Step 1: Download a two-factor authentication program
Download a program for two-factor authentication. That can be a mobile application (such as Google Authenticator) or a desktop application.

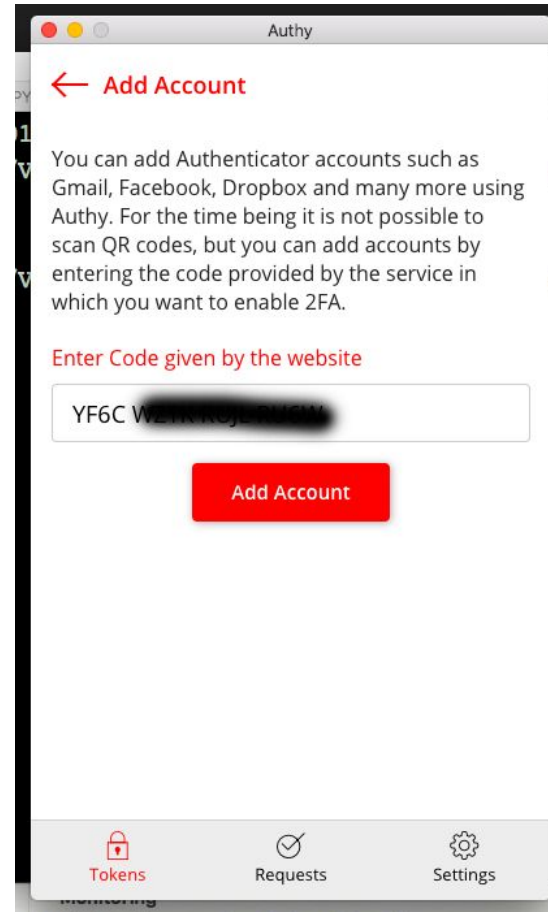

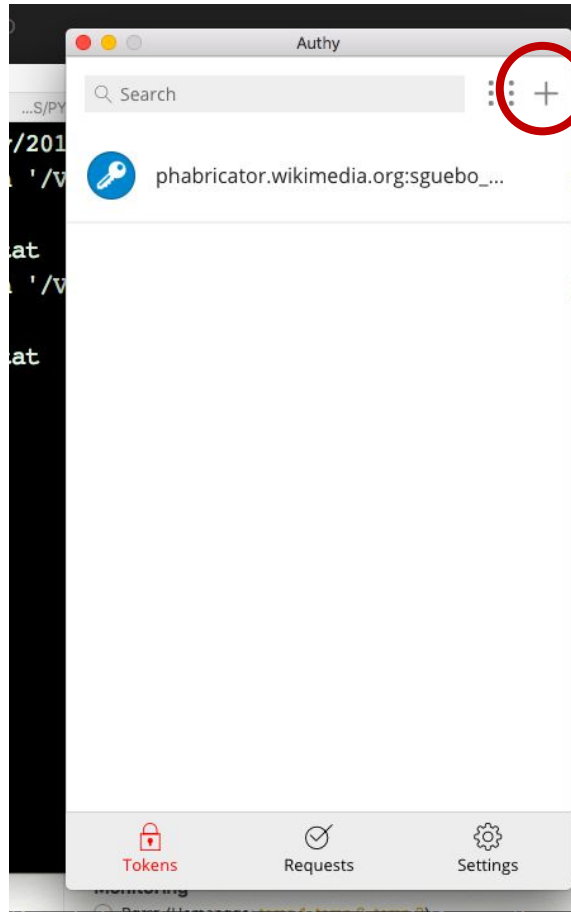

Step 2: Scan the QR code

Or enter the secret manually:
Account name:
Samuel (WMF)
Two-factor authentication secret key:
YF6C WZT...

Step 3: Write down the scratch codes
The following list is a list of one-time use scratch tokens. These tokens can only be used once, and are for emergency use. Please write them down.
These tokens will never be shown again.

- G...EIK...H
- U2HO P...CLAB
- WDGG...
- ...DO HG7L
- ...WIWE

5. Open Authy app and add a new 2FA profile as in the screenshots

6. When completing the previous steps, a token will be generated by Authy. Use this token and go back to the Wikimedia Platform

7. Paste the token, previously obtained from Authy and click Submit.

Step 4: Verification

Enter a code from your authentication device to verify:

33

Submit

8. Done! You should get a message telling you that 2FA was successfully activated for your account.

The screenshot shows the Wikipedia interface for enabling two-factor authentication. On the left is a navigation sidebar with the Wikipedia logo and various utility links. The main content area features a 'Special page' header, a title 'Enable two-factor authentication', a confirmation message, and a 'Return to Main Page' link. At the bottom, there is a footer with various policy and utility links.
