Aircraft Action Reports
2-d (60) USS Saratoga

2908 0505

VF-53/A2-11/A12 Serial 6

CONFIDENTIAL

17 February 1945

From:

Commanding Officer.

To:

Commander in Chief, PACIFIC FLEET

Subject:

Aircraft Action Report - Forwarding of Advance Copy Direct.

Reference:

(a) CinCPac Conf. Ltr. 1CL-45, date 1 January 1945.

Enclosure:

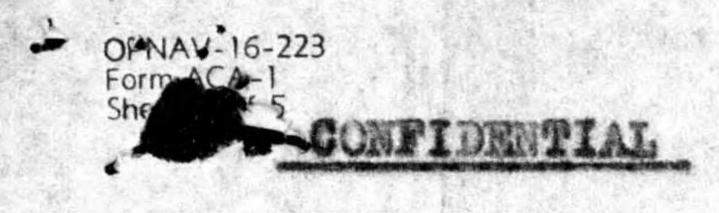

(A) Aircraft Action Report #1 for VF-53, three (3) copies of.

1. In accordance with reference (a), enclosure (A) is forwarded direct herewith.

ROBERT W. CONRAD.

Lieut.Comdr., USN

X. COMPARATIVE PERFORMANCE, OWN AND ENEMY AIRCRAFT (use check list at left).

SPEED, CLIMB, at various altitudes TURNS DIVES CEILINGS

CEILINGS RANGE PROTECTION ARMAMENT Since clapsed time between tally-be and splank was only 3 simutes little opportunity was given to compare performances of enery and own sireraft. However, the ability of the energy simpless to turn inside the pursuing aircraft was particularly noted. Also, both 968-5 a much water lajection for exproximately 45 seconds in level flight and closed with the energy very rapidly - so much so, that throttling down was noteenary. In regard to protection of energy plane, none was noteenary, in that it absorbed a seemingly unusual amount of hits before beginning to born at port wing stub.

Division 45 of Fighting Squadron FIFTY_THREE, composed of Lisutenant E.D. Roma, USNR (Division leader), Ensign V.R. Williams, USNR, Ensign R.L. Currier, USHR (Section leader), and Ensign M.B. Murphy, USHR, took off on Task Group combat air patrol from the USS SARATOGA at 1200 K. 16 February, 1945, After one unsuccessful search, the division was vectored out by the SARATOGA FDO to intercept a "bogey" at 1411 K. At 1415, the second section "talley-hoed" at 3 o'clock, 1,000 ft. above an enemy fighter which was skimming through the base of the overcast at an altitude of 2800 ft. on a bearing of 035° 32 miles from the parent carrier. This enemy airplane, portrayed in photographs taken from gun camera film of Ensign Murphy, show it to be a single radial-engine plane. From its one man cockpit (attested emphatically by both pilots), and its maneeverability, the pilots concur that it was definitely a fighter. The speed of the enemy and the interceptors was about the same - 220 knots indicated.

The F6F-5's immediately used water injection (for approximately 45 seconds duration) to close the distance to the enemy fighter. Because of slightly diverging courses and altitudes, the friendly fighters had to manoever for firing position, thereby permitting the enemy to get as far as 5,000 ft, ahead before they began to close. However. by using water injection, the F6F-5's closed to 1,800 ft. in one minute, indicating 260 knots, with the enemy pilot apparently unaware of the section's presence.

Currier commenced firing with 6 .50's with no hits being scored. The enemy, now alerted, immediately pulled up into a low cloud and emerged on top still pursued by Currier, Murphy having remained below the cloud because gyro-horizon was mon-functioning. The Jap fighter winged over and dove back down through the same cloud, trying to elude Currier, only to be met by Hurphy who was circling and waiting below. Currier, on the Jap's tail, made a slight starboard jag to avoid Murphy, and opened fire again observing his bullets hit about the cockpit section with a level no-deflection shot. At the same time. Murphy with a 40° - deflection shot commenced firing long bursts with 6 .50's, bullets hitting the port wing stub with telling effect. In a few seconds there appeared a red glow which then developed into a sizeable puff which began to emit streamers of flame. The enemy disappeared momentarily into the clouds while doing a 270-degrae climbing turn, still followed by Currier, and was met by Roma and

m) who had reversed course to join the attack ad when the "tally-ho" was made. Roma and 100 yards, and were on the verge of opening ne, now out of control, did a split-s and can. The crash was witnessed by the entire

I the enemy concurred on the strange manner live tactics, insofar as the enemy remained ce of superior forces, while at the same time r aggressiveness. In the words of Murchy, ave man, afraid to fly in clouds, or a darn apparent difficulty or weakness was failure a difficult situation - a thing he might man as remained in cloud cover.

Communications were excellent, as was coordination with the TDC. Motes Enemy fighter refferred to in this action report can't be recorr at this source, will may possibly be a new type.

Division \$5 of Fighting Squadron FIFTY_THREE, composed of Lientenant E.D. Roma, USNR (Division leader), Ensign V.R. Williams, USNR, Ensign R.L. Gurrier, USNR (Section leader), and Ensign M.B. Murphy, USNR, took off on Task Group combat air patrol from the USS SARATOGA at 1200 K, 16 February, 1945. After one unsuccessful search, the division was vectored out by the SARATOGA FDO to intercept a "bogey" at 1411 K. At 1415, the second section "talley-hoed" at 3 e'clock, 1,000 ft. above an enemy fighter which was skimming through the base of the overcast at an altitude of 2500 ft. on a bearing of 035 32 miles from the parent carrier. This enemy airplane, portrayed in photographs taken from gun camers film of Ensign Murphy, show it to be a single radial-engine plane. From its one man cockpit (attested emphatically by both pilots), and its maneeverability, the pilots soneur that it was definitely a fighter. The speed of the enemy and the interceptors was about the same - 220 knots indicated.

The F6F-5's immediately used water injection (for approximately 45 seconds duration) to close the distance to the enemy fighter. Because of slightly diverging courses and altitudes, the friendly fighters had to manoever for firing position, thereby permitting the enemy to get as far as 5,000 ft. ahead before they began to close. Movever, by using water injection, the F6F-5's closed to 1,800 ft. in one minute, indicating 260 knots, with the enemy pilot apparently unaware

of the section's presence. Currier commenced firing with 6 .50's with no hits being scored. The enemy, now alerted, immediately pulled up into a low cloud and emerged on top still pursued by Surrier, Murphy having remained below the cloud because gyro-horizon was mon-functioning. The Jap fighter winged over and down back down through the same cloud, trying to elude Currier, only to be met by Murphy who was circling and waiting below. Currier, on the Jap's tail, made a slight starboard jag to avoid Murphy, and opened fire again observing his bullets hit about the cockpit section with a level no-deflection shot. At the same time. Murphy with a 40° - deflection shot commenced firing long bursts with 6 .50's, bullets hitting the port wing stub with telling effect. In a few seconds there appeared a red glow which then developed into a sizeable puff which began to emit streamers of flame. The enemy disappeared momentarily into the clouds while doing a 270-dagrae climbing turn, still followed by Currier, and was met by Roma and Williams (the 1st section) who had reversed course to join the attack after having been up ahead when the "tally-he" was made. Rome and Williams closed to within 100 yards, and were on the verge of opening fire, when the enemy plane, now out of control, did a split and dove flaming into the ocean. The crash was witnessed by the entire division.

Both pilots who engaged the enemy concurred on the strange manner of the Jap pilot's defensive tactics, insofar as the enemy remained in the vicinity in the face of superior forces, while at the same time not showing any particular aggressiveness. In the words of Murphy, "that Jap was either a brave man, afraid to fly in clouds, or a darn fool." Thus, the enemy's apparent difficulty or weakness was failure to extricate himself from a difficult situation - a thing he might easily have done, had he remained in cloud cover.

Communications were excellent, as was coordination with the TDC.

Matel Enemy fighter refferred to in this action report can't be recogn
at this course, at this course, at this course, and the may possibly be a new type.
