BIBLIOGRAPHY OF
MILITARY PSYCHIATRY
1947-1952

Literature relating to U. S. Armed Forces with
Selected References relating to British Forces

Compiled by
Charles Roos
Head, Document Section

Washington, D. C.
February 1953

Preface

This bibliography was prepared at the request of Brig. Gen. Rawley E. Chambers, MC, Chief, Psychiatry and Neurology Consultants Division, Office of the Surgeon General, U. S. Army. It is in continuation of *Neuropsychiatric Bibliography for World War II** [Section I, 1946, Section II, March 1, 1947], issued from the Psychiatry and Neurology Consultants Division.

The following sources were searched for entries: 1. The *Current List of Medical Literature*; 2. The *Quarterly Cumulative Index Medicus*; 3. *Psychological Abstracts*; 4. *Excerpta Medica*; 5. The Subject Catalogue of the Armed Forces Medical Library; 6. Special indexes and files in the Document Section, Reference Division, Armed Forces Medical Library; 7. The literature. The subject cards which will form the MI-MZ volume of the *Index Catalogue*, now in press, were not examined, nor have textbooks containing a brief section on military psychiatry been listed. Occasional annotations have been added, but no attempt has been made to provide abstracts of the articles cited.

Major Marvin Perkins of the Psychiatry and Neurology Consultants Division was consultant to this project. Dr. Harvey J. Tompkins, Chief, Psychiatry and Neurology Division, Veterans Administration submitted references for inclusion as did the Neuropsychiatry Section, Professional Division, Bureau of Medicine and Surgery, U. S. Navy. Mr. George Slovensky typed the manuscript and provided editorial assistance.

Introduction

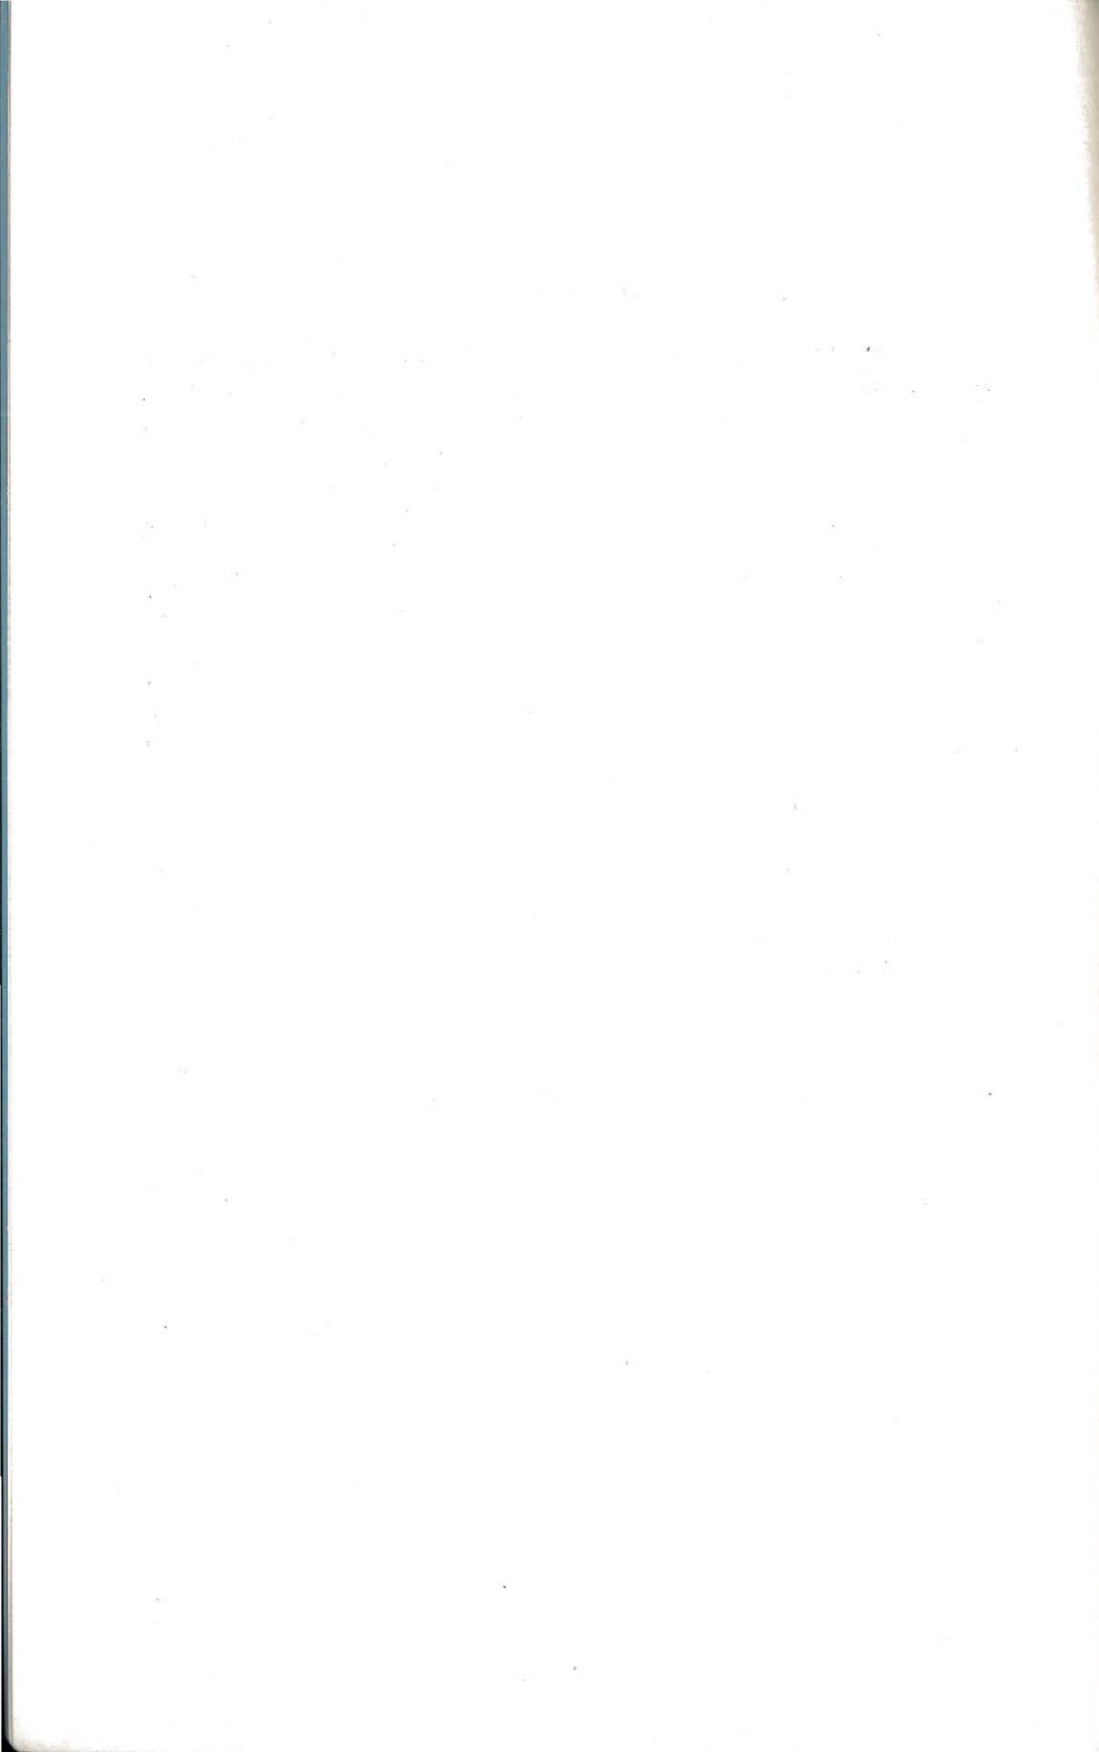

Since World War II interest in the problems of military psychiatry and in the experiences of psychiatrists in military service has been persistent. This continuing interest during the post-war period is in part a manifestation of the reaction to the continuing stress of our times. It is also the result of a kind of professional introspection among psychiatrists who recognize that many challenging questions which were asked during the war remain to be better answered.

The problems which need further clarification in military psychiatry are numerous. They include a variety of specific matters related to diagnostic formulation, treatment methods, prognostic standards, the effective utilization of ancillary services and the further development of programs in preventive psychiatry and rehabilitative psychiatry.

In all of these areas of interest, the worker has been handicapped by the lack of a systematic bibliographic reference work to the literature of military psychiatry since World War II. Much of the literature is scattered and is not easily located. With the completion of this bibliography, a distinct need has been met. Although the literature of the war years is not included herein, many of the references cited will include bibliographies which lead to the earlier literature published during the war years.
