larger than Baldivia. De Noort fays, it has a Spanifh governor, and that they make here woollen ftuffs and linen cloth... De Laet adds, that there are above 200,000 Indians within the limits of the territory of this town, who pay tribute to the Spaniards, and ferve them without any reward.

Befides those already mentioned, there are feveral

### An Account of the Part III.

veral other towns in this province of confiderable note, fuch as Villa Rica, about fifty-five miles diftant from Baldivia towards the northeaft, and about ten from the Cordillera. The foil about this city is very fruitful, being a clay of which they make good bricks. Most of the inhabitants work in wool, and make tolerable cloth. Angol is another confiderable inland town, about 130 miles north of Baldivia; it ftands in a large open plain, where the land is productive of all forts of grain and fruits.

3. The large province of Cuyo, or Chicuito, The province lies to the eaft of the Andes, exof Cuyo, or tending from the 30th to the 38th Chicuito. deg. of fouth latitude; but its breadth as well as its length is very uncertain, the country being fo remote, and feldom frequented by Europeans. Ovalle, who was a native of Chili; and procurator for the Jefuits of that province; fays, it is amazing to reflect, when there are only the mountains of the Andes between the provinces of Cuyo and Chili Proper, that they thould be fo different in their qualities, and in every refpect almost diametrically opposite to each other, though the latitude is the fame.

In Cuyo, he fays, the heats are intolerable in fummer, while the weather in Chili is very temperate. Thunder, lightning, rain, and tempefts, are frequent in Cuyo during the fummer, while in Chili they have fettled ferene weather, without any of thefe. In winter the weather in Chili is variable, but never exceflive cold to the weftward of the mountains; whereas in Cuyo

304

# Chap. IX. Spanish Settlements in America. 305

Cuyo they have conftant ferene weather in winter and extreme hard frofts, in fo much that the cattle die in the fields if they are not houfed and fed; and for five or fix months every year the paffages of the mountains are fo locked up by the fnows, that thefe two provinces have no manner of communication. However, the greateft part of this country is remarkable for fertility where duly cultivated, which is principally owing to the numerous rivulets of melted fnow that run down from the circumjacent mountains; its products being corn, wine, and oil, which are excellent in quality, and might be prodigious in quantity, if the country was fufficiently inhabited, and duly cultivated.

The city of Mendoca, or Mendoza, is the capital of the country, being fituated in about 68 deg. 25 min. weft longitude, and 34 deg. 20 min. fouth latitude, at the foot of the Cordillera, close by the pass of the mountains that leads into Chili, and at the head of a river which falls into the lake of Guanacache, about feventy miles from it, in a fouth-east direction. This town had its name from Mendoca viceroy of Peru, and was built by Peter Castillo. The Jefuits have a college here, and there are copper mines in the neighbourhood which are very much esteemed.

2. San Juan de la Frontiera, St John of the frontiers, is about 120 miles diftant San Juan de from St Jago, and 100 from Men- la Frontiera. doca to the north-east, lying also at the head of one of the rivers that run into the lake of Q q Guanacache.

#### An Account of the

Part III.

Guanacache. La Martiniere fays, it is now the chief town of Cuyo, being the most populous place in the country; and in the mountains adjacent to it there are very rich filver mines.

There are fome other fmall towns in this province, but none of any confideration; however, Ovalle fays, that, in his time, the number of people and the towns began to increase here, because the west part of Chili being pretty well peopled, occasioned many Spaniards to retire to Cuyo.

### C H A P. X.

A fhort account of the islands on the coasts of Chili, with a description of the islands of Juan Fernandez.

HE principal islands along the coaft of Chili are Nostra Senora de Socoro, Chiloe, Mocha, St Mary's, and the islands of Juan Fernandez. There are several other islands extending along the same coast from south latitude 42, to latitude 46, but none of them are well known, or inhabited but by Indians.

1. The island of Nostra Senora de Socoro lies Nostra Senora in about 77 deg. west longitude, and de Socoro. in 45 deg. south latitude; it is a simall uninhabited island, but so well situated for ships entering the South seas, that Commodore Anson, when he left the coast of Brazil, ordered his captains, as soon as they passed Cape Horn into the South seas, to rendezvous here, and

306

#### Chap. X. Spanish Settlements in America. 307

and from thence to continue their courfe to Juan Fernandez. The coaft of this ifland is very craggy and irregular, and appears to be rocky and barren. Whilft the Commodore was cruifing here, they obferved in fome places feveral deep bays, but the entrance into them was generally blocked up by numbers of little iflands: but as none of his men went on fhore, we have no particular defcription of the interior parts of the ifland.

2. The ifland of Chiloe is fituated between the parallels of 71 deg. 30 min. and The ifland 72 deg. 30 min. weft longitude, and of Chiloe. between 41 deg. 50 min. and 44 deg. fouth latitude, being about 150 miles long and 21 broad. The fouth and east parts of it are divided from the continent of Chili by a part of the fea, which is about thirty miles over, and the north part of it is about 136 miles fouth of Baldivia. The coast is fubject to ftorms and tempestuous weather, especially in March when the winter commences, and prevents ships from putting to fea during that feason.

The face of the country is various, confifting of mountains, valleys, woods, favannahs, having fome fine fprings and rivulets of water.

According to Brewer and Sir John Narborough, it abounded in corn, cattle, and fruit, both European and Indian, as also ambergris; but the Spanish plantations here were asterwards deftroyed by the native Indians, who recovered the country, and left the Spaniards little more Q q 2 than

Part III.

than the town of Castro, which has been so frequently burnt and plundered, that it is now reduced to a miferable village, whereby the lands lie uncultivated, and appear unfruitful, as the Indians fow no more than what is just fufficient for furnishing their families with food.

The only place poffeffed now by the Spaniards is the town of Caftro, built by them in the 1600, when the Chilefians had almost driven them from the continent. It is fituated in the weft part of the island, in 42 deg. 20 min. fouth latitude De Laet fays, it stands between two brooks, and has a small castle which commands the harbour; but the town has neither walls nor ramparts, and the houses lie fcattered about in a very irregular manner.

There are a great number of finall islands about Chiloe, which all take their names from it.

3. The island de la Moca, or Mocha, is not

Mocha. far diftant from the coaft, and almost opposite to the mouth of the river Imperial.

Oliver Noort, who was here in 1600, fays, this ifland lies four or five leagues out at fea, is pretty large, with a ridge of hills in the middle, from whence a frefh water river defcends. It is inhabited by Indians, who retain an implacable enmity against the Spaniards, from whose cruelty they fled, and peopled this island. Sir John Narborough places this island in 38 deg. 30 min. fouth latitude, and fays, that the Spaniards told him there was gold

308

Chap. X. Spanifs Settlements in America. 309

gold there; but that the natives were unwilling to part with it.

4. St Mary's ifland lies almost opposite to the town of Conception, not many miles St Mary's. from the continent. Frezier fays, it is low, almost plain, and about three quarters of a league in length, from north to fouth. Sir John Narborough observes, that there is good anchoring on the north fide of this island, in a fine fandy bay.

The Spaniards are mafters of this ifland, and have a fort on it with five guns, where the garrifon live very comfortably, not being molefted by the Indians, and the country abounds with corn, fruit-trees, roots, fheep, and hogs.

5. The Spaniards have generally mentioned two iflands under the name Juan Juan Fernan-Fernandez, ftyling them the greater dez. and leffer.

The ifland of Juan Fernandez Proper, is fituated about 84 deg. weft longitude, and in 34 deg. 45 min. fouth latitude. It is about 330 miles from the continent of Chili; being about fifteen miles in length, and fix in breadth, and forty in circumference. Governor Pullan fays, the foil of this ifland is indifferent upon the hills, which are overgrown with woods; but its valleys are both fruitful and pleafant, interfperfed with favannahs, or natural meadows, which are capable of great improvements, fo as to produce every thing agreeable to its climate, which is remarkably healthful and pleafant.

This island was discovered by Juan Fernando, do, in a voyage he made from Lima to Baldivia: who was fo well pleafed with its fituation, foil, and climate, that he refolved to fettle it; imagining, that its produce might well fupport four or five hundred families. On his return to Lima, he endeavoured to procure a patent for that purpofe, but happened to meet with a difappointment, fo that it has continued unoccupied fince.

Governor Pullan, during the war with France and Spain, in the reign of Queen Anne, was confulted by the ministry how it was practicable to prevent the treasures of Peru and Chili from being brought to Europe by the French and Spaniards; as also how to exclude the French from that traffic, whereby they were enabled to maintain a war fo long against the confederates. In confequence of which, the governor advised the ministry to fend a fquadron of men of war into the South feas, to be stationed at this island. He observed that the feafon of the year proper to begin this voyage, was about the beginning of September, in order to their arrival in the South feas before the French trade that went that feason: by this means they could hardly fail of deftroying all the fhips bound there that feason, and perhaps meet with fome returning home; because they must observe the same time of year, and return by the fame course of these seas, as they went into them by. The route they always use in going there, is by or round Cape Horn, the most fouthern promontory of all America: for fhips feldom

#### Chap. X. Spanish Settlements in America. 311

feldom venture through the streights of Magellan, because they find by experience, that for one ship which gets through, three are forced back, and lofe their voyage that year, to the ruin of their owners; but having fufficient fearoom the other way, they are never exposed to any fuch rifk. After they have doubled Cape Horn, they fteer directly for Juan Fernandez, to refresh their men and take in fresh water. But what induced the governor to mention the fettling of this island, was the breeding of cattle and cultivating the land, by which means mighty advantages might accrue to the inhabitants ; becaufe all the ships which pass the streights of Magellan, or by Cape Horn, conftantly touch here, on account of their men having by this time contracted the fcurvy. And though it be far from Britain or any British colony, yet it was fo capable of being fortified, that a small charge would foon build fuch works, as would render it impracticable for any people to land there against the will of the inhabitants. If this was the cafe, then the British ships would not only have a convenient harbour, and plenty of provisions, but likewise a convenient station for distreffing the Spaniards, and ruining their whole trade in the South feas.

Commodore Anfon, during his three months ftay here, was very careful in directing the roads and coafts of this ifland to be furveyed, and other obfervations to be made, knowing from his own experience, how ufeful thefe materials might prove to any British veffels employed

#### An Account of the Part III.

ployed afterwards in those feas; and further obferves, that it is the only commodious place where British cruifers can refresh and recover their men after their passage round Cape Horn, and where they may remain for some time without alarming the Spanish coast.

The Commodore arrived here in June 1741. When they first descried the island at eleven or twelve leagues distance, it appeared to be a very mountainous place, extremely rugged and irregular: though, when they came nearer the fhore, they could difcover, that the rugged precipices, which appeared fo unpromifing at a distance, were far from barren, being in most places covered with woods; and that between them there were every where intersperfed the finest valleys, clothed with a most beautiful verdure, and watered with numerous ftreams and cafcades; no valley of any extent being unprovided with its proper rill : which afforded the greatest pleasure to the Commodore, as most of his people were feverely afflicted with the fcurvy, and were obliged to be fent on fhore for their recovery.

The only fafe anchoring is on the north fide of the ifland, where there are three bays; but that in the middle, known by the name of Cumberland bay, is the wideft and deepeft, and in every respect the best; for the other two; named the east and west bays, are fearcely more than good landing-places, where boats may conveniently put their casks on shore.

The northern part of the island is composed

of

# Chap. X. Spanish Settlements in America. 313

of high rugged hills, many of which are inacceffible, though generally covered with trees. The Spanish prisoners observed to the Commodore, that the appearance of the hills in some parts of the island was like that in the mountains of Chili, where the gold is sound, so that it is not impossible but mines might be discovered there.

The trees of which the woods on the northern fide are composed, are most of them aromatics, and of many different forts; but there are none of them of a fize to yield any confiderable timber, except the myrtle trees, which are the largest on the island; though even these will not work to a greater length than forty feet. Here is also the pimento-tree, and the cabbagetree, which generally grows on the precipices, and in no great plenty, each tree yielding only a fingle cabbage.

Exclusive of a great number of plants of various kinds, almost all the vegetables are found here, which are usually esteemed to be particularly adapted to the cure of those fcorbutic diforders which are contracted by falt diet and long voyages. There are great quantities of water-creffes, and purflain, with excellent wild lorrel, turnips, and Sicilian radifles, Sc.

The excellence of the climate, and the loofenefs of the foil, render the place extremely proper for vegetation; for if the ground is any where accidentally turned up, it is immediately overgrown with turnips, &c. Lord Anfon, therefore, having with him garden-feeds of all R r kinds,

# 314 .... An Account of the Part III.

kinds, and stones of different forts of fruit, fowed lettuces and other garden-plants, for the better accommodation of his countrymen, who should touch here again. He also fet in the woods a great variety of plumb, apricot, and peach ftones.

Former writers have related, that this island abounded with goats, and their accounts are not to be doubted ; as this place was the ufual refort for bucaneers and privateers in those feas. There are two inftances to confirm this; one of a Mulquito Indian, and the other of Alexander Selkirk a Scotfman, who were left here by their respective ships, lived alone upon the island, and confequently were no strangers to its produce, Selkirk, who was the laft, after a ftay of near five years, was taken off the place by the Duke and Duchefs privateers of Briftol, in 1709; whofe manner of life, during his folitude, was, in most particulars, very remarkable; and he tells us, among other things, that, as often as he caught more goats than he wanted, he fometimes marked their ears, and let them go; which was found to be true, when Anfon was here; for his men caught feveral of thefe animals marked in this manner. But the goats are now much diminished, through the policy of the Spaniards, who were apprized of the advantages which the bucaneers drew from the provisions of goat-flesh, and therefore endeavoured to extirpate the breed, to deprive their enemies of this relief. For which purpofe, they have put on shore great numbers of large dogs,

#### Chap. X. Spanish Settlements in America. 315

dogs, who have deftroyed all the goats in the acceffible parts of the illand.

Along the fhore are plenty of fifh, of various kinds, and fea-lions which are of the amphibious kind, bearing fome refemblance to feals, which are found here also in great abundance.

The island of Mosa Fuero, or little Fernandez, is about twenty-two leagues to Little Ferthe west of the former, and is near nandez. four miles in length. It had been represented by former navigators, as a barren rock; but, while Commodore Anson was at Juan Fernan-

dez, he was joined by the Gloucester commanded by Captain Mitchell, who acquainted the Commodore, that he had been forced by the winds as far as this island; and affured him, that it was almost covered with trees and verdure, and appeared to be a very beautiful island.

In confequence of this intelligence, the Commodore fent the Trial floop to examine it, which was accordingly done ; the Trial floop found, that it bore from the greater Juan Fernandez, west by fouth, and that it was a much larger and better fpot than had been generally reported; that it was covered with trees, and that there we're feveral fine falls of water running down its fides into the fea. They also found that there was a place where a fhip might come to an anchor on the north fide of it, though the anchorage is inconvenient; for the bank extends but a little way, is fleep, and has very deep water upon it : fo that ships must come to an-Rr 2 chor

### 316 An Account of the Part III.

chor very near the fhore, and there lie exposed to all the winds but a foutherly one.

This place at prefent has one advantage beyond the ifland of Fernandez Proper; for it abounds with goats, which have not been accuftomed to be difturbed, and are nowife fly or apprehensive of danger till they have been frequently fired at.

# $\sum \mathbf{C} \cdot \mathbf{H} = \mathbf{A} \cdot \mathbf{P} \cdot \mathbf{C} \cdot \mathbf{X} \mathbf{H} = \mathbf{h}$

I the state with a state of the

A general description of Paraguay, or Rio-de-la-Plata. The extent and nature of the country; with some account of the Indians. How the Portuguese first invaded this country, under Alexius Garcia. The discoveries made here by Sebastian Cabot. The Spaniards made their first settlements in this country under Mendoza, &c. Remarks on the Jesuits of Paraguay, the six districts, or subdivisions of this extensive province.

His large country received its name from the river Plata, which rifes near the city of that name in Peru, and runs to the foutheast through this country. It is bounded on the north by part of Brazil, the land of the Amazons, and part of Peru; on the east by part of Brazil and the ocean; on the fouth by Chili and Terra Magellanica; and on the west by part of Peru and part of Chili. Its utmost northern boundaries are generally placed in 12 deg. of fouth latitude, beyond the town of Por-

to

#### Chap. XI. Spanish Settlements in America. 317

to de los Reyes, which is fituated at the top of the lake Xarayes; and the fouthern borders are commonly fet down in 35 deg. 30 min. fo that it is about 1400 miles in length. It also extends from about the 48th to the 66th deg. of west longitude, in the broadest part, which is from the Andes to the mouth of the river of St Francis; fo that its greatest breadth is about 1080 miles, though not above half that number on the fouthern extremity, where it is narroweft. Father Sepp fays, that this country exceeds Germany, France, Italy, and the Netherlands put together. The principal river in this country is the Rio-de-la-Plata, which rifes in Peru in 20 deg. fouth latitude ; it first runs to the eastward, till joined by the great river of Paraguay, which rifes in the heart of the country in fouth latitude 16, and unites with the former a little before the city of Affumption in fouth latitude 25. About 100 miles lower, they are joined by the great river Parana; befides, there are many other rivers both from the east and weft, which concur in forming fo great a collection of water, and roll in conjunction towards the fea, where it difcharges itself near the town of Buenos Ayres, in 35 deg. fouth latitude, being about ninety miles broad.

As this country is of fo vaft an extent on both fides, it must be fupposed to have a great variety of climates, foils, products, and inhabitants, the farther particulars of all which will be given when defcribing the feveral provinces. In the mean time we shall subjoin a general account of

#### An Account of the Part III.

1318

of the whole. The land is, generally speaking, very rich and fruitful, producing plenty of wheat and other European grain, fome vines, but chiefly abounds in fugar-canes: here are in fome places whole woods of peaches, almonds, figs, Sc. planted from the bare kernels. It is at prefent fo well stocked with all forts of cattle, fmall and large, that they run in a manner wild, the inhabitants killing them only for their hides and tallow, and let the flesh rot on the ground. Here are also great variety of other beafts, fuch as wild and tame horfes and mules; the former are fuffered to run wild in the woods, and of the latter they furnish Peru and other places with vaft numbers annually. Here are three forts of dcer; one kind almost as big as cows, with very large horns, and ranging chiefly among the flags and watery grounds; another fort still bigger, which rove among the flat grounds ; and a third fort, which are fmall, and harbour chiefly in the mountains: In the woods are plenty of voracious animals, fuch as lions, tygers, leopards, foxes, &c. Here are also snakes of a monstrous fize; and the rivers breed plenty of crocodiles and alligators, which are faid to be very harm-

lefs, and their flefh good eating. That part of the country which lies to the weft of the river Paraguay, confifts of large plain lands, extending about 750 miles in length, without any trees, for any thing that looks like timber; but in the country to the eaft of that river, which borders on Brazil, there is a variety of hills and valleys, of woods and champaign.

Thofe

### Chap. XI. Spanish Settlements in America. 319

Those parts which lie about and to the north of the tropic of Capricorn, have annually very heavy rains, florms, and tempests, when the fun is vertical, in November and December. At this time all the flat country is overflowed, their cisterns and refervoirs of water being repleniss ed, which ferves them the rest of the year till the rains return; these rains moisten their lands, and render them fruitful in grain and fruits.

But it is directly contrary in that part of the country which lies fouth of the tropic; for it is fummer there in November, December, and January; when the rivers which rife within the tropics fwell after the rains are fallen, overflowing their banks as they pafs through the fouthern parts of the country, which they enrich with a great fertility.

The Indians of Paraguay are reprefented as a brave people, having defeated feveral confiderable bodies of Spaniards, when they first invaded their country. It cost the Spaniards feveral years work before they could fix themselves even in the plains, and the natives defended themfelves fo well in the woods and mountains to the eaftward of the river Uragua, that they were never fubdued, till the Jesuits found means to infinuate themfelves into their good opinion, and brought them into a kind of fubmiffion by the force of flattery, and without the least compulfion of arms, where these divines live like fovereign princes, and have founded a new kind of government that never before existed in the world, world, which will be more particularly reprefented afterwards.

The first adventurer who penetrated into this country was Alexius Garcia, a Portuguefe; who was fent upon that enterprife by the governor of Brazil in the year 1524; when he marched acrofs La Plata, as far as the borders of Peru, where he amaffed a great quantity of plate, but was cut off by the Indians on his return, with most of his men; a party was also fent to support him, who shared the fame fate.

Sebaftian Cabot (who discovered North America for King Henry VII. but afterwards went to Spain, where he was made chief pilot of the kingdom, and highly carefied, to prevent his engaging with any other court) was employed in 1526 by the Emperor Charles V. to make a farther discovery of South America. He entered the mouth of the river Plate, (which was first discovered by John Diaz de Solis), failed up that river as far as the place where Garcia was defeated, and met with the plate he had accumulated on the confines of Peru, which he pur-chafed of the natives for an inconfiderable value, and concluded he had made an important difcovery, as he apprchended this treasure to be the product of Paraguay. Accordingly he erected a fort where the town of Aflumption now stands; after which he detached Alvara Ramon with one of his fhips to fail up the river, Uragua, and get farther intelligence of the mines which he imagined were to be found near the

#### Chap. XI. Spanish Settlements in America.

the banks of that river; but Ramon and his people were cut off by the natives.

When Cabot had made fome further difcoveries of the country, he fent Ferdinand Calderon and George Barlow with intelligence thereof to Spain, who delivered their difpatches to the Emperor at Toledo about the end of September 1527. Upon this advice his Imperial Majefty offered the merchants, who had contributed towards the expense of this voyage, that they might continue the expedition, and fhare in the profits, which they refused; wherefore his Majesty took it all upon himself; but though the confequence of maintaining a difcovery 600 miles in length was fo 'confiderable a thing, yet nothing was done for a long time upon this occasion. However, Cabot continued in expectation of fupplies for the space of five years, when his patience was exhausted, and he returned to Spain in one fhip which he had faved, and all the men that were left alive. He repaired immediately to court, and informed the Emperor of the nature of his expedition, the fubstance of his relation being as follows : That the chief race of the Indians in those parts was that of the Guaramies, a warlike, treacherous, and imperious people, who called all the other Indians flaves, that could not fpeak their language, continually waging war on them, wherein they were extremely bloody and cruel, killing all they could, without taking any prifoners: the territory of the city de la Plata was inhabited by this nation, and their country extend-Sf eđ

321

Part III.

ed about 1500 miles, from whence they invaded Peru, and returned home in a victorious manner; but Cabot concluded a treaty of peace with those people, and established the colony of San Espiritus; got information of them concerning the country, as also of the gold and filver of Peru, from whence the river was called *de la Plata*, or Plate

Cabot found that credit was the more readily given to this report, as he had brought home a, very confiderable quantity of plate; upon which feveral of the best families in Spain folicited the court to be fent on an expedition to Paraguay; in confequence of which, a body of 2200 land-men, befides marines, were embarked for the river of Plate, among whom were thirty heirs of noble families, and the whole was commanded by Don Pedro de Mendoza, who arrived at the mouth of the river, and founded the town of Buenos Ayres in 1535: but this was not done without great opposition from the natives, who defeated feveral bodies of Spaniards; after which Mendoza returned to Spain, leaving Ogola his deputy-governor, with part of the troops, who afterwards abandoned Buenos Ayres, and returned to the fort of Affumption.

The governor Alvaro-Nunez-Cabeza de Vaca afterwards made farther difcoveries; planted colonies as far as the north of Tucuman; rebuilt Buenos Ayres, and founded fome other towns near the mouth of the river Plate.

Francis de Acquire was detached with 200 men

322

## Chap. XI. Spanifb Settlements in America. 323

men from Chili in 1553, by Baldivia, when he built the city of St Jago. John Gomes Zarita was alfo fent from Chili to La Plata with another body of troops in 1555, when he built the town of Cordova, and made an entire conqueft of all the country as far as the river Paraguay; but the provinces to the eaft of that river, inftead of being conquered by the force of the Spaniards, were reduced by the artifice of the miffionaries, in return for which fervice the crown of Spain conferred the property of that country upon those fathers, who have there eftablished for themfelves a temporal dominion.

The unconquered Indians are governed by their caciques; but that part of the country which has been fubjected to the dominion of Spain, is under the direction of two Spanish governors, one of them having his refidence at St Jago, in the district of Tucuman, and the other at the town of Assumption, though both of them are under the fuperintendency of the viceroy of Peru; and they have also fub-governors in every district.

This extensive country, which generally goes under the name of *Paraguay*, contains the following districts or provinces, *viz*.

lowing diffricts or provinces, viz. 1. Tucuman on the weft. 2. Rio de la Plata on the fouth. 3. Uraguay. 4. Parana. 5. Guayra; thefe three lie to the eaft of the river Plate. And, 6. Paraguay Proper on the north.

Sf 2

An Account. of the.

Part III.

# C H A P. XII.

A brief account of the provinces of Tucuman and Rio de la Plata; their principal towns, trade, &c. but more particularly of the commerce of Buenos Ayres, and of the Affiento treaty for furnishing it with negroes. The great importance of that settlement were it annexed to the British territories.

HE large province of Tucuman lies in the middle between Chili and Pa-The province raguay. It is not easy exactly to of Tucuman. state its boundaries; especially towards the north; however, it is faid to extend from fouth latitude 24 to 34 deg. viz. from Chaco on the north to Cuyo and the territory of the Pampas on the fouth, being ten degrees, or 690 miles. It is bounded on the east by Paraguay Proper and Rio de la Plata, and on the west by the imperial bishopric of St Jago in. Chili. Its greatest extent from west to east is about 7 deg. that is, from west longitude 62 to 69. It lies for the most part in a temperate and healthy climate; and although no mines of gold or filver have been hitherto difcovered in it, yet the country is both rich and well cultivated, producing excellent corn, and other neceffary commodities, with vast herds of horses and cattle.

The principal towns in this province are,

1. St Jago del Eftero the capital, and an epifcopal

## Chap. XII. Spanish Settlements in America. 325

fcopal fee, is fituated in 65 deg. of weft longitude, and 27 deg. 40 min. fouth St Jago del latitude, on the banks of the Dolce, Eftero.

or fweet river, which is here pretty large and navigable, affording both plenty and variety of fifh. However, the town is but fmall, not exceeding 300 houfes, or 500 families, and is quite defititute of wall, ditch, or any other defence.

The adjacent country is rich, producing plenty of wheat, rice, and barley, as likewife fruits of all forts, efpecially figs and raifins. The forefts afford plenty of game, but are infefted with tygers and other voracious animals, particularly one fort, called *Guanacos*, which are as large as common horfes, with long necks, fmall heads, and fhort tails, in whofe maw is found the occidental bezoar.

The town has four churches, the cathedral, that of the Jefuits, and two more belonging to other monafteries. The inquifitor, or governor of this province, who is a fecular prieft, has his refidence here, and nominates his furbilitute officers in the other parts of the country.

The town is reported to lie almost in the mid-way between the mines of Potosi and Buenos Ayres; the plate is brought here from the former on the backs of mules, because of the unevenness of the country, but from St Jago to Buenos Ayres it is carried in waggons over one continued plain, where there are neither hills nor woods to be discovered.

2. San Miguel, or St Michael, was the first town

#### An Account of the

326

of the Part III.

town the Spaniards founded in this country, San Miguel. and is pleafantly fituated on a fer-

tile plain, near the banks of a fmall river that falls into the Rio Dolce near St Jago, from which it is diftant about fifty-four miles, in a north-weft direction. The productions of the neighbouring country are the fame with that of St Jago, and not inferior in fertility. The air here is reckoned one of the fweeteft and moft falubrious in all Paraguay, which makes the country well inhabited, and ftored with all the conveniencies of life.

3. Salta, or Lerma, ftands on a fmall river, Salta. which foon after falls into a neighbouring lake. It is principally inhabited by Spaniards, to whom the town and country adjacent belong, having about 400 houfes, and five or fix churches or monafteries. Salta is a place of great refort, on account of the great quantity of corn, meal, wine, cattle, tallow, falt meat, and other fuch commodities, which are fent from thence into Peru, and other places.

4. Cordova lies about 300 miles fouth of St Cordova. Jago del Eftero, and 480 north-weft from Buenos Ayres. It is a very confiderable town, but fituated on a marfhy, though rich and fertile foil, in 63 deg. 30 min. weft longitude, and 31 deg. 30 min. fouth latitude, in a temperate healthy climate, with equal winter and fummer, all the territory about it being full of cattle, and abounding with luxuriant paftures. It produces plenty of corn, fruits,

## Chap. XII. Spanish Settlements in America. 327

fruits, and other neceffaries, and has feveral excellent falt-pits; fo that the town carries on a great trade in those commodities, with Peru especially, as it lies on the road to Buenos Ayres, taking gold and filver in return for its merchandife. The inhabitants are Spaniards, who are chiefly employed in cultivating the ground, and manufacturing of cotton cloth, which they fend to Potofi.

There are many other towns in this province, which are faid to be daily increasing in number of inhabitants and extent of trade.

2. Rio de la Plata, or La Plata Proper, is fo called from the remarkable river of The province the fame name, along whofe banks of La Plata. it extends itfelf on each fide, about 600 miles in length from north to fouth, and about 300 where broadeft from eaft to weft; being bounded on the north by Chaco, Paraguay Proper, and Parana; on the eaft by that of Uraguay; on the fouth by the territory of Pampas, and Terra Magellanica; and on the weft by Tucuman.

The principal towns here are,

1. The town of Buenos Ayres, fo called from its pleafant and healthy fituation, Buenos Ayres. being fituated in 57 deg. weft longitude, and 35 deg. 25 min. fouth latitude, upon a gentle rifing ground, upwards of 60 miles from the mouth of the river Plate, and upon the fouth fide of it, that river being here feven leagues wide, and navigable by any fhip fixty leagues above the town, but no farther on ac-

count

# 328 An Account of the Part III.

count of a great cataract. The houses of this city, which were formerly of mud walls thatched with ftraw, and very low, are now much improved, fome being of chalk, and others of brick, having one ftory befides the ground-floor, and most of them tiled. The cathedral is a fpacious and elegant structure. The chapter is composed of the bishop, dean, archdeacon, and two canons. Here are feveral convents, ' and a royal chapel in the caftle where the governor refides. The principal fquare is very large, and built near a little river ; like most towns fituated on rivers, its breadth is not proportioned to its length. The front answering to the square is the caftle where the governor conftantly refides," and with the other forts has '1000 regular troops. The number of the houses are about 4000. There is a fmall church at the farther end of the city for the Indians. With regard to the æconomical government and magiftracy, it corresponds with the other places in South America under the Spanish jurisdiction. The climate here is very little different from that of Spain; there are indeed violent tempests of winds and rains, accompanied with fuch dreadful thunders and lightnings, as fill the inhabitants, though used to them, with terror and conffernation; but in fummer the exceffive heats are mitigated by gentle breezes, which conftantly begin at eight or nine in the morning. The city is furrounded by a spacious and pleasant country, free from any obstruction to the fight; and from those delightful plains the inhabitants are

## Chap. XII. Spanish Settlements in America. 329

are furnished with such plenty of cattle, that there is no place in the universe where meat is better or cheaper. It is also fertile in all forts of grain and fruits, and would be still more fo if duly cultivated; but the people are excessive indolent, and content themselves with what nature produces without labour. It formerly bore very excellent vines; from which they made feveral forts of excellent wines, besides the vast quantities of grapes they dried for use.

Within the government of Buenos Ayres are two other confiderable cities, befides Santa Fee. lesser ones. The first is Santa Fee, about 210 miles to the north-west of Buenos Ayres, in fouth latitude 31 deg. 40 min. at the conflux of the rivers Salado and Paraguay; all the territory quite down to Buenos Ayres on each fide of the river, being very delightful and rich in all productions. The town is built of brick, and was founded by the Spaniards for the defence of the rich mines of gold and filver which are in the neighbourhood of this fettlement, though the Spaniards are averfe to the opening of them, for fear they fhould encourage fome of their enemies to come and take poseffion of their treasure.

Corrientes is the next town in courfe up the river, and ftands about eighty leagues higher; being built by the Spaniards at the confluence of the Parana and Paraguay; but it is fo fmall and inconfiderable, that it nowife anfwers the dignity of its fituation, between thefe two remarkable rivers.

T t

However,

#### An Account of the

Part III.

However, the commerce of Buenos Ayres is

The extenfive commerce of Buenos Ayres.

very extensive, and indeed fuch a commerce as no other port in the Spanish West Indies can boast; for hither come from the most distant

provinces in the Spanish empire, the most valuable commodities, in order to be exchanged for European goods; stich as Vigonia wool from Peru, copper from Coquimbo, gold from Chili, and filver from Potofi; from the towns of Corrientes and Paraguay, are brought hither the finest tobacco, sugars, cotton, thread, yellow wax, and cotton cloth, most of which is used at Buenos Ayres by the flaves and other domeftics; and from Paraguay, the herb fo called and fo highly valued; being a kind of tea drank all over South America by the better fort, of which one branch is computed to amount to a million of pieces of eight, all paid in goods, no money being allowed to pass here. These goods are mostly European, and confist in knives, guns, fciffars, ribands, taffaties, filk stockings, Englill hats, English bays and coarse cloth: all these merchandifes are carried through this vast extent of country, in little waggons, though between Corrientes and this place there are no lefs than fix great rivers, in passing which, the cattle are trained to fwim, and goods are passed over in floats. The commerce between Peru and Buenos Ayres is chiefly for cattle and mules ; fuch as 'are concerned in the former, go first to the governor, and alk his leave to drive a herd of cattle into Peru, which is never refufed

## Chap. XII. Spanish Settlements in America. 331

fed when backed by a prefent of fome thousand pieces of eight. The next thing is to take 30 or 40,000 wild cows out of the King's pastures, which is performed by perfons who follow that bufiness for a livelihood, and who deliver these creatures at about two or three pieces of eight, or nine shillings Sterling per head. At that rate 30,000 cattle may come to near 100,000 pieces. of eight, and at market may possibly bring 300,000 pieces. The commerce of mules is carried on by factors, which are 'fent by the merchants of Peru, who obtain the governor's licence by a confiderable prefent; and then addrefs themfelves to the natives and inhabitants, specifying the number and times when they shall be delivered. At the appointed times they mark and ftamp them with a hot iron on the shoulders, being from that time to be maintained at their expense. These cost about three or four pieces of eight each, and are driven by pretty quick jouneys to Salta, about two thirds of the way to Potofi. There they winter, and are fatted with great care. When they are infull flesh, they carry them to Potofi, where they are fold for from feven to nine pieces of eight each ; but such as are carried farther into the country, bring forty or fifty pieces of eight, and fome-times come to a hundred. The trade carried on betwixt Buenos Ayres and Europe should be only by the register-ships from Spain; but be- . sides this, there is carried on a contraband trade to England and Spain; and there is another with the Portuguese who posses the opposite Tt2 fhore

#### An Account of the

Part III.

fhore of Rio-de-la-Plata, by means of little vessels, under cover of fending their own commodities, but really European goods.

Befides the different branches of trade carried on here, already mentioned, there was ftill another very confiderable article, namely, the importation of negro flaves, which was done by other nations in the following manner.

The first assignment of the affient of the affield King of Spain, and the French Guito treaty. nea company, for furnishing the Spanish dominions in South America with negro flaves: whereby the compliment of negroes was to be 3800 yearly, during the continuance of the war about the Spanish fucceffion, and 4800 in time of peace; the duty being fixed at thirty-three piafters and one third, or L. 5: 19:  $5\frac{1}{4}$ Sterling for every negro. But, by the treaty of Utrecht, the French ceded the affiento treaty to the English, who entered into a treaty with the Spaniards, for the furnishing of negroes, which was to commence the 1ft of May 1713, and terminate in May 1743. The English South-fea company undertook to supply Spanish America yearly with 4800 negroes, for which the fame duty was to be paid, as had been settled by the French. The forty-fecond article of this treaty, which was the last and most confiderable of ail, was not included in the treaty with the French; for this article permitted the English affientists to fend into the ports of Spanish America, every year the treaty was to fubfift,

3.32

# Chap. XII. Spanifly Settlements in America. 333

fift, a ship of 500 tuns, laden with the same commodities the Spaniards ufually fend there; with a licence to vend the fame, conjointly. with them, at the fairs of Porto-Bello and Vera Cruz; which was a concession diametrically opposite to the ancient policy, and usual jealoufy of the Spaniards, with regard to their American commerce. By fome additional articles, the English were also allowed to fend their ship yearly, though the flota, or Spanish galleons should not fail to America; that the first ten years this veffel might carry 650 tuns; as alfo that the commodities which might remain after the fale of the negroes, should be fent to Europe, after the flaves had been landed at Buenos Ayres: and, if their destination was to Porto-Bello, Vera Cruz, Carthagena, and other parts of Spanish America, they should be transmitted to the Antilles, and none of them to the South fea. ' However, on the commencement of the last war with Spain in 1739, the English afsientists were deprived of four years enjoyment of their trade; which was afterwards entirely relinquished, to the great prejudice of the company.

A very confiderable part of the gold and filver of Peru and Chili is exported from Buenos Ayres to Europe; as alfo great quantities of hides and tallow, with fuch other commodities as are furnished by this part of America: for the importance of this place principally confists in its convenient fituation for commerce; whereby the most valuable commodities, in the most

#### An Account of the

334

Part III.

most distant provinces of the Spanish empire, are brought here to be exchanged for European goods.

From the preceding account of this place, we may eafily form a judgment of its vaft importance. It is not only remarkable for an excellent climate, and luxuriant foil, but allo one of the beft fituations in all South America for trade and commerce: the navigation to it is direct and uninterrupted; the great river of Plate, and its copious tributaries lay open the interior parts of the country, which renders a free and eafy communication between Buenos Ayres and all the adjacent country, even to the diftance of many hundred miles.

In the beginning of the laft Spanish war, the judicious Governor Pulleyn published a pamphlet, under the title of a proposal for humbling Spain: in which he urged the neceffity, and the great advantages that would attend the taking and retaining of Buenos Ayres: for, as the governor justly observed, by the taking of this place, and making good fettlements in its neighbourhood, we should have the Spaniards at our mercy, and then it would be in our power to chastise them upon any just offence, or violation of treaties. Had this project been carried into execution, we should have reaped the advantages of it long before now, and would have been of the greatest confequence to us at prefent.

As the town has no regular fortifications, at leaft no forts of any firength, and those but poorly garrifoned,

#### Chap. XII. Spanifs Settlements in America. 335

garrifoned, a fmall armament with a few regular troops would foon reduce the place; and as the Spaniards have no maritime force here, it would be eafy to keep the possefilion, which (if right improved) would be attended with the following advantages of Great Britain.

1. By the British being in possession of this town, it would not only deprive the Spaniards of the best port they have on the eastern shore of South America, but also weaken their trade and shipping, and humble their unbounded pride.

2. It would not only be an introduction for us into South America, from which we have been formerly excluded, but would open to us new fources of wealth and commerce. For, by being fettled here, we would have an opportunity of trading not only in the neighbouring provinces, but alfo for penetrating into the gold and filver mines of Peru and Chili, and thereby come in for a fhare of thefe valuable metals.

. .

3. It would give us an opportunity of making fettlements to the fouthward of the river Plate, in that extensive, though uninhabited country, of Patagonia or Terra Magellanica, which is generally represented as a fruitful and agreeable territory, abounding with innumerable herds of cattle, and if peopled with industrious inhabitants, might, through process of time, become a valuable colony.

4. By being fettled in this province, it would give us an opportunity of carrying on a most beneficial

### 336 . .... An Account of the Patt III.

beneficial and lucrative trade with our allies the Portuguese in the Brazils; and as we are joined in confederacy with that nation against the Spaniards, the Brazilians may be of great use to us at present in affisting at the reduction of Buenos Ayres, which lies in their neighbourhood.

5. By our fettling here, it would not only increafe the number of our colonies, enlarge the number of our fubjects, extend our commerce; but would also prodigiously augment our navigation and failors, and exhaust immense quantities of our manufactures, and render us still more and more formidable to our aspiring foes.

### C H A P. XIII.

#### The provinces of Uraguay, Parana, and Guayra; their principal towns, rivers, and trade, &c.

3. THE province of Uraguay is bounded by Parana on the north; by the river Theprovince Plate on the weft and fouth; and of Uraguay. on the eaft by part of Brazil. Its length from north-eaft to fouth-weft is 630 miles, and its greateft breadth from eaft to weft about 390, but much narrower in other parts. Formerly there were many confiderable towns in this province, fuch as Los Reyes, Affumption, Conception, St Thomas, with many others, which were built by the Spaniards, but have fince been abandoned, and gone moftly to ruin.

4. The

# Chap. XIII. Spanish Settlements in America. 337

4. The province of Parana, fo called from the great river of the fame name, The province which is its fouthern boundary, of Parana. where it divides it from Uraguay: it is alfo bounded by Guayra and Paraguay Proper on the north; on the eaft by Brazil; and by La Plata Proper on the weft. Its length, as far as has been difcovered, is computed to be about 400 miles, though great parts of it are ftill unknown; and the breadth in fome places is about 340 miles.

The towns belonging to this diftrict, lay formerly on the banks of the Parana, but very little is known concerning these except their names and fituation.

5. The province of Guayra is bounded by Paraguay Proper on the north ; by The province Brazil on the east, by Parana on of Guayra. the fouth, and by the river Paraguay on the weft. Its greatest extension from east to weft, is computed about 450 miles, and near the fame breadth from north to fouth. The tropic of Capricorn cuts it almost in two equal parts, fo that its climate must be very hot; though it is moift on account of the great dews and rains, which makes it very fruitful in provisions as well as difeafes; infomuch that, on account of the latter, fome have represented it as a fitter habitation for wild beafts than human creatures. However, we are informed, that it was tolerably well peopled at the first coming of the Spaniards; which is farther confirmed by the number of towns and villages, that have been Uu fince

### An Account of the Part III.

fince deferted or destroyed, either by the ficknefs of the inhabitants, or by the inhumanity of the Brazilian Portuguese, who either deftroyed the people, or obliged them to quit their habitations. The town of Guaray Cividad is fituated in 24 deg. fouth latitude; St Xavier is about 300 miles to the eastward, on the confines of Brazil: but the inhabitants of these towns are generally poor, having neither plenty of bread nor flesh, except that of the wild beafts which they deftroy.

### C H A P. XIV.

An account of the territory of the Jefuits in Pa-raguay Proper; their manner of fettling and governing it; the obedience of the people.

6. PAraguay Proper is the most northern di-strict, being bounded on the north by Paraguay the great country of the Amazons, on the east by the province of Guay-Proper. ra, on the fouth by those of Parana and La Plata, and on the west by part of Peru and Tu-cuman; but it is necessary to observe, that its weftern and northern limits are far from being certain.

The chief town of this province is Affumption, which stands on the eastern banks of the river of its name, being situated in 59 deg. 35 min. west longitude, and 24 deg. 47 min. fouth latitude, about 150 miles above the confluence of the Paraguay and Parana, where the former

## Chap. XIV. Spanish Settlements in America. 339

former begins to be called the Rio de la Plata. It was built by the Spaniards in 1538, being remarkable for its healthy and advantageous fituation, as well as for the number of its inhabitants. containing at least 400 families of Spaniards, and feveral thousands of mestizoes and mulattoes. The adjacent country is exceeding rich and fruitful, producing plenty of grain and variety of fruits, not only of those natural to the country, but those which have been transported hi-ther from Spain; and the air is fo temperate, that the trees are clothed with a perennial and delightful verdure. There are likewife very noble and luxuriant pastures in the circumjacent plains, on which are bred very numerous herds of cattle; fo that there is fuch an extraordinary plenty of provisions in the town, as to make the natives, blacks, and others, ambitious of living in it.

There are many towns and villages on both fides of the river, fome of which are very populous and extremely magnificent.

Before I leave this country of Paraguay, I must beg leave to fay fomething of that extraordinary fpecies of commonwealth which the lefuits have erected in this country.

About the middle of the last century these fathers represented to the court of The rife and Madrid, that their want of fuccefs progrefs of the Jefuits in Pain their miffions was owing to the raguay. fcandal which the immorality of the

Spaniards never failed to give, and to the hatred which their infolent behaviour caufed in the Uu 2

#### An Account of the Part III.

the Indians where-ever they came. They further infinuated, that if it were not for that impediment, the empire of the gofpel might, by their labours, have been extended into the moft unknown parts of America; and that all thefe countries might be fubdued to his Catholic Majefty's obedience without expenfe, and without force. This remonstrance was listened to with attention; the fphere of their labours was marked out; an uncontrolled liberty was given to the Jefuits within thefe limits, and the governors of the adjacent provinces had orders not to interfere, nor to fuffer any Spaniard to enter into this pale without licence from the fathers. They on their part agreed to pay a certain capitation-tax in proportion to their flock, and to iend a certain number of men to the King's works whenever they should be demanded, and the miffions become populous enough to fupply them.

On these terms the Jesuits entered upon the feene of action, and opened their spiritual campaign. They began by gathering together about 150 wandering families, whom they perfuaded to fettle, and they united them into a little township. This was the flight foundation upon which they have built a fuperstructure which has amazed the world, and added so much power at the fame time, that it has brought to much envy and jealouly upon their fociety. For when they had made this beginning, they laboured with fuch indefatigable pains, and with fuch masterly policy, that, by degrees, they mollified

340

### Chap. XIV. Spanish Settlements in America. 341

mollified the minds of the moft favage nations, fixed the moft rambling, and fubdued the moft averfe to government. They prevailed upon thoufands of various difperfed tribes of people to embrace their religion, and to fubmit to their government; and when they had fubmitted, the Jefuits left nothing undone that could conduce to their remaining in this fubjection, or that could tend to increase their number to the degree requifite for a well-ordered and potent fociety, and their labours were attended with amazing fuccefs.

This miffion gradually increafed till it attained its prefent extent, which comprehends at leaft 300,000 families, who are most fubfervient to the fathers, and pay them all the reverence that can be shewn to mortals. They live in towns, are regularly clad, they labour in agriculture, and carry on manufactures; some of them as a price even to the elegant arts.

Thefe Indians are divided into forty-two parifhes, all on the banks of the river Paraguay and Parana, and none above thirty miles diftance from another. In each parifh there is a Jefuit, who is fupreme in all caufes, as well civil as ecclefiaftical, from whofe decifion there lies no appeal. By him their caciques or chief officers are nominated, as alfo all inferior ones; and even their military commanders receive their orders from him. Nothing can be better contrived than the regulations under which they live. Every family hath its proportion of land and labour. Induftry is common to all, yet wealth

#### Part III.

wealth is attained by none; the product of their harveft is carried into the fociety's magazines, whence the fathers difpenfe whatever to them appears neceffary to every family according to its degree. The furplus, which is very confiderable, faid to amount to about 800,000 pounds Sterling, is fent to Cordova or Santa Fee, there being at each place a procurator-general, who takes care of what belongs to the fociety, and, as occafion offers, transports their wealth into Europe.

It is impossible to imagine any thing in the Indies more regular, or more magnificent than their parish-churches. They are capacious, well built, and most elegantly furnished; gilding and paintings strike the eye on every fide, and all the facred utenfils are of gold and filver, nay, in many of them they are decorated with emeralds, and other precious stones; fo that divine fervice is celebrated with the most folemn splendour. On one of the high altars are tribunals for the civil magistrate, on the other fide are like cónveniencies for military officers. As to the father himfelf, his bufinefs is to officiate, which he does twice a-day with the utmost gravity. Their music, both vocal and instrumental, is far from being contemptible, the people having naturally a genius for that science, which the fathers have taken care to cultivate. The dwelling, or rather palace, of this fpiritual prince is like the church, extremely grand for the country in which we find it. It confifts of various apartments, fuited to the various functions of

### Chap. XIV. Spanifs Settlements in America. 343

of its mafter. In the morning he gives audi-ence to fuch as have any public bulinefs with him; about noon he hears confessions, in which he is very exact, that being the principal pillar on which his fovereignty refts; in the afternoon he walks abroad, gives directions, infpects the public and private affairs of his parish; in the evening he catechifes, explains the principles of the Chriftian religion, and difcourfes on moral fubjects to fuch as attend him, by rotation. In fome parts of his conduct he is ex-tremely modeft and praise-worthy, in others not a little lofty and affuming. To the first we refer his fimple manner of living, faring coarfely, fleeping moderately, and using few or no diversions, if we except such recreations as he allows to his people. We are led to accufe him of the latter, by obferving the mighty diftance at which he keeps his people, caufing even their magistrates to be corrected before him with ftripes, and allowing the beft man in the parish to kifs his sleeve, as the highest honour he is to hope for : to which may be added, their deftroying all the notions of property; for (except the father himfelf) there is no body who poffeffes any thing which he can call his own; fo that he exercifes in the highest fense both the office of a prieft and of a king.

There is an annual meeting of all the fathers, who then confer on the methods neceflary to be taken for promoting the common concerns of the miflion, for making new laws, or abolifhing old ones, as the neceffity of affairs may require.

Part III.

quire. This is the fupreme council, over which, for ought that appears, neither his Catholic Majefty, nor the Pope himfelf has any power. The first they have perfuaded, that all inter-courfe between the Indians and the Spaniards is dangerous to the falvation of the former, and on this pretence they have obtained a prohibition to the latter. As for the holy father, he is either fo thoroughly fatisfied with the conduct of the Jesuits, or is else so little acquainted with it, that he never interferes therewith, but leaves all things to be guided by the order. To this council, or congregation, the caciques are accountable, and from them they receive fuch orders as concern the miffion in general; whereas in matters relating to their particular parishes, they are entirely directed by the prefiding prieft. One great point under confideration at each of these affemblies is, preventing strangers from having any intelligence of the state of the mission; another for restraining the Indians from learning the Spanish tongue, or applying themselves to any studies, fave such as may render them ferviceable to the fociety, among which they rec-kon architecture, painting, and mufic, all which they are taught in every parifh.

The military eftablithment is very confiderable, each parifh having a confiderable body of horfe and foot exercifed duly, as the Swifs are, every Sunday evening. Thefe troops are divided into regiments, confifting each of fix companies, and every company of fifty men. The regiments of cavalry confift of the fame number

. 344

## Chap. XIV. Spanish Settlements in America. 345

ber of troops, that is, of fix regiments, but every troop contains only forty men. Thefe regiments are regularly officered, and the whole establishment is faid to amount to 60,000 men, under the command of feveral general officers; but whenever any body of these forces takes the field, one of the fathers always commands in chief: for it is a maxim which they never depart from, not to permit their Indians, either in peace or in war, to acknowledge any authority but their own. These forces, the fathers pretend, are kept up to fecure their fubjects against the infults of the Portuguese, who were formerly wont to make inroads upon them; but there is another use the fathers make of their troops, which feems to be at leaft as much their concern, and that is, fcouring the country, to prevent either Spaniards or strangers from coming privately into the quarters of the mission.

If, in spite of all these precautions, a stranger infinuates himfelf into their territories, the father into whole parish he happens to come, fends for him immediately, takes him into his own houfe, affigns him a handfome apartment, uses him with all imaginable respect, but affords him no fort of liberty; if, at his request, the father permits him to see the town, it is altogether in his company, and the Indians, having previous notice, thut up their gates and windows, and keep as close as if they were afraid the fight of a stranger would give them the plague. As foon as an opportunity offers of embarking at Buenos Ayres, he is fent thither, Xx guarded

### 346 An Account of the Part III.

guarded by a detachment of Indians, not one of whom can fpeak a fyllable of any European language; fo that it is next to impoffible for him to carry away any more than a fuperficial account of the ftate of the miffion. For however frank and open the father may be with regard to things which have no refpect to their policy here, he is filent as the grave in every thing relating to the miffion. The Indians alfo, though of themfelves gentle and courteous, yet, in confequence of the fathers inftructions, will not fo much as look an European in the face, though they do not underftand one word of his language.

It is positively afferted, that in this country there are many, and those very rich, mines of gold and filver; that there are besides abundance of valuable commodities, especially the herb paraguay; so that if this province was as much under the King of Spain's dominion as the rest of his provinces in America, it would yield him a very confiderable revenue. In its present fituation he draws very little, if any thing, from it; nor are things like to be in a better condition.

The fathers ought indeed to pay his Catholic Majefty a piece of eight for every head under their jurifdiction, which capitation-tax would produce a large fum, if it was fairly collected, and honeftly paid: but they have found two ways to elude this; first, by bribing the governor of Buenos Ayres, thereby hindering him from visiting the mission, as he ought to do, once in five years, which affords them an opportunity

### Chap. XIV. Spanifs Settlements in America. 347

portunity of fixing the tax at a third of what it ought to be; and even this they take care not to pay; for being obliged fometimes to furnish detachments for the King's fervice, during which time they receive pay, they prevail on the governors to certify these detachments to be thrice as numerous as they really are, and thereby balance the account. From which it is evident, that the King of Spain is roundly cheated, and greatly imposed upon by his subjects in America; fo that he can neither rely on the honour of his officers nor the faith of his priefts.

Such a government as this feems to be unchangeable while it proceeds upon the fame principle; nor is it furprifing that thefe Jefuits are extremely careful in keeping the poor natives flaves to ignorance and bigotry; as alfo in concealing fo much empire and wealth from the world, efpecially Spain, at whofe expense they were fent to convert the Indians, and to make them fubjects to the Spanish monarchy.

Such is the fituation and authority of every Jefuit in Paraguay, where lefs than fifty monks have above a million of fouls under their government, who, like abject flaves, worfhip the priefts, as if they were fo many gods. But there is great reafon to believe, that thefe miffionaries will, in procefs of time, renounce all allegiance to the crown of Spain, and fet up a king of their own order; and if we may credit certain advices, they have been already attempting a fcheme of this kind, and it is imagined they will embrace the firft favourable opportunity, if not timcoufly prevented.

PART

Part IV.

## PART IV.

The Spanish settlements in Terra Firma. Of the different countries in South America still possessed by the Indians, Sc.; with a description of the Canary islands.

## CHAP. I.

A general description of the extensive province of Terra Firma; its boundaries, extent, climate, and foil. The discovery of it, and the settlements made there by the Spaniards; its division into eight provinces or districts.

HE Spaniards have not made any fettlements in the other divisions of South America, which they lay claim to, to the fouthward of Buenos Ayres, nor to the northward of Paraguay, except in Terra Firma, which make a very considerable part of their American dominions.

This province is of valt extension, being bounded by Boundaries part of Peru, the country of the Amazons, and extent. and part of Guiana, on the fouth; by the river Oroonoko, which separates it from Guiana, on the fouth-east; by the North sea, or part of the Atlantic ocean, on the north and east; by the Pacific ocean, on the west, where the isthmus of Darien also divides it from New Spain. It reaches from 61 to 83 deg. of west longitude, and from the equator to 12 deg. 30 min. of north latitude, being about 1300 miles long from east to west, and 760 broad from north to south; but in feveral places it is

### Chap. I: Spanish Settlements in America. 349

fo pent in by the river Oroonoko, that it is not half that breadth in fome places, and not exceeding 180 towards the mouth of that river. The province of Guiana is fometimes included in Terra Firma, which would make it of much greater extent; but as this country is not under the dominion of the Spaniards, we fhall not treat of it at this time.

Terra Firma, like that of Chili, was divided into many governments, and the people into feveral tribes governed by their respective caciques or princes. It was first difcovered by the renowned Columbus in his third voyage to America in 1498, whofe failors called it New Caftile, becaufe most of them were natives of Old in Spain; it afterwards obtained the name of *Caftilla del oro*, or the golden Caftile, on account of the large quantities of that metal found there; but

at laft it recovered the name first given it by Columbus, viz. Terra Firma, or firm land.

The climate cannot be called either pleafant or healthful, becaufe the inhabitants are Climate and fcorched by the violent heat of the fun foil,  $\mathcal{C}_c$ . in one part of the year, and flooded with

continual rains in the other. The foil is very different; for there is a perpetual verdure in fome places, though the trees produce little or no fruit; but in other places, there is fuch great plenty of all things, that the inhabitants have two harvefts, and their verdant meadows feed prodigious numbers of cattle. The mountains abound with lions, tygers, and other voracious animals. Here are many large rivers, betides leffer ftreams, but fome of them are fo far from being wholefome, that their waters are dangerous, and not fit to be ufed. There were formerly very tich mines of gold in this province, which are now almost exhausted, or at least neglected; though there are still fome remains of them, as well as fome filver and

350

and iron mines that have been fince opened. There was once a very rich pearl-fifthery on the fea-coaft, which is at prefent greatly decayed. But as the diftricts of this country are fo large and numerous, it will be more proper to reprefent their products, rivers, trade, &c. under their refpective divisions.

Columbus only difcovered this north coast of South America, from the mouth of the river Oroonoko in the east, to Porto-Bello in the west; and, though he went on shore in feveral parts, he established no settlements on the coast. Alonza de Ojeda, and Americus Vesputius, made a farther discovery of this coast in 1499: they were immediately followed by Peter Alonzo Nino, Vincent, Yanes Pinson, and several others.

Vafco Nunez de Bilboa, who attended General Encifo in an expedition from Cuba, firft fettled a colony, and erected a fort, on the weft fide of the gulf of Darien, in 1510. He afterwards took the command from Encifo, who was very unfortunate in this expedition, and loft feveral of his men in his engagements with the Indians. Nunez then cultivated a friendship with feveral of the Indian princes, who governed the country of Darien; after which, he took 200 Spaniards and 1000 Indians to penetrate through the mountains, and difcover the South fea, wherein, as we formerly obferved, he happily fucceeded, in the year 1513.

In this expedition, the Spaniards killed a great number of defenceless Indians, who at first took these invaders for gods, but foon looked upon them as devils; being obliged to furrender themselves to their mercy, or expose themselves to their cruelty. Nunez went up to the knees in the South sea, and took a formal possession of it for his Catholic Majesty : after which he returned to Darien, and solicited a reinforcement from Spain, where he fent a great part

of

#### Chap. I. Spanish Settlements in America.

of the gold which he had acquired from the Indians. Accordingly, Peter Arias, or Pedrarias, was appointed governor of the province, and fent over with 1500 men; being accompanied by Father John Quevedo, a Francifcan friar, as bifhop of the place, with feveral other monks of that order, to inftruct the natives in the Chriftian religion. Nunez was alfo appointed lieutenant of the South feas, but received great indignities from the governor, who unjuftly put him to death \*.

Arias being now without a rival, or any perfon to check his cruelty, ravaged the country from fea to fea, in a terrible manner. He reduced the provinces of Veragua, and Nicaragua, built Panama, Nombre de dios, and other towns; but committed fuch horrid depredations on the Indians, that he thought proper to remove to his acquifitions in Veragua, where he imagined himfelf to be out of the reach of juffice. The bifhop of Chiapa afferts, that Arias and his fucceffors deftroyed no lefs than 800,000 people, and plundered the country of feveral millions of gold, but fent no more than 3000 crowns to his Catholic Majefty.

The reft of Terra Firma, from Darien to the river Oroonoko, was fubdued by private adventurers, at their own expenses, who obtained a particular extent of country from the court of Spain, and used the natives at difference in ravaging and plundering the feveral countries for 1500 miles together; and murdering, or enflaving the milerable inhabitants, who were incapable of making any confiderable refistance against their rapacious invaders; but gave them an opportunity of depopulating many countries, which were well inhabited. The bishop of Chiapa, who was appointed to make a strict inquiry into the usage of these oppression of the terms of terms of the terms of the terms of the terms of terms of terms of terms of terms of the terms of terms

\* See above, p. 159.

35E

men were not content .with barely maffacring thefe miferable people; but tortured and oppreffed the furvivers with fo much inhumanity, that they thought death was more defirable than life, under fuch an infupportable tyranny. He observes, that the Spaniards carried two millions of Indians' into flavery, from the coafts of Guiana and New Andalufia, mamy of whom died at fea for want of provisions, and the remainder perished in the mines; besides, many thousands more were destroyed in the pearl-fisheries on this coast, by compelling them to dive for pearls beyond their ftrength : That the Dutch and German adventurers (who are no lefs noted for cruelty than the Spaniards) deftroyed upwards of four millions of fouls within the diffrict of Venezuela, where they put the 'caciques to the most cruel' tortures, to make them discover the gold, which these barbarous invaders fuspected they had concealed. To all which he adds, that these adventurers kept packs of great mastiff dogs, on purpole to hunt the Indians, and tear them to pieces; that the poor natives frequently fled to the woods and mountains, as' a place of refuge from their unrelenting enemies; this the Spaniards termed rebellion, and fent out their dogs to hunt them, by whom they were torn in pieces, or flaughtered by their masters, who were possefied of as little humanity as the fierce animals they made use of in deftroying them. All which facts, how monitrous foever, appeared to be true, by the testimony of witneffes on the trial of feveral caufes in the courts of Spain, between the feveral adventurers, who had diffenfions concerning the limits of their refpective provinces, the distribution of the natives, and the rest of the plunder : the truth of fuch barbarities was occafionally manifefted.

However, the natives of this part of America were never entirely conquered, but many fled and escaped the

### Chap. II. Spanish Settlements in America. 353

the horrid maffacres of their cruel invaders, whofe posterity still retain an inveterate hatred and hereditary aversion to their tyrannical masters: and it is highly probable, that if any other nation was to attempt the reduction of this part of the new world, the Indians would join them against the Spaniards; as a proof of this, they frequently affisted the English bucaneers in their expeditions into these parts.

Terra Firma is fubdivided into the fubfequent provinces, or diftricts, and we fhall defcribe them in the order as they lie from east to west, beginning, 1. with New Andalusia. 2. New Granada. 3. Venezuela. 4. Rio de la Hacha. 5. St Martha. 6. Carthagena. 7. Popayan; and lastly, Terra Firma Proper, or the isthmus of Darien.

#### CHAP. II.

#### The extent, climate, soil, product, rivers, chief towns, and trade of the province of New Andalusia.

His province, including the diftricts of Cumana and Paria, is bounded on the north by the North feas; by the river Oroonoko on the eaft; by part of Guiana and New Granada on the fouth; alfo by part of New Granada and Venezuela on the weft; extending about 500 miles from north to fouth, and 270 from eaft to weft.

The inland part of this country is mountainous, covered with woods, intermixed with valleys, and meadows, that yield corn, and afford plenty of pafturage. This is the most easterly of all the Spanish colonies; for though they usually include in Terra Firma the large country of Guiana, yet they have few or no fettlements in it; but the Dutch and French have fixed themfelves there, where they have very valuable colonies.

Yy

The

Part IV.

The produce of New Andalufia, confifts chiefly in fugar and tobacco, Brazil wood, and other die ftuffs, with fome gums and drugs.

The principal river which waters. this country, is the Oroonoko, whole fource is near that of Magdalena in the province of Quito in Peru, almost under the equinox: It first directs its course to the eastward, and then turns to the north, receiving feveral other leffer rivers in its courfe, which fome have computed to be no lefs than 3000 miles, though it is made much lefs by others; and after watering fo great an extent of country, at last discharges itself into the North fea, in about nine degrees of north latitude, near the island of Trinidad, where it is 100 miles over. Mr Sparrey, who was left in the adjoining country by Sir Walter Raleigh in 1595, fays, this river is alfo called Baraguan or Paria, and falls into the fea by fixteen mouths; though what he calls mouths are the ftreights between the islands that lie near the fhore at the entrance of the river; but we have no good modern account of this river, becaufe it is not much frequented for trade.

The chief towns in this province are, 1. Cuma-The town of na, or Comana, the capital, fituated in Gumana. 65 deg. 30 min. weft longitude, and 9 deg. 55 min. of fouth latitude, being

nine miles fouth from the North fea. It was built by the Spaniards in 1520, and is defended by a ftrong caftle, being fo much furrounded with hills and woods, that it cannot be differend till a fhip enters the harbour, and is a place of fuch ftrength, that the bucaneers were repulfed, when they attacked it in 1670.

2. Verina is a finall town, fituated in the fouth-Verina. west part of the gulf of Curiaco, about fixty miles east of Cumann, but is remarkable

354

Chap. III. Spanish Settlements in America. 355

markable for nothing, except its excellent plantations of tobacco.

3. St Thome, or St Thomas, is also included in the province of Andalusia, though it is St Thome. fituated on the east fide, and near the mouth of the Oroonoko, in the country of Surinam, at the top of a peninfula, formed by that river, and another called Coyrama, in 8 deg. 26 min. north latitude, being the only confiderable fettlement the Spaniards have to the eastward of the Oroonoko. Sir Walter Raleigh took this town, with the forces which he had carried over to plant a colony in Guiana, though the doing of it proved fatal to that illuftrious perion, who loft his fon in the enterprife, and his own head afterwards, on a complaint prefented against him to King James I. by the Spanish ambasfador. But the death of fuch a celebrated fubject, and on fuch an occasion, will always be a difgrace to the annals of that monarch, and even a reproach to England itfelf. There are feveral other towns here, but none of fuch consequence, as to merit a defcription; as the Spaniards are few in this province, the greatest part of the country is unoccupied, and fuffered to continue in a state of rudeness for want of cultivation.

#### C H A P. III.

The province of New Granada; its chief towns, produstions, and trade.

THE province of New Granada, Santa Fee, or Caftilla del oro, is bounded on the eaft by New Andalufia and Guiana, by the country of the Amazons on the fouth, on the weft by Popayan and part of Carthagena, and on the north by the provinces of St Martha and Venezuela, being 340 miles in length Y v 2 from from north to fouth, and about as many in breadth from east to weft.

This large inland country affords a great variety of hills and fruitful valleys, being well watered with navigable rivers, and effeemed as healthy as any part of Terra Firma. In the mountains are mines of gold, filver, and emeralds; alfo it abounds with cedar-trees and other valuable timber. In the valleys are abundance of horses, cattle, hogs, goats, and venison. These valleys also produce plenty of grain and fruits, while the rivers abound with fifh.

The principal rivers are, 1. The Rio Grande, or Magdalena, which runs directly across the country; and, 2. The Oroonoko, which runs through all the eastern part of it. The province is furrounded by feveral Indian nations who have never been fubdued, and inhabit a very hot country, though in general Grana la is temperate, or rather cold, by reafon of its many mountains. It was first discovered by Gonfalvo Ximenes de Quefada in 1536, who reduced feveral of the Indian caciques, and called their country New Granada, becaufe he-was a native of Old Granada in Spain. In this expedition Quefada plundered the Indian villages, and amaffed great quantities of gold and emeralds.

1. Santa Fee de Bigota is the capital of the pro-

vince, and of all Terra Firma, fituated on The town the banks of the lake Gutavita, near the of Santa Fee iver Magdalena, in 73 deg. weft longide Bigota. tude, and 3 deg. 35 min. fouth latitude, about 180 miles east of Bonaventura bay on the South fea. The town is very populous, and is decorated with many elegant buildings, being the refidence of the goverpor, the fee of an archbishop, and the feat of an univerfity.

2. Trinidad lies about twenty-three miles to the Trinidad. north-east of Santa Fee, and thirty north

OŤ

### Chap. IV. Spanish Settlements in America. 357

of the river Magdalena. It is remarkable for having fome quarries of fine marble, rocks of cryftal, emeralds, and other valuable ftones.

3. Tunia is the capital of a diffrict of the fame name, which has feveral mines of gold and emeralds. It ftands on a rifing ground, about eighty miles eaft of Santa Fee, and ferves to keep the neighbouring Indians in awe. This is faid to be the principal place of trade in the whole country.

There are many other towns in this province; fuch as, Pampeluna, 140 miles north-east of Santa Fee; Truxillo, 210 miles in the fame direction from the capital; Tucuyo, 320 miles north-east from Santa Fee, and 160 fouth from the nearest coast of the North fea; Mereda, almost on the limits which divide New Granada from Venezuela; befides many others of lefs note. The foil in the valleys is remarkably fruitful in corn, fruits, fugars, and many other valuable commodities, while the bowels of the earth are rich in gold, filver, and other precious metals. However, this province is very imperfectly known, being an inland country, and feldom vifited by foreigners, and the Spaniards industriously conceal the productions of it from other nations, for fear they fhould difturb them in the poffession of these valuable acquisitions.

#### C H A' P. IV.

#### The province of Venezuela; its foil, productions, chief towns, and trade, &c.

THE province of Venezuela, including the diftrict of the Caraccas, is bounded by New Andalufia on the eaft, by Granada on the fouth, by St Martha and Rio de la Hacha on the weft, as also part of the laft-mentioned province and the North fea on the north. The Spaniards have not afcertained the true limits of the feveral diffricts in Terra Firma, and more efpecially of this, fo that its extent has not yet been fet down with any accuracy; however, the lateft accounts fay, that it extends about 400 miles along the coaft of the North fea, and upwards of 300 into the heart of the continent.

The climate is pretty temperate confidering its fituation, and the foil in many places is fo prolific, that the inhabitants have annually two harvefts. Here are very rich meadows, producing plenty of grain and fruits, which feed large herds of cattle, fheep, and horfes; the uncultivated parts afford plenty of game, and many kinds of wild beafts. In the heart of the country are the plains of Corora, where the foil is wonderfully rich, and feeds great numbers of European fheep. The country is alfo remarkable for its plantations of cocoa, fugar, and tobacco; but it labours under one great inconvenience, namely, the want of frefh water, for there are very few rivulets, though there are fome confiderable lakes in the country.

The lake of Maracabo is about 170 miles in length, and forty in breadth in fome places, in others more, but in fome lefs; where it opens into the fea, it is called *the gulf of Venezuela*. The Spaniards of this province carry on a trade with those of Granada by means of this lake, which grows narrower about the middle of it, where the town of Maracabo stands. There is another lake called *Tocarigua*, but quite inconsiderable in comparison of the former.

The principal cities, and other places in this province are,

1. Maracabo, which is pleafantly fituated on the Maracabo. weftern banks of the lake of the fame name, in 71 deg. weft longitude, and 10 deg. of north latitude, about eighteen or twenty miles from

#### Chap. IV. Spanish Settlements in America. 359

from the mouth of the gulf. It is elegantly built, and has a great many ftately houfes, very regular, and adorned with balconies, from whence there is a profpect of the lake, which looks like a fea, and has three small islands near the town. The number of inhabitants is faid to exceed 4000, out of which there are 800 men capable of bearing arms. Here is a large parochial church, an hospital, and four convents, befides a fpacious house for the deputy-governor, who is dependent on the governor of the province, whole refidence is at Coro. Small veffels are continually coming here with merchandifes and manufactures from the other places near the lake; the commodities brought in these veffels are chiefly cocoa, fugar, indigo, tobacco, and green hides, which are afterwards put on board the ships that come here to purchase them: befides, this place is fo convenient for the building of ships, that the Spaniards fit out many veffels from this dock for trading all over America, and even into Spain. This place is also the staple for the commodities of Mereda, and fome other towns fituated on the frontiers of New Granada.

This town was taken and plundered by the French bucaneers, as also by Capt. Morgan in 1669, who demolished the forts at the mouth of the gulf, and got posseficient of the town without any opposition, though his force confisted only of 500 men.

There are feveral pretty towns pleafantly feated on both fides of this beautiful lake, fuch as Truxillo, Gibraltar, Baracoa, New Valencia, Venezuela, Paragonia,  $\mathfrak{Sc.}$ ; all thefe carry on a confiderable trade, and have fine plantations in the adjacent country.

2. The next town of note is Coro, or Venezuela, pleafantly fituated on the North fea, upon the north-east part of the peninsula, in 69 deg. 50 min. weft longitude, and 10 deg. 40 min. north latitude. It is the capital of the province, the refidence

Part IV.

refidence of the governor, the feat of the courts of judicature, and the fee of a bifnop, who is fuffragan to the archbifhop of St Domingo in the island of Hifpaniola, but is remarkable neither for its buildings or commerce:

3. St Jago de Leon is about 120 miles fouth-eaft of Coro, and eighteen fouth of the fea. The governor of the province fometimes refides here. It was taken by the Englifh in the year 1595, after they had made themfelves mafters of the town of Caraccas.

From this town the country of the Caraccas extends as far eaft as Cape Blanco, being fo called from the native Indians; but this diffrict is under the government of Venezuela.

This coaft, according to Dampier, is remarkable on feveral accounts, being a continued tract of high ridges of hills intermixed with fmall valleys, firetched from east to west about fixty miles, though in such a manner, that they alternately run pointing upon the shore from north to fouth. These valleys are in general very narrow, and few of them extending above four or five miles from the fea, becaufe a long ridge of mountains at that diftance from the coast runs from eaft to weft, almost parallel to it, joining these fhort ridges, and clofing up the fouth end of the valleys, which lie open to the fea at the north ends, making fo many little fandy bays, that are the only landing-places on the coaft. Both the main ridge and the fhorter ones, which point towards the fea, are fo high, that the valleys make little appearance about three of four leagues off at fea, where all looks like one continued mountain. These hills are all barren except the declivities near the bottom, which are covered with a thick black mould, being the fame with the valleys, and is very good. There is a ftrong red clay in fome of the valleys, which in general are extremely fertile.

- 360

### Chap. IV. Spanish Settlements in America. 361

fertile, well watered, and clofely inhabited by Spaniards and their negroes, who have maize and plantains for their fupport, with Indian fowls and hogs; but the principal product of these valleys, and the only commodity vended in the country is the cacao-nut for making chocolate, of which we gave an account when treating of the trading commodities of New Spain \*.

The coaft of the Caraccas is fubject to dry northwest winds at certain seafons, but, in other respects, it enjoys a fweet, clear air, and is very healthy. The Spaniards used to have look-outs on the hills, with breaft-works in the valleys, and most of their negroes are furnished with arms for the defence of the bays; notwithstanding the Dutch carried on fo profitable a trade here, that Dampier fays, he has known three or four great ships at a time on the coast, each of them mounted with forty or fifty guns, which carried there all forts of European goods, efpecially linen, making great returns, chiefly in filver and cacao. The fame author observes with regret, and wonders that none of his countrymen have found the way there directly from England, adding, that the Jamaicans traded there, and found it very profitable, though they carried British commodities at fecond or third hand.

4. Caraccas, the chief town of the diftrict, is fituated in 67 deg. 20 min. weft longitude, Caraccas. and 10 deg. 10 min. north latitude, about fifty-fix miles north-eaft of St Jago de Leon. Dampier fays, the town lies a good way within land, and is a large wealthy place, inhabited by the proprietors of those cacao-walks which are in the valleys along the fhore, and worked by negroes under the direction of overseers. It stands in a large favannah country, abounding with cattle, but the way to it is very steep and craggy over a ridge of hills.

\* See above, p. 118.

Zz

5. Porto-

Part IV.

It

5. Porto-Cavallo is a fea-port town on the Caraccas

Porto-Cavallo. coaft, about twenty-five miles north-eaft of St Jago de Leon, and thirty-one fouthweft of the town of Caraccas. Although

6. La Guerre is about forty miles east of Porto-La Guerre. Cavallo, and fifteen west of Cape Blanco,

fituated clofe by the fea, and is one of the principal places upon the coaft, though it has a bad harbour; it is however much frequented by Spanish shipping; besides, the Dutch and English anchor in the fandy bays that lie interspersed on the coasts in the mouths of the valleys, where there is very good riding.

The town has a ftrong fort, but is open to the fea, and was taken by Capt. Wright in the laft century with a few privateers, though Commodore Knowles mifcarried before it in February 1743, when he had eight men of war and three floops under his command, with 2300 failors and marines, befides 400 regular troops on board; however, the Spaniards had little reafon to be elated, as their town and fortifications were almost deftroyed, and 700 men killed. In April following, the Commodore, with as little fuccefs, attacked the town of Porto-Cavallo, but after the lofs of 200 men was obliged to defift from the enterprife, and return to Jamaica.

### CHAP. V.

The provinces of Rio de la Hacha, and Santa Martha; their fituation, produce, chief towns, and trade, &c.

THE province of Rio de la Hacha is fituated between the province and gulf of Venezuela on the east, and the province of St Martha on the weft.

#### Chap. V. Spanifb Settlements in America.

It is a fmall territory in the form of a peninfula, between the gulf of Venezuela and a bay of the North fea; the middle of the peninfula being about fifty miles broad, but increasing to double that breadth within land, and extends about 120 miles from the fea into the country. This province is both pleafant and fruitful, abounding with Indian corn, herbs, and fruits, nor is it fo fubject to rain as towards the weft of St Martha; at the fame time there are tornadoes, or thunder-showers, but not fo violent nor frequent as on the coaft of Porto-Bello. Here are mines of jafper and chalcedonies, as alfo falt-pits, with a pearl-fifhery on the coaft, wherein the Indians are chiefly employed: but they retain their freedom up in the open country, where they form a numerous nation, and are faid to be a ftubborn fort of people; however, they have fome Spanish missionaries among them, who have opened a trade, and rendered them more fociable than formerly,

The principal town in this province is Rio de la Hacha, which receives its name from the The town river at the mouth of which it stands. of Rio de la Hacha. It is fituated on the weft fide of the pe-

ninfula, upon a little hill, near the banks of the river, in 11 deg. 6 min. of north latitude, about 120 miles east of the town of St Martha, and contains about 100 houses. There is a good road for ships directly oppolite to the town, with a clean fandy bottom, where the Jamaica ships frequently come over to trade. This was formerly a ftrong town, but having been fo often taken and plundered by the bucaneers, the Spaniards abandoned it in 1682, though they foon fettled it again, and have fince fortified it, fo as to be no longer apprehenfive of fuch vifits.

There is another town about eighteen miles to the north-east of the former, on the fame coast, called Rancheria, being chiefly inhabited by Indians, who 222

are

363

364

Part IV.

are employed in the pearl-fifhery : the pearl-banks lie about four or five leagues off from the fhore.

The province of St Martha is about 140 miles in The pro- . length, and above 200 in breadth from vince of St, north to fouth; being fituated between Martha. the province of Rio de la Hacha on the eaft, that of Carthagena on the weft, and New Granada on the fouth. This is a very mountainous country, and, according to Dampier, higher land than the peak of Teneriff, or any other land in the known world, being feen near 200 miles at fea. Besides, 'a chain of hills runs directly fouth, which communicate with, and are a part of the great Andian mountains. The climate is fultry hot towards the fea-coaft, but the high mountains which are covered with fnow extend fixty miles round the capital city, and render the inland country much colder. They have great falls of rain towards the fea-coast in the months of September and October, but little rain during the reft of the year. The foil not only produces Indian corn and fruits, but almost all European fruits and plants come to great perfection. The country alfo affords indigo, cochineal, brazil and logwood. In the mountains are mines of gold and copper, with various kinds of precious ftones, fuch as emeralds, fapphires, and jaspers, with marble finely veined, and on the feacoaft is a very rich pearl-fifhery.

The most confiderable places in this province are,

1. The city of St Martha, which gives name to the

The city of St Martha. province, is fituated on a branch of the Rio Grande, clofe by the fhore of the North fea, in 74 deg. 12 min. weft longitude, and 11 deg. 35 min. north latitude. La Martiniere fays, it was formerly very populous, but has greatly decayed fince the Spanish fleets neglected touching here, though at prefent it is fuppofed to contain about 3000 inhabitants, including Indians, blacks;

### Chap. V. Spanish Settlements in America. 365

blacks, and inulatioes. The governor of the province refides here, with the royal officers; and it is the fee of a bifhop. It lies near the great mountains of St Martha, in the neighbourhood of a fine fruitful plain, having a large, fafe, and commodious port, where there is a confiderable trade carried on in the richeft commodities; they have alfo a manufacture of cotton cloth, which the Spaniards difpofe of to the Indians.

This place is remarkably well fituated for trade, but it has been fo frequently plundered, that people have been afraid to fettle there. In the year 1585 it was entirely ruined by Sir Francis Drake, and the following year it was plundered by Sir Anthony Shirley. It fell into the hands of the Dutch in 1630, and was feveral times afterwards taken by the bucaneers, who in 1681 fearce thought it worth pillaging; but it has fince recovered its ancient luftre and commerce.

2. Baranca is fituated on the eaft fide of the river Grande, in 10 deg. 15 min. north latitude, about feventy miles fouth of St Martha, being a place of great trade, becaufe the merchandifes of New Granada are brought here by means of the river, from whence they are conveyed to the bay of Samba, or elfe directly to St Martha, by means of a branch of the great river, which rifes about ten miles above Baranca, and falls into the North fea at St Martha.

The towns of Teneriff, Temalameque, Cividad de Reyes, and Ramada, though pleafantly fituated, and furrounded with fruitful fields, yet are of little confequence as to trade.

CHAP.

Part IV.

### CHAP. VI.

#### The province of Carthagena, its situation, productions, chief towns, and commerce.

THE province of Carthagena, which received its name from the capital city, is bounded on the north by the fea; by St Martha on the eaft; on the fouth by Popayan and Granada; and on the weft by the river and gulf of Darien, which feparates it from Terra Firma Proper; being about 300 miles from north to fouth, and 200 broad.

The country is diverfified with hills and valleys, covered with thick forefts and groves, among which are many tygers, fnakes, and other noxious animals; the foil is generally wet and marfhy, occafioned by the exceffive rains; fo that European grain does not profper here fo well as in fome of the neighbouring provinces. But the balm, gums, and drugs produced here are held in great effimation.

The principal river in this province, is that of Rio Grande de Magdalena, which rifes in the province of Quito near the equator, and runs about 1000 miles direct north, falling into the North fea, between this province and that of St Martha, where it is two leagues broad; but the rocks and fand which lie before it, prevent the entrance of large fhips; befides, the ftream is fo rapid, that boats are obliged to be dragged up by men or horfes; and there is an ifland in the mouth of the river, which divides it into two channels.

Carthagena, the capital of the province, is fituated

The city of Carthagena. upon the fea-coaft, on a peninfula near a bay of the North fea, in 75 deg. 25 min. weft longitude, and 10 deg. 30 min. of north latitude, about ninety-five miles fouth-weft of St

#### Chap. VI. Spanish Settlements in America. 367

St Martha, 300 eaft of Porto-Bello, and 400 fouth of Port-Royal in the ifland of Jamaica. It is one of the largeft and beft fortified towns in South America, with a very fecure and capacious harbour, well defended by ftrong fortifications.

The city was founded in the year 1532, and was fo named by the Spaniards, either becaufe they were natives of Carthagena in Old Spain, or because it refembled that harbour in the Mediterranean. It is well built with free-ftone, and very populous, confifting of five large ftreets, each near half a mile in length, but one of them is larger and longer than the reft, in the centre of which is a grand fquare. Here are five churches befides the cathedral, which is a noble structure; there are also eleven convents, a fine palace for the governor, an elegant townhouse, with a magnificent cuftomhouse, the whole being walled round, and defended by fortifications conftructed in a modern manner, and lined with freestone. The inhabitants are about 20,000, of whom only 4000 are Spaniards, the reft being creoles, meftizoes, and negroes.

It is divided into the upper and lower town; the former is called *Carthagena*, but the lower is called *Gafimana*, that is to fay, the fuburbs; which is fituated to the fouth-eaft of the upper town, and feparated from it by a canal. The whole lies in a fandy plain; that on the north fide reaches to the fea, which is very fhallow there, and the coaft has an eafy defcent to the fouthward; to that, though the town lies open to the fea, it cannot be taken this way; becaufe fhips of force cannot approach near enough to batter it. It is furrounded with a muddy ditch or pond; but there is a caufey which leads from the town to the mainland, 300 paces long, and twelve broad; with two arches under it, to let the tide in and out.

The harbour may be justly ranked among the first in

#### Part IV.

Its harbour. in America. It is formed by an ifland, called *Terra Bomba*, and a peninfula called *Nave*, about four miles in length. The coaft of both runs fouth by weft, and north by eaft; but to the fouth of the peninfula lies the ifland, which on the north-eaft is feparated from the land by a very narrow paffage. The entrance of the harbour is called *Bocha Chica*, or little mouth; and the harbour lies behind the ifthmus, between it and the continent, being a very fine and most commodious port, capable of containing feveral large fleets: on which account the galleons fometimes winter here, when they are obliged to ftay in America.

This harbour is naturally ftrong, and better fortified

Fortifica tions. than any place in America, the Havannah excepted. The mouth of it is commanded by the caftle of St Lewis, mounted-

with ninety-four guns, as also by the forts of St Philip and James, which ftand on the fhore three quarters of a mile from St Lewis, the one having eight, and the other twelve guns. Within, on a fmall island, is the fort of St Joseph, mounted with fixteen guns; and at fome diftance, to the north-weft, stands the fort of Cambio, planted with feven guns. Towards the head of the harbour stands Castle Grande on the east part of the peninfula, mounted with fixtyfour guns; and directly opposite to it on the other fide of the harbour is Mansenilla, mounted with feven guns. Farther up, nearer to the town, are the forts of Pafarilla and St Lazaro, the former having feven guns, and the latter twenty-five, which commands the whole city and fuburbs. Befides, when the town was befieged by the brave Admiral Vernon, it was defended by 160 guns, and the fuburbs by 140. The garrifon in time of peace confifts of ten companies of regulars, each containing feventy-feven men, officers included, besides several companies of militia. Notwithstanding

#### Chap. VI. Spanish Settlements in America. 269

Notwithstanding Carthagena being well fortified by land, and fecure by fea, yet it was ta-Taken by ken by Sir Francis Drake in 1585, with Sir Francis a body of 2300 land-forces, who kept pof-Drake, and others. feffion of it three weeks, burnt part of

the city, and received to the value of 30,000 pounds Sterling for the ranfom of the remainder. In the 1697, it was taken and plundered by M. de Pointis, who commanded a French squadron, on board of which were 4000 troops; and carried away to the amount of two millions Sterling.

Sir Charles Wager, with four men of war, attacked and defeated the Spanish fleet off Carthagena, on the 28th of May 1709, though the Spaniards had feventeen fail of men of war and galleons; the Spanish admiral blew up, and the rear-admiral was taken; but, through the cowardice of two of the British captains, the vice-admiral and the reft escaped. On the 9th of April 1741, the British forces were defeated in an attack upon Carthagena, and were obliged to raife the fiege, though the army then confifted of more than 5000 men : however, Admiral Vernon, who commanded the fquadron, bravely difcharged his duty, by fafely landing and reimbarking the forces; befides, he burnt or deftroyed fix Spanish men of war, with fix galleons, and all the fhipping that were in the harbour; he also deftroyed all the forts and ftrong caffles that had been erected for the fecurity of the harbour; and in all probability would have taken the place, if the commander of the land-forces had acted with equal prudence and bravery.

Carthagena, together with its suburbs, is equal to a city of the third rank in Europe. Here the governor refides, and the royal courts are kept; in civil affairs, however, an appeal lies to the audience of Santa Fee, in New Granada. It has also a bishop, whose **í**piritual

3 A.

Part IV.

fpiritual jurifdiction is of the fame extent with the military and civil government. The chapter is composed of the bishop and prebends; here is also a court of inquisition, whole power is very extensive.

This may be justly reckoned amongst the richest and most important towns in all America for trade; the whole revenue from the other provinces of Terra Firma is brought here; but the most profitable trade confitts in pearls brought from the island of Margaretta, and the coafts of Terra Firma, in fuch quantities, that there is a whole quarter of the town where the inhabitants have no other employment than to chufe the pearls, and bore them for making bracelets, or necklaces. Carthagena is not only enriched by being the retreat of the galleons, whereby a confiderable commerce is promoted in the city; but it has alfo a fund of riches in itfelf; for there are fcarce any of the provinces of Mexico and Peru wherewith it does not carry on a trade, either by fea or land; without mentioning what is carried on by the Jamaicans, and the Dutch at Curacao, notwithstanding of all the vigilance of the guarda-costas. Great quantities of gold and filver are fent here from Lima, and other parts of Peru, in exchange for European commodities. The greatest part of the indigo, cochineal, fugar, and cacao, gathered in the province of Guatimala in New Spain, is fent to Carthagena, by the lake of Nicaragua. From the interior parts of the country, wit has gold, aromatic gums, excellent balfams, long pepper, and fruits.

The bay of Carthagena is the first place in the continent of America at which the galleons are allowed to touch, and hence this town enjoys the first fruits of the commerce by the public fales made there. Those fales, though not accompanied with all the forms observed at Porto-Bello fair, are yet very confiderable; for the traders at Santa Fee, Poypayan,

## Chap. VI. Spanish Settlements in America. 371

an, and Quito, lay out not only their whole ftock, but also the monies intrusted to them by commissions, for the feveral forts of goods, which are most wanted in their respective countries. The two provinces of New Granada and Popayan have no other way of fupplying themfelves with those commodities, but from Carthagena; their traders bring gold and filver in specie, ingots, and dust, as also emeralds. This little fair at Carthagena, occasions a great number of fhops to be opened, and filled with all kind of merchandife; the profit partly refulting to the Spaniards, who come in the galleon, and are either recommended to, or are in partnership with the traders, who bring European goods, and partly to those who are already fettled in the city. This is a time of univerfal profit, to fome by letting lodgings and fhops, to fome by the increase of their respective trades, to others by the labour of their negro flaves, whole pay alfo is proportionally increased, as they do more work in this bufy time; nor is it uncommon for thefe last, from this brifkness of trade, to purchase their freedom, and fet up for themfelves. While this commercial tumult lafts, the number of ftrangers is near equal to those of the residenters, and the consumption, and confequently the price of provisions advances, from which, those who bring them to market make great advantages.

When the fleet departs, and the hurry of bulinefs is over, the tempo muerto, or dead time fucceeds. The fmall trade carried on during this calm feafon, confifts of a few thips from La Trinidad, the Havannah, and St Domingo, bringing leaf tobacco, fnuff, fugars; and returning with Magdalena cacao, or chocolate, earthen ware, and other goods wanted in these islands. Another branch of the commerce of this place, during the dead feafon, is carried on with the towns and villages of its own jurifdiction, from whence

<sup>3</sup> A 2

whence are brought all kinds of neceffaries; as maize, rice, live hogs, cotton, tobacco, fruits, fugar, honey, and cacao; most of which is brought in canoes by means of rivers. Their returns consist mostly of goods for apparel, with which the states furnish themselves from the galleons, or from prizes taken by the king's frigates, or privateers.

The climate here is extremely hot and yaftly difagreeable. From May to November, which is their winter, there is almost a continual fuccession of thunder, rain, and tempefts, fo that the ftreets have the appearance of rivers, and the country of the ocean. From this, though otherwife flocking inconvenience, they fave water in refervoirs, as the wells only fupply them with a thick brackish fort, not fit to drink. From December to April, which is fummer here, there is fo invariable a continuation of heat, that perspiration is profuse to a degree of wafte, whence the complexion of the inhabitants is fo wan and livid, that one would imagine them but newly recovered from a violent fit of ficknefs; yet they enjoy a good fate of health, and live even to eighty and upwards. The fingularity of the climate occafions diftempers peculiar to the place : the most shocking is the fever, attended with the black vomit, which mostly affects strangers, and rages among the feamen; it lasts about three or four days, in which time the patient either recovers or dies, as it is very acute, and on recovery is never troubled with it again. Another diffemper peculiar to the inhabitants is the leprofy, which is common and contagious.

ÇHAP.

#### C H A P. VII.

#### The province of Popayan; its situation, soil, productions, mines, chief towns, and trade.

THE province of Popayan is bounded on the north-east by the province of Granada, on the north by the government of Carthagena, on the weft by the South sea and part of Terra Firma, on the south by the audience of Quito in Peru, and on the east by the fources of the rivers Oroonoko and Negro. Its extent cannot be precifely determined, though it is little less than 400 miles in length from east to weft, and not much inferior in breadth from north to fouth. It is feparated from Peru and the country of the Amazons by a part of the Andes, which fend out feveral branches or ridges, from whence many rivers defcend. This jurifdiction being fo very large, and containing fo many towns and villages, it is divided into feveral departments, over each of which the principal governor nominates a deputy for the administration of juflice, and introduces them to the audience to which they belong, where his nomination is confirmed; a circumstance necessary to procure them all the weight and the fecurity in the feveral departments conferred upon them.

The temperature of this government varies greatly according as the places are fituated in the plains, or on the fides of the mountains; fome being rather cold than hot, others the reverfe, while others enjoy throughout the year a perpetual fpring, particularly Popayan the capital. The fame may be faid of the foil, which produces in great exuberance the grains and fruits proper to its fituation. The farmers breed great numbers of cattle and fheep, fome of which they fell in the towns, and others they drive An Account of the

374

drive to Quito, where they are fure of a good market. The jurifdiction of Popayan is more fubject to tempefts of thunder and lightning than any of the known parts of America; frequent damages are done by thele florms: nor are earthquakes unfrequent, and are fuppofed to proceed from the great number of mines, in which it exceeds all the others, 'either in the province of Quito or Terra Firma.

Among the feveral plants of this jurifdiction is that called by the natives cuca or coca, an herb A description of the fo effectmed by the Indians, that they will herb coca. part with any kind of provisions, the moft valuable metals, gems, or any thing elfe, rather than want it. It has a weak ftem, and, like the vine, twifts itfelf round a ftronger plant for fupport. Its leaf is about an inch and a half or two inches in length, and extremely fmooth; thefe leaves they mix with a kind of chalk or whitish earth, called mambi, and chew it, as the inhabitants of the East Indies do the betal. It is fo nutritive and invigorating, that the Indians will labour whole days without any other provisions. Great quantities of it are carried to the mine-towns, and used by the Indians and negroes, who otherwife would not be able to perform their work \*.

The rivers of St Martha and Magdalena pass through

Rivers. this province: the former rifes in a valley near the mountains, about twenty-five

miles fouth-weft of the city Popayan : they both receive feveral inferior ones, which render them very broad, and they run parallel to each other for feveral leagues, but their ftreams are united near the town of Tamelameque, in 9 deg. north latitude, after which their united ftreams roll in a direct northerly courfe, and fall into the North fea between the towns of Carthagena and St Martha. There are four or five other rivers befide thefe, which have their fource in this pro-

\* See above, p. 194.

# Chap. VII. Spanish Settlements in America. 375

vince, and fall into the South fea; alfo the great rains which fail here, occafion many little ftreams and rivulets, in whofe fands are found plenty of gold duft; there are likewife many mines of gold in the mountains, which was the principal motive of fettling this country, and building fo many towns in it, notwithftanding its being very uncomfortable to live fo near the equator, where the fcorching heat and exceflive rains are extremely unhealthy and troublefome. Moft of the trees, herbs, and flowers, that grow in any part of America, are to be found in Popayan, 'particularly cotton-trees, cedars, red wood, and trees that yield the balfam of Tolu. Befides the mines of gold, here are alfo precious ftones, fuch as jafper, and various kinds of agates.

Though the Spaniards have made many fettlements in the low country, yet the mountains are still poffessed and inhabited by the Indians, who are a brave people, and retain their freedom like the Chilesians. However, the Spaniards carry on a trade with them, by the intercourse of those whom they have converted; the former ferving them with all kinds of European commodities, and gain sometimes 500 pounds per cent.

Popayan receives large quantities of Spanish goods, being fent hither from Carthagena when the galleons arrive there. But befides Trade. this commerce, it has another reciprocal between it and Quito, to which it fends horned cattle and mules, and receives in return cloths and bays. Its active commerce confists in dried beef, falted pork, roil-tobacco, hogs-lard, rum, cotton, ribands, and other finall wares. Sugar and fnuff are brought from Santa Fee, and fent to Quito, and the returns to Santa Fee are cloths and bays. Here is alfo another traffic, which confists in bartering filver for gold, there An Account of the

Part IV:

ly,

there being abundance of the latter, but very little of the former.

the capital of the province, stands in a Popayan, large plain, having on the north fide an Thetown of Popayan 74 uninterrupted profpect of the country; deg. 35 min. on the eaft is a mountain of a middling west longiheight, called M, from its refembling tude, 2 deg. that letter. This mountain being cover-40 min. ed with a great variety of trees, affords north latitude. an entertaining landscape. The west fide is also diversified with small eminences. The city is of a middling fize, with broad, ftraight, and level ftreets, and though they are not every where paved, are equally convenient, the foot-walk near the houfes being paved in every part of the city; the middle of the ftreet is composed of a hard gravel, fo that they are neither dirty in rainy weather, nor dufty in the great droughts of this climate; and hence the middle of the ftreets is more convenient for walking than even the pavement itfelf.

The houses are all built of unburnt bricks, having fpacious and well-contrived apartments; and many of them a balcony towards the ftreet; all the houses of note have one ftory, but the others only a groundfloor. The city has a very charming outward appear-ance, and the houses are elegantly furnished within. The church was erected into a cathedral in the year 1547, and is the only parochial church in the city, which is indeed a very elegant one. Here are allo convents of Francifcans and Augustines, with a college of Jefuits; all of them having churches : in the latter is a grammar-school. The plan of an university, under the direction of the fame fathers, was lately founded, and bids fair for being a flourishing feminary. The number of religious to each of the above convents is but fmall : it is, however, very different, with regard to one of the nunneries, name-

376

#### Chap. VII. Spanifs Settlements in America. 377

ly, that of Incarnation, the professed nuns amounting to between forty and fifty; and the whole number, nuns, feculars, and fervants included, exceeds 400. The other nunnery is of the order of Santa Therefa. All the convents and their churches are pretty large; and if the latter do not dazzle the fight with the fplendour of their ornaments, they do not want any thing that decency requires.

From the mountain of M iffues a river, which, by running through the city, greatly refreshes it, and affords many conveniencies to the inhabitants. The waters of this river have a particular medicinal virtue, which they are thought to derive from the many briers and herbs through which they flow. Two bridges are crected over this ftream, one of ftone, and the other of wood. On the declivity of this mountain is another fpring of excellent water, which fupplies the city and nunneries. The inhabitants of Popayan, confift of Spaniards, Creolians, Indians, and negroes. But the greatest part are of the negro casts, owing to the multitude of negro flaves, kept as labourers in the mines, and the plantations in the country, and to do the most fervile works in the city.

The inhabitants of Popayan are computed at about 25,000, among whom are many Spanish families; particularly fixty, known to have been defcended from very noble families in Spain. It is worth obferving, that while many of the towns in America fee the number of their inhabitants daily decreasing, Popayan enjoys the pleafure of viewing a conftant augmentation. This indeed has nothing mysterious in it; the many gold mines worked all over its jurifdiction, afford employment to the indigent, and confequently occasion a continual refort of people. Popayan is the conftant refidence of the governor, who directs all matters within the limits of his government, whether civil, political, or military : he is allo alfo the chief magiftrate of the city; the others are two ordinary alcaldes, chofen annually, and a proper number of rigidores. Here is a chamber of finances, into which are paid the feveral branches of the royal revenue; as the tribute of the Indians, the duties on goods, the fifth of the metals, and the like. The ecclefiaftical chapter is composed of the bission, whofe revenue is fettled at 6000 dollars per annum; the dean, who has 500, the archdeacon, rector, and treasurer, who have each 400. This fee is a suffragan of the archbishopric of Santa Fee de Bagota, in the province of New Granada.

About 117 miles to the fouth-weft of Popayan ftands the towns of Pafto, feated in a beautiful valley, called Atris, watered by a charming river, and feveral brooks. The Spaniards have fome confiderable farms in this valley, where they have many fugar-plantations, and feed abundance of cattle in the favannahs: they alfo fow maize and wheat along the banks of the river, for the climate is temperate, being even colder in fummer than in winter; they diftinguish the feafons here, as in most places near the equator, by calling the dry feason fummer, and the rainy winter.

Bonaventura is a port-town, fituated at the bottom of a deep bay on the South fea. It is inha-Bonaventubited by a few Spaniards, who receive the ra 3 deg. 30 merchandifes brought from New Spain, min. north latitude. and fend them to Popayan, and other towns in this province. The harbour is difficult to find without a pilot, being as it were hid; the town is very unwholefome, being furrounded with high mountains, where it rains almost-inceffantly. The town is poorly defended, and yet it is the staple for the cities of Cali, Popayan, Santa Fee, and the fouthern parts of Terra Firma, though the bay might eafily be rendered inacceffible.

### 378

### Chap. VIII. Spanish Settlements in America. 379

There are feveral other pretty towns feated on the banks of the rivers St Martha and Magdalena, as well as in other parts of the country, but none of any confequence as to trade.

Before we leave this province, it will be neceffary to obferve, that in feveral of the valleys here, is a remarkable infect particularly famous for the power of the fmall quan-

tity of venom it contains; it refembles a spider, but is lefs than a bug, and by fome called Coya, by others Cayba. It is of a fiery red colour, and, like fpiders, is frequently found in the corners of walls, and among the herbage. The venom of this imall creature is of fuch malignity, that on fqueezing the infect, if any happen to fall on the fkin, either of man or beaft, it immediately penetrates into the flefh, caufing large tumours, which are foon fucceeded by death. The only remedy hitherto known, is, on the first appearance of a tumour, to finge the party all over the body with the flame of ftraw or long grais growing in these plains. In order to this the Indians of the country lay hold of the patient, fome by the feet, and others by the hands, and with great dexterity perform the operation; this done, the perfon is reckoned to be out of danger.

#### C H A P. VIII.

An account of the valuable province of Terra-Firma Proper, or the ifthmus of Darien, its fituation, mountains, rivers, mines, climate, produce, &c. The Scots erected a fortrefs at the mouth of the gulf of Darien, and attempted to plant a colony in that country, but were obliged to abandon the enterprife.

Erra Firma Proper is that country which lies between the gulf of Darien and New Spain, 3 B 2 along

#### An Account of the

380

Part IV.

along the coafts of the North and South feas; being that narrow neck of land which joins North and South America together. By fome it is called the ifthmus of Darien, by others the ifthmus of Panama, or of America. It extends in the form of a bow about the noble bay of Panama; being about 300 miles long from eaft to weft, and between fifty and fixty in breadth from fea to fea; lying between the latitudes of 8 and 10 deg of north latitude, and between 83 and 87 deg. 20 min. of west longitude; bounded by the North fea on the north; by the river and gulf of Darien, which feparates it from the province of Carthagena, on the eaft; by Popayan and the Pacific ocean' on the fouth; by the fame fea, and the province of Veragua in New Spain, on the weft. This noble fituation, both on the North and South feas, as alfo on the confines of North and South America, together with the gold mines, gold fands, and pearls, with which this province, and the adjacent feas are replenished, renders it invaluable, and makes it the darling object of all enterprising people; efpecially as this is the narrowest land which disjoins the South fea from the Atlantic ocean.

As there is reafon, therefore, to believe, (if the war continue, or at leaft in fome future period), that an attempt will be made by the Britifh nation on fome of the Spanish fettlements on this famous ifthmus, in order to cut off their communication with Peru, and prevent their receiving any treasures from that part of America from whence they draw the principal part of their riches, we shall be therefore more circumstantial in our description of this province, and give a full account of its two famous cities, and the great trade carried on betwixt them and Old Spain.

The land of this province is almost every where of an uneven furface, confissing of hills and valleys of great variety,

#### Chap. VIII. Spanish Settlements in America. 381

variety, for height, depth, and extent. The valleys are generally watered with rivers, brooks,

and perennial fprings, fome of which and fall into the North fea, and others into

Mountains and valleys.

the South; most of them taking their rife from a chain of hills higher than the reft, running the whole length of the ifthmus, and in a manner parallel to the shore, about fifteen miles distant from the North fea, of which there is a fair and clear view from this main ridge; though the South fea cannot be difcovered from any part of them; because on the north fide of the main ridge, there are either no hills at all, or fuch as are rather gentle declivities than diffinct hills; but the country on the fouth fide of this ridge is intermixed with confiderable hills; clothed with lofty trees, that greatly incommode the prospect, which would otherwife be, of the South fea. The country on the north fide of these mountains is fo much covered with woods, that it has the appearance of one continued foreft; nor is the main ridge carried on every where with a difcontinued fummit, but is rather a chain of feparate hills, and accordingly has feveral large valleys, disjoined from the feveral eminences that compose its length; and these valleys not only make the ridge more ufeful and habitable, but some of them are so deep in their descent, as to admit a passage for rivers.

This province being narrow, and lying between two great oceans, is obferved to have more wet weather, than any other place within the torrid zone. The rains ufually begin in April or May; they are very heavy in June, July, and Auguft, when it is alfo extremely hot, if the fun happens to fhine; becaufe at that time there are no breezes to cool the air. The rains begin to abate in September, but it is November, or December, and fometimes January, before the fair feafon returns; fo that the country is wet for for near three quarters of a year; but in the wetteft feafon, there are now and then fome tair days, with only a tornado, or thunder-fhower. The floods and torrents caufed by these rains, frequently bear down trees, which obstruct the course of the rivers, and occasion all the adjacent country to be overflowed: the cooleft time of the year is after the rains about Christmas, when the fair weather commences.

The principal rivers, that fall into the North fea, are,

1. The river or gulf of Darien, which is the

Rivers. eastern boundary of this province; it rifes in the fouth, and runs directly north upwards of an hundred miles, falling into the North fea' near Golden island, being about twenty miles wide at the mouth; but has not above fix feet of water in a fpring-tide; though it be navigable above eighty miles, yet there is very little traffic carried on there, because no vessels can get over the bar.

2. The river of Conception rifes about the middle of the great chain of mountains, and runs precipitately to the north-weft, and falls into the fea, oppofite to La Sound's key, which is one of the Samballoe iflands; it is pretty broad, and makes a good appearance at the mouth, but has alfo a bar, that prevents any veffels of burden from getting in; however, there is a fine riding-place in the channel at the mouth of this river, between the iflands and continent, which form a tolerable harbour.

3. The Chagra, or Chagre, is more frequented by navigators than any other in this province; it rifes not far from Panama, and takes a north-weft courfe, running through very deep winding valleys, and falls into the North fea about ten leagues weft of Porto-Bello. By means of this noble river, a communication might be made between the North and South feas; and as it is not far from Panama, the merchandifes

### Chap. VIII. Spanish Settlements in America. 383

merchandifes from that place to Porto-Bello for the galleons are embarked upon this river, except the gold and filver, which are carried directly over land upon mules to Porto-Bello.

The most confiderable rivers that fall into the South sea, are,

1. St Mary's, which has its fource in the mountains, on the north-eaft part of the province, runs to the eaftward, and falls into the gulf of St Michael, on the fouth-eaft fide of the bay of Panama; it is tolerably large and navigable, but is most confiderable on account of its proximity to the gold mines, and for the beautiful ftreams which fall into it, in whofe fands are found abundance of gold, particularly, in one called *the Golden river*, from whence the Spaniards, have in fome feasons carried off eighteen or twenty thousand pounds weight of pure gold.

2. The Congo rifes in the eaft part of the province, and directs its courfe to the fouth-weft, almost parallel to the former, falling to the northward of it into the fame gulf of St Michael; there are feveral streams which fall into this river both on the east and weft fide, which render it navigable for great ships within the bar, but is fo shallow at the mouth, that the entrance is made with great difficulty.

3. The Cheapo, which rifes in the mountains near the North fea, bends its courfe weftward, and then turns to the fouth, falling into the bay of Panama, feven leagues to the weftward of the city. It runs a long courfe, and is navigable a great way, but has the fame misfortune with the reft, namely, a bar at the mouth.

Both the northern and fouthern coafts are well watered with other inferior rivers and ftreams; befides, neither of the oceans fall in at once upon the fhore, but are intercepted by a great many fmall iflands, that that lie fcattered along each coaft, of which afterwards.

Although this country in general be very mountainous, yet there are many fine valleys in it, which, where duly cultivated, are abundantly fruitful, and productive of all the fruits, herbs, and plants common to the climate; but its chief importance confifts in its advantageous fituation on both feas, the gold fands in its rivers, and the treafures of Peru and Chili, which are brought hither in order to be transported into Old Spain. These advantages have rendered this place the fcene of more actions than any other part of America; and have induced feveral adventurers to make attempts on Porto-Bello, Panama, and other places.

Near the north-west point of the gulf of Darien, in

The Scots attempted to make a fettlement on the coaft of Darien, but were obliged to abandon it. 8 deg. 32 min. north latitude, ftood the fortrefs of New Edinburgh, built by a Scotch colony, in the year 1699, when they attempted to make a fettlement on the coaft of Darien, and denominated the country about it New Caledonia. The rife of this colony was as follows. The parliament of Scotland, in 1695, paffed an

act for erecting a company to trade to Africa and the Indies, whereby the company were authorifed to plant colonies, and make fettlements in the Eaft and Weft Indies, under his Majefty's letters patent, which they also obtained; in confequence whereof, both the English and Hamburgh merchants contributed very largely to this enterprife; and equipped feveral ships, which failed with forces, and every thing requisite to plant a colony on, or near the isthmus of Darien, in the year 1698. They first landed on Golden island, at the mouth of the river Darien; but they difliked that fituation, and went over to the continent, where they built the fort of Edinburgh, with the permission

384

### Chap. VIII. Spanish Settlements in America. 385

permiffion of the native Indians, who were a free people, and in possession of that part of the isthmus, which extends along the North fea, from the gulf of Darien, to port Scrivan, being about 140 miles; and from Caret bay, in the fouth-weft part of the gulf of Darien, to the head of the river Cheapo on the South fea about 150 miles, the breadth in fome places fixty, and in others 100, and upwards. This territory was governed by eight Indian princes, who were all at war with the Spaniards, and received the Scots into their country with the greatest satisfaction, in hopes of their affiftance against their ancient enemies : in conlequence of which, the Scots erected their fortress on a most excellent harbour, about a league in length from the north-west to fouth-east, half a mile broad at the entrance, and upwards of a mile broad within, being large enough to contain 500 fail of fhips, untouched from any winds; and the access to the fort was fo well defended by rocks and precipices, that very little art would have rendered it impregnable. The adjacent country abounded in venifon and poultry; befides, the fort flood in the neighbourhood of the richeft gold mines in America; and a communication with the South fea might eafily have been opened from thence, by way of the river Darien, and the gulf of St Michael. The Scots thought themselves extremely fortunate in the discovery of this important fituation, which, they fay, was unknown to the Spaniards; and their fettlement at first went on in a very prosperous manner: but this was foon impeded, by complaints from the court of Madrid to the court of London, declaring, that Darien had long been fubject to the crown of Spain, and that his Catholic Majefty should look upon this as an act of hoftility; the English East-India company, at the same time, alfo complained against this settlement, as an infringement of their charter : upon which, the parliament

<sup>3</sup> C

286

Part IV.

liament of England thought fit to interpofe, and addreffed King William to vacate the patent granted to the Scotch company. Agents were also fent by the company to the King, to reprefent that this was no invalion of the Spanish dominions; because they were either never posseffed of that part of the ifthmus; or, if they were, they had been expelled from it by the natives, who were then actually in possession of the country, and at war with the Spaniards : but the influence of the court of Spain, and the English East-India company, was too powerful for the folicitations of the Scotch company, and all measures were taken to ruin their fettlement: the Hamburghers were prevailed on to withdraw their fubfcriptions, the merchants of London were threatened with ministerial difpleafure, and orders were fent to the English plantations, to furnish the Scots with no provisions, and to give them no affiftance; upon which, the company were unfortunately compelled to abandon the enterprife; though it is univerfally agreed, there is not a spot of ground, on the continent of Spanish America, that could be of equal fervice to Great Britain, with the fituation of New Edinburgh, whenever a rupture happens with Spain; for the Spanish treasures must be detained in America, if the ifthmus of Darien were in poffellion of the British crown. And if ever that happen to be the cafe in any future period, then the Scots might again replant their ancient colony, from which they were fuffered to be driven fo injuriously. We should there difcover a new channel of trade, that would be a means of employing and enriching many thousands of our countrymen, and may perhaps come in for a share of that wealth, which alone preferves Spain from being the contempt of all Europe.

387

A description of the two famous cities of Panama and Porto-Bello. Their trade. The galleons.

THE city of Panama ftands on the fouth fide of the ifthmus of Darien, upon the fineft and moft capacious bay of the South fea, in 80 deg. weft longitude, and 8 deg. 58 min. of north latitude. The Spaniards owe the first discovery of it to Tello de Guzman, who landed here in 1515, but found only a few fishermens huts, this being a very proper place for their business; and thence the Indians called it Panama, which in their language fignifies a place abounding with fish. In the year 1518 a colony was fettled there, and in 1521 the King of Spain constituted it a city with the proper privileges.

The town, one of the largest in America, is faid to contain 6000 houfes elegantly built of brick and ftone, difposed in a semicircular form, and enlivened with the fpires and domes of feveral churches and monasteries. The city is furrounded with a stonewall, fortified with baftions, and other works, which are planted with great guns, both towards the fea and land. It is the fee of a bishop, who is fuffragan to the archbishop of Lima; here are eight parishchurches, befides the cathedral, which is large and elegant; thirty chapels belonging to the convents, which are neat and fufficiently capacious, with feveral monafteries and nunneries. The country on the land. fide is agreeably diversified with hills, valleys, and woods. The town ftands upon a dry and tolerably healthful ground, and has a great and profitable trade with Peru, Chili, and the western coast of New Spain, chiefly for provisions of every fort, both of the animal and vegetable kinds; corn, wine, fugar, oil, with 3 C 2 tallow,

tallow, leather, &c. In the neighbourhood of this city they raife little or nothing; and yet, by traffic, and their convenient fituation, there are few cities more abundantly fupplied with all things for neceffity, convenience, or luxury. Their trade with Terra Firma and Europe is carried on over the ifthmus of Darien, and by the river Chagra. '

The chief advantage which the new town of Panama has above the old one, is an excellent road for fmall fhips, as good as an harbour, being fheltered by the neighbouring islands of Perica, which are three fmall rocky places lying in a row parallel to the fhore, two leagues from the town, where the fleet from Lima rides at anchor. The merchants of Panama are generally very rich, and the port is never without a confiderable number of fhipping; becaufe it is the grand centre of commerce from Peru and Chili, as well as of the merchandifes fent over by the galleons from Spain, to be transported to the fouthern colonies.

Old Panama flood about four miles to the eaftward of this city, but was deftroyed by the English bucaneers under the command of Captain Morgan, in 1670, who loaded 200 beasts with the treasure he acquired in plundering the city, and returned to Jamaica with no lefs than 71,666 pounds Sterling, where he received the honour of knighthood from King Charles II. for his conduct and bravery; but was afterwards imprisoned in the tower of London, as a facrifice to the refentment of the Spanish ministry.

When Sir Henry Morgan undertook this expedi-

Capt. Mor gan takes the city of l'anaina, and plunders it. tion against Panama, he first began with the reduction of the castle of Chagra, which stood at the mouth of the river upon the North sea. He left 500 men to garrison the castle, 500 more to take care

### Chap. IX. Spanish Settlements in America. 389

care of the fleet; and then embarked 1200 felected fellows on board fuch boats and canoes as he had in the river, which he foon found impaffable for large veffels, and therefore was obliged to leave his great boats and artillery behind him under a guard, advancing only with the fmall boats and canoes, fome of his men going by land, and others by water, who fuffered intolerable hardfhips both from the heat of the climate, and the want of provisions. However, after a laborious march of fix days, they arrived at Venta de Cruz, where the Spaniards embark their goods on this river for Porto-Bello, and continued their march over land, being incommoded by feveral parties of the Spaniards, as also by feveral intermediate moraffes, and the heavy rains. The bucaneers were met by the governor of Panama, with four regiments of foot, and two fquadrons of horfe; but the latter were defeated with the loss of 600 men : after which the brave bucaneers preffed forward towards the city, scaled the walls, and soon became masters of the place, without making the leaft breach; and what was ftill more remarkable, without any artillery. They first plundered the city, and then set it on fire; after which they returned to Venta de Cruz, and conveyed their plunder down the river to the caffle of Chagra, where they blew up the fortifications, and returned to Jamaica.

After the retreat of Gen. Wentworth from the unfuccefsful expedition against St Jago in the island of Cuba, towards the latter end of the year 1741, it was proposed to the council of war held at Jamaica, at which were prefent, Vice-Adm. Vernon, Gen. Wentworth, Sir Chaloner Ogle, Brig.-Gen. Guife, and Gov. Trelawney, to make an attempt either upon Guatimala, or Panama; but the latter was agreed upon; and immediately put in execution: it being also agreed to convey the troops and artillery up the Chagra

Chagra to Venta de Cruz. The fleet confifted of eight fail of the line, with three firefhips, and two hospital-ships, and forty fail of transports, on board of which were 3000 land-forces, and 500 negroes. Adm. Vernon immediately failed into the harbour of Porto-Bello, on March 28. 1742, and met with no opposition, though the governor had three companies of Spanish foldiers, and two of mulattoes and negroes, who abandoned the town; and the magistracy fent deputies to the Admiral, to defire protection of their perfons and effects, which was formally granted them. But on the 30th of faid month it was determined, in a council of war among the land-officers, that, at this juncture, an attempt on Panama was not confistent with his Majesty's service, and should be therefore laid afide. Upon which the whole armament returned to Jamaica; though the brave Adm. Vernon was of opinion, that lefs than 1500 men would have been fufficient for effectuating the enterprife against Panas ma, which had been formerly taken by Sir Henry Morgan with lefs force. Had the land-officers in this expedition behaved with as much courage and bravery as the marine officers did, and had they marched over the ifthmus, and attacked the town, in all probability it would have fallen; especially as Lord Anfon was in the South feas with a fquadron, who was waiting for an account of our troops arrival at Panama, and upon notice given, was ready to affift in bombarding it by fea with his fquadron, while the troops were befieging it by land : but the fea-officers concluded, that the land-officers had no intention of going to Panama, even before their arrival at Porto-Bello; which greatly difappointed the two brave admirals, and occasioned the failure of this important enterprife.

The audience of Panama was formerly famous for gold mines, whofe metal was of the fineft quality; but,

#### Chap. IX. Spanifs Settlements in America. 391

but, upon the revolt of the Indians, the Spaniards were obliged to abandon them, by which many of these mines were loft, and those that now remain are greatly neglected, through a dread of the natives, who often make incursions into the mountainous parts, and carry off or destroy every thing they find.

But this lofs of the mines is amply compenfated by the multitude of pearls found in the Gold mines, oyfters of its gulf; and particularly those and pearlnear a clufter of islands forming a little fifthery.

archipelago. The first European to whom the Indians made this valuable difcovery, was Balboa, who, in passing this way to extend his difcoveries in the South tea, was prefented with fome large pearls by Tomaco an Indian prince. At prefent they are found in such plenty, that there are few perfons of substance at Panama, who do not employ part of their flaves in this fishery, which is carried on in the following manner.

The negroes who are employed in it, must be very expert fwimmers, and capable of holding The manner their breath a confiderable time. These of fifting the repair to the iflands, where they have pearls. huts built for their lodging, and boats capable of holding eight, ten, or twenty negroes, under the command of an officer. In thefe boats they go to fuch parts as are known to produce pearls, and where the depth of the water does not exceed ten, twelve, or at most fifteen fathoms. Here they come to an anchor, and the negroes having one end of a rope faftened round their bodies, and the other to the fide of the boat, take with them a weight to facilitate their finking, and plunge into the water. On reaching the bottom they take up an oylter, and put it under their left arm, the fecond they hold in their left hand, and the third in their right; with these three oyfters, and fometimes with a fourth in their mouth, they rife to breathe, and put them into a bag; when

when they have refted themfelves a little, and recovered their breath, they dive a fecond time, and thus continue, till they have completed their tafk, or their ftrength fails them. Every one of these divers is obliged to deliver his mafter a certain fixed number of pearls daily; fo that when he has got the requisite number of oysters in his bag, he begins to open them, and delivers the pearls to the officer, till he has made up the number due to his mafter; and if the pearl be but formed, it is fufficient, without any regard to its being fmall or faulty. The remainder, however large and beautiful, are the negro's own property; nor has the master the least claim to them, the flave being allowed to fell them to whom he pleafes; though his mafter generally purchases them at a very fmall expense.

Some of these pearls (which are generally very fine, and fome very remarkable both for their shape and fize) are fent to Europe; but the greatest part of them is carried to Linia, where the demand for them is very great, being worn by all perfons of rank, both in that city and the inland parts of the country.

The next town of note in this famous ifthmus, is The town St Philip de Porto-Bello, the place where of Porto- the galleons take on board the treasures Bello. produced by the mines of South Arnerica. It lies in the latitude of 9 deg. 34 min. north, and in 80 deg. 45 min. weft longitude. This famous harbour was discovered on the 2d of November 1502, by Chriftopher Columbus, who was fo charmed with its capacity, depth, and fecurity, that he called it Porto-Bello, or the fine barbour. Is was however neglected, till the year 1584, when the inhabitants of Nombre de Dios, fituated about twenty miles east of Porto-Bello on the fame coast, were commanded by King Philip II. to remove to Porto-Beilo.

### Chap. IX. Spanifs Settlements in America. 393

Bello, as being much better fituated for the commerce of that country.

The town of Porto-Bello ftands near the feat on the declivity of a mountain, which furrounds the whole harbour. Most of the houses are built entirely of wood; but the first story of some is of stone, and the reft of wood. They are in general very large and fpacious, and amount to about 130 in number. The town confifts of one principal ftreet, extending along the ftrand, with others imaller croffing it, and running from the declivity of the mountain to the fhore, together with fome lanes running in the fame direction with the principal ftreet, where the ground will admit of it. It has two large iquares, one contiguous to the quay, having one fide of it formed by the cuftomhouse, which is a large structure of stone; the other faces the great church, which is alfo of ftone, fufficiently large, and decently ornamented.

Befides this, there are two other ftructures, one called *Nuefira Signora de la Merced*, belonging to a convent of the fame order, and the other *St Julian de Dios.* The latter bears the title of a hofpital, and was founded as fuch; but now it is far from being fo in reality. The church of la Merced is of ftone, but very mean and ruinous, like the convent, which is fo much decayed, that the religious, for want of conveniencies, live in the town difperfed in private houfes. That of St Julian de Dios, is alfo a fmall building in no better condition than La Merced.

At the eaft end of the town, which is the road to Panama, is a quarter called *Guinea*, from being the place where all the negroes of both fexes, whether flaves or free, have their habitations. This quarter is very much crouded when the galleons are in the harbour, most of the inhabitants quitting their houses for the advantage of letting them. The mulattoes, and other poor families also remove either to Guinea,

or

#### An Account of the

Part IV.

or to cottages erected near it, on this occasion. Great numbers of artificers from Panama likewife, who then flock to Porto-Bello to work at their respective callings, lodge in this quarter for cheapness.

The harbour of Porto-Bello is very commodious for all forts of fhips and veffels, affording them both good anchoring and convenient fhelter; being about three miles long and one broad, defended with high hills. There are twenty fathoms water at the entrance of the port toward the north coaft, fourteen on the fouth, and about ten in the midft of the harbour all the way: and though the entrance is very broad, it is well defended by Fort St Philip de Todo Fierro, or the iron caftle. This caftle ftands on the north point of the entrance, which is about 600 fathoms broad; but the fouth fide being full of rocks extending to fome diftance from the fhore, every fhip is obliged to keep pretty near the caftle, where there are from nine to fifteen fathoms water, and the bottom of clayey mud mixed with fand.

On the fouth fide of the harbour, and oppofite to the anchoring-place, is a large caftle called *St Jago de la Gloria*; about 100 fathoms to the eaftward of which the town begins, having before it a point of land projecting into the fea: and on this point is a fmall fort called *St Jerome*. But both thefe forts were deftroyed by Adm. Vernon in the year 1742.

To the north-weft of this place, is a little bay called *La Caldera*, or *the Kettle*, having four fathoms and a half of water, and is a proper place for careening of fhips, being perfectly defended from all winds.

Among the mountains which furround the whole harbour of Porto-Bello, one is particularly remarkable for its fuperior altitude, and, like the Fable-hill at the Cape of Good Hope, performs the part of a natural barometer, by foretelling every change of weather.

394

### Chap. IX. Spanish Settlements in America. 395

weather. This mountain, diftinguished by the name of Capiro, stands at the extremity of the harbour in the road to Panama. Its top is always covered with clouds of a denfity and darkness feldom feen in this climate: when these clouds thicken, increase in darkneis, and fink below their ufual station, it is the fure fign of a tempeft; while, on the other hand, their clearness and afcent as certainly indicate the approach of fair weather. However, it is to be observed, that these changes are very frequent and very subitaneous; nor is the fummit hardly ever obferved free from clouds, and when this does happen, it is of very fhort duration. The town is under the jurifdiction of a governor, with the title of lieutenant-general, as being fuch under the prefident of Panama, but his power is limited to the town and forts.

The inclemency of the climate of Porto-Bello is well known all over Europe. Not only ftrangers who come hither are affected with it, but even the natives themfelves. It deftroys the vigour of nature, and often cuts the thread of life untimely. The heat is exceffive, being augmented with the fituation of the town, which is furrounded with high mountains, without any intervals to admit the refreshing gales. The trees on the mountains stand fo thick, that they intercept the rays of the fun, and, confequently, from drying the ground under their branches; hence copious exhalations arife, which form large clouds, and precipitate in violent torrents of rain; but thefe are no fooner over, than the fun breaks forth afresh, and shines with his former splendour; though the activity of his rays has fcarce dried the furface not covered by the trees, than the atmosphere is again crouded with another collection of thick vapours, and the fun again concealed; and in this manner it continues during the whole day : the night is also subject to the fame viciffitudes, but without any diminution

of

<sup>3</sup> D 2

of the heat in either. Thefe torrents of rain are often accompanied with fuch tempefts of thunder and lightning, as muft ftrike even the moft undaunted with terror; and this dreadful noife is prolonged by repercuffions from the caverns in the mountains, like the exploiton of cannons, the rumbling of which is heard for a minute after. To which may alfo be added the hideous howlings of the tygers, and fhrieks of the multitude of monkeys of all kinds, which live in the forefts of the mountains.

There is another great inconvenience attending the fituation of this town: for as the forefts border almost on the houses, the tygers often make incursions into the ftreets during the night, carrying off fowls, dogs, and domeftic animals; even children have often fallen a prey to these ravenous animals. Serpents are also very numerous, and remarkably destructive. But the number of toads exceeds any thing of that kind hitherto known. When it has rained more than common in the night, the ftreets and fquares in the morning are paved with these vile reptiles; fo that one cannot step without treading on them, which is fometimes productive of troublefome bites; for, befides their poifon, they are large enough for their teeth to be feverely felt. They are very large, and their number is fo great, that nothing can be imagined more difmal than their difagreeable croakings during the night-feafon, in all parts of the town, woods, and caverns of the mountains.

On these accounts the number of the inhabitants of Porto-Bello is very inconfiderable; and the greateft part of these are negroes and mulattoes, there being fearce thirty white families in the whole place; it being the constant practice for every one to remove to Panama, or elsewhere, as soon as their success in trade enables them to quit the busy scenes of life; fo that those only stay here, who are obliged to it by their

### Chap. IX. Spanish Settlements in America. 397

their circumstances or employments. But this almost defolate town becomes, at the time of the galleons, one of the most populous places in all South America. Its fituation on the ifthmus between the North and South feas, the goodness of its harbour, and its small distance from Panama, have given it the preference to every other part of the continent, for the rendezvous of the joint commerce of Spain and Peru at its fair.

As foon as advice is received at Carthagena, that the Peru fleet is arrived at Panama, and landed its goods, the galleons make the beft of their way to Porto-Bello, and the concourse of people on this occasion is so great, that the rent of lodgings rifes to an excessive degree. A middling chamber with a closet lets, during the time of the fair, for a thousand crowns, and some large houses for four, five, or fix thousand.

The fleet which is called the galleons, confifts of about eight men of war, of three or four The galdecks each, and mounted with fifty guns, leons. defigned principally to fuppply Peru and the other parts of South America with military ftores; but in reality laden not only with thefe, but with every other kind of merchandife on a private account; fo as to be in a bad condition for defending themfelves, if attacked, or for protecting the reft of the fleet under their convoy, which amount to fourteen or fifteen merchant-fhips not inferior in burden to the men of war. In time of peace this fleet fails regularly once a-year from Cadiz, though at no fet time, but according to the King's pleafure, and the conveniency of the merchants. The fleet of galleons is regulated in much the fame manner with the flota, and is defigned for the exclusive commerce of Terra Firma and the South fea, as the flota is for that of New Spain and the Philippines \*.

\* See above, p. 142.

The

The commodities on board these galleons for the use of South America confist in all kinds of linens and cottons, woollen and filk manufactures, hard and haberdashery wares, and in general all necessaries for the use of mankind, whereby a large profit is obtained, fome of them producing 300 per cent. and others 100 or 150.

The galleons fail in conjunction with the flota, till they arrive at the Antilles, when they feparate; the latter steering for La Vera Cruz, while the other make the best of their way to the road of Carthagena, where they remain generally a month, and land all the goods defigned for the audience of Terra Firma.

Their next course, as was formerly observed, is to Porto-Bello; and the ships are no fooner moored in the harbour, than the failors erect in the fquare a large tent made of the ships fails, for receiving the cargo; at which the proprietors of the goods are prefent, in order to find their refpective bales, by the marks which diftinguish them. These bales are drawn on fledges from the landing-place to the fquare by the crews of every fhip; and the money given them for this labour is equally divided among them.

While the feamen and European traders are thus employed, the road from Panama is crouded with droves of mules, each caravan confifting of upwards of a hundred, loaded with chefts of gold and filver on account of the merchants of Peru. Some unload them at the cuftomhoufe, others in the middle of the fquare; yet, amidst all the hurry and confusion of fuch fwarms of people, no theft, lofs, or difturbance, is ever known. He who has feen Porto-Bello at other times, folitary, poor, and a perpetual filence reigning every where, the harbour quite empty, and every place wearing a melancholy afpect, must be filled with astonishment at the fudden change, to behold the buffling multitudes, every houfe crouded

### Chap. IX. Spanish Settlements in America. 399

crouded with inhabitants, the fquare and the ftreet encumbered with bales and chefts of gold and filver; the harbour full of fhips and veffels; fonce bringing by way of the river Chagra the goods of Peru, and others coming from Carthagena loaded with provifions; and thus a fpot at all other times detefted for its pernicious climate, becomes the ftaple of the riches of the old and new world, and the fcene of one of the moft confiderable branches of commerce on the whole globe.

The ships being unloaded, and the merchants of Peru, together with the prefident of Panama, arrived, the fair comes under deliberation. Accordingly the deputies of the feveral parties repair on board the commodore of the galleons, where, in prefence of the commodore and prefident of Panama, the former as patron of the Europeans, and the latter of the Peruvians, the prices of the feveral kinds of merchandifes are fettled; and all preliminaries being adjusted, the contracts are figned, and made public, that every one may conform himfelf to them in the fale of his effects ; thus all fraud is precluded. The whole business is transacted by brokers from Spain and Peru; and when the goods are difpoled of, the Spanish brokers embark their chefts of money on board the galleons, and those of Peru on board veffels called chatas and bangos, fending them up the river Chagra; and thus the fair of Porto-Bello ends.

During the time of the fair, which lafts feveral weeks, the difplay of the gold, filver, pearls, and precious ftones, on the one hand; and of all the curiofity and variety of the ingenious fabrics of Europe, on the other, is aftonifhing. Heaps of wedges of gold and filver are tumbled about on the wharfs like commonthings, or as fo many bars of iron or lead.

Before the departure of the fleet from this harbour, the fhips are vilited by the royal officers, who are to fee 400

Part IV.

fee that nothing goes on board but what has paid the fifth to the King; though this is no more than a matter of form; becaufe there is always an underftanding between them and the merchants; fo that fcarce more than the half of the gold, filver, and other rich merchandife embarked for Spain, is declared: befides, upon arrival of the fleet in Spain, the European officers are as defitute of integrity as those in America, and flut their eyes against the unloading of fhips.

When this fleet takes leave of Porto-Bello, they first fail to Carthagena, and then steer together to the Havannah, which is the place of rendezvous of all the sconcerned in the Spanish American trade \*.

It must be allowed, that although Porto-Bello be an unwholefome place, yet it is of the last importance to the Spaniards; and notwithstanding all the pains they have taken to fortify it, yet there are few places that have more frequently fallen into the hands of an enemy. In the year 1595, before the town was half built, it was taken and ranfomed by the celebrated Sir Francis Drake, who died there. It was alfo taken in 1601 by Capt. Parker; in 1669 by Sir. Henry Morgan; in 1678 by Capt. Croxon; and in 1742, when it was strongly fortified and well garrifoned, it fell an eafy prey to the brave Adm. Vernon.

There are many other pretty towns in this province, pleafantly fituated both on the North and South feas, as alfo on the banks of the rivers, but none of fuch confideration as to merit a particular defcription, the

\* The cargo which this great fleet carries home to Spain confifts chiefly in gold and filver, precious flones of various forts, Vigonia wool, Jefuits bark, raw hides, logwood, cochineal, indigo, and other die-fluffs, chocolate, fugars, tobacco, and many kinds of drugs,  $\mathfrak{Sc}$ :  $\mathfrak{Sc}$ , and the whole value of this cargo is faid not to fall flort of feven millions Sterling.

### Chap. X. Spanish Settlements in America. 401

trade being wholly confined to the two already defcribed.

# CHAP. X.

A description of the several islands on the coasts of Terra Firma, both in the North and South seas.

THE principal islands along the fea-coasts of Terra Firma, are, 1. Gorgonilla. 2. Gallo. 3. Gorgona. 4. Palmas; and, 5. King's islands, or Pearlkeys. These are struated in the South seas. In the North seas, are, 1. The Bastimentoes. 2. The Samballas. 3. The isle of Pines. 4. Golden island. 5. Tortuga. 6. Forta. 7. Friend's island. 8. Baru. 9. Arenas. 10. Monjes. 11. Aruba. 12. Curacao. 13. Bonaire. 14. Tortuga. 15. Margaretta. 16. Trinity; and, 17. The Oroonoko islands.

1. The island of Gorgonilla lies in 77 deg. 46 min. weft longitude, and 2 deg. 20 min. north latitude, opposite to Point Manglares, on the coast of Popayan, and about feven leagues fouthwest from the continent. This island is small, but has a river where ships may water, and anchor on a clean ground.

2. The island of Gallo lies in a deep bay, about feven leagues north-east of Gorgonilla, in 2 deg. 40 min. north latitude. There is good riding for ships in the north-east part of the bay; and the land is pretty high, well supplied with excellent timber, as also with several springs of fresh water; besides, there are some other standy bays, where ships may be cleaned, but the water is shallow all round the island.

3. The island Gorgona lies about feven leagues north-east of Gallo, and about eight from the continent, in 3 deg. 5 min. north la-

3 E

titude;

titude; it is about fix miles long and three broad; the water round it is deep, and no anchoring, but at the weft end, where there is a fmall fandy bay, and convenient landing. The foil is black and deep in the low ground; though it is a kind of red clay on the declivity of the high land. The ifland is very well furnifhed with feveral forts of large trees, which are green and flourifhing all the year; for the rains are almoft uninterrupted hereabouts; and many fmall brooks iffue from the high land. Here are a great many black monkeys, Indian coneys, and fome fnakes. At the eaft and weft ends are two other fmall iflands, which appear white with the dung of wild fowls. Here are found plenty of pearl-oyfters, which grow to the rocks in four, five, or fix fathoms water.

4. Palmas lies about two leagues weft from the

Palmas. continent, and about nineteen north-east from Gorgona; but all these islands are uninhabited, though they have been frequently visited by the bucaneers, and other adventurers, to take in wood and water, careen their spanish prizes; because these islands lie directly in the way from Peru to Panama.

5. The King's islands, or Pearl-keys, are a nu-King's islands. merous cluster of small islands, almost in the middle of the bay of Panama, ftretching about fourteen leagues in length from foutheast to north-west. The most northerly of them, called Pachea, is about twelve leagues fouth-east of Panama; and the most foutherly, called St Paul, is twelve leagues north-west of point Garachina. The whole range of this archipelago is generally about feven leagues distant from the main land of Darien. Betwixt them and the main is a channel fix or feven leagues wide, where there is a good depth of water, and anchoring all the way. These islands are of great use to the mariners who frequent the South feas; and though

## Chap. X. Spanish Settlements in America. 403

though they are uninhabited, yet the citizens of Panama, to whom they belong, fend their negroes here to plant and cultivate them at proper feafons, as alfo to fow rice in fome of the finall iflands; but the large ones are wholly uncultivated, and over-run with trees and weeds; notwith ftanding their foil feems productive of any tropical vegetables.

Commodore Anfon wooded and watered at one of thefe islands called Quito, in December 1741, in his way from Paita to Acapulco.

2. The islands of Terra Firma, along the coast of the North sea, are as follows.

. 1. The Bastimentoes are a few finall uninhabited islands at the mouth of the bay of Nombre de Dios, about half a mile from the coast of Terra Firma, and about twenty

miles east of Porto-Bello. They are all pretty high, and clothed with woods; there is also a spring of good water upon one of them; and they form a very good harbour between them and the ifthmus; but are most remarkable for being the station of the Britilh fquadron, commanded by Adm. Holier in 1726, who continued there a long time in a flate of inaction, till the fhips were almost rotten, numbers of his men dead by reafon of the unwholefomenefs of the climate, and want of neceffary provisions; and what was most amazing, his order reftricted him from taking or deftroying the Spanish fleets; which so affected him, that it is commonly faid it broke his heart, and he foon after died. It is to be wished that the particulars of this story were razed out of the British annals, and blotted out of the remembrance of this nation.

2. The Samballas, or Samballoes, are a great number of little uninhabited iflands, The Samfcattered in a row, at very unequal diftances, along the eaft part of the ifthmus,

from Nombre de Dios to the isle of Pines; some of 3 E 2 them

them being three or four miles from the fhore, others lefs, and the fame diffance from each other; which, with the hills and woods of the adjacent fhore, make a delightful landscape off at fea. These islands afford great variety of timber, plenty of fresh water, with great abundance of shell-fish; as also good anchorage, and convenient places for careening; on which account the Samballoes were the greatest rendezvous of the bucaneers on this coast.

3. The island of Pines is a fmall uninhabited place,

The island of Pines. about three leagues east of the Samballoes, and is very remarkable off at fea; being covered with tall trees, and having a fine rivulet of fresh water.

4. Golden island lies at the mouth of the gulf of

Golden ifland. Darien, about four leagues eaft of the ifle of Pines. It is fmall, fteep, and rocky, covered with trees or fhrubs, and uninhabited; having a fine deep channel between it and the continent. This ifland was recommended to the Scotch Eaft-India company, as a proper place for eftablifhing their first colony in America; but the adventurers found it too barren a fpot, and therefore removed to the opposite coaft on the continent.

5. 6. 7. 8. Tortuga, Forta, Friend's illand, Baru, are four little illands lying feattered among fome others, at a small diffance from each other, in 9 deg. 48 min. north latitude. 9. The illand of Arenas lies oppolite to the mouth of the river Magdalena, about ten leagues north of the continent. 10. Monjes are f vall illands at the mouth of the gulf of Venezuela. But none of all these are inhabited, or of any confequence.

11. 12. 13. 14. Aruba, Curacao, Bonaire, and The little Tortuga, with Magaretta, Trinity, and Antilles ifands. index to the inferior iflands, fuch as Orchilla, Roca, and Aves, are what properly

Part IV. An Account of the 404 the fbore, others

# Chap. X. Spanish Settlements in America. 405

perly form the little Antilles islands, lying between the latitude of 9 deg. 37 min. and 12 deg. 38 min. north, and between 51 deg. 28 min. and 69 deg. 40 min. weft longitude, extending from the gulf of Venezuela to that of Paria; fome of them being about forty leagues from the coast of Venezuela, and others very near it; but none of them are possefield by the Spaniards except Margaretta and Trinity; the rest being subject to the Dutch, so we shall not treat of them here.

15. The ifland Margaretta, or Santa Margaretta de la Caraccas, is fituated between 64 deg. and 64 deg. 20 min. weft longitude, and between 10 deg. 54 min. and 11 deg. 15. min. north latitude, oppolite to the gulf of Caraca, on the coaft of the Caraccas, from which it is feparated by a ftreight about feven or eight leagues over. It is about forty eight miles in length from eaft to weft, and twenty-four in breadth, and 108 in circuit; and was difcovered by Columbus in 1498, when he made his third voyage to America. The climate is faid to be unhealthy, from the frequent fogs with which the ifland is covered.

It produces Indian corn, with the ufual fruits of the torrid zone. The north parts are highland, and have a foil proper for fugar canes, tobacco, & c. Here are feveral forts of animals, particularly wild hogs, with fifh and fowl; but the inhabitants are obliged to import all the water they drink from the continent. This ifland is under the command of a particular governor, who refides at the town of Monpadre, which is fituated on the eaft cape, and defended by a fort; however, in the year 1620, it was taken by the Dutch, who demolifned the caftle, and plundered the town; upon which the Spaniards retired to the continent, leaving the ifland to be inhabited only by the native Indians, and a few mulattoes. This This illand was formerly famous for an excellent

Part IV.

pearl-fifhery, which feems at prefent either to be exhaufted, or neglected.

16. The island of Trinity, Trinidad, or Trinidada,

Trinity. is fituated near the mouth of the Oroonoko river, opposite to the east end of the

province of New Andalufia; from which it is diltant about three leagues, and 38 fouth-eaft of Margaretta. It is about eighty or ninety miles in length, and fixty in breadth, lying between 9 deg. 37 min. and 10 deg. 27 mn. north latitude, between 60 deg. 26 min. and 62 deg. 20 min. weft longitude; the north end of it being about twelve leagues fouth-eaft of Tobago, one of the neutral iflands.

The climate is infalubrious, the ifland being very often covered with thick fogs; the foil, however, is tolerably fruitful, producing fugar, cotton, Indian corn and fruits, with the beft tobacco that is cultivated by the Spaniards; befidés, it abounds with wild hogs and fowls. The principal town is called *St Josepb*; which ftands on a bay at the north-weft part of the ifland; which was taken by Sir Walter Raleigh, in 1595; as alfo by the French in 1676, who plundered the place, and extorted upwards of 14,000 pounds Sterling, to ranfom it from the flames.

17. The islands of Oroonoko are several small The Oroonoko islands, lying in the mouth of that river, but none of them are inhabited.

All along the coaft of Terra I irma, from Carthana to Venezuela, are feveral pearl-fitheries; particularly those of St Martha, Rancheria, on the coaft of Rio de la Hacha; Comanagotta in the gulf of Curiaco,  $\mathcal{C}c$ . where the time of the fishery is trom October to March; when ten or twelve barks fail from Carthagena, efforted by fome men of war called *the Armadilla*; and these shaving made their tour, re-

406

### Chap. XI. Spanish Settlements in America. 407

turn again to Carthagena, which is the centre of the pearl-trade.

#### CHAP. XI.

Of the different countries in South America, which are ftill poffeffed by the native Indians. A description of Terra Magellanica, with its bays and islands. An account of the Indians of Chili, and of the country of the Amazons; as also of the Indians of Terra Firma and Guiana.

THE countries in America which are already under the dominion of the Spaniards are of fuch great compass, and afford such immense riches, that they have no ftrong temptations to extend their conquefts, or to increase their discoveries, having much more land than what they are able to convert to utility; the greatest part of their American dominions being covered with impenetrable forelts, and are fuffered to continue in a rude and uncultivated state, for want of hands to clear the woods, and improve the luxuriant foil. Besides, the Spaniards are in general so indolent and inactive, and truft fo much to their mines of gold and filver, that they greatly neglect the neceffary business of cultivation; and their dominions are already fo immensely large, that feveral centuries must expire before they can be able, in any measure, to people and improve them. The fame may be afferted of the Portuguese settlements in Brazil, which are both vaftly extensive and immensely rich. Yet it is certain, that there is a very large tract of country in South America altogether undifcovered, or at least unpoffeffed by any European nation.

The people posses of these parts are not only defcendents from the original inhabitants, but alfo confift of great numbers of other Indians, who have sheltered

# An Account of the Part IV.

fheltered themfelves in thefe uncultivated countries from the cruelties of the Spaniards and Portuguefe; nor is there any juft reafon to fuppofe they will be foon conquered, unlefs the millionaries extend their power over all thefe in the fame manner as they have fubdued the natives of Paraguay.

Thofe territories of South America which are ftill poffeffed by the Indians are, Patagonia, Terra Magellanica, and the islands adjacent, part of Paraguay, Chili, and Peru, the whole country of the Amazons, with part of Guiana and Terra Firma.

1. Terra Magellanica and Patagonia comprehend

Terra Magellanica. a great tract of territory, extending from Rio de la Plata to the utmost extremity of South America, that is, from the 35th

to the 54th deg. of fouth latitude; but it is not fo eafy to afcertain its bounds on the weft, as fome make the kingdom of Chili to reach to the Magellanic streights; however, as the Spaniards have no fettlements on that coast beyond 44 or 45 degrees, all that lies to the fouth must be included in this tract, which is therefore bounded by Chili and the South fea on the north and weft, by the fouthern ocean on the fouth, and by the Atlantic ocean on the eaft, Its length from north to fouth is upwards of 1000 miles, and its breadth towards the north about 530, but much more contracted towards the fouth. This country was first discovered by Ferdinand Magellan, a Portuguese in the service of Spain, who communicated his name to the country, and the ftreights, by which he found a passage into the South feas.

It is to be observed, that the name of Paragonia is fometimes given to all the eastern coast of this part of the country, from the Spanish settlements to the streights of Magellan.

Although the territory to the northward of the river Plate is full of wood, and ftored with immenfe quantities

408

#### Chap. XI. Spanifs Settlements in America. 400

quantities of large timber trees, yet no trees of any kind are to be met with to the fouthward of that river, which is a peculiarity not to be parallelled in, any other known part of the globe; and Sir John Narborough, who visited this country in 1670, obferves, that he never faw a flick of wood in it large enough to make the handle of a hatchet.

But though the country is deftitute of wood, it abounds with pafture, the land in general appearing to be made up of downs, of a light, dry, gravelly toil, and producing a great quantity of long coarfe grafs, which grows in tufts, interfperfed with large barren fpots of gravel between them. This grafs in many places feeds very numerous herds of black cattle, which were first brought over by the Spaniards on their establishing themselves in Paraguay, and they are increased to much that they are not confidered as private property, but many thousands at a time are flaughtered every year by the lunters of Buenos Ayres only for their hides and tallow, and fometimes they take these cattle alive in noofes for the uses of agriculture. The country is also over-run with horses originally brought there by the Spaniards, which run wild like the black cattle. These herds of wild cattle and droves of horfes may increase fo much as to fill all the fouthern parts of this continent with their breed, which must prove of confiderable advantage to fuch thips as touch upon the coaft. Here are likewife plenty of Peruvian sheep, with great abundance of feals and fea-fowls, among the molt remarkable of which are penguins.

This country is inhabited by feveral different nations of Indians, but they are very imperfectly known, and have feldom been feen above two or three at a time, by any fhips that have touched upon the coaft, though towards Buenos Ayres they are numerous enough to be very troublefome to the Spaniards. The Pampas

3 F

### 410 An Account of the

Pampas feem to inhabit a confiderable part towards the north, and the Patagons another towards the fouth, who received this name from Magellan, on ac+ count of their gigantic stature. The Cessares are fituated between the Pampas and the Patagons, extending weftward beyond the Andes, and are fuppofed to be the descendents of some Spaniards, who were shipwrecked upon the coast in 1540, where they intermixed with the Indians, and have formed them. felves into a kind of republic.

There are a great many iflands all along the coafts of this country, the largest and most considerable of which lies on the fouthern fide; those on the east are inconfiderable, nor are those on the west of any confequence.

On the eaftern coaft are the following islands.

1. Pepy's island, which is fituated in 64 deg. 20 min. weft longitude, and 47 deg. 30 min. Pepy's ifland. fouth latitude, about 55 miles east of Cape Blanco on the continent. It was difcovered by Capt. Cowley in 1686, who reprefents it as a commodious place for fhips to wood and water at; he alio fays, that it is provided with a very good harbour, where a thousand ships may ride at anchor in great fafety.

2. The isle of Penguins lies about three leagues from the fhore, and eighteen fouth of Cape Blanco. 3. The three islands of Sebaeld de Werds lie in 67 deg. 20 min. west longitude, 151 deg. south latitude, about fifty-three leagues touth-east of Port St Julian. 4. Falkland's ifies, fomewhat to the fouth-weft of Sebaeld de Werds. Thefe islands have been feen by feveral navigators, and particularly by Woods Rogers, who run along the north-caft coaft of them in 1708, and fays, that they extended about 120 miles in length, appearing with gentle defcents from hill to hill,

Part IV.

### Chap. XI. Spanish Settlements in America. 411

hill, and feeming to be good ground, interspersed with trees, and not defititute of harbours.

The most confiderable islands on the fouthern coast are,

1. The island called Staten, from its having been first discovered by the Dutch, is about feven leagues to the eastward of Terra

del Fuego, being divided from it by the

ftreights of La Maire, which received this name from the first discoverer in 1615. These strengths are reckoned to be the boundary between the Atlantic and Pacific oceans, and are between five and fix leagues in length, through which Commodore Anson made his passage into the South seas, instead of passing through the streights of Magellan, which are above 100 leagues in length from the Cape of Virgins at the entrance of the North sea, to the Cape of Desire at the opposite extremity, and in some places thirty leagues over between the island of Terra del Fuego and Patagonia, though in others not more than a league or two.

The island of Staten is about thirty miles long and 'fixteen broad, having great wildness and horror in its appearance; for it feems to be entirely composed of rocks, without the least mixture of mould or earth between them.

2. Terra del Fuego, or land of fire, was fo called by the first discoverers, on account of fonte vulcanoes, which emitted great, Terra del guantities of fire and smoke. It is fitu-

ated between 60 deg. 40 min. and 69 deg. 20 min. of weft longitude, and between 52 deg. 30 min. and 56 deg. of fouth latitude, being about 400 miles in length from eaft to weft, and 220 in breadth. This island is rough and mountainous, but has feveral fertile plains and pasture-grounds, watered with a multitude of fine springs that descend from the moun-

3 F 2

tains.

tains. There are feveral bays and roads between this and the adjacent iflands; but the wefterly winds are extremely violent and impetuous along the fouth coaft, efpecially in the winter-feafon, to that thofe who fail to the weftward must be careful to keep as much to the fouth of them as possible, at least to the latitudes of 61 or 62 degrees; and the only proper feafon for failing round this fouthern extremity into the South feas is in the months of December and January. But the perfon who wants more particular information of this matter, may confult the relation of Lord Anfon's voyage round the world, book 1. chap. 9. where he will find excellent directions for that purpofe.

The inhabitants of this ifland are naturally as white as the Europeans, but go naked, and paint their bodies with a variety of colours. Those on the fouth fide are very uncivilized, cunning, and barbarous; but those on the other fide are reported to be poor, harmlefs, and affable people. There are feveral fmall islands lying between Staten island and Cape Horn, as also all along the coast from Cape Horn as far as Chili, but none of any confequence; the whole of this fouthern extremity being a cold, sterile, and inholpitable country, subject to terrible storms and tempests, and inhabited by a race of favages little fuperior to the brute creation, being void of all religion, laws, or humanity.

2. That part of Chili which is in poffetion of the native Indians, compoles a very extensive territory on both fides of the Andes, inhabited by feveral diffinct tribes or nations. We formerly observed, that fome of the Chilesian Indians were under tributary fubjection to the Spaniards, but the greatest part retain their original independency.

The free Indians are very numerous, and inhabit the greatest part of the country, especially towards the

### Chap. XI. Spanifo Settlements in America. 413

the mountains. They are the braveft people of all the natives of America, ftrong in body and intrepid in mind, conftant in their refolutions, and prodigal of lofing life when they think it neceffary to be hazarded for glory or liberty. Their habitations are only huts, made of the branches of trees, their furniture is coarfe, and their diet plain. Their apparel is a fort of waiftcoat of woollen ftuff, with drawers of the fame, that come down to their knees, and they have a kind of cloak or mantle when they go abroad, but ufe no linen under their cloaths. On their heads they wear caps of different kinds, on each fide of which is a plume of feathers about half a yard high.

They have the fame way of keeping accounts, remarking particular events, and conveying traditional intelligence, as in ufe among the ancient Peruvians. The people are governed by their particular chiefs, called *ulmens* and *curacens*, who claim no authority but in the administration of justice, and commanding their tribes in time of war; having neither palaces nor revenues, nor any other marks of respect paid them, except in the execution of their office; but they manage the whole affairs of their nation in certain general affemblies, where every question is decided by a majority of voices.

Their religious tenets are full of abfurdities, and their conceptions of the immortality of the foul are very imperfect; but they are not fuch barbarians as the Spaniards have reprefented them, for they have too much bravery to delight in cruelty, and too much fpirit to fubmit to flavery.

3. The large country of the Amazons, which lies in the heart of South America, is wholly under the jurifdiction of the natives; it is bounded by the equator, which feparates it from Terra Firma on the north, by

by Brazil and the Atlantic ocean on the eaft, by part of Brazil and Paraguay on the fouth, and by Peru on the fouth-west, lying between 50 and 75 degrees of west longitude, and between the equator and 15 deg. fouth latitude ; fo that it is upwards of 1200 miles in length from eaft to weft, and 900 in This denomination was given to the counbreadth. try from a supposed nation of female warriors, that were reported to inhabit the banks of one of the greateft rivers in the world, which runs from weft to east through all this extensive territory; but the Amazons were only a nation invented by the Spaniards. This country in fome places is faid to enjoy a moretemperate air than could be well expected fo near the equator: it abounds with large forefts of ebony, ironwood, logwood, brazil, and large cedars, with fome fertile fields and verdant meadows. There are vast numbers of rivers which water this country; but molt of them fall into the great river of Amazons, which rifes at the foot of the Andes.

The nations who inhabit the banks of thefe rivers are computed to be 150, who have fome manufactures of cotton, and many fine plantations, but delight most in making war upon one another.

The Spaniards in 1540 penetrated into this country, under the command of Gonzalo Pizarro, who was obliged to return to Peru after losing most of his men: besides, he was deferted by Orellana, who failed down the river of the Amazons, and proceeded to Spain, where he gave such a description of the riches of the country, that his Catholic Majesty appointed him governor, and fent him over with a confiderable body of forces, but he loss his life in the enterprife. Several attempts were afterwards made both by the Portuguese and Spaniards, in order to discover this country more perfectly, but without any success. However, it is faid, that the Jesuits from Paraguay

## Chap. XII. Spanish Settlements in America. 415

Paraguay have entered this country, where they have built feveral towns, and converted many thousands of the inhabitants from Pagan idolatry to Popish fuperstition. They have likewise engraved a map of the river Amazons, which they call Marabon, in which are an infinite number of beautiful islands: they farther fay, that it runs 1800 leagues before it falls into the Atlantic ocean, into which it discharges its waters by eighty-four mouths.

4. The country of Popayan, and the whole inland parts of Terra Firma abound with feveral Indian nations, governed by their own princes, who are fond of the retention of that liberty which they have magnanimoufly preferved against the invading Spaniards.

5. The large country of Guiana, which is fituated between the river Oroonoko and the equator, is moftly in the hands of the natives. It is true, the French have fome fettlements in the ifle of Cayenne, as alfo upon the adjacent coaft; and the Dutch have Surinam, which is fituated in the north part of this country, between the rivers Oroonoko and Maroni, in 6 deg. 20 min. north latitude : but all the interior parts of this extensive territory is inhabited by feveral numerous nations of Indians, who are reported to have fome flourifhing cities, a regular polity, with the fame manners, cuftoms, and religion, as were eftablished among the ancient Peruvians.

#### C H A P. XII.

Of the illicit trade carried on in the West Indies, between the British, French, Dutch, and Spaniards.

THE methods hitherto purfued by his Catholic Majefty for effectually fecuring the commerce of his American dominions to the inhabitants of Old Spain, and of excluding all foreigners from having 416

Part IV.

having any fhare in that trade, is the grand fource of the contraband commerce carried on there by feveral other nations. The Spanish Americans confider gold and filver as very valuable commodities, yet they are extremely willing to barter them for other commodities, which they have not, and which would be more ufeful to them than large heaps of either of these metals. It feems therefore to these people a great hardship, that either proper care is not taken to furnish them with what they want from Spain, or that they fhould not be allowed to fupply themfelves fome other way. Seeing this is the fituation of the Spanish subjects in the new world, there needs be no wonder at their endeavouring to carry on a clandeftine trade; as, on the other hand, one cannot think it ftrange, that their neighbours, who live under better governments, and who have at cheap rates all that the Spaniards want, and yet ftand in need of the filver and gold, with which they abound, should be very willing to commence fuch an intercourfe as might fupply their wants, and at the fame time enrich themselves. Sometimes the governors have winked at this, not from a principle of avarice only, that they might fhare in the profits refulting from fuch a trade, but alfo from a fende of the necellity of difpenfing with fuch laws fo detrimental to the body of the people. Upon this principle it was, that before the treaty of Utrecht, and the affiento contract, the English at Jamaica furnished the Spaniards at Porto Bello with negroes, with the knowledge at leaft, if not by the permission of the governors. The government of Old Spain never indeed attempted to fupply them with flaves, but permitted sometimes the Genoese, fometimes the French to carry on this trade; and when these did not do it effectually, the deficiency was made good by the English, though without any formal licence. The fituation of the island of Jamaića, together

# Chap. XII. Spanish Settlements in America. 417

gether with the conveniencies of building and feighting floops from thence, engaged the inhabitants in this, and in other branches of traffic. The trade is carried on in this manner.

The ship from Jamaica having taken in negroes, and a proper fortment of every kind of goods, proceeds in time of peace to a harbour called the Grout, within Monkey-key, about four miles from Porto-Bello. A perfon who understands the Spanish tongue, is directly fent ashore to give the merchants of the town notice of the arrival of the veffel; the fame news is carried likewife with great fpeed to Panama; from whence the merchants fet out difguifed like peafants; with the filver in jars covered with meal, to deceive the officers of the revenue. Here the fhip remains trading frequently for five or fix weeks together. The Spaniards ufually come on board, leave their money; and take their negroes, and their goods packed up in parcels fit for one man to carry, after having been handfomely entertained on board, and receiving provisions fufficient for their journeyhomeward. If the whole cargo is not difpofed of here, they bear off eastward to the Brew, a harbour about five miles diftant from Carthagena, where they foon find a vent for the reft. There is no trade more profitable than this; for the payments are made in ready money, and the goods fell higher than they would at any other market. It is not on this coaft only, but every where upon the Spanish main, that this trade is carried on. By degrees the gains by this commerce tempted fo many perfons to be concerned in it, and the fhips made use of were fo well manned, and of fuch force, that the Spaniards grew lefs timorous than formerly; by which means the commerce by the galleons was greatly affected; for, knowing where to buy goods cheaper, the merchants would not give the prices usually demanded at the

### An Account of the Part IV.

the fairs of Carthagena and Porto-Bello, and this, as before mentioned, gave rife to the guarda-coafts'\*.

After the Portuguese had dispossessed the Dutch of Brazil, and after the treaty of Nimeguen had entirely removed them out of North America, they were obliged to confole themselves with their rich possesfions in the East Indies, and fit down content in the west with Surinam, which we ceded to them for New York; and with three or four small and barren islands in the North sea not far from the Spanish main.

The islands which they posses are four, Curacao, St Eustatia, Aruba, and Bonaire; none of them large or fertile, but turned to the best advantage possible, by that fpirit of industry, for which the Dutch are justly famous. Curacao, or Curasson as it is generally called, is about thirty miles long, and ten in breadth. This island is the nearess to the continent, and therefore well fortified, and thoroughly peopled; and though it is naturally barren, yet produces a confiderable quantity of sugar and tobacco; besides, it has very great falt works; and it is constantly supplied with provisions from the other stand is in its neighbourhood, which in truth are good for nothing elfe.

As this island is not above feven leagues diffant from the Spanifi main, a more convenient station cannot be wished for carrying on a contraband trade. It was first introduced by the fale of flaves brought thither by the Dutch from their numerous settlements on the coast of Guinea. These the Spaniards bought in a manner openly, and have transported in their own vessels 1500 at a time; but fince the English from Jamaica have interfered in this trade, it is funk very confiderably : though they still supply the neighbouring provinces, and reap a great profit thereby, because no nation understands the management of this business better than they do, or can bring flaves at a 3 \* See part 2, chap. 12.

cheaper

#### Chap. XII. Spanifb Settlements in America. 419

cheaper rate, or vend them at a higher price. It is faid, that when this trade was in its most flourishing condition, it alone drew from the Spaniards a million of pieces of eight annually.

The dealers, however, at Curaffou, and their correfpondents in Holland, were too knowing, too converfant in bufinefs, to let the declenfion of the flavetrade rob them of the benefit of this island. In order to replace what was loft by the English interfering with them, they built vaft magazines, and ftored them with all forts of European and East-India commodities. Here are all forts of woollen and linen cloths, laces, filks, ribands, utenfils of iron, naval and military ftores, brandy, the fpices of the Moluccas, and the callicoes of India, white and painted. Hither the West-India, which is likewife their African company, bring three or four cargoes of flaves annually. To this mart the Spaniards come themselves in small veffels, and carry off not only the beft of their negroes, and at the best price, but very great quantities of all forts of goods already mentioned; they leave here their gold and filver in bars or coined, cacao, vanilla, Jesuits bark, hides, and other valuable commodities.

The Dutch veffels from Europe touch at this illand for intelligence or proper pilots, and then proceed to the Spanish coast upon a trade which they force with a strong hand. It is very difficult for the Spanish guarda-cost to take these vessels; for they are not only ftout ships with a number of guns, but, by a very wife policy, manned with a large crew of choten seamen, who are deeply interested in the safety of the vessel, and the success of the voyage. They have each a share in the cargo of a value proportioned to the owners station, supplied by the merchants upon credit, and at prime cost. This animates them with an uncommon courage; they fight bravely, because  $_3 G = 2$  every

#### An Account of the

every man fights for his own property. But, befides this, there is a conftant intercourse between the Spanish continent and this island.

Those ships that trade directly from Holland to the Spanish continent, put in ar Curaffou, on their return, in order to complete what is wanting of their cargo, with the fugar, the tobacco, the ginger, and other produce of the itland itself. The trade of this island, even in times of peace, is reputed to be worth 500,000 pounds Sterling annually; but in time of war the profit is far greater, for then it is in a manner the emporium of the West Indies, being a retreat for the span being interrupted, the Spanish colonies have fcarce any other market, from whence they can be well supplied either with flaves or goods.

The trade of all the Dutch American fettlements was originally carried on by the Weft-India company only. At prefent fuch thips as go upon that trade pay-two and a half *per cent*. for their licences; the company, however, referves to itfelf the whole of what is carried on between Africa and the American islands.

It is ftrange that the British have fo long neglected to plant colonies on some of the islands, which lie in fuch numbers off the coast of Darien; for were we to take possession of some of thefe islands, or of that part of the continent struated at the mouth of the gulf of Darien, where the Scots once settled; and were we to fortify it, and erect proper warehouses, in order to be filled with all kinds of European goods, and commodities of which the Spaniards stand so much in need; in that case we might carry on a most beneficial trade with the Spaniards, not only on the coasts of Terra Firma, but also on the coasts of New Spain, and might, in process of time, greatly diminish the Dutch trade on these coasts; this would increase

420

### Chap. XII. Spanish Settlements in America. 421

crease our shipping, exhaust large quantities of our manufactures, and tend to enrich the British nation.

But to return : The little island of St Thomas, which lies in the North feas, about fourteen leagues diftant from Porto-Rico, is the fole colony poffeffed by the Danes in the Weft Indies; nor would it be worth the keeping, but as it ferves to maintain an illicit trade with the Spanish islands in its neighbourhood. We may form fome idea of the vaft advantages flowing from this contraband trade, from this very particular, efpecially if we confider that the Hamburghers have likewife a factory in this little island, purely on the fame fcore. In order to maintain this correspondence, they transport from the Danish colonies in Africa a confiderable number of flaves, for the fupply of Porto-Rico, and the Spanish part of Hispaniola. Under colour of this trade, a commerce in European goods is carried on. Of late years, other nations have made an advantage of this free port, and keep warehouses there of all forts of commodities for the fervice of fuch customers as are willing to purchafe them; and in time of war the privateers never want a market in this place.

The French from Hispaniola alfo carry on the fame illicit trade with the Spanish islands, and fometimes on the continent.

Nor is this illicit trade confined to the Spanish islands and the coasts on the North feas, but the Portuguese at Rio Janeiro carry on a very beneficial correspondence with their Spanish neighbours. The goods with which they supply them are sugars, indigo, tobacco, wines, brandy, rum, with some European goods, and sometimes flaves. The inhabitants of this part of Brazil are faid to be very industrious, and this gives them an opportunity of gaining considerably by the inhabitants of Buenos Ayres, and other places upon the river of Plate.

Besides

422 An Account of the .? Part IV.

Befides these methods already mentioned, there is another common to all nations, which is as follows : Ships frequently approach the Spanish coasts under pretence of wanting water, wood, provisions, or more commonly to ftop a leak; the first thing that is done in fuch a cafe, is to give notice to the governor of their great diftress, and, as a full proof thereof, to fend a very confiderable prefent. By this means leave is obtained to come on shore, to erect a warehouse, and to unlade the ship; but then all this is performed under the eye of the King's officers, and the goods are regularly entered into a register as they are brought into the warehouse, which, when full, is shut up, and fealed. All these precautions taken, the business is effectually carried on in the night-time by a backdoor, and the European goods being taken out, indigo, cochineal, vinellos, and above all, bars of filver and pieces of eight, are very exactly packed in the fame cafes, and placed as they flood before, But then, that fuch as have bought may be able to fell publicly, a new scheme takes place. A petition is prefented to the governor, fetting forth the ftranger's want of money to pay for provisions, building the warehouse, timber for repairing the ship, &c. in confideration of all which leave is defired to difpose of fome fmall part of the cargo, in order to discharge these debts. This being obtained in the usual manner, fomething of each fort of goods which had been privately fold, is now publicly brought to market, and purchafed by those perfons respectively, who had larger quantities in their warehouses before. .

Having now finished what we intended with regard to the Spanish dominions in America, we shall next give a brief description of the Canary islands, which are likewise under the dominion of Spain. To all which will be added, by way of appendix, a succens account of the inhabitants, trade, government, revenues, naval

### Chap. XIII. Spanish Settlements in America. 423

val and land forces, fea-port towns, &c. in the kingdom of Old Spain.

#### CHAP. XIII.

Containing a brief description of the Canary islands; their situation, extent, produce, trade, ports, and chief towns, &c.

These famous islands are generally ranked among the number of the African islands, and are fituated in the Atlantic ocean, to the weft of the coast of Bildulgerid in Africa, between the latitudes of 27 deg. 10 min. and 29 deg. 50 min. north, and between 12 deg. and 17 deg. 50 min. weft longitude. The most famous and learned geographers agree, that these are the *infalæ Fortunatæ* described by Ptolemy and Pliny, though the former places them too far to the fouthward, namely, under the 16th deg. of north latitude.

Some fay they had their prefent name from the largeft of them, becaufe of the great number of dogs they found upon it when first discovered; though Gomera afferts, that at their discovery no fuch animals were found upon any of them. And Dr Harris agrees with Hornius, that they derived their name not from *canibus*, according to Pliny, but from Cananeans, that is to fay, Phœnicians, who used often to fail from the continent of Africa to Cerne, and fome think that Cerne is only a contraction of Canary.

They were difcovered and planted by the Carthaginians 500 years before the Christian æra; but the Carthaginian state being entirely destroyed by the Romans, all their difcoveries and plantations were lost through the neglect of navigation.

But these islands have been subject to the crown of Spain ever since the year 1417, when they were again discovered

### 424 A Description of the Part IV.

difcovered by John Betancourt, a Frenchman in the fervice of Caftille, who fubdued Fuerte Ventura and Lancerota, as others after him did the reft from that time to 1496. In the time of Ferdinand King of Caftille and Alphonfo V. of Portugal, each of them claimed a right to the other's dominions, and affumed each other's titles; upon which there enfued a bloody war between the Spaniards and the Portuguefe, and continued till both parties being fpent, a peace was concluded in 1479; by which they reciprocally renounced their pretenfions; and it was therein flipulated, that the Canary iflands fhould entirely belong to the crown of Caftille, and the commerce and navigation of Guinea to that of Portugal.

The air of thefe islands is generally good, though very hot, and the foil fertile, producing wheat, barley, millet; but they are most remarkable for excellent wine, which is transported from thence to most parts of Europe, but more particularly in time of peace to Great Britain. Here are also abundance of pomegranate, poplar, fig, citron, and orange trees; they yield fugar also, and excellent gums. Most of the inhabitants are Spaniards, but there are still some remains of the ancient natives, called *Quanches*, a very active, nimble people, who are now civilized by the Spaniards living among them. The Spanish fleets returning from the West Indies frequently make these islands their place of rendezvous.

There are twelve of these islands, but only seven of note, viz. Lancerota, Fuerte Ventura, Gran-Canary, Teneriff, Gomera, Ferro, and Palma.

1. Lanzerota, or Lancerota, lies in 29 deg. 35 min.

Lanzerota. of north latitude, and 12 deg. 30 min. weft longitude, being about thirteen leagues long from north to fouth, nine in breadth, and forty in compass. It is parted by a ridge of mountains, which afford nothing but pasture for theep

and

and goats, but the valleys produce very good wheat and barley; here are also affes, kine, camels, and a good breed of horfes.

The account of the Earl of Cumberland's voyage to the Weft Indies, fays, that in 1596, when the Earl came with his fleet into the road, which bears E.S.E. of the island, he had notice of a very rich marquis here, who commanded this and the next island of Fuerte Ventura; upon which he fent 500 foldiers afhore, under the command of Sir John Barkley, who purfued the natives, but could not overtake them. When they came to their town, which was ten miles diftant from the landing-place, they found that every thing was carried away except fome wine. The governor and his guard were fled from the caftle, though it was built of strong square stones, flanked and fortified to advantage, and defended by a great many brafs guns, and the entrance was fo high that it was impoffible for a perfon to get in without a very long ladder, fo that it was judged, that twenty men might have easily defended it against 500, only by shutting the door and pulling in the ladder. The above account adds, that the town confifted of upwards of 100 houfes, roughly built, and for the most part of one ftory, with flat floping roofs to caft off the rain.

To the north of this place lie four fmall islands, and another to the fouth called Lobos.

2. Fuerte Ventura, or Forte Ventura, in ancient geography called Casperia, lies under the Fuerte Ven-29th deg. of north latitude, and between tura. 13 and 14 deg. of weft longitude. It is about twenty-five leagues long from fouth-weft to north-east, but its breadth is very irregular, the largest is about eight leagues, and its circuit feventy-five round the coaft, which forms two bays.

The foil is partly mountainous and partly champaign, abounding in wheat and barley. There are feveral

3 H

feveral brooks of fresh water along the coasts, and foft crooked trees on their banks that yield gum, of which they make white falt. There are palm-trees which bear dates, olive and maftich trees, orchell for dying, and a fort of fig-tree which yields balm as white as milk, that is of great use in several medicines. They make cheefe of the milk of their goats, of which this island breeds above 50,000 annually; belides, their flesh is very good, and the inhabitants make great profits of their skins and tallow, each beaft

generally weighing thirty or forty pounds. The harbours here are only fit for fmall veffels, not admitting thips of burden.

3. Great Canary lies under the 28th deg. of north

latitude, is about forty leagues in com-Great Ca país, and was difcovered in 1418 by Penary. ster de Vera a Spaniard. This island is remarkably fruitful, noted chiefly for its excellent wines, which bears its name, and of which Heylin fays, they used to fend 3000 tuns every year into England and the Netherlands. It abounds also in melons, apples, oranges, citrons, pomegranates, figs, olives, peaches, plantains, &c.

Here are three towns, namely, Gualdera, Geria,

and Canary, which is the capital. It is The town feated in the fouth-east part of the island, of Canary! and one mile and a half distant from the road where the fhips anchor. The houfes are well built, but generally one ftory high. Though the governor of these islands, the bishop, and the people of quality mostly refide at Teneriff, yet this is a bir shop's fee, who is fuffragan to the archbishop of Seville in Spain. Here are also the tribunal of the inquifition, and the fovereign council, which is the fupreme court of judicature for all the Canary islands. 4. Teneriff lies under the 28th and 29th degree of north latitude, and 16th and 17th of west Teneriff.

longitude.

Part IV.

longitude. Rennefort fays, it is eighteen leagues long, and eight in breadth; and Barbot, that it is fixty in circumference. The chief fortrefs which defends this ifland, is composed of four bastions; towards the north part of it are three other finall forts, and one in the fouth, in the form of a tower. There are other two fmall square forts on the road leading to the capital city, called *Laguna*, and the whole defence of the city confilts in the difficulty there is of paffing by these forts.

The island is chiefly noted for that famous mountain called the Peak of Teneriff. Most authors fay that it is fifteen miles high, but Scaliger reckons it fixty, Panicius feventy, Thevet fifty-four, and Nicholas an Englishman, who lived here, forty-feven; but then they compute the oblique ascent, viz. from the bottom to the top of the mountain; for Varenius fays, that it is but four miles and five furlongs perpendicular, and Raymondus but three miles. Sir Thomas Herbert tells us, it is fo high that the top is feen in clear weather 120 miles off; and that there is plenty of wood at the bottom, fnow in the middle, and flames on the top, where there are veins of brimftone burning, which the people call the devil's caldren. He adds, that the people who alcend it usually ride round for the space of seven leagues, and walk the reft on foot.

Laguna, the capital of this ifland, ftands on the eaftern fhore, at the bottom of a hill called *Garachica*. It is a large and neat town, and makes a very agreeable appearance; the houfes are ftrong, and well built with ftones, and covered with pantiles. Here are feveral elegant ftructures, among which are two parifh-churches, two nunneries, four convents, an hofpital, and fome chapels, befides many gentlemens houfes. The ftreets are not regular, yet they are fpacious and handfome. 3 H 2 Here Here are fine gardens' fet round with orange, lime, and other fruit-trees, in the middle of which are potherbs, fallading, flowers,  $\mathcal{E}c$ .

On the back of the town is a large plain three or four leagues in length and two miles in breadth, producing a thick kindly fort of grafs.

The town of Santa Cruz lies also on the east fide of Santa Cruz. the island; it is a fmall unwalled town fronting the fea, guarded with two forts, befides two others between the town and wateringplace, and fome batteries fcattered along the coast to command the road. The town contains about 200 houses, all two stories high. The forts are fo weak that they could not fecure the galleons from Admiral Blake, though they haled under the main fort. This happened in 1657, when he battered the town, and burnt feveral of the galleons.

Oratavia lies on the weft fide of the island, and be-

Oratavia. ing the chief fea-port for trade, the Eng-

lifh merchants refide there with their conful. Dampier fays, that this town is bigger than Laguna the capital; that it has but one church, but many convents. The port is none of the beft, and is very bad when the north-weft winds blow. Thefe north-wefters give notice of their approach by a great fea that tumbles in on the fhore fome time before they come, and by a black fky in the north-weft. Upon thefe figns fhips either get up their anchors, or flip them, and ply off till the florm is over.

The true Malmfey wine is produced in this island, and that near Laguna is faid to be the beft in the world. The Canary grows chiefly on the weft fide of the island, and therefore is commonly fent to Oratavia. The Verdona is a green strong-bodied wine, but harsher and sharper than Canary; this is not fo much esteemed in Europe, but is exported to the West Indies, as it keeps best in hot countries. This

428

fort

fort of wine is made chiefly on the east fide of the island, and shipped off at Santa Cruz.

5. Gomera lies to the weft of Teneriff, under the 28th deg. north latitude, and 18th deg. , Gomera. weft longitude. According to Heylin, it

is twenty-two leagues in compass, though but eight in length. He adds, that it is now as well cultivated as any of the Canaries; Barbot fays, that it has a very good haven; the Spanish West-India sleet often comes into its harbour, and takes in corn, wine, fugar, fruits, and other neceffaries. The country is generally high, and feeds great numbers of fmall cattle, and is encompaffed with great deep roads.

6. Ferro is the most westerly of all the Canaries, and lies under the 27th and 28th deg. of Ferro. north latitude, and 18th deg. weft longi-

tude; faid to be ten leagues long, five broad, and twenty-five in circumference. The foil is dry and barren in fome parts, but tolerably fruitful in others. This island is become particularly famous, from the French navigators placing their first meridian in the centre of it, as the Dutch did theirs, from the peak of Teneriff; but at prefent geographers commonly reckon the first meridian from the capital city of their own country.

7. Palmas, according to Barbot, lies to the north of Teneriff; and he fays, it is feven leagues Palmas. in breadth, ten in length, and twentyfix in compass. It is of an oval figure, and is very fruitful. It has a town of its own name, and a tafe harbour, well frequented for wines, which fome reckon the best in the Canaries. Great quantities of these wines are transported to the West Indies, and other places.

In general, these islands are very fruitful and pleafant, producing great quantities of rich and delicious wines, as alfo plenty of grain, as barley, wheat, maize,

### A Description, &c.

430

Part IV.

maize, &c. with abundance of fine fruits, as papahs, apples, pears, citrons, lemons, oranges, pomegranates, plums, cherries, &c. They are also well provided with horfes, cattle, goats, mules, fheep, hogs, deer; with plenty of all forts of wild and tame fowls; all of the Canary islands have of these commodities, and provisions, more or less. But Lancerota is most famed for horfes, the Grand-Canary, Teneriff, and Palma for wines, Teneriff especially for the best malmfey; for which reafon thefe three iflands have the chief trade, and are of vaft advantage to the poffeffors. But thefe islands have likewife their difadvantages, namely, being very fubject to dreadful earthquakes, which fometimes do incredible mischief. In the year 1704, a most terrible one happened in the island of Teneriff. It began the 24th of December, and in three hours time they felt twenty-nine violent flocks; they increafed to fuch a degree on the 29th, that all the houses were shaken by them, as well as the most folid buildings. The fright was univerfal, and the people, with the bishop at their head, made processions and public prayers in the open fields. These concussions continued till the month of February following. Several vulcanoes broke out at different places, from which iffued torrents of fulphur and other bituminous matter, which fet feveral parts of the island on fire. Many churches and public buildings were tumbled to the ground, and nothing but scenes of horror and defolation were every where to be feen.

Another happened in the island of Palma in the year 1677, which was attended with as difmal confequences as the former already defcribed.

APPENDIX.

### A P P E N D I X.

#### CONTAINING

### A Succinct Account of OLD SPAIN.

#### CHAP. I.

The fituation, climate, foil, productions, &c. of Spain; with an account of the military and naval power of that kingdom.

HE kingdom of Spain is fituated on the western part of the continent of Europe; and on the east and fouth, is bounded by the Mediterranean fea, the streights of Gib-Extent and

raltar, and part of the Atlantic ocean; Extent and fituation.

and on the north by that part of the weftern ocean called *the bay of Bifcay*, and the Pyrenean mountains, which feparate it from France. It lies in the temperate zone, between the parallels of 36 and 44 degrees of north latitude, and in length it extends from the 10th degree of weft longitude to the 3d of eaft longitude, that is, 13 degrees from weft to eaft, or about 700 miles, and 8 degrees from north to fouth, or about 550 miles, but it is confiderably narrower in the fouthern part of the country.

It is a fort of oblong peninfula, joined to the fouthern parts of France by the Pyrenean mountains, which run from weft to eaft, and from fea to fea; that is, from Cape Olarzo near Fontarabia in the bay of Bifcay, to Cape Creuz on the Mediterran an, being almost eighty leagues in length. From Cape Creuz all along the Mediterranean, to Cape St Vincent in the fouth-weft corner of Spain, are generally reckoned 275 leagues;

on

on the weft fide, from Cape St Vincent to Cape Finisterre are 125 leagues; and lastly from Cape Fini-sterre to Fontarabia are 120; which added to eighty, the length of the Pyrenees, make up the extent of the northern boundaries, viz. 200 leagues; fo that the whole compass of Spain, including the little king-dom of Portugal, amounts to 600 leagues, or 1800 miles.

Spain was anciently divided into feveral diftinct kingdoms, which, through process of time, were all united into one; and it is at prefent divided into fourteen districts, or provinces; namely, 1. Galicia. 2. Asturias. 3. Biscay. 4. Navarre. 5. Arragon. 6. Catalonia. 7. Valencia. 8. New Castile. 9. Old Caftile. 10. Leon. 11. Eftramadura. 12. Anda-lufia. 13. Granada. 14. Murcia.

Spain being fituated in the middle of the temperate

Climate and foil.

zone, on which account, as well as for its many high and pleafant hills, beautiful plains, and variety of rivers, we may af-

firm it to be not only a very delightful, but a very healthy country; being on the one hand free from the fcorching heats to which Africa is exposed; and from the frosts, rains, and other inclemencies of the more northern countries. The fummers here indeed are thought by us excellive hot, though validly thort of what they are found to be in the countries nearer, or within the tropics. But befides that, these fultry heats last but about two, or at most three months, and at the fame time are greatly mitigated by the cooling breezes; whilft all the reft of the year is delightful and temperate. The air here is generally clear and ferene, the great rains fall regularly in fpring and autumn; and it is to be obferved, that as with us most diftempers are produced from colds, fo in Spain they are generally the effects of heat, fuch as burning feyers, pleurifies, and the like. As a proof of the

the healthine's of the climate here, the ancient inhabitants were not only fout and robuft, but lived to a great age, whilit they gave themfelves up to a habit of exercife and temperance. So that though the Spaniards have fince dwindled from their robuftnefs, healthinefs, and fecundity, it must be owing to their being funk into indolence, and a more luxuriant way of living, rather than to any fault or defect of the climate.

Spain is far from being a barren country, as many have reprefented it; the mountainous parts are covered with flately trees, and feed vaft herds of fheep and goats; while the plains produce excellent wheat and barley ; and though there be often great fearcity of these in this kingdom, yet this does not proceed from the fterility of the foil, but from the indolence of the inhabitants, and the neglect of tillage. It produces, however, vast quantities of the finest fruits of all forts, fuch as citrons, lemons, Fruits and oranges, almonds, railins, prunes, olives, other prodates, figs, chesnuts, pomegranates, Gc. duce.

The fame may be allo faid of their herbs, flowers, and medicinal plants, which, though excellent in their kinds, yet grow most of them wild here, when in other places they could not be produced without great art and industry. But of all its produce the wine is the principal, which is much effeemed all over Europe, for its richnefs and excellent flavour! Their oil, wax, and honey, are allowed to be as good as any in the world. Few countries exceed this for plenty, goodnels, and variety of fowl, both wild and tame; of four-footed game, as deer both red and fallow, hares, rabbits, o.c.; as for their tame fwine, all who have had experience of it, allow, that the Spanish bacon exceeds even that of Westphalia. Here are valt flocks of fheep fed upon the mountains, whose flesh is faid to be of a more exquisite relish than any that is fed in the richeft pastures; but they are 3 I ffill

## An Succinet Account of the App.

still more valuable for their incomparable wool, which far exceeds any thing of the kind in Europe; great quantities of this wool, in time of peace, are annually imported into Britain. It is generally agreed, that the Spaniards have the belt breed of horfes in Europe; the great price that is fet upon them by most other nations, and the numbers exported out of the kingdom, is a fufficient proof of their value. But they make use of mules for carrying burdens, as being better fitted by nature for drudgery, as well as for going over the most craggy and mountainous parts of the country, being both larger, stronger, and surer footed than horfes.

434

Here are mines of lead, copper, fteel, and excellent iron, the best of which is dug from the mountains of Biscay, and is sent all over Europe. It is also afferted by ancient authors, that gold and filver was found in this country in furprifing plenty; and Strabo tells us, that when the Carthaginians came hither, they found most of the Spanish utenfils made of it; however, the Spaniards have quite neglected those mines, ever fince they have been able to draw fuch immense quantities of these metals out of America.

Although the Spaniards are furnished with the most

Neglect of manufactures, fuch as wool, cotton, flax, die-ftuffs, with plenty of raw filk, yet they have shamefully neglected this necessary branch of bulinefs; the certain confequence of their indolence and inactivity; which obliges them to buy the greatest part of the goods they export to their colonies, of England, France, Holland, and Italy. There are very few of the Spaniards bred to any handicraft bufinefs, thinking it altogether derogatory to their honour to work at any trade whatfoever.

Spain is far from being a populous country, its inhabitants are computed to amount to no more than be-

tween

#### Chap. I. Kingdom of Spain.

tween feven and eight millions; though at the fame time, it is capable of maintaining three times that number, if the lands were cultivated, manufactures en-

Not populous; reafons affigned for it.

couraged, and its mines properly worked. In the time of the Goths and Moors it contained between twenty-five and thirty millions of people. Several reasons may be given for the vast decrease of its inhabitants fince that time; the principal of which are, the expulsion of the Moors, the vaft number of its inhabitants who have gone to Mexico, Peru, and all their other colonies, and the almost total want of manufactures. Another great caufe of the thinnefs of inhabitants in this country, is the great number of monasteries, of which there are no less than 9300 of religious men, and 370 nunneries, by which means. no lefs than 200,000 perfons are reitrained from propagating their species,. The manner too in which the Spaniards generally live, contributes not a little to their infecundity, particularly in the use of pepperand other fpices.

The Spaniards are not wanting in genius, though learning has flourished very little amongst The characthem, being always difcouraged by the ter of the clergy. They are, in general, people of Spaniards. a good deal of wit, and no despicable judgment, which, though flow, is generally fure.

They possed loyalty to their princes, fecrecy and constancy to each other, and patience in adversity, to a great degree; but, on theother hand, they are haughty, proud, imperious, and cruel; add to thefe floth and indolence, which complete the national character.

The Spanish land-forces confisted of 96,597 men fome time ago; but they have been of Their land-late confiderably increased. The king-forces. dom is likewife well defended on all lides; on thatof France it has a fecure fence in the Pyrenean mountains :

3 I 2

# A Succinet Account of the App.

mountains; the fea-coafts, befides forty-five towns, are lined with redoubts, forts, and towers; and were an army to venture far up the country, they would be put to great inconveniencies, particularly the horfe for want of necefiary forage:

436

The ftrength of Spain confifts more in its navy, than Their navy. its army. In time of peace their navy is principally employed in the protection of their American trade, clearing the coafts of the Barbary corfairs, and other pirates, and occasionally in transporting troops to America. It is also very well provided with feveral forts of naval ftores. Arragon, Navarre, Catalonia, and the north coaft produce good timber; Bifcay and other parts abound in iron. At Lierganes and Cerada, not far from St Andero, are founderies for cannon, anchors, &c.; and for bombs, granadoes, and all kinds of bullets, at Fugui, Azura, and Iturbiera. Powder is also made at feveral places; and Placentia in Guipufcoa, and Valencia, are famous for all forts of arms; as Puerto Real, which is not far from Cadiz, is for excellent cordage. Cada in Galicia makes both cordage and canvas, being fupplied with hemp from Granada, Murcia, and Valencia, but not in a fufficient quantity for the demand; whence foreigners still have the advantage of fupplying them with most of their canvas and cordage. Tar and pitch are made in feveral parts of Catalonia and Arragon. The Spanish settlements in America have also very good ship-timber, pitch and tar; for which reafon it would be more advantageous for them to build the greater part of their ships at the Havannah, and other proper places : befides, the American wood is more durable than that of Europe.

The Spanish navy received a fevere blow during the reign of Philip II. and from that time continued declining till after the peace of Utrecht, when Philip V. was very intent upon reftoring it. In the year 1760, it was in as formidable a state as it had been for feve-

And three or four fire-fhips, making in all about ninety-four fail. But then it is to be observed, that above one fourth of these are disarmed for want of men.

#### C'H A P. 'II.

A concife biftory of the most remarkable revolutions that have happened in Spain, particularly the passing of the crown from the house of Austria into that of Bourbon, with an account of the constitution and government of that country.

SPain was called by the ancient Greek writers Iberia, either from a colony of Iberians, or Celtes from Caucafus, or from the river Iberus, now the Ebro; though fome authors rather think that the word came from *iber*, which in the ancient Celtic language fignified on the other fide, from its being fituated on the other fide of the Pyrenean mountains.

The Celtes, a very ancient people, descended from Gomer, the eldeft fon of Japhet, who Spain overrun by fe- peopled the greatest part of Europe, veral foreign came thither from Gaul over the Pyrenations. nees, and fettled the greatest part of Spain, and continued for feveral centuries in it, tilltheir inteftine wars against each other fo weakened them, that they became an eafy prey to other maritime and warlike nations, fome of which fettled in the country, while others contented themfelves with ftripping them of their gold and filver, and returned home richly laden with the spoil. It was afterwards invaded by the Tyrians, Babylonians, and Phœnicians, the Gauls, Rhodians, Greeks, and Carthaginians, and fince by the Romans, Goths, Vandals, Suevi, and other northern nations; and laftly, by the Moors from Africa, who poured in fuch numbers of

their

their fwarthy hofts into the kingdom, that they almost completed the conquest of the whole country in little more than eight months, though it cost the Spaniards afterwards as many centuries in regaining it.

The first who began to oppose the moorifh tyranny, at least with any fuccess, was the brave Pelagius Pelagius. His original is uncertain, but defeated the as early as the year 716, being grown Moors. fomewhat powerful in Atturias and Bifcay, he collected a fmall body of forces, with which he repulfed and routed the infidels there, took feveral confiderable places from them, and was for his bravery and fuccefs faluted King by his troops, and maintained himfelf fo well in these mountainous countries, that he transmitted the crown in an hereditary fuccession to his posterity, after a reign of near twenty years. His fon Savila mounted the throne, but dying in the fecond year of his reign, Alphonfo I. fucceeded him, in right of his wife Ermefenda, the daughter of Pelagius, and, during a reign of eighteen years, gained no less than thirty-four victories over the Moors.

His grandfon of the fame name, furnamed the Chafte, was equally valiant and fuccefsful; he enlarged his dominions, and ftyled himfelf King of Oviedo, which he had taken from the Moors, made it his capital city, and the place of his refidence; but Ordonna II. after gaining feveral great victories over the infidels, and taking many important places from them, removed his court to Leon, calling his enlarged kingdom by the name of that capital city. In hisreign the little kingdom of Navarre was founded; but going to affift that new king, who had been proclaimed by the inhabitants of the countries at the foot of the Pyrenees, he was himfelf defeated by the Moors.

About the fame time the kingdoms of Caftille, Arragon, and the earldom of Barcelona were founded. In process

## A Succinet Account of the II App.

procefs of time all thefe acknowledged each other's titles, confederated together, and mutually affifted each other, in order to extend their conquefts in the countries inhabited by the Moors; but the kings of Leon were most fuccessful; indeed their dominions were by far the most extensive, their fortreffes frronger, and their forces more numerous.

440

The first union of these kingdoms was that of Navarre and Caftille, Sancho, King of Na-Navarre. Caffille, and varre, feizing on the latter in right of his Leon united. wife Numa, eldeft fifter to Garcia, late King of Caftille. As foon as he was confirmed in the poffellion of this kingdom, he placed his fon Ferdinand on the throne, and prevailed upon Bermudo King of Leon to give his only daughter to that young prince; fo that, upon the death of Bermudo, Ferdinand, who had before vanquished and dethroned his elder brother Garcia King of Navarre, united thefe three kingdoms, or rather became King of Navarre, Leon, and Castille. At his death he divided them between his three fons; Sancho had Castille, Alphonfo Leon, and Garcia Navarre. But Sancho, who was the eldeft, foon difpoffeffed the other two, and being foon after killed at the fiege of Zamora, was fucceeded by his brother Alphonfo. This prince was very fuccessful against the Moors, took the city of -Toledo from them, and in the year 1108 made it the place of his refidence.

At his death, as he left no fon, Alphonfo of Arragon, who had married Uracca his fifter and heirefs, poffeffed his kingdoms, uniting them to his own; but being obliged to divorce her for incontinence, his right to thefe crowns paffed to Alphonfo her fon by Raymond Earl of Burgundy, her former hufband, and he was accordingly crowned at Toledo with the title of Emperor. In his reign Alonzo, fon to Henry of Burgundy, who had been made Earl of Portugal, took upon

## Chap. II. Kingdom of Spain.

upon himfelf the royal title and dignity, and tranfmitted it to his posterity.

By the divorce above mentioned of the heirefs of Leon and Caftille from the King of Arragon, thefe crowns were again difunited. The two former continued in the posterity of Alphonso, the son of Uracca, and from him paffed through a fuccession of about fourteen monarchs, of whom fome were no better than ufurpers, to King John, who was fo difagreeable to his fubjects, that he was obliged to declare his fifter Isabella his heirefs, though he had a daughter of his own. John died in the year 1474, after a troublefome reign of twenty years, when Ferdinand King of Arragon, who had married the Princefs Ifabeila, took possession of these two kingdoms, though they of right belonged to Johanna, the daughter of King John. However, Ferdinand was not scrupulous with regard to her title, but reigned focially with his wife Ifabella over the three kingdoms of Arragon, Caftille, and Leon, and they have ever fince continued united in their descendents.

Soon after they had fecured their new acquifitions, they turned their arms against the Moors, and took from them the kingdom of Granada, the only country the infidels had then left in Spain. In their reign the famous Columbus difcovered the The West West Indies, the greater part of which Indies difcothey conquered by fuch bloody and treacherous means as must brand with eternal infamy the Spanish nation, though it has made fo vast an addi-

tion to that monarchy. They next added the kingdom of Navarre to their ill-acquired dominions, and afterwards conquered the island of Naples in Italy.

Thus all the petty kingdoms of Spain were at last united into one monarchy, besides the vast accession of dominions in the new world.

They reigned thirty years, and Isabella dying in 3 K the

App.

the year 1504, the kingdom devolved to Philip, fon to the Emperor Maximilian, Archduke of Auftria, and Duke of Burgundy, who had married Johanna, the daughter of Ilabella, and in whofe right he fucceeded to the kingdom of Caftille; but dying in 1506, after a reign of two years, and his Queen Johanna becoming distracted, her father Ferdinand took again the reins of government, and held them till the year 1516, when he died; and the reign of the Queen, which lasted thirteen years, terminated by reason of her incapacity.

Charles her fon, by Philip above mentioned, afcend-Charles the ed the throne in 1517, and the Emperor Great fucceeds Maximilian dying about two years after, Ferdinand he alfo afcended the Imperial throne, and and Ifabella. thereby became one of the greateft princes that ever fwayed an European fceptre, and was accordingly called Charlemagne, or Charles the Great; for being grandfon to Maximilian, who married the heirefs of Charles the Warlike, Duke of Burgundy, he poffessed the feventeen provinces of the Netherlands, and afterwards in his mother's right the kingdom of Spain, Naples, the West Indies, and now by election Emperor of Germany, with the addition of the duchy of Milan.

He reigned forty years, and then of his own freewill refigned the empire to his brother Ferdinand, and the dominions of Spain to his fon Philip. By him the crown of Spain acquired an addition of all the Low Countries, together with the duchies of Burgundy and Milan. He lived two years after his refignation a reclufe in the monaftery of St Jufta, of the order of St Jerom, near the city of Placentia, and died in the year 1558.

Philip II. his fon fucceeded him in Spain, and other dominions; but the Dutch, fupported by France and England, revolted, and formed formed themfelves into that republican government, which has fublifted to the prefent time, notwithstanding all the efforts of Spain to reduce them. During his reign the Morofcos, or relics of the fubdued Moors in Spain, also revolted, but were totally defeated and fubdued. Henry the cardinal, King of Portugal, dying without iffue, in the year 1580, Philip took poffeilion of that kingdom, as fon of Elifabeth the daughter of Emanuel, and by that means united all the kingdoms of Spain under one head, In the year 1588, he fent the famous armada with a view to conquer England; but most of the ships which composed that powerful armament, were either deftroyed by the English fleet, or perished by ftorms. From this time the naval power of Spain continued to decline, till the acceffion of Philip V, who was very intent upon reftoring their naval force. Philip II. built the noble palace of Efcurial, which was a work of thirty years, and colt an immense sum of money. He difturbed the peace of Europe, and was guilty of many oppressions and cruelties to his subjects, efpecially to those in the kingdom of Arragon, for daring to affert their rights and liberties; and by his grafp. ing fo eagerly at univerfal monarchy, he ruined the affairs of the nation, and beggared his fubjects. He died in the year 1598, after a long, but troublefome and inglorious reign of forty-two years.

He was fucceeded by his fon Philip III. the moft remarkable action of whole reign was Philip III. the banishing the Morofcos, or offspring of the Moors, which were ftill in fuch multitudes, that the number of the banished amounted to near 900,000 fouls; and yet this prodigious number confifted only of those who were known, or professed themfelves infidels; for it has fince appeared, that multitudes of them remained who professed indeed the Christian religion, and externally conformed in 3 K 2 every

A Succinct Account of the App.

every point to the fenfeless ceremonies and superftitious nonsense of the Roman church, yet at heart were really deluded Mahometans, or obstinate Jews. Philip III. reigned twenty-two years, and died in 1621.

Philip IV. his fon and fucceffor, was a prince fo Philip IV.

wholly addicted to pleafure, though en-gaged in bloody wars during his whole reign, that it gave his enemies great advantage over him. The Dutch in particular, who revolted under his grandfather, gained fo many victories, that he was obliged to declare them a free ftate. He likewife engaged in a bloody war with France, which did not fail to raife inteftine divisions in his own kingdom. The Catalans took up arms in defence of their ancient liberties, but were at last defeated, and forced to fubmit; but Portugal, which revolted at the fame time, (whofe inhabitants proclaimed the Duke of Braganza their King), was fo powerfully supported by the English and French, that it became again an independent monarchy, and has continued the fame ever fince. Philip IV. reigned forty-four years, and died in 1665.

Charles II. fon to Philip IV. was fo weak a prince, . both in body and mind, that the Spanish Charles II. affairs fell still into greater decay. During his minority, he was obliged to conclude a peace with Portugal. His wars with France, which continued the greatest part or his reign, were attended with bad fucceis, and many of his provinces, which had long groaned under the tyranny of his predeceffors, particularly the brave Catalans, were waiting for a fair opportunity to recover their ancient liberties. Under all these troubles and perplexities he spun out a reign of twenty-five years; and being the laft of the male line, made his will, by which he left the crown of Spain to Philip Duke of Anjou, fecond fon

fon of the Dauphin of France, and grandfon to Lewis XIV. Charles died in 1700, and most bloody wars enfued on account of the fuccession to that crown.

Accordingly the Duke of Anjou, afterwards Philip V. was proclaimed King of Spain, Philip V. and as fuch was not only received there, but acknowledged by other states of Europe, and the King of France prepared to maintain his grandfon in the poffeffion thereof, which he forefaw would be difputed by the houfe of Auftria and its allies; becaufe Lewis XIV. had, on his marriage with the Infanta of Spain, renounced, in the most solemn manner, all right and title to the fuccellion of Spain, by virtue of the marriage, both for himfelf and his heirs. By this renunciation, Leopold, then Emperor of Germany, was confidered as next heir, and accordingly laid claim to the Spanish crown, transferring his right to his fecond fon Charles, Archduke of Auftria, his eldeft fon Joseph having been some time before created King of the Romans; and confequently his fucceffor to the empire. Charles was accordingly acknowledged King of Spain by the Emperor, the British, Dutch, the Spanish estates in Italy, and the brave Catalans in Spain. Our fleets transported him thither, and our troops, as well as those of his other allies, affifted him, in order to take the Spanish crown from the houfe of Bourbon. War was immediately proclaimed against France and Spain, and the allied army, under the conduct of the two famous generals Marlborough and Eugene, reduced France to the loweft ebb; at the fame time Charles's troops and ours were fuccessful in Spain, and he in a fair way of becoming mafter of the whole country; but, like a weak prince, he undertook pilgrimages, and other fuperstitious fooleries, instead of feconding the ardour of his allies, and marching directly with them

to

to Madrid. Charles had not long miffed the favourable opportunity of regaining the kingdom from his rival, before the fituation of affairs took another turn, by the death of his father and his brother Jofeph, who died in 1711, and left King Charles III. fole heirmale of the house of Austria; and by his election to the Imperial throne, the balance of power began to be in as much danger from the Spanish crown being added to the empire, as it was before by passing into the house of Bourbon. Accordingly France, though reduced to the lowest degree, found means of obtaining a far more advantageous peace than what it deferved, or had reason to hope for. This was the

The treaty of Utrecht. nifh crown, and the Catalans, thole brave defcendents of the ancient and warlike Celtes, were left to the mercy of the Spaniards, by whom they were firipped of the poor remains of their ancient privileges, and reduced to the loweft flate of flavery, under which they have ever fince groaned.

By this treaty King Philip yielded to Great Britain the town and fortrefs of Gibraltar, and the island of Minorca.

Though nothing could be more adverfe, both by principle and education, to our Proteftant fucceffion than Philip V. of Spain was, yet it is wonderful to reflect what prodigious things the intereft of the two nations did for removing the antipathies of the two. courts. The administration of Sir Robert Walpole was, it is true, but ill fitted for vigorous measures, and during it Spain was guilty of the most flocking infults upon our nation and government; but ftill we were filently reaping vast advantages in commerce, and what the court lost in honour, the people gained in profit. The parliament, as guarantees of the people's

446

#### Chap. II. Kingdom of Spain.

people's honour, for a long time wanted to interpose; but Sir Robert's pacific schemes did not admit such an interposition.

After the ambition of the Queen-mother of Spain had formed one of the moft romantic fchemes that could have well been conceived, viz. the introducing his prefent Catholic Majefty into Italy, the naval power of Great Britain rendered that fcheme practicable, and carried it into execution; yet fo great was the antipathy between the two courts, that Don Carlos, his prefent Catholic Majefty, was not fuffered to truft his perfon on board the very fleet that was to carry him to take poffeffion of a kingdom. Rather than do that he hazarded his perfon, by going by land through a great part of France, and embarking at Antibes on board the Spanish galleys, proceeded to Leghorn.

Before that time the Imperial court took poffeffion of Parma and Placentia; but, by the good offices of his late Majefty, the Emperor relinquished that poffeffion, and his prefent Catholic Majefty owed to us his obtaining peaceable poffeffion of these two duchies, which paved the way for his mounting the throne of Naples, as he foon after did.

While we were thus unmeafurably aggrandizing the Spanish branch of the house of Bourbon, the court of Madrid entertained in her fervice all the adherents of the pretender, and allowed him a pension, by which he faved money enough for beginning and carrying on the rebellion of the year 1745. The young pretender, who headed that rebellion, was the distinguished favourite of the King of Naples; fo that the handle of the hatchet now lifted up against us, may be faid to have been cut out of our own wood. But even these partialities were far from inducing us to do any thing that was fevere against his present Catholic Majesty. In the year 1742, when our naval power power could have deftroyed his capital of Naples, and when, by fending his troops to join with our enemies, we might have been juftified in coming to extremities, all that our court did, though it had by that time altered its pacific complexion, was to order Admiral Matthews to expoftulate with his Neapolitan Majefty, and to give him a reafonable time for returning an answer. A small fquadron was accordingly fent to the bay of Naples, which fo intimidated the Neapolitan monarch, that he promifed to recall his troops, fo no further violence was offered him.

448

Upon the death of Philip V. (which happened in June 1746, in the forty-fixth year of his reign), Fer-Ferdinand VI. dinand V1. fucceeded. To do justice to that prince, Great Britain had lefs to complain of from him than the has had from any Catholic King thefe 200 years; and yet it was under him the infamous restitution of the Antigallican's prize took place, at the very time when his late Majefty was commending his good faith from the throne. He did not, it is true, as his fucceffor has done, make an infidious treaty with our enemies, nor did he infolently make unheard of demands: But to what was his moderation owing? not to that of his court or ministry, but to his own weak brains. Upon his demife, which happened the 10th of August 1759, he was fucceeded by Don Carlos, late King of Naples and Sicily; and Great Britain thought the had reafon to congratulate herfelf upon the fuccession of a prince, who lay under fo many perfonal obligations to her, as his prefent Catholic Majefty did. Though fhe might very juftly, according to the fpirit of the treaty of Aix-la-Chapelle, have opposed the family-fettlement he made of his dominions, yet we did not oppofe, nor, as far as the public has been informed, did any of our allies oppole it, even with a fingle memorial. Thus

## Chap. II. Kingdom of Spain.

Thus his Catholic Majefty has requited all the obligations the Britifh nation have heaped upon him, by taking part with our greateft enemy, and by most infolently interfering in their behalf, whereby the greateft indignity was offered to the British crown.

The conflictution of Spain is at prefent an abfolute hereditary monarchy, where the females fucceed in default of the male line, but

the King feems to be invefted with the power to difpofe of the crown to any particular branch of the royal family; of which we had an inftance in Charles II. beftowing his dominions upon Philip V. grandfon to Lewis XIV.

But though the King be an abfolute defpotic monarch, he feldom transacts any matter of importance without the advice of the feveral councils established for the management of their respective branches in their department. Of thefe,

1. The cabinet-council confifts of the principal fecretaries of ftate, and a few more appointed by the King, who finally determine matters relating to the government.

2. The privy council, which confifts of a great body, who prepare matters for the infpection of the cabinet.

• 3. The council of war.

4. The council of Castille, which is the highest court of judicature in the kingdom, for causes either civil or criminal, and receives appeals from all the inferior courts of the nation.

5. The leven courts of royal audience, viz. of Galicia, Seville, Majorca, the Canaries, Saragoffa, Valencia, and Barcelona. Thefe, first of all, take cognifance of every caufe within five leagues of their respective capitals, and also (by way of appeal) of all caufes removed from inferior courts within their respective jurisdictions.

3 L

There

#### An account of the principal fea-port towns in Spain.

HE ports of Spain are many, but fome of them of little importance to the trade of the kingdom; the principal of which are the following; and beginning with Barcelona, which lies in the north-eaft corner of the kingdom, we shall proceed in our defeription of them as they lie along the coast of the Mediterranean, and Atlantic ocean, till we come to Fontarabia, in the fouth corner of the bay of Bifcay. I. Barcelona is the capital of the province of Ca-

.450

#### Chap. III. Kingdom of Spain.

talonia, and inferior to few in Europe B rcelona that are not courts of princes. It is plealong. 2 eaft, fantly fituated on the Mediterranean coaft, lat. 41. 20. a little below the gulf of Lions, and opens to the fea in a beautiful femicircle, which, together with its caftle, the beauty of its churches, and other fumptuous buildings, affords a most delightful prospect to fhips failing by it; especially as it stands between two confiderable rivers, which fall into the fea on each fide of it. Before it is a fafe road; and the port, though rather too fmall, has rendered it a place of confiderable trade. It stands at the foot of the mount Monjuyque, on which is a ftrong caftle, commanding the whole city. The walls have ramparts in fome places, and in others only ftone-work defended by baftions. The ftreets are wide, the churches beautiful and rich, and the gardens elegant and delightful. Here is an univerfity, an academy of arts and fciences, founded in the year 1752, and a court of inquisition. In the year 1697, it was taken by the French, but restored again at the peace of Ryswick. K. Charles III. made himfelf master of it in 1705, but it furrendered to Philip V. after a very obstinate defence. This city ftands 300 miles eaft of Madrid, (which is the capital of Spain, and lies in the centre of the kingdom), 140 eaft of Saragoffa, and 180 north-eaft of Valencia.

2. Tarragona in the province of Catalonia, is an old fortified town, fituated on an emi-Tarragona nence near the fea, about fifty miles east long. 1. fouth-weft of Barcelona, at the mouth of 15. north the little river Francoli. It was formerly lat. 41. 6. much larger, more opulent, and more populous than at prefent. The university here was founded in the year 1532; it has a good trade, and in harbour; but the latter, on account of its many rocks, is impracticable for ships of burden. The adjacent country produces corn, oil, wine, and flax : both within and 3 L 2 without

A Succinet Account of the App.

without the city are to be feen many antiquities. In 1705, it fubmitted to the British and Dutch forces, but was reflored at the peace of Utrecht to King. Philip.

2. Tortofa is an ancient, fortified, and large city of the province of Catalonia, fituated on the Tortofa eaft river Ebro, over which it has a bridge ; long. 14 of boats. The avenue to it is defended min. • north lat. 45. by two baftions, and other outworks. .It lies partly on a level ground, and partly on a hill," being divided into the old and new town, of which the former is the largeft. The ancient ftrong caftle, with which, befides other fortifications, it is defended, ftands on an eminence betwixt it and the old town, being built in form of a citadel. Its university is confiderable, and the adjacent country abounds in grain and delicious fruits. It produces also filk and oil; near the city are fome mines, and quarries of ftone; and the inhabitants make a pretty kind of carthen ware. The Ebro being navigable, is a great conveniency to the trade of the place. It is ninety miles fouth-weft of Barcelona, and 45 from Tarragona.

4. Valencia, which is the capital of the province of

the fame name, lies on the river Guada-Valencia laviar, in a very pleafant and fertile east long. 14 country, being a large and beautiful city, min. lat. 39. defended with some fortifications. It is 2. very populous, being inhabited both by merchants and people of rank; the former of whom carry on a very confiderable trade here. The form of this city is almost circular, furrounded with an ancient flout wall, adorned with many flately towers, and thirteen gates, it being 6440 paces in circumference. Its feaport which ftands on the Mediterranean, near two miles from the city, furnishes it with every necessary. It is 180 miles fouth-east of Madrid.

5. Alicant is a famous city and fea-port on the Mediterranean,

452 .

#### Chap. III. Kingdom of Spain.

diterranean, in the province of Valencia. It is furrounded with ftrong walls, and defended by a caftle built on a rock. The harbour is commodious, and the town is famous lat. 38.35.

for its red and white wine, particularly the red. Meal, and every other neceffary of life; is here very good. It is divided into two parifhes, in which are about 1700 families; it has fix monafteries, two nunneries, two hofpitals, and feveral chapels. In the year 1706 it was taken by the Englifh, but in two years after, was recovered by the Spaniards. Its chief exports are wine, foap, and annifeed. Along the coaft are feveral towers, where a watch is conftantly kept againft the corfairs. It is fixty miles diftant fouth from Valencia, and 210 from Madrid.

6. Carthagena is a city in the province of Murcia, built on the fide of a hill on the Mediterranean, at the mouth of the river Guadalantin, and is a commodious, as well as one of the moft noted fea-ports in 40.

Spain, but is greatly declined from its former grandeur. The harbour is fheltered from ftorms by a fmall ifland called *Scumbraria*; which was fo named from the great abundance of mackerel found in the bay. Diamonds, rubies, amethyfts, and other gems are found here, and the inhabitants export great quantities of wool to Italy. Both the city and harbour are pretty well fortified; and the city contains about 1200 inhabitants.

7. Almacaron is a large fea-port in the province of Murcia, about eighteen miles fouthweft of Carthagena. It has fome mines weft long. 1. of alum, which bring in a large revenue to the Duke de Efcalona, and the Marquis de Vela.

7. Almeria is a city in the province of Granada, lying on a bay, with a little river running into it. The

#### A Succinct Account of the App, 454

The country about it is very plentiful, particularly Almeria in fruits and oil. It has a very fafe and Almeria pleafant harbour, and not far from hence weft long. 1. the land projects fouth-eaftward into the 50. lat. 36. fea, and forms a cape, by the ancients 57. called Charideme, by the moderns Cabo de Gates. This city was formerly in a much more flourishing condition than it is at prefent, having now no more than 600 houfes, and these not extraordinary. Its walls, which are washed by the fea, are reckoned about three miles in circumference; and it ftands about 210 miles fouth-east of Madrid, fixty-four foutheast from Granada, and feventy-five west from Murcia: a . . . . 1

9. Malaga is an ancient fortified fea-port in the Malagaweft province of Granada at the foot of a fteep long. 4. 4. mountain, well built, populous, and has lat. 36. 46. an harbour fuitable to its extensive commerce. The chief exports of this place are wool, olives, oil, raifins, fack, and other wines; the duties of which yield the revenues of Spain 800,000 ducats annually. It is defended by two caltles, viz. Gillalfarro, which is feated upon a hill, and Alcazzava, lying below it. The Phœnicians were the first who built a town in those parts, calling it Malacha or Malaca, from their great fale of fish here. Not far from this town, in the year. 1704; an obftinate engagement was fought between the English and Spanish fleets, but to the difadvantage of the latter. Malaga is diftant 260 miles fouth of Madrid, and fixty-fix north-eaft of Gibraltar."

10. Cadiz is a noted trading city in the province of Cadiz west Andalusia, standing on an island on the long. 6. 40. north-weft end of a long mishapen neck lat. 36. 30 of land, ftretching from north-weft to fouth-east; the western part of which is called Cadiz, but on the fouth-east the island of Leon. It is joined alfo to the continent (from which it is divided by a narrow

# Chap. III. Kingdom of Spain.

narrow canal, or arm of the fea) by means of the bridge Suazo, both ends of which are defended with redoubts, and fome other raifed works of earth. The ifland on which Cadiz ftands, and the oppofite fhore, form a bay of about twelve miles in length, and fix in breadth; but near the middle of the bay are two points of land, one on the continent, and the other on the ifland, not above 500 fathoms afunder; on which are the two forts Puntal and Matagorda, commanding the paffage; within thefe is a large and very good harbour; but no enemy can enter it without taking thefe forts called by the Spaniards *Los Puntales*. During the time of ebb, a good part of the harbour is dry.

The city of Cadiz is of pretty large circumference. The greater part of the ftreets are narrow, crooked, ill paved, and dirty; but a few of them are broad, ftraight, and well paved. The houses are mostly between three and four stories high, being built with a quadrangular area, and many are really elegant and flately. Houfe-rents and provisions, in general, are dear here, and good water is very fcarce. It is faid to contain thirteen convents, among which the college of the Jefuits is the finest in all Andalusia; but has only one parifh-church, which is the cathedral, though the fettled inhabitants here are computed at 40,000. Here is the audientia real de la contraction a las Indias, or the company trading to the Indies; which was removed hither in 1717, from Seville. It was indeed reftored to it again in 1725, but was brought back to Cadiz the following year. Both before and after the arrival of the Spanish American flota, this city is crouded with strangers, to the number it is faid of 50,000, who refort hither on account of trade, which caufes an extraordinary circulation of money.

Cadiz is the centre of all the American trade, the flota and galleons taking in their loading here, and return An Succinet Account of the App.

return hither with the rich products of Mexico and Peru.

456

To this place the French, Englifh, Dutch, and Italian merchants fend their goods, which are fhipped off in Spanish bottoms to America; besides these nations, all others who carry on a traffic by sea, have also their agents, correspondents, and factors here; and the confuls of these nations make a confiderable figure. In this place none thrive better than the merchants who feldom risk their own substance, but enrich themselves at the charge of those who remit them their effects, whence, whatever happens, they are no losers. The duty on foreign merchandise fent hither, would yield a vast revenue, and consequently the profits of the merchants and their agents would fink, without many fraudulent practices for eluding the duties.

Cadiz is fortified with walls, and irregular baftions, according as the land admitted them: on the fouth fide there is no approaching it, on account of the high and fteep fhore; on the north fide too, the accefs is dangerous, by reafon of many fand-banks and rocks which lie under water; the fouth-weft fide indeed admits of landing, but is defended by fort St Catilina: however, all the forts, together with the city itfelf, were taken by the Earl of Effex in the year 1596, who, after plundering it of immenfe treafures, burnt the place, and deftroyed the galleons in the harbour. This city is 270 miles fouth-weft of Madrid, fixty fouth of Seville, and forty north-weft of Gibraltar.

7 11. St Mary, the capital of an earldom belonging St Mary. to the Duke of Medina Celi, enjoys a flourishing trade, and lies at the mouth of the river Guadalite, directly opposite to Cadiz, which exceeds that city in bigness; the streets also are broader and better paved, and the houses handfomer;

## Chap. III. Kingdom. of Spain:

somer; but yet it contains scarce 8000 inhabitants. It is only walled round, and the little caftle, which it has instead of a citadel, is but of small force. Here are great numbers of French, English, Dutch, Genoefe, and other merchants; in it are also made valt. quantities of falt. Its harbour is the rendezvous of fome of the Spanish galleys. In the year 1702, the British and Dutch made themselves masters of it, without any opposition.

12. St Lucar, a well-built town, having a good harbour, at the mouth of the river Gua-St Lucar: dalquivir, forty-five miles below Seville. It stands on a hill. The harbour is difficult of access, on account of a rock under water, but is defended by two batteries, and in the road a whole fleet may ride with fafety. The town declines daily, and its principal trade is in falt.

13. Seville is a large and very ancient city, built in an extensive and very fertile plain, Śeville. on the river Guadalquivir, which is navigable for large ships, near forty miles from its mouth, and over which it has a fpacious bridge of feventeen boats, which joins the city to a large fuburb called Triano. The city is ftrong, and fpacious, adorned with fifteen gates, and 156 stately towers. It is divided into twenty-nine parifhes, in which are forty-four monasteries, thirty nunneries, twenty-four hospitals, 14,000 houses, and about 300,000 inhabitants.

The cathedral of this city is very remarkable, being partly in the Gothic and partly in the Morofco tafte, by which it acquires fomething of a majeftic greatness, beyond any thing of the kind in Spain. It has nine gates, eighty windows; and eighty-two altars, on which 500 maffes are faid every day. It is 407 feet in length, 271 in breadth, and 128 in height. The tower of this church is 350 feet high, 3 M in

# A Succinct Account of the App.

in which are twenty-four bells, and on the top a famous flatue of a woman, called *Giralda*, which, turning with the wind, anfwers the intention of a weather-cock. The infide of this ftructure is finely decorated with flatues, pictures, altars, and other ornaments, which would be tedious to defcribe.

All along the river are many uleful and commodious quays, where thips of confiderable burden may load and unload with fafety. Near the water-fide is a ftately tower, which they call the golden tower, commanding the whole river, city, and fuburbs. St Lucar, laft defcribed, is the port-town of Seville. This city has, at leaft in time of peace, a very extensive trade, particularly to the Weft Indies; and the circumjacent country is remarkably fruitful in wine, fruits, &c.

14. Agamonte, a town fituated at the mouth of Agamonte, the Guadiana, in the province of Andaweitlong. 8. lufia, having a commodious harbour; 5. lat. 37. the neighbouring country produces an excellent kind of wine, but not ftrong. The town gives the title of Marquis to the families of Zuriga and Guzman. It is 100 miles weft of Seville, and 85 north-weft of Cadiz.

The Spaniards have few ports on the weft fide from Cape St Vincent to Cape Finifterre, that part belonging mostly to his Portuguese Majesty.

15. The first Spanish port we meet with on the west Vigo, west fide is Vigo, a town of Galicia, feventy long. 9. 18. miles south-east of Cape Finisterre, featlat. 42. 15. ed on a small bay, having a fort on an eminence, but not capable of any long resistance. It has also an old castle, and stands in a very fruitful country. In the year 1702 the English and Dutch fleets forced their passage in, and made themselves masters of the Spanish plate-fleet, when just returned from America. In the year 1719, the British again

got

458

got poffession of this place, but relinquished it after railing contributions.

16. Noya, a fmall town in the province of Galicia, on a bay into which iffues the river Tam-Noya, weft bra; it stands in a fruitful plain, and is long. 9. 47. chiefly noted for its fhip-building. It is lat. 42. 50. fifteen miles west of the great town of Compostella, and not far from Cape Finisterre, in a south-east direction.

17. Corunna, or as it is generally called the Groine, is an ancient fea-port near Ferrol, in the bay of Bifcay. It is by its fituation well defended against the winds, and by two ftrong caftles against any hostile attempt.

Corunna, or the Groine, weft long 9. lat. 43. 10.

The city is walled, contains four parifhes, and about 1 500 families; has four churches, one of them collegiate, three monasteries, one nunnery, three hospitals, and ten chapels. It has a fpacious harbour, and is the feat of the audientia real of Galicia. In time of peace it is a place of confiderable trade, and confequently wealthy. This town is commonly known in Britain by the name of the Groine, and is the place at which all our difpatches for Spain arrive. It is thirty miles north of Compostella.

18. Betanzos, a town and fea-port in the province of Galicia, is feated on a plain in a bay Betanzos. of the fea, between the rivers Mandes weft long. S. and Cafcas, thirty-five miles north-east-50. lat. 43. of Compostella, and twenty fouth of Fer-15. rol. It is furrounded by a wall, has five gates, two parishes, and about 1000 families.

19. Ferrol is fituated at the head of an excellent harbour on the bay of Biscay, and in the Ferrol, weft kingdom of Galicia, twenty-four miles long. 8: 40. north-east of the Groine, and fifty-four lat. 43. 30. north of Compostella. This is one of the stations for the royal navy of Spain, and the port where they 3 M 2 frequently

A Succinct Account of the App.

frequently fecured themfelves in the laft war, and where their privateers carried in many British prizes; the entrance of the harbour being very well fortified, but far from being impregnable.

20. Ribadeo is a fmall town in the province of Ga-

Ribadeo. licia, feated on a rock at the mouth of a river of the fame name, which makes it a good and fecure harbour.

21. St Andero, in the province of Old Caftille, on

St Andero, weft long. 4. 30. lat. 43. 20. the bay of Bifcay, is a fmall, ancient, and fortified fea-port at the foot of a hill, feated in a pleafant country, which abounds with fine fruits and wine, having

a large, fecure, and well-fortified harbour, but has at its entrance a dangerous rock, called *Pennade Mogron*. Its fuburbs are almost wholly inhabited by fishermen, whose trade here turns to a very good account, the neighbouring feas abounding with fish. The Spaniards build and lay up fome men of war here. It is fixty miles west of Bilboa, and eighty north of Burgos.

22. Bilboa, though no city, is now the capital of Bifcay, it being a place of great trade, by Bilboa, weft reafon of its good port, fmall veffels colon. 3. north ming up to the mole, and others of lat. 43. 20. greater bulk lying farther out. The town lies in a plain environed with high mountains; it enjoys a good air, stands in a fruitful country, is well built, and is both large and populous, containing no lefs than 1200 houles. Here provisions are cheap and plenty, and the inhabitants export great quantities of wool, excellent iron, mostly in bars, and alfo fwords, fire-arms, and other military neceffaries. The town stands at some distance from the sea, on the river Nervius, now Ibaicabal, into which the tide flows, and forms a fecure harbour. It is 200 miles northeast from Madrid, and fixty west of St Sebastian.

23. San

#### Kingdom of Spain.

Chap. III.

23. San Sebastian, a noted port in the bay of Bifcay, of confiderable bignefs, having a fe-San Sebacure harbour at the mouth of the little stian, west river Gurumea. The town is feated at long. 1. 50. the foot of a mountain, which ferves as lat. 43. 35. a defence against the tempestuous sea. The harbour lies between two redoubts, between which only one thip can pass at a time. Near the entrance is also a fort with a garrifon in it to prevent any furprife. The town is furrounded with walls, befides which it is defended with baftions and half-moons, and on the mountain under which it lies is a citadel. The ftreets are long, ftraight, and clean, the houfes neat, and the churches fine; the number of families is faid to amount to 1500. It enjoys a delightful profpect, having on one fide the fea, and on the other a diftant view of the Pyrenean mountains. A confiderable trade is carried on in this place, particularly in iron, steel, and wool. In the year 1728 a company was fet up here, which trades in cacao to the Caraccas in Terra Firma.

24. Fontarabia is a little neat town, nine miles east of San Sebastian, and twenty west of Bayonne in France, fortified both by na-

ture and art, having a pretty good harbour, which towards the land is environed by the Pyrenees. In the year 1638 it held out a fiege against the French, but in 1718 it was taken by them. Near the city runs the broad river Bidasso or Vidasso, which is the boundary between Spain and France, being also, by virtue of an agreement between Ferdinand the Catholic and Lewis XII. the property of both crowns, fo that the fare paid by passers is divided among these two nations, the Spaniards taking of those who cross out of France to their side, and the French again from such as pass out of Spain to them.

CHAP,

A Succinct Account of the App.

# $\mathbf{C} = \mathbf{H} \cdot \mathbf{A} \cdot \mathbf{P} \cdot \mathbf{V} \cdot \mathbf{V} \cdot \mathbf{V}$

The revenues and trade of Spain. The bad accommy of the Spanish monarchs with regard to the management of their American colonies. The weakness and indigency of that kingdom. Reflections on the late conduct of Spain towards Great Britain, &c.

THE revenues of the Spanish crown confist chiefly of the fifths of all the riches which come Revenues. from America, which, in time of peace, come home once a-year in a large fleet, as before related; but they very feldom import their treasure in this manner when they are engaged in a war with any maritime power, but rather chuse to bring it home by stealth in single ships. Besides this, they have the usual inward resources to supply the exigency of their government, the principal of which are as follows.

The alcalya, or the tenth of every thing fold; the excife on wine, oil, tallow, soap, paper, salt-flesh, &c. belides the duties on all forts of goods exported or imported, or carried from one province to another, and on all goods brought into Madrid; the ufual aid of 441,176 crowns railed upon all under the rank of nobility; the wine-gage money; the ftamp-duties, and the half-annates; the post-office; the regulations of the crown of Arragon, and the crofs-bull, by virtue of which the clergy and laity are obliged to pay a contribution towards, carrying on a war with the intidels, even when no fuch thing is in agitation; licences for eating butter, cheefe, &c. in lent; the fublidies and tithes of the church and abbey lands; the taxes on downs, commons, and other paftures; the tenths and patrimonial rents of Catalonia, Arragon, Valencia, and Majorca; the ecclefiaftical payments

# Chap. IV. Kingdom of Spain.

ments for the military hospitals; the excise of Navarre; the quickfilver, coinage,  $\mathfrak{Sc.}$ ; all which, with feveral others less important, produce an annual revenue of between feven and eight millions Sterling.

The Spanish trade confists principally with their own colonies in America, of which, as formerly observed, they are exceeding jealous, and never allow any other power to fend their ships thither.

The dominions of the Spanish monarchy are undoubtedly the largest and richest of any in the world; for, upon the difcovery of the new world, they poffeffed themselves of the most extensive parts of it, and those which mostly abounded in opulence." Hence itis natural to conclude, that fo valt and wealthy a kingdom could not be weak and indigent: but the wonder will ceafe when we confider, that the great distance between the parts of this monarchy contributes greatly to its weaknefs, and the continual wars it maintained for several centuries were a perpetual' drain to its riches. But, above all, the Bad æconobad æconomy and despotic government my with reof its monarchs have been more de- gard to their ftructive to it than all the other causes American 16 put together. I shall therefore endea vour to point out fome of the capital errors of the Spanish monarchs, with regard to the management of their American colonies, and thereby hope, in the most conspicuous manner, to account for the weaknefs and indigency of that kingdom.

For, first, if all the Spanish subjects, without restraint, had traded to these distant regions, this must have created such a maritime force, as no other nation could have withstood. Or, 2dly, supposing the trade had been restrained, as it is at present, yet if manufactures had been encouraged, so that the greatest

# 464 A Succinet Account of the App.

greatest part of the trade of the West Indies had been carried on, without being obliged to have had recourse to foreigners, such prodigious sums must have centered in Spain, as would have enabled its monarchs. to have given law to all their neighbours, and, in all probability, the supreme direction of the affairs of Europe would have fallen into the hands of the Catholic Kings. But by neglecting thefe obvious and yet certain rules, for establishing folid and extensive at least, if not universal dominion, her Kings had recourse to those refinements in policy, which, however excellent they may appear in theory, have never yet been found to answer in practice. They were for fixing their commerce by conftraint, and for establishing power by the fword, the first, experience has shewn to be impracticable; and the latter, perhaps, was the only method whereby they could have miffed that end they used it to obtain.

In fhort, by repeated endeavours to fecure the wealth of the Indies to Spain, abfolutely they fcattered it throughout Europe, and by openly grafping at univerfal monarchy, they alarmed those they might have fubdued; fo that, in process of time, some of those they intended for flaves, became their equals and allies, and fome their mafters.

Yet those princes who took these steps, were not either rash or profuse, but, on the contrary, were esteemed by all the world the wisest of monarchs of their respective times, and in many things deferved to be so esteemed. They erred not through want of capacity, or want of application, as their fuccessors did, but for want of confidering things in a true light, occasioned wholly by their fixing their eyes on that dazzling meteor, universal empire. Ferdinand the Catholic, in whose reign the western world was discovered, was too wife and cunning for all he had to deal with, and by his arts and politics destroyed his neighbours :

# Chap. IV. Kingdom of Spain.

bours: but inftead of confiding in Columbus, who; of all men living, beft deferved his confidence, he, by an unaccountable ftroke of policy; inclined to truft any other perfon, however worthlefs, in the management of the new-difcovered world.

465

Charles the Great, who fucceeded him, minded very little any of the Spanish concerns, farther than he could render them fubfervient to his other views.

Philip II. was so much taken up in endeavouring to reduce the Netherlands, enflave Italy, conquer England, over-run France, and in annexing Portugal to his dominions, that he never confidered his fubjects in America farther; than as they enabled him by fupplies to carry on these vast designs.

From which it evidently appears, that however wife or penetrating thefe princes might be, yet they certainly acted unwifely with regard to the Indies: for inftead of confidering them as an eftate, they feemed to look upon them only as a farm, of which they were to make prefently the most they could. In doing this it must be acknowledged they acted with skill and vigour; for they drew immense fums from thence, which they wasted in Europe to disturb others, and, in the end, to weaken their own state:

All who are in any measure acquainted with the hiftory of Europe, know, that, for a long period of time, Spain maintained wars in Flanders, Germany, France, and Italy, which created a prodigious expense of treafure, and of troops; neither of which, from the death of Charles the Great, were they in any condition to spare. As families were reduced by the expense of ferving in the army, they were inclined to feek new fortunes in the Indies; and thus numbers removed to these diffant climes, not to cultivate the space fields, or to improve trade, but to ftrip and plunder those who were there before them.

Other great families also concurred with the mea-3 N fures

fures of the crown, in hopes of obtaining viceroyalties, and other lucrative offices. But though their schemes were beneficial to themselves, certain it is that they contributed more and more to the ruin of the Spanish nation. For these officers did not study the interest of the kingdom, but minded only how to acquire fortunes and riches for themselves; for which purpose they defrauded the crown, oppressed the fubjects, and thereby deftroyed all industry and public fpirit.

466

There is another thing to be obferved, which is certainly very extraordinary. This wrong turn in the Spanish policy had a very strange effect, namely, it made all the enemies of that nation rich, and all its friends poor. Every body knows that the United Provinces not only made themfelves free and independent, but rich and powerful alfo, by their long wars with Spain.---Our maritime power was owing to the fame cause. For if Philip II. had not disturbed Queen. Elifabeth, the British fleet might have been as inconfiderable at the close of her reign as it was at the beginning, when we were peftered with pirates even in the narrow feas : and the eftablishing of our plantations abroad was, in a great measure, owing to our expeditions against the Spaniards. Our manufactures at home were the confequence of affording refuge to the King of Spain's Protestant subjects. When Queen Elifabeth's fucceffor clofed with Spain, he fuffered by it, while France, the only country then at war with Spain, was a gainer. Both the British and Dutch were at vaft expense after the reftoration to preferve the Spanish Flanders, while the Spaniards themselves were inactive, and left all to be done by their allies. As foon as the tables were turned by the accellion of Philip V. the French became great lofers by fiding with that nation, though they had always got by fighting against them; infomuch that all the true patriots -

#### Chap. IV. Kingdom of Spain.

patriots in France complained, that while Lewis XIV. fhewed himfelf an excellent parent in his family, he difcharged but indifferently his truft as the father of his people.

Thus, by fo long a feries of mifmanagement, the Spaniards have brought their affairs into fo wretched a fituation, that they neither have, nor can have any very great benefit from their vaft dominions in America. They are juftly faid to be flewards for the reft of Europe; their galleons and flota bring the gold and filver into Spain, but neither wifdom nor power can keep it there, for it runs out as faft as it comes in. At firft fight this may appear to be ftrange and incredible; but when we come to examine it, the myftery is by no means impenetrable.

The filver and rich commodities brought from the Indies, come not for nothing, (the King's duty excepted); and a very fmall quantity of the goods or manufactures, for which they come, belongs to the fubjects of the crown of Spain. It is evident therefore, that the Spanish mines are dug for the other European nations, and that the Spaniards are only factors for them.

The British, French, Dutch, &c. supply the Spaniards with the necessfary affortments for their West-India cargoes.

The goods fupplied by the Britifh are pepper, all forts of woollen goods, efpecially bays, perpetuanas, flannels,  $\mathfrak{Sc.}$ ; hats of all forts, fine and coarfe; filk and worfted flockings; feveral forts of rich filks; copper, brafs, and iron ware; toys, clocks, watches in vaft quantities; dried fifh, falt provisions from Ireland, with other lefs confiderable articles, which, taken together, amount to a prodigious fum. To balance this, it muft be owned, that we take a large quantity of their produce, particularly wool, wines, die-ftuff, and many other articles; yet the balance in our fa- $_3$  N 2 your A Succinet Account of the App,

your is generally reckoned to amount to feveral millions.

The French (fince the acceffion of the houfe of Bourbon to the Spanish crown) have a very large share in this commerce; supplying all forts of gold and filver stuffs, rich filks, velvets flowered and plain; hats, filk and worsted stockings; flight woollen stuffs of the fabric of Amiens and Rheims, but chiefly of Lifle and Arras; vast quantities of linen, paper, cards, toys, and many other things. During the last general war, almost the whole of this commerce was in their hands, which in a great measure enabled them to support it. Their gains in this commerce are annually reckoned to amount to two millions or more.

The Dutch, for about twenty years before the commencement of the laft war, managed the best part of the Spanish trade; that is to fay, they supplied alone, what is now furnished both by them and the French. They have still, however, at least as great a fhare as any other nation, especially in time of war. The commodities they fend are spices, such as nutmegs, cloves, and particularly cinnamon, of which vast quantities are used in making chocolate in America; linens of all forts, callicoes, ribands, filk twift, cloths, ferges, camblets, shalloons, German toys, &c.; and it is faid that the Dutch draw annually out of the and it is faid that the Dutch draw and any out of the effects imported from the Spanish lettlements, at least five mile, "ons pieces of eight; and when Spain is at war with be "ritain, much more. Add to all this, what the Spaniards " part of the cargo from America may that the greater "long to ftrangers, on account of the intereft they have a muth confider that Spain its the interest they hav. 2 must confider, that Spain it-But befides all this, w. uch beyond what its native felf hath many wants, It. : and thefe must of confecommodities can purchafe quence

463

#### Chap. IV. Kingdom of Spain.

quence create further demands, on the effects brought from the Indies.

Befides, all expenses in Spain differ widely from the expenses of any other nation in Europe; becaufe, fooner or later, the greatest part of the money difburfed goes out of the kingdom, but never returns again. Alfo a great part of their troops are foreigners, who fend their effects away, if they are fo happy as to acquire any. Many of their artilans, pedlers, and fmall shopkeepers, are Frenchmen, or Italians, who either retire in the decline of life, or leave their effects to their relations in their own country. Nay the very labourers and harvest-people come hither annually by thousands out of the provinces of France next to Spain; and when they have done their bufines, and received their wages, go home again till next year.

So long as the court of Spain perfifts in this kind of policy, her affairs muft grow worfe and worfe. To maintain peace was certainly the true intereft of that nation at this juncture; at leaft till fuch a time as the had recovered fuch a maritime force, as might have enabled her to bring home her galleons in fpite of any foreign power. For whenever the galleons are ftopt, as is the cafe at prefent, and thereby their fupplies from America cut off for one or more years; it is eafy to difcern what troubles and diftreffes this muft occafion : and as thefe never happen but in time of war, an increase of expenses meets with a deficiency of funds, and those who are at the head of affairs, have at once both these opposite mischiers to deal with.

Although no nation in Europe can boaft of fo many natural advantages as Spain, yet, by her bad œconomy, fhe labours under many inconveniencies. The first is the want of people, which is the reason that both the inland and foreign trade is, in a great meafure, carried on by ftrangers. Another inconvenien-

CY

#### A Succinct Account of the

470

cy refulting from this, is the poverty of the country; and a third is the exceffive number and unproportionable wealth of the ecclefiaftics, fecular and regular.

But after all, their capital and most dangerous inconveniency is their court's being governed by French councils. For the first twenty years after the accession of Philip V. Spain was no better than a province to that kingdom; and her condition, for more than twenty years fince that, has been much worse. In short, no kingdom in Europe has been so oppressed and abused by their princes or ministers, who being foreigners themselves, have always had some end in view injurious to the interest of the nation.

It may indeed be objected, that, fince the conclution of the laft war, the affairs of Spain have greatly altered, her power on the continent is augmented, and an immenfe treafure has been poured in from the Indies.

But it cannot be fuppoled that this is the confequence of her connection with France : on the contrary, the real ftrength, grandeur, and prosperity of the Spanish crown, must be the work of peace alone; and if she continues to follow a contrary course, it cannot be long before she must feel the dismal effects of it.

After the conclusion of the laft peace, it was for a long time the general opinion, that the Spanish ministers had such true notions of their own interest, as to be perfuaded, that nothing concerned them more than to live upon good terms with Great Britain; without doubt it was our interest likewise to live in a perfect correspondence with that court. It has, however, proved impracticable to keep good terms with them; their partial conduct towards us during the present war with France, and their entering into a family compact with the latter, clearly demonstrated their hoftile intentions against us.

App,

## Chap. IV. Kingdom of Spain.

But what have we to apprehend from a war with Spain? What is not fhe to apprehend from a war with us? In America, fhe cannot hurt us, though we may ruin her. She has the fkeleton of a navy, but it is well known, that it is defitute of nerves and flefh, that is, of failors. We have already ruined the maritime power of France, and taken from them the greateft part of their foreign dominions, fo that we have little thing to fear from that quarter.

The Spanish fleets are at prefent blocked up in their feveral ports, and we have taken feveral rich prizes from them fince the commencement of the war. And as we have just taken one of their most valuable and important places in the West Indies, viz. the Havannah; by this noble capture, the whole Spanish main will be exposed to our attacks; and they will be prevented from bringing home their American supplies, on which they chiefly depend for carrying on a war.

A clear conficience has always been accounted half a victory. We have not fought this quarrel, we have not provoked it; and if they will not agree to a very honourable and advantageous peace, let us (depending on the bleffing of God upon our arms, and the juffice of our caufe) bravely profecute the war, till we humble this ambitious and ungrateful branch of the houfe of Bourbon.

Having now finished our account of the Spanish fettlements in America, and given a brief description of the kingdom of Spain, it will not be improper to add the accounts of the siege and surrender of the Havannah, which have been published by authority, the last whereof arrived just as the last sheets were going to the prefs.

Accounts

472

32

# Accounts of the fiege and furrender of the Havannah.

# A Journal of the Siegt.

June 6. A Fter a very fortunate paffage through the old ftreights of Bahama, the fleet arrived within fight of two fmall forts to the eaftward of the Havannah, fituated upon two rivers, about three miles diftant from each other. The whole fleet brought to; and Sir George Pocock, with twelve fail of the line, fome frigates, and all the ftorefhips, bore away for the mouth of the harbour, to block up the Spanish men of war that were there, and to make a feint on the other fide; in order to facilitate our landing on this. Commodore Keppel, with feven fail of the line, and feveral fmall frigates, was ordered to remain with the transports, to protect and conduct the debarkation of the troops, which was deferred till the next day. There was too much wind, and too great a furf from the fhore to effect it at that time.

7. By break of day this morning, the army landed without opposition between the two forts Bacarans and Coxemar. The one was filenced, and taken poffeffion of by the Mercury, and another frigate; the other was taken by the Dragon of 74 guns. They were defended by a confiderable number of peafants and negroes; in arms, who very foon abandoned them, and fled into the woods. The Earl of Albemarle, with the light infantry, and grenadiers of the army, paffed the river Coxemar, where his Lordship took his quarters that night. The reft of the army lay upon their arms along the fhore, with the picquets advanced into the woods.

8. Lord Albemarle marched the main body of the army early in the morning to a village called *Guana*macoa, about fix miles from the landing-place, and fent

## Accounts of the Siege of the Havannah. 473

fent Col. Carleton through the Coxemar wood, with a fmall corps of troops to the fame village, to endeavour to cut off the retreat of a corps of the enemy, faid to be affembled there, and which his Lordship determined to attack. The enemy were drawn up to receive us, and very advantageoully polted upon a riling ground between us and the village. Their cavalry marched down in a large body to the light infantry, who were upon the right of Col. Carleton's corps. They were very foon repulfed; and the whole body difperfed before the army got up. They were about 6000 in number, chiefly militia mounted, with the regiments of Edinburgh dragoons, two companies of grenadiers, and many Spanish officers. This morning Col. Howe, with two battalions of grenadiers, was lent through the woods to the Moro, to reconnoitre, and fecure the communication to that fort from the Coxemar.

9. Lord Albemarle marched the army from Guanamacoa, and incamped in the woods between the Coxemar and the Moro, leaving a corps at Guanamacoa, under the command of Lt-Gen. Elliot, to fecure the avenues on that fide, and a large tract of country, which could fupply the army with water, cattle, and vegetables.

We now difcovered the enemy difmantling their fhips in the harbour, at the entrance of which they laid a boom.

10. The Moro hill, called the *Cavannos*, where the enemy were faid to have a poft well fortified, was reconnoitred; and in the evening Col. Carleton, with the light infantry and grenadiers from Coxemar, went and invefted that hill, and the Moro fort.

11. Col. Carleton attacked the redoubt about one o'clock in the afternoon, and carried it with very little lofs, and little refiftance on the fide of the enemy. Here was a post established, and the work called by the name of the *Spanifh redcubt*.

30

12. The 7

474

12. The Moro fort was farther reconnoitred by his Lordfhip's order. It was difficult to reconnoitre it with much accuracy, it being furrounded with thick brufhy woods, which could not be feen through, and were moftly impaffable. It was obferved the parapet was thin, and all of mafonry; and it was therefore judged advifable to crect a battery againft it, as near as the cover of the woods would admit of. There was accordingly a plan fixed upon, at about 250 yards diftance, and preparations were accordingly made, and parties ordered out for fafcines, and collecting earth; which was a work of great labour, the foil being exceedingly thin and fcarce. The landing of the ftores was at the fame time carried on with great diligence by the fleet.

13. The battery mentioned yefterday was begun; as alfo a howitzer-battery, beyond the Spanish redoubt, to remove the shipping farther up the river. They threw a great deal of random fire into the woods, and annoyed us very much:

Col. Howe, with 300 light infantry, and two battalions of grenadicrs, was detached to land at Chorera, about feven miles to the weftward of the town, to fecure a footing, and engage fome part of the enemy's attention upon that fide.

19. There was a mortar-battery begun upon the right near the fea, for one thirteen-inch, two teninch, and fourteen royal mortars.

20. Parallels cut in the woods to the right and left of the battery, and a faicine-line begun, to fecure the guards from the enemy's fire.

23. Another battery made upon the beach, to advance the royals in the battery of the 19th nearer the fort.

- 24. A battery for two howitzers begun near the limekiln; likewife against the shipping, to remove them farther up the harbour, which had its effect.

25. A

#### and Surrender of the Havannah. 475

25. A battery for a thirteen-inch mortar begun near the limekiln, against the shipping.

26. A battery begun against the fort for four guns and two mortars, upon the left of the first battery.

29. The enemy at day-break landed two detachments of 500 men each, of grenadiers and chosen men, with a detachment of armed negroes and mulattoes with each corps; one upon the right under the Moro, the other upon the left near the limekiln. The picquets and advanced pofts prevented the fuccefs of these detachments, by repulsing them, killing, and taking near 200, besides wounding a great number, who mostly got off by the favour of the woods. Our lofs was only ten men killed and wounded.

30. This day was chiefly taken up in carrying ammunition and neceffaries to the feveral batteries, to provide for their opening next morning; which was done by the foldiers, and 500 blacks purchased by Lord Albemarle at Martinico and Antigua, for that purpofe.

July 1. This morning we opened two batteries of cannon, which, with our mortars, made up a fire as follows, viz.

	GUNS.	MORTARS.		
	4 Pounders.	13 Inch.	10 Inch	. Royals
Battery on the left cal. ed William's Lattery	1- } 4	2	0	0
Grand battery -	- 8	2	0	0
	0	Q	2	12
Batteries on the beach	0	2	I	14

Total - 12 3 26 The enemy's fire exceeded ours upon the front attacked, in the number of guns, which amounted to fixteen or feventeen, from fix to twelve pounders. They played one mortar of eight inches, and that very feldom. Upon the whole, we reckoned our fre fuperior to theirs confiderably, befides the difference. 302 of

6

of the fecurity of our works, theirs being only a parapet of thin majorry.

About ten o'clock, the Cambridge of 80 guns, the Dragon of 74 guns, and the Marlborough of 66, went in and lay against the fort: the Cambridge lay within grape-shot. They continued firing for above three hours, which the fort received and returned with great steadines. At length the ships were ordered off. The Cambridge and Dragon suffered much, particularly the former. The attacked front of the fort did not seem to suffer much from their fire, it was so much above them; but they still did us a considerable fervice, in taking up the enemy's attention for that time, which gained us a superiority in the number of guns.

2. Our batteries continued their fire with great fuccefs, and beat down the front attacked, as faft as could be wifhed or expected, particularly the eightgun battery; but unhappily, about noon, we were obliged to flacken, that battery being in danger of catching fire from the conftant fire kept up, and the drinefs of the fafcines, having had no rain for fourteen days. However, before the evening, the enemy's fire was reduced to two guns, which fired but feldom.

3. We flattered ourfelves the fire was quite out; but, about two in the morning, it broke out again with great violence. Both water and people were fent as faft as possible, but unhappily too late: the fire had infinuated itself where water could not reach it, nor earth stiffe it. Thus feventeen days labour of five or fix hundred men, and which must have let us into the fort in a few days, was now bassled, and to do over again. There was another embrazure added this night to William's battery.

4. and 5. These two nights our endeavours still continued to extinguish the tre; and, with much diffi-

culty,

culty, there were two embrazures faved upon the right, and the epaulement for mortars upon the left. The fire of these two embrazures was continued until the guns were disabled, and two more were ferved *en barbette*, until the enemy's fire obliged the men to give it up.

It was determined to convert the mortar-battery in the left parallel into a battery for cannon; which was accordingly begun, with fome improvements to the other works, which the enemy's fire from the town, Fort La Punta, fhips of war, and floating batteries, had rendered neceffary.

6. Two more embrazures were added this night to William's battery, and a place fixed upon near the ftone redoubt for another battery of four guns,

9. This morning we had twelve guns in battery, viz. William's battery of feven guns, and the left parallel of five guns, befides our mortars. The enemy fired with about eight or nine.

10. At night a battery for four guns begun in the right parallel.

11. This morning the four-gun battery near the ftone redoubt, and two guns upon the faved part of the grand battery newly repaired, opened, and played with fuccefs. We now had eighteen guns in play to eight or nine, which the enemy ftill kept up; for, by their uninterrupted communication with the town, and the great affiftance of their failors, who ferve their guns, they always made the loffes of the day good at night.

This forenoon two guns in the left parallel battery failed, one by running, the other by cracking; the carriage of a third was difabled upon William's battery.

In the afternoon the merlons of the grand battery again caught fire, and extended from right to left, and the whole was irreparably confumed.

12. The difabled guns in the left parallel and in William's battery were replaced laft night, fo that we ftill

## 478 Accounts of the Siege

ftill had fixteen guns in play. Towards noon the carriages of the three guns in the ftone redoubt battery were difabled.

13. This morning there was a battery of four thirty-two pounders opened on the right parallel against the left bastion, and made confiderable havock.

There was another battery of four guns ordered to be made upon the right of it, as foon as the materials can be collected.

The ruins of the burnt battery were ordered to be converted into a line for musketry at the fame time.

There were two guns remounted in the night upon the battery near the flone redoubt, but there were two more difmounted immediately afterwards.

14. The four guns in the ftone redoubt battery were last night mounted on fea-carriages: we had now twenty guns against five or fix, which the enemy began with in the morning. They were reduced to two before dark.

The whole front attacked, appeared in a most ruinous condition; yet the enemy, though kept in a constant hurry and confusion, behaved with spirit.

Preparations for carrying on approaches had now been in hand fome days. The 40th regiment was employed in making gabions, and feveral men of war in making junk, blinds, or mantelets, and fome bales of cotton purchafed to ferve as woolpacks. As our approaches muft be entirely railed above ground, on account of the rocks, these precautions were neceffary.

15. We played with the fame number of guns as yefterday. The enemy fired in the morning with fix or feven guns, but were totally filenced before night.

16. Our fire as yesterday. The enemy fired in the morning with two guns, and only twice with each. They

They fire the reft of the day with mufketry and wallpieces, but not much with either.

This evening the materials for the approaches began to be advanced.

The guns and ammunition are carrying up for the new battery, which is to open to-morrow morning. The enemy feemed to be employed in making up fresh merlons upon the face of the right bastion.

17. The Valiant's battery opened this morning between ten and eleven- The enemy had no fire on the front attacked, but fired two guns from the left face of the left baltion upon William's battery, and up along the cavannoes. This afternoon we began to fuff gabions with falcines for advancing our fap. In the evening our fap was begun, but there being a thick thorny wood to cut through, was advanced bat a little way.

18. The enemy's fire this morning was the fame as yefterday. We had two howitzers put in Dixon's battery to fire into the breaches. The fap was carried on this night about two thirds of the way to the finall battery at the foot of the forties before the right baftion. There was likewife a fmall lodgment made at the edge of the wood, before the point of the weft baftion.

19. The enemy fired this morning with three guns from the front attacked, but they were foon filenced. About noon we took poffelfion of the covered way before the point of the right baftion, and the former fap carried on at night, and another begun along the covered way before the right face, where we made a lodgment.

20. This morning the miners were entered under the right, or fea-face of the right baftion, the only place where there was a practicability of doing it at the foot of the wall; for the ditch of the front attacked is 70 feet deep from the edge of the counterfcarp, and upwards

## Accounts of the Siege

upwards of 40 feet, of that depth, funk in the rock ; but fortunately there was a thin ridge of the rock left at the point of the baftion, to cover the extremity of the ditch from being open to the fea, and to prevent furprifes; and by means of this ridge the miner paffed, with fome difficulty, to the foot of the wall, which he could do no where elfe without the help of fcalingladders, an operation which would be both tedious and dangerous. This ridge was fo narrow, that there was no possibility of covering a passage upon it from the fire of the oppofite flank; but we took our chance, and were glad to find it, even with that difadvantage : it coft us only three or four men during the whole time. We began the fame afternoon, to fink a shaft without the covered way, for mines to throw the counterscarp into the ditch to fill it up in cafe of occafion. We continued our fap along the glacis, and got a gun into the faliant angle of the covered way against the opposite flank. In the day-time we had parties for making fascines and other preparations against the town, after the Moro should be taken.

21. Our fappers and miners continued to carry on their work. In this they were much retarded, by meeting often with very large ftones, which coft them much labour to remove. In the night, there being a fufpicion that there were very few men in the fort, there was a ferjeant and twelve men that fcaled the fea-line a little to the right of the mine, and found only about nine or ten men alleep in that part of the work; they wakened before our men got to them, and ran off immediately to alarm the reft: the ferjeant and his party then came down; and being ordered up a fecond time, found they had taken the alarm, and a confiderable number affembled, and ready to make an oppofition. Had it been practicable to fuccour them briftly, the fort might have been carried-

at

4.80

at that time; but the attempt was not to be repeated.

22. About four this morning there was a fally made by the enemy from the town, which, by the information of prifoners, amounted to 1500 men, divided into three different parties. One pushed up the bank behind the Shepherd's battery : they were ftopped for near an hour by the guard posted there, confisting only of about thirty men, commanded by Lt-Col. Stuart, of the 90th regiment, until he was joined by about 100 fappers, and the third battalion of Royal Americans; the fire continued hot all that time; the enemy were then driven down the bank with great flaughter; as many as could, got into their boats, and many leaped into the water, where there were 150 drowned. Another party endeavoured to push up by the faliant angle of the Moro to attack our fappers upon the glacis, and their covering party; but they were beat off in a very fhort time. The third party went up the bank of the Spanish redoubt; but finding our people ready to receive them, they returned very peaceably from whence they came. The alarm was entirely over, and our people returned to their work by eight o'clock. The enemy's lofs was faid to be near 400 men, killed, drowned, and taken, befides the wounded that got off. We had about fifty men killed and wounded. The enemy cannonaded us most violently, when their troops were beat down the bank, from the Punta weft baftion, and from the lines and flanks of the entrance, and from their flupping : they even killed fome of their own men, fo eager they were to kill us. At the fame time that their troops were attacking, we faw they had great numbers paraded in the town, and fome of them going into boats to fustain the attack ; but when they perceived the rough treatment their comrades had met with, they prudently dropped the attempt.

3 L'

23. The

23. The former works continue in hand, viz. fapping, mining, and making fafcines. This day a fketch of the batteries against the town, and defences of the harbour, to be erected along the cavannos after the Moro should be taken, were laid before the Earl of Albemarle, and approved of by his Lordship.

24. The former works in hand, and the materials collecting for a four-gun battery, to the left of the Spanish redoubt, to be called

This battery to be opened against La Fuerza, and to enfilade the two next flanks, facing the entrance of the harbour. There was a party of 600 negroes ordered this day for fascine-making, and to be continued upon that fervice; but they feldom amounted to above a half, or even a third of that number, occafioned by fickness, and other pressing duties.

25. The fame work in hand as yesterday. There was a road made from the rear of William's battery up to the Spanish redoubt, covered from the town, to ferve as a communication to the new-defigned batteries upon the cavannos. This afternoon there was a battery for five guns begun to the right of the rear of Dixon's battery, to open against the Punta. This battery is called

26. The former works in hand, and the battery be<sub>7</sub> gun to the left of the Spanish redoubt. This morning a two-decked merchant's frigate, across the entrance before the west bastion, within the boom, and near the funk ships, was funk by a howitzer, near Dixon's battery: this ship had annoyed us very much.

27. The former works in hand, and a mortar-battery begun at the Spanish redoubt: there was likewife a battery begun for three guns, to fire upon boats landing at the Moro; which would have been of considerable use all along, if it could have been ferved without erecting other batteries to check the fire of the Moro itself, upon that fide; but that could not

be

be undertaken, as our troops were already fufficiently employed in the works of the real attack. Brig: Burton arrived with the first of the troops from North America, and was ordered to the west fide.

28. The former works in hand. This afternoon a large merchant-fhip of the enemy's caught fire by lightning within the harbour, and blew up in ten minutes. At night there was a battery for two mortars begun to the right of the Spanish redoubt; and one for five guns against Fort la Punta, upon the left of our fap, near the point of the Moro. 29. The former works in hand. The mines were

29. The former works in hand. The mines were this day preparing for being fprung to-morrow morn-ing:

30. About two this morning the enemy fent two boats and a floating-battery out of the harbour, to fire into the ditch where our miners were at work : they fired grape and fmall arms, but without any other effect than a fhort interruption of the work : the covering party fired fo fmartly upon them, that they were foon obliged to retife. About two o'clock in the afternoon the mines were fprung; that in the counterfcarp had not a very confiderable effect; but that in the baftion having thrown down a part of both faces, made a breach which the general and chief engineer thought practicable; upon which the troops under orders for the affault were ordered to mount; which they did with the greatest resolution; and forming very expeditionly upon the top of the breach, foon drove the enemy from every part of the ramparts. The Spaniards had about 130 men, with feveral officers, killed; about 400 threw down their arms, and were made prifoners; the reft were either killed in boats, or drowned in attempting to escape to the Havannah. Our lofs in this glorious affair amounted to two officers killed, and about thirty men killed and wounded.

31. Quf

31. Our preparations were carried on with all poffible diligence, for erecting the intended batteries upon the cavannos. The enemy's fire continued very hot against the Moro; they pointed chiefly at that part of the work where the ciftern was, in hopes, no doubt, of letting out the water. Lord Albemarle went this evening to the west fide of the town to reconoitre the ground there, and fee in what manner attacks might be carried on with most advantage on that fide, in cafe of occasion.

August 1. The enemy's fire ftill continued against the Moro. This evening Gen. Keppel determined to erect the remainder of the batteries to be erected upon the cavannos; force by the first and third brigades, and fome by the failors, and to begin them to-morrow night.

2. This morning, before day, the enemy fent down a 74 gun fhip into the entrance, and moored her opposite to the Fuerza; she directed her fire likewife against the Moro. There were two howitzers run into the battery to fire at her, which incommoded her a good deal. The batteries mentioned yesterday were begun this night by the two brigades and failors; they confisted of thirty-five pieces of cannon.

3. The former works in hand, and carried on with diligence. This morning the chief engineer was ordered to the weftward of the town, to reconnoitre the ground, for attacking that fide in cafe of occasion. This evening the enemy's ship opposite to the Fuerza, mentioned yesterday, was removed by our howitzers, with a good deal of confusion.

4. The chief engineer reported to Lord Albemarle, that as the Moro was now in our poffeffion, there was to the weftward of the town a very advantageous attack to be formed against the polygons next the Punta, by the cover of a bank running along shore from the Lazaro to Fort la Punta, supposing that fort filenced. That

6 6

That there was a road upon the bank which was, for a confiderable way, covered both from Fort la Punta and every part of the town; that the road was at prefent ftopped up by trees felled on each fide, but might be eafily cleared; but as attacks upon that ground would in fome degree ftand in the line of fire of our batteries upon the opposite fide, it would be most adviseable to delay them until these batteries had in fome measure effected their defign, and efpecially as they might of themselves, perhaps, answer the end without farther trouble.

5. The works and batteries on the Moro fide in hand as before, and fome of the platforms begun to be laid. It was now difficult to get materials for this purpofe, thole from England and Martinico being expended; but by the Admiral's affiftance the materials were got. Lord Albemarle took up his headquarters this evening on the weft fide.

6. The works in hand as yesterday; and being confiderably advanced, and the men much fatigued, there was none allowed for this night.——There were thirty carpenters from the provincial troops, lately arrived, now employed to affift in making platforms. There was a command of engineers, and a proportion of entrenching tools ordered to the west road, the former to go as foon as the batteries and works on the east fide should be ready, and the tools to be shipped immediately. The chief engineer was ordered to repair to that fide, and there remain.

7. The former works upon the east fide were going on, and fascine-parties ordered to work on the west fide.

8. The former works in hand on the eaft fide; but fafcine-making was retarded confiderably on the weft fide for want of tools. This afternoon the fhip arrived on the weft fide with the intrenching tools, but the fhip's crew being very fickly, there were none landed.

## Acdounts of the Siege

486

landed. In the evening Lord Albemarle went hinfelf to reconnoitre the road and ground between the Lazaro and the Punta, and ordered fome posts to be taken up faither a dvanced.

9. The intrenching tools were landed this day, by the affiftance of the men of war, in the afternoon. The enemy having difcovered our reconnoitring towards the Punta for fome days paft, fet fome houses near the road on fire, to prevent their being a schelter for us. In the evening there was a party of 200 men ordered to make a redoubt upon the road to the Punta, with a covering party of the fame number. The place intended for the redoubt, which was partly upon the road, being much incumbered, as mentioned before, all they could do was to clear off the trees, and form an abat is in the front and flanks for prefent defence.

10. At day-brieak this morning the enemy having difcovered the covering party, and fufpecting our having been at work, began to cannonade along the road pretty warmly, but with little execution. About ten in the morning, our batteries being ready to open on the east fide, and we to open ground on the west fide, Lord Albema rle fent a flag of truce by an aid-decamp to acquaint the governor with the ruin that threatened the place, and fummoned him to capitulate. The governor, after keeping the flag from that time till between 1 hree and four in the afternoon, in the open fields, at some hundred yards distance from the works, fent hitn back, and before he had got two thirds of the way, Hegan to fire : we at the fame time faw many people le aving the town with loads; in the evening there was a party fent to carry on the works as before.

11. At day-break this morning all our batteries opened, confilting of forty-three pieces of cannon, and eight mortars. The advantage of polition, as well

as

as fuperior fire, became visible very foon. Fort Punta was filenced between nine and ten. The north baftion almost in about an hour afterwards; but now and then fired a fhot. Between one and two we discovered a great number of the enemy running off from the Punta, as if they had abandoned it. About two o'clock there were flags of truce hung out all round the garrifon, and on board the admiral's fhip : foon after, there arrived a flag of truce at our head quarters by Don Fort Major, his fon, and an interpreter, which proved to be with propofals for a capitulation. Sir George Pocock was then fent for, and the business entered upon, as foon as he came. The works were ftopt for this night, and the flag returned about dusk.

12. The truce continued. This day the flag was fent in, and returned; and fent in again in the evening. The works were ordered to be carried on as before, which gave room to expect that hostilities were to be renewed in the morning; but the capitulation was fettled before that time.

13. This day the capitulation was figned and fealed. The long time it took to be fettled, is faid to be owing to an unreafonable earneftnefs in the enemy to fave their fhipping, which they at length gave up.

14. About ten this morning, Gen. Keppel with

men took poffeffion of Fort La Punta, and, about noon, of the Punta gate and Bastion; at both which places there were British colours holfted, having been evacuated by the enemy. Brig. Howe took possession of the land-gate, with two batzalions of grenadiers, much about the same time.

487

4.8.8

١

Articles of capitulation agreed upon between their Excellencies Sir George Pocock, Knight of the Bath, and the Earl of Albemarle, commanding the fleet and army of his Britannic Majesty, on their parts; and by their Excellencies the Marquis of Real Transporte, commander in chief of the squadron of his Catholic Majesty, and Don Juan de Prado, governor of the Havannah, for the furrender of the city and all its dependencies, with all the Spanish ships in the harbour.

#### Preliminary article.

Port La Punta, and the land-gate shall be delivered to his Britannic Majesty's troops to-morrow morning, the 13th of August, at twelve o'clock; at which time it is expected the following articles of capitulation shall be figned and ratified.

Art. I. The garrifon, confifting of the infantry, artillery-men, and dragoons, the different militia of the towns in this ifland, fhall march out of the landgate the 20th inftant, provided in that time no relief arrives, fo as to raife the fiege, with all the military honours, arms fhouldered, drums beating, colours flying, fix field pieces with twelve rounds each, and as many to each foldier; and likewife the regiments fhall take out with them their military chefts. And the governor fhall have fix covered waggons, which are not be examined upon any pretence whatever.

not be examined upon any pretence whatever. Art. I. The garrifon, confifting of the regular troops, the dragoons difmounted, (leaving their horfes for his Britannic Majefty's fervice), in confideration of their vigorous and gallant defence of the Moro fort, and the Havannah, fhall march out of the Punta gate with two pieces of cannon, and fix rounds for each gun, and the fame number for each foldier, drums beating, colours flying, and all the honours of war. The military cheft refufed. The governor will be allowed as many boats as are neceffary to transport his baggage

## for the Surrender of the Havannah. 489

baggage and effects on board the fhip defined for him. The militia without the town, as well as those within, to deliver up their arms to his Britannic Majefty's commission who shall be appointed to receive them.

Art. II. That the faid garrifon fhall be allowed to take out of this city, all their effects, equipage, and money, and transport themfelves with it to another part of this island; for which purpole shall be allowed and permitted to come freely into the faid city, all the beasts of burden, and carts. And this article is to extend to and include all other officers belonging to his Majesty employed in the administration of juflice, intendant of marines, commissive of war, and treasure-general, who are to have the choice of going out of the city.

Art. II. The officers of the above garrifon will be allowed to carry with them all their private effects and money, on board the fhips which will be provided at the expense of his Britannic Majelty, to transport the garrifon to the nearest port of Old Spain. The intendant of marine, the commission of war, and those employed in the management of his Catholic Majesty's revenues, as soon as they have delivered over their accounts, shall have liberty to leave the island if they defire it.

Art. III. That the marines, and the fhips crews in this harbour, who have ferved on fhore, fhall obtain, on their going out, the fame honour as the garrifon of the city; and fhall proceed with thole honours on board the faid fhips, that they may, together with their commander in chief, Don Guuerres de Hivia, Marquis del Real Transporte, and commander-general of his Catholic Majeity's naval forces in America, fail in their faid fhips, as foon as the port is open, with all their effects and money, in order to proceed to fome other port belonging to the dominion of 3 Q Spain;

## Articles of Capitulation

4.90

Spain; in doing which, they will oblige themfelves, that, during their navigation to their defigned port, they shall not attack any squadron or single ship belonging to his Britannic Majesty or his allies, nor merchant-veffels belonging to his fubjects; and likewife they are not to be attacked by any foundron or fingle ship belonging to his Britannic Majesty, nor any of his allies. Likewife liberty shall be given to go on board the faid fhips the aforementioned troops, and ships crews, with their officers, and others belonging to them, together with the effects and monies that are in the city, belonging to his Catholic Majefty, with the equipages, and effects in fpecie of gold or filver belonging to the faid Marquis, and others employed in the different marine offices; granting them likewife every thing that fhould be necessary to protect them and their fhips, as well as in the fitting them out, from his Catholic Majefty's ftores ; and whatever more should be wanted, at the current prices of the country.

Art. III. The Marquis del Real Transporte, with his officers, failors, and marines, as making part of the garrison, shall be treated in every respect as the governor and regular troops. All ships in the harbour of the Havannah, and all money and effects whatever belonging to his Catholic Majesty, shall be delivered up to such perfons as shall be appointed by Sir George Pocock, and the Earl of Albemarle, to receive them.

Art. IV. That all the artillery, ftores, and ammunition, and provisions, belonging to his Catholic Majefty, (except fuch as are well known to belong to the fquadron), an exact inventory shall be made thereof, by the affistance of four perfons, subjects of the King of Spain, which the governor shall appoint, and by four other subjects to his Britannic Majesty, who are to be elected by his Excellency the Earl of Albemarle,

# for the Surrender of the Havannah. 491.

Albemarle, "who shall keep possession of all till both fovereigns come to another determination.

Art. IV. All the artillery, and all kinds of arms, ammunition, and naval ftores, without referve, shall be delivered up to such perfons as shall be appointed to receive them by Sir George Pocock and the Earl of Albemarle.

Art. V. That as by mere accident were refiding in this city, his Excellency the Count de Superunda, lieutenant-general of his Catholic Majefty's forces, and late viceroy of Peru, and Don Diego Tavares," major-general of his Majefty's forces, and late governor of Carthagena, both here in their return to Spain : these gentlemen and their families shall be comprehended in this capitulation, allowing them to poffefs their equipages, and other effects belonging to them, and to grant them veffels to transport them to Spain. Art. V. The Count Superunda, lieutenant-general of his Catholic Majefty's forces, and late viceroy of the kingdom of Peru, and Don Diego Tavares, knight of the order of St James, major-general, and late governor of Carthagena, shall be conveyed to Old Spain in the most commodious ships that can be provided, fuitable to the rank, dignity, and character of those noble perfons, with all their effects, money, and attendants, at fuch time as may be most convenient for themfelves.

Art. VI. That the Catholic apoftolic Roman religion fhall be maintained and preferved in the fame manner and form as it has hitherto been, in all the dominions belonging to his Catholic Majefty, without putting the leaft reftraint to any of their public worfhips, which actually are the rites of the church, and practifed in and out of their temples, to which, as well as the folemn days celebrated therein, there fhall be the due regard they have hitherto had; and that the ecclefiaftical body, the convents, monafteries, holpitals,  $_{2}Q_{2}$  and

## Articles of Capitulation

and the different orders, univerfities, and colleges, shall remain in the full enjoyment of their rights, together with their effects and rents, moveables, or tenements, in the fame manner as they have hitherto enjoyed. 1.6.8.10

492

Art. VI. Granted. Art. VII. That the bishop of Cuba is to enjoy all the rights, privileges, and prerogatives, that as fuch belong to him, for the direction and fpiritual inftructions to those of the fame Catholic religion, with the nomination of curates, and other ecclefiaftical minifters, with the annexed jurifdiction over them, as he has had hitherto, with the freedom to receive all the rents and revenues within his bifhopric : which privileges shall extend likewife to all other ecclesiaftics in those shares belonging to them.

Art. VII. Granted with a referve, that in the appointment of priefts, and other ecclefiaftical officers, it shall be with the confent and approbation of his Britannic Majesty's governor.

Art. VIII. That within the monasteries of religious men and women, shall be observed and kept the same interior government as hitherto, under fubordination to their real fuperiors, agreeable to the eftablishment of their particular inftitutes, without any novelty or variation.

Art. VIII. Granted.

Art. IX. That in the fame manner as the effects and monies in this city belonging to his Catholic Majefty, is to be shipped on board of the squadron in this harbour to transport the fame to Spain, all the tobacco which likewife belongs to his Catholic Majetty. And alfo fhall be permitted, even in time of war, to his Catholic Majefty, the purchase of tobacco on the faid island, in the district subject to the King of Great Britain, at the established prices, and the free expor-tation of the fame to Spain in Spanish or foreign vef-

fels,

## for the Surrender of the Havannah. 493

fels, and for which purpofe, and receiving, and keeping, and curing the fame, fhall be kept, and poffeffed the warehoufes, with all other buildings which are defined for that purpofe; and likewife fhall be allowed and maintained here, all fuch officers as fhould be neceffary to manage the fame.

Art. IX. Refused.

Art. X. That in confideration that this port is fituated by nature; for the relief of those who navigate in those parts of Spanish and British America, that this port shall be reputed and allowed to be neutral to the fubjects of his Catholic Majefty, who are to be admitted in and out freely, to take in fuch refreshments as they may be in need of, as well as repairing their veffels, paying the current prices for every thing, and that they are not to be infulted or interrupted in their navigation by any veffels belonging to his Britannic Majesty, or his subjects or allies, from the Capes Catoche on the coaft of Campeche ; and that of St Antonio to the weflward of this ifland; nor from the Tortuga bank to this port; and from here till they get into the latitude of 33° north, till both their Majefties agree to the contrary.

Art. X., Refufed.

Art. XI. That all the inhabitants, Europeans and Creols in this city fhall be left in the free poffession and management of all their offices and employments, which they have by purchase, as well as of their eftates, and all other effects, moveables, or tenements of any quality or kind whatever, without being obliged to account on any other terms than those on which they did to his Catholic Majesty.

Art. XI. Granted. And they shall be allowed to continue in their offices of property as long as they conduct themselves properly.

Art. XII. That the faid offices fhall preferve? and keep the rights and privileges which they have hitherto enjoyed, enjoyed, and they shall be governed in his Britannic-Majefty's name, under the fame laws and administration of justice, and under such conditions as they have done hitherto in the dominions of Spain, in every particular, appointing their judges and officers of justice agreeable to their usual custom.

Art. XII. Granted.

Art. XIII. That to any of the aforefaid inhabitants of this city who fhould not chufe to ftay, it shall be permitted them to take out their property and riches in fuch fpecie as should be most convenient to them, and to difpose of their eftates, or to leave them under the administration of others, and to transport themfelves with them, to fuch of his Catholic Majefty's dominions as they fhould chufe, granting them four years to execute the fame, and veffels to transport them, either upon purchase or on freight, with the neceffary paffports, and authority to bear arms against the Moors and Turks, upon this express condition, that they shall not use them against his Britannic Majefty's fubjects, or his allies, who are not to infult them, nor abandon them; and that this and the two foregoing articles, are to comprehend and admit to be included all his Catholic Majefty's minifters and officers, as well civil, marine, and military, who are married and eftablished with families and eftates in this city, in order that they may obtain the fame privileges. as the other inhabitants.

Art. XIII. The inhabitants will be allowed to difpole of, and remove their effects to any part of the King of Spain's dominions in veffels at their own expende, for which they will have proper paliports. It is underftood, that fuch officers as have property in this ifland fhall have the fame indulgence allowed the reft of the inhabitants.

Art. XIV. That to these people no ill consequence shall arise on account of having taken up arms, owing

to

494

## for the Surrender of the Havannah. 495

to their fidelity, and their being inlifted in the militia on account of the neceffity of war; neither fhall the Englifh troops be permitted to plunder; but, on the contrary, they fhall completely enjoy their rights and prerogatives as other fubjects of his Britannic Majefty, allowing them to return, without the leaft hinderance or impediment, from the country into the city, with all their families, equipages, and effects, as they went out of the city on account of this invafion, and who are to be comprehended in the prefent articles; and that neither of them fhall be incommoded with having troops quartered in their houfes, but that they fhall be lodged in particular quarters, as it has been practifed during the Spanifh government.

Art. XIV. Granted. Except that in cafes of neceffity, quartering the troops must be left to the direction of the governor. All the King's flaves are to be delivered up to the perfons who will be appointed to receive them.

Art. XV. That the effects detained in this city belonging to the merchants at Cadiz, which have arrived here in the different register-ships, and in which are interested all the European nations, a sufficient passport shall be granted to the supercargoes thereof, that they may freely remit the same with the registerships, without running the risk of being insulted in their passfage.

Art. XV. Refused.

Art. XVI. That thole civil, or other officers, who have had charge of the management of the adminiftration and diffribution of the royal treafure, or any other affair of a peculiar nature, from his Catholic Majefty, they are to be left with the free use of all those papers which concern the discharge of their duty, with free liberty to remit or to carry them to Spain for that purpose; and the fame shall be underftood ftood with the managers of the royal company eftablifhed in this city.

Art. XVI. All public papers to be delivered to the fecretaries of the Admiral and General for infpection, which will be returned to his Catholic Majefty's officers, if not found neceffary for the government of the ifland.

Art. XVII. That the public records are to remain in cuftody of those officers who posses them, without permitting any of the papers to be taken away, for fear of their being millaid, as it may be productive of great prejudice, not only to the public, but also to many private people.

Art. XVII. Answered in the foregoing article.

Art. XVIII. That the officers and foldiers who are fick in the hofpital, fhall be treated in the fame manner as the garrifon, and after their recovery they fhall be granted horfes or veffels to transport themfelves where the reft of the garrifon goes, with every thing neceffary for their fecurity and fublisftence during their voyage; and before which they fhall be provided with fuch provisions and medicines as shall be demanded by the hospital-keepers, and furgeons thereof; and all others under them, who are included in this capitulation, are to flay or go as they shall prefer.

Art. XVIII. Granted. The Governor leaving proper commiffaries to furnish them with provisions, furgeons, medicines, and neceffaries, at the expense of his Catholic Majesty while they remain in the hospital.

Art. XIX. That all the prifoners made on both fides fince the 6th of June, when the Englifh fquadron appeared before this harbour, thall be returned reciprocally, and without any ranfom, within the term of two months, for those who were fent away from the city to other towns in this island, which was done for want of proper places of fecurity here, or before, if they can arrive.

496

Art. XIX.

for the Surrender of the Havannah. 497

Art. XIX. This article cannot be concluded upon, till the British prisoners are delivered up.

Art. XX. That as foon as the articles of this capitulation are agreed upon, and hoftages given on each fide for the performance thereof, the land-gate fhall be delivered into the possibilition of his Britannic Majefty's troops, that they may poss a guard there; and the garrifon shall have one themselves, until the place is evacuated, when his Excellency the Earl of Albemarle will be pleased to fend fome foldiers as a fafeguard to the churches, convents, and treasuries, and all other places of confequence.

Art. XX. The number of fafeguards required for the fecurity of the churches, convents, and oth r places, fhall be granted. The reft of the article is anfwered in the preliminary article.

Art. XXI. That it fhall be allowed to the governor and commander in chief of this fquadron, to difpatch a packet-boat with advice to his Cathol c Majefty, as well as to other people who have a right to the fame advice, to which veffel there fhall be granted a fafe and fecure pafiport for the voyage.

Art. XXI. As the troops are to be fent to Old Spain, a packet is unneceffary.

Art. XXII. That the troops of the Punta caffle fhall have the fame honours as the garrifon of the town, and that they fhall march out by one of the most practicable breaches.

Art. XXII. Granted.

Art. XXIII. That the capitulation is to be underflood literally, and without any interpretation, on any pretext whatever, of making reprifals, on account of not having complied with the foregoing articles.

Art. XXIII. Granted.

Albemarle. G. Pocock. El Marquis del Real Transporte. Juan de Prado. 3 R Admiralty-

## 498 Letters relating to the Siege

Admiralty-office, Sept. 8. 1762. Copy of a letter from Sir George Pocock to Mr Clevland, fecretary to the admiralty, dated on board the Namure, off Chorera river, the 14th of July 1762.

SIR,

Greeable to my intentions fignified to you by my letter, dated 26th May, by the Barbadoes floop, (a copy of which is inclosed), I bore away with the fleet the next afternoon, having the day before fent the Bonetta floop, Capt. Holmes, with a Providence pilot on board him, to direct the veffels to their proper flations on the Cuba fide, and Bahama banks, that we might be guided by their fignals in our paffage. Luckily the next day the Richmond joined us. She had been down the Old Streights to Cayo Sal; and Capt. Elphinfton had been very diligent and careful in his remarks going through and returning back, having taken sketches of the land and cayos on both fides. He kept ahead of the fléet, and led us through very well. We paffed the narroweft part in the night between Cape Lobos and Cayo Comfito, keeping good fire-lights on each cayo for our directions; and found Lord Anfon's Spanish chart of the Old Streights a very just one. The Providence pilot, who was on board the Bonetta floop, placed the Trent, Capt. Lindlay, at the first station on the Cubi fide, fortyfive leagues to the eaftward of where the ought to have been. This occasioned some of the others never to find the cayos, where they were fent to lie on; but no ill confequence attended it, though we find the pilots in general ignorant of the paffage.

On the 2d in the morning, the Alarm and Echo being ordered ahead to lie on the Cayo Sal bank, the former made the fignal for feeing five fail in the northwest quarter. They both chasfed, with other ships; and, about two in the afternoon, Capt. Alms-in the Alarm came up with and engaged the Thetis, a Spanish fri-

gate

gate of 22 guns and 180 men, and the Phœnix storefhip, armed for war, of 18 guns and 75 men; and in three quarters of an hour both ftruck to her. The Thetis had ten men killed, and fourteen wounded; the Alarm had feven men killed, and ten wounded. A brigantine and two schooners were at first in company with them; one of the latter escaped. They were bound to Sagoa, in the Streights, for timber for the use of the ships at the Havannah, from whence they had failed twelve days before. During all the paffage through the Old Streights of Bahama, we had fine weather, and little current; and, on the 5th in the evening, got clear through, and faw the Metances. On the 6th in the morning brought to, about five leagues to the eastward of the Havannah, to issue out directions to the captains of the fleet and mafters of the transports with regard to landing the army; and having appointed the Hon. Commodore Keppel to conduct that part of the fervice, leaving with him fix fhips of the line and fome frigates, and having manned the flat-bottomed boats from the fleet, I bore away at two o'clock in the afternoon, with thirteen ships of the line, two frigates, the bomb-veffels, and thirty-fix fail of victuallers and ftorefhips, and run down off the harbour, where I faw twelve Spanish ships of the line, and feveral merchant-ships.

Next morning I imbarked the marines in the boats, and made a feint of landing about four miles to the weftward of the Havannah. About the fame time the Earl of Albemarle landed with the whole army without oppolition, between the rivers Boca-Nao and Coxemar, about fix miles to the eaftward of the Moro: but there appearing a body of men near the fhore, Mr Keppel ordered the Mercury and Bonetta floop in fhore, to four the beach and woods; and a more confiderable body of men appearing afterwards, as if they intended to oppole the Earl of Albemarle in paffing 3 R 2 Coxemar

499

## Letters relating to the Siege

500

Coxemar river, the Commodore ordered Capt. Hervey in the Dragon to run in, and batter the caftle; which, in a fhort time, he filenced; and the army paffed over unmolefted.

The 8th, I fent two frigates in fhore, to found from as near the Punta fort as they could down along the weft fhore. They found anchoring-ground for three leagues down the coaft, from twenty to five fathom water, and eafy landing for any number of men. This afternoon the enemy funk one of their large ships of war in the entrance of the harbour, and another early next morning. The Earl of Albemarle having acquainted me, that the cavannos (or hill above the Moro) would be foon attacked; and, to facilitate the measure, defired me to make a diversion on this side. Accordingly, the 10th in the evening, I ordered Capt. Knight in the Belleisle to go and batter the caftle of Chorera, and fent the Cerberus, Mercury, Bonetta, and Lurcher with her, to keep firing in the woods in the night, and imbarked all the marines in the boats. The next forenoon the enemy quitted the fort, and at one o'clock Col. Carleton (quartermafter-general) attacked the cavannos, and foon made the enemy retreat down the hill, with little lofs on our fide. l ordered the three bomb-veffels to anchor this night, to throw shells into the town; which they accordingly performed, under cover of the Edgar, Stirling-caftle, and Echo.

On the 12th a third fhip being funk in the entrance of the harbour's mouth, which entirely blocked it up, I ordered four thips of the line to continue cruifing in the offing, and anchored with the reft off Chorera river, about four miles from the Havannah, which affords us plenty of good water and wood.

Having found it neceffary to order 800 marines to be formed into two battalions, commanded by the Majors Campbell and Collins, Lord Albemarle figni-

fied

fied his request they might be landed, and incamped on this fide: at the fame time his Lordship ordered a detachment of 1200 men over, under the command of Col. Howe. Accordingly they were landed the 15th, and have proved very ferviceable.

Commodore Keppel remains on the east fide, at anchor off Coxemar river, with fuch ships of war and transports as we find neceffary ; where he constantly keeps a number of feamen on fhore, which the Earl of Albemarle thinks it neceffary, to affift the army in landing their cannon and ordnance-ftores of all kinds, or manning batteries, making fascines, and supplying the army with water from this fide, there being no water nor wells on the cavannos, as the weather has been for the greatest part very dry. We have landed cannon that have been defired, of different calibres, from the fhips of war, two mortars from the Thunder-bomb on the eaft fide, and two from the Grenado on this fide, with old cables made up for erecting defences, and old canvas for making fand-bags, with ammunition, and every other affiftance in our power; and the utmost cordiality and harmony fubfifts between the two corps.

On the 20th the bomb-batteries began to play againft the Moro; but the want of earth retarded our batteries of cannon from being ready till the 1ft of this month, when it was thought three large fhips would prove ferviceable to be placed againft the north-eaft part of the Moro. I therefore ordered for that fervice the Dragon, Marlborough, and Cambridge, Capt. Hervey having readily offered to command the attack, and made very judicious difpofitions in placing the three fhips. The Stirling-caftle was ordered to lead until the firft fhip was properly placed, and then to have made fail off: but Capt. Campbell not having performed that fervice agreeable to the orders he received from Capt. Hervey, he has complained

## 502 Letters relating to the Siege

complained of him, and defired his conduct may be inquired into; which shall be done as soon as the prefent affairs will permit.

As the fhips were to move from the eaftward where Mr Keppel is ftationed, (who, in justice to him, I am glad to fay, executes the duty intrusted to him with an activity, judgment, and diligence no one man can furpals), I directed him to fuperintend the attack, and give Capt. Hervey his orders to proceed when he faw it convenient. Accordingly the fhips were ordered to weigh the evening of the 30th of June, and next morning went down, (Capt. Hervey having the fignal out for the line). The Cambridge, Dragon, and Marlborough were placed as well and as near as their ftations would admit of, against a fortrefs fo high as the Moro, with an intention to difmount the guns, as well as beat down the wall. They began to cannonade about eight o'clock; and after keeping a conftant fire until two in the afternoon, the Cambridge was fo much damaged in her hull, mafts, yards, fails, and rigging, with the lofs of many men killed and wounded, that it was thought proper to order her off; and foon after the Dragon, which had likewife fuffered in lofs of men, and damage in her hull; and it being found that the Marlborough, Capt. Burnet, could be of no longer fervice, fhe was ordered off likewife. The number of the killed and wounded is as follows, to wit.

		Killed.	Wounded.	4
	Dragon —		 37	
٢	Cambridge	•	 95	1
	Marlborough -	- 2	 8	

The Dragon, on the water's failing, had touched aground, and was forced to flave her water-cafks to lighten her; but has received no damage as can be perceived from it. The captains behaved becoming gallant

gallant officers, as they expressed great fatisfaction in the behaviour of the officers and men under their command. And we have to regret the loss of Capt. Gooftrey, who, though foon killed after the Cambridge brought up, carried her down with the greateft calmness and spirit. Capt. Lindsay of the Trent fupplied his place during the remainder of the action, and approved himself a brave man. I offered him the command of that ship, or of the Temple, or Devonshire, the former being vacant by the death of Capt. Legge, and the latter by Capt. Marshall's going into the Cambridge.

The Earl of Albemarle fignified to me the fhips had done incomparably well, having drawn much fire from our batteries, by which means they had an opportunity of difmounting fome of the Moro's guns which played againft them.

Admiralty-office, Sept. 8. Since the receipt of the above letter, laft night Capt Urry, of his Majefty's floop Viper, is arrived in town, who left the Havannah the 18th of July, and reports, that the guns of the Moro caftle on the fide towards the land were all filenced, only one being left mounted on that fide, and the fire had ceafed for two days before; and it was intended to florm the place that night, or the night following, for which purpofe all the bags of cotton were taken out of the Jamaica fleet coming home, in order to fill up the ditch.

That he did not hear of the death of any officer of rank in the fea or land fervice, except Captain Gooitrey.

### 504 Letters relating to the Siege

Copy of a letter from the Earl of Albemarle to the Earl of Egremont, dated beadquarters near the Havannah, August 21. 1762.

My Lord,

Have the honour of informing your Lordship, that the town of the Havannah, with all its dependencies, and the men of war in the harbour, surrendered to his Majesty's arms by capitulation on the 13th instant.

Inclofed is a copy of the capitulation, various returns, and the chief engineer's continuation of the journal of the fiege of the Moro fort, which was taken by ftorm the 30th of laft month, fo much to the honour and credit of his Majefty's troops, and to Maj.-Gen. Keppel, who commanded the attack, that I fhould do them injuffice if I did not mention them in a particular manner to your Lordship. Our mines were fprung about one o'clock, and a breach made juft practicable for a file of men in front. The enemy was drawn up on the top of it, in force, with a feening determination to defend it : the attack was fo vigorous and impetuous, that the enemy was inflantaneoufly drove from the breach, and his Majefty's ftandard planted upon the baftion.

I did not fend a particular express with this good news to your Lordship, because I flattered myself that what has happened would foon be the consequence of our fuccess at Fort Moro.

On the 11th in the morning, by a fignal from the fort, we opened our batteries against the town, and Punta fort. The guns and mortars were fo well ferved by the artillery and failors, and their effect fo great, that, in lefs than fix hours, all the guns in the fort and north bastion were filenced. The governor hung out the white flag, and beat a parley; and at the fame time fent out an officer to propose a cefiation

of

of arms for twenty-four hours, in order to prepare the articles of capitulation.

I fent on board the Namur to the admiral, to inform him of the governor's propofals.

Sir George Pocock immediately came to my quarters, and we agreed to a fulpenfion of hostilities to the 13th at twelve o'clock.

I fummoned the governor on the 10th. His answer was very civil and proper; at the same time said he would defend his town to the last extremity.

The difficulties the officers and foldiers have met with, and the fatigues they have fo cheerfully and refolutely gone through, fince the army firft landed on this ifland, are not to be deferibed. They deferve. from me the greateft commendations; and I muft intreat your Lordship to take the firft opportunity of informing his Majefty, how much I think myfelf obliged to Lt-Gen. Elliot, and the reft of the general officers under my command; to every officer and foldier in the army; and to the officers and failors of his Majefty's fleet, for the zealous manner with which they have carried on the fervice, and for the great affiftance I have received from them. Happy we shall all think ourfelves, if our conduct meets with his Majefty's approbation.

Sir George Pocock and Com. Keppel have exerted themfelves in a most particular manner : and 1 may venture to fay that there never was a joint undertaking carried on with more harmony and zcal on both fides, which greatly contributed to the fuccefs of it.

Capt. Nugent, one of my aid-de-camps, who has the honour of delivering you my difpatches, can inform your Lordship of any particulars you are pleafed to learn from him. He has been very active, and prefent at every material affair that has happened lince the landing of the troops. I must beg through your Lordship to recommend him to his Majesty as a

3 S

very

## 506 Letters relating to the Siege

very deferving young man. He carries with him the Spanish ensign taken at the Moro.

Col. Carleton, who has acted as brigadier fince Lord Rollo left the army, had the misfortune of being wounded on the 22d of July when the enemy made a fortie : he is at prefent in a fair way of doing well.

I think it but justice to Major Fuller who is my eldeft aid-de-camp, to fay, that I should have fent him to England, if I had not thought it would be more agreeable to his Majesty to receive the news by one of his own fervants.

I am, &c.

ALBEMARLE.

Copy of a letter from Sir George Pocock to Mr Clevland, dated off Chorera river, near the Havannah, the 19th of August 1762.

SIR,

Defire you will acquaint their Lordships, that it is with the greatest pleasure I now congratulate them on the great success of his Majesty's arms, in the reduction of the Havannah with all its dependencies.

The Moro fort was taken by ftorm the 30th of laft month, after a fiege of twenty-nine days; during which time the enemy loft above 1000 men, and a brave officer in Don Lewis de Velasco, captain of one of their men of war, and governor in the Moro, mortally wounded in defending the colours fword-in-hand in the ftorm : and on the 11th inftant, the governor of the Havannah defired to capitulate for the town, . which was granted, the articles agreed to, and figned, (a copy of which I inclose), and we were put in poffeffion of the Punta and land-gate the 14th. With this great and important acquisition to his Majesty, have also fallen twelve large men of war of the line, as per lift, three of which were funk, with a company's thip,

thip, in the entrance of the harbour; nine are fit for fea, and two upon the ftocks; a blow that I hope will prove the more capital to the enemy, as they receive it fo early in the war; and, I may venture to fay, will leave all their settlements, in this part of the world, exposed to any attempts that may be thought proper to be made on them. But however trivial, with the poffeffion of the Havannah, it may appear, yet I cannot help mentioning the difcovery and poffelling the harbour of Mariel, about feven leagues to the leeward of this, and which we had made ourfelves mafters of, though the enemy had endeavoured to ruin it, by finking fhips in the entrance; and we had lately fent near 100 transports with fome men of war there, for fecurity against the feason, in which we are already advanced.

It will be as needlefs, as almost impossible, for me to express or describe that perfect harmony that has uninterruptedly fublifted between the fleet and army, from our first setting out. Indeed it is doing injustice to both, to mention them as two corps, fince each has endeavoured, with the most constant and cheerful emulation, to render it but one; uniting in the fame principles of honour and glory for their king and country's fervice. I am glad, on this occasion, to do justice to the distinguished merit of Com. Keppel, who executed the fervice, under his direction, on the Coxemar fide, with the greatest spirit, activity, and diligence; and I must repeat, that the zeal of his Majefty's fea officers and feamen exerted, in carrying on the fervices allotted to them, is highly to be commended.

I shall now beg leave to refer their Lordships to Capt. Hervey for all further particulars, whom I fend with this letter, and who has approved himfelf a brave and deferving officer in this expedition; therefore 3 S 2 think

## 512 Accounts of the Siege, &c.

#### Extrast of a letter from Sir George Pocock to Mr Clevland, dated off Chorera river, the 16th of August 1762.

ON the 28th of July the Intrepide arrived, with eleven fail of transports, with troops from New York. They failed from thence the 11th of June. The Chefterfield and four transports run on Cayo Comfite, the entrance of the Bahama ftreights on the Cuba fide, the 24th of July, an hour before day-light, and were firanded, but loft no feamen or foldiers. The Intrepide met the Richmond the day after, who was looking out for the convoy. Capt. Elphinften returned with three transports which were cleared, in order to bring away the feamen and troops who were on fhore; and, to make all pofible difpatch, I fent away the Echo, Cygnet, and Thunder-bomb, to meet the Richmond, and take the men out of her; and ordered Capt. Elphinfton to take the Cygnet with him, and proceed up the Streights to meet the fecond division of transports.

The 2d inftant, the Echo and bomb returned with the fecond division, confitting of eleven fail of transports, which failed from New York the 30th of June. The Richmond, Lizard, Enterprife, Cygnet, and Porcupine floop, arrived the 8th, bringing with them all the feamen and foldiers from the fhips that were wrecked. Capt. Banks informed me, that, on the 21fl of July, at three o'clock in the afternoon, being near the paffage between Maya Guanna and the North Caicos, he difcovered two French fhips of the line, three frigates, and fix fail of brigantines and floops; that the men of war and frigates gave chace to the convoy; and that five of the transports were taken, with 350 regulars of Anfurther's regiment, and 150 provincial troops on board of them. All the reft of the troops arrived and landed in perfect health.

I have thought it necefiary to order the Sutherland and Dover to be fitted as flags of truce, taking out their lower tier of guns in order to accommodate the late Spanish commodore, the governor of the Havannah, the viceroy of Peru, and the governor of Carthagena, to Old Spain, and then return to England. Transports are getting ready for the Spanish foldiers and failors, agreeable to the terms of capitulation, which, I hope, we fhall be able to dispatch in a few days.

'I have not been able to collect an account of the killed and wounded feamen belonging to the different fhips fince the beginning of the fiege, who were employed at the batteries on fhore, but it fhall go by the first opportunity.
