Stevens Shot-guns are Natural Pointers.

They can't be balked or clogged.

Every Stevens Firearm is guaranteed as to workmanship.

Very best and finest materials are used, making Stevens Guns.

Every Stevens will last a Life time with proper care.

No hand is fast enough to balk the Stevens Repeating Shot-gun.

Standard Guns are what you get when buying Stevens.

CLUB COCKTAILS

A Bottled Delight

The aging of a cocktail is as necessary to perfect flavor as the aging of wine or whisky.

The delicious flavor and aroma of **Club Cocktails** is due not alone to the precise blending of the choicest liquors obtainable, but to the fact that they are softened to mellowness by aging before bottling.

*Manhattan, Martini and other standard blends,
bottled, ready to serve through cracked ice.*

AUTOLOADING SHOTGUN

“It Loads Itself”

Five Shots—Three To Get The Cripples. Each separate shot under absolute control of the trigger finger. The action is simple, powerful and sure. Part of the recoil, ordinarily absorbed by the shooter's shoulder, is used to operate the mechanism. Not one single ounce of muzzle energy is lost. Handles the heaviest loads with least punishment. Handles all loads with equal ease and safety, and—a solid wall of steel stands between the shooter's face and the firing chamber always. As a repeater it is better balanced—quicker pointing—faster. As a single-loader it is simpler to operate. The simple completeness of the take-down permits ready cleaning of the barrel from the breech. The take-down screw is large and easily handled. Taken down the *Remington-UMC* Autoloading Shotgun measures 32 inches over all.

Costs a little more because it is worth a little more

BASS FISHING IN MAYNARD BAYOU.

Oklahoma Bass Pioneering

By PAUL H. BYRD

THE joys of pioneering are mostly retrospect. The performance shows mostly the shadows, while the high lights are developed afterward in the telling. If mental pictures failed in the soft tones, Boone and Crocket could not have injected that large element of humor in the recital of their wonderful adventures. A modern pioeer, a fish pioneer, I might say, may get an impression of this truth by assiduously devoting himself to seeking waters where fish are rumored to be. Fish means bass and black perch, but mostly bass. I say "rumored" advisedly, which

reminds me, why is the word rumor of the feminine gender, it or "she" being referred to as a dame? Do not answer me; I know the facts in the case. With me it is axiomatic, and I do not want an argument. Besides, as regards the gender, readers of FOREST AND STREAM are not discriminated against. Also besides, this copy will receive an unofficial, pre-editorial perusal, and let us avoid these short-range arguments.

But let me cite a relevant case wherein this unreliable dame brought to me a report concerning a Cloud Creek, which is near Boynton,

Okla. A sense of the appropriate dictated the name Cloud, I found later. I repeated the rumor to my friend Adams: Clear running stream; six-pound bass caught two weeks previous y. Arrived on the scene I realized that even Davy could not have found humor in the situation. True, there was a likely looking place for a creek, but the farmers, mostly Creek Indians and Creek negro freedmen, had displayed their confidence in the indefinite continuance of the then protracted drouth by grading in places the dry bed, thereby converting it into an excellent

wagon road. Thinking at the time that wagon of the individual was not noted, and he was of traffic might interfere with navigation further a dark, somber hue somewhat resembling char-down near the mouth, we proceeded toward the coal on a dark night, in which case the edible Arkansas River, at which point we were more string was acquired through those mysterious than glad that we had not brought the canvastactics involving cabalistically treated grub worms folding boat. And this omission was the only and rabbit liver, or powerful incantations said

A GROUP OF BLUE RIDGE BEAR HUNTERS.

Photograph by Frank H. Bicknell.

consolation we had, as we bucked a thirty-five-mile wind across six miles of open prairie back to Boynton. A story of the six-round go I had with Dame Rumor will not be told here. It belongs on the sporting page.

Another element which renders this sort of pioneering more or less precarious is the very broad definition of the word fish. In Colorado it is localized to mean trout; in Wisconsin, bass, pike, pickerel and others of a like murderous tribe; in Florida, bass, perch, pike, etc.; in the East—I have never fished there. But in Oklahoma it may mean yellow-bellied catfish, pretty but mushy hickory shad, the Kaiser's favorite, carp, or half brothers to the royal delicacy, drum and buffa'o. Through some universally recognized telepathic sense of fact of animate life the disgusting gar, he with the rhombic coat-of-mail, is never included. I have found on rare occasions that it also means bass. Now, this is annoying but logical, because the country is a new one. Many streams have never been fished with artificial bait, and others but rarely and incidentally by infrequent hunting parties. Excursions into the isolated parts are never made for fishing exclusively, and information concerning those streams is to be had only after tedious inquiry, and positive knowledge only after going there and pioneering with modern tackle.

"I seen a feller comin' from there with a string o' fish" may mean that the "feller" was an Indian, in which case he gum-shoed on overhanging logs, and with a dexterousness born of generations of practice threw a fourteen-foot spear into the backs of unsuspecting catfish hog-suckers and occasionally a bass. And it may mean that in the hasty glance bestowed the color

over the cooking of doughballs with cotton, or which is more easily understood, and yet equally shrouded in occultism, expectation placed on writhing, white-ringed earthworms.

An entire Sunday is devoted to the investigation of one of these rumors. The "clear running stream" proves to be a succession of mud-holes in which a few sluggish catfish are almost domesticated through long fraternizing with the hogs. This is discouraging, albeit one recovers during the following week and is ready to pioneer some more; that is, some of us are ready. Roy Nabers, of Pryor, and A. B. Randle, of Oklahoma City, are immune from discouragement. Roy and I broke the spell when we tried Choteau Creek a year ago. It was one of the exceptions and produced large numbers of fine bass until the refuse from recently drilled oil wells near it killed or drove away the fish. We also tried Big Cabin Creek and found it unfit for bait-casting, although other than game fish were caught in it by still-fishermen.

Pryor Creek is still another that was tested by Roy and myself. A pretty stream, long, deep holes that look like ideal water for bass, and probably are, but the bass evidently do not appreciate them. Bass are not a noted salt water fish and there flows into Pryor a number of salt water wells. The day on Pryor Creek was saved from utter failure by discovering a very small tributary named Sulphur Creek, scarcely a damp spot where it empties into Pryor, and the uninitiated would not suspect a sizeable stream further up. As I have said before, it is characteristic of the streams in Oklahoma to be larger a distance from their mouths. It seems that this fact is caused by the heavy rains

bringing down soil and depositing it in the creek bed at and near the mouth through which the water seeps. Sulphur is one of them and a typical prairie creek. For miles not a tree nor a bush. Naturally following the draws of the rolling prairie, it is free from any ornamentation except the original grass which grows to its brink. Here was fine casting, and we brought away as many bass and black perch as we wanted. Nabers has gone there since and taken out bass weighing three and four pounds.

Of course we know the streams in which it is a certainty that bass will be caught provided the angler has a certain degree of proficiency. There is Barren Fork and the Illinois River, on which are located fishing clubs, but who wants a certainty? Who shall you blame if unsuccessful on a stream of established reputation? Think of the excuse, the most satisfactory and satisfying excuse, if failure is the result on one unknown. Well, it is nearly always so, but in the case of Brushy Creek my reputation received a jolt. I located Brushy about twenty-five miles north of Muskogee and selected Bob Jones as a victim. In July, I think it was, and we both want to forget the terrific heat of that day. We covered the entire length of the creek, walking a total distance of about eighteen miles, carrying packs, and were deprived of drinking water from 4:30 A. M. until 7 P. M. The creek water was covered with a green scum, and any fish in it must have taken its liquid refreshment through a filter. However, one or two bass made a feeble roll toward Bob's minnow, which was a good enough basis for telling it more interestingly. Among those who heard and remembered was Felix Gast, and Felix is slightly imbued with the pioneer spirit, too. After the late fall rains Felix went to Brushy alone, found the creek flushed cleanly, and took out a four-pounder and two three-pounders. Then of course I had to explain in detail the condition of the water when Bob and I were there.

Nabers and I could not get accurate information concerning Spavinaw Creek, yet we took our chances and went there for a week. I wrote the story for FOREST AND STREAM about the wonderful fishing we had, and received many inquiries about it. Since then numerous parties have gone there and all have had great success. That is one of the high lights of pioneering.

More recently the disappointments were offset again. Randle shared with me in this triumph. I discovered it on the map and traced it for fifteen miles from where it flows into the Arkansas at a point four miles below the historic town of Fort Gibson, to the Cherokee Insane Asylum, several miles from a railroad. I shall tell you the name because I always do that, and anyway you can easily locate it on a map of the commission to the Five Civilized Tribes, Maynard Bayou, though why it is called a bayou I cannot say. It is very much a creek, and a pretty one. In places its earth and slate banks are a hundred feet high; at another point on one side is a rock cliff 150 feet high, and it was there that Randle saw a wolf. There are pretty falls about one hundred feet long with a total drop of twenty-five feet. Above these falls the best fishing is to be had.

The interurban placed us in Fort Gibson before the ghosts of Jefferson Davis and other celebrities, who made the place their stamping ground in the early days, had retired from re-

viewing the ruins. A three-mile walk brought us to the bayou, and we found it covered with half an inch of ice. Only at the riffles could we cast until nearly noon when the sun had thawed the western half. From then on we had some unique bait-casting. Standing on the west bank we cast toward the edge of the ice, and Randle was the first to yell. You know the kind of a yell I mean; it sounds like nothing else and is never employed for any other purpose. Although a quarter of a mile away one may hear it and know the other fellow has caught one. I am not selfish, and my heart beats faster when I hear that yell. I know then that I have a chance. My turn came next; a small-mouth ten and a half inches long. We alternated until I had five and Randle four, the largest fifteen inches long. That was enough, but we would have caught more had the ice not prevented casting during the forenoon. I used a home-made wooden minnow painted a bright yellow with a single hook on each side and one tail hook, fastened with a device all my own, which is not patented. The water was very clear, and when we stood on the bank every movement of the fish could be seen from the time it appeared out of the deep blue until it made the fatal error of trying to kill a piece of painted cedar. All the bass we caught were extremely undershot, and as they lay on the dead sycamore leaves with dorsal fin belligerently erect, a moment before receiving the death blow, I was forcibly reminded of my bull terrier, Rowdy, when his ire was roused.

I think you will be interested in the wooden minnow mentioned. I find it far superior to the manufactured article, especially in regard to the hooks. Three treble hooks are barbarous and admittedly unsportsmanlike, which feature, as a concession to those who disagree or do not care, we will term the least. Everyone that uses them knows they exercise a magnetic influence over old logs, limbs and even rocks. Cast one within two feet of a sunken log and the latter will roll from its muddy bed toward the hooks. Reduce the hooks to three in all and many times one may feel the minnow sliding over obstructions instead of remaining fast. I have not found that the chances for landing the fish are reduced. I have found, however, that because but one hook is struck, the fish has greater freedom of natural movement, and more action is had during the fight. A manufactured minnow may be converted into a three-in-all. Break off two hooks from the treble, leaving the one which is soldered, or the one the point of which curves directly toward the open eye. Remove the screw hook from its metal well and use instead a round or flat head brass screw, putting it through the eye of the now single hook and screwing it down tight. The screw head will force the eye into the well in such manner that the shank of the hook will form an acute angle with the body of the minnow, presenting itself obtrusively to the fish. To reduce to a minimum snagging on obstacles under the minnow, rake the side hooks slightly upward. Put on the tail hook, barb pointing upward, and its shank will then glide smoothly over rock or log. I have a scheme better than this for the minnows I make myself, and if some manufacturer does not provide the article by the time your present supply of reconstructed ones are exhausted, I shall tell it to you.

Edgar's Bears

By FRANK W. BICKNELL

THE hardiness and self-reliance of the Blue Ridge Mountain boy were never better tried or proved than in the case of Edgar Burleson in his first bear fight. Edgar was thirteen years old then, son of the most famous bear hunter of this region, Mitchell Burleson. Everyone for many miles around knows "Mitch," and so do the visitors who have followed him and his older son, Commodore, as guides on successful bear hunts. These Burlesons are spare of flesh, built like a race horse, for speed and endurance, especially endurance. They succeed where others fail, because they are able to follow the hounds on their wild chase after bear, up and down mountains, over cliffs and ridges, across tangled hollows, through brush, briers and down timber at a pace that soon puts all but the very hardest-muscled and most determined hunters out of the game. On such hunts the visitor, who can no more keep up with these men than he could fly with his arms, is stationed

on some likely runway where the bear is expected to pass. They tell a story here about an Ohio man who was given a good stand and told to stay there till someone came after him, so he would not get lost. He was on a rock in the sunshine, and after waiting some time, fell asleep. Some sound awoke him, and looking about he saw five bears across the hollow, not 150 yards away. Seizing his rifle, he began to pump its contents in the direction of the bears, and while he hit one of them, as blood on the trail showed, the bullet did not land in the right place. "What wouldn't I give for such a chance as that!" is the exclamation of every man who hears the story.

These races sometimes last two or three days, but here again the Burleson hunt is usually ahead of others because they maintain a pack of hounds that soon brings Brother Ephraim to close quarters and holds him till the hunters catch up and put an end to the fight. Indifferent bear hounds

EDGAR, UNCLE ADEE, AND THE CUBS.

make a long, hard race and are usually badly punished, while the hounds that know their business tree the bear quickly, and while worrying him constantly manage to get in and out without being badly hurt. It is usually when the bear is shot that harm comes to the pack. If the quarry falls out of a tree, it takes several stout men with clubs or ropes to keep the dogs off him, and as the bear is rarely shot dead, he generally injures a dog or two unless there are men enough to keep the fighting brutes away from him.

"Mitch" and his boys—for he likes best to hunt with his three boys and his son-in-law—had started out Linville Mountain early one April morning, thinking it was time for the hungry black bears to be coming out of their dens in the gorge of Linville River, and that they might start one.

"Edgar, you go down the grub trail with old Bill and the pups," commanded his father, "and drive down the gorge to the Babel Tower ridge, and Commodore and I'll meet you there."

"All right, daddy, I'll be there and maybe I'll start one up past you." And off he went, fearlessly and alone into that wild and almost impenetrable cañon that has been the despair of so many ambitious hunters and fishermen. But he was older than his years, and trained as all these mountain boys are to take care of himself under all circumstances. He faced an undertaking that would have disheartened any boy but one brought up among rocks and hills, and who knew work as a daily companion. The cañon of the Linville River, usually called the gorge, is fifteen miles long from the main Linville Falls to the foot of the mountains, where the river emerges between Linville and Shortoff Mountains, to the comparatively level country below. With many winds and loops, frequently interspersed with beautiful cascades and narrow, impassable chasms, it falls more than 2000 feet in these fifteen miles, and for six miles at the rate of 200 feet to the mile. On neither side is there a human habitation, nor is there any outlet the smallest pony could travel. It is one of the wildest places in eastern America, and one of the least known. Edgar was one of the few boys in the neighborhood who had learned to know the gorge so well that it had no longer any terrors for him. He had inherited his father's love for the chase, and they knew this would be the last chance, for they are farmers before they are hunters, and the warm days that were bringing the bears out of their long sleep were urging the beginning of spring work.

Hurrying on at a pace that would have left a less experienced climber far behind, Edgar climbed, crawled, twisted and slid down into the dark tangle of laurel, grown over crooked rocks, hiding yawning holes, and promising fatal falls to the unwary. But the mountain boy is careful and is rarely badly hurt. No trail he had or needed, the occasional bark of the dogs being his only guide, and the quick, sharp yelp from the old dog told him a fresh bear track had been found. The younger dogs took it up, and reported frequently. In a short time there came to the boy the familiar and unmistakable series of barks by which the hound tells his distant master that he has come up with the bear, and that there is a fight.

Edgar's delight will be understood by every

man who remembers when he achieved for the first time his greatest hunting ambition. He had secretly hoped that he might overtake a bear before it should reach his father and brother, but he had hardly dared to think it might come so. Now here was more than the wildest dream had pictured, for he felt sure he knew what the short "race" meant. It was the season for cubs, and this must be an old mother bear, cornered with her little ones and refusing to run, so the boy tore through the bushes, over rocks and fallen trees until he came to a point where he could get a glimpse of the fight, eighty or ninety feet below. He had guessed right. There was the old bear fighting the dogs off and keeping her babies behind her while she backed toward a stout hemlock tree. Edgar carried a cheap single-barreled shotgun and he could not see well enough through the brush to shoot at that point, so he waited, and was soon relieved and amused to see the old bear drive her babies up the tree. She cuffed them right and left and made them mind, though they did not want to leave her. Then she turned to the dogs.

"Now," thought Edgar, "is my chance." He started, dropping his length and more over rocky ledges, letting himself down by roots and branches until he was directly over dogs and bear, but could not see them. A shelf of rock projected. Finally he found a place where he thought he could make it. Lowering himself as far as he could by roots and crevices, seizing the last root in one hand and his gun in the other, he let go, dropping ten feet to the next shelf and within twenty feet of the bear. But pain drove everything else out of the boy's mind for the instant, for he had struck upon a rock and had sprained his ankle. Sharp as the pain was, it did not hold his attention long, for he "just had to have that bear."

Edgar's sudden arrival had inspired in the old beast a desire for flight, and off she started, leaving her cubs safely lodged in the tree. Edgar gave no thought to the fact that he was alone in a hole with a sprained ankle, shooting a little shotgun at a bear with cubs. Fortunately for him probably the wound inflicted was slight, so the old one escaped into the fastness below. There were the three cubs clinging to branches twenty-five feet from the ground and looking down with comical solemnity.

To climb the tree for them was too much for the lamed boy, and he had no way to carry the cubs if he caught them. The cubs he knew were worth much more alive than dead, so it would not do to shoot them. He knew the cubs would not come down till their mother came for them, and she would be occupied with the dogs for some hours. He took the precaution of tying his coat around the tree, for no bear or 'coon, his father had taught him, would come down past that dreaded man-smell for at least twenty-four hours. To overtake his father and brother would be impossible, for they were several miles out on the mountain, so he had to go back to the settlement for help to bag his game.

It was a long and painful climb out of the gorge and along the trail to the home of his Uncle Adee. Excitement kept him up, however, and no time was lost getting back to the tree, to which the boy took his uncle as easily and directly as a dog finds its way home, so true is the instinct of the woodsman for direction and location. The lonesome little cubs were still

holding fast, waiting for permission to come down. Taking a stout sack—he called it a "poke"—Adee climbed the tree, and after scratching and scrambling, the cubs were at last stuffed, whimpering and fighting, into the sack and brought to the ground, to be carried away into captivity, later to amuse summer hotel guests.

Great was the joy and pride of father and brother in Edgar's success on his first bear hunt. The cubs brought them a good price, though they nearly lost them after getting them home. Little Hobart Burleson, aged four, declared he would turn them loose because they kept calling: "Mamma, Mamma." "I didn't know bears could talk," he said, "but they keep crying for their mamma just as plain." There was no denying it; their plaintive cries sounded very much like mamma. They were most amusing and frolicsome little rascals, always ready to stand up and eat out of hand. To avoid unnecessary quarrels, however, a separate dish was given to each one. They would not eat from a common dish in peace.

In the four years since this exciting event, Edgar has participated in many a bear hunt and got in his shot first on several bears, but none has given him the satisfaction that first one did. And what man will not agree with him that the first great trophy of the boy hunter is never equaled by any subsequent achievement?

At the risk of dimming the luster of the boy's courage a bit, I will say that no mountaineer who knows anything about black bears is afraid of them. He feels sure, from experience, that they will always run from a man. I have heard of but one exception, and that may have been because the bear was crazed by a shot and did not know where it was going. After a rifle shot at about 200 yards, this bear, a very large male, turned almost a right angle and made directly for the hunter who fired five shots from a heavy rifle into him and he stopped only about twenty feet from the man, a dead bear, but coming straight on, mouth open.

THE TOP RAIL.

IN England it is said that a kingfisher now and then chokes to death in attempting to swallow a bullhead; in fact, one such was photographed from life, or rather death, for the Fishing Gazette not long ago. Over here we have no such luck. Our kingfishers may be immune from death by the bullhead route, or they may avoid him altogether. And there is no bag limit in their fishing. I remember one old fellow that did his fishing from a willow tree nearby one of my camps. He always perched on the same limb, and we saw him there several times daily. His activities lasted a long time, but were closed suddenly, as befits aerial and other pirates. He did not choke on a bullhead; his digestion was not equal to a lead pill.

* * *

"IN the course of four years," says a thoughtful writer, "one pair of rabbits may be at the head of a family of 1,278,840." Maybe, yes, but not in a region where dogs and cats hunt throughout the year, and hunters beat every possible hiding place for a month or six weeks in autumn.

GRIZZLY KING.

A Day With Tennessee Quail

By LEWIS HOPKINS

"THE weather is too uncertain. Too much exposure, and really, there are too few birds left to make it worth while" I was saying to my wife, who had remarked on the fact that I had not been out yet when the telephone rang.

"You talk like you had been wearing slippers, smoking too many black cigars and sitting by the fire too much; me, too. Get your togs together and let's go after the birds to-morrow. I've got everything arranged; all you have to do is to come along."

"Um! Why, I'm busy, and I did not expect to—"

"Yes, I know all that. Consider it said and save time. Six o'clock train in the morning. Bring what shells you have on hand. I have the lunch put up."

"But, Charlie, my dog is not here."

"That's all right. Man across the street from me has a dog. Fine old pointer, too fat, and he wants me to hunt him. I'll bring the dog. You will go?"

"Well, yes—I'll be there."

Oh—e, e, e! That cold tub was snappy at 5 A. M. next morning, but when corduroys were donned, and a bit of rosy dawn began to show through the east window, that happy glow of anticipated sport set the blood to tingling from tip to toe.

Charlie was waiting at the train. He had the dog, and it was no slander to call him fat. He looked like a big brown dirigible.

"He weigh much as a keg of spikes," said a darkey who lifted the dog into the baggage car.

It was too early for birds to be stirring when we reached our destination, so we concluded to follow a stream on the southern boundary of our hunting grounds in hopes of finding a duck or belated jacksnipe.

I took one bank, leaving Charlie and the brown dog on the other. It was no trouble to make the dog heel, where he ambled along apparently half asleep. He impressed me, even this early in our acquaintance, as being a dog possessing great repose of manner.

Only a single jacksnipe rewarded our quest. We both warmed up our guns on it, but failed to score.

"I hate to miss the first flush," called my companion, as the jack flitted away untouched, "but if it is a 'scape' I generally do."

A little further along I recrossed the stream and we started the real hunt. It was a perfect

day. Clear, cold and still. There was a sheen on the frost-covered stubble that looked like rays scintillating from countless gems. The air was pure ozone, and I wondered why I had been so foolish as to miss the many such days I had let pass.

A sharp whistle turned my attention to the business in hand, and I saw the dog on a beautiful point near my friend. Hurrying down, we took position, side by side, and moved up.

"Nice work," said Charlie, nodding to the dog. "Must be covey on roost, not moved yet."

Slowly we closed in, one on each side of the dog, all three tense as bow strings. Inch by inch we moved forward, expecting a covey of birds to flush any moment, passed beyond the

AFTER SOUTHERN QUAIL.
Photograph by L. R. Foster.

dog, ranged back and forth and found nothing. Returning to the dog we followed the line of his point and found it focused on a mouse hole, "Get along, there," said my indignant companion, and quietly the dog relaxed and ambled off, while I returned to my former position.

We had gone but a short distance when the dog pointed again near me. Hope springs eternal, as the poet says, and forgetting our disappointment and doubts we hurried to position again. It was another mouse hole.

The "Get along, there" this time was reinforced by the rather vigorous application of a well-shod foot.

"More mice," said Charlie, a moment later, as the fat dog steadied down. We approached with our guns on shoulder, and hands in pockets Charlie strode on by the dog and right into a fine covey of birds that hurtled out, scattering in every direction. In frantic haste we unlimbered, shooting wildly and without effect, ex-

cept with the last barrel of my companion's gun, which stopped one bird out of bounds. I fired wildly at a pair that flew right in my face, but do not think they ever knew I was shooting at them.

"Now what do you think of that," said my disgusted friend as the smoke cleared away. "I wouldn't have been more surprised if a flock of mouse holes had flown up. I am glad to see he knows we are hunting birds, too. I had about concluded he was only a ratter."

The covey had scattered in every direction, but the birds marked down went into a bit of woods on a steep hillside, and these we followed. It was a stiff climb, but we persevered. Getting about half way up, we stopped to regain breath and found the dog missing. We finally discovered him, sitting quietly at the foot of the hill, and no amount of persuasion or commanding would cause him to attempt the steep ascent.

"Shall I shoot him?" said my friend, when we had worn ourselves out commanding and entreating in vain.

"Not my dog, nor my friend's dog. You probably know the consequences better than I," I replied, but hoped he would. Finally Charlie concluded to spare him and as we started down a bird flushed at my feet, which I dropped under the dog's nose. He never moved.

Half way down my companion slipped, grabbed at a bush, missed, lost his gun and made the remainder of the descent—about fifty feet—flat on his back and fairly flying in a cloud of leaves, brush and debris.

"My hair white?" he inquired, snatching off his cap as soon as I reached his side. "Never did believe that fool theory of sudden fright turning hair white, and if mine is not like snow,

I've exploded it right now. See that old gun of mine? Came every foot of the way three feet in the lead, safety off, both barrels loaded and pointing right straight at me. Struck rocks, tangled up in brush and had forty good chances to go off, and why it did not I can't see. Believe I would have enjoyed the trip if it had been pointing at the dog," said he with a black look at that patient animal sitting calmly at his side.

"Another beautiful point on a mouse hole causing Charlie to run half across the field and mutter dire threats against our patient best friend.

Nothing further happened until we reached the next field, then after a little careful work the dog pointed again. I felt confident it was game.

"Another mouse, or is he asleep?" said Charlie as he came striding up. "Mouse I guess; I don't hear him snore."

I was right. It was a covey of birds, and we got into them in good shape. Charlie got the two first birds up crossing, and one with his

left. I got a pair, and then Charlie got another that flushed late, six birds.

"Nice shooting, that," said my companion, as we gathered up the game. "Old Jumbo is some dog after all."

We followed the covey to where they had scattered in a bit of sedge grass, dotted with small growth, and there we had what my companion called our Christmas tree. The fat dog won back his lost reputation and made us—for the time being—forget that he had a fault.

One by one, without an error, he picked up those single birds in heavy cover, until he had given us fourteen shots, netting nine birds. Only one double, mine, and only one eye wiped, mine also. A big strong-flying cock bird ripped out at my feet and swung round left. I tried him twice, missed, and after he had passed beyond ordinary range Charlie dropped him, clean killed.

"Spring down there in the hollow; let's go eat," said Charlie, after we had gathered in our birds. "If we were home I'd give Jumbo a porterhouse steak with mushrooms for his beautiful work on those birds, but as he has to walk some yet, I'm afraid to feed him at all."

After lunch we found a covey of birds and followed them on to the adjoining farm. A belligerent looking farmer came hurrying toward us at the sound of the first shot.

"Don't know whether I know him or not," said Charlie. "Be shocked, mortified and grieved if he tells us we are over on his land, for he may cut up rough."

"I don't 'low no shootin' here," shouted the old man, as he drew near. "Got stock in all these fields."

Charlie explained that we had been invited to shoot on the adjoining land, and had followed the birds over without really knowing that we were trespassing, and—and—but I paid no further attention to the conversation. When any one listens to Charlie for the first half dozen words he will continue to do so as long as Charlie wants him to. He could talk a bulldog with a gumboil into a good humor, so I was entirely prepared for the usual result.

"Well, don't shoot near the house, an' you are welcome. Yes, thank ye, I do smoke sometimes. That's a nice fat dog. Well, good-bye, come again when you like."

We got only three of the birds, not enough, Charlie said, to pay for placating the farmer.

Back on our old grounds we found another covey, and scattered them in the woods, where the shooting was hard. The dog did well, but could not find the birds as he had those in the open.

We got seven up and five down when I came to grief. Climbing over a brush pile a bird flushed behind me. Turning quickly I fired, and at the same moment slipped and fell, striking my head on a log. Fortunately the log was decayed and my cap heavy, but the whole milky way passed rapidly in review before I collected my scattered wits.

"If that log had not been rotten," said Charlie, "you would have solved the ancient problem of 'when an irresistible force meets an immovable object, what's the result?' I think it would have been a busted crust in this case."

With my head singing like a beehive I sat on a stump and watched Charlie finish working out the cover. He and the dog broke even, each find-

Deer Shooting in North Carolina

By H. H. BRIMLEY

THE deer shooting areas in North Carolina cover two entirely different types of territory. These are the mountain region in the western part of the State and the low-lying lands of the East. In the former, deer are not plentiful, except in a few closely protected areas, and the open hunting is an almost negligible quantity. In the eastern section, however, deer are quite common in many localities and are pretty well able to take care of themselves, the natural conditions under which they live making for their preservation. This section, roughly speaking, covers the whole of the State coast line and fifty miles inland from the coast, and may embrace nearly a third of the State's area.

This is the land of the open sounds, the broad estuaries; of creeks, rivers and lakes. The uncultivated areas—of which there is an abundance—are long-leaf pine forests, cut-over pine lands, open savannahs, pocosons, scruboak lands and gum and cypress swamps, with all sorts of variations and modifications of them all.

The hunting is mostly by means of dogs, with the gunners taking stands in places where the deer may possibly run. Some still-hunting is carried on, but the character of the country almost prohibits any other form of this type of hunting than waiting around late in the afternoon for a chance deer to come along. I have tried this method scores of times, but never saw any animal larger than a 'coon.

In running with dogs the chances are all with the deer, my personal experience being that not more than one in seven or eight chased are even shot at by the hunters. Very soon after the season opens they learn the game and exert all their native cunning in outwitting both dogs and men. And one seldom kills a fat deer after the first week or two of the open season. They seem to soon train down fine, and then are able to give any pack of dogs a'l they want in the running line.

When first jumped the deer usually makes for the nearest thick pocoson, and once in that he will give the dogs a hot time for an hour or two. These pocosons are characteristic of this section and are often miles across. The tree growth consists of scattering pines, usually of dwarf habit, with an undergrowth of gallberry and bay bushes of varying height, but the barbed wire entanglement of bamboo brier (smilax) is always present. Some of the more open, or "light" pocosons, where the growth is low—averaging waist high or less—make good deer stands, though a light ladder propped against a pine is often used to enable one to see further across the bushes. Where the growth is thicker and higher no shooting is possible, and as long as the deer chooses to remain in this kind he is perfectly safe from both dogs and men. What a deer can leap lightly over the hounds have to force a way through, and the work is very hard on the dogs. But sooner or later the deer, as a usual thing, takes to the water, and once there he is safe for that day.

The great element in conserving the supply of deer on our hunting grounds is the glorious uncertainty as to what they will do and where they

will go when in front of dogs. At the camp from which I hunt—which is typical of the whole region in the character of the hunting—we frequently have as many as three deer running at once with all the dogs within hearing distance, and yet, with four or five guns posted in the most likely places, the proportion of the hunted deer that come within rifle range of any of the gunners is quite small. It is usual, though, that one or more of them are seen, sometimes out on the marshy border of one of the lakes, sometimes in the open swamp, or out in the pocoson.

Of course, camp ethics prohibit catching or killing deer in the water, and shotguns are not looked on with favor, where fifteen years ago they were almost universally used. But the shotgun is still the weapon of the old timer, though I am glad to say that the rifle is steadily gaining ground.

Perhaps the description of a hunt that took place just three days before last Thanksgiving Day, in which "tenderfoot luck" was largely in evidence, may impart more information than mere generalizing.

It was arranged that two of the party should take stands along a path between the lakes, taking a couple of dogs to be turned loose just before reaching their stands. Two others were to go out in the low pocoson three-quarters of a mile from the first pair, while the remaining three were to take four dogs and go down the road northeast of camp for about a mile, where one was to put out a coup'e of the dogs in the thickets nearby and then drop back and cover the camp road. The remaining two men were to move on a mile further, then turn into the woods for a half mile or so before putting out the remaining couple of dogs. The tenderfoot and I happened to have this last assignment, and we went in.

Now, the tenderfoot, whom I will call A., is by no means green to the woods or to a gun; but he had never seen a wild deer, let alone shot one.

We turned our dogs loose and moved on. The dogs began trailing immediately, and we moved deeper into the woods, which here consisted of logged-over long-leaf pine ridges. (In this country a ridge means land dry enough to grow long-leaf pine and wire grass, but may be only a foot or two higher ground than the swamps and bottoms.)

Becoming rather warm from the walk and the heavy clothing worn, we sat down on a log to rest and listen to the dogs. I had taken off my coat and was preparing to tie it up in blanket-roll shape, for greater ease in carrying, and had my hand in my pocket searching for string when a movement in front caught my eye, and there was a deer leaping lightly across not more than forty yards away. "There's one," I said, and came to my feet, rifle in hand. A. did the same, but hesitated, waiting for me to shoot first. "Shoot!" said I, "shoot!" and he fired—and missed clean. Then I got the .25 auto going and his second shot and my first sounded almost as one, and the deer was down. We walked over and A. was jubilant on finding that both his bullet and mine had taken effect.

I dipped my finger in the deer's blood, made the hunter's mark on his forehead, and congratulated him on his first deer. Just then a second leaped out of the thickets a hundred yards away and headed diagonally across our front. "There's another," said I. "Shall I shoot?" asked A. "No, I think he's coming nearer," I replied. Then the deer stopped, right behind some thick bushes and completely out of sight. "There's another," I called, and a third appeared about a hundred yards more to the right and 125 yards away. "Shall I shoot?" again asked A. "Yes," I replied; "give it to him," and A's .32 auto spoke five times in succession, the deer all the time heading away until, at the last shot, he was swallowed up in the dense and high pocoson 150 yards below us. Turning to our left we caught a fleeting glimpse of deer number two heading away in bushes too thick to allow of any successful shooting, so we held our fire on him. "Guess you didn't get

Hunting Turkeys in the Sunken Lands

By J. B. THOMPSON

GOVERNOR S. wrote that he would be at C. in Southeast Missouri on a date we had agreed upon. My train was late and I thought that the possibility of missing the Easterner was likely, but when the train pulled in he grasped my hand as I descended the coach steps and assisted me with my burdensome luggage. Evidently an acquaintance of mine had pointed me out to him, for it was the first sight I had ever had of his jovial round face. Before we had even dined together I felt an intimacy rapidly grow that necessarily uplifted the barriers which conventions place upon the newly-acquainted.

He was a tall man, over six feet in height,

think I'm too beefy to stand roughing it. Well, you just set the pace, and when I feel like quitting, I'll inform you."

It is to his credit to say that so far I have failed to hear an expression from him indicating a desire to slacken the pace in the hardest kind of traveling.

We arrived at our camping grounds the following afternoon by an uncertain train route, a disreputable tramway, and at last, over a blind trail which seemed to lead to nowhere. The cook, a city black, complained: "Didn't think I wuz going to have tuh do all dis toting and walking or I'd shore never come."

I settled the black's complaints by giving him

yours," I remarked. "I believe I hit him all the same," replied A., and so we left it for the present.

Meanwhile one of the dogs we had turned loose had struck the trail of the one at which we had not shot and carried it off to the north. The other dog came out to us, but not running any trail. We put him on to number three and he soon found the deer two or three hundred yards from where he had disappeared from our view. And it was awful work cutting a path through that devilish pocoson with our bush knives and getting the deer out to where number one was lying. But we got them together all right, cleaned them, and then I went for help to get them to camp while A. stayed and gloated over his good fortune.

The other two couple of dogs each ran a deer, making five in all up that morning, but none of the others were even seen by any of the hunters. And in three more drives that same week, with two or three deer going each day, not one came within shooting range of anybody, though several of them were seen. It was "tenderfoot's luck" all right on that first day.

round of face, and carried an amount of surplus flesh which I thought would be quite a handicap in the tangles of the swamps. However, he had the air and poise of one who would attempt anything, and better still, carry it out. Naturally it added to my increasing admiration of him.

Late dinner over, I turned to him and asked: "What kind of game do you want to hunt? There's plenty of deer, some black bear, and"—

He interposed before I could finish: "Been against all that; it don't interest me in the least. All I want is a turkey—a wild turkey. I have killed nearly all kinds of big game, but I have never killed, nor even seen alive, a wild turkey. I don't mind if I only get one, but I want one very badly, even if it's only a little fellow, just so it's a wild turkey."

I could hardly repress an astonished laugh at this man who had traveled over 1,200 miles merely to come up with a turkey, so I was not long in telling him that he would get his turkey. I was somewhat startled when he appreciated my deprecatory glance at his figure, and in his soft agreeable voice said: "Now, I believe you

a verbal picture of what the natives of the swamps would do to a talkative negro, and the illustration, though tingling with expletives and exaggeration, had its good effects. I had some fear of his deserting us after going through a mile of canebrakes, but after I had him two hours in the woods I knew from his ignorance of woodcraft that he could not have deserted us had he wished to. And it may be well to state that during the remainder of his stay in the big timber, he never strayed over thirty yards from camp, uttered no words of disgust, only disturbed the far-reaching howl of the timber wolf at night by loud prayers to the Master, promising all kinds of future good conduct if He would only carry him safely "outen dis one mess."

Two hours before sunset the Governor and I left camp, first cautioning our black against wandering toward Little River, for I had some fear about what would happen to a negro if he strolled into a mill town without some white person to explain the reason of his being there. Our camp was pitched on a small knoll, four huge pecan trees guarding it, and a break of small ash trees promised an available supply of fuel.

We proceeded through the great forest of ash, cottonwood, pecan, hickory, oak and the ever present cypress. Here and there we saw signs of turkeys working in the willow oak flats, but not one of the wary fellows was within our scope of vision. We must have gone over an hour without seeing game, when the sun became obscured behind a nebulous blanket of gray, and the extensive timber area became all alike; the trees and slashes almost indistinguishable one from the other.

I motioned to the Governor and said: "It's going to be dark soon, and we don't want to be caught in these swamps. See this long depression? It's Sand Slough and if followed will lead us to within 200 yards of camp." He consented to bear homeward, though I could see he was chagrined at his failure to see game, but he made no comment. The slough had been a dense canebrake a year previous, but fire had killed its growth. It had fallen and lay lapped in tiers, rotting in the humid atmosphere. It crackled like the noise of many rifles as we floundered knee-deep in it.

"Well, of all the noise," exclaimed my companion, "this beats anything I ever saw. Why, a fellow couldn't get within a mile of game with this racket going on." Just then a series of "Put-put-puts," and the thundering beat of pinions disturbed the serenity of the swamp as a large flock of turkeys that had already sensed the graying signs of evening, pitched from their roost in a big pecan tree and scattered at random in the dense tangles of switch cane. It was almost too dark to shoot, and too dark to try any experiments in getting turned away from camp.

"What a gang of them," my friend said; "let's go after them."

I disliked very much to hasten him to camp, but knew the necessity of it and answered: "No, it's too late; you can't do anything but get lost. Still, you can consider one of those turkeys yours. They are scattered well and we will get here just before daybreak and call them together."

He hated to give up pursuit, though he saw the wisdom of the course, but he could not refrain from asking, "They won't get away, will they?"

"No, they will be crazy to get together in the morning. It's such a big flock and has never been shot into, that they will come to call easily."

Deliberately he drew his small axe and made a deep cut in the trunk of a broken-topped cottonwood to remind him where the birds had gone. Would he see the hack in the dark of morn, I mused? I think his anxiety to get among the turkeys robbed him of the thought.

We came back to camp empty-handed, but the signs of game everywhere keyed us up for the next day. A hot supper awaited us, and our negro by a short stay in the wilds had developed into a model servant, and if my suggestions had not had a calming effect, the dismal hoot of the great horned owl and the continuous flight of the mallards overhead in the clear moonlight air, intimations of invisible spirits hovering over the camp, would have alone effected it.

"Do you know," said the Governor after supper, as he stared into the soft bright radiance of the heaped sweet gum logs, "that I have never seen a case of buck fever and never had that peculiar sensation myself."

"It's not the buck fever that is so exasperat-

ing when taking the novice in the woods; there's nothing dangerous about that. It's over-anxiety that's the worst bother. A fellow so afflicted wants to kill game at unseemly distances, can't keep in the cover, wants to do it all himself, and generally gets only a glimpse of the game instead of a good opportunity to kill."

"He agreed with me and continued incessantly to surmise whether the turkeys would be there in the morning.

I had a hard time awaking him at 4 o'clock in the morning, but finally succeeded and we wended our way to our chosen place of observation, awaiting the first streak of day to appear in the east. I placed the Governor in a nice cover of switch cane from which he could view the open area of woods for 200 yards. We felt the smarting bite of early frost and shivered in our hiding place. Finally light broke in the east and the spreading tops of the hardwoods rustled in the warm glow of their crimson bath. Then came the shrill staccato of the pileated woodpecker, as it shrieked maledictions at an unusually tough shaft of rotting ash. Gray and fox squirrels began their morning play and food-seeking. Occasionally one spied us, ran in haste to the fork of a tree, peering with mouse-like little eyes at us, and failing to conceive the reason of our inaction, entertained us with his muffled bark which soon turned to a defiant chatter. It was time to give our attention to the turkeys.

I admonished the Governor: "Don't stir; don't shoot until the game is near, and you will surely get several." I drew from my pocket a small frail cedar box with an opening at one end. I saw the Governor watching my every action and drew the vibrant cedar with short strokes against my rifle barrel. "Keouk, keouk," went through the woods, the sound apparently subdued in the density of cane. I desisted; no answer.

Again I began the appealing call. Far off to the northeast, modestly at first, but still distinguishable, came a faint response. The cold tang of morn had lost its power of chilling, the first answer had warmed the Governor's blood, and beads of perspiration peeped from his cap band.

I repeated the call and two well-defined responses came from the opposite direction. I cautioned, "Keep in the cane; don't move until they get to this side of that big black oak log." I began calling again, but anxiously added: "For the Lord's sake keep down. They won't eat you; you can see them well from where you are."

He was trembling and afterward confessed that no game had ever affected him as his first turkey. Straight ahead I saw five coming deliberately to our hiding place. They were young, but full grown lusty mast-fed rascals. They stopped an instant, trying to locate the call. Feebly the box emitted the enticing "Keouk, keouk." The Governor was stirring uneasily in the cane. I whispered, "Keep cool and let them get fifty yards closer."

As I spoke a huge gobbler parted the frost-stricken growth of ironweed at our left and posed in the slough. I began to take on some of the sensations of my companion, but the box nerved me to duty, and I wailed plaintively again the gathering call. The big fellow gave a leap and landed in the center of the slough. Another jump, keen-eyed, alert, but unapprehensive of danger, he mounted the monster dead log. What a magnificent fellow he was. His long beard, rounded chest, gorgeous plumage, illumined with a bronze metallic sheen as the sun centered him on the log, held us spell bound. His sudden appearance amazed us, but only for a second.

I turned as slowly as I could, as I saw the gobbler trying to descry something out of the ordinary in our patch of cane, and said: "Now's your chance; get him!"

Then came the sharp crack of my friend's .25, and the fall of the king from the log.

"Sit down," I commanded, as he started for his prize. "Sit still, and you'll get the others"

"But he'll get away!"

"The others will get away," I returned, "if you don't keep silent. If you keep perfectly quiet they will surely come."

But pleadings were useless, the flapping of the turkey goaded him on. He rushed for the bird. Though I tried ineffectively to hold him, he seized it, but not before the other five had seen him and waddled away ungracefully in the cover of cane and elbow brush.

He held his turkey high, so I could see it in all its immensity, and with a pride I never expected to see in the eyes of a big-game hunter.

"You got him," I said sarcastically, "and let the main bunch get away."

He looked at me for an instant, thinking of an excuse to condone his fault, then laughed and responded with ready good humor. "Can't you, for goodness sake, make exceptions for a big boy and his first turkey?"

Fly-Fishing in North Carolina

By ERNEST L. EWBANK

MY fishing for trout, both brook and rainbow, has been confined to the streams of Western North Carolina. I can, however, conceive of no more beautiful trout streams than this favored mountain country abounds with. There are many of them, all beautiful, all as clear as crystal, bounding over rocks and through deep gorges, here and there occasional stretches through fields cultivated or abandoned, then again through the forests. Remember, too, that Western North Carolina has a greater variety of flowers and plants than any part of

the United States, the ferns in great variety and profusion among the very many, and this plant covers varieties, including the Hartford and the walking fern; rhododendrons of several kinds and then the kalmia with blooms from white to pink; the famous pink beds in the George W. Vanderbilt estate below Mount Pisgah, being named after this kalmia, which covers the little valley of its name.

Imagine, then, a stream of clear transparent water rushing through a forest of trees of greater variety than in any other part of our

country; with masses of evergreens covered with flowers; with ferns of many sorts growing even to the water's edge; immense masses of rocks strewn everywhere; with pebbles of every shape and of varied colors; and the flowery kingdom well represented from March to December, and then do not forget the trout that are waiting for the angler in every pool and every riffle.

It is only the lover of the woods, fields and streams that can fully appreciate a trout stream with all its beauty and all its possibilities. Some say it is too rough; others, "How can you bury yourself all day in such a wild place and wade all alone miles from anyone? And for what?"

After all, to the true sportsman with rod or gun, it is not all in killing game or fish, still we want to be able on our return from our angling trip or from partridge or quail or deer hunting to have trout in our creels or birds in our hunting coats, or deer as the case may be. In Western North Carolina we always feel when we go "fishing for fish" that we can count on catching some. Personally, trout is my fish, and the killing of the trout with the artificial fly. Two years ago I discontinued the fly tied on barbed hooks and see no reason now after two seasons' fishing to return to it. Every trout that can escape from my barbless flies is certainly welcome to its liberty.

It is common practice in fishing in our waters with artificial flies to place upon the point of the hook a "stick bait," the caddis fly before it emerges from its little covering. These are found in any quantity in nearly all our streams—strange to say not in Green River for miles—and picked up at almost any point in the stream. They say trout hold the hook better when stick bait is used. I reply that once the trout gets on, it is then the angler who must keep it on. Some years ago I was following this practice in brook trout fishing on a beautiful little stream in Haywood county. I used three flies, all of

different patterns. I had a tin bait box strapped to my waist in which I carried my stick bait. It was very apparent that the trout preferred one of the three flies to the other two, though there was a stick bait on each of the three. So I put stick bait on the "other two" and none on the favorite fly. Results, exactly the same. I

I find, too, a difference of opinion as to flies. The royal coachman I have found my most killing fly for both brook and rainbow trout, and that, too, in every month from March to November; yet I know a fly-fisherman, one who casts a fly with the greatest ease and as light as a thistle, who says the royal coachman does not

kill trout for him.

I have often tried to learn the art of casting the fly with my left arm and can cast with it, but try as I may I cannot make it "do" as I wish it, and as my right arm does. There is much, I think, in the movement of the flies after they drop on the water. Trout do not always strike a fly just as soon as it touches the water, so I say the manipulating of the flies after they drop on the water has much to do with results.

This, the above, then is what I have experienced in my "trips for trout" in our mountain streams.

There are quite a number of fine trout streams in the Sapphire country, reached by passing through this place. There is hardly a more beautiful mountain country or more beautiful trout streams than can be reached from Lake Toxaway. There are something like fifty waterfalls of great beauty within ten or fifteen miles of Lake Toxaway. The lake itself covers some sixteen or eighteen hundred acres of beautiful water which is completely surrounded by mountains, the highest of which, Mount Toxaway, is 5,000 feet. The Toxaway River is a dark mountain stream, rising up under the mountain. The

lake and streams are full of rainbow and brook trout.

To go in another direction, there is the Linville Falls country that Mr. Bicknell writes so interestingly about. No better rainbow trout fishing anywhere in the Eastern or Southern States than there. Then there is the famous Pigeon River country. The best of this is controlled by a club of Waynesville sportsmen of

Continued on page 24.

LOOKING GLASS FALL, IN NORTH CAROLINA.

called a boy and handed him the box of stick bait and have never used one since. I took more trout on that trip than all the others did put together, and did away with the trouble of stick bait hunting, and opening each to get at the grub, which I often lost in the opening. What a queer idea this, that a trout will hold on better if a stick bait be used. Certain it is that he can be more securely hooked with the bare fly.

The Sandbar Honkers

By AMOS BURHANS

"WHEN you get below Cairo," said the old shantyboat man, "you will see nothin' but a bend an' a sandbar—a sandbar an' a bend." With this final mite of information he went into his floating domicile and poked up the fire, for it was frosty almost every night during the early part of the fall.

We rather liked the bends and the sandbars. They were not so much alike that one might say they looked the same. Of course, in cruising we are eager to get as much change of scenery as possible, and generally we could see the differences in the country we were in, and those we had passed. Above Cairo we had come to the first big bends and sandbars in our cruise down the Mississippi. Unless one consulted the charts of the river assiduously, he was apt to become lost as to his correct location on them.

And it was above Cairo, too, that we saw the first phalanx of honkers, long-necked and strong-winged, making a great fuss over alighting on this point of a certain sandbar or that, each seeming to pay no regard to the leader of the once regular wedge-shaped band. We were following one of the Government steamers that was towing a pair of large barges loaded with stone to within a few inches of their tops. This seemed to be the easiest way of navigating certain waters where the men on the tows had to heave the lead constantly in order that the pilot might keep in the ever-changing channel.

Off ahead, something like a mile, we could see with the glasses a great number of Canada geese flapping about in the little gale that was blowing, apparently looking for a resting place for the night, as it was mid afternoon or later. From the way they played in the air it looked to the pilot of the Wanderlust that one might get a shot worth taking if we could but get ahead of the steamer and her tow.

Putting a couple more notches of speed on at the engine we passed the steamer and drew down on the honkers with their long black necks and the streak of white across the throat. They were swinging easily here and there, not seeming to care whether they alighted at all. When we approached they swung higher, settled down to a line of flight, rose higher and let a cautious gander lead the way. We had not even come within gunshot of them. The water was beginning to come into our mouths at the anticipation of goose and cranberry sauce, but we had to retrieve it.

When we arrived at the next bend below there sat the cautious gander on a bar as white and clean as sand could be, his flock drawn out about him, resting and preparing to make another getaway in case we approached too close. We tried a shot with a rifle and missed. One could not hit a cow at that distance to say nothing of a goose. The boat vibrated some, and moving made it still harder. After the shot they rose like a scattered legion makes it retreat—in disorder, honking and defying us to bother them again.

At the next bend and sandbar there they were squatted about ready for us, but this time in-

stead of waiting for our shot into them, they all made their little trot of a few strides, goose fashion, flapped their long wings and went into the air. With the aid of the glasses we saw that their number had been augmented by some old woman's white goose which had at some stage of his career been a home-loving rascal of rather smaller caliber than the honkers he had taken up with. And by this white goose, more of a waddler than the rest, smaller and more reluctant to fly, we marked this same bunch of honkers from one point to another.

As we sauntered southward at the rate of sixty to a hundred miles per day, motoring and hunting and fishing as we fancied, the numbers of wildfowl increased, being added to by others of their kind that came down each little tributary of the Mississippi. All were southward bent for the winter to eat of the stray heads of grain that had been left in the fields, delve in the pools and pockets of the river and bask in the sunshine on the warm sandbars after they had fed in the morning, and to roost there at night after pilgrimages into unshucked cornfields along the bottoms.

At one place I stopped for a day or two to pursue the keen wild turkey. The nature of the hunting was such that I thought moccasins would make less noise among the twigs and brush than hunting boots. I carried glasses, gun and patience. It was dense with stalks and weeds, and geese were feeding in it. They must have had their outposts well trained, for 200 yards was the nearest they would allow one to approach them.

Dropping down the river further we stopped at the immense work the Government is doing at bend of Island No. 35. In the river sat a few dozen honkers, sporting themselves during the evening on a small bar that had just shown up owing to the falling river. They had taken this location during the night seemingly to be harder to approach, even if it was closer to the hundreds of men at work along the river front opposite them. One member of the party got a river man to brush his boat and went ahead of the little bar, thinking to drop down on the geese in the dusk and perhaps get a shot at them. They sat for his approach to within a hundred yards, rose in the air and stayed there until he had rowed back to the cruiser and then they came back to their sandbar.

We stopped at Pushmataha Landing for a couple of days. The chance had come to reckon with our friend the white goose and his gang again. They sat serenely content on the white sand of a bar that separated a chute or cut-off from the main swing of the channel to the outside of the bend. We went to the bar and up they flew. Hiding the boat, we dug pits and crept into them. And it was well we had patience. The geese returned and dropped on the bar near the boat. From the pits it looked as if they were roosting on it. Discouraged in the darkening night, we shooed them up and departed for the cheery boat's cabins.

The further we went south the more geese we saw. When one bunch took to the air, an-

other heard their prattlings and honkings, and up they went, too. They sat along the bars during our trip past them, easily within rifle shot, though it seemed they knew we could not hit them. Often the rifle would fail to make them rise. Ducks by the thousands were among them, more often than not taking to the air first if fired into. Plainly our meat was not to be goose, but duck, shot from the boat while traveling. But we persevered. We had set our teeth into goose, mentally speaking, and literally meant to accomplish the same feat.

One evening we consulted the charts. They told us that a long sandbar would be found at the foot of a certain bend on the Mississippi side of the river. We halted at four. Making the cruiser fast was but the work of a moment or two. Then equipped for some wading, mud and soft sand going, we hied away down the gravelly bar and through the driftwood, wreckage, logs and old skiffs for a point where a few of the real old-fashioned rail-splitting pigs were rooting among the wild artichokes. Geese are wont to follow stock. We had seen none there, but it was a likely looking spot.

Just as we made for a clump of willows to hide a portion of our approach, we saw a fine lot of geese making across the river and for the spot where the pigs had been feeding. We dropped to the ground and remained motionless for a few minutes, watching the while just where the geese dropped to the sand and cackleburs; then, screened by the weeds, we crawled, walked, kneed it, ran, till we had found their place of alighting.

Their tracks showed them to have waddled off further down the shore and probably settled among the pigs where warning of danger would be given first by the "woofers." Darkness was drawing over the sky. We crawled further. Every moment we expected them to get up further ahead than the guns would carry. Experience had told us before that it was useless to shoot unless you had a goose practically cleaning the gun barrel with his long neck and knob-like head.

The pigs had disappeared, it seemed. We crept further. Suddenly we heard a beating of the air with those gigantic wings, a few honkings and the entire bunch, cautious gander in the lead, with the old white goose close up rose well ahead of us and swung off to the left.

Lying still as death, those fool geese circled around us, swung a little higher, then gracefully came right over and we rose. The guns spat out two charges of shot each, both charges being aimed at a certain goose. Two thuds answered the summons of the buckshot and we shook hands like a pair of men who alone have put down a revolution in Central America.

"There's a dinner for the crew and the captain bold," partner shouted.

"But we didn't get the white one!" I called back, reaching over for that big, fourteen-pound goose that had scarce flopped after he came to sand.

"We'll have to let him go for another time," answered partner, and we did.

Wildfowl in Currituck Sound

By OLD MAN

FIFTY years ago there was no shooting of wildfowl on Currituck Sound, always one of the most important winter resorts for ducks, geese and swans. The Civil War had just begun, and most of the men of the South were in the Confederate ranks, fighting for the principles which for four long years they so splendidly upheld. Yet a few men still lived along the shore in Virginia and North Carolina, supporting themselves and their families chiefly by what they raised from the ground or drew

non-resident sportsmen. There is a non-resident license fee. In Currituck county, North Carolina, the non-resident is not permitted to shoot afloat. Such laws are not to be complained of by those whom they chiefly affect. It is, of course, wholly within the police powers of any State to make such regulations as it pleases with relation to the game within its borders.

In most places the local gunners may shoot from batteries, or build bush blinds into which a boat can be shoved, the decoys being scat-

teresting to the naturalist and irritating to the gunner, but is most effective in keeping up the duck supply. The North Carolina law provides that shooting must end at sunset and may not begin before sunrise. The ducks appear to understand this law, and are likely to come into their feeding grounds very soon after sunset, when they know they are safe. All night they feed there undisturbed, and in mild weather rise about daylight in the morning in a dense mass and fly eastward, passing over the quiet waters of the Sound out to sea and alighting there to remain during the whole day. Thus, on warm bright days, one may sit in the blind or sail up and down the Sound all day long and hardly see a bird moving, but if he is on the feeding grounds fifteen or twenty

IN A DUCK BLIND.

From a photograph by H. W. Isaacs.

out of the waters, and from time to time these men with their muzzleloading—and sometimes flintlock—guns killed a few waterfowl, but not enough to make the slightest impression on the vast hordes which each autumn came down from the North and spent the winter, and in spring again took their flight toward the pole.

One of the earliest of Northern gunners to go down to this country was William Wade, who, perhaps in 1865 or 1866, joined with a few gunning friends and established the Currituck Club on the outer beach, where they had—and their successors still have—wonderful shooting.

It was not until between 1880 and 1890 that the gunning attractions of Currituck Sound began to be understood by Northern sportsmen generally, but from that time on more and more of the marsh land was bought up for shooting purposes, until now there is little or no free land left there.

The States of Virginia and North Carolina have passed more or less stringent laws against

tered about the bush blind, and often bringing down the high-flying trading birds within shot of the gun.

Sometimes a local gunner, if he finds a flock of ducks or geese feeding near some point, or in some little bay, close to a marsh, will build his blind there and shoot from it. The blind may stand within four feet of the marsh, and the gunner shooting from his boat shoved into the blind is quite within his rights. Even though the marsh may belong to someone who had intended to shoot from the shore close to where the blind was built, the owner is powerless to remedy the matter.

Although for many years past the wildfowl have been growing more and more scarce in Currituck Sound, there are still vast numbers there, and with the proper weather, club members who go there, or non-residents who arrange with landowners to shoot on their properties, may have splendid shooting.

In recent years, however, the wildfowl have adopted a protective habit which is not only in-

minutes after sunset he will see the ducks and geese coming in flocks and flying about him, utterly fearless.

For the non-resident—and in North Carolina this commonly means the Northern gunner—point shooting is the only method by which wildfowl may be taken in Currituck Sound. This has often been described. If the weather happens to be fair, mild and bright, he will have no occupation in his blind except to sleep, to talk to his boatman, or to read. Under such conditions the days seem long. One runs out of conversation after a time, and get tired of reading, while to sleep is wholly profitless. When the weather is fine, boatman and gunner alike become tired and dull; they cease to watch sharply for the birds, and if an occasional pair or single bird happens to be flying about, they are certain to choose such a time to cut in from behind and pass over the decoys, to be out of reach almost before they are seen. Moreover, in quiet weather, when the water is glassy, the reflection of the decoys makes the stools look

twice as big as they naturally are, and the ducks detect the deception at a distance.

It is very different when the sky is gray, the wind blowing strongly enough to kick up a good sea on the ocean, so that the birds cannot comfortably rest there. Then they are obliged to resort to the Sound and seek more sheltered waters, passing about from one pond or bay to another, frequent'y shot at and generally kept on the move.

Many of the boatmen are remarkably skillful in imitating the cry of the various birds, the honk of geese, quack of mallard or black-duck, whistle of widgeon and sprig, growling whine of canvasback or croak of redhead. Often a flock of birds that passed without noticing the decoys may be turned and brought over them by a judicious uttering of the duck's call.

In recent years it has become more and more

Through the South with Gun and Rod

THE Persian monarch's desire—a new pleasure—manifests itself in a shooting or fishing trip made to order. There are those who write guide books, who claim that half the pleasure of a trip is in the planning thereof—generally this half of the pleasure exists only before the start, the other half takes place while you are living in bad hotels and looking for game that exists only in hotel booklets; the "third half" is enjoyed the balance of the year while you regret your foolishness in not getting authentic information before you started. The object, therefore, of this paper is not to do the thing by halves, but to lay out a complete route through the South, so that you may select your favorite

you a dollar a day for your keep and the use of a dog—such as it is. For the man with more fastidious notions, Chase City offers better accommodations but no better shooting.

Bagley Mills is probably the best shooting ground in Virginia. Quail and woodcock are very plentiful, while turkeys may be had any day. Deer and 'possums live here almost undisturbed.

When one realizes the possibility of getting on the train at 9:30 in the evening and being on the field shooting at 11:30 the following morning, it is remarkable that there are any birds left at Crowells, N. C., and yet with its proximity to New York, it abounds in quail, and the prospect of a wild turkey is not too remote. Every county in Florida and many in North Carolina demand a special \$10 license, good only in issuing county. This makes it important that you land in a county where birds are plentiful. Probably the best known shooting resort in North Carolina is Pinehurst, where Leonard Tufts has a well stocked preserve of several thousand acres, exceptionally good dogs and accommodations for the fastidious as well as for the unostentatious sportsman. In the northwestern part of the State, Mockville and Barber, famous for field trials; Greensboro, Kernersville, where are located extensive preserves of the Southern railway, and those of a number of prominent New Yorkers, offer particularly good quail shooting. A little further west in the mountains is Linville Falls, one of the most inexpensive places in the country. Here mountain trout offer surpassing sport to the angler; deer, bears and 'possums are plentiful for the rifleman, while bobwhite is troubled but little by local gunners, and is ever present for the visiting sportsman.

In Southern North Carolina, Buies offers about as good quail shooting as does any place in the State. The country is flat and easy to hunt, while perfectly broken dogs are to be had. In this section is an excellent opportunity for a club to establish itself. A few miles from Buies is Rockingham, where first-class accommodations are reasonable and quail plentiful with dogs well trained.

While South Carolina does not offer as certain shooting as her sister State, still Blacksburg and Rockhill in the north, Camden in the central and Grahamville in the southern part are plentifully supplied with quail and an occasional deer. Grahamville is reached from Ridgeland, one hour from Savannah, Ga. It lies on Broad River, where drum fishing is excellent. Aiken offers well stocked preserves and high class accommodations.

In Georgia, Tennille in the central part is abundant in quail, wild turkey and deer, while Brunswick on the coast is well equipped for the wildfowl as well as the quail hunter. In the country outlying Augusta and in Thomasville and Washington the quail hunter will get his fill.

Florida offers various kinds of shooting and fishing, and is one of the few States where wild turkeys are at all plentiful. Starting at Jacksonville, which is twenty-four hours from New York city by rail, we come first to Green Cove Springs on the picturesque St. John's River.

LINING UP FOR A TURKEY SHOOT ON A HOLIDAY IN KENTUCKY.

the custom to take out with the wooden decoys a few live ducks which are tethered at opposite ends of the stand of wooden decoys. For such live ducks a stool is prepared—a long, sharp-pointed upright to be shoved into the muddy bottom—with a little circular stool or table three or four inches in diameter, which fits on the upper end of the stake, and is pushed down until it is an inch or two under the water. A long string from the upright terminates in two loops of leather, each a running noose, which are slipped over the live duck's two feet, and it is placed in the water. For a time it swims about and feeds, and then comes to the table and mounts that, where it stands dressing its feathers, or looking up at the sky hour after hour. These live ducks call to each other and also to any birds that may be flying over. Often they will call as readily to a blackbird, a buzzard or a heron, as to a blackduck or a mallard. Usually when they speak to wild ducks, unless these have recently been alarmed, the birds put aside all suspicion and at once come down.

During a recent visit to Currituck Sound in
Continued on page 24.

State and know in just what section of it game is abundant.

From New York city to the furthest end of the Florida Keys is a distance of 1,538 miles, the running time by rail being forty-eight hours, and practically every mile of this distance, after reaching the Virginia line, is abundant in its game and fish supply.

The first shooting place touched is Old Point Comfort, nine hours out. Here is good duck shooting, and a fair bag of quail may be made on the hotel preserve. If you are ducking bent, keep along the coast to Currituck and Pamlico Sounds, which year after year justify their reputation as the best ground east of Texas for ducks, geese, brant and swans. Ocracoke, Beacon Island, Roanoke Island are places where duck rigs and guides are to be found. Close by Beaufort lies Morehead City, where the fisherman has a chance at drum, sheepshead, Spanish mackerel and sea trout.

If not interested in fishing or fowling, take a short run back into Virginia to Clarksville, where farmers welcome you to little-shot-over country pretty well stocked with quail and charge

Almost every sort of sub-tropical game stirs about here—quail, turkeys, ducks, deer—while almost the only variety of the finny tribe found in the waters is the catfish, large and gamy, while at Mayport, at the mouth of the river, there is fair sheepshead fishing. In the central part, in and around Weirsdale and Leesburg, there are a number of clear water lakes in which bass are plentiful, while birds of all kinds await the scatter gun.

Across to the west coast at Clearwater, near Tampa, at Sarasota, south to Englewood, Punta Gorda, Fort Myers and Naples, the quail, deer and turkey shooting is good, but the great feature is fishing—tarpon, kingfish and jewfish being found in great numbers, while in the Caloosahatchee River large-mouth black bass from two to eight pounds are caught. Over on the east coast the Indian River has the call. New Smyrna, Titusville, Cocoa and Fort Pierce offer wonderful quail, turkey, deer and duck shooting and such fishing as to make the most particular angler take notice—channel bass, mangrove and red-snapper, sheepshead, grouper, cavalli, sea trout, ladyfish and bonefish, and occasionally a tarpon.

Back north again to Tishabee, Ala., the home of bear; and deer, quail and turkey, too, are here to a considerable extent, though not as plentiful as in Florida. In Mississippi, turkey, bear and deer furnish good sport about New Albany, Scorba and Arcoola.

Tennessee has a close season on deer until 1915, but bear are impudent around Hickory Valley, Campbell and Anderson counties, as well as along the slope of the Great Smoky Mountains. A tremendous variety of feathered game, including quail, grouse, pheasants, turkeys, doves, snipe, woodcock, swans, geese, brant, abound.

Louisiana and Texas are probably the greatest game centers in America to-day. The entire gulf coast teems with tarpon, kingfish, mackerel, jewfish and ladyfish, the latter being a relative of the tarpon and rightfully is called the gamiest fish in the South. Ducks, swans, brant and other species of waterfowl may be killed to your heart's content. Louisiana protects pheasants, prairie chickens and wild turkey hens to 1916, while Texas protects until 1915 pheasants, prairie chickens, antelope and mountain sheep. In Louisiana the likely places are Covington, Lake Charles, Pearl River and Athens.

It seems almost impossible of belief, and yet it is true that within a few miles of Houston, Tex., a city of nearly 100,000 inhabitants, deer are abundant in the bottomlands, and wild turkeys are bagged daily in season. Wild geese, cranes, canvasback ducks, redheads, widgeons, pintails, black mallard, blue-wing teal and the common variety of mallard are found on the bays and on every inland lake and stream. Jack-snipe and woodcock are plentiful, plover by the thousands, and every field has its covey of quail. Wildfowl shooting, the best months for which are September, October, November, December, January, February and March, is mostly done from blinds and over decoys. The nearest and most preferred shooting grounds are Port Lavaca, Robstown, Palacois, Brazoria, this neighborhood being particularly prolific in bear and deer. For javelin hunting, than which there is no more exciting sport, Kingsville and the surrounding cacti, mesquite and chaparral offer abundant opportunity. Mountain lion, wild cats, bears and deer are frequenters of this section.

The Old Kentucky Turkey Shoot

By WILLIAM BRENT ALTSHELER

THANK goodness not all the interesting customs of the dear old frontier days are dead. There is one which is very live just now, and that is the turkey shoot. In colonial days, before the Revolution, one may recall traditions

of frequent matches in the straggling communities of the backwoods country now incorporated in Virginia, Kentucky and Tennessee. The tall lanky hunters attended then with their long flint-lock rifles, and, used to the pursuit of the buffalo, elk, whitetail deer, black bear, wild turkey, panther and smaller mammals and birds, accurate shooting was second nature to them. From the Atlantic to the Pacific, marksmanship is now practiced in new and different ways, the only notable exception perhaps being in Kentucky where the turkey shoot with its unique features survives. The firearms only have changed. Little different are the people. They are mostly thin and wiry, many from the farms and shops, a few from the professions and business callings.

There are various kinds of turkey shooting matches, but the one that carries the stamp of approval is where the live turkey is the target and the shooter, paying five or ten cents a shot, gets the turkey if he draws blood, and then it is immediately decapitated, so that it is not the cruel sport that one might suppose it is without due consideration.

The length of the range is regulated by the skill of the marksmen, the size of the turkey, the color and topography of the background and the conditions of light and atmosphere. It is a business proposition between the shooter and gamekeeper. If it is a losing game, the keeper will extend the range, pick out a small hen, and of a color to harmonize with the background, require shooting against a quartering wind or toward a bright blinding light, or, under the most aggravating conditions of all, on a dead flat range where one cannot gauge his elevation and windage.

I have seen the gamekeeper push his advantage in the selection of range conditions to an injudicious extreme, and the shooters case their rifles, jump the game and go home in disgust. The wise keeper will refrain from shutting out his patrons and even help them to win enough to keep up their interest and enthusiasm in the pastime. It is a poor sportsman who will not stay by the game as long as he has a fair show to win.

A few years ago I could rely upon a choice of several turkey shoots in easy reach on Thanksgiving day, Christmas and New Years. The ranges then were about as follows: Shotgun, 75 to 100 yards; pistol and revolver, 75 to 125; .22 caliber rifle up to 350 yards, and big rifles from 400 to 500 yards. Old shooters will recall when the ranges were not so long, especially for the short guns. Then a turkey was safe from pistol and revolver at a distance of 100 yards, and often the keeper won out on the fifty-yard range.

The development of arms and ammunition has changed this greatly. Strange to say, however, the rifle range has not increased in proportion; in fact, the rifleman from time unrecorded has been willing to spend his money on the shoot as long as he could draw, with the naked eye, a bead on the bird, and that cannot be much further than 500 or 600 yards.

CORRESPONDENCE.

The **FOREST AND STREAM** is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Terms: \$3.00 a year; \$1.50 for six months. Single copies, 10 cents. Canadian subscriptions, \$4.00 a year; \$2.00 for six months. Foreign subscriptions, \$4.50 a year; \$2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line (\$2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra. Special rates for back cover in two or more colors. Reading notices, 75 cents per count line.

A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Advertisements should be received by Saturday previous to the issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

NINETEEN ELEVEN.

THE year which has just closed was an average one, from the sportsman's viewpoint, that is. The winter weather was severe at times, but not for long, and the game did not suffer for want of food as in other years; an exception was found in Wyoming, where a good many elk, hemmed in by the advance of civilization, starved before hay was provided by the authorities.

In the northern tier of States where deer are most abundant in the wooded districts, and where deep snows often prove fatal to them in the late winter, conditions were about normal, with exceptions here and there. Further south the grouse and quail wintered fairly well.

The spring opened abnormally dry, with a low average rainfall for April. Early fishing was unsatisfactory in the main, and it was not until after the long delayed but heavy rains that trout fishing was even fair for a time. The summer throughout was extremely dry, the streams low, hence the fishing season was more or less of a disappointment. On the other hand, that great army of men and women that went into the woods on vacation journeys was greatly favored, one fair day following another in a delightful fashion seldom experienced. It is probable that more people enjoyed outdoor life last season than in any other year, and it is certain that they went further afield than ever before.

While 1911 was "an off year" for fishing, game birds were favored, especially in the more southerly sections, where big strong birds were found later on.

The autumn was very wet, and in place of drouth and disastrous forest fires, early hunters found full streams and moist skies; ideal conditions for deer hunting, but the bag was small, due largely, in some States at least, to the new laws against the sale of game. And this had marked effect on the wildfowl shooting along the coast, which was delayed beyond the usual time by the mildness of late autumn.

December was marked by flurries of snow and short periods of cold here and there, but in the main it was not wintry. Migrating ducks continued to fly over at times, southward bound, weeks later than usual. Robins were seen on fair days, and bluebirds were in evidence on the last day of the year.

Taken by and large, as seamen say, it was a year noteworthy for the vast number of people who spread over the known and half-wild regions in search of recreation. They went by way of the usual channels; they sought new routes. In motor cars and motor boats and canoes they went wherever it was possible to go—camping, idling, hurrying, as suited their individual tastes or the time at their disposal. But they returned healthier and happier than the stay-at-homes, and present indications are that they will go again this year, but in increased numbers.

THE WELCH CASE.

THE Supreme Court of California has written the final chapter in the now famous case of Welch vs. Ware. The record has been given from time to time in these columns, but a brief review of the case will explain the long fight made by a game warden who knew his claim was fair.

In June, 1909, Walter R. Welch was fish, game and fire warden of Santa Cruz county. While he was absent on duty the county supervisors removed him and appointed another man in his stead. Mr. Welch brought suit in the superior court against the county auditor and won. The supervisors got a reversal of the decision in the appellate court, and Mr. Welch has finally secured a favorable decision in the Supreme Court. During the litigation the supervisors who removed the warden were themselves removed by the people in the 1910 election, and the new board reinstated him as warden. Under the recent decision he will receive his salary for the full time he was out of office, but must recover the costs himself.

That Warden Welch is popular in Santa Cruz county is proved by the activities of sportsmen in his behalf. At different times the papers printed columns of matter on the subject, and the fight now and then was bitter. Mr. Welch was formerly deputy game and fish commissioner of the State, and was summarily discharged because, it is alleged, he would not wink at petty but not wholly honest practices favorable to violators. Following his dismissal he was employed by his home county, and in the long fight it was alleged that official pressure was brought to bear on the county commissioners, and his removal followed.

We congratulate Warden Welch and the sportsmen of Santa Cruz county on their victory.

In our issue of Dec. 16, Charles C. Worthington mentioned the killing, by a weasel, of a number of English pheasants in one night "last

summer." In the picture the weasel appears in winter pelage. We asked Mr. Worthington if his use of the word "summer" was not made hurriedly or as referring to the warm season in the general way often employed. He now informs us that this was not the case, but that he had in mind at the moment of writing a killing similar to the one reported, and which also took place at his pheasantries. At that time seventy-two birds were killed in one night. The weasel, and the pheasants it killed, shown in our issue of Dec. 23, were photographed in December. The birds were killed one night and the weasel was trapped the following night.

THERE is an active and increasing demand for wire fences in New Zealand. Timber is growing so scarce that it cannot be used economically in fence building. Scotch gorse hedges were tried, and while these are conceded to be very attractive and picturesque because of their bright yellow flowers, the plants spread rapidly and both the low scrub formed in this way in waste places and the hedges themselves harbor too many rabbits, hence the call for wire instead. So abundant are rabbits that on one branch of the Government railway which is maintained at a loss, the chief revenue is the freight paid on bundles of rabbit skins for export.

SIR JOSEPH DALTON HOOKER died recently at his home in London, aged ninety-four years. He was surgeon and naturalist on the British ship Erebus in the Antarctic expedition under Sir James Ross in 1839-43. He visited as a naturalist the Himalaya Mountains, Syria and Palestine, Morocco and the Greater Atlas. He was in the Rocky Mountains and California in 1877 and was president of the Royal Society, 1872-77. He wrote many books.

ON the following page we print an article of great importance to sportsmen who are seeking all available data related to the propagation of our native game birds. This is Herbert K. Job's paper on the experiments conducted during the past year with bobwhite at the Connecticut Agricultural College. The work will be continued this year.

IN Memphis arrangements are being made to drain a large portion of the sunken lands in Northeastern Arkansas and utilize them for agricultural purposes. The contract calls for about 200 miles of drainage ditches. A wide area will eventually be affected, and the shooting and fishing, now equalled in few other sections, will become a thing of the past.

SMITH'S ISLAND, off the mouth of the Potomac River in Chesapeake Bay, has been sold by the Lee family to Oliver Campbell, of New York city, who, it is said, will make a wildfowl preserve of it. The island, which is about seven miles long and half as wide, lies largely in Maryland, the southern end being in Virginia.

THE past autumn was the most successful one in the history of the Newfoundland cod fisheries, as the salmon fishing inland was the best of its kind in recent years. Perhaps the outside as well as the fresh water fishing was influenced by the improved methods laid down and enforced by the new fisheries board of the island.

The Connecticut Quail Propagation Experiment

By HERBERT K. JOB

BELIEVING that an account of the quail propagation experiment, which was conducted at the Connecticut Agricultural College last summer from the standpoint of those who actually did the work and of the resident college officials will be of interest, the following statement is issued for the public and the sportsmen of Connecticut.

The measure of success or failure of the experiment depends upon the point of view. It did not succeed, this first season, in raising a stock of young quail for distribution. On the other hand, despite various handicaps, every stage of the process of propagation worked out successfully, until a disease broke out among the numerous young birds when they were almost matured. Through the results of careful scientific work done, and still being done upon the problem, those who are in the best position to judge feel that a foundation has been laid which makes the prospect of final success far greater than ever before. Following is a brief summary of the facts in the case.

The experiment was conducted with an average of thirty pairs of our bobwhite quail. The first result was the perfecting of the details of a successful breeding system, by which even the wildest stock will breed abundantly in confinement. Most of our birds were thoroughly wild. Though we lost the best part of the breeding season through a late start, these thirty pairs produced 693 eggs. Our banner quail laid 73 eggs, the next 50. Only one hen quail failed to lay. The average was 23 eggs per pair. The fertility was 90 per cent. The system is simple and practicable.

The second result of the experiment is a successful hatching system. After preliminary tests the hatches were usually over 80 per cent. and ran as high as 95 per cent, which poultrymen will agree is not bad.

A third result is that an immense amount of detail as to the care and handling of quail has been quite thoroughly mastered. We wish to continue an elaborate series of scientific feeding tests, with a view to forestalling disease. We have worked out a promising system for game preserves which we are anxious to test out in detail this coming season. The quail chicks are beautiful and docile, and seem amenable to artificial conditions and management.

A fourth series of results, of most fundamental importance, is in the line of experimental work on quail diseases. Prof. L. F. Rettger, the bacteriologist of Sheffield Scientific School of Yale University, has been carrying on co-operative investigation in connection with poultry diseases during his vacation seasons at the Storrs Agricultural Experiment Station. He was allowed to give part of his time to the quail disease problem in conjunction with the ornithologist who is a member of the faculty of the Connecticut Agricultural College. Dr. Rettger has discovered the causative organism of at least one deadly epidemic disease of quail. He first

found it in a specimen from a Connecticut gun club from a batch newly shipped in, which had nearly all died. An inoculation test with healthy quail proved it the cause of the disease. Dr. Rettger is now keeping it in cultures, and if further specimens from various quarters prove it to be a widespread scourge of quail shipping, he proposes to attempt a vaccine or serum to render quail in captivity immune. He has also recently isolated another organism, first found in the young quail. Though there has not yet been time to demonstrate that this is surely the main cause of their death, this view received remarkable confirmation from the recent discovery by English scientists of a very similar organism in grouse, which they believe to be the cause of the grouse disease in England. If the above organism proves, through further investigation, to be the cause of the quail disease, from its nature it is believed that it can probably be eradicated or prevented by simple medicinal treatment. Moreover, it may give light upon the matter of the disease of the ruffed grouse and other game birds.

The work being conducted on the grounds of the Connecticut Agricultural College, and the bacteriological part being contributed by the Storrs Agricultural Experiment Station, received the interest and attention of President Beach, of Prof. Clinton, the director of the experiment station, of Prof. Stoneburn, who is head of the poultry department of the college, and others, and is fully approved by them. The experiment station is under the Federal Government and has regular Government inspection. The quail experiment, being connected as above with the station, received Government inspection and was approved. The work was also done in close co-operation with the poultry department, owing to which no accidents occurred. Unremitting care was given to the work, as those mentioned above will testify. The work with the young quail lasted each day till late evening, with night watches additional, involving sleeping outdoors by the brooders in a hammock.

The college and the experiment station officials, together with other important interests, believing that this work is of value and economic importance, and that it gives promise of solving a problem which would be worth a large amount of money to the State and the public, urge that it be continued for at least another year. To stop midway in a promising scientific quest already productive of useful results, on the ground that the final goal was not reached in a few months, appears to them an amazing proposition. The station's investigation of the white diarrhoea of chicks has already taken three years, and a proposed cattle disease investigation is liable to extend over five years. Yet the Government considers money thus used well expended.

The ornithologist is now completing a report on quail propagation, embodying the results of this experiment at Storrs and of another quail

experiment in Connecticut carried on privately in co-operation with him. It is the most thorough treatment of the subject that has ever been prepared. The director of the experiment station has examined the material, and considering it valuable, has asked permission to publish it for the experiment station as a Government bulletin in co-operation with the commission at the expense of the Government. Many persons who are experimenting with quail are asking for the report, so as to have the benefit of the new information for the approaching season.

Until the diseases, feeding and handling of quail are thoroughly worked out in a scientific manner, the whole problem of the artificial increase of quail will remain at a standstill. The depletion of the quail in one State for the benefit of another will never solve the problem. Just so long as shipments of quail are tried without understanding the disease problem, large numbers of them are practically sure to be swept off with the dreaded epidemic with grave danger of spreading it among the native quail and grouse. A small fraction of the game fund would continue this fundamental work. It may be remarked that the expense was not as large as stated in some of the papers. This whole matter naturally rests with the sportsmen of Connecticut, and it is for them to decide as they believe it most for the public good.

- April 17-19.—Wichita, Kans.—Kansas State tournament, under the auspices of the Interurban G. C. C. W. Jones, Sec'y, 209 N. Main St., Wichita, Kans.
- April 18.—Columbus (O.) G. C. L. Fisher, Sec'y.
- May 15-16.—Columbus (O.) G. C. L. Fisher, Sec'y.
- June 4-6.—Mexico, Mo.—Fifth annual State tournament of the Missouri State Trapshooters' Association, under the auspices of the Audrain Country Gun Club, of Farber, Mo. Russell Glynn, Sec'y.

DRIVERS AND TWISTERS.

The field shooter or the casual "going South young man," who hasn't tried the gameless game, had better chance it on this trip, after which he will become a devotee, winter and summer.

Don't overlook the fifth midwinter handicap tournament at Pinchurst, N. C., Jan. 24, 25, 26, and 27. This will be the first big trapshooting event of the new year, and indications augur well for a brilliant 1912, among the make-believe birds, if the events to follow live up to the standard set by Leonard Tufts, H. L. Jillson and the able board of governors of the Pinchurst Country Club.

As we turn over the new leaf, we find, tucked away among trapshooters' pledges to never again, Lester German's resolve to win the E. C. cup. As the ink on the new page dries it reads: "Not on your Ballistite, if I see you first," signed George Lyon. And so we see the new year begin with a resolve to and a resolve not to, and both in the shadow of the world's biggest trapshooting honor, the E. C. trophy.

There is one thing we all have to be thankful for during the past year, and that is, the accuracy with which our compositors have set up the scores that to any one but a printer were unintelligible. Our star linotyper once said: "Scores are easier to make than to set. I wonder if traps are as hard to set for shooters as is type?" But then tradition murmurs that printers are especially good at "setting 'em up," particularly T—cold Tea. Let's hope all scorers will resolve to send us legible scores for the year 1912.

The spread of the trapshooting habit is interesting. It has now reached into the realm of the winter resort to such an extent that one of the first questions the sportsman asks our Information Department concerning a place he has recommended is: "Have they clay pigeon traps?" I have noticed all through the South that hotels and camps have installed at least one trap, and the proprietors tell me that they are greatly surprised at the popularity of the game.

Trapshooting at hotels in the game country answers a manifold purpose. On rainy days, when it is impossible to go afield, the gunner can keep his hand in by breaking a hundred targets, which he can do without going from under cover. Many bird hunters like to "tune up" on a dozen clays before starting out on the day's hunt, thereby getting the "jump" on the other fellow.

Gunners going south from New York into the upper Southern States, generally arrive at the lodge or hotel early in the afternoon. They don't feel capable of getting "rigged" for the field after the railway trip. It is no uncommon occurrence, however, to find a half dozen of them making "a book" on the train for a match at the traps during the afternoon.

Sunday generally is a long day to the sportsman. He kills a great part of it roaming through the cover, "locating" beavies for the morrow. Where there are traps, he pleasantly whiles away the balance of the day

"picking up a bit of change" at the clay disks. Speaking of clay disks, the proprietor of one of the big shooting resorts in North Carolina told me that the clay disk has superseded the celluloid or ivory disk; in other words, on rainy days poker used to be the game; now it is trapshooting. Sky limit has given way to 40yd. limit.

The fifth annual tournament of the Keystone Shooting League of Philadelphia will be held at the club grounds, Holmesburg Junction, Pa., on March 14-15. The office will be under the management of Lloyd R. Lewis, of Atglen, Pa., while Charles North, of Cleveland, will be in charge of the traps. The general management of the tournament will be in the hands of Harry L. David, of Philadelphia. The club grounds have been greatly improved since the last annual tournament. The high board fence at No. 1 and 2 traps has been removed, and an 8-foot wire fence put in its place. Along nearly one-half mile of water front on the Delaware River, the trees, stumps and boulders have been almost entirely removed. This was done by the experts of the Du Pont Co., who made a practical demonstration of the uses of explosives in clearing up land and "putting the farm in shape." The roadway entering the grounds has also been rebuilt. In the regular program events the less experienced shots will be taken care of by the Squier money-back system. In addition to the regular program will be several extra events, carrying optional sweepstake conditions, entrance from \$1 to \$5, and money divided high guns. It is expected that this program will interest both the novice and expert marksmen as well, and a large attendance is anticipated. Lunch will be served on the grounds both days. Full program will be issued later.

New York Athletic Club.

PELHAM MANOR, N. Y., Dec. 30.—This was take-home day at Travers Island, cups shot for during November and December being handed to the winners, the men with the most winning numbers to their credit. The committee cup for scratch contestants finally went to B. M. Higginson, whose six best selected scores in two months netted him 141 out of a possible 150. For the handicap committee cup, D. F. McMahon led with 139. By virtue of having gained the greatest number of victories in the events since early November, R. L. Spotts was awarded the distance handicap cup. Dr. E. R. De Wolfe, the double-target cup and F. H. Schauflier the Christmas trophy.

For the second time in a week, C. W. Billings, chairman of the Olympic trapshooting committee, proved to be high gun for the day. He broke 88 targets out of 100. From scratch he led for the president's cup, and finished second in the other events. The summaries:

December cup, 25 targets, handicap:

Dr D L Culver.....	1 25	A E Ranney.....	1 19

Crescent Athletic Club.

BAY RIDGE, Dec. 30.—Good shooting and large attendance ushered out the old year at Bay Ridge to-day. F. S. Hyatt, by taking the leg on December cup, also became possessor of the cup. He made 93 out of 100 in the four shoots in the month. Take-home trophy was transported as per title by H. T. Spooner, with 88. W. W. Marshall, with 5 and C. R. Adams with 1 tied at 25 for leg on C. R. James trophy. The trophy went to J. P. Fairchild on a monthly score of 119. Stake trophy, handicap, was won by C. R. James, (1) 25. The summaries:

Take-home trophy, 100 targets:
H T Spooner..... 88 W W Marshall..... 71
F S Hyatt..... 85 J P Lamson..... 74
J F James..... 84 C Blake 74
C R James..... 81 R L Estabrook 72
*W D Hinds..... 80 A Bryant 71
J P Fairchild..... 80 A Blake 68
F Weilbacher 80 George Brower 84
*Guest.

December cup, 25 targets, handicap:
F S Hyatt..... 1 23 C Blake 2 17
J F James..... 0 22 A Blake 3 16
C R James..... 1 20 F Weilbacher 5 15
J S Lamson..... 5 19 G Brower 4 14
R L Estabrook... 5 18 A Bryant 4 13
W W Marshall.... 5 18 T W Hinds..... 0 22
J P Fairchild..... 2 17

Four best scores for month:
Hyatt 93 A Bryant 83
James 89 C R James..... 81

C. R. James trophy, 25 targets, handicap:
W W Marshall.... 5 25 J F James..... 0 21
C R Adams..... 1 25 C Blake 2 21
R L Estabrook... 5 24 T W D Hinds... 0 19
J S Lamson..... 5 23 F Weilbacher 5 18
F S Hyatt..... 1 23 A Blake 3 18
J P Fairchild.... 2 23 A Bryant 4 21
G Brower 4 22

Won by J. P. Fairchild. His best scores for the month were: 25, 25, 22, 24, 23; total 110.

Stake trophy, 25 targets, handicap:
C R James..... 1 25 W W Marshall.... 5 17
J F James..... 0 21 R L Estabrook... 5 16

Team shoot, 25 targets, handicap:
A Blake 3 24 J F James..... 0 19
C Blake 2 22-46 A Bryant 4 23-42
C R James..... 1 23
F S Hyatt..... 1 21-44

Jan. 1.—J. S. Lawson won a 20-pound turkey in the event at 25 targets, shooting with a handicap of 5; his score was 24. He offered a trophy, the first leg on which was decided yesterday by A. Bryant winning on a full score of 25.

J. F. James won the take-home trophy with a total of 95. He also won the J. P. Fairchild's trophy. The event was at 100 targets, 50 being trapped on Christmas Day. F. S. Hyatt led the field yesterday, and although Mr. James finished a poor fourth, his score on Christmas Day gave him the event with a total of 93. H. M. Brigham, the club champion took a leg on the Stake prize, and several trophy shoots were won by F. S. Hyatt. The scores:

Turkey shoot, 25 targets, handicap:
J S Lawson..... 5 24 C A Lockwood.... 2 20
J F James..... 1 23 A Bryant 5 19
G G Stephenson... 2 22 F S Hyatt..... 1 19
J E Murray..... 5 21 A E Edwards.... 3 18
M Stiner 1 21 J W Hessian..... 0 17

World's Doubles Shoot in Chicago.

CHICAGO, Jan. 1.—The first leg in the series for the world's title shoot in doubles was won yesterday afternoon by Fred Bills and Jesse Young with a grand total of 143. Jay Graham and E. W. Clancey, present champions, were the losers with a total of 142. Graham made the best individual score with 76 out of a possible 100 birds. The match is to be decided by the best two out of three. The marksmen were handicapped by a blizzard, driving directly across the traps. Graham won the 200-bird match, breaking 186 targets. The meet was the holiday event under the auspices of the Chicago Gun Club.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., Dec. 30.—Edmonson had all the best of it to-day, breaking the only straight—the best average—and won the spoon by beating Lewis in the shoot-off of a tie.

Shot at. Broke Shot at. Broke
Edmonson 120 110 Appel 100 65
Lewis 120 97 Neighbors 100 54

Tournament at Johnstown, Pa.

JOHNSTOWN, Pa., Dec. 30.—On Saturday last one of the largest and most successful trapshooting events ever had in the neighborhood of Johnstown, Pa., was held on the grounds of the Johnstown Gun Club, at Kelso Station, under the auspices of the Johnstown Gun Club and Camp No. 76 of the United Sportsmen of Pennsylvania.

Camp 76 of the United Sportsmen of Pennsylvania is principally composed of ardent fishermen, but among the number are about twenty trapshooters, who have had a small range in Dale Borough, part of Johnstown, Pa.

There is a movement on foot, however, for a consolidation of the trapshooters of Camp 76 of the United Sportsmen of Pennsylvania and the Johnstown Gun Club, which will possibly be consummated in the near future, and Johnstown will then have one of the largest and most enthusiastic trapshooting clubs in that part of the country.

There were thirteen competitions during the early part of the day for the prizes above mentioned, the summary of the day's shooting being as follows:

Table with columns: Name, Shot at, Broke, Per C't. Lists names like H M Rogers, E C Long, Wm Snyder, etc.

In addition to the above events there was a special competition at 25 birds, with six prizes, mentioned above, with results as follows: Long 22, Rogers 22, Snyder 21, Hill 20, Sliter 20, Smith 20, Bowman 19, Nycum 18, Hershberger 18, Barnhart 17, E. Ott 17, Boyer 17, Freidhoff 17, Sargent 17, Matthews 16, Strayer 14, R. Boring 13, C. Ott 13, Keiper 12, Doyle 12, Constable 11, Reiman 6.

In the shoot-off Long captured first prize, a carving set; Snyder took second prize, a hunting coat. The three-cornered tie for the third prize was won by Hill, who took down a fine cut-glass dish. Fourth prize, a safety razor, went to Bowman. Fifth, a tie between Hershberger and Nycum, was won by Hershberger, who received a jewel case, and sixth, also a jewel case, was won by Freidhoff in a five-cornered tie with Boyer, Earl, Ott, Barnhart and Sargent.

Larchmont Y. C.

LARCHMONT, N. Y., Dec. 31.—Ten men took the kink out of the targets as they flew like one possessed of delirium tremens, driven and checked by the high wind from across Hen and Chickens Reef. The feature of the Larchmont shoot last Sunday was the accumulation cup, which was won by Stuart Scott with 42 out of 50. Scott also took a leg on the vice-commodore's cup, the Alley trophy, a special scratch match at 15 birds, of which he shattered 14, and was high gun for the day. W. D. Hinds broke 9 in the 10-live bird scratch shoot, while D. F. McMahon made a full score with a 16 handicap in the 100-bird match.

The last limb for the December cup brought out the closest competition. E. G. Unitt, R. Johnson, W. J. Elias and R. L. Spotts had each won one of the coveted appendages, so that a shoot-off was necessary. Unitt with a handicap of 5, won the tie and cup. Dr. Culver didn't win anything, but he shot well, getting 93 in the 100-bird match. Scores:

Table for Special shoot, 10 targets, scratch. Lists names like W D Hinds, Stuart Scott, B M Higginson, etc.

Table for Special shoot, 15 targets, scratch. Lists names like Stuart Scott, B S Noyle, B M Higginson, etc.

Table for High gun trophy, 125 targets, scratch. Lists names like B S Noyle, Dr D L Culver, B M Higginson, etc.

Queens Club.

QUEENS, L. I., Dec. 30.—Inauguration day at the Queens Club was staged here to-day with a decidedly successful trapshoot, at which three trophies were calendered. Seven upper-class professionals added their efforts to the success of the day and shot as they usually do when they have to do a demonstration act.

W. Simonson won the trophy shoot from scratch at 25 targets with 22 dead. He also took precedence in the 25-target handicap trophy match, getting 23. The Moonlight handicap went to W. Hyland with 24 from a 2-rock handicap. H. Welles was high professional, getting a straight 25 in the first event, 24 in the second and 23 in the gloaming.

We wish the Queens club a successful New Year.

Table for Trophy shoot, 25 targets, scratch. Lists names like H Welles, W Sharpe, W Simonson, etc.

Table for Trophy shoot, 25 targets, handicap. Lists names like H Welles, W Simonson, N Apgar, etc.

Table for Moonlight handicap, 25 targets, handicap. Lists names like W Hyland, H Welles, R Chapman, etc.

Highland Gun Club.

EDGE HILL, Pa., Dec. 30.—In an interesting 100-bird match here to-day, C. H. Newcomb broke 97 birds, running 74 without a miss. He won Class B cup and spoon. He won also the protection race. Thomas Tansey shot well, finishing second, and making two straights of 25 each. Scores:

Table for Highland Gun Club with columns: Name, No. 2 was the year cup, No. 3 was for spoon, Events, Class A, Class B, Class C, Class D, Protection race.

The Du Pont Gun Club.

WILMINGTON, Del., Dec. 30.—Fifty-seven marksmen took part in the weekly shoot of the Du Pont Club yesterday afternoon. Among the participants were: Alden B. Richardson, of Dover, Del., ex-amateur State champion, and son of Senator Richardson, and Linn Worthington, professional, of Rising Sun, Md. Straight scores of 25 were made by J. B. McHugh, ex-amateur State champion, and W. A. Joslyn, both of Wilmington. The attendance was good, and the sport did not end until stopped by darkness.

W. S. Colfax, Jr., of this city, the present amateur State champion, was defeated by McHugh, for the Class A challenge cup. Colfax was the holder. This is not the State championship trophy. The men shot at 50 targets, the scores by rounds being: Colfax, 23 and 19; total 42. McHugh 21 and 25; total 46.

H. B. Smith, Jr., defeated O. V. Ort, the holder, for the Class D challenge cup. Both are Wilmington men. The scores were: Ort 27, Smith 35.

In a team race, nine men on each side, between the Sales Department and Operating Department of the Du Pont Powder Company, the Sales Department won—167 to 151. Amateur champion Colfax shot for the losing team and made a score of 24 out of 25. He was high man of the match.

The winners in the Coleman du Pont merchandise events were: Class A—Tie between L. D. Willis and William M. Foord, both former amateur State champions, 24 out of 25. Class B—W. M. Hammond, 22. Class C—Tie between L. C. Lyon and H. C. McClane, 21. Class D—William M. Francis, 19.

Table for Sales Department and Operating Department. Lists names like E du Pont, J T Skelly, Edward Banks, etc.

Individual scores: A. B. Richardson, 21 out of 25, W. Hammond 22, W. A. Joslyn 22, L. R. Lewis 21, J. A. Macmullen 15, H. W. Bush, 22, Edward Banks 22, J. B. McHugh 24, J. T. Skelly 21, L. Worthington 23, I. T. Roberson 23, E. P. Ewing 19, E. W. Crossan 16, Wm. Coyne 16, H. D. Betts 13, T. W. Keithley 20, T. Martin 22, O. V. Ort 14, J. W. Mathews 17, N. K. Smith 21, A. H. Lobb 18, E. H. Ford 9, L. C. Lyon 21, W. S. Gavan 18, H. W. Winchester 23, W. Tomlinson 20, Guy Lambert 7, A. J. Curley 11, C. D. Prickett 18, C. V. Ferriday 12, Eugene du Pont 22, Peyton 17, C. H. Simon 20, W. A. Jordan 15, F. A. Wardenburg 13, J. R. Bailey 17, D. S. Wood 10, G. S. Marshall 13, W. B. Smith, Jr., 16, Clyde Leedom 18, H. P. Carlon 20, C. C. Geron 18, H. C. McClane 21, W. S. Colfax, Jr., 24, E. A. W. Everitt 17, W. Edmonson 20, G. H. Mitchell 17, S. G. David 12, R. C. McArdle 17, J. H. Minnick 18, W. G. Wood 18, T. W. Mathews 13, William Francis 19, L. D. Willis 24, L. Turner 21, William Foord 24, Dr. Betts 15.

Bergen Beach Gun Club.

NEW YORK, Dec. 30.—About the biggest bunch of the season showed up to-day, twenty gunners calling pull. The usual 100-target distance handicap was the event. G. S. K. Remsen was the man of the hour, getting 90 birds and the trophy. J. von Boeckman missed one bird too many, and took second. The scores:

Table for Bergen Beach Gun Club. Lists names like G S K Remsen, J von Boeckman, J Martin, etc.

The New Year's Day shoot brought out a goodly bunch of trap enthusiasts. The scores, 50 targets, scratch:

Table for New Year's Day shoot. Lists names like M A Kelsey, S Van Allen, J Voorhees, etc.

New Rochelle—Stamford—Lakewood.

TRAPSHOOTING was begun last Saturday in the three places above titled, but complete scores are not at hand. At the New Rochelle Yacht Club, B. R. Stoddard got away with the big effort by winning both events programmed. He made 79 in the 100-bird handicap, and 43 in the 50-target New Year's handicap.

At the Stamford Rod and Gun Club the long handicap man, M. B. Foster, tied E. L. Match, shooting from scratch, was finally drubbed in the shoot-off for the president's cup. Mr. Hatch purloined also the turkey shoot with 24 out of 25.

At Lakewood, H. W. Hayden, of New York, packed off the cup in the 100-bird sweepstakes.

Meadow Springs Gun Club.

PHILADELPHIA, Dec. 30.—Wiley, Renner and Murdock were the three high men in to-day's shoot of the Meadow Springs Gun Club.

Murdock came within one target of tying Wiley for the Class A spoon. Wiley totaled 24, breaking 21 of his 25, and having a dead bird added handicap of 3 tacked to his total.

Renner clearly won the Class B honors. His clean score of 20 was the best made in that class, Emrey finished second with a score of 19.

Out of his 100 bluerocks, Murdock broke 89, his nearest competitors being Pratt and Soley, who broke 74.

Table with columns for names, scores, and Total. Includes Class A and Class B categories.

Essex County Country Club.

ORANGE, N. J., Dec. 30.—B. M. Shanley, Jr., broke 24 out of 25 targets and won the championship trophy here to-day.

Table for Championship trophy, 25 targets. Lists names and scores.

Table for Saturday trophy, 25 targets. Lists names and scores.

Table for Shanley cup, 10 doubles. Lists names and scores.

Table for Heller trophy, 25 targets. Lists names and scores.

Smith Gun Club.

NEWARK, N. J., Dec. 30.—Good weather generally produces good scores among good shooters. So far so good. Scores follow:

Table listing names and scores for Smith Gun Club.

Speedway Gun Club.

NEWARK, N. J., Dec. 28.—Louis Colquitt was high gun at the regular weekly shoot held Tuesday afternoon, Dec. 26, at the Speedway Gun Club, with a score of 161 "kills" out of a possible 175.

Table listing names and scores for Speedway Gun Club.

Marine and Field Club.

BATH BEACH, Dec. 30.—Paul R. Towne and E. H. Lott took all the prizes to-day. President Towne won the leg on December trophy, which also made the emblem permanently his, with a total score of 268 out of 300.

Bennett Gun Club.

GLOUCESTER CITY, Dec. 30.—Vicious weather put a damper on good scores here to-day. The pig event was the feature. Eight ties resulted. In the shoot-off Wm. Shimp took the crackle. Stokes Pickett put away Frank Bennett in the special shoot for ten beans.

Weekly shoot for 50-pound pig, at 15 bluerocks each: Martel 13, Shimp 13, Buck 13, Monohan 13, Brennen 12, Prickett 13, M. Monohan 13, Gibbons 13, Murray 12, Black 11, Burrows 11, Gibbons 11, Taylor 11, T. Monohan 11, Grater 11, Martel 11, J. Prince 10, Hargesheimer 10, Haley 10.

Shoot-off, miss-and-out: Shimp 3, B. Monohan 2, Buck 2, Martel 1, M. Monohan 1, Martel 0, Gibbons 0, Brennen 1.

Special shoot, \$10 a side, 25 bluerocks: Prickett 19, Bennett 17.

Special shoot, \$10 a side, 25 bluerocks: B. Martel 19, Grater 17.

Glenwood Country Club.

GLEN HEAD, L. I., Dec. 30.—It hasn't taken trapshooting many days to grow popular at the new Glenwood Country Club, and although W. S. Silkworth gets away with most of the silverware, he is being pushed harder each week.

Table listing names and scores for Glenwood Country Club.

Rifle and Revolver

Military School Rifle Shooting League.

The list of schools represented, the club secretary, and the N. R. A. judge follow:

Columbia (Tenn.) Military Academy—R. L. Garner, Sec'y; Lieut. W. H. Westmorland, U.S.A., Judge. Harvard Military School, Los Angeles, Cal.—H. M. Fletcher, Sec'y, and Judge. Miami Military Institute, Germantown, O.—E. J. Moterman, Sec'y; Lieut. C. R. Street, U.S.A. ret., Judge. Mt. Tamalpais Military Academy, San Rafael, Cal.—Maj. N. F. Vanderbilt, C. N. G., Judge. N. Y. Military Academy, Cornwall-on-Hudson, N. Y.—Douglas Leslie, Sec'y; Geo. S. Clark, Judge. Northwestern Military Academy, Highland Park, Ill.—W. Thode, Sec'y; Maj. R. P. Davidson, I. N. G., Judge. St. John's Military Academy, Delafield, Wis.—John Saunders, Sec'y; Lieut. C. F. Severson, U.S.A., Judge. Wentworth Military Academy, Lexington, Mo.—Warren E. Dewey, Sec'y; Capt. G. B. Pritchard, Jr., U.S.A., Judge.

The schedule of matches is arranged as follows:

Jan. 13.—Columbia vs. Harvard, Hitchcock vs. St. Johns, Marist vs. Northwestern, Miami vs. N. Y. Military, Mt. Tamalpais vs. Wentworth. Jan. 20.—Columbia vs. Hitchcock, Harvard vs. Wentworth, Marist vs. St. John's, Miami vs. Northwestern, Mt. Tamalpais vs. N. Y. Military. Jan. 27.—Columbia vs. Marist, Harvard vs. Hitchcock, Miami vs. St. John's, Mt. Tamalpais vs. Northwestern, Wentworth vs. N. Y. Military. Feb. 3.—Columbia vs. Miami, Harvard vs. Marist, Hitchcock vs. Wentworth, Mt. Tamalpais vs. St. John's, N. Y. Military vs. Northwestern. Feb. 10.—Columbia vs. Mt. Tamalpais, Harvard vs. Miami, Hitchcock vs. Marist, N. Y. Military vs. St. John's, Northwestern vs. Wentworth. Feb. 17.—Columbia vs. N. Y. Military, Harvard vs. Mt. Tamalpais, Hitchcock vs. Miami, Northwestern vs. St. John's, Wentworth vs. Marist. Feb. 24.—Columbia vs. Northwestern, Harvard vs. N. Y. Military, Hitchcock vs. Mt. Tamalpais, Marist vs. Miami, St. John's vs. Wentworth. March 2.—Columbia vs. St. John's, Harvard vs. Northwestern, Hitchcock vs. N. Y. Military, Marist vs. Mt. Tamalpais, Miami vs. Wentworth. March 9.—Columbia vs. Wentworth, Harvard vs. St. John's, Hitchcock vs. Northwestern, Marist vs. N. Y. Military, Miami vs. Mt. Tamalpais.

The conditions governing the competitions are:

Eligibility.—Open to teams from rifle clubs representing a military school or a private school having a military department, affiliated with the National Rifle Association, and in good standing. Any number of club members up to ten may shoot on the team, the best five scores to count for the team's record score.

Distance.—Fifty feet from end of rifle to target. Number of Shots.—Twenty for record. Ten standing and ten prone, ten shots on a target; no sighting shots. Target.—The N. R. A. gallery targets, furnished by the N. R. A., must be used. No other targets will be received for record. Used targets will be held subject to call by the N. R. A.

Position.—Standing: Body and rifle must be free from all artificial support. Prone: Head toward target, rifle, forearm and hand must be free from all artificial support. Use of strap not allowed in either position.

Rifle.—Any .22cal., weighing not over 10lbs. Sights.—Any, in front of the firing pin, not containing glass. Trigger Pull.—Not to be less than 3lbs. Ammunition.—Twenty-two caliber short. Time Allowance.—Ten minutes will be allowed for each string of ten shots.

Judges.—A judge appointed by the N. R. A., or his representative, will supervise the shooting of all matches and certify to the scores made. He will see that all conditions are adhered to, determine the score and report same to the N. R. A. by mail on the official blank at the completion of each match. He will take charge of the official targets before and after the match.

Matches, when Shot.—Harvard School, Hitchcock Military Academy, Mt. Tamalpais Military Academy, and St. John's Military Academy will shoot on Monday of each week or the Saturday preceding if preferred; Wentworth Military Academy, Miami Military Institute, and Northwestern Military Academy on Tuesday, and Columbia Military Academy, Marist College and N. Y. Military Academy on Wednesday or before.

Entrance Fee.—Three dollars per team. Prize.—To the team winning the most number of matches a plaque emblematic of the military school rifle shooting team championship and five silver medals to the individual members of the team.

The Interscholastic Indoor Championship Team Match for the Astor cup for 1912 will be held during the week ending April 20.

Seventh Regiment Rifles.

THE first perfect score of the season on the Seventh Regiment range was made on Dec. 29, by Lance Corporal J. K. Boles, Company I. In sharpshooters' Class Pvt. D. S. Steele, Company G, was top with 66 and 65.

Novice Class went to Pvt. A. R. Ten Eick, Company G, with 68 and 64. Ten men qualified as sharpshooters.

First entry prize winners were: Expert, Pvt. P. E. Grannis, Co. K; sharpshooter, Lieut. Fred Nicoll, Company L; novice, Pvt. A. R. Ten Eick, Company G.

A DAY WITH TENNESSEE QUAIL.

Continued from page 10.

ing two birds, but the man traveled ten feet to the dog's one.

A hawk pitched out of a thicket on which we doubled and were not sorry to find it a very dead bird. A little further on we found a small covey, getting three birds on the flush. They swung round and went back to the woods, and we did not follow them.

In the next field the dog pointed, and we hurried to position. Just as we reached him he sighed heavily and lay down with his nose at a mouse hole.

"Blown up," said Charlie, in disgust. "Run himself right off his feet. We will strike for the station; I don't want to have to carry him."

We took it easy, strolling along with the dog ambling a few feet ahead. We had to lift him over every fence. Getting a little lead, when we stopped to rest at a fence, he pointed again.

"Bet he is asleep before we get there," said Charlie, as we dropped off the fence and leisurely approached.

"Don't even see the mouse hole, this time," said he, as we ranged alongside the dog. I was about to advise him to look close, when the finest covey of birds we had yet seen burst out of the weeds at our feet. They caught us napping, but we got into action with very little lost time, and no lost motion. Charlie's first barrel cut down a single, swinging to his right; I got one straight away, feathering another badly that happened to be in line, and we each scored with the second barrel. I marked down my wounded bird, and following got it, making five birds on the flush.

The covey divided, some going in the direction we were taking, and of these we found three

more, getting two of them. The last bird I killed fell in thick cover and I tried to get the dog to help hunt it; in fact, went at him rather rough when he did not respond to repeated "Seek dead."

"Let him alone, please," said Charlie. "I will hunt the bird. He is about all in, and I have got to get him home."

Arrived at the railroad, the dog dropped down and fell asleep, and he never stirred when we pitched him into the baggage car.

It was a fine hunt, and I agreed with Charlie, who said: "Taking it all in all, it has been a day full of the unexpected."

FLY-FISHING IN NORTH CAROLINA.

Continued from page 13.

which Drs. Abell and Stringfield are members, and always ready to extend the hand of good fellowship to true sportsmen. George W. Vanderbilt has some of the finest trout water in these mountains including Davidson River, Mills River and North Fork of the French Broad River. Beyond Waynesville there are streams all the way to Murphy; some far back in the forest, others quite near.

Dr. Daniel Bryson, of Bryson City, or his brother, Thad Bryson, would give intending anglers desired information at Bryson City, sixty-five miles west of Asheville.

My rods have been put carefully away till next spring when, if a kind Providence wills it, I hope again to wade the clear waters of our streams for the shy, but beautiful inhabitants thereof. I have now taken up my gun, and with my little Irish setter bitch Nellie, Jr., bagged thirty partridges last Saturday in an adjoining county.

Partridges (quail) are plentiful this season, it seems, all over the State.

WILDFOWL IN CURRITUCK SOUND.

Continued from page 16.

search of gunning, I had one day of very moderate shooting, followed by ten days of mild summer weather, during which no fowl were to be seen in the daylight hours, though at night they were constantly heard going and coming to and from their feeding grounds.

The first day of my visit I went to a little pond perhaps 200 yards wide and twice as long. The sky was gray, there was a brisk northeasterly wind which during the day increased until it assumed almost the proportions of a gale.

The club watehman who met us as we went into the pond said that a fair number of birds, from fifty to seventy-five, fed there nightly, but usually left in the very early morning. But we were hopeful that the wind and the threatening weather might bring a number of them back before the day was far spent. It did not take long to put out our stand of decoys, using for this pond shooting chiefly blackducks, mallard and widgeon decoys, since canvasbacks and redheads rarely enter these ponds unless they are birds that have been wounded by gunners in the open waters. Because we had with us a young dog whose education was being looked after, we had brought no live decoys.

It was not very long after we had finished tying out that we had our first excitement, a duck appearing far to the eastward and gradually coming nearer and nearer, until it could be recognized as a blackduck. Would this first duck come into our stools; would he go into a long and narrow pond 500 or 600 yards south

of us, or would he go to the decoys of some friends who were tied out in a little bay less than half a mile distant? They had gone there especially for geese and had eight or ten live goose decoys, besides a good number of wooden geese and some ducks, the whole making an imposing show. The point where they had tied was commonly used at night by a flock of 100 or 200 geese and was also directly on a flyway between two large channels of Currituck Sound.

The blackduck that was approaching, with true blackduck wisdom, steered a middle course, avoiding the party of goose shooters on the one hand and our blind on the other, and passing between the two, flew straight to the little long pond and disappeared in the cane that surrounded it. Only a little later, however, a pair of mallards came over the marsh high up and directly toward us, and seeing the decoys, lowered their flight to inspect them, but showed no signs of stopping. I fired both barrels at the pair, but ingloriously missed the drake and killed the duck. A little later a single blackduck came in absolutely unsuspecting, lowering its flight as it approached the decoys, until with down-curved wings and outstretched neck he hovered almost over them, standing quite still in the air, so that I succeeded in killing him.

Now followed a long wait, broken at last by the rising of a large swarm of geese in the southeast, disturbed no doubt by the passage of a boat. These geese extended north and south, I should think, for half a mile, and most of them flew north on the east side of the Sound. Several small bunches, however, turned northwest and approached our blind with apparently slow but really rapid flight.

It was not to be supposed that they would come near enough to us to be shot at, but there was a prospect that they might go down to the goose shooters. Presently, as the distant birds approached, we could hear the clamor of their honking, and a little later, and much more distinctly, the call of the boatman with the goose shooters, and then an outbreak of cries from their decoys. Slowly the foremost bunch of wild geese swung off in the wind, and gradually lowering their flight turned toward the geese decoys, but apparently too high in air to alight to them without swinging once more. A moment later, however, I saw three geese tumble earthward from the flock, while the remaining birds laboriously climbed and flew away toward safety. Because of the wind I had not heard the shots that brought the geese down. The cane was of course so tall that the gunners were wholly concealed from us.

There was another long wait. We had watched the horizon until our eyes were tired, and I was sitting down and beginning to doze when suddenly in the air immediately above us sounded the loud hissing noise which the duck shooter recognizes as made by a bird dropping from high up in the air, and looking up I saw over the decoys and swinging away at lightning speed a widgeon that had dropped earthward, while away to the left were two others also going on, the three evidently having passed within shot during the period of careless relaxation. Certainly eternal vigilance is the price of getting shots from a blind in fair mild weather.

It must have been near noon when a pair of mallards came in, and after making the circle

The Marlin Model 20 REPEATING RIFLE

The 136 page Marlin catalog will help you decide what rifle best suits your individual desires. Send 3 stamps for it today.

You can buy no better gun for target work and all small game up to 200 yards. Without change of mechanism it handles .22 short, long or long-rifle cartridges, perfectly. The deep Ballard rifling develops maximum power and accuracy and adds years to the life of rifles.

The solid top is protection from defective cartridges—prevents powder and gases from being blown back. The side ejection never lets ejected shells spoil your bead and allows quick, accurate repeat shots. With simple take-down construction, removable action parts—least parts of any .22—it is the quickest and easiest to clean. A great vacation rifle. Ask any gun dealer.

The Marlin Firearms Co.
27 WILLOW STREET, NEW HAVEN, CONN.

of the pond, always out of shot, alighted in the further end of it, and sat there with heads up, looking about. When they had first been seen, my boatman and I had sunk out of sight, and now we watched them through the cane, wondering whether by any chance they might swim up to our decoys. I made up my mind that if they did so, I would slaughter them on the water without benefit of the clergy.

For a little while they swam about alarmed, and more or less suspicious, and then the female began to feed, while the drake scratched his head with his foot, preened his feathers, and lowering his beautiful head, began to move slowly toward us. The two came on very deliberately and in time would possibly have reached the decoys, but fate had arranged that they should not be shot at on this occasion, for a pintail coming from the southeast had lowered to our decoys, and though he showed no disposition to stop with them, he was within shot just before he passed over the blind, and I was lucky enough to kill him by one of those shots which are perhaps easy enough for those who know how to make them, but always difficult for me. The discharge of the gun of course sent the two mallards off with frightened quackings, and after the pintail had been retrieved, matters settled down to dullness again. Lunch was eaten, and while this was going on there was a little stir among the fowl. I have often noticed that between the hours of 12 and 2 o'clock there is frequently a small movement of birds, though what causes it I do not know, nor do I know whether gunners generally have observed the same thing. I think it takes place oftener than not, though I confess to a lack of definite observation on the point.

The afternoon wore away, a bird or two being killed occasionally. The weather conditions were admirable for gunning, and it was hard to say why more birds were not moving about. About the middle of the afternoon a large flock of geese, flying rather low on account of the north-

erly wind, were seen coming toward us. As they passed near the blind of the goose shooters they were vociferous in their replies to the calls of the decoy geese, but did not approach them, although they lowered their flight very considerably as they passed them to the eastward.

My boatman and I were crouched out of sight and I had put into my big gun some cartridges of B shot. On and on the birds came directly toward us, and as they were passing a little to the west, and just about a gunshot off, I gave them both barrels and two geese dropped out of the flock and fell on the water with a resounding splash. This was the last interesting shot of the day; in fact, I may say the last interesting shot of the trip. After this day came the tropical weather and at last I returned home feeling that my excursion had been a failure.

The passage of the Bayne bill, which prohibits the sale of game in New York, promises to inflict much hardship on these market gunners of North Carolina—and of course of other localities—who have always heretofore depended for a winter income on the shooting of wildfowl.

It is true that Philadelphia, Baltimore and Chicago are still large markets for wildfowl, but after all it was on the markets of New York city that the gunners chiefly depended, and the agents who purchase ducks from the individual collectors have either ceased to buy altogether, or else offer prices very much below those which usually apply in the markets along the shore.

These local gunners believe that Northern sportsmen are in some degree responsible for the passage of this law, and this has created much bitterness of feeling. As is natural, these men consider only the hardship to themselves. They do not know that on Long Island there is a large population of market gunners that have to endure the same hardships as the North Carolinians. They do not consider that the New York market men complain, that hotels and restaurants are affected, nor do they consider the possible far-reaching consequences of the law. They

recognize only that their income from gunning is reduced or cut off.

The people who feel bitterly about this are for the most part quite ignorant of conditions beyond the limits of their own small community. There is another and much larger portion of the population along Currituck Sound that takes a broader view of the matter.

It was twenty-five or thirty years ago that a veteran gunner, who still lives, declared that twenty years would see the end of wildfowl shooting in Currituck Sound, and that then the blue peter would be the game bird of those waters. Needless to say the prediction has not come true. There are not as many wildfowl as once there were, but they still exist in vast numbers, and since the passage of laws prohibiting spring shooting, they have begun to increase again. We shall long have good shooting in Currituck, but it will come only with proper duck shooting weather. As the years go by the ducks are certain to become wiser and wiser and better able to protect themselves against attacks by man. Moreover, the time is coming when, in this country as is now done in Great Britain, great numbers of ducks will be hand reared and turned loose. There will be shooting for all hands for many generations to come.

THE OLD KENTUCKY TURKEY SHOOT.

Continued from page 17.

The history of the revolver on the turkey range correctly recorded reads like a chapter from a volume of romance; in fact, recently published authenticated records of long distance revolver shooting at Kentucky turkey matches have been pronounced hot-air reports, and even experts at first accepted them with strong misgivings. The development of the long range possibilities of the revolver was a graded act and covers a period of several years. It is the logical result of the friendly rivalry between shooters to beat the keeper at his own game. In States where turkey shooting is under the ban, silhouette or shadow turkeys have been cut from black cardboard and fixed on white background and expert revolver shots tested out the distances recorded at the Kentucky shoots and surprised themselves at the good results; in fact, matches at the shadow turkey have become a distinct sport. They are quite popular at Denver and other points in the West, which is the great training ground for good all-round marksmen, but strange to relate, is unfamiliar with the turkey shoot.

During the past decade the revolver jumped into great favor with the Kentucky shooters. It was about the time the weapon was perfected in the officer's models in .38 and .44 calibers, swing out cylinder, adjustable rear U sight, symmetrical in form, beautiful workmanship and perfect balance. It is a handy weapon and soon wins the owner's lasting attachment. It can be dropped into the overcoat pocket, swung under the arm or at the belt in a holster, consequently the Kentuckians got in the habit of taking it along, and leaving the rifle behind when inconvenient to carry and handle, especially in a rain or snow storm. The attendance on the revolver range increased, the shooters displayed marked proficiency, and as the turkeys were won more frequently, the stake was moved out. A turn of the screw raised the rear sight, and a little

more care was displayed by the shooter.

Beginning at 100 or 125 yards, the ranges were increased from year to year by the addition of twenty-five to fifty yards till in the course of a few years they were at a distance unheard of for revolvers elsewhere.

It was at Pewee Valley, Ky., a suburban town connected by trolley with Louisville, that the culmination was reached. The occasion was the New Year, 1910, turkey shoot and burgoo, conducted by Richard Schultze, a riding master, thoroughbred trainer and a sportsman of the first water. Somehow the conditions all favored the revolver. The rifle range had to be abandoned on account of the steel bullets of the small-bore high-power rifles missing the embankment, and striking a house among the hills. The crack shooters all were then confined to the revolver. It was a cloudy day with the light strong enough, however, and diffused perfectly. There were no shadows nor annoying glare. The range was in an apple orchard across a shallow depression with a sharply contrasted background made by the far rise.

The turkeys were generously large, and starting at the 200-yard stake, were moved out twenty-five yards at a time to save the marks till the shooters, with their rear sights screwed up on the last thread, were shooting over a paced range of 300 yards. All dropped out except the four luckiest and best shooters, who, after they had gotten their hands in, averaged a turkey every fourth or fifth shot, the last ten or a dozen turkeys going to the 300-yard stake.

This now famous incident is not referred to as typical of the Kentucky turkey shoot, but as an extraordinary and unusual occurrence. However, the revolver range for the Pewee shooters and their friends has for the past two years been established regularly at 300 yards, and the shooters are always ready and eager to buy tickets all day at ten cents each to shoot revolvers at turkeys at 300 yards, provided they are of average size or larger, with favorable light and background.

It should be remembered that factors other than distance are very potent in turkey shooting. The wise old keeper can tie out a small turkey on a selected adverse range of 175 yards or less that will puzzle the best revolver shot, and the same will hold good with rifles. Subsequently one of the Pewee quartette made four straights on the last four turkeys exposed on the 300-yard revolver range. He may never do as good again.

A few years ago one could attend one of these shoots and have a good opportunity to study rifles of antique types, but recently the modern rifle has supplanted the old ones. The most popular now is the new Springfield army rifle of flat trajectory and accurately adjusted sights, or well known sporting models of the same calibers with peep sights, using the hard sharp-pointed bullet and smokeless powder. The turkey shooter, however, prefers black powder for the

I Want Some of THE BLACK SHELLS

When you say that to your dealer you'll see him smile, for he'll know there's another member in the "Sure-Shot Club"—another customer for him who knows good ammunition. Oh, they are all joining, for one by one they are giving the BLACK SHELLS a trial and are learning for themselves what these better shells will do for their scores.

The success of the BLACK SHELLS didn't "just happen." There are reasons why they give the men who try them the best shooting they've ever known. Here are a few of the reasons—look 'em over:

The primer used in the BLACK SHELLS contains no mercury and no ground glass. The results are quickness and uniformity—better scores and bigger bags. You doubt it? Try it.

Fractions of a second count when you are after a bird on the wing—that's why we make the Flash Passage (the hole in the head through which the flame from the primer reaches the charge) 100% larger than in ordinary shells. There's no chance for hang-fire there. BLACK SHELLS have a solid head and are really water-proof. Even a ducking won't hurt them.

There are *three* classes of BLACK SHELLS:

ROMAX, a black powder shell with 5/16 inch brass.

CLIMAX, the most popular smokeless (both dense and bulk) shell made. Has one-half inch brass.

AJAX is the highest grade smokeless (both dense and bulk) shell made. It has a long one inch brass.

Send for book about shells. If you enclose 10c we will send a beautiful colored poster, 20 x 30 inches, called "October Days." Sure to please every shooter.

FOREST AND STREAM PUBLISHING COMPANY

AMERICAN DUCK SHOOTING

By George Bird Grinnell

Describes every species of duck, goose and swan known to North America; tells of the various methods of capturing each, the guns, ammunition, loads, decoys and boats used in the sport, and gives the best account ever published of the retrieving Chesapeake Bay Dog.

About 600 pages, 58 portraits of fowl, 8 full-page plates. Price, \$3.50 postpaid.

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK

revolver, as being more uniform and reliable. Some matches are at the heads of turkeys over short ranges. Others are at dinner plates or at targets or other marks, turkeys being awarded to the winners. But no mark nor target, except the real game itself, excites the interest and enthusiasm of the shooter as the live turkey fully exposed to view. It is a virile manly sport and long may it survive.

BIG GAME AND HOUNDS.

"Pow, pow; pow, pow; boom, crash, bang!" It sounds like a sham battle in the stillness of a crisp and frosty morning. The sharp and unmistakable crack of the high-power rifle rattles through brake and wood and echoes as it meets the distant hills. The dull roar of a heavily charged shotgun, shooting a single ball, mingles with the falsetto of the rifle and reverberates through the valley. The crash of guns fades away, melting into the silence. The rich notes of the deep-throated hound are hushed. Then clear and mellow a hunter's horn awakes the stillness. Huntsmen draw rein and stand in their stirrups, immovable as statuary, as three clear blasts break the news to a listening, expectant camp.

It is the signal—three blasts—a bear has been killed. There will be "ba'r meat" in camp to-night. As the news is flashed on the morning's breeze horsemen put spurs to their steeds and a dash is made for the direction of the hunter's horn. One by one they crash through the heavy Mississippi cane brake, through tangled vines, jumping fallen logs, and boggy places and draw rein with the silent company gathered there.

It's a bear, a great shaggy fellow, a monarch of the forest, and he's dead. Standing sentinel-like over the great carcass, are the bear dogs, pulling at the fallen king, and growing savagely. Right on top of the monster hulk, proudly surveying the rest of the pack stands a giant hound, rough and shaggy, tall and rangy, his great fangs grinning defiance to all intruders of canine persuasion. He is the king of the fighting dogs, and he was "in at the death." When the battle came, he was at Bruin's throat, and the hunters were fast and furious with their fire to save him. Old Shag cared not for that, however, for fear is no part of his makeup. Half hound, half terrier, he is a fighting dog of rarest courage and quality. His nose has not the keenness of the "strike" dogs, his deep notes were not heard throughout the exciting chase until near the finish and the time to fight, but Shag was there at the end and when the rest of the pack snapped at the shanks and the hocks of the bear at bay, Shag was at his throat with a hold that knew no loosening, till death brought the parting.

Did you ever see a bear ahead of the hounds, going through a cane brake or a thick scope of forest and underbrush? Did you ever hear one, then, if you haven't seen him? Strange as it may seem, a big bear can outrun a pack of dogs at first through thick cover. Shaped like a wedge, with his nose the edge or point, the bear tapers out until he reaches his full bulk at the rump. Strong as an ox, it is no wonder this strength enables his wedge-shaped bulk to part brake and undergrowth with ease. Again, a big bear coming at full speed is calculated to make one very nervous, to put it mildly, for the noise is not unlike the rushing of a heavy freight train. Nothing stops a black bear in flight.

But presently the great fellow begins to tire. Black bears are always fat, for they are hearty feeders. As he slows down, the baying pack narrows the space between them. The music of the hounds increases in volume, and suddenly it is augmented by the cavernous notes of old Shag and the other fighting dogs. They had been trailing the pack, unable to keep up, but have now seen the bear and here is where they get into the game.

The music changes. There are new sounds, discordant notes in the melody. It is broken up. The regular tonguing has hushed and in its stead is heard the short sharp yelps of fighting dogs. Deep growls and snarls from bear

NEWFOUNDLAND

A Country of Fish and Game. A Paradise for the Camper and Angler. Ideal Canoe Trips.

The country traversed by the Reid Newfoundland Company's system is exceedingly rich in all kinds of fish and game. All along the route of the Railway are streams famous for their SALMON and TROUT fishing, also Caribou barrens. Americans who have been fishing and hunting in Newfoundland say there is no other country in the world in which so good fishing and hunting can be secured and with such ease as in Newfoundland. Information, together with Illustrated Booklet and Folder, cheerfully forwarded upon application to

J. W. N. JOHNSTONE, General Passenger Agent, Reid Newfoundland Company, St. John's, Newfoundland.

Who uses Dead Shot?

Amateurs 1911: Grand American Handicap, won by Harvey Dixon, Oronogo, Mo. Score, 99 out of 100, from 20 yards. Powder, Dead Shot.

Professionals 1911: Season's High Average, won by Mr. John R. Taylor. Score, 2038 out of 2100. Powder, Dead Shot.

Why do winners use Dead Shot?

It meant \$1,000 in cash to Mr. Harvey Dixon, besides the Interstate trophy, to win the Grand American Handicap. To win he had to select his powder with utmost thought and care. Isn't this substantial evidence that "DEAD SHOT" is the powder for amateurs as well as professionals to use?

For professional shooters the winning of the "Season's High Average" is the crowning achievement. Four years out of five, professionals using "DEAD SHOT" have won this coveted honor. Is it any wonder that professionals prefer "Dead Shot?"

You, too, will prefer Dead Shot if you will try it—compare its patterns and its penetration with that of any other powder. Once acquainted with Dead Shot you will always prefer it.

All dealers carry Dead Shot loads in stock. We guarantee the stability of Dead Shot.

and fighting dogs alike join in the bedlam and now and then a hound gives a yelp of pain. It is unmistakable. The chase has stopped abruptly. Old Bruin, tired, weary of parting the brake and tangled vines, has stopped to fight and the medley of snarling, growling and yelping tells the hunters around that the fight is on.

They must hurry. Every moment counts, for the bear is mauling the dogs, and good bear dogs are hard to get. Each rider puts spurs to his horse and makes for the scene of the fight as rapidly as the heavy cover will permit. It is a free-for-all, and the lucky man wins. No ceremony in this. The first one there gets the shot, for delay is fatal—to bear dogs—when the fight is in progress. Two or three are lucky and reach an overflow about the same time. There, in full view is old Bruin, backed near a giant tree, reared on his haunches and fighting savagely. All about are the hounds, snarling and snapping, and Bruin, watching his chances, is mauling the more venturesome ones, sending them spinning with vicious cuffs from his ponderous paws.

It is over in a moment for what chance has any living thing against modern high power rifles when shooting the soft-nose or mushroom bullet? The sham battle is brief and exciting, and bleeding and torn, a great bear lies dead in the leaves. The bear dogs fight each other now in arguing hound supremacy.

But there is another moment for the hunter who follows the hounds that causes the heart to beat fast and every fiber of his being to thrill. This time the deer pack is out, a drive is being made, and a long line of deer hunters has been stationed across the forest along the accustomed "run." Miles and miles the master of hounds piloted the pack before cutting them loose, away to the south, for the "drive" was to be to the north.

Throughout all times poets and historians have told of the stag and the hounds, and from earliest times to hunt the deer was to hunt with hounds. A hound would rather run a deer than any other animal, as a matter of fact, for a fresh and hot deer scent nearly runs a hound crazy. A deer gives off two kinds of scent, a strong body scent, and a breath scent as well, the latter resulting from its browsing on bushes and shrubbery. To-day, as in the long ago, the real deer hunt is with the hounds.

As the hunters on the stands wait in silence, the stillness of the forest is broken. There is a roar, for old Jo has struck the scent and opens up. It is fresh and hot, and the others take it up. It is one chorus of exultant, ringing music, sweeping through the bottom and on and on to the hills—a grand anthem in the great tabernacle of the wild!

Louder and clearer grows the baying of the hounds. Each man on the stands feels his heart beat quicker, and more firmly he grips his rifle or shotgun and hastily examines the weapon to see if it is in shape. Each one searches the woods to the south for the first trace of a speeding deer. On comes the race. Each moment the music gathers volume.

The deer must be very near, and is, for about two hundred yards to the south a splendid buck, jumping bushes and logs with ease, is galloping gracefully ahead of the hounds. It is time to act. The rifle goes to the shoulder, a swift glance down the barrel, the eye takes in the vision of a passing deer, and the hunter fires. Then it is the deer seems another animal. Straight up over his back goes the buck's white tail, he gives a great bound, straightens out and starts a great bound, straightens out and starts away with the speed of the wind. But the hunter does better this time. The next shot cuts right behind the quarry, the third causes the buck to spring high into the air. He gallops on another hundred yards—then down he goes, and the proudest man in the world is the man who had that stand and made that shot at a running buck.

In many of the States it is lawful to hunt deer with hounds, and such laws have been enacted for the protection of the game, on the theory that the hound not infrequently runs deer clear out of the country. But be this as it may, the chase that thrills is undoubtedly the one that

The Angler's Workshop

ROD MAKING FOR BEGINNERS

By Perry D. Frazer

Every practical angler has some room, or corner of a room, that he calls his workshop, and he obtains almost as much pleasure in working in it during the winter as he derives from his summer's fishing. He may not make rods, but he likes to "fuss over them," altering them to suit his pet ideas, making necessary repairs or renewing frayed windings. Others, who have a few suitable tools—and very few are needed—make excellent fishing rods. It is really surprising how many such rods have been produced in this way since Mr. Frazer's book has been on the market.

"Rodmaking for Beginners" was not "written over the heads" of beginners. Anybody who knows how to manipulate a plane can follow the instructions, and every old angler finds useful hints in it.

Besides being the first book on practical split-bamboo rodmaking, it contains chapters on rods of all sorts, for fresh and salt water fishing, and is of value in repair work.

Cloth, 180 pages, several full-page illustrations and 60 working drawings. Postpaid, \$1.00.

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He knows it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is Lefever Taper Boring.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N. Y.

Nine Grades

brings the game sweeping majestically along ahead of a pack in full cry, and he who kills under such circumstances must shoot fast and true. Naturally in those States which do not permit the use of the hound, the still hunt is all that is left. This simply means the hunter must tip through the woods and watch and wait and listen for sight or sound of a deer. Probably the best woodsman is the man who gets the game on the theory that he is most apt to see it, but not necessarily so.

Not only is still-hunting less spectacular and much less thrilling, but it is much more dangerous. Each year the accidents in States that prohibit the use of hounds are appalling. Hundreds of men flock to the woods on or near the opening of the big-game season, and hunt about through the dense undergrowth. Each season many men are mistaken for deer, by novice hunters and are shot down by high power guns in such hands. The still-hunter, unfortunately, and all too often fires at the first thing he thinks looks like a deer, and time and again the brown target is the khaki suit of a fellow-man.

More exciting than the ordinary still-hunt, however, is the quest of the lordly moose in Maine and other eastern woods. At certain seasons of the year the great fellow is lured to his death by calling him up, the hunter using a short instrument somewhat resembling a small megaphone for the purpose. As in turkey hunting, it is the skilful caller that gets the answer, and finally gets the shot. A bellowing bull moose coming toward a hunter is an inspiring, tremendous sight, one not soon forgotten and there is little danger of mistaking that monarch for a stalking hunter. A wounded moose is likewise one of the worst animals a hunter might meet, and is scarcely less dangerous than the great silver-tip or grizzly of the Rocky Mountain country.—Indianapolis News.

"THE FISHES' PHYSICIAN."

TENCH fishing is synonymous with summertime and hot sultry weather, says Arthur Sharp, in the Angler's News. At times we hear of tench being caught during the winter; but these cases are exceptional. Invariably the best baskets of Tinca Vulgaris are made during those days when "the face of the earth is bronzed by a withering sun," when it is too hot even for thinking very much, and the angler is only too ready to yield to the narcotic influence of drowsy days, to the charm of flowers and the song of birds. Hence tench fishing is an excuse for loitering in pleasant waterside places these "mud-grovellers" is not to be disdained by the general fisher, being at all times a welcome interlude between roach and bream fishing. At the same time, the tench does not appeal to every angler, for the simple reason that they frequent ponds and lakes rather than rivers, and still-water fishing is ever somewhat tame and apt to become irksome. Although tench are met with in a few sluggish rivers and drains, weedy and muddy ponds appear to be their natural habitat, and in these places the angler should seek them during the hot months. The tench, albeit that he is somewhat of a sluggish nature and of little value as food, has always been held in high esteem. We are told that "olive-sides" is possessed of marvelous healing powers and in the past was used for curing certain diseases. It is also averred that "the tench is the physician of fishes, for the pike especially, and that the pike, being either sick or hurt, is cured by the touch of the tench." Whether there is any real foundation for this assertion we know not. Certain it is that the tench exudes a very thick slime, which must have been given to it for some purpose. Walton, "the Father of Anglers," states that this fish "carries a natural balsam in him to cure both himself and others," and other writers before his time held that same opinion. However that may be, the olive-colored fish has been termed "the fishes' physician" for centuries, and there might be some wisdom in it, for great are the wonders of nature.

July is about the best month for coming to grips with the tench. During the cold weather they do not stir much, preferring to burrow

The Result of Over a Century's Experience

Perfection in powder-making is only achieved by exercising the most scrupulous care in the selection and preparation of raw materials, employing skilled workmen exclusively, and using only the most improved modern mechanical equipment.

This is the Du Pont method and accounts for the unequalled reputation among sportsmen enjoyed by the Du Pont brands of Smokeless Shotgun Powders. One of the most popular of these brands is

A dense powder that is absolutely uniform in velocity and pattern. Waterproof—not affected by extremes of heat or cold. "INFALLIBLE" Smokeless Shotgun Powder will not pit the gun barrels.

Wilmington, Del.

among the thick mud in the deepest part of the pond. In early summer they awake from their lethargy and are often to be seen on very hot days disporting themselves among the weeds, their great black fins protruding out of the water as they roll to and fro. When tench are observed behaving in this fashion it is next to useless fishing for them, at least that is our experience.

Tinca Vulgaris is very fickle in his feeding habits. One may wait hours, nay, even days, without getting a nibble; or one might fish several hours and obtain just a solitary bite. On another occasion, under precisely the same conditions, the basket may be filled to overflowing. There is no accounting for their ways nor the vagaries which govern their feeding. We have had the privilege of fishing for tench in a well-stocked but extremely weedy pond for many years, and in the whole of our experience we

have never found them alike on two occasions, their time of feeding being dissimilar on every occasion. Generally speaking, very early morning and late evening are the most likely times to catch them in the humor, although we have caught them at noon on a scorching hot day when our most persevering efforts have failed at daybreak. Small open spaces between weed beds are good places to fish in, but the angler should see that an open channel communicates with the shore; otherwise a well-hooked tench may be left floundering among the tenacious weeds, with a foot or two of gut sticking in his leathery jaws as a memento of his indiscretion. The nearer one fishes to the weeds the better, though care should be taken to prevent the fish gaining their welcome shelter at his first plunge. The first two or three rushes are the most critical moments, for the tench soon loses heart in the contest. When hooked the fish will en-

deavor to bury itself in the weeds around the little pool of open water. By putting on a little extra strain the fisherman will be able to check these tactics, and while the tench "plays" deep and stubbornly there is no dash or spirited plunging about it. He is a cautious biter, and it is just as well not to "strike" until the float is moving off fairly well. In fact, we usually wait until the red tip is about disappearing under the surface; then he is certain to be well-hooked. We have known tench to play with the bait for full five minutes ere taking.

To watch the float jiggling during this process is nerve-trying to say the least.

For tench fishing a fairly long rod is essential—twenty feet is not too long—as it enables one to reach well over the weeds at the margin; the reel line should be light but strong, with a medium cast of undrawn gut, preferably stained a light green or brown. A No. 7 hook is the best size to use, and a small bullet to cock the red-tipped float completes the tench-fisher's armament. A small lob worm is a good bait, but for our own use we like a well-soured branding or medium-sized red worm. Wasp grubs are equally effective at times, as are gentles; but the worm takes some beating. Ground bait with a few garden worms, chopped up finely (the drawback to this is that it savors of cruelty and is an unpleasant task at best), and fish close to the ground. While the tench sometimes attains the weight of seven or eight pounds, these large fish are rare indeed. Fish of two or three pounds are, however, fairly common. They are rather handsome fish, being very shapely, of a golden-bronze color, with large, dark fins. The eye is golden, ornamented by a bright red circle, and at either side of his leathery jaws hangs a little barb.

A few brace of tench reclining upon the grass is a pleasing spectacle to an angler's eye.

On an early summer morning, when the rosy light of dawn is shedding a soft subdued hue over the gray woods and darkening waters, it is extremely pleasant to listen to the kissing sound so characteristic of the feeding tench; watching patiently the gaily-tipped float (personally we like a red-tipped float, it is such a delightful contrast to the sober greens of the trees and weeds) until it moves slowly but surely. Then comes the thrill of contrast; of bending rod, such pulling fish; of alternating hopes and fears, until a bonnie fish is brought to bank. Certainly there are worse sports than tench fishing.

One last word. On no account be tempted to have tench for your fish course at dinner. Worthy Izaak Walton would have us believe that "he eats pleasantly." Perhaps we are too exacting in our tastes. We have tried tench once and once only; we can only describe it as being like a boiled door-mat. Therefore give your fish away or reserve it for the cat. And when you catch a record tench (or smaller one for that matter) don't fondle it closely, or you will require a new suit of clothes. Apart from these little drawbacks, a summer day spent in angling for the "physician of fishes" will not be ill-spent, even if the creel is light at eventide. For there are other summer days and you can go again.

GAME PROTECTION WITHOUT GAME LAWS.

In view of the terrible destruction of wild life, which has taken place in this country during its comparatively brief history as a nation, and the strenuous efforts now being made to protect what is left by legislation, it is curious to consider that in a crowded country like Great Britain the native deer have been preserved down to the present day and, though killed in large numbers annually, are probably as numerous as they have been at any time, within the range they still occupy, since the Britons issued their memorable invitation to the Angles and Saxons to come over and do up the Picts and the Scots. At all events there are as many deer as the range, which comprises some two hundred square miles of the Highlands of Scotland, can comfortably accommodate. This of

Sporting Estate on Currituck Sound FOR SALE!

Thousands of Swan, Geese and Duck. The place where Mr. A. Radclyffe Dugmore took his famous photos last year. The estate consists of a farm, 200 acres. House, 8 rooms, facing the Sound; bath-room, hot and cold water. Ducking grounds consist of one Island of 1500 acres, another of 10 acres, and a large tract of marsh land on the mainland of about 150 acres. This is all fine duck and snipe ground and easily guarded. The farm is well stocked with Quail, and the shooting on some thousands of acres of the adjoining farms can be rented cheaply. This is an unusual chance for a gentleman of means or for a small club. The farm alone ought to pay 3% of purchase money. Price \$15,000. Part of money could remain on place as mortgage. 40 minutes by boat to station, Norfolk & Southern R.R., about 30 miles from the city of Norfolk, Va. 4 miles from post-office, telegraph office, schools and churches.

J. UPPEBY, Currituck, North Carolina

itself may seem surprising, but the average American unaware of the facts, would naturally attribute it to very rigid game laws and a short open season. The astonishing fact is that the deer are protected by no law and there is no closed season recognized by law. If you owned any of the land over which the deer range you could shoot as many as you chose at any time of year, so long as you shot them on your own land, and as far as the law is concerned you would incur no penalty whatever. Your popularity, however, would probably be seriously impaired. The deer, in point of fact, are protected by common consent of the land owners. By common consent the open season is from the middle of August to the middle of October; by common consent the does are always protected and only the stags are shot, and by common consent the number of stags that may be shot within the boundaries of a given property is in proportion to the number of acres contained in it, the relation between the acreage and the number of deer it will support having been carefully determined and from this deduced the number of stags that may be killed to a given acreage yearly without danger of diminishing the annual supply. Thus as many as a hundred head may be killed on some of the big properties, while on the smaller the limit may be as low as five or ten. On the Farley Deer Forest in the eastern part of the county of Inverness, leased by Edward H. Litchfield for the season just passed, twenty-five was the limit and incidentally it may be added that the full number was obtained, though such is always the case. The owners of the land it must be understood have no property rights in the deer. They have only the privilege of shooting them when they happen to be on their own land and cannot follow them across the boundaries or shoot at them when they are on another man's property. Naturally the shooting at any given point in their range depends upon the movements of the animals and as they feed up wind they will be much more numerous toward one limit of their range than another when the wind has been blowing continuously for several days from the same direction. The only legal protection the deer get is in the form of a gun license. Merely to own a gun one must have a license, but this does not include a license to shoot game, though the former is embraced in the latter. The lease of a deer forest or grouse moor, however, carries a license to shoot with it.—Brooklyn Life.

A HANDY HELPMATE.

F. C. HARVEY, a lawyer, living at Tenafly, N. J., who with his wife has been at Berry's camps at Yoke Pond, says a Bangor correspondent of the Sun, started over Boardman Mountain recently on his way to the railroad station. Mrs. Harvey made a later start, carrying her husband's rifle.

Near the top of the mountain Harvey encountered a she bear in the trail. The animal charged furiously and Harvey, who was unarmed, took to a spruce tree.

In his haste he dropped his mittens. The bear showed no signs of leaving, and at the end of two hours Harvey's hands were badly frost-bitten. Fearing that he could hold on but little longer, he strapped himself to a limb with his belt.

The bear scented Mrs. Harvey as she came along the trail near noon and her husband shouted a warning as the animal started for her. Mrs. Harvey, who is an expert shot, stopped the bear with the second bullet when it was within ten feet of her.

Although his hands pained him greatly, Harvey, with his wife's aid, succeeded in removing the pelt, an unusually fine one. It will be made into a rug. This is the third bear Mrs. Harvey has shot in Maine.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Hydrophobia.

A FEW days ago a boy died in Perth Amboy of hydrophobia. The Board of Health of that place had examined the dog that bit him and did not find the dog rabid. This record serves to increase the doubt of a dog lover and large kennel owner of this city that rabies exists. Experiences of health officers and the absolute declarations of the authoritative scientists of the great laboratories have really not convinced some men who know dogs that there are rabid dogs and that the bite of them may cause hydrophobia.

The dog fanciers say the dogs in the streets, from which everybody ahead runs, and which those in the rear pursue, with stones, clubs, and pistols, are not mad dogs, but dogs wild or insane from thirst, for where, they ask, can the thousands of stray or homeless dogs in city get so much as a drop of water in these stone-bound streets in the dry season?

It wouldn't cost much more to give dogs water than it does to employ dog wagons and dog catchers. I can't see what harm it would be, either, to instruct the public to offer water, instead of kicks, to street dogs.

"What could be expected except that a dog will bite when he is crazy with thirst and all he gets is kicks and stones? A human being would kill somebody under the same conditions."

Hydrophobia is the rarest of all diseases that regularly finds a place in the periodical reports of Health Departments everywhere.

The records of the Department of Health in this city show that there were only ninety-six deaths here from rabies in the years 1900 to 1910, inclusive. In 1904 there was only one death. For the last four years practically all the deaths from rabies in New York State have occurred in New York City, although in 1908 two of the eighteen deaths reported for the entire State occurred outside of the city.

Returns from the registration area of the United States, covering 55 per cent. of the total population, show that there were forty-two deaths from rabies in the four years 1901 to 1904, inclusive. The figures for subsequent years are:

1905	44
1906	85
1907	75
1908	82
1909	55

Out of 82 daths from rabies reported in the registration area in 1908, 64 took place in cities and 18 in rural districts. The greatest number of deaths was in New York, 18, Pennsylvania being second with 14. New Jersey 11, Maryland 6, Indiana 5, Massachusetts 4, Wisconsin 3, Michigan 2, New Hampshire 2, Connecticut 1, Rhode Island 1.

In the eight months to Sept. 1 this year the Health Department's record for this city shows 2,462 persons bitten and 7 inflicted with rabies.

Immediate treatment for dog bites, doubtless meant to be applied by a physician, is prescribed in a Board of Health bulletin. It says:

"The application of nitric acid to the wounds made by bites of rabid animals is more than a conventional method of treatment. It offers a rational interpretation of many things in the

prevention of hydrophobia that might be ascribed to the effect of chance. To what extent can the employment of this method in cases already infected impart security. Apart from the Pasteur treatment the two conditions which tend to the production of security are, first, hemorrhage from the wounds, and, secondly, their cauterization, the latter causing destruction of the virus and of the parts in close connection with the outlines of the wound. The more powerful and diffusable the caustic the wider will be the range of its power, and if nitric acid be used the result will resemble that of the actual cautery, with the addition that the wound is washed or bathed by the fluid.

"It is a mistake to suppose that wounds do not heal readily after the use of the nitric acid. Care must be taken, however, not to apply the acid, unless absolutely necessary, to bloodless, bony, or cartilaginous parts. It is best applied, drop by drop, from a capillary pipette. If the wound be uncommonly severe or if the patient be a child, chloroform anesthesia will be required. Wounds made by rabid animals should be sutured.

"In spite of the simplicity and excellent results of the nitric acid method of cauterization, its value is understood by very few."

It is not generally known that the Department of Health here gives free Pasteur treatment for dog bites to all who seek it.

Of the great number bitten every year not many take advantage of this free treatment. The reason is that the patient must suffer a series of more or less painful injections, lasting about three weeks. Frequently it is impossible for persons bitten to take the treatment, owing to the fact that they cannot sacrifice the time required from their daily occupations or the care of their families.—New York Times.

Property for Sale.

ATTENTION SPORTS!

Offer about four hundred (400) acres of open land well stocked with partridges and other game. The place is well improved, having one seven-room cottage, six two- and three-room cottages; it is well watered and fine farming land. Can be rented for eight thousand (8000) pounds of lint cotton. It is three (3) miles from Blythe-wood and four (4) miles from Ridgeway, S. C., situated on the Southern Railway, and eighteen (18) miles from Columbia, S. C. A beautiful rolling country. Price, twenty dollars (\$20.00) per acre. Hunting privileges could be secured on one thousand or more additional acres, very cheaply.

For further information address R. T. FEWELL, Box 343, Rock Hill, S. C.

Property for Sale.

ON WINYAN BAY
South Carolina

Adjoining the beautiful hunting preserve of Col. Emerson, "Arcadia" and "South Island," where Mr. Cleveland used to go yearly to shoot duck with General Alexander, on that most famous of all ducking grounds, lower Winyan Bay, South Carolina, lies a fine old Colonial estate of more than six thousand acres, almost equally divided in rice fields and uncut forest. No finer ducking ground than this can be found in America, and Deer, Turkey and Quail shooting is unexcelled. Two beautiful old Colonial houses can easily be converted into ideal hunting lodges. This old estate has to be sold and can be bought very cheaply. Inquiries should be addressed to

JAMES D. EVANS, Florence, S. C.

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

The Greener Tumbler Bolting Safety.—Of course you are convinced that the Greener Side safety is a sine qua non of the perfect gun, yet to make assurance doubly sure your gun should be fitted with an internal or "tumbler bolting" safety, operated automatically and entirely independent of the shooter's volition. A safety that will safeguard the user of the gun and his companions against all risk of accidental discharge.

The Greener Tumbler Bolting Safety is almost human in its ingenuity, yet consists of but two limbs operating in such a manner that it is a mechanical impossibility for a Greener gun fitted with this safety to be fired unless the triggers are actually pulled. Should the locks by any mischance jar out of bent, the "silent sentinel" checks the fall of the tumbler instantly and effectually. Should the tumbler through dirt or other cause fail to go properly into bent, the safety prevents its fall upon the cap. When the trigger is pulled voluntarily, a projection of the trigger blade depresses the rear end of the Safety, lifting it clear of the tumbler's path and permits the gun to be fired in the usual manner.

Look at the drawing, it explains the simple working of the device exactly; of course you will have this safety fitted to your new Greener gun. *Catalog free.*

WINCHESTER

Self-Loading Shotgun Model 1911

12 GAUGE

The Winchester Self-Loading Shotgun has all the good points of other recoil-operated Shotguns and also many distinctive and exclusive features which sportsmen have been quick to appreciate and endorse. Among them are Nickel steel construction throughout, and a receiver made with the Winchester patented "Bump of Strength" which gives the gun surpassing strength and safety.

☞ No readjustment of the gun is required for different loads. It shoots any safe load from a "Blank" to the heaviest with certainty and safety without tinkering the action. The recoil of this gun is divided, which makes it "kick" less and therefore pleasanter to shoot than any other similar arm. It can be used with facility as a single loader, as the action can be locked so as to remain open after any shot at the option of the shooter. There are no outside moving parts or any sharp corners or projections to injure the hands, and the receiver is entirely free from screws or pins to jar out, or assembling holes to weaken it.

☞ A two-part take-down system, with no loose parts to be left behind or lost, is used in this gun. When taken down, the action is accessible for cleaning. In safety, reliability and shooting qualities, this new model keeps pace with the established high Winchester standard.

AMERICAN DUCK SHOOTING

By George Bird Grinnell

A most complete work, dealing with every phase of the sport of duck shooting, thus forming a complete treatise on American ducks, geese and swans. It gives details of the natural history, habitat, and characteristics of every American species.

Part I contains descriptions with plates of each species.

Part II tells of every method of swan, goose and duck shooting practiced in North America—east and west, on Atlantic and Pacific and in the interior—and gives thrilling accounts of the splendid sport.

Part III deals with the art of duck shooting, including guns and loading, the Chesapeake Bay retrieving dog, decoys, blinds and boats, and finally discusses the causes of the decrease of wildfowl and tells what may be done to increase their numbers.

It is most fully illustrated with 58 portraits of North American swans, geese and ducks, by Edwin Sheppard, with 8 full page plates, and with numerous vignettes in the text by Wilmot Townsend.

Cloth, heavy laid paper, 58 illustrations, eight full-page plates, 627 pages. Postpaid, \$3.50.

FOREST AND STREAM PUB. CO. :: 127 Franklin Street, NEW YORK

THE BEST OUT-DOOR BOOKS

THE following is a selected list of *Forest and Stream's* books which are most suited to the taste of men and women who are fond of outdoor life—Shooting, Fishing, Natural History, Camping, Canoeing, Yachting. A good book does not wear out, but continues to give pleasure.

Catalogue giving full list of books will be sent on application.

American Duck Shooting.

By George Bird Grinnell. Cloth, 630 pages. With 58 portraits of North American Swans, Geese and Ducks, Plans of Boats and Batteries. Fifty Vignettes in the text, and a Chart of the topography of a duck's plumage. Price, \$3.50.

American Game Bird Shooting.

By George Bird Grinnell. New. Just Published. This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys. The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full-page portraits of different game birds and hunting scenes, with a number of cuts in the text. Cloth. About 675 pages. Price, \$3.50 net. Postage, 25 cents.

My Sixty Years on the Plains, Trapping, Trading and Indian Fighting.

By W. T. Hamilton ("Bill" Hamilton). With 8 full-page illustrations by Chas. M. Russell. New York. Cloth. 223 pages. Price, \$1.50.

American Big Game Hunting.

The Book of the Boone and Crockett Club. Editors: Theodore Roosevelt and George Bird Grinnell. Illustrated. Cloth, 345 pages. Price, \$2.50.

Hunting in Many Lands.

The Book of the Boone and Crockett Club. Editors: Theodore Roosevelt and George Bird Grinnell. Vignette. Illustrated. Cloth, 448 pages. Price, \$2.50.

Trail and Camp-Fire.

The Book of the Boone and Crockett Club. Editors: George Bird Grinnell and Theodore Roosevelt. Illustrated. 353 pages. Price, \$2.50.

Like its predecessors, the present volume is devoted chiefly to the great game and the outdoor life of Northern America; yet it does not confine itself to any one land, though it is first of all a book about America, its game and its people.

American Big Game in Its Haunts.

The Book of the Boone and Crockett Club for 1904. George Bird Grinnell, Editor. 490 pages and 46 full-page illustrations. Price, \$2.50.

This is the fourth, and by far the largest and hand-somest of the Club's books. It opens with a sketch of Theodore Roosevelt, founder of the Boone and Crockett Club, and contains an extremely interesting article from his pen, descriptive of his visit to the Yellowstone Park in 1903. Other papers are on North American Big Game; Hunting in Alaska; The Kadiac Bear; Moose, Mountain Sheep; Game Refuges, and other big game topics.

Camp Life in the Woods.

And the Tricks of Trapping and Trap Making. Containing hints on camp shelter, and all the tricks and bait receipts of the trapper, the use of the traps, with instructions for the capture of all fur-bearing animals. By W. Hamilton Gibson. Illustrated. Cloth, 360 pages. Price, \$1.00.

Uncle Lisha's Shop.

Life in a Corner of Yankeeland. By Rowland E. Robinson. Cloth, 187 pages. Price, \$1.25.

The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evenings and dull outdoor days, "to swap lies."

Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop." By Rowland E. Robinson. Cloth. Price, \$1.00.

Danvis Folks.

A continuation of "Uncle Lisha's Shop" and "Sam Lovel's Camps." By Rowland E. Robinson. 16mo. Price, \$1.25.

Uncle Lisha's Outing.

A sequel to "Danvis Folks." By Rowland E. Robinson. Cloth. Price, \$1.25.

A Hero of Ticonderoga.

By Rowland E. Robinson. Cloth, 187 pages. Portrait of author. Price, \$1.00.

A Danvis Pioneer.

A story of one of Ethan Allen's Green Mountain Boys. By Rowland E. Robinson. Cloth, 214 pages. Price, \$1.25.

In the Louisiana Lowlands.

A sketch of plantation life, fishing and camping, just after the Civil War; and other tales. By Fred Mather, author of "Men I Have Fished With," "Adirondack Fishes," and "Modern Fishculture in Salt and Fresh Water." With portrait of the author. Cloth. Price, \$1.50.

Forest Runes.

Poems by George W. Sears ("Nessmuk"). With artotype portrait and autobiographical sketch of the author. Cloth, 208 pages. Price, \$1.50.

The Angler's Workshop, Rod Making for Beginners.

By Perry D. Frazer. Cloth, 180 pages. Four full-page illustrations, sixty working drawings. Postpaid, \$1.00.

A complete, simple and thoroughly up-to-date work for the guidance of the amateur rod maker, carrying him from first principles through all phases of successful rod making. There is no theorizing or speculation. All terms are simple, and all kinds of rods and woods are treated of.

Modern Fishculture in Fresh and Salt Water.

By Fred Mather, author of "Men I Have Fished With," with a chapter of Whitefish Culture by Hon. Herschel Whitaker, and a chapter on the Pike-Perch by James Nevin. Illustrated. Price, \$2.00.

My Angling Friends.

A second series of "Men I Have Fished With." By Fred Mather. Cloth, 369 pages, with 13 illustrations. Price, \$1.50.

Rhymes of the Stream and Forest.

By Frank Merton Buckland. Cloth. Heavy laid paper. Sumptuously bound. Postpaid, \$1.25.

A charming collection of verse by an author who knows and loves nature well. A particularly pleasing gift for fishermen, closely simulating in form and ornamentation the standard fly-book.

Jack the Young Ranchman;

Or a Boy's Adventures in the Rockies. By George Bird Grinnell. Illustrated. Cloth, 304 pages. Price, \$1.25.

Jack Among the Indians;

Or a Boy's Summer on the Buffalo Plains. By George Bird Grinnell. Illustrated. Cloth, 301 pages. Price, \$1.25.

Jack in the Rockies;

Or a Boy's Adventures with a Pack Train. By George Bird Grinnell. Illustrated. Cloth, 272 pages. Price, \$1.25.

Jack the Young Canoeeman.

By George Bird Grinnell. Illustrated. 278 pages. Price, \$1.25.

Jack the Young Trapper.

By George Bird Grinnell. Illustrated. Price, \$1.25.

Jack the Young Explorer.

By George Bird Grinnell. Price, \$1.25.

Men I Have Fished With.

Sketches of character and incident with rod and gun from childhood to manhood; from the killing of little fishes and birds, to a buffalo hunt. By Fred Mather. Illustrated. Price, \$1.50.

It was a happy thought that prompted Mr. Fred Mather to write of his fishing companions. The chapters were received with a warm welcome at the beginning and have been of sustained interest. The "Men I Have Fished With" was among the most popular series of papers ever presented to FOREST AND STREAM readers.

Houseboats and Houseboating.

By Albert Bradlee Hunt. The book contains forty specially prepared articles by owners and designers of well-known houseboats, and is beautifully illustrated with nearly 200 line and half-tone reproductions of plans and exteriors and interiors. A most interesting chapter is devoted to houseboating in England. Extra heavy paper, buckram. The price is \$3.00 net. Postage, 34 cents.

The Art of Shooting.

An illustrated treatise on the art of shooting. By Charles Lancaster. Illustrated. Cloth. Price, \$1.25.

Gas Engines and Launches.

By Francis K. Grain. A few pages are devoted to launches in general, with some excellent advice to the prospective owner of a motor boat; but the author's attention is given chiefly to explaining the principles, working and practical handling of the marine motor for the amateur who does not care to trouble his head with involved technical information. Cloth. Illustrated. 123 pages. Postpaid, \$1.25.

How to Build a Launch from Plans.

By Charles G. Davis. A thoroughly practical guide for the amateur. Shorn of all blind technicalities, it considers displacement, good construction and faulty stability, setting up the keel, framing and planking, with careful explanations. Each step is followed up to the care and running of the gas engine. Cloth, 9 folding drawings, 8 full-page plates, 40 smaller diagrams, 170 pages. Postpaid, \$1.50.

Fetch and Carry.

By B. Waters. Tells minutely of the methods by which a dog, young or old, willing or unwilling, may be taught to retrieve either by force or "natural" system. Cloth. Illustrated. 124 pages. Postpaid, \$1.00.

Nursing vs. Dosing.

By S. T. Hammond. A most practical book for the dog fancier, based largely on Mr. Hammond's observation that dogs, and particularly house dogs, suffer from too much medicine. Contents—Nursing, Cleanliness, Diet, Other Foods, Kennel and Exercise, Common Ailments, Diarrhea, Convulsions, Epilepsy, Distemper, Eczema, Need of Proper Care, Stomach, Vermin, Ear, Mange, Nervous System, Colic, Worms. Cloth. Illustrated. 161 pages. Postpaid, \$1.00.

Training vs. Breaking.

Or Practical Dog Training. By S. T. Hammond. The author tells how to bring out the wonderful intelligence of the dog by kindness as opposed to force. A clear, explicit work, which will appeal to dog lovers. Contents—First Lessons, Charge, Canine Accomplishments, The Whistle, Quartering, Retrieving, In the Field, Working in Company, Raising Puppies, Training Pet Dogs, Conclusion. Cloth. Illustrated. Postpaid, \$1.00.

Training the Hunting Dog for the Field and Field Trials.

By B. Waters. Probably the most comprehensive work on the subject written, covers every phase of training and field trial preparation with reasons. Kennel Management, Breeding, Kenneling, Points of Judging. It is a work well calculated to enable the amateur to become a successful breeder and trainer. Cloth. Illustrated. Postpaid, \$1.50.

Woodcraft.

By Nessmuk. No better or more delightful book for the help and guidance of those who go into the wild for sport or recreation was ever written. No one ever knew the woods better than Nessmuk or succeeded in putting so much valuable information into the same compass. Camp equipment, camp making, the personal kit, camp fires, shelters, bedding, fishing, cooking, and a thousand and one kindred topics are considered. Beyond this, the book has a quaint charm all its own. Cloth. Illustrated, 160 pages. Postpaid, \$1.00.

Log Cabins and Cottages.

By William S. Wicks. This book covers building for the woods from the simplest shelter to the most elaborate cottage, cabin or house, and their furnishing and fitting. The details and directions are at once simple and comprehensive, and the illustrations are numerous and illuminative. Cloth. Illustrated. 44 full-page plates and numerous text illustrations. Postpaid, \$1.50.

My Friend the Partridge.

By S. T. Hammond. A delightful reminder of crisp autumnal days in the covers. It tells of sport with the noblest of game birds, the habits and habitat of the ruffed grouse, with just the right touch of reminiscence and personal experience. Cloth. Illustrated. 150 pages. Postpaid, \$1.00.

To Honolulu in a Bark

By PALMER H. LANGDON

July 23, 1911.

"ALL ready, Captain?" asked Skipper Rasmussen of the tug Sea Fox, as Captain Kelly stepped aboard the bark Andrew Welch moored at Mission Rock Wharf, San Francisco Bay, prepared for a voyage to Honolulu. The bark over night had undergone domestic troubles of the kind with which housekeepers are frequently afflicted. The cook had taken inboard too much firewater and had refused to work, with the result that he had been put ashore, and as the cabin boy had followed the cook's bad example, the bark was ready for sea minus victualer and waiter. By scurrying around town for several hours the captain had picked up a Japanese cook, but unable to find a cabin boy, he had shipped an extra seaman and turned one of the veteran sailors into an "inside boy," and the bark at 11 A. M. was ready for the voyage.

"Cast off," said the captain to the mates, and the Welch swung out into the stream under the guidance of the tug, heading for the Golden Gate. As she neared this grand gateway to the Pacific, as yet but slightly marred by the hand of man, the romantic deeds of the past were impressively recalled to the memory. In these very waters Commandante Ayala, in his tiny San Carlos had first entered the bay in 1775 and had been followed by a host of daring voyagers, including that finest, swiftest and grandest of sail craft, the American clippers of '49-50. And despite the progress of steam, sails were still in evidence in the Golden Gate.

During the passage out of the bay there had been plenty of action aboard the bark—mates and sailors were about the deck getting ready to make sail, and as this operation on a square-rigger is always a scene of interest, the writer will endeavor to tell how the canvas wings are set—"the wings that brought the nations together and scattered them to the ends of the

earth." When a vessel is under tow on the Pacific Coast, the tug blows one whistle and the first command is to run up the staysails and jibs. These are what are known as fore and aft sails, that is, they run lengthwise of the vessel in contradistinction to the square sails which are fastened to the yards that swing across the masts. The fore and afters were readily hoisted up the stays, and then the crew awaited the signal from the tug to work on the yards. When the bark had been towed out five miles,

ing drawn down from the yard, the stick itself is hoisted up. When all was ready (there still being steam in the donkey), the halliard, which raises the yard was caught around the winch end and raised by power. Otherwise the entire crew would have been mustered on the rope, the yard and sail being too heavy for a few hands. When these two sails had been set on the main masts the same canvas on the foremast was stretched in place, making four square sails which were ready for nature's breeze.

Three blasts from the tug and we were "by ourselves," as the captain expressed it, and the crew were still busy getting up the remaining upper square sails on each mast, the fore and main, top gallant and royals and the yards of these lofty sails were hoisted up like the upper topsails, but on the lower sails, the yards being fixed, the canvas was drawn down. When ships have six yards on each mast, the two lower are fixed, the sails coming down from them, and the four upper yards are run up the mast, except when they have double top-gallant sails, when the lower top-gallant yard is fixed.

The Welch crossed but five yards, and being bark-rigged, had no cross sticks on her last (mizzen) mast, but in place carried two triangular sails, known as a spanker and a ring-tail topsail. The spanker was run up when the upper and lower topsails were in place, and the ring-tail when all of the square sails had been set.

It may be imagined that during this scene of action in setting ten square sails and eight fore and afters, there was a lively time on the decks between the shouting and movement of officers and crew, but it is all between the mates and the sailors, the captain watching events from the poop deck and giving his only orders to the man at the wheel. To look at the bewildering mass of rigging on a square rigger, the wonder is how sailors ever know which rope to touch, but on examination, it is seen

THE BARK ANDREW WELCH—UNDER ALL SAIL.

almost to the San Francisco lightship, the tug gave two blasts and half the sailors sprang up the rigging and out on to the yards. The gaskets, the ropes which hold the sails to the yards, were unfastened, the clewlines and buntlines (ropes for taking in sail) overhauled, and at the command from the mate to "sheet home," the lower main topsail began to spread into a big canvas blanket, with the other half of the crew on deck tugging away at the ropes which pull out the sail. "Belay!" shouted the mate to the sailors on deck, as the canvas was pulled into place and the first square sail was set.

The braces, the ropes which govern the yards of the sail, were next made fast on the sides of the ship and the crew went to work at the next wing, which was the upper topsail. Here was a different problem, for instead of the sail be-

that every bit of rigging has a certain lead, place and name, and it is explained that these ropes, except in minor details, are the same in all ships. Some always leading to the sides (bulwarks) of a vessel, others always down the mast, and all fastened in a certain order. And when one stops to consider that every bit of rigging has centuries of evolution back of it, the wonderful system of a ship's rigging can be understood, but we must pause in the passing and take off our hats to the builders and riggers who have finally evolved the splendid sailing ship of to-day, and then think of the heroes who have manned them through stress, storm and strife.

With her wings in position, close hauled to catch the light westerly wind, the bark's head was pointed to the south. There was wind enough, as the mate expressed it, to "lay off the

the seas for twenty-three years, she is considered as staunch as ever and good for another quarter century. Her hull, lower masts and lower yards are of iron; the upper yards and masts and decks of pitch pine. Her railings, wheel-box and skylights are of India teak, ornamented with polished brass. Her cabin is finished in teak and birdseye maple, making a most attractive living room. Her staterooms, compared with modern trans-Atlantic liners, are roomy and comfortable, and the builders had evidently thought of every detail to make the bark complete in nautical equipment, even to brass-bound fire buckets on deck and seasick basins in the passengers' cabin. With her trim appearance as a whole, her beautiful wood-work and fine brass work, she was forever pleasing to the eye, even in periods of seasickness. With a length of 178 feet, a beam of 36

power of man as exemplified in his mechanical steam engine.

It is a gratification to know that the Matson Navigation Company still retains sail craft which can be used by travelers who love the sea.

Latitude 36° 12' north; longitude 124° 12' west. Day's run 128 miles. Honolulu 1,940 miles away.

July 25, 1911; wind, west-northwest; course, south, 36° west.

Nearly the same course, same wind, same sky greeted the passengers this morning—a blanket of cloud over the encircling horizon and wind rather light. We had now become pretty well acquainted with the men who were manning the ship and realized again how different nationalities are brought together in a house of the seas.

The captain, Edward Winfield Kelly, was a gentleman from India, and was known as the "Dandy Skipper," not from the cut of his clothes, but for his uniform politeness, kindness and thoughtfulness to and for his passengers and crew. Born at Bankipose, Patna, India, of Irish parents, he had been educated in England and began his sea career as cabin boy on a steamer, then served on the tea clippers, and after going through the usual round of mate's duties on all kinds of vessels, finally came to the Pacific Coast and became master of the *George Curtis*, the *Mohegan*, and then the *Andrew Welch*. He is a man who is interested in all sorts of subjects and topics besides those that relate to the sea, and therefore was very entertaining and companionable to the passengers.

The first mate, A. G. Page, hailed from the region of America where sailors are raised, viz., the State of Maine, and he looked every inch his part. He had climbed all of the rungs of the ladder from the forecabin to the cabin, even having been master of vessels. This gave the passengers double assurance to know that there were two skippers aboard. When, in giving his orders about the deck, the mate wore his corduroy breeches, his high-top over-lapped boots and stern countenance, he resembled the old-time pictures of a buccaneer.

The second mate, James Lynch, was another real sailor of the kind pictured in story books. In contradiction to the husky, heavy-built first mate, he was small in stature and had all of the activity that goes with small people. Everywhere and anywhere about the decks, seeing that duty was done, and when off duty relating the experiences of forty-five years afloat on every kind of a craft that steams or sails the oceans or the Great Lakes. Thrice he had been shipwrecked and would tell the tales with a merry twinkle in his sea blue eyes, taking these adventures as part of the game in following the sea. He was a native of Pennsylvania.

The ship's carpenter, or as he is known among seamen, "Chips," Peter Hansen, of Sweden, was the next man of importance aboard, for he kept the ship in repair, ran the donkey engine, looked after the lights and oiled the blocks and running gear; in fact, was the Jack-of-all-trades generally, being able to do any one of the thousand and one jobs which come up aboard ship.

The cook was R. Watanave, from Japan. The old saying, one can live without books but not

HAULING TAUT THE BRACES.

rocky coast." And daylight faded on the sight, with the last glimmer of sunlight playing upon the hillside to the northeast of the Golden Gate, while to the northwest was the shadowy outline of the Farallon Islands and before us was the broad peaceful Pacific.

Latitude, 37° 48' north; longitude, 122° 27' west. Honolulu 2,100 miles away.

July 24, 1911; wind west; course, south, 36° west.

With an overcast sky and wind that was driving her along at five miles per hour, the bark was still close hauled in the morning, and a few lines will not be amiss telling what the bark herself actually is. The certificate of inspection stated that the *Andrew Welch* was a passenger sail vessel of 903 gross tons, built in 1888 for the Hawaiian trade by Russell and Company, Port Glasgow and Greenock, Scotland. She was named after Andrew Welch, founder of the firm of Welch and Company, ship owners, San Francisco and New York, formerly the Planters' Line of the Hawaiian Islands. When the islands became a part of the American Union, the *Welch* changed her flag to the Stars and Stripes.

The *Welch* is a vessel that reflects great credit on her builders, for though she has sailed

feet, a draft of 18 feet and a sail spread consisting of eighteen wings, different sizes and shapes, she could be driven as fast as ten miles per hour. Her cargo consisted of molding sand, hay, barley, feeds, canned goods and miscellaneous material, while she also carried a deck load of gasolene contained in iron drums, and redwood ties, shingles and rails.

The *Welch* having been built specially for the Hawaiian-San Francisco trade, originally hailed from Honolulu, and on her first appearance in the islands, twenty-three years ago, was considered too large for this trade, which trade has since grown to such proportions that the *Welch* has become a small factor, steamships of about 10,000 tons displacement now carrying most of the merchandise. The present owner of the *Welch*, the Matson Navigation Company, of San Francisco, at one time had nineteen barks in the island freight and passenger business, but now have only two sailing vessels carrying passengers, which vessels cater to the smaller merchants of Honolulu and to the sea loving passenger traffic—travelers who do not care to rush down to the islands in a palatial steamer, but who desire to get a real taste of a salt air voyage which can only be had in a vessel whose motive power is the power of the wind, not the

without cooks, is more true even afloat than ashore, for aboard the Welch was a crew of fifteen men and eight passengers, each with the appetite of a horse and dependent upon the bantam Jap, who presided over the 10x4 galley to appease the hunger. It is a satisfaction to record that he was very much equal to the occasion and kept the hungry wolf far away to sea; in fact, never within sight of the cabin door.

Andrew Govan, the "impressed" grandfather cabin boy, was a veteran sailorman from Scotland, one of the "steadies" aboard the Welch. He said he liked handling the ropes better than handling the dishes, but had humor enough to accept the situation with all of the Celtic jokes at his command, and they were always plentiful.

Lester Hudson, the assistant cabin boy, a high school lad, aspired to the navy and had shipped as a green hand that the experience might be good for him in getting through Annapolis. Owing to the desertion of the first cabin boy, he was impressed into the cabin as Andrew's assistant, and did his part fairly well, showing that he possessed the first duty of a soldier or sailor—obedience to orders.

The crew exemplified the well known fact that the native American is not found in the fore-castle. There was one son of the States in the lot—a Yankee from Massachusetts—but he was the exception that proved the rule. The rest represented Sweden, Norway, Denmark, Germany, Holland, England, but all were fine fellows, being, according to the seaman of Pinafore, "sober men and true and attentive to their duty."

The rest of the ship's company included the eight passengers, Mr. and Mrs. R. C. Gray, from Los Angeles; Mrs. Rogers and her daughter, Miss Helen, from Las Pasas; Reuben McIntosh and H. A. Truslow, from Redlands; L. W. Knight, from San Francisco; Palmer H. Langdon, from New York, and a wooly dog, a gray cat and twelve leghorn hens, which disappeared in pairs during the voyage, and only the cook could tell what ailed them.

Latitude, 33° 45' north; longitude, 126° 16' west. Day's run 170 miles. Honolulu 1,750 miles away.

July 26, 1911; wind, west-northwest; course, south, 42° west.

Scotch mist was what the captain termed the weather this morning, but it seemed like the general ocean mist, or leaden blanket sky with which Atlantic Ocean travelers are familiar. Anyone might wonder what the passengers could find to do on a sailing bark when the weather was not of a nature to furnish absorbing excitement. But after the first day of citified uneasiness, there was diversion and contentment enough to satisfy a nervous wreck. First of all, we were away from all modern city pests, necessary and unnecessary; no shrieking, killing automobiles; no clanging, banging trolley cars; no rattling, roaring elevated roads; no foul smelling, dust-laden city streets; no stinking cigarette cafés. Just the plain ocean with its ozone, oxygen and saltgen, its appetizing atmosphere, its ever changing surface, its freedom from all cares.

The first act of the passenger on arising at

6:30 A. M. was to step out on the quarter deck and throw over himself a few buckets of Pacific water; then apply the crash towel and he felt fit for the day. He then usually had time for a little ante-breakfast exercise, such as working the pumps, climbing the rigging or pulling the ropes as the weather gave the opportunity, and when the breakfast bell sounded at 7:30, he was ready to do justice to the meal. After breakfast he could find ship work of some kind to do if he cared to look for it, until the time of serving beef tea at 10:30. Then there were games, reading or discussions to keep him busy until dinner at noon. In the afternoon he was generally drowsy enough for a nap. He would get up rested and refreshed, ready for tea at 3:30 or supper at 5 P. M. In the evening everyone paced the decks watching the twilight and later would gather around the wheel or in the

rather light—good sailing breeze for the hugh-the-shore yachtsman, but not enough to affect a deep-sea square-rigger.

After breakfast the passengers leaned over the teak railing and discussed the negro problem, and it began to dawn on the sea travelers that they had a problem of their own which would not down, viz., restraining gluttony. The sea appetite is omnipresent and the ship was so well provisioned and the Japanese cook served such tempting dishes that it took considerable self-restraint not to become a pig. For instance, the breakfast this morning consisted of melon, porridge, two great platters of ham and eggs, a platter of bacon, a large dish of boiled potatoes, and if this were not enough, the table was supplemented with a dish of baked beans, another one of fried potatoes, besides marmalade, biscuits, toast and finally hot cakes,

THE PASSENGERS.

chart house, sing songs, swap yarns and have a pleasant time generally.

The nights so far had been pretty dark, and a passenger standing on the poop deck beside the mate on watch had a weird night scene laid out before him—inky blackness on the ocean, dim outlines of canvas sails and here and there a phantom figure on the decks. This evening the weirdness was intensified by the sudden illumination of the clouds, which lasted for several seconds. We knew it could not be lightning, there being no storm within sight or hearing, and the second mate said he was himself trying to figure out the cause of the light. The first mate came to the rescue by describing the phenomenon as a "meter," and then it could be readily understood that a meteor had flashed across the sky, but had been hidden by the clouds, only the meteoric light being visible.

Latitude, 31° 58' north; longitude, 128° 8' west. Day's run 143 miles. Honolulu 1,635 miles away.

July 27, 1911; wind, northwest; course, south, 49° west.

We were awakened this morning by the watch hauling around the yards; the winds beginning to shift toward the northeast, but they were still

or, as they are known ashore, pancakes. And every meal was served with equal abundance, and there were some rare dishes which are never found at the up-to-date six-dollar-a-day hotels, but which are served in the cabins of sailing vessels. Some of the cook's specialties were stuffed cabbages, flavored with the spices that are only understood by orientals; curries and rices, that would make an Irishman praise a Japanese, and salads that are unknown at four o'clock teas.

One of the passengers, known as the "Texan," swore he must reform and at dinner would eat only dessert. He kept his word regarding the major portion of the meal, but when it came to the plum duff, he managed to get and eat three plates of this palatable dish. He declared he had kept his vow, but his fellow passengers swore that he would never again fool them that way. He must next time state the quantity of each part of the meal he would partake, but they afterward learned that he was a lawyer, which would mean another escape by a technicality.

Latitude, 31° 51' north; longitude, 129° 39' west. Day's run 103 miles. Honolulu 1,540 miles away.

[TO BE CONTINUED.]

Coursing Hares in Australia

By AUSTRALIS

HARES are not indigenous to Australia. They were first introduced to the State of Victoria about fifty years ago, but they found the country and climate so much to their liking that they increased at a great rate. Now they are very common all over the southeast of Australia and are found in every State except Westralia. In Victoria they are so numerous in some parts as to become a pest. They do a lot of damage to the growing cereal crops, and farmers organize shooting drives. At these drives it is common to shoot up to 300 hares in one day.

It is apparent, then, that with the large areas of open and sparsely settled territory that we have, coursing would inevitably become a favorite sport. This is the case in both Victoria and New South Wales, and to a lesser extent in Tasmania and Queensland. Victoria, however, is the home of the sport. Here we have coursing clubs in every district, while every large town has its plumpton, where hares are kept and coursed in large inclosures. Open coursing, however, is by far the most popular form of the sport, and it is carried on under ideal, natural conditions. A good club usually has the right to course over five or six large sheep stations (ranches) where paddocks of 1,000 acres each are often available. These paddocks have very short grass on them, owing to the presence of the sheep, but they are always more or less thickly dotted with tussocks—bunches of tall, coarse grass—in which the hares make their "forms" or "seats." At these meetings the coursing is conducted in a simple but effective manner. All present, whether in vehicles, on horseback, or on foot, are formed into line, and beat up and down the paddock in regular strips until the whole has been gone over. About fifty yards in front is the slipper with the two hounds and the judge on horseback. The whole cortège moves forward steadily until a hare is roused. Then all, except the slipper and the judge, halt. The hounds are let go and the judge follows them. At the end of the course when the hare either is caught or escapes, the signal is given, and the crowd moves on. On good hare country as many as forty courses can be obtained in a day in this manner, but the average is between twenty and twenty-five, and the coursing to finish one stake usually extends over two, and sometimes over three, days. The hares, being left to their natural conditions, are of course wild and strong, and in the big majority of cases they get away unscathed. Usually there are large plantations of trees on these big estates, and belts of long marshy grass, and the hares naturally make for these refuges. The coursing is of course of the highest order, and as the country is level plain, with no timber (other than the isolated plantations referred to) the spectators obtain a splendid view of the sport.

In some districts the hares are beaten out of coverts on to open paddocks, much like most of the English coursing. In these instances the help of a body of from twenty to thirty horsemen is utilized. The horsemen enter the coverts, which are usually wide belts of tussock grass,

two to three feet high, of natural growth, and with no trees or bushes among it. The horsemen ride steadily forward, cracking whips, while the slipper and judge are out in the open on the opposite side with the crowd on a handy rise close by. Presumably a hare darts out of the cover to make for a similar belt perhaps a mile away. The horsemen stop at once and remain like statues until the course is over, and the fresh dogs placed in the slips. Then the process is repeated. The coursing takes place in the wide, open, short-grassed area between the coverts. This is always several hundred acres in area. On the principal coursing ground in Western Victoria it is, in fact, 1,000 acres in area. This affords a splendid coursing ground, and the trials between puss and her pursuers are always truly run. Two highly trained greyhounds would *a priori* be expected to catch any hare in open country. The hound is usually much faster than the hare, and the two hounds when slipped, though the hare is given up to 300 yards law occasionally, rarely fail to reach the hare long before she gets to cover. The hare's marvelous aptitude at doubling and twisting, however, allows her to baffle even the fastest and cleverest dogs. The average percentage of hares caught in open coursing is seldom more than one in five, and I have seen twenty successive hares escape. Even where no cover, in which to escape, is available, the hare sometimes beats the hounds. Only a few days ago I was at a coursing meeting and saw two hounds and a hare both run to a standstill. The hounds at last lay down exhausted; the hare, about fifty yards in advance, did the same. When the owners of the hounds came up to catch their dogs, the hare got up again and went slowly away. But I have seen a hard run hare lie down and die and the hounds also collapse occasionally in the same way.

The principal stakes are for sixty-four dogs, but there are several for thirty-two dogs, while in many instances unlimited entries are accepted. In these latter cases, however, the entries rarely exceed sixty, though I have been at a meeting when ninety-one dogs competed. The courses last from a fraction of a minute (with a weak hare) to three and four minutes. A good average course would occupy a little over two minutes. To get right through a sixty-four dog stake the winner and runner-up have to run six times in two days. It is thus obvious that stamina and determination are two important requisites in the dogs. Open coursers breed for this object, and the dogs running nowadays are almost all game and persistent. It is rare to see a hound, no matter how long the course may be, stop running while the hare is in sight, unless he fails through sheer exhaustion.

Part of the popularity of open coursing is due to its healthy surroundings. Our winter—which is the coursing season—is so mild that the coursing, except when it is raining, is always enjoyable. We have no ice nor snow and frost is rare. The wind is sometimes cold, but a good wrap keeps it out. So women and children are common among the followers at many meetings.

The ride in the open air creates an unusual appetite, and this is provided for by an *al fresco* lunch at mid-day. Usually this is held in the lee of a big plantation of trees, where kettles and billies are boiled and tea is made.

Coursing usually occupies the whole of the day. A start is made at either nine in the morning or half past nine at the latest, and it is rarely over before five. Sometimes if hares are scarce, it does not finish until darkness sets in. Recently I was at a meeting when the last pair of dogs were slipped after six. It was twilight, the sun was long down and the dogs and the judge could hardly be seen in the gathering dusk.

On these wide, open, lonely paddocks there is always a lot to be seen besides the actual coursing. Wild birds, especially ducks, plovers, and other waders are plentiful. There is always the possible excitement of a snake. I saw two venomous blacksnakes killed recently at a meeting. Toward the close of winter the wild flowers and shrubs are in bloom and our famous wattle (*acacia*) is a mass of golden blossom, flinging its scent far and wide on the breeze. It is no wonder, therefore, that coursing is a popular sport and promises long to continue so.

New Publications.

A WINTER SPORT BOOK, by Reginald Cleaver. Decorated cloth, quarto, 68 pages and 21 full page plates, \$1.50 net. New York, The Macmillan Company.

"Skiing," says Sir H. Lunn, who contributes a chapter on winter sport in Switzerland, "was unknown there until about 1895. The first person I ever saw skiing in Switzerland was Conan Doyle, at Davos, and he had, of course, brought the art from Norway. He was one of the earliest ski runners. Now every postman delivers his letters on ski in the winter." The sport has become tremendously popular, and the artist-author, possessed as he is of a keen sense of humor, has given, with pen and pencil, a vivid description of the benefits of skiing, ski-joring, skating, tobogganing and just loafing in the snow-clad mountains in winter. But while his narrative is largely humorous, and the beautiful sketches wholly so, there is lacking that coarseness which often mars books of this sort. One who reads the book cannot repress a keen desire to see the Swiss Alps in winter, where vigorous exercise is necessary outdoors, and even old fellows, little given to frivolity at home, tumble about in snowdrifts and enjoy themselves like children; returning to their homes slimmer by far, rugged, the cobwebs blown out of their brains, ready to begin life anew. No wonder people travel across the continent to ski and coast at Davos!

Red Hunters of the Unakas

By WILLIAM PERRY BROWN

"CATCH bear by tail, he do nothing," once said a semi-degenerate Cherokee within my hearing a few years back, but he did not say it exactly that way, though it was doubtless what he inferred.

What he really meant was that Bre'r Bear, as he is found under the shadow of the Great Smokies, the Unakas, the Nantahalas, and other wilder parts of our Southern Appalachian Mountain chain, has hardly enough tail to hold on by in any event.

Under the cliffs of Cheowah Mountain, where the Little Tennessee River threads a tumultuous course through the main range northwestwardly to meet the Holston, where begins the Big Tennesse, as the natives call it, still linger a few of a tribe which like the Florida Seminoles, declined to move westward with the bulk of their nation. This was accomplished by simply keeping out of the white man's way until the removal fever among the land hungry palefaces subsided, after they had absorbed pretty much all the Cherokee and Creek lands.

This remnant, however, gradually collected in sundry narrow valleys in Swain and Heywood counties that were dominated by Cheowah Mountain, and so this Indian name became typical of the center of Cherokee settlement in what was left to them of their old fatherland. I recall with interest these few remaining red men and their ways, as I knew them a few years back, when I tramped the Big Smokies and the Unakas during autumn vacations.

Dextrous trappers they were, these Cheowah Cherokees, and great in home-made contrivances. Naturally their petty farming operations were diversified by a good deal of hunting, trapping, the gathering of ginseng or "sang," with other roots and herbs, beeswax, wild honey and so on. Around the edges of a terribly rough wilderness in the upper laps of the Unakas, called Dismal, they would trap for otter, mink, muskrats, and even beavers long deemed to be extinct in all these Appalachian regions.

I never saw any fresh beaver hides myself, but one of them offered to guide me to an old beaver dam, somewhere in the Nantahalas, I believe. This was during the Spanish war, while I was on a hunting trip around the Hooper Bald, where some friends at that time had a ranch and cabin on the winter range for cattle. But owing to time limitations I was unable to accept. For "six wheels" and one "bush corn," besides cartridges for his rifle, our special "Barkis" was willing to instruct us in beaver lore. Undoubtedly beaver were once plentiful in the Unakas. A meeting house located close to an extinct beaver colony of the days of our daddies is still called Beaver Dam Church. The "wheels" were not wagon wheels, but good silver dollars, nor was the "bush corn" to be delivered to him in a dry state, but was the distilled essence thereof, to the measurement of one gallon in a sound, though unstamped jug, well and truly unwatered through the crossing of too many branches under the light of the moon.

It was a common saying, current among the mountaineers of Swain and Cherokee counties,

which adjoin Polk and Benton in Tennessee, that Indian hunters about Cheowah used to bring in occasional beaver pelts. To outside inquiry, the native reply would be: "White man take land; injun hide beaver." Considering the grab-all policy following the years of the in-

trusion, I do not think these people were far wrong in hiding anything hideable from the white man's unappeasable eyes and appetite.

Only once did I see one of them fairly startled out of his aboriginal calm. This was in the days of the original Waterbury watch, with a main spring several yards long. During some

THE NEWCOMER IS ADVISED TO LEARN THE MEANING OF THE WARNING "ACHTUNG!"

From a Winter Sport Book.

local bartering with the ubiquitous paleface an old driedup red hunter had become the owner of one, which finally refused to "talk time" properly, probably through being wound up too tight. Seating himself by the trail side he shook the watch, grunted, shook it with increasing vigor, holding it meanwhile by the chain only. Finally something parted. Down fell the watch on a stray pebble, the case fell apart and out sprang

the uncoiling main spring with a rattle and force that was, perhaps, too suggestive of snakes in dog days.

Leaping backward, his heels struck the log whereon he had been seated, and he fell on his back in the bushes, while the uncoiled spring spread itself clattering over him, giving him doubtless the impression that he was bitten by some unknown monster. Out he scrambled, uttering strange gasps, grunts and other audible signs of extreme terror. However, he had the remedy. His hand shook as he held a pint flask of "corn" to his mouth, but as he drained it he grew steadier. Then he grinned increasingly, feeling that he was unbitten after all and kicked the "talk-time snake-box" aside. A little later he was trying to have his flask refilled at a fruit distillery by trading the remains of the Waterbury to the man who ran the still.

As late as ten years back a prime winter-killed black bear hide, dressed only as these Indians do dress them, would be worth at Knoxville, Chattanooga or Asheville from fifteen to fifty dollars to souvenir hunters. Yet the same hide might go at some remote little mountain store for a supposable third of that sum, portioned out in a worthless jumble of mock jewelry, "sweet store tobac" and more or less slazy high-colored calico. If the merchant added a box or two of snuff, and a can of over-ripe canned stuff, the cold, hungry looking squaw that brought the hide would depart well satisfied.

But times are less Arcadian now. Since the Land of the Sky has become a sort of half-way house on the route to the piney woods country and Florida, the Cherokee, like the Everglade Seminole, has profited by experience. As guides the North Carolina Cherokees are simply at home anywhere amid the wildest parts of the upper ranges. The roughest, most bewildering labyrinth in these regions is, to them, like the paleface map. It is as if the Mighty Mother had said to her sick, weary, world-cheated red children, ready to sink down upon the universal breast: "Come to me. In my bosom will you be sheltered until you are rested and well, or until you are dead."

For a time the camera in its box form held him in awe, but he has learned the value of the "talk-picture" as well as the "talk-time box," even to the extent of sending his own picture to far-off unwary ones, personating for pelf, some local aboriginal celebrity other than himself.

The writer once bought an undressed deer skin of an ancient red hermit who lived under Snow Bird Mountain. His shack and himself were as primitive and far more literal than the Leatherstocking descriptions given by Fenimore Cooper of the Mohican companions of Natty Bumppo.

"Send injun one bush corn, one pound peach pie plug tobac. All right."

And thus the trade was concluded. Old Conny (or Conesauga) received his gallon of red liquor and his plug of tobacco, while I became the owner of a really fine hide of a mountain buck. Conesauga was a chief, too. But nowadays they use steel traps, dress their skins themselves, and sell to genuine sportsmen that flock into the Great Smokies in the wake of the Vanderbilts and others. They ignore the country store and wear brogans instead of moccasins.

"Buckskin worth heap money," they say, and it is likely they are right.

Quail Shooting.

DENTON, N. C., Jan. 3.—*Editor Forest and Stream:* One day in December Rear-Admiral Thomas Perry and Judge Cornell killed five quail out of a bevy, and they seemed to us uncommonly big birds. The apothecary's scales show the following weights: One cock, $7\frac{1}{4}$ ounces; one hen, $7\frac{1}{4}$ ounces; two cocks, $6\frac{3}{4}$ ounces each; one hen, $6\frac{3}{4}$ ounces.

We were shooting over beautiful grounds recently acquired for our club. Can you tell me the record weight for quail?

On Christmas day Judge Cornell, of New York, and myself spent the day quail shooting, which appeared in the morning to be a very poor day for sport, but we had one of the best days of the season. It looked every minute as if rain would pour. I do not remember of ever seeing any better dog work or birds more plentiful, the Judge killing a nice bag of fifteen, nearly every bird over points. In the morning we hunted Homer, Mr. Thebaud's griffon, with the Judge's favorite field trial winner, Rock. These dogs worked to perfection. It was odd to see an English setter and a griffon pointing and backing. The griffon is a great retriever; on one occasion he followed a bird down a stream, where the current had taken it for one hundred yards. Whether the dog took the scent from the water I can not say, but if he did not he surely reasoned the thing out, for he followed down stream until he came to the bird, which had lodged against the bank.

That afternoon we hunted Rye and a young pointer the Judge had just purchased. One piece of good work after another was performed, in fact I saw Rye do one of the best pieces of roading I ever saw any dog do. These birds went up wind, down wind and across wind, but Rye nailed them in good shape; never once put his nose in the grass or potted on scent.

I have never seen such large quail and as many of them as we have on these grounds, the Denton Sportsman Club.

G. DAN MORGAN.

[The average weight is about $6\frac{1}{2}$ to 8 ounces.—EDITOR.]

SAN FRANCISCO, Cal., Jan. 1.—*Editor Forest and Stream:* The fish and game commission will shortly make a number of reports covering the work of the past year. Prominent among the investigations now being made is that in regard to the alarming decrease in the number of valley quail in the sections where a few years ago they were plentiful. Fish and game officials in the various districts of the State have been instructed to look into this matter and to express their opinions as to the reasons for this decrease. Without an exception these officials have stated that in their opinion excessive shooting is to blame for present conditions and radical changes in the present law are urged. The automobile as a means of rapid transportation is held largely responsible for the increased interest that has been taken in quail

shooting. It has also increased the activity of the market hunter, for in spite of the game officials, quail are to be found in the market. The commission is attempting to secure a large number of live birds, and during the coming season special attention will be given at the Game Farm to the rearing of valley quail. Mr. Dirks, the new superintendent, has made a great success in rearing quail and his experiments have upset some of the ideas formerly entertained. He has proved that quail can be raised the same as pheasants with one male for five or six females.

The rapid decrease in the number of quail in Marin county has resulted in an agitation to have a bounty paid for predatory animals, and this is being considered by the supervisors. The sportsmen of that county have organized a strong protective association. They desire that the open season be made more uniform throughout the State, and that in most cases it be shortened. They favor the payment of hunting licenses to the county clerk, the money secured to be devoted to each particular county, and further desire a system of county patrol.

So far this season no reports have been received of any malady among waterfowl in California, although from other sections, notably the Salt Lake district, information has been received of ducks dying in large numbers. Last season thousands of ducks died in the Stockton and Tulare Lake districts and preparations have been made for a thorough investigation by State and Federal officials in case there is a recurrence of the trouble.

Louis Rink, of San Francisco, died recently. He was a member of the Gustine Gun Club, the Golden Gate Gun Club and the California Wing Club. He was an expert at the traps. A traveling man by occupation, he covered a large part of the State and enjoyed the friendship of leading sportsmen.

GOLDEN GATE.

RALEIGH, N. C., Jan. 6.—*Editor Forest and Stream:* Very curious things happen to sportsmen, and one of these occurred in Chatham county. Three men were hunting quail. One of them fired at a bird and some of the shot struck a poplar tree and a few shot glanced therefrom. Two of them struck Mr. Bruce, one in the forehead and the other under the eye, the latter making a very painful wound, which has put the sportsman in the hospital. A look at the place where the accident occurred shows that the shot glanced from the tree at a most peculiar angle, and in fact seems to have almost rebounded, in order to strike Mr. Bruce. The gun was in the hands of a very careful sportsman, who had no idea that Mr. Bruce could be injured, but the case shows that it is very hard to tell what may happen.

As the quail hunting season goes on, it is seen that there is a heavy crop of birds in the pink of condition and well grown, and excellent bags have been made almost daily, though ten days of rain in December cut out a deal of shooting. Men from the North have made in some cases strenuous efforts to get birds out of the State,

and a few have succeeded. It is said that in one case the shell of a large cheese was used to contain the birds, because the man figured that the trained bird dogs which have exposed so many of these shipments would thus be at fault. But now the wardens and the railway people are on to this scheme, as well as practically all the others.

The coldest weather of the winter has started in, and this will greatly improve the duck, goose and swan shooting from Morehead City northward, on the long stretches of the sounds.

The deer shooting in the eastern section has so far been good. Sportsmen will find Jacksonville, the county seat of Onslow, very good headquarters for good shooting, and in winter for fishing and other sports along the stretch of that singular stream the New River, which is really a salt water estuary, wide, deep and only about twenty-five miles long, with fresh water streams pouring in on both sides, in considerable numbers.

FRED A. OLDS.

Insect Pests.

TARPON SPRINGS, Fla., Jan. 4.—*Editor Forest and Stream:* In your issue of Dec. 30, your correspondent "A." asks about insect or animal pests in the South. The station where I live is 241 miles south of Jacksonville, and perhaps two and a half miles from the Gulf of Mexico. I have camped scores of times along the west coast of Florida, and a few miles inland. From Nov. 1 until the last of March, there is little trouble of any kind, unless occasionally from hogs or rats. I have seen the latter near the mouths of the rivers. The hogs, if you are near their paths, may trouble you at night—not often, however. Mosquitoes are not bad in the winter. Roaches are to be met with anywhere, and I always prefer to hang my eatables in a tree in order to avoid them. Punkies are sometimes troublesome, but not often. Scorpions are scarce, and I think not dangerous, though their sting is painful. I have never seen "jiggers" here, though they are common in Southwest Missouri.

The meanest insect pest here is the redbug. They are not in evidence between Nov. 1 and the last of March. They do not bite every person, but are annoying to some. Cooking soda or coal oil are the best remedies.

The insects never troubled me in Southern California, but I think it was because that country is so dry.

KELPIE.

Easy to Find.

BATAVIA, N. Y., Jan. 5.—*Editor Forest and Stream:* The changing of the pheasant season to November for last year, 1911, has made it easy to track them, and large numbers have been killed the season just past. Our association, the Genesee County Fish and Game Protective Association, introduced resolutions at Schenectady and Rochester, State League and Western New York Association, respectively, to change the season back to October and Thursdays only. We must watch out not to kill the goose laying the golden eggs.

Our partridge (grouse) has about been cleaned out in this county, and we expect to get a three years' closed season beginning in the fall.

CHAS. W. GARDINER, President.

December Days.

DELANSON, N. Y., Dec. 29.—*Editor Forest and Stream:* Most of December with us has been Indian summer continued. Early in the month the boys reported several woodcock when they came in from their traps. The 7th was a typical Indian summer day, and so was the 8th, the day I walked home from the village. The frost was out of the ground and my neighbors had resumed the interrupted fall plowing. I heard of pansies blossoming in a village garden.

On the morning of the 15th we found an inch of snow on the ground and at breakfast time a robin, the first we had seen in four weeks, perched in the berry garden and called repeatedly for his mate. After the bird disappeared came mist and rain, the snow melted, the big creek sang again and we were encouraged to seek some surer sign.

On the 17th one of the boys brought in a

light for April, when the wide spaces from hill to hill, and from hill to mountain have been newly swept and purified by wind and snow. This was earth's nimbus or rather aural light that flooded the landscape far and near. Save for this we might have dreamed of April.

My companion, a lover of nature at all seasons, had not spent a Christmas in the country in over two decades. He has told me of his constant yearning, winter and summer, for the old hills and the quiet country village near where he lived as a boy and young man. One of the incidents of his city life so impressed me that I venture to tell it here. A part of his work is the assortment and checking of flange screws in the stock room of a big shop, and he said that when the screws were counted and thrown in piles, that their metallic tink'ing reminded him of the tintinnabulation of countless hylas on April nights when he was a boy at home. I noticed when we crossed a wild pasture that he

saw their tracks in the snow in the edge of the pines, and later in the day dug one out of his burrow that was as wide awake as in summer and ready to meet all comers.

The December robin, the frog, the woodchuck at Christmas are of course exceptional, and are perhaps rarely recorded by the naturalists. Glimpses of the migrant's unseasonable return, of batrachian or dormant quadruped awakening prematurely to life are more often reserved for the hunter and trapper, the woodchopper or the fortunate walker like myself.

WILL W. CHRISTMAN.

Jack Rabbits.

LAS ANIMAS, Colo., Jan. 4.—*Editor Forest and Stream:* Dec. 20 a fall of snow covered Colorado east of the mountains to a depth of ten inches. Up to this time it has lain without a thaw. It has been cold for this section, and great numbers of quail and meadowlarks have

A DECEMBER FRESHET IN THE CREEK.
Photograph by Mrs. W. W. Christman.

DUKE SOULE IN CAMP.
Photograph by William E. Soule.

foot-long blackberry bush with newly-opened buds and green leaves. The frogs were out in the little brook that creeps out of the swamp, or at least one was; not a poor, stiff-legged creature such as one might dig out of a muddy, leaf-choked spring, but a wide awake, swimming frog, apparently ready to usher in the spring with exultant trump.

The warm weather culminated in a delightful Christmas. A few belated plowmen still drove their teams afield, the creeks were running free, with a little ice piled here and there against the driftwood. A raccoon that one of the boys had previously tracked into a rock hole along the creek came out, stuck his paw in the trap, but successfully extricated it and sought some safer refuge.

My city friend and I took a long walk that day up through the Indian clearing and along the brook that comes down from North's marsh, then back across the hill and sunned ourselves for a while on a warm bank overlooking the Bozenkill. Down and across the valley High Point in the He'derbergs shone dimly in the subdued sunlight. Even Rip Van Winkle, newly awakened, could never mistake this December

plucked a bouquet of the little, silver-tufted heads of the fall dandelion, long since out of blossom, but not yet ready to release their seeds; that he had the same interest with myself in the tiny, faded-yellow cups of the witchhazel on Bill Williams hill, and the same delight in the reddening soft maple buds and the poplar tips already pointed with down.

So Christmas passed and the benign influences continued until the 27th. That night we heard the wind roaring louder than the creek, and when morning came the snow looked good to us after the long autumn.

I am reminded of Christmas days green and mild in past years, that of 1889 being the most noteworthy when the maximum temperature reached 66 degrees in the shade according to the official record at Albany. I remember the day well, a serene and golden one, though snow lingered in the shade of the evergreens until nearly noon. I chatted with a plowman at the end of his furrow as I crossed the Duanesburg hills and saw a woodchuck sunning himself at the opening of his burrow as in spring. This was the only time that I ever saw the woodchuck leave his hibernaculum in December. I

succumbed. Jack rabbits have gathered around the ranches to feed upon the alfalfa. As the snow is light, the rabbits sink to the ground at every jump and become easy prey for dogs and coyotes.

I notice an account of a hunt at Garden City in the last number of *FOREST AND STREAM* at which great numbers of jack rabbits were killed and shipped to Topeka for distribution among the poor. These rabbits are poor and most of them afflicted with swellings filled with a watery fluid which makes them a very questionable food.

About holiday time these hunts are a common occurrence and the rabbits are shipped to the large cities for distribution. It may be that there is danger in this charitable movement.

In Utah in the 80's I assisted in "rabbit drives" when thousands were killed with clubs. They were afflicted as are the rabbits here, but were not used as food. Since my experience in Utah I have omitted rabbit from my bill of fare.

Can anyone tell me the nature of this disease? The swellings are just under the skin and often there are several of them on either side. Some of them contain four ounces of fluid.

F. T. WEBBER.

Work of the New Protective Ass'n.

OVER three thousand dollars, mostly in payment of one dollar yearly membership dues, has already been received by the American Game Protective and Propagation Association, according to figures given out from its offices at 111 Broadway, New York city. Although little more than two months have elapsed since its incorporation, the association has lent valuable aid to the cause of game protection, and sportsmen from all over the country, realizing the necessity for prompt and concentrated action if our fish and game are to be saved from extinction, are hastening to enlist under the National standard. Over a dozen life, and a number of club memberships have been secured.

The New York State Fish, Game and Forest League, which counts among its members most of the local clubs of the State, and which has been very influential in securing the enactment of good legislation, joined the new association by the unanimous vote of the annual convention held recently in Schenectady.

Canada, and almost every State in the Union, have furnished members, paying from one to one hundred dollars a year. Memberships are secured on the following basis: Associate, one dollar or more annually; club, five dollars or more annually; life, one hundred dollars at one time; patron, one thousand dollars; and benefactor, twenty-five thousand dollars.

The funds derived in this way, together with an income of \$25,000 subscribed by manufacturers, is administered by experts trained in the profession of game and fish protection and propagation. They stand ready to give their support to any good cause for the furtherance of these ends.

Among the things already accomplished by the association is a complete re-organization of the protective forces of one State where a special agent spent ten days, during which time more convictions were secured against violators than in the preceding ten months. The agents work with the local authorities, in most cases turning all evidence over to them so that they may obtain the convictions.

The president of the association, John B. Burnham, who has for years been identified with protective work, and who is an authority on game laws, has been asked by the State of New York to assist in codifying its laws. He is one of a committee of three engaged in this work.

Reports of local conditions, which members have sent in, are strikingly similar. Inadequate or conflicting laws, poorly enforced, are the rule almost everywhere. Laxity in the enforcement of game laws is often due to considerations of local politics from which the association's special agents are immune, and are therefore able to obtain evidence against, and prosecute violators, where the county or State officers would not do so. In other cases the local authorities are simply handicapped by lack of funds and are only too glad of the assistance of the associations' trained men.

Another of the commonest obstacles in the way of bringing to justice those who are ruthlessly despoiling the country of the game which rightfully belongs to all the people, is inertia on the part of a public as yet unawakened to

the disastrous results which are sure to follow this despoliation. If the community under his surveillance is not behind him, a warden can accomplish little. The association's agents are active in spreading the gospel of game protection among those who do not realize its necessity.

The interest that has been manifested from the start, and the loyal support which sportsmen and others have accorded to the association, show that people are ready to take the same position in the matter of saving our wild life that they have taken toward the conservation of some of our other natural resources. Nothing but united effort can save the fish and game. The business of the National Association is to organize as well as to exert this effort.

The Massachusetts Bay Goose Shooters.

SOUTH HANOVER, Mass., Jan. 3.—*Editor Forest and Stream:* In your issue of Dec. 9, there appeared a letter entitled the "Shameful Slaughter of Wildfowl."

While it is not my desire to enter into any debate or controversy on the subject, yet being a goose-shooter myself, I would consider it a favor if you allowed me the space in which to correct a few of the mistakes in that letter.

Taking the first clipping, for instance, if seven to ten men kill sixty geese in two days in the heaviest flight of geese known in ten years, how many will they average? About four or five geese a day per man, and so on down through it. When there is a big flight on, every stand will hold from five to a dozen or fifteen men. Even in the clipping, which tells of such awful "murder," it says the flight was the heaviest known for years. Seven or eight men slaughtered four or five geese apiece in two days' running. Does it seem so bad when you look at the facts?

The second clipping speaks of "forty-five geese at a single volley." Now being morally certain that such was not the case, and in fact we all laughed at that yarn when it appeared, I took the pains to telephone to a prominent member of that gun club (the Snipitnit Gun Club) to find out if the yarn held any truth. He emphatically informed me that there was no truth in the story at all, and that it was imagination pure and simple on some one's part. He said there were ten or a dozen men there on that date, but no such shooting occurred as the paper stated.

The next paragraph but one speaks of the large bore guns. Granted there are a few; there are ten 12-bores and 10-bores for everyone of a larger size, so you can see that we do not all use cannons, as the paragraph would have you believe. And a dead goose is a dead goose, whether killed in the air or in the water.

We emphatically do not consider it a calamity to have a bird escape, as he would know if the writer had stopped and thought. Any man would be a fool who did not understand that if they were all killed, in a few years there would be no geese; and considering the fact that this has been the best year we have had since live decoys were used, goes to prove that some at least are left.

More than fifty per cent. of the goose shooters are poor men who have a small "layout"

and several of these club together and have a "stand." They may average thirty or forty geese a year or four or five to a man, and it costs them perhaps \$50 at the lowest to get those few geese. Certainly not business; what is it? A wealthy man's stand may cost a club from \$1,000 to \$2,500 a year to run, but of course they may get on an average 150 geese all told in three months' shooting. A goose is worth \$1.25; it sure is business to spend a thousand or two dollars to kill two hundred dollars' worth of geese. What else is it? Or for a poor man to spend fifty dollars to kill his share of thirty or forty geese.

The above facts can be proved, if need be, and I hope you will do us the honor to publish this, as there should be two sides to every argument, and to deprive us of the right to shoot over live decoys will stop ninety per cent. of us from ever killing a duck or goose again, as we have neither the time nor the money to go where we can get goose or duck shooting without their use.

FREDERIC P. CROSS.

For November Hunting.

PHILADELPHIA, N. Y., Dec. 29.—*Editor Forest and Stream:* Cannot FOREST AND STREAM help us to get the season for deer in this State extended to Nov. 20 for the reason that two-thirds of the deer killed in October are does? At this time of the year they are strolling around the woods and the bucks are hid or watching on high points and hard to get, while after the rutting season starts, from the 1st to the 5th of November, a change of conditions take place. Then the does hide away in the thickets and swamps, where they are seldom found, and the bucks roam the woods. Therefore, November hunting means that about two-thirds of the deer killed are bucks. So long as we have does there will be plenty of deer. There will always be bucks enough to go around.

You know the later the season closes the later the hunters go to the bush. Lengthening the season does not force so large a crowd into the woods at the same time, as some will go in October.

A. F. NIMS.

Colorado Game.

LAS ANIMAS, Colo., Dec. 31.—*Editor Forest and Stream:* In October there came reports of the slaughtering of the elk and deer that make their home in the mountains surrounding North and Middle parks in the summer. On their winter feeding grounds along White and Bear rivers, the country is a desert with but little cover, and here the whites and Utes kill them by the hundreds.

We have no open season for quail in Colorado, but the quail are decimated in the winter just the same. About 100 of the western variety have made my ranch a haven this winter, but a winged one here, or a swinging leg there prove that when they are away from home the laws fail them.

To-day is Sunday and guns are popping in every direction. Ostensibly the hunter is after ducks and rabbits, but woe to the covey of quail that the most of these hunters see!

F. T. W.

Yellowstone Park Game.

SEATTLE, Wash., Dec. 20.—*Editor Forest and Stream:* With this I send you a letter from a friend at Gardiner. I've been hearing of the troops being used to keep the elk in the park, and that they would not be killed outside or get out until the close season in Montana.

FOREST AND STREAM has been trying for years to encourage the domestication of game in Montana, Idaho and Wyoming. There are too many elk and hundreds and often thousands starve. This has been going on for years! What is the use of protecting game to such an extent that the increase is of no use to man, that the animals only starve and suffer?

Now, the country is so much settled up, and all the old game winter ranges are overstocked with domestic animals, so that there is now not sufficient feed to carry through the great number of elk and other game from the Yellowstone National Park. When will the Legislatures listen to reason?

We all believe in game protection, but is it protection to let game starve, when every year two or three thousand could be spared without hurting the main herd, and this at the same time would keep it down to somewhere near the capacity of the range to feed it.

T. E. HOFER.

The enclosed letter from Gardiner, Montana, dated Dec. 6, says:

"The elk came out of the Park on the 22d (November) and the hunters came here from all parts of the State and hunted from Jardine on foot. Between 600 and 700 elk were killed and about 50 deer. There should have been more elk killed, as there is not winter range enough for those that are left, and a good many will starve to death.

"There are about 500 antelope. I think a few more than last year. They are down around Hoppe's ranch (about three miles below Gardiner).

"I heard to-day a pack of wolves got up into the buffalo corral and killed three old bulls and three calves. The scouts went out to see if they could shoot or poison them."

[This evidently refers to the first deaths by disease in the fenced buffalo herd, recently referred to in FOREST AND STREAM. Information received since the above was written advises us that no less than twenty-three of the young bison in the fenced herd have died. It is believed that the epidemic is black leg, and it is hoped that the disease has been checked.—EDITOR.]

Boone and Crockett Club Dinner.

THE annual dinner of the Boone and Crockett Club was held Wednesday, Dec. 20, in the Council Chamber of the University Club, Fifty-fourth street and Fifth avenue, New York.

There was a large attendance, including, among the members and guests, Hon. W. E. Humphrey, of Seattle; Major W. Austin Wadsworth, Col. Theodore Roosevelt, George R. Borup, who was with Peary in the expedition to the pole; Carl Akeley, recently returned from Africa; Dr. Lewis Rutherford Morris, Dr. John Rogers, Madison Grant, Charles Stewart Davidson, John B. Burnham, Professor Henry Fairfield Osborn, Charles Sheldon, J. Walter

Wood, W. R. Cross, Major Robert Temple Emmet, D. M. Barringer, Royal Phelps Carroll, Bayard Dominick, Jr., J. H. Kidder, Townsend Lawrence, E. H. Litchfield, Jr., J. H. Prentice, Alden Sampson, Hon. William Cary Sanger, John L. Seward, Lewis S. Thompson, Robert Dudley Winthrop, George Bird Grinnell, C. de Rham, Dr. C. H. Townsend.

At the close of the dinner, Mr. Akeley gave a thrilling account of some of his adventures in British East Africa in his search for the giant elephant for the American Museum of Natural History. Incidentally he spoke about other game, and by request told the story of his unique experience in choking to death a wounded leopard which had attacked him. Mr. Akeley's lecture was illustrated by photographs of great beauty and interest, and was listened to with close attention and frequently interrupted by applause from his hearers.

In response to questions, the speaker told of coming across the gorilla and the chimpanzee in a country quite distant from what has usually been regarded as the range of these primates.

Dix on Conservation.

IN his message to the Legislature last week Governor Dix said:

"This Commonwealth has forest area of approximately a million and three-quarter acres, a large percentage of which has been lumbered, and of this territory 120,000 acres have been burned over. The lumbermen have removed the mature trees and thereby diverted soil energy to the young trees, but it cannot be claimed that they have removed the humus, nature's natural reservoir for retaining moisture on the high levels.

"Conserving the waters on the high levels must be understood to embrace ownership or power of control and regulation by the State, to the end that the same shall be preserved to the people for their use and enjoyment forever, thus insuring to them all the benefits to be derived from a development of the natural resources of the State. This should be accomplished without adversely affecting existing interests. Legislation which shall recognize and conserve the interests of the people with due regard for the rights of private business will receive the approval of all citizens.

"The State should never surrender ownership or control of the great potentialities created by the barge canal and the canalized rivers which form a part of the canal system. No sale of the State's resources should be made. In fact, it would seem right and proper that such sale or transfer be prohibited. The policy of the State should be to preserve ownership and control of its natural resources and develop and utilize them entirely and solely for the public welfare."

Springfield Association.

AT its first meeting in the new year the Springfield (Mass.) Fish and Game Association had as guests State Forester Rane, and James S. Whipple, of Salamanca, N. Y. Mr. Rane spoke of the proposed plan to secure from the Legislature funds to carry out a new system of forest fire protection. Mr. Whipple told of the work that is being done in New York State looking toward better forest, fish and game pro-

tection, and gave a number of beautiful lantern slides, by way of illustration.

These officers were elected for the year: President, Mayor Lathrop; First Vice-President, Samuel D. Sherwood; Second Vice-President, Clinton Gowdy; Third Vice-President, Dr. F. H. Saunders, of Westfield; Fourth Vice-President, William J. H. Nourse, of Worcester; Secretary and Treasurer, State Fish and Game Commissioner George H. Graham; Assistant Secretary, Forbes Gatherum; Executive Committee, Arthur C. Merritt, Chairman, John B. Smith, Dr. E. A. Gates, Charles R. Culver, Charles S. Ballard, James P. Hatch, Henry Loeb, J. Douglas Law, A. E. Snow, H. L. Bowles and Dr. W. A. Hare.

It was voted to invite some of the representative farmers of Western Massachusetts to attend the monthly dinners of the club in order that the sportsmen may become better acquainted with the men on whose land they so often hunt and fish.

Louisiana Notes.

NEW ORLEANS, Jan. 6.—*Editor Forest and Stream:* J. W. Gardiner and C. O. Noble, oil operators, with headquarters in Lake Charles, have purchased 7,200 acres of land in Cameron parish on the Gulf coast, which they will convert into a private game preserve. On this preserve they have one of the few white heronries in the United States, and it is valued at a large price. On this preserve the duck, snipe and goose shooting is said to be the best in Louisiana. Mr. Gardiner holds the gold medal as the best trap-shooting expert in Louisiana, which he won in 1910 during the annual contest held in New Orleans. Both men are enthusiastic hunters and fishermen and are members of several hunting and fishing clubs. This preserve will be improved and a number of birds will be raised on the land and a private warden appointed to look after the place.

Amos Burhans, Mrs. Burhans and little son and daughter have arrived here on the gasoline launch Wanderlust from St. Paul, Minn., and will remain until after the Mardi Gras in February. The Wanderlust is 35 feet long with a 9-foot beam and is handsomely fitted out. The party will cruise in the Gulf the latter part of February and may go up the coast to New York. Mr. Burhans says the object of his long trip down the river was for the purpose of gathering material for a book for boys. He has written extensively for boys and girls. He has gained a good deal of material during his trip down the Mississippi, which began in the early fall. They stopped en route at several cities, but made the Wanderlust their headquarters. The Porpoise, a sea-going motor cruiser, accompanied the Wanderlust a part of the way down the river and will be in New Orleans shortly. The Porpoise is owned by Messrs. Hinkle and Gast, of Benton Harbor, Mich., and it is the intention of the owners to cruise to Florida Keys and then to New York. The cruiser is a palatial craft and is awaited with interest here.

During the Christmas holidays a number of parties were organized to enjoy days in the woods and on the waters, hunting ducks and wild geese. Just prior to Christmas, owing to the rush of the busy season, very few shooters

(Continued on page 64.)

A New Aquarium in Philadelphia.

PHILADELPHIA has an aquarium after fifteen years' unremitting effort on the part of a small band. The nucleus of a very large institution is now opened to the public, in Fairmount Park, in one of the buildings formerly occupied as the Fairmount Waterworks.

An ordinance passed councils last March, authorizing the construction of an aquarium, and directing the old turbines and pumps to be sold, and the money applied toward construction and maintenance. More than six months after the enactment of this measure, the then mayor of the city—John E. Reyburn—called in conference William E. Meehan, who had recently resigned as commissioner of fisheries. At the conclusion of the conference Mr. Meehan was requested to take in hand the construction of the work.

There were no funds then available, although there would be shortly. There were a number of tanks given the city by the State—tanks that had been used for the Commonwealth's display of fishes at the World's Fair at St. Louis. The waterworks consisted of three buildings—two pumping or machinery houses and one old mansion. As the junk men who had purchased the machinery had not cleared the two first mentioned buildings, so Mr. Meehan gave his attention to the mansion, where there was a hall about fifty feet square. Having no money, he persuaded the Pennsylvania Fish and Game Protective Association to guarantee the cost of the lumber, and he himself risked the putty, nails, glass and other materials. The City Bureau of Water furnished two mechanics, and the Bureau of the city proper two painters and two carpenters, and these were all the assistants.

At the end of the month they had a staging erected around three sides of the room, and nineteen tanks set and framed in with lumber. These tanks were from four to five feet long, and in them were placed, on the 24th of November, nineteen species of Pennsylvania fresh water fishes. Two large tanks, six feet long each, were set in the middle of the hall, and one of them devoted to alligators and terrapin, and the other to fancy breed of Japanese goldfish.

The new institution, small as it was, was immediately received into public favor. Forty-six thousand people visited the new aquarium in December. On Sundays the crowds are at times so large that the people are forced to get into line, reaching several hundreds of feet away from the door. The mayor has been overwhelmed with letters expressing satisfaction at the establishment of the aquarium, and urging its expansion at the earliest possible moment.

Although still on a small scale, the aquarium is being continually added to, and from nineteen, the number of species on exhibition has increased to thirty, or more than one-half the number of fishes in Pennsylvania worth exhibiting.

When the aquarium was opened to the public, Mr. Meehan, the former State fish commissioner, was appointed director by Mayor Reyburn, and Mr. Rudolph Blankenburg, immediately on his succeeding to the mayoralty in December, promptly

reappointed him. An ordinance is now pending in councils to equip one of the two old pumping stations as a salt water aquarium. The building is 110 feet long and fifty feet wide, and will hold thirty-five tanks and four pools of large size. It is hoped to have the building completed and in operation by June. A tentative contract has been placed for 300 fishes from Bermuda and Key West. As soon as that building is completed and in operation, it is hoped to secure a supplementary appropriation so that the permanent fresh water aquarium may be ready for occupation by October. This building is 200 feet long, 50 wide, and has a capacity for seventy tanks and eight or nine pools, or 105 tanks for the two buildings, about twenty more tanks and six more pools than the present capacity of the New York aquarium.

It is intended to retain the tanks in the old mansion, and build another above them with a gallery, and turn that building into an aquarium for minnows and small fishes, with a total capacity of about fifty tanks. There is a second story to the mansion which it is intended to fit up as a goldfishes room, which it is hoped will be occupied by the Philadelphia Aquarium Society as a permanent exhibit. Outside the building is a huge fore-bay, nearly 300 feet long and sixty feet wide, and this it is intended to transform into a great seal pool. This will be done the first thing in the spring, as councils has made an appropriation therefor. BONIFACIUS.

Fishing in California.

SAN FRANCISCO, Cal., Jan. 1.—*Editor Forest and Stream:* Anglers are paying attention to striped bass and steelheads, and some very satisfactory catches have been made. The striped bass have been difficult to locate, but some unusually large ones have been taken. Mr. McCormick, of Napa, recently secured two in Napa Slough No. 2, weighing thirty and forty pounds respectively. Frank Anderson, of Vallejo, secured a thirty-three pounder off North Vallejo, and J. C. Wallace, of the San Francisco Striped Bass Club, landed a thirty-two pound bass in Schultz Slough. Wallace now has the distinction of having landed the largest bass of the season secured by a member of the club. Striped bass fishing on the Russian River has been good. L. W. Andrews landed a forty-four pounder and a twenty-five pounder, and A. Simpson secured a thirty-five pounder.

A run of silverside salmon is looked for. Two years ago a shipment of 20,000 fry was liberated in Lagunitas Creek, and it is now time, according to the accepted rule, for the fish to be returning. Some have been seen, but none has been taken.

After action had been postponed for several weeks in the hopes that a heavy rainfall would make the work unnecessary, an artificial opening has been made in the bar at the mouth of the Russian River. Already steelheads are making their appearance in streams further south.

The habits of striped bass in California waters are still far from being understood, and this

season several incidents have been noted that are out of the ordinary. Some time ago a fisherman at Monterey noticed bass in large numbers in the bay there and market fishermen made a big haul. After remaining for a few days, the big school of bass suddenly disappeared, and not one has been taken since. The fishermen there declare that the fish must have come from the ocean, as there are no bass in the streams emptying into the Bay of Monterey.

The season for taking salmon eggs has been closed for some time. At Redding the United States Government has taken twenty-seven million eggs this year. Seven million were secured at Baird, on the McCloud River; ten million at Mill Creek, and ten million at Battle Creek. The first lot of salmon eggs placed in the State hatchery near Sacramento were ruined by mineral salts used in the hatching troughs, but a second lot of 50,000 has been hatched successfully. The experiment will be made of liberating the fry on the lower stretches of the river instead of on the headwaters.

W. H. Shebley, who for the past twenty years has had charge of the fish hatchery at Sisson, has been appointed general superintendent of State hatcheries.

The securing of stranded fish in the San Joaquin Valley and the planting of these in the various streams of the State has been in charge of A. D. Ferguson, of the Fresno office, who estimates that 450,000 to 500,000 fish, mostly black bass, were saved by timely work.

GOLDEN GATE.

A Finny Acrobat.

CHATTANOOGA, Tenn., Jan. 3.—*Editor Forest and Stream:* Early last spring a gentleman of this city brought me several small perch he and his little boys had caught in one of the small lakes in the neighborhood. I put them in an aquarium of about forty gallons capacity. At first they were very timid, running for cover on the approach of any one and eating nothing. After some days they would dart out and capture a bit of worm and disappear like a flash. They finally became so tame that they would come to the surface of the water and take food from the hand, showing a good deal of rivalry as to who should get the food first. One day I had been catching flies for them, and in doing so mashed one so that it stuck to my finger. I was trying to shake it off, when one of the fish jumped some two inches and caught it from my hand. From that time I made them jump for what food they got. The first jumper whom I named "Jack," soon outstripped all the others, finally reaching a point where he would jump fourteen inches out of the water and strike a fly about once in three jumps. Failure did not seem to discourage him at all. Robert Bruce was not in it for trying again. I then began holding a stick and holding food above the stick; when he would carefully measure the distance and leap up, catch the food, and fall on the other side of the stick. After a while he would sometimes jump over the stick even when there was no food in sight.

Frequently I would put food on a piece of floating plank for the turtles that occupied the aquarium with the fish. Jack would go up close to the plank and throw himself easily sidewise

(Continued on page 64.)

By Way of Criticism.

BREWER, Me., Jan. 3.—*Editor Forest and Stream:* In your issue of Dec. 16, under the heading of "A Trapper's Secret," I notice you quote Mr. Joseph Kalbfus as saying that he has "been assured that dogs will not eat the flesh of muskrat," and that, with this as his sole basis, he goes ahead and recommends a scheme for laying out poison, this advice being presumably intended for settled and farming communities; that is, the East.

Now, without going into all the phases of his scheme, which to one acquainted with the woods seems to be rather a stupid and unnecessary performance, I wish to state very frankly that dogs will and do eat muskrat. Not only that, but they are often exceedingly fond of it. Dogs which I have owned would eat it either raw or cooked and often in preference to other food. When engaged in fleshing muskrat pelts, my old dog used to sit beside me and beg so continually for the fleshings and for me to hurry up and finish skins faster, that he was often positively troublesome. At times he would eat so much raw muskrat that he would make himself sick, but he never seemed to tire of it.

Muskrat meat is good, and while not all dogs have the same taste, there is no reason why any dog, when hungry, should not eat it, and it is particularly the tired and hungry dog, coming home after a day's run, that is in danger from just such a fool arrangement as this. In a country where there are no wolves or mountain lions, there is no excuse for laying out poison. In some sections there are strict laws against such practices, and there should be such laws in more.

Moreover, no good trapper—and there are more good trappers in this country than there is game to supply them—has the slightest need of any such dangerous, wasteful, unnecessary method. No man in the East should lay out poison on any account.

As for what dogs will eat, you never can tell what they will do. At times, as everyone knows, they show all kinds of depraved tastes. For example, only a year or so ago, I had a large and well-cared-for farm dog begin to feed upon the carcass of a decayed and most unsavory wildcat and get caught in my trap while so doing. He was so near home and good food that his owner heard his outcry and released him. He had not been merely sniffing around, but actually eating the cat. W. M. H.

Noteworthy Wildfowl.

ALTHOUGH occurring casually as far south as the seaboard of the Middle States, the eider duck is nevertheless sufficiently unusual to make the capture of one worthy of record. At the taxidermist's shop of Thomas Rowland, Sixth avenue, New York, are now to be seen two eider ducks recently killed on Long Island, one by E. S. Bailey, Jr., the other by William S. Dana, both of New York. One of these is apparently a young male just about to assume his full plumage. In old times eider ducks were not

infrequently captured off the Connecticut coast in Long Island Sound, being found associated with the coots—scoters—of various species.

At Rowland's there is another interesting bird; a very beautiful male hybrid between the mallard and the pintail duck. The head is very like that of the pintail, but is heavily glossed with green. There is some mallard red on the breast, and the body colors are a mingling of mallard and sprig. The speculum is mallard, but its border is the regulation russet of the pintail. The specimen closely resembles one killed by G. B. Grinnell many years ago in Wyoming, and described in *FOREST AND STREAM*, and also mentioned in "American Duck Shooting."

The bird at Rowland's is understood to have been killed by Mr. Cheney, of the Pine Island Club, which owns the land formerly known as Palmer Island Club.

Wild Life in the Mountains.

SULLIVAN COUNTY, N. Y., Jan. 5.—*Editor Forest and Stream:* The migration of birds has been irregular this winter, owing, I presume, to the vagaries in the weather—snow and ice quite early in November, soft days, rain and great changes in temperature in December. I saw a woodcock the first Monday in November, and think this was the last, as the ground was hard frozen soon after. A kingfisher lingered on until Nov. 28, seemingly unable or unwilling to leave a shallow spring brook in which were a quantity of small trout, much exposed to the bird's attacks.

Such hardy birds as the bluejay have of course been seen and heard, and many crows, but the reappearance of wrens, goldfinches and other small birds after several weeks of cold weather surprised me. I saw a gray squirrel in a snow storm on Dec. 2, and another on Christmas day. Red squirrels are extremely numerous and are out in all weather; they are very hardy. All animals love to play in the first soft snow that covers the ground, and it is interesting to follow the tracks and ascertain where they are at home. Long stretches of woodland may be almost devoid of life, but where there is food and good cover, there many tracks will be found.

Rabbits or hares have been abundant for several years and are considered a pest by owners of vegetable gardens and fruit orchards of young trees. In summer they have their young in shallow depressions in grass or hay fields and are much in evidence in August and September. They go to ground more and more as the weather grows colder and the number of holes is surprising. They sit out in form a good deal on fine days, but feed mostly at night. They were very active during the period of bright moonlit nights in November, with snow on the ground. Two very large owls will levy heavy toll upon the rabbits and grouse this winter. The varying hare or so-called white rabbit is still found and shot in this part of the country, but seems more confined to large evergreen swamps than formerly. I was disappointed in the size of this

animal, as I expected to find it much heavier. The only one I put on the scales weighed $4\frac{1}{2}$ pounds, but men tell me that they reach a weight of at least six pounds.

Ruffed grouse must be well informed as to the law closing the open season on Nov. 30, as they were less wild in December; in fact, I saw several that allowed me to approach them very closely before taking wing.

There are enough grouse to afford good sport next year, if all goes well and particularly if the breeding season is a good one.

One ruffed grouse shot by a friend of mine had a tick of some kind upon its head, but this was the only one I heard of. THEODORE GORDON.

Yellowstone Park Notes.

A RECENT report from the Yellowstone National Park gives an estimated number of 500 antelope on their winter range near Gardiner.

The elk have come down to the antelope winter range and interfere with the superintendent's efforts to feed the antelope which seem dissatisfied with their usual range, and are constantly drifting down the Yellowstone River outside of the park. The elk break down the fence and the antelope go through it, though troops are trying to drive the antelope back and hold them inside of the park.

Twenty-seven wild buffalo were seen last spring on Pelican Creek. This is about the usual number, and indicates that they are just about holding their own. During the summer eight wild buffaloes were seen seven miles west of Thumb Station.

About the 1st of December there were 147 buffalo in the fenced herd, of which twenty-nine were calves. Since that time eight young animals have died, of which four or five were calves. This is the first serious difficulty that this herd has met with.

The mountain sheep have come down from Mount Everts and several young have been seen.

Coyotes are extremely abundant. One hundred were killed during the past year, but they are too numerous, and undoubtedly destroy many young game animals. It was necessary last year to plow up the alfalfa field which the deer, antelope and mountain sheep have depended on for winter feed ever since Colonel Pitcher established it years ago. The experiment has been made of sowing sod land with wheat, for wheat hay.

This autumn the elk came down from the mountains before the Montana hunting season closed, and crossed the park line about Crevasse Creek in considerable numbers. About 550 elk were killed in about ten days by licensed hunters. A number of wounded animals came back into the park to die. The game preserve established by the Montana State Legislature last year along a portion of the northern and western borders of the park is believed already to have assisted in protecting the park game.

Purple Grackle in December.

NEW YORK CITY, Jan. 5.—*Editor Forest and Stream:* Walking in Prospect Park on Sunday, Dec. 24, I saw a purple grackle apparently in fine condition. Is it not very unusual to see birds of this species north so late in the season? I have seen robins, but never a purple grackle before. F. M.

CORRESPONDENCE.

The **FOREST AND STREAM** is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Terms: \$3.00 a year; \$1.50 for six months. Single copies, 10 cents. Canadian subscriptions, \$4.00 a year; \$2.00 for six months. Foreign subscriptions, \$4.50 a year; \$2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line (\$2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra. Special rates for back cover in two or more colors. Reading notices, 75 cents per count line.

A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Advertisements should be received by Saturday previous to the issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

A "SPORTING CHANCE."

IN another column one of our friends takes us to task because of the printing of a communication from another friend, who protested against the killing of geese on the water near Plymouth, in Massachusetts Bay. The number reported killed in one volley, forty-five, is of no particular importance in its bearing on the question. It is the method employed that we protest against.

The decoying of wildfowl is a very ancient practice, and it is considered sportsmanlike to this day, provided the birds are shot on the wing and not as they sit, absolutely helpless, on the water. It is conceded that crippled birds should be dispatched at once, and that means, as a general thing, killing them on the water. Otherwise, the ancient phrase, to give the game "a sporting chance" to outwit the skill of the gunner and get off scot free, guides the sportsman of to-day as it did the good men and true who long ago decided that shooting in which the balance was ever on the side of the pursuer was not sport.

In the life of every sportsman there comes a day now and then when the conditions are so favorable to him that the temptation is almost irresistible to make a great killing, a record, a balancing of the long account of slim bags and blank days. There is even a modicum of justification for his act if he yields to temptation; for his mental argument that he can dispose of his kill among friends to whom game is always a treat; that the law permits him to fill out his

limit; that his shooting is an expensive pastime, and that any other shooter would, in his place, take heavy toll from the passing flocks, and be thankful for the opportunity.

In the last analysis this is a selfish view to-day, however fair and just it may have seemed in the past century. In those days the great flocks of wildfowl came from no one knew where, and went to parts in which no one held any interest. Their numbers were believed to be as inexhaustible as the sands of the sea. Times have changed, and every man who shoots knows that only through moderation to-day will there be wildfowl shooting for generations yet unborn.

To set on one hand the cost of maintaining a wildfowl shooting outfit and on the other the market value of the bag is to reduce shooting to a commercial basis. It is to be regretted that the view of one of our correspondents, who mentions these items, is consciously or unconsciously shared by too many good men. It is natural that this should be so, and yet it is, as we said, regrettable. The very fact that license fees and bag limits are exacted by law impels many men to endeavor to "get their money's worth."

On the other hand there is a growing sentiment in favor of observing smaller limits than those prescribed by law, and the influence of men so minded is becoming a power for good. It is another way of applying the doctrine of the "sporting chance," and it is worthy of the emulation of every person who goes abroad for the benefit he or she derives from recreation and rest in the open places, with catching fish or bagging game of secondary importance.

THE RETURN OF THE BEAVER.

BEAVER and buffalo are the two North American mammals that perhaps appeal most strongly to the public imagination. The buffalo was wonderful for his huge bulk and his vast numbers; the beaver for the houses and the dams that he built, since popular belief credited him with marvelous engineering skill. These two are also the mammals through whose influence the western half of our land came to be developed. The beaver furnished the motive for the trapper, who was the first explorer, and the buffalo yielded the trapper his subsistence. They are alike also in the fact that both species approached perilously near extinction in the United States before any adequate steps were taken to protect and perpetuate them.

For the buffalo as a wild creature there is no longer any place. He takes up too much room. He crowds out domestic animals more useful and more profitable to civilized man. He must be kept behind fences—in parks and preserves. With the beaver the case is somewhat different. While naturally a dweller in places untrodden by the foot of man, occupying water courses and their immediate neighborhood, and feeding on the twigs and branches of the trees and shrubs which fringe these waters, the beaver may long subsist if protected. Yet his fur offers a strong temptation to the trapper.

Some years ago, after much talk, beavers were introduced in the Adirondacks, where they have flourished and mightily increased. Long before that the late Rutherford Stuyvesant set some free at his place in New Jersey, and from there these animals, having escaped, spread over much

of Northern New Jersey and crossed into Pennsylvania and established colonies there.

In the Yellowstone National Park beavers have long been abundant, and their dams and houses and occasionally the animals themselves prove a great attraction to visitors.

Beavers should be introduced in every State and National park in the country, and it is gratifying to learn that the Department of the Interior purposes to place them in various other parks. The species was formerly found over the whole country almost from the coast of the Gulf of Mexico as far north as the limit of trees.

In the very early days of the West, a century ago, it was the beaver's fur that lured the hardy trappers into the unknown mountains in whose narrow valleys they set their traps and too often shed their blood in encounters with hostile Indians. After the trapper came the trader, the missionary and the explorer. More and more the West became known, yet only a generation ago there were great areas that had never been mapped. A few years more went by, and suddenly the West was full of people.

HARRY CHASE, for a number of years game warden of Bennington county, Vermont, has resigned to engage in the practice of law. For a long time Mr. Chase has been one of the foremost men in the rank and file of game protectors. His record and his writings have done much to place the game protectors of America on a higher plane than was occupied by them in former years. His wide field experience, backed by a thorough knowledge of the written law, enabled him to give to the world that excellent handbook, "Powers, Duties and Work of Game Wardens," which has assisted materially in the work of game protection.

AND now it is Hubert Latham who is going to Africa to hunt big game; not with an army of blacks and a number of white companions, but with his monoplane. If he startles the natives as he stirred up the Californians a year ago, he will have accomplished something. But some at least of the Africans have seen so many queer outfits that the "bird man" with his gun may not create a sensation after all.

CABLEGRAMS from London say that George M. Bowers, United States Commissioner of Fisheries, disposed of 12,002 of this Government's Alaskan sealskins recently at Lampson's auction rooms, for \$428,385. At this sale about 30,000 sealskins were disposed of, the majority being taken by American buyers.

DR. OTTO MOEBUS, of Decatur, Ala., died on Dec. 18, aged sixty-six years. He was a native of Germany, but had lived in Alabama nearly all his life. He was a well-known sportsman, and was very fond of pointers and setters and their work in the field. He is survived by six sons and four daughters.

DR. SILAS D. BLACK, the well-known nature poet of the Middle West, died on Jan. 2 at Los Angeles, Cal., where he had made his home recently. His age was sixty years.

Ticks from the Ship's Clock.

ON Jan. 18, the annual mess dinner of the Atlantic Y. C. will be held in Hotel Astor, New York city, in honor of ex-Commodore Wm. H. Bannard.

Among the varied types of boats owned by members of the Royal Motor Y. C. is a new craft in the shape of a motor punt. The description of the punt should prove of considerable interest, as a Thames punt installed with a motor is distinctly a "rara avis." The punt, which was built and engine by the Auxiliary Motor Installation Co., at Twickenham, is 30 feet long, 3 feet 8 inches beam, and 2 feet 3 inches draft, is fitted with a 4½-horsepower Smith and Douse marine single-cylinder engine, Gaines gear and reverse Bosch ignition, and has a double lever engine control at the stern and steering double control with steering wheel amidships, petrol tank on the deck aft behind the well, and fitted throughout in brass and gunmetal. To prevent side slipping an iron keel has been fixed, and the top speed is said to be ten miles an hour.

W. Butler Duncan, C. Sherman Hoyt, Joseph M. Macdonough and Prof. William Hallock, appointed at the last meeting of the New York Y. C. committee on revision of rules relating to measurement, have had a preliminary meeting at which the conclusion was reached that before taking any steps toward changing existing rules, each yacht club on the Atlantic Coast that was a member of the last conference on rules be written to, asking their views and suggestions on changes and amendments. The time required in so thorough a canvass necessarily will delay the committee report until late in the spring, or too late to affect the yachts now building or to change the rules for the season of 1912. It is hoped such changes as are made will be so clearly worded as to enable owners, sailors and measurers to understand them and be governed accordingly.

The liveliest yacht club in Southern waters is the Biscayne, with club houses at Miami and Coconut Grove, Florida. The roster numbers ninety-five names, of which many are members of New York Y. C., this being true of all the flag officers. Commodore, Col. Robt. M. Thompson; Vice-Commodore, Wm. J. Matheon; Rear-Commodore, Lewis Quenten Jones. The annual regatta will be sailed Feb. 22.

Preparations are under way for the first open regatta to be held along the South Jersey coast under the auspices of the Ocean City Motor Boat Club on Saturday, June 29. The regatta committee looks forward to raising an appropriation of \$500 for trophies for that occasion. Several of the club's officers and board of trustees have designated their willingness to present special trophies for the 1912 racing season. The regatta committee is making preparations for the annual luncheon smoker, to be held at the Hotel Majestic, Philadelphia, on Feb. 21. The committee consists of H. D. LeCato, E. J. Berlet, Maurice Daniels, Samuel Jacobs, W. B. Stanert, Augustus E. Snow and G. Alvin Snook. Commodore C. C. W. Wilson has appointed as his board of judges, William H. Hurst (chairman), J. S. Riddell and Gen. Charles Shaler. The timekeepers will be Harvey Y. Lake, Daniel Clawell and R. G. Weiner. Publicity committee is E. J. Berlet (chairman), John Clare and A. E. Snow.

Torpedo boat Wilkes was the first war vessel to pass through the inland water route to the sea. Wilkes left Norfolk for Charleston, S. C., recently and passed through the Dismal Swamp Canal, Albemarle, Choatan and Pamlico Sounds and the new Beaufort cut recently opened by

the Government. She covered 205 miles by the inside route, and proved that small war vessels and yachts can go to sea and avoid the terrors of Hatteras.

The elaborate new club house for the Pequonnock Y. C., Bridgeport, Conn., is practically complete and ready for occupancy. Moving day from the old to the new is nominated for early in the coming week. This is one of the prettiest and most complete of the smaller yacht club houses on Long Island Sound.

Ice Yachting on Shrewsbury.

THE two Shrewsbury River clubs, the South Shrewsbury and the Long Branch Ice Boat and Yacht Club, have perfected arrangements for a season of racing.

The two clubs maintain three clubhouses, one at Branchport and a second one at Shallow Point, owned by the South Shrewsbury Club, while the Long Branch Club's only house is at Pleasure Bay, where it was removed from Shallow Point two seasons ago. The clubs have upward of 400 members.

At this week's meeting of the clubs arrangements were made for many of the big races that are to be sailed at the shallow Point course just as soon as the ice is fit. The South Shrewsbury Club has a new commodore this year, Captain Benjamin P. Morris, the owner of the fast third-class flier, Mildred, who, after several years of retirement, was induced to lead the pioneer yachting club in the 1912 races. Captain Morris succeeds Charles J. Gibbons as commodore. Edward W. Reid, who was commodore of the Long Branch Club when it was known as the Shrewsbury Club, has been re-elected, and this season will have a brand new third-class yacht on the ice. The new yacht, which will take the place of the Commodore's Florence A., has not yet been named. It is thought by her builders that she will be very fast.

There has been considerable talk of consolidating the two clubs during the past few weeks. The argument set forth is that one big club, with 500 to 1,000 members, would have more weight than two smaller ones. The proposition is still being considered.

The South Shrewsbury Club is the pioneer organization. It has been in existence for more than a quarter of a century, and among its relics are many valuable pennants and other trophies. Its third-class fleet will number a score or more of fast boats, including the X. L. N. C., the Mildred, Leroy, Iola, Red Rover, George II., Baby Ruth, Say When, Princeton, Hazel L., Ingenue and Mimattie.

The first trophy to be sailed for is the Commodore's cup, offered by Commodore Benjamin P. Morris. Captain Morris is having Mildred rebuilt along modern lines. Mildred will be sailed this season by Captain Harold L. Seaman. In 1910, Mildred won seven races out of twelve, and had a record of never being headed in the free-for-all races sailed during the season of 1909.

Captain H. H. Munro will appear again this season with the Princeton and Say When, two of the fastest yachts belonging to the South Shrewsbury Club. X. L. N. C., former Senator Henry S. Terhune's fast flier, which won the Board of Trade cup race several years ago, will again be seen this winter, as will be former Commodore W. R. Joline's Hazel L., the one-time winner of the third-class pennant of the world. Captain Taber's Leroy, one of the heavy weather class, is ready for the ice, while Captain Charles P. Irwin's George II., for many years the pride of the North Shrewsbury fleet, will sail under the South Shrewsbury Club's colors this winter.

Many of the yachts are registered in both clubs. This is particularly true of the boats of ex-Commodore Gibbons, whose craft will also carry the colors of the Long Branch Club.

The crack yachts of the Long Branch Ice Boat and Yacht Club this winter include Captain Walter Content's trio, Isabel, Blanch and Clarel. Captain James O'Brien, of New York, has two fast boats, Jack Frost and Snowflake. These yachts have made records at the Newburgh races. Drub, an old-time favorite, owned by Vice-Commodore Edward Fiedler, of the Long Branch Club, will again sail the colors of that club. Robert Heitermeyer, of New York, appears as a new comer this season. He will sail Imp, a new boat designed by the owner of Drub. It is said to be a very fast boat. O. M. Roberts, of New York, will sail Rainbow II., a new boat built expressly for speed at Poughkeepsie. Captain J. E. Green, the fleet captain of the Long Branch Club, will sail his heavy weather yacht, Eagle. Sweetheart, Walter R. Patten's boat, is on the ice. Bayard Dominick's Harold and Captain E. W. Price's White Devil are numbered among the third-class fliers belonging to the Long Branch Club.

The trophies scheduled to be sailed for by the Long Branch Club include Price, Drub, Long Branch, O'Brien and Patten interstate cups.

The biggest attraction, of course, is the race for the Board of Trade cup. This trophy was first raced for during the season of 1906, when it was won by Mr. Terhune's X. L. N. C. In 1910 it was won by the Long Branch Club. The record shows that Fiedler's Drub, Content's Isabel and Green's Eagle each have won a leg. According to the conditions governing the cup it must be won three times by a club before it can be claimed. The cup is valued at \$150. The races are to be sailed over the 15-mile Shallow Point course.

Both clubs have a number of fourth-class boats, which were placed on the ice recently.

62 Fishermen Lost in 1911.

AFTER a record of seven years, during which no vessel left port (Gloucester, Mass.) and failed to return, two crafts, engaged in the Newfoundland herring fishery, sailed for their home port with cargoes, since which time no tidings have been received from either vessel or crew or any wreckage sighted showing their fate.

The increase in the number of lives lost is in part largely due to one other disaster resulting in the loss of a schooner manned by Gloucester fishermen on Nantucket Shoals, when five, of a crew of men were engulfed by the sea and their comrades, these three disasters causing altogether twenty-three deaths or nearly as many as were lost from all causes last year.

As usual, the largest loss of life outside of these disasters was caused by the swamping or capsizing of dories, thirteen lives being lost from these two causes, while nine men strayed from their vessels in their dories in fog or sudden storms and were never heard from afterward, only two deaths being reported from this cause this preceding year.

Five men were drowned by their dories being run down accidentally by the schooners in attempting to pick up the men.

The number of men washed from the deck or who were knocked or fell overboard was seven, the number being trebled from the preceding year, while four men died on shipboard or in hospitals and one man fell from the wharf in boarding his vessel.

Of the sixty-two men who were drowned, twenty-two left widows, while the number of fatherless children is over forty, it being difficult to ascertain the exact number.

The lost vessels have an aggregate tonnage of 623 tons gross and 458 tons net and a total valuation with outfits and cargoes of \$55,000, upon which there was an insurance of \$43,148.

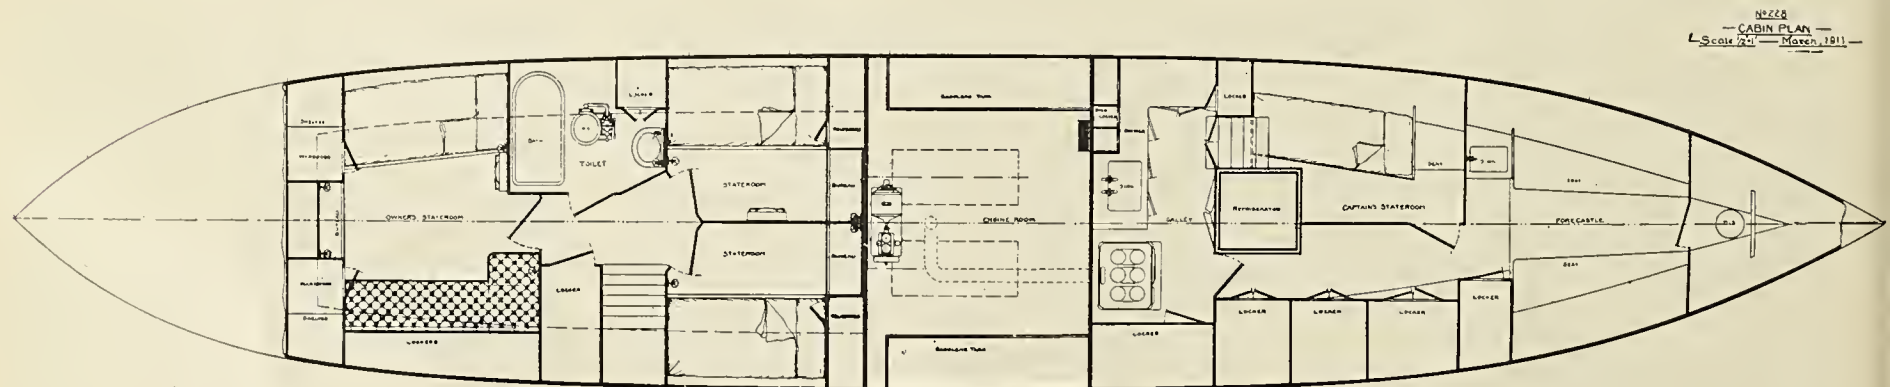

In 1910 only one vessel was lost and the number of lives sacrificed was twenty-five, the smallest number of both vessels and men for a number of years. The valuation of the lost schooners was \$12,000, the insurance being

FLOODS IN IRELAND.

TERRIFIC floods swept through the rivers of the south and west this week, particularly the Shannon, and a terrible amount of damage has been done to the spawning-grounds. As the floods fall it will be found there has been quite a number of salmon and trout swept out of the rivers into the low-lying grounds on the river's banks. Miles and miles of the lower parts of the Shannon are flooded for hundreds of yards over the banks, and many farms are completely submerged, and several hamlets and villages are more or less under water.—Fishing Gazette.

ORIGIN OF WOMAN.

AFTER the last meeting of the Royal Albert Fishing Club, a discussion was started by the Captain, Mr. Livingston. You can say what you like about the Darwin theory, said he, but you can call this the Jim Livingston theory, and you'll find it nearly correct. You've all heard of the story of the creation of man, and how a rib was taken from him to create a woman. He was taken down for his rib at midnight, and an angel was stationed under a big gum tree to hold the rib until the sun would rise and shine on it and transform the rib into a woman.

There being a long wait from midnight, the angel had partly dozed off, when a large ape stealthily climbed down the tree, hand over hand, grabbed the rib and skeltered back to the highest branches. The angel realizing the

enormity of his loss, tore up into the tree just as it was nearing sunrise, but the monkey was just out of reach. At last the angel was able to grab the ape's tail and hung on with all his might. The monkey, in turn, clung steadfastly to the tree. With such a struggle taking place something had to give, and the monkey's tail came out by the roots and down came the angel, a solikar (what's a solikar, anyhow). While he was standing at the foot of the tree ruefully surveying the tail, the first morning's sun shone forth in all its glory, and throwing its beams on to the tail transformed it into a woman, and to this day that's what makes them so mischievous.—The Angler, Australia.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

For the Convenience of the Readers of Forest and Stream

who may wish to subscribe for other periodicals, with or without Forest and Stream, we offer the following combination rates on two or more periodicals.

By following directions you can make your own selection and fix the proper remittance price. DIRECTIONS: From the list below select your magazines, add their class numbers and multiply by five—the result is the cost in dollars and cents.

For instance—Class number: FOREST AND STREAM, 47

DRIVERS AND TWISTERS.

Owing to lateness in receiving scores, many New Year's shoot reports appear in this issue.

Frank Butler and wife (Annie Oakley) are having all kinds of luck on a shooting trip in Florida. When last heard from they were browsing around Leesburg, whence came a Happy New Year card, much appreciated.

The Salt Lake Gun Club will hold a tournament the last week in May. At a meeting Dec. 28, the following officers were elected: President, John Cowan; Vice-President, A. W. Cowan; Secretary-Treasurer, E. J. Miller.

Looks as though Louis Colquitt was about to launch into the poultry business. At Newtown, N. J., on New Year's Day he won twelve chickens, one turkey, one goose and a duck. Brother Brickner characterizes him as the "Main Coop Cleaner."

Secretary Elmer E. Shaner, of Interstate Association, announces registered tournaments: Feb. 16-17, Mobile Gun Club, Mobile, Ala.; May 14-16, West Virginia State tournament, under auspices of Fairmont Gun Club, Fairmont, W. Va.; May 29-30, Delaware State tournament, under auspices Du Pont Gun Club, Wilmington, Del.; June 5-6, Aurelia Gun Club, Aurelia, Ia.

Just had a letter from J. A. R. Elliott—everybody knows who he is—to the effect that he has deserted the ranks of the noise-makers to advance the cause of the anti-noise society. He left the Winchester Repeating Arms Co. after nineteen years' service, to manufacture ear protector. His new firm is J. A. R. Elliott Ear Protector Co., of New York City. With this protector J. A. R. Elliott declares that, if there was no recoil and the target didn't smash, you never would know you were shooting. Be that as it may, Elliott will be missed from the firing line.

So many gun clubs have written asking what the requirements are to become recognized by the Interstate Association that we print in full a comprehensive circular just issued by Elmer E. Shaner, that it will be well for every trapshooter to give time to. The Interstate Association has assumed the burden of merchants in towns where tournaments are given, and cut off the rake-down of the promoter by barring all advertising from the pages of the tournament programs. It has placed gun club events on a business basis and created a uniformity in registered events. It has done a world of good, without compensation. It behooves every gun club contemplating a tournament to apply for recognition by the Interstate Association.

On Jan. 15, in the Seventy-first Regiment Armory in New York city, the twelfth annual meeting of the United States Revolver Association will be held. During its twelve years of existence the United States Revolver Association has done untold good in the development of pistol and revolver shooting in this country. It is one of the few genuine amateur organizations in which politics figure not at all. It has no professionals in its ranks, and no amateur athletic union to control its policies. The dues are only one dollar a year, and yet it has met all its heavy expenses without assessments and "minus-dividends." Three international contests have been won by the United States Revolver Association, and a strong team will be sent to the Olympic games this year. The present series of intercity and interclub matches being shot and the scores returned show to what extent this organization has developed the art of revolver shooting, as well as indicating the keen interest being taken in this educational recreation. The man or woman who never has taken up revolver shooting has no idea of the joy that comes with ability to hit a bullseye, and how enthusiasm grows with practice, nor of the feeling of security that comes with knowledge of the use of the little weapon of self-defense. It is a clean, inexpensive sport, a nerve tonic, a developer of grace, keenness of eye and quickness of mind. Secretary-Treasurer J. B. Crabtree has made much toward the popularity of the U. S. R. A. through his courtesy in explaining to inquirers the meaning of the Association, its purpose and requirements. He will send you full information if you address him at Springfield, Mass.

BEECROFT.

The Interstate Association.

The Interstate Association, at its annual meeting in 1910, materially changed and improved the conditions governing registered tournaments. These changes were necessary for the best interest of trapshooting.

Like every radical move made by the Association in the twenty years of its existence, doubt was cast upon this change of policy, which was considered by many persons to be the greatest innovation in the history of trapshooting. It is worthy of note that among the many original departures made by the Interstate Association, with a view to the betterment of trapshooting, none have reached such a pinnacle of success as that introduced in 1911. A summarized report of the operations during the year shows that 199 tournaments were registered, of which number 170 were conducted in accordance with the Association's new policy; that \$16,750 was contributed by the Association to gun clubs, State associations and leagues of gun clubs; that \$19,753.89 was paid back to amateurs to cover their losses, and that \$22,448.86 in average money was divided among amateurs after all of said losses were paid back. Of the 170 tournaments conducted under the new plan, only two failed to make good. One of these tournaments fell short \$10.70, and the other \$5.85. Approximately \$20,000 was divided among amateurs at these 170 tournaments, which, under the old conditions, would have gone to promoters and to gun clubs in the way of excessive profits.

The registered tournament plan of 1911 was so successful in its working that the directors of the Interstate Association at their annual meeting unanimously decided to continue it in force during the year 1912.

The Interstate Association's primary object in the encouragement of trapshooting is to encourage State Associations, leagues of gun clubs and special organizations; therefore, it is the Association's present intention to do all in its power to urge and foster the formation of State associations and leagues of gun clubs in those States where none now exist. The Association anticipates that in 1913 or 1914 it shall probably be in a position to contribute more generously to State and similar organizations.

A broad experience has demonstrated that the registration of tournaments confers many important advantages to trapshooting activities, but that, if not safeguarded and controlled by proper restrictions, it is subject to many abuses, petty and serious. The promoter, actuated by purely business reasons, is the chief offender. For the sport or its advancement, he cares nothing; for the profits he hungers greatly. Under the old conditions each succeeding year the mushroom club and the hungry promoter were becoming more numerous, and accordingly, the Interstate Association was expending money for which no return was given in the way of promoting legitimate trapshooting. Yet many legitimate attempts at holding tournaments resulted in failure, because the sum total of so much gun club effort exceeded the demand for competition. The majority of shooters have limitations to their purses, besides having a limit to their craving for competition. There is such a thing as too much shooting, with its harmful reactions.

Again, under the old conditions, a strong club holding a successful tournament often made excessive profits, which were out of all proportions as compared to the effort and expense of holding the tournament. Of course the excessive profits came out of the shooters' pockets.

The new conditions eliminate the undesirable features while developing the sport on lines that are broad,

wholesome and permanent. The matter of good sportsmanship is given full consideration.

Referring more in detail to the changes made at the annual meeting in 1910, the Interstate Association decided that gun club program advertising by its members shall cease from Jan. 1, 1911. In place of program advertising the Interstate Association has substituted a yearly contribution of \$20,000.

In the apportionment of the \$20,000 contributed by the Interstate Association, the States are divided into three classes—A, B and C.

Class A includes States with a population of 3,000,000 or over. To each State association tournament of this class the Interstate Association will contribute \$300, to be applied to the Squier money-back system. Class B includes States with a population of under 3,000,000 to over 1,000,000. To each State association tournament of this class the Interstate Association will contribute \$200, to be applied to the Squier money-back system. Class C includes States with a population of under 1,000,000. To each State association tournament of this class the Interstate Association will contribute \$100, to be applied to the Squier money-back system. The matter of population will be determined by the census of 1910.

A State association in a Class A or Class B State must have a membership of ten or more bonafide gun clubs located in ten or more different cities or towns. A State Association in Class C State must have a membership of five or more bona fide gun clubs located in five or more different cities or towns.

The Interstate Association, at its discretion, may exact proof of the proper organization of any State Association which applies for a registered tournament.

The foregoing applies to State associations, or to a league of gun clubs in a State which has no State association.

The following applies to individual gun clubs: Any gun club, a member in good standing of a State association or of a league of gun clubs, may apply for registration. Applications from gun clubs not members of a State association or of a league of gun clubs will not be considered.

To each two-day approved tournament, the Interstate Association will contribute \$100, to be applied to the Squier money-back system.

To each one-day approved tournament, the Interstate Association will contribute \$50, to be applied to the Squier money-back system.

When a gun club applies for a two-day tournament, the granting of such application shall depend on the attendance at, and success of, previous registered tournaments of said club, if any were held. The determination of whether it shall be a one-day or two-day tournament is at the discretion of the Interstate Association.

The records of the Interstate Association show that the most successful tournaments held during the past few years were those of one-day duration, and that many two-day tournaments which had a good attendance the first day were failures in point of attendance the second day. Therefore, applications for one-day registered tournaments will be given the preference in 1912.

Any application for a registered tournament must be made not less than ninety days in advance of the tournament opening date.

The program each day at any registered tournament shall consist of ten 15-target events, entrance each event, \$1.40; optional sweepstakes, \$1 extra; extra entrance for Squier money-back system, \$1. Price of targets (2 cents each) included in all entrances of the regular program.

Division of Moneys.—Regular program, Rose system, ratio points 5, 3, 2, 1.

To be eligible for the Squier money-back system a contestant must compete in all regular program events.

Optional Sweepstakes.—The optional sweepstakes may be conducted under the percentage system, Jack Rabbit system, high gun system, or any other system, and the number of moneys may be arranged as desired. In addition, the amount of entrance in the optional sweepstakes may be changed to meet the wishes of the gun club giving the tournament.

The Interstate Association suggests that when the percentage system, class shooting, is used, two moneys be made for ten entries and under, and that when the high gun system is used, three high guns win the money for ten entries and under.

The optional sweepstakes are separate from the regular program, and it is optional with the contestant whether or not he makes entry for them. The Squier money-back system does not apply to the optional sweepstakes.

There shall be no deviation from the regular program, as it relates to the Interstate Association, but special events such as championship events, cup events, team events, merchandise events, and extra events of any nature, may be scheduled and shot in connection with the regular program.

Gun clubs located in sections where freight rates are excessively high, thus making targets cost considerably more than they do in the East, may charge 2½ cents or 3 cents per target, if it is customary to make such charge at tournaments. The Interstate Association suggests, however, that, when more than 2 cents per target is charged, the entrance in the regular program events be increased to \$1.50 per event.

Any gun club holding a registered tournament shall give one page of its program, of which the copy shall be furnished by the Interstate Association, for purposes of announcing the amount of money contributed by the Interstate Association, and for purposes of publicity.

The Interstate Association's contribution will not be paid to any club until such time as such club, holding a registered tournament, shall have sent in the requisite report of the tournament to the Interstate Association.

The Squier money-back system shall be a part of the program. It was originated by Mr. L. J. Squier, of Pittsburgh, Pa. It designates a special fund created for the purpose of paying back the losses, or a share of the losses, of those amateur contestants who compete in all regular program events of a tournament and fail to win the amount of their entrance fees, less the price of targets. All contestants must shoot through the entire regular program to gain an interest in this fund. This special fund is made up from the added money contrib-

Northern Kentucky Gun Club.

THE seventh annual tri-state championship shoot at white fliers was held on Jan. 1 and proved to be one of the most successful of the series. The contest for the trophy (a gold watch charm with diamond setting) was open to amateurs of Indiana, Ohio and Kentucky, and the three States were well represented. Among the visitors were Messrs. Shafer and Hall, of Maysville, Ky.; Judge Denny, of Lexington, Ky.; T. H. Clay, Paris, Ky.; C. A. Woody, Cynthiana, Ky.; R. H. Burns, Brookville, Ind. The weather was all that could have been asked for—clear and cold, with no wind—and the large number of spectators were able to watch the sport in comfort. The birds were a very ordinary lot, though there were a few extremely fast ones in the bunch. Sitters were plentiful, and in some cases refused to take wing; others proved to be the most puzzling fliers, and fooled the marksmen more than once.

The shooting started about 11 o'clock, with an event at 5 birds, in which seven of the twelve contestants went straight and divided the moneys. The trophy event had twenty-one entries, Nicholas withdrawing after his sixteenth bird, and Woodbury after his seventh. The latter has not been in the game for several months, and was not in his usual form. The contest proved an exciting race, Hammerschmidt, Bruns, Walker and Robbins being tied at the end of the 22d round with one miss each. Walker dropped out on his next bird, and Robbins missed his 24th, leaving the other two to fight it out, as they finished with 24. Two shoot-offs were required. The first was a tie on 5 straight. In the second, Bruns lost his fourth bird and his opponent went straight, winning by one bird, a total of 34 out of 35 birds.

Hammerschmidt has not been shooting at the trap for three or four months, but lack of practice seems to make no difference with him. Bruns is one of the best amateur trap shots in this vicinity at both clay targets and live birds, and as good a loser as winner. He divided first money with Hammerschmidt. Payne lost a bird dead out, which kept him out of the tie. He is the quickest man with his first barrel that we have in these parts, and it is generally effective. Irwin seldom loses as many birds as he did in this match. Voige is one of the new ones in the game, and is making good. Robbins lost his first bird and then killed 23 straight, the long run of the match. Geo. Dameron was not in form to-day, and besides had the hard luck of losing 3 birds dead out. Dr. Gould lost his birds early in the race, and finished in second money with four others. Holaday, Sr., can't handle a gun as he used to, but still retains his love for the sport. Milt Johnson can't resist a real good shoot, and was on hand to-day, getting in third place. At clays he often does much better, but the white fliers are rather new to him. A miss-and-out ended the day's sport. Walker and Voige divided the money on a score of 9. Hammerschmidt stayed in till his ninth bird,

which he missed. The last bird was shot from 38yds.

REMINGTON ARMS - UNION METALLIC CARTRIDGE CO. - 299 Broadway, New York, N. Y.

The Du Pont Gun Club.

AFTER a series of shoots covering about four months, the competition for the Frank L. Connable amateur handicap championship trophy of the Du Pont Gun Club, was closed last week, and the prize awarded to William G. Wood with a percentage of 9208 in twenty contests of 25 targets each.

This is one of the most highly coveted trophies that has ever been competed for by the members of the Du Pont Gun Club. It is a handsome silver cup, donated by Frank L. Connable, one of the vice-presidents of the Du Pont Company. The cup is solid silver and stands nine inches high with an ebony pedestal four inches high, making the total height of the trophy thirteen inches. It was designed and made by Bailey, Banks & Biddle, of Philadelphia, which is a sufficient commentary to make on its quality and the gracefulness of its style.

The twenty-seven high men, percentages and number of contests follow. Each contest was at 25 targets:

Table with 3 columns: Name, No. of Contests, Percentage. Lists members like William G. Wood, Dr Horace Betts, Stanley Tughton, etc.

The New Year's shoot at Du Pont Gun Club was one of the most successful thus far shot off by the yearling club of Delaware. Eighty-three gunners shot through the entire program, and the turkeys on hand reminded one of G. D. Tilley's wildfowl emporium at Darien, Conn.—turkeys to right of them, left of them and back of them, and at dinner in front of those that won. Ed. Banks was high man, missing only one of his 50 prospects, but being a professional, he had to send a charge into the butcher for his turkey, Dead Shot wouldn't bring it home. The official scores out of 50 shot at were: J. W. Mathews 35, Victor du Pont 32, J. H. Minnick 36, W. L. Jarrell 36, Dr. H. Betts 36, W. M. Francis 28, C. W. Crossman 16, Stanley Tughton 39, W. A. Casey 29, T. W. Mathewson 36, W. M. Hammond 38, L. S. German 40, M. W. Mitchell 41, C. B. Osborne, Jr. 42, W. Edmanson 39, William G. Wood 35, C. D. Prickett 36, C. V. Ferriday 30, W. S. Simpson 32, T. W. Keithley 32, J. A. MacMullen 32, J. R. Bailey 24, L. C. Lyon 29, R. P. Choate 37, Thorpe Martin 36, F. A. Wardenburg 28, W. A. Jordan 26, R. E. L. Hopkins 32, J. O. Groff 36, Edward Banks 49, E. A. W. Everitt 42, W. S. Colfax, Jr. 48, A. B. Richardson 47, J. T. Skelly 41, Dr. Bullock 26, Gregg Godwin 38, W. B. Abbott 29, S. J. Newman 31, J. W. Evans, 39, N. K. Smith 40, W. S. Gavan 36, D. S. Wood 19, Dr. F. A. Buckmaster 40, Dr. S. C. Rumford 40, C. L. Walker 30, L. W. Crawford 28, Dr. C. R. Jefferies, Jr., 28, E. C. Ferriday 17, H. P. Carlon 43, J. T. Roberson 42, J. J. Magahern 43, J. B. McHugh 47, L. D. Willis 46, C. L. Pretze 7, W. Coyne 33, H. W. Bush 27, R. S. Robison 19, H. C. McClane 34, D. A. Grier 32, W. M. Foord 41, C. H. Simon 43, F. F. Lofland 36, W. J. Warren 40, F. P. Ewing 37, C. S. Griswold 33, D. Lindsay 38, Dr. S. Steele 41, W. W. Bacon 24, W. B. Smith, Jr., 36, W. A. Lindsay 34, A. H. Lobb 40, Dr. A. Patterson 30, W. J. Highfield 27, S. G. David 32, J. W. Anderson 38, A. J. Dickerson 29, J. C. Groome 36, R. C. McCordle 30, A. M. Lindsay 22, T. E. Doremus 27, W. A. Joslyn 35, H. B. Lyham 7.

Winners of turkeys: Class A—J. B. McHugh 47, A. B. Richardson 47. Class B—H. P. Carlon 43, M. W. Mitchell 41. Class C—J. J. Magahern 43. C. H. Simon 43. Class D—L. L. Jarrell 36, W. B. Smith, Jr., 36. Visitors' Class—C. B. Osborne, Jr., 42.

Atlantic City Gun Club.

ATLANTIC CITY, N. J., Jan. 5.—The Christmas shoot of the Atlantic City Gun Club, for turkeys was a decided success, everyone getting a bird excepting Powers, and he, after the program was finished, got desperate and challenged Plum to shoot him for his bird against \$2.50, and even then was defeated, so he had to dig and get his own bird.

The program was composed of 15-bird events, and the shooter winning a bird was put back 3yds., until 21yd. mark was reached, and this system insured an even distribution of the prizes.

Table with 3 columns: Name, 1st, 2nd, 3rd, 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th. Lists members like Plum, Powers, Cook, L. Lewis, Westcoat, J. Morris, Sheppard, French, Herold.

Cook won turkeys in events 1 and 2; Plum in event 3; Morris in event 4; Westcoat in event 5; Shepard in event 6, and French in event 7. The winners were given orders for 10lb. dressed prizes.

At the New Year's shoot Powers came back. Since the Christmas shoot Powers has become the proud possessor of a daughter, and the way he did grind up targets was a wonder; he took away four turkeys and a chicken. Cook got a turkey and a chicken, and Shepard got two turkeys. Scores:

Table with 3 columns: Name, 1st, 2nd, 3rd, 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th. Lists members like Cook, Sheppard, Powers, Plum, French, De Wolfe, Westcoat, Adams.

Look out for Powers from now on. Plum did not get a turkey; neither did French, they sure did try hard to get off that 16yd. line.

We had with us Dr. De Wolfe, of the New York A. A., and were glad to welcome him. Westcoat got a chicken.

Columbus Gun Club.

COLUMBUS, O., Dec. 30.—Seven men faced the traps Saturday afternoon at the Columbus Gun Club shoot in spite of bad weather. Chamberlain was high gun. Mr. Ross, of Millersport, was a welcome visitor, as well as Mr. Wormeldorf, of the State Hospital. H. E. Smith and Lon Fisher expects to attend the big midwinter shoot at Pinehurst, N. C., on Jan. 24; they will start about the 16th. Fisher expects to continue his trip on into Florida.

The next regular shoot will be held on Jan. 12, when a new system will be tried out; entrance for the day will be \$3, to shoot at 150 targets; half of this will go as average money. With thirty shooters this will make \$45 to be divided among the high men. Class division, not high guns; two moneys for every \$10 in addition to the average optional sweep of 50 cents for each event, will be shot; this will be divided 40, 30, 20 and 10; entrance for the day, \$8. Come and try this system. Scores for Saturday:

Table with 4 columns: Name, Shot at, Broke, Name, Shot at, Broke. Lists members like Chamberlain, Taylor, G Smith, Webster, Ross, Wormeldorf, Fisher.

Jan. 6.—Le Noir was high gun on New Year's Day at the Columbus Gun Club's turkey shoot. The turkey winners were: LeNoir 2, Dr. Edwards 2, Fisher 1, Dr. Van 1. Every one had a good time. No one out on Saturday on account of bad weather. It is sure winter. The Columbus team still holds the Fishing and Hunting cup, emblematic of the championship of the State. Don't scme team want it. We are ready any old time to defend it. Come on, you 90 per cent. teams. Scores:

Table with 4 columns: Name, Shot at, Broke, Name, Shot at, Broke. Lists members like Le Noir, Kelly, J H Smith, Fisher, G Smith, Shilling, Dr Edwards, Wells, Dr Van, Carter, McBee, Curtis, Weinman, Joyce, H E Smith, Jones, Ford.

LON FISHER.

Youghiogheny Country Club.

THE Youghiogheny Country Club held its first clay-pigeon tournament, open to non-members, on New Year's Day, twenty-three shooters participating. Eighteen shot through the program. Good scores were made, notwithstanding the cold weather and a strong wind blowing across the traps. Dr. A. H. Aber and J. F. Calhoun divided first honors, each breaking 96 out of 100. Geo. Cochran was second with 95, and Ad. Heckman third with 88. L. J. Squier was of great assistance to the management. Scores:

The club will hold a cup and medal shoot for the members and tournaments for non-members during the spring and summer months.

Table with 2 columns: Name, Score. Lists members like Aber, Calhoun, Cochran, Heckman, Baxter, Bradshaw, Davis, Higsby, Squier, Johnson, Hardy, Keener, Anthony, Pierce, Heisey, Barkemeyer, Gardner, Sword, Everett, Ulmer, Meyers, Hartman, Howell.

SECRETARY.

Bergen Beach Gun Club.

BROOKLYN, N. Y., Jan. 6.—Too cold here to-day for the 100-bird handicap, so the events were broken up into practice at 25-strings. High guns were G. Remsen and R. Morgan, who each made 24 out of 25. Scores:

Table with 3 columns: Name, 1st, 2nd, 3rd, 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th. Lists members like P von Boeckman, H W Dreyer, Dr Judd, E A Brown, Dr Griffith, H Beague, A V Suydam, R Morgan, C Crawford, J Voorhees, G Remsen, H Hewens, G Jones.

New York Athletic Club.

PELHAM MANOR, Jan. 6.—The man who invented handicaps in trapshooting didn't do it because R. L. Spotts needed 'em, for the reason that said Spotts shoots with a great deal more confidence and correspondingly better scores when he isn't allowed to drop a few saucers when cleaning up the china closet, without hurting his chance of winning. To-day he tied in four events and won all of them in the shoot-off. W. B. Ogden tacked a leg on January cup, while Dr. Culver won the 10 pair doubles scratch with 17, which, it may be mentioned, was quality shooting, under the weather conditions existing. Scores:

Table with 3 columns: Name, Score, Name, Score. Lists members like W B Ogden, J G Ranney, C W Billings, Dr Culver, T V Lenane, R Debacher, R L Spotts, J G Dey, J G Crowe, G F Battison, O C Grinnell, G Lembeck, G C Corbett, D F McMahon, J W Hessian, G T Lawson.

Lansdale—Highland.

LANSDALE trimmed the Highlanders yesterday by a score of 388 to 364. The club grounds, located on the top of a hill, offered a tempting spot for the piercing wind, and every gunner who stepped from the club house to the traps has to endure a cold which cut through to the bone. As the match progressed the gunners' fingers and arms became numb, and many could hardly finish their allotted string of 50 birds. This accounts for the very many poor scores made on the last round of 25 birds. Lansdale shot a better race than did Highland. Of their ten high men, they had four to break 40 or better. L. I. Swartz led the club with 45 smashes. Rogers and C. Swartz broke 43, and Henry shattered 42. McCarty and Tansey with 42, led the Edge Hill delegation. They, with Perry, were the only Highlanders to reach 40 and better. Scores:

Table with 3 columns: Name, Score, Name, Score. Lists members like L Swartz, Rogers, C Swartz, Henry, Bender, Taylor, Martin, Hoffman, Metz, Rauch, McCarty, Tansey, Perry, David, G Clark, S Freeman, Meehan Sr, Hibbs, T Meehan, Sr, Pffegar.

Scores made by gunners who failed to qualify for their respective teams follow:

Lansdale—Hildeltie 35, Wampole 34, Goerber 32, I. Schultz 31, Pierson 29, N. Clark 19, Kicker 27, E. Schultz 27, Henning 26, Swartley 24, Cauffe 23, White 22. Highland—Crooks 31, W. Dalton 31, Drakeley 30, S. Meehan, Sr., 26, E. F. Wentz 23, Hoover 19, Davis 19.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Crescent Athletic Club.

BAY RIDGE, Jan. 6.—To the tune of de Koven's "Winter Lullaby," eleven warm-bloods shot six interesting events here to-day. The take-home trophy at 100 targets didn't show any high scores, 79 broken by J. E. Murray, being high enough to win. George Brower returned a full score with a handicap of 4, and won J. S. Lawson cup. C. R. James (2) 21 and W. W. Pell (4) 21, tied for the leg on January cup. George Brower came in with the Stake trophy, and was on the second combination in the team race, won by Hyatt and James. C. R. James made the 25-target handicap trophy shoot. Scores:

Take-home trophy, 100 targets, scratch:	
J E Murray..... 79	G E Brower..... 68
F S Hyatt..... 74	J F James..... 67

Mt. Kisco Gun Club.

Mt. Kisco, N. Y., Jan. 5.—The first target shoot of 1912 of Mt. Kisco Gun Club was held on New Year's Day. Fifteen members were present for the opening of the afternoon program. Five events were on the program—three for poultry, two of 20 targets each for merchandise. The handicap shooters captured most of the poultry, and merchandise prizes. Scratch shooters had very hard work to get any of the prizes.

High gun for the day was A. Betti, who, despite bad angles, broke 77 out of 85 targets, shooting from scratch. James A. Benedict, another scratch man, was second with 74 to his credit, while Lester C. Remsen and J. E. Sutton, each shooting with 2 handicap, tied for third place with 72. Scores:

Targets:	Hdcp.	15	15	20	15	Total.
J A Benedict.....	0	12	14	18	17	74
L C Remsen.....	2	12	12	17	17	72

A. BETTI, Sec'y.

DuPont—Meadow Springs.

Jan. 6.—Somebody in the club house started to play the Spring Song on the piano during the shoot here to-day—please omit flowers. The day was so beastly cold that the only thing that kept up interest in the regular Saturday shoot was making it warm for the Meadow Springs Gun Club, of Biddlehurst, and warm it was, as Du Pont won by the score of 427 to 411. H. H. Sloan, of the visitors, was top-cracker with 47 out of 50, while W. S. Colfax made only one less. In the practice shoot at 100 targets, J. T. Skelly got into the upper berth with J. B. McHugh, each sprinkling the frost-bitten sod with 92 aerosaucers. N. K. Smith didn't have a Ballistite hold on the Class B cup, so it was E. C. for William G. Wood to take it away with a margin of 3 birds. Ed Banks was on the job with his old trusty, breaking 48 out of 50 merely as a matter of form. The scores in the team race were:

Du Pont.		Meadow Springs.	
Colfax..... 46	Sloan..... 47	McHugh..... 45	Buckwalter..... 43
Hammond..... 45	P V Mace..... 42	Robinson..... 44	Coyle..... 42
Joslin..... 43	Mardin..... 41	Lobb..... 42	Zeigler..... 42
Willis..... 42	Warren..... 40	Richardson..... 41	Kinchiner..... 39
Carlson..... 40	Chandler..... 38	Anders..... 39-427	Renner..... 37-411

Hudson Gun Club.

JERSEY CITY, Jan. 5.—The last shoot of the Hudson Gun Club for the year 1911, took place at the club traps on Dec. 31, with only fifteen shooters taking part in the day's program. Conditions on this occasion were about as miserable as they could possibly be, as the snow of the night before, lying on the grounds, the rain of the morning and the cold wind that was sweeping across the meadows, played havoc with the scores of the shooters, as a glance at the score sheet will tell, 19 being the best individual score recorded by one of our best shots. C. von Lengerke.

Billy Emmons was with us this morning, journeying all the way from Hartford, Conn., and the excuse offered for his "bum" scores was the load that he was using; it is all right, Bill, we all know about that load, as several of us had used some of the same thing, and found that it was all right.

Our next shoot will be held on Jan. 14.

Targets:	25	25	25	25
J von Lengerke.....	19	16	11	13
J Williams.....	14	15	15	16

T. H. K.

Newton Gun Club.

NEWTON, N. J., Jan. 1.—Thirty-two shooters participated in the fifth annual poultry shoot. The club provided forty chickens, fourteen geese, seven turkeys, ten ducks, ten Guinea hens for this shoot. L. Colquitt was the main coop cleaner; twelve chickens, a turkey, a goose, and a duck was all he could carry home. Brickner, Kinney and Welsh running him a very close race. A. B. Brickner was high gun; L. Colquitt second; P. Welsh third.

WINCHESTER

*.22 Caliber Cartridges and
.22 Caliber Muskets*

ESTABLISH A NEW HIGH INTER-CLUB RECORD

Composite Target of the 100 Shots.

One of the 5-Shot Targets.

In the Inter-Club Match shot December 26th by the Winchester Rod and Gun Club Team, of New Haven, Conn., and the Erie, Pa., Team, the former by making a score of 993 out of a possible 1,000 points, established a new high record for this kind of competition.

The team and individual scores were:

Capt. W. H. Richard.....	200
G. W. Chesley.....	199
M. O. Buttsteadt.....	199
H. M. Thomas.....	198
H. S. Williams.....	197
	<u>993</u>

All of the winning team shot Winchester .22 Long Rifle cartridges loaded with "Lesmok" powder and Winchester .22 Caliber Muskets. This is the bullseye combination for the man who "points right". Unaccountables are few and far between when it is used. If you seek to excel, use Winchester Rifles and Winchester make of cartridges. They **Show Their Possibilities by Making "Possibles"**.

PETERS
Big Game CARTRIDGES

Can be depended upon to "make good" in any sort of critical situation. Primers that are **really sure-fire**, bullets and shells designed and made by scientific experts, standard brands of powder accurately loaded—all these are essentials of the finished cartridge that produces results.

Peters Ammunition develops the **greatest efficiency** of any good gun.

Ask your dealer for **Peters** Cartridges for the simple reason that they are **the best.**

The Eleventh Annual Sunny South Handicap.

The program of the eleventh annual Sunny South Handicap (the great sporting event of the South), to be held under the auspices of the Houston Gun Club at Houston, Tex., Jan. 22-27, reads as follows:

Otto Sens, Tremont Hotel, is President; Alf Gardiner, 906 Franklin avenue, Manager.

First Day, Monday, Jan. 22, 9:30 A.M.—Five events at 20 targets, entrance \$2, \$10 added to each event. Five events at 25 targets, \$2.50 entrance, and \$10 added to each event; all shooting from 16yd. mark, 50yd. target; money divided per cent. plan, 40, 30, 20 and 10 per cent., class shooting. High amateur average on this day will receive \$25 cash; second high average, \$25, and third high average, \$15.

Second Day.—Ten events at 20 targets, \$2 entrance, and \$10 added to each event; all shooting from 16yd. line; 50yd. targets; money divided per cent. plan, 40, 30, 20 and 10 per cent., class shooting. High amateur average on this day will receive \$25 cash; second high average, \$25, and third high average \$10.

To reach shooting grounds, take South End car on Main or Travis street, and transfer for gun club grounds.

Third Day.—Five events at 20 targets, entrance \$2, and \$20 added to each event. All shooting from the 16yd. mark, and money divided on the per cent. plan, 40, 30, 20 and 10 per cent., class shooting.

Event No. 6, is at 100 targets, entrance \$10, and is for the Houston Chronicle trophy, emblematic of the Southern amateur championship, to be shot for from the 16yd. mark, and is open to all amateurs and counts for average on the program. It is now held by Guy Dering, of Columbus, Wis. Money in this event is divided as follows: 50 per cent. of the purse goes to the holder of the trophy. The balance of the purse divided 50, 30 and 20 per cent. The winner of the trophy will receive 50 per cent. of the entrance fee at the next open contest upon surrender of the trophy.

High amateur average for the day's program will receive \$25 cash; second, \$15; third, \$10.

Fourth Day—Nine events at 20 targets, entrance \$2.50, and \$25 added to each event, all shooting from 16yds., and money in the first four events divided 40, 30, 20 and 10 per cent., class shooting. The next events will be divided Rose system. Event No. 9 is for the Houston Post trophy, emblematic of the team championship. This event is open to any two amateurs living in the same State, and is to be shot for once every year at the Sunny South Handicap. The trophies are now held by Messrs. Crothers and Ditts, of Illinois. The event is at 25 targets per man, \$2.50 entrance, 16yds. rise. Money in this event will be divided as follows: 50 per cent. to the present holders, the balance divided, 50, 30 and 20 per cent. High amateur average this day will receive \$10; second high, \$5.

Fifth Day.—Five events at 20 targets, \$2.50 entrance, \$25 added to each event, all shooting from 16yds. rise. Money divided Rose system.

The Sunny South Handicap, 100 targets, \$10 entrance, \$100 added. Handicaps, 16 to 22yds. Eight moneys, 25, 20, 15, 10, 10, 10, 5, 5 per cent., class shooting, in addition to first money, the winner will receive a beautiful trophy. This event is open to both amateurs and pro-

fessionals. The balance of shooting is only open to amateurs. High amateur average on this day will receive \$15 cash; second high, \$10. The Sunny South Handicap is counted for average.

Jim McLain, of Augusta, Tex., was winner of the 1911 Sunny South Handicap, making a score of 94, shooting from the 16yd. mark.

Sixth Day—Ten events at 20 targets, entrance \$2.50, \$25 added to each event; all shooting from 16yds. Money in first five events divided 40, 30, 20 and 10 per cent., class shooting. The last five will be divided Rose system. High amateur average for the entire program will receive \$50; second, \$25; third, \$25; fourth, 15; fifth, \$10.

Plenty of good duck and snipe shooting near the city. ALF. GARDINER, Mgr.

Manhasset Bay Y. C.

PORT WASHINGTON, Jan. 7.—The regular weekly shoot of the Manhasset Bay Yacht Club was held to-day. A strong northwest wind and a bad glare from the snow made shooting very difficult, so J. W. Alker was the only one to turn in a full score. Hoyt, however, broke 24 from scratch in two events. It was intended to hold a team shoot with the Glenwood Country Club, but the Country Club team did not show up in force, so two impromptu teams were made up. Mr. Hoyt's team won easily. Scores for the day:

Sweepstakes, 10 targets, scratch:

H L Hoyt, Jr.....	9	B G Loomis	6
J E Meyer.....	8	C Clark	5
J W Alker.....	7	J C Meyers	5
H F Clark.....	6	F Richards	5

Cleveland Gun Club.

For the thirty-second year, New Year's Day was celebrated at the Cleveland Gun Club by a trapshooting tournament. This year weather conditions were ideal, with the result that many good scores were made. Dr. A. T. Brown broke 138 out of 150, and took first "stuff," with Weeden only 5 behind, for second lucre. The satisfactory Jack Rabbit system of money division made every shooter happy in accordance with the number of targets he cut down. Third place was a tie between Jones and Burns. The scores follow:

Jones.....	131	Archer.....	124
Boardman.....	123	Janson.....	119
Ledgett.....	128	Rockwell.....	98
*Taylor.....	132	Burns.....	131
*Chamberlain.....	122	Gruber.....	121

Money division:

Weeden.....	133	John Brown.....	99
Dr Brown.....	138	Rogers.....	119
Rasch.....	123	Cathan.....	116
Witwer.....	123	Weidener.....	110
*Call.....	130	Werkel.....	91
Hansen.....	115	Hopkins.....	97
F D Telling.....	121	Hogan.....	128

*Birds only.

Boston Athletic Association.

TEN men shot at the Riverside traps to-day, with conditions ideal. C. P. Blinn was top with 89, with a handicap of 12. T. C. Adams, shooting from scratch, was second with 80.

C P Blinn.....	13	89	C B Tucker.....	5	79
T C Adams.....	0	86	J L Snow.....	8	69
M Ballou.....	8	84	G L Munroe.....	24	68
G H Hassam.....	0	83	F H Richards.....	17	65
F Whitney.....	15	83	J E Lynch.....	5	60

Jan. 6.—Following are the scores of the weekly shoot at Riverside. J. L. Snow won first. High wind and bright sun were the weather conditions.

J L Snow.....	8	87	C B Tucker.....	5	81
T C Adams.....	0	86	*P E Osborne.....	0	77
*W D Darton.....	0	84	G L Munroe.....	24	77
*C H Wheeler.....	0	82	F Whitney.....	15	75

Here's the Rifle you have been waiting for—

**The New Model 29
Marlin
Repeater**

Write us for free circular

It's an up-to-date .22 caliber repeater that handles without change or adjustment the .22 short, .22 long and .22 long-rifle cartridges, black, semi-smokeless and smokeless of all makes and styles, yet sells at the surprisingly low price of \$8.50.

Order from your dealer

¶ The Model 29 is similar in general construction to the well-known *Marlin* Model 20. ¶ It is a **take down**, convenient to clean quickly and thoroughly and can be packed in a small space. ¶ It has the **popular trombone action**, quick and easy in operation. ¶ The modern **solid top, side ejection and closed-in breech** insure greatest safety, comfort and convenience.

¶ It has a **(23-inch) barrel** long enough for all requirements; it shoots all **.22 short, long and long-rifle cartridges**, including the hunting cartridges with mushroom bullets; it is a **thoroughly accurate and efficient** arm for rabbits, squirrels, hawks, crows, foxes and all small game, and for target work. ¶ **Guaranteed in accuracy and reliability.**

Circular giving full description free on request—or complete catalog of all Marlin repeaters for three stamps postage.

The Marlin Firearms Co. 27 Willow Street, New Haven, Conn.

Larchmont Y. C.

LARCHMONT, N. Y., Jan. 7.—Ever play freeze-out? Well, it was played here to-day. All but fifteen shooters were properly cold stored. The wind couldn't seem to penetrate the bulk of Tom McCahill and G. Lembeck, so they ambled off with the big end of the offerings. McCahill scored leg on vice-commodore's cup and leg on accumulation cup. Mash Lembeck leg on Alley trophy, 125-target scratch event, and monthly cup. W. B. Short dressed the grass properly with fragments of 94 targets in the 100-target handicap and copped the copper. Scores:

Scratch shoot, 15 targets:

J G Battison..... 14	T Lenane, Jr..... 10
R L Spotts..... 13	B Williams..... 10
T J McCahill..... 13	G S Dey..... 9

New Rochelle Y. C.

NEW ROCHELLE, N. Y., Jan. 6.—The interest here to-day was keen, but the icy-bladed wind which howled around Harrison Island was much keener. This, mixed with two parts snow and shaken à la P. J. D. cocktail, made shooting a bit uncomfortable. R. Schneider seemed least affected by the weather. He got away with a straight in the special handicap, and later made 43 out of 50 in the special 50-target event. Jack Fanning, with his usual "after-you-Mr. Amateur" consideration, broke only 42 in this event. Jack will always be Jack. V. P. Krause went into executive session with his gun, and decided on a close corporation, so he took three out of the six events. To him went the Du Pont trophy, week-end prize, and special 25-bird match.

The Donovan cup, 25 target, handicap, slipped into the maul of G. P. Granberry, who, with 4 handicap, scored 24. Speaking of the Donovan cup reminds me that maybe a word to the wise will be sufficient in re Joe Donovan: If this gentleman takes as much interest in trapshooting as he does in yachting—beware. When he gets his weather eye on the aerosaucer with the accuracy with which he hitches it to the "rippers that indicate" the best of the smashettes had best beware. Joe is one of them who sails by instinct. If he starts shooting by instinct—H. O. Enough said. Scores:

Donovan cup, 25 targets, handicap:

G T Granberry..... 4 24	V P Krauss..... 4 17
C A Marsland..... 8 20	B R Stoddard..... 5 15
*R Schneider..... 0 18	

Du Pont trophy, 25 targets, handicap:

V P Krauss..... 4 23	C A Marsland..... 8 20
B R Stoddard..... 5 23	J P Donovan..... 6 15
G T Granberry..... 4 22	

Shoot-off:

V P Krauss..... 4 24	B R Stoddard..... 5 20
----------------------	------------------------

New Rochelle cup, 25 targets, handicap:

V P Krauss..... 4 24	B R Stoddard..... 5 20
*J S Fanning..... 0 22	C A Marsland..... 8 20
*R Schneider..... 0 21	

Commodore's cup, 25 targets, handicap:

V P Krauss..... 4 22	*J S Fanning..... 0 20
G T Granberry..... 4 21	*R Schneider..... 0 18
C A Marsland..... 8 21	*R Schneider..... 0 25

Special trophy, 25 targets, handicap:

V P Krauss..... 38	B R Stoddard..... 31
--------------------	----------------------

*Professionals.

Marine and Field Club.

GRAVESEND BAY, N. Y., Jan. 6.—Old Boreas was pretty busy here to-day, making it pretty cold on the shores of the Atlantic. However, eight ruddy gentlemen faced him manfully. The initial leg on the January cup went into a tie between Dr. Hopkins and J. M. Knox, each recording 84 out of 100.

E. H. Lott got the take-home trophy after a shoot-off with C. M. Camp and J. M. Knox, breaking 24 out of 25. Mr. Lott won also the 25-target scratch shoot with 24.

January cup, 100 targets, handicap:

J M Knox..... 20 84	P R Towne..... 0 71
Dr Hopkins..... 8 84	C B Ludwig..... 4 70
E H Lott..... 0 82	C D Sayre..... 16 68
C M Camp..... 8 81	J H Emanuel..... 4 61

Take-home trophy, 25 targets, scratch:

E H Lott..... 19	C B Ludwig..... 18
C M Camp..... 19	P R Towne..... 18
J M Knox..... 19	J H Emanuel..... 14
Dr Hopkins..... 18	C D Sayre..... 13

Shoot-off, same conditions:

E H Lott..... 24	J M Knox..... 18
C M Camp..... 21	

Scratch shoot, 25 targets:

E H Lott..... 24	J H Emanuel..... 17
C M Camp..... 22	C D Sayre..... 15
Dr Hopkins..... 18	J M Knox..... 15
P R Towne..... 17	C B Ludwig..... 15

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

South End—Haddonfield.

HADDONFIELD, N. J., Dec. 6.—South End defeated Haddonfield here to-day, 329 to 325. The biting cold made the shooters at their stands shiver as though afflicted by buck ague, when the birds sped from the traps, accelerated by the stiff northwester, and when the head wind retarded the shot so that, unless the shooter centered his bird, he failed to make an impression on it. It was discouraging to see time and again lost birds go right down the line of a squad, and when one succeeded in getting a bit off the target he was greeted with approval by his fellow shooters. When the results all summed up the shooters of the two clubs missed almost as many targets as they hit, and not a few who had an excellent League record had his average cut down in to-day's event.

Frank J. Hinelne's 40 was high for the day, Edwards missing it by one and Reidman by two. These three, with C. and L. Holloway, Fleming and Pechman, were the only ones to show anything like form. Scores:

South End.		Haddonfield.	
Hinelne	40	Beideman	38
Edwards	39	C Holloway	37
Fleming	35	L Holloway	35
Pechman	35	Jas Logan	34
Cross	34	Shreve	34
Johnson	33	Dungan	33
Slear	30	F Holloway	31
Rexon	29	J Peacock	29
Firth	27	S Bergen	28
Wakeman	25-329	Eyster	26-325

Others who failed to qualify were:
 South End—Snagg 25, Radcliff 24, J. Anthony 23, Newkirk 20, Goodfellow 16,
 Haddonfield—Stafford 26, Bevan 26, J. W. Logan 25, Pedlow 24, Remington 23, Tompkins 19, Lye 14.

Smith Gun Club.

A FAIR turnout of shooters braved the cold Saturday afternoon at the Smith Gun Club grounds. The regular monthly merchandize prize shoot for members only was the big event of the afternoon. Fifty dollars' worth of handsome prizes were awarded the six leading shooters. The usual handicap method was used, each man handicapping himself by the score made in the first string of birds. L. Trowbridge was high gun, taking first prize. Second went to S. Thornton; third to R. Bercaugh; fourth to P. Coffin; fifth to H. Sindle and sixth to W. Hassinger.

In addition to the prize event, several sweepstakes were shot off, together with the usual preliminary practice shooting. Scores:

P Coffin	17	17	18	19	33	18
L Page	15	13	9	11	26	14
W Kussmaul	15	17	12	12	21	..

S Thornton	18	35	..
N Apgar	16	20	22	9
L Colquitt	30	..

S. S. White—Clearview.

THE ill wind blew good to S. S. White Gun Club on Jan. 7, for only seven Clearview gunners made their appearance. Their combined score totaled 263 broken targets out of the 350 fired at, and as the League rule provides that ten men must make up a team by giving each absentee credit for 25 broken targets, this boomed the Darby men's total to 338. This score, however, was beaten by the Whites, who, having sixteen men on hand, had their ten highest to smash 438 out of their 500, a remarkable score, when considering the intense cold the gunners had to face. Scores:

S. S. White.		Clearview.	
Newcomb	48	Fisher	42
Severn	45	Bonsall	41
Sidebotham	42	Martin	39
Griffith	44	Redman	36
Cantrell	44	Ferry	36
Pratt	42	King	35
Wilson	42	Davidson	34
Powers	40	Absentee	25
Smith	40	Absentee	25
Cook	39-428	Absentee	25-338

Scores made by White gunners who failed to qualify for their team: Lewis 41, Hamlin 39, Dr. Mathews 38, George 35, Robinson 36, McKean 37, Taylor 17, Hand 35, Fontaine 37, Heite 23, Kendall 25, Denham 35, Watson 28, Keene 30.

Martel Gun Club.

GLOUSTER CITY, N. J., Jan. 6.—Owing to the bitter cold weather, the match for the big turkey was made a miss-and-out event. Thirty-five gunners contested, and Benjamin Carson, who hit 5 straight, was the winner. The scores: Benjamin Carson 5, J. Smith, H. Moeffus, B. Martel, F. Bennett, W. Sloan, J. Ross, A. Grater, A. Hargensheimer, E. Black, W. Bartman, W. Wakeman, D. Mooney, T. Fullam, W. Gallagher, W. Anderson, J. Hudson, W. Shindle, J. Dolan, G. Victor, W. Rox, T. Owens, 4 each; F. Butler, W. Murray, M. Monohan, F. Sampson, J. Madden, J. F. Curran, 3 each; S. Prickett, James Brennan, R. Shimp, J. Roden, W. McGinnis, 2 each.

SMITH GUNS

GRAND AMERICAN HANDICAP

1911

1906

1902

Great guns win great events because of long-distance, close-shooting and hard-hitting qualities

Our Art Catalog tells all about them. Write for it.

THE HUNTER ARMS CO.
 90 Hubbard Street - - Fulton, N. Y.

Buffalo Audubon Club.

BUFFALO, N. Y., Jan. 6.—Five events of 20 birds each were shot here to-day, which were divided into trophy events. The badge was worn away by Hopper with 20 straight. W. C. Wootton was second with 19. The spoon will have the honor of diving into the eight club eggs at the breakfast table of either Smith or Hopper, as both broke 19. Dr. Burke and Kelsey tied at 18 for the Lambert trophy. Scores:

Events:	1	2	3	4	5
Targets:	20	20	20	20	20
Wootton	18	19	18	16	12
Kelsey	17	16	15	17	18
Wacker	16	17	14	18	17
Lambert	15	15	19	16	13
J Reid	14	17	15	18	14
Rogers	12	14	15	15	14
Blackmer	9	10	13	13	13
Smith	14	15	16	19	10
Hopper	16	20	19	19	16
Dr Burke	18	16	16	13	18
Imhoff	16	16	17	17	14
Smith, Jr.	15	12	13	9	..
Hill	14	15	15	16	12
Waldon	11	14	15	11	..

No. 2 was the badge event; No. 4 the spoon event; No. 5 the Lambert trophy handicap.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., Jan. 1.—In spite of zero temperature and a high wind the regulars and a few beginners made the following scores on New Year's day:

Shot at. Broke		Shot at. Broke	
Hickman	225 209	Grey	150 129
Edmonson	225 198	Irvin	150 128
McGinnis	225 198	Diggs	150 91
Moller	225 191	Rice	60 49
Lewis	225 173	Appel	50 28
Britton	150 131		

Jan. 6.—In the regular weekly practice, Edmonson was again high gun and beat the spoon handicap:

Shot at. Broke		Shot at. Broke	
Moller	125 106	Layman	100 36
Edmonson	100 93	Dixon	45 31
Barr	100 91	Ford	40 29
Carrol	100 81	Hoover	40 29

R. R.

Speedway Gun Club.

NEWARK, N. J., Jan. 3.—As a special feature at the weekly shoot of the Speedway Gun Club yesterday afternoon, there was a 50-bird event for professionals, who shot for the Bernard M. Shanley prize. The trophy was won by H. S. Welles; who made 46. Stevens was second with 44, Neaf Apgar third with 43, and T. A. Davis fourth with 31.

In the regular events the following scores were made:

B M Shanley, Jr.	20	17	22	20	20	17	24	23
John Bey	19	17	19	23	17	20
H S Welles	21	22	25	21	19	23
N Apgar	25	23	22	21	22
Stevens	22	23	23	21	20
T A Davis	15	20	17	14
William Hassinger	22	24	21	22	23	23
L Colquitt	22	23	24	20	24	25
Peter Bey	13	13	11	15
Wm Stengel	18	20

SMOKELESS.

Lehigh Rod and Gun Club.

BETHLEHEM, Pa., Jan. 6.—Heil was high gun, breaking 93 out of 100 targets. Dorn and Gapp shared second honors. Scores:

Targets:	25	25	25	25	25
Heil	22	23	25	23	..
Gapp	20	20	18	23	..
Snyder	20	19	21	17	..
Dorn	19	19	20	23	23
Sobers	19	16	20	23	23
Miller	14	15	21	20	22
Werst	12	16

Ossining Gun Club.

OSSINING, N. Y., Jan. 1.—New Year's Day brought fifteen trap artists out here, and some wholesome scores were made:

Class A—J. T. Hyland 42, A. Bedell 41, L. Lyons 41, A. L. Burns 40, C. G. Blandford 39, I. T. Washburn 38, E. Brewerton 29.
 Class B—W. S. Smith 33, S. A. Kipp 31, W. J. Kuder 31.
 Class C—Wm. Holden 33, J. H. Moran 26, H. Washburn 21, Leon Lyon 19, J. V. Kirby 17.

Englewood Field Club.

THE Gunners of the Englewood Field Club held an interesting shoot at clay targets, Jan. 6. The handicapping had been so well done that three tied for first place. These were Dr. J. N. Teeter, Emmett Schulz and Dr. George D. Hamlen. Each was credited with a score of 25 out of a possible of the same number. In the shoot-off Dr. Teeter won, with 10 straight kills.

Essex County Country Club.

ORANGE, N. J., Jan. 6.—B. M. Shanley, shooting from scratch, won Saturday cup with 22 out of 25. Mr. Shanley won also a leg on Heller trophy with 23; a leg on January trophy went to P. Hauck (5) 25. A. R. Coffin took a leg on B. M. Shanley cup.
 The shooters were very scarce because of the illustrated picture of winter presented in the Orange Mountains.

Rifle and Revolver

Inter-Collegiate Rifle League.

THE schedule for 1912, which opened Jan. 6, promises to be most interesting, with twenty-one non-military colleges and universities shooting a schedule lasting until March 16. The schedule follows:

The shooting dates of the Eastern League are: Jan. 6, 13, 20 and 27; Feb. 3, 10, 17, and 24; March 2, 9, and 16.
 The shooting dates of the Western League are: Jan. 13, 20 and 27; Feb. 3, 10, 17 and 24; March 2 and 9.

The conditions governing the matches are:
 Eligibility.—Open to teams from university and college rifle clubs affiliated with the National Rifle Association and in good standing. Members of teams to be in

good standing in the undergraduate year and who are maintaining the necessary hours of work and standard of scholarship required by the institution.

Team.—Any number of men up to ten may shoot, the best five scores counting for the team score.

Distance.—Fifty feet from end of rifle to target.

Number of Shots.—Twenty for record—10 standing and 10 prone.

Sighting Shots.—Two sighting shots only will be allowed at commencement of firing if the two positions are shot consecutively. If there is an interval of time between shooting the two positions, sighting shots will be allowed before record firing in each position. Sighting shots must not be fired on match targets.

Targets.—The N. R. A. gallery target, 1 to 10 count, to be used. Twenty officially stamped targets will be furnished free for each match—two for each competitor. These targets will be marked for identification, and no other targets will be received for record. These targets will be sent to the N. R. A. judge, and will be retained under his control before and after the shooting. Targets similar to those used in the matches may be secured from the N. R. A. for \$3 per thousand.

Position.—Standing; Offhand, body free from all support, strap allowed in connection with one arm only. The regulation web belt may be used if desired. Prone: Head toward target. No part of extended arm to touch the ground except at the elbow. No artificial support to any part of the rifle, except the sling, or to the arm, except at the elbow.

Rifle.—Any .22cal. rifle weighing not over 10lbs.

Sights.—Any, in front of the firing pin, not containing glass. Telescopes not allowed.

Trigger Pull.—Not to be less than 3lbs.

Ammunition, .22cal. short.

Time Allowance.—Ten minutes will be allowed for each string of 10 shots.

Judges.—The judge appointed by the N. R. A., or his representative will act as executive officer at each contest. He will see that all conditions are adhered to, determine the score and report same to the headquarters of the N. R. A. by mail on completion of match. In the Western League the scores will be telegraphed to the N. R. A. at night rate, prepaid.

Matches, when Shot.—Team may shoot on the Monday, Tuesday or Wednesday night of each week, or on the Saturday night preceding, if the targets stamped for the following week are used. A report of the week's shoot must be in the office of the N. R. A. by Thursday morning of each week. Matches may be shot either afternoon or evening. All clubs not reporting by mail or telegram by noon will receive a zero for the week's shoot.

Entrance fee, \$5 per team.

Prize.—The winning team of each League will shoot off for the championship, and the winning team will receive the championship trophy and five silver medals. The losing team will receive a trophy emblematic of the championship of the East or West, as the case may be, and five bronze medals.

Special Prize.—J. A. Baker, Jr., and P. St. G. Bissell, Jr., two former members of the Columbia University rifle team, have presented a bronze figure as a special prize for the non-military college making the best record in the matches. The trophy to remain in competition for ten years and become the property of the college winning it the greatest number of times in that period.

The method of determining the winning team in each League will be by the greatest number of wins.

John A. Dietz's Revolver Record.

On Nov. 26, 1911, John A. Dietz, of New York, announced his intention at the Cypress Hill range to shoot for the 50 shot 50yd. revolver record. Mr. Dietz scored 94, 96, 94, 95, 96; total 475. The range was duly measured with accurate steel tapes, and Mr. Dietz stood

well back of the 50yd. mark. Revolver, S. & W. .38 special, Pope barrel, Patridge sights, special mid-range ammunition of his own loading. The revolver when cocked sustained a trigger pull of more than 3½lbs. All the above details have been fully verified by numerous letters and affidavits filed with the secretary-treasurer, and the performance is recognized as a new U. S. R. A. record. Composite reproduced above.

Some Good Reasons Why You Should Shoot

AMERICAN DUCK SHOOTING

By George Bird Grinnell

Describes every species of duck, goose and swan known to North America; tells of the various methods of capturing each, the guns, ammunition, loads, decoys and boats used in the sport, and gives the best account ever published of the retrieving Chesapeake Bay Dog.

About 600 pages, 58 portraits of fowl, 8 full-page plates. Price, \$3.50 postpaid.

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK

Game Laws in Brief

A new and revised edition for 1912.

It gives all the fish and game laws of the United States and Canada. It is complete and so accurate that the editor can afford to pay a reward for an error found in it. "If the Brief says so, you may depend upon it."

Sold by all dealers, or by mail by us. Price, twenty-five cents.

Forest and Stream Publishing Co., 127 Franklin St., New York

N. R. A. Inter-Club League.

WASHINGTON, D. C., Jan. 6.—The second week of the Eastern League schedule brought out some good scores, none particularly high, and all but three being well over the 960 mark. The lowest total of the week was 910, made by Manchester.

Those who shot in the matches last year will at once appreciate the rapid increase in high scoring. The Winchester Rod and Gun Club again had the high total for the week—986—closely pressed, however, by Bridgeport and Cleveland, each of whom had 984.

Every one will be glad to notice the great improvement made in this N. R. A. prone shooting at 25yds. It shows that these indoor riflemen will soon accustom themselves to a new form of shooting. This prone shooting game, with open sights is just a little different from anything ever tried before, and the fact that when the possible score of 200 is made by an individual, it is usually as good as can be made by machine rest. This proves also the high state of perfection reached in the manufacture of arms and ammunition.

LOUISIANA NOTES.

Continued from page 49.

went out. The weather conditions were extremely bad on account of the long duration of rain, wind and cold and foggy days. A number of deer have been killed recently near New Orleans, and several of the hunters have brought in ducks, geese and some wild turkeys. Turkeys have been very scarce this season as compared with last year. Quail are rather abundant. Many muskrats have been trapped and good prices have been realized for their skins. The game commission rather encourages the trapping of muskrats on account of their destructive propensities in reference to the levees.

The commission has been endeavoring for some time to get the police juries of the parishes to enact ordinances protecting the alligator, and a number of parishes have taken action on the subject. The commission claims that the alligator destroys the alligator gar and other worthless fish that prey on the edible fish. The alligator also devours the muskrat. It is claimed by the commission that unless the alligator is protected by legislation, he will soon become extinct, as the curio stores collect thousands of baby 'gators annually, and many concerns buy the alligator skins for tanning.

The holiday hunting parties were very numerous. Most of the hunters preferred to shoot ducks, although a few went in quest of deer and wild turkeys. The holiday season was confined largely to local sportsmen. Just prior to the annual carnival or Mardi Gras a large number of visitors are expected and all the hunting clubs will entertain many guests. The carnival will take place about the middle of February, and the winter tourists come about a month in advance.

The fishermen are getting ready for the early season and expect to make good catches during the next few weeks. The early fishing in salt waters begins the latter part of January and early in February, especially if the weather is balmy. The fishermen spend the Sundays at the Rigolets, Lake Catherine, Chef Menteur, Lookout, Waveland, Bay St. Louis, Pass Christian, North Shore and other resorts where clubs abound. During the past fortnight, on account of the bad weather conditions, little has been done in the fishing. Several parties went out during the holidays and landed some redfish, speckled trout and green trout and sheepshead, but catches were small.

James Robertson, a locally renowned trapper, recites a thrilling experience which he had a day or so ago with a wildcat in St. Bernard parish. Robertson says he had set one of his traps near a branch, and in making his rounds he heard the yells of a wildcat. The animal had been caught by the left hind leg. He approached the cat, and so furious was the animal, that he was at first at a loss to know exactly how to take the beast out of the trap without shooting it, but managed to kill it with a long pole.

The death of City Councilman John J. Frawley caused much sorrow among a large number in this city and State. Mr. Frawley died of apoplexy. He was a leading fisherman, put in his spare time with the rod and reel at North Shore on Lake Pontchartrain and in other waters. He had often entertained visiting fishermen and hunters at the Grunewald Hotel, of

which he was a part owner, and also the club at North Shore.

The best hunting month near New Orleans and in the center of the State is in January. The busy times incident to the Christmas trade and the preparations for the holidays are keeping men from the woods, marshes and bayous, except for a short time on Sundays. During the holidays scores of hunters will go to the woods and streams in quest of ducks, turkeys and deer.

Henry Jacobs, who is connected with the State Game Commission, will deliver a series of illustrated lectures in the city public schools. Mr. Jacobs will display specimens of the birds, fish and animals to be found in Louisiana. Commissioner Frank M. Miller will lecture and explain the objects of game preserves and the conservation of the natural food supply of Louisiana. He says he believes the children ought to be instructed in these subjects and induced to make inquiries into natural history. Mr. Jacobs has returned from a tour of the country outside of New Orleans where he lectured to 20,000 school children and secured their names for the Audubon Society. He found the people willing to hear him, and a great deal of interest was manifested, and his trip was in every way satisfactory. He will continue his trips to the schools in the country after the Christmas holidays.

The steamboat New Orleans, the replica of the first steamboat to navigate the Mississippi and Ohio rivers a century ago, is still anchored at one of the landings in this city. It is probable the quaint little craft will remain here for some time, or at least until the city of Pittsburgh and the West Pennsylvania Historical Society gives orders for the boat to be returned. It is said, however, that the expense of taking the boat back will be very great, hence it may remain in New Orleans indefinitely.

John Wolf, nineteen years of age, a member of the Manchac Hunting Club, has the honor of killing the largest buck of the season up to this time. The big deer weighed 200 pounds. It was killed at Pass Manchac, twenty-five miles from New Orleans, and brought to this city by Wolf and his friends. Mr. Wolf is probably the youngest member of the club and is well known to hunters in and near New Orleans. He is a good shot and puts in all his spare time hunting big game.

Judge Peter Clement's sudden death during the week is greatly deplored by the Security Hunting and Fishing Club, of which he was president. Judge Clement presided as recorder of the court in Algiers and was prominently identified with the Masons, Knights of Pythias, Woodmen of the World and other organizations, civic and political. He was very fond of both fishing and hunting, and his club has a large membership, especially among those residing in Algiers and across the river from the main part of the city. He took a prominent part in all the field and water sports, and was popular with the fishermen and hunters. F. G. G.

THOMAS FOX came near blowing himself through the bottom of a sneak-box Saturday morning. He was watching for some of those Shrewsbury River mommie ducks, and in turning over accidentally discharged both barrels of his gun. The kick caromed off his ribs and strained two boards in the bottom of the boat, which rapidly filled with water as Tom frantically rowed for the beach. It ended his day's hunting.—Newark Star.

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He knows it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is Lefever Taper Boring.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS Co., 22 Maltbie St., Syracuse, N. Y.

A FINNY ACROBAT.

Continued from page 50.

on the plank, get the food and slide off again. I have often heard that fish cannot hear, but I am certain that Jack could hear; and talking to him had a good deal of effect in making him do his tricks. It would sometimes take quite a lot of persuasion to make him do a very high jump. He would come to the top of the water, and if he thought the stick too high he would shake himself and back away, but if I spoke and urged him to it, he would make the attempt up to about fourteen inches. Higher than that he would not try to jump.

When winter set in, I had no way of heating my aquariums and Jack seemed to get sluggish and appeared to wish to hibernate. So I gave Jack to a lady friend to keep in her conservatory. She kept him all winter and only a few weeks ago put him in a small half-gallon jar, took him into her parlor to show him off, and setting him aside, forgot and left him several hours and then found him dead. We all mourned his loss very much.

Jack was about four inches long and was different from any perch I have had. I do not know what kind of a fish he was. Some said he was a young black bass. I do not know, but he was wide like a perch, not very highly

colored, and had a small black spot near end of the second half of dorsal fin.

Hundreds of people came to see Jack and can vouch for the truth of this statement. If there are any doubting Thomases, let them write to any business man of Chattanooga, and if he accidentally strikes one who did not see Jack, with very little trouble he can find hundreds who did. Jack was very tame and appeared to like being fondled and taken up in the hand. He knew me and would not go to strangers.

H. G. SAUNDERS.

BILTMORE FOREST SCHOOL.

DARMSTADT, Germany, Dec. 10.—*Editor Forest and Stream:* Here we are! Darmstadt lies in the midst of the woods. The woods are owned, largely, by the city itself. There are pineries to the west, extending from Darmstadt toward the Rhine—ten miles distant—all established artificially on poor bare sandy lands, unfit for remunerative agriculture.

The old stands of pines, containing from 10,000 to 15,000 feet board measure per acre, were raised, we are told, from scattered pine cones. Bands of sheep were driven over the ground thus "planted." It seems as if the sheep had pressed the pine seed into the ground when it dropped from the pine cones.

The stands of pine in the pole stage, established some fifty years ago, were raised from seeds planted. They excel in long, clean and straight boles. The youngest stands were raised, usually, from small germs or seedlings, planted to the tune of sixteen thousand per acre. Such planting is a cheap matter, the germs costing no more than ten cents per thousand to produce.

Frequently these germs are planted in rows alternating with rows of potatoes, so that the owner obtains, for a few years at least, some agricultural revenue from soil enriched by a preceding generation of timber.

Our most extensive side trip was an excursion to the Spessart Mountains, near Darmstadt, in the heart of which we have spent a full week at a place known as Rohrbrunn, where the Bavarian Kings are wont to hunt the wild boar. We did not have a chance to join in the sport, for lack of time, of rifles and also of invitations.

The Spessart woods have their pasture problem, analagous to the pasture problem in our national forests. Here, however, the pasture is exercised by hogs rather than by sheep and cattle.

The Bavarian and Hessian foresters have been extremely kind to us, sacrificing much valuable time to our instruction in the woods.

JAMES W. EGNOR, JR.,
Class President.

A YOUNG WOMAN'S PILGRIMAGE.

A YOUNG Ohio lady who had become interested in the pathetic fate of the wild pigeons, found herself in Cincinnati a short time ago, and bethought herself of the report that the last known specimen of these vanished birds had been captive at the Zoo for many years. So she went to see it.

"There was an errand in Cincinnati, so off I went and did the business and then had just a little time left before my train," she writes. "Of course, I thought of the Zoo and the last wild pigeon. So I took a car and found that it was a long, long way. It was so dark when I got there that the gates were closed, but a kind keeper was quite melted by my pathetic story of having come 'way from Dayton to see the pigeon, so he admitted me and told me to go up to the lion house, find the keeper and say, 'the boss said he could show the lady the pigeon.'"

"I went into a dark house and instantly there was tremendous jabbering and two lions came

running at me. I fled for the door and they after me, and outside they proved to be big and friendly cats. An Italian employe came along and told me I had got into the monkey house and waked them all up. He escorted me to the lion house and there we found 'Jim,' who lighted a lantern and silently took me to the enclosure where the pigeon was roosting. He blinked his eye and moved his head indifferently as if he knew he was an object of interest. A great placard on his cage gives the prize offer and story of the pigeons. They don't know how old he is, but Jim said with respectful solemnity, 'when he passes away the remains will go to Washington.'

"So I felt that it had not been a wild goose (but a wild pigeon) chase after all, and sometime I hope to go again by day and see the other animals."—Saginaw Courier-Herald.

The Result of Over a Century's Experience

Perfection in powder-making is only achieved by exercising the most scrupulous care in the selection and preparation of raw materials, employing skilled workmen exclusively, and using only the most improved modern mechanical equipment.

This is the Du Pont method and accounts for the unequalled reputation among sportsmen enjoyed by the Du Pont brands of Smokeless Shotgun Powders. Two of these brands that are in high favor among shooters are

(Bulk)
A perfect shotgun powder with light recoil. Unlike other powders of light recoil, Schultze gives high velocity and remarkable patterns.

(Bulk)
Hard Grain—Smokeless—Uniform. Requires no special wadding to make it do its best. Loaded just as easily as Black Powder. "The Old Time Favorite."

These powders positively will not pit the gun barrels.

UNEQUALED FOR FIELD AND TRAP-SHOOTING
See that your shells are loaded with either **SCHULTZE** or **E. C.**

Send today for Schultze and E. C. pamphlet No. 3. It contains information of interest to all shooters.

THE LAST FURROW.

MESSRS. ERNST & ERNST, Public Accountants, have sent us a beautiful calendar, a reproduction of a painting by Thomas Moran. It is called, "The Last Furrow." Through the long rays of the setting sun which tint the clouds with crimson and gold, the plowman is following his oxen over the last furrow of the day. The foreground is field and the background sky, and the picture conveys a tremendous feeling of space, in no sense interrupted by the cluster of houses in the right middle distance, from whose windows the evening lights are beginning to shine. It is a beautiful picture, and beneath it are printed four lines from Kipling.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Show of Pomeranians.

THE annual show of the Pomeranian Club of America will be held in the ballroom of the Waldorf-Astoria on Jan. 12, when a collection of these dogs exceeding all previous records, will be seen in competition. The prizes are more than two thousand dollars in cash and nearly two hundred valuable cups and other trophies.

The entry comprises more than three hundred and fifty, surpassing even the Boston terrier and bulldog shows. The show is under the management of Miss Anna Sands, Mrs. William Caner Wiederseim, Mrs. F. C. Smith, Mrs. Hartley Williamson, Mrs. Ogden Mills and Mrs. Fred W. Vanderbilt. The judge is Charles G. Hopton, of New York city, an international authority on the breed, who has officiated at the prominent shows both here and in Europe.

Most prominent among the exhibitors will be Banner Kennels of Meadowbrook, Pa., owned by Mrs. F. C. Smith, who has entered thirty-two; Mrs. William Caner Wiederseim, with the champions Kew Marco and Afon Gem; Miss Anna Sands, with the English champion, Pom Patch Belper Tossie; Mrs. Ogden Mills, with Trixie III., which won last year; Mrs. Frank Clarke, with the English champion, Fairfax Wee Oliver; Mrs. Barclay Warburton, Miss Evelyn Burden, with Pengwern Bleu Imp; Mrs. J. A. Stillman, with Sable Mite; Mrs. Fred W. Vanderbilt, with Pom Patch and Lady Bluey; Miss Mildred Holmes, with Prince Kobrie; Mrs. D. B. Hollins, with Eastney Dickens; Mrs. Ferdinand Semms, with the recently imported champion, Sir Thomas; Mrs. M. E. Harby, with Nowata Moretto, and Miss Fanny McLane, with Wild Flower.

Several famous Canadian champions and many recent importations arrived on board the Lusitania on Friday.

Westminster Dog Show.

THE thirty-sixth dog show of the Westminster Kennel Club, which is to be held this year at the New Grand Central Palace on Feb. 21 to 23, is expected to eclipse even the record made last year, when 1,900 dogs were entered. The premium list just issued is better than that of a year ago, when forty-four pages of the little volume were taken up with their records. This year fifty-one pages are so filled. A large number are challenge cups offered by the various specialty clubs, but there are innumerable cups, trophies and cash prizes added to the regular schedule presented by the club.

The members of the club have contributed thirty-five cups individually. In the way of specialty club offers there are fifty-five in the name of the Ladies' Kennel Association, the Spaniel Club adds forty-four specials for that breed and the Collie Club thirty-seven, including four cash prizes of \$25 each. Outside of the club prizes there are \$75 added for Irish setters, \$60 for dachshunds, \$30 for Dalmatians, \$80 for Airedales and \$230 for Irish terriers.

The regular classification consists of an allotment of 639 classes, which exceeds that of last year by ten, though there are no great changes in that direction. The one of any note is the

addition of four Schipperke classes by dividing the sexes, all the other slight changes being of no importance. There is an error in the Pomeranian class No. 553, which appears as for both sexes, is for dogs alone, there being a class for the other sex, No. 562. Entries for the show close on Jan. 29, with the show secretary, James Mortimer, No. 1,125 Broadway.

When Your Dog Jumps Up.

THERE is nothing much more annoying than to have a dog get up on his hind legs and plant a pair of dirty front paws on your store clothes. In no case should the dog be blamed for thus giving vent to his exuberance of spirit or display of affection, call it whichever you prefer. The man that owns the dog is to blame for his inexcusable habits. It is a simple and painless task to cure the jump-up habit, and it can be remedied at any age.

When the dog jumps up, take hold of his fore paws, and, while talking to him in a friendly way, walk on his toes. As often as he moves them out of the way, step on them again. Don't give the dog any sign that the act is intentional. When he finds his toes continually in the way he will jump down; pat him and let him go on his way. The next time he gets the rising tendency, repeat the toe-stepping performance. After a few doses of this seemingly accidental turkey trotting you will find that when he forgetfully jumps up, he rememberingly flops right down again. The next display of "buoyancy" ends in mid air, the "idea" reaches him before he reaches you.

It isn't likely from now on that endeavor to caress you with his dirty feet will recur, but should he again forget himself, one more bit of foot work will permanently cure him. I have broken a strange dog of the jumping habit in one day, and he didn't go lame, either.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

By B. Waters

Tells minutely of the methods by which a dog, young or old, willing or unwilling, may be taught to retrieve either by the force or "natural" system. Cloth, illustrated, 124 pages. Postpaid, \$1.00.

FOREST AND STREAM PUBLISHING CO.

Resorts for Sportsmen.

Sportsmen's Club

An ideal place for Shooting and Fishing, away from the long cold winters. It will be especially attractive to persons who like these sports and have to get into a warmer climate through the winter. We want to convert a 1100-acre farm into a game and fishing preserve. Can secure exclusive hunting privileges on more than ten thousand acres additional upon payment of taxes. Would like a proposition from some one who can organize and manage this Club.

MERCER & THOMAS, Tennille, Ga.

QUAIL—TURKEY—DUCK.

A combination of shooting hard to find, but it's here.

BLACK BASS FISHING.

Located on Indian River, 174 miles south of Jacksonville. Dogs, guides and horses furnished. Deer shooting ten miles from Hotel. Good food, comfortable beds, perfect climate, reasonable rates.

A delightful place to take your wife.

COCOA HOUSE - Cocoa, Florida

FLORIDA HUNTER AND FISHERMEN'S CLUB ::

LAKE VIEW HOTEL LEESBURG, FLORIDA

A social organization without any membership fee. If you want the best Quail, Duck, Dove and Snipe hunting in the United States, write for particulars. Information gladly given regarding license, dogs, liveries and game; also rates at hotel. Address C. E. WORRELL, Sec'y, Lake View Hotel, Leesburg, Fla.

For Sale.

GAME BIRDS.

Hungarian Partridges, Ring-neck Pheasants, Black Game, Capercaillie, Wild Turkeys, Pure Mallard and Back Ducks. Decoys. Highest State and private references as to the quality of stock supplied. Beautiful Swans, Fancy Pheasants, Peafowl, Cranes, Storks, Ornamental Ducks and Geese. Everything in the bird line from a Canary to an Ostrich. I am the oldest established and largest exclusive dealer in land and water birds in America, and have on hand the most extensive stock in the United States. Darien is on the main line of the New York, New Haven and Hartford Railroad, about seventy minutes out of New York City, and my Bird Park and Aviaries, which cover about sixty acres, are three minutes' walk from the station. Visitors welcome by appointment.

G. D. TILLEY (Naturalist), Darien, Box F, Conn.

 O. J. CLARK, Sherwood, N. D.

SHETLAND PONIES—An unceasing source of pleasure and robust health to children. Safe and ideal playmates. Inexpensive to keep. Highest type. Complete outfits. Satisfaction guaranteed. Illustrated catalogue.
BELLE MEADE FARM, Box 24, Markham, Va.

Property for Sale.

ATTENTION SPORTS!

Offer about four hundred (400) acres of open land well stocked with partridges and other game. The place is well improved, having one seven-room cottage, six two- and three-room cottages; it is well watered and fine farming land. Can be rented for eight thousand (8000) pounds of lint cotton. It is three (3) miles from Blythe-wood and four (4) miles from Ridgeway, S. C., situated on the Southern Railway, and eighteen (18) miles from Columbia, S. C. A beautiful rolling country. Price, twenty dollars (\$20.00) per acre. Hunting privileges could be secured on one thousand or more additional acres, very cheaply.
 For further information address R. T. FEWELL,
 Box 343, Rock Hill, S. C.

FOR SALE. Spring Island Barony.

A developed game preserve of 6,000 acres, surrounded by water, accessible to ocean yachts, 10 miles from Beaufort, S. C. Apply to **BUIST & BUIST,**
 30 Broad St., Charleston, S. C.

Wants and Exchanges.

WANTED.

A sober and reliable man to act as overseer and warden on a Fishing Preserve, situated near Redfield, Oswego County, New York. Season from about April to October. Pay at least \$75 per month to the right party. Previous experience not necessary, but a person familiar to some extent with woodcraft would be desirable. Address, with references: "B." care Forest and Stream Pub. Co.

Hook, Line and Sinker

IN OUR SOUTHERN NUMBER, last week, we had a comprehensive article describing shooting and fishing places in the South.

WE HAVE AT HAND names of hotels and boarding houses in each locality mentioned, and their rates.

WE WILL GIVE YOU directions as to how to get there, what railroad or steamship line to take, the fare, time-table, and time required for the trip.

WE WILL ALSO ADVISE as to what gun you will find most satisfactory, what ammunition to take, and where to buy it most economically.

CLOTHING IS IMPORTANT in Southern shooting. We can help you in its selection. Fishing tackle will be a prominent part of your outfit.

RODS, REELS, HOOKS, LINES, baits and so on, all make fishing successful and enjoyable in such a degree as they are properly selected. Tarpon can hardly be landed on a 6-o hand-forged O'Shaughnessy, any more than Spanish Mackerel can be taken with a Von Vleck hook chain.

THERE IS SUCH A THING, though, as getting one outfit, with the exception of hooks, that will do for all Southern fish. We can tell you just what this outfit comprises.

GAME LAWS. Get a copy of our "Game Laws in Brief" before you go South. There are many county laws, particularly in North Carolina and Florida that it will be well for you to get posted on at the start—it may save you money and inconvenience.

THIS DEPARTMENT is conducted for the benefit of Forest and Stream readers, so do not hesitate to call upon it for information on the subject discussed above, or upon any other subject of interest to the outdoor man or woman.

"MULLERITE"

Powder Has Won by Sheer Merit

Thousands of dollars are spent yearly in advertising and hundreds of demonstrators are continually extolling the virtues of other Smokeless Powders, but the sale of **MULLERITE** with practically no publicity, steadily increases.

**Once a MULLERITE Shooter
Always a MULLERITE Shooter**

Such satisfactory results could not be accomplished if Mullerite was not a truly remarkable powder. No inducements are offered to use this powder and no paid professionals say a good word for it because their bread and butter does not come through Mullerite channels, but the amateur who once uses it gets results and that counts more than smooth talk.

Don't take our word for it—just try a box of Mullerite in the field or at the traps.

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

The Greener Treble Wedge Fast Action.— Many methods of uniting the top of the standing Breech and upper portion of the gun barrels have been introduced, but none are so strong and thorough as the Greener Treble Wedge Fast Cross Bolt, which has been proved by actual experiment to add enormously to the safety and wear of a gun.

At the famous London *Field* explosive trials of 1878, a special experimental gun was prepared by the editor of the *Field*, and the following extracts from his report are a remarkable testimony to the strength and efficiency of this device.

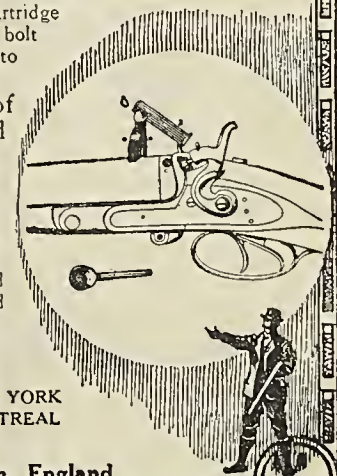

"to this action we had a little apparatus fixed as shown in this sketch, by this arrangement a piece of silver paper can be strained between the hook and the screw clip, attached to the barrels so that when any separation takes place during an explosion the paper breaks. We found that in Mr Greener's action no breakage occurred, using any charge of powder which the cartridge case could be made to hold with the bolt in position the paper remained intact up to the last"

In these experiments a charge of 65 grains of Schultze powder and 2 ounces of shot was used without causing the breech to "give" in the slightest degree

See that your new gun carries the Greener guarantee—Life-long satisfaction. Our free catalog will interest you, we hold a large stock of guns in New York and Montreal.

AMERICAN DUCK SHOOTING

By George Bird Grinnell

A most complete work, dealing with every phase of the sport of duck shooting, thus forming a complete treatise on American ducks, geese and swans. It gives details of the natural history, habitat, and characteristics of every American species.

Part I contains descriptions with plates of each species.

Part II tells of every method of swan, goose and duck shooting practiced in North America—east and west, on Atlantic and Pacific and in the interior—and gives thrilling accounts of the splendid sport.

Part III deals with the art of duck shooting, including guns and loading, the Chesapeake Bay retrieving dog, decoys, blinds and boats, and finally discusses the causes of the decrease of wildfowl and tells what may be done to increase their numbers.

It is most fully illustrated with 58 portraits of North American swans, geese and ducks, by Edwin Sheppard, with 8 full page plates, and with numerous vignettes in the text by Wilmot Townsend.

Cloth, heavy laid paper, 58 illustrations, eight full-page plates, 627 pages. Postpaid, \$3.50.

FOREST AND STREAM PUB. CO. :: 127 Franklin Street, NEW YORK

THE BEST OUT-DOOR BOOKS

THE following is a selected list of *Forest and Stream's* books which are most suited to the taste of men and women who are fond of outdoor life—Shooting, Fishing, Natural History, Camping, Canoeing, Yachting. A good book does not wear out, but continues to give pleasure.

Catalogue giving full list of books will be sent on application.

American Duck Shooting.

By George Bird Grinnell. Cloth, 630 pages. With 58 portraits of North American Swans, Geese and Ducks, Plans of Boats and Batteries. Fifty Vignettes in the text, and a Chart of the topography of a duck's plumage. Price, \$3.50.

American Game Bird Shooting.

By George Bird Grinnell. New. Just Published. This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys. The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full-page portraits of different game birds and hunting scenes, with a number of cuts in the text. Cloth. About 575 pages. Price, \$3.50 net. Postage, 25 cents.

My Sixty Years on the Plains, Trapping, Trading and Indian Fighting.

By W. T. Hamilton ("Bill" Hamilton). With 8 full-page illustrations by Chas. M. Russell. New York. Cloth. 223 pages. Price, \$1.50.

American Big Game Hunting.

The Book of the Boone and Crockett Club. Editors: Theodore Roosevelt and George Bird Grinnell. Illustrated. Cloth, 345 pages. Price, \$2.50.

Hunting in Many Lands.

The Book of the Boone and Crockett Club. Editors: Theodore Roosevelt and George Bird Grinnell. Vignette. Illustrated. Cloth, 448 pages. Price, \$2.50.

Trail and Camp-Fire.

The Book of the Boone and Crockett Club. Editors: George Bird Grinnell and Theodore Roosevelt. Illustrated. 353 pages. Price, \$2.50.

Like its predecessors, the present volume is devoted chiefly to the great game and the outdoor life of Northern America; yet it does not confine itself to any one land, though it is first of all a book about America, its game and its people.

American Big Game in Its Haunts.

The Book of the Boone and Crockett Club for 1904. George Bird Grinnell, Editor. 490 pages and 46 full-page illustrations. Price, \$2.50.

This is the fourth, and by far the largest and handsomest of the Club's books. It opens with a sketch of Theodore Roosevelt, founder of the Boone and Crockett Club, and contains an extremely interesting article from his pen, descriptive of his visit to the Yellowstone Park in 1903. Other papers are on North American Big Game; Hunting in Alaska; The Kadiac Bear; Moose, Mountain Sheep; Game Refuges, and other big game topics.

Camp Life in the Woods.

And the Tricks of Trapping and Trap Making. Containing hints on camp shelter, and all the tricks and bait receipts of the trapper, the use of the traps, with instructions for the capture of all fur-bearing animals. By W. Hamilton Gibson. Illustrated. Cloth, 360 pages. Price, \$1.00.

Uncle Lisha's Shop.

Life in a Corner of Yankeeland. By Rowland E. Robinson. Cloth, 187 pages. Price, \$1.25.

The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evenings and dull outdoor days, "to swap lies."

Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop." By Rowland E. Robinson. Cloth. Price, \$1.00.

Danvis Folks.

A continuation of "Uncle Lisha's Shop" and "Sam Lovel's Camps." By Rowland E. Robinson. 16mo. Price, \$1.25.

Uncle Lisha's Outing.

A sequel to "Danvis Folks." By Rowland E. Robinson. Cloth. Price, \$1.25.

A Hero of Ticonderoga.

By Rowland E. Robinson. Cloth, 187 pages. Portrait of author. Price, \$1.00.

A Danvis Pioneer.

A story of one of Ethan Allen's Green Mountain Boys. By Rowland E. Robinson. Cloth, 214 pages. Price, \$1.25.

In the Louisiana Lowlands.

A sketch of plantation life, fishing and camping, just after the Civil War; and other tales. By Fred Mather, author of "Men I Have Fished With," "Adirondack Fishes," and "Modern Fishculture in Salt and Fresh Water." With portrait of the author. Cloth. Price, \$1.50.

Forest Runes.

Poems by George W. Sears ("Nessmuk"). With art-type portrait and autobiographical sketch of the author. Cloth, 208 pages. Price, \$1.50.

The Angler's Workshop, Rod Making for Beginners.

By Perry D. Frazer. Cloth, 180 pages. Four full-page illustrations, sixty working drawings. Postpaid, \$1.00.

A complete, simple and thoroughly up-to-date work for the guidance of the amateur rod maker, carrying him from first principles through all phases of successful rod making. There is no theorizing or speculation. All terms are simple, and all kinds of rods and woods are treated of.

Modern Fishculture in Fresh and Salt Water.

By Fred Mather, author of "Men I Have Fished With," with a chapter of Whitefish Culture by Hon. Herschel Whitaker, and a chapter on the Pike-Perch by James Nevin. Illustrated. Price, \$2.00.

My Angling Friends.

A second series of "Men I Have Fished With." By Fred Mather. Cloth, 369 pages, with 13 illustrations. Price, \$1.50.

Rhymes of the Stream and Forest.

By Frank Merton Buckland. Cloth. Heavy laid paper. Sumptuously bound. Postpaid, \$1.25.

A charming collection of verse by an author who knows and loves nature well. A particularly pleasing gift for fishermen, closely simulating in form and ornamentation the standard fly-book.

Jack the Young Ranchman;

Or a Boy's Adventures in the Rockies. By George Bird Grinnell. Illustrated. Cloth, 304 pages. Price, \$1.25.

Jack Among the Indians;

Or a Boy's Summer on the Buffalo Plains. By George Bird Grinnell. Illustrated. Cloth, 301 pages. Price, \$1.25.

Jack in the Rockies;

Or a Boy's Adventures with a Pack Train. By George Bird Grinnell. Illustrated. Cloth, 272 pages. Price, \$1.25.

Jack the Young Canoeeman.

By George Bird Grinnell. Illustrated. 278 pages. Price, \$1.25.

Jack the Young Trapper.

By George Bird Grinnell. Illustrated. Price, \$1.25.

Jack the Young Explorer.

By George Bird Grinnell. Price, \$1.25.

Men I Have Fished With.

Sketches of character and incident with rod and gun from childhood to manhood; from the killing of little fishes and birds, to a buffalo hunt. By Fred Mather. Illustrated. Price, \$1.50.

It was a happy thought that prompted Mr. Fred Mather to write of his fishing companions. The chapters were received with a warm welcome at the beginning and have been of sustained interest. The "Men I Have Fished With" was among the most popular series of papers ever presented to FOREST AND STREAM readers.

Houseboats and Houseboating.

By Albert Bradlee Hunt. The book contains forty specially prepared articles by owners and designers of well-known houseboats, and is beautifully illustrated with nearly 200 line and half-tone reproductions of plans and exteriors and interiors. A most interesting chapter is devoted to houseboating in England. Extra heavy paper, buckram. The price is \$3.00 net. Postage, 34 cents.

The Art of Shooting.

An illustrated treatise on the art of shooting. By Charles Lancaster. Illustrated. Cloth. Price, \$1.25.

Gas Engines and Launches.

By Francis K. Grain. A few pages are devoted to launches in general, with some excellent advice to the prospective owner of a motor boat; but the author's attention is given chiefly to explaining the principles, working and practical handling of the marine motor for the amateur who does not care to trouble his head with involved technical information. Cloth. Illustrated. 123 pages. Postpaid, \$1.25.

How to Build a Launch from Plans.

By Charles G. Davis. A thoroughly practical guide for the amateur. Shorn of all blind technicalities, it considers displacement, good construction and faulty stability, setting up the keel, framing and planking, with careful explanations. Each step is followed up to the care and running of the gas engine. Cloth, 9 folding drawings, 8 full-page plates, 40 smaller diagrams, 170 pages. Postpaid, \$1.50.

Fetch and Carry.

By B. Waters. Tells minutely of the methods by which a dog, young or old, willing or unwilling, may be taught to retrieve either by force or "natural" system. Cloth. Illustrated. 124 pages. Postpaid, \$1.00.

Nursing vs. Dosing.

By S. T. Hammond. A most practical book for the dog fancier, based largely on Mr. Hammond's observation that dogs, and particularly house dogs, suffer from too much medicine. Contents—Nursing, Cleanliness, Diet, Other Foods, Kennel and Exercise, Common Ailments, Diarrhea, Convulsions, Epilepsy, Distemper, Eczema, Need of Proper Care, Stomach, Vermin, Ear, Mange, Nervous System, Colic, Worms. Cloth. Illustrated. 161 pages. Postpaid, \$1.00.

Training vs. Breaking.

Or Practical Dog Training. By S. T. Hammond. The author tells how to bring out the wonderful intelligence of the dog by kindness as opposed to force. A clear, explicit work, which will appeal to dog lovers. Contents—First Lessons, Charge, Canine Accomplishments, The Whistle, Quartering, Retrieving, In the Field, Working in Company, Raising Puppies, Training Pet Dogs, Conclusion. Cloth. Illustrated. Postpaid, \$1.00.

Training the Hunting Dog for the Field and Field Trials.

By B. Waters. Probably the most comprehensive work on the subject written, covers every phase of training and field trial preparation with reasons. Kennel Management, Breeding, Kenneling, Points of Judging. It is a work well calculated to enable the amateur to become a successful breeder and trainer. Cloth. Illustrated. Postpaid, \$1.50.

Woodcraft.

By Nessmuk. No better or more delightful book for the help and guidance of those who go into the wild for sport or recreation was ever written. No one ever knew the woods better than Nessmuk or succeeded in putting so much valuable information into the same compass. Camp equipment, camp making, the personal kit, camp fires, shelters, bedding, fishing, cooking, and a thousand and one kindred topics are considered. Beyond this, the book has a quaint charm all its own. Cloth. Illustrated, 160 pages. Postpaid, \$1.00.

Log Cabins and Cottages.

By William S. Wicks. This book covers building for the woods from the simplest shelter to the most elaborate cottage, cabin or house, and their furnishing and fitting. The details and directions are at once simple and comprehensive, and the illustrations are numerous and illuminative. Cloth. Illustrated. 44 full-page plates and numerous text illustrations. Postpaid, \$1.50.

My Friend the Partridge.

By S. T. Hammond. A delightful reminder of crisp autumnal days in the covers. It tells of sport with the noblest of game birds, the habits and habitat of the ruffed grouse, with just the right touch of reminiscence and personal experience. Cloth. Illustrated. 150 pages. Postpaid, \$1.00.

A SEAMAN ON THE EAR OF THE TOPGALLANT YARD.

A VIEW FROM ALOFT.

To Honolulu in a Bark

By PALMER H. LANGDON

(Continued from last week.)

July 28, 1911; wind north-northeast, varying to south-south east; course, south, 59° west.

UNDERNEATH the cabin floor is a storeroom for sails, and the crew roused the passengers this morning by hauling out a great bundle of canvas which proved to be an upper fore topsail and which was to be put in place of the present sail that needed repairing. The passengers hurried through breakfast to see the operation of changing sails.

First the yard holding the old sail was

lowered down until it rested on the cross stick beneath it, and then the entire crew of eight men were ordered aloft to unbend (unfasten) the wornout canvas. A block and tackle, called a gantline, was made fast to the mast above the yard, and when the sail was unhitched it was lowered down via the gantline and the new one hoisted up to the mast. The sailors grabbed the canvas and first fastened it in the center and then hauled it out on each end of the yard, attaching the earings (end ropes). They then

began to bend (fasten) the sail by weaving spun yarn (small tarred rope) through the eyelets in the canvas to the jackstay of the yard, which stay is a small iron rod running lengthwise of the stick. When this had been accomplished the real fun began of hauling the yard up to its right place. There was no steam for the engine now, and the entire crew and the carpenter were mustered on deck for action. As the mate shouted, "Haul away!" John, the Yankee sailor, who was leading the gang, piped a wang

twang, sounding like a Caledonian bag pipe, and the twang was followed by the yodel of the Scandinavian, which warble is such a delight to a sailor's ear. All hands pulled with a will and the yard went up to its resting place.

An after examination of the rigging showed how an iron yard fifty-six feet long and weighing over a ton could readily be hoisted into place by nine man-power. Attached to the center of the yard is a chain which leads over a block in the center of the mast; this chain ends in another block close to the slot in the mast. Through this block leads a chain and steel cable up to the block and down across the ship, one end of which is made fast to the bulwarks; the other to a block and tackle fastened to the opposite side of the ship. A stout rope is rove in the block called the fore topsail halliard, upon which all hands exert their force. It is by this division of the weight from pulley to pulley and tackle to tackle that the yard can be managed so readily by the foremast hands. The yard is held to the mast by a thimble, known as a parrel, which permits it to slide up and down.

A study of the rigging is a lesson in natural philosophy which explains how each pulley reduces the required pulling force one-half to lift a given weight, but that nothing is really gained in power, for it takes twice the time to lift the weight. But again, in the passing, we must bow to the riggers who have practically applied the principles of physics to the ropes of a vessel and made it possible for man to put in position all kinds of canvas wings on sticks called masts and yards and make the wind blow him to his desired destination.

Latitude, 30° 3' north; longitude, 130° 51' west. Day's run 90 miles. Honolulu 1,485 miles away.

July 29, 1911; wind, northeast, variable; course, south, 30° west.

Doldrums was the order of the day, but the change was very agreeable. For six days the sky had been overcast and the temperature too cool to be comfortable. With the slacking of the winds and the sun piercing the clouds, there came the balmy air of the summer sea shore and the ocean was as blue as a washtub of blueing.

Four times during the day the skipper wore ship to catch the variable slants of the light shifting wind. The maneuver of wearing ship is the reverse of tacking, for instead of the bow being swung into the wind the stern is slewed around into the direction of the breeze. The first inkling of what is to happen comes when the captain says, "Square the main yard." The mate on duty then hustles his watch aft and shouts to slack up the lee braces, the ropes which are holding the yards on the wrong side of the mast. Then the watch is brought over to the other side of the ship to haul taut the weather braces, the ropes which are on the side from which the wind is blowing. In the meantime the helm has been put over and, by the time the braces are trimmed to the right position of the wind and the mizzen spanker and topsail (stern sails) are jibed over, the ship is on the right course.

The brace of every yard has to be hauled taut, beginning with the lowest yard and ending with the highest, or as sailors call them, main (on the main mast) topsail, upper topsail, top-

gallant sail and royal. The braces of the lower yards lead to the side of the vessel; those of the upper yards to the center. When the yards are hauled around square to the wind in the movement of wearing ship, the former weather brace becomes the lee brace and the former lee the weather.

Splendid exercise this hauling around the braces. The landlubbers of the cities who have to play golf or similar gentle games in order to live should take a whack at hauling braces on a square-rigger, then they would surely have enough strength to carry their own golf sticks and not need the services of the small boy. The brace exercise is also recommended for liver trouble and all forms of indigestion. It certainly throws sickness to the four winds and puts vim and vitality into every fiber of the human body.

All day long the ship lolled in the Pacific waiting for the northeast trades, though they came not, and she sped not. It was a day of rest and ease. At sunset there was breeze enough to move her and the new moon made her appearance shining directly in the path of the bark, thereby silhouetting the fine curves of the square sails against the dark background of the night. A beautiful sight, and anyone was moved to utter the lines of Stephen Phillips:

"Alas! must ye utterly vanish and cease from amidst us,
Sails of ye olden sea;
Now dispossessed by the stern and stunted ironclad,
Wingless and squat and stern.
Alas! must ye go as a dream and depart as a vision,
Sails of the olden sea."

Latitude, 29° 45' north; longitude, 131° 3' west. Day's run 22 miles. Honolulu 1,440 miles away.

July 30, 1911; wind northeast; course, south, 74° west.

All of the saints and all of the sinners never had a more glorious Sunday than this July 30, on the sun-spangled Pacific, and yet the captain says we have not reached the trades but it is a delightful northeast breeze, one that would drive a yachtsman to ecstasy and one that drove the bark along at a rate of five knots. The scene was a sky-blue sky, curtained here and there with cloud drapery, an ocean dotted with crested blue waves and over all a sun as genial as a kindly friend. It was a day to make a believer say, "Praise God from whom all blessings flow," and a non-believer to bow his head in admiration of the Creator of the Universe.

Sundays aboard a sailing vessel are as far as possible a day of rest, only the absolutely necessary work is done, work required in the handling of the ship. The sailors take the day to wash themselves and their clothing and to loaf and read on the forecabin head or house. The officers spend the day in talking over the ship's needs and deeds and other ships' blunders.

In the evening the passengers had the benefit of two concerts, the sailors took a hand forward at playing the accordion, and each nationality played its country's airs. There is rarely a forecabin but that has an accordion and players. It is the universal instrument of the toilers, afloat and ashore. In the cabin house or chart room, situated on the poop deck, the captain started his phonograph, and in this corner of the far-away Pacific the ship's company could hear the best opera soloists of the world and joined in song themselves as the

old airs were played by the bands or orchestras.

Latitude, 29° 30' north; longitude, 132° 4' west. Day's run 45 miles. Honolulu 1,400 miles away.

July 31, 1911; wind northeast; course, south, 71° west.

As five bells (6:30 A. M.) sounded this morning the ship was beginning to catch the northeast trade winds and was moving along at a good clip. The wind was nearly dead aft (behind) and had been for several days. Not a tack had been made since the start, only the wearing around a few times in the day of calms, and the hauling around a little of the braces as the wind canted on the more breezy days. Today whitecaps were appearing on the horizon.

The striking of the ship's bells and the method of keeping time aboard ship are always a subject of curiosity to landsmen. Instead of keeping track of hours and minutes, the crew works by the number of bells. Beginning at 12:30 P. M., one bell is sounded; at 1 P. M., two bells; 1:30, three bells, and so on every half hour until 4 P. M., eight bells, when the count begins again and runs up to 8 P. M., when eight bells are struck again and the same number at midnight and 4 A. M. At every eight bells a watch (half the crew) goes on duty, the watches being divided into four hours each, excepting the period from 4 to 8 P. M., which is divided into watches of two hours, that every day each part of the crew may not be on duty at the same time. These two-hour periods are known as dog watches and have furnished sailors many yarns and writers much nautical lore.

The watches of a windjammer are divided into the starboard and port (right and left) and the members of a watch are supposed to bunk on their respective sides of the forecabin. The different watches are selected as soon as the sails are hoisted on leaving port, the mates summoning the crew amidships and each officer (of course, beginning with the first) picking a man at a time. The Welch carrying eight foremast hands, there were four seamen in each watch. During the daytime the watch on duty was kept busy making sail and cleaning ship. At night they were on the lookout. One man in each watch was always at the wheel and the wheelmen were changed every two hours. This left three men for work. At night one man would be stationed way forward on the forecabin head, two would be in the waist of the ship and the fourth at the wheel. As the helmsman left the wheel, he repeated to the officer of the watch the course he had been steering, and a mate was always on duty with his watch, ready to give orders or take a hand at the ropes, the broom or the needle. Busy men these first and second mates with scant leisure or sleeping time. The first mate must be also, according to law, a navigator and take an observation every day, which is checked off with that of the captain, and the mate also keeps the ship's log, recording the wind, course, weather, position of the ship and the work done during the day.

The ship's time is determined every noon by the captain and mate "shooting the sun." That is determining with the sextant when the sun is at the point of highest altitude, which is noon. The captain then orders eight bells, which are struck by the man at the wheel and repeated on the forward bell by a foremast

hand on the bow. All of the ship's watches and clocks are now set for the day. If the sun is obscured and no observations can be made, then the captain and mate set the chronometers by dead reckoning; that is, they know by the speed of the vessel and the course they have steered, how far east or west they have sailed, and set the clocks accordingly until the sun shines again. As the Welch was sailing west of south she was continually losing time.

The noon recording of that handy instrument, the sextant, is used in figuring out the latitude and an observation is taken with the same instrument at 8 A. M. and 4 P. M., to get the longitude. The captain and mate then calculate where the ship is every day at noon and plot her position on the chart. By this system of observation, dead reckoning and bells the work proceeds aboard ships.

Latitude, $28^{\circ} 53'$ north; longitude, $133^{\circ} 52'$ west. Day's run 116 miles. Honolulu 1,278 miles away.

Aug. 1, 1911; wind northeast; course, south, 70° west.

First day of the trades, though moderate,

THE CREW OF THE BARK.

were enough to drive the ship six to seven knots. A white-capped, vigorous sea all the live long day. Not a brace or rope touched with the friendly wind at our stern.

One of the sights this morning was to see some flying fish dart like arrows across the bow of the ship. These little fellows are supposed to be driven into flying from the pursuit of other big fish. So our fish line was promptly put over the side in the hope of catching a dolphin, shark or bonito. We have now been treated to the sight of a variety of marine life. The first day out a humpback whale gambled about the ship, and then a gooney followed us for several days giving an exhibition of soaring that resembles the flight of an albatross. The next few days we were favored with views of the boatswain bird, which flies well up from the water and looks very spectacular with its long pointed white tail that sailors say is shaped like a marlinspike. We hope to see more marine wonders.

All of the California passengers to-day indulged in an earnest discussion over which place was really a city—San Francisco or Los Angeles. The way the adherents of each town poured out acid on the other fellow's abiding place indicated that brotherly love was unknown

among some of the residents of the Golden State. The basis of contention of the "Frisicans" was that San Francisco had the foundations of a city, had grown with just pride to be one of the finest in the land, while Los Angeles was an overgrown village. To which the "Angelites" replied that if "San Fran" did not have any more earthquakes she might become a city, but the city of the angels was growing at such a pace in recruiting from the ranks of the health and rest seekers, that in the course of a few years San Francisco would be forgotten and man would only remember the Golden Gate.

Latitude $27^{\circ} 59'$ north. Longitude, $136^{\circ} 40'$ west. Day's run 153 miles. Honolulu 1,145 miles away.

Aug. 2, 1911; wind northeast by east; course, south, 76° west.

Such a sight this morning as the vessel danced in the merry waves of the northeast trades. The writer had heard a number of seafaring men say: "If you ever take a voyage in a sailer, go where you will catch the trade winds; it is the

geous crimson, making the scene magnificent, and the day ended with the mate declaring that the trip from San Francisco to Honolulu was the finest sailing run in the world, and the passengers were inclined to believe him.

Latitude, $27^{\circ} 12'$ north. Longitude, $139^{\circ} 06'$ west. Day's run, 178 miles. Honolulu 863 miles away.

Aug. 3, 1911; wind northeast by east; course, south, 76° west.

Rocked in the cradle of the deep was the order of events last night. The sea which had been rolling mainly after us shifted to the side with the result that everyone had a rocky cradle sleep. In the morning the wind had increased to twenty-five miles an hour, with white caps galore and occasionally a sea twenty feet high. As a wind fifty miles an hour is considered a gale and a wave of forty feet is estimated to be the highest, we were sailing in half a gale and in waves that were worth recording. A shift in the slant of wind necessitated the jibing over the mizzen spanker (last sail in stern) and hauling around the square sails, which gave the pas-

THE MORNING BATH.

poetry of motion," and it is. All around the great blue circle were combing, foaming, boiling rollers which seemed to take delight in tumbling among themselves, and the ship equal joy in tumbling over them. But it was the steady roll and swing of a sailer, not a steamer, and the pleasure of being blown over the sea by this balmy, thrilling power-wind—not by a rumbling, shaking steam engine. The wind neither raged nor howled, but just simply blew, and every wave as it broke its crest left an emerald spot of water to mark the climax of its career. The captain wished the trades might be stronger, but it was fast enough for the passengers who were enjoying the sensation of the swooping ship. First coasting over one of the rollers, then dipping down into the basin, then roll to one side, then to the other, but not taking a drop of water on the fore-castle, main or poop decks. None of the thumping, bumping, pounding, driving of a steamer, but the delightful motion of a sailing ship.

As the wind and wave had made the day glorious, the heavens, as if jealous, must do their part in the twilight. The sun disappeared in a cloud, and it looked as if there would be no sunset to crown the glories of the day, when suddenly the entire western curtain of clouds were painted a gor-

sengers the opportunity of seeing how a square rigger was worn around in half a gale, the method being the same as in a light breeze, but requiring more care in handling the ropes. The wind was still mainly astern, but was reaching for the quarter.

The trades had rolled up such a sea that it was difficult even with the fiddles to keep the dishes on the dining room table. While at dinner a big roller caught the ship aright and every thing went sprawling down the board, but were caught by the diners on the lee side, and all enjoyed the sight of seeing the tableware take on legs. Another big sea during the day tossed some passengers out of their reclining chairs, but no one was hurt nor had a bucket of water boarded the decks of the ship in this splendid run before the northeast trades which made the Welch hit up a gait of nine knots per hour.

During the tumbling about in the dancing trade waves, four kittens arrived in the fore-castle and all hands predicted that they would become lively cats, born in such a lively period of the bark's history.

Latitude, $26^{\circ} 29'$ north. Longitude, $142^{\circ} 04'$ west. Day's run, 178 miles. Honolulu 863 miles away.

[TO BE CONTINUED.]

Fly-Fishing on the South Llano River

By J. L. PHILLIPS

THE rivers making the watershed of this portion of Texas, viz., Neches, Sabine, Brazos, Trinity and Colorado, are all what may be called muddy streams and not fit for my style of fishing, hence it is the same old story, "if you would get the best, it is just over yonder and the furthest away." The South Llano River is a most beautiful stream in Southwest Texas. It is very swift, absolutely clear and is said to be fed by seven hundred springs. I do not know who made the count, but evidently every one thinks alike about it, as they all tell you the river is made by seven hundred springs. That portion of Texas is still in the hands of the ranchmen. The man with the hoe is there, it is true, but he has not as yet tilled the soil enough to muddy the streams and deface the landscape with the ax and the saw.

The valley of the Llano is not only beautiful, but rather picturesque, hemmed in as it is on each side by mountains of very good height and rather rugged. The soil of the valley is very fertile and particularly adapted to raising alfalfa. Most of the trees are pecan, many of them very large and they look as though they had been there for hundreds of years. Many pecans are gathered each year, but that country is yet a long way from market, it being about forty-five miles to the nearest railroad. The Llano is a very fine fishing stream, an ideal stream for fly-fishing, and not so swift but that one can wade it. It is true you will find a few pools now and then too deep for your boots, but you don't want to catch them all. Of course, it contains no trout, for that fish is not found in Texas, but you will find some of the liveliest members of the fish family you ever met; namely, large-mouth bass, warmouth, crappie, red-breast sunfish, long-eared sunfish and the common sunfish, every one of which is as quick to rise to a fly as any trout that ever swam in a Northern pool. Now laugh! If you do not believe me, just try it once and then tell me about it.

Now, I did not say, nor would I have you think that I am trying to make the sunfish the equal of the lordly trout. I merely said they will in that stream take a fly as readily as any trout that ever lived. Of course, we all know what a sunfish can do after he has taken your fly. The struggle does not last long, but the little chap is willing, pugnacious and will do the very best he can to interest you with the fight he puts up.

The bass (large-mouth) are the finest and the most beautiful specimens of that family I have ever met, except in mountainous portions of Eastern Oklahoma, where you will find the same fish and his brother, the small-mouth, in the same waters. The bass in the Llano are rather long slim fish, not the elliptical, short-bodied, bellied down type of bass usually taken from weed-grown ponds, deep lakes, etc. (big-mouth bass taken from such places are usually sluggish and do not prolong the fight when hooked, hence a great many anglers claim the big-mouth not the equal of the small-mouth). The environment produces the type. I never

saw it so greatly and clearly proven anywhere, as you will see as soon as you cast your fly on the waters of the South Llano. I never met gamer bass, I never had a small-mouth jump any higher, fight any longer or use more tactics credited to the bass family than these bass resort to when hooked, and they are every one fighters. My way of accounting for the shape of these fish, their fondness for the fly and their beautiful color is this: The swift water of that river keeps the fish on the go in order to make a living, its clear, cold water gives us the firm beautiful fish, and from what I saw, I am sure the bass look for their food in the shape of insect life on top of the water instead of feeding so much on minnows and crawfish; hence the reason they take a fly so readily.

In my five days' fishing I do not think I took on any day less than twenty-five fish, some days a little more. I did not catch any large fish on the trip, two pounds was the largest, the average about $1\frac{1}{4}$ pounds; I have no tale of woe to unfold about the "big one getting away," nor did I cause the air to turn blue because I went in over my waders in some deep hole. The whole time was spent just like a good, gentle angler should spend it. The fish that I did not want for my friends' table I placed back in the water. The best kind of sport could be had not far from the house. I fished both up and down stream and can not say that I saw any particular difference in my catch. If fishing down stream roiled the water and scared the bass, I was unable to tell it. I did not have to fish from sunup until sundown in order to catch the number of fish that I did. I took it easy, enjoyed every moment of my time, rested when I wanted to, and when I placed my rod in its case preparatory to starting home, I had the satisfaction of knowing I could have taken twice the number of fish if I had worked harder and whipped the pools and riffles more hours each day. My sport was clean and gentlemanly; I had all the sport I wanted and all my friends and their neighbors all the fish they could use for food. What more?

Like many anglers who are lovers of nature, too, I must quote here and take off my hat as well to the memory of George Dawson, who left us this well worn aphorism, "It's not all of fishing to catch fish." I found every word of it true on this trip, for aside from the beautiful scenery along the river, I was treated to a beautiful sunset every evening I was there. One evening in particular I shall always remember; it was my last evening.

I had fished up stream, my sport was exceptionally fine that afternoon and I was sorry it was coming to a close. I sat down, as usual, to watch the sun go down behind the mountains. On this evening I was so situated as to look at the setting sun up the valley of the river, the coloring given to the landscape was grand and the sky seemed to blend perfectly with the coloring on the mountain tops and the shadows in the valley. On each side of the river was a large flock of sheep being driven home by Mexican herdsmen. They were too far away

for me to hear the noise made by many hoofs, but I could hear the low, deep call of the mothers and the bay-like answer of the lambs and every now and then I could catch bits of song, as the herdsmen were singing "La Paloma" in their characteristic low-noted way. It was a scene calculated to enchant you; one that would test the bounds of your imagination.

Speaking of sunsets, after what I have seen in the western portion of this State, I cannot help but marvel at the idea of American people going to Italy to see the sun set in all its glory when they can see it better and on a grander scale here in Texas.

I found the brown and gray hackle to be the most useful flies. The bass did not hesitate a moment to rise to either. The smaller sunfish would take anything and were so eager they were a nuisance when you wanted nothing but bass. I never saw anything like it, the eagerness of those sunfish to get the fly. They would come from the opposite side of the river or as far as they could see the fly, and if I did not want them, I simply had to go to another place.

The portion of the South Llano, where I did my fishing, is in Kimble county, about five miles up stream from the little town of Junction, which takes its name from its situation. It is located beautifully at the junction of the North Llano and the South Llano rivers.

As I said in the beginning, you always have to go furthest for the best, I will give readers the route I took and the distance, in case any of them are ever down this way and want to try their luck in the same waters: From Lufkin to Houston, 118 miles; from Houston to San Antonio, 206 miles, from San Antonio to Kerrville, 75 miles, and thence from Kerrville by stage 60 miles to the little town of Junction; in all about 456 miles. Quite a little jaunt for one to take, but then you must know Texas is a pretty good-sized State, and in order to get anywhere you have to travel. The people down here are used to it and do not mind it. I left here about the 7th of October last and my fishing days were between the 10th and 16th.

THE TOP RAIL.

If you were showing a shooting friend your favorite gun and he were to say it was not nicely lined, how would you take it? And yet an Irishman's definition of the term, which evidently originated in Birmingham or some other British gunmaking center, is totally different from what the man in the street would suppose. This is, good material, nice fitting of parts, well finished, and smooth working. You or I would say offhand, probably, that if the phrase did not correctly apply to the bore, it could only refer to what we call, more or less correctly, the balance, the "hang" or, as sometimes used, if incorrectly, the "heft" of a gun. In the latter case weight applies only in a comparative sense. When a man says, "Let me heft your gun," he has in mind what the Irishman refers to as nicely lined. English is, as the Germans say, a fearful and wonderful language, and we do not have to go to Mexico to hear phrases which convey an entirely different meaning from that which they convey to the raw student.

GRIZZLY KING.

Down Lake Winnipeg in Winter

By the REV. ARTHUR SANTMIER

ON the night of March 28, a little party of travelers left the lighted streets of Selkirk and began to battle with the drifts. The great blizzard had covered the country with a thick mantle of white; the wind had piled the drifts mountain high, it seemed; and on the frozen surface of river and lake the snow lay to the depth of several feet.

Our little party numbered four, exclusive of the driver, who was temporarily employed, and was an interesting group. Mr. Ewing, the real leader of the party, was at the head of a fish and mercantile firm, and was en route to the faraway Nelson River fisheries—newly established; Ed. Scott was an experienced net fisherman; Mr. Justy was an employee of the firm—a trader, fish buyer and accountant; and I was a missionary teacher among the Cree Indians on the Nelson River.

Although the railroad extended northward to Winnipeg Beach, a distance of thirty miles, the blizzard had caused a complete stoppage of traffic, and so our start was made from Selkirk with a team of horses and a driver, recruited from a local livery stable. The necessary preparations for so long and hazardous a journey occupied the hours of daylight of Monday, the 28th, and the start was made as the gloom of night settled over the snow-covered prairie.

For miles the road lay over the dreary prairie and through well-nigh impassable snowdrifts, and later, for miles upon the frozen surface of the Red River of the North. Late in the night we camped in the cabin of a half-breed named Black. This is a regular stopping place and is popularly known as Black's place. In the small room seventeen men found sleeping space, while

goodness knows how many were huddled in the family apartment overhead. Mr. Ewing and myself spread our rabbit robes—or rather his robes, for Mr. Ewing had kindly offered to share his comfortable robes with me—upon the floor. Amid odors many, and not without fears lest other bodies than our own might inhabit

NORWAY HOUSE BOARDING SCHOOL FROM THE LAKE IN 45° BELOW ZERO WEATHER.

our robes 'ere morning, we laid ourselves to rest.

Before daylight the company was astir. The hasty breakfast was soon over and Mr. Ewing suggested that we travel in advance of the team for a little distance. This early morning jaunt in the crisp atmosphere dispelled the mental mists and stirred the faculties into life.

Winnipeg Beach was reached at an early hour. The first man we met was intoxicated, and while swinging a bottle over his head, was filling the air with curses. At this place we

engaged a team of wiry Western horses and a large and roomy sleigh. The outfit was made ready by a drunken hostler, and we ate a hasty meal at the hotel, where, to judge from the sound, they were having a jolly good time in the bar-room. Sufficient horse feed to take us to Beren's River was secured and a few provisions for ourselves were purchased. At eleven o'clock the journey was renewed.

We traveled rapidly over well-beaten roads through a continuous belt of poplar forest. The scene was quite attractive to the eye in spite of the dreary uniformity. Some time after

passing the town of Gimli we drew up at the little Icelandic settlement of Hnausa, having covered just forty-three miles between eleven o'clock and five.

Lodgings were engaged and in the evening I was invited to finger the keys of a neglected-looking organ that stood in the corner. Mr. Ewing sang with me several familiar songs, such as "Suwanee River," "Rock of Ages," and the "Bonnie Banks of Loch Lomond." Our audience was a large one and highly interested; but whether lauding our supposed skill, or highly amused at our lack of it, I was unable to determine. In the midst of the singing the Provincial Member of Parliament and the Provincial engineer walked into the room. They were touring this out-of-the-way place presumably in the interests of their constituents. Politicians know no geographical limitations at election time.

The quiet hamlet of Hnausa was left behind us early the following morning, and leaving the well-beaten route of the mail-sledges, we encountered a stretch of very bad road. Our way lay over the Washow peninsula, which was, save for one or two deserted cabins, an uninhabited wilderness. There were undoubtedly numbers of moose on this portage, for many tracks were seen and several frightened animals ran at our approach. Owing to the heavy roads our progress was slow. At night camp was made in a deserted stopping-place known as the Half-way House.

All along the route grouse and rabbits were plentiful. At a point on the peninsula, where evergreen trees were plentiful, I observed a flock of grouse beneath a large spruce tree. Hastily jumping from the sleigh, I dashed to the assault armed with a revolver. Mr. Ewing laughed out a warning and the sleigh passed on down the trail. I then opened the engagement. Bullet after bullet was fired at the dodging birds until finally I secured two or three and then paid

DOG TEAMS AND CARIOLE.

for them many times over by being obliged to chase that flying sleigh for more than an hour. After this incident, I never remained behind to shoot birds or rabbits, but either fired from the sleigh or ran on ahead to hunt.

Fisher River Indian Reserve was reached a little after noon, and we called at a trader's store to purchase snow-glasses and a few necessary provisions. An interesting story is told of this trader. It was reported that he had moose meat in his possession illegally; for be it known that Manitoba has strict game laws that apply—though not often enforced—as well upon her wilderness frontiers as within the region of men and towns. Shortly after, a game constable paid this man a visit. Not knowing the stranger to be an official, our friend extended to him the hospitality of his house and set before him a dish of savory moose meat and delicious gravy. Observing that the stranger did not eat heartily, he urged him, saying, "Take a little more of this tender moose meat, and some more of the gravy." After collecting a heavy fine, the constable departed, leaving the astonished trader wondering which is the more foolish, to repose over-much confidence in a stranger, or to break the civil law. Tradition has it that this trader would not enter the church for fourteen years because of a grudge against the missionary for reporting a breach of the law.

After following the Fisher River for about five miles, we came out on the Fisher Bay of Lake Winnipeg and stopped there for the night in a house belonging to a white man. During the night a heavy snow began to fall, and in the midst of the storm several teams with loads of fish passed through en route to Winnipeg Beach. From them it was learned that a very crooked trail might be followed down Lake Winnipeg for a few miles, and then, with no road, our team must cut straight across the frozen lake.

In the morning a terrific blizzard was raging. With a new supply of bacon and of Indian bread, or bannock, and having secured the services of a guide who was to return with Mr. Justy and the team, we boldly launched out on the frozen expanse of Lake Winnipeg and faced the storm. The trail made during the darkness of night was the most crooked one over which I have ever traveled. We successively faced every point of the compass. Looking ahead the trail appeared to be a huge serpent outstretched in sinuous curves. It was better, however, to follow this trail than to make a new one through the stiff crust. The sleet cut our faces and benumbed our bodies, and the poor horses could hardly stand before the gale; we had difficulty in keeping their heads to the north.

At one point a sleigh loaded with boxes of frozen fish was fast in an ice crack. The driver, unable to extricate his load, had been obliged to leave it. Our team was run at full speed and jumped the crack safely. A number of these dangerous places were passed in this way. During a spell of very cold weather the ice often opens clear across the lake, the awful pressure throwing up a ridge of gigantic blocks of ice. When new ice cracks in this way, the water overflows to a considerable distance on either side, and to one coming along immediately after, he not only finds wet traveling, but

he is liable to fall into the crack. A very few minutes suffice to freeze the water and thus render the crossing safe and easy. Later in the winter when these fissures are marked by high ridges of ragged ice filled with holes, it is difficult to effect a crossing. Often a traveler must follow a ridge of this kind for miles before locating a safe passageway.

After severe battling with storms and another night's camp, we finally reached Beren's River; the end of our 160-mile ride behind horses. The memory of that last camp-fire will live forever. As we were belated and the darksome night overtaking us, we made desperate efforts to find a deserted house that was said to be on an island in the lake. Late at night this house was located high up in the timber amid deep snows. The horses and sleigh were left upon the lake shore, our Indian guide was dispatched for dry wood and we hastily betook ourselves to this habitation of the bats. A small fire was kindled and we were enabled to eat a few mouthfuls of food mixed with cinders and drank some tea which contained charcoal and dirt of various kinds. By the aid of lighted matches several filthy-looking bunks could be discerned, but being too tired to care, we tumbled in and snatched what sleep we could. Long 'ere dawn we were on our way once more.

While passing the Commissioner Islands I fired several unavailing shots at two ptarmigan that were still wearing their winter coats of white. This was the farthest south that I have observed these birds.

Besides being partially snowblind, my face was badly scarred and covered with deep cracks, filled with coagulated blood; forehead and cheeks were badly blistered; and in many ways the hardships of the trip were visible. To travel in the North is to court suffering.

At Beren's River I met Mrs. McLachlan, whose husband had met a tragic death a short time before. The Rev. J. A. McLachlan was for many years a missionary among the Indians. While conveying a party of children to the Brandon Industrial School, his sailboat was capsized and the entire party drowned. Mr. McLachlan was considered an expert sailor, but the terrific storm that raged upon Lake Winnipeg was too much for any craft and any sailor and overwhelmed the devoted missionary and his party within a few miles of a landing. A daughter of the missionary, Miss Madelaine McLachlan, was born in the North, and in addition to considerable skill in handling birch-bark canoes and in driving dogs she played the piano well, and soon afterward left Beren's River to attend the Conservatory of Music.

After a short rest at this point, Mr. Ewing started on expecting me to follow in an hour or so; but, unfortunately, I was unable to find dogs and was delayed for several days. After considerable parley, a young Indian by the name of Francis and a team of five fairly good dogs were secured. With a load of not more than two hundred pounds, I fully expected to ride. But the way proved long, the dogs slow and the weather cold; so that I ran nearly all the way, a distance of about a hundred and twenty miles, finishing in two and a half days.

The first night of this journey I met with an experience that nearly terminated my labors ere they began. We chose for our camp a mossy

place at the base of an uprooted tree, and after our customary meal of roast rabbit, bannock and strong tea, I conducted the evening devotions and we prepared to turn in. For the Indian this was an easy matter, but to me it presented a danger for which I was entirely unprepared. Mr. Ewing was several days in advance with my bedding and I had but one thin blanket and the night was clear and cold.

Few realize the intense cold of a night in the far North. It comes down silently, without warning, and embraces in its icy folds all that has life, and gradually, almost imperceptibly, destroys that life; rendering the Northland a land of danger and often of suffering and death.

Wrapping myself in my blanket, I lay down—but not to sleep, for as the fire gradually went down the mercury dropped, and I soon found myself freezing. After two or three hours without changing my position, I became alarmed and tried to rise, when, to my horror, I found that I could not move a muscle. In terror I endeavored to call the guide, but my tongue would not obey. For the space of two or three minutes I endured untold agony. At last by a violent effort I succeeded in breaking the spell and was able to move one limb; then the blood started to circulate, and with every nerve tingling and teeth chattering as the cold rushed in, I made my way to the still glowing embers of the camp-fire and endeavored to blow them into a flame. The agony of body was too great, however, and so, with no very gentle kick I awoke the sleeping Indian and soon we had a roaring fire.

At half-past one in the morning we harnessed the dogs and started on our journey. The Aurora Borealis illuminated the heavens, lighting the starry host as they coldly gazed down upon us. All nature lay wrapped in a cold shroud of mystery as we followed the faint trail down Lake Winnipeg.

At the Spider Islands my driver left me, and a trader by the name of Donald Flett volunteered to take me the remainder of the distance to Norway House. With his very fast train of four beautiful black dogs and a snowy-white leader we reached his home at the foot of the lake, a distance of twenty miles, in a little over two hours and there I stopped to rest.

For a day or two I was royally entertained at the home of this trader. His wife, a Cree Indian woman, prepared the most toothsome delicacies to tempt the appetite. Never shall I forget the kindness of Mr. and Mrs. Flett. On Sunday morning Mr. Flett harnessed his dogs to a cariole, and, covered with fur robes, I made my first luxurious cariole trip. The trail led through beautiful evergreen groves, dotted with silver birches. I greatly enjoyed that ride of two hours, the trader running alongside or behind the entire distance. When within six miles of Norway House, I bade farewell to my kind host, and leaving my baggage with an Indian to have forwarded later on, I finished the distance on foot.

Upon arrival at Norway House Mission, in spite of my wayworn and battered appearance, I received a very cordial welcome from the Rev. J. A. Sousley, principal of the boarding school, and his wife.

The hardships of the trip were followed by a period of severe illness, and I was confined to the bed for several days, receiving kind care

Conservation Commission Report

from all connected with the mission and school. When recovered sufficiently to resume the journey, two Indians and a cariole were placed at my disposal, and in weakness I was helped in and out of the cariole during the entire trip.

On the second day Cross Lake was reached and I was warmly welcomed by the Indian missionary, the Rev. Edward Paupanekis and his family. After a further illness of more than a week, I was at last able to begin my duties as school teacher, establishing my headquarters at the home of Paupanekis and starting at once to study the language and customs of the country.

One incident of the trip I shall long remember. When within eighteen miles of Cross Lake, we were overtaken by darkness and desired a resting place for the night. On the Whiskey Jack portage Ray Bayer was living at the time. With true Northern hospitality I was invited to stay over night, the one bed in the house being placed at my disposal, while the inmates slept on the floor. To my great surprise and delight a phonograph was discovered and brought forth. In that far off wilderness, surrounded by strangers and in a feeble condition physically it seemed like a breath from the Southland and home to listen to the well-known songs of childhood and the familiar compositions of our great band and orchestral leaders. No one under different circumstances can appreciate the thoughts and emotions that were brought into life by that little program of music, and that left me sleepless until the morning light.

New Publications.

CAZA MEXICANA, Carlos M. López and Carlos López. Decorated cloth, 8vo., 631 pages, illustrated from photographs. Mexico City, C. Bouret.

In the dedication of this splendid volume, and the first one of its kind to be produced in Mexico, the authors give a hint of the wide variety of sport to be had there, among the snow-clad summits of the Sierra Madre on the high central mesas, and along the lowlands of both coasts. It is divided into six parts, each one an exhaustive treatise and appropriately illustrated.

Part I. relates to preparations for hunting, where to go, how to equip, firearms and practice with them, habits of game, and how to find it.

Part II. is devoted to firearms, ammunition, and data regarding the merits of guns, rifles and accessories, care and use.

Part III. covers hunting dogs; kinds, use, training, care and treatment.

Part IV. describes big game, its habits, range, how to hunt it, the seasons, and recipes for cooking game.

Part V. covers small game, upland and lowland birds and wildfowl.

Part VI. is in reference to game protection and laws, and includes a valuable map showing the kind of game to be found in each State.

The text is very interesting and the illustrations are mainly original. These relate to famous shooting grounds, sportsmen's camps and incidents of the hunting. Many of the illustrations of game are from life, while those from mounted specimens are valuable.

The volume is a very creditable one, and should be in the hands of every sportsman who hunts in Mexico or contemplates doing so.

IN the first annual report of the New York Conservation Commission to the Legislature the commission says that in the preservation and restoration of forests the prevention of fires is the fundamental thing, and that the efficiency of the fire protection of the forests is shown in the fact that although the year 1911 was a year of unusual drouth, and with an increased num-

ber of fires over that of previous years, but one-half of one per cent. of the total area of the forests under protection suffered fire loss, and this although each patrolman covered an area of over 100,000 acres. "The State," remarks the commission, "bears the entire cost of the patrolling of forest lands, although it owns less than one-fourth of the area patrolled. The entire expense of the patrol system is borne by the State, as well as one-half the extra expense of the cost of fighting fire. These two items last year amounted to \$71,067.60, of which the State paid directly \$47,693.62 for patrolling and for one-half of the cost of hiring extra help and fighting fires \$23,373.98. It would seem only a matter of good business and justice to all concerned if the

cost of patrolling and fire fighting could be based on the area of forest lands protected. Is there any reason why the State shou'd pay for the protection of the forests of private owners? An equitable system could be devised whereby each private owner and the State would pay a just and proportionate amount of the expense of saving the forests."

The commission attributes much of the increased efficiency of forest fire protection to the installation during the year of sixteen new mountain observation stations, making thirty-six in all, and says that while the number of fire patrolmen was increased this year from forty-eight to sixty-four, the districts in many cases are still too large, and adds:

"It is estimated that in this State to-day five trees are cut down to every one planted. At the present rate of increase of reforestation and in accordance with the commission's plans, it is expected to reach the much-to-be-desired result of planting at least one tree for every one removed.

"The method of reforestation recommended by Governor Dix has received approval of the people in all parts of the State.

"The use of prisoners in growing nursery stock for reforestation will greatly reduce the cost of the transplants, since labor is the main item. The State should encourage by every means this reforestation work and the policy of selling trees at cost should be a very large inducement. The State should make no profit whatever on transactions of this character.

"The policy of the State in regard to its land in the forest preserve should be to consolidate its holdings so that the work of protecting the forests and of reforesting the watersheds can be most effective and at the least expense. The summits of mountains in the parks should be acquired so as to afford the greatest protection to the watersheds in the conservation of water.

"The conservation commission regards the State Forest Preserve as the people's great playground and health resort, for the use of all and abuse of none."

The prevention of chestnut blight and other tree diseases suggests to the commission the urgent necessity for the services of an expert plant pathologist.

The commission presents facts and figures showing that its predecessors in office had practically contracted for forest lands valued at \$21,913.96 more than had been appropriated for that purpose, not including the value of the large tract of land known as the Taggart-Fisher tract of about 40,000 acres appropriated by the forest purchasing board. "This commission," says the report, "has completed the purchase of all lands where the owners had delivered deeds thereto to the State, and the same had been recorded and has also investigated the remaining lands with a view of ascertaining whether the prices agreed to be paid are reasonable and the title thereto marketable, and while it appears that in some instances the State agreed to pay more than the land was reasonably worth, we recommended that the balance in the appropriation for the purchase of lands in the Adirondacks be made available for the payment of lands contracted for in

GAME BAG AND GUN

Better Sportsmanship.

SOMERVILLE, Mass., Jan. 9.—*Editor Forest and Stream:* The more thought and study I give to the fish and game question along the lines of conservation and protection, the more complex and difficult a problem it seems to be to properly regulate. With the many different local conditions and the great diversity of opinion entertained by the different sportsmen, it seems almost impossible to bring it to any definite state in which it would be satisfactory even to a good majority of sportsmen.

A great many good suggestions and much good advice is offered as a solution. Many bad features are pointed out and the blame laid to one thing or another, but the more I think of it, the more I am inclined to believe that the one greatest retardment is that ever-present trait of human nature, selfishness. While it is no doubt unconsciously practiced in many cases, still there are a great many who do not seem to care one way or the other, giving no thought to the future, but bent entirely upon getting the most out of the present. This, I think, is one of the greatest obstacles so detrimental to bettering of the fish and game situation, which must to a great extent be overcome; by the use of proper teachings and by right influences.

When we stop to think of it, nearly every other recreative game or sport can be and is played according to a fixed set of rules, which govern every point of every game, and each game can be played under the guidance of a chosen referee or umpire. But with the fishing and hunting game it is different. While we have many statute laws and rules regulating these two great forms of recreation, it is impossible to always play them under the guidance of properly appointed official referees, partly because of the lack of a sufficient number of officials, and partly because of the many out-of-the-way places in which they are enjoyed. Therefore, it becomes the duty of every participant to be his or her own referee.

While there are a great many persons who could not enjoy any game or form of sport unless they play it in a fair and honest way, according to every rule, and always do so, even without the necessity of a compelling referee, yet the previously mentioned human trait will assert itself in others, causing them to take every advantage, fair or otherwise, and appear to enjoy the results just the same. I know of no other sport that has the number of moral and unwritten laws that are practiced in the pursuance of fishing and hunting.

During my limited intercourse with this fraternity of sportsmen, it seems to me that I have more often seen displayed a feeling of good will, and it has appeared more easy to appeal to their better sentiments through these two forms of recreation than in any other way. Some who display little or no sentiment in regard to other sports can many times be approached and brought out, through the medium of these two sports. Isn't this the very feeling

to be taught and cultivated? Sportsmen brought to this state of feeling will find it more easy to live up to all game laws than those who obey them because they feel obliged to, or think it unsafe to do otherwise. In what other good cause do we find men of all classes working side by side as we do in the cause of conservation, in the interest of which all good sportsmen are working.

I am glad to be able to feel that this class of sportsmen is gradually increasing. I am encouraged by the apparent advancement which has been made in the past year in the interest of this great question. I know of nothing more encouraging than the many good tidings derived from the perusal of FOREST AND STREAM. Many are the good suggestions contained therein and much do we rejoice over the many good results brought about by its teachings. As more and more people are brought to realize and understand the idea of conservation and protection, then has a great gain been made in the interest of the cause. When it is more generally understood that conservation does not mean merely a protection to fish and game, but a protection to all beneficial birds and animals, a saving of our forest and all lakes, streams, waterways and all natural resources for the benefit of all outdoor recreationists. When it is more fully understood that all true sportsmen stand for these principles, then will a greater prestige with the general public have been gained by this class of sportsmen.

This is my impression of the teachings of our good paper, FOREST AND STREAM, and while it and its big family, including the best class of sportsmen to be found, are working for the enactment of more good and restrictive laws, let the teaching of moral laws and better sportsmanship go on, and may the recruits to this good cause be greatly increased in number this year just started. Moral laws and the proper idea of sportsmanship are more to be depended upon at present than the many statute laws which it is so difficult to enforce.

CHAS. H. SHAW.

Game Preserves.

BRYN MAWR, Pa., Jan. 2.—*Editor Forest and Stream:* I have read with great interest Henry Chase's article in the last FOREST AND STREAM, and in the main agree thoroughly with what he says.

The question of Federal control of our game at the present time is of course out of the question. So, in the meantime, why would it not be well to get to work on the game laws, both State and county, trying not only to improve them, but have them enforced?

The habits of the different game birds should be generally better known in framing the game laws. Every town should have a game warden, intelligent enough to instil his ideas into his neighbors and their sons, and to understand the value of the small and big game of his section. In short, people must be educated to

the point where they take a real and personal interest in the wild life surrounding them.

There is one thing, I think, should be made a law in every State in the Union. That there shall be no shooting between one hour before sunset and one hour after sunrise, for in that time the game is least able to help itself.

As an example, and to show how late shooting can effect one small section, let me give my experience in Southern New Hampshire, where I have owned a farm for twenty-five years. Twenty years ago there was first-class ruffed grouse shooting in the section between Jaffrey and Keene, New Hampshire. To-day a good bag would be perhaps two or three grouse. Yet, owing to the ruffed grouse's habit of roosting on trees near or on old wood roads, I have within five years, or since the shooting has become poor, often met some small boy, or man, with a bag of eight or ten birds all killed while roosting in the apple trees or birches along the roads and runs where the birds were known to be.

This sort of thing is a shame, and, in my opinion, has had much to do with the rapid disappearance of our ruffed grouse.

Twenty years ago it was a lucky man or boy in the country who had a gun that could be depended upon. In these days anyone can get one. In consequence hundreds of birds are killed in the way I have spoken of.

The same thing occurs in all Southern States, where the turkeys roost along the elms on the creeks. In certain parts of Texas, to my personal knowledge, it is the only way turkeys are hunted, and if a big flock is located the slaughter is frightful.

In regard to Mr. Chase's remarks on private preserves, I think that in many cases the preserves are the direct result of the failure of the average man to realize that game laws are not made to stop his shooting, but to give him and his sons after him shooting for years to come. If game gets scarce in his section through his carelessness and ignorance of the game laws, he cannot see why a man with money should buy up land, stock it, and preserve it for his own use.

Incidentally, a private game preserve on which quail have been put out, does help the surrounding country by a natural overflow, as quail are at times exceedingly migratory, especially in dry weather.

I am not advocating private preserves, but simply trying to account for a condition which has, as Mr. Chase says, arrived.

As a rule, on most private preserves the game laws are obeyed to a nicety, otherwise where would be the use of the preserve? This should show the man who cares nothing for game laws, and shoots for sport, not food, one very simple way of keeping up the supply of game. Simply obey the game laws.

The bags in all State and county laws should be limited to the supply of game in the section to which the game laws apply, and papers should be circulated which would give the fair thinking taxpayer the reason for the seeming stringency in controlling his day's shooting. For, if we are not educated to the point where we are willing to trust to an expert's advice in shooting, as we do in other things, our game is bound to be exterminated.

MARK HOPKINS, JR.

Insect Pests.

CAMDEN, N. J., Jan. 15.—*Editor Forest and Stream:* In your last issue there was a request made for information in regard to insect or vermin pests in Florida, and from the wording, I would think the party was inquiring in reference to camping. I have spent portions of six winters in Florida, from November to June, and covering the East Coast from St. Augustine to Cape Florida, the St. Johns River from Jacksonville to Lake Pointsett, portions of the West Coast, Pensacola, Cedar Keys and the Tampa Bay section; five trips down the East Coast and the St. Johns River country, one trip on the West Coast and dating from my first trip of November to June in 1885 and 1886.

The last trip, two years ago, down the East Coast, when my wife was with me, in a canoe trip, St. Augustine to Miami and back. During the entire trip of nearly eight hundred miles and eight weeks' duration we camped and cooked our meals at a camp-fire; we had a small tent and slept on the ground with a bed of palmetto or cocconut leaves and our blankets, and during the whole trip never were bitten or annoyed. Only on three nights of the entire trip did we sleep in a house.

To anyone who enjoys boating, variety of vegetation, camping or cruising, the conditions on the East Coast are ideal. There is the wilderness, when you want it, nothing but trees and water, then maybe in a few hours a town, and the environment so beautiful it is beyond me to properly picture. If you wish to fish, there is plenty of water and fish, too; oysters and clams are in plenty. A breeze that will drive your boat six or eight miles an hour, or put you on your mettle to make any headway against it with paddle or oar; and yet so soft you feel no bad effect from resting in it when overheated.

Now a word for the people. You are made to feel a hospitality you do not know in the North. You are a bother to no one; every one you meet has a pleasant word. It is a pleasure to show you over their garden or through the grove or packing house, and when you leave you carry instructions as to the best route, the fishing grounds, a few vegetables or your boat is loaded with oranges. You are to be sure to stop on your way back. If you leave your boat and tent in town, settlement or wilds, you need have no fear of it being disturbed. There seem to be no thieves and "young America" seems to be educated to an entirely different degree from in the North. We returned from our trip full of pleasant memories and—renewed health and hopes to repeat the trip.

HARRY MANSFIELD.

New York Legislature.

ALBANY, N. Y., Jan. 15.—*Editor Forest and Stream:* Senator Argetsinger, of Rochester, has introduced into the Legislature two bills relating to auxiliary forest preserves, as follows:

Providing for the taxation of auxiliary forest preserves. The board of supervisors of each county is required to furnish each year to the Board of Assessors of each town in the county a statement of the names of the owners, and a sufficient description of the tracts classified as auxiliary forest preserves. These reserves are to be taxed at not more than one dollar per

acre, unless they are underlaid with valuable minerals, in which case the minerals may be assessed separately. When timber on these auxiliary reserves is cut and marketed, the owner must pay to the supervisors for the use of the county and township, ten per cent. of the selling value of the marketed stumpage of both coniferous timber and broadleaf timber.

Defining and establishing auxiliary forest preserves. It provides for setting aside surface lands by private owners, with the approval of the Conservation Commission, for the purpose of reforestation.

These two bills have been introduced by Senator Walters, of Syracuse:

Appropriating \$75,000 for the purchase of sites for the six game farms, the sites to be selected by the Forest, Fish and Game Commissioner.

Amending the Act of 1911 (Chap. 851), establishing a State college of forestry at Syracuse University, substituting the chairman of the State Conservation Commission for the State Forest, Fish and Game Commissioner upon the Board of Trustees of the institution.

The Senate committee on forest, fish and game will be constituted the same as last session, viz.: Senators Roosevelt, of Dutchess; Frawley, of New York; Cronin, of Brooklyn; Long, of Nassau; O'Brien, of Brooklyn; Fiero, of Greene; Bayne, of New York; Hamilton, of Chautauqua; Sage, of Albany.

The Assembly committee on forest, fish and game, just appointed by Speaker Merritt, comprises the following: Messrs. Macdonald, of Franklin; Waring, Ulster; Waters, Orleans; Yeomans, Wayne; Hart, Fulton-Hamilton; Brong, Niagara; Prime, Essex; Duntz, Seneca; Milford, Onondaga; Crawford, New York; Blauvelt, Rockland; McDaniels, Tompkins; Schwarz, Rensselaer. E. C. C.

Adirondack Notes.

NORTH CREEK, N. Y., Jan. 1.—*Editor Forest and Stream:* I am spending the winter at a farmhouse about seven miles from North Creek, Warren county, in the Adirondacks. The woods, especially where there are large tracts of evergreens, are most beautiful and interesting to a nature lover, when in their winter garb. The forests would certainly be a dreary and uninviting place in winter, were it not for their cheerful and majestic presence.

Black bears are quite numerous around here, and a few years ago created quite a good deal of havoc with the farmer's sheep-folds. Fresh tracks were reported recently and we took the trail in the afternoon. After a mile of very bad going, we came on a deer's carcass, upon which bruin had that afternoon been feeding. Just as the trail was getting warm, we had to give up the chase, as the days are so very short. If bear-hounds could be used, it would afford good sport, but the law says nay, and the surest way to take them is in steel traps.

Rabbits and partridges are numerous and have afforded good sport. A short time ago we took a beautiful specimen of an albino flying squirrel.

That blood-thirsty little savage, the red squirrel, is very common here.

Last summer I spent seventeen straight weeks

at a leading sporting camp in Northern Maine, and, while there, became quite intimate with an old, experienced and very capable guide. He informed me that to become a guide in Maine, one has to procure a license and at the end of the deer and moose season to send in a detailed report of his work for the year to the fish and game commissioner at Augusta. They have their guides under most admirable supervision, and if this great and good (?) Empire State, with its far-famed Adirondacks teeming with deer, were to pass a law requiring all guides to be licensed, it would be a step in the right direction and would prevent, as I will attempt to show, the many senseless and unnecessary shooting fatalities. I have talked with experienced and veracious native hunters in this section, and their unanimous opinion is that at least eighty per cent. of hunting tragedies can be directly or indirectly traced to strong drink in self-appointed and incompetent "guides." Intemperate country youths and middle-aged men, because brought up in the neighborhood, believe themselves qualified to guide a sportsman after deer, though their knowledge of woodcraft and experience in hunting may be very limited, to say the least. Their rum-besotted advice is in many instances about as follows:

"Anything you see moving or rather any commotion in the brush must be a deer, so blaze away!"

There are many sober (at least, during working hours), experienced, careful and lion-hearted guides, for whom I have the most unbounded admiration and respect, and I think a careful perusal of the records will disclose the undeniable fact that very few accidents have occurred while the sportsman has been under the care of that master of woodcraft, the high-class guide. L. T. CARTER.

Walnut for Gunstocks.

CONSUL ALBERT HALSTEAD, of Birmingham, says that a number of attempts have been made by prominent local gun manufacturers to obtain walnut from the United States for gun stocks, but the wood has invariably been found unsuitable for the high-class guns, and it has not heretofore been used for guns of poor quality. The difficulty is not in the strength of the wood, but in the color, which is dark brown with none of the yellow and light brown streaks that are found so attractive for gun stocks.

The walnut that has been used for British gun stocks has come from Italy, Switzerland and France. It is said, however, that the last tree suitable for gun stocks in Italy has apparently been cut, so that the supply is now French, but the prices for the French walnut are going up so high that they may within a few years become prohibitive. The French walnut is now particularly in demand for veneering purposes, it being found more profitable as a rule to cut it for veneer than to sell it for gun stocks. Thus it is quite likely that a situation will develop where American walnut gun stocks will be in demand.

It is highly desirable that prices be quoted in English money and the walnut delivered in Birmingham, or at least delivered at a British seaport.

Our Utopia.

BY ROBERT E. PINKERTON.

I KNOW a lake that's buried in a far-off forest land,
It's circled by the pine trees and rimmed with rock and
sand;
Mere man has seldom seen it—just the moose and deer
and bear—
But some day we are going to build a cabin there.
This lake is like a mirror when the sun comes up each
day
And colors all the islands, each point and shadowed bay,
From the paint box of a master whose work is ever new,
And all this wondrous beauty I long to show to you.
And you and I will live there in a cabin 'neath the pine,
And round us moaning Norways with sobbing winds will
whine;
We'll tramp the woods together, we'll float in our birch
canoe,
We'll catch the trout and muskie, and stalk the caribou.
And from a rock at sundown, we'll see the shadows fall,
We'll watch the stars come twinkling, and learn them
one and all;
We'll hear the cry of night birds as we paddle 'neath
the moon,
We'll watch the moose and buck deer come down to
drink at noon.
When winter comes, and hungry wolves, across the lake
at night,
By howling, trace the pathway of frightened deer in
flight,
We'll gather 'bout the glowing stove—a pipe, a book,
content—
With ne'er a thought of cities where wasted years were
spent.

Anglers' Club of New York.

THE annual meeting of the Anglers' Club of New York was held at the Hotel Navarre on Jan. 9, an exceptionally large number of the members attending. The election of officers for the current year resulted as follows: President, Jason G. Lamison; Vice-President, Edward Farnham Todd; Secretary, A. B. Hubbell; Treasurer, Harry Friedman; Directors, the above officers and Perry D. Frazer, Harold G. Henderson, John L. Kirk, George M. L. LaBranche, Robert B. Lawrence, Nathaniel S. Smith and Tobias A. Wright. The members of the various committees were also elected, the chairmen being: Admissions, A. R. Hanners; Tournament, Walter McGuckin; Arrangements, William C. Metcalfe; Nominations, Jason G. Lamison.

Under the new constitution of the club this will be the only business meeting of the year, as all business will hereafter be transacted by the board of directors and the committees which will report to the latter, but monthly dinners will be arranged as heretofore, each of which will have some special feature, such as a debate between selected members on the merits of different methods of fishing; addresses by members and others on fishing and outdoor topics; fishing experiences of members and friends; stereoptican views, etc., as may seem most popular on trial.

After the meeting dinner was served to about eighty-five members and guests, followed by speaking under the able guidance of Julius H. Seymour as toastmaster. The speakers were W. S. Champ on his experiences in the arctic regions as head of the Baldwin relief expedition;

W. E. Coffin, on pipe smokers; Gifford Pinchot, who told two Catalina fish stories; Dan Beard, on outdoor life, and Commodore Gregory, on a bag of snipe and a pocket flask. The retiring president, Mr. LaBranche, was then presented with a loving cup on behalf of the club by the chairman of the dinner committee, E. M. Gill, and accepted it in a very well chosen and really impromptu reply, as it came to him as a complete surprise.

The meeting then adjourned to the adjoining room for the pictures which closed the entertainment. These consisted of lantern slides from photographs and comments thereon, by W. H. Miller, E. F. Todd, E. M. Brunn, R. J. Held and G. M. L. LaBranche, of the club, of fishing scenes and experiences, and slides and moving pictures, the latter being the first ever taken in the extreme North, by A. A. Fiala, when on the Ziegler polar expedition, Mr. Fiala also giving a very instructive explanation of his work. These were followed by motion picture films showing fishing in various foreign countries, after which the company broke up with many thanks to the dinner committee for a most enjoyable evening.

Public Fishing Rights.

RECENT decisions in the courts concerning the rights of riparian owners threaten to arouse no little controversy, says Land and Water. It is not our intention to discuss the pros and cons of the cases referred to, but to call attention to various broad issues which are often overlooked. Earnest advocates of what are loosely termed "public rights" tells us that the decision of the Law Lords means that no one has any right to fish on any river in these islands if the owner objects.

Legally that seems correct enough, but there are any number of things the law does not allow if it were strictly enforced, but no one troubles to take proceedings except to prevent a nuisance or establish a right. So it is with fishing in our rivers. No riparian owner takes action unless his undoubted rights are encroached on or fishermen use his waters in such numbers that he is seriously incommoded. It is claimed by some that anyone should have the right to fish when and where he likes. We are told that thousands of anglers all over the country would hail such a right with joy. As soon as we begin to look into the matter, however, we find that the fisherman would suffer rather than benefit. We are continually hearing complaints that the fish in our streams are diminishing owing to pollution by factory discharges and town drainage and the increase in the number of anglers. The supply is maintained largely by restocking and strictly enforced regulations concerning close times, netting, and the size of fish that may be taken. This being so, who would take the trouble and expense to obtain fresh stock and prosecute breakers of the law if it merely meant he was benefiting others more than himself? If the owner of the banks had no more right to fish than anyone else, he would not go to the expense of keeping an

efficient watch over the fishing waters; in fact, it would be unnecessary, as poaching would cease to exist.

Whatever way we look at it, "public rights" in this connection of fishing mean anarchy pure and simple. Many of those anxious to do away with riparian ownership persuade themselves that they are acting in the interests of the "working man" against the "idle rich" or the "plutocrat." As a matter of fact, many thousands of working men are really riparian owners themselves. There are any number of angling clubs whose members consist exclusively of men of moderate or very small means. These associations rent the fishing rights and often stock their own waters. Thanks to their small subscription, they are able to count on a certain amount of sport; but if anyone is to have the right to fish where he chooses, these workingmen anglers will be hit as hard as the rich salmon-fisher.

It may be said that the fishing rights would be vested in the local authorities, who would grant licenses to all who applied for them. That does not overcome the difficulty. Either the fee for the license would be so very small that anybody could afford one, or it would be sufficiently high to shut out the poor man altogether. In the first case we have a state of anarchy again; in the second we merely substitute public for private ownership. The private owner asserts his rights if he thinks fit, in which case he takes steps to protect his property, or he allows the public to fish without hindrance. If the local authorities granted license for angling they would have to prevent unauthorized persons from enjoying any sport. There are only two alternatives—regulation or anarchy. Angling would soon cease to be a sport in the British Isles if any man had the right to fish where he pleases without let or hindrance; so anglers would not benefit if that were the law. And if public ownership took the place of private rights, there would be so many red-tape regulations that, in all probability, angling would be far less popular than it is at the present time. If the rights of riparian owners were really a menace to sport, the number of cases in the courts would be infinitely greater than it is, for the landowner only enforces his claims when something really serious is at stake.

Not on His Map.

IN a northern seaport town there is a wealthy but illiterate man who owns many fishing vessels and follows their course over the seas by aid of a large atlas and a 10-horsepower magnifying glass. "I've just had a letter," he said to a neighbor, "from one of my captains, and he tells me he's been in a fearful storm. I'll read you what he says:

"The waves rose like mountains. We were driven before the wind to the danger of our lives and put into great jeopardy."

"What I want to know," said the shipowner, "is, where is Great Jeopardy? It's somewhere in the Mediterranean, but I can't find it on this map anywhere."—Marine Journal.

All the fish laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

Zoological Society Annual Meeting.

THE eighteenth annual meeting of the New York Zoological Society was held in the ballroom of the Hotel Waldorf-Astoria on Tuesday, Jan. 9. Prof. Henry Fairfield Osborn, president, presided, and Madison Grant, chairman of the executive committee, read the report of that committee for the year 1911.

The report showed that the membership of the society had increased during the year, and urged the members to make efforts to still further enlarge the list. During the year a series of ten new bear dens has been practically completed, as has also an eagle and vulture aviary. Both buildings will be put in use next spring. It is purposed to erect in Baird Court a house for the anthropoid apes for the large collection of chimpanzees and orangs owned by the society. A hospital and quarantine, as well as other administrative buildings, are to be erected during the year.

Reference has already been made in *FOREST AND STREAM* to various events of the year. The little gorilla brought from Africa lived only eleven days in the park; the Siberian tigers are doing well and growing fast. From Paul J. Rainey have been received a number of animals including a hyena, a cape hunting dog and two leopards. Two new and rare South American bears have been received. The national collection of heads and horns received through the generosity of Clarence Mackay twelve large Alaska moose horns mounted, ten wapiti and four bison.

The endowment fund has been increased and is now \$283,062. The decision of the city to build a new aquarium and the appropriation of \$200,000 as a beginning has already been told of in *FOREST AND STREAM*.

After the report of the executive committee, Dr. Hornaday made some remarks on game protection, and Dr. Charles H. Townsend, director of the New York Aquarium, described with lantern slides the expedition of the Albatross under the auspices of the Zoological Society and the American Museum of Natural History to Guadalupe Island off Southern California, and the discovery of the herd of elephant seals and the capture of the specimens now on exhibition at the Aquarium. Dr. Townsend's account was extraordinarily vivid and interesting, and his pictures very beautiful. He held his audience.

C. William Beebe, curator of birds at the Zoological Park, who had just returned from his expedition around the world to study pheasants, exhibited many photographs of strange birds and of distant lands collected during his absence. Mr. Beebe was accompanied by Mrs. Beebe, and his pictures were very interesting and his talk was greatly applauded.

Paul E. Akeley, who has just returned from Africa, showed a number of pictures of elephants and other African game and described a number of his adventures in his search for material for a mounted elephant group in the American Museum of Natural History. Mr. Akeley very modestly did not tell of the most surprising ad-

ventures that he had; such as choking to death a leopard with his bare hands and being left for dead by an attacking bull elephant.

At the close of the meeting the following candidates were chosen to the outgoing class of the board of managers for 1912: Levi P. Morton, Henry A. C. Taylor, Andrew Carnegie, Hugh J. Chisholm, John L. Cadwalader, Frank K. SturGIS, Madison Grant, Geo. J. Gould, Wm. White Niles, Ogden Mills, Samuel Thorn and Lewis Rutherford Morris.

Belated Migrants.

HENDERSONVILLE, N. C., Jan. 13.—*Editor Forest and Stream:* We are having winter. Two snow storms, one of three inches, were followed by sleet and rain, leaving a sheet of ice dangerous for both man and beast, and now, just when most of this was melted, comes a fall of four inches of light soft snow. All last winter we did not have one-quarter of an inch of snow and sleet. Another thing rather "out of common" is this: In the middle of December there were numbers of robins up here. I saw one to-day. I do not remember robins in mid-winter before. Also I saw a mockingbird here to-day. Evidently he has become acclimated, and I expect to hear him as usual in early spring. And how he can sing! I am sure after this winter passes he will be so full of song he will find it difficult to contain himself. The sunshine and balmy air will have the effect it must always have on the feathered songsters.

But I would have thought all this rough cold weather would have sent all these birds "down South" long ago.

Evidently cold weather arrived rather late in the North and this December delegation of robins was delayed in the migration. They did not stay long, and the one I saw to-day must be very lonesome and no doubt will hasten his departure.

Quail shooting (except for pot-hunters) has been out of the question since the snow fell. No sportsman cares to take advantage of the birds at such times as this when snow covers the ground.

No doubt the birds are suffering, not only from the pot-hunters, but from the difficulty in getting food. The Ewart law is for this reason among others the worst ever made. Quail should be shot in November and December in this country and protected after Jan. 1. There is also a clause in his law "that it shall be illegal to trap or sell quail except during the months of January and February," thus legalizing just what all sportsmen have tried to stop all these years, and in the worst months. No trouble to trap any grain-eating birds now, and it is more than a pity; it is a shame.

ERNEST L. EW BANK.

NEWPORT NEWS, Va., Jan. 11.—*Editor Forest and Stream:* I am sending you the head of a bird. My opinion has been asked as to what this bird is. I think it is an English starling.

Am I right? Many hundreds of these birds have been seen in this locality during the last few days in flocks. Have they ever been seen as far south as this before? B. B. SEMMES.

[The bird was a starling. As yet the habits and range of the English starling in America are not generally known; in the vicinity of New York city they are frequently seen in small groups in winter. One flock numbering about twenty has been seen every day in a village in Northern New Jersey. They made no attempt to leave last week when the mercury dropped as low as 5 and 10 degrees below zero, but sought shelter on the leeward side of buildings and in wild cherry trees. Before the ground was covered with snow, this flock fed on lawns and in gardens, always returning to the old cherry trees.

Possibly the starlings mentioned by Mr. Semmes were driven southward by storms, but as they increase in numbers it is to be expected that they will spread further and further away from the places where they are now fairly numerous.

The starling at a distance appears to be black, but closer inspection will show that the feathers are tipped with white or light brown. The tail is very short. On the ground they do not hop, but walk. Feeding, they run rapidly a few feet, stop, then run again quite rapidly.—EDITOR.]

Norton Sound Bears and Caribou.

A GEOGRAPHICAL Survey report, recently published, speaks of an abundance of caribou sign in the higher hills between the Yukon River and Norton Sound, Alaska. These deer are abundant in the region specified, though further west they are almost entirely wanting. It is stated also that the domesticated reindeer, held there by the Government, or private ownership, and which are herded near the mouth of the Shaktolik, are moved from place to place, and sometimes these animals stray away and become wild.

In the less frequented parts of the region bears are comparatively numerous. Well trodden bear trails run along the Shaktolik for many miles, used by the bears during the salmon season, when they visit the river to fish. During the bear season bear signs are abundant along many rivers. Trappers and prospectors report that lots of the bears are rather large and brown in color, very few black bears being found.

Caribou and bears are the only two large animals in the region.

The Captive Elephant Seals.

THE six elephant seals sent back by Dr. Charles H. Townsend, director of the New York Aquarium, until within a few weeks threw so well and were so voracious that they promised to eat the New York Zoological Society out of house and home. Two of the animals were sent to Washington, and shortly after that two others died suddenly. This seems to be the fate of most captive animals. It is impossible to keep them under natural conditions and sooner or later they must perish.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

CORRESPONDENCE.

The **FOREST AND STREAM** is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Terms: \$3.00 a year; \$1.50 for six months. Single copies, 10 cents. Canadian subscriptions, \$4.00 a year; \$2.00 for six months. Foreign subscriptions, \$4.50 a year; \$2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line (\$2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra. Special rates for back cover in two or more colors. Reading notices, 75 cents per count line.

A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Advertisements should be received by Saturday previous to the issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

FEED THE BIRDS.

THROUGHOUT the United States low temperatures have prevailed during the past fortnight and storms of snow, sleet and rain have taken heavy toll of the furred and feathered game. The survivors need attention, and every sportsman should devote a little time to placing feed where it will be found by the game and other birds. This work is systematically done in many places, but there is not a woodlot or thicket that does not provide shelter for wild life, and every effort made to conserve this will bring satisfactory returns. Feed the birds.

FUR SEAL LEGISLATION.

ALTHOUGH the convention between Great Britain, Russia, Japan and the United States that met last summer agreed that pelagic sealing should cease, Congress has not yet ratified the convention's action. A bill providing such a ratification is now in committee of the House. There is also before the House a resolution offered by Mr. Rothermel, forbidding the killing of any seals on the Pribilof Islands for a period of fifteen years. That resolution, if passed, would undo much of the good promised by the agreement of the powers with regard to pelagic sealing.

The habits of the fur seal have been so closely studied that they are well understood. The male fur seal gathers about him a company of twenty to one hundred females that he defends against all other males. Rival bulls are constantly striv-

ing to steal females from each other, a bull seizing a female in adjacent territory and lifting her over to his own harem. If the bull from which the female is being taken, sees what is being done, he seizes the cow to retain her, and in the struggle she may be torn to pieces or greatly injured. Among fur seals the pups are produced in equal numbers, and as a result of their polygamous habits there is under ordinary conditions a great surplus of males. These, while still too young and too weak to hold a position in the rookery as breeding males, herd by themselves. In past years the number of these bachelor males was kept down by the killing for fur, enough being left to supply the loss among the breeding males from old age or death.

If the resolution suspending the killing of all seals on the Pribilof Islands for fifteen years should pass, in a few years there would be a great body of strong adult males which would invade the rookeries, causing constant fighting, and as a result the destruction of a great number of young and female seals. Such destruction would tend to delay for a number of years the re-establishment of the fur seals on the Pribilof Islands in anything like their old numbers. The resolution is opposed by every fur seal expert who has been on the islands for the last twenty years, and all naturalists familiar with the subject believe that it would be very injurious to the fur seal herd.

If a farmer has a dozen cows or a dozen ewes, he does not at the breeding time turn into the pasture with these cows a dozen bulls or a dozen rams. If he did that, the consequences can easily be imagined. Precisely similar results would be attained by treating the Pribilof fur seal herd in the manner proposed by House Resolution 277.

Reports from Washington indicate that the House Committee on Foreign Affairs will report the ratification bill almost as introduced, and will not regard the representations of those who are urging a close season on the fur seals.

THE COMMISSION PLAN.

IN the report of the Conservation Commission to the New York Legislature is found another hint that at some future day the people will be urged to empower that commission to take from the Legislature the making, as well as the enforcing, of the forest, fish and game laws.

The plan is not new, for it has been applied more or less successfully in other countries, but it is not likely that it will meet with the favor of lawmakers, some of whom find their principal occupation during legislative sessions in the juggling of the game laws. The desire for simpler game laws is growing, however, and when the long-suffering public finally demands that an end be put to the incessant changing of seasons, as it may be expected to do some day, then the plan to give over this work to a small group of men will be brought up for approval.

It is not without merit. There is reason in the belief that a commission of three or five men seeking to please an entire State, can make better game and fish regulations than a hundred men, each of whom is pledged to carry out the wishes of a few constituents. And if the commission plan is ever carried out, there will, it is hoped, be few local laws to confuse and discourage sportsmen from other portions of the State, who must now know that it is unlawful

to fish in Blue Run between Jake Smith's blacksmith shop and the Millville dam.

Insofar as it applies to the supervision and regulation of lumbering on private lands within the Adirondack and Catskill Parks, the Conservation Commission's recommendation for more power is sound. Scientific forestry, so-called, or rather common sense forestry, is needed on such lands as are not now within the jurisdiction of the commission, but which should be, since the cutting of every tree in the Adirondacks bears just so much on the solution of the question of preserving the stream heads.

THE American Forestry Association, at its thirteenth annual convention, held in Washington last week, recommended that the Forest Service be taken entirely out of politics and put on a scientific basis. The association also urged Congress to make further appropriations for the purchase of additional forest lands in the Southern Appalachians and the White Mountains. Governor Robert P. Bass, of New Hampshire, was re-elected president, and Mrs. Grover Cleveland was elected a life member.

No word of comfort has so far been received by the friends of Edmund S. Bailey, Dr. C. A. Clemons and Thomas Veltman, who departed from Bay Shore, N. Y., more than a week ago, intending to shoot wildfowl on Short Beach Island, in Great South Bay. Their motor boat was recovered, but no trace of the men or the small boat in which they put out for their shooting box has been found.

THE forest situation may not inaptly be likened to the late Mark Twain's whimsical description of his efforts to farm. He had succeeded, he said, in making one blade of grass grow where only three had grown before. And to-day great efforts are being made to replant more than one tree for every five that are felled.

A BUCK deer that escaped from a crate and ran down Broadway some years ago created more excitement than the fox hunt which took place in Fifth avenue last Monday, for the fox's dodging tactics were not equal to the buck's speed, and he was cornered and taken alive in short order.

THERE will be a brave showing of winter sports in Montreal next month. The annual convention of the American Physical Education Association is to be held there Feb. 22-24, inclusive, and the plans include numerous outdoor sports.

THE new railway which is to be built in the spring, from St. John to Grand Falls, N. B., will render 200 miles of excellent shooting and fishing country accessible to sportsmen. It will traverse the St. John River valley the entire distance.

AN industrial exposition will be held in Manila, P. I., Feb. 3-10, inclusive. Admission will be free to the grounds, which will be situated on Wallace Field, where the annual carnivals are always held.

ABOUT 600 moose were killed by sportsmen during the recent open season in Nova Scotia.

Ticks from the Ship's Clock.

"THE captain swam ashore," reported a country newspaper, describing a wreck, "as did also the stewardess. She was insured for \$15,000 and carried two thousand tons of pig iron!"—Tid-Bits.

Every flash from the "Flashlight" of the Erie Y. C. grows brighter. If the twelfth flash is much brighter than the first, there will be a glow like the Aurora Borealis on the southeast shore of Lake Erie. Incidentally, they slipped in a new editorial lighthouse keeper when our telescope was turned elsewhere; he is in three sections now, namely, George T. Bliss, George R. Oberbolzer and William S. Foster. Ex-Editor Nick has gone to the devil, with one Perrin—he is in the advertising department, and the back pages show his speed.

Announcement is made that New York Motor Boat Show will be held in Madison Square Garden instead of 69th Regiment Armory, as originally intended. The date, Feb. 17-24, remains the same. This is good news, as the Garden is roomier and more accessible.

Another setback has run afoul the small racing schooner class through the sale of Princess, nee Irolita, to J. F. Crofoot, of Omaha, by Demarest Lloyd. Although Princess was not in commission last year, it was hoped, when Mr. Lloyd recently purchased her from the estate of J. Roger Maxwell, she would brace up the small schooner class in races along the coast. It is quite certain she will not be raced, as her new owner summers at Penobscot Bay, Maine, and is not interested in yacht racing to any great extent.

In his speech of acceptance of the prize for the winnings of Peter Pan IV., last evening, James Simpson suggested, that because of the increase in flotsam in the lower Hudson, and the increased danger to small speed boats therefrom, that races next season be run higher up the river, perhaps starting from Yonkers. Mr. Simpson also announced the glad news that a new Peter Pan, to make 36 miles an hour, would be built in time for the coming season.

The Chicago Y. C. will build a challenger for the Yacht Racing Union cup, offered by Commodore Richardson, of Toledo Y. C., in a race with the yachts entered by Royal Canadian Y. C., of Toronto. The racing committee of the Chicago Y. C., known as the hustlers of the Great Lakes, is enthusiastic over a recent letter sent by Secretary MacMurray, of Toronto Y. C., in which he voiced enthusiastically the strong sentiment in the Canadian organization in favor of a renewal of friendly relations with Chicago Y. C., on whom, as he says, depends much of the success of these fresh-water international contests.

Ice Yacht Races.

At Long Branch two ice yacht clubs sailed their first races over the Shallow Point course on Jan. 11. X. L. N. C. and Drub winning first honors. In the race of the Long Branch Ice Boat and Yacht Club over the 15-mile course, nine yachts faced the starter. Drub won easily.

After the Long Branch Ice Boat and Yacht Club race had been finished the South Shrewsbury yachtsmen sailed a 10-mile race for the Commodore's cup, the Terhune yacht, X. L. N. C., winning. She led from the start and was never headed. Say When was second and Hazel L. third. Ex-Commodore Gibbons' Ingenue dropped out after sailing the second round. The summaries:

Commodore's Cup.—South Shrewsbury Ice

Boat and Yacht Club, 10 miles—X. L. N. C., Capt. Henry S. Terhune, sailed by Capt. Charles Irwin, elapsed time 28m. 55s.; Say When, Capt. Henry H. Munro, sailed by Capt. Asher Wardell, elapsed time 31m. 31s.; Hazel L., Capt. William R. Joline, sailed by Capt. Robert Curtis, elapsed time 32m. 29s.; Ingenue, Capt. J. C. Gibbons, sailed by Capt. John Bates, withdrew.

Commodore's cup, Long Branch Ice Boat and Yacht Club, 15 miles.—Drub, Edward Fiedler, sailed by owner, elapsed time 45m. 57s.; Snowflake, Capt. James O'Brien, sailed by Capt. Charles Blair, elapsed time 49m. 12s.; Ingenue, Capt. J. C. Gibbons, sailed by Capt. John Bates, elapsed time 51m. 8s.; Isabel, Capt. Walter Content, sailed by Capt. William Buxton, elapsed time 52m.; Blanche, Carl C. and Imp withdrew.

Corinthian Y. C.

BOTH branches of the United States service were well represented at the twenty-first annual meeting and banquet of the Corinthian Y. C., held at the Racquet Club, Philadelphia, Jan. 15. Commodore E. Walter Clark presided, and introduced Admiral Buehler, U. S. N., who related amusing nautical yarns. Captain Grant, commandant of the League Island Navy Yard, responded to the toast of the sailors, and gave a review of the evolution of the United States Navy and made a plea for the merchant marine. He was followed by Colonel Barnett, of the U. S. M. C., who alluded to the marine corps as an auxiliary to the navy. Commodore August Heckscher, of the Scawanhaka-Corinthian Y. C., patted yachtsmen on the back, as did Rear-Commodore Wilson, of the Larchmont Y. C., and Vice-Commodore Harold S. Vanderbilt, of the Seawanhaka. They announced that the waters of Long Island Sound and their ports and anchorages always extended a welcome to the Corinthian Club fleet.

Edward Walter Clark, schooner Irolita, was unanimously re-elected Commodore. Other officers chosen were: C. Howard Clark, Jr., schooner Savarona, Vice-Commodore; Robert Toland, sloop Grilse IV., Rear-Commodore; Addison F. Bancroft, Secretary; Henry S. Jeanes, Treasurer; George Breed, Measurer; Addison F. Bancroft, George Breed and Charles Longstreth, Race Committee; Trustees to serve for three years—Dr. Richard H. Harte and Edward H. Johnson.

The report of the treasurer showed the organization to be in a prosperous condition financially. The report of the secretary and chairman of the Race Committee developed that there are 196 members enrolled in the club and 111 yachts flaunt the club burgee. The fleet is divided up into 7 schooners, 11 auxiliary schooners, 23 sloops and yawls, 8 auxiliary sloops, 7 raceabouts, 8 open boats, 14 steam yachts, 29 motorboats and 4 houseboats.

There were two series of raceabout regattas held during the regular yachting season, the spring series being won by W. Frazier Harrison's Quakeress III., with six firsts; Robert Toland's Grilse IV. was second, with three firsts and four seconds; Paul H. Barnes' Tomboy was third, with one first; Nathaniel Hathaway and George Breed's Natoma, Addison F. Bancroft's Ellanor and W. Barklie Henry's Cyrilla being a tied for fourth place, each having a second to its credit.

The fall series resulted in a tie between Tomboy, Ellanor and Natoma, each having two firsts, while Grilse IV. brought up the rear with one first.

In a special race for the Commodore's cup, W. Frazier Harrison's Quakeress III. was victorious.

The unfinished race of 1910 was concluded in a series of contests from Oct. 4 to 24, of 1911, and Ellanor captured first place with 31 points.

Owners of the larger sailing craft carrying the club's colors cruised to the eastward and took part in the New York Y. C. races. E. Walter Clark, at the wheel of Irolita, had the distinction of capturing the Commodore's cup in a big race off Newport, one of the most valuable trophies ever offered. W. Barklie Henry, sailing his Class M sloop Dorello, made a clean sweep in many of the events, outsailing the entire New York Y. C. fleet in his class. Robert Toland and Edward Dale, in the schooner Dervish, also took part in the Long Island Sound races, and the events off Newport and Marblehead, as did C. Howard Clark, Jr., with his schooner Savarona.

Vigilant's Racing Flag.

MR. C. OLIVER ISELIN presented his old racing flag, carried on the America's Cup defending yachts, Vigilant, Defender, Columbia and Reliance, to the New York Y. C. at its last meeting.

This incident of the club's meeting was told in the New York Herald at the time, but then and since, there may not have been many yachtsmen who have had in mind what this battle-stained private signal stands for, and what it recalls.

That flag tells the story of the club's efforts to safely hold the blue ribbon of the sea against the invasion of British challengers for ten years; it tells the story of the expenditure of more than \$1,000,000, possibly a great deal more, to do so; it tells of races that may never be surpassed or equalled in earnestness and, in instances, heart-breaking closeness; it tells the story of magnificent fleets of accompanying yachts and excursion steamers carrying hundreds of thousands of interested men and women, and it tells the story of outbursts of Yankee pride and patriotism that resounded the world over.

The old flag stands for victory; it stands for the supremacy of the Herreshoffs in the designing and construction of the defending America's Cup vessels; it stands for stalwart yachtsmen and skippers, many of whom have looked upon their last yacht race, and it stands for the generosity of individual members and club syndicates that provided the means to construct the many costly vessels called for by the challenges for the cup.

It recalls the generosity of Mr. W. K. Vanderbilt, who gave the club the Defender for its cup service, and recalls the generosity of Mr. J. Pierpont Morgan, who gave the Columbia for the same purpose, which vessel is still so well preserved it may again be used as a trial craft, if another challenger comes along. It recalls the syndicate that built the Reliance, the last of the great defenders, that also could once more be pressed into club service if necessary, and the old flag recalls yachting controversies without parallel.

What a procession! Yachts of marvelous speed, patriotic and generous club members, mighty fleets of excursion vessels on the broad waters of the Atlantic, untiring regatta committeemen, skippers with no superior the world over, and quarter deck groups of amateurs full of hope and enthusiasm—an almost endless procession.

And so the C. Oliver Iselin flag, also telling the story of this veteran's retirement from the activities of the sport, should have a conspicuous place in the N. Y. Y. C., that all American yachtsmen may not forget what it stands for and what it recalls.

Ocean Yacht Race.

INVITATIONS have been sent to all yacht clubs in this country by Warren D. Wood, Commodore of the South Coast Y. C., of Los Angeles, Cal., to participate in the trans-Pacific Ocean yacht race from San Pedro to Honolulu, starting from San Pedro June 11.

The race, which will be the longest event of its kind conducted by any yacht club in this country, will be under the auspices of the South Coast Y. C. and the Hawaii Y. C.

Club Elections.

BAYSWATER Y. C.

The following officers for the ensuing year have been elected by the Bayswater Y. C. of Bayonne: William Greschel, Commodore; Benjamin Ryer, Vice-Commodore; John Rumber, Treasurer; Edward Waldron, Secretary; Dr. J. Beardmore, Fleet Surgeon; Thomas Brown, Fleet Captain; William Paulson, Benjamin Ryer, Frederick Lumbreyer, Thomas Brown and John Meyer, Trustees. The club house is on New York Bay off Forty-sixth street.

EASTERN Y. C.

The following officers have been elected by the Eastern Y. C.: Commodore, Robert Treat Paine, 2d; Vice-Commodore, H. M. Sears; Rear-Commodore, Francis M. Whitehouse; Secretary, Henry Taggard; Treasurer, Patrick T. Jackson; Council-at-Large, G. A. Goddard and Frank B. McQuesten; Regatta Committee—Louis M. Clark, H. A. Frothingham, H. A. Morss, Stephen W. Sleeper and W. B. Stearns; Committee on Admissions—Arthur Adams, Charles P. Curtis, R. G. Fessenden and Augustus Hemmenway, Jr.; House Committee—E. M. Beals, Parkman Dexter, T. G. Frothingham, W. B. Revere and D. K. Snow.

HUDSON BOAT CLUB.

At the annual meeting of the Hudson Boat Club, New York city, the following were elected officers for the coming year: President, M. C. J. Doyle; Vice-President, R. H. Pettit; Secretary, Charles E. Lewis; Financial Secretary, John Hessler; Treasurer, G. S. Higgins, Sr.; First Lieutenant, C. R. Lewis; Second Lieutenant, Joseph Aspell; Captain, George Kunz, Jr., and Trustees, J. J. Derrick, William Becker, William Wade, W. T. De Witt, and S. E. Connolly.

MORRIS Y. C.

The annual meeting of the Morris Y. C. was recently held at the club house at Pelham Bay Park, at which the officers and committees were elected for the ensuing year. The meeting was enthusiastic and satisfactory, the reports of the outgoing committees and officers being received with favor. Special attention was paid to the report of ex-Commodore F. J. Robinson, which showed that the club was in the healthiest condition of its career. It was also stated that it holds the highest club membership percentage in the Waterway League.

The officers elected were: Commodore, E. F. Delavante; Vice-Commodore, J. H. Hack; Rear-Commodore, A. G. Buchholtz; Treasurer, W. G. Mohre; Recording Secretary, E. Roberts, Jr.; Corresponding Secretary, J. H. Hack, Jr.; House Committee—William Nuebeck (chairman), W. J. Hauser, F. J. Robinson, R. Symmers, R. C. Pfeiffer; Board of Directors—A. Scherake, D. Roberts, Jr., J. G. Hawthorn, B. C. Pfeiffer, J. Belgard; Regatta Committee—C. T. Isbell, William Nuebeck, R. Symmers.

NORTH SHREWSBURY ICE Y. C.

At the postponed meeting of the North Shrewsbury Ice Y. C., held in the club house at Red Bank Jan 13, ice yachtsmen were in evidence from all this section of the country. Following the meeting the annual election of officers were held and plans for the winter season were discussed. The American championship race will be held the latter part of the week. This race will be between the North and South Shrewsbury Ice yacht clubs, and will be for the championship of America. Thomas Henry Grant was re-elected Commodore, W. Harold Powers Vice-Commodore, Henry N. Supp, Treasurer, George McClellan Taylor, Major, and L. W. Haviland, Assistant Major.

WINTHROP Y. C.

On Jan. 16 the following officers were elected by Winthrop, Mass., Y. C.: David M. Wiseley, Commodore; Charles A. Blazo, Vice-Commodore; Charles G. Bird, Secretary; Joseph J. Devereux, Treasurer; Frank H. Byrne, Measurer; Charles A. Rouillard, Board of Directors for three years; Eugene Cronin and L. Brown Crandon, Board of Directors for one year;

Walter T. Milton (chairman), James E. Farrel, William A. Garratt, Harry L. Pease and Severt Stromberg, Regatta Committee, George E. Doty, Fred C. Winters, H. C. Lazell, John P. Wakefield, Ralph S. Johnson, Francis F. Flint, Christopher H. Foster, John B. Meisel and L. A. Christopher, Membership Committee. Charles G. Bird, the Secretary, is nominated for the 26th time.

ALBANY Y. C.

The annual election resulted in choosing the following officers for the ensuing year: Commodore, Matthew McCarthy; Vice-Commodore, C. R. Butler; Fleet Captain, Harry B. Willard; Fleet Surgeon, Dr. B. E. Kinne; Treasurer, George C. DuBois; Secretary, Victor C. Heidrick; Treasurer, Thomas T. Bissell; Board of Governors—John E. Scopes and William De Meyer; Auditing Committee—Henry E. Snow, George Apple, Arthur R. Mullen, Joseph G. Wiley and Carl Meyer; Inspectors of Election—E. L. Houston, William J. Weber and San C. McNeil.

SHENANDOAH Y. C.

The Shenandoah Y. C., Shenandoah, N. Y., Jan. 4, elected the following officers: Commodore, Oscar Sinsabaugh; Vice-Commodore, James T. Marsh; Fleet Captain, Charles W. Fagg; President, James E. Salisbury; Vice-President, Arthur G. Bussey; Recording Secretary, William H. Jarvis; Financial Secretary, Earl B. Manchester; Treasurer, Henry L. Gilbert; Measurer, D. H. Ten Eyck; Fleet Surgeon, L. A. Robinson; Trustees—William H. Jarvis and Guy M. Edmonds. The only opposition was for President. Mr. Salisbury defeated George C. Fisher.

GLOUCESTER Y. C.

Officers for the current years were elected as follows: Commodore, Benjamin H. Colby; Vice-Commodore, F. Wilder Pollard; Fleet-Captain, S. E. Raymond; Secretary, Kenneth J. Ferguson; Treasurer, Conrad R. Hanson; Director, three years, Evrett A. Flye; Measurer, John G. Wehlman; Regatta Committee—Charles S. Webster, John G. Mehlman, Jack Raymond, Addison G. Stanwood, T. E. Fassett, William J. Crawley, Archibald Fenton; House Committee—Dr. J. H. Bussey, Carl Olander, Guy Howard.

DETROIT Y. C.

On Jan. 8 the following officers were elected. The new ticket changes only two officers, H. B. Gunnison being elected Vice-Commodore to replace Thomas Owens, and Chas. W. Zink Rear-Commodore in place of Robert Kerr. Thomas H. Beery is the unanimous choice for a second term as Commodore, his régime in that capacity the past year being a most pleasant one for the yachtsmen to look back to. Louis W. Schimmel, Secretary, and Andrew Kramer, who has just completed his fourteenth term as Treasurer, returned to that office. Fleet Surgeon, Dr. O. E. Fischer; Fleet Measurer, Walter J. Oades. The Board of Directors, with one exception, that of Dr. G. L. McClellan, are new men, as follows: Chas. R. Dickson, Geo. W. Trendle, Walter M. Trevor and Edward Veltman.

SOUTH BOSTON Y. C.

At the election held Jan. 3, the South Boston Y. C. elected for ensuing year the following officers: Commodore John M. Burke; Vice-Commodore John J. Tobin, Treasurer W. X. McKee; Trustee, M. J. Lynch.

ATLANTIC Y. C.

The result of the annual election, held at the Waldorf-Astoria, New York, Jan. 7, the following officers were chosen: Commodore, J. Stuart Blackton; Vice-Commodore, Willard U. Taylor; Rear-Commodore—Arthur W. Teele; Trustees—Charles B. Ludwig, William H. Barnard, whose terms expire 1914; J. W. Copmann, whose term expires 1912; Secretary—Edward I. Graft; Treasurer, P. H. Hart; Membership Committee, Charles B. Ludwig, Herbert L. Jones, Kenneth Lord; Nominating Committee, yacht owners—Francis M. Wilson, George P. Dillenback and W. Hunt Ball; non-yacht own-

ers, Charles N. Lindley, Max Grundner and Walter H. Sykes, Jr.

In the comparative statement of the assets and liabilities of the club for 1911, the current assets are shown to be 3,526.63; the current liabilities, \$10,681.84; the fixed assets—property and fixtures, \$178,024.01, and the fixed liabilities, \$72,500.

KILL VON KULL Y. C.

The Kill von Kull Y. C., of Bayonne, has elected the following officers for the ensuing year: Joseph B. Smith, Commodore; Jaffrey Buchanan, Vice-Commodore; John Ball, Rear-Commodore; Edward Smith, Secretary; John Gilbertson, Treasurer; Dr. Lucius F. Donohoe, Fleet Surgeon; John R. Cowper, Fleet Captain; John J. Higgins, Measurer; John Gibson, Benjamin Laubenheimer and John Cowper, Trustees.

MANHASSET BAY (L. I.) Y. C.

These were the officers and trustees elected Jan. 9 to serve this year: Commodore, John F. O'Rourke; Vice-Commodore, Henry D. Walbridge; Rear-Commodore, Edgar A. Sierck; Secretary, B. G. Loomis; Treasurer, Edward J. West; Measurer, William Gardner; Trustees, Class 1914—H. L. Hoyt, Hazen L. Hoyt and F. N. Hoffstot. The reports of the officers and various committees read at the meeting showed the club to be in a prosperous condition.

The secretary's report showed that the club membership is now 222. The club fleet consists of seven schooners, eight yawls and ketches, twenty-six sloops and cutters, ten steamers, two houseboats, and thirty-three launches, a total of eighty-six vessels. Commodore O'Rourke presided at the meeting.

NEWARK MOTOR BOAT AND Y. C.

Reports made to the annual meeting of the Newark Motor and Yacht Club, held Jan. 4, showed that the club is in a very prosperous condition. Plans are being outlined for the coming season. After the meeting a supper was served and the Oceana orchestra, which is composed of members of the yacht club, rendered selections. The next club event will be the fifth annual smoker, to be held at Turnbull Auditorium, Monday evening, Feb. 5.

Officers were elected as follows: Commodore, Joseph P. Kroll; Vice-Commodore, Clarence Wentworth; Rear-Commodore, Ever-

YACHT and BOAT SAILING

By the late Dixon Kemp

Tenth edition. Published 1904. We have a copy in fairly good condition, published at \$12, which we will sell for \$9.00.

FOREST AND STREAM PUBLISHING CO.

ett Bradley; Secretary, Albert P. Guerin; Financial Secretary, John J. Beatty; Treasurer, Harry Breckenridge; Measurer, Charles Klink; Librarian, Charles Genelle; Trustees, two years—John B. Chenowith, Charles F. Montaloo, Harry H. Harrison, Henry Kieferdorf, Harry Balfour and Louis Werner; Sergeant-at-Arms, William K. Guerin.

VOLUNTEER Y. C.

At the annual election of the Volunteer Y. C., of Lynn, Jan. 1, the following were elected: John Galvin, Commodore; A. F. Taylor, Vice-Commodore; I. Comeau, Fleet Captain; G. G. S. Butterick, Secretary; G. A. Woodman, Treasurer; C. B. Taylor, Measurer; A. B. Neily, William Keefe and J. Bowlbey, Directors; A. R. Kitchen, S. P. Miles, William Dion, F. Brown and L. Brown, Regatta Committee; William Wright L. Bragaw and W. Keefe, Membership Committee.

CORINTHIAN Y. C.

These officers of the Corinthian Y. C., of Trenton, N. J., have been installed by retiring Commodore Bert Brindley: Commodore, Charles M. Moses; Vice-Commodore, Elmer Armstrong; Rear-Commodore, George B. Wilkinson; Fleet Captain, George V. Anderson; Treasurer, Nat Clegg; Secretary, E. B. Lee; Trustees, Frank E. Bowers, Peter Wilkes and Charles Moses; Sergeant-at-Arms, Harry Carr.

Prize Presented Peter Pan.

LITTLE PETER PAN IV., champion of the Hudson River Yacht Racing Association, was "in her cups" last week, when on Jan. 11, her owner and skipper, James Simpson, was presented by the Columbia Y. C., under whose colors she raced, with a handsome gold medal, emblematic of the championship.

Commodore Porter made the presentation, and there was a general jollification at the Columbia Y. C. at West Eighty-sixth street, New York city.

Fair Haven Ice Y. C.

Two pretty and close ice yacht races were sailed by the racers of the Fair Haven Ice Y. C., at Red Bank, N. J., on Jan. 11. Capt. Edward Little, who captured both races yesterday in the fast time of 20 and 22 minutes respectively for the 8-mile course, lost the race to-day by 30 seconds to William Bennett, Jr.'s Russell B., but managed to beat out this same yacht with his Jennie in the second race by about the same time.

Gloucester (Mass.) Y. C.

An enthusiastic crowd of yachtsmen gathered in the offices of Dr. J. H. Bussey in Gloucester, Jan. 9, for the annual meeting and election of officers. Reports indicate that the weekly club races will have thirty-five boats in the fleet. This is a larger number of entries than has been shown at regular weekly meets of any yacht club along the coast.

- July 9-12.—Eugene, Ore.—Pacific Indians. F. C. Riehl, Sec'y.

DRIVERS AND TWISTERS.

Don't overlook the Sunny South Handicap, at Houston, Texas, Dates: Jan. 22, 23, 24, 25, 26 and 27.

It has been suggested by a subscriber that from now until July, all shoots and tournaments list at least two events in which the "gun-below-elbow" rule is enforced.

Owing to the construction of the new State dam at Troy, N. Y., Laureate Boat Club was obliged to give up part of its grounds, and therefore has abandoned trapshooting. There seems to be small chance of the gentle art of clay bird shooting again being taken up.

The list of members of the rejuvenated Royal Center Gun Club contains the names of thirteen—not unlucky in this case—ladies. Congratulations. This is the first report of progress in the movement to develop trapshooting among women. We will give a year's subscription to FOREST AND STREAM to the woman breaking the greatest number of targets during the month of February.

The annual meeting and election of the Highland Gun Club, Philadelphia, Pa., will be held Jan. 29. The present officers are: Wm. Dalton, President; David Mercer, Vice-President; Thos. Tansey, Treasurer; J. Franklin Meehan, Secretary; H. E. Perry, Captain. The club has had so successful a year that there is apt to be no opposition to the present officers, if they accept renomination.

The winning of the Interstate Association's official amateur trapshooting average by Dr. W. S. Spencer, of St. Louis, Mo., with a Winchester repeating shotgun and Winchester loaded shells, makes the Red W combination supreme for 1911, as a Winchester repeating shotgun and Winchester loaded shells were also used by J. R. Taylor, in winning the official professional season's average.

At the annual meeting of the Mount Pleasant Gun Club, Schenectady, N. Y., recently held, the following officers were elected: President, Josef Suppanz; Vice-President, Anton Loukota; Recording Secretary, Josef Stritter; Financial Secretary, Martin Panzner; Treasurer, Josef Szedlak; Gun Warden, Paul Drozlik; Council of Directors, Paul Szodoma, Henry Prag, Josef Frohlich; Auditors, Andrew Bartman, Andrew Lachner, Carl Josefek; Trustees, Peter Mihalkovits, Albert Fueleoep.

At an enthusiastic gathering of the members of the various marksmen's organizations of Riverside, Cal., the Riverside Gun Club was formed. A member of the merger may shoot on any of the ranges of the various clubs. H. E. Hinde is president of the new club; H. E. Pequegnat, treasurer; H. E. Raymer, secretary; L. Brehm, captain of the rifle range, and B. E. Taber captain of the shooting range. The rifle and pistol ranges have been moved to the Bluerock grounds, where commodious buildings have been erected.

Owing to the extremely cold weather, the match race between teams representing the Nonesuch and Du Pont gun clubs, which was to have been shot Jan. 13, was postponed until a later date. The match was to have been shot at Newport. On Jan. 16, the re-organization meeting of the Delaware State Trapshooters' Association was held. Nonesuch, Guyencourt, Aurora, Woodale and Wilmington gun clubs were admitted. A well established association is assured. The meeting was held in room 466, Du Pont Building.

Says Secretary Maltby Conover: "The target tournament of the Freehold (N. J.), Gun Club will be held on the Freehold grounds, on Thursday, Jan. 18, commencing at 10 o'clock. There will be ten 15-target events, \$1 entrance each event. Money divided 40, 30, 20 and 10 per cent. Optional sweeps—Entrance \$2.50 on first 50 birds; \$5 on last 100. Four moneys. High guns. All standard makes of shells on the grounds. C. R. R. trains leave 8:30, Liberty street, New York. P. R. R. train leaves 8:32 Broad street, Philadelphia."

The proficiency attained by amateur trapshooters is shown in the amateur averages for 1911, just compiled by the Interstate Association. Out of 81 shooters listed, 45, or over 50 per cent., made better than .9000, while the lowest average ran over .5000. W. S. Spencer, of St. Louis, the high man recorded .9628, breaking 2022 targets out of 2100 shot at. Harry Kahler, amateur champion, broke 3846 out of 4050, averaging .9496. In double-target events Allen Heil, of Allentown, Pa., was high with 8700, with a breakage of 174 out of 200. J. R. Graham broke 369 out of 450, for an average of .820. Three hundred and sixty-seven thousand targets were thrown from the traps, of which 220,109 were broken. More than a half million cartridges were used.

It takes only an introduction to a gun, a few cartridges and a trap to make an enthusiastic recruit in the greatest of out-door sports—trapshooting. Proof: On New Year's Day a bunch got together at Laura-ville, Md., for a "match," some were experienced gunners, some were not, but all agreed after the shoot to organize a club and to hold regular clay target practice. This organization movement is progressing rapidly under direction of Harry Bruns, John Knox, Benjamin Maenner, Richard Hall, William Collins, William Amelang, George Bing, Melvin Erdman, William Potter and J. Thompson. The identical thing happened in Elkton, Md., only that the Elktonites got a little quicker action and are already organized with officers elected. Those who read this column who are not trapshooters, just borrow a gun and half a dozen cartridges from one of your friends the next time you are at your club; get out and take a try, and if you don't like the game well enough to try it again, just tell me so, and I will pay the price of the cartridges. Trapshooting is a good sport to watch, but it's a much better sport to take part in.

Many of the rules and conditions governing trapshooting at Olympic games at Stockholm, July, 1912, will be annoying to the American shooter. Notably is this true of Article 7: "The competitor must not shoulder his gun and take sight, or rest the butt against his shoulder, before the clay pigeon thrown up has appeared in sight. The butt of the gun is to be held between the hips and armpits, but under no conditions rest against the shoulder." The American practice of holding gun to shoulder at call of pull, undoubtedly means a handicap in this change of style at short notice. When the Lord Westbury challenge cup for individual

championship was won by the present holder, Walter H. Ewing, of Montreal, Canada, shooters were privileged to shoot in any style most convenient to them. Mr. Ewing shot his gun against his shoulder. Just why the shooter is restricted to the "field position" is not set forth in the catalogue. It unquestionably will greatly handicap shoulder shooters, mostly Americans and Canadians, while benefiting inestimably those addicted to the gun-below-elbow habit. As we can't change the rules, it behooves us to do the next best thing—practice from now until sailing day the style prescribed by H. M. the King of Sweden and the Olympic committee.

BEECROFT.

Larchmont Y. C.

LARCHMONT, N. Y., Jan. 14.—It wasn't too cold for R. L. Spotts here to-day; in fact, it seemed about his speed in the way of temperature. He was there with quantity, winning four events and making excellent scores in each. He won the 100-bird handicap with 95, take-home trophy, 24 out of 25; Alley cup with a full score, and accumulation cup, 48 out of 50.

Stuart Scott was no slouch when it came to making good scores. On leg for vice-commandore's cup he returned a full score of 25 with a handicap of 1; took the 125-target scratch event with 112, and 10-target scratch event with full score. W. B. Short made leg on January cup with full score, while B. M. Higginson won 15 target scratch event in shoot-off with Stuart Scott and W. J. Elias. Scores:

January cup, 25 targets, handicap:			
J Henry	1 24	W J Elias	3 24
B S Noyl	0 24	T J McCahill	1 19
R L Spotts	2 22	J S Fanning	0 19
B M Higginson	1 25	W B Short	3 25
T Lenane, Jr.	4 23	H H Childs	7 17
J G Batterson	3 21	S Scott	1 22
Accumulation cup, 50 targets, handicap:			
J Henry	2 45	W J Elias	6 46
B S Noyl	0 47	T J McCahill	2 42
R L Spotts	2 48	J S Fanning	0 37
B M Higginson	2 46	W B Short	4 43
T Lenane, Jr.	8 43	S Scott	2 48
J G Batterson	6 48	H H Childs	14 39
Vice-commandore trophy, 25 targets, handicap:			
J Henry	1 25	W J Elias	3 24
B S Noyl	0 23	T J McCahill	1 23
R L Spotts	1 24	J S Fanning	0 19
B M Higginson	1 23	W B Short	2 23
T Lenane, Jr.	4 22	S Scott	1 25
J G Batterson	3 24	H H Childs	7 17
Scratch event, 125 targets:			
J Henry	110	W J Elias	104
B S Noyl	110	T J McCahill	94
R L Spotts	110	J S Fanning	98
B M Higginson	112	W B Short	101
T Lenane, Jr.	96	S Scott	112
J G Batterson	102	H H Childs	53
Alley trophy, 25 targets, handicap:			
J Henry	1 23	W J Elias	3 25
B S Noyl	1 19	T J McCahill	1 18
R L Spotts	2 25	J S Fanning	0 21
B M Higginson	1 23	W B Short	2 23
T Lenane, Jr.	4 25	S Scott	1 22
J G Batterson	3 24	H H Childs	7 17

Essex County Country Club.

WEST ORANGE, N. J., Jan. 13.—Too cold for anything like the regular events here to-day, so a series of mixed events took the place of schedule. They had to be kept well mixed to keep from freezing up. In the 25-target practice event the scratch men shot well, but were beaten by A. L. Colgate with 4 handicap. Colgate and Pynchie outshot the scratch men in the early bird event, Colgate's handicap of 4 was one too many for Pynchie's 3, so he won with (4) 25.

Practice, 25 targets:			
B M Shanley	0 23	A E Hart	8 19
J A Hart	0 23	J F Shanley	8 14
A L Colgate	4 25	P Ross	5 22
L Ross	5 20	Hauch	5 21
C P Daly	0 23	Pinchot	5 22
Early bird event, 25 targets, scratch:			
B M Shanley	0 19	P S Ross, Jr.	5 23
J A Hart	0 18	P Hauck	5 22
A Colgate	4 24	Pynchie	2 24
L Ross	6 24	W Rollinson	5 23
C H Daly	0 18	S Rollinson	4 21
Hart	8 22	T Mittraff	3 23
J F Shanley	8 21		

Jersey City Gun Club.

JERSEY CITY, N. J., Jan. 13.—To-day was fully as bad for trapshooting as a week ago—Mercury down below zero and a good strong wind blowing; and as a result, the attendance at the regular Saturday shoot of the Jersey City Gun Club was small, for most of those who were out last week evidently decided to wait for more favorable weather. Geo. Piercy was high for the day; he also won a leg on the January prize. Shannon was second high and took home the only weekly prize contested for. The scores follow:

Shot at. Broke		Shot at. Broke	
Williams	125 61	Jones	50 22
Piercy	125 89	Brady	75 40
Sheppard	100 53	Simpson	100 55
Dixon	125 72	Jerry	100 49
Shannon	75 49	Clayton	75 39

SECRETARY.

Spring Valley Shooting Association.

READING, Pa., Jan. 6.—The Spring Valley Shooting Association held their midwinter handicap on their grounds at Spring Valley, outside of city limits. W. B. Lutz furnished the birds, which were all excellent fliers. The day was an ideal one, but the thermometer registered 2° below zero, which caused the attendance to be a little low. The sun shone brightly and hardly a bit of air stirred.

The first event was the Valley Handicap, 20 live birds, entrance \$5. In this event Dinger, of Harrisburg, Pa., the old reliable skeeter, proved himself the superior marksman by killing 19 birds. He missed his 11th bird, which flew away as if never touched. Fred looked jolly, but refused to enter into the second event, as the boys wanted to stake him at 30yds.

"Bucky" ranked in the 18 class to-day. Arthur wondered why. Gee, Bucky missed his 7th and 10th. Surely it was not the red W's fault.

Oliver fell a little shy—nervousness—thus scored but 13; way below his ability.

Adams showed exceptional skill to-day; he missed his 15th, then his 17th bird. This placed him in for the second money class. Well done, Ed.

Shupp scored fairly well. Haas, from Fleetwood, showed the boys some pace to-day with 18 in the first and 10 straight in the second event—a clever eye and quick action makes 'em drop.

Knowles ranged as one of the foremost crackers in the handicap special, all to his credit.

Rehrig lost his third and fifth. So he was some how back in the woods, but ranked as third man with 17.

Lee Wert dropped his first. A fly sat on his gun barrel, thus he aimed several degrees below the bird. It's a shame. He scored 16, and received \$13.55 as fourth money.

Frank Wertz and Schmeck, two chubby chums, also scored 17, and ranked in the third money class. Frank proved his superior in the second event, when he killed straight. Here Schmeck dropped 3 again.

A. P. Tyson shot a pretty good clip in the second event, missing but one bird.

Wegeman, one of the old-timers, joined in second event, scoring 8 kills.

Lesneskie, of Lebanon, missed his fourth bird; it made a bee line for his gun barrel as soon the trap was sprung. This aroused much enthusiasm among the crowd. Thus Walter scored but 7 birds.

"Pompy" had an occasional dip in the snow, when he chased for some wounded birds within the boundary limit.

C. Prutzman was kept busy all around the grounds, and had no chance to show his skill at the traps.

H. Trivits had charge of the traps which worked to perfection.

A. A. Fink, of Reading, served as referee.

A miss-and-out event followed between Wegeman, Adams, Lee Wertz, Shupp, Frank Wertz and Haas. All had missed in the second round but Lee and Frank Wertz, who then divided the receipts.

The Association intends to hold a registered target shoot early in the season, and anticipates a fair attendance.

Someone remarked, "Why, where's Harry Coldren, to-day?" No one knew, but Arthur thought it was a boy. Well done. If another shooter made his appearance, we all wish him luck.

Luddy tried to get H. J. Melchior to accompany him to the grounds, but he stated he was not able to compete in this kind of game. They must be birds without feathers.

Four hundred and fifty-five birds were shot and finished at 4:20 P. M. Well done, boys.

Event 1, 20 live birds, entrance \$15:

Dinger, 2922222222220222222222	19
Bucky, 29122222022202222212122	18
Oliver, 2820022200022220022222	13

Schmeck, 271222200220	7

A. K. LUDWIG.

Marine and Field Club.

FIVE trapshooters found ideal shooting conditions at the Bath Beach traps of the Marine and Field Club last Saturday. The only drawback to the sport was the bitter cold that made it anything but pleasant on the firing line. The prizes in the different events were well distributed. S. P. Hopkins was high gun in the 100-target shoot for the monthly cup, and the take-home trophy was won by E. H. Lott. C. M. Camp and S. D. Sayre were the winners of the trophy shoots, the latter taking two events.

Hudson Gun Club.

JERSEY CITY, N. J., Jan. 14.—With the mercury 6° below zero, sixteen members of the Hudson Gun Club journeyed to the grounds this morning to indulge in their favorite pastime at the traps, and after the scores of the different events were totaled, Dr. Culver, the New York Athletic Club crack shot, was found to be high gun with an average for the day of 80 per cent.; George Piercy was the runner-up with 75 per cent.

On Jan. 28 we will be open for business again, and all shooters are welcome to come out and try to get a straight score over the traps that can throw targets 65yds. and then some.

To reach our grounds, take the Turnpike car from the Pennsylvania R. R. Ferry at Jersey City, or any point in Newark, and ride to the west side of the Hackensack River bridge; then walk north along the river bank to the D., L. & W. R. R. tracks, where the club house is situated, and the Stars and Stripes are flying to welcome any man that can handle a shotgun.

Targets:

D D Engle 25 25 25 25 25 25 25 25	25
Dr Culver 15 17 19 13 16 19
L H Schorty 22 16 21 18 18 20 22 20 24

T. H. K., Sec'y.

Bennett Gun Club.

GLOUCESTER CITY, N. J., Jan. 13.—The weekly shooting match of the Bennett Gun Club was postponed this afternoon, owing to the weather. Two special matches were shot and good scores made. In the first, Frank Bennett and Wm. Murray defeated Bert Taylor and Charles Sears. In the second Bennett was the victor. Scores:

First event, match shoot, 10 bluerocks each:

Wm Murray 9	Sears 9
F Bennett 9-18	Taylor 8-17

Second event, sweepstake, miss-and-out: Bennett 9, Taylor 8, John McLaughlin 8, William Murray 7, Frank McQuaid 6, John Blackburn 5.

AMATEUR CLEAN-UP

J. R. Graham wins the combined amateur average at singles and doubles, shooting

Remington-UMC Steel Lined Shells
and a *Remington-UMC* Pump Gun

Mr. Graham shot at 4500 birds breaking 3877 ex 4050 singles and 369 ex 450 doubles, a combined amateur high average of 88.6%

The number of targets shot at shows the uniform hard-hitting qualities of

Remington-UMC — the perfect shooting combination.

Trap Shooting at Olympic Games.

THE following rules and regulations governing trap shooting at Olympic games in Stockholm, Sweden, will interest trapshooters because of the many variances with trapshooting "American style":

Three traps, throwing in different directions, will be set up, concealed by a screen, before each mark.

Five marks will be arranged at a distance of 5 meters between each, and numbered 1, 2, 3, 4 and 5. Numbering begins from the left.

The marks will be placed at a line 15 meters distant from the traps.

Guns of greater caliber than .12 may not be used. Cartridge cylinders, powder and shot of any sort may be used, but a charge of shot may not exceed 35.5 grammes, and the shot may not be thicker than No. 6 English sort (2.5 mm.).

The umpire of the competitions reserves to himself the right to, with the aid of assistants, take out two cartridges from the stock of cartridges of each competitor to examine them with regard to their proper loading.

The gun shall be open at the breech till the controller has assured himself that the competitors have taken up their places, and has given the order "linjen klar" ("line ready").

Two shots are fired at each clay pigeon. The competitor must not shoulder his gun and take sight, or rest the butt against his shoulder, before the clay pigeon thrown up has appeared in sight. The butt of the gun is to be held between the hips and the armpits, but under no conditions rest against the shoulder.

If the marksman discharges both shots, practically at once and hits his clay pigeon, it is counted as "no bird," but if he misses, a miss is noted.

The marksman has the right to refuse a clay pigeon if it leaves the machine in a broken condition, but he is bound by the result if he fires at a part of the clay pigeon.

If one or more clay pigeons are by accident thrown so that they fly in the air at the same time as the pigeon which should be shot at, the competitor has the right to consider this as "no bird."

If the gun, duly loaded and cocked, misses fire for some reason beyond the control of the marksman, the pigeon shall be counted as "no bird." If the gun misses fire with the first barrel and the marksman fires the second shot and hits, it shall be judged as a "hit," but if he fires the second shot and misses, it shall be counted as a "miss." If the second shot is not fired, the pigeon shall be counted as "no bird." If the second shot misses, a fresh bird is thrown up for the marksman, but the first barrel in such case shall be charged with only one powder-filled cylinder, which shall be fired after the trap has been set in motion. The result of the second shot will be counted. If the marksman uses a gun which necessitates a fully loaded cartridge to be discharged in order that the mechanism may work at the second shot, or if the first cartridge or a part thereof sticks or prevents firing, the marksman can claim two more cartridges, the first of which, after the trap has been set in motion, shall be discharged into the air, and the second at the clay pigeon. The result of the second shot will be counted. Should the first shot hit the pigeon, a miss shall be counted.

The defective cartridge shall be submitted to the umpire, who will examine wherein the fault lies, and decide if, in conformity with the above rules, another shot may be fired.

In order to be recorded as hit, the pigeon must break before touching the ground. The umpire's decision as to whether a pigeon is hit or not is final. A marksman not conforming to his decision will be disqualified. The pigeon must not, under any circumstances, be picked up for the purpose of examination.

Marksmen are ranged for the five marks. Five guns occupy the marks, and No. 6 takes his place behind No. 1, and there awaits his turn. Gun No. 1 shoots first from mark No. 1, gun No. 2 from mark 2, and so on. At or during the closing of the series, No. 1 shall stand at mark No. 2, and No. 6 at mark No. 1; No. 2 at mark No. 3, and so on; so that No. 5 is the shot who waits at the back of mark No. 1. Competitors must not leave their marks before the series is concluded.

When the marksmen have taken their marks, the person who is regulating the throwing from the different machines calls out: "No. 1 klar" ("ready"), whereupon the competitor who is standing at mark No. 1 answers, "Ga" ("go"). The remaining competitors answer "ga" when the number of their mark and "klar" are called out.

If a marksman fires out of his turn, a miss will be counted to him. The marksman, whose turn it was to shoot, has a fresh bird thrown up.

The marksman shall be unaware as to which of the traps behind each screen will be discharged.

All the machines will be filled before the shooting commences, and the competitors will be kept in ignorance as to from which set of traps and trap the pigeons will be thrown.

One marksman on the line.

The marksman is to stand at mark No. 3 and shoot at the fixed number of pigeons before leaving this mark.

Two marksmen on the line. One stands at mark No. 2 and shoots at the required number of pigeons, thrown up from sets of traps Nos. 1, 2 and 3, and the second at mark No. 4, and shoots at the required number thrown up from sets of traps Nos. 3, 4 and 5.

TEAM COMPETITION.

The competition is open to one team from each nation. Each team to consist of six men, with a maximum of three reserves, of whom the team captain may form one.

The order of shooting between the teams will be decided by lot.

The shooting will be divided into three rounds. Each round will be concluded in one day.

First stage.—Twenty clay pigeons per man, thrown at unknown angles from known traps, will be shot at under continuous firing in two series of 10 birds each.

Two or three teams shoot together. Each marksman, from the different teams alternately shall in his turn shoot off a series of 10 shots. The first stage will thus constitute a succession of competitions. A tie shall be decided by shooting at 10 pigeons by each marksman under continuous firing.

Second Stage.—A maximum of 50 per cent. of the teams competing in the first stage who have obtained a lower number of points shall retire. The order of shooting among the different teams will be the same as in round No. 1.

Thirty clay pigeons per man, thrown up at unknown angles from known traps, will be shot at without interval in two series of 15 birds each. A tie will be decided by each competitor, re-shooting at 10 pigeons under continuous firing.

Third Stage.—A maximum of 50 per cent. of the teams competing in the second stage who have obtained in the first and second rounds a total lower number of points shall retire.

The order of shooting will be the same as in Stage No. 1. Forty pigeons per man are shot at on the continuous firing system in two series of 20 birds each, and thrown up from known sets of traps at unknown angles on the group system. In addition, from firing point, No. 3 with single shots at 10 pigeons per man, thrown at unknown angles from unknown traps.

A tie shall be shot off at 10 birds by each marksman on the single fire system—i. e., from mark 3.

The winner will be the team which has obtained the highest total number of hits in all three stages.

INDIVIDUAL COMPETITION.

The competition is limited to 12 individual entries from each nation.

The order of shooting will be decided by lot. The shooting will be divided into three stages. Each stage will be concluded if possible in one day.

First Stage.—Twenty clay pigeons per man, thrown up at unknown angles from known traps, will be shot at on the continuous fire system in two series of 10 birds each. In the event of a tie, 10 pigeons are to be shot at by each competitor on the continuous fire system.

Second Stage.—A maximum of 50 per cent. of the competitors competing in the first round who have obtained a lower number of points will retire. The order of shooting among the marksmen will be the same as in stage No. 1.

Thirty clay pigeons per man, thrown up at unknown angles from known sets of traps, in two series of 15 birds each, will be shot at under continuous firing. In the event of a tie, there will be a re-shoot of 10 pigeons per man under continuous firing.

Third Stage.—At most, 50 per cent. of the competitors in the second round who in the first and second stage obtained a total lower number retire. The order of shooting among the marksmen is the same as in stage 1. Forty clay pigeons per man will be shot at in two series of 20 pigeons each, under continuous firing, thrown up at unknown angles from known sets of traps, and moreover, at 10 pigeons per man in two series of 5 pigeons each, under continuous firing, thrown up at unknown angles from unknown sets of traps. The marksman will stand at mark No. 2 for 5 pigeons thrown up from set of traps Nos. 1, 2 or 3; also at mark No. 4 for 5 pigeons, thrown from traps No. 3, 4 or 5. A tie will be decided by shooting off at 10 pigeons per man, under continuous firing, thrown up at unknown angles from known sets of traps.

The marksman who has obtained the highest total number of hits in all three stages will be declared the winner.

Royal Centre Gun Club.

ROYAL CENTRE, Md., Jan. 10.—Last Thursday night it was done over—that is, the Royal Centre Gun Club was reorganized and new officers elected. That this club will be among the most active and popular is beyond peradventure, because practically every live, red-corpuscle, anti-anæmic young man and woman in the town has joined or contemplates joining the gun club. Over forty actives are recorded at the first meeting.

The members of the club are: E. B. Thomas, Loren McCloud, Chas. Wilkinson, Leslie Kistler, Geo. Wentz, Chas. Pugh, Geo. McCauley, O. M. McCombs, Roy Underwood, Bert Rhody, Chas. Agness, Jesse Hand, Dr. Kistler, Chas. Hollenback, W. H. Bingaman, M. A. Weyand, Salem La Reau, Dan Dodt, Joe Ropp, Ed. Jones, Walter Harvey, Emil Marx, Cliff Baughman, Will Marx, Jr., Jesse Swisher, Forest Lee, Disa Day, Hattie Harvey, Etta Kistler, Esther Fry, Pearl Swisher, Gladys McCauley, Mrs. Chas. Fox, Genesis Fry, Leota Harvey, Alice Bliss, Lillian Ubelhouser, George Cline, John Cline.

Officers elected: President, E. A. Marx; Vice-President, Ed. Jones; Secretary, Jesse Swisher; Assistant Etta Kistler; Treasurer, Jesse Hand; Field Captain, Walter Harvey; Referee, M. A. Weyand; Scorers, Will Marx, Jr., and Bert Rhody; Judges, Chas. Hollenback and Joseph Ropp; Committee on By Laws, Charles Pugh, Leslie Kistler and Roy Underwood.

Following are the scores made by the new club:

Shot at. Broke		Shot at. Broke	
*W D Stannard	50 44	W Harvey	50 19
*R O Heikes	50 36	J Ropp	50 17
E A Marx	50 35	W Marx, Jr.	50 15
*Otto Hise	50 29	B Rhody	50 9
*O Leach	50 25	J Hand	50 3
C Hollenback	50 25	L McCloud	25 11
R Leach	50 22	R Underwood	25 6
Chas Pugh	50 21	S A La Reau	25 8
Ed Jones	50 21	Forest Lee	25 9
C Baughman	50 20	John Kline	25 11
J Swisher	50 19		

*Not members.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Crescent Athletic Club.

BAY RIDGE, N. Y., Jan. 13.—Atmospherically the day was perfect for trapshooting, the targets were clearly defined against a blue, white sky, but one glance at the thermometer—well, it was about the same everywhere in the East. Among the notables from warmer climes were Teddy Doremus and J. E. Skelly from Du Pont Gun Club, and Jack Frost from across the blue waters, handicapped them rather extensively—at least so their scores would indicate. L. C. Hopkins, with his coat buttoned over a store of sunshine from Dixie Land, whence he has just returned, did the high run of the day with 24 out of 25, which won him a prop on the monthly cup. Walter Higgins, ex-secretary of the Crescent A. C., dropped in on a visit, but couldn't be induced to beat his old comrades, and declined to shoot. G. C. Stephenson smashed 86 out of 100 for the take-home trophy, beating Hyatt by one aerosaucer. W. W. Pell got the trophy shoot high score with (4) 23 out of 25. There were three ties at 22 for the Lawson trophy. C. R. James, G. S. Stephenson and J. F. James were the Oxfords in the event. State trophy was mawed by C. R. James (2) 23. In the trophy shoot, Geo. E. Brower with a handicap of 3, won over Stephenson, who made 18 from scratch.

There was only one clay disk between the contestants in the team shoot. The team headed by Stephenson broke 33 out of 50.

If R. Schneider hadn't been a visitor he would have taken the leg on Lawson trophy, as he made 23 from scratch. The summary follows:

Take-home trophy, 100 targets, scratch:			
G S Stephenson	86	G E Brower	78
C R James	85	A E Alberts	77
F S Hyatt	84	J E Murray	70
C R James	84	J P Fairchild	59
J F James	80		
W W Pell	79		

Monthly cup, 25 targets, handicap:

*Guest.

New York Athletic Club.

PELHAM MANOR, N. Y., Jan. 13.—It was a lucky thing the animals no longer reside on the western section of Glen Island, for if they had they would have been peppered to-day, as many a target scaled through the oxygen and nitrogen and found a resting place in its entirety in the splashing H²O, for the cold numbed the trigger fingers of the Travers Island trapshooters sadly.

Dr. Culver porked the deal generally, taking a leg on the president's cup with 21 after a shoot-off from a tie at 24 with B. M. Higginson and E. F. Crowe, and the January cup, in which event he had to shoot off with G. Lembeck.

The Day (ex-committee) cup was scored upon by W. B. Ogden with 23, and then by way of improvement Ogden made a full score of 25, with 3 handicap for New Year's cup. R. L. Spotts had to show somewhere, so he cribbed the distance handicap, breaking 23 from 20yds. This event brought out very erratic shooting, gunners like Higginson and Grinnell getting only 13 from 21 and 20yds. Dr. Culver was supreme in the three-barrel event, breaking 13 targets out of 10 pair, in addition to which he was high gun for the day with 90 breaks out of 100 chances. The day was so cold that only twelve gunners staged across Pelhamdale avenue from the Manor station. The summary follows:

New Year's cup, 25 targets, handicap:			
W B Ogden	3 25	J I Brandenburg	5 20
G F McMahan	2 24	O C Grinnell	1 19
A E Ranney	1 23	G Lembeck	2 18

Amateur Averages for 1911.

PITTSBURGH, Pa.—Following herewith is the official Interstate Association list of amateur averages for 1911, with names of contestants, total number of targets shot at in registered tournaments, total number of targets scored and percentages.

The averages for single targets are based on a minimum of 2000 targets, as per the Interstate Association ruling to that effect. The records of the tournaments held at Detroit, Mich., April 26-28; Calgary, Alberta, Canada, July 4-5, and Portland, Me., Aug. 15-16, were not received, and of course are not included in the list.

The averages for double targets are computed on the Interstate Association tournaments only, and they are based on taking part in two tournaments as a minimum, as per the Interstate Association ruling to that effect.

ELMER E. SHANER, Sec'y-Treas.

WINCHESTER

Repeating Shotgun and Shotgun Shells

WIN

THE OFFICIAL AMATEUR SEASON'S AVERAGE

Dr. W. S. Spencer of St. Louis, Mo., won the Interstate Association's contest for the Amateur Season's Average for 1911. He shot at 2,100 targets in various tournaments and scored 96.28 per cent., a record that

all amateurs agree is a wonderful one. In winning this great trap shooting honor which so many amateurs annually strive for, Dr. Spencer shot a Winchester Repeating Shotgun and Winchester Loaded Shells. His record is conclusive proof of their strong and uniform shooting qualities, for such shooting as Dr. Spencer did could only have been done with the best possible equipment. Dr. Spencer's victory and the winning of the Professional Season's Average for 1911 by J. R. Taylor, with a Winchester Repeating Shotgun and Winchester Loaded Shells emphasizes the wisdom of shooting the make of gun and shells that always helps and never handicaps skill. That Winchester Shotguns and Winchester Shells are such a combination is shown by their consistent and conspicuous winnings.

The Red W Combination was Supreme in 1911

Crescent Gunners Hold Live Bird Shoot.

WHITE HOUSE, N. J., Jan. 10.—The secretary of the Crescent Gun Club, of this place, arranged a live-bird shoot for the members last Saturday. The shooting was done at Frenchtown, Pa. Sixteen of the members participated. Upon arriving at Frenchtown, teams were chosen, and the losing team had expensive suppers to by in Easton at a fashionable hotel. Each man shot at 25 birds. Geo. Crammer was high gun with 23. E. L. Wilson was second with 22. R. C. Stryker and J. N. Pidcock were tie for third place with 21 each.

R. C. STRYKER, Sec'y.

AN UNBEATEN RECORD!

TARGETS SHOT AT
4280

97.28%

TARGETS BROKEN
4164

This is the percentage with which Mr. J. S. Day won the **1910 OFFICIAL HIGH AMATEUR AVERAGE**—a percentage **never equalled by an amateur** and **exceeding by exactly 1%** the figures of the 1911 winner, who, moreover, shot at only 2100 targets.

Mr. Day's Wonderful Shooting was done with

Peters

FACTORY LOADED SHELLS

The Lion's Share of the 1911 Amateur Honors

was also won with **PETERS Shells**, for they were used either exclusively or for the most of their shooting, by

5 out of the 10 HIGH AMATEURS.

This is not all. The **1911 GRAND AMERICAN HANDI-CAP**, the greatest event in the Trap-Shooting world, was won by Mr. Harvey Dixon, who scored

99 out of 100 from the **20** yard mark.

HARVEY DIXON.

J. S. DAY.

This score has never been equalled and is a **World's Record.**

Mr. Dixon used

Peters Shells

the kind with "steel where steel belongs"

Particular Attention is directed to the fact that all of the shooting of Messrs. Day and Dixon was done with

Peters Regular Factory Loads

purchased from dealers where the various tournaments were held. Their shells were not special in any sense, but were **regular stock goods**, such as can be procured from any **Peters** dealer.

And remember this—you can use **PETERS Shells** in **ANY** good gun. They require no special make of gun to give *best* results.

*Order from
your dealer*

¶ The Model 29 is similar in general construction to the well-known *Marlin* Model 20. ¶ It is a **take down**, convenient to clean quickly and thoroughly and can be packed in a small space. ¶ It has the **popular trombone action**, quick and easy in operation. ¶ The modern **solid top, side ejection and closed-in breech** insure greatest safety, comfort and convenience.

¶ It has a **(23-inch) barrel** long enough for all requirements; it shoots **all .22 short, long and long-rifle cartridges**, including the hunting cartridges with mushroom bullets; it is a **thoroughly accurate and efficient** arm for rabbits, squirrels, hawks, crows, foxes and all small game, and for target work. ¶ **Guaranteed in accuracy and reliability.**

Circular giving full description free on request—or complete catalog of all Marlin repeaters for three stamps postage.

***The Marlin Firearms Co.* 27 Willow Street, New Haven, Conn.**

Smith Gun Club.

NEWARK, N. J., Jan. 13.—At the Smith Gun Club grounds to-day a fair turnout of shooters was on hand, and the scores made were up to the standard. W. Hassinger was high gun man with 95 out of 125 breaks to his credit. He was followed closely by Louis Colquit with 93 out of 125. J. Baldwin came in third with 88 out of 125. Considerable interest was aroused over a 50-bird match between H. Page and R. Trimpi. Both men broke 14 out of the first string of 25. In the second string Trimpi took the lead by breaking 15 against 14 by Page. Several interesting sweepstake events were also shot off. The following were the scores made:

L Colquit	12	19	18	21	23
W Hassinger	21	17	15	22	20
J Baldwin	16	18	15	15	24
H Hassinger	13	19	16
H Page	12	16	13	14	14
R Trimpi	13	18	13	14	15
C Day, Jr.	23
E Hansel	18	20	16	18	..
J McEnness	20	16	17	17	..
H Felter	16	20	20	21	..

L Irons	18	16	17	17	..
W Mack	14	18	17	18	..

Robin Hood Gun Club.

CONCORD, S. I., N. Y., Jan. 13.—The first shoot of the season was held here to-day, and despite the 4-below-zero weather, ten shooters came to the traps. H. S. Langhan was high amateur in the 20-target event with 18, and took the 10 double target event with 16. S. Edwards won the 25-target shoot with 22, and the 15-string with a straight. Jack Fanning (professional) was high in three out of four events.

Targets: 20 25 15 *	Targets: 20 25 15 *
J Fanning 19 23 14 17	J Weir
H S Langhan.. 18 .. 10 16	W Curry

W T Bush.... 16 17 12 10	J Rowley

*Ten pairs double.

The Du Pont Gun Club.

WILMINGTON, Del., Jan. 13.—Chilblains and frost-bites took charge of the shoot here to-day, and kept the entry list pretty low. J. B. McHugh was top gun with 90 out of 100. He won the Coleman du Pont spoon in Class A, with 23 out of 25. The Class B spoon was carried off by J. W. Mathews, with a score of 21 out of a possible 25. Walter Tomlinson, by breaking 20 out of

his quota of 25 targets, laid claim to the Class C sterling silver spoon. There was no competition in Class D. The scores in the Coleman du Pont spoon event, 25 targets, were as follows: J. W. Mathews 21, N. K. Smith 19, W. M. Hammond 19, H. C. McClane 19, W. G. Wood 17, Clyde Leedom 17, S. G. David 13, E. T. Guest 15, W. Swayne 17, J. B. McHugh 23, Stanley Touchten 18, J. H. Minnick 18, Dr. Betts 15, W. A. Joslyn 18, A. H. Lobb 20, F. Springer 14, E. A. W. Everitt 18, W. S. Colfax 21, W. Tomlinson 20, H. Winchester 18, W. L. Smith 18, H. P. Carlon 23, J. R. Baily 13, D. Lindsay 20.

Bergen Beach Gun Club.

ONCE more the clay pigeon cracksmiths of the Bergen Beach Gun Club found it impossible to decide their weekly sliding distance handicap on the 13th inst. The intense cold made even the most enthusiastic gunner seek the shelter of the shooting lodge and hug the warm stove that was kept at summer's heat. However, there were many strings of 25 targets decided. The best runs were made by D. Sauer (a new member), J. Voorhees and J. S. Simonson. The scores:

Elkton Gun Club.

ELKTON, Md., Jan. 11.—Last night we completed the organization of a gun club here, and if enthusiasm counts for anything, it will be a real success. The officers elected are all trapshooters of no little ability, and understand the game of management thoroughly. They are: William Stephens, President; John A. Morgan, Vice-President; Harvey J. Scott, Secretary; Jacob Reynolds, Treasurer. The members of the club, besides the officers, are: Samuel Kink, Albert Alexander, Harry Taylor, Harvey Reynolds, Albert Constable, Reginald Constable, Morris Strickland, Edward Morgan, Ralph Morgan, Herbert Morgan, D. J. Ayers, David Lindsay, Charles Dilks, Henry B. Mitchell, Robert J. McCauley, Joshua Clayton, Cleaver Potts, William McDowell, Norwood Atkinson, Alfred H. Davis, Harry D. Carrett, Myron Miller, Scott Green, Albert Johnson, Harland Johnson, Samuel Simmons, James Naylor, Dr. John Mackall, Lewis Vansant, Clarence Diebert, Wirt Rouchelle, Noble Heath, George Heath and Hooper Heath.

Columbus Gun Club.

COLUMBUS, O., Jan. 12.—Clarence Coburn was high amateur. John R. Taylor high professional. Eighteen shooters braved the blizzard Friday to attend the regular monthly shoot. It sure took nerve to come out in such weather, and then shoot all day. After each event was shot every one sought comfort before the big log fire in the club room. The Webster system was used and proved O.K. At the end of the program there was found to be \$21.75 for average money. Coburn got first; Cooper, second; H. E. Smith, third; Jones, fourth; Le Noir and Fisher fifth.

The management wants to thank one and all for coming. We are sorry to announce the death of one of the Asheville shooters—John L. Stevenson, who died the first of the week. He will be missed very much. He was universally liked by all, and a good shot. Scores:

LON FISHER, Sec'y.

Independent Gun Club.

HOLMESBURG JUNCTION, Pa., Jan. 13.—Fourteen cold-proof, courageous gunners bucked the northwester to-day and journeyed to the Junction to run into a little surprise uncanned by J. F. Pratt, an ebony-hued pony, who was given a handicap of 12 because nothing great was expected of him—and he furnished enough excitement to warm up the whole meet. Dr. W. H. Matthews had the 100-target match pretty safely packed up, with 6 birds to spare at the end of the third string, when Pratt ran the last string with only one miss, beating the doctor out by one scaler. As runner-up, the doctor took the silver dipper, he also was high on actual number of breaks with 88, for which he took the spoon. Scores:

Pratt, 17..... 12 97	Wilson, 17..... 8 87

Birmingham Gun Club.

BIRMINGHAM, Ala., Jan. 6.—Six shooters were at the weekly shoot of the Birmingham Gun Club on Friday, Jan. 5. The weather was quite cold, but all had a good time. Professional Guy Ward was with us, and brought his new Stevens gun to try out over our traps. He has just joined the selling force of the Stevens Arms and Tool Co., and his many friends in Birmingham wish him success. He did not shoot up to his average, however, as his average over our grounds on about 1000 targets during 1911 was better than 97 per cent.

Mr. Cornwell was shooting at clay targets for the first time, and judging from the improvement he showed, will shortly become a good shot.

Much enthusiasm is shown by the shooters, and judging by this, the coming season will be a banner one for the Birmingham, Gun Club.

Scores made Jan. 5:

	Shot at.	Broke		Shot at.	Broke
*Guy Ward.....	150	126	Ed. Cornwell....	100	48

*Professional.			O. L. GARL, Sec'y.		

Paleface Gun Club.

ROXBURY, Mass., Jan. 11.—A little sister to a blizzard won out at a game of freeze-out at our shoot last Saturday, driving all but ten gunners out of the game at Wellington.

Charles F. Marden was in good fettle, however, winning the 100-target match with 94 "dead," missing only one in his last 50. Second went to R. N. Burns with 91, and third went with 89 to Porter Osborne. Scores:

Targets:	15	15	20	15	15	20	Total.
Marden	14	13	18	14	15	20	94
Burnes	15	12	17	14	14	19	91
Osborne	14	14	16	15	13	17	89

CAPTAIN.

Registered Tournaments.

THE following tournaments have been registered with the Interstate Association during the week ending Jan. 13:

- April 8.—Mt. Airy (Md.) G. C. Ray Watkins, Mgr.
- April 9-10.—Birmingham (Ala.) G. C. O. L. Garl, Sec'y.
- April 9-11.—Perry, Okla.—Oklahoma State tournament, under the auspices of the Perry G. C. Bush H. Bowman, Sec'y.
- May 14-15.—Adel, Ia.—Adel G. C. C. F. Clarke, Sec'y.
- June 10-13.—Syracuse, N. Y.—New York State tournament, under the auspices of the New York State Sportsmen's Association. H. W. Smith, Pres.
- July 9-12.—Eugene, Ore.—Pacific Indians. F. C. Riehl, Sec'y.

ELMER E. SHANER, Sec'y-Treas.

Speedway Gun Club.

NEWARK, N. J., Jan. 10.—Members of the Speedway Gun Club had their weekly practice yesterday afternoon, and accounted for the following scores:

B M Shanley, Jr.....	15	16	16	20	19	18
J Bey	16	14	15	16	18	17
N Apgar	21	21	21	23
T H Lawrence	12	16	15	14	13	12
H Scovel	10	18	13
F Felger	21	15	11	11
F Sinnock	17	20	18	19
J Stobaueus	12	9	8	14

SMOKELESS.

Englewood Country Club.

ENGLEWOOD, N. J., Jan. 13.—In the 50-bird shoot here to-day full scores were made by H. M. Cox and Emmett Schultz. In the shoot-off at 10 birds, Schultz got 9 and won. There was too much weather and not enough gunners to make things exciting.

Rifle and Revolver

Seventh Regiment Rifles.

NEW YORK, Jan. 13.—Corporal J. K. Boles sustained his reputation as the best in the regiment by returning scores of 70 and 68; a total of 138 out of a possible 200, in the expert class. Nine men qualified as sharpshooters, six of them just making the necessary 65 required for qualification. Scores:

- Winners in Class cup match No. 2:
- Expert Class—L. Corp. J. K. Boles, Co. 1, 138.
- Sharpshooter—Corp. L. A. Oliver, Co. K, 135.
- Novice Class—Pvt. A. R. Ten Eick, Co. G, 132.
- First entry prize winners:
- Expert Class—Pvt. A. C. Lumley, Co. D, 67.
- Sharpshooter—Sergt. P. J. Clarke, Co. B, 67.
- Novice Class—Lieut. G. Stratton, Co. G, 66.
- Class rifle match:
- "68" Class—Sergt. A. Scholz, Co. M, 68.
- "67" Class—J. P. Felt (Vet.) 67.
- "66" Class—A. N. Cowperthwait (Vet.), 66.
- "65" Class—Lance Corp. J. K. Boles, Co. I, 65.
- "64" Class—Sergt. W. Hinman, Co. L, 64.

Who uses Dead Shot?

Amateurs 1911: Grand American Handicap, won by Harvey Dixon, Oronogo, Mo. Score, 99 out of 100, from 20 yards. Powder, Dead Shot.

Professionals 1911: Season's High Average, won by Mr. John R. Taylor. Score, 2038 out of 2100. Powder, Dead Shot.

Why do winners use Dead Shot?

It meant \$1,000 in cash to Mr. Harvey Dixon, besides the Interstate trophy, to win the Grand American Handicap. To win he had to select his powder with utmost thought and care. Isn't this substantial evidence that "DEAD SHOT" is the powder for amateurs as well as professionals to use?

For professional shooters the winning of the "Season's High Average" is the crowning achievement. Four years out of five, professionals using "DEAD SHOT" have won this coveted honor. Is it any wonder that professionals prefer "Dead Shot?"

You, too, will prefer Dead Shot if you will try it—compare its patterns and its penetration with that of any other powder. Once acquainted with Dead Shot you will always prefer it.

All dealers carry Dead Shot loads in stock. We guarantee the stability of Dead Shot.

Rifle Shooting in Genesee County.

BATAVIA, N. Y., Jan. 9.—It is difficult to keep up interest in fish and game associations when so much else is going on as at this season of the year. At our monthly meeting last night we admitted eighteen new members, which with twenty-nine new ones last month, shows healthy growth. We now have over one hundred who have paid for the present fiscal year, ending Sept. 1. We are going to make a decided effort to secure as members those who secured hunting licenses in this county in 1911, and there were over 1600. If we can get a fair proportion of them we will have a fund with which to plant birds, fish and otherwise better conditions, so there will be something to go after when the fall season opens. Just to keep things moving, we had a rifle contest last night. Sides were chosen, and the losing side paid 10 cents each, which furnished a smoke for everybody. The ten high men then shot a match for a ton of coal, which a member had donated. Last month we had four prizes. For next month we already have two prizes offered. Try it; it was a blizzard night, but it brought out forty of the boys. Scores follow:

Side captained by Edward Russell, 2343; side captained by C. M. Feary, 2219. Russell wins by 124.

Scores made in match for ton of coal:

E S Watson.... 120 119—239	C D Townsend 118 111—229
M Mason 117 117—234	Tomlinson, Jr. 113 115—228

CHAS. W. GARDINER.

Olympic Revolver Team.

At the twelfth annual meeting of the United States Revolver Association, held Jan. 15, in the Seventy-first Regiment Armory, it was decided to send a team of four men and two substitutes to the Olympic games at Stockholm. The matches are to be shot between June 29 and July 5. The international target will be used, and each man will have 60 shots at 50 meters. Any ammunition, any pistol or revolver and any open sights may be used. Elimination trials will be held over the United States until May 29, when the entries close. The time of the departure of the team has not been fixed. It is pretty well understood that the team captain will be Lieut. Reginald H. Sayre, of this city.

The by-laws were amended so as to elect five vice-presidents instead of one as before. This gives the executive committee seven members. The Association now has 14,000 members and a balance in the treasury of \$2,000.

The officers elected for 1912 are: President, C. S. Axtell, of Springfield, Mass.; Vice-Presidents, C. L. Linden, San Francisco; C. C. Crossman, St. Louis; R. J. Mulligan, Baltimore; W. H. Whigham, Chicago, and Dr. R. H. Sayre, New York; Secretary-Treasurer, J. B. Crabtree, Springfield, Mass.

Federal Rifle and Revolver Club.

At the regular annual meeting of the Federal Rifle and Revolver Club, held at the Federal range, Boston, on Jan. 8, the officers elected were: President, W. E. Fennell; Vice-President, C. H. Kelly; Secretary, O. E. Gerrish; Treasurer, W. S. Gibbons; Executive Officer, G. F. Hoffman.

Under this competent administration there can be no doubt of the success of the organization during the year.

The membership has increased remarkably, and material for exceptionally strong shooting teams is developing rapidly. Many interesting individual and team matches are planned, and entries have been made in the N. R. A. and U. S. R. A. matches.

DAVIS.

Wisconsin Challenges.

THROUGH an unfortunate delay in forwarding their entry blanks to National Rifle Association for a place in the intercollegiate tournament now in progress, Wisconsin University rifle team was unable to find a place in colleges listed in the matches. This is rather too bad, as Wisconsin, most of whose students hail from the big-game regions of the West, are, many of them, natural rifle shots, and would have added considerably to the interest in the tournament. They have, however, shown their sporting blood by issuing challenges to all colleges East and West. The first challenge went to Nebraska University this week.

National Rifle Association.

WASHINGTON, D. C., Jan. 13.—At the end of the third week of the Eastern Indoor League, Cleveland, New Haven and Bridgeport stand tie, each having won three and lost no matches. Two members of the New Haven team made possibles during the week, this being the principal reason New Haven finished ahead on the week's work. The results for the week were: Philadelphia 947, Manchester, N. H., 938, New Haven 990, Warren, Pa., 974, Bridgeport 988, Boston 935, Cleveland 975, Birmingham, Ala., 970, Portland, Me., 956, Erie, Pa., 943.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Some Good Reasons Why You Should Shoot

This Man takes His Oath

¶ The fisherman is known to be the most "exact" person in the world, and some shooters can still draw the "long bow," but our customers are convinced that

The Greener is the World's Best Gun

They lose no opportunity of advertising this fact amongst their fellow sportsmen.

Mr. Beddall, a merchant of Port Carbon, Pa., recently shot a crow with his 16-bore Greener gun at a distance of 312 feet, measured by a Civil Engineer, and he has sworn to his statement before Mr. W. U. Gane, J. P.

Mr. Penn, of Columbus, Ohio, another enthusiastic customer, writes, "I cannot thank you enough for my new gun. It is a jewel. I would not take \$500 for it. Hurrah for W. W. Greener! He certainly is the Only Gunmaker."

Surely your new gun will be a "Far Killing" Greener. No other can give you the same consistent shooting combined with hard hitting and lasting wear.

Our new catalogue (N.S. 2) describing thirty-eight grades, mailed free on receipt of postal.

National Rifle Association.

AMERICAN riflemen are to compete abroad this year with marksmen of the world. At the annual meeting of the National Rifle Association of America, Jan. 10, it was decided to send teams to Buenos Ayres, Argentina; Ottawa, Canada, and to the Olympic games in Sweden next summer. The executive committee of the organization was intrusted with the mapping out of the details. Officers elected for the coming year were: Lieut.-Gen. John C. Bates, U. S. A. (retired), President; Gen. C. R. Boardman, Wisconsin; Col. C. D. Gaither, Maryland, and Brig.-Gen. Elliott C. Dill, of Maine, Vice-Presidents; Col. H. C. Catrow, of Ohio, Treasurer, and Lieut. Albert S. Jones, Secretary.

Aim Rifle Without Range.

EDINBURGH, Jan. 14.—Volunteer Sergeant Ommundsen, the winner of the King's prize for shooting at Bisley, has invented a rifle sighting device which eliminates the necessity of finding the range.

Experts are enthusiastic over the invention, and military and naval authorities are testing it with a view of having it adopted in these arms of the service. It is based on the geometrical theory of angles, but is very simple in operation.

Ommundsen says that tests under skirmishing conditions have shown a percentage of hits of 95 as compared with 19 by ordinary sights.

CONSERVATION COMMISSION REPORT.

Continued from page 79.

the Catskill park; also that the Legislature appropriate a sum sufficient to complete the sales so contracted for by the forest purchasing board estimated to be approximately \$25,000. We further recommend that they appropriate a like sum so that this commission may at all times have money available to take advantage of any offers that might be made for the sale of land to the State where it appears that the price is just and reasonable."

The commission will submit a complete revision and codification of all the laws relating to the powers and duties of the land purchasing board and forest, fish and game commission, and recommend:

"1. A permanent and more extensive fire patrol system in the forest preserve counties, with additional patrolmen and observation stations, and State-wide fire supervision of woodlands and railroad rights of way.

"2. More stringent regulations in regard to protection against fires, and greater powers to the commission in making such regulations and enforcing penalties for violations thereof.

"3. More extended powers to the commission of acquiring land for the protection and conservation of the forests and waters of the State.

"4. Power of supervision over parks and reservations receiving and disbursing State moneys, and not now under the supervision of any other State officer.

"5. Power to establish rules whereby lumbering on lands within the Adirondack and Catskill parks shall be carried on in a scientific manner so as to perpetuate the forest cover, preserve the parks and protect the water supply of the State.

"6. The promotion of reforestation by the adoption of measures whereby the burden of taxation may be lessened upon those lands within the forest preserve counties which shall be replanted with trees or allowed to remain as wild forest lands.

"7. Extend the powers of the commission in regard to establishing and maintaining nurseries and reforesting both State and private lands."

The commission says that throughout the State there has been apparent during the year a more general desire on the part of the public to assist the department in the enforcement of the fish and game laws, indicating an aroused popular sentiment in favor of the objects of these laws. During the year the regular and special protectors brought actions for violations which resulted in the recovery of \$37,173.74 in fines at an expense of \$4,735.79, cost of prosecutions. The

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is Lefever Taper Boring.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N. Y.

"The Gun that Blocks the Sears"

See how the Safety-bar (No. 4) when pushed back over the L-shaped ends of the Sears (No. 5) completely blocks them, making accidental discharge absolutely impossible. Every Davis Hammerless Gun has the Safety that "Blocks the Sears". It is a *Safe* "Safety".

N. R. DAVIS & SONS, Lock Box 707 Established 1863 **ASSONET, MASS., U. S. A.**

average cost of prosecuting a case was less than the preceding year. The commission says:

"The game laws cannot be enforced unless they appeal to the common sense and common interests of the sportsmen, the farmers, the land-owners and all who delight in the recreation of rod and gun. The conservation commission is in hearty accord with the popular demand for 'fewer laws, more fish and game.'

"The general desire of the commission is to make the law, first, more simple in form so that it may be clearly understood, not only by the experienced lawyer, but by the average citizen; secondly, to make the law general throughout the State, in so far as it is practicable. The present law abounds in local provisions, and in order to eliminate these it will be necessary to give to the conservation commission the power within certain proper limits of prohibiting or regulating the taking of any species of fish or game when such prohibition or regulation becomes necessary for the proper conservation or protection of the same. Among the more radical changes recommended are: First, a change in the size limit of trout from six to seven inches; second, a bag limit of twenty-five birds per day to be placed on wildfowl; third, a bag limit of fifteen birds per day to be placed on shore birds; fourth, the permitting of the sale of trout raised in private hatcheries under a proper system of licensing and tagging.

"The commission believes that without imposing any unjust burden on the citizens of the State, the division of fish and game can be made self-supporting, providing a proper solution may be reached for obtaining an adequate income from the lands leased for shellfish purposes."

The commission says that it will endeavor to popularize the work of preserving and protecting the wild life of forest and streams, but that meantime an increased number of protectors is urgently required; that there should be one in every county and several protectors in the counties where the fish and game are most abundant and the largest number of violations of the law necessarily occur. It notes that from all over the State come demands for increased protection for fish and game which the commission is unable to meet without legislation increasing the total number of protectors. A favorable report is made as to the workings of the so-called plumage law, the Bayne-Blauvelt law prohibiting the sale of game with certain exceptions, the cold storage law and the Sullivan law, and it is remarked that as a result of the enforcement of the Bayne law the pot-hunter has lost his market and hence his incentive to kill more game than he can use himself.

The State game farm at Sherburne distributed during the year 2,535 pheasants and 12,945 pheasants' eggs. It is expected that this distribution will be easily doubled in 1912. The experiment of feeding deer during the winter, it is stated, proved successful and should be greatly extended in scope.

The nine State fish hatcheries during the year produced and distributed 700,000,000 fish, almost one-fourth as many fish as the Federal Government's fifty hatcheries. This output exceeded last year's by 165,000,000, and the State fish culturist expects a production of 1,000,000,000 fish for 1912. Upon the basis of half the price charged by commercial hatcheries, the State hatcheries' production last year was worth over

\$200,000, and the cost of the work was only about \$75,000. The commission recommends the establishing of a new fish hatchery in St. Lawrence county.

Of the work of the Bureau of Marine Fisheries it is said that the value of the shellfish taken from the waters within this State during the past year is upward of \$12,000,000, and that it is safe to assume that the value of the migratory food fish output was of at least equal commercial value.

The report goes on to say that since its inspector of docks and dams was appointed in October last, the commission has inspected and reported on no less than forty-six dams in this State. In all, thirty-eight were found defective;

in some cases entire rebuilding and in others repairs were recommended. The commission is pleased to add that in every case its recommendations are being cheerfully complied with. The report also refers to the fact that the report of its inspector as to the causes of the collapse of the Austin dam was the earliest explanation thereof has been widely accepted as authoritative, and has been fully corroborated by subsequent testimony. The commission proposes, it says, to see to it that every old dam in the State is made safe; that no new dam shall be constructed which is not safe. To the end that adequate power in this regard may be vested in the commission, it recommends that the law be amended.

Dog Breeding in a Small Way.

VERY little extra effort is expended in rightly caring for two or three more dogs than the average dog-owner's single animal. He is a poor sportsman who cannot afford one good dog, and he would like to keep a few more. The writer kept one dog for some time before he saw the advantages of caring for a couple additional.

I first owned a setter bitch of very good breeding and kept her only for hunting and my own fancy. After she had come in heat it occurred to me to breed her, as a good many acquaintances had said they wanted a puppy and would pay a little something for it. But when her first litter came on and was ready for the weaning process, there were but three who bought puppies and carried them home. I sold these puppies at from five to ten dollars each.

The litter of ten was a handsome lot. With seven more on my hands it was something of a little chore to care for them and keep them clean and bedded, yet the outdoor work was pleasant and I liked their friendly ways. After using some advertising space I found that there were sportsmen in the country who wanted well bred puppies, so they could train them for their own particular kind of shooting. They did not want race horse dogs or pups bred that way, but pups with brains and ability to go out and come to their own points. They wanted good noses, some looks and searching ability.

One of the puppies of the first litter I ever bred went to Colorado, and from it I sold three more. Others scattered about the country, and friends of those who bought them came to me for the entire next litter, I might say, only three of them having to be advertised. But as I saw the value of letting folks know what I bred, I bought another well bred and broken bitch and issued a little pamphlet telling about the stock I was offering and giving prices at the various ages.

Before I had been breeding dogs two seasons, I had five brood matrons in a nice little kennel, cement floors for the puppies and a lot of conveniences built into the kennels for caring for the stock. I had purchased a nice stud dog, well bred and handsome, one that took the eye and whose picture made sales of puppies. Steadily I weeded out and added to my kennels until I had six good matrons. They were whelping about two litters each every year and a half, some doing better than this and others not so well.

Accurate account was kept of everything spent on each litter and matron, and she was charged with it on my account book. They were credited with all that I had received from them and the credit side of the account was a surprise. The after-dinner hours were devoted to caring for the litters, kennels and other work of breeding, and when it became too heavy to be handled outside of office hours, I hired a good young lad to do the roughest of the work of caring for them, cleaning dishes, grooming the old dogs and cleaning floors.

I am convinced that any man who loves dogs can take two females of his favorite breed, handle them right and make from one to two hundred dollars per head on them each year. My bitches in the kennels after getting started did better than this. I could only sell puppies, as I did not have the facilities to break puppies at first. I found a greater satisfaction in selling

pups than in broken dogs. Of the latter, since I have become shaped to handle them I do not find as much profit as I thought there was. They have to be kept for so long, handled so carefully, and so many risks taken that I would rather sell puppies when weaned and up to five or six months old.

The city dog fancier can breed puppies for market if he has the room to start them and care for the bitches. If he owns both sire and dam he stands a better chance of selling to the trade that calls at the kennel for the puppies, than if he bred to some one's stud dog. The extra care of a stud is not great and the investment is one that puts into the little enterprise a certain backbone that breeding without a stud dog to show visitors cannot emphasize. If you are a stud dog owner, get a bitch or two and try it. If you have the females, get a nice well-bred, young stud and go into the game. Let folks know what you have by advertising and you will be surprised at the willingness with which people will buy. B.

Resorts for Sportsmen.

Sporting Estate on Currituck Sound FOR SALE!

Thousands of Swan, Geese and Duck. The place where Mr. A. Radclyffe Dugmore took his famous photos last year. The estate consists of a farm, 200 acres. House, 8 rooms, facing the Sound; bath room, hot and cold water. Ducking grounds consist of one Island of 1500 acres, another of 10 acres, and a large tract of marsh land on the mainland of about 150 acres. This is all fine duck and snipe ground and easily guarded. The farm is well stocked with Quail, and the shooting on some thousands of acres of the adjoining farms can be rented cheaply. This is an unusual chance for a gentleman of means or for a small club. The farm alone ought to pay 3% of purchase money. Price, \$15,000. Part of money could remain on place as mortgage. 40 minutes by boat to station, Norfolk & Southern R.R., about 30 miles from the city of Norfolk, Va. 4 miles from post-office, telegraph office, schools and churches.

J. UPPLEBY, Currituck, North Carolina

QUAIL—TURKEY—DUCK.

A combination of shooting hard to find, but it's here.

BLACK BASS FISHING.

Located on Indian River, 174 miles south of Jacksonville. Dogs, guides and horses furnished. Deer shooting ten miles from Hotel. Good food, comfortable beds, perfect climate, reasonable rates.

A delightful place to take your wife.

COCOA HOUSE - Cocoa, Florida

A sober and reliable man to act as overseer and warden on a Fishing Preserve, situated near Redfield, Oswego County, New York. Season from about April to October. Pay at least \$75 per month to the right party. Previous experience not necessary, but a person familiar to some extent with woodcraft would be desirable. Address, with references: "B." care Forest and Stream Pub. Co.

Buying a Yacht

Have you a yacht or small boat for sale? Do you want to buy one? In either case we can help you. Our just-organized Yacht Clearance Department is at your disposal.

The object of this innovation is to put the man who has and the man who wants in communication.

If you have a boat to sell, send this department full information and price, with photo, if you have one.

If you want to buy a yacht, motor boat or dinghy, file with us a general idea of what you want, and if we have nothing on record corresponding with your specifications, we will, through our many channels of information, find what you want.

If you think of having a boat built, perhaps we can help you select an architect or builder. We willingly will get estimates on plans and specifications for you.

If you contemplate chartering for the summer, suggest the class and style of boat you think you want, and we will submit a number of bargains worth taking under consideration.

It doesn't make any difference whether you want a catboat or a steam yacht, a speed boat or a houseboat, our lists will help you get a line on not only those in the market, but some that are listed for private sale.

This service is for readers of "Forest and Stream." There is no fee nor commission attached to it. It is simply another feature added to our subscribers' service bureau, every department of which is wide open and absolutely free to readers of "Forest and Stream."

Attend to this yacht for sale or wanted proposition at once, as the opening of the season will be here before you realize it.

AMERICAN DUCK SHOOTING

By George Bird Grinnell

A most complete work, dealing with every phase of the sport of duck shooting, thus forming a complete treatise on American ducks, geese and swans. It gives details of the natural history, habitat, and characteristics of every American species.

Part I contains descriptions with plates of each species.

Part II tells of every method of swan, goose and duck shooting practiced in North America—east and west, on Atlantic and Pacific and in the interior—and gives thrilling accounts of the splendid sport.

Part III deals with the art of duck shooting, including guns and loading, the Chesapeake Bay retrieving dog, decoys, blinds and boats, and finally discusses the causes of the decrease of wildfowl and tells what may be done to increase their numbers.

It is most fully illustrated with 58 portraits of North American swans, geese and ducks, by Edwin Sheppard, with 8 full page plates, and with numerous vignettes in the text by Wilmot Townsend.

Cloth, heavy laid paper, 58 illustrations, eight full-page plates, 627 pages. Postpaid, \$3.50.

FOREST AND STREAM PUB. CO. :: 127 Franklin Street, NEW YORK

THE BEST OUT-DOOR BOOKS

THE following is a selected list of *Forest and Stream's* books which are most suited to the taste of men and women who are fond of outdoor life—Shooting, Fishing, Natural History, Camping, Canoeing, Yachting. A good book does not wear out, but continues to give pleasure.

Catalogue giving full list of books will be sent on application.

American Duck Shooting.

By George Bird Grinnell. Cloth, 630 pages. With 58 portraits of North American Swans, Geese and Ducks, Plans of Boats and Batteries. Fifty Vignettes in the text, and a Chart of the topography of a duck's plumage. Price, \$3.50.

American Game Bird Shooting.

By George Bird Grinnell. New. Just Published. This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys. The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full-page portraits of different game birds and hunting scenes, with a number of cuts in the text. Cloth. About 575 pages. Price, \$3.50 net. Postage, 25 cents.

My Sixty Years on the Plains, Trapping, Trading and Indian Fighting.

By W. T. Hamilton ("Bill" Hamilton). With 8 full-page illustrations by Chas. M. Russell. New York. Cloth. 223 pages. Price, \$1.50.

American Big Game Hunting.

The Book of the Boone and Crockett Club. Editors: Theodore Roosevelt and George Bird Grinnell. Illustrated. Cloth, 345 pages. Price, \$2.50.

Hunting in Many Lands.

The Book of the Boone and Crockett Club. Editors: Theodore Roosevelt and George Bird Grinnell. Vignette. Illustrated. Cloth, 448 pages. Price, \$2.50.

Trail and Camp-Fire.

The Book of the Boone and Crockett Club. Editors: George Bird Grinnell and Theodore Roosevelt. Illustrated. 353 pages. Price, \$2.50.

Like its predecessors, the present volume is devoted chiefly to the great game and the outdoor life of Northern America; yet it does not confine itself to any one land, though it is first of all a book about America, its game and its people.

American Big Game in Its Haunts.

The Book of the Boone and Crockett Club for 1904. George Bird Grinnell, Editor. 490 pages and 46 full-page illustrations. Price, \$2.50.

This is the fourth, and by far the largest and hand-somest of the Club's books. It opens with a sketch of Theodore Roosevelt, founder of the Boone and Crockett Club, and contains an extremely interesting article from his pen, descriptive of his visit to the Yellowstone Park in 1903. Other papers are on North American Big Game; Hunting in Alaska; The Kadiak Bear; Moose, Mountain Sheep; Game Refuges, and other big game topics.

Camp Life in the Woods.

And the Tricks of Trapping and Trap Making. Containing hints on camp shelter, and all the tricks and bait receipts of the trapper, the use of the traps, with instructions for the capture of all fur-bearing animals. By W. Hamilton Gibson. Illustrated. Cloth, 360 pages. Price, \$1.00.

Uncle Lisha's Shop.

Life in a Corner of Yankeeland. By Rowland E. Robinson. Cloth, 187 pages. Price, \$1.25.

The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evenings and dull outdoor days, "to swap lies."

Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop." By Rowland E. Robinson. Cloth. Price, \$1.00.

Danvis Folks.

A continuation of "Uncle Lisha's Shop" and "Sam Lovel's Camps." By Rowland E. Robinson. 16mo. Price, \$1.25.

Uncle Lisha's Outing.

A sequel to "Danvis Folks." By Rowland E. Robinson. Cloth. Price, \$1.25.

A Hero of Ticonderoga.

By Rowland E. Robinson. Cloth, 187 pages. Portrait of author. Price, \$1.00.

A Danvis Pioneer.

A story of one of Ethan Allen's Green Mountain Boys. By Rowland E. Robinson. Cloth, 214 pages. Price, \$1.25.

In the Louisiana Lowlands.

A sketch of plantation life, fishing and camping, just after the Civil War; and other tales. By Fred Mather, author of "Men I Have Fished With," "Adirondack Fishes," and "Modern Fishculture in Salt and Fresh Water." With portrait of the author. Cloth. Price, \$1.50.

Forest Runes.

Poems by George W. Sears ("Nessmuk"). With art-type portrait and autobiographical sketch of the author. Cloth, 208 pages. Price, \$1.50.

The Angler's Workshop, Rod Making for Beginners.

By Perry D. Frazer. Cloth, 180 pages. Four full-page illustrations, sixty working drawings. Postpaid, \$1.00.

A complete, simple and thoroughly up-to-date work for the guidance of the amateur rod maker, carrying him from first principles through all phases of successful rod making. There is no theorizing or speculation. All terms are simple, and all kinds of rods and woods are treated of.

Modern Fishculture in Fresh and Salt Water.

By Fred Mather, author of "Men I Have Fished With," with a chapter of Whitefish Culture by Hon. Herschel Whitaker, and a chapter on the Pike-Perch by James Nevin. Illustrated. Price, \$2.00.

My Angling Friends.

A second series of "Men I Have Fished With." By Fred Mather. Cloth, 369 pages, with 13 illustrations. Price, \$1.50.

Rhymes of the Stream and Forest.

By Frank Merton Buckland. Cloth. Heavy laid paper. Sumptuously bound. Postpaid, \$1.25.

A charming collection of verse by an author who knows and loves nature well. A particularly pleasing gift for fishermen, closely simulating in form and ornamentation the standard fly-book.

Jack the Young Ranchman;

Or a Boy's Adventures in the Rockies. By George Bird Grinnell. Illustrated. Cloth, 304 pages. Price, \$1.25.

Jack Among the Indians;

Or a Boy's Summer on the Buffalo Plains. By George Bird Grinnell. Illustrated. Cloth, 301 pages. Price, \$1.25.

Jack in the Rockies;

Or a Boy's Adventures with a Pack Train. By George Bird Grinnell. Illustrated. Cloth, 272 pages. Price, \$1.25.

Jack the Young Canoeeman.

By George Bird Grinnell. Illustrated. 278 pages. Price, \$1.25.

Jack the Young Trapper.

By George Bird Grinnell. Illustrated. Price, \$1.25.

Jack the Young Explorer.

By George Bird Grinnell. Price, \$1.25.

Men I Have Fished With.

Sketches of character and incident with rod and gun from childhood to manhood; from the killing of little fishes and birds, to a buffalo hunt. By Fred Mather. Illustrated. Price, \$1.50.

It was a happy thought that prompted Mr. Fred Mather to write of his fishing companions. The chapters were received with a warm welcome at the beginning and have been of sustained interest. The "Men I Have Fished With" was among the most popular series of papers ever presented to FOREST AND STREAM readers.

Houseboats and Houseboating.

By Albert Bradlee Hunt. The book contains forty specially prepared articles by owners and designers of well-known houseboats, and is beautifully illustrated with nearly 200 line and half-tone reproductions of plans and exteriors and interiors. A most interesting chapter is devoted to houseboating in England. Extra heavy paper, buckram. The price is \$3.00 net. Postage, 34 cents.

The Art of Shooting.

An illustrated treatise on the art of shooting. By Charles Lancaster. Illustrated. Cloth. Price, \$1.25.

Gas Engines and Launches.

By Francis K. Grain. A few pages are devoted to launches in general, with some excellent advice to the prospective owner of a motor boat; but the author's attention is given chiefly to explaining the principles, working and practical handling of the marine motor for the amateur who does not care to trouble his head with involved technical information. Cloth. Illustrated. 123 pages. Postpaid, \$1.25.

How to Build a Launch from Plans.

By Charles G. Davis. A thoroughly practical guide for the amateur. Shorn of all blind technicalities, it considers displacement, good construction and faulty stability, setting up the keel, framing and planking, with careful explanations. Each step is followed up to the care and running of the gas engine. Cloth, 9 folding drawings, 8 full-page plates, 40 smaller diagrams, 170 pages. Postpaid, \$1.50.

Fetch and Carry.

By B. Waters. Tells minutely of the methods by which a dog, young or old, willing or unwilling, may be taught to retrieve either by force or "natural" system. Cloth. Illustrated. 124 pages. Postpaid, \$1.00.

Nursing vs. Dosing.

By S. T. Hammond. A most practical book for the dog fancier, based largely on Mr. Hammond's observation that dogs, and particularly house dogs, suffer from too much medicine. Contents—Nursing, Cleanliness, Diet, Other Foods, Kennel and Exercise, Common Ailments, Diarrhea, Convulsions, Epilepsy, Distemper, Eczema, Need of Proper Care, Stomach, Vermin, Ear, Mange, Nervous System, Colic, Worms. Cloth. Illustrated. 161 pages. Postpaid, \$1.00.

Training vs. Breaking.

Or Practical Dog Training. By S. T. Hammond. The author tells how to bring out the wonderful intelligence of the dog by kindness as opposed to force. A clear, explicit work, which will appeal to dog lovers. Contents—First Lessons, Charge, Canine Accomplishments, The Whistle, Quartering, Retrieving, In the Field, Working in Company, Raising Puppies, Training Pet Dogs, Conclusion. Cloth. Illustrated. Postpaid, \$1.00.

Training the Hunting Dog for the Field and Field Trials.

By B. Waters. Probably the most comprehensive work on the subject written, covers every phase of training and field trial preparation with reasons. Kennel Management, Breeding, Kenneling, Points of Judging. It is a work well calculated to enable the amateur to become a successful breeder and trainer. Cloth. Illustrated. Postpaid, \$1.50.

Woodcraft.

By Nessmuk. No better or more delightful book for the help and guidance of those who go into the wild for sport or recreation was ever written. No one ever knew the woods better than Nessmuk or succeeded in putting so much valuable information into the same compass. Camp equipment, camp making, the personal kit, camp fires, shelters, bedding, fishing, cooking, and a thousand and one kindred topics are considered. Beyond this, the book has a quaint charm all its own. Cloth. Illustrated, 160 pages. Postpaid, \$1.00.

Log Cabins and Cottages.

By William S. Wicks. This book covers building for the woods from the simplest shelter to the most elaborate cottage, cabin or house, and their furnishing and fitting. The details and directions are at once simple and comprehensive, and the illustrations are numerous and illuminative. Cloth. Illustrated. 44 full-page plates and numerous text illustrations. Postpaid, \$1.50.

My Friend the Partridge.

By S. T. Hammond. A delightful reminder of crisp autumnal days in the covers. It tells of sport with the noblest of game birds, the habits and habitat of the ruffed grouse, with just the right touch of reminiscence and personal experience. Cloth. Illustrated. 150 pages. Postpaid, \$1.00.

GOOD GUN OIL

No matter how new or how old your gun, it needs "3 in One." Trigger, shell extractor, hammer, break joints—every action part of any gun works easier, surer, truer, if oiled with "3 in One." It cleans gun barrels inside and out, removes residue of burnt powder, black or smokeless. Positively prevents rust in any climate or weather. Will not gum or dry out. "3 in One" also cleans and polishes stock.

FREE Try this good oil on your gun at our expense. Write for sample bottle and booklet—both free. Library Slip in every package. **3 IN ONE OIL CO., 112 New St., NEW YORK CITY.**

Mulligan

By ROBERT E. PINKERTON

MANY woodsmen believe that waves, like misfortunes, travel in threes, and that, after the third big wave, a canoe can be turned with comparative safety.

When Mulligan and his partner, Jack, saw that they could not buck the big curlers that rolled down upon them through the long stretch ahead, they decided to turn after the third wave.

They had entered the heavy sea before realizing how strong the wind was. On the other side of the point, 200 yards behind them, it had been comparatively quiet. It was not until they were well out in the "big stretch" that they saw the difficult work and thorough wetting that confronted them.

Both were good canoemen, having been born and raised in the woods of Northern Minnesota, where men become skilled in the use of the paddle as a Western man becomes an adept in the saddle. They had no fear, although neither had ever bucked such rollers as those tossing them there at the beginning of the big lake. The wind was hard and gusty, and they were in the apex of a V-shaped body of water. This compressed the movement of the big waves and made them larger, closer together and more difficult to navigate in the fifteen-foot river-model canoe that the Government furnished its forest rangers.

The wind was cold and the water icy. The day had begun with snow squalls. Two weeks before, big, long-armed Knife Lake had been covered with ice, and even then, on a clear night, edges of shallow bays were coated with a thin layer. The season had been unusual. Not for fifty years had the ice gone out so early. Ordinarily it is not possible to canoe before the first of May in that country. This year the season had been a month earlier.

For 200 yards they bucked the rollers. A sudden gust piled the water higher, and Mulligan, in the bow, was drenched as the canoe dived from the top of a roller and plunged into the next, burying its nose before it began to rise to the crest. Jack, in the stern, noticed that his knees, on the floor of the canoe, were far above

Mulligan's head as they made the plunge, and that, as they ascended the next wave, Mulligan's feet were higher than his, Jack's, head. But he thought of this only as a plunging half-back, in the last tense moments of a losing game, might think of a new patch on the jacket of an opponent as they swirl and grind and go down, for when they rose to the crest of the second wave there was another plunge, a little harder,

of its own accord, swung further, and they dropped into the next hollow at an angle of forty-five degrees to the trough. Just at the moment of topping the crest, Jack gave a mighty pull to his paddle, starting the stroke far out and ending it close in to the stern. Mulligan, when Jack began to swing the canoe, also had started his stroke far out and ahead and pulled toward the canoe, although, as the craft balanced before beginning the slide downward, he was forced to reach far down to get a foot of his paddle blade into the water. By the time the canoe had reached the bottom of the trough, each had taken two more similar strokes, and the canoe was riding broadside to the waves.

Had the wind remained steady, the fourth wave would have rolled harmlessly under them. But the gust, which had increased the first three waves, was followed almost immediately by another which curled the top of the fourth roller. Both Mulligan and Jack saw it as they climbed the wave toward the tumbling crest. Their strokes were quick, sharp and powerful. Another swing and the stern would quarter into the wave, and nothing more serious would happen than a hissing, snapping curl of water along the windward gunwale that would deposit a pail of water in the canoe.

But the second gust of wind was stronger than the first, the fourth wave larger than the preceding three. The canoe was hardly quartered away from the roller, which struck the stern,

piled up over the short decking, curled along the gunwale and left so much water in the heavily loaded little craft that, as the canoe slid down on the other side, the gunwales were a bare inch above water.

Both men paddled desperately, but water, men and outfit, there was 1,500 pounds in the canoe. It lay like a log, dropped broadside into the trough, and despite the efforts of the paddlers, rose in that position to the crest of the fifth wave. Jack, from his vantage point in the stern, saw the hopelessness of the situation.

"The next one'll put us over, Mull," he

BY WAY OF DIVERSION.

a little steeper, and a little wetter for Mulligan, and a canoe, as it balances a wave crest, seems possessed of an untrained colt's desire to wheel suddenly and bolt.

As they crested the second giant roller the gust which had piled the water higher subsided as suddenly as it had come, and Jack shouted to Mulligan that they would turn after the third wave. Down plunged the canoe to meet and rise with the roller. As it started up with the quick, bouncing, see-saw motion a canoe has when heading into the wind, Jack pointed it off slightly to the left. Once on top the canoe,

shouted above the noise of the wind and tumbling water. "Hold on to your paddle and the canoe when—"

The contraction of his lungs caused by the complete submersion of his body in the icy water prevented his finishing the warning. The huge curler was too high and moving too quickly to allow the heavy craft to ride it; it was so strong and engulfing that, as it struck, Jack was swept so quickly from the canoe he failed to grasp the gunwale. When the wave had passed, only the bottom of the canoe showed. Mulligan, head above water, was holding the sharp and slippery bow with numbed fingers. A packsack, the one that held the tent and blankets, bobbed to the surface near him, and he endangered his already precarious hold on the canoe by grasping one of the shoulder straps.

The full and initial force of the curling crest had struck Jack and carried him far from the canoe. As he came to the surface on the slant of the receding wave, he was ten feet from the stern of the overturned craft. He was unable to swim to it before the canoe rose to the crest of the sixth wave and was buried. So high did the water pile over the craft Mulligan was torn from his hold. In the next hollow both were swimming to the boat. The packsack bobbed so far away Mulligan did not try to get it.

When the men reached the canoe, one near the bow and the other near the stern, each felt under the water for a more secure hold on the overlapping gunwales. They shook the water from their eyes and looked at each other. Mulligan grinned.

"Getting all the excitement you want?" he shouted. "Ought to. Fifty miles from nowhere, no grub, no tent, no blankets, no nothing."

The next curler delayed Jack's reply.

"There's a line and trolling hook stuck in the stern," he said, when they had dropped into the trough. "But we got to get to shore first. If we can get some of the water out of the canoe and work her toward shore, this wind will drift us back to the point. It's not far, but we'll have to dig to make it."

The men worked along to the extreme ends of the canoe, and when they had dropped into a trough, lifted and twisted at the boat. Their heads went under, but a gunwale finally showed. There was a loud sucking of wind and then, the gunwale free of the water, the canoe righted itself so quickly that Jack for a moment lost his hold.

The canoe was almost full of water, and the next wave filled it until the gunwales in the middle were beneath the surface. In the next trough they tried to lift one side of the canoe. Half a barrel of water flowed out, only to be replaced by the next wave. In the next trough they tried again with the same result.

"We'll have to hang on with one hand and swim with the other," shouted Mulligan. "It's hard work and little gain, but maybe we can make it."

Each grasped a gunwale, and they started. The work was welcomed, for by this time both were so chilled they were unable to prevent their teeth chattering. They had drifted back further than they thought, and a glimpse from the brief vantage point of the top of a roller showed them that they would hardly be able to work the canoe over sufficiently to get to the point before they had drifted past. They worked only

as can desperate men in a desperate situation. Their circulation quickened and their teeth became silent. With quick, long strokes of their free arms, they hauled the water-logged canoe.

"We'll make her at this rate," gasped Jack from the top of a wave, "but it'll take all we've got."

However, as they came closer to the long, narrow and heavily wooded point, they found a new factor to contend with. Until then the wind had been blowing straight into the narrows, and they had only to work across it as they drifted with it. Now, when 100 feet from the point, and in a line where they would have to work the canoe over only twenty-five feet to gain the rocks, the wind, deflected by the solid wall of spruce and balsam on the point, began to carry them away from the tip of rocks. Both men saw it, but said nothing. Each increased his efforts. Mulligan thought it might be well to try again to right the canoe, but he did not voice his inspiration because, with renewed velocity, the wind piled the waves higher.

With the point fifty feet away, and thirty feet across the wind, they saw that they could not make it. Both men stopped working.

"Better drop the canoe and swim for it," Mulligan panted.

"And be without a canoe in this country! Our only chance of getting out is keeping the boat. Maybe we can work it in after we pass the point. If we can get into the shelter of the point, we have a chance to get it to shore. Let's try it, anyhow."

They began working as before, not so desperately, but with longer, slower, more powerful strokes. They worked determinedly, but both glanced longingly at the point not more than forty feet away as they drifted past it.

The wind increased, and, shunting out at an angle by the point, carried canoe and men still further from shore. The point was long and ran quartering with the wind. Consequently, when once the canoe had drifted past it, the nearest shore was that of a deep bay behind the point.

"We can't do anything this way," said Mulligan. "We're getting further and further from shore. There's nothing to it, but swim and let the canoe go."

Jack agreed with a nod. When they abandoned the canoe the nearest land was 300 yards away, quartering down the wind.

"It's goin' to be a hard scrap," said Jack as they started, "and I'm beginnin' to feel sort of tired."

He was more nearly spent than he knew. And so was Mulligan. The ice water and their ceaseless struggle of more than half an hour had sapped their strength and vitality. Further, they were dressed as are woodsmen in that time of the year—the heaviest possible woolen underclothing, woolen shirts and trousers and well hob-nailed cruisers' shoes over heavy woolen socks.

Both men had nerve, that quality possessed by all men who survive in the struggle against the odds the wilderness continually throws in the path of those who would penetrate it. The quality which keeps a beaten boxer on his feet, which drives the sweep of an exhausted crewman in the last quarter mile of a college race, is the same that lifts the leaden feet of the snowshoed explorer who cannot find his cache,

that swings the paddle of the starved trapper whose cabin and supplies have been burned, and he is forcing the last fifty miles of his foodless journey.

The boxer and the oarsman have the shouts of admirers in their ears, but the explorer, the trapper, Mulligan and Jack must fight it out alone, unseen, uncheered. The first are fighting for money, for glory, but the Mulligans and Jacks are fighting to survive.

While both Jack and his partner were abundantly supplied with the quality that makes survival in the wilderness possible, Mulligan also possessed an imagination. Both could fight a forest fire for fifty hours without rest. Both could pack 150 pounds across any portage in the North country, could suffer from long hours in the canoe or hard, plodding journeys on snowshoes. Day in and day out they could do about the same amount of labor. But in addition to the nervous energy upon which both could call when necessary to drive their seemingly exhausted bodies to further effort, Mulligan also possessed an imagination.

Even when he had made what seemed to be his last physical effort, Mulligan's abundant nerve force would step in and prod the exhausted muscles to further activity. And, when this flow of will power and superior mental control weakened, they, in turn, were recuperated by the man's imagination. As a boy he had delighted in reading of hardships survived, great powers of endurance put to the test, great physical accomplishments. Often he had placed himself mentally in positions similar to those of his fiction heroes and dreamed of his life struggles against terrific odds.

It was this vivid imagination, coupled with a romantic, adventurous temperament, that galvanized, through the medium of a rejuvenated nerve force, weary muscles to further action.

And it was this quality that enabled Mulligan to crawl steadily away from his companion as they started to swim toward shore. He turned and saw that Jack was progressing slowly.

"Hurry up, and I'll wait," he called.

Jack shook his head. A few yards further on Mulligan turned and repeated his offer. Again Jack shook his head. Then he called: "Go on; I'm all right."

After swimming fifty yards, Mulligan was fifteen yards ahead. He thought to turn again, but an overpowering weariness and a steadily increasing drowsiness warned him that every effort should be expended in sending him shoreward. He reasoned this out vaguely. He wanted to turn and help Jack, but he believed that neither could reach shore. Then he thought that Jack might be in a worse condition and needed help. He was about to turn, but the drowsiness and weariness increased. His hands were blue and numb. There was little feeling in his legs below the knees. His heavy woolen clothing seemed leaden, his lungs were so contracted by the cold he breathed with difficulty. He swam jerkily, in spurts, each increase in exertion being followed by a greater ebbing of his mental stimulus. Once he roused himself to faster, stronger swimming, only to relapse into semi-unconsciousness. Then his imagination brushed away the mental blur, and another spurt resulted. His head cleared sufficiently for him to think of Jack, but he did not turn nor call. The spurt ended this time in total unconsciousness, his

face fell forward under the surface, and he sank.

In a moment his head bobbed up. The water on his face and trickling into his lungs had revived him momentarily. He struck out quickly, wildly, and then thought of Jack. Turning, he looked back along the trough of a wave.

Twenty yards behind him a hand and half of a forearm were thrust out of the water. At first Mulligan thought it was being held there steadily, but soon he saw that it was slowly, then more quickly, sinking. When only the hand was visible, a wave cut off his vision for a moment. When the wave had passed the hand was gone.

"Jack," cried the swimmer; "Jack," and he looked wildly toward the spot where the hand had disappeared. Then he turned and swam on toward shore.

The knowledge that Jack was dead served to arouse Mulligan. He realized vaguely that he had lost consciousness. The fact that Jack was dead brought a third factor—fear—to act as a spur on the apparently exhausted body. He looked toward shore and saw that he had traversed half the distance. But he was now well within the shelter of the point and no longer would be impeded by the big rollers.

For fifty yards he swam steadily before the force of his nervous energy was dulled, and his movement became sluggish and painful. He wet his face by bending his head in an effort to revive his ebbing faculties. Fear ceased to be a spur. He became more drowsy and tired. The water was cold, but it felt soft, and he thought that he would like to sink. He knew it would be painless, quick, welcome. He was about to try it when something, somewhere, seemed to call "quitter," and he struggled on. The drowsiness became more oppressive, more overpowering. Again he sank, and again his head bobbed up, his mind only slightly cleared by the water on his face. He saw the shore, no more than twenty-five yards away, paddled feebly until he had recovered his stroke and momentum, and was about to relapse into unconsciousness, when his imagination brought new nerve force. His stroke became stronger and more regular, his progress correspondingly greater.

But the cold, the prolonged exertion and the nervous strain had stripped him of so much strength that his recovery was short lived. The shore, which he saw to be a rock-covered gravel beach running back to the brush, which in turn gave way to a spruce forest, became dim. His eyes closed and his nose occasionally dropped beneath the surface. The numbness of his hands and feet extended to his elbows and knees. Again there was a faint twinkle of a thought that he would like to sink through the soft water. Before his slow-moving faculties could act upon this suggestion, unconsciousness, came. But still he swam on. An instinctive, animal-like desire to live and the automatic continuation of the slow movement of his arms and legs kept him afloat and pushed him nearer shore.

When Mulligan recovered consciousness he lay face down in a heavily moss-carpeted spruce thicket. He lifted his head, only to drop it instantly, as pains shot through his neck, shoulders and back. The pain served to clear his head, and he remembered.

Slowly, with teeth clenched, Mulligan began moving his right arm. When the pain had lessened, he began with the left. He lifted his feet

by bending his legs at the knees. When he tried to roll over on to his side, he was unable to suppress a groan. Fifteen minutes later he had so far restored circulation and softened his muscles that he could reach a sitting position.

Then, for the first time, he became conscious of a stinging pain in the skin of his chest, shoulders and knees. He looked down to find that the front of his clothes was torn to shreds, and that his skin was scratched and raw. Blood had clotted and blackened in the abrasions and run down his body and arms.

The cause was a greater mystery than his being in the spruce thicket. He saw a freshly broken spruce in front of him, and freshly torn moss, and further on more torn and bent and broken bushes. Getting stiffly to his feet, he found a newly broken trail, a trail such as a man would make by dragging a deer behind him. The trail led out of the spruce, into the willow brush and on to the rock-covered gravel beach where it was visible in newly overturned rocks, some of which bore spots of blood. The trail led to the water's edge.

Then it dawned upon Mulligan that he had, when he struck shore, continued his swimming stroke and had crawled, shoved and pulled himself, when unconscious or delirious, over rocks, through brush and into the woods too yards from the water.

He looked out over the tumbling water, but there was no sign of the canoe in the big stretch down the wind. He knew the lake was long, wide in places, cut up by islands and points, and its shores broken by long arms that ran back, sometimes ten miles.

At least fifty miles to the west was Ely, the nearest human habitation. Between him and the town was a country covered with lakes and streams, swamps and rocky ridges, dense growth of brush and pine. If he were to survive, if Jack's body were to be recovered, he must get to Ely. He shivered, both from the cold north wind and because of what lay before him. It was a journey no one would undertake, especially in winter, unless compelled by a necessity such as confronted him. There were only two means of travel in that country, canoe in summer and snowshoes in winter. If a man, with a heavy pack and following a section line, were to cross a township in a day, he would be making good time. Mulligan had no pack, but he had no food, no matches, little clothing. Ice cold rivers were to be crossed, long-armed lakes circumvented, tearing, maddening brush penetrated for miles and miles, swamps forded or evaded by long detours. He knew he would walk one hundred miles before he reached Ely.

It was 8 o'clock Sunday morning when the canoe was upset. Wednesday forenoon Mulligan staggered into Winton, three miles east of Ely. He called up the forest supervisor at Ely and then drove over in a livery rig. At the offices of the forester he found rangers and guards and an undertaker ready to start by a canoe to Knife Lake.

"Get something to eat and go to bed," said the supervisor, looking at the hollow-eyed, blood-spattered, ragged ranger.

"When are you going to start?" Mulligan asked.

"We will leave in an hour."

Mulligan went out. Forty-five minutes later he returned. He wore new clothing, had washed

the grime from his face and hands, and two quarts of soup distended his belt.

"Why don't you go to bed, man?" demanded the supervisor.

"I'm going to Knife Lake," was all Mulligan would say.

Arguments, entreaties, even the commands of his superior officer were unavailing. In that long, forced canoe trip of nearly seventy-five miles, in which heavy winds, snow squalls, biting cold and raging water were met and overcome, Mulligan swung as strong a paddle as any other, carried as big a pack on the portages.

When Jack's body had been found and brought back to Ely and sent to his home further south, Mulligan hung around headquarters for a day. Toward night he bought a new packsack, blankets, outfit of grub and camp utensils.

"What are you doing, Mull?" demanded the supervisor.

"Guess I'll get out in the morning," he said, and the supervisor did not see his ranger again until the last of August, when he penetrated to the isolated district which, in that year of disastrous forest fires, Mulligan's solitary but vigilant care had kept free from the devastating flames.

New Publications.

KING EDWARD VII. AS A SPORTSMAN, by Alfred E. T. Watson and others. Decorated cloth, 381 pages, 102 illustrations, \$6 net. New York, Longmans, Green & Co.

Descended from a long line of ancestors most of whom were fond of hunting and shooting, it was natural that King Edward should have taken keen enjoyment in this sport. Though not as expert in wing shooting as his son, now King George, Edward was accounted a good shot, but he cared little for numbers, and it is said that some of his pleasantest days were those spent on the moors of Scotland, where shots were few and the luck of the day fell to other men.

King Edward fired his first shot at game from a little single muzzleloading gun. The late Duke of Clarence and the Prince of Wales also fired their first shots from this gun, and in December, 1907, Princes Edward and Albert underwent a like initiation. Of fishing Edward was not very fond, though he practiced it at times.

Much of the volume is devoted to the outdoor pastimes of the late King, yachting, horses, his travels at home and abroad, and his hunting in India and elsewhere. Chapters are contributed by Sir Seymour Fortescue, the Marquis of Ripon, Lords Walsingham, Ribblesdale and others. The illustrations are superb. A number of them are in colors.

THE MOUNTAIN THAT WAS GOD, by John H. Williams. Embossed paper, quarto, 144 pages, 190 illustrations and two maps, 75 cents. New York, G. P. Putnam's Sons.

Few handbooks equal this one in quality of text and illustrations. There are so many traditions and stories, old and new, associated with Mount Tacoma, or Ranier, that the few which find a place in the book make it worth many times its price to people who have no thought of climbing the mountain, while as a guide it is indeed excellent. There are eight colored plates and many other full-page halftones, reproduced from beautiful photographs by scores of expert photographers.

A Protest

By SYDNEY G. FISHER

I WAS sorry to see a statement in FOREST AND STREAM from so eminent a person as Mr. Kalbfus, of the Pennsylvania Game Commission, recommending an apparently ingenious way of poisoning foxes and other vermin or predatory animals by means of muskrat carcasses impregnated with a deadly drug. Only the predatory animals, he says, will eat the muskrat carcass. Your valuable pointer or setter will not touch it. He even recommends professional trappers to resort to this poisoning instead of setting traps for fur-bearing animals.

Without stopping to dispute the supposed theory that your pointer or setter would be safe, I must enter my unqualified protest against the whole disgusting and contemptible poisoning business, especially when it is recommended in a sporting paper and among sportsmen. No real sportsman will have anything to do with such degradation.

Too many of us each year lose devoted companions by the sneaking poison scoundrels in villages and even in the country, whose spite and depravity are aroused against all who possess valuable bird dogs. If in the second decade of the twentieth century we cannot do better than to recommend poisoning to the public, our boasted advancement is worse than a failure. We are going back to the dark ages. Our people are bad enough already in exterminating the beautiful animal and bird life of their country, and to recommend poisoning to them in public print is shameful.

The motive for it apparently is that by poisoning, Mr. Kalbfus thinks, you would get rid quickly of all the foxes, weasels and so-called vermin, and then you would have an abundance of game. Very likely he might want to extend the process to the hawks and crows and everything he dislikes. Poisoning, he thinks, will bring the millennium to the sportsmen. He will never have abundant game until he exterminates the vermin. Where are his eyes and observation?

I can remember the eastern shore of Maryland when I was a boy, just after the Civil War, and one farm in particular which I still own. It swarmed with animal life of all kinds—hawks, foxes, all species of vermin, eagles built their nests in the trees, and quail and rabbits were numerous. On that farm there were regularly four coveys of quail; now there is not one, and it is even hard to find a rabbit. The hawks and foxes have been exterminated along with other vermin, but the quail do not come back. It used to be a not uncommon sight when you went out for a walk to see a fox, and in the midst of the foxes and other predatory creatures the quail and the rabbits flourished, and had flourished for generations before I was born.

I have had the same experience in more recent times in various parts of the South. I have seen quail and other game very numerous in the midst of hosts of so-called predatory creatures, as in Florida for example, and the game remains numerous under these conditions until man, the exterminator, comes along. He and his methods are the only dangers to game.

Think a minute. If it were true that it is the

vermin that decreases the game, then there would have been no game several hundred years ago, when white men first came to this country. The predatory creatures, so-called, having had their own way unchecked by poisoner or trap, would have destroyed all the game. But we know that the contrary was true; game was abundant in the midst of the predatory creatures.

Similarly if the theory of vermin exterminating the game were true, we would not now be seeking out-of-the-way places for game. I would find plenty of game on my own farm where the foxes and vermin have been exterminated. But instead of that I spend precious dollars in traveling far away to places where the old conditions still exist.

Those conditions are what the naturalists call the balance of nature. The name predatory creatures or vermin is a mere phrase, an artificial distinction. They are all predatory. The so-called innocent birds eat the worms, bugs and insects by the hundred thousand million. So far as destroying numerous individual lives is concerned, the birds are the most predatory of all. The foxes and other vermin live on mice, rats, insects and to a certain extent on the birds. The hawks live to a certain extent on birds, but more on mice and insects. The squirrels come in for their turn even on the birds, and so it goes on, or perhaps more properly went on, in a complicated interchanging compensating system under the old original conditions that prevailed in this country. Those conditions had been produced through thousands or hundreds of thousands of years of undisturbed nature. The balance was kept up by all preying on one another. If we merely reasoned upon that condition, we would say, as people are led to say now, that it must end in all being exterminated, except one set of the most predatory. But we know that was not so, and in dealing with nature we must abide by facts and not reason too much. We cannot perhaps describe exactly in words or give reasons how that balance of nature worked, but we know that it resulted in abundance of game in the midst of the so-called predatory birds and animals, just as I used to see it as a boy in Maryland, and thousands of others are alive who can remember it there and in numerous other places.

There is another fact which is one of common observation to those of long experience with nature. If you disturb the balance of nature by attempting to eliminate one of the elements of the balance, you never know what may happen. You may upset the whole thing, and the evil may extend to plants and trees, for they are included in the balance. For example, so many boys have used five-dollar shotguns on the woodpeckers that those useful birds are exterminated in some localities, and an insect that the woodpeckers used to destroy has so increased that it threatens to exterminate the hickory trees. So also in numerous other instances. The German Government is making most extraordinary efforts to people its forests with birds to save and improve the timber. Our own Biological Survey at Washington will supply literature on

these subjects to any citizen who will write for it. Now, I can understand that if the so-called vermin became excessively numerous, it might be advisable to thin them down, as English gamekeepers sometimes do. But they do not exterminate vermin in England, and they have far more game than we have. An English sportsman will often shoot away in a season from two thousand to ten thousand shells, and often suffers from gun headache. I shall be greatly obliged for information of a place in this country where you can acquire gun headache. One of the great beauties of an English countryside is the varied life—hawks, foxes, vermin of all sorts. It is as much pleasure and delight to watch them and know about them as it is to see the game.

The English people are great conservationists; they preserve all of nature they possibly can and teach their people to enjoy it. If you exterminate nature, what have you left but a dried-up narrow-minded existence.

We have not yet reached the point in this country when it is necessary to thin down predatory creatures. If there are such places they must be very rare. I have never seen any of them.

Why the foxes should be poisoned I do not understand. In England they are so valuable that they make the national sport. In New England, and parts of the South, and in one or two counties of Pennsylvania, they are highly valued for hunting. They are a most interesting and beautiful animal, and play an important part, naturalists tell me, in the balance of nature. They should be protected and encouraged.

We have enough to do to teach the American people conservation of their resources without making poisoners of them. We want to give them the spirit of sportsmen and nature lovers instead of the sneaking mind that accompanies the poisoner. We want to make every citizen an instinctive preserver of every fox, hawk, crow and everything else, because he loves them and wants to study their ways. Then if he goes too far and develops the balance of nature too much on the predatory side, we can give him instructions to use his gun or some honorable means to thin them down.

But as it is now, the masses of our people throughout the country are terribly inclined to regard all nature as their enemy. It is really extraordinary the view they take. They want to make a desert and call it peace. I have been most unpleasantly depressed by them. Last winter in Florida one of them, who had become a man of means and should have known better, was for cleaning out pretty much all the life around him, and the only reason he usually gave was, "Oh, it (some bird or animal) is a mean kind of thing, anyhow." This he would apply to first one and then another until he included about all, even the vultures, which are protected by law as useful scavengers.

I often think that this widespread feeling arises from a notion that has gradually grown in their minds that these natural things are symptoms of poverty, and that their absence will in some mysterious way produce wealth; that if they wipe out nature entirely, all the land will be city building lots at high prices; that the city is the standard, and that the more they banish nature the more their social positions will im-

To Honolulu in a Bark

By PALMER H. LANGDON

(Continued from last week.)

Aug. 4, 1911; wind east to northeast; course, south, 53° west.

TROPICAL weather this morning; the trades had moderated and there was heat and humidity with rain squalls at intervals. What wind there was had drawn to the quarter, making necessary another tug at the ropes. As is well known a quartering wind is the joy of all masters and sailors, for with a wind coming diagonally over the stern, a ship sails the fastest, she holding a certain amount of air power, so to speak, rather than running away from her driving power as she does with a breeze dead astern.

The sailors were busy to-day as usual mend-

and expect speed in others. There is no time for explanation, and consequently every order is in the nature of a drive. When the ropes have been handled and made fast, the mate and his watch settle down again on the deck to sail making, feeling the better after the encounter with ropes and yards.

Some day, as the character of sailors becomes more refined—and there is room for refinement, though there is probably less toughness to-day than ever—the old-time friction between masters and mates and the crew may entirely disappear. In the meantime, considering the varied and hard work that sailors do, and the way they are called upon for duty at all hours of the day and night,

quarter moon appeared abeam of the ship in the east. The temperature was so mild, the breeze so gentle that no coat was necessary to keep warm. It was now a sail by the light of the silvery moon, and the bark's sails and the dazzling water appeared particularly beautiful, for what is more beautiful than a bark under sail in a moonlit sea. The scene brought the passengers together beside the teak taffrail on the poop, where way into the wee hours of the night they sang old songs, talked over old times and thought of days of the past. So fascinating was the scene that all were loth to go below and leave the sight of a moonlit bark gently wafted over the sparkling seas.

Latitude, 24° 35' north. Longitude, 144° 49' west. Day's run, 189 miles. Honolulu 680 miles away.

Aug. 5, 1911; wind, east northeast; course, south, 72° west.

The vigor of the trades seems to have departed for the present, moderate breezes with

FURLING SAIL.

BENDING A NEW SAIL.

ing sail. Every ship is supposed to have a relief sail for every bit of canvas she carries, and with the ever constant wear and tear, it takes considerable labor and skill to keep up the two suits of sails. Sailors' duties are certainly many and varied, and so much has been written about the cruel treatment of seamen aboard American vessels that a word on the subject is timely of conditions aboard the *We'ch*. First off, there was no semblance of cruelty, not a man struck, not a man hazed. The mates on the ship were vigorous fellows and naturally wanted their orders obeyed immediately without asking why, and the sailors understood the necessity of discipline, and while they might occasionally swear and grumble at their work and the mates curse and criticise the way it was done, this was only considered as part of the seafaring side of life the same way profanity prevails ashore in putting-through contracts of public work. The mate said he could get along with any kind of men as long as they did not give him any "back slack" (talk). However, as everything went so smoothly in the voyage to the islands, there were few occasions in the working of the ship that cuss words were heard in carrying out the nautical maneuvers. Then again in working a vessel properly, quick action is an absolute necessity, and the mates of course have had "spry action" drilled into them

the writer believes that masters and mates should remember that seamen are human and would no doubt like occasional words of encouragement and appreciativeness of work well done as well as sharp comments and thrusts at work undone. "Every soldier carries a marshal's baton in his knapsack," said Napoleon Bonaparte, the stern disciplinarian, but beloved commander of the French. Perhaps if seamen were given to understand that every sailor carried a captain's commission in his dough bag, there might be a better opinion of each other between the fore-castle and the cabin.

Another way to improve conditions in the fore-castle would be to introduce music and athletics. Aboard American windjammers the main diversion is the accordion and card playing, while on some of the deep water ships of other nations, notably Germany, out door games are encouraged and likewise music; the foremast hands forming a band among themselves with the consequent songs and good comradeship.

After supper each evening the passengers gather on the poop deck beside the teak wood railing to watch the passing of the day, and this evening the cloud effects were particularly beautiful, the spectators being favored with a rainbow and clouds in all sorts of fantastic shapes. As the sun sank out of sight in the west, a three-

plenty of rain squalls being the order for the past two days.

The passengers had discussed many times their chances of reaching land if the ship went down. There on deck, ready for instant service, were the small boats, which all ships carry, to be used when the big boat goes to the bottom, and in each boat were sails, oars, boat hooks, compass, oil, water and bread, all kept in condition by a canvas cover. The bread is packed in tins and is replenished every six months. Each boat would hold fifteen persons. If put overboard in disaster, the course would be to sail wherever wind and wave would permit. As to the chances of reaching land or the course of passing vessels, the captain and mates would only shrug their shoulders. Passing vessels were certainly very scarce, for we had not seen one since we had been out, and this was to be expected, for sailing vessels steer one course in going to the islands from San Francisco and another returning, neither of which courses are the same as the one taken by the steamers. Therefore, the chances of being picked up from small boats were rather slim.

But what little danger there really was. First off, we had a staunch ship which had been seasoned with years of service, and the owners and captain knew what she could do. In the next

place she could move under nature's never-failing power of the wind. She was not a steamer forever subject to machinery breakdowns and then helpless until the break is repaired. And as we had the broad Pacific to ourselves, there was but a slight possibility of collision. Of course, the danger of fire was ever present, as it is ashore, particularly in this age of promiscuous smoking, which permits the carrying everywhere of lighted fire brands, but we depended upon the officers and crew to keep out that horror of horrors—a fire at sea—and to put out quickly any flame, which happily to say there was none. So all in all we felt quite as safe, if not more so, than in traveling in a steamer, a railroad train or an automobile, and probably we were far more safe than in crossing the dangerous, congested highways of a modern city.

Latitude, 23° 55' north; longitude, 147° 03' west. Day's run, 128 miles. Honolulu, 600 miles away.

Aug. 6, 1911; wind east by north; course, south, 65° west.

Vigorous trades and ample sunshine made another beautiful Sunday on the Andrew Welch. The mates wore gaiters, Sunday clothes and smiles; the crew an air of peace and contentment, while the captain was happy in the breeze and prospect of an early arrival during the week. Quick passages are forever on the minds of skippers.

Captain Kelly at first estimated we would sail 2,500 miles in making Honolulu, but it now looks as if this estimate would be reduced. The steamer course is 2,100 miles, the direction being southwest. Sailing vessels, however, in order to run more quickly into the trades, steer first south and then west, making a little longer course. Returning to the Pacific coast they steer first north and then east, in this way avoiding zig-zagging back and forth or tacking, instead they take advantage of the steady trades. The correct steaming and sailing directions for the Pacific ocean are now plotted and published each month by the Hydrographic office of the Navy Department and by the Weather Bureau of the Department of Agriculture, the United States Government giving most valuable up-to-date information for navigators. Quite different than in the exploring days of Magellan, De Gama and Cook, when printed charts were unknown, likewise unknown islands, reefs, shoals and other perils to navigation.

The reader may have noted in this log that the day's runs of the ship do not correspond from day to day with the distance from Honolulu. The reason is that a degree of longitude north or south of the equator does not measure sixty nautical miles, but diminishes until at the poles it is nothing; consequently in a ship sailing southwest on the run to Honolulu, the day's journey does not equal the day's difference in distance from Honolulu as measured on the chart from noon to noon with a chart allowance of sixty miles to a degree of longitude. The observation at noon to-day showed that the Welch had crossed the Tropic of Cancer and was now within the torrid zone.

One of the remarkable commentaries about sailing ship travel is the low cost compared with steamships. The rate for a berth on a sailer to Honolulu is only forty dollars and the outward voyage to the islands may last from fifteen to

twenty-five days, while returning it may take even forty days. The minimum fare on a steamer either way is sixty-five dollars and the trip lasts but six days, therefore the sailer gives three times the number of meals and houses a passenger three times as long as the steamer and charges 40 per cent. less, but in this age of hurried luxury travel, which makes such adventure cowards out of the traveling public, people pay all kinds of prices for the sake of living amid apparent magnificence, and with the possibility of rushing to their destination and seeing little or nothing of the land or sea over which they traverse.

Latitude 23° 04' north; longitude, 149° 06' west. Day's run, 125 miles. Honolulu 495 miles away.

Aug. 7, 1911; wind east northeast; course, south, 59° west.

Another glorious day on the sun-spangled Pacific with a good genial breeze and flying-fish darting around the ship. The passengers were moved to enter into the spirit of the weather by climbing the rigging. An athletic "Redlands youth," followed by a portly "Frisco knight courteous," had been taking shys at rigging climbing for a week past, and to-day the captain jumped into the game, going straight up to, and standing on the main royal yard, a distance of 135 feet above water—as high as the Brooklyn Bridge. The "Redlands youth" followed, touching the yard, and then the captain came down the wire stays hand over hand, abandoning the rattlings (ladders). He then escorted the "Belle of the Bark" up to the main top. This was too much for "Redlands Mac" and he sprang into the rigging. The remaining passengers followed suit, including the "ficy Texan," Madame Georgia and Senora San Francisco (their sea nick names), and were well repaid for the effort by the sight of the mighty ocean and the smiling faces of the sailors and officers upon the decks. The second mate passed the word aloft "to be careful and not squeeze the tar out of the rigging." Not a bad bit of humorous advice considering the way that the greenhorn rigging climber clings to everything within clinging distance. He feels as if he did not have hands enough, and when he gets down he is ready to praise the sailor who has to run up the rigging, the blackest, stormiest, roughest night and no time to consider the danger. Sailors are certainly entitled to all of the hero songs and praise that have been bestowed upon them. If kind and thoughtful treatment had always been their portion on all ships, they might have thought their lives worth the living of the heroes pictured in verse and song.

Another favorite perch of the passengers is out on the bowsprit. This great iron pole, pointing ahead at a raking angle and supplied with ample hand and foot ropes, gives a vantage point of looking backward on the ship and water, which is simply fascinating in vision and charming in hearing, for above arc the inspiring, towering masts, yards and square sails; below is the surging, foaming spraying ocean playing about the ship's bows. At the end of the bowsprit is fastened a shark's tail, it being the custom on the Welch to lash to the jibboom (end of bowsprit) every shark caught on the bark. Contrary to some sea superstition the performance has never taken the wind out of the sails of the Andrew Welch.

The taffrail log was put over the side to-day to keep a more accurate record of the day's run, as land was drawing near.

Latitude, 21° 51' north; longitude, 152° 20' west. Day's run, 175 miles. Honolulu 330 miles away.

Aug. 8, 1911; wind northeast by north; course, south, 67° west.

Our southing and westing is pretty well run down with only 275 miles between us and Honolulu; about the same wind and same course each day as we stroll over the sparkling Pacific. The ship is being "house cleaned" for the arrival in port. The teak woodwork has been sand scoured, then oiled, which brings out the rich coloring of this superb wood. The poop deck has been scoured and oiled, the binnacle lamps polished and also the brass work, and there is a general air of expectancy everywhere. Prizes are being offered for the first passenger to sight land, with a penalty to the one who takes the heavens or the ocean for terra firma.

Mark Twain, in his capital story of outdoor life, entitled "Roughing It," relates how in a voyage in a sailing ship from Honolulu to San Francisco the passengers, during a protracted, monotonous calm, were so hard pressed for occupation and amusement that they gave a part of their time every day to trying to sit on an empty champagne bottle, lying on its side, and at the same time thread a needle without touching their heels to the deck or falling over. The passengers of the Welch were not driven to such an extremity, for in the first place we were not becalmed long enough to bother us; in the next place we had no champagne bottles, and finally the time was spent too pleasantly in other ways.

There were some land-loving passengers aboard who longed to see mother earth, but to the sea lovers every day was a joyful dream, and we were of the opinion, expressed in Paul Eve Stevenson's fine descriptive book, "By Way of Cape Horn," in which he says: "Ah, no one knows what the real beauties of the sea are until he has made at least one deep-water voyage in a sailing ship. The flying glimpse of the Atlantic that one catches from the deck of a steamer or the experiences of a midwinter voyage to the Mediterranean gives one no idea of what ocean life really is. No; to comprehend the sea in all of its splendid phases one must live on it for months at a time, for not till then can one fully appreciate that "they that go down to the sea in ships that do business in great waters, these see the works of the Lord and his wonders in the deep."

Latitude, 20° 49'; longitude, 152° 14'. Day's run, 85 miles. Honolulu, 275 miles away.

[TO BE CONCLUDED.]

THE announcement was made last week that the extensive collection of game heads made by Clarence H. Mackay had been presented by him to the National Collection of Heads and Horns now housed in the Administration building of the New York Zoological Society in Bronx Park. The group comprises four bison heads, ten elk heads and twelve moose heads, and taken together it is one of the finest collections of its kind in existence, while some of the specimens are unequalled.

GAME BAG AND GUN

New York Legislature.

ALBANY, N. Y., Jan. 22.—*Editor Forest and Stream:* Senator Roosevelt, of Dutchess, has introduced in the Legislature a bill amending the conservation law by consolidating in it a revision of the present laws relating to fish and game, including the forest, fish and game law and all laws relating to shellfish. The principal changes of substance, as stated by the Forest, Fish and Game Commission (which is responsible for this bill) in a memorandum which accompanies the bill as introduced, are as follows:

Increase in the number of game protectors from 95 to 125.

Permission granted to a citizen to bring into the State under certain restrictions game lawfully taken by him in another State or country.

Permission granted a non-resident to take out of the State the number of game he may lawfully take in one day.

Trapper's license incorporated in the hunting license.

A non-resident fishing license with fee of \$2 exacted, but not applied to persons under sixteen years of age and a \$10 non-resident trapper's license required.

Killing of deer limited to bucks only, and season changed to Oct. 1 to Nov. 15, both inclusive.

Bag limit of five placed on squirrels.

Use of ferrets in taking rabbits prohibited, but owners of farm lands permitted to take rabbits at any time in any manner.

Bag limit of twenty-five to a person and thirty-five to a blind or battery placed on wildfowl.

Season on certain upland game birds advanced to Sept. 16, closing Oct. 31.

Closed season on quail, except on Long Island.

Law made general on pheasants, open season advanced to Thursdays only in October.

Season on woodcock advanced to Sept. 16 up State, and on Long Island advanced to Oct. 15.

Shooting on public highways prohibited.

Persons permitted to take minnows for bait for their personal use, but not for sale without procuring a license.

Trout season made general, opening date fixed May 1, except on Long Island where it is unchanged, size limit increased to seven inches.

Sale of bass prohibited, season made general, the opening date being June 16.

Limit on whitefish made twelve inches.

Mile limit in Lake Ontario with regard to netting changed to one-half mile from Oct. 1 to April 30.

A license is required for dealers in imported game, not to include, however, retail dealers, hotel keepers or clubs.

Among the amendments incorporated in a bill submitted by the conservation commission are provisions for greater protection from fire in the forest preserve counties. The commission would compel the operators of logging railroads which have caused so many fires in the past, to take the same precautions as the railroads acting as common carriers. Slashings and debris must be burned when in the judgment of the commission there is danger of fire, and any person setting

a fire on or near forest or brush land, and leaving it unquenched is made guilty of a misdemeanor. To start a camp-fire on or near forest lands without clearing away the brush and leaves for at least ten feet is likewise a misdemeanor, punishable by fine or imprisonment for not more than ninety days.

The provisions with regard to the scientific cutting of timber upon lands in the forest preserve and the laws encouraging the planting of forest trees, if enacted, will be in advance of any legislation yet enacted in the United States, it is asserted by the commission. The bill gives to the commission power to regulate the cutting of timber to the end that the forest cover may be maintained, thus conserving the waters, and seeks to encourage the growing of forest trees throughout the State.

It is provided that no soft wood timber less than eight inches in diameter, and no hardwood less than twelve inches, breast high, growing upon any wild forest lands in Hamilton county and in certain towns of Clinton, Delaware, Essex, Franklin, Greene, Herkimer, Lewis, Oneida, Saratoga, St. Lawrence, Sullivan, Warren and Washington counties, shall be cut without the written consent of the conservation commission.

Senator Thomas, of Madison, has introduced a bill relating to coarse fish in certain counties.

Senator Ramsperger, of Buffalo, has introduced a bill appropriating \$50,000 for building and equipping at Cornell University a range of glass houses for experimental and teaching work in floriculture.

Assemblyman Sullivan, of Chautauqua, has introduced a bill relating to whitefish.

Assemblyman Patrie, of Greene, has introduced two bills as follows:

Providing that suckers may be taken by hooking through the ice in the Schoharie Kill below the Iron Bridge, at Hunter, and in the Batavia Kill, below Soper's Dam, at Windham, in Greenc county.

Including carp among the kinds of fish that may be taken in the Delaware River and that part of the Hudson River below the Troy Dam, with nets operated by hand only, from March 15 to June 15, both inclusive.

Assemblyman Walters has introduced a bill appropriating \$75,000 to enable the conservation commission to select sites for six game farms at such places within the State as the commission may determine, and to purchase for the State such lands as may be deemed necessary therefor.

Brown's Tract Guides.

UTICA, N. Y., Jan. 13.—*Editor Forest and Stream:* The Brown's Tract Guides' Association, which has done a great deal to promote the interests of fish and game, held its annual meeting at Old Forge on the evening of Jan. 11. Notwithstanding the fact that the mercury indicated 19 degrees below zero, and the snow was nearly three feet in depth, there was a very large attendance. The following officers were

lected for the ensuing year: President, George Godsell, Old Forge; Vice-President, J. E. Ball, Old Forge; Secretary and Treasurer, A. M. Church, Boonville; Executive Committee, William Weedmark, E. J. Ball, Old Forge; Fay Smith, Beaver River; Daniel Charbonneau, Old Forge; M. J. Oley, White Lake; E. J. Arnum, Inlet; E. M. Covey, Big Moosc.

The report of Secretary and Treasurer Church stated among their things: "The year has been a quiet one with the association. We applied for and received from the Fulton Chain hatchery located at Old Forge 45,000 brook trout fingerlings, which were planted in streams tributary to the Fulton Chain of Lakes, Big Moose and in the river. We also planted lake trout fry and fingerlings and whitefish fry in the lakes. The general report from people along the chain of lakes was that the fishing was very much better than it had been in many years. There seemed to be a large number of the lake trout just reaching the fifteen-inch limit. Many have questioned the wisdom of our stocking our waters with the lake whitefish, but during the past season they have been caught by the hundreds of pounds with hook and line.

"At the request of the boards of the towns of Webb and Inlet in 1907, fishing in the small streams in their towns was prohibited for a term of five years. Unless measures are taken to renew this close season in those streams, they will be open for fishing on the first day of May next. As these small streams are the places where the trout fry and fingerlings are released on being taken from the hatchery, and where they are supposed to grow and, reaching maturity, drop into the larger streams and lakes, it is important that this close season be continued, and I would suggest that the president be authorized to appoint a committee from each town to attend to this matter.

"Nearly all the reports were to the effect that deer were more scarce than ever. The further back in the forest, the more the scarcity was noted. Hunters were as numerous as in other years, but the kill was much less. The winter of 1910-1911 was very severe. Many deer died from its effects, some early fishing parties seeing forty or fifty carcasses on their fishing trips through the yarding districts. This mortality was more general than in any previous years of my experience. Feeding them by cutting brush and browse is all right in a general way. Helping them by means of snowshoe paths and trails is a great help also, but they cannot be reached to a great extent by men on snowshoes in isolated places, and the remedy lies, in my opinion, only in some regulation that will allow their increase in numbers to such an extent that they may break their own roads as they formerly did and find their own food in that way. In my report of last year I stated to you that I believed in, and was in favor of, an open season during which bucks only should be killed, and I believe that in this lies the solution of the whole question."

At the close of the business meeting the guides repaired to the dining room and enjoyed a fine supper of which some 250 partook.

W. E. WOLCOTT.

All the game laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

California Notes.

SAN FRANCISCO, Cal., Jan. 15.—*Editor Forest and Stream:* At the annual meeting of the California Fish and Game Commission, Frank W. Newbert, of Sacramento, was elected president. Mr. Newbert has been a member of the commission, but a short time, having been appointed by Governor Johnson to fill the vacancy caused by the resignation of Dr. David Starr Jordan prior to the departure of the latter for Japan on a lecture tour. The new president of the commission has a very wide acquaintance among sportsmen in this State, and is especially well versed with the fish and game laws.

Another new member has taken his seat with the commissioners. Carl Westerfeld was appointed a short time ago to fill the vacancy caused by the resignation of Fred D. Sanborn.

Dr. C. H. Gilbert, of Stanford University, who has been making a special study of the history of Pacific coast salmon and other fish, tendered his resignation, which was accepted, and this work will now be in charge of W. H. Shebley, superintendent of State hatcheries.

The district of the State formerly under the direct control of the San Francisco office has been divided and a branch has been established at Sacramento in charge of Commissioner Newbert. The territory controlled from the new office will extend from the summit of the coast range mountains to the eastern boundary of the State, and from the Oregon line south to the San Joaquin Valley district, in charge of A. D. Ferguson. The San Francisco office will have charge of the coast territory and the counties around the bay.

Steps are being made for the betterment of the service, and it is planned to place civil service rules in operation in all departments. It is not planned to have the examination for such position as game warden of a technical character, but to make it of such a nature that hunters and woodsmen can successfully compete. It is also planned to have a traveling deputy whose duty will be to cover the entire State, visiting game wardens and instructing them in their work. Violations of the law are to be dealt with with more strictness than in the past, and during open seasons special deputies will be on duty in the duck and quail districts.

Secretary Ernest Schaeffle's report shows a balance of \$104,899.15 in the treasury. During the year just closed there were 766 arrests made for violations of the fish and game laws and 612 convictions were secured. Fines paid amounted to \$13,693.50 and jail sentences totalled 309 days.

The success that has been met with in operating the State game farm and fish hatcheries has been such that it has been decided to increase the output of these. The game farm will be retained at Hayward, with an auxiliary farm at Folsom where birds will be reared on the prison grounds. Valley quail are now being secured, and it is planned to rear these in large numbers.

Rabbit drives, which were formerly common throughout the San Joaquin valley, are now rarely held, owing to the fact that in but few places are jack rabbits to be found in sufficient numbers to make such an event successful. An old-time drive was held recently at Raisin City, near Fresno, in which 600 persons took part. The hunters made a line four miles square and grad-

ually closed upon the rabbits, killing them with clubs and shotguns. No rifles or revolvers were allowed. Over 1,000 rabbits were killed as well as three coyotes and other predatory animals, the rabbits being shipped to the Salvation Army at Los Angeles.

Mayor Frank Mott, of Oakland, has offered a reward of \$25 for the arrest and conviction of anyone caught shooting ducks on Lake Merritt, which is in the heart of the city. The park commissioners have been feeding the birds and doing everything in their power to induce them to stay on the lake, but numbers of them have been killed by early morning hunters. Shooting is prohibited within the city limits, but the lake is so large that it can be patrolled with difficulty.

Justice of the Peace Holton Webb, of Riverside, Cal., was shot and seriously injured on Jan. 4 by an Italian, John Chinicci, whose son had been fined by Webb for shooting without a license.

Heavy storms throughout the Pacific Northwest have driven southward ducks and geese in large numbers. The rains to date have been very light, and as a result there is splendid shooting. Nowhere is there a lack of water, and the arrival of northern birds is keeping the ponds well stocked. The absence of heavy storms here has resulted in shooting on San Francisco Bay and the nearby marshes being better relatively than in the interior.

A magnificent specimen of the wandering albatross, recently caught on the coast, has been presented to the Golden Gate Park Museum at San Francisco by J. B. Williams. The bird stands five feet in height and measures nine feet from tip of wing to tip of wing.

GOLDEN GATE.

Southern Game.

NEW ORLEANS, La., Jan. 20.—*Editor Forest and Stream:* The severe cold spell has rather deterred even the hardiest and most daring hunters during the past several days. The rainy spell lasted several weeks and was interspersed with intense cold for this climate. There were several freezes, and ice formed on many of the still waters and lagoons.

Ducks at the present time are more plentiful than at any time this season. The ducks are in excellent condition. The market hunters have had almost a monopoly recently and have brought large numbers to the city and shipped hundreds to the large cities in the North and East. Quail have not been so abundant as was anticipated.

Mayor Martin Behrman, of New Orleans, received during the week by express a wild turkey gobbler weighing twenty-three pounds. The bird was sent by a friend who resides in Covington, thirty miles from this city. The gobbler was killed in the woods near Covington. The Mayor was also the recipient during the last few days of another big wild turkey shot near Abita Springs. Both of these specimens attracted considerable attention when they were displayed at the City Hall. The turkeys were in splendid condition and proved incentives to several to seek turkeys in the localities referred to.

Practically nothing has been done in the way of fishing during the past two weeks on account of bad weather and storms. It is hardly probable very much fishing will be had until after the Mardi Gras.

F. G. G.

A Tribute to Charles Sheldon.

LOUISVILLE, Ky., Jan. 12.—*Editor Forest and Stream:* I have just received a very high tribute to the distinguished genius of Charles Sheldon. It came to me unsolicited in a letter from an Alaskan who was companion and guide to Mr. Sheldon for a number of months. In part, it follows:

"You said you had read Mr. Sheldon's book on the 'Wilderness of the Yukon.' He is very conservative and thorough. What he writes you can depend on, and a better sportsman never hit the hills. He nearly always hunts alone, and whatever he goes after he generally gets. I have known him to start out at 8 in the morning with a biscuit and a 'billie' of tea, and if he made a killing, get back at two or three on the following morning, with the skull and hide. Not once, but many times has he done this. He always takes his notes in the field and never lets them run over a day. If I were with him he would read them over to me to see if I thought he had exaggerated. I never found that he had. He was always very conservative and yet thorough."

The guide's report merely confirms the opinion anyone must have after reading what Mr. Sheldon has published. His Yukon book will rank with the best of English and American books on mountain hunting. And to natural history he is opening up a hitherto little known region, the Northern Rocky Mountains. It is with lively interest and keen appreciation that one learns that his recent superb volume on the British Yukon is to be followed in after years by the publication of his journals of travels in the upper Mount McKinley region, and on the islands of Alaska.

Natural historians will no doubt follow with profound interest and considerable enlightenment the notes as they are made public of the close and careful scrutiny Mr. Sheldon has made of the habits and relationships of the large mammals in several years' field work in the remote and out-of-way Northwest America.

BRENT ALTSHELER.

Will Bear Watching.

NEW SALEM, Mass., Jan. 18.—*Editor Forest and Stream:* At a recent public conference called by the Massachusetts Fish and Game Protective Association at Boston, it was mentioned by one man that wherever pheasants abound, there are no partridges.

In a report from Batavia, N. Y., in your issue of Jan. 13, Mr. Gardiner mentions the shooting of a large number of pheasants in his county last fall, indicating that pheasants are plentiful there, but he remarks incidentally that "our partridge (grouse) have about been cleaned out in this county, and we expect to get a three years' closed season beginning in the fall."

In the book published by our State, "Useful Birds and Their Protection," the author mentions watching a ring-necked pheasant and a quail feeding together, and one day seeing a pheasant strike a quail on the head with its beak, exactly as a hen will sometimes strike and kill a strange chicken.

For the restoration of partridges, therefore, perhaps it is well that a large number of pheasants were shot in Genesee county last fall. These foreigners will bear watching.

E. O. M.

Animals in the Cold Snap.

FOUNTAIN CITY, Ind., Jan. 17.—*Editor Forest and Stream:* The inclosed clippings relating to the presence of robins in this section at this time of year and in the midst of a record-breaking cold spell of weather is news for the oldest inhabitant.

We are wondering whether the incessant persecutions of these birds in the South has driven them back here to take their chances in our merciless cold.

O. H. HAMPTON.

LAWRENCEBURG, Ind.—Trappers and hunters are well pleased with the deep snow, as it assists them in capturing wild animals for food and for their pelts. More than 3,000 rabbits have been trapped and caught with ferrets during the last week and hundreds of frozen quail have been picked up by hunters and are used as food. A number of farmers have been scattering grain in their fields for the quail to feed on during the snow.

CRAWFORDSVILLE, Ind.—W. F. Swan, who lives near here, says: "A flock of robins, estimated at more than one hundred, is feeding on cedar seeds in my grove. The birds arrived recently while the mercury was 2 degrees below zero, and appeared to be as lively as they are in the summer. I am seventy-five years old and had never seen the like before."

NASHVILLE, Ind.—Otto Kelley and Charles Harden, living about five miles south of here, came to town one morning with thirty-eight rabbits, which they had caught with their hands. The rabbits could not run and were nearly starved, the snow being seven inches deep.

NEWCASTLE, Ind.—John Hunt, living on the Ben Allen farm, west of the city, reports that six robins have taken up their abode in his orchard, despite the zero weather. The birds, Mr. Hunt says, are building nests and evidently preparing to stay until spring.

HAGERSTOWN, Ind.—Fifty or more robins are eating frozen apples in the orchard of J. T. Hunt. They do not seem to mind the below zero temperature.

JACKSONVILLE, Ill., Jan. 20.—*Editor Forest and Stream:* I have just read the article in your current number on belated migrants. Mr. Ewbank reports that he saw a robin on the 13th at Hendersonville, N. C., with snow on the ground. That robin was having an easy time. On the morning of Jan. 15, with snow on the ground some six inches deep, and the mercury in the region of 15 degrees below zero, a robin was in my back yard, "jes' as sassy as a jaybird." And we have had zero weather since Jan. 1 and once as low as 24 degrees below. All winter I have seen and heard of robins being seen. I do not remember a winter when they have been so plentiful, and yet this is the coldest winter for many years. A friend reported a robin a few days ago in one of our parks which she tried to catch, it being hardly able to fly, but the one I saw last Monday was bright and chipper.

Yesterday I saw in my garden a yellowhammer or flicker, the first one I remember to have seen at this time of year. During the night a rain had fallen, which had turned to sleet, cover-

ing trees, ground and everything outside with a good coat of ice. The flicker was in the garden busily getting his breakfast from an ear of sweet corn left on the stalk. When disturbed he flew to a nearby peach tree, but returned to his ear of corn as soon as I withdrew a short distance. He evidently knew a good thing when he had found it.

But the mockingbirds we must "pass up"; that is, the regular Southern gray mockingbird. Yet for two or three years a pair—I have often wondered if it was the same pair—spent the summer on a farm I have some twenty miles north of here. I have not seen them for two or three years. They probably nested, being about all summer. They were the first of these birds which I have seen, either in Illinois or Indiana, though they may be common in the southern part of these States.

L. O. VAUGHT.

Game Preserves.

SCHUYLERVILLE, N. Y., Jan. 19.—*Editor Forest and Stream:* I have read the article on game preserves by Mr. Chase. Evidently something has happened near him. But the game preserves have come to stay, and there will be more of them every year. And the object of most of them will not be to protect the game but to protect themselves from general damage and larceny. I have a couple of tracts of farming land of about 1,000 acres each on which probably 100 bushels of berries, nuts, etc., go to waste; but I have had such disagreeable experience with trespassers that I exclude everyone but the neighbors.

Within fifteen miles of here the following has happened: One two-year-old colt shot and killed by deer hunters; result, twenty to thirty farms posted. One buck shot and killed by berry pickers because he was ugly; two farms posted. A farm dog killed because he interfered with a squirrel hunter by barking at hunter, which scared the squirrels; ten farms posted. Hunters killed two deer on a farm and the owner asked them to give him some of the meat for dinner. He was told to go to a warm place. Two more farms posted.

In my experience I had two hundred sheep let on to a railroad track by mushroom gatherers leaving the gate open. Damage \$60; could not collect one cent—signs went up on my places. One farm was posted because a hunter was filling his coat with walnuts and swore at the farmer's wife who told him to get out. As against this, some of the farmers have posted their farms so their sons could get the skunks, and one farm is posted on account of a thirty-acre marsh which has lots of wild ducks for this part of the country. But this is the only place that might be possibly called a game preserve. We have the trespassers pretty well off of our land, a long term for some chicken thieves we helped run down and some straight talk to some other people has helped keep us clear, but in spite of all our efforts some one got away with the wheels in a back barn from a heavy wagon. They must have needed them badly as they were heavy and they carried them quite a ways. I have a 400-acre orchard and had some little fruit stolen, but we did very well, considering there are ten miles within three miles of our farm.

What Mr. Chase says is pretty much so.

Private preserves are selfish and they foster class prejudice. Strife of conflicting interests has arrived here, but the bloodshed so far has been dog, sheep and horse blood. We are getting the best of the lawless element here, but the signs are going up on farms all over the country and will continue to, as the general public has not a high sense of decency and looks upon a farmer as something to be preyed on.

B. E. C.

State Game Farms.

SYRACUSE, N. Y., Jan. 20.—*Editor Forest and Stream:* A bill has been introduced into the Senate of the State of New York by Hon. J. Walters, Senator of Onondaga county, asking for appropriation of \$75,000 for six game farms. All true sportsmen should write to the Governor and their senator and assemblyman urging the passage of this bill, and they should also get their friends to do the same.

Sportsmen should work hard. Do not rest with one letter or no letter at all, relying upon others to do the work. Every man's assistance is needed. Gun clubs should call a meeting to urge the passage of this bill. If we can get these six game farms, there will be more game in the State of New York than ever before.

I trust that every man will do his duty. We would thank your paper to urge upon every sportsman to give assistance to this measure, and may your paper from time to time assist in getting this appropriation for game farms by keeping the interest of the sportsmen awakened to the necessity of urging the passage of this bill.

W. E. HOOKWAY, Chairman.

Biltmore Forest School.

DARMSTADT, Germany, Jan. 10.—*Editor Forest and Stream:* We are still in Darmstadt, deeply engrossed in the studies of the German forests. During December we made a ten days' excursion to Würzburg and Kronach in Bavaria, and to Dresden, Tharandt and Schwarzenberg in Saxony. Near Würzburg we visited the forest of Grammschatz, well known for its huge oaks which have towered for centuries as so-called "standards," over an underwood of beech, hornbeam and basswood, coppiced in rotations of twenty-four years. In Northern Bavaria we were located in the Frankenwald, a spruce and fir region. From Dresden we visited the suburb of Tharandt, which has the honor of being the first technical forest school in the world. At Schwarzenberg we became acquainted with the problems of Saxon forestry.

The work of the school is progressing most satisfactorily.

JAMES W. EGNOR, JR., Class President.

Practical Forestry.

THE New York Conservation Commission, having made an examination of the forest conditions on lands of State institutions at the request of the fiscal supervisor of State Charities, reports that of the total acreage of 8,908, about 40 per cent., or 3,568 acres, badly need the application of practical forestry. It is pointed out that this would not only effect increased efficiency of the several State institutions and reduce their cost

(Continued on page 130.)

Lines for Fly-Fishing.

SULLIVAN COUNTY, N. Y., Jan. 22.—*Editor Forest and Stream:* The subject of lines for fly-fishing is a very interesting one and much discussed by anglers. Twenty years ago American enameled waterproof lines were considered the best in the world, and large quantities were exported. This is still true in lines of medium or low price, but we import many of the English tapered lines of high grade. This is due probably to the discovery of the air pump method of dressing with pure boiled linseed oil and its general adoption by manufacturers on the other side of the water. The process is a rather tedious one, as in the best lines many soakings of oil under the air pump are required and time allowed for drying and rubbing down between coats.

Several of the English lines bought by me have had but a short life of usefulness, while others have been excellent. However, it is no longer necessary to go abroad for quality, as the very best lines of any taper required are now made in the United States. This matter of the taper desired varies with the rod or the individual. One man prefers a rapid three-yard taper, another a taper of either five or six yards. I fancy that the short taper works best on a very stiff rod; that is, in regular stream fishing; I am not thinking of tournament casting. We all have our notions and I do not like the very heavy lines for fine fishing with small flies unless one has to butt into a strong adverse wind. Long casts are the exception, not the rule, and delicacy and accuracy of delivery are the main requisites. Our trout are not foolish in the day time, whatever they may be at night, and a heavy line falling and lying across the surface of a placid pool does not encourage them.

On hard-fished public water in this country the trout have a pretty hard time of it, as they are tempted to destruction in every way, both by day and by night, and it is only by constant restocking that we can hope to answer the demands made by the constantly increasing army of fishermen.

The careful distribution of the fly or fingerlings is of the greatest importance and requires time and discretion in the selection of the most suitable places. The State has been very liberal in answering requisitions, but cannot be expected to supply all applicants with all the young fish they ask for.

The "rare fish" which "was supposed to have followed the yachts from the West Indies" etc., reported in the New York Times as having been caught by Mayor H. B. Marshall, of Greenwich, Conn., proves to have been a handsome striped bass of fourteen pounds. I learned the facts in the case only recently.

A fourteen-pound bass taken near Greenwich is certainly a fine fish, but by making a "story" of its capture, the reporter led many people astray. Scientific pisciculturists were interested in the strange and rare wanderer "fifty-three inches long and only twenty-eight pounds in

weight," and naturally enough made inquiries in regard to it.

By the way, it seems to me that a very common fish found along our rocky coasts in large numbers is not appreciated as its merits deserve. The blackfish or tautog affords much sport all along shore and is a good table fish when properly prepared. It should be skinned before cooking.

It is very strong and when fished for with rod and reel puts up a good fight. Special hooks are made for this work and clams seem to be as good a bait as anything, besides being tough and staying on the hook well. Cunnners are apt to worry one when he is using lobster or crab baits. I have taken eighty pounds on a tide at the eastern end of Long Island Sound years ago, and believe that conditions have not changed since that time. Very large tautog are sometimes caught.

THEODORE GORDON.

Fly-Casting in Australia.

SYDNEY, Australia, Dec. 13.—*Editor Forest and Stream:* I notice that in your issue of Sept. 30 of this year, referring to Mr. Anderson's letter to you, you state that Dr. Maitland's cast of 129 feet odd was not a world's record.

We are given to understand that the record is held by Messrs. Mills and Leonard, with 120 feet each, and that the other records are not recognized as standards, as they are made by laying the line along the bank and ripping it off when there is a favorable puff. If this is so, surely it cannot be recognized as fly-casting.

I presume you are aware of our methods. We cast off a punt, and have to lift the line in front of us sheer off the water, and cast clean and high at the back, without allowing the fly to touch the water. If it should touch, it is no cast, and we have to commence again.

I might mention that it is the exception (I might say that it never happens) when a caster's line is fully extended that his fly touches the water behind him.

I should be glad to have any information from you in reference to this matter. As you are aware, we are very enthusiastic in this country, and are very fond of the sport, but we insist upon its being carried out in a fair and clean manner.

H. J. SOLOMON.

[While it must be admitted that Dr. Maitland's cast was not a record, it is only fair to inform our good friends in Australia that the American records for distance fly-casting were, unfortunately, made under conditions which, although permissible, are found only where the high records have all been made; name'y, on Stow Lake in Golden Gate Park, San Francisco. We are informed by sportsmen who have cast or witnessed the casting there, that the casting point is at the head of a valley and very high above the sea; that when the steady trade wind is blowing there is a strong draft up this depression; that the cast is made down wind in a way best adapted to that particular spot; that in a high back cast the line is whipped forward by the wind and carried many yards further than

is possible on any other well known casting water, resulting in the wonderful scores that have been made so frequently as to be regarded as commonplace. We are also told that there is not water, but a bank of air behind the platform, hence touching the water behind is impossible.

Some of the great scores made on Stow Lake with fly-rods follow:

H. C. Golder, 11 foot 10⁷/₈ ounce rod, 140 feet.

T. W. Brotherton, heavy rod, 137 feet.

W. D. Mansfield, 11 foot 10 ounce rod, 134 feet.

W. D. Mansfield, five-ounce rod, 129¹/₂ feet.

Mr. Brotherton's best cast in the East, where he now lives, is 109 feet.

That it is not likely that Messrs. Golcher, Brotherton and Mansfield could equal their Pacific coast records inland is the opinion of expert casters everywhere. They base their belief in part on the probability that no rod of the sort commonly used in casting is equal to the task of lifting sufficient line to make 140 foot casts over the water and from a platform 18 inches high, which is standard; and by the same token, no caster is believed to be able to cast so far under usual conditions.

Therefore, if the Stow Lake records are to be recognized, there will always be, hanging over the heads of casters who strive to excel, the apparition of 140-foot casts, so that, no matter how high their best work, it will appear insignificant.

On the other hand, the great casting tournaments have all been held in places more or less alike so far as wind and the state of the air enter into the conditions affecting casting; these are Kalamazoo, Racine, Chicago and New York city. The time covered is several years; the season the summer. The best records are, for heavy rods, 120 feet by Reuben Leonard and E. J. Mills, 117 feet by Fred N. Peet; average of highest scores, not much over 100 feet; general average for all casting in contests, under 95 feet. Five ounce rods, Fred N. Peet, 102 feet; average of highest match scores, around 90 feet; general average of all contest casting, under 85 feet.

In the last analysis, an average for the season's contests of 105 feet with heavy rods and 90 feet for five-ounce rods is an excellent one, and yet the Stow Lake averages throughout the season make these records appear insignificant, as anyone will admit in looking at the various scores that appear in these columns in summer.

There is only one remedy apparent: Recognize no score unless made over water, front and back. Some of the Chicago records were made over a lawn back cast. No penalty is imposed on touching on the back cast. It is generally believed that one should be made, but over the water it is to the caster's interest to avoid touching behind him, since that kills the scoring cast.

If all tournament casting were by rule held over water, front and back, then conditions would be more nearly equal everywhere, with the balance in favor of dry air and a wind from the rear or no wind at all.

Perhaps Mr. Solomon will tell us what the average conditions are at Sydney. There is an impression here that strong, dry winds are the rule there, and that the high average casting is partly due to those conditions. The average here is more or less humid air and fishtail winds. to quote from the marksmen, meaning variable currents.—EDITOR.]

NATURAL HISTORY

Winter Elk in Jackson Hole.

LAST spring Congress appropriated \$20,000 for the feeding, protecting and removing of the elk in Jackson Hole and vicinity. This action was the result of complaints made for years of the loss of elk by starvation which has been taking place ever since by the settling up of the country, their old wintering grounds in the Red Desert was cut off from the elk, and they were confined in winter to the region known as Jackson Hole. This is a part of the valley of Snake River, in Wyoming, extending in a general way from Jackson's Lake—or perhaps better, the valley of Buffalo Fork, of Snake River—down the larger stream to and beyond the valley of the Hoback River, which also enters Snake River from the east.

The act making this appropriation provided that the funds should be administered by the Department of Agriculture, and the work was turned over to the Biological Survey. To Edwin A. Preble, one of its assistants, was assigned the work of investigating the subject.

At Cheyenne, Mr. Preble met Mr. Nowlin, a former State game warden, and Mr. Hudson, the present game warden, and proceeded to Jackson. The report that he made to the Biological Survey has just been issued, and is an interesting document. The description of the country and the maps and photographs which illustrate the paper render it very vivid.

Mr. Preble estimates the number of elk in this region as from 20,000 to 25,000. The number was formerly much greater, for practically all the elk in the high mountains in the south of the Yellowstone Park, and to the southeast of that, used to begin to work south in early autumn and following down Snake River for a considerable distance across over into the Red Desert. He estimates the number of cows at three years old at 6,625, and the number of calves, male and female, at 3,750. He estimates that from 2,000 to 2,500 elk perished from starvation in the Jackson Hole region in the winter of 1910-11. This loss was largely in calves, though of course a small percentage of it comprised old and wounded animals. He concludes, however, that there should be an annual product of nearly 5,000 calves, and that until the deaths equal that number the elk will about hold their own. He estimates also that 2,000 elk are killed annually by hunters, and about 1,000 by wolves. We should suppose that the estimate of 1,000 by wolves to be far in excess of the fact, but Mr. Preble has of course had the best opportunities for gathering information on this point. These estimates bring the annual death rate close to Mr. Preble's danger line.

In 1910 and 1911 the State fed 250 tons of hay. This saved the lives of large numbers of elk, but of course was much less than the amount needed.

Under the severe conditions of winter, the elk become extremely tame and can readily be approached. They soon learn to understand the plan of feeding, and follow the loads of hay so that the herd gradually string out. On the

wagon's return journey, small quantities of hay are thrown out at short intervals, and thus all the animals have a chance to feed.

The damage done by the starving elk to the settlers' fences and hay stacks has been many times described.

When the elk cannot find grazing, or tender shoots of shrubs, they begin to eat the willows and aspens and destroy young trees of considerable size. In past years we have seen taken from the stomachs of starving elk quaking aspen branches thicker than a man's thumb. During the severe winter of 1910 and 1911, feeding did not always save the suffering animals, for it is reported that large numbers, both calves and older animals, died after the feeding had begun as a result of starvation before food was offered.

As the winter ends, and the weather grows milder, the elk withdraw from the valley to the higher lands where the cured grass, which has been covered by the snow, supports them. Gradually as spring advances they move back toward their summer range where, of course, the females again produce their young. With the coming of the first snows, the animals begin to work down from the high mountains toward the lower land. These migrations at first are made individually, but as the weather grows more severe and the snow deeper, the elk collect in large herds.

Of the natural enemies of the elk in the Jackson Hole country, Mr. Preble regards the wolves as the most important. He says that there are about twenty-five adult wolves in Jackson Hole, and they are extremely destructive to elk, as they are to stock.

There is more or less illegal killing in this region throughout the year for various reasons, and the tusk hunter, who butchers one of these fine animals simply for the teeth which he sells, is the most contemptible of all the destroyers of the elk.

By permission of the State authorities, Mr. Preble captured a dozen vigorous elk which were taken to the railroad. Of these a part were sent to the National Bison Range at Ravalli, Montana, and a part to the Wichita Game Preserve, in Oklahoma. Both shipments reached their destination in good condition.

Mr. Preble recommends a game refuge in Jackson's Hole, where of course the elk would have to be fed in winter. Such a suggestion was made some time ago, but the settlers of Jackson Hole could not agree on any plan, and nothing has been done.

Mr. Preble's report, made with the same care that characterized his earlier reports to the Biological Survey, is an admirable document, and should be in the hands of everyone who is interested in North American big game.

Jamaican Trade in Booby Eggs.

"BOOBY" is the name given long ago by British seamen to several of the smaller species of gannets, because these sea fowls are regarded as stupid, since they show no fear of man.

In the spring and summer, according to Consul Julius D. Dreher, of Port Antonio, millions

of these birds flock to Morant Keys, three islets about thirty-five miles southeast, and to Pedro Keys, four islets forty to fifty miles south of Jamaica. Both of these groups are leased for a term of seven years to private individuals by the colonial government of Jamaica. Although cocoanuts have been planted and a few huts built on Pedro Keys, the lessees derive their profits almost wholly from the sale of the immense number of eggs laid by the boobies on the islets of the two groups. These eggs, which under the lease may be collected three times in a season, are brought to Kingston by sailing vessels. During 1911 three schooners brought 38,000 dozen eggs from Morant Keys and three schooners 20,000 dozen from Pedro Keys. The eggs are put up in boxes of 500 and 1,000, which are sold at \$3.00 to \$3.25 for a box of 500. The arrival of a boat with booby eggs is the occasion of no little excitement among the negro women, who buy them by the box and then sell them by retail chiefly in Kingston, though they are also sold in Spanish Town, Port Antonio, Montego Bay, and in other towns in the island. Though sold mostly by the dozen to housekeepers, booby eggs are also peddled, hard-boiled, on the streets of Kingston, salt and pepper being provided that the purchasers may eat the eggs at once. These eggs are about two-thirds the size of an ordinary hen's egg, and are quite palatable.

Birds on Lake Ontario.

BROCKPORT, N. Y., Jan. 18.—*Editor Forest and Stream:* In your issue of Jan. 13 I notice an article on "Noteworthy Waterfowl," recording the taking of two eider ducks on Long Island. Believing it would be of interest I give a few records of rare or unusual occurrence of waterfowl in the western end of the State.

I have on two occasions taken the eider duck (*S. spectabilis*) on Lake Ontario. One, an adult female, was taken on Dec. 22, 1895; the other, a young female, on Nov. 18, 1900.

A probably more noteworthy record is the securing of a young male, Barrow's goldeneye, on Lake Ontario, in Monroe county, on Nov. 23 of the past year. The range of this species is more arctic than that of the common goldeneye or whistler, and its occurrence in the interior is very rare. This bird had but recently come from the sea coast, as an examination of the stomach contents revealed only the remains of salt water crustacea.

Among other birds of rare or irregular occurrence in Western New York are the phalaropes, both the Northern and Wilson species having been observed on Lake Ontario, the former on Aug. 19, 1910, and the latter on Aug. 20, 1911. Four birds were seen in each instance. They were out on the lake, two miles or more from shore, swimming around like little ducks.

The surf scoter is another irregular visitor to Lake Ontario, as is also Brunnich's murre, parasitic jaeger, great black-backed gull and laughing gull. Caspian terns and Baird sandpiper are regular, although uncommon fall migrants. White-rumped sandpipers are rare, as are also piping plover. A fine male of this species, which was secured here, is now in the State Museum at Albany.

There are many other species of birds which on rare occasions visit Lake Ontario, more often during the fall than spring migration.

GEORGE F. GUELF.

Published Weekly by the
FOREST AND STREAM PUBLISHING COMPANY,
 127 Franklin Street, New York.
 EDWARD C. LOCKE, President.
 CHARLES B. REYNOLDS, Secretary,
 S. J. GIBSON, Treasurer.

CORRESPONDENCE.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Terms: \$3.00 a year; \$1.50 for six months. Single copies, 10 cents. Canadian subscriptions, \$4.00 a year; \$2.00 for six months. Foreign subscriptions, \$4.50 a year; \$2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line (\$2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra. Special rates for back cover in two or more colors. Reading notices, 75 cents per count line.

A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Advertisements should be received by Saturday previous to the issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

FEED THE BIRDS.

SOME of the rural mail carriers of the Northwest have asked the Government's permission to feed the starving birds along their routes. That the request will be denied is scarcely to be expected. Much excellent work can be done by these men, many of whom relieve the monotony of their lonely and often difficult journeys by taking note of the wild life along the way. It is interesting, if not surprising, to see how familiar the average rural mail carrier is with the habits and haunts of game and other birds that they see daily, and the wish to stop and scatter a little grain here and there is as natural as it is commendable.

The practice of feeding the birds is gaining friends everywhere, but it is not so widespread as it should be. There is altogether too much apathy apparent among farmers and others who profit through the increase and lose in the decrease in the number of birds about their places. Before the clearing of all lands fit for cultivation there was little need to look after the welfare of the birds, but to-day the natural shelters and feeding places are few and a different plan of action is necessary.

Reports from a number of places widely separated show that the recent cold snap found the birds in poor condition, and as the winter is still young, there is urgent need of supplying our birds with food and, if possible, shelter. It is a good investment for individuals as well as clubs and associations.

SIMPLIFIED GAME LAWS.

THE report of the New York Conservation Commission, transmitting to the Legislature the codification of laws relating to fish and game, is a remarkable document, deserving of the attention of all sportsmen. The codification work was performed by a committee composed of George A. Lawyer, president of the New York State Fish, Game and Forest League; Marshall McLean, of the Camp-Fire Club; and John B. Burnham, president of the American Game Protection and Propagation Association. The committee was assisted by Dr. Tarleton H. Bean, State Fish Culturist, and a large number of sportsmen, breeders and dealers attended the open meetings held at various times.

Among the proposed changes in the bill, which is now before the Legislature, are some which are marked departures from the provisions of the present law. Prominent are the following.

Increasing the number of protectors to one hundred and twenty-five. There are ninety-five protectors now, and they are required to cover a very large territory.

Making it legal to kill two adult male deer during six weeks ending Nov. 15 up State, and two weeks in certain Catskill counties.

Limiting the number of wildfowl one person may take to twenty in a day, or thirty-five if two persons shoot in company.

Reducing to twenty the number of black bass one person may take in a day, or thirty-five if two persons fish from one boat.

Changing the general trout season to May 1-Aug. 31 and April 1-Aug. 31 on Long Island, with a seven-inch and ten-pound limit; Long Island rainbow trout season, April 16-Sept. 30.

Fixing a fishing license fee of \$2 for non-residents sixteen years of age or over, and a trapping license fee of \$10 for non-residents.

Permitting residents to bring into the State between the dates Sept. 16-Jan. 10, as his personal baggage and for his own use, game or fish lawfully taken fifty miles or more outside the State. A special license only is required in addition to the usual tags.

The special local provisions which have cumbered the laws heretofore were left out in the revision, and the language of the sections is plain. It remains to be seen whether the Legislature will take kindly to the suggestions, and the people accept them with a good grace. They are worthy of careful consideration and wide comment.

SPRING SHOOTING SANCTUARIES.

THE Long Island Game Protective Association, through its President, Ottomar H. Van Norden, has made an extensive canvass with a view to obtaining the opinion of sportsmen, associations and State commissions on the spring shooting question. Mr. Van Norden informs us that his association is greatly encouraged by the replies he has received. He says:

I have been receiving many letters from various points of the country, and in not a single instance, either from individuals or from State fish and game commissioners, have I received an endorsement of spring shooting. The sentiment seems to be universally against it, and I find that we are not alone in the fight, by any means.

This is encouraging and proves that sportsmen are fully informed as to what is the best policy to pursue in the protection of wildfowl.

With no spring shooting and with the spreading sentiment in favor of no sale, a material increase in the number of wildfowl can be looked for in the autumn.

Another important step which must be taken in order to still further conserve wildfowl is the setting aside of certain lands and waters as sanctuaries. There should be a number of such places along the Atlantic coast, the Mississippi River and the Pacific coast, maintained by States or by the Government. There are now many private lands where wildfowl find rest and quiet during spring or summer, depending on latitude, but more are needed, particularly in the Mississippi valley. Barren sandbars, grown over with smartweed and willows, are ideal for the purpose, and there are thousands of these all along the great river. The Missouri, until a few years ago frequented by hordes of geese and ducks, is no longer visited by them in numbers, owing mainly to incessant shooting during nearly half of the year.

This is a matter of much greater importance than is generally known, but it is one which is deserving of the support of all sportsmen's associations.

RUTHERFORD PAGE, who was killed at Los Angeles on Monday of this week, when the aeroplane in which he was flying was wrecked, was a well known sportsman and amateur photographer. His age was twenty-seven years, and his home was in West Thirty-eighth street, New York city, where his mother, two brothers and two sisters reside. He was a nephew of Dr. Geo. Bird Grinnell, the author-naturalist, and his companion in many shooting and exploring trips. Mr. Page graduated from Yale College in 1910. He was granted a license as an aviator two days before his death, and had won his first and last race just prior to the fatal accident.

CANOEING on the Zambesi River in Africa is not without its perils, according to a noted traveler who says that the hippopotami have been shot at so much that they have grown peevish and likely to attack small boats. He cites a case where two young married couples were canoeing on the river above the Victoria falls. A hippo overturned the canoe and two of the four were drowned, their bodies going over the falls. One couple, strangely enough, was deprived of the wife, the other of the husband.

THE New Jersey Fish and Game Commission has secured a site for the State Game Farm, the purchase of which was authorized by the last Legislature. About 400 acres of land has been purchased at Forked River, fronting on Barnegat Bay, and it is believed that this land will be suited in every way to the breeding of game birds. For this purpose the commission has planned to expend several thousand dollars during the present year.

THE New York Conservation Commission is prepared to sell to residents for reforestation purposes this year a large number of small trees at very low prices. White pine transplants will be sold at \$3.50 a thousand. Young Scotch and red pines, European spruces, Carolina poplars, larches, black locusts and basket willows will also be supplied at prices which are much lower than those formerly asked.

YACHTING

Ticks from the Ship's Clock.

THE sloop yacht Effort, owned formerly by Frank M. Smith, N. Y. Y. C., is being dismantled at the Riverside Shipyard at New London and broken up for junk. She was purchased recently by the New England Iron & Metal Company. There are about thirty tons of lead in Effort's keel. This sloop has been hauled out alongside the schooner yacht Hildegrade at Riverside for several months. She has not been in commission for years.

Effort was built for Mr. Smith in 1906, at City Island, from designs by H. J. Gielow, of New York. She became famous by winning the first race sailed for the King's Cup. It was a great battle, and the schooners Queen, now Irolita, also built in 1906; Elmina, Corona, Amorita and Muriel; the sloops Yankee and Rainbow, and the yawl Vigilant were the starters. Amorita was owned by the late Richard Mansfield at the time. Queen was the first boat to cross the finish line, but on corrected time Effort defeated her by nine seconds.

Her hull was of bronze with steel frames. She was 93 feet 3 inches over all, 65 feet on the waterline, 16 feet 6 inches beam, 9 feet 9 inches depth of hold, and 10 feet 11 inches draft.

J. F. McGuire, of Columbia Y. C., Chicago, does not believe in taking any chances on the new Commodore Richardson cup getting out of the maw of Chicago yachtsmen, for, although W. Hale Thompson and his club are already to build a \$10,000 boat from plans in hand by William Gardner, of New York, Mr. McGuire is raising a fund to build another cup defender. He says it will take some boat to beat Patricia, which will represent Royal Canadian Y. C. She easily trimmed Seneca on Lake Ontario for the Fisher cup last year, although Seneca was the successful defender of the Canadian cup in 1907.

We observe that plans for the new cup defender for Chicago Y. C. have been ordered from William Gardner, of New York. It seems rather unfortunate that these designs could not have been made by an architect on the Great Lakes. The original argument on which the peace of mind of Rochester Y. C. was wrecked came about through their insistence that they be allowed to have the defender built in any place they cared to. The question of architects was not involved in the imbroglio, but what a feather it would be in the grummeted hat of Chicago Y. C. in particular, and Great Lakes yachtsmen in general, to win the cup with an inland-designed, Great-Lakes-built yacht. We hope it may occur to Mr. McGuire, should he succeed in raising funds necessary for the building of another defender, to have the boat a Great Laker from designer to skipper. Incidentally, should Chicago Y. C. retain the cup and Royal Canadian Y. C. challenge again next year, the challenger would have to be built in Canada, as the conditions governing the Richardson trophy state that "the yacht must be built in the country from which the challenge is made." The Royal Canadian yacht Patricia was designed by Owen and built by Lawley, of Boston.

Karina Going Abroad.

THE big three-masted schooner yacht Karina, owned by ex-Commodore Todd, leaves early in May for a season's racing abroad, and incidentally to try for a trans-Atlantic record.

Karina made herself famous in her first season by winning the Brenton's Reef cup in a race of 264 miles, against the holder of the ocean race winner Atlantic. In the contest for the Cape May challenge cup she was defeated, but only 23.45 in the race of 214 miles.

She has been supplied with a new suit of

Ratsey sails, so that it goes without saying that she intends to race against time across the Atlantic. Such a big, able vessel as Karina will stand a lot of driving, and it would be no surprise if she should break all records from Sandy Hook to the Needles.

Atlantic holds the record for that course, made in the race for the German Emperor's cup, in 1905, when she covered the distance—3,158 nautical miles—in thirteen days, ten hours and fifteen minutes, at an average speed of 9.80 knots. Her best day's run was 341 miles. Karina is 15 feet longer on the waterline and has 4 feet 3 inches more beam.

Commodore Todd expects to return from abroad in time to take part in the cruise of the New York Y. C., in August. Karina's dimensions are 198 feet 7 inches over all, 150 feet waterline, 33 feet 9 inches beam and 17 feet draft. She was designed by Theodore D. Wells, and built by the Staten Island Shipbuilding Company in 1911.

Corinthian Y. C.

THE Corinthian Y. C., of Boston, held its annual meeting at the Boston A. C. rooms Jan. 10, when the following officers were elected: Commodore, Charles B. Hallock; Vice-Commodore, John B. Fallon; Rear-Commodore, Lawrence F. Percival; Secretary, Herbert S. Goodwin; Treasurer, Fred W. Moore; Measurer, Samuel H. Brown, Jr.; Executive Committee—John M. Ward, Andrew Raeburn; Membership Committee—Percival W. Pope, Samuel W. Lewis, Merrill Hunt, Harold Peters; Regatta Committee—William L. Carlton, George H. Mayo, George Upton, G. E. Chapin, John G. Alden; House Committee, three years, Arthur P. Tarbell.

The most important matters taken up of general interest to yachtsmen was the amendment to the constitution that hereafter the measurer, instead of being elected by the club, shall be appointed by the Regatta Committee. It is hoped that similar action will be taken by the other Massachusetts Bay clubs and the Yacht Racing Association of Massachusetts, with the idea in view that the leading clubs at least agree on one well-equipped man, who shall not in any way be interested in the success of any of the boats, and whose decisions shall carry with them the authority of a scientific expert.

The Corinthian Club raced small boats in New York waters and a return match was held last year.

The new projected 15-foot, one-design class, from plans by J. G. Alden, has become an assured fact. The building of six boats will be constructed to race continuously.

The winners of 1911, as reported by W. L. Carleton, chairman of the regatta committee, are:

Championships.—Class P, Italia; Class Q, Gringo; Sonder Class, Ellen.

Midsummer Series Winners.—First special, Altair; Class M, Marie; Class N, Odysseus; Class P, Italia; Class Q, Gringo; Sonder Class, Ellen; 18-foot knockabouts, Moslem II.; Cape cats, Dolly III.; Class A, interclub, Nutmeg; Class B, interclub, Barracouta; Class C, interclub, Lindsey; Class S, interclub, Wawenock; Class V, Tabasco, Jr.; Class X, Barbara; Class R, Sumaki; Class S, Tedesco; Manchester one-design, Asteria; Class H (Hull), Vera; Hingham one-design, Usona; Alpha dories, Flirt; Beach combers dories, Shadow; Handicap class, Meddler; Nahant bug class, Humbug; Pleon Y. C., Periodic; speed power boats, Gee Whiz; open power boats, Anabel.

Cape Cod Ocean Race Winners.—Schooners, Venona; Class A, Sayonara; Class BB, Gringo. Grand Handicap, Commodore's Race Winners.—Class A, Wianno; Class B, Porcupine.

Winner of power boat race, Marblehead to New York, Classic.

Winner of series of special Sonder class races, Harpoon.

Interstate races with New York Class P boats at Marblehead, won by New York boats Windward and Joyant.

Y. R. A. of Gravesend.

THE clubs comprising the Gravesend Bay Yacht Racing Association, namely, Atlantic, Bensonhurst and National Marine and Field, New York Canoe and Crescent A. C., held a convention Jan. 15 for general discussion and announcement of winners during the past season. The place of W. L. Inslee, secretary, resigned, was filled by Louis Tiemann.

The records of the yachts to qualify in these classes follow:

Class Q—Soya, 12 starts, 38 points out of a possible 48, percentage, 79; Grayjacket, 23 points out of a possible 32, percentage, 72; Alice, 26 points out of a possible 48, percentage, 54; Spider, 23 points out of a possible 44, percentage, 52.

Handicap Class—Joy, 33 points out of a possible 48, percentage, 69; Careless, 27 points out of a possible 48, percentage, 56; La Cubana, 25 points out of a possible 48, percentage, 52; Miana, 19 points out of a possible 40, percentage, 47½.

Class S—Wink, 27 points out of a possible 36, percentage, 75; Cyric, 22 points out of a possible 36, percentage, 61; M. and F., 16 points out of a possible 36, percentage, 44.

Class X—Skylark, 74 points out of a possible 96, percentage, 77; Suffragette, 58 points out of a possible 80, percentage, 72½; Slow Poke, 58 points out of a possible 88, percentage, 66; Merry Widow, 56 points out of a possible 88, percentage, 64; Scud, 57 points out of a possible 96, percentage, 59; Mouse, 30 points out of a possible 72, percentage, 41; Lassie, 24 points out of a possible 64, percentage, 37; Chico, 12 points out of a possible 72, percentage, 17.

Class Y—The Aries was the only yacht to qualify.

Attention was called to the difficulties in connection with the Bensonhurst turning mark, and then the courses were discussed. It was agreed that they did not give general satisfaction and so a committee consisting of Peter Bentley, Jr., John R. Brophy and W. A. Barstow was appointed to review the courses and to arrange for new ones if possible. It was also decided that a change should be made in the starting signals, and in future classes M, N, P and Q will be sent away each Saturday afternoon at 3 o'clock and the other divisions put five minutes ahead. There have been no yachts racing in classes M, N and P for two years, and if any should appear this year a special time will be set for them.

The annual meeting will be held this year at the Crescent Athletic Club house on Tuesday, Feb. 27. The election of officers will then be held and the schedule arranged.

Unqua Corinthian Dinner.

COMMODORE FRED B. DALZELL presided at the eighth annual dinner of the Unqua Corinthian Y. C., held at the Waldorf-Astor the 19th inst. Yachtsmen from clubs on Long Island, the Lower Bay, and Great South Bay were guests of the club. They included Rear-Commodore F. M. Wilson and Horace Boucher, of the Larchmont Y. C.; Commodore J. Stuart Blackton, of the Atlantic Y. C.; William H. Moffit, Commodore of the Great South Bay Motor Boat Club, and Commodore Frank Guthridge.

The speakers included Commodore Fred B. Dalzell and Justice Frederick E. Crane. Others present were: Vice-Commodore Edward P. Foster, Rear-Commodore W. T. Loudon, Secretary Clark B. Davis, Treasurer Marshall H. Woodman, Francis A. Williams, George P. Thomson, Charles A. Duryea, Erastus E. Haff, Rufus J. Ireland, Senator Burr and George Schaud, Jr.

Yacht Transfers.

THE following-winter yacht sales are reported by the office of Stanley M. Seaman, New York city:

Steam yacht Roamer sold for Mr. N. G. Herreshoff, Bristol, R. I., to Mr. Lyman E. Warren, N. Y. Y. C. Roamer was built for this well known designer's personal use and has always been conspicuous in all large yacht gatherings.

Gasolene cruiser Temegan sold for Mr. R. A. Dowler, New York city, to Mr. F. F. Christy, of Hastings-on-Hudson, N. Y. New owner is now cruising in Florida waters and will use her during the summer off his country home at Greenport, L. I.

Cruising launch Tommy Traddles sold for Mr. V. B. Hubbel, N. Y. Y. C., to Mr. D. B. Hoornbeek, Elgin, Ill. Yacht was delivered to new owner's winter home in Bradenburg, West Coast of Florida by Capt. I. S. Haff, of Ossining, N. Y. She made the trip from New York to Miami in fifteen days actual running time.

Auxiliary yawl Maori sold for Mrs. Salter to Mr. J. F. McClendon, New Yory city.

Gasolene cruiser Kathmar sold for Mr. R. T. Fowler, New Rochelle Y. C., to Dr. J. E. Lloyd, of Brooklyn, for use in the waters of the Hudson.

Launch Evelyn sold for Mr. J. M. Sherrard, of Brooklyn, to Mr. A. J. Longley, New York city.

Launch Wilhemharvet sold for Mr. W. H. Ferry, to Mr. P. B. Polhemus and others.

Sloop Peri II. sold for Mr. H. B. Griffin to Mr. C. F. Herbert.

Speed launch Carita sold for Mr. J. S. Clarke, of Philadelphia, to Mr. F. W. Yates, Rochester, N. Y., for use at owner's winter home at Hobe Sound, Fla.

Launch Kum On sold for Mr. Frank Barto to E. C. Benedict & Co., New York city, representing South America interest. She was shipped two weeks ago.

Cruising launch Mijess II. sold for Mr. Geo. Bowles, Astor Theatre, New York, to Mr. Lee Rosenberg, New York Cotton Exchange.

Auxiliary yawl Gladys sold for Mr. Robert Fuchs, of Chicago, to Mr. H. G. Outwater, New York city.

Raised deck cruiser Thelma sold for Mr. G. W. Toerge, New York city, to Mr. David McKnight, Philadelphia, Pa.

New York Y. C. 30-footer Asthore sold for Mr. Clinton W. Crow, New York city, to Mr. S. F. Ward, N. Y. Y. C.

Chicago Gets International Event.

A FEW weeks ago conditions had assumed such sad proportions that an International race this year seemed most unlikely. The Rochester Club, Rochester, N. Y., holders of the Canadian cup refused to put up or engage in a contest to defend it unless allowed to have the defender built in any place it desired. The Royal Canadian Y. C., annual challenger, maintains that boats for the event should be built upon the Great Lakes. This question has prevented the sailing of this, the most important of fresh-water events, for the past two years.

On Dec. 9, Commodore S. O. Richardson, Toledo Y. C., offered a handsome cup for the event, thereby eliminating the Rochester Y. C. from the controversy, as the Richardson cup will take the place of the cup won and held by Rochester. Those hustlers from Lake Michigan, known as Chicago Y. C., of which A. Sheldon Clark is secretary, as well as instigator, got busy immediately and within a week raised \$10,000, by subscription, to build a defender. Not satisfied with this, G. H. Atkins and Ogden McClurg went over to Toronto, and despite strong opposition, made arrangements to have the race sailed in Chicago Harbor.

The date of the International race is next August, with the first race on the 10th. The boat winning three out of five races is to receive the cup. The races are to be sailed over a 15-mile triangular course and the winner of the cup will be allowed to hold it for one year.

Toronto was represented at the conference by William Gray, J. S. McMurray, secretary of the Yacht Racing Union, Owner Norman of the Patrica, and Commodore Jarvis.

Manhasset Ice Boating.

The Manhasset Bay Y. C. held an ice boat regatta on Jan 21, two classes filling, those of 350 square feet and those of 200 square feet.

The large class furnished the most exciting and spectacular event ever held on this bay. There were six entries. The boats went around a 5-mile triangle twice. The wind blew out of the west at a 20-mile rate. Soon after the start Whiz, Ice Baby and Manhasset drew away from the rest of the fleet, and at the first turn rounded in the above order.

The next leg just at the start Manhasset caught the two leaders and passed them. The three boats were then traveling at least 50 miles an hour, and so all three rushed around the home stake with Manhasset in the lead. Straightening out for the second round, Manhasset increased her lead and rushed across the finish line with a 25-second lead. J. W. Alker was at the helm of Manhasset.

Start, 3:00:	Finish.	Elapsed.
Manhasset, J. W. Alker & C. M. Gould.....	3 14 45	0 14 45
Ice Baby, R. Dusenbury.....	3 15 10	0 15 10
Whiz, W. Vanderpol.....	3 15 35	0 15 35
Bertha Ida, W. Hully.....	3 16 00	0 16 00
Knickerbocker, H. Stevenson.....	Did not finish.	
Nameless	Did not finish.	

In the second class W. S. Duncan, Jr., at the helm of Trouble, after an exciting start, walked away with his class.

	Start.	Finish.
Trouble, W. B. Duncan, Jr.....	3 30 00	3 49 53
Papoose, W. Ward	3 30 00	3 50 03
Blue Bell	Did not finish.	

Yacht Fleet to be Larger.

FOUR new Class B yachts will be ready for the spring races, according to the plans of the builders of the Oregon Y. C. T. J. Mendenhall is having a 28-foot cabin cruiser built by Gus Amonson. The plans for the craft indicate it will be one of the best sailers and best equipped boats on the river. It will be nine feet beam and seat about 20 outside the cabin.

Frank Creasy is building a 28-foot boat, which will be something on the style of Mendenhall's, with the exception of the cabin. Amonson drew the plans for the boat, but it will be built by Portland naval constructors. C. Hastorf and J. Prideau are building the other two craft of that class. Max Meyer planned Hastorf Lark.

Besides these vessels of the larger division, there will be a great number of smaller boats of all sizes from the dinghy upward. A new type made its appearance on the river when two catamarans, which are being planned, will be turned out for the opening events on Decoration Day. One of these will be 32 feet over all and carry 700 square feet of sail.

Eastern Y. C. Cruise.

THE first announcement of a cruising date comes from Eastern Y. C. The squadron will rendezvous at Newport June 29. The course as tentatively laid out will be a race across the shoals to the club's home station at Marblehead, where a regatta will be held, thence to Bar Harbor. The squadron will disband July 11. Any of the New York vessels will be at liberty to make their way westward in time to prepare for the Larchmont Y. C.'s "race week" and the cruise of the New York Y. C. squadron in August.

Making Newport the place of rendezvous for its cruise is an innovation on the part of the Eastern Y. C. In days gone by the squadron made the run to New York, but that has not been the case for several years. The rendezvous for its cruise has been Marblehead for a long time, but with an important ocean race on its annual schedules a change has been deemed necessary.

Club Elections.

BAYONNE CITY Y. C.

Members of the Bayonne City Y. C. held a well attended meeting on the 21st inst. and elected the following officers: Commodore, Gustav F. Ruh; Vice-Commodore, Chas. B. Easton; Fleet Surgeon, Dr. B. S. Heintzelmann; Treasurer, William Dressig; Recording Secretary, George Bowers; Financial Secretary, John W. Deubert; Measurer, John Erickson; Fleet Captain, Henry T. Snarkey; Sergeant-at-Arms, Julius Luick. Reports submitted to the club showed it to be in a prosperous financial condition. Commodore Ruh succeeds Comptroller John J. Ryan in that office.

BARNACLE Y. C.

The Barnacle Y. C., of Greenville, N. J., held their annual meeting at the club house, Linden avenue and New York Bay, and re-elected the old officers for the ensuing year. Commodore Winters was in the chair. The secretary and treasurer reported a prosperous year. A vote of thanks was given Edward C. Marten, the treasurer. He also reported that a new 22-foot launch will be added to the fleet by Mr. John Miller of Old Bergen road.

PEORIA (ILL.) Y. C.

At the annual meeting of Peoria Y. C., held Jan. 8, Edward Harms was again chosen Commodore, the other officers elected being: Vice-Commodore, Ralph Lillya; Rear-Commodore, Warren Anderson; Secretary, F. M. Doty; Treasurer, G. W. Luke. The date of meeting was changed from the first Monday to the first Wednesday of each month.

NORTH CAMDEN (N. J.) Y. C.

At a meeting of the North Camden Y. C. on Dec. 30, the following officers were elected: Commodore, George Kruck; Vice-Commodore, Frank Mitchell; Rear-Commodore, Emmett Crosby; Recording Secretary, John Hollingsworth; Financial Secretary, William Steer; Treasurer, James Gray.

The members of this hustling organization are extending every effort to complete the new club house by spring.

DORCHESTER (MASS.) Y. C.

The Dorchester Y. C. has elected the following officers: Commodore, Charles L. Bertram; Vice-Commodore, Rollin H. Fisher; Rear-Commodore, T. W. King; Treasurer, D. G. Robinson; Secretary, William S. Mace; Measurer, J. H. Burroughs.

EUREKA Y. C.

Members of the Eureka Y. C., Newark, N. J., ate their annual dinner on Jan. 3 at Achtel-Stetter's restaurant. Officers for the ensuing year were elected as follows: Commodore, Max Blasberg; Vice-Commodore, W. H. Taylor; Rear-Commodore, John A. MacIntyre; Recording Secretary, E. S. Hunt; Financial Secretary, Thomas Edwards; Treasurer, A. W. Krenich; Trustee for three years, T. W. Lewis; Auditors, Charles Sheffmeyer, C. H. McKee and Watson Crane. W. Sherman Rauch, the retiring commodore, installed the new officers.

YACHT and BOAT SAILING

By the late Dixon Kemp

Tenth edition. Published 1904. We have a copy in fairly good condition, published at \$12, which we will sell for \$9.00.

FOREST AND STREAM PUBLISHING CO.

American Canoe Association.

Atlantic Division.

BURLINGTON, N. J., Jan. 15.—*Editor Forest and Stream:* Believing it to be a good way to bring to members' attention the importance of having you familiarize yourself with the conditions that are vital to the life and success of the association in general, and the Atlantic Division in particular, I take this opportunity to convey to every member an appeal for encouragement and support in whatever events that may take place during the coming year, with the idea of making every effort so successful that it will be a one-to-be-remembered year in the history of the Atlantic Division.

First, I would have you take into consideration that whatever events are to be held will, as far as possible, be self-supporting, as our only income will be the balance turned over from last year—about \$220. As you are no doubt aware, we have the general meet to support, and our usual percentage of receipts will be expended for that purpose. Therefore I would be glad to have a large attendance at all meets and social gatherings, so that the fees collected at such times will be nearly sufficient to defray the expenses of the same.

Secondly, I would remind you that the life of the association depends upon its membership. As soon as you receive your statement of dues, forward the amount of same to the Treasurer before it is forgotten, thereby clearing your conscience of the matter (small as it may seem to you, but of great importance to the association), and also diminishing the work of the Treasurer in not having to send out delinquent notices. I do not know what the percentage of delinquents in this division has been as compared to other divisions, but I would like to know that during one year there were no delinquents in the Atlantic Division.

Thirdly, when you receive notices of coming events, make them generally known among the members of your club who are not A. C. A. members, that they may have an opportunity of attending these events and participate in the good times we always have. In this way we may be able to induce them to join the association where every other effort would fail. The more we get together, the greater the bond of true friendship which exists between canoeists; and it is this example of goodfellowship that keeps us up and going. See to it, therefore, that all your club members are being interested in the association, and I will promise that your vice-commodore and his committees will strive to arrange events which will hold their interest and show them what they have missed by not becoming members before.

HENRY B. FORT, Vice-Commodore.

Western Division.

CHICAGO, Ill., Jan. 15.—*Editor Forest and Stream:* So much comment of a favorable character was elicited by the smoker given in Chicago in November under the auspices of the Western Division, that a great many members have asked to have it tried again. The November smoker served to bring together Chicago, Milwaukee, St. Paul and Peoria members, and I believe that an even greater number can be brought together by meeting in a more central location.

For that reason I have made arrangements for a dinner on Saturday evening, Jan. 27, at 6:30 o'clock, at King's restaurant on Fifth avenue, north of Madison street, which is accessible to all the elevated trains, and surface cars from various railroad stations pass the door.

It is now time to determine upon a site for the Western Division camp of 1912, and for that reason it is advisable that members look up locations which appear to them the most accessible for that purpose. A discussion of this subject will be called for on the evening of Jan. 27, so please come prepared to talk about your wishes in that respect and illustrate your views with a map, if possible.

F. B. HUNTINGTON, Vice-Com.

TRAP SHOOTING

If you want your shoot to be announced here send a notice like the following:

Fixtures.

Feb. 22.—Cleveland (O.) G. C. tournament. F. H. Wallace, Sec'y.

REGISTERED TOURNAMENTS.

Feb. 16-17.—Mobile (Ala.) G. C. J. L. Suttle, Mgr.

May 14-16.—Fairmont, W. Va.—West Virginia State tournament, under the auspices of the Fairmont G. C. Ed. H. Taylor, Sec'y.
May 15-16.—Columbus (O.) G. C. L. Fisher, Sec'y.
May 21-24.—Sunbury, Pa.—Pennsylvania State tournament, under the auspices of the Sunbury-Selinsgrove G. C. J. W. Schoffstall, Sec'y.
May 23-24.—Waterloo (Ia.) G. C. J. F. Libby, Sec'y.
May 29-30.—Wilmington, Del.—Delaware State tournament, under the auspices of the Du Pont G. C. T. E. Doremus, Sec'y.
June 4-6.—Mexico, Mo.—Fifth annual State tournament of the Missouri State Trapshooters' Association, under the auspices of the Audrain Country Gun Club, of Farber, Mo. Russell Glynn, Sec'y.
June 5-6.—Aurelia (Ia.) G. C. Frank R. Welch, Sec'y.
June 5-7.—Warm Springs, Ga.—Merriwether G. C. T. B. Slade, Mgr.
June 10-13.—Syracuse, N. Y.—New York State tournament, under the auspices of the New York State Sportsmen's Association. H. W. Smith, Pres.
June 18-21.—Springfield, Ill.—The Interstate Association's thirteenth Grand American Handicap tournament, on the grounds of the Illinois Gun Club; \$1,500 added money. The winner of first place in the G. A. H. guaranteed \$1,000 in cash and a trophy. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.
July 9-12.—Eugene, Ore.—Pacific Indians. F. C. Riehl, Sec'y.
Aug. 14-16.—Kansas City, Mo.—The Interstate Association's seventh Western Handicap tournament, under the auspices of the Kansas City Gun Club; \$1,000 added money. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.

DRIVERS AND TWISTERS.

The Birmingham (Ala.) Gun Club will hold a registered tournament, April 9 and 10. It is arousing a tremendous amount of local interest.

Social note: Miss Annie Oakley is shooting the winter away at the Lakeview Hotel, Leesburg, Fla. She is billed thusly: "See the Band Play and hear Annie Oakley Shoot."

The Merriwether Gun Club, Warm Springs, Ga., will hold its tournament this year on June 5-7. Added money and prizes will be about \$400, and everything will be done to make the shoot a success, as in years gone by. The shoot will be registered, and it is expected there will be between fifty and sixty shooters in attendance.

It is interesting to observe that all \$1,000-a-week advertising copy writers are not turning out copy for the Weneeda Biskut Co. and Invisible Washing Powder. For an ocular demonstration see the trade mark line put up by Kenwyn Kennels. "An Airedale can do anything any other dog can do, and then lick the other dog."

In another column appears an interesting and decidedly discouraging report from Secretary Jones, of the National Rifle Association in America. With the great, conscientious and intelligent efforts of the mother organization, rifle practice in the United States is on the decline, and apparently legislative medicine offers the only remedy.

The Mississippi State shoot this year will be held under the auspices of Laurel Gun Club, at Laurel, Miss., in the latter part of April. The new officers of the club are: Charles Green, President; Dr. C. M. Davis, Vice-President; H. N. Rogers, Secretary; Geo. Bacon, Assistant Secretary; W. F. Rumble, Field Captain. The regular shooting day is Thursday.

At the annual election of Sunbury-Selinsgrove Gun Club, at Sunbury, Pa., held last week, the following officers were elected: President, Geo. Howell; Vice-President, C. A. Hartman; Secretary, J. W. Schoffstall; Assistant Secretary, Chas. Foster; Treasurer, A. H. Sigfried; Assistant Treasurer, Samuel Troxell; Field Captain, Brian Teats; Assistant Field Captain, A. H. Siegfried. The three trustees elected were J. W. Schoffstall, Grant Shuck and Brian Teats. The shooting days are the first and third Thursdays of the month. State shoot will be held at Sunbury, May 21-24.

Just received programme of the annual shoot of the Highland Club, of Edge Hill, Pa. ("Trapshooters' Paradise"), which will be held Jan. 27. All shooting in classes. There are seven events, each at 15 targets, except No. 5, which is miss-and-out. Entrance in each event 35 cents, excepting Nos. 6 and 7, which is 50 and 25 cents respectively. Optional sweeps, 25 cents. The prizes in each event are: No. 1, solid silver spoons; No. 2, shooting jackets; No. 3, umbrella; No. 4, pocketbook; No. 5, solid gold pin; No. 6, solid silver trophies. "Remember, that a trophy is given for each class in each event. Sweeps are also in classes, and divided 60 and 40 per cent., high guns. You may have three entries in No. 5 if you wish. No. 6 is a "consolation race" and classes will be revised. Extra event, not included in above, for a number of prizes. A miss-and-out event. Not classes. Open to All. Bring your friends."

Fourth annual amateur clay bird championship of Long Island Sound will be held Jan. 27, at Port Washington, L. I., under auspices of Manhasset Bay Yacht Club. Open to members of all clubs on Long Island Sound and the waters thereof, including the Garden City Gun Club, the Hillside Rod and Gun Club, the Crescent Athletic Club, and the Bergen Beach Gun Club. The match will be at 100 targets, 16yds. The shoot will start at 11 o'clock. Entrance fee of \$5, including cost of birds and luncheon. An optional \$10 sweepstake will be shot on the match. There will be three handsome trophies awarded to the three high guns. A trophy will be awarded to the club team that scores the most points. The scores of the best five men in each club to count. A shooter can represent only one club, and shall state what club he represents on entry. Those who wish may engage sleeping rooms the night before the shoot, by applying to the house committee at the club house, Port Washington. Shells may be purchased at the club house. Trains leave New York (Pennsylvania R. R. station) 9:05, 10:08, 11:07, 12:05. Trains leave New York (East Thirty-Fourth Street Ferry), 8:50, 9:50, 10:50, 11:50. Guns and ammunition shipped in care of the club, by Long Island Express, prepaid, will be delivered at the club house. Entries should be sent to Trap Committee, at the club, Port Washington, L. I., before noon, Friday, Jan. 26. H. L. Hoyt, Jr., is the chairman of the Trapshooting Committee.

BECROFT.

Amateurs Take the Coin.

PITTSBURGH, Pa., Jan. 18.—*Editor Forest and Stream:* Please announce to the readers of FOREST AND STREAM that, since their annual meeting last December, the directors of the Interstate Association have ruled that money entries in the Grand American Handicap shall be confined to amateurs. Professionals will be allowed to shoot in the Grand American Handicap for "targets only," and compete for a special trophy donated by the Interstate Association.

ELMER E. SHANER, Sec'y-Treas.

THE FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

New York Athletic Club.

PELHAM MANOR, N. Y., Jan. 20.—Shooters at Travers Island enjoyed a most delightful afternoon to-day banging away at the tiny bluerocks over the N. Y. A. C. traps. Two straight scores of 25 targets were made. The first nimrod to make a clean run was B. M. Higginson, who took a leg on the monthly cup without missing a single target.

In the next event A. E. Ranney came to the front and duplicated the performance. The shoot was the weekly leg on the Dey trophy, and it was a lucky thing for Mr. Ranney that he made a straight score, as J. E. F. Dey, and G. F. Pelham also had full scores of 25 targets. They, however, made their totals with handicaps, so the leg was awarded to the gunner who had not missed a bluerock.

The other shoots also were taken by high scores. J. E. F. Dey won the president's cup with a total of 24 out of a possible 25 targets, and the same score won the weekly shoot for the New Year's cup. In the latter event there was a shoot-off, however. In the first time at the traps R. L. Spotts, T. F. McMahon and W. B. Ogden all had 24 out of a possible 25 targets. The shoot-off that followed was a close and interesting one until the marksmen entered their final strings. Then Mr. Spotts pulled away from the other two and won easily.

The distance handicap also fell to Spotts, shooting from the 21yd. mark, he breaking 20 out of 25. Fred Pelham took the shoot at 10 pairs of doubles with 13 targets. The scores follow:

January cup, 25 targets, handicap: B M Higginson..... 0 25 A E Ranney..... 1 20 J G F Dey..... 0 25 C W Billings..... 0 19 R L Spotts..... 1 23 J E Batterson..... 3 18 G F Pelham..... 4 23 H M Brigham..... 0 18 W B Ogden..... 3 22 R R Debacher..... 5 18 J I Brandenburg..... 5 22 J E Chapman..... 0 17 Dr Culver..... 0 21 A C Walker..... 5 17 T F McMahon..... 2 21 J W Hessian..... 0 16 O C Grinnell..... 1 21

Dey trophy, 25 targets, handicap: A E Ranney..... 0 25 C W Billings..... 0 19 J G F Dey..... 3 25 J E Batterson..... 3 19 G F Pelham..... 4 25 J W Hessian..... 0 18 W B Ogden..... 3 24 R R Debacher..... 5 19 Dr Culver..... 1 22 J E Chapman..... 0 16 R L Spotts..... 1 22 O C Grinnell, Jr... 1 15 B M Higginson..... 0 21 A C Walker..... 5 15 J I Brandenburg... 5 21 T F McMahon..... 2 21

President's cup, 25 targets, handicap: J G F Dey..... 3 24 R R Debacher..... 5 20 Dr Culver..... 1 22 C W Billings..... 0 19 A E Ranney..... 0 21 R L Spotts..... 1 19 B M Higginson..... 0 21 J E Chapman..... 0 17

Crescent Athletic Club.

BAY RIDGE, N. Y., Jan. 20.—J. F. James kept up his excellent shooting at the Bay Ridge traps of the Crescent Athletic Club. To-day he won the take-home trophy with the excellent score of 88 out of a possible 100 targets. The field was the largest that has shot in the event since the competition was started by the New Moon gunners. Seventeen were on the firing line, and returned excellent scores.

It was not the only event that fell to the steady aim of the well-known gunner. Together with his partner, A. Bryant, he also was the winner of the team race, with a total of 47 out of a possible 50 targets. The James family did excellent work throughout the day, as Clinton R. James took a leg on the Lawson trophy, with a full score of 25 targets. Full scores won practically all of the other events. G. E. Brower hung up a win on the Stake prize with a total of 25 targets, and the same total gave L. C. Hopkins the position of honor in the race for the monthly prize. A trophy shoot also was taken with a full score by E. A. Henry.

After the regular shoot was ended several marksmen practiced shooting by the aid of two big calcium lights.

The Crescent Athletic Club is planning a moonlight shoot for the 27th, at which calcium lights will be thrown on the targets. Yesterday was the first time it ever was tried at Bay Ridge. The lights proved to be a success. The shooting committee decided that the club championship will be a 200-target event, 100 birds being trapped on Lincoln's, and the other 100 on Washington's Birthday. The scores:

Take-home trophy, 100 targets, scratch: J F James..... 88 A Bryant..... 77 F B Stephenson... 83 G E Brower..... 73 C R James..... 83 E A Henry..... 72 A Blake..... 82 F S Hyatt..... 72 J E Murray..... 82 T N Stahl..... 71 L C Hopkins..... 82 H T Spooner..... 71 J A R Elliott..... 81 G G Stephenson, Jr... 70 M Stiner..... 79 J P Fairchild..... 62 C Blake..... 79

January cup, 25 targets, handicap: L C Hopkins..... 5 25 C Blake..... 3 20 J E Murray..... 5 24 J F James..... 0 19 F S Hyatt..... 1 22 M Stiner..... 0 19 G E Brower..... 3 22 E A Henry..... 3 17 G G Stephenson, Jr 3 21 F B Stephenson... 0 16 J P Fairchild..... 2 21 T W Stahl..... 5 14 A Bryant..... 4 20 C R James..... 2 22 A Blake..... 4 21

J. S. Lawson trophy, 25 targets, handicap: C R James..... 2 25 C Blake..... 3 21 J F James..... 0 24 G G Stephenson, Jr 3 20 G E Brower..... 3 23 F B Stephenson... 0 19 F S Hyatt..... 1 22 E A Henry..... 3 19 A Bryant..... 4 22 A Blake..... 4 18 M Stiner..... 0 22 T W Stahl..... 5 15 J E Murray..... 5 22 M Stiner..... 0 22 L C Hopkins..... 5 21

State trophy, 25 targets, handicap: G E Brower..... 3 25 C Blake..... 3 19 C R James..... 2 24 A Bryant..... 4 18 J F James..... 0 23 E A Henry..... 3 18 J E Murray..... 5 22 F B Stephenson... 0 17 L C Hopkins..... 5 21 A Blake..... 4 22 G G Stephenson, Jr 3 20 M Stiner..... 0 23 F S Hyatt..... 1 20 J P Fairchild..... 2 21

To Shoot For Money.

WASHINGTON, D. C., Jan. 12.—National rifle matches for money prizes will be held during the present year, beginning Aug. 21 next, at a place yet to be determined by the National Board for the promotion of Rifle Practice, which has just concluded its annual meeting at the War Department. If the new range at Sparta, Wis., is ready in time, the matches will be held there; otherwise they will be held at either Camp Perry, O., or Sea Girt, N. J.

PISTOL AND REVOLVER CARTRIDGES

are chosen by the majority of revolver and pistol experts the country over because they know—

The ignition is prompt, uniform and sure.

The accuracy and sure-fire are guaranteed by records.

World's Indoor Fifty-Shot Pistol Record held by George Armstrong.....score 473 ex 500.

World's Indoor Twenty-Five-Shot Pistol Record held by A. P. Lane....score 240 ex 250.

World's Seventy-Five-Shot Rapid Fire Record held by A. P. Lane.....score 605 ex 750.

World's Outdoor Pocket Revolver Record held by A. P. Lane.....score 211 ex 250.

World's Grand Aggregate Individual Record held by A. P. Lane.....score 1236.

Onondaga Gun Club.

ONONDAGA, N. Y., Jan. 19.—A dozen members of the Onondaga Gun Club faced the traps at the yacht club range yesterday in the first of a series of semi-monthly shoots to be held during the winter.

The first 25 birds of the regular program of each shoot will apply on the Du Pont trophy for the member having the highest average in all the shoots. Yesterday the honors were taken by George Phillips, who broke 24 out of 25. J. H. Lamphere was second with 22, and T. E. Clay and H. S. Mallory were tied for third place with 21 each. Visitors were present from Weedsport, Jamesville and Fulton. The heavy wind kept many of the gunners from turning in their best marks.

George M. Phillips, field captain of the Onondagas, repeated his performance of the last registered shoot in December. He broke 78 out of 90. J. Lamphere came through the six events with 74, and T. E. Clay made third with 73.

One of the surprises of the shoot was the good form displayed by George Bartoo, who brought down 62 of the 90 birds in the regular program, and also came through with flying colors in the special team match arranged after the regular program.

The team match proved to be the best fun the gunners have experienced since the summer shoots were held. Teams captained by Hurlburt W. Smith and H. V. Fellows were selected, each captain choosing his side. The team captained by Fellows, after a tight rub, finally won out, after much excitement by the close margin of 8 birds. A wild shout went up from the winners when the scorekeeper announced the result. With such veterans at the trapshooting game as Smith, Phillips, Hobbie, Brugman and Jackson, the younger quintet hardly believed that a victory had been registered for some time after the final scores were posted. Phillips and Fellows were high, cracking 23 out of 25 in the match. Brugman, Clay, Meager and Bartoo all succeeded in hitting 21 out of the 25. Scores:

Table with 4 columns: Name, 15, 15, 15, 15, Total. Lists scores for various shooters like H. W. Smith, J. Lamphere, T. E. Clay, etc.

Table with 4 columns: Name, 20, 23, 21, 21, 21, 17-103. Lists scores for team match participants like Smith, Phillips, Brugman, etc.

Birmingham Gun Club.

BIRMINGHAM, Ala.—Jan. 12.—Considerable shooting was done over the grounds of the Birmingham Gun Club during the past week. Parties were out on Tuesday, Thursday and Friday. Guy Ward is still practicing with his new gun, and is improving very rapidly. He will no doubt make a good race for high average at the Pinehurst tournament. Bruce Plummer was with us Thursday and Friday.

The Birmingham Gun Club will give a registered tournament on April 9-10, with practice on the 8th. The program is being prepared, and much interest is being shown by local shooters.

Table with 4 columns: Name, Shot at, Broke, Name, Shot at, Broke. Lists scores for Guy Ward, P. B. Plummer, O. Garl, Ed Cornwell, Mrs. O. L. Garl, Ira Armstrong, R. R. Skinner.

Jan. 20.—A small squad of shooters went to the grounds of the Birmingham Gun Club both Thursday and Friday, and considering weather conditions, the scores were very good. Guy Ward is improving with his new gun. J. K. Warren was shooting in fine form. L. M. Norwood was shooting below his average. Scores as follows:

Table with 4 columns: Name, Shot at, Broke, Name, Shot at, Broke. Lists scores for Guy Ward, L. M. Norwood, Ed Cornwell, Mrs. O. L. Garl, O. L. Garl, J. K. Warren, H. C. Ryding, G. Hillman, I. Armstrong, R. H. Baugh, Ed Cornwall, J. F. Scott.

Second Indoor Trap Shoot.

A TOPIC at the winter shoots of the gun clubs is the 1912 indoor trap shoot. This, the second yearly indoor international trapshooting tournament, combined with the eighteenth annual Sportsmen's Show in New York, will be held March 1-9, at Madison Square Garden. General Manager S. M. Van Allen announces that Luther J. Squier, of Pittsburgh, who managed the 1911 shoot, will, through the courtesy of the Du Pont Powder Co., manage the 1912 tournament, and is arranging its program. Some changes will be made this year, based upon the experience of last year's first indoor shoot ever held, which will inure to the benefit of both shooters and Sportsmen's Show exhibitors. To begin with, the gunners will shoot diagonally from a platform on the north side of the Garden's arena, over traps placed toward the southeast corner, instead of from the center straight toward the east. This improvement will more nearly equal outdoor conditions, giving a longer range. The steel barrier to stop the shot will be higher, will reach the floor, and the whitened space will be higher and lower. Instead of the lighting arrangements of 1911, forty flaming arc lights will have reflectors that will light

the flying clay targets, while shading the shooters' eyes. It might be remarked that Miss Annie Oakley, in her exhibition last year, broke most of her bluerocks, but also incidentally shot out sixty odd electric lights. Last year, the chosen loads of some of the trapshooters carried No. 6 shot, backed with powder enough to kill mallards. This year the management will recommend 3drs. of powder or equivalent and 1 1/2 oz. No. 7 1/2 shot; these loadings composed of shells, powder and shot from all the manufacturers, will be on sale at the tournament, although shooters' "pet loads" will not be barred. The elapsed time occupied by the daily program now under construction by Mr. Squier, will be considerably less than that of 1911, in consideration of exhibitors. A free school for novices will be open each morning during the show.

Cleveland Gun Club.

CLEVELAND, O., Jan. 14.—Weekly shoot of the Cleveland Gun Club, held Saturday afternoon, Jan. 13, at Shooting Park, Stop 16 A. Mayfield road, was a good-natured affair, and the boys got down to their cold weather form. The cold snap took them off their form last week, but to-day they had regained their equanimity and picked off the clays as they came forth, with startling consistency. Mr. C. B. Haycox was the champion for the day, breaking 94 out of 100. Dr. Brown was a close second with 93 in the two events, the monthly and the annual contests. Dr. Brown, in a special event, broke 49 out of 50, so that his total for the afternoon was the remarkably high score of 142 out of 150. The weather conditions, such as we have had in January, have been a handicap to trapshooting at the Cleveland grounds, but we have managed to keep things moving, and we are looking for a prosperous year. The conditions will be the same this year as they were last year: Monthly and annual events, also a championship open contest without handicaps. This should open the gates for all those who do not like handicap can go after the championship trophy, and those who do not think they have any chance for high gun can take in the monthly and the annual, both of which have handicaps, and gives every man a chance for his money. So if you want to see this good work go on, pick your class and give the manager a helping hand.

Following are Saturday's scores. No. 1, was the monthly cup; No. 2, the annual event; No. 3 a special; each event at 50 targets, 16yds.:

Table with 4 columns: Name, 1, 2, 3, Name, 1, 2, 3. Lists scores for various shooters like Brown, Jones, Haycox, Weeden, Archer, Morris, Rockwell, Freeman, Thorp, Hopkins, Green, Nick, Tenard, Clark, Mack.

Jan. 21.—The regular weekly club shoot of the Cleveland Gun Club, of Cleveland, O., held Saturday afternoon, Jan. 20, at Shooting Park, was a real winter contest, with snow to a man's waist and a snowdrift to the height of 4 feet to shoot over that put the trap house out of sight; but a dozen of the true bloods were on hand. Those who stay at home and make up back scores on sunny days, don't know what the real fun is. But some say they have made their record. It is all to lose and nothing to win with them. If that's the case, wipe it out; be a builder and help to make 1912 a record-breaker. A true sportsman never stops at anything.

Mr. C. E. Doolittle was out for the first time for some weeks, and we were all glad to receive him, as Charley is one of the old standbys, and when he is in condition, he is a trotter, and 90 out of 100, which he broke to-day, is going some for a man that has not seen a target for some time. Capt. Freeman is expected to be at the shoot next Saturday. C. B.'s general club record for 1912 is a good one. Geo. Brown shot himself away New Year's Day and hasn't been found yet. Frank Telling, who we all like to see, shot over 3000 targets in 1910, but Frank didn't get in a club shoot in 1911. Blakeslee, who gave Webster, of Columbus, O., a chase of his life for the championship of Ohio, is never seen at the club any more, and some say that Charley Ducommun has gone to the bad because he can't break 101 out of 100.

No. 1 is the monthly cup; No. 2, the annual trophy contest, 25 targets; No. 3, special event, 25 targets, for the love of Mike:

Table with 4 columns: Name, 1, 2, 3, Name, 1, 2, 3. Lists scores for Doolittle, Brown, Weeden, Haycox, Jones, Archer, Walj, Nick, Stevens, Hopkins, Morris, Rockland, Weedon, Stauns, F. H. WALLACE, Mgr.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., Jan. 13.—Moller had best average, and beat Edmonson for the spoon by breaking 25 straight in shooting off a tie.

Table with 4 columns: Name, Shot at, Broke, Name, Shot at, Broke. Lists scores for Moller, Edmonson, Appel, Ford, Hoover, Ong.

Jan. 20.—Edmonson was first in the percentage of targets broken, and beat Moller for the spoon in shooting off another tie. Moller was the only one to score a straight.

Table with 4 columns: Name, Shot at, Broke, Name, Shot at, Broke. Lists scores for Edmonson, Moller, Hymer, Appel, Dixon, Lewis, Britton, Ott, R. R.

S. S. White Gun Club.

HOLMESBURG JUNCTION, Pa., Jan. 20.—Single guns won every event here to-day at the first shoot of the season. George McCarthy was starred on the program, which meant he was a visitor; he saw to it that the star had an added meaning by getting away with high gun for the day, breaking 96 out of 100. He trimmed Harry Kahler by one target. The other spoon winners were: T. E. Hinkson, who was high on 50, and H. E. Perry, who captured the club dipper. Although Walter Firth did not get any prize for his total on 75, he got what was infinitely more worth while—a leg on the handsome trophy offered by Frank M. Eames. That the foregoing landed the prizes was something to be proud of, as in the large squad present there were some of the best shots of the club, and it took exceptional ability to show in front of some of them. The usual handicap conditions governed yesterday's shoot, and with the added targets, the successful ones all get into points on the trophy offered by Secretary W. E. Robinson; Perry Heite, T. E. Sinkson and Walter Firth being the successful ones to start the year aright. The program called for 100 targets in strings of 25, and the handicap added to each event, the shooters being classified. Scores:

Table with 4 columns: Name, Class A, 24, 24, 25, 49, 21, 70, 19, 89, 93. Lists scores for Griffin, Tansey, Severn, Judson, Newcomb, W. H. Mathews, Cantrell.

Table with 4 columns: Name, Class B, 23, 24, 21, 46, 19, 66, 22, 85, 89. Lists scores for Sidebotham, Wilson, Hand, Pratt, Keen, Cook, T. F. Hinkson, Johnson, H. George, Budd, Lockwood, F. W. Mathews.

Table with 4 columns: Name, Class C, 22, 25, 23, 51, 23, 75, 23, 91, 103. Lists scores for Perry, Fontaine, Smith, Murray, Robinson.

Table with 4 columns: Name, Class D, 16, 24, 14, 16, 14, 68, 68, 100. Lists scores for Heite, Kendall, C. C. Watson, Firth.

Table with 4 columns: Name, Unclassified, 24, 23, 24, 24, 24, 95, 95. Lists scores for Kahler, Clegg, Keenan, Hawkins, McCarty, Apgar, Bowman, G. Hinkson, Lockwood.

Northern Kentucky Gun Club.

OWING to the extreme cold and stormy weather which has prevailed in this section since Jan. 1, there has been nothing doing on the grounds. Therefore when Jan 21 proved to be an ideal winter day, with the mercury a trifle above freezing, and the sun shining brightly, a few of the real cranks took advantage of the opportunity and came out to the grounds. The only drawback to the otherwise perfect conditions was caused by the sun shining on the wide expanse of snow, producing a light which was too dazzling for the eyes of some of the contestants. The traps were set so that they threw a very high target, but after a few shots, this did not seem to bother the shooters to any great extent. Olin was shooting a new 20-gauge gun, which is a good excuse for his fall down from his usual high mark. Wallace made a bad start, and could not overcome it in the following events, finishing 10 or 15 per cent. lower than usual. High score was made by Irwin, and 84 per cent. under the light-conditions was very good work. J. B. C. was handicapped by the dazzling light, and while he shot very consistently, he did not break as many as he generally does. The afternoon's sport was wound up with an event at doubles, Olin breaking 23 out of 24 pairs; Ford and Ertel 19 and 11 respectively out of 12 pairs each. The next shoot will be held Jan. 28, and an interesting match at 50 targets has been arranged between Irwin and J. B. C. This will be shot under the old time rule of "gun-below-the-elbow" until the target is in the air. It will be a new stunt for Irwin, but a game at which J. B. C. is at home.

Table with 4 columns: Name, 15, 15, 15, 20, 20, 15, Total. Lists scores for Irwin, Wallace, Ertel, Olin, Ford, J. B. C.

Youghiogheny Country Club.

McKEESPORT, Pa., Jan. 20.—The first bi-monthly 25-bird handicap medal shoot was won by Dr. E. S. Ballard breaking 22 out of 25 at 20yds. In the preliminary shoot at 20 targets, Dr. W. C. Heisey was high gun with 18. Scores in the trophy shoot, 25 targets, handicap, follow:

Table with 4 columns: Name, Yds. T'l, 20, 22, Simpson, 16, 18. Lists scores for Ballard, Heisey, Pendleton.

The Du Pont Gun Club.

WILMINGTON, Del., Jan. 20.—As a tribute to the Weather Man, fifty shooters turned out here to-day. In addition to the regular program there were several team matches and contests for challenge cups in Classes B and D.

A five-man team race between teams captained by Luther J. Squier and Eugene du Pont respectively, was won by the latter team, 402 to 393. The Squier men shot from the 20yd. mark; the others shot from the 16yd. distance.

The Class B challenge cup match between W. G. Wood, the present holder, and Dr. S. Steele, the challenger, was won by the latter in the shoot-off. Each man broke 40 out of 50 in the first round.

E. F. Slear, of Philadelphia, broke 25 straight, thus winning the Class A spoon. This is habit with Brother Slear; he did the same thing on his last visit.

D. J. Dougherty won Class B, breaking 23 out of 25; L. S. Evans won Class C, 21 out of 25. L. I. Jarrell won Class D, 18 out of 25.

In the Class D challenge cup race Mr. Jarrell, the challenger, defeated W. R. Smith, Jr., the holder. Jarrell broke 37 out of 50; Smith 27.

Five-man team race:

L. J. Squier.....	77	E du Pont	87
W. M. Foord.....	76	A. H. Lobb.....	78
W. S. Colfax, Jr....	86	J. H. Minnick.....	79
J. B. McHugh.....	88	H. Winchester	74
H. P. Carlon.....	66-393	E. A. W. Everett...	84-402

The individual scores out of a possible 25 were: J. W. Anderson, Jr., 19, A. H. Lobb 20, J. B. McHugh 24, J. W. Mathews 15, H. C. McClane 16, S. G. David 17, J. H. Minnick 14, N. K. Smith 22, G. F. Lord 12, E. F. Slear 25, W. Edmanson 19, C. Scarborough 19, W. A. Casey 14, W. Tomlinson 13, H. P. Carlon 20, L. C. Lyon 18, R. Whetworth 22, L. S. Evans 21, W. J. Highfield 15, T. W. Mathewson 21, J. W. Anderson, Jr., 18, E. A. W. Everitt 20, J. T. Roberson 16, J. J. Magahern 17, W. S. Colfax, Jr., 22, Dr. H. Betts 17, S. J. Newman 11, W. A. Casey 19, L. J. Squier 22, W. M. Foord 23, Clyde Leedum 17, D. A. Grier 9, Dr. S. Steele 15, L. L. Jarrell 18, J. B. Grier 15, W. B. Smith, Jr., 16, J. A. Campbell 17, H. K. Davis 11, H. D. Betts 9, S. Tuchten 18, Dr. A. Patterson 19, C. E. Springer 19, D. J. Dougherty 23, Dr. Bullock 14, J. H. Holden 17, W. M. Francis 12, Z. H. Lofland 17, D. Lindsay 15, E. du Pont 22, H. Winchester 19.

Meadow Springs Gun Club.

PHILADELPHIA, Pa., Jan. 20.—Winning the Class A competition and the high gun total for the day enabled Harry H. Sloan, the Meadow Springs expert, to carry off two silver dippers here to-day. Sloan shot in superb form. In his class event he shattered 24 of his 25 targets, beating out all handicap men, and then ran through the 100-target program with but 8 misses.

A. J. Renner, with a clean score of 25 smashes, won Class B trophy. Renner, too, shot in wonderful form, he cracking every one of his bluerocks to dust. Thompson, with a total of 85, was runner-up to Sloan on the day's events. Scores:

Class A:						
Sloan	10	15	8	12	23	92
George	10	11	7	10	1	76
Moore	6	11	7	10	3	73
Hogan	7	13	7	12	0	59

Wilson	4	7	11

Bergen Beach Gun Club.

THE honors were divided between John H. Hendrickson and G. S. Remsen at the weekly trap shoot of the Bergen Beach Gun Club last Saturday. The gunners, who have their traps off the shores of Jamaica Bay, have decided to postpone their sliding distance handicap until next month, and throughout January there will be only practice shooting at Bergen Beach. Scores:

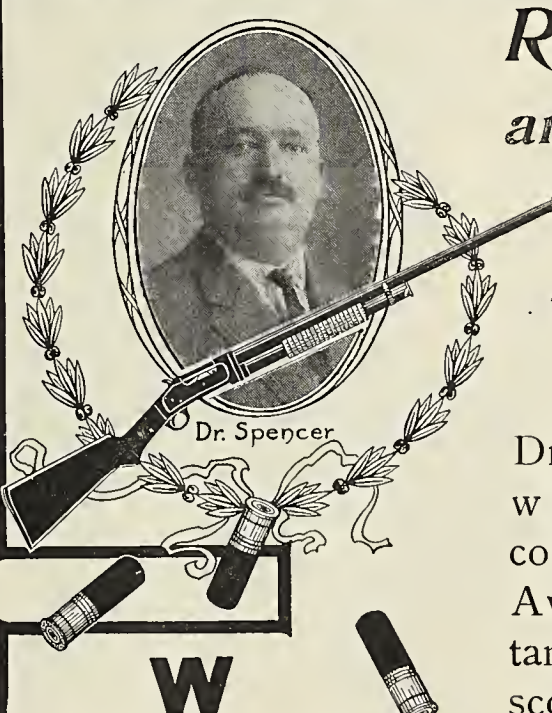

J. H. Hendrickson	22	23	22	23	23	21	24	22
G. S. Remsen	24	21	22	24	22	21	24	22

H. Hewes	16	12	12	13
B. Lynch	17	19	14	19

Bennett Gun Club.

GLOUCESTER CITY, N. J., Jan. 20.—There were three matches at the weekly shoot of the Bennett Gun Club this afternoon. In the first event, the prize for which was a punch bowl, the winner was Frank Bennett, who broke 15 straight. G. S. Grater was the winner of the second event with 14 straight. The sweepstake match resulted in a tie between Bennett and Wm. Murray. In the shoot-off Bennett won.

First event, open shoot, 15 bluerocks, prize punch bowl: Frank Bennett 15, B. Martel 14, C. Redfield 14,

WINCHESTER

Dr. Spencer

W

Repeating Shotgun and Shotgun Shells

WIN

THE OFFICIAL AMATEUR SEASON'S AVERAGE

Dr. W. S. Spencer of St. Louis, Mo., won the Interstate Association's contest for the Amateur Season's Average for 1911. He shot at 2,100 targets in various tournaments and scored 96.28 per cent., a record that all amateurs agree is a wonderful one. In winning this great trap shooting honor which so many amateurs annually strive for, Dr. Spencer shot a Winchester Repeating Shotgun and Winchester Loaded Shells. His record is conclusive proof of their strong and uniform shooting qualities, for such shooting as Dr. Spencer did could only have been done with the best possible equipment. Dr. Spencer's victory and the winning of the Professional Season's Average for 1911 by J. R. Taylor, with a Winchester Repeating Shotgun and Winchester Loaded Shells emphasizes the wisdom of shooting the make of gun and shells that always helps and never handicaps skill. That Winchester Shotguns and Winchester Shells are such a combination is shown by their consistent and conspicuous winnings.

The Red W Combination was Supreme in 1911

M. Monohan 13, G. Grater 13, F. Baner 13, S. Cahill 13, F. Grant 13, S. Prickett 13, H. Redfield 12, W. Murray 12, A. Dasch 11, J. McLaughlin 10, E. Black 10, H. Musselman 10, F. McGinley 9.

Second event, open shoot, 15 bluerocks, prize pair of chickens: G. Grater 14, C. Redfield 13, W. Murray 13, F. Bennett 12, B. Martel 11, M. Monohan 11, S. Prickett 10, E. Cahill 10, H. Hess 9, H. Musselman 8.

Third event, sweepstakes, 15 bluerocks: F. Bennett 15, W. Murray 15, C. Redfield 14, B. Martel 13, S. Prickett 13, F. Burcher 12, E. Black 11, G. Grater 11, J. McLaughlin 9. Shoot-off, miss-and-out: Bennett 1, Murray 0.

Portland Gun Club.

THE articles of incorporation of the re-organized Portland (Ore.) Gun Club were filed with the Secretary of State week of Jan. 3. The club intends to promote and encourage all kinds of field and athletic sports. It also encourages reasonable and proper protection of wild game and fish.

Under the new club many big shooting events will be scheduled. The first of the events will be the Pacific Coast Handicap shoot, which will be held the week following the Elks' convention. The Handicap is one of the banner shooting events in the United States and will bring together the best trapshooters from all parts of the country. Preparations have been started for the installation of four sets of traps. A new club house will be built this summer, and the officers plan to make it the biggest organization of its kind in the Northwest.

The local grounds are well situated and can be reached easily by car or automobile. There is plenty of room for several more traps, and the clearing of the ground has already commenced.

The officers elected Jan. 2 are: J. E. Cullison, President; P. J. Jolohan, Vice-President; J. A. Addleman, Secretary-Treasurer; R. A. Taylor and W. A. Carter are the others officers of the Board of Directors.

Englewood Country Club.

ENGLEWOOD, N. J., Jan. 20.—Three events were scheduled here to-day, and brought out fifteen guns—the largest battery thus far this season. Weather conditions could not have been improved upon. There were three ties in the 25-target scratch, E. Schultz, Dr. J. Peter and W. E. Loughman each scoring 21. Schultz won out in the shoot-off. S. O. Miller with 4 scored 12 and won the first 15-target event, the second going to W. E. Loughman with (4) 15.

AN UNBEATEN RECORD!

TARGETS SHOT AT
4280

97.28%

TARGETS BROKEN
4164

This is the percentage with which Mr. J. S. Day won the 1910 OFFICIAL HIGH AMATEUR AVERAGE—a percentage never equalled by an amateur and exceeding by exactly 1% the figures of the 1911 winner, who, moreover, shot at only 2100 targets.

Mr. Day's Wonderful Shooting was done with

Peters

FACTORY LOADED SHELLS

The Lion's Share of the 1911 Amateur Honors was also won with PETERS Shells, for they were used either exclusively or for the most of their shooting by 5 out of the 10 High Amateurs. This is not all. The 1911 Grand American Handicap, the greatest event in the Trap-Shooting world, was won by Mr. Harvey Dixon, who scored 99 out of 100 from the 20-yard mark. This score has never been equalled and is a World's Record.

Mr. Dixon used PETERS SHELLS the kind with "STEEL WHERE STEEL BELONGS."

Particular attention is directed to the fact that all of the shooting of Messrs. Day and Dixon was done with Peters Regular Factory Loads. And remember this—you can use PETERS Shells in any good gun. They require no special make of gun to give best results.

Marine and Field Club.

GRAVESEND BAY, N. Y., Jan. 20.—The weather here to-day was ideal for hunting the bluerock, and scores picked up considerably. Dr. Hopkins won two events out of four. The January cup and take-home trophy going his way. In the latter event, however, he was tied by E. H. Lott, shooting from scratch, but won the shoot-off. J. M. Knox pulled down the trophy shoot and the 25-target sweepstake. Scores:

Sweepstake, 25 targets, handicap:			
J M Knox.....	4 25	C M Camp.....	2 20

Jersey City Gun Club.

JERSEY CITY, N. J., Jan 20.—Only ten shooters were out at the regular Saturday shoot of the Jersey City Gun Club to-day. The zero weather we have been having the last two weeks evidently has the boys hugging the stove and trying to thaw out. Dave Engle was high gun for the day, and Shannon the runner-up. Shannon also won the leg on the monthly prize. Williams, Jr., captured the only weekly prize contested for. The scores follow:

Engle	125	93	Williams, Jr	100	52
Schultz	200	90	Jones	75	33
Dixon	175	116	Bird	125	60
Shannon	200	139	Brady	100	49
Williams	125	65	Harvey	75	37

SECRETARY.

The Trap in Florida.

LEESBURG, Fla., Jan. 19.—The Florida Hunter and Fishermen Club gave a target shoot to-day in connection with Annie Oakley's exhibition, held on the Leesburg Baseball grounds, to which admission was charged and the receipts, amounting to \$150, donated to the Leesburg Band. The conditions of the shoot were 100 targets each, open to all amateurs, and the scores were as follows: Evans 91, Annie Oakley 91, Lucius 85, Butler 84, Stoer 83, Watts 82, Randolph 82, Lanier 76, Proctor 72, Yates 70, Sanders 69, Hood 69, Brown 72. The grandstand was full of spectators, and the exhibi-

tion given by Annie Oakley at 2:30 in the afternoon was a wonderful demonstration of marksmanship and skill, and was enjoyed by all those present.

In the evening the Band gave a concert at the Lake View Hotel, which was followed by a grand ball.

E. A. WORRELL, Sec'y.

Stamford Rod and Gun Club.

STAMFORD, Conn., Jan. 20.—There were four handicap 25-bird sweepstakes here to-day. R. M. Gillespie won the first (2) 24; J. M. Carr took the second from scratch with 23; M. B. Foster with 4 handicap made 25 and Dr. J. H. Staub got 24 from scratch and won event four. Scores:

Sweepstakes, 25 birds, handicap:

Speedway Gun Club.

NEWARK, N. J., Jan. 18.—Some good scores were handed in by the gunners who participated in the regular weekly shoot of the Speedway Gun Club, held Tuesday afternoon, Jan. 16. While the day was far from being an ideal one for trapshooting, the gunners did remarkably well. Louis Colquitt was the high man of the day. B. M. Shanley, Jr., and N. Allen were the only ones to turn in a perfect score of 25. Shanley turned the trick on his fourth appearance on the firing line, while Allen was credited with 25 kills on his first try. Colquitt and Hassinger also shot well. The former was in good form, and with one exception, he never missed more than five in any of his strings. The scores:

Events:	1	2	3	4	5	6	7	8	9
B M Shanley, Jr.....	23	21	23	25	18	19	20	22	23
Wm Hassinger	21	23	18	20	18	19	17

SMOKELESS.

Registered Tournaments.

THE following tournaments have been registered with the Interstate Association during the week ending Jan. 20:

- April 13.—Rittersville, Pa.—Lehigh R and G. C. H. F. Kock, Sec'y.
- April 15-17.—New Orleans, La.—City Park G. C. E. F. Leckert, Sec'y.
- May 8-9.—Columbus (O.) G. C. Lon. Fisher, Sec'y.
- May 9.—Riverside, Ill.—National G. C. Chas. W. May, Pres.
- May 21-24.—Sunbury, Pa.—Pennsylvania State tournament, under the auspices of the Sunbury-Selinsgrove G. C. J. W. Schoffstall, Sec'y.
- May 23-24.—Waterloo (Ia.) G. C. J. F. Libby, Sec'y.
- June 5-7.—Warm Springs, Ga.—Merriwether G. C. T. B. Slade, Mgr.

ELMER E. SHANER, Sec'y-Treas.

Glenwood Country Club.

GLENWOOD, L. I., Jan. 20.—There wasn't much of a crowd, just six gunners, powder-burning here to-day. Jack Fanning dropped in and left his card with 94 on it. W. S. Silkworth trotted along behind with 87, this being high amateur score.

S. Isaac made place with 80. C. W. Berner 78, C. B. Berner 59 and D. E. Smith 55.

It was a great day and those who can shoot and won't shoot—well, it's about like the little bird that wouldn't sing.

Clearview Gun Club.

DARBY, Pa., Jan. 20.—Ten of the Roxborough Gun Club members helped to make the first event of 1912 of the Darby Club to-day one of the best shoots held by the Clearviews this season. Thirteen Clearview men participated in the class events, which, with the Roxborough squad also contesting in these classics, kept the firing line busy until dusk. The conditions were 50 targets a man, in two events, class shooting. Bonsall, with 43, led the Class A men, beating Fisher by one target. In Class B, Davidson and Kirshner had a fight for the honor, 40 to 39. Fink was the only Class C man to compete, and naturally his score of 30 won him high honors.

The Roxborough men had a close race for high gun among themselves, which ended in a tie between Free and George, both of whom smashed 43. Freeman totaled 42, getting 21 in each event.

The Clearviews added a new event to this year's program, and it started yesterday. It is a miss-and-out for a silver spoon, and Kirshner proved to be the winner with 9 straight. Scores:

Class A—Bonsall 43, Fisher 42, Gideon 40, Redman 29
 Class B—Davidson 40, Kirshner 39, Bruan 38, McCullough 36, Johnson 34, Elwell 32, Shuster 31, King 30.
 Class C—Fink 30.
 Visitors—Free 43, George 43, Freeman 42, McClennan 38, J. Mettis 34, Bickings 34, R. Mettis 31, Wilde 30, Webb 28, Agar 18.

Paleface Gun Club.

WELLINGTON, Mass., Jan. 17.—Dr. E. A. Gleason, of the Boston A. A., shot excellently at the weekly shoot here to-day, making 96 out of 100 targets, beating his nearest competitor, Frank Lynn, by 5 birds. Edwards took third cast with 89. Scores:

Targets:	15	15	20	15	15	20	Total.
Gleason	14	15	10	14	14	20	96
Frank	14	13	19	14	13	18	91
Edwards	14	14	16	12	14	19	89
Steele	13	12	18	13	13	19	88
Snow	14	12	18	15	12	16	87
Burnes	11	14	17	13	13	19	87

Larchmont Y. C.

LARCHMONT, N. Y., Jan. 20.—Of the ten matches decided to-day, five of them were regular fixtures and five were special contests. In six of the ten, full scores were made by several of the gunners, and shoot-offs were required in six of the events.

Eighteen men faced the traps in all but one match, and in that, for the take-home trophy, W. Chase was

SMITH GUNS HUNTER ONE-TRIGGER

In the brush or at the traps you want to feel sure of your gun. A second's loss of time means the loss of your bird or a failure to score in the competition. The strongest insurance policy the world over for sportsmen is a Hammerless Smith Gun with the Hunter One-Trigger attachment.

THE HUNTER ONE-TRIGGER gives a pull, short, clean and quick. There's no creep or drag. The speed of the mechanism far exceeds the speed of the trigger finger. The aim is not disturbed—because there is no relaxing, no re-gripping, no accommodating yourself to the different lengths of the stock—but just a firm, steady grip and pull.

The very newest Hammerless Smith Gun is the 20-Gauge Hunter One-Trigger—and it's a beauty. Weighs only 5 3/4 to 7 lbs. Just the finest gun that can be made at the price—simply all gun and no frills. Be sure to ask your dealer about it.

Write today for handsomely lithographed Catalogue—it is free.

March 1st to 9th, inclusive, 1912

MADISON SQUARE GARDEN

NEW YORK CITY

International Trap Shooting Tournament and Sportsmen's Exhibition

S. M. VAN ALLEN, General Manager WILLIAM J. POTH, Business Manager, 339 Fifth Avenue

TELEPHONES; 8746-8747 MADISON SQUARE

the winner with a full score of 25. R. L. Spotts, W. B. Short and J. Henry tied with 24 each. W. Chase was also the winner of the 100-target handicap match, after a shoot-off with Henry and Johnson, this trio having tied with the remarkable score of 98 out of the possible 100.

T. Lenane, Jr., J. Henry, B. M. Higginson and M. C. Waters tied in the shoot for the January cup with full scores. In the shoot-off T. Lenane, Jr., won.

W. Chase, C. H. Dugro, W. B. Short and R. Johnson tied in the match for the vice-commodore's cup with 25 each. In the shoot-off Johnson won.

The leg for the Alley trophy was won by T. Lenane, Jr., with a full score, after a shoot-off with Elias and Chase. Dr. Culver won the second take-home trophy match.

The 125-target scratch was won by J. Henry with 113, and the 15 and 10 target scratch matches were won by R. L. Spotts and W. J. Elias respectively. R. Johnson and J. Henry surprised their friends by breaking all of their targets in the 50-target match for the accumulation cup. The tie will be shot off next week.

Riverside Gun Club.

RIVERSIDE, Jan. 13.—Bright sun and no wind were the weather conditions at the shoot of the Riverside Gun Club. W. C. Brooks won first after shoot-off with Gleason and Tucker. Scores:

C B Tucker	5	93	*G N Steele	0	85
E F Gleason	0	93	T C Adams	0	82
W C Brooks	18	93	*E A Staples	0	82

Western Connecticut Trapshooters' League.

THE annual meeting of the Western Connecticut Trapshooters' League was held at the Sea Side Outing Club, Bridgeport, Conn., Monday, Jan. 15, 1912. The meeting was called to order by President E. H. Bailey, of Danbury, and the following delegates responded to roll call. Messrs. Hall, Adams and Wilson, Bridgeport; Bailey, Olmstead and Day, Danbury; Bailey, Fray and Judd, Bethel; Rice, Smith and Gale, New Brunswick; Sherman, Sherman and French, Long Hill, and Dreher, Templeton and Hall, Waterbury.

A communication was read from Secretary Shaner, of the Interstate Association, congratulating the League upon the highly successful season of 1911, and informing us that we had the largest average attendance of any league or association in the country, and wishing us continued success. Also a communication from the Hartford Gun Club, applying for admission to the League, should there be any vacancies this year. There being no vacancy, and not deeming it advisable to increase the size of the League, the secretary was instructed to so inform the Hartford Club, and their letter was placed on file for consideration when a vacancy might occur.

President Bailey made his report on the season's work and offered several recommendations for adoption for the coming year, principally among them being the question of "class shooting," it being the desire of the different clubs to have the prizes go to the shooter who merits them, and avoid the dropping hack of men when they see that they are out of the running in the next higher class.

The following rule was adopted for the coming season: "That the third high gun of the day be used for a basis, and that each class be defined by a graduation down of 10 per cent. to each class.

It was moved and adopted that we have two 15-bird and six 20-bird events, making a total of 150 birds, the same as last season, but making eight events instead of 10. This was done in view of the fact of the large attendance of the tournaments, and hoping to expedite matters by less changing of squads, when there is always more or less time lost, and at the best, it was generally dark before the last gun was fired.

It was moved and adopted that any and all "special events" shall be decided after the regular program of the day is concluded.

The following officers were elected for the ensuing year: President, W. W. Rice, New Haven; Vice-President, H. M. Judd, Bethel; Secretary-Treasurer, Chas. Sherwood, Long Hill, P. O. address, Stratford, Conn.; Directors: D. H. Hall, Bridgeport; W. E. Day, Danbury; W. B. Judd, Bethel; Homer Sherman, Long Hill; W. W. Gale, New Haven; John Dreher, Waterbury.

A hearty vote of thanks was extended to the retiring officers.

The following dates were selected for the different tournaments the coming season: Bethel, May 4; New Haven, May 25; Long Hill, June 22; Danbury, July 13; Waterbury, Aug. 17; Bridgeport, Sept. 2.

Much enthusiasm was expressed on all sides in regard to the success of the past season, and after a general exchange of ideas as to the good and welfare of the organization, the meeting adjourned, all anxious for the opening of the regular season.

T. M. A.

Penn Square Gun Club.

PENN SQUARE, Pa., Jan. 20.—The Penn Square Gun Club held an interesting live-bird shoot on their grounds this afternoon. Expert wing shots from Philadelphia, Norristown and the surrounding country attended. Mumbower won the 25-bird race, losing only his 17th and 22d birds. Walker failed to gather his 1st, 2d, 13th and 18th birds. Phillips, Chalk, Walker and Hart also shot well. The best scores follow:

Twenty-five bird race: Mumbower 23, Walker 21.

Ten-bird race: Phillips 9, Mumbower 8.

Miss-and-out sweepstakes: Chalk 5, Phillips 4, Hart 4, Walker 3, Righter 3, Jamison 3, Butz 2, Uhler 2, Detwiler 2.

Final miss-and-out sweepstakes: Walker 6, Hart 6, Phillips 5, Uhler 5, Chalk 4, Butz 3, Righter 3, Jamison 3, Reimer 3, Detwiler 2.

Live Bird Match.

SHAMOKIN, Pa., Jan. 20.—In a live-bird match here today, Nathan Benner, Mahanoy City, Pa., captured a \$400 purse over Penrose Marquette, of this place. A large number of sports from Schuylkill, Columbia and Northumberland counties were present, a big amount of money changing hands over side wagers. The men were to have shot at 17 birds each. Benner grapsed 10 out of 16 and his opponent 8 out of 16. Marquette missed his first five birds, while Benner let his first 3 out of 5 get away.

Rifle and Revolver

Du Pont Gun Club, Rifle Dept.

WILMINGTON, Del., Jan. 20.—The results of the four-man pistol team shoot on the range of the Du Pont Rifle and Revolver club were:

K. K. V. Casey's Team	L. du Pont's Team.
K. K. V. Casey..... 199	L. du Pont..... 215
D. Appleby..... 209	E. G. Ackart..... 203
W. S. Weeden..... 178	F. Robelen..... 157
S. B. Miller..... 134-720	T. E. Doremus..... 134-709

Pistol scores: D. Appleby 87, 87, 90; L. C. S. Dorsey 83, 80.

Rifle scores: D. Appleby 86, 80; W. G. Long 57, 44; P. Randall 40, 45; J. Anderson 18; J. A. Campbell 45.

Rifle Practice in America.

THE report of Secretary Albert S. Jones, of National Rifle Association of America, just issued, would indicate that, if the year 1911 is a criterion, target rifle shooting in America is a failure. The report says:

That the rifle club movement in the United States is a failure is owing to two causes: the first and foremost being a lack of outdoor ranges whereon rifle firing can be carried on. At the present time there are only forty rifle clubs in this country, exclusive of the foreign-American clubs of the Schuetzen class, who have outdoor ranges, owned or leased by the club. There are thirty or more clubs who are able to get a small amount of practice on National Guard ranges. Some of these clubs are able to get this practice, however, only at such times when the ranges are not in use by the army or militia, which in most cases is when it is impracticable for the rifle clubs to use them. Most of our rifle clubs in the larger cities have practically gone out of existence owing to this cause.

This lack of ranges is particularly noticeable east of the Mississippi River, where the growth of the population in large cities has forced the closing of the ranges in and near them, with the result that rifle firing is now confined to one or two State ranges, often available only for the use of the National Guard.

What is needed more than anything else in the military line in the United States is the construction of rifle ranges by the Government near large centers of population for use not only by the army and National Guard, but by civilians, colleges and schoolboys' rifle clubs and cadet corps. Every year that this is put off only increases the ultimate cost. It probably will be impossible to acquire ranges for long-distance shooting, and we may have to come to the shorter ranges protected by mantles, such as are in use on the Continent.

After the Government has acquired ranges, the next move must be the free issue of arms and ammunition. We then will be in a position to see the movement grow and expand, and it would not be long before we would have built up in this country an organized reserve of qualified marksmen of enlistment age and more or less military training.

The law passed in 1905 authorizing the sale of service arms and ammunition to rifle clubs has not proved effective in stimulating civilian rifle practice. Since the law went into effect 1000 model 1903 service rifles have been sold to clubs. My belief is that very few of these rifles are being used for the use intended—target practice—and that a great many have passed from the hands of the original owners. Under the present law, the Government has no way of compelling the purchasers of these rifles to use them in target practice, whereas if rifles are "issued" to clubs for the purpose of target practice, and they were not used for that purpose, they could be withdrawn and the club's charter cancelled.

The National Rifle Association is indebted to the Ordnance Department for many courtesies. The Department has done all it could under the law to help the cause. By order of the Secretary of War, a certain number of new Krag rifles were set aside for sale to our rifle clubs at the price of \$10 each, and ammunition for the same at the price of \$15 per 1000. Our club members seem to prefer the latest model, however, as 314 model 1903 rifles were purchased during the last year, as against 69 Krags; 97,250 rounds of ammunition for both models were purchased by rifle clubs during 1911.

I would recommend that the question of legislation for the building of ranges be again taken up, or if the rifle practice bill now pending in Congress should become a law, that the greater part of the appropriations carried therein be devoted to range building for some years to come. If the Government does not do something along these lines, the only alternative is to encourage the organization of miniature rifle clubs like they have in England, where over 2000 such clubs are now in existence. Gallery shooting with small caliber rifles is not of great value, taken from a military standpoint, but it would be better than nothing at all. Experience has shown that men who kept up their gallery work during the winter produce better results on the outdoor range in summer, which goes to show there is some value in miniature rifle shooting. The interclub indoor leagues that we are promoting have greatly stimulated gallery work.

Among colleges there were 8 new clubs organized, while 10 have dropped out. Of the 36 college clubs enrolled, 27 are institutions having a military department.

The report shows a marked falling off in schoolboy rifle clubs, a loss of 26 teams being recorded.

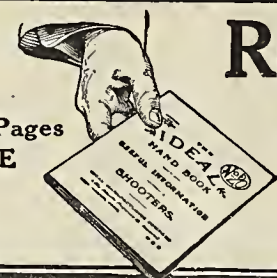

This decrease in schoolboy clubs is due to four causes, the principal one of which is the lack of ranges; the second reason is the difficulty in getting competent instructors to take charge of the boys as required by our regulations; the third, the cost of purchasing rifles and ammunition; the fourth is the opposition encountered from the school authorities. This opposition seems to be almost universal throughout the country.

New York and Washington are notable exceptions to this rule. In both cities this work has the hearty sanction and co-operation of the school authorities, and rifle shooting is one of the recognized sports in the school, and the school letter is given to the members of successful rifle teams, the same as in other branches of athletics.

In Greater New York there is a sub-target gun machine installed in each school and the rifle shooting department is under the direct supervision and care of a faculty member detailed for that purpose. In addition to which there is the Public Schools Athletic League, which assumes direct control of the shooting. During 1911 over 3000 boys received rifle instruction.

In connection with this work, I would again suggest that schoolboy work would be greatly facilitated if the Ordnance Department of the Army would manufacture portable gallery ranges, these ranges to be issued in units of one complete range, including a back-stop with wires and wheels for the trolley system and simple instructions for installing. Such a portable range could be manufactured at a cost of between \$40 and \$50 a unit, and would be easy to install in any room where 60 or 75 ft. in length could be secured. This would do away

Reload Your Shells

140 Pages FREE

The .32-40 High Power factory cartridges sell for \$34.20 net per thousand. By reloading the same shells with factory primers, factory bullets and the same powder charge, your expense is \$13.46;

You save \$20.74 on 1000 cartridges.

The .32-40 low power smokeless factory cartridges cost \$28.80 per thousand; when you reload, your expense is only \$11.31, making a **saving of \$17.49.** Factory .32-40 smokeless short range cartridges cost \$25.20 per thousand; by reloading your shells, they cost you only \$7.65 per thousand. Make your own bullets and you have **1000 short range cartridges for \$3.80.**

You wouldn't throw away your pipe after smoking it once; you waste money if you throw away your expensive high-grade shells without reloading.

FREE—The Ideal Hand Book tells all about the tools and methods for reloading all standard rifle, pistol and shotgun ammunition; 140 pages of practical information for shooters. Mailed free to any shooter interested enough to send three stamps postage to

The Marlin Firearms Co.
27 Willow Street New Haven, Conn.

with a lot of technical specifications on range building, which is more or less Greek to the average boy. I think that if this could be done, that a good many schools would become purchasers of such ranges.

Another feature greatly needed is a uniform gun for this work. At the present time there are no less than eight to ten different makes and styles of rifles being used by the boys in their work.

The Government has about 34,000 Krag carbines on hand which would make an ideal arm for schoolboys, as they could be used for both indoor and outdoor work—for indoor work by using an adapter and a revolver cartridge or gallery loaded ammunition. It has also been suggested by the Chief of Ordnance that .22cal. barrels could be put on these rifles at small expense.

This country greatly needs an up-to-date cadet rifle, preferably a miniature of the service rifle. Nearly all foreign countries manufacture a miniature army rifle for their cadet corps.

This work among the schools will never amount to a great deal until we are in a position to appoint a competent man in each city to take charge of the work and devote most of his time to it. This, of course, would require paying such a man for his time and expenses.

LEGISLATION.

The so-called rifle practice bill, entitled, "a bill to promote a patriotic spirit among citizens and youth of the United States, and for the encouragement of rifle practice" has been re-introduced in Congress. There have been few bills so strongly indorsed by "powers that be," and good citizenship generally, having the backing and approval of President Taft, Theodore Roosevelt, Secretaries of War Root, Wright, Dickinson and the present Secretary; of the Chief of Staff and of Chief of Ordnance U. S. Army; Chief of Division of Military Affairs; National Board for Promotion of Rifle Practice in United States; National Rifle Association of America; National Guard Association of United States; Commander-in-Chief Grand Army of the Republic; President National Civic Federation, and many other organizations and prominent citizens.

This alone should show its work, and should require no other recommendation. Necessity for this legislation is apparent. The purposes of this act not only are to create universal knowledge of the military arm among citizens, but to revive the almost lost art of rifle shooting as a pastime in this country, for rifle shooting bears too important a relation to our national defense to be neglected."

Results of an investigation to ascertain how many Americans in different branches of the service, as well as civilians, received instruction in rifle practice during the year 1910 furnishes food for thought.

Records of the War Department show that during that year 29,230 members of the Regular Army, exclusive of those in the Philippines, received rifle instruction, of which 17,473 failed to make the qualifying score.

During the same year the Navy instructed 35,000 men, and the Marine Corps 400 more. In the organized militia 51,749 were given rifle instruction, of whom 20,630 failed to qualify as marksmen. There were also 40,000 who were not even taken to the range.

This makes a total of 120,379 men in the regular military service of the United States who received rifle instruction of more or less degree during the year. To this might be added 3000 members of civilian rifle clubs. There could also be counted 7710 students in colleges having a military department who were given a limited amount of instruction.

In the aggregate, this will give us a total number of male citizens between the ages of eighteen and forty-five who practice with the service rifle during one year

of 132,069 out of a total male population of the enlistment age of 16,000,000.

One important fact should be taken into consideration with regard to these figures, and that is that nearly 40 per cent. of these men are turned back annually into private life to forget what they have already learned of this important feature of national defense. A large percentage of this class drifts to the large cities. If they were enrolled into rifle clubs they could be kept track of, and would continue their shooting, and thus be much more efficient as volunteers.

The Ordnance Department of the Army has on hand about 3000 model 1898 .30cal. magazine rifles, popularly known as the Krag, and 34,000 carbines. It is no longer necessary to hold a very great number of these arms or a reserve, and they are available for issue to rifle clubs in case this legislation becomes law.

INTERNATIONAL MATCHES.

The principal item of expenditure in putting into operation plans to promote rifle shooting through rifle clubs would be that of ammunition. It is estimated that this issue the first year would amount to about 100,000 rounds, figuring on a basis of 100 rounds to each club member. This would cost in the neighborhood of \$25,000. This amount would naturally gradually increase, but during the first few years the money not expended for ammunition could be used advantageously in range construction, the acquiring of trophies, and preliminary organization work.

As regards the Olympic situation: As we are the present holders of the Olympic rifle shooting championship, which was won by our team at the last Olympic games in England in 1908, there is not a doubt but what we should defend our title and send a team to Stockholm. We will have a harder proposition to face than the last competition, as the longer ranges at which we were particularly strong, have been abolished and all the shooting will be at 200, 400, 500 and 600 meters. The matches will be shot June 30 to July 6. Entries close May 30.

The question of organizing and sending a team to represent this country at these games has been put in the hands of our Association by the American Olympic Committee. We practically unofficially have promised to do so. I think this Board will be of one accord in agreeing that it is most desirable that such action be taken, and assuming that the Board's action would be favorable to sending a team, I have taken up the question of ways and means and submit for your consideration four tentative plans for raising the funds necessary. Taking as a basis the expenses of the last Olympic team, we need in the neighborhood of \$7000 to finance the proposition.

The personnel of the Board of Directors of the National Rifle Association of America consists of the Adjutant-General of each State and Territory; a representative of the War Department, appointed by the Secretary of War; representatives of the Navy Department and the United States Marine Corps, appointed by the Secretary of the Navy; a representative of each State rifle association, and thirty-six members elected at large.

Philadelphia Rifle Association.

The following scores were made by the Philadelphia Rifle Association, on the Philadelphia range of the National Rifle Academy, 1234 Filbert street, Thursday, Jan. 18:

Rifle, offhand, German ring target, distance 75ft.: E. H. Williamson, Jr., 236, 240, 241, 238, 245, 233, 243, 238, 239, 236, 242, 233, 242, 240; J. G. Schnerring 243, 243, 242, 243, 239, 243, 246, 242, 246.

Rifle, prone, target N. R. A., 1 to 10 count, distance 75ft.: W. J. Maybee 94, 99; E. H. Williamson, Jr., 96, 94; Harry Overbaugh 89, 91; R. S. Newbold 98, 96; Nathan Sperring 93, 98; H. L. Reeves 92, 94, 93; J. G. Schnerring 91, 92; Dr. W. E. Quicksall 94, 88; George Hugh Smith 90, 93.

Pistol, Standard American target, distance 60ft.: Nathan Sperring 83; W. J. Maybee 84, 90, 90; H. A. Dill 80, 82, 86; Herman Thomas 87; Dr. G. G. Davis 83, 74, 68, 83, 67, 79; R. S. Newbold 86, 79, 80, 91, 78; W. T. Smith 90, 84, 91; George Hugh Smith, 84, 84; E. A. Palmer 79, 76; Dr. W. E. Quicksall 88, 87, 84; H. L. Reeves 81, 94, 82.

Missouri State Rifle Association.

The annual meeting of the Missouri State Rifle Association will be held Saturday evening, Jan. 27, at 6:30 P. M., at the First Regiment Armory, 220 South Grand Avenue. At this meeting officers will be elected for 1912. It is desired to have a full attendance of members and their friends, and in order to make the evening as enjoyable as possible a dinner will be served. There will be a number of short talks on subjects of interest to riflemen by competent authorities, including Col. J. J. Dooley, of Portland, Me., for several years principal assistant officer in charge of the national matches. Col. Dooley is an authority on modern military rifle shooting, and a speaker of great merit. A short musical program will also be rendered.

Game Laws in Brief

A new and revised edition for 1912.

It gives all the fish and game laws of the United States and Canada. It is complete and so accurate that the editor can afford to pay a reward for an error found in it—“If the Brief says so, you may depend upon it.”

Sold by all dealers, or by mail by us. Price, twenty-five cents.

Forest and Stream Publishing Co., 127 Franklin St., New York

OUTDOOR PHOTOGRAPHS

Forest and Stream wants good photographs of shooting, fishing, yachting, canoeing, camping, natural history and kindred subjects. Pictures that tell a story preferred to those depicting still life. Carbon prints, and those made on printing-out papers, will be given preference. Pictures that have not been used in other publications will, if available, be paid for.

THE ANGLER'S WORKSHOP

Rodmaking for Beginners

By PERRY D. FRAZER

Not only Americans, but anglers of Great Britain and nearly every European State, South Africa, Australia, Canada, are making their fishing rods under the simple instructions laid down by the author in this useful little manual. A Japanese, after reading the book, took up rod repairing for his fellow countrymen as a business. An Englishman followed it in making several of the sixty-five rods that he has in his collection. A Russian appreciated the book so much that he suggested a Russian translation. The British sportsmen's papers have quoted from it time and time again. In that country it has helped bring about a great change in rod types, and to attract attention to the excellence of American fishing rods. In fact, "Rodmaking for Beginners" has become the standard manual wherever fishing with rod and reel is practiced.

The reason is obvious. The book is written in plain English, and all the details are set down so simply that a boy can follow them. All of the types of rods used on fresh and salt water are described and specifications given. Separate chapters cover all details, and the one on split cane rodmaking is the only comprehensive treatise on that subject ever published.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid, \$1.

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK

At Shell Mound Park.

EMERYVILLE, Cal., Jan. 7.—With rain to start with, the first shoot of the New Year was held here to-day, and the clubs that held their shoots were the Shell Mound Pistol and Rifle Club, the Independent Rifles and the Deutsche Krieger Schuetzen.

K. O. Krindgren made the first 25 on the 200yd. range, and H. W. Klienbroich made the first 10 on the 50yd. with the pistol for the new year. E. Schierbaum made two fine scores in the champion class on the 200yd. rifle range, German target; his score was 216; his second was 221, or a 20 or better. H. W. Klienbroich was the high man in the first class with a score of 100 and 199. A. M. Poulsen made the best score in the second class, which was 198. S. Phillips made the best in the third class, having made 182. H. A. Harris made two dandy scores in the champion class of the pistol, having made 93 and 96. W. N. Christie led the first class with 88 and 90. C. J. Doehring made a fine score in the first class, making 91. The honors of the third fell to H. W. Klienbroich, having made 73.

The members of the Bay Cities Revolver Club, including R. W. Jones, secretary and treasurer, held a meeting to decide as to what date to hold the annual meeting. It was decided to hold same at Shell Mound Park, on Tuesday, Jan. 9. At this meeting the election of officers will also take place.

As far as can be learned there will be one of the largest shoots ever held here during the World's Fair, 1915.

The members of the Independent Rifles turned out in full force to-day, and with the old .45 Springfield they shot at the Standard American target, 200yd. range. John Kulke made the first 10, which brought up the flag. This organization is at present one of the most active in and about San Francisco Bay. Capt. Harry Gaetjen, who is in command now, will no doubt bring this organization in equal with any military company of its kind.

A score of 65 out of a possible 100 was the best score shot in the regular monthly medal shoot of the Independents, which was made by M. Anderson. H. Pape was a close second with 61.

The Deutsche Krieger Schuetzen had a very good attendance, and it took Capt. Fritz Kiezer to make the best score, which was 395 out of a possible 500. C. Hartman made the most centers, while H. Wegemann made the most red flags.

Many new members took part to-day in the different clubs, and it is expected that many of the old-timers will take to the rifle again to get in trim for the big shoot in 1915.

The Golden Gate Rifle and Pistol Club will start their new program next Sunday, and it is expected that a large attendance is expected, for the program is one of the best offered by any club. WM. A. SIEBE.

EMERYVILLE, Cal., Jan. 15.—The world's pistol record was changed this afternoon at the Shell Mound targets, when James E. Gorman, of this city, set a mark of 956 out of a possible 1000 in 100 shots at 50yds. The former record was thirteen points shy of the mark made by the San Francisco marksman. Gorman made his record score in the regular monthly medal competition of the Golden Gate Rifle and Pistol Club.

Conditions at the range were ideal for good scores, and the range was crowded all day long, seven different clubs holding their monthly shoots; and it kept the targets busy bobbing up and down all day long.

William F. Blasse, vice-president of the Golden Gate Rifle and Pistol Club, certainly did the trick, for he was in good trim for rolling up good scores. He won the first prize in the Germania Schuetzen Club yearly rifle shoot; his total was 2231 for the year in picking out his ten best scores. He won the first prize in the yearly bullseye shoot, that club making 227 in 20 shots. In his own club, the Golden Gate Rifle and Pistol Club, he made 231, the best score in that club for the day. W. C. Prichard made one 98, and R. Mills made a 96 and 97.

E. Bornholdt won the first prize in the monthly bullseye shoot of the Norddeutscher Schuetzen Club. Capt. Fritz Attinger made the best score in the regular monthly shoot of the S. F. Turner Schuetzen, making 201.

O. A. Bremer won the first prize in the San Francisco Schuetzen Verein monthly bullseye shoot.

The Independent Rifles had the largest attendance of them all, and as this company is now 170 strong, it was necessary to raise the initiation fee to \$20, as the company is now the largest in its history. It will also require that more targets must be used to accommodate the large attendance.

The Bay Cities Revolver Association of the U. S. R. A., held their annual meeting last Tuesday evening, Jan. 9. The following officers were elected for the year 1912: W. A. Siebe, President; R. W. Jones, Vice-President; C. W. Seely, Secretary and Treasurer; H. A. Harris and F. P. Poulter, Directors. New constitution and by-laws were adopted.

Following are the results of the various competitions at the Shell Mound targets:

Germania Schuetzen Club annual rifle shoot: Expert Class—W. F. Blasse 2231, C. M. Henderson 2199; Frank Mason 2173, O. A. Bremer 2154, F. P. Schuster 2079, H. Huber 2065. Champion Class—B. Jonas 2154, M. Blasse 2145, G. A. Pattberg 2139, L. Bendel 2056. Capt. J. E. Klein 1982. First Class—E. Hoffman 1976, S. Heino 1803. Second Class—G. Fricke 1834, G. Gunther 1760, F. Klatzl 1690.

Annual bullseye shoot: W. F. Blasse 629, H. Huber 1158, M. Blasse 1139, G. A. Pattberg 1480, F. P. Schuster 1493, B. Jonas 1919, G. Fricke 2158, Capt. J. E. Klein 2420, N. Ahrens 3572, L. Bendel 4355, D. Huntemann 4457, S. Heino 5121.

Regular monthly medal shoot: Expert Class—W. F. Blasse 227, 221; B. Jonas 212, 209; H. Huber 209, 206; F. P. Schuster 207, 202; L. Bendel 208; O. A. Bremer 222, 211. Champion Class—E. Hoffman 196, 174; Capt. J. E. Klein 161, 138. First Class—D. Huntemann 202, 198; G. Fricke 161, 138. Second Class—F. Klatzl 198, 186. Norddeutscher Schuetzen Club bullseye shoot: H.

Pornholdt 302, O. Lemcke 331, S. Schwormstede 478, H. Fleischer 506, P. F. Rathjens 563, H. Huber 899, E. Hoffmann 912, F. P. Schuster 996, L. Brune 1043.

Monthly medal shoot: Expert Class—F. P. Schuster 202, 201. First Champion Class—S. Schwormstede 211, 200; E. Schierbaum 212, 215. Second Champion Class—Not represented. First Class—E. Hoffman 196, 196. Second Class—E. H. Stehn 186; H. Intemann 197, 198; H. Fleischer 180, 181. Third Class—Not represented. Fourth Class—P. F. Rathjens 166, 172.

Golden Gate Rifle and Pistol Club rifle scores: B. Jonas 215, 204, 200, 222; F. A. Garrabrant 210, 214, 212; F. O. Bratton 211, 203, 212; J. Williams 202, 205; J. G. Day 193, 210, 212, 211; W. F. Blasse 231, 219, 219; O. A. Bremer 221; E. Schierbaum 214, 218, 214, 213; F. Klatzl 163, 176; E. N. Moore, 210; G. A. Pattberg 216; Chas. Barher 150.

Pistol scores: Dr. R. A. Summers 89, 87, 89, 90; C. W. Seely 84, 82, 86, 87, 86, 89, 89; W. G. Williamson 89; C. W. Randall 92; C. W. Linder 90, 86, 91; J. E. Gorman 98, 92, 94, 95, 95, 96, 98, 96, 96, 97, 95; J. Appleyard 82, 72, 90, 86, 80, 77, 76, 81, 85, 89, 81; R. Mills 89, 88, 94, 90, 88, 97, 96; W. C. Pritchard 89, 98, 88, 90, 93, 91.

San Francisco Turner Schuetzen medal shoot: F. Acker 122, 160; Capt. F. Attinger 201, 189; F. J. Klatzl 161, 161; M. Nagle 156, 161; A. Furth 183, 197; C. Abraham 163, 177; C. Sagehorn 56; A. Huntemann 138, 131; J. Straub 162, 189; J. J. Mahr, 159, 116; H. Enge 197, 190.

San Francisco Schuetzen Verein bullseye shoot: O. A. Bremer 106, N. Ahrens 291, J. De Wit 478, E. H. Stehn 574, H. Bornhold 650, S. Heino 652, F. P. Schuster 904, L. Bendel 1124, H. Huber 1239, A. Bertelson 1502.

SECRETARY.

Seventh Regiment Shoot.

WITH every company except one represented, riflemen of the Seventh Regiment competed for the Seventy-first Regiment trophy, over the armory ranges on Jan. 19. Company M, with a grand total of 324, led, and equalled the record for the event set by Companies G and K. The summary:

Yards:	200	500	T'l.	Yards:	200	500	T'l.
Co. M.....	156	168	324	Co. E.....	153	158	311

Necessary for qualification, at least 65.

U. S. R. A. Indoor League.

The following are the unofficial scores in matches 13 and 14 in the U. S. R. A. Indoor League:

Match 13—Philadelphia 1074 vs. Boston 1062; Golden Gate 1100 vs. Portland 1147; Providence 1058 vs. Citizen's, 947; Belleville 928, vs. Springfield, 1138; Federal 1074, vs. National Capital, 1100; St. Louis 1092, vs. Oakland, 1044; Chicago 1065, vs. Shell Mound, 1054; Youngstown —, vs. Baltimore, 1009; Pittsburgh, 1062, vs. Myles Standish, 1007; Columbus, —, vs. Los Angeles, —; Spokane 1105, vs. Seattle, 1006.

Match 14—Golden Gate 1121, vs. Manhattan 1111; Providence 1061, vs. Boston, 1064; Belleville 971; vs. Portland, 1106; Federal, 1080, vs. Citizen's 951; St. Louis 1084, vs. Springfield, 1119; Chicago, 1072, vs. National Capital, 1105; Youngstown —, vs. Oakland, 1046; Pittsburgh 1041, vs. Shell Mound, 1071; Columbus —, vs. Baltimore, 1007; Spokane 1086, vs. Myles Standish 1058; Osborn 978, vs. Los Angeles —.

Lost at the end of the tenth match: Portland and Manhattan, none; Springfield, one; Golden Gate, Philadelphia and Spokane, two each; Boston, Columbus, three each; Federal, Los Angeles and National Capital, four each; Pittsburg, four and one-half; Providence, five; Chicago and Myles Standish, six each; Oakland, six and one-half; Shell Mound, St. Louis, seven each; Baltimore, Belleville, eight each; Osborn, Seattle, nine each; Youngstown, apparently nine; Rochester, ten.

J. B. CRABTREE, Sec'y-Treas.

A World's Record.

ONE afternoon last week two officials of the veteran Brays Bayou Gun Club foregathered with the sporting editor of the Post, discussing the history of that organization. The two officials are both enthusiastic rifle shots and both have been big figures in the history of the oldest rifle organization in this part of the State. One is F. F. Platt, president of the club, and the other Secretary Birchfield.

"Did you know," President Platt inquired, "that a world's record is held with the rifle in Houston, and that it is by the Brays Bayou Gun Club? Well, it's a fact, though it has never been printed in a newspaper.

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He knows it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is Lefever Taper Boring.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N. Y.

Durston Special 20 Gauge. Price \$28.00

The gun club record book gives it, but so far as I know that is the only place it has ever been printed. And it was made five years ago at that.

"I don't recall the exact date, but it was about five years ago when the Brays Bayou Gun Club was holding a big anniversary shoot. We had invited representatives from the rifle clubs that then existed in Harris county to attend, and there was a big field shooting.

"William H. Moeller was the man who made the record. He and another good shot were shooting together, and both started hitting centers at 45yds. with remarkable precision. We had plenty of beer on the grounds for the entertainment of the visitors—most men like to drink a little good beer while they are shooting. But neither Moeller nor his companion would take any. They made 42 consecutive centers, and they still seemed to be going. On the 43d, Moeller's companion missed the center, but Moeller kept on. Some one bet him he could not finish the 50, and the shooter gave odds that he would. To the surprise of all of us, he went all the way—made 50 consecutive centers and established a world's record that has never been equaled at 45yds.

"A lieutenant in the regular army is listed with 43 out of 50, which is, I believe, the next best performance. So the world's record was made in Houston and by the old Brays Bayou Gun Club."—Houston Post.

Zettler Rifle Club.

The following scores were made by the Zettler Rifle Club on Jan. 16:

G L Amouroux.....	242	227	241	236	233	—1189
F M Bound.....	248	241	243	244	243	—1219

Aggies Lead in Shooting.

WASHINGTON, Jan. 20.—Massachusetts Agricultural College, with a score of 933 out of a possible 1000 points, again led the Eastern colleges in the Intercollegiate Rifle Shooting League's tournament at the end of the second week's competition. Harvard made the second best score of 926, against West Virginia's 821. Other results were: Princeton University 924, vs. North Georgia Agricultural College 907; Maryland Agricultural College 833, vs. Delaware College, 778; University of Pennsylvania 867, vs. New Hampshire College, 817; Louisiana State University, 898, vs. Norwich University, 884. The best individual score was made by A. P. Edminister, Massachusetts Agricultural College, who scored 196 out of a possible 200.

DEER IN MAINE.

A SPIRITED argument is going on between the hunters and guides just now as to whether or not Maine's deer population is increasing or decreasing, and there is a wide difference of opinion on the subject, although the fact that nearly 200 deer carcasses were brought to Bangor in one day in November and more than 100 on several days recently would seem to show that the game is plentiful in some sections of the State.

Emery Swett, of Oxbow, a registered guide, says the deer are decreasing because of wanton slaughter by some of the visiting hunters and the killing of hundreds by logging crews for food. The law allows each woods camp to have six deer in a season, but Swett says that he has often seen as many as a hundred skins around a camp in one winter. The crews cutting ties for the railroads are the worst offenders, says Swett, and in Aroostook county there are fifteen or twenty of these crews at work every winter.

On the other hand, Chairman Wilson of the State Fish and Game Commission declares that Maine has all the deer that can find a living in the woods; that if there were any more deer some of them would starve to death, and in his opinion he is supported by Tim Pollard, chief warden. Pollard says there are more than there would have been if none had been shot in the last three years.

"The deer," says Pollard, "get into herds and locate yards for the winter. In the early part of the season they get along all right, but with the big storms and the deep snow comes trouble. The animals soon eat all the food within reach—the small branches and twigs, and when that supply is gone and they cannot cruise around in the woods because of the deep snow they starve to death."

"Why," said Commissioner Wilson, "last week a guide named Turner, who operates all over Maine and has just returned from a trip to Canada, was at my camp in the Rangeley region and gave it as his opinion that we ought to allow people to shoot more deer than now because there isn't food enough for all we have. He said he could take me up into Aroostook county and other game regions and show me hundreds of carcasses of deer lying around the swamps where they had died of starvation."

"Exactly," said Pollard, "everything has been eaten up clean and they've nothing to live on. That is why I say that there are more deer in Maine to-day than there would have been had not a deer been shot for the last three years. Any great increase in numbers would have meant general famine, disease and death."

Both officials agree that there is plenty of game of all kinds in the woods except caribou, which animals left Maine some years ago and have never returned, except in a few cases close to the Canadian border, where a few have been seen from time to time. Moose are more plentiful now than at any time in the last ten years, and receipts at Bangor are ahead of last year's at this time.

Warden Pollard says the caribou will never come back to Maine until the deer leave. Many years ago the deer left Maine and then the

caribou flocked in. Caribou are rather dainty and they would starve to death in a State where 100,000 or more deer are greedily devouring all the food that tempts the caribou appetite.—The Sun.

DIVIN' FOR 'EM.

Two inexperienced anglers went fishing one day. One sat down on the pier, while the other stood. Just before beginning operations they made a wager with each other as to who would make the bigger catch of fish. They had been fishing for about half an hour with little or no success, when John, who was standing, lost his balance and fell off the pier. As he went headlong past Dick, the latter gave a yell, and said: "Hi, John, if you are goin' to dive for 'em, the bet's off;"—Anglers' News.

The Result of Over a Century's Experience

Perfection in powder-making is only achieved by exercising the most scrupulous care in the selection and preparation of raw materials, employing skilled workmen exclusively, and using only the most improved modern mechanical equipment.

This is the Du Pont method and accounts for the unequalled reputation among sportsmen enjoyed by the Du Pont brands of Smokeless Shotgun Powders. One of the most popular of these brands is

A dense powder that is absolutely uniform in velocity and pattern. Waterproof—not affected by extremes of heat or cold. "INFALLIBLE" Smokeless Shotgun Powder will not pit the gun barrels.

A PROTEST.

Continued from page 108.

prove. The vast growth of cities, the fabulous wealth in them that they read about, the ridicule of country life that has been published in newspapers every day for generations—all this has overawed our masses and driven them to rely only on the artificial and to look up to it as a sort of heaven.

If one of them acquires wealth, he rushes away from the natural as far as he can go, will not even take a walk, and the doctors reap a harvest. If he decides to have a house and grounds, he cuts down all the fine forest trees, grades the land by contractors to stupidity level, and buys

from a nursery man a few sapling sticks to continue the stupidity. It looks more civilized, and that is what he wants.

The city people of wealth who go into the country are no better. They build the house so that it can be seen from the road. It is an exhibition rather than a home. They clear up every nook and corner until there is no cover for song birds or game instead of planting covers and making seclusion, as is done in Europe. Then they wonder why country life is so stupid. They tire of sitting on their piazza because it is so glaring and conspicuous, and there is no seclusion; they tire of driving, for there is nothing to do or see. Driving and sitting are all there is, because everything else has been destroyed, and the little left to do the coachman attends to. They wonder why people are said to enjoy country life in Great Britain.

PRACTICAL FORESTRY.

Continued from page 113.

of maintenance, but would also provide model forests in various sections of the State which would furnish practical examples of the benefits of scientific forestry.

One of the prominent examples of the possibilities of practical forestry is furnished at the Craig Colony, Sonyea. The institution has 1,045 acres of woodland with a stand so dense as to require radical thinning to prevent stagnation of tree growth. At the same time the necessary cuttings would furnish good cash returns and cut down the institution's coal bills for the brick-making plant, and furnish healthful winter work for the inmates. Another similar example occurs at Letchworth village where there are 1,200 acres of rough mountain land, best adapted to forest growth, where the present stand consists of worthless scrub sprouts, weakened by repeated cuttings and fires. The whole area is producing nothing of value and should be replanted to valuable trees.

At the Elmira Reformatory the woods are in bad condition, and much of the agricultural land is of such poor quality that it could be more profitably employed in forestry.

At the Eastern New York Reformatory at Napanoch, fire protection and tree planting are urgently needed. The woods afford protection to the institution's water supply.

Shade tree improvement and utilization of waste land is recommended for the House of Refuge grounds on Randall's Island.

At the State Agricultural and Industrial School there are scattered woodlots which the forester declares need cutting and planting, as well as protection from grazing. There is opportunity for the cultivation of the basket willow.

At the New York Training School for Boys at Mohansic the woods need much attention. The chestnut is dying. Some woodland would be better cleared and some open land better planted.

The gravel hills at the New York State Reformatory, Bedford, are now waste and need forest planting.

Recommendations for forestry improvements are made also for the Western House of Refuge of Albion, the Training School for Girls at Hudson, the Thomas Indian School at Iroquois, the Rome Custodial Asylum, the Custodial Asylum for Feeble Minded Women at Newark, and the Syracuse State Institute.

Kennel Department

Southern Ohio Field Trial Association.

A MEETING was held on the evening of Jan. 18 for the purpose of perfecting the organization of the field trial club formed on Dec. 12, in Cincinnati, Ohio. In spite of the bad weather over thirty enthusiastic amateurs assembled, and at nine o'clock the meeting was called to order by George R. Harris, who was elected temporary president at the first meeting. The first business brought before the meeting was the election of permanent officers, and a motion was made that the president appoint a committee of three to prepare a list of nominations. The committee consisted of Messrs. George Walker, Dr. P. K. Phillips and B. H. Delvin. In due course of time the committee reported the following list of names: President, J. W. Utter; First Vice-President, Frank Wood; Second Vice-President, C. C. Acton; Treasurer, A. F. Zimmerman; Secretary, George R. Harris; for Directors, the officers and U. T. Schaefer, B. H. Delvin, T. O. Dunlap, F. M. Oxley, G. E. Morlidge. The report of the committee was accepted, and the gentlemen named were unanimously elected to serve for the ensuing year, or until their successors are elected. Mr. Harris then resigned the chair to the new president.

Mr. Wood made a motion, which was seconded, that the club incorporate under the name of the Southern Ohio Field Trial Association. There was some discussion of this motion, Dr. Phillips thinking that it might be well to adopt the name of Ohio Valley instead of Southern Ohio, and thus avoid the possibility of being considered a purely local club. The original motion was finally carried. Mr. Wood then moved that the association adopt the constitution and by-laws of the Continental Field Trial Club, but with such changes as the needs of this club called for, and that a committee of three be appointed to make any needed changes and to report at the next meeting of the club. The committee consisted of Frank E. Wood, J. O. Oliver and H. F. Schaefer. The committee also to attend to procuring the incorporation papers.

The question of grounds for the trials next fall was brought up, and Mr. Robinson stated that there were some 2,000 or 3,000 acres of farm land about three miles north of Hamersville, consisting of fairly large fields, available. The country is level, and there is a variety of cover. Birds are plentiful. Good accommodations for men and dogs. Mr. Walker also spoke very favorably of the locality, which is familiar to him as an old hunting grounds, where he used to get the limit (100) of birds every day that he went out, but he quickly added that that was before the law regulated the number of birds to be killed per day. Others present were also familiar with the locality in recent years, and never failed to find abundance of birds during the season. The trials will be held on these grounds without doubt.

Mr. Flora raised the question of making the trials strictly amateur affairs, but this was not viewed with much favor by many of the members present. Mr. Harris was in favor of making the trials open to all, and to make an effort to induce the presence of the professional handlers by offering purses sufficiently large to be worth competing for. Mr. Walker advocated a members' derby and all-age stake, which would be for amateurs, the prizes to be cups, and the open stakes for money prizes. There was much general discussion, but no further business done.

The following are the charter members: G. R. Harris, J. O. Oliver, Dr. P. K. Phillips, Gordon Oskamp, G. C. Walker, J. W. Utter, G. E. Morlidge, F. E. Wood, P. J. Molloy, B. H. Delvin, A. F. Zimmerman, Herman Schuerman, Jerry Kern, Dr. F. M. Oxley, C. L. Robinson, C. Faulhaber, C. C. Acton, T. O. Dunlap, H. F. Schaefer, G. E. Flora, D. Ferris and C. H. Cord.

The next meeting of the club will be held about Feb. 18, when the committee on constitution will report.

Buying a Yacht

Have you a yacht or small boat for sale? Do you want to buy one? In either case we can help you. Our just-organized Yacht Clearance Department is at your disposal.

The object of this innovation is to put the man who has and the man who wants in communication.

If you have a boat to sell, send this department full information and price, with photo, if you have one.

If you want to buy a yacht, motor boat or dinghy, file with us a general idea of what you want, and if we have nothing on record corresponding with your specifications, we will, through our many channels of information, find what you want.

If you think of having a boat built, perhaps we can help you select an architect or builder. We willingly will get estimates on plans and specifications for you.

If you contemplate chartering for the summer, suggest the class and style of boat you think you want, and we will submit a number of bargains worth taking under consideration.

Address: Yacht Clearance Division,

**INFORMATION DEPARTMENT
FOREST AND STREAM**

127 Franklin Street New York

Forest and Stream desires to make an appeal to its readers. It asks that when writing to advertisers for catalogs or prices, or when ordering goods that are advertised, you mention that you "saw the advertisement in Forest and Stream."

This enables advertisers to know that their announcements are being read. They are read, of course; in fact, are studied with great care, because our subscribers know that anything that is advertised in Forest and Stream has merit. But advertisers do not always appreciate the value of any paper that is not mentioned. If, therefore, you will kindly mention Forest and Stream in answering advertisements, you will confer a favor on the

"MULLERITE"

Powder Has Won by Sheer Merit

Thousands of dollars are spent yearly in advertising and hundreds of demonstrators are continually extolling the virtues of other Smokeless Powders, but the sale of **MULLERITE** with practically no publicity, steadily increases.

**Once a MULLERITE Shooter
Always a MULLERITE Shooter**

Such satisfactory results could not be accomplished if Mullerite was not a truly remarkable powder. No inducements are offered to use this powder and no paid professionals say a good word for it because their bread and butter does not come through Mullerite channels, but the amateur who once uses it gets results and that counts more than smooth talk.

Don't take our word for it—just try a box of Mullerite in the field or at the traps.

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

The Greener Facile Princeps Action.—"Facile Princeps" is a Latin phrase meaning 'Easily First,' and no better name could have been chosen for a gun that has been winning the principal shooting events of the World for three generations. The 'Facile Princeps' is easily first for strength, reliability and simplicity. The lockwork consists of a hammer, a sear, a lifter and a spring, the weight of the barrel cocks the tumbler, everything works smoothly with the minimum of friction, and the striker is just a fraction of a second quicker in its blow than any other type of mechanism; this point alone should be sufficient to secure its adoption by the man who knows.

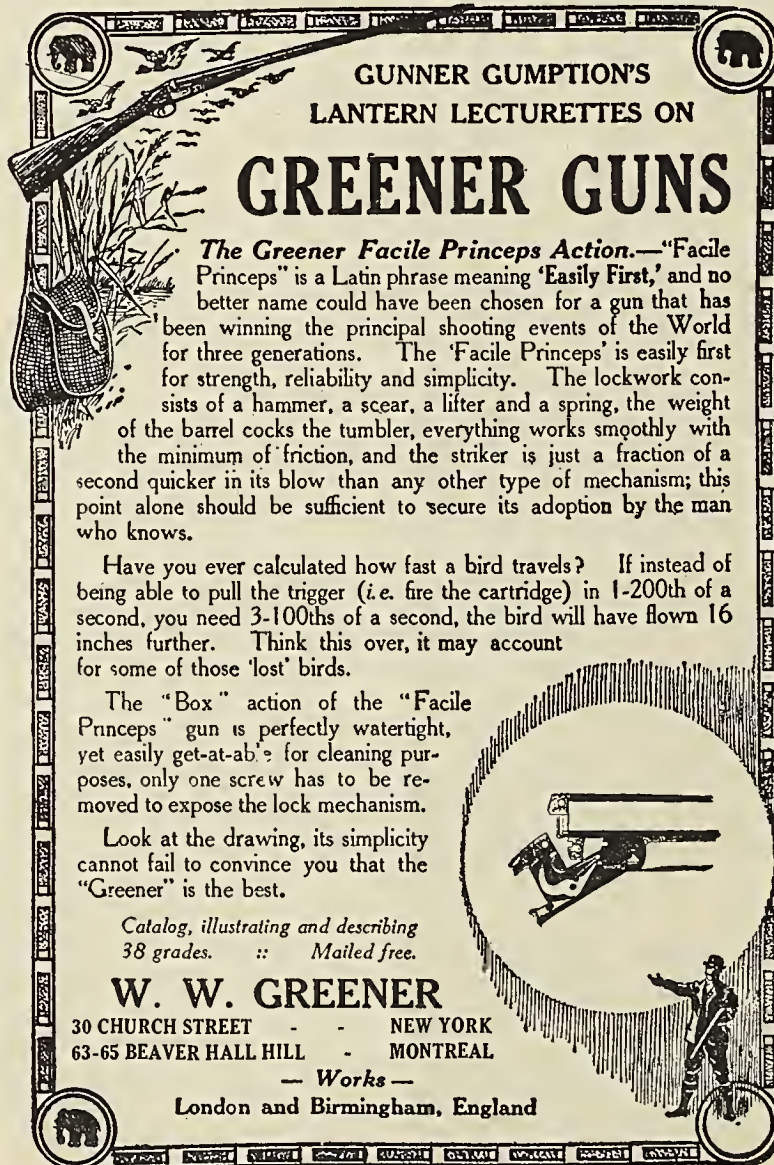

Have you ever calculated how fast a bird travels? If instead of being able to pull the trigger (*i.e.* fire the cartridge) in 1-200th of a second, you need 3-100ths of a second, the bird will have flown 16 inches further. Think this over, it may account for some of those 'lost' birds.

The "Box" action of the "Facile Princeps" gun is perfectly watertight, yet easily get-at-able for cleaning purposes, only one screw has to be removed to expose the lock mechanism.

Look at the drawing, its simplicity cannot fail to convince you that the "Greener" is the best.

NEW YORK, N. Y.

IN GROUSE COVER

From a photograph by Horatio Bigelow.

ARE YOU A GUNNER?

Do you love to follow your good dog over the fields in search of quail or chickens, or to struggle through swamp or along thick grown hillside, expecting to hear the roar of the ruffed grouse or the twitter of the fall woodcock? If so, you should have this new book.

AMERICAN GAME BIRD SHOOTING

By **GEORGE BIRD GRINNELL**

(New—Just Published)

This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys.

The first part of the volume is devoted to a description of the various species and their habits—the way in which they live their lives.

The second part of the book is devoted to upland shooting and treats of the methods by which all the upland birds are pursued and taken. The chapter "Aids to Shooting" describes the clothing, guns, and loads and dogs that the gunner may profitably use; while the last section of the book treats of the shooting of the future and the efforts to rear our native quail and grouse in domestication.

The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full page portraits of different game birds and hunting scenes, with a number of cuts in the text.

Cloth. About 575 pages. Price \$3.50, net. Postage 25 cents.

This book is of inestimable value. It contains the genuine hunter-naturalist facts given in the most entertaining and interesting style.

FOREST AND STREAM PUBLISHING CO., 127 Franklin St., NEW YORK CITY

AMERICAN DUCK SHOOTING

By *George Bird Grinnell*

A most complete work, dealing with every phase of the sport of duck shooting, thus forming a complete treatise on American ducks, geese and swans. It gives details of the natural history, habitat, and characteristics of every American species.

Part I contains descriptions with plates of each species.

Part II tells of every method of swan, goose and duck shooting practiced in North America—east and west, on Atlantic and Pacific and in the interior—and gives thrilling accounts of the splendid sport.

Part III deals with the art of duck shooting, including guns and loading, the Chesapeake Bay retrieving dog, decoys, blinds and boats, and finally discusses the causes of the decrease of wildfowl and tells what may be done to increase their numbers.

It is most fully illustrated with 58 portraits of North American swans, geese and ducks, by Edwin Sheppard, with 8 full page plates, and with numerous vignettes in the text by Wilmot Townsend.

Cloth, heavy laid paper, 58 illustrations, eight full-page plates, 627 pages. Postpaid, \$3.50.

FOREST AND STREAM PUB. CO. :: 127 Franklin Street, NEW YORK

THE BEST OUT-DOOR BOOKS

THE following is a selected list of *Forest and Stream's* books which are most suited to the taste of men and women who are fond of outdoor life—Shooting, Fishing, Natural History, Camping, Canoeing, Yachting. A good book does not wear out, but continues to give pleasure.

Catalogue giving full list of books will be sent on application.

American Duck Shooting.

By George Bird Grinnell. Cloth, 630 pages. With 58 portraits of North American Swans, Geese and Ducks, Plans of Boats and Batteries. Fifty Vignettes in the text, and a Chart of the topography of a duck's plumage. Price, \$3.50.

American Game Bird Shooting.

By George Bird Grinnell. New. Just Published. This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys. The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full-page portraits of different game birds and hunting scenes, with a number of cuts in the text. Cloth. About 575 pages. Price, \$3.50 net. Postage, 25 cents.

My Sixty Years on the Plains, Trapping, Trading and Indian Fighting.

By W. T. Hamilton ("Bill" Hamilton). With 8 full-page illustrations by Chas. M. Russell. New York. Cloth. 223 pages. Price, \$1.50.

American Big Game Hunting.

The Book of the Boone and Crockett Club. Editors: Theodore Roosevelt and George Bird Grinnell. Illustrated. Cloth, 345 pages. Price, \$2.50.

Hunting in Many Lands.

The Book of the Boone and Crockett Club. Editors: Theodore Roosevelt and George Bird Grinnell. Vignette. Illustrated. Cloth, 448 pages. Price, \$2.50.

Trail and Camp-Fire.

The Book of the Boone and Crockett Club. Editors: George Bird Grinnell and Theodore Roosevelt. Illustrated. 353 pages. Price, \$2.50.

Like its predecessors, the present volume is devoted chiefly to the great game and the outdoor life of Northern America; yet it does not confine itself to any one land, though it is first of all a book about America, its game and its people.

American Big Game in Its Haunts.

The Book of the Boone and Crockett Club for 1904. George Bird Grinnell, Editor. 490 pages and 46 full-page illustrations. Price, \$2.50.

This is the fourth, and by far the largest and handsomest of the Club's books. It opens with a sketch of Theodore Roosevelt, founder of the Boone and Crockett Club, and contains an extremely interesting article from his pen, descriptive of his visit to the Yellowstone Park in 1903. Other papers are on North American Big Game; Hunting in Alaska; The Kadiak Bear; Moose, Mountain Sheep; Game Refuges, and other big game topics.

Camp Life in the Woods.

And the Tricks of Trapping and Trap Making. Containing hints on camp shelter, and all the tricks and bait receipts of the trapper, the use of the traps, with instructions for the capture of all fur-bearing animals. By W. Hamilton Gibson. Illustrated. Cloth, 360 pages. Price, \$1.00.

Uncle Lisha's Shop.

Life in a Corner of Yankeeland. By Rowland E. Robinson. Cloth, 187 pages. Price, \$1.25.

The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evenings and dull outdoor days, "to swap lies."

Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop." By Rowland E. Robinson. Cloth. Price, \$1.00.

Danvis Folks.

A continuation of "Uncle Lisha's Shop" and "Sam Lovel's Camps." By Rowland E. Robinson. 16mo. Price, \$1.25.

Uncle Lisha's Outing.

A sequel to "Danvis Folks." By Rowland E. Robinson. Cloth. Price, \$1.25.

A Hero of Ticonderoga.

By Rowland E. Robinson. Cloth, 187 pages. Portrait of author. Price, \$1.00.

A Danvis Pioneer.

A story of one of Ethan Allen's Green Mountain Boys. By Rowland E. Robinson. Cloth, 214 pages. Price, \$1.25.

In the Louisiana Lowlands.

A sketch of plantation life, fishing and camping, just after the Civil War; and other tales. By Fred Mather, author of "Men I Have Fished With," "Adirondack Fishes," and "Modern Fishculture in Salt and Fresh Water." With portrait of the author. Cloth. Price, \$1.50.

Forest Runes.

Poems by George W. Sears ("Nessmuk"). With artotype portrait and autobiographical sketch of the author. Cloth, 208 pages. Price, \$1.50.

The Angler's Workshop, Rod Making for Beginners.

By Perry D. Frazer. Cloth, 180 pages. Four full-page illustrations, sixty working drawings. Postpaid, \$1.00.

A complete, simple and thoroughly up-to-date work for the guidance of the amateur rod maker, carrying him from first principles through all phases of successful rod making. There is no theorizing or speculation. All terms are simple, and all kinds of rods and woods are treated of.

Modern Fishculture in Fresh and Salt Water.

By Fred Mather, author of "Men I Have Fished With," with a chapter of Whitefish Culture by Hon. Herschel Whitaker, and a chapter on the Pike-Perch by James Nevin. Illustrated. Price, \$2.00.

My Angling Friends.

A second series of "Men I Have Fished With." By Fred Mather. Cloth, 369 pages, with 13 illustrations. Price, \$1.50.

Rhymes of the Stream and Forest.

By Frank Merton Buckland. Cloth. Heavy laid paper. Sumptuously bound. Postpaid, \$1.25.

A charming collection of verse by an author who knows and loves nature well. A particularly pleasing gift for fishermen, closely simulating in form and ornamentation the standard fly-book.

Jack the Young Ranchman;

Or a Boy's Adventures in the Rockies. By George Bird Grinnell. Illustrated. Cloth, 304 pages. Price, \$1.25.

Jack Among the Indians;

Or a Boy's Summer on the Buffalo Plains. By George Bird Grinnell. Illustrated. Cloth, 301 pages. Price, \$1.25.

Jack in the Rockies;

Or a Boy's Adventures with a Pack Train. By George Bird Grinnell. Illustrated. Cloth, 272 pages. Price, \$1.25.

Jack the Young Canoeeman.

By George Bird Grinnell. Illustrated. 278 pages. Price, \$1.25.

Jack the Young Trapper.

By George Bird Grinnell. Illustrated. Price, \$1.25.

Jack the Young Explorer.

By George Bird Grinnell. Price, \$1.25.

Men I Have Fished With.

Sketches of character and incident with rod and gun from childhood to manhood; from the killing of little fishes and birds, to a buffalo hunt. By Fred Mather. Illustrated. Price, \$1.50.

It was a happy thought that prompted Mr. Fred Mather to write of his fishing companions. The chapters were received with a warm welcome at the beginning and have been of sustained interest. The "Men I Have Fished With" was among the most popular series of papers ever presented to FOREST AND STREAM readers.

Houseboats and Houseboating.

By Albert Bradlee Hunt. The book contains forty specially prepared articles by owners and designers of well-known houseboats, and is beautifully illustrated with nearly 200 line and half-tone reproductions of plans and exteriors and interiors. A most interesting chapter is devoted to houseboating in England. Extra heavy paper, buckram. The price is \$3.00 net. Postage, 34 cents.

The Art of Shooting.

An illustrated treatise on the art of shooting. By Charles Lancaster. Illustrated. Cloth. Price, \$1.25.

Gas Engines and Launches.

By Francis K. Grain. A few pages are devoted to launches in general, with some excellent advice to the prospective owner of a motor boat; but the author's attention is given chiefly to explaining the principles, working and practical handling of the marine motor for the amateur who does not care to trouble his head with involved technical information. Cloth. Illustrated. 123 pages. Postpaid, \$1.25.

How to Build a Launch from Plans.

By Charles G. Davis. A thoroughly practical guide for the amateur. Shorn of all blind technicalities, it considers displacement, good construction and faulty stability, setting up the keel, framing and planking, with careful explanations. Each step is followed up to the care and running of the gas engine. Cloth, 9 folding drawings, 8 full-page plates, 40 smaller diagrams, 170 pages. Postpaid, \$1.50.

Fetch and Carry.

By B. Waters. Tells minutely of the methods by which a dog, young or old, willing or unwilling, may be taught to retrieve either by force or "natural" system. Cloth. Illustrated. 124 pages. Postpaid, \$1.00.

Nursing vs. Dosing.

By S. T. Hammond. A most practical book for the dog fancier, based largely on Mr. Hammond's observation that dogs, and particularly house dogs, suffer from too much medicine. Contents—Nursing, Cleanliness, Diet, Other Foods, Kennel and Exercise, Common Ailments, Diarrhea, Convulsions, Epilepsy, Distemper, Eczema, Need of Proper Care, Stomach, Vermin, Ear, Mange, Nervous System, Colic, Worms. Cloth. Illustrated. 161 pages. Postpaid, \$1.00.

Training vs. Breaking.

Or Practical Dog Training. By S. T. Hammond. The author tells how to bring out the wonderful intelligence of the dog by kindness as opposed to force. A clear, explicit work, which will appeal to dog lovers. Contents—First Lessons, Charge, Canine Accomplishments, The Whistle, Quartering, Retrieving, In the Field, Working in Company, Raising Puppies, Training Pet Dogs, Conclusion. Cloth. Illustrated. Postpaid, \$1.00.

Training the Hunting Dog for the Field and Field Trials.

By B. Waters. Probably the most comprehensive work on the subject written, covers every phase of training and field trial preparation with reasons. Kennel Management, Breeding, Kenneling, Points of Judging. It is a work well calculated to enable the amateur to become a successful breeder and trainer. Cloth. Illustrated. Postpaid, \$1.50.

Woodcraft.

By Nessmuk. No better or more delightful book for the help and guidance of those who go into the wild for sport or recreation was ever written. No one ever knew the woods better than Nessmuk or succeeded in putting so much valuable information into the same compass. Camp equipment, camp making, the personal kit, camp fires, shelters, bedding, fishing, cooking, and a thousand and one kindred topics are considered. Beyond this, the book has a quaint charm all its own. Cloth. Illustrated, 160 pages. Postpaid, \$1.00.

Log Cabins and Cottages.

By William S. Wicks. This book covers building for the woods from the simplest shelter to the most elaborate cottage, cabin or house, and their furnishing and fitting. The details and directions are at once simple and comprehensive, and the illustrations are numerous and illuminative. Cloth. Illustrated. 44 full-page plates and numerous text illustrations. Postpaid, \$1.50.

My Friend the Partridge.

By S. T. Hammond. A delightful reminder of crisp autumnal days in the covers. It tells of sport with the noblest of game birds, the habits and habitat of the ruffed grouse, with just the right touch of reminiscence and personal experience. Cloth. Illustrated. 150 pages. Postpaid, \$1.00.

Church's Double

By HORATIO BIGELOW

"WELL, William, what's the program today?" I cried as I stopped the machine at Church's door.

Church lifted his setter, Count, into the tonneau, slid his repeater in afterward, climbed into the front seat beside me, and said: "I guess we'll start in at the woodcock ground at the lake, then try the swamp hole near Abell's, hunt Powell's lot, then the Packer place, and finish up at Ford's swamp."

This seemed a good layout to me, and in about ten minutes we stopped at a pair of bars that let us into the woodcock ground. Birches and maples with occasional patches of laurel and high huckleberry bushes formed the cover along the eastern shore of Gardner's Lake, and if the longbills were not there, we were quite sure of finding one in the alder run nearby. We hunted the south side of the "edge" without success, though Count kept trying to work to the north of us. We thought we'd see what interested him so much, and let him have his way while we followed. Count made game and started trailing, while Church and I got ready for business. Suddenly with twittering wings a woodcock flushed wild in front of Church and he fired, but missed, as the bird was nearly out of range. We marked the direction of its flight and followed after, but found nothing of it.

As we reached a woods road near the bar-way, we flushed a partridge and saw where it went down a short way into the woods on the other side of the road. There was a stone wall at the edge of the cover near where we had marked the bird down, and I climbed over into the open lot on the further side in hopes that I would get a shot when the bird flushed. Church and Count crossed the road and struck into the maples after the game. In a few minutes William sang out: "I've got a point!" and a second later I heard the partridge get up. I stood watching and soon saw the bird going through the tree-tops and nearly out of gun shot. I was afraid if I waited for it to cross an open space in front of me that I would lose my chance, so I fired through the maples. The partridge never changed its course, but kept straight on and

would have given me a fine shot in the opening, but it had crossed before I could get on it with my second barrel.

We turned back and looked for more wood-

that showed the woodcock was right under his nose. Church flushed and the bird twisted through the trees ahead of me. I saw enough of him to get him over the end of my gun, and he dropped like a wet rag. Count retrieved and we circled to the right. Not a hundred yards away we had another point. The dog stood, or rather squatted directly in front of me, head turned slightly to one side. I walked ahead, and was lucky enough to drop woodcock number two, with much the same kind of a shot I had had on the last one.

As we had quartered this section pretty thoroughly, we swung around through the alder run near the lake, and then through the last corner of the "birch edge" which we had not yet disturbed. Church had hardly hied Count into the cover when another dog—a lemon-and-white pointer—burst out of the bushes in front, and stood there looking at us for a minute. Then a whistle sounded and the dog darted back. An instant later we heard some one say: "There used to be woodcock along this edge last year," and the pointer came into view again followed by Bob Congdon, of New London, and another hunter. To their greeting, "What luck?" I answered, "Not much; we flushed a partridge over there," as I pointed to the cover we had been through, and as they moved on I whispered to Church, "Let's leave; I think we've cleaned up this piece." In confirmation of the truth of this remark I know that we did not hear a shot from the other party, though Powell's, our next objective, was only a mile distant.

On our way we stopped in at Abell's to see if young Elmer would join us, but his hunting license had run out the day before, so he could not go. However, I had an extra gun in the car and turned it over to Thompson, the chauffeur, to see if he could kill a bird. Church took Count into the swamp hole opposite Abell's to try and find a

partridge, while Thompson and I stationed ourselves in the road between the swamp hole and Powell's. It was nearly a certainty that if Church flushed a bird, it would go across the road, and we waited in anticipation, until finally Count scrambled over the wall into the road

GOT HIM.

From a photograph by G. P. Baughman.

cock. Count pointed on the edge of the birches and Church walked in, flushing a longbill. The cover was so thick, however, that a shot was impossible, and we followed up the bird. We were more successful this time than with the first bird, and Count soon came to a stiff point

and Church followed saying, "Nothing doing." We spread out going through Powell's, Church taking the thick cover with Count, Thompson the hillside on his right, and I the edge on his left. Thompson was the first one to shoot, once, twice, and then called, "D—n it! Had a fine shot at two partridges, but missed them. They've gone on up the hill. Are you going to chase them up?"

"We certainly are," cried I and joined Church and the dog in circling over toward Thompson and up the hillside. After a short hunt we flushed one of the birds and Thompson missed another shot. The partridge flew back again into the run we had quitted and we kept after it. When Thompson missed a third chance, I tried a barrel at the bird as it rose over the treetops and headed for the swamp hole where Church had drawn a blank. I could not seem to do any better than Thompson, as the old cock kept straight on and Church called out, "I think it's my turn." He went back with Count into the thickest of the cover and we soon heard a shot.

"Did you get him?" I cried.

"Darn it, no," said he; "I had a good sight on him, but put the charge into that old black maple. He's gone back into Powell's."

Again we followed up that long suffering partridge, and at the edge of a clearing Count froze to a point near a tuft of grass. We all stood ready for a fine shot and Church walked in to pick up the bird which was lying stone dead right under the dog's nose. Some of the charge had got by that black maple.

On our left lay a long stretch of alders, once a famous woodcock ground, and nowadays often a resting place for a few of the longbills. After a conscientious search, however, Count emerged from the lower end of the cover without discovering a bird. We continued on our way through Powell's, skirting the edge of a thick growth of birch, maple, oak and chestnut timber. Church, strolling ahead of me, was spinning yarns about his hunting experiences with General Ely, a famous old Norwich sportsman, who used to spend much of the open season with William.

"Yes, old Grouse, the general's dog, had the finest nose I ever saw. I've never seen such a partridge dog before or since. He always seemed to get a point without flushing, but then there were birds those days, and you could get somewhere near them. Grouse started in mighty wild. I remember one time the dog was with me for a couple of weeks. I was shooting for the market then pretty regular and gave old Grouse a few lessons in steadiness that he needed. When the general went out with him again, he did not say much, but I noticed he kept a careful eye on the dog. A few days afterward he sent me a check for —"

"Brrrr; brrrr!" two partridges flushed at the edge of the birches in front of Church and started for cover. The old repeater came up like a flash and at its sharp crack a cloud of feathers and a thud in the dry leaves marked the end of the first bird, a straightaway. Hardly had number one struck the ground when "crack" went the gun again, and this time partridge number two, a left quarterer, was literally bowled over, the light gray of its breast showing as it dropped.

"I'm awfully sorry I took your shot" cried Church. "I cou'd just as well have slipped out

of your way. I forgot myself, to tell the truth." I was standing close to William, who really seemed, quite conscience-stricken, that he had not given me the shot, and taking a step toward him I gave him a resounding slap on the back. "Don't bother about that," said I, "you got them both, which is more than I could have done. It was worth the hunt to see you do it."

We now headed for the Packer place where we had located a flock of about fifteen partridges in one of our former hunts, but the birds did not seem to be in the treetops and brush heaps where we had found them before, and we turned our steps toward the clumps of birches in the next lot. Count scrambled over the wall, began nosing around, and soon struck a scent so hot that he had to crawl along on his belly to avoid overrunning his bird. In a minute he froze to a stiff point in some birch sprouts alongside the patch. There was no undergrowth and I wondered where the bird was, for I could see none. Church said he could see him just in front of the dog's nose. I stepped in and a nice fat woodcock whistled out in the open and went corkscrewing down the path. Both barrels of my gun and one of Thompson's had no effect on "Mr. Timberdoodle" further than to increase the speed and weird twisting of his flight. We marked him down a few hundred yards away near a big maple, and followed after.

As I was scrambling over a dilapidated stone wall, trying to keep various portions thereof from landing on my toes, the woodcock flushed again. It rose straight through the treetops, giving Thompson as good a shot as the one I had just missed. He failed, however, to take advantage of his opportunity and we pursued the bird another "fly." This time Church had his turn on a wild flush, but the cock still kept on, this time into a thick swamp where we were unable to find him.

We turned back to the birches, "Tom Gardner's woodcock patch," as Church called it, to look for more, and it was not long before we had another point. A cock flushed ahead of me and headed straight through the myriad birch twigs. I sighted the bird carefully and at the crack of my first barrel he shut up like a jack-knife. Count retrieved and we tried out the rest of the patch. Suddenly the dog stiffened and we walked in ahead of him. "Brrrr, brrrr," and two partridges got up on the further edge of the cover and went streaking across the open pasture and into the woods beyond. Luckily their line of flight led toward Abell's and 'unch. One we were unable to find, the other buzzed out of a treetop in front of Church, who fired and downed it just as I pulled myself. I say "downed," and so I thought, but just before it struck the ground, the partridge recovered and sailed off into the cedars. Finally, Church, who suggested that it might be a little further to the left than we had searched, wandered over in that direction and nearly stepped on the bird lying dead on its back. When he had tucked it away in the back pocket of his shooting coat, we hurried on to Abell's and strengthened the inner man with a sandwich or two before we started on the afternoon's hunt.

Our pipes lighted, we started the old machine up the cross-road that ran near Ford's swamp and hopped out at the bars leading into Ford's seven-acre lot. There were no signs of game in the alder run, however, and we kept on up

a path over the hillside beyond. As we dipped down over the ridge, Count pointed in the maples at the pathside. The dog's nose was held high as if he scented a partridge in a clump of cedars beyond, so when a woodcock fluttered up in front of me, the minute I stepped into the cover I promptly missed with both barrels. The old setter made another nice point on the woodcock after his first "fly" and again I tried my luck. I thought I would be more careful this time and when the bird flushed, waited until I got him over the end of the gun. Just as I pressed the trigger, however, the cock changed his straight-away course and swooped to the left. Needless to say, my charge of No. 8 came nowhere near him. We marked him down by a fence near the brook.

On our way Count had another point and it was Church's chance this time. William walked over to and by the dog, when suddenly the woodcock twittered up behind him. Church swung around like lightning, but the bird dropped down in a birch thicket before he could hold on him. We went back over the ridge, and at the dog's point I called to Church: "Now, you get him. I can't hit a thing." Church flushed the bird, but did not fire and the longbill gave me a beautiful straightaway shot as it twisted up over the treetops. We turned back after woodcock No. 1. "How about this last one?" you ask. "Did you get him?" I did not think it necessary to say anything more about that bird. I certainly did—not, and he kept on out of sight.

As we trudged down the hillside toward the fence I told William that he would have to kill the bird, as it was beyond me. The sound of my voice flushed the woodcock—a flight bird which my shooting had made rather wild—and he got up over forty yards away. Church's old gun, however, was good for the distance and the cock dropped.

We crossed the little brook and up over the hill beyond, then swung back toward the machine. A partridge rose out of a clump of long grass at the edge of the cover and I snapped at it ineffectively as it went sailing down toward the brook. Church marked the bird down in a fallen chestnut tree. My resolves were most deadly as we approached the treetop, and when the old hen started to make for the top of the other hill, I took plenty of time and missed her with the first barrel. By this time I thought her out of range, and fired the second barrel in her general direction just for luck. The bird was topping a big oak, but at the crack of this last luck shot she came bumping down through the dead leaves as dead as a herring.

We had one more point as we walked down the brook to the road, but the partridge flushed way ahead of us. When we got to the machine, Thompson told us that the bird had just sailed over the road into the next lot. That field was posted. However, we thought we had had our share and called it a day at that.

Hunting Hardships.

"SERVE the champagne in tin cups, James," directed the owner of the hunting lodge.

"Very good, sir."

These hunting parties always like to rough it a trifle.—Louisville Courier-Journal.

To Honolulu in a Bark

By PALMER H. LANGDON

(Continued from last week.)

Aug. 9, 1911; wind, northeast by north; course, south, 67° west.

THE noon observation showed the ship to be somewhat south of her course and she was hauled to the westward. Everyone is now guessing the date of arrival and wagering dinners for the winner.

The moonlight nights are now simply glorious. This evening we had a full moon which arose directly astern, coloring the clouds as it advanced through the heavens. The skipper brought his phonograph up to the poop deck, attached some dance music, and the passengers had the novel pleasure of dancing the Virginia reel under the radiant light of the moon on the upper deck of

In the passing, humanity will be gratified to hear that leprosy is slowly dying out.

Shorten sail was the order after dinner, for there was a brisk breeze, and the skipper did not wish to arrive off Honolulu until morning. The mainsail was the first wing attacked, and the mate and his able watch were soon heaving downward on the three ropes which draw up on the yard the big canvas comprising the mainsail. These ropes, which take in sail, are called the clew garnets, the bunt lines and the leach lines. The term garnet is only applied to ropes on the sails known as "courses"; that is, the lowest sails on the main and foremasts and termed the mainsail and foresail. On the other

the power of steam and the ugly unrigged freight steamer.

During the day the passengers had an extra sight of aloft athletics, when one of the foremast hands climbed to the royal trucks, the very top of the main and foremasts, and rove the signal halliards. The sailor thought no more of shimming up the slender swinging pole 135 feet in the air than the passengers did of eating dinner.

In the evening we were sailing within five miles of the island of Molokai, from which flashed the light of Kalaapapa, and we were treated alternately to moonshine and rain cloud as the bark under her shortened canvas slowly made her way to the channel between Molokai and Oahu.

Latitude 21° 31' north; longitude, 156° 13' west. Day's run, 100 miles. Honolulu 75 miles away.

Aug. 11, 1911; wind east-northeast; course, according to chart, shore and lights.

At 5 o'clock in the morning Captain Ke'ily summoned on deck all passengers that they might

REEVING THE SIGNAL HALYARDS.

THE SECOND MATE OFF DUTY.

a square rigger in a far away corner of the Pacific, while the bark glided o'er the silvery seas.

Latitude, 20° 39' north; longitude, 154° 4' west. Day's run, 100 miles. Honolulu 175 miles away.

Aug. 10, 1911; wind, northeast by north; course, by compass and chart.

"There's the land, sir," said the mate to captain and passengers as they stepped on the poop deck after breakfast this morning, and over on our beam, towering above the clouds that hovered on the horizon, was the great round peak of Mauna Kea, 13,805 feet high, situated on the Island of Hawaii, and said to be the highest island mountain peak in the world. Captain Ke'ily figured that we were fifty miles away. As the clouds parted, more mountainous land could be seen, and then in another hour all was lost in the clouds as the bark left the island which Captain Cook discovered, where he lived and died, and we sailed on toward Oahu, the island upon which Honolulu is located.

In the afternoon the dim outline of Maui island was sighted, and then way ahead as far as the eye could reach was the island of Molokai, the land which contains the Hawaiian leper reservation, which means the forced abode of a colony slowly but surely dying from an incurable disease.

sails these particular ropes are called clew lines, and every squaresail except the courses has a clew line, bunt line and leach line for taking in sail, as they have a halliard and a starboard and a port sheet for setting sail, excepting the lower yards which, being fixed, require no halliards for hoisting. Everything, therefore, is arranged with regular order with the proverbial exceptions here and there as ashore to prove the rule.

But when ropes and arms have clewed the sails from the deck, there comes the work about which sea writers have dwelt upon with such fervor and romance, viz.: the labor of climbing up the ladders, then out on to the yards and fastening the sails to the cross sticks, the work aboard ship known as "furling." The entire crew of eight men were ordered up on the main yard, four on each side of the mast, with the second mate in the center, and with a lot of ye-ho-ing and tugging by all hands, the canvas was bundled into a roll and strapped to the yard by a rope known as a gasket. The same operation followed on the foresail. And what an athletic sight it was to watch those hardy tars furling sail, stretched out across the yard with the foot ropes as a balancer, each with arms like iron bands, each with the shoulders of a bullock, each with the chest of a chimpanzee. Alas, must this fine sight and grand exercise vanish with

see Makapuui Point, the first land of the island of Oahu, and upon which is situated a very powerful light in memory of the late President William McKinley. Back of the lighthouse, in the dim daylight, was the sharp outline of the volcanic hills. I believe the geologists consider the Hawaiian Islands the last word on land making, with the exception of some small volcanic peaks which nature has thrust more recently into other isolated parts of the Pacific. And a very impressive scene it was to see the "last word" in the Oahu shore sandhills as the sun revealed them in his diurnal flight. Barring the first glimpses of the distant shoreland, the ship's company had seen nothing but sky and ocean since leaving the Golden Gate. Not even a vessel had been passed, but now, in addition to seeing again the real land, a steamer was bearing toward us from Honolulu harbor. When she passed she dipped in response to our salute, the flag of old Nippon, and we made out the name of America Maru, belonging to Japan's largest steamship company.

As we quietly sailed by the famous promontory of Diamond Head, the captain, glass in hand, was watching the shore. Of a sudden he turned quickly to the mate and said, "They are after us; call the watch!" "All hands out to take in sail," shouted the mate to the watch in the

forecastle, and the other half of the crew came ambling out to aid the watch on duty in furling the remaining sails, and again the passengers had the treat of watching the sailors haul the ropes and see them go into the rigging and tie up the canvas wings. The number of seamen on the yards decreased as the height increased, but one or two men being sent to the highest yards. With it all there was plenty of action a'oft and on deck.

It was with regret that we watched the canvas disappear, leaving the bare spars, for though by this time everyone was ready to step ashore, yet the voyage had been such a pleasant one and so free from storms or maneuvers that we had even hoped some shift of wind or gale would make it necessary to put the ship about before she made harbor so early. Not a tack had been made all the way down. The only zig-zagging of any kind was when the ship was worn around a few times in the day of ca'ms. The voyage

port doctor boarded us and found no sickness of any kind; then Uncle Sam's customs men swarmed over the side, but discovered no opium or any other contraband goods, therefore the ship proceeded on her way to Honolulu with its pa'ms, gardens, surf and surrounding mountains, and with the running ashore of the gang plank there ended the bark's voyage in the "finest sailing run in the world"—from San Francisco to the territory of Hawaii—the paradise of the Pacific.

Latitude, $21^{\circ} 18'$ north; longitude, $157^{\circ} 51'$ west. Day's run, 75 miles.

A Model Clipper.

Some maritime men have suggested that before square-rigged sailing vessels are entirely driven from the seas, that a replica of the famous clipper ships should be built and preserved as a museum—an example of the sail transportation of the nineteenth century. New York city

THE COURSE SAILED BY THE WELCH.

was closing, therefore, without the sight of that interesting maneuver of a square rigger—tacking ship, viz., the swinging around of her head and putting the weight of the wind on the other side of the vessel.

As the bark was stripped of her wings, the tug Intrepid circled alongside and the commander asked the skipper about his health and weather in the run down. It was the first outside voice we had heard in nineteen days, and then we began to think that according to superstition we were lucky to have ever heard any voice from the outside world, for the Welch had sailed on the 23d day of the month with twenty-three persons and had arrived on a Friday. If good fortune and fair winds had not followed us all the way down, it would of course, according to nautical and landable tradition been due to the unlucky numbers and the fatal day of the week. But when the tug threw her line and the good bark Andrew Welch followed in the wake of steam power, we knew that as in all things it is not luck that runs successfully ships or railroads, but judgment, energy and ability, and thanks to the able seamanship of the officers and crew of the Andrew Welch the bark could soon tie up to the wharf at Honolulu.

When within view of the harbor entrance the

has models of the Half Moon, representing a typical seventeenth century sail craft, and of the Clermont, portraying the first steam vessel, and why not complete the series by building a model of a clipper. Contrary to her predecessors in historical representation she need not necessarily be only a museum replica. What would be more fitting and useful to the maritime community than that the model clipper be put in service during the summer months on voyages across the Atlantic, carrying passengers who desire real sea trips for health and happiness.

By co-operation with the city government or the steamship companies, the clipper might be made a part of the boys' nautical training school system and be partly manned by juvenile jack tars. At any rate, there would seem to be enough sea-loving travelers in the land who would patronize a square-rigger trip across the Atlantic, and also enough "slow freight" available to pay a part of the expense of maintaining such a craft. Captain Arthur H. Clarke, in his admirable book, entitled, "The Clipper Ship Era," has drawn a thrilling pen picture of the glories of sailing in the 50's. Cannot the lovers of sails of to-day have the opportunity of crossing the ocean in one of these "Flying Clouds" that would make a voyage over the sea a delightful memory of a

life time? Passenger sailing ships, as instanced, are still running very successfully on the Pacific; in fact, have a waiting list, slow sailers as they are. Why not have a few swift sail clippers on the Atlantic?

[THE END.]

On Manuscripts.

THERE are poachers in every field of endeavor, and the literary field is not without its scamps. Now and then an editor is imposed on by an unprincipled person who yearns for the glory of seeing his name in print. Knowing his shortcomings, he purloins his story and submits it as an original contribution. One such "writer" sent a stolen article to FOREST AND STREAM several years ago, was told in plain English that the facts were known, but despite this he submits copy now and then, and this is invariably returned to him.

Another so-called nature writer whose travels have probably averaged three miles per day for a number of years, writes of "journeys" far and near, and illustrates his day dreams with clever faked photographs.

A manuscript came to our desk in the usual way. It was a good story but aroused suspicion. The writer lives in an interior town, and both his note and the manuscript were written with pen in an indifferent style, yet he told of photographing lions in Africa. A well-known African book was opened, and beginning at the second paragraph, he had copied verbatim all of one chapter.

Among honest writers the editor's word in returning a manuscript is usually regarded as final, but there are exceptions, and one of these is sufficiently amusing to print. It comes from the Northwest. We quote parts:

Editor Forest and Stream:

Yours under date of Oct. 27, returning the mss. "—————" is disgustedly received.

What gits me is ware ye sez: "These stories are full of interesting matter, and we enjoyed in particular your description of the storm. * * *" Wimmen ain't got no logic, they sez, but wen "me" (I cum from Philadelphia, ware they sez "me") wife sez on reading this: "I should think his readers would enjoy the reading if he does himself," wy it duz seem to me as if the logic wuz al rite, especially as the readers would have no worriment on their minds, about any durn supperfluous words like the editor lets spoil his pleasure in the reading, thinking he me'by 'l have to pay for some thet he thinks mite be loafers. An' thet's so! even wile I kno that enny wun who talks bak to an editor is plum foolish.

Thet long cruise looked mitey good to me, but I suppose it 'l be too turrble hard work to try to part any publishin' company from so much money all at onst; 'an I need stumps to make Christmas presents. So I mite ez well bust it up, and with this I send ye the gem of the collection—the storm scene yeh enjoyed an the finish. An' I giv yeh full liberty, if ye sees any word gasin' at the scenery, insted uv swettin' up on the halliards, to boot it overboard.

If there is anything more coming to ye, I hopes ye git it. Yours sincerely,

The Story of a Hunting Dog

By MOQUIS

BEPPO was a beagle, given me by a friend. One day a party comprising George, Fred, Charles and myself went over to Cotley and had Beppo to follow the game. Not long after striking into the woods the dog sung out on a start, and rushed madly down into the swamp. After him went the hunters, I being the last. This swamp was a good place to start a rabbit, but very difficult to get a shot, being filled with briars and alders and birches and plenty of mud and water.

I had been there before and knew something about it, as well as the course which the rabbit would probably take; for over and over again we had started a rabbit in that spot, and he invariably got away from us. Finding from the direction the dog was taking that the game was going through the swamp to the opposite side, where there was some high ground, I backed out of the swamp and cut around to the right, where the woods were more open, in an endeavor to get to a stand on a rabbit run, where I knew the rabbit was likely to pass, provided he kept on the course he was then pursuing.

I ran as fast as I was able and got my stand where I could see quite a distance before me. I had not long to wait when bunny emerged from the thick covert and came up the path directly toward me. As I raised my gun he saw the motion and turned to dodge back, but I fired just in time, and he fell at the shot. Almost at the same second Beppo appeared, coming in full cry on the trail. He came up to the rabbit and mouthed him a little, and looked as pleased as his master. I was glad to get this rabbit, as he had thrown the dogs off a number of times; and I have no doubt would have done so on this occasion had I not taken the stand I did.

On a second hunt there were five in the party, the fifth man being Joe. On the right of the county road we had started a rabbit which ran like a hare, going a good mile straight away before he made a turn and headed back. Finding this to be the case, I went up the road until I came to a cart-path which I presumed the rabbit would cross, and there taking my stand where I could guard the cart-path and also see down the main road, I waited for ten minutes until I knew by the rapidly nearing bark of the dogs, Beppo and Smiler, that the game was heading my way and coming fast. I was all ready to shoot, when I heard a crash, and Beppo appeared, running at full speed and in full cry and dashed across the path almost at my feet. It was evident the rabbit had passed before I got there.

The briars there were so thick as to be almost impenetrable. Of course, the rabbit could scurry along beneath them, but a big dog could not do so. Beppo, however, was not so large as to be prevented from keeping along at a good rate of speed on the track; for he crouched and literally crawled along under these briars until he came to better going. Not long after he disappeared, Joe's dog came up. He was a big dog, almost as large as a mastiff, and

had a thick coat of hair that made him look like a sheep, his coat being perfectly white. It was with great difficulty that this dog could get along at all; in fact, he could not do so, except by jumping into the air and alighting on the tops of the briars, and he managed in that way to work his way along, but he was far behind Beppo in consequence.

Seeing how things were going, the rabbit still heading up the road, I concluded the best thing I could do was to run up the road until I came opposite the point where I should hear Beppo driving, and then rush into the brush and try to get within the maze, where there was an open space. This I accordingly did; but when I got to what seemed a favorable spot, I saw Joe in the distance, and felt sure of one of two things, either Joe would get the rabbit or miss it; and if he missed it, and it did not hole up, the rabbit would take the back

RABBIT HUNTING.

Photograph by Frank Winch.

track again to the place from which it originally came.

Accordingly I got out of the woods, took the road and ran down it as fast as my legs would carry me until I arrived at the path across which the quarry had gone in the first place. I had not long to wait, the rabbit in rapid flight jumped across the path some way to my right and I let go at him as he did so. I did not know whether I had got him or not, but ran down the path to see what had become of him, and there just below in the woods I saw George and Fred, who, pointing to the rabbit which lay dead at their feet, said, "You have got him," and so that ended the hunt of that day.

One further incident in Beppo's career, which came near putting an untimely end to it: He was running along by the side of my carriage in which were two young ladies, when they chanced to pass by a house whose owner kept a number of Dane dogs. Three of them came out of the barnyard, and while Beppo was running along entirely ignorant of their presence, as he had not seen them, one of them made a dive at him, and catching him, tore a piece from his neck nearly as large as my hand. The

second dog bit Beppo as he lay powerless in the dust. One young lady leaped out of the carriage with the whip and lashed the great Dane, and Beppo then managed to make his escape, and ran as fast as he could until he came to the creek which ran across the road from the anchor forge pond; and swimming this creek, he ran up the opposite bank and disappeared. It was hours afterward before he returned home, and then he came and lay down upon the door-mat, covered with blood and dirt and almost exhausted. I secured the services of a skilful veterinary, and he took twenty stitches in that dog's neck to replace the torn and lacerated portion. The dog did not utter one cry after the first puncture was made with the needle. He recovered, and was eventually enabled to still roam around in the woods, but not as before.

Beppo was one of the best dogs I ever had. He was with me nearly all one day, as I ran the lawn-mower or raked the autumn leaves. He disappeared that night. I could not find him anywhere; but the next day one of my neighbors came to me and said he was afraid my dog was dead. And going with him to a piece of grass land near his house, I found Beppo lying on his side, dead. I ascertained that he was run over by an automobile. My good neighbor and myself took him home, and now with grief I write these final lines:

"Pride of thy race! with worth far less than thine
Full many human leaders daily shine!
Less faith, less constancy, less generous zeal!—
Then no disgrace my humble verse shall feel,
Where not one lying line to riches bows,
Or poisoned sentiment from rancor flows.
Nor flowers are strewn around ambition's car;
An honest dog's a nobler theme by far.
Each sportsman heard the tidings with a sigh
When death's cold touch had stopped his tuneful cry."

New Publications.

THE LOG OF THE NORTH SHORE CLUB, by Kirkland B. Alexander. Cloth, 228 pages, illustrated, \$1.25. New York, G. P. Putnam's Sons.

Few regions are so little known generally to outdoor people as the north shore of Lake Superior, with its numerous rushing rivers, its rocky shores and its myriad islands. And the wind blows there, kicking up boisterous seas, so that every cove and inlet possess an importance not at first suspected by the stranger.

It is of a month passed in exploring the trout streams, cruising among the islands and traversing a number of the rivers that the author tells. Numerous reproductions from his photographs assist in making the book a guide for others who will go there to fish and to rest.

PHOTOGRAPHY FOR BIRD LOVERS, by Bentley Beetham. Cloth, 126 pages, illustrated, 5s. net. London, Witherby & Co.

This manual treats successively of apparatus, nest photography, young birds, stalking, concealment, and all the details it is desirable to master in successful work of this nature. Mr. Beetham's "Home Life of the Spoonbill" and this more recent work are the result of much painstaking labor and patience.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

A Measure to Restrain Dogs.

BOSTON, Mass., Jan. 25.—*Editor Forest and Stream:* The following is a copy of Senate bill No. 175, the result of the conclusions of a majority of the committee appointed by the Fish and Game Association to draft a bill relative to the better protection of partridge, quail, woodcock and other ground-nesting birds.

Section 1. It shall be unlawful for any owner, lessee or custodian of any "self-hunting" dog to permit such dog to run at large in the woods or fields inhabited by game birds or quadrupeds between May 1st and June 30th, both dates inclusive. For the purpose of this act, no dog shall be considered a "self-hunting" dog until after he has been found running at large and hunting in woods or fields inhabited by game birds or quadrupeds, unaccompanied by the owner, lessee or custodian; and further, that the owner, lessee or custodian shall have been so notified in writing by the fish and game commission.

Section 2. If, after the owner, lessee or custodian of such a dog has been notified, as provided above, the dog is again found running at large and hunting in the covers above described, it shall be presumption of law that such running and hunting was with the knowledge and consent of the said owner, custodian or lessee, unless the contrary is shown by evidence.

Section 3. It shall be unlawful for any person or persons to molest, harass or annoy any game bird or quadruped by breaking, training or practicing any dog upon them between May 1st and June 30th, inclusive.

Section 4. Whoever violates the provisions of this act shall be punished by a fine of not less than five dollars nor more than twenty dollars.

It has been our intention to frame a bill that would be acceptable to any fair-minded sportsman. All bird lovers who are in the habit of getting out into the open and into the haunts of nesting birds know very well that "self-hunting" dogs are very destructive to bird life. It is our hope that the owners of self-hunting dogs will not insist upon their right to prey upon, or seriously disturb, wild birds that nest on the ground.

It is our opinion that if our birds are to be saved, a great many people must make some concessions for their benefit. The contention that self-hunting dogs should be restrained during the nesting season, and while young birds are unable to fly, is really not open to argument.

The fox hunting contingent of this State is expected to oppose this bill, inasmuch as they insist on the privilege of hunting foxes throughout the entire year, and at the present time there is no law on our statute books that will restrain them. It would seem that every fair-minded sportsman, whether he be fox or bird hunter, should be willing to make it possible for the game wardens to get at that class of self-hunting dogs which, under the present status of affairs, cannot be done.

You will note from the wording of this bill that it will not apply to any dog until he is actually caught in the act of disturbing the game and hunting in the covers during the months of May and June.

It is a fact that in this State we have thousands of self-hunting dogs that practically sustain themselves, especially during May and June, on young rabbits, chasing them particularly at night. Not only do they destroy the rabbits, but they drive the quail, par-

tridge, woodcock and other ground-nesting birds from their nests, not returning until morning. If the eggs are in the nest, they will become chilled and refuse to hatch. If the young birds are out, and not over a week or ten day old, they will become chilled from the night air and perish before the mother bird returns to them, or if the dog finds the young birds, he will in all probability make a meal of them.

It is, without doubt, a fact that the remnant of the upland game birds of this State now hangs to life by such a slender thread that the friends of wild life must either give the birds more protection or lose them forever.

GEORGE B. CLARK.

Birds in the Cold Snap.

RALEIGH, N. C., Jan. 27.—*Editor Forest and Stream:* The most severe cold period North Carolina has known since 1899 began on the 6th inst. and ended on the 18th, the temperature ranging well below zero in the mountain section several days and in Raleigh going to 6 degrees above, while over all the State snow fell, more of it near the coast than anywhere else, almost breaking the record at Wilmington for depth of fall, though that region is almost sub-tropical.

Millions of robins made their appearance with the cold weather. In the country they ate the hollyberries and chinaberries. In the suburbs two little boys killed a hundred. They stood on their porch and shot the birds while the latter were eating chinaberries. Strings of robins were brought in and sold at two and a half cents a piece. While on a long tramp on the 20th I saw a great many, together with an unusual number of woodpeckers and crow blackbirds. The blackbirds made themselves at home in the Raleigh streets during the most severe weather. On the coldest day I saw four snipe alight on the sleet-covered snow on the edge of a little stream at a point where it was running swiftly and was not frozen. Two of the birds were not thirty feet away and were watched as they stepped off the ice on to the bank and instantly began to sink their bills into the ground, being evidently very hungry and seemingly unafraid. It is a popular belief that the chinaberries to which allusion has been made possess some intoxicating property, and the negroes declare that they have seen robins after eating these yellow berries, which are so thick on the trees, drop to the ground and walk about, "lak dey wuz drunk."

Eighty-eight miles from Raleigh a great dam has been completed and will furnish 32,000 horsepower here. Saturday the gates were dropped closing the sluice ways in the dam, which is over fifty feet high and 1,650 feet in length. It backs water about forty miles. As soon as the gates were closed the water began to rise very rapidly above the dam, and islands began to form. The negro employes at once noticed rabbits running toward the higher ground, and a party that put out in boats for one of the islands in a quarter of an hour killed seventy-two rabbits. Similar hunts on the other islands before the latter were covered with water were made. When the Yad-

kin had ceased to flow, the stream being about a quarter of a mile wide, the negroes rushed to it with sticks and gigs in order to get the fish in the shallow pools. A negro had caught a gigantic eel at least six feet long and as large as his arm. The eel was really too much for him. He tried desperately to hold it, but could not do so until help came. There was a wild search for fish all the way to the South Carolina line and no doubt beyond.

Great numbers of ducks and geese were in the coast waters, but some days the weather was so severe that even the stoutest sportsman did not attempt to do any hunting. FRED A. OLDS.

MINNEAPOLIS, Minn., Jan. 20.—*Editor Forest and Stream:* The recent cold wave that swept over the Northern States played havoc with the feathered kindred, if not the furred creatures. My first intimation of the relentlessness of that spell was when happening to go out into my tent, which I keep up all winter, I came across nine or ten sparrows unable to more than flutter around out of my reach. I had noticed before that the family cat helped himself at his leisure to this toothsome dish. I have found sparrows dead and dying from cold and hunger in nooks and crannies and in sheds. I scattered food for them despite the fact that I am a sort of foe of this species. I searched the surrounding country for further evidence of the devastation wrought by the storm wave, for I had in view a number of places where quail gathered. Last summer a number of quail made their home in Minneapolis and the outskirts. In several wooded sections I have flushed coveys of up to thirty quail at one time. They have been everywhere in great numbers within the limits, for the wholesale shooting that ran the gamut years ago in the city has ceased, and only a stray hunter attempts a shot within the city limits, hence the quail have become fearless. I followed the creek for a half mile that morning and came to the first resting place of the quail under a great bank. Ten were found stiff on the ground. They were hardly larger than a robin. I tracked through a corn patch where the shocks were still standing and flushed six in a stretch of weeds. The shocks had been used as shelter, and though I thrust my hands in and felt around, I could uncover no dead ones. Further on in the patch of weeds I scared up three others and watched them dive into a thicket on the other side of the creek.

Returning along the creek, I found liberal evidence of weasel; a big fellow had followed the creek and took his course over a sort of rise. Under a windfall I found seven dead quail scattered around with their heads chewed off. This was the work of the large weasel. I suppose that the quail were half starved and froze, or the weasel killed them all at his leisure. Some of them were ten feet away from the windfall. I decided to trap the weasel, and with that in view took several of the quail and tracked him to where he had disappeared into some roots. Cutting the quail open, I pinned up the bait and then set one trap directly under same and another one a little to one side, both bedded in some hair-like roots. On the way home I found the trail of another weasel and decided to track him, too. I followed the trail through a wood and back to the creek and up a water course where I set another trap, baited with the head of a rabbit. Around a barn there was evidence

CLARENCE H. MACKAY'S TROPHIES, RECENTLY PRESENTED BY HIM TO THE NATIONAL COLLECTION OF HEADS AND HORNS IN THE NEW YORK ZOOLOGICAL PARK

of the quail. They seemed to have split up in small bands, going this way and that, and holding close to the habitations of man. I searched other known places for evidence of the bobwhite and hunted up a farmer who had seen quite a number early one morning in the yard. They had been around his corn stacks that were piled high on all sides. He did not take much interest in birds, anyhow, he said, but wished he had had a gun because he knew quail were good eating. Of the birds I noticed some juncos, a lone chickadee and a bluejay.

The next morning I went over the same course. At the first roost there were no new victims, so continued on to a new locality. In a strip of pines, cedars and other planted trees I found bluejays, juncos, chickadees, sapsuckers and a butcher bird. At the trap I found a weasel. Wisely enough he had skirted around the bait, but had fallen victim to the second trap, set a little to one side. He was pure white with the black tip at the end of his tail.

In the second trap I found not a weasel, but a muskrat. This was most surprising, for I have not seen a muskrat in this part of the country

since the swamps dried up two years ago. At that time they all left the country and made their homes along the river. This rat evidently had his hole somewhere along that open watercourse and had stumbled on to the trap with its bait in his wanderings. I found no further evidence of the quail. Undoubtedly there are many big beavies yet, and I am going to ascertain for certain just how great the damage is. I understand that postmen in the rural districts have asked leave of the Government to feed the birds along their routes. This certainly should be granted them, for there is no limit to the good they might do while passing along day by day. I should think that the farmers would do something for the help'ess birds, but they do not seem to take any interest in them here.

ROBERT PAGE LINCOLN.

Mistaken for a Turkey.

THE New York Times printed a dispatch from Portland, Ark., on Jan. 27, saying that D. L. Bain, a merchant, planter and banker of that town, died that afternoon from a gunshot wound

inflicted accidentally early that morning by a young man named Simons, while hunting turkeys near Empire, in Chicoti county. The bullet entered Mr. Bain's right side, and an operation failed to save him.

Mr. Bain and Simons were hunting turkeys in the same locality and both were calling at the same time. They did not know of each other's presence, and when Mr. Bain answered young Simons's call, the latter fired at him, thinking him a turkey. As soon as he discovered his mistake, Simons called assistance and Mr. Bain was taken home.

He was one of the most prominent figures in South Arkansas and was at the head of D. L. Bain & Co., at Portland. He was heavily interested in banks and owned several large plantations.

New York Legislature.

ASSEMBLYMAN THOMPSON, of Suffolk, has introduced a bill excepting wild ducks, geese, brant and other wild waterfowl from the restrictions placed by this section upon selling game birds and song birds for food purposes.

Boone and Crockett Club Meeting.

THE annual meeting of the Boone and Crockett Club was held at the rooms of the club, 50 East Forty-first street, on the evening of Thursday, Jan. 25.

The following officers were elected for the ensuing year: President, Major W. Austin Wadsworth; Vice-Presidents, Arno'd Hague, Walter B. Devereux, Archibald Rogers, William D. Pickett, Theodore Roosevelt; Secretary, Madison Grant; Treasurer, C. Grant La Farge. Two members of the executive committee, to serve until 1915, Charles Sheldon and Dr. William K. Draper.

Among the various reports presented that of the game preservation committee is of the widest general interest. It deals with the committee's work for the year, gives a list of pending legislative measures of special interest to the club and an account of the game situation for 1911.

The club believes that its most important work is to formulate a comprehensive plan of national game refuges and have such refuges established. To this end it is working with the departments of the Government especially interested in these matters, and especially with the Biological Survey. From H. W. Henshaw, chief of that Survey, was received a report on this subject which is printed as an appendix to the committee's report, and is of extreme interest. The committee believes that funds should be raised through the Boone and Crockett Club to pay the cost of stocking certain game refuges, and that if this is done, Congress will establish refuges and will care for the animals placed on them. It is believed that the time is favorable for the inauguration of a vigorous campaign for a comprehensive system of national game refuges, and that the club may properly appeal for funds, not only to its own members, but to any public-spirited citizens interested in this matter. Without funds little can be done.

During the past year efforts were made by the committee to help through Congress various appropriations in behalf of game protective work. Dr. Townsend, the secretary of the committee, himself an expert on the fur seal question, took strong public ground against the House resolution which provides for fifteen years' close time on male fur seals. From the pen of Mr. Sheldon, a member of the committee, came this year the extraordinarily interesting and valuable volume on the wild sheep of the Yukon wilderness and other species of large game there. The two herds of antelope established last year by the club in the Montana Bison Range and the Wichita Game Preserve are doing well. The funds required for the capture and transportation of these animals were contributed by members of the club—J. P. Morgan, Jr., Percy R. Pyne, E. Hubert Litchfield, Jr., Bayard Dominick, Jr., and Henry Clay Pierce.

The report of the game situation gives the interesting news that of the fenced herd of bison in the Yellowstone Park, numbering a few weeks ago 141, twenty-two young animals have recently died from an epidemic which attacked the herd. This is a strong argument in favor of the establishment of new herds of various species of wild game in widely separated localities. Of the outlaw bison belonging to Michel Pablo, which he could not deliver to the Canadian Government, the greater number have been killed, but about

twenty are still at large in Western Montana.

Moose are holding their own, and there seem to be a good number in the Glacier National Park. Those introduced several years ago in Newfoundland are reported to be increasing.

Perhaps the only caribou now found in the United States are a few in Northern Idaho, Washington and Montana, just along the boundary line. Several years ago there were perhaps 200 of these. They have now been reduced to about thirty. It is reported that rarely one of them crosses the North Fork of the Flathead River and strays into the Glacier National Park.

The problem of the elk south of the Yellowstone Park has been studied by Mr. Preble, of the Biological Survey, who has recommended a refuge there, but the settlers in that country seem as yet unable to agree as to what shall be done.

While the antelope, though protected all over the United States, are decreasing in number, investigations made during the past year show that in Arizona there are many more antelope than was formerly supposed. There are a few localities in the peninsula of Lower California that still have antelope.

The eight antelope in the Montana Bison Range seem to be thriving. The same number in the Wichita Game Preserve are doing well, and last summer a single one was born there. The Provinces of Alberta and Saskatchewan have an open season on antelope, and the constantly increasing emigration threatens their speedy extinction there.

White goats and wild sheep are doing well and are probably not decreasing.

Bears are growing scarcer except where protected, but in the National parks they are bold and often troublesome.

The fur seal herd in the Pribilof Islands still requires attention, and the committee takes strong ground against the passage of House resolution 277 forbidding the killing of male seals for a period of fifteen years. It is not likely that Congress will pass this resolution.

Dr. Townsend's expedition to the Guadalupe Islands and the discovery of a herd of elephant seals, long believed to be extinct, is a matter of extraordinary interest. Efforts are being made to protect them through the Customs House of the Pacific Coast.

Beavers are increasing and should be introduced in all Federal reservations. On the other hand, when they become too numerous in any region, they should be promptly reduced in number, not by making an open season on them, but by having Government officials trap them until their numbers are properly reduced.

The appendix to the report consists of a memorandum on the establishment of refuges for North American game furnished to the committee by H. W. Henshaw, of the Biological Survey. This memorandum suggests that the elk should be the first species used in restocking game refuges, using the abundant supply in and near the Yellowstone Park. Many of the National forests in the mountains of the West are available as game refuges, and most of them were formerly occupied by the elk. In the work of stocking these reservations, it would be necessary to make enclosures of considerable size to keep the elk together, otherwise the animals turned out might become widely scattered and

lost, and the experiment fail. The cost of such fencing in the mountains of the West in a rough country is about \$1,000 a mile. The Forest Service is heartily in sympathy with the attempt to restock these areas and will be glad to work with the Biological Survey and the Boone and Crockett Club to this end. The Order of Elks, a widely spread, strong and extremely popular organization in the West, would be likely to take an interest in this matter, and to work hand in hand with the club and the Government departments. Mr. Henshaw's memorandum closes with notes on certain National forests and their availability as game preserves. The first one mentioned is the Pecos National Forest, where a movement has already been started to set aside a National game refuge of fourteen townships covering the extreme headwater drainage of the Pecos River. This is a country from which the elk have been exterminated. Deer, bears and wild turkeys are still found there. The Sitgreaves and Coconino National Forests in Arizona are other places where refuges might be established. Mule deer, turkeys, beavers, antelope, bears, lions and some wolves are still found there. There is both summer and winter range.

The Black Mesa of Arizona, a high plateau available as a game refuge, was described by E. W. Nelson in the book of the Boone and Crockett Club, "American Big Game in its Haunts," in 1904. The top of the mesa is good summer range, but in winter the snow lies deep there. On the other hand the southerly and easterly slopes of the Blue River side will give winter range.

Another admirable locality for a game refuge is the Sacramento Mountains in New Mexico. This is a beautiful island of mountains, a natural game country from which, however, the elk have been exterminated. However, bears, deer and wild turkeys still exist, and certain slopes of the mountains would be available for the desert mountain sheep. There are some antelope on the open plains near these mountains.

On the whole the report of the game preservation committee for 1911 is a very interesting document which should be in the hands of all persons interested in this subject.

At the close of the business meeting of the club an adjournment was had to the lecture room of the Chemists Club at the same address where Captain Robert A. Bartlett, of Commander Peary's North Pole expedition, gave a very spirited illustrated talk to the members of the club and their guests. It was listened to with great interest.

Massachusetts No-Sale Bills.

GROTON, Mass., Jan. 25.—*Editor Forest and Stream:* I inclose herewith a copy of a bill recently introduced into the Massachusetts Legislature, with the purpose of accomplishing here what has already been accomplished in New York by the Bayne law.

Massachusetts sportsmen and all other protectors of wild life should know why more than one bill avowedly for the purpose of stopping the sale of native wild game in this State are now before the Legislature. The bill referred to would never have been introduced had the committee appointed at the recent conference of sportsmen's clubs and other interested parties done its duty in accordance with the in-

structions which it received from that conference. Although these instructions were explicitly to prepare a Bayne bill for Massachusetts, the committee has now presented a bill which practically does nothing more than to stop the sale of shore birds. By permitting the sale of all wildfowl and big-game animals killed outside of Massachusetts, it not only encourages the illegal killing for sale of those species within this State and fails utterly to help the conservation of game in any part of the Union, but also effectually renders entirely useless its elaborate provisions avowedly designed to build up a licensed game-breeding industry by permitting the competition of wild game from all parts of the country.

If the enemies of wild life had been asked to draft a bill to suit their interests and make the sportsmen of Massachusetts appear ridiculous, they could hardly have improved upon the bill which has been so emasculated from its original form, which original I now submit. Had the committee, narrowly divided on the matter as it was, been required to report back to the conference by which it was appointed, there can be no question but that its report would have been emphatically rejected. It is because its bill can never command the support of the mass of true sportsmen and wild life protectors in this Commonwealth that the bill herewith inclosed was introduced. This bill in all its essentials is the Bayne law adapted to Massachusetts. However imperfect in minor respects, it embodies the principles upon which all who are not backsliders can and will unite, and by working earnestly and in harmony place upon the statute books.

WILLIAM P. WHARTON.

[Section 1 of the bill makes it unlawful, "except as hereinafter provided, to sell, offer for sale, have in possession for purposes of sale, or buy any birds or quadrupeds protected by law at any season in any part of the United States, or any part thereof, whenever or wherever taken or killed." Other sections provide for the rearing of game for market, under license, and the sale of European game.—EDITOR.]

Game Birds in Connecticut.

PACKER, Conn., Jan. 20.—*Editor Forest and Stream:* We have had three or four snows, one on top of another, one of them heavily sleet covered, hiding every square inch of ground, and thus every weed, seed and acorn, and the very important grit needed by quail especially. At the same time the temperature was repeatedly much lower than normal, 20 to 30 degrees below on more than one occasion during the past ten days. The hungry crows and bluejays were tamer and less noisy than usual, and surely were living on short rations. A squirrel also seemed unusually active, and in a hurry to find something to eat. The rabbit tracks were abundant, but their droppings few and far apart. They must live on the young twigs or sprouts, and few of these seem acceptable. Deer, too, did a lot of wandering, searching for food, doubtless. The tracks of seven crossed just back of my house, among the apple trees, but I could not see that one twig had been eaten. My experience with deer in orchard, garden and field has been quite different from that of the farmers who complain in the agricultural papers of the

great damage done by these interesting animals. One farmer told me he had counted nine pasturing with his cows, but would no more think of killing one than he would of shooting the gray squirrels that made their homes in his shade trees. Some write as if they would like to exterminate them.

Now the snow is nearly gone and the weather mild. The ruffed grouse, quail, rabbits, squirrels and jays can get the acorns if any are left. The deer, too, eat acorns, I believe; in fact, live quite largely on them, judging from their tracks under the oak trees. Grit is once more available to grind the acorns and weed seeds for quail and jays. The partridges do not suffer so greatly for grit, I believe, as they eat buds when acorns are not to be had, and these are more easily digested.

When the snow was melting I took a walk in the woods to see how the birds and animals were faring, and think they came through all right. The rabbits seemed to be on the move at mid-day, which I had never before noticed. Probably they were driven by hunger to leave their forms and burrows as soon as the ground became bare in spots. I saw where one rabbit had come out of his burrow and taken a bath in the wet snow, leaving a dirty spot where he had wallowed.

Mr. Morgan raises an interesting question, the weight of quail. I would not have thought $7\frac{1}{4}$ ounces a large one. But if really weighed on apothecary's scales, as stated, $7\frac{1}{4}$ ounces is nearly 8 ounces avoirdupois; 7.954 to be nearly exact. Many druggists, however, use avoirdupois rather than apothecary scales in most of their weighing. Reports from your readers on weights of large quail killed in many sections of our country would be interesting. Weights of ruffed grouse—partridge in the East and pheasant in the South and West—and rabbits would also be of interest. I do not believe the cottontails of this section much more than half the weight of that of the corn-fed rabbits of the Central West. A game dealer in New York once told me the quail of Western Ohio and Eastern Indiana were the largest that reached his market. A friend quite familiar with Long Island tells me that one district of that island produces the largest in America. Where do the largest grow, avoirdupois?

Still another question I would like to see discussed is the proportions, male to female, both of quail and rabbits. At one time a friend and I kept careful account of our bags of quail, and found far more cock than hen birds. A man who hunted rabbits with ferrets told me he made a practice, particularly late in the season, of liberating all females he caught, and that fully five out of six were males. I also heard an old hunter and trapper say that in winter all rabbits were male, while in summer every adult rabbit caught would be a female. What can your gifted writers tell us as to this? Farmers who were also hunters and interested in the quail crop have told me of small bebies of quail that did not mate in summer as usual. I asked them to examine them carefully when again they saw them, and see if they were not all male birds. Later they were so reported. I have understood these bebies of male quail are very disturbing to the mated birds, as the male quail does his share of the incubating, and is often driven from his nest and kept fighting until the eggs are cold.

Grizzly King raises the question of the rapidity of rabbits breeding, quoting a "thoughtful writer" as saying one pair would amount to 1,278,840 in four years; of course, barring all accidents. My mind revels in figures, and I find each pair would have to be the progenitors of fifty-six yearly to bring this result in four years. This is on the basis that half are of each sex. If a large percentage were does, it would be easy. Rabbits are said to carry their young only thirty days, and that the doe will breed within twenty-four hours after dropping her young. Then the does of the first and second litters in each year begin breeding before the summer is over. Thus fifty-six per year is not at all unlikely. But that no accident will happen is unlikely. Foxes, dogs, cats, owls, hawks, minks, weasels and men like rabbits, and some of these have it quite often on their bill of fare. Under conditions favorable to breeding and freedom from enemies, rabbits, quail and grouse multiply at a rate that should make shooting a more satisfactory sport than it has been of late. One pair of quail breeding at the rate of only eighteen young per year would at the end of ten years, barring all accidents, reach the enormous number of twenty billion. One pair of rabbits bringing forth only thirty-eight a year would amount to 20,480 billion.

E. P. ROBINSON.

Death of Rutherford Page.

RUTHERFORD PAGE, whose name is familiar to FOREST AND STREAM readers as having taken many beautiful photographs of Rocky Mountain scenery and pack trail travel, died in California, Monday, Jan. 22.

Within a few months he had become deeply interested in the science of aviation, and had been studying the subject and making flights at the Curtis school at San Diego. On Jan. 20 he received his license as a pilot. On the 22d he entered a general meet near Los Angeles and competed in some of the events, winning one of them over Beachey, a very skillful and experienced aviator. Later in the afternoon, flying in a stiff wind, he struck an adverse current of air, the aeroplane turned turtle and he fell from a height of seventy-five feet, his engine falling on him. He was instantly killed.

Mr. Page was a devoted sportsman. Though only twenty-four years old, he had done shooting in the East, and had had experience with big game in the Northern Rocky Mountains. He recently planned a trip to Alaska, which, however, he gave up in view of his interest in aviation.

He felt a keen interest in natural things and was a good observer. About eight years ago he and his brother took from a burrow in the Connecticut woods three or four short-tailed nondescript animals, whose eyes were not yet opened, and which no one recognized. These tiny creatures were given to a cat to nurse, and were watched until they developed into gray foxes. The two brothers wrote an interesting article on the observation, which was published in FOREST AND STREAM.

Rutherford Page was an able, alert, high-couraged young man, whose charm of manner and ready sympathy won for him the liking and affection of those with whom he came in contact. Had he lived, a bright future lay before him.

NATURAL HISTORY

Florida Sandhill Cranes.

KISSIMMEE, Fla., Jan. 24.—*Editor Forest and Stream:* Come with me if you will, gracious reader, and enjoy a scene from the Southland. It is a bright and glorious morning; tall live oaks grace the well-kept lawn; from orange trees chirp the mockingbirds; red birds of brilliant scarlet feed complacently along with the dove, and jays in numbers herald their presence as they beg for their every morning breakfast of bread crumbs.

By the playing fountain stand like sentinels two white-plumed egrets, their spotless figures adorned in their bridal veil of long silken plumes, making a picture that an artist might envy. Central in the Florida scene are two large sandhill cranes, one pluming itself after the morning bath, the other a rollicking youngster, dancing and bowing at an imaginary plaything she sees in the grass.

It is chiefly of dear old Dick, familiar to FOREST AND STREAM readers, we would write. A few years ago Dick made his debut into the world of type when his history appeared in the columns of FOREST AND STREAM, and was so largely copied by the press all over the country.

Dick is now seventeen years old and is still the bugler and picket guard of the yard. His head is stately and like that of an Indian; his eye keen and piercing; his head surmounted by a brilliant red crest. He is truly an imposing and picturesque feature of the lawn.

He is a favorite with everybody, and accounts of his intelligence have been carried far by tourists and visitors to our town, while many a camera series is adorned with his figure.

The intelligence of this bird is equal to that of a highbred dog. He courts companionship, following us about the yard; and where the negro is at work, there Dick appears, digging industriously with his long beak, like a sexton.

Dick has always been inordinately fond of his master, whom he makes every effort to please, whether the command is to dance, or carol a greeting, or turn his back with wings outstretched to be carried. The last named is Dick's latest acquirement and is performed after this manner. His master will say: "Dick, do you want to be carried?" When Dick will at once turn his back, spread his wings, and after his master has grasped the wings close to the bird's body and has carried it a short distance or has jumped it up and down, Dick is told to say, "Thank you." and immediately puts up his head and gives a long, mellow trumpet call.

The bird shows a sense of intelligence so keen that we look upon it with daily wonder. While dozens of automobiles pass by during the day, it is only the car of Dick's owner whose rumb'le and konk-konk Dick notices. He recognizes its vibration long before the automobile is in sight, grows restless, and then with head erect commences a series of low gurgling notes, which culminate in a long clangorous, trumpeting call of welcome as the car rolls into the garage.

Three years ago Dick, then fourteen years old, surprised everyone by proving sex and lay-

ing the first egg, and now while Dick's name cannot be changed, we must think and speak in the feminine gender. Proud the old bird was of her first egg, and two weeks later she laid a second. The eggs were taken away and soon forgotten. A year later Dick began to show signs of nest building again, so with the aid of her master and mistress, quite a bunch of dried grass was gotten into one place, Dick calling and assisting in placing the twigs. One egg, two eggs and still Dick watched the nest, when a third egg was laid. Natives as well as the Seminole Indians say they have never found more than two eggs in a crane's nest.

A year ago Dick at the budding age of sweet sixteen again got to the nest building stage and

THE PET CRANES.

laid two eggs. In the interim between the laying of the first and second egg, a farmer brought to us a baby crane, a toddling, soft-eyed, yellow-legged creature. We placed the little crane in the yard, wondering how Dick would treat it, for Dick has always been the sovereign of the place—dogs, cats, chickens and the white herons have learned to bow to her superior will. To our surprise Dick tolerated the young bird, until the second egg was laid, when affection took the place of toleration and a mother instinct asserted itself. In a few days Dick had assumed entire proprietorship and adopted the baby crane as her sole property.

Dick being the pet of the yard for so many years had grown naturally selfish, much as a spoiled child, but now with the advent of the little stranger from the prairie she commenced to show a most self-sacrificing spirit with all the instinct of a foraging hen with her brood, denying herself all the tid-bits and feeding the new charge as long as the little toddler could be induced to swallow, the youngster moving away from its over-indulgent foster mother, who kept following with a choice bit. Not until the young bird had refused to be coaxed into eating more would dear old Dick eat.

Dick grew more and more foolish over the adopted baby, reminding one of a doting grand-

mother over a spoiled child, and soon began to resent any approach to the new treasure. She grew so cross—to all except her master—that Dick's friends of years thought "discretion the better part of valor" and admired her from a distance.

At the end of six months the young crane, whom we christened Peggy, had grown into a handsome bird with all the rollicking nature of a young puppy and kept her foster mother on the *qui vive*.

Around and around the house Peggy runs, chasing the cat, running after the buzzards, going through all sorts of gymnastics, bowing and dancing, picking up sticks, throwing them into the air and hopping up and down as if on a spiral wire.

The two birds enjoy each other's society through the winter, going about the yard neck and neck, digging the ground with heads together and roosting side by side at night.

Spring came and Dick commenced to show signs of peevishness at Peggy's persistent companionship, and soon we decided that Dick had something unusual on her mind, and the old chirp, chirp that attends the nest building was heard, and Peggy was commanded in crane language to keep away. Peggy, who needed something to love, sought the company of the horse, and now the handsome young crane and the pony make a most picturesque feature of the lot—the bird keeping close by her side and taking a step as the horse takes one—picking at her tail, jumping up and down, and apparently as happy as when Dick was her over-indulgent parent.

To complete the story a few more words about Dick must be added. She has certainly broken all crane records in egg laying, for beginning with her peevish attitude toward Peggy, when she laid a large well-formed egg, she has continued at intervals to make a nest under the shady corner of the bamboo until ten eggs are credited to her account.

MINNIE MOORE WILLSON.

Starlings.

GOLDSBORO, Md., Jan. 20.—*Editor Forest and Stream:* Starlings have been quite plenty here this winter. I have noticed flocks of fifty or more, and during the recent cold weather they have been quite thick about the barnyards. I recognized the bird from the pictures of it in the encyclopedia and even Webster's dictionary.

I should like to know when they were imported and set free in this country?

J. SPENCER LAPHAM.

[Starlings were brought to New York city about 1890. Their increase was rapid, for in 1910 they were reported from many towns in this State, Connecticut and New Jersey, and even Philadelphia. Since then their spread in all directions has been more rapid. It would be interesting to hear from correspondents north and west, as well as south, as to the extent of their present range. They seem to have passed through the inclement winter weather without leaving their accustomed haunts, but come readily to places where food is placed for them. Last week we picked up a starling that had died or been frozen. It seemed to be but two-thirds grown. No others were found in the vicinity, which is frequented daily by them.—EDITOR.]

SEA AND RIVER FISHING

Indian Anglers.

RALEIGH, N. C., Jan. 26.—*Editor Forest and Stream:* There yet remain two tribes of Indians in North Carolina, the Cherokees, in the high mountain region, and the Croatans, in the south central section. I spent a few days in May with the Croatans, and in August with the Cherokees, and was brought into the most intimate association with both tribes.

The streams in that section are deep and swift, though the country is sandy, and in general quite flat, and there are extensive swamps and great areas of long-leaf pine timber. The jack or pike grows very large and is in much request. The rivers are entirely fed by springs and are bordered by forests of cypress and juniper which literally cover the swamps and which give the water the color of light chocolate in the mass, though when taken in a glass it is as clear as crystal and is extremely palatable.

The Indians fish with all sorts of bait, sometimes with worms and often with what they call roaches, for black bass, which they term trout or chub. The main stream is the Lumber River, which properly is the Lumbee. The poles are long and so are the lines, and the fishing is done either from the banks or from boats. The cypress "knees" stand up thickly, and the streams run so fast through the shallows and the woods as to make a kind of whispering noise, very peculiar at night. The bottom of the streams is generally covered with a luxuriant growth of slender green vegetation which trails like a snake and has stalks sometimes fifteen to twenty feet in length.

One of the most prized, and at the same time handsome fish in the Lumber River and its numerous small tributaries and the outlying

marshes is the one known as the blue bream, which is a very bold fish and gives as fine sport as the large-mouth black bass. These blue bream weigh generally from a pound to two pounds and they are delicious eating. Anglers can go to that section from a considerable area

JIM TAIL READY FOR FISHING WITH WASP GRUB BAIT.

The Cherokees have exterminated the game in their high mountain country, and therein are widely different from the Croatans, for in the section inhabited by the latter there are yet many deer, wild turkeys and squirrels, while as already stated there are no end of fish. The Croatans show more up-to-date methods in preserving their game than do the Cherokees. The

Croatans generally use shotguns for killing game, though rifles, old and new pattern, are very frequent. Strange to say, these Croatans have always used the cross-bow, being the only Indians so far as known that ever used this weapon. They got this of course from the English side of their race, and it is a survival of the days of Queen Elizabeth. Of course they used the long-bow, too, but this has gone out for many a year, while cross-bows are yet made, though now these are not used for killing game, but merely for purposes of amusement, though some of them are extremely well made and duplicate the lines of the once so deadly English weapon.

The Cherokees, with the usual Indian improvidence, have literally exterminated all the game in their wonderful region, which extends from the top of the Smoky Mountains, on the Tennessee border, down to the tableland some sixty miles westward from Asheville. These Indians use blow-guns for killing small game, and the scarcity of everything in fur or feathers is remarkable.

The principal streams are Oconalufy River, the Nantahala, the Soco Creek, etc. The canoes are all dug-outs. The Indians prize the brook trout most, next to this ranking the black bass, which they, too, call chub, and there are very handsome yellow-throat perch of good size. The streams are so clear that they look like quicksilver. For bait they never use the fly, but often grasshoppers and wasp grubs, together with worms and little salamanders, which they find under stones and logs alongside the streams. They have very great skill in taking fish, coupled with infinite patience. They fish by day and by night. They also "bait"

certain places in the streams, where there are rather deep holes, by throwing food there from time to time, so as to accustom the fish to go to these places.

On one occasion Jim Tail, whose name in Cherokee is Conectah, had just come in from a hard morning's work and was getting ready to

CORRESPONDENCE.

The **FOREST AND STREAM** is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Terms: \$3.00 a year; \$1.50 for six months. Single copies, 10 cents. Canadian subscriptions, \$4.00 a year; \$2.00 for six months. Foreign subscriptions, \$4.50 a year; \$2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line (\$2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra. Special rates for back cover in two or more colors. Reading notices, 75 cents per count line.

A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 20, and 20 per cent. on 52 insertions respectively.

Advertisements should be received by Saturday previous to the issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, AUG. 14, 1873.

GROUND-NESTING BIRDS.

MASSACHUSETTS sportsmen propose to curb the wanderings of self-hunting dogs during the nesting season of quail, grouse and woodcock. A bill for this purpose is now before the State Legislature, and excellent reasons why it should become a law are given in another column.

To the appeal made by Mr. Clark there is little that may be added, but we would suggest that those who now oppose the passage of the bill give careful consideration to the fact that, as more and more land is cleared for agricultural purposes, cover for ground-nesting birds decreases, and important agents in this situation are the fires that creep about among the leaves and grass in autumn. These little fires are regarded as of small importance, but they destroy many of the few covers left to the birds. When severe storms and periods of cold come in mid-winter, the birds find difficulty in securing food and shelter, and in the nesting season they become the prey of every dog that roams at will, and of cats as well.

If a portion of the vast sums of money now expended in the purchase of foreign game birds were devoted to simple measures for protecting our native game birds, the results would not be so difficult to find as is the case to-day. It may properly be regarded as an innovation to tie up the dogs during certain periods, and to look after the welfare of small game in severe weather, but the necessity for this is evident.

The cold weather of January killed immense numbers of small game in regions where the

game formerly wintered with small loss. The substitution of barbed wire fences for the old-time worm fence of split rails, accounts for no small portion of the loss to-day. These old fence corners were always perfect shelters for birds and rabbits, even in cleared fields. Because of the scarcity of wood, the worm fence has entirely disappeared over much of the country, and the wire fence which takes its place affords no shelter, as there are no angles grown up to brush and dense grass, to furnish windbreaks, keep out the snow and protect the birds hiding therein in winter and nesting in spring, from night and day prowlers, wild and domesticated.

Much is heard of conservation. Real conservation, which is only another way of saying protection, includes within its scope the feeding of and providing shelter for our small game, and there is no better way to continue this work through the seasons than to prevent the disturbing by dogs and cats of the nesting birds.

CLIPPER SHIPS.

THE suggestion made by Palmer H. Langdon, in concluding his story of a voyage from San Francisco to Honolulu in a bark, that a sailing ship might well be put to similar use on the Atlantic, merits the approval of all those who love the sea and witness with regret the passing of the clippers. There are, on the Atlantic coast and elsewhere, many persons who would, if it were possible, be glad to pass their vacations on board a first-class sailing vessel, and if such a ship were put in commission, properly equipped to insure the comfort and amusement of a reasonable number of passengers without overcrowding, it is more than likely that the enterprise would prove profitable. There are ships aplenty suited to this use, or that may be adapted to it with some alterations; officers and crews to be had, and no lack of men who would gladly take passage if permitted to "play sailor" now and then, and with them would go their families.

The Atlantic's moods have not changed, but men have acquired greater skill than was possessed by the navigators of the old-time clipper ships, and they are assisted by instruments and data unknown then, while it is possible now to so equip ships that living aboard one for a fortnight will be a pleasure.

CALLING TURKEYS.

THE accidental killing of one Arkansas turkey hunter by another may strike the average person who has never called a turkey as of the same brand of carelessness as that which has been displayed so conspicuously in the woods of the Northern States. Such unfortunate happenings are rare in the regions where turkeys may still be found, and the only explanation that may be deduced from theory alone is that the man who fired the shot was not an expert hunter, and that he was deceived by the imitation of the turkey hen's plaintive call.

In places where calling is practiced the gobblers can be deceived only by an excellent imitation of the hen's call, but there are very few veteran hunters who mistake the imitation for the real call and are thereby placed in personal danger from a possible shot from the other hunter's place of concealment. Still, that such a thing is possible is proved now and then,

but usually the deception is discovered before it is too late, and few hunters fire before the gobbler is actually seen. In the Arkansas case the shooter did not wait to make assurance doubly sure, and was therefore guilty of the inexcusable carelessness which has cost so many deer hunters their lives in other States. For he fired into the bushes and of course did not miss the other hunter concealed there. Such shots rarely do miss.

It is a blessing, to say the least, that deer and other game of the Northern hunting grounds cannot be lured by calling or any similar deception. As it is, the fatalities have kept pace with the increase in the number of persons who go into the woods every autumn to hunt deer. If green hunters had, as an additional excuse for random shooting, a call of some sort, their imaginations would lead them to further recklessness, if that were possible, than some of them have displayed in the past.

WORK will be begun this year on two new additions to the American Museum of Natural History, New York City, the plans for which have been filed with the Building Department. The original building fronts on Seventy-seventh street, and with the completion of wings from time to time, it now covers nearly the entire block on that street between Columbus avenue and Central Park West. One of the new additions will extend the structure part way along Columbus avenue, the other along Central Park West, and in the course of time other additions will complete the plan to cover the entire block, leaving an immense court within the quadrangle. The present additions will cost in the neighborhood of \$700,000.

THE New York State Conservation Commission has announced that there will be 30,000 pheasant eggs and 5,000 pheasants for free distribution from the State Game Farm at Sherburne, this year. Sportsmen, farmers and lovers of game birds desirous of obtaining allotments of these birds or eggs for restocking covers may apply to the commission. Upon request blanks will be sent for the purpose. All applications should be made before March 1. The distribution of eggs will commence about the middle of April and continue during May, June and the first part of July. Pheasants will be ready for distribution during August, September and October.

RICHARD TJADER, the big-game hunter, is planning another expedition, but in this one he will bag big game of another sort, and lay his plans for capture in a different way than those made on his African hunting excursions. Both he and Mrs. Tjader have long been interested in missionary work, and his plans include an extensive journey by motor car into many parts of the world in the continuance of this work. While he is saving souls, perhaps Mr. Tjader may also do a little shooting now and then on side trips.

PLANS are being made in New Rochelle, N. Y., to secure a fund by popular subscription for the erection of a statue of the late Frederic Remington on the plaza in that town. Mr. Remington lived in New Rochelle for a great many years and his neighbors were very fond of him. One of the stations of the new railway building there will be named for him.

YACHTING

Ticks from the Ship's Clock.

GREAT LAKES yachting circles are considerably agitated just now over the question of helmsman for the Richardson cup defender. Otto Schoenwerk, Jr., who won the soubriquet of "champion sailor of the Great Lakes," through his success in winning the Columbia Y. C. Michigan City race with Invader, and the Mackinac trophy with Mavourneen, has taken up his residence in Seattle. However, there needn't be such a great brow furrowing over the question, as Bill Thompson, commodore of the Chicago Y. C., is about as capable a helmsman as anyone could ask on either fresh or salt water. It is no cinch that Schoenwerk is a better skipper, and if he is, the shade he has on Commodore Bill is very light. The commodore has political aspirations, which we hope will become realization, but even at that, Mr. Thompson must have recreation, so why shouldn't he take his time off from politics in sailing the new defender to victory. Besides, we don't think any chair in politics would be sufficiently sticky in the seat to keep Bill from getting out of it to push the \$10,000 beauty over the line and keep the International trophy in the Windy City. The other possibilities, all winners, are Ogden McClurg, Fred Price and Roy Barcale. If any one of these spokes-turners is selected, Chicagoans may put it right up to the new boat, for if she has the speed in her, they can extract it without pain.

Members of the Muskegan, Mich., Country Club yachtsmen are planning to have the local club represented at the regattas and boat races at White, Bear, Spring and other lakes in this vicinity next summer, and it is likely that two or three speedy sailboats will be purchased. At the meeting last week several members expressed their intention of securing boats, in the racing class and entering them in different events. The local club promises to take an important part in nautical events this summer.

A member of the Manhasset Bay Y. C. has offered a cup to be known as the iceboat championship cup of Manhasset Bay. The following conditions govern: Any yacht club located on Manhasset Bay may enter for the cup, each club to be represented by one boat only, of 300 feet or less sail area. Any iceboat which has been on the ice on the bay at any time up to Jan. 23, 1912, shall not be disqualified on account of having more than 300 feet sail area, provided her sail plan has not been increased. The match shall be decided by points in five races; two points shall be awarded to the winner and one to the second boat in each race, but in case the conditions do not allow the sailing of the full five races the match shall be decided on the points of the races sailed. The cup shall become the property of the club first winning it three times.

The Corinthian Y. C., of Baltimore, has decided not to consolidate with Arundel Boat Club. The proposition has been under advisement for some time and many Corinthian members were in favor of it. Graham Eckel was elected Commodore in place of J. H. Robinette, who has held office two terms with success to the club.

Jamaica Bay Y. R. A.

At a meeting of the Yacht Racing Association of Jamaica Bay, held Jan. 25, the question of abolishing the open races held by the clubs in the association, and of changing the courses sailed by the several classes in the handicap division was discussed, but owing to the absence of delegates from several clubs, and the

short time given for the consideration, the matter was laid over until next meeting.

The idea of abolishing the open races is for the purpose of keeping down the number of racing dates, and utilizing these open dates for handicap races. The change in the course is in the interest of the deeper draft boats, which find difficulty in negotiating the shoals in Jamaica Bay. It has been proposed to lay out a course from Sheepshead Bay to Romer Shoal, to the bell buoy, off Norton's Point, Coney Island, thence to the starting line, for sloops, cabin cat-boats and cruising power boats. A course in Jamaica Bay for the smaller sail and power boats was advocated in order to keep them out of rough seas.

Ice Yachting.

WEATHER conditions have not been propitious for ice yachting during the past week, but a number of skippers, nevertheless, braved the snows and gales with the result that some spirited contests were recorded. At Long Branch, on the 22d, under the auspices of South Shrewsbury Club, Henry Monroe's Say When won the club pennant, beating Terhune by 44s. and Hazel L., 51s. The 10-mile course was made in 31:30.

At the Long Branch Ice Boat Club, Robert Heitermeyer's Imp beat James O'Brien's Snow Flake for a \$500 purse. Imp's time was 40:48 for the 15-mile course.

On the 24th, records for 10 and 15 miles were made over the Shallow Point course by boats of the South Shrewsbury and Long Branch clubs. The 10-mile club race was won by ex-Commodore J. C. Gibbons' Ingenue in 16m. 52s.

The other record was made by Walter Content's Clarel in the lateen class for the Long Branch ice yacht trophy in a race with Eagle. Clarel, sailed by Capt. William Riddle, covered the course in 26m. 4s., 45s. ahead of Eagle. The best previous club record was held by Jack Frost, 28m. 30s. over the 15-mile course.

Ex-Commodore Gibbons' Red Rover, sailing under the colors of the Long Branch Ice Boat Club, won the Ayres and O'Brien cup, covering 15 miles in 27m. 12s. With Rainbow II., Capt. O. F. Roberts captured the Drub cup from ex-Commodore Gibbons' Ingenue.

Manned by Edward Asay and his son Harry the third class ice yacht Daisey captured the second race for points on the North Shrewsbury Club pennant. She covered the 10-mile triangle club course in the fast time of 18m. 44s.

At Fair Haven three races were sailed for points on the Fair Haven Club pennant. Jennie captured two races and Frank Bennett's Bessie B. won the last race. Capt. Edward Little sailed Jennie in the winning contests, and in the last contest Harvey Little sailed.

On the 25th, Red Rover, ex-Commodore J. C. Gibbons' ice yacht, won the Weiner cup, sailed for by boats of the Long Branch club, from a field of six starters, covering the 15-mile course in 26m. 4s., exactly the record made by Clarel the day before. Capt. James O'Brien's Jack Frost was second, only 27s. behind the winner, with Drub a close third. Red Rover's second win was in the race for the Irving cup for boats of the South Shrewsbury club. Rover covered the 15-mile course in 26m. 52s., beating Say When by 1m. 5s. Hazel L. withdrew.

In a blinding snowstorm twelve ice yachts of the fourth and fifth class raced a 5-mile course on the 26th before a large carnival crowd. The Red Bank boats, Everett Asay's Streak, Harry Asay's Reindeer and Ralph Sickles' P. D. Q. II., finished first, second and third, in 22m. 42s., 23m. 34s. and 24m. 24s. respectively. Henry Applegate's Vim, the only non-club boat, was fourth in 25m. 25s. Capt. Edward Little's Jennie, in fifth place, was the

first Fair Haven boat to finish, in 26m. 45s., and Porter Hoagland's Catherine sixth in 27m. 26s.

Streak, Reindeer, P. D. Q. II. and Vim finished first, second, third and fourth respectively in another race between the smaller yachts.

The first ice yacht race for the Board of Trade trophy this season was sailed on the 26th at Red Bank, Capt. Edwin Fiedler's old-time favorite, Drub, winning from ex-Commodore J. C. Gibbons' Ingenue by 3m. 6s. In the last seven years the South Shrewsbury and Long Branch clubs have each won a leg on the cup, three races in five in any one season, and the trophy is at present held by the Long Branch club.

There were ten starters in the race. The Long Branch club was represented by Drub, Carel, Jack Frost, Isabel, Blanche and Eagle. The South Shrewsbury boats were Princeton, Hazel L., Mildred and Ingenue.

Drub, in a light northwest wind, led from start to finish. Hazel and Drub passed the first stake close together, with Jack Frost third. At the end of the first five miles Drub led Jack Frost by 44s., with Ingenue third. When the 10-mile stake was turned Drub had increased her lead to nearly 2m. over Ingenue. Drub continued to increase her lead to the finish.

The Long Branch Ice Boat and Yacht Club won another race for the Board of Trade cup on Jan. 27 on the South Shrewsbury River. This time the winning yacht was Jack Frost. The summary:

Jack Frost—First lap, 3:42; second, 4:49; third, 5:57; fourth, 5:57; sixth, 5:26. Time, 30:07.

Ingenue—First lap, 4:03; second, 4:54; third, 6:20; fourth, 4:36; fifth, 6:43; sixth, 5:51. Time, 32:33.

Blanche—First lap, 4:31; second, 5:02; third, 6:20; fourth, 4:35; fifth, 7:40; sixth, 5:28. Time, 33:14.

Princeton—First lap, 4:31; second, 5:27; third, 5:38; fourth, 6:06; fifth, 6:29; sixth, 4:37. Time, 33:50.

Hazel L.—First lap, 4:44; second, 4:43; third, 7:10; fourth, 6:06; fifth, 6:44; sixth, 5:03. Time, 34:41.

ON GREAT SOUTH BAY.

There was fine scootering again on Jan. 25, and the Bluepoint Scooter Club had an exciting race, which was witnessed by a large crowd. The distance was 18 miles. There was a "flying start" and the first to get away was Commodore F. C. Thurber in Elmer. The winner was Keep It Dark, Captain C. W. Ruland, Jr., of Patchogue, sailed by William Corley; second, Ice Pick, Captain Harry Hoyer, and the third, Elmer.

Several members of the Islip club were on the ice the early part of the week indulging in impromptu brushes. This was the first time the Islip "duck class" of scooters has had an opportunity to assemble, and although the wind was light, many of them showed that they are capable of astonishing speed.

ON THE NORTH SHORE.

In a 20-mile northwest breeze and on ice as smooth as glass the Manhasset Bay Y. C. gave a 10-mile race for ice boats at Port Washington, Jan. 22. The winners were Manhasset and Trouble, both belonging to the Manhasset Y. C. The summary:

Large Boats—Start, 3:00.

	Finish.
Manhasset, J. Walker and C. M. Gould.....	3 14 45
Ice Baby, R. Dussenberre.....	3 15 10
Whiz, W. Vanderloal	3 15 35
Bertha Ida	3 16 00
Nameless and Knickerbocker did not finish.	

Small Boats—Start, 3:30.

Trouble, W. B. Duncan, Jr.....	3 49 53
Papoose, W. Ward.....	3 50 03
Blue Bell did not finish.	

Club Elections.

SOUTH BAY Y. C.

The annual meeting of the South Bay Y. C., San Jose, Cal., was held Jan. 11. The report of Commodore Thomas E. Gibson reviewed briefly the good events of last season. The report of

the secretary showed the club to be in excellent financial condition. The Program Committee appointed Commodore T. E. Gibson, former Commodore S. E. Smith, W. J. Gardner, Frank Cox and N. E. Wretman. The following officers were elected: Commodore, T. E. Gibson (re-elected); Vice-Commodore, E. Knickerbocker; Port Captain, Martin Jensen; Secretary, N. E. Wretman; Treasurer, J. B. Harmon.

E. Knickerbocker has a motor boat for which he claims 20 miles an hour, and an equal speed is boasted of by C. H. Letcher for his boat. The men will probably test this matter out before their fellow-sportsmen early in the season.

CHELSEA Y. C.

The Chelsea Y. C., Chelsea, Mass., elected the following officers for the coming year: Commodore, Joseph D. Swoyer; Vice-Commodore, John R. Wiggins; Rear-Commodore, James H. Hayes, Jr.; Treasurer, John R. Shields.

CORINTHIAN Y. C. ELECTS OFFICERS.

The Corinthian Y. C., of Boston, is looking forward to another very successful year this summer following the holding of the annual meeting and election of officers at the Boston Athletic Association. Reports showed that 1911 was a banner year, no less than twenty-two races being held with a total of 783 starters. A number of changes were made in the executive officers, the staff for the current year being named as follows: Commodore, C. B. Wheelock; Vice-Commodore, J. B. Fallon; Rear-Commodore, L. F. Percival; Secretary, H. S. Goodwin; Treasurer, F. W. Moore; Measurer, S. H. Brown, Jr.; Executive Committee—J. M. Ward, Andrew Raeburn; Membership Committee—P. W. Pope, S. W. Lewis, Merrill Hunt, Harold Peters; Regatta Committee—W. L. Carleton, G. H. Mayo, George Upton, G. E. Chapin, J. G. Alden; House Committee, three years, A. P. Tarbell.

KNICKERBOCKER Y. C.

The Knickerbocker Y. C., New York, held an informal dinner at the Hotel Manhattan on Jan. 17. There were between seventy-five and one hundred members and guests present. The following officers of the club have been nominated for the year, and the election will take place at the annual meeting, which will be held on Feb. 20: Commodore, W. E. Spencer, M.D.; Vice-Commodore, W. F. Duffield; Rear-Commodore, W. D. Griscom; Treasurer, G. H. Cooper; Secretary, J. O. Sinkinson; Measurer, G. J. Stelz; Fleet Surgeon, W. H. Peer, M.D.; Board of Directors—Rodman Sands, Harry Stevenson, W. B. Beam, Alfred Schoen and F. L. Kraemer.

TAMPA Y. C.

The annual election of officers was held at the Tampa Yacht and Country Club, and the result follows: D. C. Gillett, President; H. T. Lykes, Vice-President; C. M. Davis, Secretary; R. J. Binnicker, Treasurer; Board of Directors—J. T. Mahoney, William M. Fielder, M. G. Gibbons, W. S. Barritt, J. M. Harvey.

Motor Boating

Motor Cruiser for G. M. Pynchon.

At the yards of the Gas Engine & Power Co., Morris Heights, a twin-screw motor yacht is being built for Vice-Commodore G. Mallory Pynchon, of the Larchmont Y. C. She is 70 feet 3 inches over all, 65 feet on the waterline, 11 feet 6 inches beam and 3 feet 6 inches draft, with a speed of 14½ miles.

The new yacht will be used in connection with Commodore Pynchon's racing sloop Istalena. The machinery will consist of two six-cylinder, 6x6 inches Speedway.

Commodious quarters for the crew are located forward. The engine room is under the after end of the raised deck forward and has a large skylight. The midship deck is 14 feet long and the full width of the vessel. In the

trunk cabin part aft of the midship deck is the saloon, with folding berths, buffet and wardrobe. The yacht will be lighted throughout by electricity. The joiner work is of hardwood. There will be six steel watertight bulkheads. She will be ready for delivery early in May.

Running the Motor with Kerosene.

Now that the price of gasoline is running a Marathon with butter and eggs and bids fair to cut the gas engine from its favorite food, just as marketmen sooner or later will deprive the motorist of two of his pet breakfast staples, it has fallen to the lot of the ever handy inventor to find a substitute. This appears in the form of a kerosene oil converter, whereby the engine in your motor boat runs on oil. This simple device is known as the universal hydrocarbon gas producer, invented by W. K. Bassford, and is attached in the same manner as the muffler.

The principle of its operation is as follows: This being a suction gas producer, the fuel is first atomized and then drawn by the suction

A—Duplex Kerosene and Gasolene Carburetor. B—Gas Producer. C—Thermostat. D—Automatic Control Mechanism.

of the engine through passages heated by the exhaust, thus making the device automatic, and suiting the requirements of the engine under all conditions of speed or load. The exhaust is absolutely clean, odorless and colorless, which signifies perfect combustion, a minimum consumption of fuel, and a maximum of efficiency.

It is described as being "fool proof," which, if true, is in itself sufficient recommendation. It starts on gasoline, and after running three minutes, the gasoline supply is shut off automatically and kerosene turned on. This is all done by a thermostat and requires no thought nor attention from the operator. Its economic value may be figured thus: A 10-horsepower gasoline engine running ten hours a day will use seven gallons of gasoline at 15 cents a gallon, \$1.05. The same horsepower engine with the gas-producer attachment would consume six gallons of kerosene at 7 cents, costing 42 cents, a saving of 63 cents a day,

To Florida by Motor Boat.

MANY motor boat owners who can spare the time visit Florida in winter and wait until the weather is warm before returning to this frigid section. Time was when only those who owned a fair sized steam yacht or a good auxiliary could make the trip south in the winter months, and then when the motor boat began to take the place of the steamer, only large boats of that type could make such a journey, because a considerable part of the voyage was on the ocean. Owners of smaller craft shipped them south by rail or sent them around in charge of professional crews. Now things are different and one could get to Florida with a 20-foot boat if he cared to put up with a little discomfort, or if he rested each night at some town or village. A 40-footer is an ideal craft for such a trip, and to make things more agreeable, there should be a party of four or five congenial ones on board. Some motor boats have been built specially for such a trip. Last year several went south, and since then, the inland water

route has been so much improved that it is now possible to get from New York, Philadelphia, or almost any other eastern city, all the way to the orange groves and have only about 160 miles to travel on the ocean. That 160 miles is from Beaufort, N. C., to Winyah Bay. Cape Fear River is half way between those two points, and it affords good anchorage for boats of all sizes. A cruising motor boat can make 80 miles in eight to ten hours in good weather, so that this run outside is nothing to be worried about.

The Department of Commerce and Labor, acting through the Coast and Geodetic Survey, has issued special charts which cover the route through the inland waterway, and on these charts it is shown by a broken red line. Briefly, in starting from New York, the way is up the Raritan River to New Brunswick, N. J., thence through the Delaware and Raritan Canal to Bordentown, N. J.; down the Delaware River to Delaware City, Del.; thence through the Chesapeake and Delaware Canal to Chesapeake City, Md., and thence through Back Creek and Elk River to the head of the Chesapeake. The route then traverses the home of the oyster and canvasback duck and leads southward through Elizabeth River, Dismal Swamp Canal (or Albemarle and Chesapeake Canal), Albemarle and Pamlico Sounds, Neuss River, Adams Creek Canal to Cove Creek and Newport River to Beaufort, N. C. Vessels drawing 3 feet or less can go 23 miles further to Bogue Inlet, but vessels of deeper draft must go outside at Beaufort. At Winyah Bay there are more inland routes, but the way is tortuous. It is a well buoyed and lighted way through and can be easily made out. Just now the southern route is the popular one with all who can take it.

Mr. Gardner's New Yacht.

AN inland yachtsman who makes buggies and friends easily, Russel E. Gardner, has now ordered a gasoline speed yacht of 150 horsepower for June delivery. Mr. Gardner owned the old-time stern-wheeler Annie Russell. The new vessel is 57 feet long, 12 feet beam. Cabin will be finished in mahogany with glass observation rooms. She will be the finest yacht on the Mississippi.

YACHT and BOAT SAILING

By the late Dixon Kemp

Tenth edition. Published 1904. We have a copy in fairly good condition, published at \$12, which we will sell for \$9.00.

FOREST AND STREAM PUBLISHING CO.

motor as well as the automobile motor has been at a disadvantage because of the trouble frequently had in starting the motor. It is no fun to crank, especially on a hot day, and often cranking is attended by some serious mishap. The Janney-Steinmetz starter is one of the new ones which will attract much attention, and it is claimed for this starter that it makes it possible for a woman to take a boat and stop and start it without having to ask for assistance. The base of this starter is less than 5 inches square. The compressor with its rotor, gears, valves, measures 7x8 inches, and it weighs less than 20 pounds. A single cylinder model weighs less than 10 pounds. The device in all its actions is controlled by the helmsman. The starting is done by high air pressure, and it is absolutely silent. Last summer when the motor boats were racing at Huntington, much trouble was experienced in starting the big motors in the racing craft. All sorts of cranking devices were used, and sometimes, try as they would, the motors would not start. A self-starter that is reliable will be a boon to motor boatmen.

Reliance V.

THE owner of Reliance IV. has built a new Reliance and has a challenge ready for any speed boat extant, in course of construction or in a state of contemplation. The Reliance owner, J. J. Ryan, of Cincinnati, who was in town early in the week said:

"I am willing to race my speed boat Reliance against any motor boat in the world and will certainly have a crack at these foreigners when they come. Reliance IV. was the fastest boat in the West, and she defeated among others Kitty Hawk, La Truda, Gretchen and Hoosier Boy, and, I think, would have beaten Dixie IV. at Buffalo when that boat ran ashore. Reliance is under 30 feet in length and has a 75-horsepower motor. She has made more than 37 miles in races. Now I have a new Reliance and am willing to match that boat against any speed boat in the world, any size, any power. The race may be any distance from one mile to 100 miles and the stakes from \$2,500 to any amount.

"Now that is what I call a sporting proposition. Reliance will race in the East this year, and I'll show the owners of speed boats here what speed is. My new boat will make 47 miles an hour, and then I'll have a little to spare. You see, I don't want to give her away at once. The boat is coming here and will be on exhibition at the Motor Boat Show in the Madison Square Garden. I have no secrets. The hull will be fully exposed. It is a hydroplane, but the secret of its speed is in its proper adjustment. Everything works in harmony, and there is no detail in the hull that we are afraid to show. When a boat of the size of Reliance can get such speed with a 75-horsepower motor it proves that these high powered things are built on some wrong principle. My boat is not for sale."

Canoeing

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—David J. Boon, 4265 Ridge avenue, Philadelphia, Pa., and G. Ashton Barker, 3018 W. Lehigh avenue, Philadelphia, Pa., both by Henry B. Fort.

TRAP SHOOTING

If you want your shoot to be announced here send a notice like the following:

Fixtures.

Feb. 22.—Cleveland (O.) G. C. tournament. F. H. Wallace, Sec'y.

REGISTERED TOURNAMENTS.

- Feb. 16-17.—Mobile (Ala.) G. C. J. L. Suttle, Mgr.
- Feb. 22-23.—Columbus (O.) G. C. L. Fisher, Sec'y.
- March 14-15.—Holmesburg Junction, Pa.—Keystone S. L. of Philadelphia. H. L. David, Mgr.
- March 21.—Columbus (O.) G. C. L. Fisher, Sec'y.
- April 8.—Mt. Airy (Md.) G. C. Ray Watkins, Mgr.
- April 9-10.—Moberly (Mo.) G. C. L. R. Hulen, Sec'y.
- April 9-10.—Birmingham (Ala.) G. C. O. L. Garl, Sec'y.
- April 9-11.—Perry, Okla.—Oklahoma State tournament, under the auspices of the Perry G. C. Bush H. Bowman, Sec'y.
- April 10.—Gaithersburg (Md.) G. C. R. M. Purdum, Sec.
- April 11.—Atglen (Pa.) G. C. L. R. Lewis, Mgr.
- April 13.—Rittersville, Pa.—Lehigh R and G. C. H. F. Kock, Sec'y.
- April 15-17.—New Orleans, La.—City Park G. C. E. F. Leckert, Sec'y.
- April 17-19.—Wichita, Kans.—Kansas State tournament, under the auspices of the Interurban G. C. C. W. Jones, Sec'y, 209 N. Main St., Wichita, Kans.
- April 18.—Columbus (O.) G. C. L. Fisher, Sec'y.
- April 23-24.—Spokane, Wash.—Washington State tournament, under the auspices of the Spokane R. and G. C. T. B. Ware, Pres.
- April 23-25.—Laurel, Miss.—Mississippi State tournament under the auspices of the Laurel G. C. Chas. Green, Pres.
- April 23-25.—Omaha (Neb.) G. C. F. T. Lovering, Sec'y.
- May 8-9.—Columbus (O.) G. C. Lon. Fisher, Sec'y.
- May 9.—Riverside, Ill.—National G. C. Chas. W. May, Pres.
- May 14-16.—Columbus, Ga.—The Interstate Association's Seventh Southern Handicap tournament, under the auspices of the Columbus G. C.; \$1,000 added money. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.
- May 14-15.—Adel, Ia.—Adel G. C. C. F. Clarke, Sec'y.
- May 14-16.—Fairmont, W. Va.—West Virginia State tournament, under the auspices of the Fairmont G. C. Ed. H. Taylor, Sec'y.
- May 15.—Milton Junction (Wis.) G. C. W. H. Smith, Sec'y.
- May 15-16.—Columbus (O.) G. C. L. Fisher, Sec'y.
- May 15-17.—Peoria, Ill.—Illinois State tournament, under the auspices of the Illinois State S. A. Robert Scholes, Sec'y.
- May 21-24.—Sunbury, Pa.—Pennsylvania State tournament, under the auspices of the Sunbury-Selinsgrove G. C. J. W. Schoffstall, Sec'y.
- May 23-24.—Waterloo (Ia.) G. C. J. F. Libby, Sec'y.
- May 23.—Mt. Morris (Ill.) G. C. H. W. Cushing, Sec'y.
- May 28-30.—Omaha, Neb.—Nebraska State tournament, under the auspices of the Omaha G. C. F. T. Lovering, Sec'y.
- May 29-30.—Wilmington, Del.—Delaware State tournament, under the auspices of the Du Pont G. C. T. E. Doremus, Sec'y.
- June 1.—Roversford (Pa.) G. C. F. A. Anderson, Sec'y.
- June 4-6.—Mexico, Mo.—Fifth annual State tournament of the Missouri State Trapshooters' Association, under the auspices of the Audrain Country Gun Club, of Farber, Mo. Russell Glynn, Sec'y.
- June 5.—Janesville (Wis.) G. C. L. L. Nickerson, Sec'y.
- June 5-6.—Aurelia (Ia.) G. C. Frank R. Welch, Sec'y.
- June 5-7.—Warm Springs, Ga.—Merriwether G. C. T. B. Slade, Mgr.
- June 10-13.—Syracuse, N. Y.—New York State tournament, under the auspices of the New York State Sportsmen's Association. H. W. Smith, Pres.
- June 11-13.—Sioux City Ia.—Soo Gun Club. W. F. Duncan, Sec'y.
- June 18-21.—Springfield, Ill.—The Interstate Association's thirteenth Grand American Handicap tournament, on the grounds of the Illinois Gun Club; \$1,500 added money. The winner of first place in the G. A. H. guaranteed \$1,000 in cash and a trophy. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.
- June 25-28.—Eugene, Ore.—Pacific Indians. F. C. Riehl, Sec'y.
- June 27-28.—Spencer (Ia.) G. C. G. O. Round, Sec'y.
- July 14-15.—Fargo, N. D.—North Dakota State tournament, under the auspices of the Gate City G. C. Albert E. Rose, Sec'y.
- July 16-18.—Bradford, Pa.—The Interstate Association's Seventh Eastern Handicap tournament, under the auspices of the Bradford G. C.; \$1,000 added money. Elmer E. Shaner, Sec'y-Treasurer, Pittsburgh, Pa.
- Aug. 7-8.—Lindsay, (Okla.) G. C. Robt. May, Sec'y.
- Aug. 14-16.—Kansas City, Mo.—The Interstate Association's seventh Western Handicap tournament, under the auspices of the Kansas City Gun Club; \$1,000 added money. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.
- Sept. 2.—Ogdensburg (N. Y.) S. A. J. M. Morley, Sec.
- Sept. 10-13.—Denver, Colo.—Rocky Mountain Interstate Sportsmen's Association; \$5,000 added money. Ambrose E. McKenzie, Mgr.

DRIVERS AND TWISTERS.

Pacific Indians tournament at Eugene, Ore., will be shot June 25-28, instead of July 9-12, as originally scheduled.

Eighteen tournaments were registered with Interstate Association, week ending Jan. 27. These will be found listed under "Registered Tournaments" at top of this page.

Elmer E. Shaner, Secretary-Treasurer Interstate Association, writes: "Please state that our seventh Southern Handicap tournament will be held at Columbus, Ga., May 14, 15 and 16, under the auspices of the Columbus Gun Club, and that our Seventh Eastern Handicap tournament will be held at Bradford, Pa., July 16, 17 and 18, under the auspices of the Bradford Gun Club. There will be \$1,000 added money at each tournament."

From Haddonfield, N. J., comes this: "The Haddonfield Gun Club did not hold the regular monthly shoot on Saturday, 20th inst. Too cold, the boys said, to shoot. The reason given was an excellent one. To my mind, it was not complete. Have a very strong suspicion that they were shy of the hard targets the club had to hand out to them. The last League shoot proved to them that all targets will not break when hit with as many as seven pellets when not further than 35yds. from the score. A freak lot sure. A rifle ball will not break half of them. W. A. Shreve, Secretary."

The official list of registered trapshooters, just issued, places Pennsylvania at the top with 668; Ohio second with 341, New York third with 314, and Rhode Island and New Hampshire last with one lonesome registered clay-bird breaker in each State. The list by States follows: Alabama 60, Arizona 3, Arkansas 69, California 87, Canada 239, Colorado 58, Connecticut 184, Delaware 56, Washington, D. C., 11, Florida 2, Georgia 19, New Mexico 16, Idaho 56, Illinois 248, Indiana 75, Iowa 267, Kansas 130, Kentucky 38, Louisiana 19, Maine 28, Maryland 114, Massachusetts 82, Michigan 17, New Hampshire 1, Minnesota 50, Mississippi 38, Missouri 237, Montana 35, Nebraska 190, New Jersey 146, New York 314, North Carolina 52, North Dakota 36, Ohio 341, Oklahoma 69, Rhode Island 1, Oregon 40, Pennsylvania 668, South Carolina 11, South Dakota 60, Tennessee 39, Texas 59, Vermont 28, Virginia 76, Washington 78, West Virginia 51, Wisconsin 187, Utah 5, Wyoming 2.

BEECROFT.

Chicago Gun Club.

CHICAGO, Ill., Jan. 21.—The fairly pleasant weather of the past two days was a welcome relief from the snow and zero temperature which had kept our shooters away from the traps the past two weeks. Nine shooters came out to-day, and Stannard topped the list with a score of 99 out of 100, while Bills was a close second with a score of 98. Amos Moore won the amateur honors for the day with a score of 90 out of his first 100, and finished up with 23 out of 25 in an extra event. He was highly pleased with his success on the first day as a member of the club, and especially as this was his fourth trial at the traps, although he has done considerable field shooting. Martin also did splendid for one who had never tried to break targets.

On Saturday Jan. 20, Ed. Graham, O. P. Goode and H. Winans were the only ones to show up for a few turns at the trap. Graham had quite a bit the best of it when they had finished, as he broke 96 out of his 100, but he had to hustle to keep the lead, as Goode had one 24, one 22 and a 21 to his credit. Scores:

Arms and Ammunition Chat.

It is surprising how low-priced and yet how good a rifle can be put on the market. The Marlin Fire Arms Co. has just put out Model 29. It's a repeater, .22 caliber, taking without adjustment a short, long or long-rifle cartridge. It is of the take-down variety, trombone action. Is, in fact, similar, in general construction to the exceedingly popular Model 20. The object of this paragraph is not to call attention to how good this arm is—the fact that it's a Marlin product guarantees its merit, but to show how low-priced a good arm can be made and sold. The price is \$8.50. At the price, and with a set of Ideal reloading instruments, the cost of your shooting is reduced to about the least expensive recreation worth indulging in.

New York Athletic Club.

PELHAM MANOR, Jan. 27.—Twelve gunners participated in the clay pigeon shoot at the Travers Island traps to-day under fairly good conditions, but high scores were impossible. The high gun total of 82, made by Gus Lembeck, was a really creditable performance, and gave him top honors by a margin of only one target over Fred Schaulffer. The summaries:

January cup, 25 targets, handicap:

G W Lembeck..... 2 23	T Lenane, Jr..... 4 19

Speedway Gun Club.

NEWARK, N. J., Jan. 24.—Fourteen gunners participated in the regular weekly shoot of the Speedway Gun Club yesterday afternoon over the traps near the Speedway. While the day was not an ideal one for trap-shooting, some good scores were turned in nevertheless. High gun honors of the day were divided between Louis Colquitt and B. M. Shanley, Jr. The former broke 154 out of 175 blue-rocks that he shot at, while Shanley was credited with 201 kills out of a possible 225. Colquitt and Sim Glover were the only gunners to be credited with breaking 25 in a row. Scores:

Events:	1	2	3	4	5	6	7	8	9

SMOKELESS.

Birmingham Gun Club.

TEN shooters were at the weekly shoot of the Birmingham Gun Club, on Jan. 26. The day was ideal for shooting, and every one had a good time. Some of the old regulars are coming out again to get in practice for the Mobile, Ala., shoot. Present indications are that Birmingham will be represented by a full squad at the Mobile registered shoot. James Hillman did the best shooting. Mrs. Garl landed second place by her consistent shooting. P. H. Lallande made his first attempt at targets, and, considering, his shooting is very good. Scores:

Shot at. Broke		Shot at. Broke	
J Hillman..... 100	93	Dr J Coulbourne 100	70
Mrs O L Garl... 100	78	R H Baugh..... 75	51

O. L. GARL, Sec'y.

Solid-breech, Hammerless, Safe.

Remington-UMC Autoloading Rifle is the only recoil operated rifle that locks the cartridge in the firing chamber until after the shot is fired. Allows five shots.

Remington-UMC .22 Repeater has fewer, simpler, bigger and stronger parts to its action than any other repeater. Loads 15 short, 12 long and 11 long rifle cartridges.

Remington-UMC Autoloading Shotgun allows five shots. The recoil ejects the empty, throws a loaded shell into place and cocks the gun.

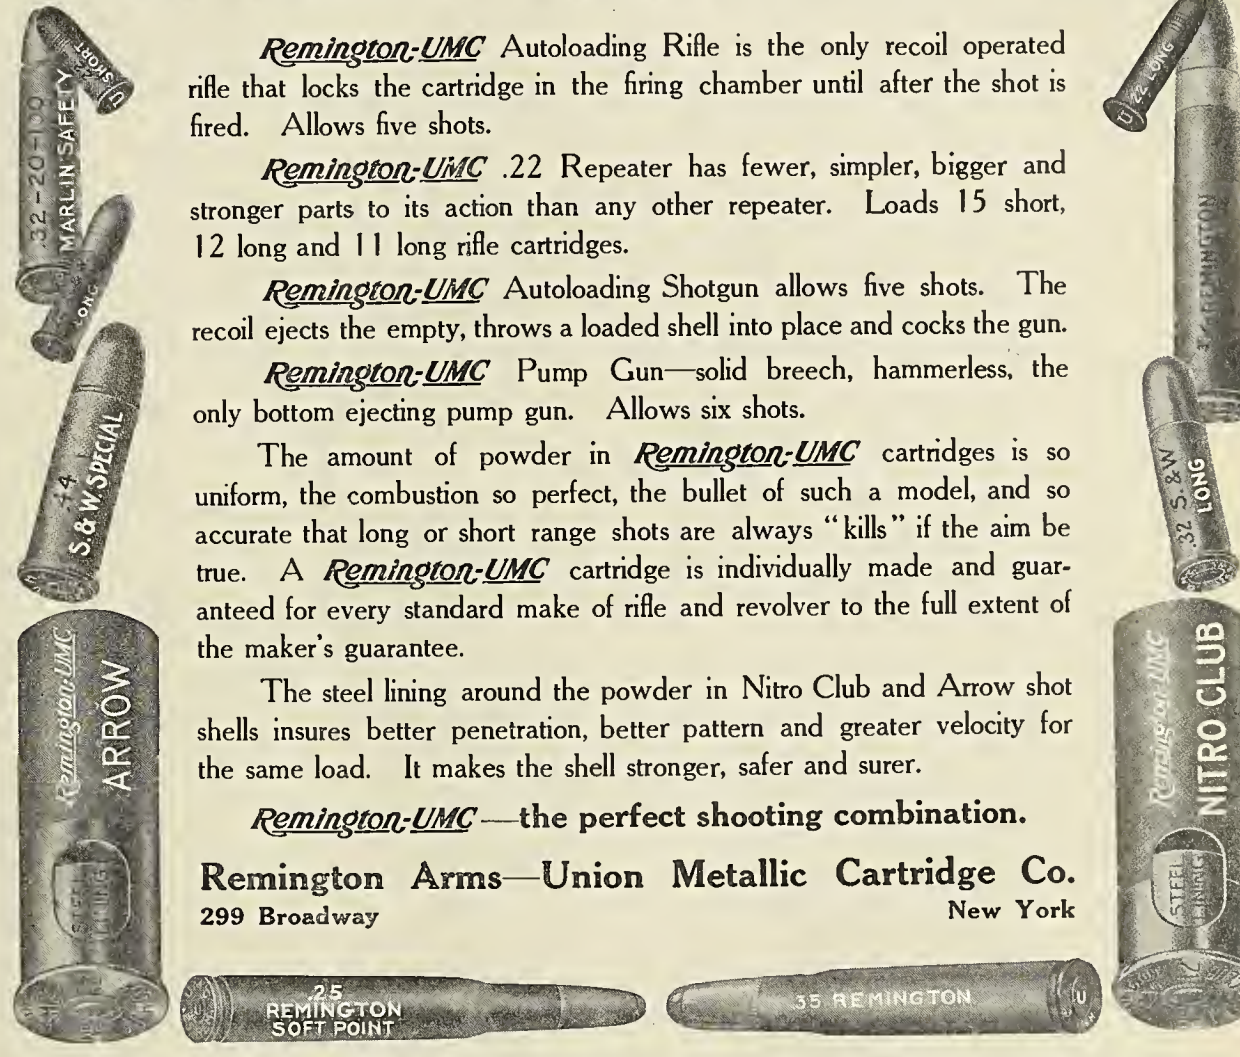

Remington-UMC Pump Gun—solid breech, hammerless, the only bottom ejecting pump gun. Allows six shots.

The amount of powder in *Remington-UMC* cartridges is so uniform, the combustion so perfect, the bullet of such a model, and so accurate that long or short range shots are always "kills" if the aim be true. A *Remington-UMC* cartridge is individually made and guaranteed for every standard make of rifle and revolver to the full extent of the maker's guarantee.

The steel lining around the powder in Nitro Club and Arrow shot shells insures better penetration, better pattern and greater velocity for the same load. It makes the shell stronger, safer and surer.

Remington-UMC—the perfect shooting combination.

Remington Arms—Union Metallic Cartridge Co.
299 Broadway New York

Manhasset Bay Y. C.

PORT WASHINGTON, Jan. 27.—It was a vicious day for the Long Island Sound clay-bird championship to-day, but almost every club within a radius of fifty miles was represented. While scores were kept down by weather conditions, competition was keen. H. L. Hoyt, Jr., of Manhasset Bay Yacht Club, tied W. S. Silkworth, of Glenwood Country Club with 85 out of 100. In the shoot-off Silkworth broke 24 out of 25, while Hoyt slipped off his speed and lost 9 of his string. Third went to A. W. Alker, of Manhasset Bay Yacht Club, with 84.

The team trophy was taken by the new Queens Gun Club five with 360 out of 500. High professional was Capt. Doe with 77, being two more than made by his brother professional, Carl von Lengerke.

Quakertown Gun Club.

QUAKERTOWN, Pa., Jan. 27.—Quakertown Gun Club held its monthly 25-target shoot to-day, the Du Pont trophy for the high gun being won by W. Hessler. Scores: Weitzel 17, F. Hessler 15, F. Fred 12, O. Newbert 7, W. Hessler 19, A. Keller 9, W. Binkley 11, W. Daub 12, J. Linselberger 10.

Midwinter Handicap.

PINEHURST, N. C., Jan. 24.—The best field a Southern trapshooting tournament has ever gathered together lined up for to-day's opening events in the fifth annual midwinter handicap, seventeen of the starters scoring better than 189 out of 200. G. S. McCarty, of Philadelphia, scored 198, which included straight runs of 64 and 131. For second place F. S. Wright, of South Wales, N. Y.; C. H. Newcomb, of Philadelphia; F. A. Hodgman, Tuckahoe, N. Y., and W. T. Laslie, of Tuskegee, were bunched at 192. H. W. Kahler, of Philadelphia, and H. E. Buckwalter, of Philadelphia, were tied at 191. J. F. Wulf, of Milwaukee, made 190 and J. A. Smith, of South Solon, O., and C. G. Westcott, of Orlando, Fla., 189 each.

Heading the professionals was Lester German, of Aberdeen, with 195; J. T. Skelly, of Wilmington, who scored 194, three targets in the lead of R. W. Clancy, of Chicago; E. H. Storr, of Baltimore, and L. J. Squier of Pittsburgh.

Jan. 25.—An unfinished straight run of 105 landed A. L. Ivins, of Red Bank, at the head of the field in 200-target race with a total of 194. In second position H. W. Kahler, of Philadelphia, and G. S. McCarty, of the same place, tied at 193, McCarty ending up with an unfinished run of 67. G. J. Corbett, of New York, who ran 73 straight, and W. H. Jones, of Macon, made 192. There was another tie at 191 between H. E. Buckwalter, of Philadelphia, and Allan Heil, of Allentown. At 180, F. A. Hodgman, of Tuckahoe, tied with Vassa Cate, of Brunswick, Ga. Other big runs were a 69 and a 61 unfinished for J. A. Blount, Greensboro, who scored 186.

Jan. 26.—A. E. Ranney, shooting under New York Athletic Club colors, captured the Preliminary Handicap to-day in a race which was uncertain in its outcome until the last shot had been fired by the half a dozen leaders. In second position a single target away were a fast trio, including B. B. Ward, of Aberdeen; R. H. Bruns, of Brookville, Ind., both at the 18yd. mark, and R. L. Spotts, the Larchmont Yacht Club champion, who was a yard further off. The field was closely bunched with J. A. Smith, of South Colon, O., and John L. Englert, of Catasauqua, both at 18yds., tied at 91.

Huff, at 21yds., and Skelly at 19yds., were first and second among the professionals in 92 and 91. G. G. McCarty, of Philadelphia, led in the morning sweepstakes with 98, tying with Lyon, professional. Kahler and F. A. Hodgman, of Tuckahoe, tied with Clancy, professional, at 91.

Jan. 27.—Shooting from the 21yd. mark, Harry W. Kahler, of Philadelphia, led the field to-day with a clean cut score of 98, missing one target each in his second and fourth strings. Early in the game it looked as if some of the experts might keep up to him, but it was soon apparent that the purse and the trophy were his. Henry Powers on the 18yd. mark finished second with 95.

In third position a triple tie resulted between C. W. Billings, of New York A. C.; David T. Leahy, of Brooklyn; E. R. Alexander, of Tuskegee, all at 18yds., and J. C. Bitterling, of Allentown, 16yds., who scored 94. W. F. Hopper, of Jefferson, 18yds.; Frank S. Wright, of South Wales; Charles H. Newcomb, of Philadelphia, and Allen Heil, of Allentown, all 20yds., were in fourth place at 93; H. P. Carlon, of Wilmington, 18yds., and C. G. Westcott, of Orlando, 19yds., being the last to make over 90 per cent. The day was perfect.

Hawkins, at 21yds., led the professionals with 94; Storr, at 19yds., making 93, and Skelly, at the same mark, 92.

The gold medal for the high general average for the full 800 targets of the tournament went to Kahler, who scored 766, or 95 3/4 per cent. The gold medal for the 600 targets at 16yds., Preliminary and Midwinter omitted, was won by G. S. McCarty, of Philadelphia, who scored 587, or 97 5/6 per cent.

Kahler won second with 578, or 96 1/2 per cent., while H. E. Buckwalter, of Philadelphia, and F. S. Wright, of South Wales, tied for third medal at 574, or 95 1/2 per cent., Wright winning the shoot-off, 25 to 23, Buckwalter missing his fourth and thirteenth targets.

Lester German won the professional general average with 586, or 97 3/4 per cent. Wright was high in the morning sweepstakes with 99, and Jesse Young, of Chicago; Buckwalter and McCarty, tied for second at 98. German also scored 99, which was high gun for the professionals.

Taken all in all, it is generally conceded that the percentage of experts, the entry list of eighty considered, was as high as has ever been recorded in an American event. The winner takes \$500, and the handicap trophy, and yesterday's Preliminary winner, \$200 and a trophy. The total added money and trophies amounted to \$1,860.

It is superfluous to say that the Du Pont expert Luther Squier in the managerial chair, and with Charley North in charge of the Ideal-Leggett traps, that the tournament ran off as smoothly as an oiled sea. Leonard Tuft's hospitality was of the real old Southern variety, which spells perfection.

First Day.

Table with 4 columns: Name, Score, Name, Score. Lists top performers like H D Gibbs (200, 187), J Clark (200, 184), H B Pottinger (200, 176), etc.

The moneys in the two handicap events were as follows:
Preliminary handicap, entrance \$10; \$200 added; winner guaranteed \$200 for first money: One 93 paid \$200; three 92s, \$87.36; two 91s, \$53.76; five 90s, \$30.91; five 89s, \$2.69.
Pinehurst Handicap, entrance \$20; \$500 added and winner guaranteed \$500; 53 entries: One 98 paid \$500; one 97, \$241.28; one 95, \$196.04; four 94s, \$120.64; four 93s, \$61.09; one 92, \$30.16.

Crescent Athletic Club.

BAY RIDGE, Jan. 27.—A shoot by calcium light was held at Crescent Athletic Club to-night. The conditions called for 25 targets, and when the final bluecock was trapped, it was found that F. B. Stephenson, John H. Hendrickson and W. C. Damron all had tied with 20 targets each. In the shoot-off, John H. Hendrickson won with a total of 24 out of 25. F. B. Stephenson finished second with 23, and then came W. C. Damron with 22.
The shoot was a decided success. Two big calcium lights were placed beside the traps and they played a steady light over the firing ground. The targets were painted white and looked big and round when they were thrown.
The conditions were miserable for high scores, as it was bitterly cold. In addition a strong wind swept in from the Bay and chilled the gunners. Flurries of snow whirled across the traps, and into the faces of the marksmen, who, however, did not seem to mind the trying conditions. Scores:

WINCHESTER

Dr. Spencer

Repeating Shotgun and Shotgun Shells

WIN

THE OFFICIAL AMATEUR SEASON'S AVERAGE

Dr. W. S. Spencer of St. Louis, Mo., won the Interstate Association's contest for the Amateur Season's Average for 1911. He shot at 2,100 targets in various tournaments and scored 96.28 per cent., a record that all amateurs agree is a wonderful one. In winning this great trap shooting honor which so many amateurs annually strive for, Dr. Spencer shot a Winchester Repeating Shotgun and Winchester Loaded Shells. His record is conclusive proof of their strong and uniform shooting qualities, for such shooting as Dr. Spencer did could only have been done with the best possible equipment. Dr. Spencer's victory and the winning of the Professional Season's Average for 1911 by J. R. Taylor, with a Winchester Repeating Shotgun and Winchester Loaded Shells emphasizes the wisdom of shooting the make of gun and shells that always helps and never handicaps skill. That Winchester Shotguns and Winchester Shells are such a combination is shown by their consistent and conspicuous winnings.

The Red W Combination was Supreme in 1911

Boston Athletic Association.

JAN. 20.—The Palefaces from Wellington took a fall out of their Athletic neighbors here to-day and carted away the first half of the home-and-home trophy with a margin of 44 birds. The shoot is at 200 birds: 100 shot to-day at Riverside, the second 100 to be thrown at Wellington.
High gun was E. C. Griffith, of the Paleface contingent, with 91. Second gun was F. Hilliard, of the same bunch, with 88. Third man was T. C. Adams, of B. A. A., with 84 to his credit.
The conditions, atmospherically, were excellent. The referee was E. C. Sibley; scorer, C. C. Clapp.
In the regular club shoot C. Crompton broke 94; W. C. Brooks 86, and G. F. Munroe 85.

AN UNBEATEN RECORD!

TARGETS SHOT AT
4280

97.28%

TARGETS BROKEN
4164

This is the percentage with which Mr. J. S. Day won the 1910 OFFICIAL HIGH AMATEUR AVERAGE—a percentage never equalled by an amateur and exceeding by exactly 1% the figures of the 1911 winner, who, moreover, shot at only 2100 targets.

Mr. Day's Wonderful Shooting was done with

Peters

FACTORY LOADED SHELLS

The Lion's Share of the 1911 Amateur Honors was also won with PETERS Shells, for they were used either exclusively or for the most of their shooting by 5 out of the 10 High Amateurs. This is not all. The 1911 Grand American Handicap, the greatest event in the Trap-Shooting world, was won by Mr. Harvey Dixon, who scored 99 out of 100 from the 20-yard mark. This score has never been equalled and is a World's Record.

Mr. Dixon used PETERS SHELLS the kind with "STEEL WHERE STEEL BELONGS."

Particular attention is directed to the fact that all of the shooting of Messrs. Day and Dixon was done with Peters Regular Factory Loads. And remember this—you can use PETERS Shells in any good gun. They require no special make of gun to give best results.

Spring Valley Shooting Association.

READING, Pa., Jan. 27.—The Spring Valley Shooting Association held a live-bird shoot on their grounds to-day with a fair attendance, fourteen shooters shooting through the first event and thirteen through the second, while eight entered in the miss-and-out. The day was fair, but the ground was covered with snow, which made the birds very hard hitting. They were early risers and strong flyers, thus the boys all did enormously well. James Wertz was selected as referee during the preliminary and Valley handicap. A. K. Ludwig had charge of the scores and kept the hall rolling. Stice, Adams and Frank Wertz constituted the handicap committee. Pony Smoyer was again in charge of the traps, which worked to perfection. He raced all afternoon without either hat or coat. Lots of credit is due to him for the success of the shoot.

Prutzman, the first man up, lost his 5th and 9th dead out of bounds, scoring 8 kills in the preliminary, and dropped 3 in the second event. Prutzzy has shot very little this season, which thus accounts for his low score. Adams dropped his first bird dead out of bounds in each event. Too bad. "It's like taking home your best girl when she drops you at the gate." He landed in the second money class in the first event, and third money in the second event. Adams is secretary of the Association.

Fred Wertz visited us to-day, lost his second in the preliminary and first and second out of bounds in the second event, scoring 8 and 6 kills respectively.

Coldren, who was not able to participate two weeks ago, got the lion's share of the game to-day. He lost his third bird out of bounds in the preliminary and killed straight in the handicap. He drew \$15.50 as first money in the second event. This shows that "the first boy" adds to a shooter's luck. Harry, it's all to the glory of the boys. Arthur shouldn't have told us so.

Stice showed exceptional skill to-day; he scored straight in the preliminary, of which 5 were killed with one barrel. He shot from 26yds., but used an L. C. Smith 16-gauge with an exceptionally small load. Mr. Stice has a keen eye and caught his birds as soon as they had risen. You will also note that he killed 5 with one barrel in the second event; but his third and fourth got away untouched, thus scoring totals of 8. In the miss-and-out, he missed his first bird.

Frank Wertz, another guy who is fast leading up the line, killed straight in the preliminary and 9 in the handicap, lost but one bird out of his 20. He shot from 28yds. to-day, but will very likely step back at the next challenge. Frank is one of the wideawake boys of the club, and takes great pride in the game.

Lee Wertz, who held the State challenge trophy during the year 1910, which he won at Harrisburg, Feb. 22, 1910, lost one bird in each event, but shot the limit in the miss-and-out. Mr. Wertz is the senior of the four Wertz brothers, and his eyesight is not so good as it was in former years. He has done well under these circumstances. Remember, he is always in the race, yet hard to beat.

Moyer, the oldest shooter on the grounds, to-day, showed exceptional skill with 8 and 9 kills. Equal to some of the very best prime-of-life boys.

Shupp is always in the game, but cannot reach the

top-notchers. Try, try again, George; you will succeed at last.

Kotzenmoyer made his first appearance on our grounds to-day, scoring 8 kills. He was very enthusiastic, killing 3 birds with one barrel.

Eisenhauer ranged in the third money class in each event, with 8 kills.

Eck entered in both events; killed 7 in the first and 9 in the second event. You will note that he is a hard hitter, as he killed 7 birds with one barrel out of his 20 tries.

Kern, the youngest shooter in the bunch, probably in his teens, killed 7 in the preliminary, and 7 in the handicap, but shot the limit in the miss-and-out, as well as Lee Wertz and Ambrose Moyer.

Trivits shot four of the strongest birds in the bunch in the first event, which sailed away like a flash. He scored 5 in the first and 9 in the second event.

There were 288 birds shot at during the contest, but Pony released two from the traps while dashing for a wounded bird. His toe caught the wire leading to the traps.

Secretary Ludwig, of the Hercules Gun Club, Temple, Pa., announced that he had an application for a registered shoot pending with Secretary-Treasurer Elmer E. Shaner, Interstate Association, Pittsburgh, Pa., for May 4, 1912.

LUDDY.

Marine and Field Club.

GRAVESEND BAY, N. Y., Jan. 27.—Inclosed find scores made to-day:

January cup, 300 targets, possible 100:

Dr S P Hopkins	82	84	89	255
C M Camp	81	84	78	243
E H Lott	82	78	80	240
P R Towne	73	88	77	238
J M Knox	74	79	69	222
C D Sayre	66	63	83	212
C B Ludwig	69	74	69	212
J H Emanuel, Jr.	67	63	64	194

The winner, Dr. S. P. Hopkins, has only been shooting at these traps this month, but he managed to outshoot the old veterans who have been shooting here the past three years.

Trophy shoot, 25 targets, handicap:

Dr S P Hopkins	... 2 25	J H Emanuel, Jr.	... 1 18
E H Lott	... 0 21	C D Sayre	... 4 18
P R Towne	... 0 20	C B Ludwig	... 1 16
J M Knox	... 4 19	H B Smith	... 5 15

Dr. Hopkins also won this event with very consistent shooting.

Take-home trophy, 25 targets, handicap:

C D Sayre	... 4 23	J H Emanuel, Jr.	... 1 14
P R Towne	... 0 20	J M Knox	... 4 18
E H Lott	... 0 20	H B Smith	... 5 17
C B Ludwig	... 1 20		

Mr. Sayre, who has been trying every Saturday to win a prize, finally captured the take-home trophy.

Club sweepstakes, 25 targets, handicap:

C D Sayre	... 4 22	J M Knox	... 4 17
P R Towne	... 0 18	J H Emanuel	... 1 17

Novelty shoot, single-barrel guns against double-barrel, 25 targets, handicap:

Single Barrels.		Double Barrels.	
J H Emanuel	... 1 22	S P Hopkins	... 2 19
P R Towne	... 0 17	C B Ludwig	... 1 17
C D Sayre	... 4 22-61	E H Lott	... 0 19-55

Won by the single-barrel guns by 6 targets. It was the coldest day we have had out on the traps this year. We are 700 feet from the shore at the end of our new pier, which was erected this spring.

Pillow Gun Club.

PILLOW, Pa., Jan. 24.—Owing to the extremely cold weather, the Pillow Gun Club held its first shoot of the season on Jan. 20, with the following scores, shooting at 25 targets each:

D M Bohner 21	H Deibler 22
J A Shaffer 20	D W Williard 13
J N Buffington 19	Geo Wertz Sr. 16
J A Bingham 17	J E Bingham 9
D W Reitz 20	A Daniels 19
J Bingham 13	C E Bowyer 11
T L Snyder 12	H V Runk 14
C M Schmeltz 11	C Messner 11
		J. A. BINGAMAN, Sec'y.	

Highland Gun Club.

PHILADELPHIA, Pa., Jan. 27.—There were seven events on the program here to-day—six at 15 targets each, and one, a miss-and-out. Few of those taking part failed to land some trophy to show for the day's powder burning.

To stand in front of the traps with a swirling snow driven by a keen northeast wind directly into the faces of the shooters, with fingers numb with the biting cold so that there was little feeling in the trigger finger, took real sporting blood, and yet a big squad shot through the program, shooting until it was too dark to follow the targets.

Jesse Griffith was high gun with 90. E. Fred Slear made the only straight; he broke his second string of 15 without a miss. Griffith was the high man in Class A; Slear led the Class B shooters; Davis and Perry shared the Class C honors, and Harkins won in Class D.

Winding up the afternoon's sport, and as the last event was a protection race, the shooters being paired from their previous scores. This developed into a hard race, ending in a tie between Tansey and Perry and Fleming and J. F. Meehan, Sr., the latter took the place of Lindley, who found it too cold to continue. These teams tied at 27, and in the shoot-off Fleming and Meehan won. Griffith and Davis finished with 26, as did Davis and T. Meehan. Scores:

Class A:									
Events:	1	2	3	4	5	6	7	Total.	
Crothers	12	12	13	12	0	12	13	74

Meehan, Jr.	12-24								

**Can You Ask for Better Reasons for Using
US CARTRIDGES**

In U. S. Army tests, they have taken first place more often than any other brand. Our *Non-Mercuric Primer* has several vitally important points of superiority: It contains no powdered glass to be ground into and rip away the lands, thus spoiling the rifling. It is vastly cleaner and has much less tendency to foul the barrel than any other primer. It is wholly without the inevitable tendency of mercury fulminate to make brass brittle. After the superiority of U.S. Ammunition was demonstrated by the severe tests of the U.S. Ordnance Officers, the Government abandoned, several years ago, the use of the old-fashioned ground glass and mercury primers in its service ammunition. The list of matches in which U.S. Cartridges have won the highest honors would be monotonously long. If you want to learn the character and standing of U.S. Cartridges, ask any expert.

“The Gun that Blocks the Sear”

See how the Safety-bar (No. 4) when pushed back over the L-shaped ends of the Sear (No. 5) completely blocks them, making accidental discharge absolutely impossible. Every Davis Hammerless Gun has the Safety that “Blocks the Sear”. It is a *Safe* “Safety”.

N. R. DAVIS & SONS, Lock Box 707, ASSONET, MASS., U. S. A.
Established 1863

Essex County Country Club.

WEST ORANGE, N. J., Jan. 27.—The attendance here to-day was excellent, considering weather conditions. In the January cup contest at 25 targets, B. M. Shanley, Jr., J. A. Hart and C. H. Daly shot from scratch. Shanley made the best showing, breaking 23 targets, but with the handicap of 5, W. Rollinson won with a total of 25. In the event for the Saturday cup Hart and Hauck totaled 24 each, the latter being in receipt of 5 handicap, conceded by Hart, who failed to smash the 23rd bird thrown. In the shoot-off of the tie Hauck won. A triple tie resulted in the Shanley cup contest at 10 doubles, in which Hart, the Rollinsons and Shanley each tallied 12. Hart won the shoot-off at 5 doubles with 7. The Heller cup was won by S. Rollinson with a total of 25. The summary:

January cup, 25 targets, handicap:

W Rollinson	5	25	B M Shanley, Jr.	0	23
S Rollinson	4	24	J A Hart	0	20
P Ross	5	19	C H Daly	0	21
J Metcalf	4	23	P Hauck	5	20

Tie between Shanley and Hauck won by Hauck on shoot-off.

Saturday cup, 25 targets, handicap:

B M Shanley, Jr.	0	23	P Ross	5	13
J A Hart	0	24	J Metcalf	2	13
C H Daly	0	20	P Hauck, Jr.	5	24

Tie shot off and won by Hauck.

Shanley cup, 10 doubles, scratch:

W Rollinson	12	B M Shanley, Jr.	12
S Rollinson	12	J A Hart	11
P Ross, Jr.	5	C H Daly	11
J Metcalf	7	P Hauck	11

Tie shot off at 5 pair and won by Hart with 7.

Heller cup, 25 targets, handicap:

W Rollinson	5	22	B M Shanley, Jr.	0	22
S Rollinson	4	25	J A Hart	0	21
P Ross, Jr.	5	24	C H Daly	0	20
J Metcalf	4	17	P Hauck	5	25

Nassau Country Club.

GLEN COVE, L. I., Jan. 27.—A team from Rumson Country Club, of New Jersey, blew in here to-day and took a fall out of Nassau C. C. It was a hard day, and many of each man's allotted 75 birds got away. The visitors won by 14 targets. Kellogg, of Rumson, was top gun with 49. Maxwell, of the home club, had 48. The scores:

Rumson C. C.		Nassau C. C.	
Kellogg	49	Whitney	46
Jones	38	Maxwell	48
McGraw	41	Loring	21
Stout	44	Rossiter	32
Denning	35	Bruch	45
McCloud	45	Chubb	37
Potts	35	Brokaw	42
Moore	34-32a	Geddes	46-307

New Rochelle Y. C.

NEW ROCHELLE, N. Y., Jan. 28.—It took a shoot-off to win the leg on Donovan cup, and another shoot-off to finally win the cup itself, as conditions called for 100 targets during the month. Granbery, with 5 free ones, beat Stoddard, with 6 on the leg, thus leaving Granbery and Currier tied at 88. In the shoot-off Currier had 7 handicap or two more than Granbery, and it was these two that lost the cup for said Granbery. Kraust was predominant in score alley. He won the Du Pont trophy with 92, the M. W. Houck cup with 15 straight, and a special 10-target scratch event with 9. Stoddard took 25-target scratch sweepstake with 22, and event at doubles. Scores:

Table with 2 columns of names and scores for J. P. Donovan cup, 25 targets, handicap.

Shoot-off: Currier 7 25 Granbery 5 23

Du Pont trophy, 100 targets, 25 each Sunday in January, handicap:

Hudson Gun Club.

JERSEY CITY, N. J., Jan. 28.—The appended scores were made this morning at the regular bi-monthly shoot of the Hudson Gun Club. The morning was very cold and windy, which made the boys seek the warm club house when not on the firing line, to swap stories and tell some lies about their shooting trips—several of our members are past masters at shooting game in the club house.

Sim Glover paid us a visit to-day, and as it has been several years since his face was seen on the Hudson's grounds, there was a number of the boys that did not know him until after his first try at the trap, and when he returned a score of 24, and a total of 90 out of 100 shot at, we all had to hand it to Sim as the best shot on the grounds this morning. Dave Engle was high amateur with 76 per cent., and this was considered good shooting under conditions at our ground.

Our next shoot will be held on Feb. 11, and all shooters are invited to give us a call and spend the day with us. We start shooting in the morning and stay as long as there are shells and birds, and our grounds can be reached, viz., the Turnpike car from the P. R. R. ferry at Jersey City, or any transfer point in Newark; ride to the west side of the Hackensack River bridge and walk north along the river dyke to the club house, where you will always find some one to welcome you.

Table with 6 columns of names and scores for Hudson Gun Club events.

Team match, 25 birds per man, ten men on a team: Married men, D. D. Engle, Captain, 188 out of 250; single men, R. G. Young, Captain, 136 out of 250.

Team match, 25 birds per man, 11-man team: Team No. 1, D. D. Engle, Captain, 141 out of 275; team No. 2, R. G. Young, Captain, 131 out of 275.

T. H. K., Sec'y.

Reload Your Shells. 140 Pages FREE. Includes image of a hand holding a shell and a book titled 'THE IDEAL HAND BOOK FOR RELOADING GUNS'.

The .32-40 High Power factory cartridges sell for \$34.20 net per thousand. By reloading the same shells with factory primers, factory bullets and the same powder charge, your expense is \$13.46;

You save \$20.74 on 1000 cartridges.

The .32-40 low power smokeless factory cartridges cost \$28.80 per thousand; when you reload, your expense is only \$11.31, making a saving of \$17.49. Factory .32-40 smokeless short range cartridges cost \$25.20 per thousand; by reloading your shells, they cost you only \$7.65 per thousand. Make your own bullets and you have 1000 short range cartridges for \$3.80.

You wouldn't throw away your pipe after smoking it once; you waste money if you throw away your expensive high-grade shells without reloading.

FREE—The Ideal Hand Book tells all about the tools and methods for reloading all standard rifle, pistol and shotgun ammunition; 140 pages of practical information for shooters. Mailed free to any shooter interested enough to send three stamps postage to

The Marlin Firearms Co. 27 Willow Street New Haven, Conn.

Patterns made with Dead Shot are always the best from any gun

The choke of the barrel may be bored true to gauge, but if you load of powder fouls and bakes a coating of lead on the choke neither the most expensive nor the most inexpensive gun will make good patterns.

The required standard of velocity and pressure from all powders being alike, the winning feature of one load over another is determined by the regularity of patterns.

How evenly does your 12-gauge gun distribute the pellets in 1/4 oz. No. 7 1/2 shot in a 30-inch circle at 40 yards?

To realize how the good patterns made with Dead Shot helped in establishing the world record of 565 straight, make a few patterns with Dead Shot in your own gun—compare them with equal loads of others.

All dealers carry Dead Shot loads in stock. We guarantee the stability of Dead Shot.

Smith Gun Club.

NEWARK, N. J., Jan. 27.—At the weekly practice shoot of the Smith Gun Club to-day, held under adverse conditions, some excellent scores were made. The shooting of L. Colquitt and J. Geiger was exceptionally good. We were mighty pleased to see Wm. Hassinger back again on the firing line after an absence of a couple of weeks, caused by a very bad fall that he received. Billy, here's hoping that you don't have any more accidents, for we certainly miss a member of the old guard. Capt. Bercaugh was trying out a new pair of 32-inch barrels, which seem to affect the balance of his gun, also his score. It looks as though we would have to offer a reward for information leading to the whereabouts of several of the good old stand-bys. Come, boys, place the Smith Gun Club on the map.

Table with 8 columns of names and scores for Smith Gun Club events.

Jersey City Gun Club.

JERSEY CITY, N. J., Jan. 27.—Twelve shooters were out to-day at the Jersey City Gun Club, and the scores were very mediocre, as the shooters had a strong wind to shoot against. Hallinger was high for the day with 77 per cent., and Shannon took second honors with 68 per cent.—pretty poor shooting for that pair of stars who are most always found up in the 90 per cent. class or lower. Shannon, however, had his nerve with him in the monthly prize shoot, as in that event he shot from scratch and broke all of his twenty-five birds, scoring nothing but dust of every one, thereby winning the leg and also the prize. Dr. Bogart won the only weekly prize contested for.

On Washington's Birthday, Feb. 22, we are planning to have an all-day shoot, programs of which will be out in a few days.

The scores follow:

Table with 2 columns of names and scores for Jersey City Gun Club event.

SECRETARY.

The Du Pont Gun Club.

WILMINGTON, Jan. 27.—A good many of the good shooters were in Pinehurst to-day, which fact, with a few inches of snow on the ground and an incalculable amount in the air, kept the entry list down. There was plenty of enthusiasm "among those present," and this, with the aid of a big log fire in the club house, made the afternoon merry and interesting.

W. S. Colfax, Jr., and W. M. Hammond put a little sporting proposition up to W. A. Joslyn and N. K. Smith, and he it said they almost knew not whereof they shot, for they got away with the match by only one target—44 out of 50 being score for high team.

L. C. Lyon was high individual gun with 24 out of 25, which took the Class C silver eating implement.

In Class A event, A. H. Lobb got the Coleman du Pont merchandise, with 22 out of 25. Class B, with same score came across to Nelson K. Smith, with H. L. Morgan atop in Class D with 5 misses out of 25 shots. The scores in detail, at 25 targets were: C. Leedom 19, N. K. Smith 22, J. H. Minnick 20, J. W. Mathews 16, W. A. Joslyn 21, J. B. Brier 13, G. H. Mitchell 16, W. Edmanson 16, H. L. Morgan 20, Dr. H. Betts 15, T. W. Mathewson 18, A. H. Lobb 22, L. C. Lyon 24, W. S. Colfax, Jr., 23, W. M. Francis 16, L. L. Jarrell 19, G. G. Stiegler 7, J. W. Anderson, Jr., 16, S. Tuchten 16, W. G. Wood 18, R. P. Choate 14, J. J. Magahern 19, J. L. Roberson 19, Z. H. Loffand 17.

Meadow Springs Gun Club.

PHILADELPHIA, Pa., Jan. 27.—This was Severn day at the Meadow Springs traps. He broke 87 out of 100, which won the spoon for most breaks, and was high gun for the day as well. Sloan was a good second with St. Thompson was high Class B man with 17 breaks, and one thrown in for good measure, the latter being just enough to win. Scores:

Class A:					
Sloan	9	11	7	12	21 21 21 81
Soley	5	10	8	10	15 17 .. 50
Hogan	7	11	7	7	14 14 .. 46

George	2	10	7	5	w
L. Pierce	2	8	w 10

Paleface Gun Club.

WELLINGTON, Mass., Jan. 24.—In a strong wind and bad light, the scores made here to-day were not bad at all. Snow made 69 out of 80, Burns and Frank tied with 66 and Marden and Edwards tied at 65.

Shot at. Broke		Shot at. Broke	
Snow	80 69	Richardson	80 54
Burns	80 66	Sweet	80 54
Frank	80 66	Jones	80 53
Marden	80 65	Dimick	80 50
Edwards	80 65	Bird	45 31
Williams	80 63	Proctor	50 24
Barnard	80 58		

Eagle Gun Club.

MANOA, Pa., Jan. 27.—Ike Knowles won the weekly shoot of the Eagle Gun Club to-day. He killed every bird he fired at, beating out Gideon and Hawk by one bird each. Gideon missed his first bird, as did Hawk. Scores: Knowles (28yds.) 10, Gideon (30) 9, Hawk (30) 9, Boyd (28) 8, Scheerer (28) 7, Blessing (29) 7, Swartz (29) 6, Schofield (29) 6.

Rifle and Revolver

Zettler Rifle Club.

Scores of the Zettler Rifle Club were made as follows at the regular weekly practice shoot on Jan 23:

A Begerow	240	232	239	235	235—1181
F M Bund	237	242	242	242	239—1202

Eastern Intercollegiate Rifle Shooting League.

WASHINGTON, D. C., Jan. 27.—At the end of the fourth week's matches of the Eastern Intercollegiate Rifle Shooting League, the Massachusetts Agricultural College kept its lead by defeating Harvard University, 945 to 933. Other results were: Princeton defeated Louisiana State, 901 to 886; Pennsylvania defeated Norwich, 901 to 887; West Virginia defeated Maryland Agricultural, 896 to 807; Delaware defeated New Hampshire, 835 to 826; North Georgia Agricultural won by default from United States College of Veterinary Surgeons, 885 to 0.

Some Good Reasons Why You Should Shoot

THE PARKER GUN

Be high man at the traps. Shoot the finest brush gun made. Mechanical construction perfect.

Game Laws in Brief

A new and revised edition for 1912.

It gives all the fish and game laws of the United States and Canada. It is complete and so accurate that the editor can afford to pay a reward for an error found in it. "If the Brief says so, you may depend upon it."

Sold by all dealers, or by mail by us. Price, twenty-five cents.

Forest and Stream Publishing Co., 127 Franklin St., New York

OUTDOOR PHOTOGRAPHS

Forest and Stream wants good photographs of shooting, fishing, yachting, canoeing, camping, natural history and kindred subjects. Pictures that tell a story preferred to those depicting still life. Carbon prints, and those made on printing-out papers, will be given preference. Pictures that have not been used in other publications will, if available, be paid for.

At Shell Mound Park.

EMERYVILLE, Cal., Jan. 21.—The "Nationals" held their regular monthly medal shoot on the Shell Mound Range to-day. With forty-five members in attendance they took aim with the old .45 Springfield at the Blunt target at 200yds. range. Weather conditions were perfect for good scores and as early as 9 A. M. the first shots were fired, and a constant banging away at the targets was kept up all day until 5 P. M., not even taking time for dinner at noon.

Sergeant A. R. Coons had the high score until late in the afternoon, then Sergeant F. J. Povey beat him one point, making a 47 out of a possible 50. Povey was high man for the day. Coons, with 46, was second, and Corporal Orth was third with 46, being beaten by Creed-moor rules. Lieut. H. W. Mitchell was fourth with 45. Jan. 18.—The regular monthly shoot of the Possible

Pistol Club was held here to-day and with rain enough to soak all the targets, so that they looked like a wet rag. We shot a 50-shot match for a silver spoon on U. S. R. A. targets.

W. A. Shiebe won, having a handicap of ten points over H. A. Harris. He only won by three points, his score being 451. With the handicap of ten points his total was 461, while Harris made a dandy score, his total being 458.

We then shot a 30-shot match for another spoon, and H. A. Harris won it easily with 98, 95, 87; total, 280.

The scores were as follows:

Match	Player	Score	Score	Score	Score	Score	Hdcp.	T'tl
Match No. 1:	W. A. Siebe	91	88	91	91	90	451	10
	H. A. Harris	93	85	91	96	91	458	Scratch
	Geo. Larson	83	91	79	87	87	427	25
	A. Poulson	79	77	87	81	97	415	12

Du Pont Gun Club, Rifle Dept.

WILMINGTON, Del., Jan. 27.—The pistol scores of the Du Pont Gun Club were:

D. Appleby, captain, 40, 47, 45, 41, 45-218; H. G. McCullom, 44, 41, 44, 41, 45-215; J. G. Miller, 28, 20, 37, 32, 21-138; I. u. Pont, 41, 46, 41, 32, 44-205; total, 776.

K. K. V. Casey, captain, 41, 45, 38, 39, 39-202; F. J. Harkins, 37, 47, 30, 44, 41-208; E. J. Ackart, 39, 38, 43, 39, 40-199; F. J. Robelen, 41, 27, 28, 39, 17-152; total, 761.

The ties in the Eugene E. du Pont trophy contest, which started Feb. 2, and ended Dec. 10, are: Henry Winchester, 2; J. B. McHugh, 0; Stanley Touchton, 3½; Walker Mathewson, 5½; Victor du Pont, 3½; H. P. Carlon, 2½; S. G. David, 7; J. W. Anderson, Jr., 4; J. J. Magahern, 3½; Dr. Horace Betts, 6; Z. H. Lofland, 5; L. C. Lyon, 4½; D. J. Dougherty, 1½; W. M. Hammond, 3; William G. Wood, 2.

INDIAN ANGLERS.

(Continued from page 147.)

go fishing in the Oconalufy River, which all the Indians shorten and call the 'Lufty. He stepped to the porch of one of the neatly kept log houses in which all these Indians live and took one of a number of admirably made baskets of cane, large at the bottom and small at the top, and hung this around his neck, then took his long reed pole. By his side hung a gray mass, which upon examination was found to be four wasps' nests with cells quite well filled with young grubs, the openings being closed, while two or three full grown wasps very sullenly moved about over the surface of the nests, as if they were dazed.

David said the Cherokees are very partial to wasp grubs as fish bait, and that Jim Tail was "mighty well fixed," and added that the Indians made a little torch out of dried leaves or a bit

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He knows it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring.**

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$23 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. Lefever Arms Co., 23 Maltbie St., Syracuse, N. Y.

of paper, held this under a wasp's nest and smoked the grown wasps out. Then he told Jim Tail what he had said, whereat the latter smiled and said it was a mistake; that he hadn't used any fire at all, but had taken the nests from the wasps with only his hands and his hat, and he was going to use the baby wasps as bait. These Indians always use this sort of bait, and find it very effective.

The fish baskets as well as other basketry made by these Indians are beautiful, not only in design, but in richness of color. They are very fond of bright colors, wear feathers in their hats and in various other ways make themselves picturesque. FRED A. OLDS.

EXCITING FOX HUNT ON CAPE COD.

O'er bogs and rocks we chased the fox
From Pleasant Lake to Brewster,
Where Cap'n Thad 'most got the lad
That loves to dine on rooster!

REYNARD is very much in evidence around here this season, and the sports are having a great time, says Michael Fitzgerald, of East Brewster, in the Yarmouth (Mass.) Register. One day recently, James Cahoon started a big fellow at Pleasant Lake and headed him for Brewster. Right through South Brewster and Brewster Center, reynard set a great pace. The dogs kept the scent in fine style and there was much excitement when the hunting party

reached the thickly settled part of the town. The cry of "A fox! a fox!" resounded through the echoing woods, and even the most peaceable citizen felt the ardor of the chase. Every tree sustained its man, and the display of gleaming rifles boded ill for the arch enemy of the poultry yard. The rapid mobilization of such a large body of armed men shows what the invader may expect should he ever attempt to effect a landing on the inviolate shores of our historic town. There were no laggards. In fact, as in the case of John Gilpin's famous ride:

"All and each that passed that way
Did join in the pursuit!"

But the pampered rogue outwitted his foes. Once he had an extremely narrow escape, and that was when he incautiously exposed himself to Capt. Thaddeus Bassett's vigilant eye. Captain Bassett threw it right into reynard who, considerably the worse for the encounter, made tracks for the shore. He was next seen on the ice off Nickerson's boathouse. Boldly facing the bay, he jumped from floe to floe until he had distanced his pursuers and he finally disappeared in the direction of Wellfleet.

SHOOTINGS AND THEIR VALUE.

As the years go on shooting becomes an increasingly expensive sport, and he is a wealthy man who can afford to rent a well-stocked Scottish grouse moor. Before the middle of last century the number of grouse shootings let in Scotland was almost negligible and rents were small, but as the sport advanced in popularity the demand for them grew, until now it has been computed that grouse and general shootings in the northern half of the kingdom amount to over three thousand, bringing in not very far short of one million sterling in rent.

Shootings that our fathers could have leased for very moderate sums have risen in many cases tenfold in rentals, and so great is the demand for them that tenants are found without the least difficulty. There is a limit to the supply of grouse shootings, but there seems to be hardly any limit to the demand, so great is the growth in popularity of autumn shooting and in the number of men of means able to enjoy it. That demand, of course, is to some extent based upon at least a moderately good supply of birds upon each shooting. But, granting that condition, it is difficult to estimate the dimensions the demand may yet reach. Grouse-shooting is a sport in which the whole world of sportsmen can participate in turn, so long as the price for it is paid. British sportsmen are not alone in the enjoyment of it even now, and all the indications point to the fact that it appeals with greater force every year to foreign gunners. Report has it that more American sportsmen than ever are shooting grouse this year, and the fashion is undoubtedly growing, especially with those wealthy visitors from across the Atlantic who are beginning to regard a stay in Britain during the summer and autumn months as indispensable. The heather-bearing stretches of ground on which our grouse can be shot cannot be increased in any way, though they may be greatly improved as sport-producing factors. And if the applicants for them multiply by the addition to British sportsmen of a number of gunners of other nationalities, it would seem that the values of grouse moors are likely to mount up still more largely in the near future.

The value of deer forests has grown at an even greater rate, and only the very wealthy can afford to rent a tip-top one. Some consider that high rents do not make for the improvement of a forest, especially if it is taken by a different tenant every year. It is only natural that a stalking tenant renting a forest only for a six weeks' season should desire to secure as many trophies as is possible by the terms of his agreement. In the desire to represent the sport to be obtained in the best light the "limit" is apt to be placed high—not higher, perhaps, than the forest can yield, but higher than it can well stand year after year. Stalking lessees for a season are not to be blamed

The Result of Over a Century's Experience

Perfection in powder-making is only achieved by exercising the most scrupulous care in the selection and preparation of raw materials, employing skilled workmen exclusively, and using only the most improved modern mechanical equipment.

This is the Du Pont method and accounts for the unequalled reputation among sportsmen enjoyed by the Du Pont brands of Smokeless Shotgun Powders. One of these brands that retains its popularity year after year is "The Old Reliable"

Bulk

High Velocity without sacrifice of regularity of pattern and pressure, and without increase of residue. Burns clean—no "blow back". DU PONT SMOKELESS SHOTGUN POWDER positively will not pit the gun barrels.

for desiring to get full value for their considerable rentals, nor are they compelled by agreement to spare any of the best stags. At the same time, the system is certainly to some extent answerable for the deterioration of anglers, of which we annually hear so much.

The improvement in the values of shootings seems likely to continue, as the sport increases in popularity with all classes, which it has undoubtedly done during the past quarter of a century. In England as well as in Scotland rentals have been rising, although more gradually and steadily than across the Border. As the number of wealthy men of leisure demanding sport with the gun swells, and as the necessity of a healthy holiday in the open becomes more and more recognized, there is every prospect of a further rise in rentals. With care and proper preservation, shootings in England and

Scotland, and especially in Ireland, should show an even greater yield of game than they do at present, thus enhancing their value to their owners and the world of sport to a very appreciable degree.—County Gentleman.

ENGLISH SPARROWS.

OWING to damage done to the crops by sparrows in Mid-Dorset, the Milborne farmers some time ago organized a sparrow club, which offered 4d. a dozen for old birds, 2d. a dozen for young birds, and 1½d. a dozen for eggs. At a meeting of the Milborne Farmers' Club this week it was reported that during the season 2,724 birds had been killed and 4,844 eggs taken. The damage to the crops this summer has consequently been much less.—Shooting Times.

Cases of Suspected Hydrophobia.

WHEN hydrophobia is suspected the case must always be treated from observation both of the person bitten and the animal supposed to be affected by rabies. These observations are very clearly dealt with by Dr. Grysez in a well informed memoir recently published by the Echo Medical du Nord.

The method to be followed in cases of bites by an animal suffering from or suspected to be affected by rabies is the practice adopted by the Pasteur Institute of Lille. If the animal is manifestly rabid there can be no doubt about the matter, and the subject bitten should immediately be sent for treatment to the Pasteur Institute.

But if the symptoms presented by the animal are not definite it is advisable to defer treatment for a period of ten days. During this time the animal should be examined by a veterinary surgeon. When the animal is really affected by rabies definite symptoms will appear and the death of the animal will soon supervene, for rabies develops in dogs in from four to six days at the most.

In any event, an animal which has bitten some one ought never to be killed before having undergone this period of observation. It is impossible, in fact, after death to affirm the existence of rabies simply by the evidence of an autopsy. Only the inoculation in a rabbit of a part of the brain of the animal suspected can furnish a definite diagnosis, but this is unfortunately too late, as it requires two or three weeks.

It is therefore prudent to recommend treatment for hydrophobia every time that an animal which has bitten any one has been killed. The same course should evidently be followed in cases of bites by an unknown dog.

Dr. Grysez resumes and completes these principles as follows:

Cases where the treatment must be recommended:

Person Bitten.—When the skin has been more or less cut by the teeth of the animal. When a wound or scratch has been licked by a rabid animal.

Animal Which Has Bitten.—When it has been killed less than ten days after the bite. When it has died, disappeared or is unknown. When it presents symptoms of rabies. When it dies from rabies while under observation.

Cases where treatment is needless:

Person Bitten.—When the individual has been bitten through his clothes and these have not been pierced by the teeth of the animal.

Animal Which Has Bitten.—When it is alive and in good health ten days after the bite. When the integuments present no fraying.

In general, whenever there is any doubt it is necessary to institute treatment. By so doing it is true there is a risk of needless treatment, but there is no inconvenience in this respect, since the preventive injections are absolutely harmless.

No ill results have ever been observed in the case of the numerous doctors or their assistants who in the laboratories where the anti-hydrophobic inoculation is prepared have voluntarily submitted to preventive treatment by means of these inoculations without having really been bitten themselves.

In any case prevention is better than cure, and when it is a question of hydrophobia nothing is easier than prevention, for hydrophobia is propagated and perpetuated solely by stray dogs. It is extremely simple to get rid of stray

dogs by enforcing the laws and regulations which exist in connection with this subject, particularly in France. The law, in fact, prescribes the immediate slaughter of any dog bitten or infected by a rabid dog.

If these regulations were strictly applied they would suffice to stamp out hydrophobia. But it is impossible to know exactly what dogs have been bitten, and it is especially difficult to distinguish stray dogs or those having neither owner nor domicile.

French law rightly stipulates that every dog on the public roads should be provided with a collar bearing the name and address of the owner, but in practice it is impossible to insure that this regulation is strictly observed.

Another and more practical solution is to insist upon the rigorous collection of the dog tax by the "medal system." For this purpose every dog should be declared at the mairie by its owner, who receives a medal which is to be attached to the dog's collar. The medal bears a number which is recorded in a register. Opposite each number in the register is written the name of the owner. Every dog not bearing this medal would ipso facto be considered as straying and would be consigned.—Herald, Paris.

Southern Ohio Field Trials.

THE Southern Ohio Field Trial Association, with headquarters in Cincinnati, proposes to make a bid for the presence at its trials next fall of the best pointer and setter dogs in the country. The purse in the open stakes will be not less than \$600, guaranteed, and the association hopes to increase this amount materially before the closing of entries. We want the handlers of the crackerjacks to be with us, that the members may witness a practical demonstration of what constitutes high class in field trial competition. Stakes will be run for the amateurs, in which the prizes will be cups for first and second, and silver medals for third. The amateur class, as recognized by the association, will consist of dogs belonging to members of the club, or to handlers of dogs which have never been entered in competition for money prizes. At the February meeting of the association, dates for the second annual trials will be selected, various committees appointed, and the work started to ensure the success of the trials.

Buying a Yacht

Have you a yacht or small boat for sale? Do you want to buy one? In either case we can help you. Our just-organized Yacht Clearance Department is at your disposal.

The object of this innovation is to put the man who has and the man who wants in communication.

If you have a boat to sell, send this department full information and price, with photo, if you have one.

If you want to buy a yacht, motor boat or dinghy, file with us a general idea of what you want, and if we have nothing on record corresponding with your specifications, we will, through our many channels of information, find what you want.

If you think of having a boat built, perhaps we can help you select an architect or builder. We willingly will get estimates on plans and specifications for you.

If you contemplate chartering for the summer, suggest the class and style of boat you think you want, and we will submit a number of bargains worth taking under consideration.

Address: Yacht Clearance Division,

**INFORMATION DEPARTMENT
FOREST AND STREAM**

127 Franklin Street New York

Forest and Stream desires to make an appeal to its readers. It asks that when writing to advertisers for catalogs or prices, or when ordering goods that are advertised, you mention that you "saw the advertisement in Forest and Stream."

This enables advertisers to know that their announcements are being read. They are read, of course; in fact, are studied with great care, because our subscribers know that anything that is advertised in Forest and Stream has merit. But advertisers do not always appreciate the value of any paper that is not mentioned. If, therefore, you will kindly mention Forest and Stream in answering advertisements, you will confer a favor on the

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

The Greener "Unique" Ejecting mechanism is but one of the many unique points for which the Greener Gun is famous. Weight for Weight, the "Unique" Ejector is the Strongest gun that exists.

It has all the extra weight necessary to a fore-end ejector put into the barrels.

It is the simplest and most scientifically constructed, the most perfectly balanced, the easiest and most reliable gun to use.

It has a thoroughly sound hinge joint, not cut to a mere skeleton by cocking levers and ejecting connections.

There is no thrust to force the fore-end away from the joint.

The action frame, though light, has the metal so disposed as to offer the greatest resistance where the strain comes.

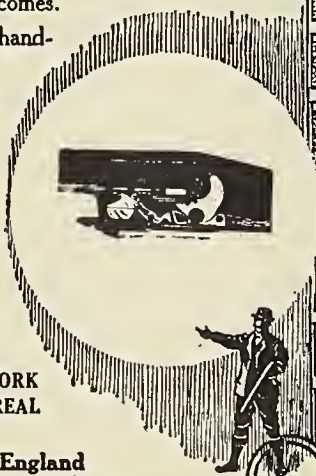

It is the most compact form and is the hand-somest of all guns.

It is made in the best quality only, and your new gun should certainly be made on this system!

Look at the drawing, its simplicity cannot fail to convince you that the "Greener" is the best.

Catalog, illustrating and describing 38 grades. :: Mailed free.

“THE MISSING LINK”

That's what Mr. W. S. Colvin, Osawatomie, Kansas, calls the Stevens 6-shot repeating shotgun. This is the way he says it:

“I am pleased to inform you that your trombone action repeating shotgun put on the market several years ago is superior to all others of its kind. * * *

“Previous to that time I had disposed of them one after another. * * * I was looking for a missing link and I finally found it in the Stevens.

“Its shooting efficiency, smoothness and rapidity of movement was all a surprise to me. I can throw this gun any old way and get results because it is a natural pointer. Also there is no kick or a recoil—nor jammed shoulders.

“My field hitting percentage jumped up by bounds, and since I purchased this gun I have shot some 2,000 shells and always found it ‘Johnny on the spot’. The model I own is No. 520, 28-inch modified choke.”

Perhaps you can find **your** Missing Link in our latest illustrated catalog of single barreled, double barreled and repeating shotguns, single shot and repeating rifles and pistols and rifle telescopes.

Send to-day for a copy of this book which is practically a standard treatise on firearms.

AMERICAN DUCK SHOOTING

By George Bird Grinnell

A most complete work, dealing with every phase of the sport of duck shooting, thus forming a complete treatise on American ducks, geese and swans. It gives details of the natural history, habitat, and characteristics of every American species.

Part I contains descriptions with plates of each species.

Part II tells of every method of swan, goose and duck shooting practiced in North America—east and west, on Atlantic and Pacific and in the interior—and gives thrilling accounts of the splendid sport.

Part III deals with the art of duck shooting, including guns and loading, the Chesapeake Bay retrieving dog, decoys, blinds and boats, and finally discusses the causes of the decrease of wildfowl and tells what may be done to increase their numbers.

It is most fully illustrated with 58 portraits of North American swans, geese and ducks, by Edwin Sheppard, with 8 full page plates, and with numerous vignettes in the text by Wilmot Townsend.

Cloth, heavy laid paper, 58 illustrations, eight full-page plates, 627 pages. Postpaid, \$3.50.

FOREST AND STREAM PUB. CO. :: 127 Franklin Street, NEW YORK

THE BEST OUT-DOOR BOOKS

THE following is a selected list of *Forest and Stream's* books which are most suited to the taste of men and women who are fond of outdoor life—Shooting, Fishing, Natural History, Camping, Canoeing, Yachting. A good book does not wear out, but continues to give pleasure.

Catalogue giving full list of books will be sent on application.

American Duck Shooting.

By George Bird Grinnell. Cloth, 630 pages. With 58 portraits of North American Swans, Geese and Ducks, Plans of Boats and Batteries. Fifty Vignettes in the text, and a Chart of the topography of a duck's plumage. Price, \$3.50.

American Game Bird Shooting.

By George Bird Grinnell. New. Just Published. This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys. The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full-page portraits of different game birds and hunting scenes, with a number of cuts in the text. Cloth. About 575 pages. Price, \$3.50 net. Postage, 25 cents.

My Sixty Years on the Plains, Trapping, Trading and Indian Fighting.

By W. T. Hamilton ("Bill" Hamilton). With 8 full-page illustrations by Chas. M. Russell. New York. Cloth. 223 pages. Price, \$1.50.

American Big Game Hunting.

The Book of the Boone and Crockett Club. Editors: Theodore Roosevelt and George Bird Grinnell. Illustrated. Cloth, 345 pages. Price, \$2.50.

Hunting in Many Lands.

The Book of the Boone and Crockett Club. Editors: Theodore Roosevelt and George Bird Grinnell. Vignette. Illustrated. Cloth, 448 pages. Price, \$2.50.

Trail and Camp-Fire.

The Book of the Boone and Crockett Club. Editors: George Bird Grinnell and Theodore Roosevelt. Illustrated. 353 pages. Price, \$2.50.

Like its predecessors, the present volume is devoted chiefly to the great game and the outdoor life of Northern America; yet it does not confine itself to any one land, though it is first of all a book about America, its game and its people.

American Big Game in Its Haunts.

The Book of the Boone and Crockett Club for 1904. George Bird Grinnell, Editor. 490 pages and 46 full-page illustrations. Price, \$2.50.

This is the fourth, and by far the largest and handsomest of the Club's books. It opens with a sketch of Theodore Roosevelt, founder of the Boone and Crockett Club, and contains an extremely interesting article from his pen, descriptive of his visit to the Yellowstone Park in 1903. Other papers are on North American Big Game; Hunting in Alaska; The Kadiac Bear; Moose, Mountain Sheep; Game Refuges, and other big game topics.

Camp Life in the Woods.

And the Tricks of Trapping and Trap Making. Containing hints on camp shelter, and all the tricks and bait receipts of the trapper, the use of the traps, with instructions for the capture of all fur-bearing animals. By W. Hamilton Gibson. Illustrated. Cloth, 360 pages. Price, \$1.00.

Uncle Lisha's Shop.

Life in a Corner of Yankeeland. By Rowland E. Robinson. Cloth, 187 pages. Price, \$1.25.

The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evenings and dull outdoor days, "to swap lies."

Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop." By Rowland E. Robinson. Cloth. Price, \$1.00.

Danvis Folks.

A continuation of "Uncle Lisha's Shop" and "Sam Lovel's Camps." By Rowland E. Robinson. 16mo. Price, \$1.25.

Uncle Lisha's Outing.

A sequel to "Danvis Folks." By Rowland E. Robinson. Cloth. Price, \$1.25.

A Hero of Ticonderoga.

By Rowland E. Robinson. Cloth, 187 pages. Portrait of author. Price, \$1.00.

A Danvis Pioneer.

A story of one of Ethan Allen's Green Mountain Boys. By Rowland E. Robinson. Cloth, 214 pages. Price, \$1.25.

In the Louisiana Lowlands.

A sketch of plantation life, fishing and camping, just after the Civil War; and other tales. By Fred Mather, author of "Men I Have Fished With," "Adirondack Fishes," and "Modern Fishculture in Salt and Fresh Water." With portrait of the author. Cloth. Price, \$1.50.

Forest Runes.

Poems by George W. Sears ("Nessmuk"). With art-type portrait and autobiographical sketch of the author. Cloth, 208 pages. Price, \$1.50.

The Angler's Workshop, Rod Making for Beginners.

By Perry D. Frazer. Cloth, 180 pages. Four full-page illustrations, sixty working drawings. Postpaid, \$1.00.

A complete, simple and thoroughly up-to-date work for the guidance of the amateur rod maker, carrying him from first principles through all phases of successful rod making. There is no theorizing or speculation. All terms are simple, and all kinds of rods and woods are treated of.

Modern Fishculture in Fresh and Salt Water.

By Fred Mather, author of "Men I Have Fished With," with a chapter of Whitefish Culture by Hon. Herschel Whitaker, and a chapter on the Pike-Perch by James Nevin. Illustrated. Price, \$2.00.

My Angling Friends.

A second series of "Men I Have Fished With." By Fred Mather. Cloth, 369 pages, with 13 illustrations. Price, \$1.50.

Rhymes of the Stream and Forest.

By Frank Merton Buckland. Cloth. Heavy laid paper. Sumptuously bound. Postpaid, \$1.25.

A charming collection of verse by an author who knows and loves nature well. A particularly pleasing gift for fishermen, closely simulating in form and ornamentation the standard fly-book.

Jack the Young Ranchman;

Or a Boy's Adventures in the Rockies. By George Bird Grinnell. Illustrated. Cloth, 304 pages. Price, \$1.25.

Jack Among the Indians;

Or a Boy's Summer on the Buffalo Plains. By George Bird Grinnell. Illustrated. Cloth, 301 pages. Price, \$1.25.

Jack in the Rockies;

Or a Boy's Adventures with a Pack Train. By George Bird Grinnell. Illustrated. Cloth, 272 pages. Price, \$1.25.

Jack the Young Canoeeman.

By George Bird Grinnell. Illustrated. 278 pages. Price, \$1.25.

Jack the Young Trapper.

By George Bird Grinnell. Illustrated. Price, \$1.25.

Jack the Young Explorer.

By George Bird Grinnell. Price, \$1.25.

Men I Have Fished With.

Sketches of character and incident with rod and gun from childhood to manhood; from the killing of little fishes and birds, to a buffalo hunt. By Fred Mather. Illustrated. Price, \$1.50.

It was a happy thought that prompted Mr. Fred Mather to write of his fishing companions. The chapters were received with a warm welcome at the beginning and have been of sustained interest. The "Men I Have Fished With" was among the most popular series of papers ever presented to FOREST AND STREAM readers.

Houseboats and Houseboating.

By Albert Bradlee Hunt. The book contains forty specially prepared articles by owners and designers of well-known houseboats, and is beautifully illustrated with nearly 200 line and half-tone reproductions of plans and exteriors and interiors. A most interesting chapter is devoted to houseboating in England. Extra heavy paper, buckram. The price is \$3.00 net. Postage, 34 cents.

The Art of Shooting.

An illustrated treatise on the art of shooting. By Charles Lancaster. Illustrated. Cloth. Price, \$1.25.

Gas Engines and Launches.

By Francis K. Grain. A few pages are devoted to launches in general, with some excellent advice to the prospective owner of a motor boat; but the author's attention is given chiefly to explaining the principles, working and practical handling of the marine motor for the amateur who does not care to trouble his head with involved technical information. Cloth. Illustrated. 123 pages. Postpaid, \$1.25.

How to Build a Launch from Plans.

By Charles G. Davis. A thoroughly practical guide for the amateur. Shorn of all blind technicalities, it considers displacement, good construction and faulty stability, setting up the keel, framing and planking, with careful explanations. Each step is followed up to the care and running of the gas engine. Cloth, 9 folding drawings, 8 full-page plates, 40 smaller diagrams, 170 pages. Postpaid, \$1.50.

Fetch and Carry.

By B. Waters. Tells minutely of the methods by which a dog, young or old, willing or unwilling, may be taught to retrieve either by force or "natural" system. Cloth. Illustrated. 124 pages. Postpaid, \$1.00.

Nursing vs. Dosing.

By S. T. Hammond. A most practical book for the dog fancier, based largely on Mr. Hammond's observation that dogs, and particularly house dogs, suffer from too much medicine. Contents—Nursing, Cleanliness, Diet, Other Foods, Kennel and Exercise, Common Ailments, Diarrhea, Convulsions, Epilepsy, Distemper, Eczema, Need of Proper Care, Stomach, Vermin, Ear, Mange, Nervous System, Colic, Worms. Cloth. Illustrated. 161 pages. Postpaid, \$1.00.

Training vs. Breaking.

Or Practical Dog Training. By S. T. Hammond. The author tells how to bring out the wonderful intelligence of the dog by kindness as opposed to force. A clear, explicit work, which will appeal to dog lovers. Contents—First Lessons, Charge, Canine Accomplishments, The Whistle, Quartering, Retrieving, In the Field, Working in Company, Raising Puppies, Training Pet Dogs, Conclusion. Cloth. Illustrated. Postpaid, \$1.00.

Training the Hunting Dog for the Field and Field Trials.

By B. Waters. Probably the most comprehensive work on the subject written, covers every phase of training and field trial preparation with reasons. Kennel Management, Breeding, Kenneling, Points of Judging. It is a work well calculated to enable the amateur to become a successful breeder and trainer. Cloth. Illustrated. Postpaid, \$1.50.

Woodcraft.

By Nessmuk. No better or more delightful book for the help and guidance of those who go into the wild for sport or recreation was ever written. No one ever knew the woods better than Nessmuk or succeeded in putting so much valuable information into the same compass. Camp equipment, camp making, the personal kit, camp fires, shelters, bedding, fishing, cooking, and a thousand and one kindred topics are considered. Beyond this, the book has a quaint charm all its own. Cloth. Illustrated, 160 pages. Postpaid, \$1.00.

Log Cabins and Cottages.

By William S. Wicks. This book covers building for the woods from the simplest shelter to the most elaborate cottage, cabin or house, and their furnishing and fitting. The details and directions are at once simple and comprehensive, and the illustrations are numerous and illuminative. Cloth. Illustrated. 44 full-page plates and numerous text illustrations. Postpaid, \$1.50.

My Friend the Partridge.

By S. T. Hammond. A delightful reminder of crisp autumnal days in the covers. It tells of sport with the noblest of game birds, the habits and habitat of the ruffed grouse, with just the right touch of reminiscence and personal experience. Cloth. Illustrated. 150 pages. Postpaid, \$1.00.

Jacking for Bunnies

By ROBERT S. LEMMON

"I TELL you, it's true!" hotly reiterated motor-man Al Williams, his big, kindly face furrowed with lines of temporary anger. "We seen eleven o' the little devils on the last run o' the Limited Tuesday night, and Bert plugged six of 'em. If you don't believe it, you don't have to, that's all."

"Aw, fergit it," advised MacLaughlin, one of the linemen, as he picked up his hooks and safety belt preparatory to going home to supper. "Ev'rybody knows you've got the reputation of bein' the biggest liar in the company without your tryin' to spring any story about shootin' rabbits at night off the front end of a car," and he passed out into the cold.

The crowd, assembled in the storeroom of the big Consolidated Building, smiled. They liked these two—Williams, with his unconquerable fondness for exaggeration and absolute dependability in time of trouble or danger on the road, and MacLaughlin, always afraid of being made the butt of some joke. This weakness of the lineman's naturally made his fellow employes all the more eager to "string" him, as they said, and great was their joy whenever the string was firmly attached.

"Mac's still shy of you, Al," remarked the night trouble hunter. "He ain't forgot the song and dance you gave him about that telephone girl over in the Newcastle Southern sendin' him a bunch o' roses tied up with pink ribbons after he fixed the short circuit in front of the window where she works. You sure had him fooled that time; he thought he was the whole show with that peroxide queen until he found out where the flowers really come from. That's the story that got Al his championship belt," and the trouble hunter proceeded to relate it at length for the benefit of one of the new men.

As the crowd began to thin out after the general laugh that invariably followed the repetition of the famous tale, the front-end man, who had listened quietly to all the badinage while scrutinizing Williams closely, approached the latter as he was leaving the room. "Look here, Al," he said in a low voice, "I want to go with you on the Limited run the first good chance;

Williams half stood, half sat on a tall stool behind the controller and air-brake lever.

"It's all right, Al," he said, in answer to the other's questioning glance. "I met the old man on his way home from the theater, and when he saw the bag he just said, 'Comin' or goin'?' and went on without waiting for an answer. Guess he doesn't suspect anything, and I didn't meet any of the other men."

The motor man nodded approval, and then, as he got the conductor's go-ahead signal, he straightened up and shoved the controller forward notch by notch until the big car droned steadily along the deserted avenue. Soon the conductor came forward and grinned understandingly as he caught the front-end man's eye.

"How many passengers 've you got, Bert?" queried Williams.

"Only two, and they both get off at Stop 19. We'll prob'ly have an empty car from there on, so you fellows 'll have a chance to do some shootin'. Ain't it one

peach of a moon, though? Betcher we get some." He rubbed his hands together in anticipation and returned to the bright interior of the car, closing the curtained doors behind him.

The houses were becoming more scattered now and longer intervals separated the sputtering arc lights above the streets. Soon dark blurs of woodland and occasional pasture lots appeared, dimly formless in the moonlight. An old cornfield, where the shocks straggled in irregular rows like ghostly tents, flashed past—the open country was at hand.

"You see, it's this way," explained Williams, settling back comfortably on his stool as the car swung around a curve and began to climb a long, easy grade. "You know that long stretch of woods the other side of Pine Gap—wild-like and rough, with quite a few big swamps and

BEAVER HOUSE AND POND IN GUNNISON COUNTY, COLORADO.

From a photograph by H. L. Curtis.

I'd like to try your method of hunting rabbits."

For an instant Williams' steady eyes regarded the front end man gravely. "All right," he replied, evidently satisfied of the other's sincerity. "To-morrow night'll be O. K., if it's clear. The moon rises about 10:30 and the rabbits ought to be out thick by the time we hit the hills beyond Pine Gap. Put your gun in a suit-case and be at the Diamond by 11:55—we leave at midnight. Be sure and keep it mighty close under your hat, though," he cautioned. "Anythin' like this is strictly against the company rules, and if the old man hears of it, it's back to the farm for us."

As the heavy Limited car rumbled in to the Diamond the following night, the front-end man swung aboard, nodded to the conductor, and after depositing his suit-case under a seat, went forward to the darkened platform where Wil-

plenty o' standin' timber? There ain't any houses there for close to five miles, so nobody can hear if we shoot a few times, and so get the idea that it'd be a good stunt to turn us in at the office for disturbin' the peace. Well, that section's plumb full o' rabbits, and just between me and you it's one o' the best places in this part of Ohio for partridges.

"I'd seen quite a few bunnies at night on the right-of-way there durin' the fall, but didn't think much about 'em; we get used to havin' the searchlight surprise animals of different sorts along the tracks. But a couple o' weeks ago I read a story in one o' the Cleveland papers about rabbits likin' to come out on moonlight nights when there's snow on the ground and sorter play around in little clearin's—gambolin', the paper called it. The thing sounded reasonable enough to me—like to dance myself out at the park when there's a moon—and rabbits are kinder light-headed little fools, anyway. So I showed the story to Bert and says to him: 'If them Cleveland rabbits like to gambol in clearin's by the light o' the moon, why wouldn't ours? The right-of-way's about the only place from Pine Gap to Stop 37 that ain't covered with trees or brush, and looks to me like it oughter make a bully dancin' pavillion for 'em. Let's try and get some after the first snow. You can smuggle your old blunderbuss aboard and do the shootin' out the front window while I run the car.'

"Bert's a keen gunner, and he took me on quicker'n a fuse blowin' out, so last Tuesday night we got busy." The motorman stopped to indulge in one of those quiet chuckles that always made his big, squarely-built frame shake.

"Say!" he resumed, "it was a shame to take the money. When we left the Gap about 12:45 there wasn't a single passenger on board to give us away, so Bert rigged up his old pump gun and, come out on the front end with me. I eased the car along slow-like, and you never did see a better jack lamp than that old searchlight made. Them rabbits was—but you'll find out soon what sort o' fun we had. The snow's nice and dry, so they won't get wet feet, and this moon 'll sure make 'em gambol for fair."

By this time the two lone passengers had long since been left at their destination, and the Limited was humming steadily along through the open country. Fence, field and woodland swept rearward in rapid procession, ghostly in their mantles of feathery white; silent farmhouses slumbered among guardian orchards.

Ahead, the beam from the big reflector seemed to seek out and throw into sharp silhouette each wayside pole, every darker tree and bush and jutting rock. At a curve the searching finger of light left the rails and dwelt an instant on the glistening cascade of a little brook that tumbled over a broken ledge from some hidden pond above. For a moment the falling spray, the projecting rocks with their rounded caps of glistening ice, the dark, snow-rimmed pool below and its sentinel pine stood out vividly as in a flashlight. Then they faded into the night as the light passed slowly on.

"Best get out your gun; Pine Gap's just ahead," Williams broke a long silence.

The front-end man started. The mystery of the weird, swiftly-changing scene had cast a sort of spell over him. It was as if he had been standing in a darkened room gazing at a white screen on which a stereopticon threw vivid pic-

tures. But instantly now he was alert. Gun and shells were quickly taken from the innocent-looking suit-case, and Bert helped carry them to the forward platform.

He is a compact, wiry man, is Bert, with close-cropped black mustache and a boxer's set to his shoulders—the sort of fellow that gives the impression of being constantly poised on the balls of his feet, ready for anything that may happen. Evidently he knew guns, for as the twelve closed with the smooth, solid snap of perfectly fitting parts, he grunted approvingly, "Good gun, that. Betcher she throws a pretty pattern, even if she is small. Mind my lookin' at her?"

The gun was willingly passed over for inspection, while Williams said: "Lower that front window and stand pretty close up so's you'll be able to shoot out to the side a little; generally the little cusses are dead ahead, but once in a while one of 'em 'll take a notion to skip off sideways before you c'n pip him. Watch out now—we're liable to see one any minute."

The Limited rumbled across a trestle and at reduced speed entered a long level stretch walled in by close-standing hemlocks and laurel.

"There's two of 'em," suddenly muttered Bert from his position on Williams' right. Far ahead along the right-of-way two shadowy forms bobbed an instant in the searchlight's rays, then leaped for the shelter of the woods.

Bert swore fervently. "Ain't generally as wild as that. Must be a couple o' the ones I missed the other night; bashful about bein' in the lime-light."

Steadily the car glided on through the silent woods. The nipping air streamed in above the lowered glass, chilling the three men a little despite their heavy clothing. Soon the hemlocks gave way to brushy swamps, through which the track ran on a low embankment. For a mile the right-of-way led straight—a narrow, level pathway, silvery white in the soft rays of the moon.

"Along here's where we had the best luck," said the motorman. "These marshes are chuck full of"—he broke off abruptly as a rabbit curved suddenly from out a wild rose tangle, landed on the embankment close before the car, and after one frightened glance, sped with long leaps straight away between the rails. With the sharp, insistent "pow" of the nitro, the bounding form spun over and over in a scatter of disturbed snow. Williams brought the car to a stop a few feet away, and Bert swung off to retrieve the game.

"Funny thing about the way the little beggars act," he remarked, returning with a fine, fat buck. "Sometimes they'll run right toward you as fast as this one was runnin' away, and then again they'll sit as still as a girl readin' a love story 'till you're plumb on top of 'em. Lots o' times we've run over 'em when the car was slippin' along pretty fast—they get sorter hypnotized by the light, I reckon."

Hardly was the Limited under way again when two more rabbits went twisting and dodging across the tracks some twenty yards ahead. A scant six feet separated the flitting shadows, and the two reports from the car platform were almost simultaneous.

"Ha!" ejaculated the conductor with evident satisfaction, as he saw the second rabbit crumple up and join his companion on the slope of the embankment. "Guess you must 've been brought up on quail." Again the car stopped to let Bert play retractor.

Only one more chance offered during the next half mile, and then the Limited left the marshes behind and passed into a different type of country. The hills were higher here, and down the narrow ravines between them twisting lines of unbroken white showed where trout brooks murmured beneath their blankets of ice and snow. Stretches of hardwood were interspersed with dark groves of hemlocks, to whose drooping branches still clung the snow which had fallen the day before. Under the hazel bushes beside the track lay the delicate blue-black tracery of twig and branch, sharply etched upon the sparkling white. Down from a wooded gorge floated the clear, deep "whoo, hoo-hoo-hoo, whoo!" of a great horned owl. The still air tingled with frost.

As the car coasted quietly down a gentle incline, the ever watchful Williams detected a faint, shadowy something far ahead, where the rays from the headlight merged with the night. The dim form soon resolved itself into a cotton-tail, crouching motionless with wonder as he watched the strange approaching glare. The car was barely crawling now, and under the skillful handling of the airbrakes it made scarcely a sound. "Don't shoot!" whispered Williams. "Let's see what he'll do when we get close."

Nearer and nearer they crept until the reflection of the light in the little fellow's eyes, and even the curious quivering and wrinkling of his nose, were clearly visible. When no more than a dozen feet separated the huddled bunny from the source of his wonderment, an odd whim seized Bert. With a smooth, swift motion his left hand shot out to the whistle cord, and three shrill, staccato blasts ripped the stillness and echoed away among the hills.

With the first one, the terrified rabbit appeared to shrink to half his former size; the long, inquiring ears dropped and lay flat along the neck; his whole form tensed, and he crouched closer to the snow. For the briefest instant he was literally "scared stiff." Then, as the paralyzed nerves awoke to life again, he cleared the rails in one frantic leap and headed for cover.

Five minutes later the front-end man scored again, and then passed the gun to Bert, whose trigger finger was itching. Quick results followed the exchange, for soon after the conductor had taken his place at the open window, three dodging sprites hopped into the pathway of light and chased each other about unconcernedly until the gun's roar abruptly ended their game of tag.

In a winding gorge where steep rocks flanked the tracks one more was added to the little pile in the corner of the platform, and then Williams glanced regretfully at his watch.

"Guess we'll have to call it off, boys," he sighed. "We're fifteen minutes behind schedule now, and there's a call-down waitin' at Smoke City if we get there late. Better close that window, 'cause I'm goin' to let her flicker the rest o' the way."

"He shoved forward the controller, and the crescendo whine of the motors rose higher and higher until it merged into the roar of the flying car. Faster and faster rushed the big Limited, taking the long, well-banked curves smoothly, like an express train. They shot through a rocky cut where the narrow walls hurled the tumult back like a heavy weight against the ear drums of the three men, and out again across wide reaches of frozen meadow.

"She's doin' close to forty-five an hour, now," Williams shouted across to where the front-end man clung to a convenient handle. "Great road bed, ain't it?"

"Whoop-ee!" yelled Bert, suddenly pointing. "Look at him go!" Thirty yards away the last rabbit fled before the swaying car, the white puff of his tail rising and falling, rising and falling in the headlight's glare. Barely in time to avoid the forward trucks he turned aside with a twisting bound, and the Limited tore on through the darkness.

New Publications.

HOME LIFE OF THE OSPREY. Photographed and described by Clinton G. Abbott, B. A. Illustrated by thirty-two mounted plates. \$1.00. London, Witherby & Co.

Uniform with the interesting books telling of the Home Life of the Golden Eagle, and of the Spoon Bill, this volume of the Osprey now comes to us. Clinton G. Abbott is well known as a writer and lecturer on birds of America and Britain, and here writes interestingly about one of our very familiar birds. The osprey has often been figured as a type of honest industry among birds, and probably the only American hawk that has no enemies. Itself a fisher, it is regarded by fishermen as a friend.

Along the Atlantic coast this bird is still abundant and in many places builds its great nest close to the home of man. Years ago—and according to Mr. Abbott, even at the present time—ospreys nest, or at least attempt to nest, each year within the city limits of New York. At points on Long Island and in southern New England and again in New Jersey and to the southward, the osprey still breeds in considerable numbers, and there is every opportunity to study carefully the summer habits of the bird and to photograph it during many of the operations of its life.

Of these opportunities Mr. Abbott has taken abundant advantage, and in conjunction with Howard H. Cleaves, of the Public Museum, of New Brighton, N. Y., he has brought together

a great number of interesting facts and a beautiful series of photographs. These last naturally have to do largely with the nesting habits of the bird, and the photographs show nests, often tenanted by young, in a great variety of situations, on the ground, on a weather-beaten old rock on the beach, in marshes, on a fence and on a telegraph pole. At some points in Rhode Island, where the osprey is carefully protected, nesting sites are made by raising an old cartwheel on top of a pole to form a foundation for the nest.

Attention is called to the well known habit of the osprey of breaking off dead branches of trees for nesting material, somewhat as the chimney swift collects its twigs for the nest, save that the osprey breaks the dead branches by grasping them with its talons. Many years ago a nest-building osprey was seen to do this in what is now Van Cortlandt Park, New York city, where for years a pair raised their young without molestation.

Mr. Abbott's book should be read by every bird lover.

THE Department of Agriculture has just issued a bulletin on leaves and herbs used as medicine, which is also a useful handbook for all outdoor people. Nor is this the first publication put out by this department on the subject of medicines, the others being Weeds Used as Medicine, Root Drugs and Medicinal Barks.

Collectors of medicinal plants have made such insistent demands on the department for a guide in their work that a description of thirty-six medicinal plants, including only such as are in most common use, has been prepared by direction of the secretary, fifteen of these being mentioned in the Eighth Decennial Revision of the U. S. Pharmacopoeia.

Each plant is listed under the name in most common use, but synonymous common names, and the pharmacopoeial name, if any, are also given, that no one should have difficulty in recognizing the plants familiar to him, or in identifying an unknown one if of the series, from the description given.

indigenous to the tropical highlands. But in the dry season—from about Jan. 1 to April 20—the deer go down to the plain to feed on the rich pampas grass and palmetto. This is the season when most of the deer are killed. The white hunter usually shoots from a cayuca or light skiff. The deer is very fond of the water-cresses which grow on the banks of the rivers, and, in the early morning, while it is feeding on this cress, the hunters drift down with the stream and shoot from the cayuca. Strange as it is, the deer invariably returns to the same place from which it took flight, and within an hour you will find him at the same spot.

The deer of the tropics do not travel in herds as do some of its cousins of the North, such as the antelope, etc., but go in small groups of fours and fives, and in the rutting season, as a rule, one buck and three or four does. Deer in this climate, like everything else, are very prolific. The deer rut twice a year and the period of gestation is but eleven weeks.

Another fine sport is the hunting of the caribou or mountain cow, which is to be found aplenty on the Isthmus; but the hunter (to use the vernacular) "must hit the high spots." for the cow will follow the most inaccessible trails over the hills, and when once it takes fright, it will go for twenty miles before it takes a stand, which it does by climbing to the top of the loftiest crag. It is very slow to the scent and depends on the eye to give it warning. The flesh of the caribou is highly prized by the Spaniards and Panamanians, and is hunted mostly by the natives for the market of Panama City. The meat of the cow caribou is good all the year round, but that of the bull is not very good during the rutting season, as it has a very strong taste, savoring of the goat.

The caribou of the tropics is a wonderfully strong swimmer and spends much of its time in the rivers. About sunset they will always go to the river and stand in the water, about withers deep. They undoubtedly do this to cool the sting of the insect bites, and to protect themselves from the vampire bats. The vampire always attacks the flank, and is capable of killing the yearling. While the blood-drawing of the bat, which is about a pint and a half, will not kill a full grown bull or cow, the teeth cause blood poisoning, and the animal shows all the signs of distress and wasting. It is most fatal to mules and horses. Unlike some other bats, the vampire is entirely sanguivorous, and while drawing the blood from the animal it holds to the hide with its extremities and at the same time keeps fanning the victim with its wings.

In the Canal Zone shooting clubs are very popular; that is, for target shooting, but as hunt clubs they are looked upon as huge jokes, and the following story is told of the hunt club at Torro Point, Canal Zone.

The boys left at dawn one Sunday morning for a day's hunt, accompanied by a pack, fifty-seven variety hounds. After a long day's hunt, the hunters were rewarded by the sight of a deer, about a mile away, and all hands started in full cry. On their return home, they were asked what luck they had had. The hunt captain said they had treed a deer and almost lost it, because no one had an ax, but one of the boys climbed the palm and brought it down. The deer proved to be a sloth, which indicated the speed of a Canal Zone hunt club.

Shooting in the Canal Zone

By A. A. BEECROFT

THOSE who are fortunate enough to be able to visit the Panama Canal, and who perchance have a predilection for hunting and the strange freaks of nature, would find it most instructive and interesting to take a few side trips off into the jungle provinces, adjacent to the Canal Zone.

In the Province of Chiriqui, the next Province to the canal on the north, and reached by Penell steamer in six hours, is to be found a virgin range for shooting—deer, mountain cow, picori, wildcats and scores of other animals, which give first-class sport to the hunter. The deer of Panama is about the same size as the antelope, that is, about three feet high at the shoulders and is easy to detect in the brush by its spotted coat. It has a short tail and palmed horns. In the dry season both buck and

doe have the back, flank and thighs of a light brown color with numerous white spots, and in the wet season, or winter, these parts change in color to brown. The buttocks are always brown with a black streak, and a dark line passes along the back, the belly and the insides of the legs.

The deer of Panama, or Ciervo, as the natives term it, is not very wild, owing probably to the fact that it has been hunted so little. The native mode of taking the deer is by stalking it with a lantern and knocking it on the neck with a machete. They only use the two horns and the skin, leaving the rest of the carcass to the wildcats and the aerial fleet of garbage removers of the tropics, the vultures.

Panamanian deer are to be found during the wet season for the most part on the hills and high lands, feeding on herbs and palm scrubs

Porpoise Fishing at Cape Hatteras

By FRANK A. HEYWOOD

NEARLY the whole 300 miles of North Carolina seacoast is a sterile reef of yellow sand, as destitute of vegetation as the deserts of Arabia. This reef is cut through at long intervals by inlets that make of it a chain of islands, some of which are forty miles long, and but little more than one mile wide at any point. The inlets afford passageway for vessels of light draft, and through them the fresh waters of the sounds and their tributaries flow out and mingle with the ocean. The coast, owing to the fact that the greater part of it is elevated but a few feet above high tide, and that the three great capes—Hatteras, Lookout and Fear—shoot out many miles into the ocean, is proverbially a dangerous one.

This breakwater is largely a neutral territory, where ownership is a matter of dispute. Some maintain that it belongs to the Federal Government, but when the latter wishes to erect thereon a life-saving station or lighthouse, a convenient owner, or one who purposes to be such, never fails to put in an appearance and howl painfully for his pound of flesh. Among those, however, who dwell upon the mainland, and who frequent this strip of beach, it is looked upon as neutral ground where neither man nor Government possesses any right other than that of might, and where the minor canons of morality may be stretched without breakage to an almost unlimited tension.

Wrecks—and many occur on these sand dunes—are stripped with a bewildering celerity. The coast is wreck-strewn, and how gladly wrecks and their rich freight are welcomed by the people who live along its sands. They regard the tempest as a friendly fairy, and all that comes within their range is considered theirs by right, unless interfered with by Government life-savers. Under any circumstances a wreck throws these people into spasms of remunerative activity. The natives of these reefs are chiefly fishermen, and many of them are engaged the greater part of the time at the porpoise fishing grounds at Cape Hatteras, the only one on the Atlantic coast.

The porpoise, contrary to general belief, is not a fish, but an air-breathing mammal, warm-blooded, viviparous, and suckling its young. Though shaped like a fish and living in water exclusively, and moving in the same manner with them, it must come to the surface for air. During the summer these animals are scattered all over the seas, and are familiar objects to the steamship passengers, but when cold weather comes, the prey upon which they feed—menhaden, herring and other small fishes that associate in schools—go southward and assemble by millions in the shallows lying between Ocracoke and Hatteras Inlet. Cape Hatteras affords a barrier against the fierce winds from the north, and in the waters below it these little fish seek shelter. There, accordingly, thousands of porpoises congregate.

Usually there are about twenty men in a porpoise camp. There must be a sufficient number to man four boats and as many seines. The boats are distributed at three stations along shore. Two of them are together at one spot, while the

third is a mile above, and the fourth a mile below. Each boat has a seine aboard. Lookouts are continually stationed upon high bluffs to watch for game, and they signal with flags when a school of porpoises is coming.

Suppose the animals are curvetting down the coast. Warned in time by the signals, the men at the station furthest south row rapidly out to sea, dropping their seine as they go. If the thing has been properly managed, they have been in time with their net to head off the first of the animals. As soon as the school, or most of it, has got past the station furthest north, the boat from that point is run out in like fashion, dropping its seine on the way. Thus the porpoises find themselves hemmed in between two fences of net, each stretching a mile into the ocean. They might easily escape by swimming seaward, save for the fact that meanwhile the two boats from the middle station have put out a mile from land, not dropping their seines on the way, but extending them on a line with the shore and joining the extremities of the other two seines. In this way is made within a few minutes a rectangular pen two miles long and one mile broad, in which the luckless beasts are confined. They could easily get out of course by breaking through the nets, inasmuch as their strength is enormous, but they evidently do not think of that.

The porpoises thus inclosed are surrounded with smaller seines and drawn in shore where they are kept in a pound until the fisherman wishes to kill them. Sometimes as many as 200 will be secured at a single haul. The catch is very profitable, because there are several products of the porpoise which are valuable. The skin affords an excellent leather. Upon being stripped from the animals, the hides are salted down, tanned crudely and shipped to Northern markets, where they are used in the manufacture of shoes, traveling bags and other goods. This leather has a particularly fine grain, and boots made from it are given a waterproof quality by the natural oil of the skin.

However, the highest priced porpoise leather, which is very costly indeed, is obtained from the unborn young. It is of a most delicate texture and exquisitely mottled in black and white. For book covers it is a most admirable material.

Every one has heard of porpoise oil, which is used for watches and other delicate machinery. It is one of the most costly oils known, because only a few ounces of it are secured from each animal. It is obtained from the jaws only, being tried out from the bones after the skin and flesh have been removed. There is another sort of oil procured from the fat beneath the skin and from the liver and other viscera. Hides are worth from seventy-five cents to \$2.50 apiece, the latter price being paid for the best skins of unborn calves. A school of 200 porpoises represents about \$500 to the fishermen. Nobody has ever attempted to make any use of the skeletons, which are scattered by tens of thousands along the shore below Cape Hatteras.

Firearms Trade in Spain

THE use of firearms is very extensive in Spain, says Vice-Consul J. L. Byrne, of Valencia, and particularly so in that region. An idea may be formed of the widespread popular taste for shooting game and wild fowl of every description from the fact that 20,000,000 empty sporting cartridges were imported into Spain last year and of these 2,300,000 entered the port of Valencia alone. More than two-thirds of the total are of ordinary and low-grade quality, costing about 55 cents per 100 unloaded, but there is also a limited market for very high-grade sporting cartridges with deep metallic lining, adapted for heavy charges of smokeless powders which are imported from Great Britain and the United States, and are retailed at \$1.45 to \$1.98 per 100 according to length and finish. The duty on unloaded cartridges is \$14.47 per 100 kilos (220 pounds), or approximately 10,000 shells of the ordinary light-weight varieties that constitute 85 per cent. of the total imports.

The natural sporting proclivities of the inhabitants of this district are fostered by the proximity of the Albufera, an extensive marshy lake, visited in the fall and winter by myriads of wild ducks, coots and other waterfowl that migrate from northern Europe, while the forest wastes and arid brushwood hills of the interior are moderately stocked with red partridges, hares and rabbits. All the moist culti-

vated valleys following the course of streams are also visited in the spring and summer by migratory quail that come over from North Africa.

The trade in sporting guns, pistols, and revolvers is of considerable importance, but only the very highest grades are imported. Nearly all medium quality, ordinary, and low priced products are manufactured in the country, mostly at Eibar, the Basque Provinces in the north of Spain, where excellent workmen, many of whom study at the leading arms factories of Birmingham and Liege, make almost every form of gun, rifle, pistol, and revolver. The barrels are usually imported in the rough from Great Britain or Belgium and are bored and finished at the Spanish factories. The duty on sporting guns is equivalent to \$3.86 per kilo, or approximately \$12.16 on a 7-pound gun, and \$1.54 per kilo on pistols of all kinds.

American firearms on sale here at present are limited to repeating rifles and automatic pistols, and revolvers. Imitations of well-known makes are numerous, some of them selling as low as \$1.40 retail price.

Samples of double-barreled, central-fire shotguns have been frequently imported at this city from the United States, but so far have failed to create a market. The proverbial hobbies and fads of sportsmen are perhaps nowhere more

(Continued on page 192.)

Game Here and in England

By H. HICKMOTT

THAT is a very interesting article by Mr. Chase, of Vermont, in your issue of Dec. 30 on game preserves, but according to our system of game preserving here in England, the first and most important item of all is not mentioned, and in all the very good articles I have read in *FOREST AND STREAM* for the past twenty-five years on game birds and the preservation of game generally, I have been surprised that very few articles have referred to it—that is, killing down vermin of all kinds and descriptions. The first thing any experienced gamekeeper does in this country is to clear the estate he has under charge of all kinds of noxious animals and birds.

Our experience is that the vermin will do far more harm in the nesting season than all the poachers combined. Of course, the time of incubation is the most dangerous for the gamekeeper, as it regards wholesale losses. It is no unusual occurrence for a vixen fox with cubs to take several young birds off their nests in one night. This would apply to both pheasants and partridges, also wild ducks, young rabbits and hares and poultry. They will also carry off newly born lambs and fawns. Self-hunting dogs and cats are almost, if not quite as bad. Stoats, weasels, rats, hawks, owls, crows, jays, jackdaws, magpies, snakes and adders are passionately fond of all kinds of young game birds and never require the second invitation to kill and destroy them.

No gamekeeper in his right senses would ever think of trying to raise game birds of any kind unless he had previously killed the vermin well down. It would be his first and only thought. It does not matter where, or on what system game is going to be raised or who the owners are, continuous trapping is an absolute necessity to keep the vermin down. It does seem most absurd to me to spend large sums of money on game preserving and then to lose fifty per cent. of them through noxious animals and birds, which, I fear, has too often been the case. Kill your vermin first, that is the first and most important consideration. Raising your game either as wild birds or by propagation (hand rearing) is a second consideration. Enforcing your laws for illegally killing and destroying game birds and fish is a third consideration.

What Mr. Chase has said concerning the game laws of England, of course, is quite true; but, on the other hand, things of importance are generally governed by circumstances. In course of his remarks, Mr. Chase says the game is owned in trust by the State for the benefit of all its people, which is also quite true, but as far as America is concerned, circumstance has always permitted this system of liberty of spirit and free principles, and as far as the game is concerned, it originated when the Mayflower landed its first consignment of Pilgrims on the coast of New England, A. D. 1620. Of course, as they met with no opposition, except by Indians, the Pilgrim fathers naturally took it for granted that they were the owners of the game, and according to the circumstances they had a

perfect right to it and unquestionably their bill of fare generally consisted of wild game and fish, and as the same constitution of spirit and liberty and free principles has been handed down from generation to generation for hundreds of years, and with the advantage of an immense extent of country, with boundless resources and enormous supplies of wild game, and thinly populated up to within comparatively recent years, circumstances were able to permit of free hunting with little or no expense. Therefore, it is not difficult to understand the feeling

stands, many people benefit by it, for it gives employment to thousands of men as gamekeepers, and it causes large sums of money to be circulated. Of course, large quantities of game are killed every season all over the country, but, note this, on many estates where a large head of game is reared it cannot be done and never is done, without considerable expense, for the preservation of game and everything connected with it, and, taking the sum total for the whole country combined, it must range up into the hundreds of thousands of pounds annually. For example, the licenses that are purchased for every sporting dog, and all the game certificates that are taken out for the killing and selling of game, it must benefit the inland revenue many thousands of pounds also.

There are still other items of benefit connected

AFTER THE HUNT.
From the County Gentleman.

of spirit and conception of principles that is still retained by the sportsmen of the United States at the present day.

Referring to the game laws of England, circumstances are very different. We have never had the extent of country or the resources. According to history, the game belonged to the people prior to the Norman conquest, but after the battle of Hastings, Oct. 14, A. D. 1066, the game laws of England underwent a universal change. William I. The Conqueror appeared to have been as keen a sportsman as he was an ardent warrior, for he established the New Forest in the county of Hampshire as a hunting preserve, which is retained by the government to this day for the same purpose, and thus commenced in England the feudal system, and the preservation of game generally.

In a country like England, limited both in size and resources as regards a natural supply of wild game, with an ever-increasing population, how would it be possible to provide free hunting and shooting for all? As the law now

with it, gunsmiths, ammunition and cartridge manufacturers, game and dog food manufacturers, game salesmen of London, and all other large towns in England, all benefit by it also. Several sporting journals devoted to the interest of sportsmen, gamekeepers and proprietors of game preserves all find a revenue more or less in publishing their papers. Proprietors of game farms, who annually sell hundreds of thousands of eggs and many young game birds to owners of game preserves, all get a living out of their occupations. Bootmakers and tailors, who make and furnish sportsmen and gamekeepers with their clothing and sporting suits, also drop in for a share. Corn merchants often get large orders from gentlemen to supply them with different kinds of grain for feeding the adult birds. They also appreciate the private preserve.

Circumstances will never permit of free hunting and shooting in this country for the above-mentioned reasons. I consider the game laws of England are both reasonable and satisfactory

at the present day. The laws permit all tenant farmers in every county of England to a joint right to kill and sell the ground game (hares and rabbits), thereby getting both profit and recreation without any additional expense.

Deer are not classed as game in this country, nor is there any closed time for them. They can be legally killed in any park by the owner, or his park keepers, by the purchase of a ten-shilling gun license. This applies to all varieties of deer in England. Although many deer are annually killed, we find no difficulty in maintaining a full stock up to the acreage of the park, thereby keeping them at a uniform number; but had it not been for the game laws and private preserves, the game in England would have been exterminated long, long ago.

In conclusion, I say once again: Gentlemen, kill your vermin.

THE TOP RAIL.

NEARLY every hunter has, no doubt, heard excellent imitations of the wild turkey's call, and knows that it is possible to lure gobblers in this way. But how many of them, I wonder, have considered the danger that lurks in the vicinity of the one who manipulates the call, and the absolute reliance he places in the ability of every other hunter who hears the sounds to correctly interpret them as coming from a tiny cedar box or the wingbone of a Christmas goose? He knows that he can lure the wariest old gobbler, for he has proved this, but he depends on the superior ear of fellow hunters to detect false notes that the gobbler does not hear or disregards, as may be, to keep bullets out of his own precious skin. Otherwise turkey hunting would be practiced differently.

I will tell you a story. On a cold autumn morning before daylight three hunters left camp and sought stations on the side of a bald hill. My station was the center one, and I sat beside a huge oak in the midst of a group of pawpaw bushes whose big leaves completely hid me. There were plenty of turkeys about, and it was their habit to cross the open summit of the hill and descend to the woods in the valley below us, to feed. Walter, on my left, was not an expert caller, but a "cheep" or two now and then told me that he had moved from his first station to a point further away. Will, on my right, was more skilled than I was, and I called but seldom, preferring to depend on him to lure any birds that might come our way. Still, in my own estimation, I was a fair caller, and later on I called at infrequent intervals, because, as I thought, turkeys were in the woods below me, and not on the hillside.

Presently the turkeys came nearer and nearer and I ceased to call, fearing that any gobbler among them might detect the fraud and bolt. So I crawled through the pawpaws, trying to peer beyond, then rose suddenly to see Will making his way toward me through the scrub oaks and sumacs.

That was a scare for us both, and as we stood, shaking hands in silent thankfulness, I am sure that the great lesson every hunter must learn sooner or later was so deeply impressed on us that we are never likely to grow careless with firearms, though we live to be a hundred.

GRIZZLY KING.

GAME BAG AND GUN

The Game Situation.

WENHAM, Mass., Feb. 4.—*Editor Forest and Stream:* In your issue of Jan. 20 my old friend Mr. Hopkins has a very sensible note. I cannot help, though, differing from him on the subject of the hopelessness of Federal game control. I do not believe that such a situation is impossible, and I have talked with men recently who are in a position to know the exact status of this movement. The worst thing we can do for the cause is to assume its hopeless nature. Granted we believe in its usefulness, we ought to push it for all it is worth in spite of the adverse attitude of men like Mr. Miller, of New Orleans.

All this does not affect at all our local game birds. Mr. Hopkins is right about the grouse. That bird is certainly going, slowly but surely, with occasional fluctuations which give us an excess of either hope or despair. The question is, can any amount of legislation and education save it in numbers at all sufficient from a sporting standpoint? I believe not. Competent ornithologists have expressed the opinion to me that the grouse, here in the East, anyway, is bound to go.

There are two distinct classes of birds and beasts—those that are favored by proximity of man, cleared land and perhaps extermination of certain carnivores; and those that are gradually doomed by the same train of causes. In the first class, for instance, we might put the bobwhite, the cottontail rabbit and the Virginia deer; in the second class, the ruffed grouse, the turkey, the snowshoe rabbit and the caribou.

The case of the quail is too well known to more than mention, and everyone is familiar with the extending range of the cottontail, which animal except for continual persecution from various enemies, would soon be numerous enough. The deer always increase if given half a chance. Now, the grouse is just the opposite. It and the white rabbit do not thrive well where land is cleared, especially when the swamps are gone. What subtle causes contribute to its undoing we do not know, but the result is plain enough.

Within a very few years there has developed an enemy to our grouse, so serious that if the open season were cut down to one week, the result would only be delayed, namely the automobile. I am speaking of conditions here in Eastern and Central Massachusetts. It is possible now to cover an enormous stretch of country in one day, and to waste no time in blank covers. The result is, that with sufficient local knowledge one can comb out the favored places with much less exertion than formerly.

Now, as to the game preserve idea so heartily sat upon by Harry Chase in a recent issue. By game preserve we do not necessarily mean a large tract under an eight-foot fence, typified by the great Adirondack parks, and controlled by one individual. The game preserve of the future, and there will be many of them, will be organized by bodies of sportsmen more far-sighted, energetic and thrifty than the average, who have combined to lease tracts of land. The farmers will provide most of the warden service neces-

sary. This is simply the result of the inevitable increase of the population and the decrease in hours of work necessary to keep body and soul together. For instance, there are a good many men of very moderate means nowadays who are able to take a vacation each year extending over most of the open season.

Now the future game preserve, like some already in operation, need not be at all an expensive affair, but it will cost something. In the South shooting can be had to-day in places for two and one-half and three cents an acre. And there is no reason why the right kind of preserve should cause the terrific race feeling that Mr. Chase has pictured. Anyway, it has almost got to be a question of preserved sport or no sport. We do not all own steam yachts or private cars; neither do we all depend on charity. Some people are always going to have some things that their neighbors either do not want or cannot have, and if it were otherwise, what a dreary place this world would be.

J. C. PHILLIPS.

Game in Nevada.

TROY, Nevada, Jan. 30.—*Editor Forest and Stream:* I live on a small farm in the mountains, and as there is not much news of this part of the State regarding the game, I will tell the readers some facts about it. The mountains around here are as high as 10,500 feet. There are a great many mountain sheep or bighorn to be found; in fact, they are thick. I have seen as many as twenty-four head in one bunch, although they usually run in bunches of six to twelve, and bucks of all sizes mostly alone. In the summer at times I see three and four in a bunch. They are practically tame, and I have ridden up within fifty yards of them before they ran, while at other times they will run before I get within gun shot of them.

There are also a good many blue grouse in the timber. I have killed grouse that weighed 4½ and 5 pounds. On the mesas antelope are seen, as many as one hundred in a bunch, and a man could get one most any day.

There is not much duck shooting here, as there are no lakes or large ponds, but the mountains are full of small streams which come from the snow. There are snow banks in the mountains in July. It seems a shame that the streams around here are not stocked with trout, as it is a fine place for them.

There are a good many interesting sights for the Eastern sportsman. There is one place especially where the cañon narrows to about twenty feet wide and 300 feet high. On the left-hand side, up about 150 feet, there are a number of Indian arrows in a crack which were shot up there in early days by the Indians. The old Indians here claim it was the result of a treaty of peace, and that the warriors shot their remaining arrows up in this crack. The arrows are made of grease wood. Some still have parts of the feathers on them. These were fastened by means of deer sinew.

JOHN W. GARRETT.

New York Legislature.

ALBANY, N. Y., Feb. 5.—*Editor Forest and Stream:* At an adjourned hearing of the Senate and Assembly joint committees on the proposed changes of the fish and game laws held Jan. 31, the committee took up parts 5 relative to quadrupeds, part 6, birds; part 7, fish; part 8, nets and netting, and part 9 on fisheries.

The hearing was attended by fish and game clubs from all over the State as well as many persons interested in the provisions of the new law. The section relating to the killing of bucks only met with general approval as well as that portion of the section requiring bucks to have horns at least three inches in length. It was contended that if this feature of the law was strictly enforced, fewer hunting fatalities would occur, as the hunter would then make certain of his object before firing. Statistics were produced showing that in States where the killing of does was prohibited, there were fewer human fatalities in the season. Some representatives advocated the season opening earlier, but it was agreed that the great percentage of the loss of life was during the early part of the hunting season because of the dense foliage, and that the codifiers had made no error in this direction.

Considerable stress was laid upon the pot-hunters and lumbermen killing deer all the year around, and it was suggested that more protectors were required to enforce the law. One representative asserted, and all present concurred, that if ample protection were provided, within three years the deer would be so plentiful that every hunter could easily kill three deer without in the least thinning them out.

Seymour Van Santvoord, of Troy, endorsed the limiting of the killing to bucks, which he said was one of the fine points in this proposed law. Mr. Van Santvoord said he had received a letter from Dean Hitchcock, seventy-four years of age, a veteran hunter, in which he said: "You have a fine law and don't be afraid of it, and New York State has for the first time an apparently sensible game law."

Among other speakers were John B. Burnham, E. H. Johnson, W. T. Hornaday, T. J. O'Connor, Mr. Houghton of the Camp Club of America, Mr. Taylor, a representative of the Johnstown Hunting Club, and J. H. Henderson, of Jamaica, L. I.

The bag limit in ducks developed some opposition from Long Island hunters, but the sentiment of the assembled sportsmen was overwhelmingly in favor of the amendment, and it was generally agreed that the proposed law was the best ever offered in fairness to all concerned.

At a hearing on Jan. 30 before the joint committee of the Senate and Assembly on the proposed changes in the fish and game laws, the committee took up for discussion the first four parts of the bill. The hearing was largely attended. The committee heard the various people for and against the different sections and the various ideas.

The final hearing of the joint committees of the Senate and Assembly on the proposed changes in the fish and game law was held on Feb. 1. The parts of the law relating to nets and netting, private parks, importation and sale of fish and game, and definitions and constructions were taken up. That portion of the law relating to marine fisheries was not discussed for

the reason that the conservation commission is to prepare a separate bill relating to marine fisheries and which will be introduced later in the session. There were no serious objections to any of the provisions of the law which were discussed, with the exception of the limit of twelve inches placed on blue pike. C. H. Wilson, of Glens Falls, well known defender of the whitefish, appeared before the committee and stoutly maintained that the two pounds in the round limit on whitefish should not be removed.

Assemblyman Coffey, of Westchester county, has introduced an interesting bill in relation to the acquisition of lands and water rights and the use of waters in Westchester county.

Assemblyman Ruland has introduced a bill striking out the provision fixing \$100 for each offense as the penalty for violation by a non-resident. This would make non-resident offenders subject to the same penalties as residents—\$60, and an additional \$25 for each animal taken, possessed, sold or offered for sale in violation of the law.

These bills have been introduced:

Assemblyman McDaniels, relating to black bass in Cayuga Lake.

By Assemblyman Sullivan, prohibiting the hunting of hares and rabbits in Chautauqua county with ferrets. E. C. C.

Deserved Consideration.

PINEHURST, N. C., Feb. 5.—*Editor Forest and Stream:* A varied series of runs are interesting the fox hunters, remarkable for their length and diversity, for the gray foxes of this section possess not only the craft and cunning of their kind, but the endurance of the red foxes, a few of which are found roundabout.

One of the most novel hunts of the season was enjoyed on Monday and Reynard is still at large as a tribute to his originality by M. F. H., James T. Twitty. Started after rollicking trailing of an hour and a quarter, the pack burst into full voice close up, indicating a speedy run and a quick catch. Half an hour the hunt followed, expectant, covering some ten miles in as clean a figure eight as ever was cut with skates; then a swing to the north down wind varied the monotony and another figure eight which lost itself in another half circle dash only to reform again into the graceful number.

"Dun beats me," was Huntsman Nat's puzzled comment. "Don't seem ter be gainin' er mite. I reckon we're runnin' a couple foxes an' they'se relayin' an' restin' up on us."

Master Twitty's reply was inaudible, but presently his absence was noted from the hunt. Half an hour later he rejoined the chase, still in full cry, like a stage steeplechase on a treadmill, almost but not quite. "Call 'em off, Nat," was his strange command, and old soldier that he is, Nat obeyed without question, casting side glances at the master, whose laughter mingled with the mellow horn.

"What do you suppose we are up against?" he queried, when the last straggling hound had ceased to protest. "That chap's been doubling up and running close behind us; just having a lovely time letting the pack set the pace. He certainly deserves some consideration, and so I am going to keep him for special occasions. He beats an anise seed bag flat."

HERBERT L. JILLSON.

Game Birds in Iowa.

FORT DODGE, Iowa, Feb. 2.—*Editor Forest and Stream:* Game conditions in this part of Iowa were not such during the past season as to make sportsmen enthusiastic to a degree calculated to produce exhilaration.

The pinnated grouse, or as locally known, prairie chicken, has been hunted and shot in season and out, until the hope of sport in the pursuit of this noble bird in this vicinity has ceased to enter into the calculations of those who observe the game laws. The few grouse hatched about here are shot long before the season opens, or the birds have attained size and strength sufficient to afford even the semblance of sport.

There are hundreds of grouse here now. The birds keep to the cornfields, where they are assured of plenty of feed. These birds drift in during the fall from Minnesota and the Dakotas, and if one-fourth of the effort, in either labor or expense, was made by those to whom the protection of the game of this State is entrusted to protect and propagate the prairie chicken, as is put forth to introduce foreign game birds and protect them, the sportsmen of this State would have shooting that would in every way surpass anything that can be even hoped for from the introduction of the pheasant or the Hungarian partridge.

There have been liberated in this section about fifty pairs of the Hungarian partridges. During the fall it was reported that several coveys of these birds had been raised, and that the birds were strong and in apparent good condition. What the effect of the weather since Dec. 26 last will have upon these birds I do not know. The ground has been covered with snow to the depth of a foot or more, and since Dec. 29 there have been but four days on which the thermometer has not registered zero some time during the day, and on several occasions from 22 to 35 degrees below. Such weather has no terror for the pinnated grouse. They have endured it since the white man has known them, and in spite of all its rigors they feed, thrive and prosper where other game birds fail.

Owing to the dry weather of the late summer and fall, the ducks and jacksnipe found little to tempt them to tarry in this region. Some mallards dropped in late in October after the fall rains had filled the few sloughs and ponds which have escaped the all-absorbing tile drains, but the duck shooting was of short duration and not very good while it lasted. The best was probably in the Missouri valley above Council Bluffs. I had some fair shooting on the grounds of the Mondamin Gun Club for one or two days, and this was largely due to the fact that these grounds are leased from the owners by the gun club for shooting purposes, and the use thereof limited to the club members and invited guests. I was afield with a beagle after cottontails from Oct. 15 until Christmas on an average, I think, of once a week; have hunted through some excellent quail cover, and the nearest approach to the sight of a quail was when in company with my shooting companion we found the scattered feathers of one, evidently killed by a hawk. I fear the severe weather has wiped out every quail in this county. The deep snow, the intense cold and lack of shelter have been more than bobwhite is able to endure.

There was more than \$100,000 in the fund derived from the sale of game licenses a year ago, and yet during the winter of 1911-12 I did not learn of any money expended to protect or feed game birds in this section of the State.

Maybe I am pessimistic, but seeing game cover and wildfowl resort become cultivated ground, and the game grow scarce with no adequate effort to protect or propagate, is not calculated to render one optimistic. Wherefore,
CONVIS.

Tie Up the Dogs.

NEW YORK CITY, Feb. 4.—*Editor Forest and Stream:* Your issue of Feb. 3 prints on page 142 a bill said to have been drafted by a committee appointed by the Massachusetts Fish and Game Association, relative to the better protection of partridges, quail, woodcock and other ground-nesting birds by forbidding the roaming at large of self-hunting dogs during two months in the year.

With all deference for the possible broader viewpoint of the committee, which drafted this bill, I beg leave to urge that this is a half measure which can accomplish little or nothing in the way of protection of birds interesting to gunners and of the far greater number of birds that are of peculiar interest and value to farmers.

The objections to the bill seem to be many. The period, sixty days between May 1 and June 30, is far too short. Woodcock and ruffed grouse have made their nests and begun to lay by May 1, and dogs in the woods and swamps can do a great deal of damage before that date. The young of many species of ground-nesting birds and the eggs of second broods are still in the nest June 30.

The bill provides that to be considered a self-hunting dog, a dog must have been found running at large and hunting in the woods or fields—by whom? After this the Fish and Game Commission must be notified and the commission must notify the owner. All this takes time. Then the dog has another chance; must be reported on again and if so reported and the owner is convicted, he may be fined the large sum of \$5.

For a number of generations now dogs have been allowed to run at large in the woods and I believe that this is one of the chief causes of the constant and increasing diminution of game birds and ground-nesting birds, many of which are such valuable aids to agriculture. It is perhaps encouraging that sportsmen and bird protectors have been so far aroused from their lethargy in regard to this matter that they acknowledge the need of a law which shall restrain the dogs, but until they awaken sufficient'y to demand a law which, if enforced, shall be effective, nothing will be accomplished.

The last two paragraphs of George B. Clark's letter tell the story, and it is perhaps not necessary to comment on it. I believe that in any given region which is thickly settled, self-hunting dogs destroy more game and more ground-nesting birds than all the foxes, weasels, minks, skunks and raccoons in the same region.

Mr. Clark and his committee must come to realize that half measures will accomplish nothing; they must either protect the birds of Massachusetts or let them go. In many regions I fear protection will come too late. G. B. G.

Pheasants vs. Partridges.

BOSTON, Mass., Jan. 29.—*Editor Forest and Stream:* The letter of your correspondent, E. O. M., dated Jan. 18, commenting upon the striking of a quail by a ring-necked pheasant, and his suggestion that the pheasants ought to be shot, meets with my own hearty approval.

As a boy I lived in Oregon at a time when there were none of these foreign birds there, and when the covers along the Willamette Valley were plentifully supplied with native ruffed grouse. I remained there long enough to see Oregon overrun with Mongolian pheasants and to see the ruffed grouse become scarcer than hens' teeth. Native sportsmen and naturalists were almost universally of the opinion that the pheasants brought a throat disease which they were able to get by with all right, but which the grouse could not stand. Also that they attacked the young grouse and killed them, and occasionally destroyed their nests. Cocks of the Mongolian pheasants have been known in Oregon to come into a barnyard and whip the rooster on his own dung heap.

The pheasant is not a good game bird; he will not lie to a dog, but runs like a turkey all day long; and after you do kill him he is not for a moment in the same class so far as eating is concerned with our own royal native ruffed grouse, the grandest game bird that flies.

In spite of the limited shooting season now afforded in Massachusetts, our ruffed grouse are becoming scarcer and scarcer. This year I found them particularly scarce in a country which was inhabited by the ring-necked pheasants, whereas I am told by many friends in Maine that it has been an exceptionally good season for grouse there where there are no ring-necked pheasants.

The ring-necked pheasant has no excuse for living in Massachusetts. He is not a good game bird, he is not very good to eat, and about all he is really good for is to grace some fair lady's hat or to stand upon the mantel, stuffed and display his gaudy tail. Instead of putting a close season upon him, I should vote in favor of putting a bounty upon him and having him exterminated, and I should personally be glad to contribute to a fund, one-half of which should be devoted to his extermination, and the other half to a scientific attempt to restore the ruffed grouse in Massachusetts covers. R. L. W.

Woodcock in the Provinces.

HALIFAX, Nova Scotia, Jan. 29.—*Editor Forest and Stream:* I noticed a letter in the issue of the 20th from Ernest L. Ewbank, of North Carolina, stating that there were numbers of robins yet in that vicinity when he wrote on the 13th of this month. I did not suppose that was a very unusual occurrence for that latitude, but I am sure it is very unusual to see robins in this country in January. There has been a little family of four in our garden and vicinity as late as the 20th of this month, and this means that they have experienced several nights of zero weather besides several considerable snow storms, and on the 15th one of the coldest rains imaginable accompanied by a fifty-mile-an-hour hurricane.

I would like to inquire of the fraternity if they have found the numbers of Wilson's snipe particularly large this past season. The "wizard

of the bogland" is a great friend of mine, and I follow him up rather more than any other game bird every autumn, but never within the last ten years at least has the snipe been so common as during the past October in pretty well all the Eastern Provinces of Canada. They were in places unusual in my experience. Often enough when you expected a grouse to rise before the pointing dog in alder covers up would dart a woodcock, or coming out of the cover and crossing a grass stubble field of high land, the dog would make one of those spectacular stands by an old furrow or little spot of softer ground where, with no long grass or cover to hide him, you might gaze in admiration of that act which never grows stale in the eyes of the dog lover.

Should this meet the eye of Mr. Ewbank, I would ask him also how he accounts for the fact that there are no ruffed grouse in Chatham county in his State. I have been there quail shooting two winters and was constantly thinking what an ideal condition existed there for this royal game bird, but there never have been any in that part of the State, at least as far as I could learn. W. H. STARRATT.

Club Meetings.

DANBURY, Conn., Feb. 3.—*Editor Forest and Stream:* The twelfth annual banquet of the Pahquioque Rod and Gun Club, held at the Hotel Green, Danbury, Conn., on Feb. 1, eclipsed all the preceding ones. This affair is getting so popular and there is such a demand for tickets that we could have sold one hundred more.

John B. Burnham, president of the American Game Propagation and Protection Association, was with us, and to say he will make a success of the organization of which he is the head there is no doubt. Every club in the country should give the association its support and join it, as we did. It will accomplish more for the sportsman than any other organization. Mr. Burnham also brought with him J. Alden Loring, the naturalist, who gave an illustrated lecture on game birds and their habits, which was very instructive. Our club voted Mr. Burnham and Mr. Loring honorary members. We also invited Colonel Roosevelt, but being unable to accept, he sent a nice letter of regret.

We also had our State game commissioners, State game warden, also Geo. Sutton, game warden from New York State, with several from the Mt. Kisco Gun Club. Thad Adams headed the Seaside Club boys of Bridgeport, with several from Hill Side, of Long Hill, and Bethel. There were several professional shooters present—"Jack" Fanning, "Hank" Stevens, Gil Wheeler, A. Sibley, C. Chapin and Neaf Apgar.

On entering the banquet hall one stood in amazement, looking at the scene before him, as the decorating committee, of which C. Keet Plancon was chairman, had decorated the walls with attractive pictures. The tables were neatly arranged with a clay pigeon at each plate for an ash receiver, with an elaborate menu, the cover being orange with a black ribbon with a setter dog in light green.

W. E. Day, president of the club, talked of the success of the club for the past year, it being in the best condition, both financially and in numbers; and of the success of the Western Connecticut Trapshooters' League of which we were the leaders. Toastmaster Herbert R. Mc-

Chesney then introduced Mayor N. B. Rogers, a member of the club, who welcomed the guests.

E. H. BAILEY, Sec'y.

THE Rutland County Fish and Game League held its annual meeting in Rutland, Vt., on Jan. 25, and at the banquet plates were laid for 200 persons. Thomas H. Browne, president of the league, presided. Among the speakers were Dr. G. W. Field, State fish and game commissioner of Massachusetts; P. S. Farnham, of the American Game Protective and Propagation Association; John W. Titcomb, of Lyndonville, State fish and game commissioner; Harry Chase, county warden of Bennington; Frank E. Howe, speaker of the Vermont House of Representatives at the last Legislature; W. H. Preston, of Fair Haven; Frank L. Fish, of Vergennes; M. F. Barnes, of Chimney Point; Dr. P. M. Williams, of Rutland; Fred Smith, of Addison; Rev. Joseph Reynolds, of Rutland, and others.

THE Cold Spring Rod and Gun Club held its sixth annual meeting in Wilkesbarre, Pa., on Jan. 16 and elected the following officers: President, D. L. Creveling; Secretary, Wayne T. James; Treasurer, George T. Knoll; Trustees, J. P. Breidinger, Boyd Dodson and H. S. Freas. The club's membership is limited to thirty-five. It controls a preserve of 5,000 acres in Monroe county.

Confiscating Game.

SAN FRANCISCO, Cal., Jan. 27.—*Editor Forest and Stream:* During December thirty mountain lions were killed in California and \$600 in bounties has just been paid for the scalps. Eight of these came from Siskiyou, five from Trinity, six from Humboldt, two from Tehama, and one each from Kern, Mariposa, Shasta, Tulare, Tuolumne and Butte.

J. B. Cannon, who owns a pack of hounds at Two Rock, brought six coyote pelts to Santa Rosa to claim the bounty of \$5 a scalp offered by the county.

The game commission has commenced a strict enforcement of the law relating to the quantities of game that a person or firm may have in his or its possession, and a number of successful raids have been made on San Francisco business houses of late. A number of deputies from outside points have been gathered here for this purpose and a large amount of game confiscated. At one market 580 ducks and 115 cottontail rabbits were secured. The law allows a limit of twenty-five ducks and fifteen cottontails. At another market twenty-nine ducks were secured and at the hotels searched quantities of game were seized. The confiscated game is being distributed to charitable institutions.

The commission is now winding up the distribution of wild turkeys raised during the past season, and by the close of the present month will have distributed about 500 of the birds in various sections of the State.

It is proposed to experiment with a number of birds at the State Game Farm and trappers are now busy securing quail, sage hens and grouse. In addition, game birds will be brought here from the East. Attempts will be made to rear a large number of pheasants.

GOLDEN GATE.

Shooting in the Hill Country.

HENDERSONVILLE, N. C., Jan. 29.—*Editor Forest and Stream:* I wrote you in a recent letter of seeing a single robin. He looked very lonesome, but a few days later a number of them were to be seen all over this country. This year, or rather winter, has evidently been one the robins could not figure on. It began to get very cold rather late "up North," if I have been reliably informed, and then very cold "down South" rather early, so they seem to be undecided as to when it is best to go. I never "saw the like before."

Last Saturday a friend and I took a tramp with Nellie, Jr., in search of quail, and we never saw one. A farmer showed us where some pot-hunters had tracked a covey in the snow and shot all but two of them. No doubt this has been done to the birds all over the country covered by the snow.

Tuesday last I took a tramp of about twelve miles with a couple of young men from Brevard, Transylvania county, after my favorite bird, the ruffed grouse. Of course, Nellie, Jr., went along. We climbed and tramped the mountains from a little after nine till a few minutes after twelve o'clock and saw none. We stopped ten minutes for a lunch, then began again. We were just up under the east, or southeast of Cedar Rock, and turned south down the little creek that heads up in this little gap. Just then a bird flushed wild, went over this ridge eastward, and we followed it. Twice more it got up and each time very wild, and I did not see it. So we returned to the gap and again hunted down stream, I on the west and the two young men the east side of it. After going about a quarter of a mile, two more grouse got up just across from me and in front of the young men, and one got a shot but failed to kill. Although I heard these birds, I did not see them.

The ground was frozen on my side and the going rather hard, so that I held my gun, using my right hand to catch firm hold of the trees and bushes to prevent falling, my left thumb on safety to be quite sure it is always on till a bird should get up, as I never cock my gun or throw off the safety till my game is up, whether or not the dog points. This is done as the gun comes up to my shoulder. A little lower down the creek and a bird got up, again on the other side from me. Then after going about two hundred yards an old cock flushed about thirty yards in front of me—my first chance for the day. I was trying black shells with $7\frac{1}{2}$ chilled shot, and this bird I dropped before it was over forty yards away. Over and over it bounced on the hard ground. I called Nellie Jr., showed her a bunch of the feathers and told her to fetch, and she brought it out of the little creek forty feet from where it fell, a clean kill.

Just as my bird got up one rose on the other side of the branch, and both the young men shot at it, but did not succeed in stopping it. Then began a slippery tramp after it; but we never found it, and it got so fearfully hard on my side that I crossed over and we began our return tramp till we reached a smaller stream flowing into the one we were on; and here we decided to go up it, as it was our direction home. I asked the boys to give me warning if one got up from them, and a short time after the call came, "Look out, look out," and none too soon.

This bird tried another scheme, and it was to circle us. It rose on the other side from me, and in a thicket, turned up stream, then circled and came back about one hundred and fifty feet above; and being on a steep mountainside required that I twist half round to get in ahead of it, as it went a seventy-mile gait for the thickets beyond. It was a difficult shot, but fair against the sky, and getting the right lead, I pressed the trigger and had the satisfaction to see it go over and over. This bird, though killed dead, bounded fully thirty yards or over down the mountainside, and Nellie, Jr., retrieved it from the stream some distance below where I had any idea it would be.

This was the last bird we found. It was my dog's first grouse—these two—and I feel that she is now in a fair way for graduation. Hereafter she will know just what I want when I take her in the "big woods." She is very intelligent; in fact, animals, if properly handled, will respond to kind treatment and learn much one would hardly expect them who knows little about them.

One year we had an inroad of cats and dogs, due largely to my daughter's fondness for these animals, and we had to sack a lot of cats and send them to town to locate themselves. The next morning the Thomas cat was with us for breakfast. But a very handsome and glossy black cat left its owner, who had just arrived from Birmingham, Ala., via Madden, Ga., say 500 miles, announced himself, and was welcomed by our old baron cat. He stayed all summer with us, then quietly returned to his mistress in time to go back South with her. Then came the dogs, and we found their owners, till it came to a little wire terrier. I dubbed him Mickie. We "enjoyed" enough dogs, and so did not think we needed Mickie, so I gave him to a visitor in town. He kept him over night, and he (Mickie) climbed out through a pane of glass in the kitchen window and was with us for breakfast. Then I found another home for Mickie on the Flat Rock road, three miles from home. Mickie had a large yard with other dogs, and was kept in this back yard three days, and then let into the front yard. At once he came right on through town and to our home.

I was going to Brevard, twenty-two miles away, the next day, so my good wife asked me to take Mickie along and locate him. I did so. I stopped at the Heming Inn, and my friend Heming gave Mickie to the milkman before I was up next morning. But the little dog was not at home there and joined me in Brevard at about nine o'clock. I then gave him to a painter, who asked for him, and he took him into the country. The next day I came home, and at daylight next morning Mickie announced his return home with a friend of his he had picked up somewhere. Then we came to the conclusion Mickie had earned a place with us—a home—and should be one of us, but not his friend.

Two days later Mickie disappeared, and we have no idea where he went or what became of him. Where he came from or where he went to is still a mystery to us.

I suppose he got lost and came to us, finding treatment or something like he was accustomed to, and last of all again meeting his old owner. I don't know; but I do know that Mickie knew a thing or two—Mickie had intelligence.

ERNEST L. EWBANK.

Starlings.

WASHINGTON, D. C., Feb. 3.—*Editor Forest and Stream:* Noticing the request for information contained in FOREST AND STREAM for Feb. 3, regarding the present range of the European starling (*Sturnus vulgaris*) in this country, I am able to state that two individuals were obtained out of a flock about the middle of January, in the neighborhood of the Anacostia River, Washington, D. C. The specimens were brought to the United States National Museum for mounting, and will be made a part of the exhibit of the birds of the District of Columbia, now being prepared for that institution.

Referring to the ability of the starling to endure the present severe winter weather, it should be remembered that it is a very hardy species, being originally an inhabitant of Northwestern Europe and a regular summer visitor to the British Isles and Scandinavia, spending the winters further south. They often reach their European summer haunts while the snow is yet on the ground and the cold occasionally intense, yet the damage inflicted on them by such severe weather conditions always seems slight. It is, therefore, not to be anticipated that the birds will succumb or even suffer material injury from the harshness of American winters, at least on the Atlantic seaboard. What will be more interesting to observe in the future is the evolution of their migratory instinct in the new environment and the possible acquirement of subspecific characteristics under the same conditions, a somewhat parallel case being that of the starling of the Faroe Islands (*Sturnus vulgaris faroensis* Feilden), now recognized as a subspecies.

It is to be hoped, from the viewpoint of both the farmer and the ornithologist, that this extremely useful and attractive bird will meet with and deserve encouragement and protection in its new found home, thus offsetting, to some extent at least, the prejudice created against European bird immigrants by the odious example of the common house sparrow.

S. M. GRONBERGER.

ALBANY, N. Y., Feb. 5.—*Editor Forest and Stream:* Your interesting note on the starling, appended to a communication from a Maryland correspondent in your last issue, calls attention to the fact that under the "uniform" game law advocated by the Conservation Commission, this bird is mentioned and placed in the unprotected list.

Originally the section (219) headed, "Certain wild birds protected," read: "Wild birds other than the English sparrow, crow, crow-blackbird, snow-owl, great horned owl, and kingfisher and bittern shall not be taken or possessed at any time, dead or alive, etc."

After considerable discussion in which Mr. Hornaday and Mr. Pierson led, the section, it is understood, was made to read: "Wild birds other than the English sparrow, crow, Cooper's hawk, sharp-shinned hawk, crow-blackbird,

snow-owl, great horned-owl, kingfisher and starling shall not be taken, etc." There is some uncertainty about the bittern, but certain up-State members of the Legislature think it ought to be protected and will insist on it. The 1911 law as it now is excepts from protection the English sparrow, crow, hawk, crow-blackbird, snow-owl, great horned owl and kingfisher. The bittern was added by the uniform committee.

J. D. WHISH.

Sparrows and the Cold.

NEW YORK CITY, Jan. 27.—*Editor Forest and Stream:* During the recent zero weather I happened to be in Prospect Park one day and there saw a curious sight, viz.: a number of English sparrows taking a bath in the icy waters of a little stream which had not frozen as it fell over a rock. On the surrounding bushes perhaps a thousand more of the birds had gathered, and when one or more of the bathers had performed their ablutions, their places were immediately taken by others. The most curious thing was that they actually plunged into the water, and ruffling their plumage shook themselves about until they seemed to become thoroughly saturated; then they would betake themselves to the bushes and commence preening themselves. All the time a grand chirping was kept up which betokened very plainly enjoyment and content. And yet, be it remembered, the thermometer registered only a few degrees above zero.

Nothing could better illustrate the hardness of the English sparrow. It actually seems to revel in the cold. A friend of mine lately returned from Canada tells me he found it there hale and hearty with the thermometer 30 degrees below zero. It may yet be found within the arctic circle and it certain'y will if it can solve the food question. But how does it withstand the cold? A bird of the temperate zone, without the thick plumage and down of arctic birds, such as the ptarmigan or the owl, it will sit exposed all night to a zero temperature and not freeze. There is something almost supernatural about it. We certainly cannot tell how it is any more than we can tell how the Virginian curlew develops power to carry it from Labrador to Brazil (a distance of 3000 miles) in one grand flight.

FRANK MOONAN.

Pine Grosbeaks in Winter.

JACKSONVILLE, Ill., Feb. 1.—*Editor Forest and Stream:* The following paragraph is from a Traverse City, Michigan, paper of recent date:

"Bird lovers are noting with interest the visitation of a flock of pine grosbeaks within the city limits. The flock seems to consist mostly of females and young males not yet in full plumage, nevertheless strikingly beautiful in their markings of saffron yellow or red. Perched high in a tree the effect is that of a bird a little smaller than a robin, with ashy breast and black wings marked with white, but on closer scrutiny the brilliant coloring of head, cheeks, and back is visible, as the bird

feasts in the pine trees or devours the mountain ash berries. Attention may first be attracted by a short song as sweet as it is unusual, coming in the dead of winter with the thermometer below zero. These birds are protected by law, and a heavy fine imposed on those who kill them."

I remember last winter a similar notice of the appearance there of the evening grosbeak. I have seen the pine grosbeak occasionally in the mountains of Northwest Montana; never in this part of the country. The evening grosbeak has for years been of special interest to me because some twenty years ago, while in college, I found a flock of these birds in Central Indiana, and the fact was reported in various ornithological journals and for a year or so I kept receiving letters from various parts of the country regarding it. As I now remember, it was the first fully authenticated case where these birds had been noted so far south, and it really created quite a stir in the bird world. So far as I know they have never been found in Indiana since.

We have here the rose-breasted grosbeak during the summer season in rather large numbers. They nest in our trees and at a certain season one cannot be outdoors long without hearing the peculiar plaintive call note of the baby rose-breast begging for his dinner. While so common here, I never saw them in Indiana, and I have often wondered if they appeared in any part of that State.

L. O. VAUGHT.

Mr. Bell's Caribou Group.

MINNEAPOLIS, Minn., Jan. 27.—*Editor Forest and Stream:* A beautiful group of the Newfoundland caribou (*Rangifer terranova*) has recently been added to the natural history department of the Minnesota University. The group consists of four specimens; one of the males carries a magnificent pair of antlers. The surroundings represent a Newfoundland bog in the fall, the whole forming a very good representation of a typical Newfoundland landscape. The material was collected by J. F. Bell, of this city, who also furnished the money for the preparation of the group and then donated it to the University. Mr. Bell is a true sportsman who believes that what is worth killing is worth preserving. Minneapolis is fortunate indeed in having a man like Mr. Bell.

J. W. FRANZEN.

Rabbit Diseases.

POMEROY, Wash., Jan. 24.—*Editor Forest and Stream:* In the last issue of FOREST AND STREAM F. T. Webber speaks of rabbits being diseased. The rabbits are afflicted here the same way and the disease is called tuberculosis. Very few people here use them for food. The fluid Mr. Webber speaks of is filled with little white particles which look like little tiny pimples. I think myself it is very questionable food and should be forbidden to be used as such. Now, can anyone tell me why the cottontail rabbit is not afflicted with the disease. They seem to be entirely free of anything of the kind and are much used for food.

C. OBENLAND.

SEA AND RIVER FISHING

The Creek in Winter.

DELANSON, N. Y., Feb. 3.—*Editor Forest and Stream:* The Bozenkill at this season is a frozen and buried stream. Its steep, shaded banks are coated with ice and fringed with changeless juniper and hem'ock. In spots less wild, ironwoods, birches, maples and an occasional beech lean over the stream. Its many falls, propped by pillars and columns of ice, alternate with level snowbound reaches. Where the spring floods go roaring down an irregular stairway is now a slender rill covered with thick ice and snow. Viewed from some bare bluff, just as the sun is setting, the wild valley winds away eastward toward the Guilderland meadows as into an arctic night.

The most striking feature of the creek in winter is the ice formation following a January thaw when countless invisible rivulets have filled the buried conduit to the point of overflow. Everywhere underneath is a busy but muffled hum, all around a new and beautiful geology. Here is a new crust or strata, a modern bed in which the old law of crystallization is still active. It is an unstable continent; not terra firma, but aqua firma that must soon be dissolved.

During a thaw the increasing stream finds a vent at the foot of some little fall, and the accumulation of foam is spouted up through the opening, forming a low mound. When the temperature falls, the mound freezes and becomes a hollow cone through which the foam is constantly forced to the top where it spills over and is frozen until a miniature volcanic peak is built, often four or five feet high, sharper and more symmetrical than Hecla or Erebus. This creation is as fragile as the drapery of frost on winter trees. The breath of the stream frozen; it is a phenomenon not easy to describe. Imagine, if you will, a pyramid of the lightest and most delicate lace, folded and crumpled by its own insignificant weight, but with many of the characteristics of a volcano.

Late in January the weather conditions were such as to insure a fine display, but a fierce wind sprang up and most of the cones were immediately demolished. I found one fine specimen about four feet high, intact in a sheltered spot and leaning to its fall like the tower of Pisa. Thinking that we might get a photograph in spite of wind and clouds, we got out the camera and revisited the spot later in the day. An inch or two of light snow had fallen meanwhile and the cone was a complete wreck.

Later a cold wave followed a three days' thaw. We realized that this might be the last opportunity of the season and set out early, taking the camera. Almost every fall or cascade had a solitary cone. The finest group, the three shown in the photograph, was the product of one vent.

The tallest or central cone measured five feet from the ice floor.

smallest cone standing nearest the fall had increased until capped by the frost, when the foam had forced a new opening at its foot and another grew. This, too, had been capped and both had settled somewhat from their perpendicular position when the central and largest cone had sprung up between the two. When the photographs were taken, this was also frozen through. While we stood admiring the trio, the forenoon sunlight with increasing warmth slanted in between the hemlocks. The smallest cone seemed vexed with an inaudible cough, the breath of the stream came convulsively, ejecting little shreds and patches of foam that were caught up

THE GROUP OF CONES.
Photograph by Mrs. Christman.

and blown about by the gentle wind that prevailed there. Within an hour the largest of the trio had fallen and the two smaller ones did not survive till midday.

I go up the wooded glen of a winter morning with all the anticipation of an explorer in some unknown, sub-arctic land, bent on the rediscovery of these ephemeral mountains. What adventures in slippery places! What snowy vistas under the leaning hemlocks! And then a new Erebus at the foot of some little fall, or where the stream is wide with numerous channels, three or four of them, a veritable volcanic range! I took as much delight in those I found yesterday as in my first discovery.

WILL W. CHRISTMAN.

Fishing in California.

SAN FRANCISCO, Cal., Jan. 27.—*Editor Forest and Stream:* Steelhead fishing is excellent in all streams where this game fish is found. San Francisco anglers are now making week-end

trips to the Russian River, and some splendid catches are being made there. The bar at the mouth of this stream was closed until early this year when a shovel brigade opened it, and since then there have been several light showers which have sweetened the water and also enlarged the opening. No heavy rains have discolored the water, and fishing will be excellent until the stormy season commences.

Nice catches have been made in the Soquel River and in the Santa Ynez River. Trout spoons can be used to advantage there, but many anglers use bait with good success.

At the annual banquet of the San Francisco Striped Bass Club the prizes for the last season were distributed. The first prize was annexed by J. C. Wallace, who caught a 32-pound bass in Schultze Slough; second prize, Chris Johnson, for a 17-pound bass; third, W. D. Smith, a 16-pound fish, and others in order to "Doc" Wilson, Frank Messner, Charles Urfer, Fred Franzen, Emil Accret, H. von Dohlen, Alvin W. Thornton and Jas. S. Turner. About forty members of the club enjoyed the banquet.

The San Francisco and Monterey Bay Light Tackle Club has awarded prizes for the season of 1911 as follows: Largest salmon taken on a Stewart spoon, won by Paul M. Nippert with a 30-pound fish; Ellery Arms trophy, for the largest salmon taken during the season, E. S. Pomeroy, a 39-pound fish; Golcher trophy for the next largest salmon, S. Keesling, a 33-pounder; third prize, the J. F. Cooper trophy, for the third largest fish, was won with a 32-pound fish taken by E. A. Moeker, and W. W. Richards won the fourth prize with a 32-pound salmon.

GOLDEN GATE.

Preparing an Eel Skeleton.

ONE of the hardest fish skeletons to get in a complete state is that of the eel, still no collection is complete without one. The best method, says the Newark Call, to use in getting such a skeleton, is to place the eel near an ant hill, after the skin has been removed, and build a small stockade about it, just so strolling animals cannot get to the eel, and then let the ants do the rest. They will clean every particle of flesh from the bones and during the process bleach the skeleton far better than any chemical will do. Old Tom Hathaway, of the Pocono Mountains, has secured many fine specimens in this manner, one of which he sent to this city for a private collection. He learned this secret from the Indians, who always put the ants to work when they wanted some real fine shark's teeth or an exceptionally fine shark's jaw bone, with teeth intact.

Illinois Casting Club.

CHICAGO, Ill., Jan. 30.—*Editor Forest and Stream:* The Illinois Casting Club, at its January banquet and business meeting, held on the 15th, elected the following officers to serve for the ensuing year: President, O. C. Wehle; Vice-President, A. D. Whitby; Secretary-Treasurer, A. F. Swisher; Captain, E. K. Pierson; Three-Year Committeeman, D. R. Linder.

A. F. SWISHER, Secretary.

Published Weekly by the
FOREST AND STREAM PUBLISHING COMPANY,
 127 Franklin Street, New York.
 EDWARD C. LOCKE, President.
 CHARLES B. REYNOLDS, Secretary,
 S. J. GIBSON, Treasurer.

CORRESPONDENCE.

The **FOREST AND STREAM** is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Terms: \$3.00 a year; \$1.50 for six months. Single copies, 10 cents. Canadian subscriptions, \$4.00 a year; \$2.00 for six months. Foreign subscriptions, \$4.50 a year; \$2.25 for six months. Subscriptions may begin at any time. Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line (\$2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra. Special rates for back cover in two or more colors. Reading notices, 75 cents per count line. A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively. Advertisements should be received by Saturday previous to the issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, AUG. 14, 1873.

IN THE WINTER WOODS.

THERE is little in the winter woods to cheer one who is abroad to-day. Snow fell often in January, and after the increasing warmth of the sun's rays by day and the cold air by night had packed the various layers of snow, rain fell and the cold that followed sealed all the earth with an icy coat that has resisted the sun's power. The trees, warmer than the ground, threw off their icy fetters, but all of the food that furred and feathered creatures customarily find beneath the snow or on bare ground in midwinter is beyond their reach.

The old roads and the paths beside the brooks bear no marks of footprints, and to all appearances the woods are devoid of those stories without words which tell eloquently of day and night life under conditions usually found in midwinter. The squirrels are not abroad, no track of fox or 'coon or 'possum indents the surface, and he who walks breaks through the crust now and then, making noise enough to warn away all forest folk that may venture forth to seek much needed food.

Even the creek bed, the winter highway of the four-footed night prowlers, bears no imprint of any foot, and the open holes loom black and cold here and there in the glistening white blanket, and only the subdued tinkle of the water beneath tells of the feeble efforts of the brook to break its bonds. Here and there a spring defies the cold, its water tumbling down the shelves of sandstone, to form little mounds and long icicles or to trace the outlines of weed

and branch in purest white, while in the shelter of the crevices a little green peeps out where spear of grass or water weed still retains life under the constant flow.

In the fields the weeds stand out against the shimmering ice, each branch and seedpod, sealed by the sleet, looming large in the strong light.

On such a prospect the fabled groundhog gazed when he interrupted his long sleep to emerge from his burrow and survey the world, on Candlemas day; indeed, although the sun shone brightly on that day, at least in this part of the world, after the groundhog awoke, if he awoke at all, there was work to do ere he broke through the icy crust that covered everything and held the food of the other creatures that do not hibernate.

While the winter woods are very beautiful, and it is good to be abroad, particularly by night, when the moon's rays play phantastic tricks on the glassy crust, there is cold comfort in the certainty that wild creatures are hard put to eke out sustenance until the inevitable "February thaw" comes along to "break the back of winter" and give promise of the coming of another spring.

CHILDREN AS PROTECTORS.

A MOVEMENT that is on foot in Michigan has for its purpose the instruction of boys and girls in the importance of protection against forest fires and other waste. The Michigan Forest Scouts is the title of the organization, the companies of which will in emergencies become auxiliary fire wardens and be subject to call from the State game, fish and forestry warden. Youths ranging in age from seven to eighteen years may become members, and the older boys will receive pay for active work, if called out, while awards will be made to those showing skill in contests that will be open to all school children. No assessments will be levied for uniforms or equipment.

The department of public instruction will assist in the work planned, and scout companies will be formed in about a dozen of the principal towns in Michigan. Through the school children it is expected that the economic importance of the protection of game and fish, of reforestation, of the prevention of fires and other waste in the woods and of the necessity for keeping water-courses clean will be brought home to all of the people.

The Boy Scout movement has spread at a remarkable rate within a short time, and even if the activities of the Scouts are confined to little jaunts in the open, much good is being done for the youth of the land, too many of whom would otherwise know none of the joys that were the every-day portion of the country boy of the seventies. Much depends upon their leaders and instructors, but when those chosen are well versed in woodcraft and all the simple knowledge that makes rambles outdoors of real benefit to human beings, and they are at the same time capable of disseminating this information in times and places when it will be absorbed by young minds, then the work is worth while.

It is natural for boys to be destructive—to start woods fires, stone animals, defile natural objects—but once the harm of these things is shown them in a way they may understand, they are equally quick to absorb the lesson, and no

more staunch advocates of the right will be found than among such boys.

The annual observance of Arbor day has had an effect that could not have been hoped for at first. To actually see a little sprout that he has planted with his own hands growing into a sturdy tree is a marvelous thing to a child. It is but a step from this to reforestation, and the protection of wild life follows naturally. The boy's eyes are sharp, he is quick to act, and once he is enlisted in the work, he will do far more good than many of his elders.

FOUR canoeists crossed the Hudson River recently while considerable quantities of ice were drifting with the ebb tide, and finding that the shore ice prevented a safe landing, accepted the assistance of persons ashore who employed a rope in effecting the "thrilling rescue" about which the daily press printed columns next day. Along the beaches under the Palisades a few hardy canoeists have camped almost every weekend during the winter, and whenever the absence of floating ice has permitted, they have made their way from the city to their favorite camp-sites in their canoes; otherwise they go afoot, equipped with a small outfit in a pack. If the temperature is too low even for them, they make Sunday pilgrimages to the same place, and one of the regulars at the midday lunch and camp-fire is Judge Franklin W. Hopkins, a member of the Palisades Interstate Park Commission and an earnest worker in the preservation of this great park.

THE receipts of the New York Conservation Commission for January were: Fines and penalties, \$2,218.20; net licenses, \$1,197.12; trespass, \$580; fire rebates, \$285.63; tree orders, \$50.75; top lopping, \$25; breeders' licenses, \$25; refunds on pay roll, \$39.45; Adirondack and Catskill maps, \$19; telephone rentals, \$6; badges, \$2.50; miscellaneous, \$55.79; total, \$4,314.44; hunting licenses, \$6,469.26; importation of foreign game, \$2,056. Grand total receipts, \$12,480.24. The receipts for the month of December were: Miscellaneous accounts, \$7,670.66; hunting licenses, \$26,172.90; importation fund, \$1,315.40; total, \$35,158.96.

H. L. CURTIS, of Paonia, Colo., who made the photograph of the beaver house and pond reproduced on the title page of this issue, says that in 1879 he was in the country where beavers were being trapped, but that last autumn, during a sojourn in Gunnison county, he saw more beaver sign than he did thirty years ago. The house, he says, was one of the best he had ever examined, and the pond one of the largest. Protection is producing results, so far as beavers are concerned.

THE iron and steel revision bill now before Congress provides for a 35 per cent. duty on all breechloading guns and rifles, and on pistols of all kinds. Muskets and muzzleloading guns and rifles are assessed at 15 per cent.; fishhooks at 10 per cent. and fishing rods, reels and tackle, 30 per cent.

THE New Jersey Fish and Game Commission has recalled all of the deputy fish and game warden commissions, and will reappoint only those persons whose activities warrant it.

YACHTING

Ticks from the Ship's Clock.

THE annual banquet of Maryland Motor Boat Club was held Feb. 7. Many important matters were discussed and arranged. The long distance race became an assured fact under direction of the following committee: James C. Callis (chairman), Commodore J. Cookman Boyd, President Lee S. Meyer, Robert Levering, William F. Turner, Frederick T. Dorton and Dr. Robert W. Price. The date set for the event is June 29.

The annual meeting of Huguenot Y. C., of New Rochelle, will be held Feb. 12 at Hotel Astor. The annual dinner will be held Feb. 17. The Nominating Committee submits the following ticket: Commodore, G. W. Kease; Vice-Commodore, T. I. Coe; Rear-Commodore, H. M. Williams; Secretary, H. M. Myrick; Treasurer, G. C. Allen; Trustees—E. A. Sanford and E. W. King.

Lawley has completed ten of one-design, 17-foot class boats for members of Eastern Y. C. Seven others are well under way.

Swasey, Raymond & Page have orders for a 20-foot hydroplane for the same owners as are having built the 40-foot hydroplane at Lawley's. The small boat will be of the monoplane type and will have 200-horsepower engines of a French make. The same firm is designing two 125-foot by 20-foot freighters, which will have a power plant of 500-horsepower, and six 50-foot boats, which will have 50-horsepower each.

Mavourneen, the Class P boat famous in Massachusetts Bay a couple of years ago, when owned by George Lee and the boat that carried off the honors on the Great Lakes last season under the command of her new owner, E. M. Mills, of the Chicago Y. C., will be used as a trial boat in the races to select the defender of the new Yacht Racing Union of the Great Lakes trophy.

New Rochelle Y. C.

THEY ate, drank and were merry, and to-day (the day after) they are alive, although some of the salts are in the throes of convalescence, while others are in that period of uncertainty when the proposition of Patrick Henry, now a by-word among suffragettes, means one and the same thing—release from a throat like Sahara and a head so sensitive that the dropping of a pin on a brussels carpet sounds like a crowbar falling from the roof of the Hotel Manhattan on a cobbled street. It was a merry gathering of twenty fathoms of yachtsmen, was the banquet following the annual election of officers of the New Rochelle Y. C. on Feb. 3, at the Hotel Manhattan. Everybody who was anybody in New Rochelle yachtdom, was there, including the genial Mayor, F. H. Waldorf, of New Rochelle, and Alderman Harry Scott. The service was so good as to come under the head of civil service, but when it came to the election of Commodore, there was no competition, as Commodore E. C. Myrick had served so well that no one wanted to try to fill his oilers. Official yacht club "banquet" measurer was strictly in the competitive class, and scores took the examination, which was not conducted by rule of thumb but rather by rule of about "three fingers." The position was not filled permanently—some of the applicants were, however.

The financial statement showed the club to be in excellent circumstances, showing expenditures aggregating \$2,000 for betterments to club property and the retirement of bonds, after which there is a cash balance on hand of \$3,195. The statement also showed net assets aggregating \$13,423, and increase of about \$1,000 over the previous annual statement.

Officers elected were: Commodore, E. C. Myrick; Vice-Commodore, W. S. Creevey; Rear-Commodore, J. A. Mahlstedt; Secretary, C. A. Marsland; Treasurer, H. M. Lloyd; Measurer, R. M. Haddock; Trustees—H. H. Moulton, W. L. Van de Wiele and G. A. Fisher; Regatta Committee—G. P. Granbery, A. E. Eldridge and H. L. Stone; Law Committee—J. F. Lambden and R. C. Ten Eyck; Art Committee—H. Doscher and W. J. H. Ehler; Entertainment Committee—H. A. Bliven and E. R. Leaycraft; Nominating Committee—E. B. Wright, W. King, Jr., and H. S. Hart.

Commodore Myrick thanked the Board of Trustees and the members generally for their loyal support, with particular commendation for the fine efforts of the House Committee. Ex-Commodore F. H. Waldorf, who is now Mayor of the city of New Rochelle, announced that he had interviewed Mr. C. Oliver Iselin with the result that Mr. Iselin had graciously and generously agreed to sell to the club Harrison Island, which the club now occupies under lease. Harrison Island is conservatively valued at from \$40,000 to \$50,000, and Mr. Iselin, who is a member of the club, in offering it to the club at \$20,000, payable on easy terms, is virtually presenting the club with \$20,000 cash. There is no doubt that Mr. Iselin's offer will be accepted within the next three months, and the New Rochelle Y. C. will then own its home and will thus be firmly established as one of the most active, progressive, popular and successful in the Eastern States. John F. Lambden made a brief speech urging the purchase and pointing out the generosity of Mr. Iselin. Mr. Warren Sheppard presented the club with a beautiful painting of Echo Bay, which is the club's anchorage.

The First Steam Yacht.

A FEW days ago, a prominent merchant of New Orleans wrote to the Secretary of War, asking that he be granted the privilege of taking the first steam yacht through the Panama Canal.

This request of the merchant yachtsman brings to mind the fact that William H. Aspinwall, of New York, who built the Panama Railroad in 1850, and after whom the City of Aspinwall (now Colon) at the Atlantic entrance of the Panama Canal was named, was the first man in America to own and operate a steam yacht, and it came about somewhat as follows:

One day, some sixty years ago, William H. Aspinwall, then President of the Pacific Mail Steamship Company, was seated in his office, when a card was handed to him from a Frenchman who wished to see him on "imperative" business. The Frenchman was shown into the office of the president of the steamship company, and proved to be an inventor with a new kind of propelling-wheel, which the French inventor thought would prove to be the greatest thing in the universe, and his "imperative" business was to sell it to President Aspinwall at once and for cash down. As a rule, Mr. Aspinwall didn't take very much stock in inventors. He had met many of them and lost both time and money on their inventions, but he rather liked the idea of this propelling-wheel and determined to give it a tryout, so he made a bargain with the inventor and forthwith made a boat to hold the new fangled wheel, a single

paddle wheel in the center of the boat, which was thus a "center-wheel" boat instead of a "centerboard." When the Frenchman saw this boat with his wheel in it launched, and, as he thought, ready to steam away, he was for about several hours wild with joy, then he was wilder yet with chagrin and rage, for the center wheel was a failure. Mr. Aspinwall was just a trifle angry with himself for having been "made the goat," but he was a philosopher, as well as a rich man, and made the most possible use of the failure by converting the little center-wheel boat into a side-wheeler, which, as she was only sixty feet long, was too small to be called a steamboat, and must, therefore, be considered as a steam yacht—the first steam yacht which ever graced the waters of New York Bay or any other waters of America.

It was a steam yacht, properly speaking, not only from the point of size, but of use, for having no use for it, Mr. Aspinwall employed it solely to cruise about on pleasure trips and finally got into the habit of sailing in her between New York city and his country home on Staten Island, being thus the first American to have his own private yacht, such as it was, on the waters of America—a common practice today with the wealthy of America and other countries. This first steam yacht was called the Fire Fly, though she was not much of a flyer, her best pace being less than nine miles an hour.

When the war of the Rebellion broke out, this Fire Fly was sold by Mr. Aspinwall to Uncle Sam, and figured in various engagements in the Great Civil War. Mr. Aspinwall, though forced to come into possession of the first steam yacht, can scarcely be said to have been a steam yachtsman, but to his son, John Aspinwall, steam yachting must ever be indebted for his personal skill, labor and contribution. John Aspinwall was a studious youth, and became a clergyman, but he was also a great believer in muscular Christianity and outdoor sports and made a great study of steam yachting. John Aspinwall built his first steam yacht from plans drawn by himself, when he was only seventeen years old. It was fourteen feet long, and was propelled by an engine of ten alcohol lamp power, and as the senior Aspinwall was wont to say, "the spirits for the lamps and 'other' purposes were taken from a demijohn in his winecellar," for John's yacht capsized in the Kill von Kull and all hands had to swim ashore. Since that time a great many demijohns of alcohol have been consumed on board steam yachts and some of it for motive power. John built several small yachts, each a slight improvement over its predecessor, but it was not until later years that he, then the Rev. John, built what might be called a flyer. She was the Julia and was 40 feet over all, side-wheeler and very round bottomed. On her first trip she was struck by a large sailing ship in Hell Gate and went down in short order. Nothing daunted, however, the young parson built another yacht which he called the Julia II. Manlike, the parson liked the second Julia better than the first, completely forgetting unfortunate namesake and predecessor. Then came the steam yacht called Surprise, longer than Julia II., which was the first yacht that ever had a regular "pilot house" of her own. This, at the time, was regarded as quite a novel and swell arrangement. Then Runaway, 80 feet long, which was the first flush-deck steam yacht ever seen in New York Harbor, whose speed was 12 miles an hour. He next built Arrow, which, at the time, some forty years ago, was the fastest steam yacht in the vicinity of New York, making nearly 15 miles an hour, and thus steam yachting spread on—the Rev. John Aspinwall meanwhile spreading his experience with it.

After the Aspinwalls had started steam yachting, Jacob Lorillard took it up and materially aided the art of yacht construction by having several very fine steam yachts built for himself. And so it has gone on till the present day, with its magnificent floating palaces, and it might be a fitting tribute to the man who made Panama possible by the railroad and gave so much to steam yachting, to allow the merchant of New Orleans to take the first steam yacht through the Panama Canal.

Eustis B. C.

WASHINGTON'S BIRTHDAY will bring on a big aquatic day at Eustis, Florida. The yacht club and Board of Trade have combined to make the regatta the big annual affair of the South. At 9 A. M. will come the yacht parade, followed by yacht, motor boat and small boat races. Invitations have been issued to yacht owners in Leesburg, Tavares, Mt. Dora, Lane Park, Lake Harris, Lake Griffin, in fact everyone living near

enough to get there has been welcomed. The club officers are: George Scott, Commodore; Joseph Wiggins, Vice-Commodore; Charles Isted, Secretary.

All entries should be sent the secretary not later than Feb. 17.

Down the Florida Coast a number of prominent northern yachtsmen have arrived at Lake Worth. Of these several went on to Key West, among them Gray Duck, Capt. James King Clarke, of Philadelphia, and Captiva, Capt. E.

Motor-Driven Ice Boats.

THE accompanying pictures show two unique motor ice boats that have made speed records. They are distinctive in type to the extent that in the case of the Greene boat the cause precedes the effect, while in the Roe scooter the effect precedes the cause. The Greene flyer was built by Phillipse Greene, an enthusiastic amateur yachtsman at Shrewsbury, N. J. Weather conditions have been so bad that he has had only one opportunity to speed her up. In that trial he drove four miles in 3 minutes and 50 seconds on a straightaway course. The flyer dimensions are: Length 8 feet, beam 5 feet.

Her keel is cut from spruce and weighs 16 pounds. Total weight of boat, 200 pounds. She is drawn by a 4-foot 6-inch propeller, driven 800 turns a minute by a 12-horsepower Buchet, air-cooled motor.

Mr. Greene is putting on a 5-foot propeller, with which he thinks he can get at least one-third more speed.

The motor scooter, built by Nat Roe for service on Great South Bay, has made 90 miles an hour, gone over 100 feet of open water and coasted over a mile after power was shut off. She is 20 feet long, 4 feet wide, driven by a 35-horsepower Fiat motor. She is propelled by a spiked wheel, fitted in the centerboard trunk.

THE GREENE FLYER ON SHREWSBURY RIVER.

NAT ROE'S MOTOR SCOOTER ON GREAT SOUTH BAY.

Mapes, of Minneapolis. Captiva was formerly Ruffhouse, which Payne Whitney had down there last season. Mr. Mapes had on board with him a party of friends, including L. S. Gillett, C. P. Bratnober, Dr. J. Matthews, and John Birkholtz.

Mr. and Mrs. Lee Fisher, of the Cleveland Y. C., arrived in their yacht June after a 3000-mile trip through the Great Lakes, the Erie Canal and Hudson River, and the inland waterways south from there.

One Measurer for all Clubs.

THE Eastern Y. C. regatta committee sent letters last week to the yacht clubs in the vicinity of Boston, suggesting that each appoint Harold A. Everett as its measurer. The letters said the Eastern Y. C., Corinthian Y. C. of Marblehead, Boston Y. C. and the Yacht Racing Association intended to appoint him, and that such an appointment would be of benefit to yachting in Massachusetts Bay.

Mr. Everett is assistant professor of naval

Enjoy the Freedom of the Big Outdoors

THERE are no barriers to the complete enjoyment of the woods and lakes and rivers if you own a good canoe. There is no flare back to complete enjoyment if your canoe is an

"Old Town Canoe"

The "Old Town Canoe" is the modern perfection of the red man's birch bark. It is true in line, true in balance, light, strong and durably constructed. Properly cared for, it never warps, bulges, splits or leaks.

It is the choice of experienced campers, hunters and professional guides. It is known the world over.

Wherever canoes are much used the owners of Old Town Canoes are the envy of the others. We have agents everywhere. 2000 canoes in our storehouses insure prompt deliveries.

Our illustrated catalog, full of canoe pictures and canoe facts, sent free for a postal.

OLD TOWN CANOE CO. 1657 Middle St., Old Town, Me., U. S. A.

ARCTIC HUNTING

For charter, ship fully equipped, specially built for ice work, for one or more months' cruise in Greenland or Spitzbergen and Franz Josef's Land waters, will accommodate party of 5 to 15. Polar bear, reindeer, fox, seal, walrus, Arctic birds, fishing.

YACHT and BOAT SAILING

By the late Dixon Kemp

Tenth edition. Published 1904. We have a copy in fairly good condition, published at \$12, which we will sell for \$9.00.

FOREST AND STREAM PUBLISHING CO.

architecture and marine engineering at Massachusetts Institute of Technology, and will be competent to measure yachts either under the universal rule, or under any other rule a club may desire. There will be no expense to any club directly, he will be paid by the owners of boats measured, as is the present method of remuneration for measurers, and it is intended that the present fees shall be maintained. Some adjustment of fees may be necessary, because the present fees are not all alike in different clubs for different sizes of boats.

The move of the Eastern Y. C. is the first attempt made to induce Massachusetts Bay clubs to take concerted action.

Yacht Sales and Charters.

THERE has been considerable activity recently in the yachting world, as shown by the following sales and charters that have been made by Messrs. Tams, Lemoine & Crane:

The 90-foot houseboat Ednada III. was chartered to Sherwood Aldrich for a cruise in Chesapeake Bay. This boat, one of the modern houseboats, is equipped with two 60-horsepower Craig motors. She is owned by Mr. Geo. C. Thomas, Jr., of Philadelphia.

Mr. W. Earl Dodge chartered the same boat for a cruise in Florida waters at the completion of Mr. Aldrich's charter. She will be used as a tender to the racing hydroplane which Messrs. Tams, Lemoine & Crane have designed and just finished building for Mr. Dodge. This boat is to race in Florida this winter.

The twin-screw houseboat Lanai, 80 feet, equipped with two 25-horsepower Craig motors, has just been sold by Tams, Lemoine & Crane to Commodore A. C. James, and is now on her way south. Mr. James intends cruising in Florida waters with the boat. Numerous alterations were made in her under Tam, Lemoine & Crane's supervision.

The steam auxiliary brigantine Aloha has been sold by Commodore James to a syndicate of prominent yachtsmen, and is now undergoing extensive alterations, under the same firm's supervision.

The 110-foot motor yacht Heather II. has been chartered for a cruise in West Indian waters to Mr. McCutcheon, of Chicago. She will leave Miami in a few days.

Mr. August Belmont, Jr., has sold his run-about launch to Mr. C. E. Varney, of Indianapolis, Ind., and she has recently been shipped to him.

The 110-foot cruising motor yacht Cristina was sold by Mr. F. C. Fletcher to Mr. J. D. McKee, of Pittsburgh. Cristina is one of the best known of the larger motor cruisers. She is equipped with two 125-horsepower Standard motors. She is now at Norfolk and will proceed in a few days for an extended cruise on the east and west coast of Florida. The boat has been renamed Esperanza.

The 75-foot twin-screw motor yacht Akabordi has been sold by Mrs. John Nicholas Brown to Commodore Wm. H. Childs. She has been renamed Joyful. She will be the flagship of the Indian Harbor Y. C. next summer.

The 125-foot houseboat Nirodha was sold for Mr. E. Childs to Mr. Hugh D. Auchincloss. This boat was extensively altered for Mr. Auchincloss and has recently been delivered to him, alterations having been done under Messrs. Tams, Lemoine & Crane's supervision. She is now cruising in Florida waters.

Messrs. Tams, Lemoine & Crane's designing department is exceptionally busy for this time of the year. Most of their activity is confined to the larger motor yachts and to the racing hydroplanes. There seems to be an unusual demand for the latter. They have several fast boats under construction, the details of which they at the moment are not prepared to give out. Good racing for next season, however, is already an assured thing.

The advent of the new 20-foot class, which are being built from Messrs. Tam, Lemoine & Crane's plans, and are being called Dixie Juniors, are already exciting a good deal of comment among motor boat racing enthusiasts. These boats are guaranteed 35 miles an hour.

Club Elections.

WEST HUDSON Y. C.

The following officers were elected by the West Hudson Y. C.: Commodore, David Gillow; Vice-Commodore, T. Norris McNish; Financial Secretary, S. T. Hard; Recording Secretary, Clarence W. Dukes; Treasurer, Frederick Clark; Sergeant-at-Arms, Ely Rue; Measurer, Ralph S. Young; Fleet Captain, John Griffin; Board of Directors, John Williams, George Tait, James P. Hamilton, Jr., William Rue.

SYRACUSE ICE Y. C.

The annual meeting of the Syracuse Ice Yacht and Motor Boat Club was held Jan. 23 and officers for the ensuing year were elected: Commodore, Harry Morton; Vice-Commodore,

James A. Ten Eyck; Financial Secretary, Frank Kent; Secretary-Treasurer, Jacob Hecker; Measurers, Cornelius Dorr and John Hecker.

Harry Morton had his Columbia II. out and she won much praise. When the other boats had to reef, Morton's craft, with its great stability arrangement, which works on rollers, was able to carry full sail. The stabilizing arrangement is the invention of Dr. William Stanbrough, of New York.

COLONIAL Y. C.

Most important at the meeting of Colonial Y. C., held early this week, was the decision to build a big extension on the club house at 140th street and Riverside Drive. The following officers were elected for ensuing year: Commodore, Franklin P. Pratt; Vice-Commodore, Herbert M. Betts; Rear-Commodore, Dr. N. J.

For the Convenience of the Readers of Forest and Stream

who may wish to subscribe for other periodicals, with or without Forest and Stream, we offer the following combination rates on two or more periodicals.

By following directions you can make your own selection and fix the proper remittance price. DIRECTIONS: From the list below select your magazines, add their class numbers and multiply by five—the result is the cost in dollars and cents.

*For instance—Class number: FOREST AND STREAM, 47
 “ “ EVERYBODY'S - - - 23
 “ “ WORLD'S WORK - - - 37* **Cost. 107 x 5 = \$5.35**

☞ Quotations gladly supplied on magazines not included in this list.

**CANADIAN POSTAGE 50 CENTS EXTRA ON EACH MAGAZINE, FOREIGN, \$1.00
 CANADIAN POSTAGE ON FOREST AND STREAM, \$1.00 EXTRA; FOREIGN, \$1.50**

Baker; Recording Secretary, Edward L. Mannken; Financial Secretary, Charles F. Stone; Treasurer, Fred Gerst; Directors—Charles M. Milliker, James A. Donegan, M. H. Dyckman, Sigmund Cohn and C. P. Holland.

WINTHROP Y. C.

At the annual meeting of the Winthrop Y. C. the following officers were elected: Commodore, D. M. Wisley; Vice-Commodore, C. A. Blazo; Secretary, C. G. Bird; Treasurer, J. J. Devereux; Measurer, F. H. Byrne; Directors—C. A. Rouillard, Eugene Cronin and L. B. Crandon; Regatta Committee—W. A. Milton, W. A. Garratt, H. L. Pease, J. E. Farrell and Severt Stromberg; Membership Committee—G. E. Doyt, J. P. Wakefield, F. C. Winters, F. F. Flint, H. C. Lazell, C. H. Foster, J. B. Meisel, R. S. Johnson and L. A. Christopher.

KNICKERBOCKER Y. C.

The following officers, for the season of 1912, were nominated at the regular December meeting of the club, and the election will take place at the annual meeting which will be Wednesday, Feb. 21, 1912: Commodore, W. E. Spencer, M.D.; Vice-Commodore, W. F. Duffield; Rear-Commodore, W. D. Griscom; Treasurer, G. H. Cooper; Secretary, J. O. Sinkinson; Measurer, G. J. Stelz; Fleet Surgeon, W. H. Peer, M.D.; Board of Directors—Rodman Sands, Harry Stephenson, W. B. Beam, Alfred Schoen, F. L. Kraemer.

Motor Boating

Tireless III. Going to Monaco.

THE motor boat Tireless III., one of the British team last summer which came to America to take home the British International trophy, is to be sent by her owner, F. Gordon Pratt, to the Monaco races. Mr. Pratt will be unable to handle his boat himself, so A. G. Fentiman, who sailed Daimler III. for Lord Howard de Walden when she raced for the trophy, will represent Mr. Pratt.

Canoeing

Atlantic Division.

BORDENTOWN, N. J., Jan. 27.—*Editor Forest and Stream:* The annual dinner of the Atlantic Division will be held in Trenton, N. J., at the Hotel Windsor on Saturday evening, Feb. 17, at 7 o'clock. Members who fail to be present will surely regret it.

Trains leave Trenton for New York at 11:20 P. M.; for Philadelphia, 11:48 P. M.; for Camden, 11:20 P. M.

ELMER B. AYRES,
Chairman.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—Edwin H. Parker, 529 W. 135th street, New York, N. Y., by Payne L. Kretzmer; G. Fallonsby J. Neumann, W. 206th street and Bolton road, New York, N. Y., by Francis C. Buchenberger; Harold Voorhis, 89 Shrewsbury avenue, Red Bank, N. J., by Everett V. Walker.

MEMBERS RESIGNED.

Atlantic Division.—6129, J. F. Werner, New York, N. Y.; 5466, Benjamin Jandorf, New York, N. Y.

Eastern Division.—6243, J. Merle Whitney, W. Medford, Mass.; 6247, Fred A. Riess, Cranston, R. I.; 6004, Oliver W. Branch, Manchester, N. H.; 4491, A. A. Ridgeway, Boston, Mass.; 4490, R. B. Parkhurst, Boxford, Mass.; 6240, J. Orton Buck, Bridgeport, Conn.

TRAP SHOOTING

If you want your shoot to be announced here send a notice like the following:

June 25-28.—Eugene, Ore.—Pacific Indians. F. C. Riehl, Sec'y.

June 27-28.—Spencer (Ia.) G. C. G. O. Round, Sec'y.

July 9-11.—Bradford, Pa.—The Interstate Association's Seventh Eastern Handicap tournament, under the auspices of the Bradford G. C.; \$1,000 added money. The winner of first place in the Eastern Handicap is guaranteed \$250 in cash and a trophy. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.

July 14-15.—Fargo, N. D.—North Dakota State tournament, under the auspices of the Gate City G. C. Albert E. Rose, Sec'y.

Aug. 7-8.—Lindsay, (Okla.) G. C. Robt. May, Sec'y.

Aug. 14-16.—Kansas City, Mo.—The Interstate Association's Seventh Western Handicap tournament, under the auspices of the Kansas City G. C.; \$1,000 added money. The winner of first place in the Western Handicap is guaranteed \$250 in cash and a trophy. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.

Sept. 2.—Ogdensburg (N. Y.) S. A. J. M. Morley, Sec.

Sept. 10-13.—Denver, Colo.—Rocky Mountain Interstate Sportsmen's Association; \$5,000 added money. Ambrose E. McKenzie, Mgr.

DRIVERS AND TWISTERS.

There will be a live bird shoot at Harriburg, Pa., on Feb. 22, 1912. In 1910 Mr. Lee Wertz won first honors at this tournament. Last year he did not participate. The grounds will be remodeled, and other alterations to beautify and render better service shall be accomplished.

Secretary Murdoch, of Meadow Springs Gun Club, pays a handsome tribute to S. S. White Gun Club. He says: "This is a great club, and one hardly likely to be beaten this season." In the shoot Feb. 3, Meadow Springs had twenty men with scores of 40 or better, but were handily trimmed by S. S. White outfit.

Any shooter interested in keeping his individual score should send for the card just issued by J. Stevens Arms and Tool Company, Chicopee Falls, Mass. The cards are on good stock, printed in two colors, allowing for twelve regular and three added events, with columns for targets shot at, broken, entrant, receipts and addenda. This enterprising firm will send a supply free to any gun club requesting them. It is a decidedly useful proposition.

Secretary Young writes: "On Washington's Birthday, Feb. 22, the Jersey City Gun Club is going to have a shoot for prizes, starting at 1 P. M., and extends a cordial invitation to the shooters in this vicinity to join us and spend a pleasant afternoon celebrating. On St. Patrick's day, March 17, the club will hold an all-day shoot, as has been its custom for several years. An attractive program is being arranged, and will be sent out in plenty of time to serve as a reminder of the proper place to spend St. Patrick's day."

At the annual meeting of the Hercules Gun Club, Temple, Pa., the following officers were elected for the ensuing year: President, N. L. Rothermel; Vice-President, Lee Wertz; Secretary, A. K. Ludwig; Treasurer, W. B. Brickner; Field Captain, J. W. Rahn; Trustees: Geo. B. Bortz and W. S. Kenny. The club will hold a tournament on March 23. Programs will be distributed in due season. The annual registered shoot will be held May 4, 1912, under the management of A. K. Ludwig and A. A. Fink.

February will be a big month for the New Rochelle Yacht Club gunners. Com. E. C. Myrick has offered a prize for 25 targets each week. Field Capt. G. P. Granbery offers a similar prize, 25 targets each week, and two extra "legs" to be shot for on Lincoln's and Washington's birthdays. The regular monthly gun club prize will be shot for at 25 targets each week. There will also be a special cup for each of Washington's and Lincoln's birthdays, making five prizes in all for competition during the month, in addition to which there will be extra events on both holidays. The Harlem Yacht Club has been invited to send a team to shoot on Lincoln's Birthday, and the Siwanoy Country Club of Mount Vernon, has been invited to send a team to compete on Feb. 18. All this will keep the gunners busy during the month, and will no doubt attract many spectators.

Mr. Ed. H. Taylor, Secretary, writes: "Will you kindly change your coming events for the West Virginia State shoot to read May 15-16. We have decided three days too long a grind for the average shooter. We will, however, have an attractive event on the 14th if any shooters wish to practice. This of course will be a registered shoot, and outside of the money given by the

Interstate Association, we will add in average money and prizes not less than \$300 for the two days. At our two days' shoot last fall we had a nice lot of average money, and with say \$200 to add to the averages outside of the surplus, we should be able to give some fine-sized purses. We will soon be at our program, and we hope to be able to guarantee the high gun for two days not less than \$60.00. We are going to have a number of averages for both high and low guns. If interested, we will be glad to answer any questions."

BEECROFT.

Sunny South Handicap.

HOUSTON, Tex., Jan. 27.—It's over and it was a success. We began shooting Jan. 22 and ended to-day. No man could ask for better weather conditions, nor a happier attendance. W. H. France was the big noise. He won the Sunny South Handicap with 95 out of 100 after a shoot-off with C. L. Parsons and L. A. Marshall. In the shoot-off, France broke 25 straight, while Parsons got 23 and Marshall 22.

In the team trophy event France and Gardiner won with 49 out of 50. Graham and McDermott loped along, one behind, with Dixon and Parson third, with 47. The Chronicle cup fell to the 7/8s of J. P. Graham with 93 out of 100.

Birmingham Gun Club.

BIRMINGHAM, Ala., Feb. 2.—The wind blew cold at the shooting grounds of the Birmingham Gun Club to-day. Ten shooters faced the traps and made some good scores, considering the bad conditions. Gentry Hillman made a straight run of 48 and won high percentage for the day. P. B. Plummer (professional) was with us and made good score under the conditions. Programs will be out in a short time for our three-day registered shoot in April.

Palefaces—U. S. Machinery.

BEVERLY, Mass., Feb. 3.—At the United Shoe Machinery A. A. Gun Club traps this afternoon the Paleface Gun Club members beat the United Shoe team in team shoot. The Paleface team of ten men averaged 83, while the Beverly shooters had an average of 76, having thirteen men on their team. Frank Hilliard, of the Paleface team, was high gun, getting 93 out of 100. Dickey was top man for his team with 88. To the winners of the match were presented cups, and the Palefaces carried home with them ten trophies. The scores:

Palefaces.	United Shoe.
Frank	Dickey
Marden	H H Eaton
Burnes	Hurd
Osborn	Goddu
Clark	W A Foster
Williams	Winslow, Jr.
Snow	Spencer
Blinn	Whidden

Boston A. A.—Portland G. C.

BOSTON, Mass., Feb. 3.—The Portland, Me. Gun Club defeated the B. A. A. Gun Club by 36 birds to-day at the Riverside traps in the first half of their interclub five-man team match. The wind was strong and puffy. The second half of the match will be shot at Portland in two weeks.

The regular weekly handicap shoot of the B. A. A. Club was held after the team match, and W. B. Farmer, with a handicap of 15, was high gun with a total of 94. The scores in the team match follow:

Portland.	B. A. A.
S B Adams	T C Adams
E A Randall	J E Lynch
A L Dow	C B Tucker
C S Randall	G H Steele
W N Taylor	S A Ellis

The scores in the handicap event were:

W B Farmer	15 94	F Whitney	15 79
*W G Hill	0 88	*H Tuttle	0 78
M Ballou	8 85	C Compton	5 75
W C Brooks	12 84	*F W Gray	0 71

AT HOUSTON, TEXAS.

Southern Amateur Championship, Houston Chronicle Trophy.

Won by J. R. Graham, 93 ex 100, shooting *Remington-UMC* Steel Lined Shells and a *Remington-UMC* Pump Gun.

Remington-UMC — the perfect shooting combination.

REMINGTON ARMS — UNION METALLIC CARTRIDGE CO. - 299 Broadway, New York, N. Y.

New York Athletic Club.

PELHAM MANOR, N. Y., Feb. 3.—Ralph Spotts was honor man at Travers Island to-day, getting 94 out of 100 targets. Seventeen gunners were out. The summaries:

Table with 3 columns: Name, Score, and Handicap. Includes names like B M Higginson, D W Lembeck, R L Spotts, etc.

Table with 3 columns: Name, Score, and Handicap. Includes names like Lenane trophy, D J McMahon, T Lenane, Jr., etc.

Table with 3 columns: Name, Score, and Handicap. Includes names like President's cup, C W Billings, G M Thompson, etc.

Table with 3 columns: Name, Score, and Handicap. Includes names like Lembeck trophy, T Lenane, Jr., O C Grinnell, etc.

Table with 4 columns: Name, Yds., T'l., and Score. Includes names like J W Hessian, F Hall, D A Hobart, etc.

Crescent Athletic Club.

BAY RIDGE, N. Y., Feb. 3.—J. E. Murray topped the field here to-day with 91 out of 100. The scores:

Table with 3 columns: Name, Score, and Handicap. Includes names like Take-home trophy, J F Murray, I P Fairchild, etc.

Table with 3 columns: Name, Score, and Handicap. Includes names like February cup, G E Stephenson, Jr., L C Hopkins, etc.

Table with 3 columns: Name, Score, and Handicap. Includes names like Stake trophy, J E Murray, J P Fairchild, etc.

Table with 3 columns: Name, Score, and Handicap. Includes names like F. B. Stephenson trophy, J E Murray, W W Pell, etc.

Table with 3 columns: Name, Score, and Handicap. Includes names like Team shoot and trophy match, J G Murray, W W Pell, etc.

Table with 3 columns: Name, Score, and Handicap. Includes names like Team shoot, W W Pell, J E Murray, etc.

Table with 3 columns: Name, Score, and Handicap. Includes names like Sweepstakes match, G E Stephenson, Jr., J F James, etc.

Jersey City Gun Club.

JERSEY CITY, N. J., Feb. 3.—Fourteen shooters were out at the regular shoot of the Jersey City Gun Club on Feb. 3 and enjoyed a fine afternoon's sport, as the weather was the best we have had since December.

distance handicap, breaking 21 from the 21yds. mark. The scores follow:

Table with 4 columns: Name, Shot at, Broke, and Score. Includes names like Engle, Dalton, Shannon, etc.

Sunbury-Selinsgrove Gun Club.

At the regular weekly practice shoot on Feb. 1, the shooters made some fine scores. Hartman and Sked had a struggle all the way through for high honors, Hartman finally winning out by one target.

Table with 4 columns: Name, Shot at, Broke, and Score. Includes names like Sked, Hartman, Howell, etc.

Independent Gun Club.

MULBERRY GROVE, Ill., Jan. 31.—In an Independent trapshooting event, which took place to-day under extremely severe weather conditions, ten new beginners endeavored to take the kinks out of the flying clay saucers, but fell short of making respectable scores.

Table with 4 columns: Name, Score, and Handicap. Includes names like Fred Martin, Bill Peterson, E E Page, etc.

Speedway Gun Club.

NEWARK, N. J., Jan. 31.—Louis Colquitt and John Geiger were the individual stars at the regular weekly shoot of the Speedway Gun Club, held yesterday afternoon over the club's traps.

Table with 4 columns: Name, Shot at, Broke, and Score. Includes names like B M Shanley, Jr., John Rey, Geo A Ohl, Jr., etc.

Plattsville Gun Club.

PLATTSVILLE, Wis., Jan. 28.—Owing to cold and snow, only eleven faced the trap. We hold a ten-man team shoot next Sunday, so we will have a crowd that day.

Table with 4 columns: Name, Shot at, Broke, and Score. Includes names like Events, Targets, J C David, etc.

Glenwood Country Club.

GLEN HEAD, L. I., Feb. 3.—Only one event was shot here to-day, the first leg of the monthly cup at 100 targets. W. S. Silkworth stayed by his usual form and won with 92.

Table with 4 columns: Name, Shot at, Broke, and Score. Includes names like W S Silkworth, S Isaac, C W Berner, etc.

Cleveland Gun Club.

AN interesting year is promised by the Cleveland Gun Club, as may be seen by accompanying program:

Championship Trophy.—This trophy shall be emblematic of the club open championship for the year 1912. The only scores and make-up scores accepted in competition for this trophy will be those made in the annual handicap trophy contest under the conditions which govern said contests.

Annual Handicap Trophies.—Four handsome trophies, presented by the club, are to be known as the President's, Vice-President's, Treasurer's, and Secretary's cups. The contests for these trophies are to be at 16yds. rise, under a self-imposed handicap.

Monthly Trophy Contests.—Contests shall be held each Saturday afternoon during 1912, at 50 targets, 16yds. rise, entrance, price of targets. These contests shall be conducted under the same kind of handicaps imposed in annual handicap trophy contest.

F. G. Hogen, C. E. Doolittle, H. C. Rockwell, comprise the Contest and Tournament Committee.

Pillow Gun Club.

PILLOW, Pa., Jan. 27.—Scores of the Pillow Gun Club, made to-day, at 25 targets each man:

Table with 4 columns: Name, Score, and Handicap. Includes names like J A Bingaman, J E Bingaman, D W Reitz, etc.

In the evening following the shoot the election of officers took place at the National Hotel, for the ensuing year. All the old officers were unanimously re-elected, after which it was decided to improve and enlarge the club house and make other necessary changes.

At this juncture, to the surprise of all, one of our junior members made a retreat through the rear exit as if following a deer track. Exactly one hour later this same member shyly returned with a new club member and a life partner, in time for the banquet.

Buffalo Audubon Club.

BUFFALO, N. Y., Feb. 3.—Scores of the Buffalo Audubon gun club, made to-day:

Table with 4 columns: Name, Shot at, Broke, and Score. Includes names like Targets, Lambert, Anderson, Wacker, etc.

Delaware State Sportsmen's Association.

WILMINGTON, Del., Feb. 3.—On Thursday evening last, Feb. 1, the Delaware State Sportsmen's Association effected a permanent organization, adopting a constitution and by-laws and electing officers for the ensuing twelve months. Thus the State of Delaware is now equipped with an association which not only promises well for the future of trapshooting within the borders of the Diamond State, but will also cut some figure in the protection and propagation of the game of the State, the enactment of new game laws and the enforcing of same.

The meeting was held in the Du Pont Building, at Wilmington, with T. E. Doremus, temporary chairman and W. A. Joslyn temporary secretary as presiding officers. The following clubs were represented: Nonesuch Gun Club, of Newport, Del., by Messrs. Young and Lynam; Guyencourt (Del.) Gun Club, by W. G. Wood; Brandywine Springs Gun Club, of Marshallton, Del., by Messrs. Robinson and Melson; East Lake Gun Club by C. Haverback; Wooddale (Del.) Gun Club, by B. Guest; Wilmington Gun Club, by Thorpe Martin; Du Pont Gun Club, by T. E. Doremus.

The constitution and by-laws prepared by Edward Banks, the committee appointed at the preliminary meeting of the Association to prepare same, were adopted, and the following officers for the year of 1912 elected: President, Dr. Horace Betts, Wilmington, Del.; Vice-President, George Rues, Bridgeville, Del.; Secretary and Treasurer, William A. Joslyn, Wilmington, Del.

The above officials, together with T. W. Young, Newport, Del., and James McKelvey, Newark, Del., constitute the Board of Directors.

The Association placed on record its hearty indorsement of the work now being done by the American Game Protective and Propagation Association, the national body recently organized for the purpose of safeguarding the interests of the sportsmen of the North American Continent, and will make application for membership in the Association in the near future.

The first shoot of the new Association will be held on May 29 and 30 on the grounds of the Du Pont Gun Club, at Wilmington, the Interstate Association having granted that club the privilege of holding a registered shoot on the above date.

Special features on the program for the two days of the shoot will be the competition for the Delaware State championship, the trophy emblematic of that championship now being held by W. S. Colfax, Jr.; also merchandise prize events, one for amateurs who are members of the State Association, and one "open to all amateurs." The latter event will probably be shot on the first day of the tournament, while the merchandise event "for State amateurs only" will be decided in the afternoon of Decoration Day, the second day of the shoot.

In order to make sure of having everything in the best of shape for this shoot, the management of the Du Pont Gun Club will hold a meeting early next week, and appoint committees necessary to make the tournament an unqualified success.

Registered Tournaments.

THE tournaments registered with the Interstate Association during the week ending Feb. 3, were as follows: May 4.—Temple, Pa.—Hercules G. C. A. K. Ludwig, Sec'y.

May 4.—Bethel, Conn.—Western Connecticut T. S. L. tournament, under the auspices of the Bethel G. C. C. K. Bailey, Sec'y.

May 6-8.—Vicksburg (Miss.) G. C. J. J. Bradfield, Sec. May 7-8.—Columbus (Neb.) G. C. G. A. Schroeder, Sec'y.

May 20-21.—Iowa City (Ia.) G. C. C. Bothell, Sec'y. May 25.—New Haven, Conn.—Western Connecticut T. S. League tournament, under the auspices of the New Haven G. C. Wm. F. Alcorn, Sec'y.

May 30.—Watertown (Wis.) G. C. B. H. Reick, Sec'y. June 4-7.—Dayton, O.—Ohio State tournament, under the auspices of the N. C. R. G. C. W. F. MacCandless, Sec'y.

June 17-19.—Salida, Colo.—Colorado, New Mexico and Wyoming State tournament, under the auspices of the Salida G. C. W. G. Myers, Sec'y.

ELMER E. SHANER, Sec'y-Treas.

Queens Country Club.

QUEENS, L. I., Feb. 3.—A first-class contingent of nineteen trapshooters shot in the open handicap here to-day at 100 clays. W. Simonson broke 89 from scratch, while Carl von Lengerke got one less, as did J. F. Simonson. Scores:

W Simonson.....	0 89	J H Hendrickson...	0 75
C von Lengerke....	0 87	J Thompson.....	0 75
J F Simonson.....	0 87	F Rowland.....	20 74
L Colquitt.....	0 85	J M Kissan.....	16 69
D K Morrell, Jr....	0 85	*J Lawrence.....	0 59
S Van Allen.....	0 79	D N Lord.....	0 57
T D Chapman.....	20 79	Dr Cleghorn.....	20 63
H P Nash.....	0 78	C Voegel.....	12 56
W Hyland.....	8 75	E A Lein.....	10 42

Grafton Gun Club.

GRAFTON, W. Va., Feb. 2.—Only four shooters "came out" on Ground Hog day, to face the traps. The scores made were not record-breakers, but shooting in a blinding snowstorm at a target thrown fully 60yds., accounts for part of the misses. The following scores were made:

Shot at. Broke	Shot at. Broke
Gerstell..... 125 114	Piggott..... 125 84
Reffel..... 125 95	Flanagan..... 125 90

The shoot was gotten up in honor of a visitor, Mr. J. M. Morrison, of Brownsville, Pa. However, like a real ground hog, he looked at the weather, used good judgment and stayed in. R. G.

The Sunny South Handicap

— WON WITH —

WINCHESTER

Repeating Shotguns and Loaded Shells

W. R. CROSBY.

The opening gun of the trap shooting year was fired with the holding of the Sunny South Handicap at Houston, Texas, and as usual the Winchester red **W** combination started right in to corral the winnings. W. H. France, who won the main event, the Sunny South Handicap, shot a Winchester Repeating Shotgun and Winchester Loaded Shells, scoring 95 out of 100, and 25 straight on the shoot-off. Also he and Alf. Gardiner won the Team Race with the splendid score of 49 out of 50, both shooting Winchester Repeating Shotguns and Winchester Loaded Shells.

HIGH GENERAL AVERAGE 1148 x 1205

Out of a total of 1205 targets thrown, W. R. Crosby broke 1148, winning High General Average. As an onlooker remarked, "this was remarkable shooting, as Mr. Gardiner certainly threw the hardest targets it was possible to throw with an automatic trap." As usual, Mr. Crosby shot Winchester Factory Loaded Shells, which are hard-hitting enough to break the hardest targets.

Get Into The Winnings This Year By Shooting The Red W Combination

The Du Pont Gun Club.

WILMINGTON, Del., Feb. 3.—Hardly anybody was home to-day, owing to a previous engagement in Darby, Pa., but just the same there was a little something doing "to hum"—Linn Worthington dropped in for a visit, broke nearly all the china served up. He was high gun with 45 out of 50. The infant prodigy, J. B. Grier, from Roland, shot like blazes, getting 41 out of 50. This lad is only thirteen years old. Harry Kahler better watch out. The regular spoon events were postponed.

Shot at. Broke	Shot at. Broke
L Worthington... 50 45	J B Grier..... 75 59
H D Betts..... 50 18	D A Grier..... 25 14
S J Newman.... 50 17	Wm Coyne..... 75 55

Paleface Gun Club.

WELLINGTON, Mass., Jan. 31.—The shooters at the weekly shoot here to-day were bothered during the early part of the afternoon by the big soft flakes and

a northeast wind. The snow stopped falling and the sun came out about 2:30 o'clock, giving an opportunity for some unusually good shooting, in which E. Osborne, of Somerville, took high gun honor for the day from R. N. Burnes, of Cambridge, and Frank Hilliard, of Lynn, the amateur State champion, by 1 bird. Osborne broke 93 of the 100 targets, registering exactly the same as Burnes in each of the five events except the third, where he broke 19 out of 20 to 18 for the Cambridge gunner. This one bird gave him the high gun honor, as both men shot exactly even in the last three rounds.

The return team match with the B. A. A. will be shot at Wellington Feb. 10.

AN UNBEATEN RECORD!

TARGETS SHOT AT
4280

97.28%

TARGETS BROKEN
4164

This is the percentage with which Mr. J. S. Day won the 1910 OFFICIAL HIGH AMATEUR AVERAGE—a percentage never equalled by an amateur and exceeding by exactly 1% the figures of the 1911 winner, who, moreover, shot at only 2100 targets.

Mr. Day's Wonderful Shooting was done with

Peters

FACTORY LOADED SHELLS

The Lion's Share of the 1911 Amateur Honors was also won with PETERS Shells, for they were used either exclusively or for the most of their shooting by 5 out of the 10 High Amateurs. This is not all. The 1911 Grand American Handicap, the greatest event in the Trap-Shooting world, was won by Mr. Harvey Dixon, who scored 99 out of 100 from the 20-yard mark. This score has never been equalled and is a World's Record.

Mr. Dixon used PETERS SHELLS the kind with "STEEL WHERE STEEL BELONGS."

Particular attention is directed to the fact that all of the shooting of Messrs. Day and Dixon was done with Peters Regular Factory Loads. And remember this—you can use PETERS Shells in any good gun. They require no special make of gun to give best results.

Philadelphia Trapshooters' League.

PHILADELPHIA, Pa., Feb. 3.—By winning from Meadow Springs yesterday, the S. S. Whites shook their nearest competitor for the Trapshooters' League lead, and now have a clear lead of 2 points for the blueribbon target event of the East. This victory over the West Philadelphians has now given the Dentists such an advantage that if any of the four clubs which are now tie away for second place are going to beat out the Holmesburg Junction crowd they will have to keep them from 2-point winning in the remaining two shoots. At that, should the Whites lose both of the next two shoots and any of the four clubs tie for second win, the next two, the race will end up in a tie. At the best, the Whites cannot be beaten out unless they meet their match in a shoot-off after the regular season ends.

The defeat to Meadow Springs and Lansdale at South End, with victories by Highland and the Camden gunners, enabled the latter team to creep up to a tie with Meadow Springs and Lansdale for second place. These four clubs have now two remaining chances to tie up the Whites, but at least two of them are sure to drop out of the running in the March shoot.

Although the weather yesterday was far from being favorable to the gunners for good scores, nevertheless the totals made by most of the clubs were exceptionally high. The Du Ponts, of Wilmington, who came up to town with a big part of the Delaware population, ran up the highest team score of the day, breaking 449 out of 500 targets, a remarkable performance. The Whites to beat Meadow Springs had to break 446 to 437, while South End's close victory over Lansdale was achieved by the former breaking 404 to their opponents' 402. This match proved to be the most hotly contested of the day. Highland won the easiest match of all, they beating Haddonfield by 393 to 325. Clearview made 420 against the Du Ponts. The points scored and targets broken follow:

	Targets	Broken.	Points.
Whites	2253		10
Meadow Springs	2181		8
Highland	2109		8
Lansdale	2055		8
South End	2030		8
Du Pont	2183		7
Clearview	2009		6
Haddonfield	1864		5

Highland—Haddonfield.

EDGE HILL, Pa., Feb. 3.—Better scores, made under difficult conditions, enabled the Highlands to defeat Haddonfield to-day in the League match here by a score of 393 to 325. Twenty-eight Edge Hill men fired at their half hundred bluecrecks, while eleven brave gunners from Haddonfield made the trip up the North Penna. Considering the unfavorable conditions, the Highlanders' score of 393 for a team total was good. They had four of their ten men get 40 or better, Tom Tansey leading the way with 43 smashes.

Haddonfield had but one gunner to get past the 40 mark. This was Beideman, who not only led the South

Jerseymen with a score of 45, but incidentally led the entire field for the day's sport. Scores:

Highland.		Haddonfield.	
Tansey	43	Beideman	45
McCarty	40	Shrieve	39
W Dalton	41	Duncan	37
Landis	40	Logan	34
Davis	39	Halloway	34
Crothers	39	Stafford	31
Pflegar	38	Tompkins	30
S Freeman	38	Pealow	25
Perry	37	Eyster	24
Clarke	36-393	Peacock	26-325

Scores made by gunners who failed to qualify for their respective teams:

Highland—Laurent 31, E. Wentz 29, Meehan, Sr., 34, Drcakley 27, Hoover 19, Crooks 32, Freed 32, Harkins 31, Hibbs 34, Lindley 15, Flannigan 26, Meehan, Jr. 29, A. B. Freeman 35, Biddle 33, Cooper 29, Wm. Dalton 26.

Haddonfield—Wood 20.
Professional—Lewis 35.

South End—Lansdale.

THERE was as much glory for vanquished as victor in the League shoot over the South Camden traps yesterday, and though the South End Club won from Lansdale by the score of 404 to 402 targets, the match was not decided until the last squad had faced the traps. From the start the two clubs ran neck-and-neck, and only one or two targets separated them right down the line until Johnson, Bright and Lamborn went out to shoot. The first named dampened the hopes of the South End rooters at the start by getting only 16, and Lansdale's stock went soaring when Bright broke 18 and Lamborn 21 on their first trap, considered the harder of the two. On the second trap, however, all three went to the bad, and Lamborn, who had a golden chance to pull Lansdale through, fell down, breaking only 16. While, as a rule, the stars of their respective teams shot close to form, it was the second string shooters who swung the victory.

Hineline and C. Swartz divided the high gun honors with 46 each. Frank Bender got 43, when, as a matter of fact, he lost a bird by an error of the scorer; Slear and Rodgers each 44. These were to have been expected, but it was the ability of the shooters below 40 which decided in favor of South End, as of their four 30s figuring in the victory, they totaled higher than did the same number for Lansdale. Scores:

South End.		Lansdale.	
Hineline	46	C Swartz	46
Slear	44	Rodgers	44
Borden	41	F Bender	43
Cross	41	D Swartz	41
Hornor	40	Kauffis	41
Pechman	40	E Shultz	41
Cordery	39	F Henry	38
Holloway	38	Lamborn	36
Springer	38	Bright	36
Fleming	37-404	Rauch	35-402

The scores of other shooters who failed to qualify follow:

South End—Green 36, Wakeman 34, W. Johnson 33, H. Anthony 33, Rixon 31, Johnson 31, Goodfellow 25, J. Anthony 23, Newkirk 21.
Lansdale—Taney 34, D. Shultz 34, Pierson 33, Henning 33, Metz 32, Nice 32, J. Swartley 31, Taylor 30, Martin 28, Hildebeitel 26, R. White 24, Gerber 18.

DuPont—Clearview.

DARBY, Pa., Feb. 3.—The Du Pont Gun Club, represented by thirty-eight of its unlimited stock of expert marksmen, walloped Clearview Gun Club, of Darby, Pa., at the latter's traps in the fifth match race in the series of the Philadelphia Trapshooters' League by the score of 449 to 420, to-day.

It is hardly possible to imagine what the local gunners would have done under ordinary conditions, as every one was in gilt-edge form, and breaking the birds in one-two-three order, and four others had shot inside the qualification limit.

Smith, Colfax and Richardson made a perfect run of their first 25 targets.

The local club by its victory retains its lead, if not advancing a point, in the League standing.

J. T. Robinson still leads the League in the point of targets broken.

The scores in the team race were as follows:

Du Pont Gun Club.		Clearview Gun Club.	
McHugh	47	Davison	46
Martin	46	King	47
M K Smith	46	Greene	44
Lobb	46	Gideon	41
Colfax	45	Bonsal	44
Lyon	45	Fisher	46
Richardson	45	Echenhofer	38
Edmanson	44	Fox	38
Wood	43	Elwell	38
Minnick	42-449	Schuster	38-420

The scores of those who did not qualify on their respective teams were:

Du Pont Gun Club—Bush 37, Joslyn 42, McMullen 18, C. E. Springer 25, Casey 37, J. W. Anderson, Jr., 33, Dr. Steele 33, Dr. Betts 39, Evans 37, Matthewson 32, Winchester 37, Tomlinson 37, Dr. Paterson 39, Kenworthy 30, Hammond 42, Lofland 37, England 39, Vance 40, Carlon 36, Leedom 34, Curley 28, Victor du Pont 42, Harrington 29, Foord 40, Doremus 38, Magahern 38, Mitchell 36.

Clearview Gun Club—Paulson 31, Braun 19, Paul 37, Holznagel 32, Kirshner 35, Redman 36, Williams 34, Agar 31, Devan 23, McCullough 36, Bockius 38, Fink 37, Chew 36.

Meadow Springs—S. S. White.

ALTHOUGH Meadow Springs threw in forty-seven of their best shots in an effort to check the winning streak of Whites, the West Philadelphians finished on the short end of the League match shot yesterday at Fifty-seventh and Lancaster avenue, the score being 446 to 437. With a chance to tie up the dentists for the League lead, the interest in this shoot aroused more attention

among the marksmen of the city, and suburbs than any other contest this season.

Both clubs made an urgent plea for every one of their members to turn out at the traps, and although the Whites had eighteen less men than the Meadow Springs, they managed to get ten higher men on their team than did the West Philadelphians. Consistent marksmanship really carried the Whites in a winner. Christman, with 48 breaks, was the high man of the day, and while he was a Meadow Springs man, the rest of his team mates could not touch that figure. The Whites had two men to smash 47—Newcomb and Griffith; and two to get 46. Three shattered 44, two got 43, and the tenth gunner 42.

Although there was little wind, the cold and the snow glare was a big handicap to the target getters. Scores:

S. S. White.	Meadow Springs.
Newcomb 47	Christman 48
Griffith 47	Zeigler 44
Cantrell 46	Pierce 44
Milton 46	Jones 44
Overbaugh 44	Mace 43
Severn 44	Platt 43
Hamlin 44	Emmes 43
Sidebotham 43	Buckwalter 43
Pratt 43	Henry 43
Powers 42-446	Hogan 42-437

Gunners who failed to make their respective teams made the following scores:

S. S. White—Ford 32, Fontaine 36, Denham 32, Abbott 30, St. Clair 39, Watson 33, White 37, Robinson 39, Smith 40, Wilson 41, Cook 37, Hand 41, Colling 40, George 35, Heite 31, Firth 26, Hinkson 29, Beyer 40, Kendall 32.

Meadow Springs—Gothard 31, Morris 39, Soley 40, Moore 27, Kenchner 37, Greaber 39, Pyle 32, Pepper 21, Williams 41, Clegg 41, Keenan 35, Chandler 36, Garrett 24, G. Garrett 25, Hall 37, Fish 30, Hames 33, Torpey 40, Alexander 16 (w), Marlin 40, Wiley 33, Quist 41, Hillpot 36, Deiley 26, Menamine 25, Sloan 41, J. Emerson 33, Benner 40, Eachus 39, MacAlonan 22, Thompson 41, Hewlett 33, Coyle 38, Englert 41, Armstrong 38, Warren 42, Mardin 34.

Scores of professionals: Hardy 12, Apgar 45, Stevens 43, Stevens 46.

Cleveland Gun Club.

CLEVELAND, O., Jan. 27.—Regular weekly club shoot of the Cleveland Gun Club, held Saturday afternoon, was well attended for a winter shoot. The scores were not big, but with weather conditions, they were good.

The January trophy contest was brought to a close with to-day's shoot, and the winners of these trophies were L. M. Weeden, first; and A. J. Stevens second.

January trophy, 50 targets, 16yds.:

Call 47	Hopkins 37
Brown 44	Rockwell 36
Stevens 42	Freeman 35
Weeden 41	Ong 35
Jones 40	Harris 34
Thorp 39	Riley 34
Morris 39	Gould 33
Archer 38	

Annual trophy, 50 targets, 16yds.:

Brown 44	Thorp 35
Weeden 41	Archer 33
Jones 41	Rockwell 33
Hopkins 39	Waken 33
Stevens 39	Morrison 31
Archbald 39	Hopp 30
Freeman 38	Harris 30
Morris 36	Frank 30

Feb. 3.—The weekly club shoot of the Cleveland Gun Club Co., held this afternoon, at shooting park, was another of their real winter contests, to which only those who love the game come out. While the day was not ideal for trapshooting, some good scores were made nevertheless. President E. S. Rogers returned home after spending a month in the sunny South, and was on the job just the same as ever, and put up a good score of 87 out of 100, just as good as 97 out of 100 in the summer. Oh, what a club it would be if we had twenty fine shooters like the president. Brother Flick was looked for, as he has been away for a month, but he didn't show up. But he will be on deck the next shoot, and then John will try to win the brick house and lot that is to be put up for high gun for 1912. Capt. Geo. Freeman says he will win it, and maybe he will, as George is a great shot at ducks. Dr. Brown is keeping up his good work for the winter, and Stevens and Weeden are both in it and doing well for new ones, and both are making points each Saturday. Mrs. Stevens say that if Mr. Stevens brings any more spoons home she will call in the neighbors to take care of them.

Following are the scores:

Monthly trophy contest:

Brown 44	Archer 40
Rogers 43	Wall 35
Stevens 41	Thorp 31
Freeman 40	Bock 26
Weeden 40	Brainard 24

Annual trophy contest:

Freeman 45	Weeden 39
Rogers 44	Thorp 31
Brown 44	Morris 29
Archer 43	Brainard 27
Stevens 40	Rock 27

Special event, 50 targets:

Rogers 44	Thorp 35
Brown 42	Morris 35
Archer 42	Brainard 34
Weeden 41	Rocksmith 32
Stevens 37

Larchmont Y. C.

LARCHMONT, N. Y., Feb. 4.—A gale, full of icicles, couldn't keep thirteen ardent gun specialists indoors here to-day, nor did it prevent Spotts and McCahill from shooting in good form. Each got away with three events, but Ralph Spotts captured high gun for the day with 100 out of 125, while McCahill made one less. B. M. Higginson, of N. Y. A. C., beat McCahill by one bird, 24 out of 25, for vice-commandore's cup, but not being a club member, McCahill won the leg. Higginson also did excellent work in the accumulation cup race, getting 45 out of 50, and tying M. V. Lenane. The take-home trophy was taken in by D. F. McMahon, while 10- and 15-target scratch events went to H. K. Waters with a straight, and J. H. Henry with 14 out of 15.

Youghiogheny Country Club.

McKEESPORT, Pa., Feb. 3.—The second 25-target distance handicap gold medal shoot of the Youghiogheny Country Club was won by H. N. Pendleton with 19, from 14yds. Dr. W. C. Heisey made the first win on the 1912 Du Pont trophy with 18 out of 25 from 19yds. James Lewis, the Winchester representative, was high gun for the afternoon with 89 out of 100. Scores:

Gold medal shoot:

	Yds.	T'l.		Yds.	T'l.
Pendleton	14	19	Simpson	16	15
Heisey	19	16	Pierce	19	10
Ballard	20	15			
Scores made for the Du Pont trophy:					
Heisey	19	18	Pierce	19	13
Ballard	20	16			

Bennett Gun Club.

GLOUCESTER CITY, N. J., Feb. 3.—The cold weather had an effect on the members of the Bennett Gun Club who participated in the weekly shoot at the old race track to-day, and the scores were not as good as they usually are. The prize was a silver watch, and at the end of the 15th round Michael Monohan and Frank Bennett were tied with 12 each to their credit, and in the shoot-off Bennett won. Scores:

First event, weekly shoot, 15 bluerocks, prize silver watch, unknown angles: Frank Bennett 12, Michael Monohan 12, William Murray 11, Mooney 11, Robert Boyd 11, Banes 10, Charles Hess 10, John McLaughlin 9, Herbert Taylor 9, Nancy 8.
 Shoot-off, miss-and-out: Bennett 4, Monohan 3.
 Special shoot: W. Murray 7, W. Hess 6, F. Bennett 6, McLaughlin 6, Boyd 5, McGinley 4.

Marine and Field Club.

BATH BEACH, N. Y., Feb. 3.—The principal event was first leg on a new monthly cup to-day. The winner was C. M. Camp, with 93 out of 100, having a handicap allowance of 8 targets. He also was a winner of a club trophy shoot. C. B. Ludwig, J. M. Knox and C. D. Sayre took other prizes. The scores:

Monthly cup, 100 targets, handicap:			
C M Camp.....	8 93	P R Towne.....	0 76
C B Ludwig.....	8 92	C D Sayre.....	16 65
J M Knox.....	16 82	H B Smith.....	16 64

GEO. BENDER, Supt.

New Rochelle Y. C.

NEW ROCHELLE, N. Y., Feb. 4.—A whole gale of wind, puffy, and accompanied by bitter cold, gave the gunners of the New Rochelle Yacht Club the most difficult task conceivable to-day. Besides, the annual dinner of the club had been held the evening before, which put all of the men except Messrs. Robinson, Giriat and Mahlstedt at some further disadvantage. Considering all these circumstances the scores made were not entirely inexcusable. B. R. Stoddard was high gun for the day with 65 out of a possible 75. G. W. Robinson broke 62, and incidentally got 20 in the shoot for the commodore's prize, which, with his handicap, gave him a clean score in this event. C. A. Marsland won the leg for the February prize. The string for the Granbery cup gave B. R. Stoddard a slight lead over Messrs. Robinson, Donovan and Marsland, who lead the others in this event. Scores follow:

February prize, 25 targets, handicap:			
C A Marsland.....	8 25	J P Donovan.....	8 18
V P Krauss.....	4 21	G W Robinson.....	6 16
D Giriat.....	8 20	G P Granbery.....	5 14

J P Donovan.....	8 21	J A Mahlstedt.....	6 15
C A Marsland.....	8 21	P C Pfeiffer.....	6 15
D Giriat.....	8 18		

B. R. STODDARD.

Smith Gun Club.

NEWARK, N. J., Feb. 3.—Eight gunners stood on the firing line at the Smith Gun Club Saturday afternoon. The feature event was a match between fifteen-year-old Harry Hassinger and L. Trowbridge. The race was even until the 22d target, when Hassinger blew up, losing his last three. Score: Trowbridge 22, Hassinger 19. We expect a goodly turn-out of members Saturday, Feb. 10, when the monthly prize shoot takes place.

Events:	1	2	3	4	5	6
Targets:	25	25	25	25	25	25

H. HIGGS.

Lehigh Rod and Gun Club.

BETHLEHEM, Pa., Feb. 3.—There were 1,660 clay pigeons thrown at the bluerock shoot held to-day by the Lehigh Rod and Gun Club before its well appointed traps at Rittersville. There were fourteen 25-target events, including the monthly silver medal shoot, which was won by Howard Schlicher, of Allentown, who broke 24 out of 25 targets. Fourteen sportsmen participated in the different events. Schlicher was also high gun of the meet, breaking 226 out of 250 targets, a total of 90 per cent. Bitterling was a close second with a score of 203 out of 225. Scores:

Club event, 25 targets: Schlicher 24, Bitterling 23, Heil 22, Dorn 22, Fluck 21, Schrader 20, Sobers 17, Kuklentz 16.		
Twenty-five targets: Heil 24, Schlicher 23, Bitterling 19.		
Twenty-five targets: Schlicher 24, Bitterling 23, Heil 22, Dorn 21, Sobers 19.		

Twenty-five targets: Heil 24, Schlicher 23, Dorn 22, Bitterling 21, Sobers 17.

Twenty-five targets: Heil 24, Schlicher 24, Bitterling 22, Dorn 21, Sobers 18.

Twenty-five targets: Schrader 24, Heil 23, Schlicher 21, Bitterling 21.

Twenty-five targets: Fluck 24, Sobers 21, Gapp 18, Ketchledge 14, Wall 14.

Twenty-five targets: Bitterling 24, Turn 18, Snyder 16, Hefner 13, T. Snyder 6 out of 15.

Twenty-five targets: Schlicher 21, Bitterling 20, Sobers 20, Schrader 17.

Twenty-five targets: Fluck 19, Snyder 15, Kepler 13, Wall 12.

Twenty-five targets: Dorn 21, Schlicher 20, Heil 18, Bitterling 16, Schrader 15.

Twenty-five targets: Fluck 20, Sobers 17, Wall 15, Gapp 14, Snyder 14.

Twenty-five targets: Schlicher 22, Heil 21, Dorn 18, Bitterling 17, Schrader 9 out of 10.

Twenty-five targets: Snyder 21, Wall 13, Haffner 13, T. Snyder 4 out of 10.

Special match, 25 targets: E. Snyder 21, Haffner 13.

Rifle and Revolver

To the American Public.

WASHINGTON, D. C., Feb. 1.—The National Rifle Association of America herewith appeals for funds to assist in having the United States represented by rifle teams at the Olympic games in Stockholm, Sweden, and the Pan-American rifle shooting tournament, to be held at Buenos Aires, Argentine Republic, during the coming spring. The proposition to have this country represented in the rifle shooting division at the fifth Olympiad should appeal favorably to every American.

We are now the holders of the Olympian rifle shooting team championship with the military rifle, having been the victors at the last Olympiad, held in England in 1908.

Our ideals of sportsmanship alone would be argument enough in favor of our defending our hard-earned laurels, but there is also another strong reason for our being represented, which will be mentioned later.

As to the Argentina proposition, there are strong commercial, as well as sentimental, reasons for our accepting the invitation to join with the South American republics in a friendly passage at arms on the rifle range. This Government is most anxious for cordial relations with our rapidly growing sister republics of South America, and in view of the greatly increasing trade relations between them and the United States, we would not have been acting for the best interests of such relations not to have accepted the cordial invitation extended by Argentina to send representatives to the Pan-American tournament, to be held at Buenos Aires.

A great international rifle shooting tournament is to be held at Camp Perry, O., in 1913, in connection with the Perry Centennial, and the sending abroad of these American teams this year will assist greatly in making a success of that event.

Subscriptions are herewith solicited to enable us to send these teams. Corporations, firms, banks, civil and military organizations and individuals are cordially invited to help make it possible to uphold before the world the traditions of "American marksmanship" as we have never failed to do in the past.

Checks should be made payable to the National Rifle Association of America, and sent to Lieut. Albert S. Jones, Secretary, Room 1025, Woodward building, Washington, D. C.

Subscriptions will be acknowledged and credit given in the annual report and through the press.

The executive committee is made up as follows: Lieut.-Gen. John C. Bates, U. S. A., retired; Brig.-Gen. C. R. Boardman, Wisconsin; Brig.-Gen. James A. Drain, Washington; Lieut. A. S. Jones, Washington, D. C.; Congressman John O. Tilson, Connecticut; Col. C. D. Gaiter, Maryland; Brig.-Gen. E. C. Dill, Maine; Col. H. G. Catrow, Ohio; Col. Joseph Garrard, U. S. A.; Capt. C. D. Rhodes, U. S. A. representing the Assistant Secretary of War.

Philadelphia Rifle Association.

SCORES of the Philadelphia Rifle Association, Thursday, Feb. 2, on the Philadelphia range of the National Rifle Academy, 1234 Filbert street:

Rifle, offhand, German ring target, 75ft.: E. H. Williams, Jr., 240, 240, 244, 241, 240, 235, 247, 241, 241, 238, 239; E. C. Goddard, 239, 236, 242, 238, 236, 239, 244, 240; J. G. Schnerring, 245; C. R. Dougherty, 232, 229, 226, 232, 232; Dr. E. E. Given, 234, 210.

Rifle, prone, N. R. A. target, 1 to 10 count, 75ft.: H. A. Dill, 90, 90, 94, 95, 90, 90, 91, 95; E. H. Williams, Jr., 38, 91; Harry Overbaugh, 91, 94; W. J. Maybee, 95, 95; R. S. Newbold, 90, 95, 92; Nathan Sperring, 92, 96; J. G. Dillin, 91, 90; W. N. Patrick, 93, 91; J. G. Schnerring, 97, 96; H. L. Reeves, 95, 93; E. E. Given, 88.

Pistol, Standard American target, 75ft.: H. L. Reeves, 94, 91, 88, 90, 89, 82, 92, 90, 84, 89, 87, 81; Miller Forbes, 87, 87, 81, 93, 87; George Hugh Smith, 87, 86, 93, 86, 91, 94, 93, 91, 94, 82; D. L. Vaughan, 68, 72, 75, 83, 80; Herman Thomas, 91, 88, 86, 88, 84, 87; Dr. G. G. Davis, 88, 71, 72, 70, 76, 70; R. S. Newbold, 83, 74, 70, 78, 84, 75; W. T. Smith, 85, 81, 85, 82, 92; Dr. W. E. Quicksall, 88, 81, 91, 89, 93.

United States Revolver Association Indoor League matches:

In the match against Chicago, the scores were: Philadelphia—Geo. Hugh Smith 233, W. J. Maybee 223, H. L. Reeves 219, Herman Thomas 216, Dr. W. E. Quicksall 214; total 1105.

In the match against Pittsburg: Philadelphia—Dr. W.

Reload Your Shells

140 Pages FREE

The .32-40 High Power factory cartridges sell for \$34.20 net per thousand. By reloading the same shells with factory primers, factory bullets and the same powder charge, your expense is \$13.46;

You save \$20.74 on 1000 cartridges.

The .32-40 low power smokeless factory cartridges cost \$28.80 per thousand; when you reload, your expense is only \$11.31, making a saving of \$17.49. Factory .32-40 smokeless short range cartridges cost \$25.20 per thousand; by reloading your shells, they cost you only \$7.65 per thousand. Make your own bullets and you have 1000 short range cartridges for \$3.80.

You wouldn't throw away your pipe after smoking it once; you waste money if you throw away your expensive high-grade shells without reloading.

FREE—The Ideal Hand Book tells all about the tools and methods for reloading all standard rifle, pistol and shotgun ammunition; 140 pages of practical information for shooters. Mailed free to any shooter interested enough to send three stamps postage to

The Marlin Firearms Co.
27 Willow Street New Haven, Conn.

E. Quicksall 228, Geo. Hugh Smith 221, H. L. Reeves 219, Miller Forbes 219, Herman Thomas 217; total 1104.

In the match against Portland in the N. R. A. Inter-club League, Philadelphia team scored as follows: J. G. Schnerring 193, E. H. Williams 192, W. J. Maybee 190, Nathan Sperring 187, Harry Overbaugh 187; total 949.

HARRY OVERBAUGH.

At Shell Mound Park.

EMERYVILLE, Cal., Jan. 28.—With beautiful weather, the sharpshooters of the Bay Cities held their regular monthly medal and bullseye shoots. The attendance was very large, and good scores were made. Six organizations held their regular monthly shoots, and they were the Golden Gate Rifle and Pistol Club, San Francisco Schuetzen Verein, Germania Schuetzen Club, Veterans, N. G. C., Norddeutscher Schuetzen Club, and Red Men Schuetzen Co.

In the re-entry matches of the Golden Gate Club, shooting on the German 25-ring target, 200yds. range, W. G. Hoffmann made the best score, 227. On the 50yd. pistol range, J. E. Gorman and W. C. Pritchard each made 95, the best score of the day.

In the Veterans' shooting, on the military blunt target with the old .45 Springfield, F. Poulter made 47 out of a possible 50.

On the revolver target, F. J. Povey and F. Poulter, both made 48 and 47 each, two scores each.

F. Bremer made the best score in the Red Men Schuetzen two 10-shot scores out of 227 and 229. The best center in the bullseye shoot went to S. Kierning.

Dick Schwormstedt won the first prize in the bullseye shoot of the Norddeutscher Schuetzen Club.

Martin Blasse won the first prize in the bullseye shoot of the Germania Schuetzen Club.

Otto Bremer made the best score in the medal shoot of the San Francisco Schuetzen Verein.

Many of the best rifle shots will take part in the 100-shot match on the Standard American target, 200yds. range, Schuetzen rifle, on Washington's Birthday, Feb. 22. A beautiful medal, valued at \$100, will be worn by the man making the highest score. Worn for one year only. WM. A. SIEBE.

Du Pont Gun Club, Rifle Dept.

WILMINGTON, Del., Feb. 3.—Some one on the sidelines to-day was humming that old favorite so popular over the "Rhine" in Cincinnati—

"Oh, the Irish ain't much,
Oh, the Irish ain't much,
But they're a darn sight better
Than the bloomin' Dutch."

when up spoke one Capt. Appleby, and says he, "I'll pick a bunch of Dutch that will make your Irish bunch take water—much as they hate the stuff." And he did. Capt. Casey led the Irish to defeat. Scores:

Game Laws in Brief

A new and revised edition for 1912.

It gives all the fish and game laws of the United States and Canada. It is complete and so accurate that the editor can afford to pay a reward for an error found in it. "If the Brief says so, you may depend upon it."

Sold by all dealers, or by mail by us. Price, twenty-five cents.

Forest and Stream Publishing Co., 127 Franklin St., New York

OUTDOOR PHOTOGRAPHS

Forest and Stream wants good photographs of shooting, fishing, yachting, canoeing, camping, natural history and kindred subjects. Pictures that tell a story preferred to those depicting still life. Carbon prints, and those made on printing-out papers, will be given preference. Pictures that have not been used in other publications will, if available, be paid for.

THE ANGLER'S WORKSHOP

Rodmaking for Beginners

By PERRY D. FRAZER

Not only Americans, but anglers of Great Britain and nearly every European State, South Africa, Australia, Canada, are making their fishing rods under the simple instructions laid down by the author in this useful little manual. A Japanese, after reading the book, took up rod repairing for his fellow countrymen as a business. An Englishman followed it in making several of the sixty-five rods that he has in his collection. A Russian appreciated the book so much that he suggested a Russian translation. The British sportsmen's papers have quoted from it time and time again. In that country it has helped bring about a great change in rod types, and to attract attention to the excellence of American fishing rods. In fact, "Rodmaking for Beginners" has become the standard manual wherever fishing with rod and reel is practiced.

The reason is obvious. The book is written in plain English, and all the details are set down so simply that a boy can follow them. All of the types of rods used on fresh and salt water are described and specifications given. Separate chapters cover all details, and the one on split cane rodmaking is the only comprehensive treatise on that subject ever published.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid, \$1.

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK

Erie, 983 to 951; Boston defeated Manchester (N. H.), 966 to 953.

Iowa City High School and Southern High School, Philadelphia, were tied for first place at the close of this week's matches of the Intercity High School Rifle Shooting League. The results were: Iowa City defeated Salt Lake City, 942 to 906; Southern (Philadelphia) defeated De Witt Clinton (New York), 908 to 896; Deering (Portland, Me.) defeated Western (Washington), 920 to 721; Baltimore Poly. won from Manual (Philadelphia), 909 to 0 (defaulted); Business (Washington) won from Central (Washington), by default; Morris (New York) defeated Deering (Portland, Me.), 892 to 830; Manual (Washington) won from Ogden, Utah, 859 to 0 (defaulted).

University of Iowa held its lead in the Western Intercollegiate Rifle Shooting League as a result of the week's matches. The results were:

Iowa defeated Kansas, 953 to 785; Minnesota defeated Michigan, 936 to 865; Arizona defeated St. Thomas, 868 to 784; Purdue defeated Michigan Aggies, 907 to 872; Nebraska won from California by default.

U. S. R. A. Indoor League.

THE standing at the end of the fourteenth match in the U. S. R. A. League was as follows:

Portland lost none; Manhattan and Springfield, one each; Golden Gate, two; Spokane, three; Philadelphia, four; Columbus, apparently four; Federal, Los Angeles and National Capital, five each; Boston, six; Pittsburgh, six and a half; Chicago, St. Louis and Providence, eight each; Oakland, eight and a half; Myles Standish and Shell Mound, nine each; Baltimore and Seattle, eleven each; Belleville and Osborn, twelve each; Youngstown, thirteen; Citizens, fourteen.

J. B. CRABTREE, Sec'y-Treas.

922 Out of a Possible 1000.

PORTLAND, Me., Feb. 3.—The Myles Standish Rifle Club, of this city, and the Park Rifle Club, of Bridgeport, Conn., were still tied to-day for the lead when the result of the third week's shooting in the New England Indoor Rifle League was announced. The high total of the week was made by the Bridgeport team, 922 out of 1,000. Portland was four points behind. E. H. Besse, of Portland, was high, with 189 out of a possible 200.

FIREARMS TRADE IN SPAIN.

Continued from page 172.

conspicuous than in the selection of a sporting gun. Duck guns of 8 and 10 bore are scarcely ever used here, and as the work of larger bores and heavier weapons falls entirely on 12-bores, the latter for the Valencia trade must be extra strong and rigid without adding materially to their normal weight of about 3.2 kilos.

The barrels of the American guns experimented with were quite capable of resisting the heavy charges of smokeless powder to which they were subjected in duck shooting, but being standardized machine-made weapons they were said to be easily shaken loose in their vital fittings and lacked that extra close coupling of hand-finished catches, crossbolts, and furniture, while the substitution of spiral arrangements for standard springs did not give satisfaction in this climate. It should be remembered in this connection that London gunmakers held almost exclusive possession of these markets for high-class sporting guns during the greater part of the last century, and Spanish sportsmen who, regardless of cost, aim at possessing what they consider the best obtainable sporting weapon still apply to noted London gunmakers for guns made to measure, in which the bend, length, and cast-off of the stock are calculated to half a millimeter and

the barrels preferably of fluid compressed steel, the finished gun costing \$250 to \$300.

Distinguishing characteristics of guns adapted to the requirements of this market, as compared with American sporting guns, are a shorter stock, with thicker neck and usually much greater bend, while a cheek piece is indispensable. Bolts, grips, catches, and general furniture must be extraordinarily close fitting, and the trigger pull, which is usually four to four and one-half pounds in American and British guns, is here reduced to about three pounds or even less. The boring of the barrels is either both full choke or the right three-quarter and the left extra full choke and thirty inches in length for duck and trap shooting, although latterly shorter barrels are coming into vogue for field shooting.

Advertising or correspondence alone would in all probability not lead to business, and it should be understood that only high-grade products and specialties in firearms can be imported under existing conditions, because home factories amply supply the whole trade in ordinary and cheap goods.

Consul Edward J. Norton, of Malaga, says there is absolutely no trade in American firearms in that section of Spain; furthermore, it must be reported that the outlook for business in this line is so unpromising, and so limited in any case, that American manufacturers can not be encouraged to attempt the building up of exports to the district.

One of the obstacles to the development of a trade in firearms is found in the law which prohibits the importation of pistols, revolvers, rifles, or carbines of a caliber over seven millimeters (0.27559 inch). Limited quantities of these arms may be introduced, however, together with ammunition of the corresponding caliber, if special permission is obtained beforehand through the customs authorities, but dealers state that there is such a limited call for arms of the prohibited class, including sporting rifles, and expenses in connection with obtaining entry are so heavy that there is no profit in handling the line.

The free sale of imported firearms is also restricted to a great extent by the Spanish customs law, under which a flat rate of duty, amounting to twenty pesetas per kilo net weight (\$3.86 per 2.2046 pounds), is charged on all firearms of the non-prohibited classes, with the exception of pistols, which are dutiable at \$1.54 per kilo. As guns or revolvers made of the best materials or involving workmanship of a high degree are charged the same rate of duty as arms of inferior quality, it has followed that dealers carry very light stocks of these goods and have limited their purchases to the best products of well-known Belgian or German makers. Imported firearms are sold at exorbitant prices and are beyond the reach of all except wealthy people.

All the trade in low-priced guns, rifles and revolvers is supplied by the Spanish arms factories located at Eibar and Barcelona. Most of these plants produce low-grade goods, but among the Eibar factories there are one or two plants specializing in the manufacture of high-class shotguns. The best guns of Spanish make are constructed after British models and are said to be accurate, well-balanced arms. A new model just put on the local market is a

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He knows it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is Lefever Taper Boring.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N.Y.

Durston Special
20 Gauge. Price \$28.00

hammerless, equipped with an improved and patented safety action, and is offered for sale at a price below possible competition of any imported gun of about the same style and finish.

The automatic pistols and the revolvers produced in Spain closely resemble American models. Double-action revolvers are more in demand than automatic pistols. Prices range from \$2.50 to \$8, but the best selling weapons are those retailed at \$4 and \$5.

Under the provisions of a law enacted in June, 1897, exclusive privileges relating to the manufacture and sale of powder and explosives in Spain and in the Balearic and Canary groups were granted to the Sociedad Union Española de Explosivos. This company maintains its central offices and factory in Bilbao and has established selling agencies throughout the Kingdom. Certain kinds of sporting powder only may be imported upon payment of customs duties amounting of 8.7 cents per kilo (2.2046 pounds), to which must be added the sum allowed by the Government to the powder monopoly as a commission on imports. This commission on F, FF, and FFF black powders amounts to \$1.06 per kilo. On smokeless the commission payable to the monopoly is fixed at \$2.22 per kilo.

Cartridges, loaded, pay a customs duty of \$11.58 per 100 kilos (220.46 pounds), to which must be added \$0.68 for each 100 cartridges

loaded with black powder and \$1.25 for each 100 cartridges loaded with smokeless, for account of the powder company.

It appears that target shooting with small-caliber rifles and revolvers, trapshooting, etc., are much more popular in the northern and western sections of Spain than in this immediate district, and it might be worth while for American manufacturers of sporting arms to investigate those markets. Should the business outlook be favorable they might support their trade campaign by advertising. There is at least one periodical in Spain devoted to hunting, fishing, and field sports generally, a bi-monthly called *Caza y Pesca*, published in Madrid, Calle Bolsa No. 10. A recent issue of this journal carried advertisements of four American manufacturers of firearms and sporting goods.

INITIATED.

ONE of the big moose in Golden Gate Park was standing near the fence that prevented him from getting into closer touch with the surrounding scenery the other afternoon, when a pretty young woman wearing just the niftiest hat ever came along in company with a man who was evidently her husband, because he was not paying her nearly the attention that her attractiveness demanded.

When the girl saw the moose she smiled real prettily at him and ingratiatingly held out a piece of candy for his inspection. The animal gave a glance of disdain at the candy and then deliberately sneezed in the young woman's face.

When a moose eliminates from his system a really earnest sneeze there usually is some atmospheric agitation in the immediate vicinity. There was in this case. The pretty young woman's hat blew off, there was a rain of hair-pins and her hair—and it was her hair, too, or else it would have followed the hat—came down.

The young woman pinned up her hair, put on her hat, and then turned to the man at her side: "Fred, dear," she said, without the flicker of a smile, "now I know why you are usually so mussed up when you come home late from a meeting of that Elk or Moose lodge you belong to. I don't blame you a bit."—San Francisco Chronicle.

FIELD TRIALS.

Oct. 28.—Southern Ohio Field Trial Association's second annual field trials. G. R. Harris, Sec'y, 15 West Sixth St., Cincinnati, O.

Southern Ohio Field Trials Ass'n.

THE Southern Ohio Field Trials Association will hold its second annual trials beginning on the 28th of October. The grounds will probably be near Hamersville, a short ride on the traction line from Cincinnati, but this will be definitely settled a little later, after the Ground Committee has had time to look into the matter thoroughly. There will be two stakes open to the world, with a purse in each that will be worth competing for. The club will put every dollar received for nomination and starting fees into the purses, deducting only enough to pay the legitimate expenses of the trials. Arrangements will be made so that those wishing to do so may follow the dogs on horseback. These stakes are expected to appeal to the handlers who follow

The Result of Over a Century's Experience

Perfection in powder-making is only achieved by exercising the most scrupulous care in the selection and preparation of raw materials, employing skilled workmen exclusively, and using only the most improved modern mechanical equipment.

This is the Du Pont method and accounts for the unequalled reputation among sportsmen enjoyed by the Du Pont brands of Smokeless Shotgun powders. One of these brands that has earned a high reputation among shooters is

BALLISTITE
A PERFECT
DENSE SMOKELESS POWDER

Moderate recoil—shoots clean; no unburned grains to "blow back". Will not deteriorate with age. Waterproof. BALLISTITE SMOKELESS SHOTGUN POWDER positively will not pit the gun barrels.

the big circuit, and to attract a number of them as they are on their way for the trials in the south. The club has not forgotten the amateurs, and will run a derby and all-age stake for their benefit, which will be opened to members and their invited guests, the prizes being cups for first and second and medal for third. Since the spell of cold weather which visited this section, inquiries have been made among the farmers as to how the quail had been affected. The reports were that the birds had suffered to some extent in the lowlands, but in wooded country and on the hills they had survived the storms and cold and were doing well. The prospects are good for an abundance of birds next fall, barring accidents. The next meeting of the club will be held on Feb. 6. At this meeting the amount of the stakes will be decided upon, and the entrance fees fixed.

A Pedigree Study.

To those not professionally implicated in the not only enjoyable, but lucrative pastime of dog breeding, the study of a pedigree will be interesting; but before taking up directly the pedigree, we will select as a type the Airedale.

It will be necessary to explain briefly that the Airedale came to be a type, or class, within the last century, and it came about in this wise:

The towns of Bingley and Airedale along Aire River in England, were infested with rats, so that a rat-dog of a water type was a necessary adjunct to every household. The otter hound had the requisite qualifications and was therefore broken to rat. Naturally, where there were men and dogs, there was keen rivalry among the owners.

It first was a question as to whose dog was the best ratter, then it became a question as to

whose dog was the best fighter. One day there came to town a man with a bull terrier, a strong, big-boned, aggressive dog, so full of fight that within a short time he "cleaned up" the pick of the hounds along the river. The bull terrier being so good a fighter, it occurred to the hound owners that a cross between the hound and the terrier would produce a type combining the aquatic qualities of the otter hound, and the quickness and intelligence of the terrier. The cross worked perfectly and the "Airedale" became indigenous to the shores of the Aire River.

It is safe to say that the judgment of these Yorkshiremen was not at fault, for there is no dog better able to take care of itself in a "toothic" encounter, than the Airedale, while as a vermin hunter he is unbeatable.

This, of course, did not give us the fine, straight-limbed, square-jawed, and highly intelligent Airedale found on the bench to-day. That is where the pedigree is interesting. It shows how they are crossed and intercrossed. For instance, a dog of fine bone is crossed with a bitch having the desired hair quality. From this litter generally comes one pup with the combined qualities sought. It doesn't always follow, however, that a champion sire and dam will produce a litter of possible champions.

As an example, the litter brother of Oui Oui, shown in accompanying pedigree, threw back

to an almost perfect otter hound. Inbreeding scientifically, avoiding too much relationship results in good pups, but even the most careful breeding will not obviate the possibility of a throwback to one or the other of the early stock from which a breed was developed.

The pedigree herewith shown is an excellent example of family relationship. Note by the stars the number of times the same sire and dam appear. For instance, we find Champion Crompton Oorang as the paternal grandfather of Empost Princess Nell (and all the rest of the pups pictured here), while Crompton Oorang appears four generations back on Princess Nell's mother's side; in other words, Oorang is Nell's father's father, and Nell's mother's grandfather three times removed.

The litter used for illustration is most unusual. It is owned by E. M. Post, a non-professional breeder of Babylon, Long Island, N. Y.

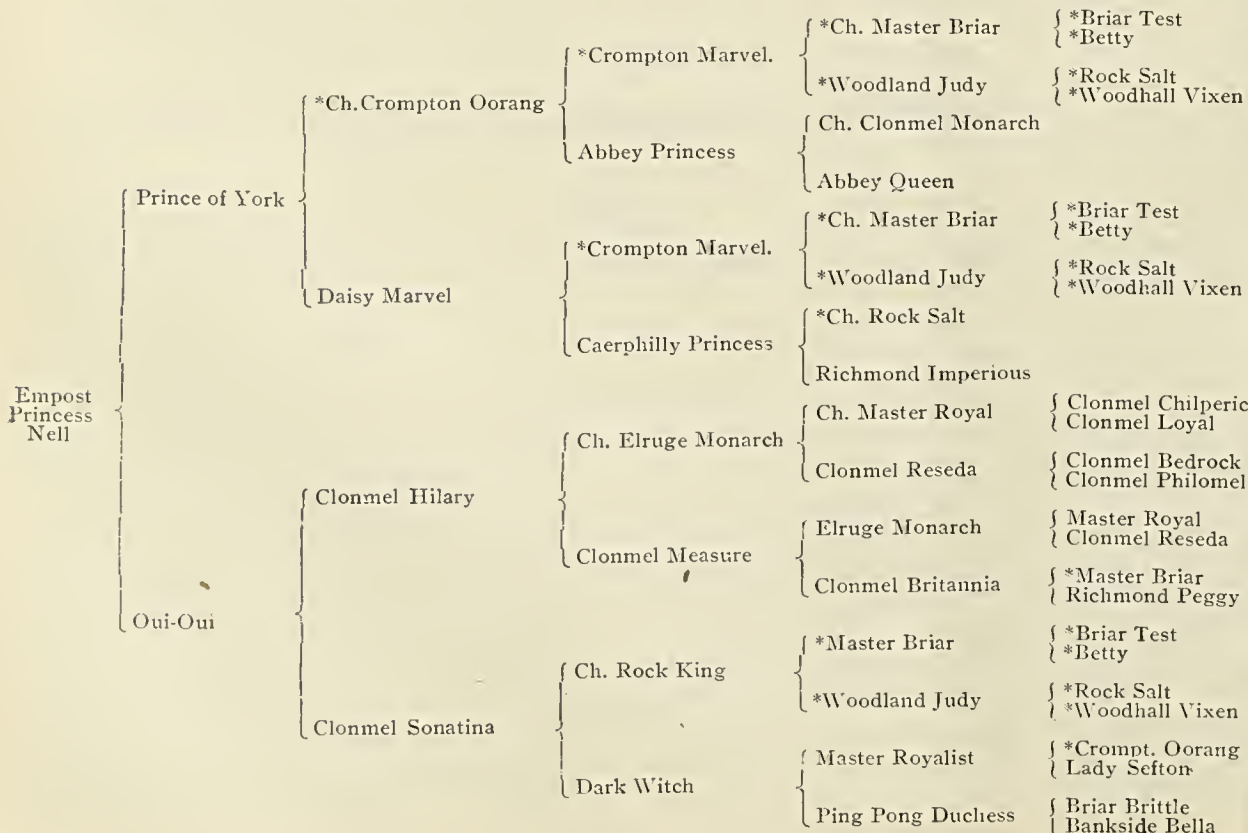

Out of nine pups of Oui Oui by Prince of York, every one will be shown at the forthcoming Westminster Kennel Club show. Judges of Airedales have been unable to decide which are the most worthy of being benched and have persuaded Mr. Post to show all, including the mother.

They will be entered under the kennel prefix Empost and bid fair to give a good account of themselves.

Buying a Yacht

Have you a yacht or small boat for sale? Do you want to buy one? In either case we can help you. Our just-organized Yacht Clearance Department is at your disposal.

The object of this innovation is to put the man who has and the man who wants in communication.

If you have a boat to sell, send this department full information and price, with photo, if you have one.

If you want to buy a yacht, motor boat or dinghy, file with us a general idea of what you want, and if we have nothing on record corresponding with your specifications, we will, through our many channels of information, find what you want.

If you think of having a boat built, perhaps we can help you select an architect or builder. We willingly will get estimates on plans and specifications for you.

If you contemplate chartering for the summer, suggest the class and style of boat you think you want, and we will submit a number of bargains worth taking under consideration.

Address: Yacht Clearance Division,

**INFORMATION DEPARTMENT
 FOREST AND STREAM**

127 Franklin Street New York

Forest and Stream desires to make an appeal to its readers. It asks that when writing to advertisers for catalogs or prices, or when ordering goods that are advertised, you mention that you "saw the advertisement in Forest and Stream."

This enables advertisers to know that their announcements are being read. They are read, of course; in fact, are studied with great care, because our subscribers know that anything that is advertised in Forest and Stream has merit. But advertisers do not always appreciate the value of any paper that is not mentioned. If, therefore, you will kindly mention Forest and Stream in answering advertisements, you will confer a favor on the

"MULLERITE"

Powder Has Won by Sheer Merit

Thousands of dollars are spent yearly in advertising and hundreds of demonstrators are continually extolling the virtues of other Smokeless Powders, but the sale of **MULLERITE** with practically no publicity, steadily increases.

**Once a MULLERITE Shooter
Always a MULLERITE Shooter**

Such satisfactory results could not be accomplished if Mullerite was not a truly remarkable powder. No inducements are offered to use this powder and no paid professionals say a good word for it because their bread and butter does not come through Mullerite channels, but the amateur who once uses it gets results and that counts more than smooth talk.

Don't take our word for it—just try a box of Mullerite in the field or at the traps.

GREENER GUNS

SAFETY.—While the dictum that "there's safety in numbers" may be true in so far as it concerns individuals, it is certainly wrong when applied to parts of mechanisms; here the simplest is always the best, and the perfect gun is that which does its work effectually with the fewest parts.

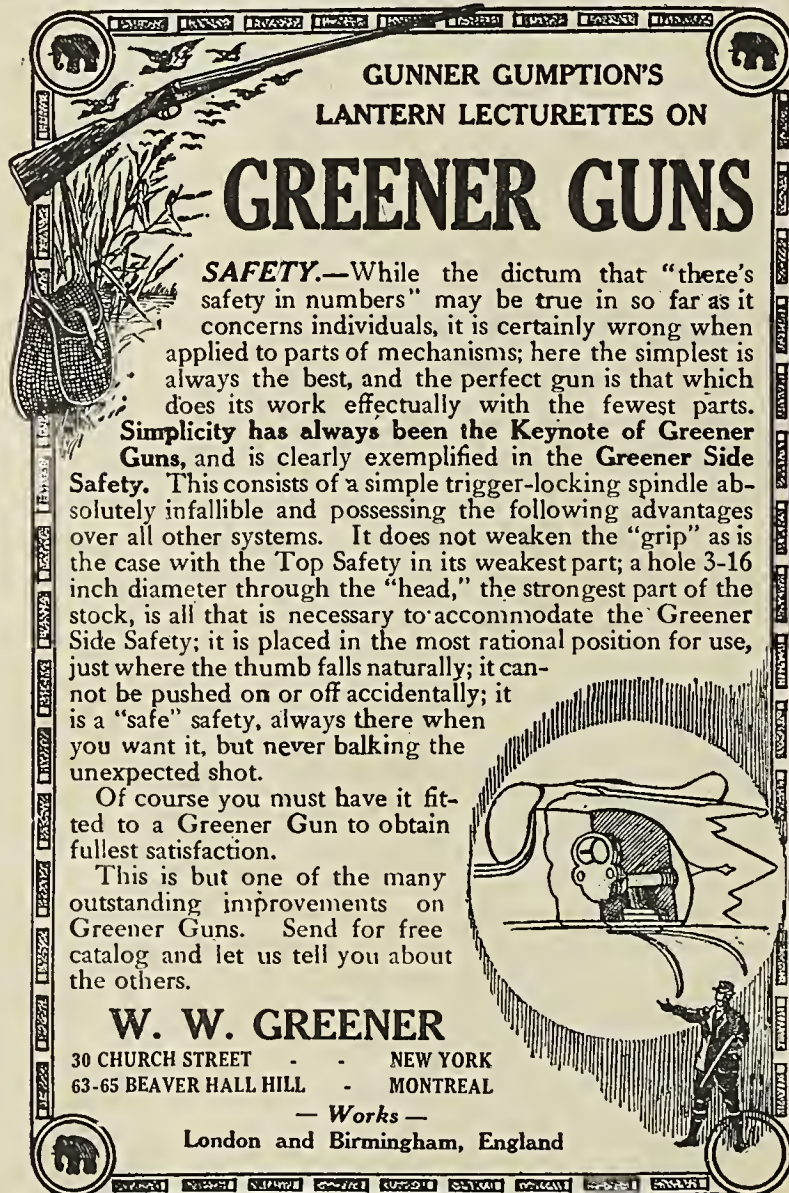

Simplicity has always been the Keynote of Greener Guns, and is clearly exemplified in the **Greener Side Safety.** This consists of a simple trigger-locking spindle absolutely infallible and possessing the following advantages over all other systems. It does not weaken the "grip" as is the case with the Top Safety in its weakest part; a hole 3-16 inch diameter through the "head," the strongest part of the stock, is all that is necessary to accommodate the Greener Side Safety; it is placed in the most rational position for use, just where the thumb falls naturally; it cannot be pushed on or off accidentally; it is a "safe" safety, always there when you want it, but never balking the unexpected shot.

Of course you must have it fitted to a Greener Gun to obtain fullest satisfaction.

This is but one of the many outstanding improvements on Greener Guns. Send for free catalog and let us tell you about the others.

TRAPPING ON THE HACKENSACK MEADOWS

From a photograph by Miss Carita Lemmon.

ARE YOU A GUNNER?

Do you love to follow your good dog over the fields in search of quail or chickens, or to struggle through swamp or along thick grown hillside, expecting to hear the roar of the ruffed grouse or the twitter of the fall woodcock? If so, you should have this new book.

AMERICAN GAME BIRD SHOOTING

By **GEORGE BIRD GRINNELL**

(New—Just Published)

This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys.

The first part of the volume is devoted to a description of the various species and their habits—the way in which they live their lives.

The second part of the book is devoted to upland shooting and treats of the methods by which all the upland birds are pursued and taken. The chapter "Aids to Shooting" describes the clothing, guns, and loads and dogs that the gunner may profitably use; while the last section of the book treats of the shooting of the future and the efforts to rear our native quail and grouse in domestication.

The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full page portraits of different game birds and hunting scenes, with a number of cuts in the text.

Cloth. About 575 pages. Price \$3.50, net. Postage 25 cents.

This book is of inestimable value. It contains the genuine hunter-naturalist facts given in the most entertaining and interesting style.

FOREST AND STREAM PUBLISHING CO., 127 Franklin St., NEW YORK CITY

AMERICAN DUCK SHOOTING

By *George Bird Grinnell*

A most complete work, dealing with every phase of the sport of duck shooting, thus forming a complete treatise on American ducks, geese and swans. It gives details of the natural history, habitat, and characteristics of every American species.

Part I contains descriptions with plates of each species.

Part II tells of every method of swan, goose and duck shooting practiced in North America—east and west, on Atlantic and Pacific and in the interior—and gives thrilling accounts of the splendid sport.

Part III deals with the art of duck shooting, including guns and loading, the Chesapeake Bay retrieving dog, decoys, blinds and boats, and finally discusses the causes of the decrease of wildfowl and tells what may be done to increase their numbers.

It is most fully illustrated with 58 portraits of North American swans, geese and ducks, by Edwin Sheppard, with 8 full page plates, and with numerous vignettes in the text by Wilmot Townsend.

Cloth, heavy laid paper, 58 illustrations, eight full-page plates, 627 pages. Postpaid, \$3.50.

FOREST AND STREAM PUB. CO. :: 127 Franklin Street, NEW YORK

THE BEST OUT-DOOR BOOKS

THE following is a selected list of *Forest and Stream's* books which are most suited to the taste of men and women who are fond of outdoor life—Shooting, Fishing, Natural History, Camping, Canoeing, Yachting. A good book does not wear out, but continues to give pleasure.

Catalogue giving full list of books will be sent on application.

American Duck Shooting.

By George Bird Grinnell. Cloth, 630 pages. With 58 portraits of North American Swans, Geese and Ducks, Plans of Boats and Batteries. Fifty Vignettes in the text, and a Chart of the topography of a duck's plumage. Price, \$3.50.

American Game Bird Shooting.

By George Bird Grinnell. New. Just published. This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys. The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full-page portraits of different game birds and hunting scenes, with a number of cuts in the text.—Cloth. About 575 pages. Price, \$3.50 net. Postage, 25 cents.

My Sixty Years on the Plains, Trapping, Trading and Indian Fighting.

By W. T. Hamilton ("Bill" Hamilton). With 8 full-page illustrations by Chas. M. Russell. New York. Cloth. 223 pages. Price, \$1.50.

American Big Game Hunting.

The Book of the Boone and Crockett Club. Editors: Theodore Roosevelt and George Bird Grinnell. Illustrated. Cloth, 345 pages. Price, \$2.50.

Hunting in Many Lands.

The Book of the Boone and Crockett Club. Editors: Theodore Roosevelt and George Bird Grinnell. Vignette. Illustrated. Cloth, 448 pages. Price, \$2.50.

Trail and Camp Fire.

The Book of the Boone and Crockett Club. Editors: George Bird Grinnell and Theodore Roosevelt. Illustrated. 353 pages. Price, \$2.50.

Like its predecessors, the present volume is devoted chiefly to the great game and the outdoor life of Northern America; yet it does not confine itself to any one land, though it is first of all a book about America, its game and its people.

American Big Game in Its Haunts.

The Book of the Boone and Crockett Club for 1904. George Bird Grinnell, Editor. 490 pages and 46 full-page illustrations. Price, \$2.50.

This is the fourth, and by far the largest and handsomest of the Club's books. It opens with a sketch of Theodore Roosevelt, founder of the Boone and Crockett Club, and contains an extremely interesting article from his pen, descriptive of his visit to the Yellowstone Park in 1903. Other papers are on North American Big Game; Hunting in Alaska; The Kadiac Bear; Moose, Mountain Sheep; Game Refuges, and other big game topics.

Camp Life in the Woods.

And the Tricks of Trapping and Trap Making. Containing hints on camp shelter, and all the tricks and bait receipts of the trapper, the use of the traps, with instructions for the capture of all fur-bearing animals. By W. Hamilton Gibson. Illustrated. Cloth, 360 pages. Price, \$1.00.

Uncle Lisha's Shop.

Life in a corner of Yankeland. By Rowland E. Robinson. Cloth, 187 pages. Price, \$1.25.

The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evenings and dull outdoor days, "to swap lies."

Danvis Folks.

A continuation of "Uncle Lisha's Shop" and "Sam Lovel's Camps." By Rowland E. Robinson. 16mo. Price, \$1.25.

Uncle Lisha's Outing.

A sequel to "Danvis Folks." By Rowland E. Robinson. Cloth. Price, \$1.25.

A Hero of Ticonderoga.

By Rowland E. Robinson. Cloth, 187 pages. Portrait of author. Price, \$1.00.

A Danvis Pioneer

A story of one of Ethan Allen's Green Mountain Boys. By Rowland E. Robinson. Cloth, 214 pages. Price, \$1.25.

In the Louisiana Lowlands.

A sketch of plantation life, fishing and camping just after the Civil War; and other tales. By Fred Mather, author of "Men I Have Fished With," "Adirondack Fishes," and "Modern Fishculture in Salt and Fresh Water." With portrait of the author. Cloth. Price, \$1.50.

Forest Runes.

Poems by George W. Sears ("Nessmuk"). With artotype portrait and autobiographical sketch of the author. Cloth, 208 pages. Price, \$1.50.

The Angler's Workshop, Rod Making for Beginners.

By Perry D. Frazer. Cloth, 180 pages. Four full-page illustrations, sixty working drawings. Postpaid, \$1.00.

A complete, simple and thoroughly up-to-date work for the guidance of the amateur rod-maker, carrying him from first principles through all phases of successful rod making. There is no theorizing or speculation. All terms are simple, and all kinds of rods and woods are treated of.

Modern Fishculture in Fresh and Salt Water.

By Fred Mather, author of "Men I Have Fished With," with a chapter on Whitefish Culture by Hon. Herschel Whitaker, and a chapter on the Pike-Perch by James Nevil. Illustrated. Price, \$2.00.

My Angling Friends.

A second series of "Men I Have Fished With." By Fred Mather. Cloth, 369 pages, with 13 illustrations. Price, \$1.50.

Rhymes of the Stream and Forest.

By Frank Merton Buckland. Cloth. Heavy laid paper. Sumptuously bound. Postpaid, \$1.25.

A charming collection of verse by an author who knows and loves nature well. A particularly pleasing gift for fishermen, closely simulating in form and ornamentation the standard fly-book.

Jack the Young Ranchman;

Or a Boy's Adventures in the Rockies. By George Bird Grinnell. Illustrated. Cloth, 304 pages. Price, \$1.25.

Jack Among the Indians;

Or a Boy's Summer on the Buffalo Plains. By George Bird Grinnell. Illustrated. Cloth, 301 pages. Price, \$1.25.

Jack in the Rockies;

Or a Boy's Adventures with a Pack Train. By George Bird Grinnell. Illustrated. Cloth, 272 pages. Price, \$1.25.

Jack the Young Canoeeman.

By George Bird Grinnell. Illustrated. 278 pages. Price, \$1.25.

Jack the Young Trapper.

By George Bird Grinnell. Illustrated. Price, \$1.25.

Jack the Young Explorer.

By George Bird Grinnell. Price, \$1.25.

Men I have Fished With.

Sketches of character and incident with rod and gun from childhood to manhood; from the killing of little fishes and birds to a buffalo hunt. By Fred Mather. Illustrated. Price, \$1.50.

It was a happy thought that prompted Mr. Fred Mather to write of his fishing companions. The chapters were received with a warm welcome at the beginning and have been of sustained interest. The "Men I Have Fished With" was among the most popular series of papers ever presented to FOREST AND STREAM readers.

Houseboats and Houseboating.

By Albert Bradlee Hunt. The book contains forty specially prepared articles by owners and designers of well-known houseboats, and is beautifully illustrated with nearly 200 line and half-tone reproductions of plans and exteriors and interiors. A most interesting chapter is devoted to houseboating in England. Extra heavy paper, buckram. The price is \$3.00 net. Postage, 34 cents.

The Art of Shooting.

An illustrated treatise on the art of shooting. By Charles Lancaster. Illustrated. Cloth. Price, \$1.25.

Gas Engines and Launches.

By Francis K. Grain. A few pages are devoted to launches in general, with some excellent advice to the prospective owner of a motor boat; but the author's attention is given chiefly to explaining the principles, working and practical handling of the marine motor for the amateur, who does not care to trouble his head with involved technical information. Cloth. Illustrated. 123 pages. Postpaid, \$1.25.

How to Build a Launch from Plans.

By Charles G. Davis. A thoroughly practical guide for the amateur. Shorn of all blind technicalities, it considers displacement, good construction and faulty stability, setting up the keel, framing and planking, with careful explanations. Each step is followed up to the care and running of the gas engine. Cloth, 9 folding drawings, 8 full-page plates, 40 smaller diagrams, 170 pages. Postpaid, \$1.50.

Fetch and Carry.

By B. Waters. Tells minutely of the methods by which a dog, young or old, willing or unwilling, may be taught to retrieve either by force or "natural" system. Cloth. Illustrated. 124 pages. Postpaid, \$1.00.

Nursing vs. Dosing.

By S. T. Hammond. A most practical book for the dog fancier, based largely on Mr. Hammond's observation that dogs, and particularly house dogs, suffer from too much medicine. Contents—Nursing, Cleanliness, Diet, Other Foods, Kennel and Exercise, Common Ailments, Diarrhea, Convulsions, Epilepsy, Distemper, Eczema, Need of Proper Care, Stomach, Vermin, Ear, Mange, Nervous System, Colic, Worms. Cloth. Illustrated. 161 pages. Postpaid, \$1.00.

Training vs. Breaking.

Or Practical Dog Training. By S. T. Hammond. The author tells how to bring out the wonderful intelligence of the dog by kindness, as opposed to force. A clear, explicit work, which will appeal to dog lovers. Contents—First Lessons, Charge, Canine Accomplishments, The Whistle, Quartering, Retrieving, In the Field, Working in Company, Raising Puppies, Training Pet Dogs, Conclusion. Cloth. Illustrated. Postpaid, \$1.00.

Training the Hunting Dog for the Field and Field Trials.

By B. Waters. Probably the most comprehensive work on the subject written, covers every phase of training and field trial preparation with reasons. Kennel Management, Breeding, Kenneling, Points of Judging. It is a work well calculated to enable the amateur to become a successful breeder and trainer. Cloth. Illustrated. Postpaid, \$1.50.

Woodcraft.

By Nessmuk. No better or more delightful book for the help and guidance of those who go into the wild for sport or recreation was ever written. No one ever knew the woods better than Nessmuk or succeeded in putting so much valuable information into the same compass. Camp equipment, camp making, the personal kit, camp fires, shelters, bedding, fishing, cooking, and a thousand and one kindred topics are considered. Beyond this, the book has a quaint charm all its own. Cloth. Illustrated. 160 pages. Postpaid, \$1.00.

Log Cabins and Cottages.

By William S. Wicks. This book covers building for the woods from the simplest shelter to the most elaborate cottage, cabin or house, and their furnishing and fitting. The details and directions are at once simple and comprehensive, and the illustrations are numerous and illuminative. Cloth. Illustrated. 44 full-page plates and numerous text illustrations. Postpaid, \$1.50.

My Friend the Partridge.

By S. T. Hammond. A delightful reminder of crisp autumnal days in the covers. It tells of sport with the noblest of game birds, the habits and habitat of the ruffed grouse, with just the right touch of reminiscence and personal experience. Cloth. Illustrated, 150 pages. Postpaid, \$1.00.

Trout Fishing in the Wutach

By LEONARD FINLETTER

IN a very amusing article published a year or more ago Emerson Hough told of his experiences on a German trout stream. He drew a graphic picture of fishing armed with a many-sealed license, attended by a uniformed guide, while a lusty peasant trundled a wheelbarrow along the bank, on which was a barrel of water to keep alive the trout caught. Everything he wanted to do was "verboten," except the payment of many tips.

My own experience was decidedly the reverse. I did not have any gallery watching my movements, and the tipping was absolutely nil. I had been staying at Baden, where the Oos flows through the town. There were a number of trout which profit by the rule prohibiting fishing within certain confines. From my seat at the hotel restaurant I could watch them rising within fifty feet of me.

The trout seemed to be of three varieties: the ordinary brown trout of Europe, and two others, lighter in color. One of these, called colloquially the stone trout, was so light in color that I mistook them for grayling. These fish were of good size, some of them weighing

a pound. It was interesting to feed them. Sometimes they would rise to pieces of bread, but would reject the crust, only eating the softer pieces.

The white or stone trout would eat ravenously pieces of meat thrown to them, while the brown trout did not seem to care much for such diet. I made a practice of feeding them, and soon noted that each trout seemed to have his own particular place, and we would almost invariably find them within a narrow radius.

A week of this developed the fishing fever to its utmost. I had been deprived of a trip to Nova Scotia, so well described by Dr. Miller in *FOREST AND STREAM* recently, by leaving for

Europe early in May, so that there was some excuse for me.

I had brought some of my fishing outfit with me, but lacked waders. Finally after much search I secured in Berlin a pair of high rubber boots of American make. Germany does not seem to go in for fishing very much, so it was rather difficult to secure equipment.

DRY-FLY WATER IN NOVA SCOTIA.
From a photograph by J. Gurney Taylor.

I had been recommended to try the river Wutach at Tiengen, four hours' run from Baden. My train was equipped with the usual "Speise Wagen" with the inevitable table d'hôte luncheon. To anyone not familiar with the horrors of this peculiar institution, I would misquote Longfellow, "Beware the awful table d'hôte." Such a mass of poor food badly served can hardly be imagined. It is not possible to escape by ordering such parts of the bill as seem least revolting. Once you have submitted to the tender mercies of the waiter, you have to take your place and have each successive nauseous mess thrust in front of you to stay there until the last person in the car has consumed the

whole of his portion. Any other method would be "lese majeste" and probably upset the German Empire, or render the violator liable to fine and imprisonment. The card says that food may be obtained à la carte. I tried that once and had to wait until every last one of two sections of table d'hôtes had been served and take what was left from their meal.

Reaching Tiengen, mine host Fritz of the Goldene Ochsen had my license ready for me, which, with characteristic German thoroughness, told me a few things I could do and many things I could not. Its effect was rather wasted on me, as it was mostly in German manuscript, and that is utterly beyond me. The only German word with which I am thoroughly at home is "verboten." One learns that the first day in Germany. The only things which are not verboten are "streng verboten," which is worse. When a thing is verboten in Germany it means something. Never in my life have I seen such law-abiding persons as the Germans. There is none of that spirit of defiance which prompts an American to do a thing, simply because it is

forbidden. When we Americans see a sign, "No trespassing," we exercise all our ingenuity to gain access to the forbidden territory. Doubtless it is the same spirit which moves the trusts to employ great lawyers to determine how far they may evade the letter of the law and escape imprisonment in the common goal. The old English spelling of that word seems to carry terror more effectively than our American jail.

But in all countries in which trout are protected the usual method adopted is regulating the size of the fish to be retained. I was told by my host that twenty centimetres was the legal limit. By an extraordinary mental calcu-

lation I succeeded in transposing the metric system into the more familiar English and learned that eight inches would be safe. We all know the effect of any such standard. It produces a run of fish just one-half inch under the lawful requirements. I have observed this in Pennsylvania, where a six-inch trout is ordained by an all-wise Legislature to have reached years of discretion and in other places where seven- and eight-inch standards have been adopted.

This recalls an incident when fishing for musk-alonge when the law required all fish under thirty inches in length to be returned to the water uninjured. Now a musky of twenty-six or twenty-eight inches in length is a rather formidable object with which to deal. He will weigh six or seven pounds, and is gifted with a splendid row of sharp teeth and an equally sharp temper. The only logical and unfailing argument to use with him is a stout club. This, when employed by the guide, rendered the enforcement of the law rather difficult. The embarrassment was relieved by the Indian guide, who cut off the first six inches of the yard stick. After that they all measured thirty inches in length.

After donning my apparel, Herr Fritz and I started for the trout stream. The Wutach is a small river emptying into the Rhine near the celebrated Rhine Falls. Like the Oos, it is shut in by walls of masonry which make it uniform in width and depth. The water was too high for wading and the fishing was therefore from the banks. This could readily be done, as there was not a single bush or tree upon either bank which would impede the casting. Mine host showed me how to start and soon landed a lively fellow about a foot in length. The heavy black spots showed a marked difference between him and our own native. Left to my own devices, I was soon industriously fishing down stream. I hate to confess it, but I rarely fish up stream when I can fish otherwise. The only thing which will tempt me to do it is a strong up-stream wind.

It was some time before I got a lawful fish. One or two "near ones" tempted me, but they were carefully returned. I was afraid the whole German army was watching me. At last the silver Alexandra, a favorite of mine in strange waters, lured one to his undoing, and after a few minutes of misgivings and doubts, I slipped the net under my first European trout—a short stocky fish of three-quarters of a pound. After a short time spent in admiration I resumed my fishing, but it was quite a long interval before I was again successful. This time the coachman was taken. The trout were not rising freely; occasionally one would make a half-hearted attempt, but could not be coaxed to repeat the performance. When I did succeed in getting another fish, a glance at my watch showed it to be after eight o'clock. I had no idea it was so late, being completely deceived by the long August twilight. I hurried home only to wait nearly an hour for my dinner.

The Goldene Ochsen is worthy of special mention. I had been told by Mr. Thackera, our Consul General at Berlin, that it was good, but I was unprepared for such comforts as I experienced. The proprietor is a fisherman himself, and includes among his guests many Englishmen, who come each year for the fishing.

He was extremely kind and solicitous as to my welfare.

The ground floor of the hotel contained a room which was the bar, eating room for the towns people, and general gathering place of the neighborhood. On either side was another eating room, rather more pretentious, where the process of eating was conducted with more ceremony by the lodgers. I was impressed with the late hour at which everything was done. My dinner was served at nine o'clock, and when I had finished I found the assembly room filled with people eating and drinking. The proprietor being a sportsman, made the hotel a rendezvous for all kindred spirits. Many were accompanied by the sedate little dachshunds, considered necessary to reduce the game of the country to possession. The grotesque little beasts with their long low bodies and short legs suggested gargoyles on an old church. But they are exceedingly good-natured and well-behaved. Like all Germans, they take themselves seriously. Perhaps the weight of the vast standing army, which, we are told, crushes all Germany, has produced their depression of spirit and legs.

An inspection of my fly-book was in order. The fishermen seemed much pleased with my American flies, but unanimously voted my gut too heavy for snells. My old flies had been tied on ordinary gut suitable for No. 12 flies, and I had sent to England for the finest undrawn gut to use as points for the eyed flies.

Herr Fritz came to my rescue with some fine drawn gut, so frail that great care had to be exercised in tying on the fly. I doubted the ability of this gut to hold a decent fish in that fast water. I had seen a 2½-pound trout which had been taken that day, and wondered what I would do with a like one. However, the gut proved sufficient. True, I lost a couple of fish by the gut breaking when striking a fish, but when once hooked the fish never parted it. The largest fish I got weighed just over a pound, so I did not have a chance to test the strength with anything heavy.

The next morning the first fish I caught was a grayling. Fishing near the mouth of an irrigating ditch, I saw a swirl near my flies. Resting him for a short time, I was ready when he rose. When I struck, a bar of silver more than a foot long jumped into the air. Humoring his rushes, I worked him out of the fast water while he jumped several more times. When I got him near enough to attempt to land him, the large dorsal fin showed almost red in the water. In my eagerness to use the net, I neglected to watch my footing, and down I went, striking heavily on my right elbow. Fortunately for me I held up the rod and the fish was too tired to profit by my awkwardness. I slipped the net under him just in time, for the Montreal came away as the fish struck the net.

At a safe distance from the river bank I sat down to rub my bumps and make a critical examination of the fish I made the trip to catch. Longer and lighter in build than a trout, with fine black spots, it resembled a young salmon. The crowning glory was the extremely high dorsal fin, which when held toward the light showed many hues as the rainbow. Never have I seen such a beautiful fish. It did not require a prophet or a son of a prophet to tell me what I had caught.

I shall not attempt to give all the details of my three or four days' stay at Tiengen. My catch was a modest one, so far as numbers were concerned, but I could always get a few without much effort, and after all, that is the best fishing.

In Nova Scotia I have caught twenty or thirty trout without moving and left them still rising. But that is too easy. It reminded me too much of the fishing in a well known stream in Pennsylvania a few years ago. Just before the season opened the club stocked it with eight or nine-inch liver-feds. The silly fools stayed just where they were placed and rose to any sort of a fly. The unskilled angler could get the club limit whenever he struck a school of them, but the wise ones left them alone to fish for bright fish.

It rained intermittently on a couple of days; enough to dirty the water and prevent a very determined effort at fishing. Once when I went out for a short time I took a small German boy, who spoke English. I spoke no German. He was to carry the net and act as guide. The first fish I caught produced a diversity of opinion as to methods. He made frantic jabs at the fish, trying to catch him on the wing, while I was imploring him to hold the net still. This he finally did, but out of the water. Meantime the fish, a grayling, had exhausted himself and I took the net from the boy and landed the fish safely. He learned very quickly, however, and landed several others without again incurring my wrath.

The expense of the trip was extremely moderate. The license for a week's fishing cost about five dollars, including everything; absolutely no tips or gratuities of any kind and no one to watch one's movements.

The hotel, the Goldene Ochsen, was capital, and the price moderate. The proprietor, Wilhelm Fritz, speaks English and helped me in every way. He did everything in his power to make my stay successful.

I could see no difference between the fishing in this river and any other well fished water in this country. There were trout there in plenty, but they required careful fishing to get them. They rose equally well to the wet or dry fly—not fished in the style of the English purist, but allowed to float over likely places.

I tried American flies, too, and found my old friend the Montreal acceptable to both trout and grayling. At first the even banks and uniform depth of this water suggested fishing in a canal. There were no holes scooped out under the banks, no fallen trees or ragged, rough rocks to furnish hiding places, so eagerly looked for by us. It might well have been a river of "Spotless Town."

Following our friend Van Dyke's example, I have added to my list of "Little Rivers," the Wutach.

Real Service.

KING GEORGE has the proper conception of modern hunting, and we are glad to hear that his expedition after tigers was equipped with electric lights and automobiles. But for real service commend us to the typewriter, camera, fountain pen, khaki suit and special wire successfully employed in a recent African campaign.—Evening Sun.

Deer Hunting in Minnesota

By HENRY JOERG

"HURRAH, boys, it's time for the train!" These words were spoken on Nov. 7 to the boys, who all had a longing for the pure air of the pine, cedar, balsam and spruce forests, the real balm for lungs, nerves and blood; the purifying of the whole system. After working hard all the year, this trip to the woods is a real recreation.

Arriving in St. Paul, we bought the extras needed, as we had four hours' time to wait for the Duluth flyer for Moose Lake. From there we took the Soo train at noon for Remer. This new line, just built, saved us a fifty-mile drive over hills and valleys to the real deer and bear hunting country.

This year the bears had all been denned up, for cold comes early at Remer. We bought our provisions for the balance of the month and started to our camp, fourteen miles distant. Myself, J. L. Kunz, Frank Seymour and a couple of other men joined us later on, but their names I will omit, for reasons given later on.

We were met at the train by our old friend, the wood chopper, war horse and logging camp owner, Alex Gilmer, who had for about twenty years taken us in and out each season. The old boss would have it no other way but to go to his camp over night, and after supper a general conference was held on the location, the game seen, their notions and acting, as the deer seem to understand the hunter better every year, they being more cautious since the use of high power rifles.

In the morning early we started in a drizzling rain, arriving at camp about 11 o'clock. We were surprised to find the door and window gone, one-half the roof off, the chinking between the logs mostly gone, part of the stove missing and the inside full of water and ice. It was a job to put all this in line, and it was midnight before we were ready to turn into our bunks.

This camp is on the beautiful shores of Thunder Lake amidst the most picturesque surroundings I have ever seen, and I think it the nicest spot on earth. The frequent rumbling, seemingly under the lake, which sounds like far distant thunder, is a phenomenon never explained by scientists so far. Many a time as I sat on a stump close to the water I would hear this mysterious rumbling, but no quiver of earth or air could be felt.

On opening day we took a stroll, each one by himself. During night it had turned very cold and all leaves and bushes were full of ice. The rising sun made everything look as if crystalized, but walking was so noisy on the frozen leaves that we soon gave up hunting and returned to camp to gather wood for the season. By that time it clouded up and started to snow. Later there was a regular blizzard and we had to work to get wood in. By dark we had enough to last, we thought, a week. How we got fooled!

Next morning our water pail had three-quarters of an inch of ice on it in the camp, and the air was so cold that we had to work to keep warm. The first cold snap is always felt more, but one finally gets used to it. In two days all our wood was gone and there was about eight-

teen inches of snow on the level, but the fourth day it was clear with the temperature 15 degrees below zero. When we started out it was a little hard on cheeks, ears and noses, but we followed the valleys all we could, taking in swamps and other places. Tracks seemed to be plenty, but we could not get near any deer that day, nor the next six days, when the temperature fell to 30 degrees below. We noticed that the deer had left these hills, going for the big timber. We then decided to move to a place eight miles away which we did the next day, and when we got up next morning, the weather was fine and the day seemed the right one for hunting. Five rods from the shack we found three fresh tracks. One man stayed there while the other two went

THE PARTY AND ITS GAME.

around in a circle to head them off, but when the driver returned they had gone through. As the tracks were only a short way from there, I told the two boys to wait three-quarters of an hour, then follow the track. I knew of a hillside where they all used to cross. When I got there I found the storm had blown over a large hard maple whose leaves were still on, and which made splendid cover. Nothing was seen, so I started for another place eighty rods further on, but when I had gone about twenty yards, on looking over to the place where I wanted to stand, I saw three flags drop over a hogback.

The boys were there when I got to the runway. The deer had passed very close to them, but were not seen. They followed the tracks clear to Bog River, while I made for the swamp where I found a dandy open place, lots of windfalls on one side, cedar and tamarack on the other and the side on the swamp with thick alders. I watched all around for five minutes when a slight crackling of a twig reached my ear. I turned slowly to see a big buck coming down hill right-quartering toward me. Putting the rifle to my shoulder I turned, but could not turn far enough without sliding off the log, but I fired and the buck jumped up high, while I landed in three feet of snow, legs in the air.

When I got on my feet, no buck could be seen. I crawled over the windfall to the place where I had last seen him and from there the track was eight feet wide. He went fifty-seven yards from where I shot. The bullet struck close to the shoulder joint, cut the bottom of the heart entirely off, and went out on the other side. When I skinned him at home this piece of heart was between the skin and the ribs. The meat was nice. He was fat and had a nice even set of four prong horns.

Next morning we all started again, and a quarter of a mile from the shanty we saw fresh tracks. I sent one of the boys ahead while I made a drive, and fifteen minutes later we had another nice deer hanging up. Only three shots were fired. As it was only 9 o'clock A. M., we decided to take a recess for two days, and went fishing. There are thirty-five lakes in the vicinity, and from the high hill near Thunder Lake one can see nearly all of them. We got a nice bunch of partridges and spent a couple of days free and easy. On the third day we got up very late to find that the weather had moderated. It was thawing some. The deer do not smell so good when it is damp and they are lazy, too, on a warm day. One of the boys took the hill, one the swamp; I took a circle and in half an hour all had their lawful number. In a grassy spot near a tamarack swamp one of us jumped six deer.

When our other parties came they asked us to show them some deer and let them shoot, so we decided to help them. Of course, it is fun to watch a green hunter, and I decided to have a good time with them. We circled after putting one man on a pine stump at the edge of a swamp near three runways. We all started on the other side of a bad bog where at every step we sank one to two feet. That is the way to break them in. There were three islands on the bog and they always harbor some deer. Presently we noticed five tracks going toward our man, who had a .40-65 rifle. We heard no shooting, but he was awfully excited, shouting: "I got them! I got them!" These five deer passed within five rods. I winked at the boys, who understood. I made a circle, went back and found all his loaded shells. He had pumped them out of the rifle in excitement, never thinking of aiming or pulling the trigger. It is certainly comical to see those greenhorns the first time they see a deer. Many a time have I watched from a safe place. Once in a while I made a funny noise a little distance away. Really, the poor fellows were nearly scared to death and ready to leave the woods.

This year as usual we stayed out two full nights to watch nature and the animals. Many a time a deer came within reach of my foot. It is fun to hear the unmerciful yell the bobcat emits when it gets one's wind close by; then the crackling and thundering of the ice on all the lakes. It is not pleasant to be out all night in real cold weather, but it pays to see and hear all that is going on, especially the fun the deer have playing. I tell you, one month in the woods is the real life, and every man owes it to himself and to his family to keep well.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

The Covey in the Meadow

By AMOS BURHANS

THE pup and I dragged ourselves to a shady spot under a willow at one side of the meadow's end. It had been a hot morning in the early fall, and it had been spent looking for the little covey that I had known to inhabit the locality for the season, and Charlie and I had tried to take toll from their midst for our steady protection of the summer and previous spring. But they had eluded us easily, running at times ahead of his old dog and my puppy, refusing to rise, and in every way had shown themselves not to be intimidated by the dogs or our voices.

There were at the beginning of the season three nesting pairs. The pair that had nested in the orchard raised two nice coveys. The second pair, that nested in the strawberry patch now grown high with weeds and burs from a couple of seasons' wild growth, had reared seventeen birds. The third covey down in the woodlot, some twenty birds, had blown in from across the Mississippi and settled in the edge of the woodlot. And all had scuttled out to the meadow and the surrounding corn and swale grass as the big, juicy bugs of haying time and corn cutting season had invited them. True, we had seen but little of them during the previous two weeks and thought they were to be easily found.

Charlie and I had been scouting for the eager small-mouth black bass along the ripraps and wing dams and heard the quail calling at nightfall. We had listened to them during the morning while we were in our little fishing boats with friends, dropping moon-eyed minnows into the deeper waters when the flies and surface work failed to snare the cautious strikers at the baits. One noon as we had flipped the eggs over in the skillet—I particularly remember the day because we did not have enough of those fresh country eggs to go around—just across the river we heard a lot of quail talk and saw a black cur chasing through the pastures, head to the ground and probably the cause of the shrill whistling of the birds, each trying to find the other again after separation. But no matter how thick they seemed to have been before, to-day they were not to be found.

Beginning near Pearl Joe's place we circled a little cornfield, drew down on a long fence of rails, with its corners full of rubbish, and then crossed the meadow end to work up the dewy side of it. Now, a Mississippi valley meadow is something other than a meadow like they used to have back York State way. It is a real meadow. For miles and miles, stretching first on one side of the Mississippi and then on the other, you can see the spots that are subject to overflow. In Iowa, Minnesota and Wisconsin this is particularly true. The land is not broken up because the river has a habit of turning all the plans of men at naught when she wants to cavort about on land a while. The low places are all meadows, and often are twenty or more miles in length, and the only thing that shuts them off from each other is the one and two-wire fence of the barbed type which sometimes divides the land.

Our meadow was seven miles in length and as wide as the flat land back to the bluffs, nearly ten miles. Here and there it was broken by patches of swale grass, copses of willows, and the hay only having been cut where the land was dryest, made the waving stiff grass that stood seem like little islands dotting a sound. Cornfields of more or less pretensions were scattered here and there through the meadows, as if the farmers who planted and reaped on the higher ground had been afraid of wasting seed in doubtful soil.

We contented ourselves with the thought that the last end of the hunt is the best end, and that we knew the birds were about somewhere, and we would eventually find them. By 10 o'clock we had skirted another piece of mowed meadow, and sent the dogs into a few bunches of scrub willows. Then we looked at each other and sat down.

Charlie allowed they had gone over into the lower lands along the bluffs where water could be had without exposing themselves. The dogs allowed they had worked hard enough until they could lie in the water awhile. This from their actions. Our council of war resulted in a determination to take them at any cost, so we hastened three miles to a spot along a slough in the meadow. It was noon. The dogs had been heeled, and were put on cords and allowed the freedom of the water. They rolled in it and sloshed about in the mud until they seemed to have enough, every now and then drinking great mouthfuls of it. We pulled a bit of hay out of a stack and lay in the shade of that low rick.

After lunch we started again, working out the low covers, the tall grasses, willows and plum thickets. Birds? They had literally taken to wing and left the vicinity. From one side of the slough to the other we passed and thrashed. Then we went down long rows of scraggly corn. The dogs were beginning to peter out, and yet the pup's bone and muscle kept him ginging up every now and then, while the old dog, famed for his choke-bored nose and hardened sinews, gradually dropped to the rear. His ten years were telling.

We worked toward the river again, and thought we might perhaps get into the covey along the pasture fence or brush here and there. Down the path we sauntered, the pup ahead, tail up and nose to the earth, fearful lest he should miss a scent. Just as we turned into a thicket of willows, bordered on one side by a patch of corn, the pup ran through the maize and scared seven birds to wing. Dropping our guns from shoulder we watched them sail and drop in a nice piece of high grass. There must have been five acres of it. Being out of range and the birds too concealed in the tops of the corn, gave us no chance for a fair shot.

The old dog, again smelling business in the air, stiffened up and began to swing his tail. Hardly had he gotten into the cover where the birds had dropped than old Mike and the pup were making a point, the elder backing. Charlie went up to the puppy and kned him into the

single bird, for he never would have gone into it alone. With a heart-quickenning whirr the bird made off straight away. Smokeless powder did its work easily and quickly. The pup was watched closely while the old dog retrieved. Then both of them started into the cover at the left and nailed another bird in the tuft of grass at the edge of the slough. Charlie scored an early hatched bird of wonderful breast development, hard and full rounded.

The shots and the dogs must have scared the other birds. While I stood at one side where I could plainly see a mowed opening, scooting across went the other five birds bunched so close that a newspaper would have covered them. We sent the dogs into the new bit of swale grass, but they failed to get a point. While they were hunting out the cover fully, Charlie cried: "Over this way, quick. They have gone across into the uncut piece."

"Haven't they got wings?" I bantered.

"They don't use them, however," he replied, running to catch the pup who was reluctant to leave the hot scent in the cover. And they kept ahead of us from one piece of uncut grass to another, and finally got into the corn where the dogs could not find them. Once in a while one of the setters would drop his nose to the ground in the corn as though a bird had immediately ahead of him rushed afoot over the soil. Then he would act-puzzled for a time and finally give it up.

And thus we spent the remaining hours of daylight, seeking but not finding. They had foiled the noses of the dogs and brains of us who sought to apply our field learning. Two little birds out of seven fine rascals, and fifty or more within striking distance! They would be there another day, we figured, but when the other day came we could not find them. We devoted ten or twelve days that fall to those phantom coveys and finally gave it up, thinking that if they were made of that sort of stuff, they would be just the sort we wanted to trap and carry over where we could free them in the spring to again nest in the meadows about our favorite haunts.

The fall was a beautiful one. We sat in the boats, teasing the bass with pickled minnows the last of November. The sky was as clear as a day in June. The sun was warm and the whole scheme of outdoor life was perfect.

"Hear that?" asked Charlie, raising his head and shoving an ear over toward the Minnesota shore.

"Hear what?" I demanded.

"Those five birds are running yet! But I guess they are scattered now, for I heard one call to the other. Listen!"

The whistle sounded as plain as could be.

"We will find out more about where they lie for sun baths and where they dig for the sumac berries when a light snow comes," I said.

Below the Average.

BERLIN, N. Y., Feb. 9.—*Editor Forest and Stream:* The amount of fur taken this season has been below the average, the catch of mink, muskrat and skunk being very small. 'Coons and foxes constitute the bulk of the furs taken. One trapper took fourteen foxes and enough smaller furs to bring a total of \$114. Edward Robertson, of Glens Falls, whose success last year was phenomenal, reports a season below the average.

SANDY.

Buying the Canoe

By CARITA LEMMON

SIS, having finished her chapter, snuggled deeper into the big armchair, blinking at the fire.

"Sis, we'll have to buy a canoe this spring."

"I know it, Jim," she murmured, "but," rubbing thumb and fingers together with monetary insinuation, "where'll we get it, boy?"

"Er—fur trading," he answered, with a large gesture.

"In Jersey? With little old New York just over the Palisades? What'll we trap, Jimmy, field mice or the priceless cattail?"

"A-aw! mink. I believe there are mink still around, along the edges of the flats, up the side creeks and ditches. They use the same den year after year, you know, and if we found a home den, we might trap three or four right there.

CAUGHT.

Six mink pelts would bring the price of a canoe all right."

Sis yawned with frank unconcealment and turned again to her book. "Certainly, Jim, and I've been told the surest way is to put salt on their tails."

With a fine scorn for girls, Jim went out into the January sunshine to look over the field of proposed operations. Down across the marshes he went, shattering crystal panes of "air ice" at every stride. There was two inches of fluffy snow on the ground, ideal for tracking, and he noted many rabbit tracks, and the wee trails of mice, delicately chaining stump to stump. Just where the woods, flanked by wading alder bushes, merge with the wide flats, Jim stopped with a satisfied "I thought so." There were mink tracks without doubt. Skirting regiments of stark cattails, Jim followed the trail to the slight elevation of a ditch bank that ran like a long finger from the woods out across the salt meadows. There he came upon what must have been in minkdom a Fifth avenue mansion. Mink are

confirmed globe trotters, but this was evidently a favorite resort, placed as it was between the fat fields by the creek and the upland hunting grounds. Tracks led away from it in three directions, and Jim, feeling that he now had, as it were, an introduction to the inner circles of minkdom, chuckled gleefully.

"Oh, there's mink, mink, lashin's of mink!" he chanted, paraphrasing Sandys' countryman, and hurried home to crow over Sis. She, fired with sudden enthusiasm, helped him rummage house and stable for traps, and joyfully tramped down to the ditch to watch him make the first sets. Afterward they followed along the two streams that empty into the creek and found more tracks, and under a tangle of brush by an uprooted tree, a small den. In one place Jim broke the ice over a pool and scooped out a netful of killies to serve as bait. Tremendous vitality they have, these little fish, squirming and gasping for hours after being taken from the water. A man once said he had found on a bank some frozen killies that he took home. When they thawed, one of them began to open and shut his mouth, and finally gasped: "I'm dry; give me a Scotch." Oh, well—

It was customary in those days for Jim to eat his breakfast in the pantry about 9:40, so when he appeared next morning at 7:25 and offered to carry in the muffins, his mother beamed at him. "He must have heard, after all, what I said last evening about promptness," she thought. "Dear boy, he does try to please me." But Sis began to flick her duster about with perilous speed and knew that she would have to sneak out of washing the dishes if she was to be in at the death, if there was a death that day, in the family of Putorius Vison, Esq.

The two returned from this first visit to the line in topping spirits, for was there not, hanging limply from the trap in Jim's hand a potential five or six dollars toward the price of the canoe? They bore the spoil up to the attic where there was a table with a newspaper spread on it. Jim laid the mink there, and drew forth a murderous looking knife.

"Y—you're going to do this part of it, aren't you, Jim? Sis quavred.

"Well, Sis," he began, very intent on the knife, "you know, you really haven't done very much to help, so far. If you wouldn't *mind* doing this?"

If anyone but Jim had asked it. However, she swallowed hard, and limply took the knife. Ugh! The mischief that had lurked in Jim's eye came out and sat boldly on his face. Gravely he gave directions, palely she carried them out, until an unlucky jab of the knife wrought her own, and the mink's undoing. With a horrified gasp Sis dropped the knife and fled away from the scented atmosphere, leaving Jim to reflect that a practical joke after all is apt to be like the swine who turn again and rend you. The end of the week brought them another mink, a victim to a carnal appetite for killies. Then came a thaw, and a time of raining and freezing that blocked the traps and tried Jim's patience. But it cleared after awhile, and at last one night

Putorius, Jr., evidently came home at a shocking hour, tried to sneak in the side door without waking the mater, and stepped into a No. 1 trap. There they found him next morning, jaws bloody, ground all torn up, and he still fighting mad. The old man side-stepped next and was caught in an equally tight place. By this time the partners, so sure were they of success, were discussing what time to order the canoe, but their hopes were dashed. Whether there never had been but four mink in the neighborhood, or whether others, alarmed, had fled, it remained that the ditch knew Putorius no more that winter.

"Of course," Jim pondered, "there'll be plenty of muskrats down there in the spring, but we'd have to catch a lot of them. Wish to goodness we could trap two more mink somewhere."

Sis, on the rug, frowned thoughtfully at the fire. "Jim, why don't you look along Phillips' ditch?" Jim smiled tolerantly. "Oh, it's much too civilized there. Maybe there's one along the Cresskill brook, though."

Now, this stream rose, and still rises, in a

ONE MORE.

marsh on the Palisades and dashes down the hillside with a great deal of noisy enthusiasm under the gloomy shade of hemlocks. Up there, where the brook was conducting itself with all the dash of a professional trout stream Jim found mink tracks, and though he feared that the animal had just passed through on a foraging expedition, he set the traps. The mink did not materialize, but a half wild cat did, and with its short tail and long legs, feathered out at the joints, was an interesting case of reversion to type, but though Jim was glad to see one less "varmint" in the world, he was growing discouraged, and the season was on the wing.

"Jim," Sis began, "at least you might look by Phillips' ditch."

"No use," he answered patiently, "people around there every day. No mink would frequent a place like that. If you want to pack me up some lunch to-morrow, I'll go over to the Cherry Hill brook. If that fails, we'll have to bank on the inglorious muskrat."

Now, Sis had not been at all impressed by his

scorn of her ditch theory. She couldn't for the life of her see why men being there in the day time should affect mink who came out at night, especially when the two ditches looked so much alike, and were only half a mile apart. Accordingly, while Jim was away on a visit to the Cherry Hill line, down to Phillips' ditch she went. There, she knew it! Under the shelving bank were prints of agile paws. Sis followed them craftily while hope surged high within her. Once her foot slipped off a root into six inches off icy water, but her excitement was so great that she only said "Ouch!" and went right on. Presently another set of tracks joined the first, then a third, and the mingled trail led straight to an old willow tree. Ah! there between the roots was the entrance to the den. Sis inspected it with sparkling eyes, and then in a minute caught sight of a second entrance a yard away.

"No mink would frequent a place like that," she mocked gleefully, "but they do, Jimmy, my boy; there's mink, mink, lashin's of mink!"

She reached home breathless and giggling at the joke she had on Jim. On Jim, who knew so much. Jim was home again, too. "The deuce you say!" he exclaimed when she burst upon him with the news, and he started off on a run, traps swinging and clashing. She tailed behind, arriving at the ditch some minutes after he did. He was gravely regarding the mink tracks.

"Well, Jimmy?" she chirped, nearly bursting with pride.

"This trail runs right up to Phillips' barn," he said. "There's a hole under the stable, and I saw one of the beggars duck into it."

"Oh, Jim, how tame they must be! We can probably catch them all and then you can buy that fly-rod, too, and—what's the matter?" Jim was leaning against the willow tree, shaking with laughter. "Oh, Sis," he gurgled, "don't you know a rat track yet?"

But there's no relying on a feminine sense of humor, and when a girl takes a joke as Sis did this time, there's only one thing to do, unless she's some other fellow's sister. Jim roared at her. "Oh, brace up! It doesn't matter. It's all right! We'll get the canoe; I caught two big fellows at Cherry Hill."

Colorado School of Forestry.

In the Ranger course of the School of Forestry, Colorado College has achieved a distinct success. This course has attracted a large body of men from the National forests of Colorado and Wyoming. With six weeks of field work, including studies of the growth and development of forest trees and mapping and estimating timber; the course has been of the greatest practical value. Forest service experts on problems of forestation, grazing, the management of Rocky Mountain forests and forest fire protection, have given liberal assistance.

The aim has been to give the rangers training to enable them to co-operate more fully in the technical problem of forestry that appears constantly in connection with the administration of the National forests. The success of the course this year means that it will be a permanent feature of the School of Forestry.—Colorado Springs Gazette.

GAME BAG AND GUN

A Great Temptation.

Editor Forest and Stream:

Last November, while living in my little brush hut on Oakledge Tract in Northeastern Connecticut, I took down the old .32-20 single-shot—the rifle that I have used for more than twenty-five years—and started for the woods just back of the cabin, intending to get a couple of squirrels for the next day's dinner.

Following a path along the brook side I got a glimpse of a big squirrel above a limb near the top of a very large and tall chestnut tree. As the little animal was very slow about showing enough of his anatomy for a fair shot, I just dropped upon one knee and watched and waited.

Presently I heard a splash in the water just below and behind me. Turning to look, I was greatly surprised to see a full-grown buck standing near the bank broadside to me and less than thirty yards away. And what a splendid target he was! Rising carefully, I cocked my rifle, put it to my shoulder and aimed directly at his heart. Just then a thought came to me, and saying to myself, "Lyon, if you pull the trigger there's a hundred-dollar fine awaiting you," I lowered the rifle and stood watching him.

Presently he turned and stood facing me. Wasn't he a beauty, though, and what a splendid pair of antlers! Again cocking the rifle and putting it to my shoulder I took careful aim at his forehead, not with any intention of shooting, but just to see how it would seem to take a shot at such noble game.

After standing and facing me a moment the buck turned, trotted back and forth along a worm fence, then, with the greatest ease, he jumped over into the adjoining lot and trotting off, was lost in the woods.

Again looking up into the big chestnut I saw the squirrel and dropped it with a shot through the head. Going a little further I saw another gray near the top of a big pine, which came down with a well directed shot through the body. Then with the two I went back to the hut, dressed them, and next day had a fine fricassee for dinner.

Two days from then, after having packed my suit case preparatory to taking the journey to my home in Asbury Park, N. J., and having a little time to spare, I took a walk through the woods near where I had seen the buck, and saw a doe among the laurels. It was a full grown one and did not seem the least bit afraid. It leisurely trotted off to a nearby swamp.

There were quite a number of deer around there during last summer and fall, as they trimmed my garden truck quite closely. Every day I saw many deer tracks of all sizes around there and especially around a water hole near the spring just back of the hut. A doe and two half-grown fawns seemed to make their home nearby, and they were beauties, too.

Gray squirrels were more than ordinarily plentiful, probably owing to the extremely large crop of acorns, chestnuts and shell-bark hickory nuts. In the early season I found two partridge

nests near the cabin, one having seventeen eggs and the other fifteen. In the former, all except one of the eggs were hatched, and in the latter, every egg hatched. During the season not a few rabbits were seen and one good-sized covey of quail. In the fall several gunners, including myself, got goodly sized bags of game on and around Oakledge.

A. L. L.

An Unconscious Bluff.

KETTLE FALLS, Wash., Feb. 5.—*Editor Forest and Stream:* On the 13th of the present month, while I was watching the flight and the work of a flock of cedar birds in the orchard, three robins came and alighted in an apple tree within five rods of the door. This appeared noteworthy in a locality further north than Quebec, Canada.

Our coldest weather so far this winter was 17 degrees below; for one night only.

A few days ago a teamster near town saw a lynx—my neighbor insists that the brute was a "link"—cross the road in front of his team, and upon his reporting the matter in the village a party of hunters with lanterns and dogs took the trail and wallowed bravely through the snow in search; but up to date that link in the chain of wild life remains unbroken.

Last night at 10 o'clock, while yet wife and I remained awake, what was probably the same creature turned himself loose and for a dozen times gave his peculiar cry in the road in front of the house within a hundred yards. Of course, it was then dark as pitch and useless to try for him.

My savage house dog—as he could not back entirely through the closed door behind—bravely faced the night prowler, and from the porch hurled defiant challenge; thoughtfully omitting to step out and shake hands with the inquisitive stranger. It was the first lynx I have heard in years.

If readers will pardon the garrulity of an old man, I will tell of an adventure with one of these animals in Western Iowa more than fifty-six years ago. I am not quite sure that this was not written for the paper many years since; but it is worth telling twice, as it illustrates the fact that animals differ in disposition, strangely at times.

A neighbor lad of about my own age reported that on coming home in the dusk of evening from a deer hunt, a big lynx, whose shadowy form was just distinguishable in the gloom of approaching night, crowded so close on his heels that he turned and shot at the brute; reloaded his rifle and again finding the animal entirely too close behind, again fired at it, and not until almost home did the savage thing disappear.

His story caused some merriment in the little settlement, yet the more thoughtful ones, who knew Tom to be a cool, determined lad, with a lot of frontier experience, began wondering if so cowardly a creature had really meant to attack the boy.

A mile from Tom's home lived a man whom I was then helping in the hay field, and two mornings after the boy's adventure I was sent to Tom's father to borrow a chain needed for the extra yoke of oxen, and as it was just coming daylight, I borrowed the man's rifle in the hope of seeing a deer while on my errand.

As he handed me the rifle, he said: "Remember now, that the rifle is heavily loaded; and if you get a close shot, hold eight or ten inches under, for it overshoots."

Following along the old Indian trail which skirted the south end of the grove, I hunted carefully and silently but saw nothing until, on coming to the top of the hill near Tom's home, I saw that a new field had been inclosed at the edge of the prairie; and the high rail fence ran squarely across the trail I was following.

I was too near the house now to find deer, and while yet the fence was three hundred yards away, I gave up hope of venison, and throwing the rifle barrel across my shoulders behind my head, I held it with one hand on the stock and the other on the barrel, and strolling slowly along the trail, dreaming of everything except danger, slowly approached the fence. The trail was deep, smooth and plain, leaving no need of looking up until the fence was to be climbed.

Those of my readers who were familiar with the old-time worm fence, made of rails, know that its very highest rail was called a rider. This rider lay between the stakes which straddled the fence at each rail length, and was commonly so much higher than the upper rail of the fence that one could easily crawl through between them, rather than climb over.

Precisely above the trail which the fence ran squarely across, on the upper rail and under the rider lay, stretched out, the largest and most beautiful lynx I have ever seen. Did I see him lying there? No. Strolling slowly along, forgetful of everything save Daniel Boone, Davy Crockett, and the buffalo and bear I hoped soon to kill, I came to the fence, and without pausing in my walk, raised my head to look, at the same instant that my hand came up to lay hold of the rail in front in the work of climbing through the fence.

Positively not until that instant when my head and hand rose together did that brute move. Talk about courage! That was the bravest wild animal I ever saw; and in the stupidity of utter ignorance of danger I had called his savage bluff; outfaced him fairly and beaten him at his own game—without knowing it. Down he sprang to the sods of the breaking inside the fence and stopped broadside on within five rods. Of course the gun by this time was cocked and laid across the fence rail, careful aim for his heart was taken, when at the roar of the big rifle the bullet shaved the tips of the long hairs above his shoulders and tore up the sods of the plowing beyond, and the now perfectly satisfied brute sailed over the top of a nearby thicket, the tall flags of hair above his ears still pointing bravely skyward, as though even yet the gallant little creature disdained to lower his colors.

What a grand thing is reputation. To the day of his death that lynx—or link, if my neighbor still insists—must have rested assured that in the little frontier settlement was one young lad, at least, on whom an attempt to "run a bluff" was manifestly useless.

ORIN BELKNAP.

Progress of the Hunting Season.

THE Secretary of Agriculture has received from the Biological Survey the following report on the progress of the hunting season in the United States:

The month of January has been marked by abnormally low temperatures throughout most of the country, accompanied in many regions by heavy snowfall. In consequence of these adverse conditions, quail and other game birds suffered severely. While the measures taken for the preservation of the birds were inadequate, yet unusual interest was manifested in the threatened loss, and much activity was exerted in efforts to avert it.

The National Association of Audubon Societies called the attention of the public to the need of feeding birds and as a result of this and other appeals, many persons, chiefly farmers, scattered food and provided shelter. Grain was distributed in suitable places by game wardens, mail carriers and other public officers. In the District of Columbia more than a thousand quail were fed by the police, while the needs of non-game birds were supplied by many householders, especially in the suburbs. Virginia expended \$200 through the Virginia Audubon Society and the Game Protective Association. In Delaware, Pennsylvania, Ohio, Indiana, Illinois, Kentucky, Missouri, Oklahoma, Montana and other States concerted action was taken by the residents of many localities in the distribution of food.

In Illinois numbers of dead prairie chickens were picked up, and the same conditions doubtless prevailed in other parts of the prairie chicken country. That provisions for feeding birds in severe weather should be made early in the season and should be more systematic and thorough, has been amply demonstrated.

The elk of the Jackson Hole region, Wyoming, have thus far been in good condition and there has been no repetition of the losses by starvation such as characterized the two preceding winters. On account of the severe weather the Virginia Legislature on Jan. 30 passed an emergency measure closing the seasons for all upland game throughout the State.

The shooting season is more generally closed in the North than in the South. After January deer shooting ceases in every State in the Union except Mississippi, where it continues until March 1. Quail, wild turkeys and doves may yet be shot in most of the Southern States, but nowhere else, and woodcock in North Carolina, Tennessee, Arkansas and the Gulf States. Waterfowl may be shot in any part of the United States, except the northern tier of States, New England—omitting Rhode Island—Utah and Oregon. No change in this respect will occur during the month, but at its close the open season will end in Mississippi, Colorado, California and Oregon. The termination of the open season in Illinois on Feb. 1 closes the Chicago market to game from other States till next season.

Nine State Legislatures are at present in session and several important game measures are under consideration. Easily first in importance is the bill codifying the New York game laws and extending the authority of the newly created Conservation Commission of that State to cover certain powers formerly exercised by the Legislature. The Virginia Legislature also has before it several game laws in which, among other

things, provision is made for a State game warden and uniform bag limit, both of which are new features in Virginia. In Maryland bills have been introduced that provide for a game and fish commission of three members to serve without pay, a resident hunting license, and uniform seasons for the State. In Massachusetts forty game bills have been introduced. One of these is designed to establish a tagging system for marketing game, similar in its provisions to the Bayne laws passed by the New York Legislature last year. Another provides for better control of "self-hunting" dogs during the nesting season. A bill under consideration in New York authorizes the establishment of six game farms and provides an appropriation of \$75,000 for their operation. A bill taking the robin off the game list has already passed one branch of the Virginia Legislature with little opposition.

Turkey Shooting.

SAWYER, Idaho, Feb. 4.—*Editor Forest and Stream:* This is Sunday morning, up in the mountains near the Pend Oreille River.

This morning when I sat down and picked up FOREST AND STREAM to partake of the many good things which are served weekly to its readers, about the first thing that I read was the turkey hunt, described by J. W. Thompson. That carried me back in my memory some fifty-seven years.

That winter my father was making shingles in the Missouri River bottom; I was hauling them to Atchison, where they found a ready sale. It was just before Thanksgiving, the ground was covered with snow about four inches deep, the weather was a little cold for the time.

I had been down with a load. On my return and about two miles from home, I noticed where a flock of turkeys had crossed the road. On examining the tracks I could tell they had not been gone very long. I hurried up the oxen, intending to return and follow those turkeys as soon as I could get home and my chores done.

I was not long in reaching home, and boy-like it did not take me half as long to get my cattle fed and other chores done, and as soon as I had eaten my supper, I took my little rifle and dog and started for the turkeys. It did not take me long to reach the place where I saw the tracks. The moon was coming up; I had no trouble in following the tracks. I soon came to where they had been scratching. They were working down a slough that was fringed with tall sycamore trees. I had often hunted turkeys at night and I was going very carefully. Still, with all my care, I was startled by a big turkey flying out from a tall tree nearby.

I stood quite still for a long time, and looking over the trees I finally saw one near the top of a tall sycamore, then I made out several more. I had to move quite a little to get the turkey between me and the moon. Finally I got around behind a big oak, and from there I could see the turkey very plainly. I had my rifle sighted so it shot about ten inches high, so by holding under the turkey I would shoot high enough to kill it. I fired, and down came the turkey, and the woods fairly rang with the other turkeys leaving the trees. Boy-like I ran for my turkey. It was a good gobbler, very fat, but not so very big. I reached home before the folks had gone to bed.

LEW WILMOT.

Quail Mortality in Iowa.

FARMERS who have made an investigation fear that the quail has practically been exterminated in Iowa as a result of the severely cold weather and heavy snow fall. These fowls, which are semi-domesticated, have been spending the winter months near farm houses. There they have had access to the barnyards and have been enabled to secure food, but the recent protracted cold wave and deep snow have chilled birds to death.

On the Heskett farm in Mt. Vernon township the destructive effects of cold and starvation upon quail have been especially noticeable. A covey of sixteen of the birds hovered about the premises. They were almost as tame as the domesticated fowls, and were great pets of the family. A few days ago an investigation disclosed that every bird in the covey was dead, most of them in a compact mass about the roots of a tree that afforded some shelter against the storms. A few of them had ventured forth, probably in search of food, and were buried in the drifts. All of the birds were greatly emaciated, and the low vitality, because of starvation, caused them to succumb to the cold.

Other farmers make similar reports, and the cheery call, "Bobwhite, bobwhite," will probably not be sounded in the coming spring and summer months.

The situation will have a tragic aspect for those who admire the lively little birds.—Waterloo Courier.

REPORTS of starving quail heard during the recent cold wave and heavy snows are receiving confirmation, now that it is possible to estimate the damage afield. However, the appeals sent from various sources asking farmers and others to feed the birds undoubtedly saved many. Gun clubs and local protective associations supplied food for great numbers, thus enabling them to survive the severe weather.

The American Game Protective and Propagation Association, of 111 Broadway, New York, calls attention to this in urging the establishment of county protective associations throughout the United States. Under normal conditions the game could hold its own against the forces of nature, and the covers depleted by severe storms would soon be replenished from the surviving breeding stock, but under the conditions existing throughout the country, which have been brought about by indiscriminate shooting, the birds do well to survive the attacks of man, and unusually cold weather, accompanied by heavy snows, often exterminates them in certain localities.

In such crises energetic action by local sportsmen can save them, but to be truly efficacious it is organized action that is needed rather than the sporadic efforts of scattered individuals.

In numerous other ways county protective bodies help save the game and increase the supply. Their influence on public opinion is an invaluable aid to the cause. Where they exist, not only are there fewer violations of the game laws, but the warden can prosecute effectively those which occur when he has the people behind him, and not indifferent or antagonistic to him.

The national association's interest in the formation of local organizations does not stop with advocacy of the plan. The association will lend

material aid to those interested in starting either State or county clubs for the protection of game. It has already accomplished much in this line.

The first patron of the association has just been secured, T. Coleman duPont, of Wilmington, having donated \$1,000.

The association has received a copy of a resolution passed at a recent meeting of the Boone and Crockett Club. The resolution is a cordial expression of endorsement and support for the plans of the association.

Not the Only Friend.

BENNINGTON, Vt., Feb. 3.—*Editor Forest and Stream:* A recent writer on game conservation says: "I believe that the best and only friend of game is the man who shoots it legally." Could anything be more absurd than this? I did not suppose in this age of enlightenment that any friend of the game conservation movement took such a narrow view of the subject. It is undoubtedly true that the shooter constitutes an important element in this movement, but I never imagined before that he would publicly arrogate to himself all the virtue there is in the cause. If what he says is true, what of all those good people who form the Audubon societies? What of the Biological Survey? Are they not friends of the game? Was the Survey organized to aid the protection movement for the sole purpose of saving only such game as the shooter is interested in? Or rather is this department not attempting to demonstrate to the American people what the true value of game is to us? Again, what about that great and growing army of recreationists, campers, nature-students and outdoor people who are fond of studying living birds and mammals? They would rather photograph and study the game than shoot it, and yet can we truthfully say that they are not friends of our wild life?

No, the movement for conservation of our wild life has for its purpose a much broader object than merely saving the game for the shooter alone. Its general scope is far more extended than that. It aims to benefit the entire human race. If this were not so, it is very improbable we should find in its ranks scientists, medical men, teachers, publicists, nature-lovers, artists and ministers of the gospel—all solidly aligned with the man who shoots lawfully, to assist in the good work—and we should not reject the help of any one, as the need is great for more assistance.

To my mind, the statement of this writer fully bears out what Charles H. Shaw recently wrote in *FOREST AND STREAM* regarding game protection, "that the one greatest retardment is that ever-present trait of human nature—selfishness." Is this trait not interfering to some extent with the above writer's vision? Is it not obscuring a clear view of the whole intent of game protection as seen from thousands of eyes? Some shooters care nothing for our wild life, except those birds and mammals which furnish them with sport. The others may all be exterminated as far as they are concerned, and they scorn the aid of people interested in wild life generally. But this is certainly a narrow view, and would not be entertained were it not for that little trait of selfishness, which has got to be eliminated if we are ever to save our game.

HENRY CHASE.

Small-Bores for Wildfowl.

FORTY years ago the ambition of many wildfowl shooters was to use in this sport the largest gun that they could handle. They believed that the larger the charge and the further they could send it, the better their chances for success in shooting. Heavy guns were the fashionable weapons then. Years before that the club members who shot at certain points in Chesapeake Bay used to shoot 20-pound, 4-bore, single barrel shotguns with which they tried to bring down, and often did bring down, the high-flying canvas-backs and redheads, which looked like bumble bees as they flew over the points. These guns were so heavy that only a pretty stout man could swing them, and anything like quick shooting with them must have been out of the question. Some of these guns no doubt still survive, and we fancy that in later years a number of them were turned into swivel guns and used by poachers in Chesapeake Bay waters, and later still either captured by game wardens or thrown overboard in deep water—sometimes with a buoy attached by which they might afterward be brought to light again.

For a good many years now the tendency has been toward smaller bores, and while perhaps most wildfowl shooters still use 10-gauge shotguns, there are a very great many who shoot 12's and some who use still smaller bores.

John Burling Lawrence, of New York City, has a 20-bore shotgun with which last fall he secured a number of ducks at one of his clubs in Michigan, and in the winter shooting at Currituck Sound killed in a part of an afternoon fifteen or twenty mallards. Mr. Lawrence said that so far as he could see the birds were killed by the 20-gauge gun precisely as effectively as by the 12-gauge which he usually shoots.

Dr. A. K. Fisher, of the Biological Survey, has long been using a gun much smaller than this—a 28-gauge. Originally, we believe, he secured it for use on quail, but found it also most effective on ruffed grouse. Later, in the spring of 1906, he used the gun in California on ducks and geese, shooting near Gridley or Butte Creek. He believes that he never killed birds cleaner or better with a 12-gauge gun than he has done with the 28. So far as pattern goes, he tells of putting five pellets of No. 8 shot in a quail at sixty yards.

A day's shooting with this little gun in January is well worth recording, for we have known of nothing like it. Dr. Fisher was asked to visit the Sand Bridge duck preserve to consider the introduction there of certain aquatic plants used by ducks for food. He found the plants already growing there, and further planting unnecessary. Friday, Jan. 5, a tempestuous day, Dr. Fisher spent in a duck blind on an exposed part of the marsh and shot his 28-gauge gun. The shooting must have been good, and he must have shot well, for his score was twenty-four black ducks, seven mallards, three pintails and one bluebill.

The results accomplished with this little gun bear ample testimony to its effectiveness and to the skill of the user.

After all the results attained with any gun depend chiefly on the man behind it. Most of us excuse our failures, blaming the gun, the ammunition or the way in which the birds fly, but the real reason we do not kill our birds is because we shoot badly.

State Game Farms.

SYRACUSE, N. Y., Feb. 10.—*Editor Forest and Stream:* Will you please call attention of your subscribers and sportsmen in general in New York State that they should write their representatives, the State Conservation Commission and also the Governor at once urging the passage of the Walters bill, stating the number and what it is. If you will do this, it will help along the cause. W. E. HOOKWAY.

THE Walters bill, to provide for the acquisition of land for game farms or preserves and making an appropriation therefor, now before the Legislature, is as follows:

Section 1. The State Conservation Commission is hereby authorized to select sites for six game farms or preserves at such places within the State as they may determine and to purchase

Another feature wherein the laws are lamentably lame is in the lack of protection of game and fish from their natural enemies; that is, predatory animals and birds of prey. The States do not encourage the destruction of such pests and in some instances these same pests are protected by law. In Nebraska it is unlawful to shoot hawks, owls, etc., without consent of landowner. In view of these facts it looks to me as if it was up to the gun clubs and such societies to secure legislation along the lines of protection from natural enemies. It will take less along other lines to accomplish the same results. The English gamekeeper on a private preserve destroys every bird or animal that destroys or harrasses his young coveys.

I have lived for fifty years near the Western frontier and have watched the game disappear, but I do not believe that white men are wholly to blame for the disappearance of some species.

Gored by a Buffalo.

LIEUTENANT PAUL GRAETZ, the gallant young officer of the German army, who made himself famous two years ago by his adventurous motor car trip through Africa, and who at the beginning of last summer commenced a still more adventurous journey across the dark continent in a motor boat by way of the Zambesi and the River Congo, met with disaster on Sept. 3 in an encounter with wild buffaloes on the banks of the mysterious Bangweolo Lake, in which his only white companion, a French cinematograph operator, was killed, and he himself terribly mangled.

Lieutenant Graetz's own description of his encounter with three tremendous animals on the shores of this mysterious lake, deep in the heart of the dark continent, reads more like a chapter from one of Rider Haggard's romances than a

TRAPPER'S CABIN IN THE LOUISIANA MARSHES.

for the State such lands as they may deem necessary therefor; and the sum of \$75,000, or so much thereof as may be necessary, is hereby appropriated, out of any moneys in the State Treasury not otherwise appropriated, for the purchase of said lands, payable by the State treasurer, upon the warrant of the comptroller, upon the requisition of said commission, accompanied with a certificate of the attorney-general approving the title to any parcel of land for the purchase of which a warrant is requested.

Man not Alone to Blame.

BRULE, Neb., Feb. 11.—*Editor Forest and Stream:* I am very much interested in the letters you publish from time to time in regard to the game laws, preservation of game, game propagation, conservation, etc., but in all the State laws that I have examined but very few prohibit the sale of game and game fishes. As I see it, this is the only clause in the Nebraska law that really amounts to anything in the way of protection, and I have good reasons to believe that the same conditions prevail in other States.

The great American buffalo was a back number before the forty-niners wended their weary way to the gold fields of California. The prong-horned antelope faded away like mist before a summer sun. Iowa, the natural home of the prairie chicken, knows it no more, but his demise lays not at man's door. E. L. HOBBS.

Louisiana Muskrats.

NEW ORLEANS, La., Feb. 5.—*Editor Forest and Stream:* I notice in a recent issue of your valuable paper a picture of a Norwegian trapper's cabin, and by so much take the liberty of handing you herewith a photograph of a muskrat trapper's cabin in one of our marshes, and a photograph showing muskrat skins stretched out on boards drying. FRANK M. MILLER.

New York Legislature.

ALBANY, N. Y., Feb. 12.—*Editor Forest and Stream:* Assemblyman Patrie, of Greene, has introduced a bill in the Legislature increasing from \$900 to \$1,200 the annual salaries of fire inspectors.

story of real life. In his letter, which has been published in the London Standard, Lieutenant Graetz says:

"On Sept. 3 the sun rose blood red over the dark chain of the Muchemwa Mountains. We left our tent and stood watching the mist melting from the surface of the Chambesi. At our feet, in a small bay, lay the motor boat, glistening under a covering of dew, slowly evaporating in the sun's rays. At 6:40 the black 'boys' laid their oars in the rowlocks, for we had many shallow channels to navigate and were harboring our supply of petrol. Suddenly we on the bank stood still as if petrified. Buffalo! Not more than fifty paces from us, close to the edge of the river bank, stood three mighty animals watching us with wondering eyes. Silence! I laid my cheek to the butt of the Mauser rifle. Bang! The first buffalo threw a somersault, and then, dashing up the bank, galloped from our sight into the bushes. The other two followed him. Intermittently through the undergrowth we caught sight of their shaggy forms as they followed the course of the stream, but now there were only two of them. What had become of
(Continued on page 225.)

Insect Pests.

CULEBRA, Canal Zone, Panama, Feb. 3.—*Editor Forest and Stream:* In your issue of Dec. 30 a correspondent asks for information in regard to tropical pests. I have done considerable hunting in the jungle of Panama, and as far as local conditions are concerned, I will be glad to give him the benefit of my experience.

I believe that in all tropical and semi-tropical lands the most annoying and most dreaded of all flying insects is the mosquito. There are said to be over fifty known species on the zone, from the culex which are considered only troublesome, to the stegomyia, which participate in the conveyance of yellow fever germs. This creature of torture is so well known by all that it is of no use to elaborate on it. They are just about as amiable here as anywhere else. Most of them start their work after sunset, but we have quite a number which are diurnal. I get along pretty well with them by never letting the fire in my pipe get low when I am in the jungle. The majority of them are carriers of malaria infection. Sportsmen who are exposed to them will do well to keep a good stock of quinine on hand and use it freely. Some with a great deal of experience in the jungle believe in taking about three grains of quinine a day as a regular diet.

The sand-fly, found along the coast here, is tantalizing, but not of any consequence. They yield quite readily to the soothing influence of tobacco fumes.

To my mind, the most harassing but least injurious of the bug tribe here is the "moquin," which is nothing more or less than just an ordinary red bug which has found the isthmus a happy hunting ground. He is very companionable and prefers human company above every other. If you go where he is, he insists on accompanying you home. There are always a few millions or trillions of them on the zone, but they are most numerous in the wet season (May to December). When they are taking apartments in various parts of your anatomy, they are hardly visible, but by next morning you can count them by the little red spots on your hide and know they are there by the violent itching which they cause. They are considered somewhat of a joke; that is, when someone else gets them. There is nothing serious about them. When scratched, the red spots develop into small sores which an (external) application of bay rum or any other kind of rum will soon cure.

Ticks are quite numerous, but they seem to prefer the company of animals to humans. They bury their head in the flesh and in trying to remove them this part of their body is frequently left behind and causes a bad sore sometimes. If moist tobacco is applied to them, they will soon back their way out and seek other company.

Of crawling things there are ants of all species and sizes, from the small red ones to the large "tokanderas" which are over an inch long. The bite of the latter is like the puncture of a red-hot needle; it leaves no sore.

Scorpions, up to six inches long, are found in all parts of the jungle. They hide under flat rocks, in rotten trees, and in dark moist places generally. Their sting is painful and causes local swelling, but I have never heard of any serious effects from it.

Tarantulas are generally found in old deserted huts and secluded nooks. One of their favorite haunts is the inside of a bunch of bananas. Their bite, like the sting of the scorpion, is painful, but not dangerous.

Centipedes are numerous. Their bite is not dangerous, but is said to be confoundingly painful. It leaves a local swelling and is said to cause a great disturbance of the system. I have had no experience with this beast.

Besides the above there are probably fifty or more bugs, bats, flies and fleas of uncertain lineage which find the tropics a merry camping place, but outside of causing annoyance by their presence, they are not to be feared. During the wet season there is always a greater abundance of these creatures than during the dry season when the strong trade winds keep the isthmus fairly clear of them.

However, let thoughts and forebodings of these not deter anyone from anticipated pleasures of a trip to the tropics. The beautiful scenery of the jungle will compensate. They are part of the game and complaints are fewer than the laughs. Oil of citronella, as an external application before going out into the jungle, is recommended by many as a means to discourage the advances of mosquitoes, flies, ticks, red-bugs and other pests.

CHAS. E. MENGEL.

A Dangerous City Insect Pest.

Editor Forest and Stream:

Even more deadly to our splendid elms than the elm leaf-beetle is the leopard moth, an imported pest which has become abundant during the last five years, only in cities and large towns. This is because the English sparrow has there driven out most of the insectivorous birds which would have preyed upon it. In country regions, even though the native birds are none too plenty, there are still enough to keep this dreadful pest from gaining a foothold. This is one of the most striking concrete examples of the economic value of wild birds.

Unless we can devise methods to protect and attract to the cities the native insectivorous birds, notably the woodpeckers and their allies, our elms and other shade trees will be devastated more and more. Dwellers in the smaller towns may well appreciate the value of the birds that they still have, and take care lest, through indifference, the same calamity may come upon them. It is a problem, thus, for city and country alike.

No spraying methods can affect this pest, because the larvæ, which do the damage, burrow in under the bark, and there in secret girdle the tree. The first that we know of the destruction is when we see the tree dying at the top. Each of these dead limbs is girdled, and during

gales they blow off, endangering the lives of people passing beneath. It is only a question of time when the tree must die. One larva or borer is often enough to kill a young elm.

It is practically impossible for man to do much in the way of reaching and destroying this secretive borer, inside the wood, often eighty feet from the ground. The real expert for this work is the woodpecker. The little spotted downy woodpecker is the best known, but we also have the flicker, and sometimes the hairy woodpecker. The nuthatches also are useful in this work. Just watch our little hammerer do his scientific forestry on that fine elm. Systematically he traverses the trunk and branches, tapping and sounding. He knows that when the wood rings hollow he has struck the burrow. Following it up, he hears the drum-beat muffled where lies the soft worm. With a few vigorous strokes the strong bill pierces the dead wood into the chamber, and the marauder is dragged out and eaten. J. W. Chapman, of the Boston Park Commission, has photographed this work of the woodpeckers, and he declares that they are doing efficient work in destroying the leopard moth.

For nearly two years the larva bores, eats and grows, except during the winter sleep. Then it goes into the pupal stage, soon emerges as a moth and lays clusters of eggs on the bark of the tree. These hatch in two weeks, and the young larvæ proceed to bore into the tree. During these latter stages the various summer insectivorous birds, probably nearly all kinds, devour the sluggish "leopard-spotted" whitish moths, glean up the egg-clusters, or feast on the exposed tender larvæ before they can get under cover.

In Europe this pest does some damage in cities, but not as much as with us, for there the birds are better appreciated and cared for than here. In Germany there is a government commission to protect and increase the native birds by a system which includes feeding the birds, preparing nesting-sites, exterminating enemies such as the house sparrow, securing public co-operation through educational methods, and the like. Such work should be made by law a function of our so-called game commissions, or of some other responsible agencies, such as State agricultural colleges. If the thousands of dollars wasted in importing foreign game birds, with the sole result, in many cases, of building political machines, could have been used somewhat with the German spirit and ideal, we should have more native birds, both insectivorous and game.

It would be a splendid thing if every school in Connecticut and in the whole nation, could provide a little instruction—as many are already doing—in knowing our wild birds and their economic value. Both school children and the public should hang out suet in winter to keep the woodpeckers and nuthatches in town or about the estate to work for us, scatter small grain or barn-sweepings for the seed-eating tribe, put up bird-boxes, hollow limbs, or tin cans, for nesting-sites, keeping English sparrows and starlings away, if possible, and in nesting time keep the cats shut up. If these things are widely done, we may be able to make advance in our warfare on the leopard moth and other insect pests.

HERBERT K. JOB,

Connecticut State Ornithologist.

SEA AND RIVER FISHING

Fly-Casting and Sportsmen's Show.

A FEATURE of the eighteenth annual Sportsmen's Show, which will open Friday evening, March 1, at Madison Square Garden, will be the anglers' casting tournament. The competition will be conducted by a committee representing the National Association of Angling Clubs and the important Eastern anglers' clubs. The tournament committee consists of David T. Abercrombie, Chairman; John Doughty, E. M. Gill, C. G. Levison, A. Jay Marsh and Walter McGuckin. The general committee includes the tournament committee and the following: Julius H. Seymour, Fred. T. Mapes, Wm. C. Metcalfe, Jason G. Lamison, D. W. Poor, Willett B. Gano, Robert B. Lawrence, Harold G. Henderson, Arthur C. Rice, Warren L. Miller, Charles T. Champion and Nathaniel S. Smith.

Most of the criticism of the past has arisen from the lack of good management. In the 1912 indoor tournament the committee aims to make a record in this respect. The rules will be the tournament rules of the National Association with modifications adapted to the occasion. The judges will be appointed by the committee upon their assurance that they will serve.

The opening event will be at 8:30 Friday evening, March 1; trout casting for distance, 5-ounce rods, 70-foot class, open to all except those who have cast 70 feet or more in any open or club tournament with a 5-ounce rod. The complete program for the following seven days of the tournament will be announced later. It contains some accuracy-casting-under-obstacle events that will be spectacular and designed to be especially attractive to the public. The committee in charge intends to attract and interest novices. There are innumerable anglers who have cast flies and bait in fishing who have never realized the allurements of casting as a sport and the improvement it steadily makes in the angler's art.

Lake George Association Protest.

LAKE GEORGE, N. Y., Feb. 8.—*Editor Forest and Stream:* The proposed "uniform fish and game law" is now before the Senate of the State of New York, introduced by Senator Franklin D. Roosevelt. A man closely in touch with matters at Albany, particularly those pertaining to fish and game, says of the bill:

"I am satisfied the bill is framed to please the commercial fisheries in the main, but it is also a political measure of the cleverest kind."

It is strange that the commission should have framed such a bill without consulting their protectors as to the needs of the various districts; it is significant that one of the ablest game protectors in the service was asked for his resignation two days after he had openly denounced the bill.

I do not know how the bill affects fish and game interests in other sections of the State, but if it is as disastrous elsewhere as it is here, then it is easily the vilest enactment of its kind ever offered the people of the Empire State.

For years organized effort has been sustained at considerable expense to promote the develop-

ment of game fish in Lake George, Schroon and Glen Lakes until laws now exist which are fairly satisfactory in the main. We protect black bass until Aug. 1, bullheads until July 1, great Northern pike until June 16. We also last year secured an act limiting the catch of any one boat in a day to twenty-five pounds of black bass or thirty pounds of pike.

In these Northern waters black bass do not spawn until July and are not off their beds even as late as Aug. 1 in many instances. The new law opens the season for black bass June 16.

Great Northern pike run up into the marshes as late as June 1 to spawn, and the bill proposes to open the season May 1. Protection is removed entirely from bullheads. Catch of fish is limited to each fisherman so that our steamboat fishhogs can again get busy with their crews of hired fishmen who of late years have all but stripped the lake of its game fish.

As far as the Adirondack section is concerned it is of the utmost importance that this bill be defeated. It is probably true that other sections of the State will be as badly off. May I ask that you will in some form give publicity to the danger which threatens?

EDWARD A. KNIGHT, Sec'y.

Restoring Natural Conditions.

THE following suggestion relating to the restoration of fish life in the lakes of Pennsylvania has been made by N. R. Bul'cr, Commissioner of Fisheries:

"One of the proper functions of the fisheries department is an effort to restore fish life in the inland lakes of the State of Pennsylvania. The

greater number of inland lakes are in Wayne, Pike, Monroe and Susquehanna counties. The four counties mentioned contain over 200 natural lakes, which are not likely to be contaminated and comprise the greatest natural resources of that region, not only for furnishing food fishes, but as an attraction for people seeking recreation.

"Deterioration of the fish in these bodies of water has come as a result of the inroads of civilization as well as the lack of stocking and propagation. Years ago when the country around them was in a primal state, the lakes were full of fallen trees, especially around the shores, which furnished natural breeding, feeding and hiding places. The timber near the lakes having been cut away, and time having eradicated those that fell into the water, the fish gradually became robbed of their natural protection, and they have diminished in size and numbers.

"To overcome this downward tendency it is recommended that landowners, sportsmen and others interested in the restoration of fish life in these lakes, haul trees and even piles of stone, of which there are plenty on these lakes, when they are covered with ice, and when the ice melts and the trees and stones sink to the bottom, they will, as it were, furnish homes for the fish where they can breed in safety, find proper food and secure necessary protection from their natural enemies."

Fisherman's Club of Chicago.

THE fifth annual dinner of the Fisherman's Club of Chicago will be held on the night of March 30 at the Auditorium Hotel in that city. All anglers will be welcomed, as they will be assured if they will write to the secretary, George Henry Cleveland, 1909 Ogden avenue, Chicago, who will inform them concerning all details. These functions have always been pleasant ones, at which a large number of fishermen have met, to discuss fish and fishing, exchange experiences, renew old friendships and form new ones. A copy of the preliminary announcement is reproduced herewith.

THE TOP RAIL.

SOME of the camera people advise the beginner to start out with a cheap outfit as the proper thing to learn with. This is nothing more nor less than fraud, for they know the serious ones will not be satisfied with the outfit, will discard it and buy a more expensive one. There is nothing too good for a beginner if he is serious.

An old fisherman who became enthusiastic over tournament casting asked a group of experts whether it would not be advisable for him to begin with a good nine-foot rod, then after he had practiced awhile with it, purchase a ten-foot rod, then a standard 11½-foot rod. Did they disagree in their replies? No; all advised him to buy the best standard length rod he could afford of a weight to suit his strength of wrist; line and leader to suit, and practice, practice. He acted on this advice, took up the sport in earnest, and became a first-rate fly-caster. Money was no object to him but he rejoiced that he had not wasted it and his time to no purpose when, as it transpired, he was led to start in right at the beginning.

GRIZZLY KING.

Published Weekly by the
FOREST AND STREAM PUBLISHING COMPANY,
 127 Franklin Street, New York.
 EDWARD C. LOCKE, President,
 CHARLES B. REYNOLDS, Secretary,
 S. J. GIBSON, Treasurer.

CORRESPONDENCE.

The **FOREST AND STREAM** is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Terms: \$3.00 a year; \$1.50 for six months. Single copies, 10 cents. Canadian subscriptions, \$4.00 a year; \$2.00 for six months. Foreign subscriptions, \$4.50 a year; \$2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line (\$2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra. Special rates for back cover in two or more colors. Reading notices, 75 cents per count line.

A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Advertisements should be received by Saturday previous to the issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

WHERE ARE THEY?

PORTIONS of the Great Lakes have been closed by ice during the recent cold weather, and it is said that deer, moose and other game have moved southward from Canada into the United States, where it is possible they may remain.

Throughout the northern tier of States the temperature has been low for an unusually long time, and here and there storms of snow and sleet have hampered bird life. No doubt the loss among quail, grouse and imported pheasants and partridges will be very heavy. Sportsmen and farmers have scattered food in favorable places, with good results, but despite this the outlook is not bright, and 1912 will probably be a lean year for the upland bird shooters, and even a very favorable breeding season can scarcely be expected to offset the ravages of the long severe winter.

The Legislatures now in session seem to favor the popular demand for reasonable game laws. It is significant that at least one of the Southern States purposes to take robins off the list of game birds, and that no-sale laws are being considered in other capitals.

If sportsmen will examine with thoroughness the places where imported game birds have been liberated, and report the results of their surveys, their testimony may throw much-needed light on an experiment that is becoming more and more of an expense to the States. The question of what disposition to make of the shooting license fund has been answered in a number of States by purchasing large numbers of imported birds

at fancy prices, while at the same time no extra efforts are being exerted to protect native game. It would be enlightening to know what percentage of these foreigners can, under normal conditions, be found in the places where they are put down, if indeed, they may be found at all.

WATER STORAGE.

The water storage bills, now before the New York Legislature, are two cunningly drawn measures which, if they become law, will give to the water grabbers the power they have so long sought in vain, and open the State preserves to private interests. Under the guise of conservation, the bills provide for a number of acts ostensibly for the benefit of the public, but intended primarily for private gain at public expense.

Water storage and the regulation of stream flow, the preservation of watersheds and the distribution of power can be handled by the State without any assistance from semi-public corporations, and without invasion of the forest preserves.

BRITISH ANGLERS' MUDDLE.

THE anglers of Great Britain are much exercised over the possible effect of the enforcement of the Protection of Animals Act, which was made a law last year, one section of which, it is pointed out, applies to the use of live baits of all sorts.

The principal purpose of the act is to prevent overloading, abuse and unnecessary suffering among beasts of burden, but it also refers to "any domestic or captive animal," and the definition, which follows, seems to have escaped the attention of the angling public until too late for protests.

The section follows:

The expression "captive animal" means any animal (not being a domestic animal) of whatsoever kind or species, and whether a quadruped or not, including any bird, fish or reptile, which is in captivity or confinement, or which is maimed, pinioned or subjected to any appliance or contrivance for the purpose of hindering or preventing its escape from captivity or confinement.

The police have warned anglers not to employ live bait in their fishing, and it is conceded that magistrates possess full authority to punish users of live bait, if indeed, they may not also consider that catching fish comes within the meaning of the law.

In all civilized countries the trend of sentiment is toward the use of artificial lures in fishing. The main reason for this is that large catches are frowned on, else nets would be the thing. Methods that are clean and sportsman-like are necessary in conserving the supply of fish, and ere many years we may see the fishing in certain waters restricted to artificial lures, a policy that has been tried in one State with success.

Much depends on the anglers themselves. If selfishness continues to give way to moderation in the future as in the recent past, restrictions of this sort may be long deferred, if indeed they will ever be generally imposed.

AN ordinance enacted by the East Africa Protectorate gives the governor power to declare any area therein a forest area, and power is conferred to make suitable regulations for protection of trees and forest produce on crown lands in a forest area. Provision is also made

for a board of forest commissioners, which is especially charged with the question of forests which are now or may be declared to be demarcated. The present Government forest timber area is about 2,000,000 acres. According to the last report of the conservator of forests, the destruction of forests by natives in the past fifteen years amounts to 224,000 acres.

WHEN John Munro killed 216 plovers at one discharge of a punt gun recently in Cromarty Firth, some of his friends claimed that it was a record bag for that part of Scotland. In a country where other game is protected so religiously, it is remarkable that punt gunning is not only permitted, but is classed as sport. In the British sportsmen's papers various writers solemnly discuss the merits of various big guns, always with a view to their range and killing circle, and dilate on the joys of the gunner who wipes out entire flocks of wildfowl. But after all, there is not much to choose between the bag of the successful punt gunner and that of the landowner who, with his guests, shoots driven birds. The latter shooting is profitable to a greater number of people, particularly those in the ammunition trade, and no great harm is done, as the pheasants are raised for the purpose. The class of men who shoot pheasants do not care to face rough winds and salt water in motion, hence the supply of wildfowl seems to be affected but little, though wholesale methods of annihilation are permitted and practiced.

DURING the fiscal year ended June 30 last, four cases arising under Sections 242 and 243 of the Criminal Code of the United States (35 Stat., 1088) were reported to the attorney-general for appropriate action. Two of these cases were subsequently dismissed, owing to the fact that service could not be obtained upon the defendants; the other two cases were pending at the close of June 30 (Department of Agriculture Miscellaneous Cases Nos. 121 and 122). The case of twenty-three Japanese poachers who were arrested on Laysan Island in the act of killing birds was brought to trial and the defendants fined and imprisoned.

In his address before the annual convention of the hardwood manufacturers of the United States, held in Cincinnati recently, W. B. Greely, of the Federal Forestry Service, pointed out the advisability of eliminating fire risks, which he termed "the first commandment of forestry." He also cited a number of examples showing the profit and economy of saving young trees, with a view to continuous production, making of lumbering a business of to-morrow as well as of to-day.

THE Dutch Government purchases annually large numbers of young salmon, which when liberated in the German Rhine, eventually descend into Holland. In 1910 over 3,000,000 salmon were thus planted, while during the same time about 6,000 adult salmon were taken from the Rhine by fishermen in Holland.

NEARLY 55,000 shooting licenses were taken out by sportsmen in Indiana last year, an increase of about 7,000 over the returns for 1909, and about 2,500 more than in 1910.

Ticks from the Ship's Clock.

FOR real progress and up-and-comingness among inland yacht clubs we dip our grummetted topping lift to the Muskegon Country Club yachting division. They have a membership of nearly 100, a very handsome club house, in fact, there is no other club on Lake Michigan, outside of Chicago and Milwaukee, and few clubs anywhere on the Great Lakes, occupying so luxuriant a home as does Muskegon Y. C. During the winter there is something doing all the time, so that when spring comes there is no delay in getting into commission. Already elaborate plans for next season are being completed, and a most successful season seems assured.

Between watches, Commodore J. Stuart Blackton, of Atlantic Y. C., found time to write a musical comedy, "On the Wings of Love," which was produced by an amateur company at Waldorf-Astoria last week. Mrs. Blackton played the lead charmingly. The company was good, while the book was exceptional for an amateur.

A report from London to the New York Sun, under date of Feb. 12, says:

"The Royal Motor Yacht Club to-day challenged the Motor Boat Club of America for the British International trophy won by Dixie IV. One of the contestants for the trophy on behalf of the Royal Motor Boat Club will be a new hydroplane designed by the Thorneycrofts."

This will stimulate building of motor boats in America, which has been unenthusiastic because of our easy victory last year and the general impression that there would be no international contest this year.

M. Herman Brill, of Philadelphia, is having built by Luders Marine Construction Co. a 71-foot cruising motor boat to take the place of Granada I, a 60-footer which he has used for the past two years. Granada I, probably is best known under the original name of Triune. The new boat will be named Granada II. She is to be 12 feet beam fitted with twin screws driven by motors aggregating 60 to 75 horsepower and developing a speed of 12 statute miles. The design of the craft is of the seagoing type with plumb flaring bow and whaleboat stern of the Luders type. She will have raised deck for two-thirds of her length and will carry forward a sunken pilot house or dining saloon 9½ feet long. This room is to be finished in natural African mahogany.

The entrance to the quarters is from the side, on the main deck level and consists of a double stateroom, a bathroom opposite the companionway, a vestibule and a living room forward. All the furniture of these rooms, the beams overhead, the doors and trim are to be solid African mahogany. The vestibule is to be finished in mahogany, but the remainder of the paneling is to be in white enamel.

The engine room is amidships, aft of the galley and will be partitioned off for the gasoline tanks, with capacity of 525 miles. The fresh water tanks are large, and the boat has been designed with an unusual amount of locker, provision and supply space. The boat will be rigged with a military mast, a large stack and will carry a 13-foot power tender and a 9-foot rowboat. Delivery is to be made May 15.

Speaking editorially of the conditions governing international yacht races on Great Lakes, the Flashlight, published by Erie Y. C., says: "If the racing conditions need changing, we wish that while at it they could be changed so as to

restrict entrances to yachts designed and built on the Great Lakes and sailed by Corinthian members of the contesting clubs." Right O, say we.

Air inlets in a motor, both for the carburettor and the breather pipes, should have strainers to keep out duct and dirt. A fine brass wire gauze is good for this purpose. Breather pipes are used to allow a free passage of air in either direction in the crank case. If the case were entirely closed the pistons in descending would create a compression in the crank case and offer resistance to the rotation of the motor. Conversely, on the upward stroke of the piston the air would be rarified and again offer resistance to rotation. Therefore an opening called a breather pipe is provided in the crank case, to allow free "respiration" of the engine. This opening must be protected from foreign substances which might get into the oiling system.

Bayside Birds.

THE new one-design class being built by Nevins at City Island, for members of Bayside Y. C., after designs by William Gardner. This is a decidedly servicable type of boat and will do a day's work as a pleasure boat or cruiser. It is remarkable value at the cost, \$600. The boats are of the centerboard type, 27 feet 9 inches over all, 17 feet 9 inches on the waterline, 6 feet 11 inches beam, 2 feet 6 inches draft and with board down 5 feet 3 inches. Each will have 1,200 pounds of lead ballast and spread 350 square feet of canvas. These boats will be comfortable, seaworthy and have a small cabin.

Club Elections.

PHILADELPHIA Y. C.

The annual meeting and election of officers of the Philadelphia Y. C. was held at the club house, Essington, Wednesday, Feb. 7. The following named gentlemen were elected to serve for the ensuing year: Commodore, John H. Bromly; Vice-Commodore, Philip H. Johnson; Rear-Commodore, Bernard Block; Recording Secretary, S. W. Bookhammer; Financial Secretary, C. Carroll Cook; Measurer, Alex. G. Réa; Fleet Surgeon, Dr. Fred J. Haerer; Harbor Master, Geo. F. Schilling; Trustees—Jos. Price, Wm. A. Christy, A. L. English, Geo. W. Fite, S. B. S. Barth, Robt. J. Williams, Walter N. Stevenson; Race Committee, John McAvoy, Thos. W. Boyd, Otto R. Heiligman. Preceding the meeting and election of officers the annual dinner was held. One of the features of the evening was the presentation of a handsome mahogany hall clock to the retiring Commodore Saml. B. S. Barth.

MARYLAND MOTOR B. C.

At the annual meeting of Maryland Motor Boat Club the following officers and committees were elected: President, Lee S. Meyer; vice-president, Harry G. Leland; Commodore, J. Cookman Boyd; Vice-Commodore, O. L. Molter; Rear-Commodore, Jacob Mayer; Fleet Captain, Gustav F. Krug; Secretary, Charles C. Counselman; Treasurer, Edward A. Weiler.

The Board of Governors consists of the above officers and the following additional members: William P. Bigelow, Myer Rosenbush and Albert H. Likes.

By unanimous vote the courtesies of the club and of such of the boats as may be available were tendered to the committee having in charge the entertainment of the delegates and representatives of the Democratic National convention, which is to be held in Baltimore in June next.

In this connection there was also appointed a committee, consisting of J. Cookman Boyd,

BAYSIDE BIRDS.

chairman; William P. Bigelow, Robert M. Levering, Myer Rosenbush, William H. Evans, Harry B. Little, Albert H. Likes, W. W. Varney, J. J. H. Kirwan, Howard Bryant, James C. Callis, Harry G. Leland, O. L. Molter, Jacob Mayer, Gustav F. Krug, Joseph A. Vaeth, Ambrose Vogt and Edward A. Weiler, to act in conjunction with the club committee on entertainment and assist in entertaining the members of the National convention. This committee will call on Mayor Preston and Robert Crain and formally tender its services.

The Treasurer, Edward A. Weiler, submitted his annual report, which showed excellent financial condition. James C. Callis was appointed chairman of the Racing Board. George W. Marsheck was appointed chairman of the House Committee.

MOSQUITO FLEET Y. C.

The Mosquito Fleet Y. C., at the annual meeting elected officers as follows for 1912: Commodore, Thomas J. Kelley; Vice-Commodore, Edward L. Hopkins; Secretary, Richard S. Landers; Treasurer, Cornelius J. Driscoll; Measurer, Edward T. Landers; Directors—James H. White, Henry J. Lannon, Richard F. Quirk.

STAMFORD Y. C.

Strenuous was the evening of Feb. 5 in Stamford, Conn., when the yacht club held its annual election. The women members were called upon to exert their influence and practice ballot casting. They did both and helped the regular ticket win out. The officers elected were: Commodore, E. Y. Weber; Vice-Commodore, Edward Corning, of New York; Rear-Commodore, Irving E. Raymond; Directors—W. W. Heroy, Theodore R. Hoyt, Bartholomew Jacob, William H. Martin, Frank Shea, Douglas L. Elliman, William H. Judd, James S. Jenkins, John J. Radley, Herman C. Fleitmann, Richard H. Gillespie, Jr., Charles D. Lockwood; Nominating Committee—Edward C. Hoyt, New York, chairman; Walter Daskan, Charles E. H. Phillips, Wilson L. Baldwin, Malcolm R. Pitt. The defeated ticket was headed by John B. Phillips. It was composed mostly of Stamford men, whereas the regulars were many of them New Yorkers.

WATERWAYS LEAGUE.

The annual election of Waterways League, held last Tuesday night, put into office the following: Commodore, William A. Strong; First Vice-President, Commodore Joseph B. Acker, Canarsie Y. C.; Second Vice-President, Hon. Herman A. Metz; Brooklyn Y. C.; Third Vice-President, Commodore Joseph W. Masters, Belle Harbor Y. C.; Honorary Vice-Presidents—Commodore George J. Vestner, Colonial Y. C.; Commodore William S. Braisted, Morris Y. C.; Commodore J. E. Schiffmacher, Sheepshead Bay Y. C.; Commodore E. A. Chapman, Bergen Beach Y. C.; Commodore C. A. Schiffmacher, Keystone Y. C.; Commodore William Armbruster, Old Mill Y. C.; Commodore M. W. Houck, New Rochelle Y. C.; Commodore William C. Towne, Brooklyn Y. C.; Commodore A. H. Brook, Canarsie Y. C.; Commodore William J. Hogg, Stuyvesant Y. C.; Commodore William H. Barnard, Atlantic Y. C.; Commodore J. A. Lannan, City Island Y. C.; Commodore G. J. Harrison, Metropolitan Y. C.; Commodore Louis M. Pultz, N. Y. Canoe Club; Commodore A. W. O'Donnell, Mecca Y. C. Treasurer, Fred Reid. Assistant Treasurers—Commodore F. J. Robinson, Morris Y. C.; E. C. Schiffmacher, Sheepshead Y. C. Corresponding Secretary, Otto B. Schmidt, Canarsie Y. C. Assistant Corresponding Secretary, Commodore G. M. Sprague, Ben Machree B. C. Recording Secretaries—Robert C. Kerr, Jr., Brooklyn Y. C.; Butler C. Pfeiffer, Morris Y. C.; Clarence M. Strong, Nassau Y. C.; Ramsey McElvery, Flatlands Y. C.; Joseph C. Zwack, Stuyvesant Y. C.; Arthur Haas, Hudson River M. B. C.; George H. Schiffmacher, Keystone Y. C. Board of Governors—Commodore William J. Moran, Jamaica Bay Y. C., chairman; Commodore William A. Strong, Commodore Joseph B. Acker, Hon. Herman A. Metz, Commodore Joseph W. Masters, Treasurer Fred Reid, Otto

B. Schmidt, Commodore Thomas Northridge, M.D., Commodore George J. Vestner, Commodore J. E. Schiffmacher, Commodore Montrose W. Houck, Commodore J. Stuart Blackton, Commodore William E. Powers, Commodore Edward Effinger, Commodore William S. Boyd, Commodore Louis C. Daul, Commodore G. A. Cooper, Commodore John A. Still.

EAST GREENWICH Y. C.

The following officers and committees have been elected for ensuing year by East Greenwich, Rhode Island, Y. C.: Commodore, F. Herbert Smith; Vice-Commodore, Dr. William H. Heald; Rear-Commodore, Henry E. Allen; Secretary, F. S. Nock; Treasurer, L. W. Dugdale; Fleet Captain, M. A. Newcomb; Fleet Surgeon, Dr. F. G. Taggart; Measurer, F. S. Nock; Assistant Measurer, G. L. Spencer; House Committee—A. P. McCabe (Chairman), A. E. Leu, R. V. S. Read, Wm. Nason, W. A. Congdon; Racing Committee—F. S. Nock (Chairman), Walter Sherwood, T. Drew Durnell, Wm. Nason, C. H. Mandeville; Representatives to Narragansett Bay Y. R. A.—F. S. Nock, Wm. Mason, C. H. Mandeville; Ways and Means Committee—Frank Church (Chairman), M. A. Newcomb, Senator T. H. Galvin, John Bisbee, Wm. H. Taylor, T. A. Briggs, C. H. Mandeville, Thos. Hussey, J. J. Brant, G. F. Brownell; Official Reporter, A. E. Leu; Reception Committee—Dr. F. T. Rogers, William Hodgman, Arthur Knight, William L. Sharpe, Arthur B. Lisle, Col. Robt. B. Treat, L. H. Tillinghast, George P. Tyler, A. A. Earnshaw, Senator C. G. Hill, T. Drew Durnell, Joseph Lawton, Thomas Kilkenny, Clarence M. Dunbar, F. S. Nock, W. H. Taylor, William Halkyard, Moses J. Barber, C. H. Mandeville, Hon. David J. White, H. Anson Richmond, Louis L. Lorillard, B. Frank Vaughn, W. A. Browning, Frank H. Arnold, Gideon Spencer, Daniel Jackson, Dr. H. F. Powers, A. E. Leu, J. R. Champ- lin, Dr. George B. Langmaid.

ROBBIN'S REEF Y. C.

At the annual election held at their Bayonne, N. J., club house the Robbin's Reef Y. C. elected the following officers: Commodore, P. J. McDermott; Vice-Commodore, James Dunn; Rear-Commodore, Michael Hanner; Treasurer, Valentine Steinmetz; Secretaries, Frederick Golding and C. D. Stalling; Measurer, Samuel Seals; Fleet Surgeon, Dr. Oscar Ditmar.

EDGEWOOD Y. C.

Six new officers of the Edgewood Y. C., Providence, R. I., were elected Feb. 10. They are Commodore, Vice-Commodore and Rear-Commodore and three members of the Board of Directors, all among the young, enthusiastic members.

Fred W. Bartels, the new Commodore, holds office in the organization for the first time. During his membership in the club for the past three or four years he has become very popular, and his boat, Alzada III., built by Fred S. Nock, is one of the handsomest raised deck cruisers in the fleet. It will be a worthy successor to Dutee W. Flint's Unome III. as flagship.

Walter D. Wood, the new Vice-Commodore, has been one of the most prominent members of the club for several years in the racing as well as the social end of the club's activities. Dorothy, a new 18-foot knockabout last year, was one of the team which opposed the visitors from Massachusetts Bay in the inter-bay races, and Nautilus, his class cabin power boat, aided in carrying spectators and entertaining visitors during a number of races. Mr. Wood is considered a true sportsman. His popularity is shown by the unanimity of his election.

The new Rear-Commodore is Thomas J. Critchley. These men, by virtue of their offices, hold positions on the Board of Directors. The three new members of the Board with them are B. B. Manchester, Jr., Howard N. Knight and John M. Latham. This makes six of a total of nine members of the Board who are new, a fact which has aroused keen interest in the first meeting, which is to be held soon, as the policy of the organization for the coming summer will be outlined at that time.

The officers retired by the election, by their own request, were Commodore Dutee W. Flint, Vice-Commodore Charles F. Markham, Rear-Commodore John D. Peck, and Directors Herman G. Possner, Harvey J. Flint and John H. Stone, all of whom have been prominent in Narragansett Bay yachting activities for a number of years.

Simple Navigation.

BY A. G. GOLDSMITH.

THE science of navigation, if gone into thoroughly, proves such an inexhaustible subject that the majority of amateur yachtsmen have left it severely alone, being apparently smitten with the idea that without months of ardent study it is impossible to gain sufficient knowledge of the art to enable them to leave the beaten track and navigate their craft with comparative confidence into distant waters, hitherto unknown to them by any previous practical experience. This may be due to the fact that those of their fellow yachtsmen who possess a fair knowledge of the rudiments of navigation have sought to initiate them into its higher branches before they have mastered the ground work, thereby erroneously impressing them with the difficulties which lie in the path of the budding navigator; or possibly it may be owing to their having sought to instruct themselves from books compiled for the use of those who intend qualifying for Board of Trade certificates, and which, to the uninitiated, appear to bristle with difficult problems and long technical expressions. In summing up the science of navigation as a difficult one, the amateur yachtsman is making a big mistake, for nothing is simpler or easier to understand than the majority of rules, tables and formula by which he can with safety navigate his craft, either on deep sea or coasting trips, thus avoiding the inevitable monotony of continually cruising in home waters, with which he has for so long been familiar.

Without ever having to handle a sextant or depend in any way upon stellar or solar observations, there is no reason why the owner of any yacht should not cruise around almost any coast in Europe in perfect safety, provided of course he is possessed of a sound knowledge of

By the late Dixon Kemp

Tenth edition. Published 1904. We have a copy in fairly good condition, published at \$12, which we will sell for \$9.00.

FOREST AND STREAM PUBLISHING CO.

chart work and his compass, and is able to make use of the many simple methods for fixing positions from observations of points of land, etc. As light knowledge of the sextant tends to give the navigator an additional sense of security, as well as a great advantage over his less skilled brethren, it must not be thought by any means that this useful instrument is absolutely indispensable when cruising in foreign waters.

Anyone, however, who intends visiting places with which he is unacquainted must of course be provided with a certain amount of reliable gear, the most important of which is a really efficient compass. The style of instrument to be found on board the majority of small yachts is one technically known among professional navigators as a "boat's compass" and is useless, or next to it, for anything but steering purposes. To begin with, the card is of far too small a diameter, added to which it is usually boxed up under a binnacle in such a way as to render it impossible for the navigator to get accurate bearings of points of lands, etc., whereby he can so easily determine his position to a quarter mile or so.

For small yachts the type of compass known as a "spirit compass" is undoubtedly the best, as the fluid in which the card floats minimizes the effect of the short, jerky, diving motion of the craft when under weigh in heavy weather. The card itself should in no case be of less diameter than eight inches, while the binnacle cover should be removable, so as to enable the navigator to take freely any bearings which he may require.

When buying this indispensable instrument it should be borne in mind that whereas a good reliable one will be of the utmost use and assistance at all times, a small cheap one will only prove an endless source of worry and anxiety to its owner. Fifty dollars or seventy-five dollars may seem a big outlay, but when buying a compass it is money well spent, especially if long cruises are anticipated.

The subject of the deviation of the compass is a long and complicated one, when gone into very thoroughly, but for all practical purposes it may be reduced to this:

(1) The magnets which are attached to the

DIAGRAMS 1 AND 2.

How to use parallel rulers for finding the true bearing of two objects in transit.

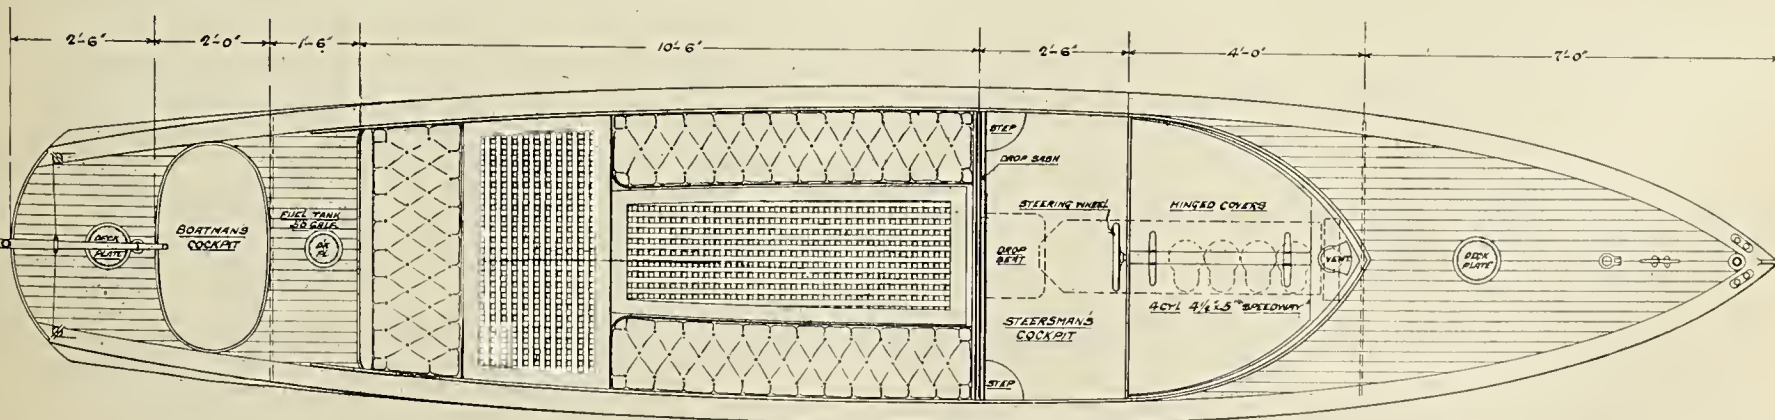

card do not always point to the magnetic pole, as local attraction causes them to deflect either on one side of it or the other. This may be due to the presence of iron screws, stanchions,

blocks, etc., within a radius of nine feet of the compass. In the case of wooden vessels, the deviation (as this deflection is called) is generally very slight, but in iron or steel vessels it may be very considerable, and need compensating for by other magnets placed in certain positions within the compass stand. This correcting of the compass by magnets requires the attention of a skilled navigator, and is altogether beyond the sphere of the amateur yachtsman, so I do not propose to deal with it in these articles.

(2) This deviation will not be the same on all points of the compass, but will change, both in force and direction, as the vessel's head is brought on to the different points. Once this deviation has been ascertained by means which I shall explain later, a deviation card can be drawn up and kept handy for future reference, as for all practical purposes it will remain unaltered while cruising within an area of some hundreds of miles of the place where the observations were taken. It should of course be checked from time to time, but providing ordinary care is taken of the compass and no additional soft iron or steel whatsoever, either in the form of odd bits of gear or extra fittings, be brought into its vicinity, the deviations should remain the same on all points as were originally determined.

To facilitate the taking of bearings, the standard compass should be fixed somewhere clear of all deck hamper in the shape of companionways, hatches, etc., and if in such a position it is not convenient for the helmsman to steer by, an additional small compass should be carried for this purpose. Once the standard compass has been fixed in its position with the black line marked on the inner rim of its bowl—or "Lubbers Point" as it is generally termed—placed exactly over the midship line of the vessel, it is ready to be tested for deviations.

Before proceeding any further it will be as well to mention briefly the other error which affects every compass—an error of the earth so to speak this time. This "variation," as it is called, is the deflection of the compass magnets from the direction of the true pole, and is due to the earth's magnetism as well as to the fact that the magnetic pole (to which all magnets,

30-FOOT GASOLENE YACHT TENDER BEING BUILT BY GAS ENGINE & POWER CO. AND CHARLES L. SEABURY & CO. FOR MR. ABRAM BOUDINE'S STEAM YACHT KANAWHA.

The hull will be constructed with oak stem, keel and frames; mahogany planking and finish throughout, grating floors, glass wind-shield at forward end of owner's cockpit; folding khaki awnings will be provided. The machinery will consist of a 4-cylinder, 4-cycle, 4 1/2 x 5 in. Speedway engine of 18 to 22 H. P., and a speed of 15 miles per hour is guaranteed. It is an exceedingly hand some boat, very able and comfortable, and of a seaworthy type.

when freely suspended and unaffected by deviation, will point) and the true pole arc situated at some little distance from one another. The amount of this deflection, or variation, as we must term it, varies both in force and direction according to latitude and longitude, but as this is clearly marked on all admiralty charts, it is nothing more than a mere cypher in the navigator's calculations.

In all compass calculations, whether it be in the setting or correcting of courses, or taking and laying off bearings on charts, I would strongly advise all amateur navigators to work only and solely in degrees, having proved from long experience that it is not only the easier method, but also a shorter and more accurate one, having the additional advantage of offering less scope for clerical errors on the part of the calculator.

All the better class of compasses are marked in degrees as well as in points, the numbers running from 0 to 90, starting from either pole, to the points E. and W., respectively.

How often does one not hear on board a yacht the skipper, when calculating his compass course, say something after this style:

"Let me see. Thirteen degrees westerly variation, that's about 1¼ points, and two degrees westerly deviation; that's about ¼ point—altogether about 1½ points west to be allowed for."

Why does he not calculate it in degrees throughout, and allow for 15 degrees of westerly error straight off, instead of transferring the variation and deviation into points and allowing for 1½, which, strictly speaking, is not accurate?

However, from the above it can be clearly seen the difference between variation and deviation of the compass, and to determine the latter the following method may be used:

Take two prominent objects on the shore—one as near as possible to the observer, and the other as distant as possible, and maneuver the yacht so as to bring them in line with one another. Then find their magnetic bearing from the chart by laying the parallel rulers over them, subsequently working the rulers across to one of the meridians of longitude, so that the arrow mark K rests directly upon it. Close the rulers firmly together, taking care not to move the arrow mark off the meridian. From the upper edge of the rulers can now be read, at the point where the meridian intersects it, the exact number of degrees in the true bearing of the two objects. Common sense will tell the navigator whether to name the bearing N., S. E. or W.

Having found the true bearing of our two objects, we must proceed to deduce its magnetic bearing. This is a very simple matter, and is effected by applying the local variation. Thus:

True bearing of objects..... N. 30 W.
Variation (allow to right)..... 13 W.

Magnetic bearing N. 17 W.

For the benefit of those who are unacquainted with the rules for applying variation and deviation to true bearings, with a view to finding their magnetic and compass bearings, I quote the following:

To turn a true bearing into a magnetic and compass bearing—

If the variation or deviation is west, allow it to the right.

If the variation or deviation is east, allow it to the left.

EXAMPLE.

True bearing N. 30 W.
Variation (allow to right, i. e., subtract) 13 W.

Magnetic bearing N. 17 W.
Deviation (allow to left, i. e., add).... 3 E.

Compass bearing N. 20 W.

To turn a compass bearing into a magnetic and true bearing—

If the deviation or variation is west, allow it to the left.

If the deviation or variation is east, allow it to the right.

EXAMPLE.

Compass bearing N. 20 W.
Deviation (allow to the right, i. e., subtract) 3 E.

Magnetic bearing N. 17 W.
Variation (allow to the left, i. e., add) 13 W.

N. 30 W.

The second process being of course the exact reverse of the first.

Now take a careful compass bearing of the two objects, the difference between the two bearings, as taken from the chart, and also from the compass, being the deviation of the latter for that point upon which the yacht's head lay at the time of the observation.

Now proceed to turn the vessel round, stopping her to take a fresh bearing of the objects as her head rests steadily on every full point, or 10 degrees, whichever the navigator prefers. Having noted each bearing down, together with the direction of the yacht's head at the time of taking it, comparisons can be made with the correct magnetic bearing of the two objects, and a complete deviation card compiled, which will be invaluable for future reference.

[TO BE CONCLUDED.]

Motor Boating

Motor Boat Show.

THE eighth annual exhibition of motor boats and engines will be opened in Madison Square Garden to-night, and will convene for eight days. The Garden has been transformed to represent one of the long piers running into the Hudson River. It is doubtful if preparations for a show of this kind were ever made before on so extensive a scale. As the show is one of boats, engines, and their accessories, everything in the Garden is of a nautical character. On entering the Garden from the Madison avenue end, one will imagine that he is walking down a long pier in the neighborhood of West Twenty-third street. At the end of the floor will be seen the Hudson River, its tide flooding. On the other heading north will be the United States cruiser Salem, alongside the torpedo boat destroyer Meade and the high speed boat Dixie IV. So well has the scenic artist painted these fast craft that they seem to be racing. Bow waves are splashing against the stems of each and the spray is being thrown high on each side. In the distance is the New Jersey shore with Castle Stevens, and in the distance the blue hills about the Oranges.

On each side of this pier or dock is a mammoth ocean steamer. The Olympic is on the north and the Mauretania on the south. These two are apparently ready to put to sea. Black smoke is belching from the four stacks on each vessel. The scenery to display the midship sections of these two steamers is 240 feet long and it towers way up into the roof girders of the Garden. The exhibits of boats and engines are to be on the dock or main floor of the Garden. There will be altogether more than 150 exhibitors at this show and as yachtsmen are all anxious to find out what the prevailing fashions in boats will be this year, and to see what improvements have been made in engines in ignition, carburetors and the many other things that go to make a perfect boat, these exhibits will be attractive.

Among the exhibitors will be twenty-five boat builders and these will have 17 cruisers, ranging in size from 26 to 60 feet, many day boats of all sizes and a dozen hydroplanes of different types. The National Association of Engine & Boat Manufacturers who hold this annual exhibition, wish this year to make it as educational as possible, and the Motor Boat School of the Young Men's Christian Association and the Nautical College will conduct an information bureau where the novice can learn all about boats, engines and trips, and the expert can

learn a few things he did not know before. Capt. Howard Patterson and others are to lecture afternoon and evenings on boats, engines, nautical instruments, the compass, chart reading and many other subjects. These lectures will be free to visitors to the show. In the theatre there will be moving picture show and the races for the British International trophy and other classic events can be witnessed again.

Maurice Levi is to conduct the band. This, too, will be nautical in character. Every piece rendered will have a taste of the sea and many special numbers have been written for this show which will be rendered for the first time.

Canoeing

Atlantic Division Meet.

PHILADELPHIA, Pa., Feb. 10.—*Editor Forest and Stream:* Although 1912 is the year for the Atlantic Division of the American Canoe Association, to support and carry out the general camp, Vice-Commodore Fort and the division officers have planned a regular division meet. This event will be held from July 3 to 7, inclusive, at the Philadelphia C. C., Wissahickon, Philadelphia.

This club occupies the old quarters of the "State in Schuylkill Fish Club," known as Colony Castle, the building being over a hundred years old and originally used as a Revolutionary grist mill. The club house and grounds are in the famous Fairmount Park at the junction of the Wissahickon Creek and Schuylkill River, and delightful short cruises can be taken on both streams.

The Wissahickon runs through a rugged valley beautiful at all times and with enough rapids and rough water to suit anyone, while the river and canal give opportunities for easier cruises. The park extends on both sides of the Schuylkill below the club and on this stretch each Fourth of July the People's Rowing Regatta is held, which is known as the American Henley, and all the big events are run off at that time.

In the other direction, up the river, at Valley Forge, a special Independence Day celebration is held that is worth paddling up to see.

The camp this year will be unique. It will practically be held on club grounds in the city of Philadelphia, and yet be out in the open, at the same time. Trolleys pass the door, and Wissahickon station on the Reading R. R. is right at hand, while Riverside Mansion and High Bridge Hotel, both well-known road houses, are practically on the same ground. The railroad facilities make it convenient for out-of-town people, while the trolley service will enable campers to go to and from work in a short time, staying in camp at night.

Although unable to run any sailing races on the Schuylkill, a course for paddling events can be selected to suit all conditions.

There will be no general mess, but arrangements will be made whereby good service can be had for bread, groceries, milk, etc., so that the real campers can enjoy their own meals, while the hotels can look after the ones who prefer not to cook. The committee is going to arrange smokers, dances, campfires, cruises and entertainments, so that everyone will have a good time. Definite directions how to reach there will be given later on.

The Red Dragon C. C. had its annual mess at the club house on the Delaware, Wissinoming, Saturday, Jan. 13. It was a bang-up affair, and all those present enjoyed themselves. The Dragons were a quarter of a century old this year and celebrated accordingly.

The Philadelphia C. C. held a smoker at the club house on the Schuylkill on Jan. 27. Visitors from Red Dragon, Lakanoo and Yapewi were on hand and after a fine feed, the A. C. A. was boosted from all sides.

FRANK T. WILSON.

 May 8-9.—Columbus (O.) G. C. Lon. Fisher, Sec'y.
 May 9.—Riverside, Ill.—National G. C. C. W. May, Pres.
 May 9.—Vergas (Minn.) R. and G. C. C. Scharf, Sec'y.
 May 9-10.—Charlotte, N. C.—Mecklenburg County G. C. E. P. Coles, Sec'y.
 May 14-15.—David City (Neb.) G. C. E. D. Taylor, Sec'y.
 May 14-15.—Adel, Ia.—Adel G. C. C. F. Clarke, Sec'y.
 May 14-16.—Columbus, Ga.—The Interstate Association's seventh Southern Handicap tournament, under the auspices of the Columbus G. C.; \$1,000 added money. The winner of first place in the Southern Handicap is guaranteed \$250 in cash and a trophy. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.
 May 15.—Milton Junction (Wis.) G. C. W. H. Smith, Sec'y.
 May 15-16.—Fairmont, W. Va.—West Virginia State tournament, under the auspices of the Fairmont G. C. Ed. H. Taylor, Sec'y.
 May 15-16.—Camden (Ark.) G. C. J. P. Wright, Mgr.
 May 15-17.—Peoria, Ill.—Illinois State tournament, under the auspices of the Illinois State S. A. Robert Scholes, Sec'y.
 May 17.—Nevada (Ia.) G. C. E. W. Scott, Sec'y.
 May 20-21.—Iowa City (Ia.) G. C. C. Bothell, Sec'y.
 May 21-23.—Waco, Tex.—Texas State tournament, under the auspices of the Waco G. C. E. S. Forsgard, Mgr.
 May 21-24.—Sunbury, Pa.—Pennsylvania State tournament, under the auspices of the Sunbury-Selinsgrove G. C. J. W. Schoffstall, Sec'y.
 May 23-24.—Waterloo (Ia.) G. C. J. F. Libby, Sec'y.
 May 23.—Mt. Morris (Ill.) G. C. H. W. Cushing, Sec'y.
 May 25.—New Haven, Conn.—Western Connecticut T. S. League tournament, under the auspices of the New Haven G. C. Wm. F. Alcorn, Sec'y.
 May 28-30.—Omaha, Neb.—Nebraska State tournament, under the auspices of the Omaha G. C. F. T. Lovering, Sec'y.
 May 29-30.—Wilmington, Del.—Delaware State tournament, under the auspices of the Du Pont G. C. T. E. Doremus, Sec'y.

May 30.—Watertown (Wis.) G. C. B. H. Rejck, Sec'y.
 June 1.—Roversford (Pa.) G. C. F. A. Anderson, Sec'y.
 June 4-6.—Mexico, Mo.—Fifth annual State tournament of the Missouri State Trapshooters' Association, under the auspices of the Audrain Country Gun Club, of Farber, Mo. Russell Glynn, Sec'y.
 June 4-7.—Dayton, O.—Ohio State tournament, under the auspices of the N. C. R. G. C. W. F. MacCandless, Sec'y.
 June 5.—Conde (S. D.) G. C. A. E. McMillan, Sec'y.
 June 5.—Janesville (Wis.) G. C. L. L. Nickerson, Sec'y.
 June 5-6.—Aurelia (Ia.) G. C. Frank R. Welch, Sec'y.
 June 5-7.—Warm Springs, Ga.—Merriwether G. C. T. B. Slade, Mgr.
 June 10-13.—Syracuse, N. Y.—New York State tournament, under the auspices of the New York State Sportsmen's Association. L. H. Schortemeier, Sec'y-Treas, 201 Pearl street, New York.
 June 11.—Washington, Pa.—Western Pennsylvania Trapshooters' League tournament, under the auspices of the Washington G. C. C. W. Peterson, Sec'y.
 June 11-13.—Sioux City Ia.—Soo Gun Club. W. F. Duncan, Sec'y.
 June 12.—Brodhead (Wis.) G. C. J. B. Pierce, Sec'y.
 June 12-13.—Pine Bluff, (Ark.) G. C. E. J. Voss, Sec'y.
 June 17-19.—Salida, Colo.—Colorado, New Mexico and Wyoming State tournament, under the auspices of the Salida G. C. W. G. Myers, Sec'y.
 June 18-21.—Springfield, Ill.—The Interstate Association's thirteenth Grand American Handicap tournament, on the grounds of the Illinois Gun Club; \$1,500 added money. The winner of first place in the G. A. H. guaranteed \$1,000 in cash and a trophy. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.
 June 25-28.—Eugene, Ore.—Pacific Indians. F. C. Riehl, Sec'y.
 June 27-28.—Spencer (Ia.) G. C. G. O. Round, Sec'y.
 July 3.—Catasauqua, Pa.—Bryden G. C. E. C. Jones Sec'y.
 July 9-11.—Bradford, Pa.—The Interstate Association's Seventh Eastern Handicap tournament, under the auspices of the Bradford G. C.; \$1,000 added money. The winner of first place in the Eastern Handicap is guaranteed \$250 in cash and a trophy. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.
 July 9-11.—Fort Dodge, Ia.—Iowa State tournament, under auspices of the Fort Dodge G.C. Jos. Kautzky, Manager.
 July 14-15.—Fargo, N. D.—North Dakota State tournament, under the auspices of the Gate City G. C. Albert E. Rose, Sec'y.
 July 16.—Butler, Pa.—Western Pennsylvania Trapshooters' League tournament, under the auspices of the Butler R. and G. C. S. G. Purvis, Sec'y.
 July 25-26.—Warroad, Minn.—Minnesota State tournament, under the auspices of the Minnesota State Sportsmen's Association. Peter Alldrin, Sec'y.

PISTOL AND REVOLVER CARTRIDGES

are chosen by the majority of revolver and pistol experts the country over because they know

The Ignition is Prompt, Uniform and Sure. The Accuracy and Sure-Fire are Guaranteed by Records.

DRIVERS AND TWISTERS.

The following officers were elected for 1912 by Chenango Fish, Game and Gun Club: President, L. A. Smith; Secretary, E. D. Borden; Tournament Committee, Greanery, Borden, Munroe and Ferris.

Royal Centre Gun Club will hold a tournament on March 22, on their grounds at Royal Centre, Ind. A large entry is expected. Full particulars from E. A. Marx, President, or J. E. Swisher, Secretary.

The Niles Gun Club, at Niles, O., is very busy just now preparing to move into their new club house and getting ready for the annual tournament, to be held May 23. This club is a hustler and no mistake.

The recently organized McCarron Lake Gun Club at St. Paul, Minn., has elected the following officers: Paul W. Feist, President; Fred W. Keussel, Vice-President; Max Rielsing, Treasurer; Henry Enfeldt, Secretary.

At a meeting of the Florida Hunters' and Fishermen's Club, held at the Lake View Hotel, Leesburg, Feb. 5, a pleasant surprise was sprung on Game Warden George E. Winters, when the president, Mr. C. J. Rainear, on behalf of the club, presented him with a handsome Remington repeating shotgun. The presentation was greeted with cheers by the club, for Mr. Winters is a popular game warden and guide.

To-day is the day of the annual clay pigeon championship of New York Stock Exchange, to be held on grounds of Country Club at West Chester, N. Y. This shoot always brings out a bunch of very good guns, who shoot every Saturday and Sunday at the Country Club on Pelham Bay, and whose names get into the papers only annually. It also includes many prominent amateurs from Larchmont, New York A. C., Crescent A. C., Atlantic Y. C., who are members of the board.

W. F. MacCandless, Secretary, N. C. R. Gun Club, writes us as follows: "The Ohio State shoot will be held on our shooting grounds, June 4-7. We are going to make this the biggest and best shoot (for the shooters) yet held, and ask you and your friends to help us do so by attending, and shooting through the program with us. Dayton for all—for Dayton." The officers of the N. C. R. Gun Club, Dayton, O., are: H. L. Monbeck, President; S. W. Everett, Captain; W. F. MacCandless, Secretary-Treasurer. The officers of the Ohio State Trapshooters' League are: R. R. Dickey, President; J. E. Cain, Vice-President; J. M. Markham, Secretary, all of Dayton, O.

The program of the seventh annual Washington's Birthday shoot of the East Millstone (N. J.) Gun Club is interesting. There are to be eight 25-target events, \$1.50 entrance in each event; Nos. 5 and 6 constitute the County Championship. In these events the entrance fee for shooting for the championship of Somerset county, for residents only, is \$2. If shooters wish, they may enter for the \$1.50 sweepstakes as well. The winner of the County Championship will hold the Fleischman cup for one year, and the East Millstone Gun Club solid gold medal permanently. High amateur guns, \$5, \$3, \$2. Money divided by Rose system, 5, 3, 2, 1. High professional gun, \$5, providing five or more compete throughout the program. Not more than two professionals will be allowed to shoot in any one squad. Professionals shoot for targets only. Any one may shoot for targets only. Shells in all standard loads will be on sale at the grounds. Ammunition, etc., shipped, express prepaid, to East Millstone, N. J., care of East

Millstone Gun Club, will be delivered on the grounds free of charge. If stormy the shoot will be under canvas, starting at 10 o'clock. Trains leave New Brunswick at 7:55 A. M. Automobiles will meet both the 8:30 A. M. train from New York, via the Penn. R. R., arriving at New Brunswick 9:29 A. M., and the 8:15 train from Liberty street, New York, via the Philadelphia & Reading R. R., arriving at Weston 9:20 A. M.

Trapshooting by electric light, indoors, will be for the second time, a feature in the coming Sportsmen's Show, the eighteenth annual, which will open March 1, for an eight-day run at Madison Square Garden. General Manager Steve Van Allen, who took in the Pinhurst tournament, reports the clay pigeon breaking fraternity heading strong for the Garden shoot, and predicts a great assemblage of shotgun sharps. Philadelphia, which has become the home of top-notch American trapshooters, will be strongly represented, led by Harry Kahler and George McCarty. A suggestion made at Pinhurst, for a Philadelphia-New York championship five-man match at the Sportsmen's Show is developing.

A gun club with a large membership has been organized at Mt. Healthy, O., under the name of the Mt. Healthy Royal Gun Club, and will hold regular weekly club shoots as soon as the weather becomes settled. The officers of the new club are as follows: President, Fred Menze; Vice-President, W. H. Weber; Recording Secretary, John Koehler; Financial Secretary, Charles Weiner; Treasurer, George Smith; Trustees, Louis Bitner, Ed. Bitner and Clem Shaw. The grounds are located at Lookout Grove, a short distance from College Hill, on the traction line. One of the objects of the club is the protection of game, and practical work done in this direction during the long spell of cold, stormy weather. Seven committees, of two men each, have looked after twelve beves of quail, supplying them with food and doing all possible to insure their survival through the winter. The club is planning for an all-day picnic and shoot on June 22, at which prizes galore will be offered.

Secretary J. Franklin Meehan, of Highland Shooting Association, sends the following: "A section of President Dalton's (of our Highland Shooting Association) address might be of interest to shooters in general, and perhaps be the means of securing some friendly matching in the shooting game. Among other things, he said he believed the Highland Shooting Association had the best individual shot in the country, the best five-man team, the best ten-man team, the best fifteen-man team, the best two-man team, members of which were over sixty years of age, and the best three-man team, whose members were under seventeen years of age. He expected clubs in Philadelphia simply because all the shooters here belong to the several prominent clubs, and one of his objects in making this assertion was in the hopes that for the sake of friendly contests the shooters of Wilmington, Baltimore, New York, Allentown, Harrisburg, Pittsburgh or any section would look at it in the same friendly spirit and respond with challenges."

BEECROFT.

Does it Pay to Reload Shells?

WE have received from the Marlin Fire Arms Co. a copy of the new "Ideal Handbook No. 22," just off the press. This is similar to the previous issues of the "Handbook," familiar to all expert shooters during the past twenty-five years, but the new edition is corrected to date, and has been amplified by the addition of about twenty pages of useful and interesting information for shooters. In this book the Marlin Co. does not leave it to the imagination or experience of the shooter to decide that the saving in cost of ammunition by reloading the empty shells actually amounts to enough to make it worth while—they prove by actual cost figures that any man who shoots considerably can materially reduce his shooting expense in this way. They show, for example, that the .32-40 high power factory cartridges cost the shooter \$34.20 net per 1,000; the same cartridges loaded by hand, buying the new primed shells and other component parts, cost the shooter \$26.96 per 1,000; when the shells are reloaded with exactly the same powder charge, primers and factory bullets, the expense is only \$13.46 per 1,000.

The .32-40 low power factory cartridges cost \$28.80 per 1,000; when you reload, your expense is only \$11.31. Factory .32-40 short range cartridges cost \$25.20 per 1,000; reload your shells, and they cost you only \$7.65. Make your own bullets, and you have 1000 short-range cartridges for \$3.80.

It is admitted that modern metallic shells represent the biggest part of the expense of factory ammunition. These expensive, high grade shells are extremely well made. They can be reloaded time and time again. You

wouldn't throw away your pipe after smoking it once, why throw away your empty shells.
 Even shotgun shells can be reloaded successfully two or three times each, as the Ideal tools include one which cuts off any frayed end of shells, leaving a good crimping end. A reloading outfit costs very little, and you can load as few or as many shells as you wish with just the right loads for the occasion, and always have fresh ammunition.

This book contains full information regarding powders, bullets, primers and reloading tools for all standard rifle, pistol and shotgun ammunition, tells how to cast bullets, how bullet moulds are made, how to measure powders accurately—in fact, everything relating to loading and reloading of ammunition.

It lists hand-cast bullets; tells all about gas check bullets (which take the place of metal jacketed bullets, with less wear of barrel); gives tables of shotgun or smooth-bore gauges; round ball for shotguns; tables of velocity, penetration, etc.; twists of rifling in rifle barrels; made by the various arms companies; tells how to find the twist in any rifle barrel; tables reducing drams to grains; tables of powders, primers, etc. This book has 160 pages of information every shooter needs; sent free to any shooter for three stamps postage by the Marlin Firearms Co., 27 Willow street, New Haven, Conn.

Chicago Gun Club.

CHICAGO, Ill., Feb. 3.—Although the thermometer was hovering around the zero mark, with a sharp wind blowing from the west, ten shooters came out for their favorite recreation in the fresh air. Short frames of 15 and 20 birds are decidedly popular with the shooters when the cold air gets to nipping the fingers, and after finishing each frame they made a beeline for the club house, where a good fire warmed them up again.

MacLachlan and Goode each broke 21 out of 25 in the practice event, Young and Graham scoring 20 each. In the club event at 50 targets, Stannard topped the list with a total of 47, while Fetherston was high amateur with 45, and Edmonson was next in line with 44.

Young took the lead in both events at doubles 19 breaks out of 12 pairs in each frame.

We were pleased to have with us to-day, Mr. C. A. Edmonson, of Indianapolis, Ind., and Mr. H. C. Kirkwood, of Boston, Mass., both of them giving a good account of themselves on the firing line, and we hope to have them with us whenever they are in Chicago and can find time to come out to our park.

*Practice.

Feb. 4.—This was another day of cold weather, and although the sun was shining brightly, it was almost noon before the thermometer registered up to zero, and it only got a few notches above that during the afternoon. Most of the twelve shooters put up very creditable scores, considering the cold weather.

In the club event, Fetherston was high amateur with a total score of 44 out of 50, while Seelig was only one target behind him. Taggart and Kammerer each broke 40, while Moore scored 39. Bills was high professional with 46, Graham taking second place with 44, while Stannard broke 43. Bills broke 21 out of 12 pairs in the double event, Fetherston and Graham each breaking 18.

May is trying to get used to a new "pump" gun, and says he finds it quite a change after shooting a double barrel for years. Meisner has returned from a trip which kept him away for the past month.

J. A. BINGAMAN, Sec'y.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

New York Athletic Club.

PELHAM MANOR, N. Y., Feb. 10.—Twelve gunners concealed here to-day. Following the suggestion of FOREST AND STREAM, one event on the program was shot from "field position," as was the case last week. George Lyon took this event with 25 out of 25. C. W. Billings, captain of the Olympic team, made only 19, while R. L. Spotts, a probable member of the team, broke only 14. The winners in the events were: A. Elliott Ranney, O. C. Grinnell, Jr., R. L. Spotts and George Lyon. The summary:

February, cup 25 targets, handicap:			
O C Grinnell, Jr.	3 25	G F Pelham	4 21
A E Ranney	2 25	W B Ogden	3 21
G Lyon	0 24	R Johnson	2 21
R L Spotts	1 23	T Lenane, Jr.	3 20
B M Higginson	0 22	J G Batterson	3 20
C W Billings	2 21	O Dickey	0 18

Shoot-off:			
O C Grinnell, Jr.	2 25	A E Ranney	2 21
President's cup, 25 targets, handicap:			
A E Ranney	2 24	G F Pelham	4 21
G Lyon	0 23	R Johnson	2 20
C W Billings	0 23	T Lenane, Jr.	3 18

O C Grinnell, Jr.	20	19	T Lenane, Jr.
R Johnson	19	17	W B Ogden

Shoot-off:			
R L Spotts	21	19	C W Billings
R O Muller	16	18	

On the 12th, while it was nationally Lincoln Day, it was locally Corbett's day. This shooter won the 100-bird handicap with a credit of 12 with 102. While warming up he took a leg on Lembeck and February cups. Fred Pelham found the other prize in the 100-bird match with 97, aided by a 20 handicap. The limb on Lenane cup went to R. R. Debacher, and the distance handicap to C. W. Billings. Scores:

February cup, 25 targets, handicap:			
G J Corbett	2 24	G F Pelham	4 21
G M Thomson	4 24	E M Smith	3 19
R R Debacher	5 23	D F McMahon	2 21
F H Schaufler	2 23	G N Huggins	5 17

The Sunny South Handicap

— WON WITH —

WINCHESTER

Repeating Shotguns and Loaded Shells

W. R. CROSBY.

The opening gun of the trap shooting year was fired with the holding of the Sunny South Handicap at Houston, Texas, and as usual the Winchester red **W** combination started right in to corral the winnings. W. H. France, who won the main event, the Sunny South Handicap, shot a Winchester Repeating Shotgun and Winchester Loaded Shells, scoring 95 out of 100, and 25 straight on the shoot-off. Also he and Alf. Gardiner won the Team Race with the splendid score of 49 out of 50, both shooting Winchester Repeating Shotguns and Winchester Loaded Shells.

HIGH GENERAL AVERAGE

1148 x 1205

Out of a total of 1205 targets thrown, W. R. Crosby broke 1148, winning High General Average. As an onlooker remarked, "this was remarkable shooting, as Mr. Gardiner certainly threw the hardest targets it was possible to throw with an automatic trap." As usual, Mr. Crosby shot Winchester Factory Loaded Shells, which are hard-hitting enough to break the hardest targets.

Get Into The Winnings This Year By Shooting The Red W Combination

One hundred birds, scratch and handicap:			
G J Corbett	12 102	F H Schaufler	12 91

Paleface Gun Club.

WELLINGTON, Mass., Feb. 7.—This was one good day for us. We had a field of nineteen shooters, seven of whom made 90 or better, out of the 100 allotted targets.

Darton, a professional from Portland was high gun with 95, leading Snow and Williams by one bird. Scores:			
Targets:			
Darton	15 15 20 15 15 20	Total.	95
Snow	12 15 20 14 15 19		94
Williams	13 13 20 14 14 20		94
Clarke	12 15 19 14 14 20		94
Sweet	15 14 18 13 14 19		93
Adams	14 14 17 15 13 18		91
Osborne	12 15 19 13 14 17		90
	14 10 18 15 15 18		90
	11 9 1 814 15 20		87

Plattsville Gun Club.

PLATTSVILLE, Wis., Feb. 5.—Owing to severe cold, the attendance was not large at the traps to-day. The scores, at 50 birds, follow:

B Doescher	44	J C David	33
T J Bridges	43	C E Gilmore	32
Ed Long	41	Walter Rose	32
L Bartling	40	C Burg	30
C Eberhardt	40	J Horister	5
T. J. BRIDGES, Sec'y.			

AN UNBEATEN RECORD!

TARGETS SHOT AT
4280

97.28%

TARGETS BROKEN
4164

This is the percentage with which Mr. J. S. Day won the 1910 OFFICIAL HIGH AMATEUR AVERAGE—a percentage never equalled by an amateur and exceeding by exactly 1% the figures of the 1911 winner, who, moreover, shot at only 2100 targets.

Mr. Day's Wonderful Shooting was done with

Peters

FACTORY LOADED SHELLS

The Lion's Share of the 1911 Amateur Honors was also won with PETERS Shells, for they were used either exclusively or for the most of their shooting by 5 out of the 10 High Amateurs. This is not all. The 1911 Grand American Handicap, the greatest event in the Trap-Shooting world, was won by Mr. Harvey Dixon, who scored 99 out of 100 from the 20-yard mark. This score has never been equalled and is a World's Record.

Mr. Dixon used PETERS SHELLS the kind with "STEEL WHERE STEEL BELONGS."

Particular attention is directed to the fact that all of the shooting of Messrs. Day and Dixon was done with Peters Regular Factory Loads. And remember this—you can use PETERS Shells in any good gun. They require no special make of gun to give best results.

Early bird shoot: Shanley..... 0 21
Hart..... 0 15
Colgate..... 4 17

Queens Country Club.

Feb. 12 was about the best day this year in the matter of attendance. Lincoln's Birthday shoot, 200 targets, handicap:

D K Morrell..... 40 189
W Simonson..... 0 176
F Rowland..... 40 175
C H Denton..... 56 168
W Hyland..... 8 166
T R Chapman..... 48 163
B Hathaway..... 24 163

Bergen Beach Gun Club.

It was so cold at the Jamaica Bay traps of the Bergen Beach Gun Club on the 10th inst., that only five members showed up. The number was so small that the committee decided to call off the regular sliding distance handicap and have only practice shoots. G. Remsen and J. Voorhees did the best work.

George K. Kouwenhoven won the first prize in the distance handicap shoot of the Bergen Beach Gun Club on the 12th inst. Thirty-seven marksmen took part in the contest, which was at 50 targets. The winner had 46 to his credit, shooting from the 19yds. mark. J. Gaughan on 17yd. mark, took second, and A. F. Suydam, J. F. Simonson and R. Morgan divided the third price. The scores:

	Yds.	T'l.		Yds.	T'l.
G Kouwenhoven	19	46	J Voorhees	18	36
J Gaughan	17	44	C A Brown	16	36
A Suydam	17	42	J H Hendrickson	19	36
J F Simonson	18	42	H Kelsey	16	36
R Morgan	18	42	H Keeler	16	35
G S Remsen	19	40	C A Brown	16	34
H Wellbrock	16	39	F R Long	18	33
P Von Boeckman	19	39	C A Medler	18	32

Dr Gunther	18	39	T Lyon	16	31
H Welzmuller	17	39	T Davis	16	31
T Schorty	19	39	G Piercy	19	30
G Sauer	16	39	G Richmond	19	29
R Young	16	38	T Short	16	28
H W Drever	18	38	H Hewins	16	28
H D Bergen	17	37	L Levier	16	27
P Van Valer	16	37	J O'Neill	16	27

Marine and Field Club.

THE trapshooters of the Marine and Field Club had a novel experience yesterday. Gravesend Bay was frozen from Norton's Point to Fort Hamilton, and as far west as the main ship channel. Over the sheet of solid ice, dotted here and there with skaters and people walking, the Bath Beach organization threw the bluerocks. Although it was bitterly cold the gunners did not seem to mind the weather.

C. B. Sayre did the best work of the afternoon, winning practically every prize of the day. He took the second leg of the February cup with a total of 97 out of a possible 100 targets, and followed the shoot by taking the take-home trophy with a full score of 25 targets. Mr. Sayre also won two club trophy shoots. One was taken only after a shoot-off, in which J. H. Emanuel, Jr., competed. The latter gunner also won a club trophy shoot.

Mr. Sayre was also in excellent form on Lincoln's Birthday. He gained a leg on the February cup with a full score of 100 targets. It was the first time in ten years that such a total has been made at Bath Beach. In addition to the February cup, he also took the Lincoln Day cup and a club handicap. E. H. Lott and C. B. Ludwig were the other winners of the afternoon.

The following are the scores in February cup match:

C D Sayre	16	100	E H Lott	0	87
C B Ludwig	8	95	C M Camp	8	81
J H Emmanuel, Jr.	8	93	T R Towne	0	78

Jersey City Gun Club.

JERSEY CITY, N. J., Feb. 10.—Eleven members were out at the regular Saturday shoot of the Jersey City Gun Club to-day. It was another zero day, fully as disagreeable as any we have had since Jan. 1, and as the coldest days seem to come on Saturdays, our attendance has been very small; but with milder weather the boys will be out in force.

A. M. Dalton, of Tuckahoe, N. Y., paid us another visit to-day, and was high gun for the day with an average of 64 per cent., and he also won the distance handicap event.

Piercy, who has been laid up for a month with rheumatism in his right hand, was out to-day and shot a few, but had to give it up, as the weather was not just the right sort for his trouble. The scores follow:

	Shot at	Broke		Shot at	Broke
Piercy	115	72	Jones	75	25
Shannon	275	13	Brady	100	40
Dalton	200	129	Joy	50	20
Dixon	200	124	Bill	100	48
Hering	150	80	Simpson	75	37
Engle	150	71			

On Washington's Birthday we are going to have a shoot for prizes, starting at 1:30 P. M., and extend a cordial invitation to all shooters to pay us a visit that day. Programs for St. Patrick's day will be mailed in a few days.

SECRETARY.

Registered Tournaments.

THE following tournaments have been registered with the Interstate Association during the week ending Feb. 10:

- May 2.—Jewell (Ia.) G. C. W. S. Hoon, Sec'y.
- May 2.—Dublin (O.) G. C. N. J. Dominy, Sec'y.
- May 7.—Pittsburgh, Pa.—Western Pennsylvania Trapshooters' League tournament, under auspices of the Herron Hill G. C. Thos. D. Bell, Sec'y.
- May 7-8.—Des Moines, Ia.—Hyperion G. C. W. E. Moyer, Mgr.
- May 9.—Vergas (Minn.) R. and G. C. C. Scharf, Sec'y.
- May 9-10.—Charlotte, N. C.—Mecklenburg County G. C. E. P. Coles, Sec'y.
- May 14-15.—David City (Neb.) G. C. E. D. Taylor, Sec'y.
- May 15-16.—Camden (Ark.) G. C. J. P. Wright, Mgr.
- May 17.—Nevada (Ia.) G. C. E. W. Scott, Sec'y.
- May 21-23.—Waco, Tex.—Texas State tournament, under the auspices of the Waco G. C. E. S. Forsgard, Mgr.

ELMER E. SHANER, Sec'y-Treas.

Northern Kentucky Gun Club.

THERE was a good attendance at the weekly shoot of the club on Feb. 10. The cold, stormy weather of the past few weeks has prevented the boys from coming out, and they welcomed the rise in temperature, which permitted them to heed the call of the clays and once more enjoy their favorite sport. The light was poor, owing to the haze which rose from the river, making the targets hard to see and keeping the scores considerably below normal. Hammersmith was out for the first time in two or three months, and showed that he had not forgotten how to point by breaking over 90 per cent. of his targets. Ertel and Ford also did nice work, approaching the 90 per cent. mark very closely. Messrs. Werner, Menze, Kohler, H. Kohler, Weber and Pfeisticker, all of the new club at Mt. Healthy, O., were present, and

enjoyed the afternoon's sport, as well as the cordial welcome they received from the club members. They will come over again, and extended an invitation for the Northerns to visit them. Of the visitors, Menze did the best work. The game is new to most of them, so that the showing they made on strange grounds may be called very good. Richards was fooling with a strange gun, a frequent happening with him, and his scores show the result. Rogers shot only in one event, as it was up to him to do the work of scorer and referee.

Nearly 1,000 targets were trapped during the afternoon. The club will hold a shoot at white fliers on Feb. 17, in preparation for the shoot on the grounds of the Crystal Lake Gun Club at Ryland, Ky., Feb. 22, when the Ohio State championship at white fliers will be contested for. The sweeps are optional, and are open to all, but only residents of Ohio can compete for the title and trophy. The next regular shoot of the club will be held on Feb. 18. A number of the members will attend the shoot at Ryland, and also the shoot at the private grounds of T. H. Clay, Jr., on Feb. 26, 28 and March 1, when Harry Kahler and J. D. Gay will shoot their match at 100 white fliers per day. This promises to be some match, and as both contestants are well known, and have many friends in this part of the country, much interest is manifested. They will have a fair field and no favor, and may the best man win.

Hudson Gun Club.

JERSEY CITY, N. J., Feb. 11.—At the Hudson Gun Club bi-monthly shoot this morning the attendance was not up to the standard owing no doubt to the extreme cold weather that we are having hereabouts, as only fifteen of the faithful dyed-in-the-wool shooting bugs showed up to make a noise, and get lots of good fresh air, that blows across the banks of the picturesque Hackensack.

Dave Engle was the kingpin this morning with 77 per cent. to his credit, with Jack Fanning the runner-up, he scoring 73 per cent. of his targets. Joe Whitley challenged Tom Kelley to shoot a race at 100 targets, but after shooting 75, Whitley was so badly beaten that he threw up the sponge and decided to wait until Kelley gets a little older, as Joe had to admit that Kelley is a little too young a man for him to try to beat in a shooting match. Conditions were very hard to-day for the sport, lots of wind and zero weather, and the ground covered with snow, which are not very propitious for high scores at any grounds. On Feb. 25 we are going to try to pull off another team shoot between twenty or more members of the club, and we would like to see a big attendance at the grounds on this date, so that we will have lots of timber to choose from. Visitors are always welcome, so just come around and look us over.

Smith Gun Club.

NEWARK, N. J., Feb. 10.—The monthly prize shoot of the Smith Gun Club brought out twenty-one members to brave the zero weather that prevailed. The red-hot stove in the club house seemed more preferable than the firing line, judging from the efforts of the squad hustler, John Geiger won first prize with a great big 47 out of 50, followed closely by Phil Coffin with one bird less. Louis Colquitt starts for Florida to have a little game shooting (of course not to get away from this frigid atmosphere). All the boys wish him success, and will anxiously await his return.

On Washington's Birthday we will hold a merchandise shoot, open to all amateurs, at 100 targets, sliding handicap, \$2 entrance. These shoots are very popular, as conducted by this club, so we look for a record-breaking crowd.

The Frank Hall Cup.

MR. FRANK HALL, of Ridgefield, N. J., has presented the New Jersey State Sportsmen's Association a solid silver cup, to be known as the 100-bird State champion 1912 cup. This cup is to be shot for on the grounds of the gun clubs belonging to the New Jersey State Sportsmen's Association, who make application to the secretary for dates. Shoots to consist of 100 targets on each ground, and five highest scores to win, each club to furnish two sets of traps.

These shoots to be open to all amateurs who are bona fide residents of New Jersey. Each shoot to consist of 100 targets per man, \$3.50 entrance, \$1 to go to purse on the 100 targets, to be divided on the percentage system, 40, 30 and 20 per cent.; \$1 to be reserved for the final purse for the five highest guns to be divided 30, 25, 20, 10 and 5 per cent. The remaining \$1.50 to pay club for targets.

The contestant having the highest total for five shoots to receive cup and 30 per cent. of final purse.

Shoots to start at 2 P. M., and entries to remain open in each event until the last squad entered have shot their first 25 targets. Interstate rules to govern.

In case of ties for cup, they will be shot off at 100 targets on neutral grounds, to be named by State Association.

Club grounds and dates will be sent to clubs as soon as final arrangements can be made with the various clubs of the Association.

The cup is a handsome one, standing 21 inches high and nicely engraved, and has a value of \$150. The cup becomes the property of winner.

This Association thinks this shoot should be an im-

portant event in shooting circles in New Jersey, and should bring out a strong field of shooters.

The New Jersey State Sportsmen's Association takes this opportunity to thank Mr. Hall for his magnificent gift. Clubs should address applications as early as possible to the Secretary, Chas. T. Day, 618 No. Seventh street, Newark, N. J.

Birmingham Gun Club.

BIRMINGHAM, Ala., Feb. 10.—The fine weather Friday brought out twenty shooters to the gun club grounds, and the shooting continued till dark. Some good scores were made, and some beginners were present, also spectators. Tom Cassity has again gone with the trade after a vacation of two years, and his many friends in Birmingham are glad to know that he will make his headquarters in Birmingham. P. B. Plummer, of Chattanooga, was here also, and shot with us. Charlie North, John Lester and Geo. Hillman paid us a visit during the week.

Conrad R. Skinner, of Lexington, Ky., father to R. R. Skinner, our local expert, paid us a visit, and enjoyed the shooting very much.

R. R. Skinner, J. K. Warren and Gentry Hill did the best shooting, each breaking 93 out of their 100, closely followed by James Hillman and H. C. Ryding.

John Fletcher did the most phenomenal shooting, making two perfect scores of 25 each, and finishing with 73 out of his 75.

Tom Cassity shot well for one who has been out of the game for two years. He had a perfect score of 25. He broke his gun the first time up and used another one to finish. Ed. Cornwall is improving nicely for a beginner, and has now joined the regulars at our shoots, and promises to become an expert.

Mrs. O. L. Garl and Judge Frank Cahalan had a fine race and wound up with a tie on 79.

R. H. Baugh shoots Mr. Ryding's gun better than his own, as his score is above the average, and we hear that he has made several flattering offers to Mr. Ryding for it.

Mr. Wheeler is shooting well for a beginner, and has joined the club.

J. K. Warren did phenomenal shooting at doubles, making 23 out of 12 pairs.

Much interest is being shown in our spring shoot to take place April 8, 9, and 10, with \$600 added money, three trophies and several prizes. This will be the biggest shoot in point of number of targets, added money, prizes and trophies held in Birmingham for some years and in the State also.

Reload Your Shells

140 Pages FREE

IDEAL HAND BOOK FOR SHOOTERS

The .32-40 High Power factory cartridges sell for \$34.20 net per thousand. By reloading the same shells with factory primers, factory bullets and the same powder charge, your expense is \$13.46;

You save \$20.74 on 1000 cartridges.

The .32-40 low power smokeless factory cartridges cost \$28.80 per thousand; when you reload, your expense is only \$11.31, making a saving of \$17.49. Factory .32-40 smokeless short range cartridges cost \$25.20 per thousand; by reloading your shells, they cost you only \$7.65 per thousand. Make your own bullets and you have 1000 short range cartridges for \$3.80.

You wouldn't throw away your pipe after smoking it once; you waste money if you threw away your expensive high-grade shells without reloading.

FREE—The Ideal Hand Book tells all about the tools and methods for reloading all standard rifle, pistol and shotgun ammunition; 140 pages of practical information for shooters. Mailed free to any shooter interested enough to send three stamps postage to

Patterns made with Dead Shot are always the best from any gun

The choke of the barrel may be bored true to gauge, but if your load of powder fouls and bakes a coating of lead on the choke, neither the most expensive nor the most inexpensive gun will make good patterns.

The required standard of velocity and pressure from all powders being alike, the winning feature of one load over another is determined by the regularity of patterns.

How evenly does your 12-gauge gun distribute the pellets in 1 1/2 oz. No. 7 1/2 shot in a 30-inch circle at 40 yards?

To realize how the good patterns made with Dead Shot helped in establishing the world record of 565 straight, make a few patterns with Dead Shot in your own gun—compare them with equal loads of others.

All dealers carry Dead Shot loads in stock. We guarantee the stability of Dead Shot.

Game Laws in Brief

A new and revised edition for 1912.

It gives all the fish and game laws of the United States and Canada. It is complete and so accurate that the editor can afford to pay a reward for an error found in it. "If the Brief says so, you may depend upon it."

Sold by all dealers, or by mail by us. Price, twenty-five cents.

Forest and Stream Publishing Co., 127 Franklin St., New York

OUTDOOR PHOTOGRAPHS

Forest and Stream wants good photographs of shooting, fishing, yachting, canoeing, camping, natural history and kindred subjects. Pictures that tell a story preferred to those depicting still life. Carbon prints, and those made on printing-out papers, will be given preference. Pictures that have not been used in other publications will, if available, be paid for.

THE ANGLER'S WORKSHOP

Rodmaking for Beginners

By PERRY D. FRAZER

Not only Americans, but anglers of Great Britain and nearly every European State, South Africa, Australia, Canada, are making their fishing rods under the simple instructions laid down by the author in this useful little manual. A Japanese, after reading the book, took up rod repairing for his fellow countrymen as a business. An Englishman followed it in making several of the sixty-five rods that he has in his collection. A Russian appreciated the book so much that he suggested a Russian translation. The British sportsmen's papers have quoted from it time and time again. In that country it has helped bring about a great change in rod types, and to attract attention to the excellence of American fishing rods. In fact, "Rodmaking for Beginners" has become the standard manual wherever fishing with rod and reel is practiced.

The reason is obvious. The book is written in plain English, and all the details are set down so simply that a boy can follow them. All of the types of rods used on fresh and salt water are described and specifications given. Separate chapters cover all details, and the one on split cane rodmaking is the only comprehensive treatise on that subject ever published.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid, \$1.

National Rifle Association Notes.

At a meeting of the executive committee of the National Rifle Association, held at the office in Washington on Feb. 7, the following organizations and individuals were elected to membership in the Association:

Life Members—Brig.-Gen. Theo. Schwan, U. S. A., retired; M. Merillon, president de l'Union Internationale des Federations et Associations Nationales de Tir, Paris, France; Senor Don Antonio del Pino, president Tiro Federal Argentino, Buenos Aires, Argentine Republic; J. H. Cumpston, Dallas, Tex.; W. S. Park, Los Vegas, Nev.; Hon. Butler Ames, Boston, Mass.; Wm. B. Coit, Buffalo, N. Y.; J. H. Carl, Gilroy, Cal.

Regiments—Ninth U. S. Cavalry.

Third Class (Military) Organizations—Co. E, Third Wyoming Infantry, and Co. I, Tenth Pennsylvania Infantry.

Civilian Rifle Clubs—California Grays Rifle Club, San Francisco; Brooklyn (N. Y.) Naval Militia Rifle Club; Bucyrus (Ohio) Rifle Association; Haywards (Cal.) Rifle Club; Payette (Idaho) Rifle and Revolver Club; Boston (Mass.) Revolver Club; Winnemucca (Nev.) Rifle Club; Ancon (Canal Zone) Pistol and Rifle Club; Redding (Cal.) Rifle Club; Milwaukee (Wis.) Rifle and Pistol Club, and Fremont (Ohio) Civilian Rifle Club.

College and University Clubs—Kansas University Rifle Club, West Virginia University Rifle Club, Norwich University Rifle Club.

School Boy Rifle Clubs—Eastern High School, Washington, D. C., and New Mexico Military Institute.

The ambitious plans of the Association to organize and send two rifle teams abroad this spring will mean strenuous work to collect the \$15,000 necessary for the sending of these teams. Subscriptions have begun to come in. The first to be heard from is the well-known shot Billy Martin, of New Jersey, who writes that his regiment, the Second Infantry, will subscribe \$100. Two hundred dollar subscriptions have been received from the Remington-U. M. C. Co., and the Winchester Repeating Arms Co. General Crozier, Chief of Ordnance, U. S. Army, sends in his check for \$5, and Mr. J. H. Cumpston, of Dallas, Tex., one for \$10.

Plans are under way by several regiments which have adopted the suggestion sent out in a circular letter by the Association recommending the holding of a review or other entertainment in the armory for the benefit of the fund. The details have been completed for the ammunition tests, which will be held at the U. S. Marine Corps' range, Winthrop, Md., March 26 and 27.

The officers for the Argentine team have been selected. The team captain will be Col. Charles D. Gaither, of Maryland, who is well known by all the riflemen of the country, he having been in charge of the Maryland State rifle team at the national matches for a great many years. The team adjutant will be Capt. James A. Moss, of the General Staff, U. S. Army, one of the best-known linguists in the army. He is from Louisiana, and French is almost his native tongue. He has also been a teacher of Spanish in the army school, and will be of invaluable assistance in representing the United States at the Congress of Sharpshooters, to be held at Buenos Aires, at the same time as the tournament, and in the conferences of the team captains, preliminary to the matches.

The Army, Navy, and Marine Corps have expressed their intention of nominating candidates to tryout for these teams. Reports are beginning to come in from the States as to the number of representatives. West Virginia will send three, California two, and the indications are that the representation will be very general.

Philadelphia Rifle Association.

SCORES of the Philadelphia Rifle Association, Thursday, Feb. 8, on the Philadelphia range of the National Rifle Academy, 1234 Filbert street:

Rifle, offhand, German ring target, 75ft.: E. H. Williams, Jr., 240, 239, 236, 240, 239, 242, 237, 234, 240, 243, 243; E. C. Goddard, 240, 243, 241, 240, 240; C. R. Doughty, 236, 230, 231, 239, 231.

Rifle, prone, N. R. A. target, 1 to 10 count: W. J. Maybee, 98, 94; Harry Overbaugh, 87, 95; E. H. Williamson, Jr., 92, 99; W. N. Patrick, 91, 92; R. S. Newbold, 94, 96; N. Spering, 91, 90; J. G. Schnerring, 93, 95; J. G. Dillin, 89, 90; Dr. E. E. Given, 80, 90, 85; H. L. Reeves, 94, 95.

Pistol, Standard American target, 60ft.: H. A. Dill, 81, 83, 82, 86; Geo. Hugh Smith, 85, 86, 91, 93, 90, 92, 90; W. J. Maybee, 82, 83, 87, 93; D. L. Reeves, 80, 86, 68, 82, 88, 88; N. Spering, 82, 83; J. G. Dillin, 80, 77; Dr. W. E. Quicksall, 91, 89, 85, 81, 83.

United States Revolver Indoor League matches: Philadelphia vs. Spokane: Geo. Hugh Smith 233, Dr. W. E. Quicksall 219, Herman Thomas 217, H. L. Reeves 215, Miller Forbes, 211; total 1095.

Philadelphia vs. Seattle: Geo. Hugh Smith 223, Herman Thomas 222, W. J. Maybee 221, Miller Forbes 218, H. L. Reeves 216; total 1100.

National Rifle Association Indoor League match: Philadelphia vs. Birmingham: W. J. Maybee 192, E. H. Williamson, Jr., 191, R. S. Newbold 190, H. L. Reeves 189, J. G. Schnerring 188; total 950.

HARRY OVERBAUGH.

Seventh Regiment Rifles.

WITH the record number of 341 entries, the rifle shooting competition at the Seventh Regiment Armory on Feb. 9 and 10, was one of the most successful. Lance Corporal Boles, Company I, continued in the lead in the expert division of the class cup match, while Sergt. A. Scholz, Company M, won the class match.

AMERICAN WOODPECKERS AND TELEGRAPH POLES.

SOME months ago reference was made in the Field to a Bulletin issued by the United States Department of Agriculture relating to the food of American woodpeckers, and the value of many of these birds as destroyers of noxious insects, some of which are not eaten by other birds. That inquiry, however, did not finally settle the question as to the relative beneficial or harmful character of the various species of woodpeckers, and a fresh investigation has been accordingly undertaken for the purpose of determining the amount of damage inflicted by these birds on trees and timber. The results are recorded in a second Bulletin (No. 39) issued by the Biological Division of the Department, and drawn up by Mr. W. L. McAtee.

As regards the larger species, such as the big ivory-billed woodpecker, some of them undoubtedly damage trees by the holes made in their search for insects, and also by such nesting holes as are excavated in living wood, a fresh one being made every year. Other species, however, select hollow or rotten boughs, and make use of the same hole year after year. As regards indirect damage, the holes and incisions made in the tree stems and branches permit the entrance of bacteria, fungus spores, and insects, and for the injurious effects of those the birds are, of course, primarily responsible. Damage to living trees is, however, by no means the sole injury caused by the typical woodpeckers in America, for, surprising as it may seem to those who have studied them only in this country, it appears that in the United States these birds not infrequently hollow out telephone and telegraph poles for nesting or shelter cavities to such an extent that the poles sometimes snap off in high winds. In Pennsylvania the worst offender in this respect is the red-headed *Melanerpes erythrocephalus*, which some years ago ruined many poles belonging to the Pennsylvania Telephone Company, while along one of the railway lines 110 out of 268 white cedar poles were bored by these birds. The golden-fronted *Centurus aurifrons* is equally mischievous in Texas. Mr. H. P. Attwater, for instance, reports as follows of the damage done in that State.

"Here their favorite nesting sites are in telegraph poles, and there are few without nesting holes as they [the birds] appear to make new ones every year. * * * A line running out of San Antonio to a ranch nine miles distant was almost destroyed by these birds. They came from

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He knows it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is Lefever Taper Boring.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N. Y.

all sides, from far and near, and made fresh holes every year, sometimes as many as five or six in a single pole."

Again, Mr. Sennett, writing of the same species in the Rio Grande Valley, observes that:

"The square Government telegraph poles are its favorite nesting place. There is hardly a pole free from their holes, and in one I counted ten; probably some of these were made by their only relative in this section, the Texas woodpecker, *Picus scalaris*."

Further to the west, another species, probably the Gila woodpecker (*Centurus uropygialis*), has been a source of trouble and expense to the Southern Pacific Telegraph Company for many years past. In the Sonora district, for instance, no fewer than 300 poles had to be renewed. Some of these were of cylindrical cedar and others of squared redwood, while others again were creosoted. The squared poles suffered worst, some having five or six holes of three or four inches in diameter. In these cases most of the holes seemed to have been drilled in search of insect larvæ, although others were bored to form nesting holes. It is suggested that the hum of the wires—which may have been mistaken for that of insects—has something to do with attracting the birds to the poles. This, however, is most unlikely, for woodpeckers do not take humming insects on the wing.

In spite of this serious damage, however, it is considered that these birds are distinctly beneficial on account of the number of woodboring insects they consume; and it is recommended that, instead of killing them, nesting boxes should be attached to the telegraph poles, as it has been ascertained that they will readily resort to them.

GORED BY A BUFFALO.

Continued from page 209.

the third? Perhaps he still kept company with his fellows, or perhaps he had left them—the surest sign that he was severely wounded. * * *

“One o'clock midday. After six hours' fruitless search I decided to have the motor boat brought up to us. In the meantime the cook could light the kitchen fire, and we would have breakfast. I sent some of the 'boys' to continue the search for the buffalo, promising 'bakshish' to the one who first discovered him, and I and Fièrè, my French companion, stretched ourselves out for a short rest. Suddenly we were startled by a shout of 'Buffalo! buffalo! buffalo!' James, the cook, came running to tell us that the 'boys' had found the wounded animal lying in high grass. We sprang to our feet excitedly. So much luck we had not expected.

“Suddenly the high grass parted right in front of me, and the animal dashed out, making straight for the spot where I stood. I fired, and at the same time I think I heard the report of Fièrè's rifle. Then I sprang to one side to escape the rush of the maddened animal, caught my foot in the long grass, and fell. It was my salvation. If I had remained upright I should have been impaled on the sharp points of the buffalo's wide-sweeping horns. Snorting with fury, the animal nosed under me as I lay on the ground, evidently trying to toss me. I sprang to my feet and clung with all my strength to the horns of the animal, in the vain hope that, severely wounded as he was, he might give way before my own strength, so that Fièrè might get in a second shot. It all happened in a few seconds; the buffalo tried to shake me off, and as he flung his huge head from side to side, the point of his left horn pierced its way deep into my right cheek. I cried out with pain, and then felt myself suddenly hurled upward into the air; my consciousness left me.

“I awoke, covered in blood, on the river bank, supported by two loudly howling 'boys' with the motor boat at my feet. 'Where is Fièrè?' 'The others are bringing him; he will die soon, too.' 'And the buffalo?' 'Dead!' A thick flood of blood was flowing continually from my mouth and the right side of my face. The 'boys' lifted me into the boat, and with every movement the blood flowed faster. 'Quick! the medicine chest.' Sew, sew, sew. Terrible necessity taught me to sew. A jagged, irregular hole as large as my hand gaped in my right cheek; my under lip hung loosely quivering. Under the horrified gaze of the 'boys' I jabbed the bent needle into my flesh and cobbled the loose rags together.

“The pain was excruciating. Heaven helped me keep my senses! The lower jaw was broken in two places—near the ear and near the lip—and from this crushed mass a long splinter of bone with three teeth hung loosely by the nerves and flesh of the gums. The who'e outer flesh of the lower jaw was scraped loose. Teeth, roots and bones lay white and shimmering through the hole in my cheek. My tongue, pierced by the point of the buffalo's horn, was half torn from its foundations. I spat continuously splinters of bone and tooth.

“In the meantime the tent had been erected and a bed prepared for Fièrè, from whom James cut the clothes with a pair of scissors. He had recovered consciousness, and softly his pale lips

The Result of Over a Century's Experience

Perfection in powder-making is only achieved by exercising the most scrupulous care in the selection and preparation of raw materials, employing skilled workmen exclusively, and using only the most improved modern mechanical equipment.

This is the Du Pont method and accounts for the unequalled reputation among sportsmen enjoyed by the Du Pont brands of Smokeless Shotgun Powders. One of the most popular of these brands is

A dense powder that is absolutely uniform in velocity and pattern. Waterproof—not affected by extremes of heat or cold. “INFALLIBLE” Smokeless Shotgun Powder will not pit the gun barrels.

UNEQUALED FOR FIELD AND TRAP-SHOOTING

ESTABLISHED 1802

Wilmington, Del.

formed the words, 'Très mauvais.' He had been three times pierced and tossed. The left breast muscle hung loose; heart and lungs were untouched. In the left side, between heart and hip, was a great tear. This wound was immediately sewed together. Fièrè was washed, bandaged and put to bed. He breathed regularly and seemed to sleep. The night fell. A night full of pain, during which my mouth seemed full of red hot stones. Toward morning a short, troubled sleep gave me temporary relief from my agony. With the gray light of dawn I awoke to new tortures. Everything was deadly still. I clapped my hands for the 'boy' to open the tent, and crossed over to Fièrè's bed. The first light of

day fell on a pale, sunken face. It was death * * *.”

Lieutenant Graetz than describes his painful journey on an improvised stretcher to the nearest post of civilization, his meeting with the English physician, Dr. G. F. Randall, who marched day and night to bring him relief, and the operations under difficult circumstances which have left him with an altered face. As soon as he had fully recovered, the undaunted young officer continued his journey westward.

All the game laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

Kennel Department

Southern Ohio Field Trials Association

A MEETING of the association was held at 426 Main street, Cincinnati, on the evening of Feb. 6, and was largely attended. President J. W. Utter called the meeting to order at 8:30, and the roll call found all of the charter members, with one or two exceptions, present. The minutes of the previous meeting were read and approved. The Treasurer's report showed a satisfactory condition in the club's finances, and on motion of Mr. Wood, seconded by Mr. Morledge, he was directed to pay all outstanding bills. Applications for membership were then read, and on motion of Mr. Wood, the following gentlemen were elected by acclamation: Messrs. A. G. Turnipseed, E. W. Rugg, L. B. Harrison, E. D. Townsend, J. Taylor Williams, Frank Ellison, Edward T. Thompson, George Moerlin, E. C. Evans, H. S. Leyman, J. B. Towler, H. S. Rosenthal, Henry J. Koch, Edwin C. Ely and M. Remlin.

The subject of a guaranteed purse was then brought up, President Utter calling upon Mr. Frank E. Wood to give the members his ideas on the matter, and saying that he wished every member present to state his views as to the amount of the purse, and the conditions under which it should be offered. Mr. Wood said, in part, that he thought the main thing should be to offer a purse large enough to attract the handlers of the best dogs in the country, and he favored making it \$1,000 guaranteed, giving \$500 in each stake. Mr. Harris favored offering the amount named by Mr. Wood, and also to add any additional money received from nominations and starting fees to the purses in each stake. Mr. C. H. Cord, breeder of the well-known pointer, Cord's Lad of Jingo, said that in order to get the best dogs, a good purse must be guaranteed, and was in favor of making the amount \$600 in each stake, with additional money added. Messrs. J. W. Utter, E. W. Rugg, P. K. Phillips, Flora, G. C. Walker, and others also spoke on the subject, the majority favoring the suggestions of Messrs. Wood and Harris. A motion was then made by Mr. Turnipseed, seconded by P. K. Phillips, that the association offer a purse of \$1,000 guaranteed, \$500 in each stake, with any additional money added. After some discussion, Mr. Oliver offered an amendment, which was seconded by Mr. Wood, that the amount be \$800 instead of \$1,000, but, on vote, the amendment was lost, and the original motion was carried unanimously.

Mr. Turnipseed moved that a committee of three, consisting of the President and two others appointed by him, should fix the amount of fees for nominating and starting. The motion was seconded by P. K. Phillips, and was carried. The president appointed Mr. G. R. Harris and G. C. Walker to serve with him, and after a brief conference the committee reported that they had fixed the fees at \$10 to nominate and \$15 to start.

The following committees were appointed by the president: Grounds Committee—H. F. Schaefer, F. O. Dunlap, George Moerlin, J. O. Oliver, George R. Harris and P. K. Phillips; Membership Committee—B. H. Delin, George C. Walker, George E. Morledge, J. B. Towler, Carl Faulhaber, Dr. Leighner, Herman Schuerman, C. H. Cord, C. C. Acton and A. G. Turnipseed; Finance Committee—Dr. F. M. Oxley, Frank E. Wood, H. F. Schaefer, F. O. Dunlap, George E. Flora, C. H. Cord, P. J. Molloy and E. W. Rugg.

The question of judges was settled by the appointment of George C. Walker as presiding judge, he will have two assistants whose names will be announced later. The selection of Mr. Walker is beyond any adverse criticism. He is thoroughly familiar with the qualities which go to make up the perfect shooting dog, as well as the first-class field trial performer,

and his absolute impartiality insures a "fair field and no favor" to every contestant.

The date of closing entries will be announced through the sportsmen's journals in due season, and it was the sentiment of the meeting that the nominating fee must accompany each entry. This will be a "riding" trial. The club will provide men to open gaps in the fences at suitable places, and good mounts can be obtained in this neighborhood.

Letters have been received from several of the well known handlers promising to do all they can for the success of the trials, and this undoubtedly means a good entry of the cracker-jacks of the field trial world. Some of the club members have also signified their intention of starting in the open stakes and getting a run for their money, even if they do not land one of the prizes. It would not be a matter of surprise to those who know if some of them were placed well up in the stakes.

A number of applications have been received since the meeting and will be acted upon by the membership committee. The committee on constitution and by-laws has attended to its duties, and the document is in the hands of the printer, and will be ready for distribution within a few days. With one or two minor changes and additions, the constitution of the Continental Field Trial Club was adopted.

Westminster Kennel Show.

TWENTY-ONE States and the Dominion of Canada will be represented at the annual bench show of the Westminster Kennel Club at the New Grand Central Palace Feb. 20 to 23. Fifteen Canadian exhibitors will send their dogs over.

New York leads in the total number of exhibitors with a total of nearly one hundred. These include August Belmont, Jr., Mr. and Mrs. Payne Whitney, Samuel Untermyer, Miss Mary Winthrop, W. A. Wadsworth, Jacob Ruppert, Jr., Mrs. Samuel Willets, Harry T. Peters, Mrs. Francis Hadden, Alfred B. MacLay, Franklin B. Lord, C. M. Hamilton, Mrs. Morris Mandy, H. K. Bloodgood, Mrs. Reginald F. Mayhew, Mr. and Mrs. John W. Minturn, Mr. and Mrs. Tyler Morse, George B. Post, E. C. Cowdin, 2d, Raymond Belmont, Mrs. Frank T. Clarke, Richard Croker, Jr., and Mrs. Gouverneur M. Carnochan.

Among the leading exhibitors from New Jersey are Andrew Albright, Jr., Winthrop Rutherford, Mrs. James A. Burden, Jr.; J. G. Bates, Mrs. William Bayard Blackwell, Miss Lucy F. Austin, Louis Batjer, Mrs. Henry W. Berryman, Mrs. Charles H. Lester, Mrs. C. Bradley, James Scott Butcher, Mrs. Palmer Campbell, S. W. Carey, Jr., Robert E. Bond, Mrs. A. Ronalds Conkling and Miss G. A. Davies.

Exclusive of the foxhounds and beagle packs, 3,063 entries have been received by Secretary James Mortimer.

Country Real Estate

The sun begins to get hot about noon nowadays and with it comes the out-of-town fever. Has it touched you yet?

If it has, or when it does, drop us a post card and you will get immediate access to our real estate list.

It is made up in such a way as to locate houses, camps, bungalows and unimproved property on lakes, streams and seashore, where the best fishing is to be found adjacent to the big cities as well as in remote corners of the country. If you have property to rent or sell, that would interest the man and woman of the sort who live the life out-of-doors, send us specifications of the property and we will list it so that those who inquire for corresponding places may get in touch with you.

We charge no commission, nor is there any string attached to our offer in any way other than the fact that you must be a reader of **FOREST AND STREAM**. Tell us in what State you prefer to locate, whether inland or on the coast and we will do the rest.

**INFORMATION DEPARTMENT
FOREST AND STREAM**

127 Franklin Street New York

Forest and Stream desires to make an appeal to its readers. It asks that when writing to advertisers for catalogs or prices, or when ordering goods that are advertised, you mention that you "saw the advertisement in **Forest and Stream**."

This enables advertisers to know that their announcements are being read. They are read, of course; in fact, are studied with great care, because our subscribers know that anything that is advertised in **Forest and Stream** has merit. But advertisers do not always appreciate the value of any paper that is not mentioned. If, therefore, you will kindly mention **Forest and Stream** in answering advertisements, you will confer a favor on the

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

The Greener Tumbler Bolting Safety.—Of course you are convinced that the Greener Side safety is a sine qua non of the perfect gun, yet to make assurance doubly sure your gun should be fitted with an internal or "tumbler bolting" safety, operated automatically and entirely independent of the shooter's volition. A safety that will safeguard the user of the gun and his companions against all risk of accidental discharge.

The Greener Tumbler Bolting Safety is almost human in its ingenuity, yet consists of but two limbs operating in such a manner that it is a mechanical impossibility for a Greener gun fitted with this safety to be fired unless the triggers are actually pulled. Should the locks by any mischance jar out of bent, the "silent sentinel" checks the fall of the tumbler instantly and effectually. Should the tumbler through dirt or other cause fail to go properly into bent, the safety prevents its fall upon the cap. When the trigger is pulled voluntarily, a projection of the trigger blade depresses the rear end of the Safety, lifting it clear of the tumbler's path and permits the gun to be fired in the usual manner.

Look at the drawing, it explains the simple working of the device exactly; of course you will have this safety fitted to your new Greener gun. *Catalog free.*

VON LENGERKE & DETMOLD
200 Fifth Avenue - - - NEW YORK

That's what Mr. W. S. Colvin, Osawatomie, Kansas, calls the Stevens 6-shot repeating shotgun. This is the way he says it:

"I am pleased to inform you that your trombone action repeating shotgun put on the market several years ago is superior to all others of its kind. * * *

"Previous to that time I had disposed of them one after another. * * * I was looking for a missing link and I finally found it in the Stevens.

"Its shooting efficiency, smoothness and rapidity of movement was all a surprise to me. I can throw this gun any old way and get results because it is a natural pointer. Also there is no kick or a recoil—nor jammed shoulders.

"My field hitting percentage jumped up by bounds, and since I purchased this gun I have shot some 2,000 shells and always found it 'Johnny on the spot'. The model I own is No. 520, 28-inch modified choke."

Perhaps you can find **your** Missing Link in our latest illustrated catalog of single barreled, double barreled and repeating shotguns, single shot and repeating rifles and pistols and rifle telescopes.

Send to-day for a copy of this book which is practically a standard treatise on firearms.

ARE YOU A GUNNER?

Do you love to follow your good dog over the fields in search of quail or chickens, or to struggle through swamp or along thick grown hillside, expecting to hear the roar of the ruffed grouse or the twitter of the fall woodcock? If so, you should have this new book.

AMERICAN GAME BIRD SHOOTING

By **GEORGE BIRD GRINNELL**

(New—Just Published)

This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys.

The first part of the volume is devoted to a description of the various species and their habits—the way in which they live their lives.

The second part of the book is devoted to upland shooting and treats of the methods by which all the upland birds are pursued and taken. The chapter "Aids to Shooting" describes the clothing, guns, and loads and dogs that the gunner may profitably use; while the last section of the book treats of the shooting of the future and the efforts to rear our native quail and grouse in domestication.

The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full page portraits of different game birds and hunting scenes, with a number of cuts in the text.

Cloth. About 575 pages. Price \$3.50, net. Postage 25 cents.

This book is of inestimable value. It contains the genuine hunter-naturalist facts given in the most entertaining and interesting style.

FOREST AND STREAM PUBLISHING CO., 127 Franklin St., NEW YORK CITY

Wonderful Offer to Readers of Forest and Stream

THESE FOUR BEAUTIFUL PICTURES IN COLORS FREE

To every reader of this magazine who loves nature and animals and outdoor life we will send, without charge, the four beautiful pictures shown in the accompanying illustration, which retail at fifty cents each.

These pictures are wonderful examples of the art of color printing. They are reproduced on heavy plate paper without lettering, and can be framed at moderate cost or used just as they are in any room of the house. The subjects represented are such as will appeal to nature-lovers generally; they will add much to the beauty of your home. Exact size of pictures, 10½ x 7½ inches.

Why We Make This Offer

The object of this offer is to acquaint you with our new "Standard Library of Natural History" which has recently been published, after years of labor and at an enormous expense. It is the only work of its kind in existence, illustrated from actual photographs, of which it contains over 2,000, besides many full-page plates showing birds and animals in their natural colors. In many cases special expeditions armed with cameras and dry plates had to be sent to foreign lands to secure the photographs from which these illustrations were made. The work is not technical or dry, but teems with the most interesting and instructive stories of animal life, told by famous naturalists and explorers.

Do not confuse these with cheap pictures. They sell at Art Stores for 50 cents each

Absolutely No Obligation

Your application for these pictures imposes no obligation to purchase anything. On receipt of the accompanying coupon we will forward the pictures, together with description of the books, by mail, postpaid. You will not be bothered by agents or canvassers; this Society transacts all its business by correspondence. Mail the accompanying coupon promptly, as the supply of pictures is limited.

An Unpremeditated Canoe Trip

By O. W. SMITH

TING-A-LING, ting-a-ling, ting-a-ling, ling!" jangled my telephone one cold April morning last year, and before I could take down the receiver, it was ringing away more insistently than at first.

"Hello," I called, "who is this?"

"It's me," came the ungrammatical and highly illuminating answer from a town miles away.

"Well, what does 'me' want this time? It is too early for trout, and spring shooting is not allowed in Wisconsin."

"Say, old man, the Pensaukee River is on the rampage, bank full, just right for a canoe trip. You know where the Milwaukee road crosses the river. Well, come down on the 8 o'clock train to-morrow morning and get off at the bridge—I've fixed it with the conductor so that there will be no trouble—and I will be there with a boat. Bring your gun, for we may see a goose." The receiver was hung up with a bang, the bell tinkled gently, and I knew that my friend had gone to prepare for the trip.

I glanced at my study table, littered with a mass of unfinished work, then out of the window at the cold April sunshine and reeking soil. I thought of my companion serenely getting ready for the trip, certain that I would step from the train next day if it arrived at the bridge. I hesitated. Such faith should not go unrewarded, I told myself, and plunged into the most pressing of my correspondence. Having answered those letters which I did not dare put off, I threw a few necessary things into my war-bag, and caught the train for my all-night ride. So it fell out that the eight o'clock train slowed up for an instant at the well-known bridge the next morning, and I swung down to grasp the out-stretched hand of one of the best fellows that God ever let hunt and fish.

"Thought that telephone would fetch you," he grinned after we had shaken hands for a full minute.

"But, you miserable old sinner," I began, for we always like to blame any one but ourselves for our own shortcomings, "I have no business being here to-day; why, man, I left important work just because of your fool message. Now, if you had given me a chance to"—

"The canoe is just below the bridge," he broke in with another grin, "so you better get into your boots and we will start."

Meekly, silently, I followed down the bank to where a light canoe balanced saucily, anxious to be off. At sight of her trim lines,

the river rushes along in flood time, snarling and growling ominously. Obviously it is an ideal stream for a level-headed canoeist. Certainly there are long stretches of water where the stream wanders between verdant banks, or through some farmer's woodlot; but such places are to rest one for the next struggle with rushing water or jam of driftwood. But worse than driftwood jam or boiling rapid are the wire fences stretched by ambitious farmers to keep the cows within bounds. They spell disaster swift and certain if the canoeist is so unfortunate as to run into them. I know from sad, or rather, wet experiences.

The Pensaukee, like nearly all streams flowing through a thickly settled country, is possessed of legends, and nearly every bend, rapid and pool has a name; names, too, that savor of the days when the Indian hunters and log drivers followed well-worn paths up and down its serpentine length, and deer fed upon the grassy banks. When the Pensaukee first came to the notice of white men, it was a trout stream, but that was before the rivermen had blasted out its rocks or the raven-

ous pickerel had made its home in the deeper pools. Trout may still be taken from its upper reaches, but they are small and few, and to be taken only by those who know how to angle and know the location of the feed springs as well. No, Pensaukee is no longer on the map. Most people love it for what it has been, but we who have run it in flood love it for what it sometimes is. There are scores of streams just like it in this thickly settled country of ours, streams that when in flood the canoeist might well attempt to negotiate for pleasure as well as practice.

My companion, the butcher, held the boat steady while I climbed in; then he, with skill born of long experience, took his place in the stern and we were off. Oh the joy of being

THE START.

the madly rushing river teasing just beyond, all thought of work vanished to return no more for a long day of delight. I surrendered unconditionally. When a man plays he should play with all his might. The hearty players make the best workers.

Ordinarily the Pensaukee River does not deserve to be called a river at all; only in flood time is there water enough to float anything but a paper boat; but during the spring freshet, or after long continued heavy rains, it is a torrent. One reason given for the usual lack of water is the angle of the river bed—"so steep, that the water all runs off," and there is a modicum of truth in the saying. Where cows ordinarily stand amid the rocks and slap the flies with tails that do not even reach the water,

afloat once more on a racing river! For a half mile the river just naturally slid down hill, turned sharply to the right and plunged over a ledge of limestone rock in three distinct drops, boiling and seething ominously. A bit of water where good canoemanship is necessary if a spill is to be avoided, and a spill would be a nasty thing even if the stream no longer deserves to be called a river. Yet there is joy in the noise of the boiling water, the bite of the air, and the down-dropping sensation. At such moments I always experience a desire to yell at the top of my voice, there is so much joy in being alive.

Below the rapids, as though ashamed of its burst of anger, the river spreads out over the flats, and it is high-water indeed when even the lightest boat does not touch bottom. We found ourselves compelled to get out and wade, leading the canoe by a rope as we would a docile cow, and the canoe, like an affectionate beast, rubbed against our legs. I enjoyed the wading as much as I did the riding. Suddenly the water deepened and we were bowling along again at a merry pace, the banks slipping to the rear. We passed under a highway bridge where a man and boy stood and peered down upon us, too astonished to reply to our salutations, such a strange sight was a canoe on the river.

Suddenly the river grew tired of meadows and fields and turned sharply to the left to enter a bit of woodland as wild and untamed as any Northland wilderness. "Now keep your gun handy and watch out," remarked the butcher, "for we are apt to run into a solitary old gander when we round one of these bends." But my companion was a poor prophet. Ducks there were, lone mallards and pairs, sometimes four or five, and their surprise was comical to behold; for an instant they gazed at us with curiosity, the canoe meanwhile dashing upon them, then with discordant squawks and rapidly beating wings they leaped into the air and away down stream. Later we would overtake them, to their great bewilderment, when they went through the same maneuvers again. The butcher said they enjoyed it, were just playing with us because it was closed season, always

adding, "If the law were off I would soon make them sing another tune." And I am sure that he would have done so, too, for he is a wonderful wing shot.

It was early for song birds, of course, for the sweet voiced visitants do not arrive until the warm days of May have banished every hint of frost; but there were birds of the sparrow family, from the common song sparrow, sweetest and most companionable of all his tribe, to the shy and tuneful white-throat forever praising "sweet Canada." Then the red-wing blackbirds were present in flocks, as were the purple and bronze grackles, all gurgling in joy over the flooded pastures and meadow lands.

So rapid was the stream that the actual hours spent upon the water were few. At times it seemed that when we were not quarreling with a wire fence—twice a submerged wire nearly wrecked us—we were working our way around or through a jam of driftwood. Only once did actual disaster overtake us. We were running a little rapid, and because of its insignificance I did not observe it as closely as I should have done, so suddenly we dropped upon a sharp rock and punched a great hole in the bottom of the canoe. Fortunately we were at the bottom of the rapid and near shoal water, so experienced little difficulty in dragging our craft ashore, where the butcher, who had come prepared for just such a contingency, made temporary repairs.

At noon we stopped where a high bluff promised a dry campsite and cooked coffee, bacon and eggs and boiled potatoes; not to mention great slices of bread and butter from the pantry of the butcher's wife. After dinner came the long rest flat upon our backs, while we talked of trips past and future; for he assured that same butcher and I have camped and tramped over a goodly portion of Wisconsin, and hope to complete our intimate survey before old age and rheumatism compel us to seek the warm side of the fire-place.

The afternoon was but a repetition of the experiences of the morning, with a difference, the difference that makes canoeing so delightful. The shadows were long when our little craft floated free upon the swelling bosom of old Green Bay, the duck hunter's paradise, where in early spring ducks, geese and swans congregate in great flocks, and at times their clamor can be heard for a mile inland. Well out upon the bay a line of white foam became a great flock of swans, when examined through a field glass, a thousand, if there was one. I could have gazed for hours, but the gathering night soon made that impossible. Then came the team to take me to the train, which whirled me away through the night, back to the desk and the dreary old grind once more. But the office was less a prison, and the grind not so arduous. Who shall say that such unadventurous trips are not worth while?

A New Trout

By JOHN M. CRANFORD, Superintendent of Hatcheries, State of Washington

IF one would listen to and believe all of the trout stories that are told by the anglers in the State, he would come to the conclusion that there are about a hundred different species of trout in the waters of this State. The steelhead trout (there is no such a fish as a steelhead sa'mon) is perhaps more plentiful and goes

under more names than any of the trout family native to this State. It masquerades as the steelhead salmon, salmon trout, brook trout and mountain trout.

This trout comes into the streams during the run of salmon and feeds on the spawn of the same. It appears in the streams as a full grown steelhead, a yearling and a two-year-old fish; it is often called a salmon trout when caught in the streams tributary to the Puget Sound during the fall months. During the spawning season in the early spring it is often called a rainbow trout. The younger members of this family show a bright red streak along the lateral line during the spring and are also called the rainbow trout. A great many of this species that are hatched in the mountain streams do not go to the ocean, but remain in fresh water where they breed, and their young are designated as the rainbow trout, and if caught in the small mountain streams are called mountain trout, and if caught in brooks are called brook trout.

The different seasons of the year work a change in the appearance of these fish, and steelhead trout that have been landlocked will appear as four different species of trout if caught during the spring, summer, fall and winter. The environments also make quite a difference in the appearance of these trout; if caught in a deep hole where the banks of the stream are overhung with a heavy growth of underbrush that makes the surroundings dark, the fish will ap-

pear dark also. If caught on the riffles where the sunlight shows strong, the fish will appear bright and silvery; in fact, the environments and the different seasons of the year make a great deal of difference in the appearance of the steelhead trout.

The amount of natural food in the different waters makes a difference in the appearance of these fish. In streams where food is plentiful these fish grow very fast and become large, and if food is not plentiful, they become stunted and remain small.

The sea run of this species will frequently come into a stream when the silverside and dog salmon are spawning, and feed on the spawn of these fish. They will then leave this stream and later return and spawn in the same stream. This fact is demonstrated every fall in Muck Creek, a tributary of the Nisqually River.

The cutthroat trout is also found in salt water and in the fresh water streams of this State. The sea run always follows a run of salmon into the fresh water streams and feed on the spawn of the salmon, and like the steelhead these trout also landlock and remain in the fresh water streams where they breed, and their

Crosses between Landlocked Steelhead and Lake Chelan Cutthroat Trout.

young remain and are also classed as salmon trout. If caught in the mountain streams they are called mountain trout, and if caught in brooks are called brook trout.

The cutthroat mark, which consists of a red dash directly under the gills, does not make its appearance until some time after the sea run fish have been in fresh water, but in the trout that do not go to salt water, the red dash makes

its appearance almost as soon as the yolk sack is absorbed and the young trout begin to take food. As the sea run species of the cutthroat makes their appearance in the streams at the same time as the yearling steelhead, and the cutthroat mark has not yet made its appearance, both species are often classed as the salmon trout.

In reality, there is no such fish as the salmon trout.

Young chinook and silverside salmon caught in the waters of Puget Sound are sold on the market as salmon trout, but these fish are strictly salmon, and it has been only about eight years since these young salmon have been sold on the market in any quantity.

The fact that cutthroat trout caught in the same streams at the same time of the year varied a great deal in appearance, led me to make some experiments in breeding. I had already inbred the steelhead for seven years and convinced myself and other fish culturists that the rainbow trout was a descendant of the steelhead. On the 3d of July, 1904, I shipped a consignment of steelhead eggs to the Lake Chelan trout hatchery. These eggs were hatched at the trout hatchery and kept until ready to plant. Mr. Cool, who had a homestead on the shores of Dumphkey's Lake, was given a supply of these young steelhead trout to plant in the lake. The lake is situated high up in the mountains and about one and one-half miles from Lake Chelan. At this time the lake contained no trout of any kind. The young steelheads were placed in milk cans and transported by a lake steamer to a point near Dumphkey's Lake. The fish did remarkably well, and four, taken twenty-two months later, averaged over two pounds in weight. The steelhead trout spawn at two years of age.

Two years later some cutthroat were secured from Lake Chelan and Railroad Creek and transported in cans lashed on pack horses to Dumphkey's Lake. Last August I was at the lake and found that the cutthroat and steelhead had crossbred and the result was a splendid trout. Although the cutthroat is the smaller fish, all of the hybrids showed the cutthroat mark under the gills. I secured quite a number; in fact, twenty-five specimens of these hybrids, and I never saw a more beautiful or more gamy fish.

The flesh of the steelhead is a bright red, as is that of the Lake Chelan cutthroat, but the meat of the hybrid is of a delicate pink and the flesh is delicious. I caught several of these hybrids both male and female that had spawned, and I also found many females full of spawn and many males with large milt. The result of this experiment is, that the Fisheries Department of

this State has installed a sub-station on Dumphkey's Lake to be worked in conjunction with the Lake Chelan Hatchery next spring, and there is not the slightest doubt that many streams in the State will be stocked with the best and gamiest trout in the world. This experiment has demonstrated that the steelhead and cutthroat can be crossed and produce a splendid trout. I am satisfied beyond any doubt that these hybrids will reproduce.

During the month of February, 1909, this experiment was carried on at the Nisqually salmon hatchery in this State, and the result was a strong, healthy trout that thrived as well as any other fish in the hatchery, and they practically all showed the cutthroat mark before they were planted. As we had no pond where we could conduct a perfect control experiment with these hybrids, we turned them out into Muck Creek.

Landlocked Steelhead and Cutthroat Trout taken from brooks and mountain streams and often classed as Mountain Trout.

In the spring of 1910 we again made some experiments along the same line, and the young hybrids did as well as the year previous, and all showed the red dash under the gills at an early age. These trout were kept in the troughs of the hatchery until about the first of June when a consignment was planted in a pond in Kitsap county, owned by Senator Josiah Collins, of Seattle.

The result of this plant was very good. Last month, Senator Collins caught a large hybrid that was full of spawn and would probably have spawned during the month of February. He has also caught several other of the hybrids. They were all beautiful and gamy trout, and the flavor was delicious, and all showed a remarkable growth and all were marked by the red dash under the gills. Lately a few of these trout have been caught in Lake Whatcom.

The native trout of Lake Whatcom is a cutthroat. During the last few years Whatcom county has maintained a trout hatchery on the lake, and some steelhead spawn have been shipped to this point and there hatched and the young cared for, and when large enough to secure their own food have been liberated in the lake. The State Fisheries Department planted a number of young steelheads in this lake and there is no doubt that these fish have crossed with the native cutthroat trout. The specimens taken from Lake Whatcom are certainly a splendid trout.

I should not be surprised if the steelhead and the cutthroat have crossbred in nearly all the trout streams of this State for many years; that is, at least the landlocked specimens.

In any of the streams can be found the cutthroat steelheads, and as they spawn about the same seasons of the year, there is no doubt in my mind that they crossbreed.

In Dumphkey's Lake I found steelheads that would weigh from one to four pounds, and cutthroats that would weigh from one to three pounds. Specimens of the hybrids that would weigh from one to two pounds were also found. Some hybrid females were found that had spawned out, and some male hybrids were found that were partially spent and spawned also quite a large number of small trout, probably ten or twelve months of age were seen. Good results are expected from the take of spawn from the fish during the coming season.

Besides the steelhead and cutthroat, the only native trout found in the waters of this State is the Dolly Varden (sometimes called the bull trout). This trout also consists of the sea run and the landlocked varieties. When caught in salt water, the spots are very dim; sometimes they can be hardly noticed. After being in fresh water a short time the spots begin to turn to an orange hue and sometimes to a bright red. The young of this species also landlocks and is often found high up in the mountain streams. Usually the trout of this species when taken from the brook or mountain stream are found to be very small and the spots almost white.

In this State the Dolly Varden spawn in the fall. As a usual thing, this species are not very gamy, and there is about as much sport in pulling an old boot out of the water as there is in catching a Dolly Varden.

These fish are great scavengers and in the fall and winter months live principally on the salmon which have died after spawning. They are great destroyers of the young salmon, and constantly feed on the spawn of all salmon during the spawning season.

They are not to be compared with the cutthroat or the landlocked steelhead in either gameness or flavor. If we had fewer Dolly Vardens, we would have more cutthroats, steelheads and salmon, as they destroy millions of the young of all these fishes, besides large quan-

ties of their spawn; in fact, they are a very undesirable fish.

There have been some Eastern brook trout planted in the waters of this State, but we really have no native species of mountain or brook trout in this State. The best posted and scientific men class the Beards'ey trout as a landlocked steelhead, therefore in the State of Washington the native trout consists solely of the steelhead, cutthroat and Dolly Varden.

Without particular attention being paid to the hybrids produced from the cutthroat and steelhead, they would be classed as cutthroats, although they differ somewhat in appearance. I am well aware that the cutthroat caught in the same streams will differ somewhat in appearance, but the difference between the cutthroat and hybrid is of a different nature.

The hybrids are a splendid lake trout and take either a fly or spoon. As in all probability there will be a great many of these trout planted in the waters of this State, I should like very much to have someone suggest a name for this

species of trout. I think the Fisheries Department of this State is the first to take up this experiment.

The cuts shown in connection with this article are made from photographs of the steelhead, cutthroat and hybrids taken from Dumphkey's Lake, and of a Dolly Varden taken from the Nooksack River. The so-called brook and mountain trout, which are in reality landlocked specimens of the rainbow and cutthroat, were taken from a brook and small mountain stream near Mt. Baker.

The sea run steelhead from the Wind River tributary to the Columbia River and the young salmon (so-called salmon trout) were taken from the waters of the Puget Sound near Skagit Head.

The study of the trout in this State is very interesting, as there are thousands of beautiful mountain streams which, while they now contain some trout, could be stocked up to such an extent that the State of Washington would become the sportsmen's paradise.

Big-Game Hunting in New York State

By D. M. HERMALIN

WHEN a man living in New York city decides to go a-hunting for deer, it is not necessary for him to go to another State and pay the high-priced license required for a non-resident. For the \$1.10 a year which he pays for shooting ducks on Long Island, he may go to the Adirondacks and have just as much fun.

The Adirondack woods abound in deer. All one needs to do is to look for a place where the animals have not been hunted too much and where humanity has not been too frequent a visitor. Such a place I found last fall near Cranberry Lake. I waited until the New York Central reduced its fare for the fall vacation. It then amounted to one fare plus two dollars, and I got an excursion ticket for \$14 which took me to Wanakena, N. Y., landing me alongside Cranberry Lake. For fifty cents a motor boat took me from there to Bear Mountain camp. It is a beautiful sail of ten miles on one of the most magnificent lakes of the country.

Bear Mountain Camp consists of two handsome cottages, with all accessories and improvements. They are near the lake and at the foot of Bear Mountain. "Johnny" Balderson, the proprietor, who charges \$12 per week for a clean spacious room and an excellent table, is a clever young fellow possessed of a lively temperament, besides being a thorough sportsman. He is ready to do anything to satisfy you.

However, on arriving there, you learn the fact that that part of the country was only recently opened to the world at large, that a railroad was built there only a short time ago, and the shooting fraternity does not know much about it. You discover the real primeval woods, occasionally you meet a coon, a rabbit or a porcupine which regards you with more wonder than fear. On the lake you see flocks of ducks flying to and fro, you hear the disagreeable "Ha-ha" of

the loon, and besides the countless hoof marks of the deer in the woods, you see also the occasional imprint of a bear's paw in the runways.

There are quite a number of partridges and they are comparatively tame. The reason is that they have not been molested by dogs, or perhaps have not been hunted at all, for the sportsmen going there in season are out for big game only.

Here I wish to speak about the outfit in the woods. It is not important what one wears. Most important are his shoes. I had a pair of hunting boots for which I paid \$12. They almost killed me. Get light moccasins, waterproof, if possible. Take along a light fishing shirt to protect you against the rain.

I was the only sportsman among a number of others who had a featherweight .303 repeater. Some of the men had 11mm., 9mm. and .404 magazine rifles, .405 repeaters and .35 and .401 autos. They looked askance at my little rifle and passed some unpleasant remarks. Balderson, however, said it was big enough. Later, when my guide appeared, he had a .25-20 repeater and claimed that every deer he had shot with that toy rifle dropped in its tracks.

A canvass revealed to me the fact that with the ten or twelve men in camp, only one buck was shot. What was the reason? All of them had seen deer, shot at them, but missed—missed with all their cannon! More important, they slept late, went out three or four together and made as much noise as a wild elephant in a crockery store. They were all disheartened and decided to go home. I on the contrary, was encouraged, and I decided to stay on and get my deer.

I thought it a good thing for the animals in the woods to be confronted by such hunters, who see deer, shoot at them and miss. Mind you, ten or twelve men, seeing deer and shooting at

them and ultimately getting only one animal.

My guide's name was of historic significance, Rutherford B. Hayes. He was a quiet and inoffensive young man, quite ready to do your bidding and possessed of a fair knowledge of the woods.

It was decided that we go out early in the morning, hunt a few miles from camp and return toward evening. For these services my guide was to receive \$3 per day and besides this I would have to pay seventy-five cents a day for his board. For short, Rutherford B. Hayes was called "Roody," and he proved ready to do anything to please his companion.

We hunted for three consecutive days, ten hours to the day, but we did not see even the tail of a deer. However, we discovered numerous tracks of them. Among these we found every day here and there signs of some big buck which jumped ere we had time to see him. This we learned by the fresh large imprints made in the soft ground and the fresh earth lying on green leaves. But they always slunk away ere we came up to them without our hearing a sound. This proved that there were plenty of deer, but the fault was ours in that we could not steal up to any of them. True, some of the trees still bore leaves, but there were also plenty of clearings where we should have been able to discover some deer.

At the end of the third day's hunting I and my guide sat down to discuss matters and find out the reason why we could not locate a deer and have a shot at it. Roody admitted that I talked less while hunting than any one else he had guided through the woods. I also tried to walk slowly and cautiously, but after all my clothes were not soft enough, hence a great deal of rustling while passing through the underbrush, and then my shoes were an abomination. We came to the conclusion, however, that we would have to be more careful the next day.

We were out bright and early. We decided to hunt once more on Bear Mountain, where we had hunted the first day. I preferred this place because there was an old abandoned lumberman's road about three miles in length. I could walk through there and Roody could creep through the thicket, while if Roody could stir up some animal, I would have a chance of meeting it passing along the road. We proceeded very slowly, watching every hill, every knoll and looking over any place which might afford shelter for the denizens of the woods.

At 12 o'clock we sat down and ate our luncheon. I began to lose patience. I felt a nervous strain coming over me. Roody read all this in my face and began to console me, saying that no patient hunter in that vicinity ever went home without a deer. This enlivened me a bit and my spirits rose. And so we continued to hunt the lumberman's road. At 1:20 P. M., Oct. 2, there, eighty yards away, a noble animal was walking leisurely around and browsing off the underbrush. I could see occasionally the entire outline of his form among the trees.

Up went my rifle and I aimed at the right shoulder, a little low. But, alas; the safety was on. I immediately released it and fired. The shot reverberated through the woods and the buck, after making one great leap, came down, but as he was not dead, I gave him another shot. The first shot went through his heart and the second broke his spine.

"Bang!" It was a feeble report and as I judged rightly, came from Roody's rifle. The next moment a stately doe much larger than my buck appeared. She came trotting near the dead animal, even paused a moment to look at him, and then galloped off through the woods at no great speed. I could have shot her many times, but I refrained from doing this. I had enough—one deer—and I did not want any more.

When all this was over, Roody appeared and asked me whether I had seen another deer besides the one I shot. I told him I had. He at first apologized for not having hit his deer, claiming that he saw her only fleeting through the woods after my shots were over, and then he asked me why I did not shoot the doe. I gave him my reasons. He was quite angry that I did not think about other people needing meat. However, he seemed very happy over my success and congratulated me. He said: "You

CRANBERRY LAKE AND BEAR MOUNTAIN.

don't know how hard I worked to have you get that deer."

"Yes, I know," was my curt reply, for I was busy feasting my eyes on the fine animal.

Into the place where the bullet of the little .303 came out, you could insert your whole fist. He proved to be a spike horn buck, weighing ninety-six pounds dressed. Roody displayed some skill in dressing the animal. It took him but a few moments to disembowel him and clean away everything which might spoil the meat. He then gave me his rifle to carry, while he shouldered the deer and triumphantly we returned to camp. There Roody sewed up the middle part of the animal in burlap and stored it away in Balderson's big ice house.

I told my guide to go home and return in the morning when I intended to take my sixteen-gauge and go for partridges. Toward evening "Johnny" Balderson took me out on the lake where I had some fun shooting sawbills. The next day we went for partridges.

Only one thing I regretted there, and that was that I could not fish for togue (lake trout) as the season was over. I was told that in season sportsmen get trout weighing five pounds and over.

In conclusion, let me say, that the place is so situated that any one with an ordinary compass may hunt without a guide and return toward

evening safely to camp. The only thing is this: that after shooting a big buck, sometimes weighing about 300 pounds, or a 400-pound bear, it is much more agreeable to have some boon companion along to help you carry the quarry.

THE TOP RAIL.

A CURIOUS optical illusion is sometimes associated with shooting a rifle fitted with a telescope sight. I have noticed it recently in shooting English sparrows with a heavy .22 caliber target rifle and nitro powder cartridges, the smoke from which does not obscure the field of view, nor does the recoil move the glass away from the object. Most of the sparrows are shot from high perches, as bare tree branches, so that the background is clear sky. The telescope is three-quarter-inch in diameter and it magnifies

six times, so that a sparrow looms large. When a bullet strikes, the sparrow seems to explode, the pieces flying in all directions, just like pictured dynamite explosions, and the field of the glass is full of flying particles. Of course nothing of the sort takes place, for it is a few feathers that remain momentarily in the field of view that deceive the eye, while the victim, with a tiny hole in the place where a hole will do the most good, drops out of the field of view, and a wandering tomcat closes the incident with a meal.

Incidentally, there are few prettier marks on which to hold the cross-hairs of the telescope than the little patch of reddish brown on the throat of the cock sparrow.

* * *

If you live in South Carolina it may be that you can look forward with equanimity if not pleasure to a long winter, for the summers are not short and none too cool. Otherwise it is difficult to explain what was meant by a Spartansburg editor who, in concluding a reference to Candlemas day, said: "Here is to Mr. Woodchuck; may his shadow never grow less." One possessing more or less faith in the old fable, and living in a cold region, would scarcely feel like saying, "Amen" to the toast if in any way it were to be applied to sunshine or shadow on Feb. 2.

GRIZZLY KING.

A Hunt at Bear Hole

By MOQUIS

ONE bright fall morning I was routed out of bed by that all-prevailing power, next to the Deity, known as one's better half. It is questionable if we do not pass the better half of our lives owing to her influence.

However, we will pass that by, and merely say that I shudderingly obeyed the mandate which bade me to arise and get ready for the arrival of George, Fred and the "Doc," who were to be on hand at 6:30 sharp, with all the implements of the chase, and two good dogs.

There were many things to be done preparatory to getting the game bags and guns. However, all this was accomplished in due season; and upon looking out of the window, I saw a vehicle approaching, in which were seated my expected friends. The vehicle was driven into the yard, whirled around the house, and brought to a stop at the kitchen door. I took out my paraphernalia, and stowing it snugly away under the seats, started for our long contemplated trip to Bear Hole.

I wish I had the power of pen to properly portray the wild and solitary appearance of that spot. It was bare of every living thing but a net of scrub oak. If Heaven favors, I intend to get some views of that amphitheatre of swelling hills and deep ravines, with tinkling rills flowing between—the bogs and morasses—the beautiful ponds, over which the wild ducks scudded, all conducing to make a scene of impressive grandeur, and for the moment of profound silence, soon to be broken by the shouts of hunters and baying of dogs.

There was a house, an old dilapidated affair, built many years ago, the occupant of which had recently purchased it, and here we put up, as the present owner, who had already made many improvements, was well known to "Doc." There was one servitor on the place, old but ready and willing, and, under the direction of his mistress, he attended to all our wants. He also pointed out the spot where on a hillside near we would be likely to start a rabbit which came every day into the farm yard and was fed and often slept there with the chickens.

I did not want this rabbit killed, and yet it was not five minutes later when Sport took his track and, with Spot following, drove him in a straight line along the hill until he went to earth under a huge rock, while, owing perhaps to the lack of knowledge of the surrounding country, all the efforts of the sportsmen to get a shot were unavailing. We at once turned our attention to the next ridge, intending to follow the heights around the Bear Hole Pond and scare up whatever we could.

We had not been in the woods ten minutes when we heard dogs following over to the right of the trolley road, and soon after met three young men, all bearing arms, and having with them one small dog. Apparently these young men were novices, for they had started nothing and cautiously kept in the open glades to avoid brambles and briars, while the dog trotted contentedly at their heels. We bade them good-day, but had hardly ascended the first height beyond when we heard a perfect fusillade of

shots fired in the direction in which the young men had disappeared.

I feared at first lest Sport, who was just five months old, might be tempted to join them. But Fred looked out for that, and we scaled the ridge to its summit, and here was presented one of the finest views I ever saw. One could readily imagine himself to be in some vast wilderness, for, as far as the eye could reach, ridge arose beyond ridge, with the waters of Bear Hole shimmering on the left—the beautiful trout brook at our feet—and to the north and east apparently interminable hills arose. We paused awhile to view this scene, and then, one by one, we descended the slope, crossed the stream, and commenced to scale the heights on the opposite side. The dogs had already found their way over and were sniffing the leaves with occasional short barks indicating the presence of game.

Hardly had we got mid-way up the opposite ridge when the dogs sung out on a start; and soon there was music in the air. We hunters toiled and struggled up the steep, over the stems of fallen trees, upon the stones that treacherously rolled from beneath our tread, as onward and upward we went; and stringing out, we hurried to reach favorable stands. The dogs soon drove the object of their pursuit down the opposite side of the ridge, thence to its western end, and swung around it, only to dart up the side toward the spot where we were stationed. We soon heard a gun, and Fred cried out, "I have got him!" And mightily pleased was he, because his little Sport came in ahead on the trail, being nimbler footed than the older and more sedate Spot. This dog was called Spot owing to a peculiar black spot which surrounded his right eye, but did not prevent him from seeing.

Toward the northern heights we went, finding dull work for upward of one hour. Finally, in stumbling over one of the fallen trees, I awoke a rabbit from his slumbers, which, like a flickering vision, disappeared before I could even get my gun to my shoulder. These fallen trees lay almost everywhere in profusion. They had been cut down years before, just after the whole tract had been burnt over by a conflagration caused by cinders from a locomotive. I had some sixty acres ruined at the time in the same section, and when the tree is dead, it is cut down to afford the new growth a better chance to flourish.

I stumbled, owing to the fact that my wading boots were put on wrong, the right being on the left foot, and the left on the right. Thus I met more obstacles in my path than usual. This was done because the boots were so uncommonly large. It was the easiest way I could devise of keeping them on my feet, and an occasional stub of the toe was better than the certainty of two big blisters on the heel, which would have been the case otherwise.

The rabbit started like a flash, and so did I. I took my stand on a bank which lined the side of the wood road, feeling certain that if he should escape the others, he would eventually give me a call. First the rabbit ran everywhere

seemingly, affording no one a shot. He was keeping far ahead of the dogs and running as silently as a sleuth. "Doc" guarded the road below me. George was in the brush to the westward, and Fred on the top of a ridge a quarter of a mile away, from which he could see the dogs and the rabbit as they ran, pursuers and pursued, upon the ridge which I was facing. The rabbit seemed to go everywhere, excepting where he was expected. But after waiting, Doc spied him in the thick scrub bordering the road, and fired just as the rabbit shot out of the bushes to cross the road within ten feet of where he stood. He gave him both barrels, the second just as he was disappearing in the thicket on the side where I stood. I supposed that the game was secured after the Doc's usual happy faculty, and so sprang down the bank and went down along the road to the stand held by Doc, where I found him carefully looking at the bushes where the shot had riddled them, but bunny had escaped.

Soon came in the dogs, barking madly, for the excitement of the long chase had stirred up their sporting blood, and, true to the track, they scurried by, hot on the trail. I passed up the road to a point directly opposite to that where I had been so long and patiently waited, after first starting the rabbit, in hopes that at last I would have a chance to test my ammunition. But, alas! the pursued had got tired of so much excitement all in one afternoon, and so was determined to hie away to some safe harborage, which he did as fast as his legs could carry him. He went about half a mile up a big cliff, and dove into his nest, and there perforce we left him to take a much needed rest.

We breathed a sigh, and taking the dogs, went on to the next acclivity. Nor were we long in hunting up a swift-footed fellow that took another bee-line straight away from us, with the tired dogs trailing after. We took our respective stands. I assumed a commanding position on the summit of a huge rock at the top of a considerable eminence. George was near on the right, and it was he who set the dogs right when they went wrong, as they did, owing to the fact that the game ran under one of the fallen tree trunks, and crawling through the top, leaped up the almost perpendicular height of the hill before him, and so got a long start on his pursuers. George got them going again, and scaling the cliffs, Spot fell back several times before he succeeded in getting to the top thereof. When he did so he pursued the quarry with unflagging vigor and unfailing tongue, and with his sweet melody the woods and ridges rang. I waited until the sounds died away in the distance and then descended to see if I could find a more eligible place, for the rock on which I had been standing did not admit of seeing two rods in the direction the dogs had gone, but in front I could see for a long distance and on either hand.

Hardly had I taken my position, when I judged that the rabbit was making his way back again, and it would be safer for me to go back to the rock of my first selection, and there abide the result. It was well that I did so, for it was but a few moments later when I saw the rabbit stealing forth from the brush. I fired hastily, getting but two glimpses, and seeing nothing after I had done so. Both dogs came up—

GAME BAG AND GUN

Self-Hunting Dogs.

BOSTON, Mass., Feb. 13.—*Editor Forest and Stream:* I have carefully read Mr. Grinnell's criticism of Senate Bill No. 175, in your issue of Feb. 10, which has been presented to the Legislative committee of this State, and which covers the better protection of partridge, quail and woodcock during the nesting season, by the restraint of self-hunting dogs from disturbing the ground-nesting birds during the months of May and June.

The committee agrees most heartily with Mr. Grinnell that the bill should cover a longer period of time, but it is clearly evident that he is not conversant with the unfortunate conditions existing in this State to-day. We most assuredly would like to protect our game birds from these self-hunting dogs for a longer period than May and June, but, inasmuch as the bill presented last year by the Fish and Game Commission itself, asking for the restraint of these dogs from April 1 to Oct. 1, was killed so quickly, we felt we would rather have half a loaf than none at all, and one reason for asking only for two months was to make the bill so obviously fair that none would oppose it; inasmuch as all will concede that the bird life of our State at the present time is actually hanging in the balance. Even this bill was vigorously opposed by a certain element of fox hunters, who seemed to disregard altogether the rules of common sense, insisting on the privilege of running their dogs, if they desired to do so, twelve months in the year.

For the past ten years, unfortunately, the game laws of this State have been practically dominated by this fox-hunting contingent, which is very well organized, and which has opposed, and will oppose, no matter how meritorious it may be, any measure that might be construed to in any way interfere with training or running their dogs through the covers at all seasons of the year. They admit that the game birds of the State are almost extinct, yet they are unreasonable enough to object to any measure that would have a tendency to give the birds a better chance during the breeding season, for the simple reason that they might want to take their dogs into the covers during May and June.

This element is led by a certain prominent man from Worcester county, whose eloquence and power of oratory are such that he seems to be able to win over to his way of thinking our recent committees, owing to the regrettable fact that very few of the members of our fish and game committees have been men with sufficient actual experience to enable them to judge these matters from a practical standpoint, with the result that they have acted on the matters brought before them greatly from the standpoint of who recommended or who opposed them, so that all measures desired by the fox hunters have gone through and been endorsed by the committee, and everything they have opposed has met with defeat.

At the hearing on this bill, the man above

mentioned rose to heights of oratory that would have been commendable in a better cause; in fact, he denied the right of any legislation to prohibit him from taking his dog into the woods whenever he pleased, stating that it was his constitutional right, and that he was going to exercise it. His graphic description of the accumulation of fleas on a dog restrained was so realistic that more than half the people in the room unconsciously began to scratch.

This bill, as submitted, was approved by T. C. Palmer, of the Biological Survey; T. Gilbert Pearson, of the Audubon Society; W. T. Hornaday, of the New York Zoological Garden, and John B. Burnham, President of the American Game Protective and Propagation Association, as well as our own fish and game commission, and it is to be hoped that the strong letters of endorsement given our committee by these men will, when read before the executive session of the fish and game committee, prevail against the untenable argument presented by this man.

It was most gratifying to our committee to note that there were some of the old-line fox hunters who were willing to concede that it was not beneficial to our bird life that these self-hunting dogs be permitted to disturb them during the nesting season.

As to the final success of the bill, that remains to be seen, and this letter of explanation is simply to let the readers of FOREST AND STREAM know that we should have liked to have had not only the month of April, but July also, but that, owing to the strong opposition of the fox hunters, we felt that if we could get May and June, we would be accomplishing something—at any rate, more than we have at the present time.

GEORGE B. CLARK,

For the Committee.

Duck Foods.

WATERLILY, N. C., Feb. 10.—*Editor Forest and Stream:* In these days when the whole country seems to have gone "game law made," I would like to offer a suggestion to every individual club, or any organization fond of wildfowl shooting, and it is this—write to the Biological Survey people at Washington, D. C., for Circular No. 81, which tells how to grow the different kinds of duck foods—sago, pond weed, wild celery and other kinds. It is a well known fact that thousands of acres of the very best waterfowl marshes have been drained for agricultural purposes, entirely destroying their usefulness so far as the fowl are concerned, and while this is true there are hundreds of thousands of acres of lakes, rivers, creeks, ponds and streams in America in which some of these foods mentioned will grow abundantly and some will grow them all. Now it is up to all of us who are fond of waterfowl shooting and who care to do so to plant these seeds and plants in all sections of the country where they are not now found, and in a year or two we will find that all specimens of the waterfowl tribe have wonderfully increased.

No better proof of this could be offered than

Currituck Sound where their foods, all except the wild rice, are found. For more than fifty years wildfowl have withstood the awful slaughter of the market hunter and the many clubs and still continue to come here in countless thousands.

It is known among all raisers of ducks and geese that where they once lay and rear their young, they will return season after season and repeat it, unless killed or driven away by destroying their nesting places. This being true, waterfowl can be caused to breed in many sections of the South and Middle West as well as along the whole coast from Maine to Florida, instead of all going to the far North where their grounds are being rapidly destroyed.

Another very important thing to us all is raising game—I mean ducks of all kinds and the Canada geese. They are much easier reared than chickens and there are millions of acres in America where this can be done and many of those grounds of little value for anything else. Let us then turn our attention to these two matters, which I think are very important just at this time.

W. L. McAtee, who issued the circular, No. 81, has made a deep study of the duck food question, and what he says is of much interest to us all.

MORE ANON.

Game Birds and Foxes.

PACKER, Conn., Feb. 9.—*Editor Forest and Stream:* Since Jan. 20, the date of my last letter, when we were having a warm spell with melting snow and spots of bare ground, we have had another cold snap with ground snow covered until the last day or two. I have heard of only three quail being found dead, but of many being seen alive and in apparently good health. One of my fox hunting friends told me of seeing two large beavies one day, and the tracks of three other beavies. I took a walk yesterday and another to-day to see if I could find any quail alive or dead, but failed. Yesterday I found the tracks of a bevy of eleven near my buildings, fully as many as I supposed were left at the end of the late shooting season. Last night we had another light snow, not more than a quarter inch, and the ground is bare in all sheltered nooks and on the sunny hillsides, so quail may obtain the needed grit again. I have been scattering corn where I thought the quail might find it, but have not seen that they have eaten any of same. The mice seem to take advantage of my generosity and have nightly picnics with corn on their bill of fare for a change.

One of my fox hunting acquaintances who tracked a fox for some miles on a recent fresh snow to his burrow and dug him out says he caught and ate four ruffed grouse during this short trip. On questioning him carefully he couldn't be certain all four were caught on this trip, but had thought so at the time, yet admitted that the fox might have caught and hid one or more of them on a previous night. Five or six pounds of partridge would be quite heavy feeding for even a large fox, I would say, and of a grade not indulged in very freely by some men of fortune. This man's experience is in accord with my own, as I have often seen where foxes had caught quail, grouse and rabbits, but some hunters think foxes not very destructive of our game birds and animals. What has been the experience of the readers of FOREST AND STREAM?

E. P. ROBINSON.

Native and Introduced Game Birds.

SOMERVILLE, Mass., Feb. 14.—*Editor Forest and Stream:* I have noticed a considerable amount of dissension among sportsmen here in the eastern part of Massachusetts concerning our introduced pheasants. Several articles have appeared in the magazines at different times, and I have heard many discussions at meetings of hunters. The general sentiment seems to be unfavorable to this tame bird. Personally I have taken sides with the bird.

Perhaps the great beauty of these birds, especially in the case of the cock bird, has appealed to me. Certainly they make a pretty sight running fearlessly about in the open and along the highway as they so frequently do. I have heard more than one person remark that they are too beautiful to shoot.

The principal complaint of these hunters is that they are driving out our quail and ruffed grouse. Is it quite fair to blame this bird for the scarcity of quail of which we have had comparatively few in the past few years? Why not put the blame where it belongs in regard to the quail. After the gunner, then the more or less certainty of their reduction by our occasional severe winter?

While I could hardly be called a bird hunter of any great renown, my entire toll on both the quail and partridges has been a single specimen of each which I secured in the same season several years ago, probably more by accident than otherwise, as I happened to get them both with snapshots. Yet I spend many days in our local covers, while hunting a small pack of beagles, and naturally have occasion to notice to some extent our game birds.

The last covey of quail which I saw was a small flock of seven birds which we used to see nearly every week during the winter where several of us worked our pack of beagles in the vicinity of Tophet swamp, Lexington, three years ago. We always found them in about the same neighborhood, but they suddenly disappeared. I have heard of one flock of quail this winter in Middlesex county, by a party of hunters who helped along their extermination. Therefore, I see little necessity for worryment about the quail being driven out by pheasants in this locality.

In regard to our partridge to the best of my judgment I should say that I have seen them in about the same numbers during the past few years. If I were to form my opinion from some days that I have been out, I would say that there were practically none, but there are other days when I have counted numbers of them. I remember one afternoon a year ago in Lexington, when I counted nineteen partridges in perhaps three square miles. I feel reasonably sure that they were all different birds. I have seen several of these birds this year, but no quail.

I have come to the conclusion that in working a number of dogs, at the same time I see more birds flushed than the man who hunts with a gun only. Many times have I passed within a few feet of a partridge without knowing it to have it flushed immediately afterward by one of the dogs, which convinced me that hunters going through the woods pass by game a great many times, causing them to return home with the impression that there is little or no game. Let some of these hunters walk through the

woods after the first light fall of snow if they wish to get some idea as to the amount of game. Of course this will be in closed season in this part of the country, but there are those who like to walk out even if they cannot shoot. With a number of dogs working about through the brush, it seems to give the birds less chance to run with the result that they more often take wing. Many times I have seen them jump up just a few feet from the ground, and sit on some low bush watching the dogs casting about close by.

The future of our grouse is limited here in the East, partly owing to the increasing number of guns, but principally to the fast diminishing amount of proper cover. Civilization is pushing out into the rural districts, land is being cleaned up, and the few covers remaining are allowed to burn over too frequently. This state of affairs is certain to drive out the ruffed grouse if there were no other good reasons.

One favorable thing about the pheasant, one of the first things that impressed me about these birds, was the fact that they frequented such open country when there was at least a little thick cover at hand. Nearly all of them that I have seen I have flushed in the open places where there was hardly a bush to be seen; in fact, no brush at all. Just a thick growth of rank grass and rushes and some places where it did not seem as though there was enough of this to conceal a bird of such proportions. Only the other day a friend spoke of having seen some of the birds here in our own city in the narrow strip of rushes which border Alewife Brook, a small stream which forms part of the boundary line between our city and Arlington. These were wild birds and no woods nearer than three miles. Considering the increasing lack of suitable grouse covers and the doubtful prospects of replenishing what little remains with our native game birds, the day is coming when the hunter here will be glad that a bird has been found that can thrive here as this one apparently has. The time has arrived if the hunters were perfectly honest about it, and they were allowed to shoot these birds without restraint. If the time ever comes when it will be possible to restock our covers with hand-raised native birds, and it is proven that these pheasants are a hindrance to such a work, I will leave it to the hunter to exterminate them.

Many knowing ones say they are a hard bird to hit. I have always thought that they offered a comparatively easy mark for a fair shot, as I have flushed them in the open and watched them sail straight away with a poor showing of speed as compared with the speed of the grouse.

Under all this clamor and complaint I have felt that I detected an uncontrollable desire to begin the open slaughter of these birds; a lack of self restraint in allowing these birds or any birds to remain under absolute protection for any length of time. All in all, I see no cause for alarm, for I see nothing that will save these birds when legal shooting is added to the persecution which has already been practiced. I marvel that they have done so well, which fact in itself is some encouragement for their future. I see no help for them unless it is their ability to use their legs, spoken of by those who seem to know. Extermination will probably come for those who wish it without putting them in the class with birds and animals which are marked for extinction.

CHARLES H. SHAW.

Sale of Southern Game.

NEW ORLEANS, La., Feb. 14.—*Editor Forest and Stream:* To those of us from the North who go out to kill our own game and prepare it for the table, it seems odd that we find snipe, ducks, quail, turkeys and woodcock in the market stalls and for sale. I was in the French market a day or two ago and saw some very fine ducks, barrels of them, for sale at from fifty cents to one dollar each. Of course none but the well-to-do purchase them at this figure. The most food is sold by the five and ten cents' worth to the foreigners and negroes. Food is very high in price for a land that is so replete with advantages to grow it. A string of a dozen snipe were for sale at \$10. A dozen woodcock were worth \$10 to \$12. Quail, abundantly in the markets now, are bringing from twenty-five to thirty-five cents each. The market hunters get from five to twelve cents each for them and dump them into boxes without care and ship to the market.

A market hunter's license costs \$10; that is, if he is a native. Thousands of birds are killed without any license behind the shooter. You cannot blame the natives who have been taught that game is a sort of natural revenue-earning thing the same as the fish and oysters they take from the waters. Game and fish are to them what bananas are to the Central American who cuts and packs them to the market and gets his money.

On the street any day one can see men who have shot a few nice ducks peddling them along. These are sold for the most part about the cotton board and the saloons. If you are anybody here and make a good killing, you of course take some of them to your friends and show the balance at your place of business. I see great lots of ducks and game being brought to the city daily. A party of three or four had out a 70-foot launch and literally plastered all their deck room with ducks during a two days' hunt. How they could eat all of them I do not know. I really think—and always have been of this opinion—that a man should not kill more than he could eat. This is a law of nature that did not diminish the game supply before man got so civilized that he had to kill for his friends, too.

AMOS BURHANS.

New York Legislature.

ALBANY, N. Y., Feb. 19.—*Editor Forest and Stream:* Senator Griffith has introduced a bill inserting in the general municipal law a new section providing for the acquisition and development of forest lands by counties, towns and villages.

Senator Murtaugh, of Elmira, has introduced bills repealing the prohibition against the hunting of hares and rabbits with ferrets in Schuyler and Tompkins counties, and providing that any fish except black bass and pike perch may be taken in certain portions of Cayuga Lake by spearing, April 15 to June 15, inclusive.

Assemblyman Brereton, of Warren, has introduced a bill appropriating \$20,000 for the purchase of lands on Lake George for a fish hatchery, and for the construction of suitable buildings, fixtures and ponds.

A bill similar to Senator Roosevelt's bill of last session has been introduced by Assembly-

man Patrie, of Greene, in relation to sturgeon, and to nets in the Hudson and Delaware rivers.

Senator Emerson and Assemblyman Prime have introduced a bill increasing from five to fifteen the number of tip-ups which may be operated at the same time by one person in Lake Champlain for catching certain kinds of fish.

Among the bills just reported favorably from the Assembly committee on forest, fish and game is one of Assemblyman Seaker for a fish hatchery for hatching black bass and other fish in St. Lawrence county. The bill carries with it an appropriation of \$20,000.

Beautiful Dog Pictures.

ON Feb. 19 an exhibition of pictures of high interest for all sportsmen who use the gun was opened at the art galleries of Moulton & Ricketts, 10 West Forty-fifth street, New York city. These pictures, fourteen in number, are by Edmund Osthaus, the eminent painter of dogs. They are chiefly quail shooting scenes and many of them of the dry country of the Pacific coast.

Prof. Osthaus is so well known for his familiarity with dogs and their work, his skill with the gun, and his knowledge of technique, that it is hardly necessary to say that these paintings are no less remarkable for their fidelity to nature than for their great beauty. Our front cover this week shows one of them. The scene is in the dry California country, and the quail shooter is giving his dogs drink by pouring water into his cap from the canteen which he carries.

All who are familiar with the field work of dogs, and indeed all who love a good dog, should avail themselves of this opportunity to see these rare pictures. While most of the scenes portrayed have to do with field shooting, there is one picture of a pack of foxhounds in full cry.

The exhibition will be open for two weeks.

Cooperation.

BLOOMINGTON, Ill. Feb. 17.—*Editor Forest and Stream*: Three hundred farmers and sportsmen assembled in a mass meeting at Frankfort this week to discuss the game and fish laws. Game Warden William Courey, of Bloomington, addressed the meeting. It was desired to create friendly feeling between landowners, hunters and fishermen, and the rights of each under the law were explained. All present were urged to co-operate with the fish and game wardens in prosecuting persons who violate the law either by trespass or taking fish illegally and hunting out of season.

The first flock of wildfowl to reach the Illinois River this year was reported this week near Pekin. The birds were thought to be shell-drakes. The flight is unusually early and is thought to portend an early spring.

Central Illinois sportsmen are looking forward to a roundup of the wolves that have been plundering sheep and poultry yards of Menard county during the past winter.

J. E. Kiple, of Chicago, pleaded guilty to the charge of purchasing wild ducks from a Mason county man and was fined \$250 and costs by Judge Rahn. The defendant did not appear, sending word that he would pay the fine assessed without going to trial. The assessment is a sequel to the recent seizure of several hundred wild ducks which were consigned by hunters in Mason county to Chicagoans. E. E. PIERSON.

Grouse in North Carolina.

HENDERSONVILLE, N. C., Feb. 10.—*Editor Forest and Stream*: I have just read with interest the letter of W. H. Starratt in to-day's issue of FOREST AND STREAM. Replying to his question as to the ruffed grouse, as far as I am able to learn, there have been no ruffed grouse for very many years, at least, any distance south of our mountains. Some years ago there were a few, I am told, in the Piedmont belt. I do not think they can stand much very hot weather, and this may account for the fact that they are not found far south of the mountain section of the South.

Here we are from 2,000 to 6,000 feet above sea level, so that we are practically on a par with higher latitudes, so far as cold weather goes, and this winter the mercury has dropped below zero, particularly all through this mountain country. Hendersonville is 2,500 feet above sea level, and when I go grouse shooting, I am from 3,000 to 5,000 feet above it. I doubt very much if very young grouse could stand the moist heat of the lower country of the Carolinas.

It is snowing as I write, and the ground is covered with it. Robins, thrushes, catbirds, and in fact all the migratory birds leave us as the winter approaches—the woodcock staying in small numbers till unable to push his bill into the ground.

This week I saw the largest eagle I have ever seen in captivity. The spread of his wings was seven feet, or more, and of his talons full seven inches. This bird looks as large as a turkey when on his roost. He is very dark in color, and in part a dark mottled-brown and black on back and breast. Color of head dark, and nothing bald about him. He was caught in a steel trap set for him (yet is unhurt), as he had been carrying off pigs. This was close up to the great Smoky Mountains. He is a magnificent specimen. I call him a great American eagle. ERNEST L. EWBANK.

Bison Society's Annual Report.

THE fourth annual report of the American Bison Society just issued gives much interesting information relative to the society's work, contains many beautiful illustrations and is altogether interesting.

The president's report opens the booklet and gives an account of the operations of the society during the year. Dr. W. T. Hornaday, president of the society since its foundation, resigned his office at the annual meeting, and Prof. Franklin W. Hooper was elected in his place. Minutes are given of the fifth annual meeting of the society, and reports of several meetings of boards of managers.

The census of the pure-blooded bison in North America shows for 1911, 2,760 head against 2,103 in 1910. This census does not include some recent increase, for the buffalo in captivity in Alberta are given as 954, while as a matter of fact they numbered in November 1,132. Again the buffalo on the Montana range are given as fifty-one, while in September, 1911, they were sixty-nine in number. Accompanying the census is an excellent outline map of the United States showing where captive buffalo still exist within our limits.

An interesting history of the Canadian move-

ment in behalf of the buffalo was prepared by the Canadian Government at the request of the Bison Society by Fred H. Byshe, and E. H. Baynes has written of the Corbin herd, which is said to number eighty-five head.

The report gives the constitution of the Bison Society and a list of its members, divided into patrons, life members, active members and associate members.

Snipe in the Provinces.

HALIFAX, N. S., Feb. 16.—*Editor Forest and Stream*: In the issue of Feb. 10 you published a letter written by me which you head "Woodcock in the Provinces." It would have been more properly styled "Snipe in the Provinces."

The printer has also changed two words in the manuscript which altogether alters my meaning. The point I was making as to the unusual distribution of snipe is thereby lost. As printed it reads: "Often enough when you expected a grouse to rise before the pointing dog in alder covers, up would dart a woodcock." What I really did say was: "Often enough when you expected a woodcock to rise before the pointing dog in alder covers, up would dart a corkscrew" (viz.: a snipe).

W. H. STARRATT.

[We share the error. Mr. Starratt wrote "cock" and not "woodcock," as he remembered it. We had in mind the Nova Scotian term "cock" for grouse.—EDITOR.]

Pheasants vs. Partridges.

BATAVIA, N. Y., Feb. 15.—*Editor Forest and Stream*: In relation to the remarks of O. E. M. and R. L. W., I beg to say that we have a few grouse, but they were practically cleaned out years ago. What few have bred have been killed off each year with no chance to multiply. I make decided objection to the statement of R. L. W. that the pheasant is not in it for eating, compared with the grouse. The pheasant breeds rapidly and the grouse does not, but there is one sure thing: the pheasants we have taste much better than the grouse that we do not have.

If you want to get rid of your Massachusetts pheasants, send them over here where they will be appreciated. We have another foreigner up here—the Hungarian partridge—and our birds are doing well in spite of our recent severe weather.

CHAS. W. GARDINER.

William W. Nixon.

WILLIAM W. NIXON, Chief Deputy of the Massachusetts Commission on Fisheries and Game, died at the Massachusetts General Hospital on Feb. 8, and his funeral, held in Cambridge on Feb. 10, was attended by the full board of commissioners and nearly all of the deputies in the State.

Mr. Nixon was appointed a deputy from Gloucester in 1903 and for several years has been chief deputy. He was a most efficient officer and worker, and nothing but praise was ever said of him by the commissioners and all who came in contact with him. His soul was in his work, and it was in the performance of his duty in the woods that the accident happened that caused his death. He leaves a widow and seven children.

Trout Planting.

RECENTLY in answer to some queries from a club member as to the best methods of stocking a stream with brook trout for future fishing, N. R. Buller, Commissioner of Fisheries, at Harrisburg, gave his views on the subject which are given below as of interest to the sportsmen and fishermen:

"After having given this matter many years of study, I have proven by ocular demonstration that in this age the only proper method to follow is to stock streams with brook trout of larger size than fry. I would, therefore, advise for this season's fishing the stocking with seven or eight-inch trout, the fish to be placed in the streams as soon as weather conditions permit, and for future fishing to stock with trout not less than from four to six inches in length. Practically all clubs follow this plan in order to keep their preserves stocked and at the same time have some fishing. For this reason the Department of Fisheries advises the stocking of streams with larger trout than fry.

"It is not the wish to convey the idea that not any of the fry planted survive, but it is known that the percentage is so small that it does not pay to make the effort. Some of the reasons for not planting fry are that there is not food supply sufficient in the streams for them, while there is usually plenty of food for the larger trout, such as crawfish, fresh water shrimp, the larvæ of the dragon fly and minnows, which are all natural food for the larger trout.

"The question is often brought up that years ago the streams kept stocked without artificial planting, and that fishing was good from the hatching of the spawn deposited naturally in the stream. They forget, however, that conditions are continually changing, and the same conditions do not now prevail that prevailed years ago. Years ago the mountains and meadows were covered with extensive forests, the streams were overhung by foliage and fallen timber, and trees in the streams created many natural hiding and feeding places for them. Under the conditions then prevailing, the continual dropping of small insects and insect eggs from the foliage and brush into the water furnished the food for the baby trout. Time has changed all these conditions. The timber is about all cleared off and the driftwood has practically disappeared from this cause, thus eliminating the feeding grounds, and for that reason so few of the small trout survive. Here is where the fish culturist steps in and endeavors to help nature, taking the eggs, hatching them and caring for the young trout until they reach a suitable age and size to care for themselves. The matter of the fish being fed on artificial food does not destroy that instinct in the trout which impels them to forage for themselves when placed in a stream. Such bred trout readily take the bait or artificial fly and thrive on the natural food mentioned above in the streams.

"The suggestion that you stock a stream with

minnows and crawfish and begin the planting of grass is a very good one, and it is also suggested that where it is possible to do so to place driftwood in the stream and try to restore some of the natural conditions which existed heretofore. In doing this you create eddies, larger areas of still water and provide a place for the dragon fly to deposit its eggs."

Dry Fly vs. Wet Fly.

INVITATION is extended to all anglers, whether members of the club or not, interested in a discussion of the different methods of fly-fishing, to be held by the Anglers' Club of New York, at its rooms at the Hotel Navarre, on the evening of March 12.

Walter McGuckin and W. C. Metcalfe will speak on the advantages of the use of the dry or floating fly, while Dr. R. J. Held and E. B. Rice will look after the wet fly method. Informal discussion by those present to follow the arguments of these gentlemen.

The meeting will be held at 8 o'clock sharp, preceded by an informal dinner at 7, which any gentleman may attend upon signifying his desire to the secretary of the club, A. B. Hubbell, Southern Boulevard and 144th street, New York city.

The cost of the dinner as usual will be \$1.75 per cover. Further information may be obtained by addressing G. M. L. La Branche, 67 Exchange Place, New York city.

Temperature Zones.

ALBANY, N. Y., Feb. 19.—*Editor Forest and Stream:* Some years of study of and experience with the inland waters of New York State have made me a decided unbeliever in the scheme to have a uniform fishing law, such as the new Conservation Commission now advocates. It is my belief, and on it I ask the judgment of scientific men as well as fishermen, that the territory comprised in the State is too great to be covered either safely or satisfactorily by a single law. The open season for fishing can be governed properly only by the temperature of the water, and no law based on striking a balance of the various dates existing for the several kinds of fish, as I am advised the committee which framed the proposed law has done, can be defended.

It is a sorry fact that the State never has had a scientific examination made of its inland waters. During my term as secretary of the old fish and game commission, the necessity for the information which such a survey would furnish was seen almost daily. The data in possession of the commission consisted in the main of reports made fully twenty-five years ago. Much of it was known to be valueless. Some lakes had been studied in part by experts of the United States Commission, and their work was all that was reliable. The data as to the stocking of the various waters exists in the records of the several commissions which have had charge of this work, but it never has been compiled. Added to it there should be many facts which can be

had only through careful research by qualified students.

It has seemed to me, in view of the situation stated, that the only safe fish law is one that is "uniform" as to localities. There are at least three temperature zones into which the State may be divided—the Long Island (warm), the middle section (temperate) and the northern (cold). This proposed division has at least the merit of fairness when a fish law is to be considered. It is also reasonably safe so far as the warming up of the waters which governs the spawning seasons. Some mountain lakes and streams not in the suggested northern zone also would require exception from a general law.

This suggestion is made for the purpose of calling forth an expression of opinion from scientific men and fishermen interested in the saving and protection of fish life in this State. There are none too many game fish now in our waters to risk making a general law to govern their taking.

JOHN D. WHISH.

Fishing in California.

SAN FRANCISCO, Cal., Feb. 12.—*Editor Forest and Stream:* The January rains did not materialize and splendid fishing is still to be enjoyed in streams that are usually not visited at all at this season. Some fine sport is being enjoyed on the Russian River and both steelheads and striped bass are being taken. Near Duncan's Mills steelheads have been landed, several exceeding fifteen pounds. Hugh Copeland recently took an eighteen-pounder.

A heavy run of striped bass was noted recently on Wingo Slough. Merrel McCrea landed a sixty-pound bass. The big fish was probably one of the largest striped bass ever taken on the coast with hook and line. A forty-five-pound bass was taken on the Russian River recently by W. E. Lunger.

John Kennedy Orr, a California pioneer and a prominent sportsman, died at his home in Berkeley recently at the age of seventy-six. The deceased spent much of his spare time in the open and was the founder of a number of hunting clubs in this section. Just before his death he was planning a hunting trip to the Suisun marshes and was discussing the details of this with his wife. Death was caused by a stroke of apoplexy.

GOLDEN GATE.

Silkworm Gut.

IN an address before the members of the New South Wales Rod Fishers' Society, in Sydney, Australia, the Rev. J. Moran referred to a means of preserving silkworm gut. He recommended steeping it in pure neatsfoot oil, which he contended renders it everlasting, imparts a slight tinge of color, and removes objectionable brilliancy, his scheme being to place the gut or casts between pieces of flannel or felt saturated with glycerine, which has the effect of preserving and softening it.

Casting Club of France.

AN international fly-casting tournament will be held in the Cercle du Bois de Boulogne, Paris, March 28-31, inclusive, under the auspices of the Casting Club of France.

NATURAL HISTORY

Birds in the Adirondacks.

POLAND, N. Y., Feb. 14.—*Editor Forest and Stream:* Just below our little village is situated a natural bird sanctuary, a perfect jungle of a place, and one to which man seldom intrudes. It consists of a long stretch of sandy soil grown up to willows with a few scattering elms and basswoods, and all overrun with creeping vines of many kinds. Here and there great crowns of ferns reach to one's head, and horsetails and various weeds and wild flowers abound. This resort is bounded on one side by a little used road, on the other by the West Canada Creek, and the whole is intersected by little clear water brooks, and from this last fact the place is known to the country round as The Islands. At the lower end is a small spring-fed pond, the home of many turtles, and a favorite fishing ground for the blue and green herons and bitterns. I recall seeing a bittern early last spring standing on the ice of a small frozen pool in these same grounds and looking for all the world as if he too was frozen, for I was permitted to approach to within fifteen feet before he took wing.

The birds that frequent this retreat include about all our summer residents, and a great many migratory birds stop here both in spring and fall. This spot is well protected on the north and west by hills, and travelers must find this a nice warm place to rest and feed for a few days. Last spring I was unable to spend as much time here as I should have liked, but even so was fortunate enough to find the nests of three of our birds which are not always easy to discover. They were the very, rose-breasted grosbeak and black-billed cuckoo. The young of the grosbeak I was able to photograph just before they left the nest, but the other nests, much to my disappointment, were situated in positions to prevent photographing. I was most anxious to obtain a picture of the cuckoo's nest. It contained two young, but I could throw no light on it without disturbing the nest, and this bird is such a shy, wild one that no liberties can be taken with either her or her nest. It was in a thorn tree and carefully concealed by the leaves of a wild grapevine, and only about six feet from the ground. This nest consisted of a very shallow and rough construction of twigs cushioned with plant down. These nests are made so shallow that the eggs must sometimes fall out in hard winds.

While I found but few nests in the summer,

still almost all our birds nest here, including even the elusive woodcock. They nest on different floors so to speak, from the ground up to the dead tops. Along the shores and on the pebbly banks of the creek the spotted sandpipers can be found, and in the spring numbers of ducks and shelldrakes pass a few days here. I often watch these waterfowl, and of them none seem so pretty as the hooded merganser, particularly when consorting with a female and flashing his white cockade. His larger relative, the American merganser, is sometimes here in large numbers. The first of the land birds to arrive in the spring are the blackbirds and grackles, and

YOUNG ROSE-BREASTED GROSBEEKS.

they never fail to advertise their arrival. This season the warblers seemed to be very late in reaching here. My first record was a yellow palm warbler on the 19th of April. Our backward spring probably had some effect on the migration; we had snow away in the month of April. Ruffed grouse can always be found at the lower end of this piece and hawks and owls are occasionally seen.

There are probably many such bird haunting places as this I describe, only it remains for some woods loving wanderer with a hobby for birds to find them out, and this particular spot is known and appreciated by only a young friend and myself.

CHARLES A. GIANINI.

Starlings with Crows?

HOLYOKE, Mass., Feb. 14.—*Editor Forest and Stream:* Starlings were located here about two years ago. I have not seen any in Holyoke, but I have seen a large flock in the town north of here, in South Hadley and South Ernest. These starlings were very friendly to the crows. I lived last fall just north of Mt. Holyoke range and every morning large flocks of crows flew over west and with them flocks of starlings

mixed in on very friendly terms. Sometimes there would be only one crow with a flock of birds in the afternoon. They would be coming back all mixed together, flying from field to field and tree to tree, going back to their roosting places on the mountains. I think they must roost together. They certainly were great friends.

ELLIS L. DUDLEY.

[Is there not some error of observation here? We have never seen anything like this and the association seems unlikely.—EDITOR.]

Starling Facts Sought.

ALBANY, N. Y., Feb. 17.—*Editor Forest and Stream:* I would be glad to know the truth about the starling. Your Washington correspondent last week called it "an extremely important and attractive bird," and expressed the hope that it "will meet with and deserve encouragement and protection."

The new conservation commission in its proposed "uniform" law puts the ban on the bird and lists it among those not to be protected in New York State. I am advised by John B. Burnham, who was one of the committee of three that drew up the proposed law, that this was done at the earnest request of Mr. Pierson. He furthermore says that the starling is a bird so destructive that it ought to be exterminated; in fact, that it is as bad as the English sparrow.

It would be a pity to place on the legal blacklist any bird that is not absolutely dangerous to the general welfare. Our native birds are fast becoming altogether too few in numbers, and it has for a long time seemed to me that the alarming destruction which threatens our trees may be chiefly due to disturbing the balance of nature by wantonly killing off the birds. By all means let in the light on this subject.

JOHN D. WHISH.

[What are the starling's habits with respect to other birds and to insects in this country? They are abundant in the region of which New York city is the center, and are spreading steadily, hence studying them will be possible over a large area. For good and sufficient reasons the habits of the bird in England cannot be applied to starlings reared here.

As an example of mistakes that may be made, there is the so-called "American squirrel" which, introduced into England, has been credited with acts never or rarely ever practiced by squirrels here, such as robbing birds' nests and devouring young and eggs. Without doubt this "American squirrel" is the red and not the gray squirrel—

CORRESPONDENCE.

The **FOREST AND STREAM** is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Terms: \$3.00 a year; \$1.50 for six months. Single copies, 10 cents. Canadian subscriptions, \$4.00 a year; \$2.00 for six months. Foreign subscriptions, \$4.50 a year; \$2.25 for six months. Subscriptions may begin at any time. Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line (\$2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra. Special rates for back cover in two or more colors. Reading notices, 75 cents per count line. A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 20, and 20 per cent. on 52 insertions respectively. Advertisements should be received by Saturday previous to the issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL
 will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

MIGRATORY GAME BIRDS.

OFFICIALS of the American Game Protective and Propagation Association have just returned from Washington, where they arranged for a hearing in the matter of a national law for the protection of migratory game birds. Three bills for this are now pending. Conferences were held with Senator McLean and Congressmen Weeks, Anthony and Lamb. It is announced that the hearing will be given on March 6 before the House Committee on Agriculture.

It is believed that nothing short of Federal regulation will save the country's migratory game birds, and it is of the greatest importance that all those interested in the measure arrange to attend the hearing and urge the passage of the bills.

WATER POWERS.

THE committee on forests of the New York Board of Trade and Transportation, in a lengthy report, submitted at the board meeting last Wednesday, denounced, in the most vigorous terms, the water-power bills now before the Legislature, reference to which was made in these columns last week. The committee said:

The difficulty heretofore has been that the power owners have been unable to acquire at their own valuation such private property as they covet, and the constitution has prohibited the taking of State property. This scheme would gather in the whole thing and give the power owners what they have so long sought for. Are the people of this State prepared to confer the right of eminent domain upon any private person or corporation, the right to be exercised by one person or a

power corporation to take from another person or another power corporation the private property of such persons or corporations or of the State for the exclusive use and benefit of the other private person or corporation?

The committee questions the legality of some of the provisions proposed, and continues:

This so-called quasi-public eleemosynary corporation which is to be operated without profit to its stockholders is in fact a new conception, a new hybrid organization to be brought into existence, a sort of centaur among corporations, a monster having the head, arms and body of a corporation, united to the body and legs of a holding company; but which is neither a holding company nor a corporation, but which would nevertheless do the part designed for it, and that is manifestly to serve as the medium for gathering in all properties and rights under the form of law, creating a vast aggregation of interests which will eventually be controlled by one of these monsters. This is quite clear, for the same act which provides for their creation also provides the means by which these centaurs may, so to speak, eat each other up—i. e., may acquire each other's property until the last great centaur, having eaten all the others, will alone survive to exploit the State and the people.

In recommending that every effort be made to defeat these Senate bills, the committee says that denunciation in measured terms would be wholly inadequate to express its views of them, and that it is simply dumfounded that any intelligent committee of the Legislature should, with the pretense of regarding the public interests, have recommended such measures for enactment.

ARROW FLIGHTS.

IN a note printed in these columns last September, we commented on the excellent flight shooting of R. P. Elmer at the thirty-third annual meeting of the National Archery Association in Chicago last summer, and several correspondents referred to the subject later on. Dr. Elmer, we now learn, was a novice then, he having read a number of books on archery and practiced it without other instruction, so that the veterans with whom he competed at the national meet were surprised and pleased at the skill he displayed in defeating some of them. His best flight shot was 270 yards.

Dr. E. B. Weston, who has followed the history of archery in America very closely, gives in the Christian Science Monitor a summary of the best flight shots made at any of the meetings of the association. L. W. Maxson, he says, holds the distance record of the association; 290 yards, made in 1891. Two years later C. J. Strong shot an arrow 285½ yards, and Dr. Elmer's score, 270 yards, stands third.

In 1904 Miss Mabel Taylor, of Cincinnati, won the women's prize with 219 yards, which is the association's record for her sex. Second, 211 yards 1 foot, was made by Miss E. C. Cooke, of Washington, in 1891. Third place belongs to Mrs. Albert Kern, of Dayton, Ohio, who shot an arrow 211 yards in 1899.

WHILE the winter has been bitter in the United States, the month of February in England has been even more severe. Frost has locked ponds and streams usually open all winter, and skating, an unaccustomed pastime, is practiced everywhere. The winter birds have suffered terribly, winter residents have been found dead in the fields, sea gulls worn out by cold and storm have alighted in towns, and a specimen of the little auk was found dead in the fields in Northamp-

tonshire. How far the game has suffered from the unexpected severity of the winter will not be known until spring comes, but in spite of all the efforts that have been made to feed the partridges and the pheasants, it is likely that the loss has been heavy and that next season's bags will be poor.

THE advocates of reforestation who have pointed with pride to the efforts put forth by a few railways and other corporations to offset the evils of wholesale lumbering by reforestation, may read with surprise the remarks of Senator Argetsinger, made at Rochester recently. In deploring the unfavorable light in which his State reforestation bill was regarded at Albany, and the probability that the Conservation Commission's reforestation bill would not be passed, the Senator said:

I have found that many owning timber land are opposed to the measure, and also that there is opposition on the part of members of both houses.

The strength of the lumber and pulp interests is very great, and it is their policy to maintain high prices to-day and as far into the future as they may be able to extend their influence. The fewer the trees, the higher will be the price of timber and lumber. How long will the people submit to this policy of ruin?

MR. WHISH's communication, printed in another column, should be carefully considered. The temperature of the water is a very important element in the regulation of the fishing. Taking spawning fish is not advisable. And yet, with the opening day as at present, fishing is allowed while the bass are still spawning in certain waters. The Delaware River is a notable example. Every angler who is familiar with the conditions there knows that many bass are still on the beds on June 16. While the water in that river is cold, it is warmer than some of the bass waters further north in the State. It is of interest in this connection to add that vigorous efforts are being exerted in Trenton to advance the opening date for bass fishing in New Jersey from May 20 to June 15.

UNITED STATES CONSUL JONES, stationed at Winnipeg, Manitoba, says that the recent stampede of prospectors to Minitonas, 257 miles northwest of Winnipeg, was caused by the finding of placer gold in the crops of tame turkeys. The land in the new district is practically all taken up, but the Government retains the right to dispose of all minerals it contains, and requires prospective miners to give a bond in the sum of \$600, for owners of land, although they cannot prevent mining operations on it, must be reimbursed for damages.

HENRY WISNER, of Oregon City, Ore., who has been selected as Director of Fisheries of Uruguay, has signed a five-years' contract with the Uruguayan Government. Two American foremen are to accompany him, and the vessels to be used in connection with his work have been purchased in the United States.

A PRIVATE firm has asked the Government of Argentina to admit free of duty certain machinery which it is proposed to utilize in converting grasshoppers, which are very numerous there, into fertilizer.

YACHTING

Ticks from the Ship's Clock.

PRACTICALLY every one of the fast power boats of last year and the 1912 models will be represented in the Southern championship races to be held April 3, 4 and 5 under the auspices of the St. Augustine Power Boat Club. A partial list follows: Vita, 19 feet 10 inches, 38 horsepower, Daimler Knight, 24 miles; Paula H. Blackton, owner. Vita, Jr., 17 feet 11 inches, 40 horsepower, Humber, 33 miles; J. Stuart Blackton, owner. Ruth K., 32 feet, 45 horsepower, Sterling, 21 miles; Chas. S. Smiley, owner. Jane S., 32 feet, 65 horsepower, Sterling, 27 miles; Chas. S. Smiley, owner. Victor, 31 feet, 40 horsepower, Loew Victor, 22 miles; G. F. Paddison, owner. Manker III., 19 feet 11 inches, 40 horsepower, Hershall & Spillman, new boat; C. B. Phelps, owner. Slipper, 38 feet, 40 horsepower, Murray & Tregurtha, 20 miles; Geo. W. Spaulding, owner. Baby Dixie, 19 feet 11 inches, 65 horsepower, Sterling, 35 miles; F. B. Sicars, owner. Minnow, 26 feet, two 90 horsepower, Simplex, 40 miles; W. Earl Dodge, owner. Golden Rod, 28 feet, 60 horsepower, Fox, 27 miles; P. B. Alsbrook, owner.

THE Colonial Y. C. has arranged for a long motor boat race on June 22. It will be from the club house, down the Hudson River, up the East River and through the Sound to Cornfield Point Light and return, distance 183 nautical miles. The prizes, five in number, have been presented by C. C. Hunt, a club member.

Preparing for the Yachting Season.

SAN FRANCISCO, Cal., Feb. 12.—*Editor Forest and Stream:* The various yachting clubs on San Francisco Bay are preparing for the 1912 yachting season and within a few weeks the schedules of the various organizations will be made ready. Several new club houses are being erected this season, new boats are being built and the outlook is for much activity in yachting circles.

The South Bay Y. C., which makes its headquarters at San Jose, recently held its annual meeting and election of officers, the officials chosen being as follows: Commodore, Thomas E. Gibson; Vice-Commodore, E. Knickerbocker; Port Captain, Martin Jensen; Secretary, N. E. Wretman, and Treasurer, J. B. Harmon. This club is now planning its annual jinks, which it terms, "A Night in Venice," and members of the Corinthian Y. C. of San Francisco have been invited to attend this.

The Vallejo Yachting and Rowing Club, of Vallejo, Cal., held its annual meeting on Jan. 26 and officers were chosen as follows: Commodore, Grant L. Allen; Vice-Commodore, J. L. Beard; Fleet Captain, Teddy Swenson; Port Captain, David Barry, Jr.; Financial Secretary, J. P. Scully; Recording Secretary, J. A. Browne; Treasurer, S. J. McKnight; Measurer, W. A. Kirkland; Directors—H. F. Stahl, G. F. Hilton, N. W. Farmer, David Barry, Sr., and J. W. Oliver; Regatta Committee—Horace Ezzell, L. C. Kaarsburg and H. Bergwall.

The annual meeting of the Corinthian Y. C. of San Francisco was held on the evening of Jan. 31, and was attended by about seventy-five members. The officers elected for the season of 1912 were: Commodore, E. J. Convey; Vice-Commodore, H. E. Picker; Port Captain, J. H. Keefe; Treasurer, C. F. Morel; Secretary, H. W. Westerfeld; Directors—the above with William J. Hogg and J. F. Campbell. The Regatta Committee consists of William A. Barlage, Geo. Lux and W. W. Coates. Following the business session a banquet was served and at this W. J. Hogg, retiring Commodore, was presented with a fine clock. T.

F. Tracy is acting as secretary during the absence of H. W. Westerfeld, who is on his way to Europe. Work is progressing rapidly on the new club house at Tiburon, and this will be ready for occupancy by the first of May. GOLDEN GATE.

Late Cruisers Southward.

NEW ORLEANS, La., Feb. 14.—*Editor Forest and Stream:* During our trip down the Mississippi I saw a great many cruisers, I mean people, not boats, headed for the South. They were for the most part in boats that were unsuitable for the work of knocking along the rivers. One poor man who has never reached here was in a little platform rigging set upon two small skiffs, a tent within a tent covering the outfit. The last we saw of him was above Cape Girardeau, Mo., where the very pleasant natives on the Illinois side annexed my setter dog, through a process of benevolent assimilation—collar, chain and kennel.

The average person thinks that anything will do to run down the Mississippi. It will not. Neither can a fool make the trip in any sort of water. It takes a modicum of common sense. One must be careful about landings and making fast for the night, carry plenty of anchorage, have extra engine parts and double tiller lines and wheels, a big fresh water capacity. These things do not worry much above Cairo or St. Louis or down the Illinois or Ohio, for there are towns of importance where one can always get fixed out if something gives way with the engine. Below Cairo machine shops are so few and far between that if you look long at the map it will prevent your taking the trip. On a river trip I would advise a solid built, light draft boat, not drawing more than three feet, and two would be better, though if you expect to make the Florida coast trip, better have three-foot draft and ballast heavily when you get to New Orleans. There are lots of good places to draw out in New Orleans and repair, and shafts will generally have to be rebuilt, owing to the sand in the water, its cutting into the stern bearing and shaft.

Repair men tell me that every boat making the trip has to begin at the shaft and stern bearing. Be prepared for the merciless banging out of a boat on the river before starting.

AMOS BURHANS.

Foreign Built Yachts.

THE Commissioner of Navigation has just issued a report which once more brings attention to Representative Francis Burton Harrison's bill relative to yacht taxation, recently introduced at Washington. Mr. Harrison says that because of the Payne-Aldrich law compelling the payment of \$7 a ton per annum on foreign-built vessels purchased by citizens of the United States, owners are selling their boats abroad and chartering them for the short time they need them on this side. In addition to this, many American owners have broken their yachts up and sold them for junk rather than pay the \$7 tonnage tax. Thus far tax payments amount to \$33,864 (since September, 1909, when the law became effective), \$26,118 of this amount coming from the late Joseph Pulitzer for three years' taxes on his yacht Liberty.

The following list shows foreign-built vessels and reasons why they are exempt from duty:

Anemone, 118.00, C. L. Tutt estate, sold foreign, May, 1910.
Apache, Edmund Randolph, sold foreign.
Arethusa, 18.00, Frank E. Wood, sold foreign.
Asteria, 421.00, Alexander Gordon, sold foreign.
Calanthe, J. Arthur Hinckley, sold foreign.
Candida, 151.00, Leon S. Kahn, sold foreign.

Caress, Charles M. Hall, dismantled.
Conqueror, 386.00, F. W. Vanderbilt, sold foreign.

Cysne, E. B. Morton, broken up.
Eelin, 43.81, Lindsley Loring, burned.
Enchantress, Nathaniel L. McCready, sold foreign.

Erl King, 440.74, A. Edward Tower, sold foreign.

Gulnare, 204.00, sold foreign and lost.
Gunilda, 390.85, W. L. Harkness, sunk in sixty fathoms Aug. 31, 1911.

Hathor, Herbert Morris, sold foreign.
Hermione, 270.09, Henry L. Pierce, sold to United States Government.

Hildegarda, 111.61, Frank R. Long and J. L. Swarze, broken up.

Jessica, M. Roosevelt Schuyler, used as a house ashore at Nyack, N. Y.

Khama, George L. Batchelder, broken up.

Lady Evelyn, 81.07, C. Williamson, wrecked.
Miranda, 84.69, Charles N. Nelson, broken up March, 1910.

Queen Mab, 40.50, Lucius H. Smith, broken up.

Sapphire, 541.00, Henry E. Converse, sold to United States Government.

Satanella, 169.00, M. J. Lawrence, dismantled.
Senta, John Fish, dismantled.

Sybarita, W. Gould Brokaw, dismantled.
Tuscarora, 533.00, Walter Jennings, sold foreign.

Valiant, 1,823.23, William K. Vanderbilt, sold foreign.

Varuna, 1,434.48, Eugene Higgins, wrecked.
Vivid, unknown.

Total, thirty yachts, 7,232.07 tons.

Forty-nine yachts built abroad and understood to have been owned on Sept. 1, 1909, and to be now owned by citizens of the United States have not paid the tax, as their owners generally have combined to test the validity of the law. The case is now before the Supreme Court of the United States.

Another point in the connection that generally is not known is the fact that whether or not owners pay the tax, they may not fly the American flag over a foreign-built vessel. This law, originally made in England, was confirmed in this country after the Revolution, along with other iniquitous barbarisms long passed out of existence in England, but which continue to flourish here. Shipping Illustrated writes editorially as follows:

"To this law may be traced the decadence of shipbuilding in our country, for it is evident that were it possible for American owners to acquire ships wherever available at a low price, the amount of repair work, necessary for the maintenance of these foreign-built vessels alone would keep American shipyards busy. The yards competent to do the repair work speedily become, as has been found in Germany, competent to build ships themselves, and so the shipbuilding industry develops. Give the merchant half a chance to naturalize his ships, just as the owner himself may be naturalized, if he happens to have been born abroad, and see how quickly he will grasp it. The policy is earnestly recommended by practical men to all those who have the welfare of American waterborne commerce sincerely at heart. It is a policy the precedent of which has been so well-established and the working of which has been so fully demonstrated as successful that there should be no serious opposition to its acceptance for general application."

Whether the decadence in ship building in America may justly be attributed to taxation or to the prohibition to the use of the Stars and Stripes, as our contemporary feels it should, the figures from Maine alone emphasize the decline in that once great industry. In 1911 the entire output of the State, including all sorts of craft, even to four vessels for United States Government was less than ten thousand tons, while in years past, previous to the passage of the Payne-Aldrich law, tonnage seldom fell below 30,000, and often ran as high as 70,000. In Maine only one yacht was built last year, Hesperia, owned by Chester A. Cogdon, of Duluth, Minn., a wooden vessel of twenty-three tons.

Simple Navigation.

BY A. G. GOLDSMITH.
(Concluded from page 216.)

To name the deviation correctly, either east or west, let the observer imagine himself standing at the center of his compass looking toward the bearings of the objects in question, then—

If the magnetic bearing is to the right of the observed bearing, name the deviation east.

If the magnetic bearing is to the left of the observed bearing, name the deviation West.

EXAMPLE—YACHT'S HEAD BY COMPASS, NORTH.
Magnetic bearing of A and B..... N. 30 W.
Observed bearing of A and B..... N. 27 W.
Deviation 3 W.

EXAMPLE—YACHT'S HEAD BY COMPASS, WEST.
Magnetic bearing of C and D..... N. 88 W.
Observed bearing of C and D..... S. 88 W.
176
180
Deviation 4 E.

In this case, one bearing being north and west, while the other was south and west, it was necessary to add the two together and subtract their sum from 180 (the total number of degrees in both quadrants) in order to find the amount of the deviation. It is named of course in the usual way.

In many ports there are marks specially put up, either on the dock walls, or in the shape of buoys moored in the harbor or roadstead, whose correct magnetic bearing, taken in line with some building, tower or other leading mark, are published in the port authorities' book of rules, also in Brown's Nautical Almanac. These are of considerable use to those who wish to test their compasses for deviation before proceeding on a cruise, as it saves them the trouble of finding reliable marks elsewhere.

There are of course other methods for ascertaining the deviation of compasses, applicable to cases where it is impossible, or inconvenient to obtain bearings of objects ashore or afloat, but as these methods involve stellar or solar observations, I propose to deal with them later.

Given a reliable compass, then, whose deviation has been obtained by the foregoing means, the amateur navigator must turn his attention to choosing a stock of large scale charts of the coasts off which he intends cruising.

Old charts should not be relied upon, especially in narrow waters, as the position and character of the buoys and lights marking the reefs and other dangerous places, to say nothing of the depths of the water on the shoals and bars, are constantly changing. The average price of a perfectly up-to-date chart is 11s., so even if half a dozen are required, the outlay is not a very considerable one.

For laying off bearings on the charts, there is nothing to equal an ordinary pair of parallel rulers, which, being engraved on the front edge and ends with marks representing the degrees contained in two right angles, enable the navigator to dispense with the awkward little compasses drawn in various places on the chart, and lay all his bearings down from one of the meridians of longitude.

One hears a lot said about course protractors, station pointers, etc., but very few professional navigators ever make use of them outside the navy, for they are quite unnecessary, and of no particular advantage. Another point against them is that they are by no means inexpensive (especially the latter), so the amateur navigator will do well to dispense with them altogether, and lay his money out in more useful directions.

A somewhat expensive but exceedingly useful little instrument for taking compass bearings is that known as Sir W. Thomson's Azimuth Mirror. Despite its somewhat puzzling name, it is exceedingly easy to use, being simply a little prism, which when placed on the glass cover of the compass bowl enables the navigator to reflect objects on the horizon or elsewhere directly on

DIAGRAM 3.
Compass as found marked on a true chart.

DIAGRAM 4.
Compass as found marked on a magnetic chart.

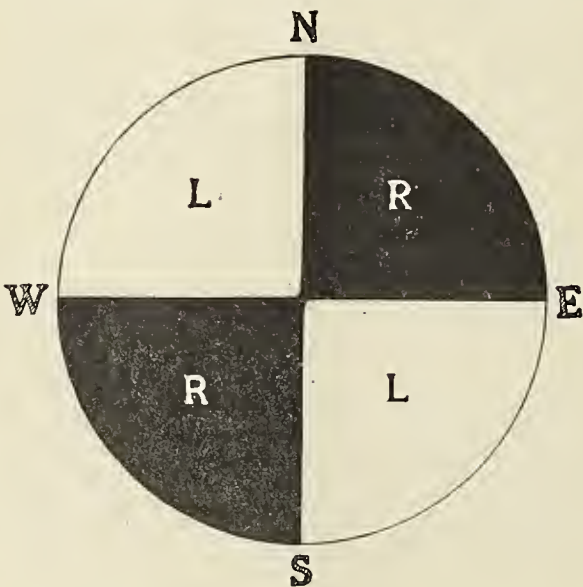

DIAGRAM 5.
All courses and bearings in black quadrants are right-handed; those in white quadrants are left-handed.

to the rim of the compass card, from which their bearings can be determined to a fraction of a degree at a glance. Most yacht's compasses are fitted with sight vanes, but none of these are nearly as easy to manipulate, or yet so accurate as this simple little Azimuth Mirror.

Turning now to the subject of charts, one frequently hears navigators talking about "working from true charts" or "working from magnetic charts"

This may be somewhat muddling to the begin-

ner, and is due to the fact that the majority of coasting "skippers" will still favor the old method of using the compasses drawn in certain places on the charts for the purpose of reading off bearings and laying down courses. The modern navigator never by any chance pays the least attention to them, except to read from them the amount of the local variation.

What is known as the "true chart" is one in which the compasses inscribed thereon—regardless of the existing variation—have been placed with their north points exactly over one of the meridians of longitude. On the other hand, magnetic charts are those in which the compasses are drawn with their north points either to the east or west of the meridian, according to the amount of the local variation. There is, however, no need to trouble with them at all if a pair of Field's rulers are employed. Personally, I have seen more dangerous mistakes made through using them, to say nothing of general inaccuracy in the laying down of courses and bearings, etc., owing to their small diameter and indistinctly marked points and degrees, than from any other means whatsoever.

I have of course met many men who invariably did all their calculations in points and reduced all bearings to magnetic ones, using an ordinary pair of rules and these compasses engraved on the charts. I have also had the pleasure of pointing out to many of them the all-round advantages of using Field's rulers and working in degrees. In the majority of cases they immediately adopted this latter method, finding it as superior to the other as the metric system is to our British "rod, ell, link, pole, furlong, etc.," measures.

The following example will clearly demonstrate the simplicity of this system of chart work:

The navigator wishes to set a course from his position A to pass five miles south of a point C. Placing one edge of his rulers straight along a meridian, he works them across until they are directly over C, drawing a line from it when he had done so. This line bears due south from C. Then he takes his dividers, and measuring five miles on them from the latitude column at the side, proceeds to mark off the required distance on this line. This spot we will call B. Placing the front edge of the rulers, upon which the degrees are cut, so that it passes exactly through the points A and B, he proceeds as in the case of finding the magnetic bearing of the two objects shown in Diagrams 1 and 2.

Having found the true course, he then turns it into the corresponding compass course by the following rules:

(1) To turn a true course into a compass course—

If variation or deviation is east, allow it to the left of true course.

If variation or deviation is west, allow it the right of true course.

The result is the course to be steered by compass.

(2) To turn a compass into a true course—
If variation or deviation is east, allow it to the right of compass course.

If variation or deviation is west, allow it to the left of compass course.

The result being the true course.

In this case we will suppose that the true course from A to B is N. 70 E., the variation we learn from the chart is 13 degrees west, and the deviation, we note, on referring to our compass deviation card, for N. 83 E.

(N. B.—Always apply the variation to the true course before referring to the deviation card, as it gives greater accuracy) is two degrees east. He then proceeds in this fashion:

Rule 1.
True course (right hand)..... N. 70 E.
Variation (right hand) 13 W.

Rule 1.
Magnetic course (added because both are right hand)..... N. 83 E.
Deviation (left hand)..... 2 E.

Compass course (subtracted because one is right hand and the other left) N. 81 E.

This is the course the navigator must steer from his position A in order to pass five miles south of the point C.

From this it can be seen that in order to revert this compass course to a true course, we must simply reverse the above process thus:

Rule 2.

Compass course (right hand)..... N. 81 E.
Deviation (right hand)..... 2 E.

Rule 2.

Magnetic course (right hand)..... N. 83 E.
Variation (left hand)..... 13 W.

True course (right hand)..... N. 70 E.

What is meant by right and left hand bearings and courses can best be explained by diagram (Diagram 5). The navigator must suppose himself standing at the center of the compass, facing either of the poles. Bearings which lie in the quadrant on his right are called "right-hand" and those which lie in the quadrant on his left are called "left-hand."

Thus, all bearings between north and east, or south and west, are termed right-hand bearings, while those between north and west and south and east are said to be left-hand bearings. In dealing with them in all problems pertaining to correction of courses, etc., like signs (such as two rights or two lefts) are always added, while unlike signs are always subtracted.

Once the amateur navigator has made himself perfectly familiar with the use of his Field's rulers, and can correct his bearings and courses easily and accurately by the above methods, he has made the first real strides toward a sound knowledge of navigation.—Yachting Monthly, England.

Canarsie Y. C.

At the annual meeting of the Canarsie Y. C., Louis Wedel was elected commodore. Joseph R. Hodgson retired after serving two terms during which time the club has grown in numbers and financially. Mr. Wedel is a young, enthusiastic yachtsman under whose guidance the club is certain to continue in prosperity and power. Other officers are: Vice-Commodore, Nat G. Bennett; Recording Secretary, J. Halstead Patterson; Financial Secretary, George E. Winters; Treasurer, John P. Sparr; Measurer, J. W. Fletcher; Trustees for two years, Joseph H. Hodgson, Joseph B. Acker and John Dewes.

Thomas M. Mannion, who served as fleet captain under Commodore Hodgson, was reappointed by Commodore Wedel. The committees are as follows: House, George G. Brown, Chairman; Herman Green and Edward Hayes, Regatta; Martin R. Plage, Chairman; E. T. M. Cane and George Masters, Entertainment, Fred S. Titus, Chairman; John L. Fedliesen and Fred von Staden, Membership, H. C. Hafely.

Club Elections.

ST. AUGUSTINE POWER BOAT CLUB.

Results of annual election of the St. Augustine Power Boat Club was held on Feb. 7, 1912: Commodore, Geo. W. Gibbs; Vice-Chairman, Seth Perkins; Rear Commodore, W. M. Wright; Treasurer, Guy Farris; Secretary, Chas. F. Hopkins, Jr.; Fleet Captain, F. O. Iwanowski; Board of Governors, E. W. Howatt, X. Lopez, A. M. Taylor, H. Muller and J. T. Pacetti.

The meeting was most enthusiastic and the prospects for the brightest future possible was conclusively shown, especially so far as racing is concerned. The Southern championship races being a meet of national importance.

An Appreciation.

BUFFALO, N. Y., Feb. 5.—*Editor Forest and Stream:* Just a line in appreciation of the current article in FOREST AND STREAM entitled, "A Trip to Honolulu in a Bark." It is fine and well written and more acceptable perhaps on account of the present scarcity of such articles describing the real thing in sailing. I know

there are lots of readers of FOREST AND STREAM who will be delighted with the story. In these degenerate days of gasoline it certainly is a relief once in a while to get a little salt air blown in in that way. Let us have this season in your yachting columns photos and designs of new racing sail craft in the Lakes as well as on the coast, and stories of cruises and illustrations; in fact, keep up the reputation of your paper as the authority on yachting.

L. G. N.

Motor Boating

Small Speed Boats.

It needed the coming of the Pioneer in 1910 to stir us to life and make us realize that the hydroplane was a factor to be considered in speed boats and the great possibilities of this type.

Since the advent of the light gasoline motors, which only in recent years have arrived at their present perfection, much experimenting in high speed boats has been done throughout this country, resulting in wonderful performances by recent speed boats. Even a few years ago any man predicting such speeds as were made at Huntington last summer by various boats, would have been scoffed at by most "experts," the most spectacular of the 1911 racers being the wonderful Dixie IV., fastest boat in the world, the idol of all motor boat enthusiasts in this country.

The Dixie Junior is the ideal small racing hydroplane to-day. This craft is being designed by Messrs. Tams, Lemoine & Crane, pioneers in the designing of motor boats.

The Dixie Junior is guaranteed to have a speed of 35 miles an hour. She will be 20 feet long, 4 feet 6 inches beam. The model of the boat is the result of the experience gained by Messrs. Tams, Lemoine & Crane in the designing of such famous racers as Vingt Et Un, Challenger, etc., world famous boats in their day, and Dixies I., II., III. and IV., all the latter being winners of the British International trophy. Under Mr. Crane's supervision, exhaustive model tests of this special 20-foot hydroplane were held this fall and winter in the official Government testing tanks at Washington. No expense was spared to make the results absolutely certain.

The construction of the boat is substantial throughout, strength not having been sacrificed to attain speed, and only the best of material and workmanship have been used. Frames and floors of elm, yellow pine plank-sheer, selected mahogany planking, copper fastened. She will have three double planked bulkheads. Shafts of Tobin bronze, propeller Manganese bronze, the latter being specially designed for the boat by Mr. Crane. Metal fittings throughout will be of brass or bronze.

Dixie Junior can be carried in the davits of yachts of even comparatively small size.

The Staten Island Shipbuilding Company, who built Dixie IV., are building the Dixie Juniors.

The arrangement of the boat has been very carefully worked out. Forward is a small turtle back deck, directly aft of this is the helmsman's cockpit, in which are two comfortable seats. Throttle, clutch, etc., are arranged as in an automobile, so as to insure perfect control by the driver at all times. Aft of the cockpit is the engine compartment, motor being under a hood. All parts easily accessible. There is an engineer's cockpit abaft the motor, followed by a small deck. The helmsman's seat being forward of the motor does away with the objectionable gases and noises, and her flare forward is sufficient to throw the spray well aft of the man at the wheel, assuring him a dry, comfortable place.

The motor is a special six-cylinder Sterling, 5½ bore, 6-inch stroke, rated 45-65 horsepower. These engines are having some slight alterations made in them to make them more

efficient for the hard usage that they will probably be put to, having in view the production of an engine that will stand up under the most adverse conditions, and that can be absolutely relied upon to finish any races entered into. The motor without question is one of the smoothest, quietest running engines built. The cylinders are cast in pairs, an arrangement which reduces the number of joints and possibility of leakage to a minimum. Cylinders and valve seats thoroughly water-jacketed. All gears, cam shaft, and in fact every essential to the operation of the motor are covered, nothing being exposed, all parts easily accessible. Reverse gear of special design is placed in an extension of the lower base. Crank shaft, of special analyzed steel, the lower base, also special, that is, water-jacketed, thus cooling the oil in the base of the engine. A special steel fly wheel has been built for these motors.

The ignition system is of the Bosch 2-spark dual type. As to horsepower the motor will develop about 85 B. H. P. at 1,000 revolutions, and at 1,200 revolutions per minute probably better than 95 B. H. P.

Any purchaser of a Dixie Junior may see his own motor tested in the works of the Sterling Engine Company, Buffalo, or deputize some one to represent him at the test if he sees fit. So much for the engine, which was selected in the first place only after careful consideration on account of its mechanical efficiency, general simplicity and well-known reliability.

As Mr. Crane once said in speaking of Dixie IV., "We wanted a boat that could race 30 miles in moderate weather, then do it again to-morrow, and, if necessary, the next day." This also applies to Dixie Junior.

These boats are being built as a stock class and therefore only a limited number are available for sale.

Los Angeles M. B. C.

THE Los Angeles Motor Boat Club, at its annual meeting, elected the following officers for the ensuing year: President and Commodore, Roy L. DeCamp; First Vice-President and Vice-Commodore, R. C. McClay; Second Vice-President and Rear Commodore, Roy F. B. Shaver; Port Captain, W. J. Wiklie; Treasurer, C. J. Black; Secretary, E. R. Abbott; Directors—Clement L. Shinn, Dr. Walter N. Vilas, Geo. H. Rector.

This club is a young one, only being in existence about a year, but has a live membership of sixty-two, all hustlers and motor boat enthusiasts, and owners of some of the finest fishing and speed boats on the coast. Many

ARCTIC HUNTING

For charter, ship fully equipped, specially built for ice work, for one or more months' cruise in Greenland or Spitzbergen and Franz Josef's Land waters, will accommodate party of 5 to 15. Polar bear, reindeer, fox, seal, walrus, Arctic birds, fishing.

Tenth edition. Published 1904. We have a copy in fairly good condition, published at \$12, which we will sell for \$9.00.

FOREST AND STREAM PUBLISHING CO.

handsome cruisers capable of making long ocean trips are among its fleet.

They have comfortable quarters at their club house with a safe anchorage.

The coming season will see many cruises to the islands, and a number of races will be pulled off with handsome cups and other prizes for the winners.

There being forty-eight motor boats in the fleet with several others under construction, it means that the members are looking forward to great enjoyment on their many outings.

The climate here admits of all year cruising to a great extent, so there are but few of the boats out of commission at any time.

E. R. ABBOTT.

A Wireless-Operated Boat.

THERE was exhibited on the Danube at Vienna, says Consul-General Charles Denby, Vienna, Austria, during the last week, a boat which is controlled by wireless electricity from the bank, without any person being on board.

This boat (a photograph of which is on file in the Bureau of Manufacturers) is described as being constructed on the system of Wirth, Beck & Knauss, of Nuremberg, Germany. It has attracted many spectators—military, scientific, and the simply curious—who pay a small sum for admission to the immediate vicinity of the operator on the bank. The boat carries a storage gattery which furnishes its motive power, the "system" or invention consisting in the adaptation of wireless electric waves of different length to the control of the motive power, steering gear, and other mechanism. This system, it is also claimed, will prevent disturbance by electric waves elsewhere generated within the same sphere of influence.

At a recent exhibition the boat was manifestly operated without other control than that exercised by the manipulator of the wireless mechanism on the bank. It moved forward and back, turned right and left, described figures, was guided to definite points, rang bells, exhibited flags and lights, fired guns, etc., giving proof of effective control. The mechanism is, however, far from perfect; the speed is not great, the responses to the operator's will are hesitating and inexact, and the range is limited to a few score yards. The exhibition, in fact, was notably only as the beginning of the de-

velopment of a mechanism of possible great importance.

Aug. 27-29.—Portland, Ore.—The Interstate Association's seventh Pacific Coast Handicap tournament, under the auspices of the Portland G. C.; \$1,000 added money. The winner of first place in the Pacific Coast Handicap is guaranteed \$250 in cash and a trophy. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.

Sept. 2.—Ogdensburg (N. Y.) S. A. J. M. Morley, Sec.

Sept. 10.—McKeesport, Pa.—Western Pennsylvania Trapshooters' League tournament, under the auspices of the Youghiogheny Country Club. R. J. Caughey, Sec'y.

Sept. 10-13.—Denver, Colo.—Rocky Mountain Interstate Sportsmen's Association; \$5,000 added money. Ambrose E. McKenzie, Mgr.

DRIVERS AND TWISTERS.

The seventh Pacific Coast Handicap tournament will be held at Portland, Ore., Aug. 27-29, under the auspices of the Portland Gun Club. There will be \$1,000 added money.

Elmer E. Shaner, Secretary-Treasurer Interstate Association informs us that the United States Cartridge Co., Ltd., of Lowell, Mass., has been elected to membership in the Interstate Association.

Under the heading "Rules at the Olympic Games," in another column, will be found letters from prominent amateur and professional trapshooters, including one from Elmer E. Shaner. They are well worth reading.

The Orange Gun Club, of Orange, N. J., recently elected their officers for the coming year, as follows: Dr. Geo. W. Wakeley, President; Roland Hopper, Vice-President; Abram Mosler, Treasurer; F. R. Wicks, Secretary.

Lots of the younger shooters among the yacht clubs will bear watching. At Marine and Field Club, Chas. B. Ludwig has been improving consistently. On Lincoln's Birthday he won the Lincoln cup with pretty near a full score, getting 49 of his 50.

Any gun club that has not yet had a copy of "The Sport Alluring," by Ed. Banks, should get one at once. It is full of valuable information to the novice and of no less interest to the amateur expert. The book will be sent free of charge to any one mentioning FOREST AND STREAM in their request to the advertising division of the E. I. du Pont de Nemours Powder Co., Wilmington, Del.

Elmer E. Shaner, Secretary-Treasurer, sends the following: "I beg to advise you that the directors of the Interstate Association have appointed J. W. Bell, St. Louis, Mo.; A. C. Conner, Springfield, Ill.; Frank Fuller, Mukwonago, Wis.; Ray E. Loring, Marseilles, Ill., and John H. Noel, Nashville, Tenn., a committee to allot handicaps to entrants in the coming Grand American Handicap at Springfield, Ill."

J. M. Corey, Secretary, writes: "The Saratoga Gun Club recently reorganized with a membership of about fifty, and the number will soon be increased to about one hundred. In former years the Saratoga Club was one of the foremost clubs in the State, but through lack of interest it soon disbanded. The New York State shoot was held here at one time, and upward of three hundred shooters faced the traps. An interstate shoot is planned by the members, to be held some time this spring, and it is hoped that we will have a bit attendance. At present we are shooting from three experts, but will soon have automatic traps installed. Shooters are cordially invited to participate in any of our shoots, and manufacturers' agents invited to call on us when in this vicinity. The officers of the club are: Harry Lev-

engston, President; J. K. Walbridge, Vice-President; J. M. Corey, Secretary; P. B. Kearney, Treasurer. Shoots are planned for all holidays and Sundays."

Harry Kahler, one of the youngest shots in the country, is out to secure the world's championship of white flyers this season. Following his match with J. S. Gay, the Kentucky champion, which will be shot at Lexington, Ky., on Feb. 26 and 28 and March 1, if a third shoot is necessary, the Philadelphia marksman will accept all challenges, regardless from whom and whence they come. Kahler this year has made an exceptional record, both at targets and white flyers, and his coming tests with Gay are attracting widespread interest throughout the shooting community. Each one of his races with Gay will be at 100 birds, the winner of the series to pull down the \$3,000 purse which has been offered. All of the shoots will be decided in Lexington on the grounds of a private club.

BEECROFT.

Crescent Athletic Club.

BAY RIDGE, N. Y., Feb. 17.—Three thousand clay birds were sprung from the Crescent Athletic Club's traps yesterday, and the returns show that a good portion of them were recorded "dead." A good muster of gunners reported at the firing line in squads of five, and as the conditions were much to their liking, many full scores were made. The summaries:

Take-home trophy, 100 targets, scratch:

C H Pulis	98	F S Hyatt	85
F B Stephenson	94	J P Fairchild	85
C W Berner	91	L C Hopkins	81
A Bryant	90	G E Brower	81
J F James	88	G G Stephenson, Jr.	79
J A R Elliott	88	H F Spooner	77
C R James	87	W W Marshall	66

February cup, 25 targets, handicap:

C R James	0 23-46	G E Brower	4 16-37

New York Athletic Club.

TRAVERS ISLAND, N. Y., Feb. 17.—R. L. Spotts, with a total of 97 out of 100, was the high gun in the weekly trapshooting contests yesterday at the New York A. C. traps at Travers Island. The weather was ideal for the sport, and an unusually large number of spectators were on hand. A squad of twenty-one gunners would also speak well for the popularity of the events. Mr. Spotts, in addition to having the high score of the day, carried off legs on three trophies, donated by Messrs. Lenane, Lembeck and Billings.

February cup, 25 targets, handicap:

C J Corbett	0 22	R L Spotts	0 23
A E Ranney	1 17	B M Higginson	0 21
O C Grinnell	1 24	D F McMahon	2 22

Stock Exchange Handicap.

BAY CHESTER, N. Y., Feb. 17.—The bulls and bears, members of the New York Stock Exchange, held their annual championship at the Country Club here to-day. The traps, facing Stepping Stones lighthouse, looking over the Sound toward August Belmont's house, offered a fine, clear line on the targets, and as a result, good scores were made. Prentiss Kellogg won the championship with 86 out of 100, beating Stuart Scott, title holder, by one bird. Geo. M. Seidenberg won the handicap.

Stock Exchange handicap, 100 targets:

Hdcp.		Ttl.		Hdcp.		Ttl.	
G M Seidenberg	40	100	S Scott	0	85		
G C Miller	30	100	C B Spears	10	85

Chicago Gun Club.

CHICAGO, Ill., Feb. 10.—With zero weather again on tap and a sharp wind blowing, the ten shooters who came out to-day had their troubles trying to break targets. Cold fingers would not always point the gun in the exact spot, while the shooter tried to hold, and consequently many of the targets kept soaring on without a scratch.

Graham did fine work when he broke his 47 out of 50 in the club event, Fetherston and Ammann each scoring 43 in the same event.

Barto, Ammann and Graham each broke 12 out of the 15 in the practice event. Goode, Ammann and Jeff each made the same score on 15 targets, following the club event.

MacLachlan topped the list on the doubles, breaking 37 out of 24 pairs. Goode and Jeff each scored 31, while Graham broke 30.

Events:	*	1	2	3	4	5	6
Targets:	15	50	15	10	25	12p	12p

C W Fredericks.....	4	21	..	5
L M Fetherston.....	..	43

Feb. 11.—During the night the weather grew warmer and this morning it started to snow, and for awhile it looked as though we were in for a snowstorm, but by noon it stopped snowing and we had a fine afternoon for shooting, which was appreciated by the twenty-four shooters as well as quite a number of spectators. Among the latter was Mr. J. H. Shrigley, who is just able to be out after suffering with bronchitis, which kept him in bed for three weeks.

Most all the marksmen put up good scores. Hardy Wolf is especially well pleased with his 96 out of 100, which was his total for the three events in which he participated. In the practice event at 25 targets, Wolf, Goode and Davis each broke 23, while Kammerer, Jeff, Young, Keller and Donnelly each scored 22.

In the club program event at 50 targets, Wolf and Collins tied with scores of 49, Fetherston, Goode, Young, Seelig, Sr., and Graham each breaking 47, while McDermott and Keller each scored 45.

C. C. Collins, our good friend from Indiana, who was in the city for the day, took first honors in the event at doubles by breaking 21 targets out of 12 pairs. Young and Clancey each scoring 19, while Crocker brought down 18.

Wolf and Clancey each wound up his day's shooting by breaking 24 out of 25 in the last event, Goode, Kammerer and Donnelly finishing up with scores of 23.

Goode, May, Kammerer and Jeff came out early and had a splendid time in shooting a number of interesting match races, the most important one being a team race between Kammerer and Jeff, who defeated Goode and May, their scores being 89 to 71 respectively.

This is the second time the latter team had to buy dinners, but Doc says that he will help even matters up when he gets that new pump to working just right.

Mr. W. K. Cochrane is one of those who is right "at home" with a gun when in the field, but is just breaking into the trapshooting sport, and we hope to have him with us quite often in the future.

Robin Hood Gun Club.

CONCORD, S. I., Feb. 14.—The Robin Hood Gun Club held their regular shoot on Lincoln's Birthday, at their grounds at Concord, Staten Island. Eight guns faced the bitter cold weather to try their eye on the bluerocks. The main event was for the 1912 cup at 100 birds, to be won three times. B. Beyersdofer won the first leg.

B Beyersdofer	87	G Conelley	77
G F Hutchings	73	J Bardes	66
S Edwards	83	C Rowley	75
W L Bush	72	A Meyers	78

C. Rowley won the first leg on the Du Pont watch fob.

The scores:			
C Rowley	22	G Conelley	15
G F Hutchings.....	17	W L Bush	18
S Edwards	16		

GEO CONELLEY, Sec'y.

Inter-Club Record Again Boosted By

WINCHESTER

.22 Cal. Rifles and Cartridges

WONDERFUL to tell, the phenomenal Inter-Club Record of 995 out of a possible 1,000 points made by the Winchester Rod and Gun Club, of New Haven, Conn., has been beaten, but it took the same club to do it and the same shooting equipment. The new record was made in the match between the above club and the Bridgeport Club on February 13th. The table shows how and by what members it was accomplished:

Composite of the 100 Shots

G. W. Chesley, - - -	200
Capt. W. H. Richard, - - -	199
H. S. Williams, - - -	199
M. O. Buttsteadt, - - -	199
Capt. A. F. Laudensack, - - -	198
Total	995

Composite of Chesley's Targets

This makes three times in succession members of the Winchester Rod and Gun Club have broken the Inter-Club Record, and in each instance every shooter used exclusively Winchester Rifles and Cartridges. If anything were needed to further convince informed shooters that Winchester Rifles and Cartridges have exceptionally good shooting qualities, these performances would change their conviction into a dead certainty.

You Won't Go Wrong If You Shoot The Red W Combination

Essex County Gun Club.

ORANGE, N. J., Feb. 12.—Twelve gunners turned up on Lincoln's Birthday at the traps of the Essex Country Gun Club in West Orange. Fair scores were made, Ernest von Lengerke scoring the best string of the afternoon. C. O. Geyer was a triple winner for the afternoon. With a handicap of 4 in 25, he won a leg on Class B cup, the secretary's cup and the R. D. Unger trophy. William Miller, a former president of the Orange Gun Club, came down from his home on the Delaware River to show his continued interest in the club's welfare and warm up with the boys. Other visitors were Dr. Poor, or Orange; William McNamara, of Newton, and Chas. T. Day, of the Smith Gun Club, Newark. In the 25-bird events the scores made were as follows:

Events:	1	2	3	4	5	6	7	8
Miller	16	8	12	15	12
Mosler	21	16	15	13	19	18	22	..
Dukes	21	22	19	16	19	18	20	19
Geyer	15	14	19	16
E von Lengerke.....	21	23	19
H von Lengerke.....	17	16	19	17
J von Lengerke.....	18	15	17
J von Lengerke, jr.....	19	13	19
Wicks	15	14	12

Ossining Gun Club.

OSSINING, N. Y., Feb. 14.—Thirteen shooters faced the traps here on Lincoln's Birthday, Feb. 12. The thermometer was edging around the zero mark, which accounts for poor scores. The feature was a team match between Mt. Kisco Gun Club and Ossining Gun Club, five men on each team, 50 birds each. Mt. Kisco won by 4 birds. The scores:

Mt. Kisco.		Ossining.	
Remsen	43	Blandford	46
Benedict	39	Smith	40
Parks	39	Bedell	39
Sutton	37	Hyland	36
Betti	34-102	Holden	27-188

In the prize event at 25 birds the following scores were made:

Benedict	24	Moran	20
Hyland	23	Blandford	18
Bedell	22	Fisher	18
Remsen	22	Sutton	18
Betti	22	Tuttle	16
Parks	21	Holden	16
Smith	20

Essex County Country Club.

NEWARK, N. J., Feb. 17.—Albert O. Headley, with a handicap of 6 targets for every 25, walked away with all but one of the six contests. In the one event which he failed to win—a leg on the Shanley cup at 10 pair's of doubles—he tied with C. H. Daly for second place. Mr. Headley won with an even score in the 100 targets on the committee cup, in legs on the Saturday cup, the Heller cup, the February cup and the early bird trophy. The scores were as follows:

Committee cup, 100 targets, handicap:		H. T.		H. T.	
Headley	24	100	*C H Daly	24	85
*B M Shanley, Jr.	24	95	*James A Hart	24	83
L H Ross	24	93	Peter Hauck Jr.	24	71
Jesse Metcalf	16	87	P S Ross, Jr.	24	67
H S Brown	24	86			

Heller cup, 25 targets, handicap:

Headley	6	25	Ross, Jr	6	17
Metcalf	4	19	L H Ross	6	22
*Shanley	..	23	*Daly	..	22
Brown	6	20	Hauck	3	18
*Hart	..	21			

Saturday cup, handicap:

Headley	6	25	Ross, Jr.	6	21
Metcalf	4	24	L H Ross	6	21
*Shanley	..	22	*Daly	..	20
Brown	6	22	Hauck	3	18
*Hart	..	21			

February cup, handicap:

Headley	6	25	Hauck	3	20
Brown	6	24	*Shanley	..	19
*Hart	..	22	*Metcalf	4	18
L H Ross	6	22	Ross, Jr	6	18
*Daly	..	21

Headley	6	25	*Daly	..	23
Brown	6	22	*Shanley	..	24
*Hart	..	21	Metcalf	4	25
Ross	7	25	Ross, Jr	6	18
Hauck	3	19			

Shanley cup, 10 pairs of doubles:

Shanley	11	Metcalf	10
Hart	15	Headley	12
Daly	12	P S Ross	7
Ross	11		

*Shot from scratch.

Eagle Gun Club.

MANOA, Pa., Feb. 17.—Three gunners tied for high gun in the Eagle Gun Club's weekly white flyer shoot held to-day. Jack Brewer, J. Emerson and J. Jackson grassed their 10 birds.

Second division in the 10-bird race was incidentally similar to that of high gun, as Ben Redmond, A. Felix and Harry Morrison, from Dover, N. J., shared the loot, while third money was divided between Black, Edwards, Knowles, Coyle, Dougherty and Clegg, who missed two flyers.

Ten-bird event, handicap rise:

Brewer, 31	10	Coyle, 30	8
Emerson, 28	10	Clegg, 30	8
Jackson, 29	10	Dougherty, 29	8
Redmond, 29	9	Edwards, 29	8
Morrison, 31	9	Black, 27	7
Felix, 30	9	Record, 30	6
Knowles, 29	8	Wingate, 29	6
Sweepstake contest:		H. T.	
Emerson, 28	7	Murray, 30	6
Brewer, 32	7	Redmond, 29	6
Felix, 30	7	Knowles, 29	5
Morrison, 32	6		

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Meadow Springs Gun Club.

PHILADELPHIA, Pa., Feb. 17.—Secretary Murdock was the big gun at the shoot held here to-day. He won the Class A spoon by beating out Soley in an extra shoot-off event by 20 to 19, then finished up the day's work by totaling the greatest number of breaks on 100 birds, 87 in all. Thompson, with 21 smashes, was the best B gunner.

Soley gave Murdock a hard rub in the A chase, tying him with 24 breaks. Both men broke 22 of their 25 birds, and each having two added handicap targets, wound up in a 24 tie. The shoot-off was won by Murdock by one blue rock.

Dr. Ivens was the closest B man to Thompson. The former smashed 19 of his birds, two less than Thompson secured. Scores:

Class A:		Hdcp.		Total.
Murdock	10 13 6 14	2	22 24 20	87
Soley	7 10 10 15	2	22 24 19	85
George	4 13 5 9	1	19 20 20	71
Moore	5 14 6 12	3	17 20 ..	57
Hogan	10 10	0	22 22 23	67
Henry	7 13	1	18 19 ..	39

Class B:

Thompson	7 12 6 10	1	20 21 20	76

Bennett Gun Club.

GLOUCESTER CITY, N. J., Feb. 17.—Three shooting matches were held at the grounds of the Bennett Gun Club to-day. In the first match William Husted and William Robinson defeated Benjamin Martel and Stokes Prickett. The second event, an open shoot for a silver watch, was won by John Owens. The third event, a sweepstake for members, won by William Murray, who hit ten straight. The scores:

First event, match shoot, special, for oyster supper for members: William Husted 8, William Robinson 6; total 14. Stokes Prickett 7, Benjamin Martel 6; total 13. Second event, open shoot for members, 10 blue rocks each, prize silver watch: John Owens 10, Boyde 9, Husted 9, Monaghan 9, Dasch 8, Prickett 9, Martel 8, Robinson 7, Murray 7, Boyer 7, Hess 6, Bennett 6, Hargesheimer 6, Redfield 6, Barsstreser 8, Smith 6, Blymer 5, McLaughlin 5. Third event, sweepstake, 10 blue rocks each, silver watch: William Murray 10, Husted 9, Butler 9, C. Redfield 8, Monaghan 8, Taylor 7, F. Taylor 7, John Owens 5, Prickett 5.

Rules at the Olympic Games.

PITTSBURGH, Pa., Jan. 18.—*Editor Forest and Stream:* Your letter of Jan. 15, relative to trapshooting at the Olympic games, is at hand, and very carefully noted.

I am not familiar with the standard rules governing trapshooting on the other side of the Atlantic Ocean, consequently I do not know how they correspond with the rules issued by the Olympic committee. If said standard rules call for "the butt of the gun to be held between the hips and armpits," I think the committee is well within its rights in enforcing the so-called "field position," but if this rule was manufactured for the occasion, I think it is entirely wrong to enforce it, and pressure should be brought to bear upon the committee to change the rule.

In this connection, I am a firm believer in adhering to rules adopted, and I believe in enforcing them as long as they are in existence, always provided that the rules are not specially made for an unfair purpose; therefore, I cannot see how this particular rule is not fair to Americans and others, who are accustomed to hold their guns in any position. We must admit the right of our fellow sportsmen on the other side of the Atlantic to make rules of their own, the same as we do in America, and we should, therefore, be governed accordingly. If the trapshooting fraternity on this side of the Atlantic do not approve of the rules governing, they can exercise that great American privilege which we all have of not making entry for the competition.

Personally, I do not approve of the "field position" rule, as it leads to bickering and much ill-feeling when strictly enforced by the referee. A similar rule was in force in America many years ago, but it was changed to the present rule on account of the wrangling it engendered. With a "quick man" at the firing points, the question was nearly always raised as to whether or not, in placing the gun to his shoulder, the contestant "beat" the target's appearance in the air. I for one, would not care to fill a referee's position with this rule in force.

In my opinion, the "two shots at each target" stipulation, so far as the scores made by trapshooters on this side of the Atlantic are concerned, will figure little, if any, in the final results. They have been so drilled and accustomed to deliver with such deadly effect the one shot allowed by our rules, that I very much doubt the use of two shots will make any material difference in the scores made by them. By this I mean that, knowing they have two shots at each target, they will become somewhat careless in delivering the first shot, and the result will be the percentage of extra misses with the first shot, due to this carelessness, will fully offset any extra breaks made with the second shot, the final results being about the same as they would have been with the use of only one shot. The records of the Interstate Association covering those events conducted at it under the rule allowing the use of "two shots at one target" will bear me out in this opinion.

ELMER E. SHANER, Sec'y-Treas.
Interstate Association.

WILMINGTON, Del., Jan. 17.—*Editor Forest and Stream:* In reply to your favor asking my opinion as to how I like the enforcing of the "field position" at the traps, would say, that across the Atlantic practically everybody adopts the field position at the traps, and in fact, I don't believe they care anything about "gun in any position."

They have also had two very forcible lessons as to what Americans can do with the gun at the shoulder: One lesson was the trip of the American team to England in 1901; the other was the victory of W. H. Ewing, of Montreal, Canada, at the Olympic games in 1908. The explanation of the practically universal adoption of the "field position" on the other side of the water, is the fact that trapshooting there is regarded more as practice for "field shooting" than as a sport by itself.

You also ask me what my opinion is of the "two shots at each target" stipulation. This really means, as I take it, that you can fire two shots if you want to. You surely would not want, and would not be forced to shoot two shots if you broke the target with the first fired at each clay pigeon," it really means "two shots are fired at each clay pigeon," its really means "two shots may be fired at each clay pigeon."

Clause 7, which reads, "The competitor must not shoulder his gun and take sight, or rest the butt against his shoulder, before the clay pigeon thrown up has appeared in sight," seems to me a little ambiguous. Translated literally, it apparently means that a man must not align his gun over the trap and then drop it from his shoulder so that the butt is held "between the hips and the armpits." If this is the case, all members of the proposed American team will have to be very careful as to how they handle their gun at the score, or run risk of disqualification. Probably the idea of those who drew up the Olympic rules was that no sportsman would put his gun to his shoulder and then take it down again while a dog was pointing a covey.

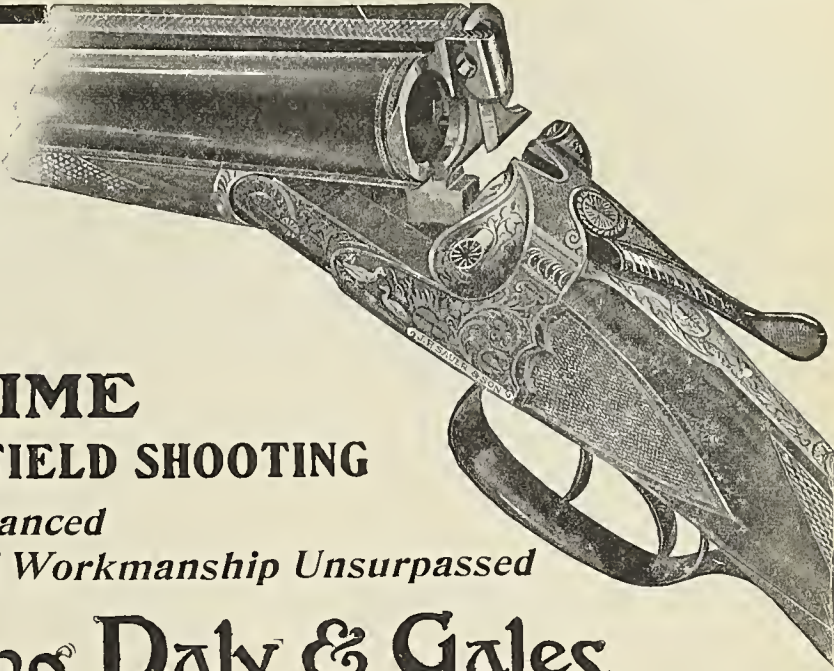

Under Section 9, which defines what are "no birds," the shooter is given the right to refuse a broken target, but there is no provision apparently made for the refusal of a target thrown at an appreciable time after the shooter has called "pull."

One of the most important rules or regulations governing the shooting at Stockholm, Sweden, is that which contains the definition of an amateur. After stating that "the competitions are exclusively confined to amateurs according to the following definition," it goes on to say, "An amateur is one who has never (a) shot in public, or been specially occupied with instruction in shooting with the intention of thereby earning his living; (b) taken part in an open competition for professional shooters; (c) sold, pawned, hired out, or exhibited for payment any prize won in a competition; (d) been engaged at a gunsmith's, and there been specially occupied with sighting and adjusting weapons."

Of the above, section b is probably the most important.

EDWARD BANKS.

OSSINING, N. Y., Jan. 16.—*Editor Forest and Stream:* In looking over the set of rules you sent me, can see a number of pitfalls. The part that says a man must hold

A
SAUER
GUN

EVERY TIME
FOR TRAP OR FIELD SHOOTING

Perfectly Balanced
Shooting and Workmanship Unsurpassed

Schoverling Daly & Co.

302-304 Broadway (Cor. Duane St.) New York City

his gun away from the shoulder will of course work an injustice to the Yankee team; most other countries employ gun below armpit position. Why don't Charlie Billings try to arbitrate and have the same thing obtain that was tried when our team took a fall out of the British—allow them two barrels and hold gun any way they choose? "If a marksman discharges both barrels practically at once," is going to cause trouble. Again, a man might be slow on his first barrel, for some reason or other, and he may then refuse to fire the second and get another target. The rule that causes a man to fire a blank in the first barrel or fire a loaded shell in the air can only be justified by the ammunition people. I am afraid our boys will be up against a hard game if that shoulder business is not removed.

CHARLES G. BLANDFORD.

NEW YORK, Jan. 17.—*Editor Forest and Stream:* Replying to your letter of yesterday, will say that I have really not given the Olympic question the consideration it deserves, simply because I have been too busy. However, since you put the question to me, and were good enough to inclose the rules, I have taken advantage of the opportunity and time to read it over more carefully, and must say that although their ideas of target shooting are much behind the times in "our way" of thinking, yet it is a fair way of shooting, and no doubt those who are thoroughly acquainted with that style enjoy it fully as much as we do our rapid-fire system. They have their own rules, which are perfectly fair in their way, and I believe that shooters from other countries going there to compete for prizes should do so accepting those rules without a kick or a murmur.

So far as the "two shots at each target" rule is concerned, I am frank to say that I do not believe it will be of any material benefit to our American target shooters, nor do I believe that the "second shot" will beat them. The "field position" will bother most of the American shooters at this target shooting game, yet I see no reason why an international event such as this, conducted under rules adopted by an association, to govern this event, should be changed to suit any one particular class of shooters.

On the other hand, if any changes can be suggested by you, and could be made without causing any reflections on the good sportsmanship of our American shooters, I would say that rules on the lines of those adopted by the Interstate Association would eventually prove the most satisfactory to all concerned, and those who now enjoy the field style of shooting at targets would perfect their trapshooting. Field shooting and trapshooting each is in a class by itself, and should be conducted under separate style and rules.

I hope "our boys" will go over there, meet them at their own game, beat them on their own "dunghill" and keep up the unblemished reputation of good American sportsmanship, win or lose, and not raise a "howl" about conditions.

CARL VON LENGERKE.

BROOKSTON, Ind., Jan. 22.—*Editor Forest and Stream:* Replying to your favor of the 15th inst, I beg to say that I fancy American trapshooters are entirely unfamiliar with "field position" shooting at the trap. However, when you go to Rome you must do as they do in Rome. Whatever position is enforced, it is my opinion that the American trapshooter can more than hold his own against any other shooters in the world. There is no doubt that the stipulations "two shots at each target and field position" are aimed directly at American and Canadian shooters, who have won at recent Olympic games. The Americans are in a class by themselves in the trapshooting game, and will bring home the bacon.

W. C. WOOTTON,
Sec'y Buffalo Audubon Club.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Mulberry Grove Gun Club.

MULBERRY GROVE, Ill., Feb. 13.—We had to make ready for to-day's shoot in a hurry, therefore never expected very much shooting; but the "fur was flying" all afternoon, just the same. Warmer atmospheric conditions brought out fifteen shooters, and three events were shot.

Arthur Killam (professional) was with us, and while he was unable to "break 'em all," his presence inspired Ed. Hartley to even surprise himself by disfiguring the maps of 46 clay twisters out of 50 shots.

We had several new shooters with us to-day, who made good scores considering the fact that it was the initial try-out for some of them.

Our regular weekly shoots will be held just as soon as the weather permits. Scores of to-day:

<table border="0"> <tr><td>Events:</td><td>1</td><td>2</td><td>3</td></tr> <tr><td>Targets:</td><td>25</td><td>25</td><td>25</td></tr> <tr><td>E D Hartley.....</td><td>24</td><td>22</td><td>..</td></tr> <tr><td>H K Ingram.....</td><td>19</td><td>20</td><td>..</td></tr> <tr><td>F E Martin.....</td><td>19</td><td>15</td><td>20</td></tr> <tr><td>F Ellis</td><td>17</td><td>16</td><td>..</td></tr> <tr><td>*A Killam</td><td>8</td><td>21</td><td>19</td></tr> <tr><td>Y Ingram</td><td>10</td><td>17</td><td>..</td></tr> <tr><td>B Ellis</td><td>10</td><td>16</td><td>..</td></tr> <tr><td>F McKean</td><td>12</td><td>12</td><td>12</td></tr> </table>	Events:	1	2	3	Targets:	25	25	25	E D Hartley.....	24	22	.. F. E. MARTIN, Sec'y.

Paleface Gun Club.

WELLINGTON, Mass., Feb. 14.—Dr. E. A. Gleason, just back from the South, where he did some trapshooting, won the Valentine's Day matinee shoot of the Palefaces this afternoon with 95 against 93 made by Porter E. Osborne, of Somerville.

The weather conditions were fine. Dr. Gleason, the high gun for the day, made three straight 20s in the second, fourth and fifth rounds of the 100-target match. The summary:

Gleason	95	Burnes	87
Osborne	93	Clarke	86
Frank	92	Newton	81
Edwards	92	Proctor	82
Sibley	91	Low	68
Sweet	90	Jones	56

Pillow Gun Club.

PILLOW, Pa., Feb. 10.—Weather conditions, outside zero, were ideal. The shoot was largely attended by the citizens of Pillow. The scores:

J A Bingaman.....	86	H V Runk.....	51
J E Bingaman.....	78	C Messner	61
J Bingaman	70	D Willard	75
D M Bohner	79	Geo West, Sr.....	71

Northern Kentucky Gun Club.

IN spite of the fine weather of Feb. 17, there were only a few at the special shoot of the club. Hammerschmidt was high man with 10 straight.

The balance of the afternoon was put in at the target trap, four events being shot. Hammerschmidt was high gun here also, breaking 90 out of the 100.

The Hyde Park Gun Club will have a meeting on Feb. 20, and proposes to arrange a match with the Goshen shooters for the 22d.

Table with 2 columns: Name and Score. Includes Hammerschmidt, Hessler, Irwin, Menze.

Table with 2 columns: Name and Score. Includes Hammerschmidt, Irwin, Menze, Frohlinger, Weiner, Rogers.

Boston Athletic Club.

BOSTON, Mass., Feb. 17.—The B. A. A. Gun Club beat the United M. C. Club of Beverly in the first half of their inter-club team match to-day at the Riverside traps by 30 birds.

T. C. Adams, of the B. A. A., was not only high gun on his own team, but of both teams.

In addition to the team match the B. A. A. held its weekly handicap, in which nine members and five guests competed. Though Walter B. Farmer did not shoot in the handicap, he was awarded the club cup for first prize.

Table with 2 columns: Name and Score. Includes T C Adams, E Gleason, B Farmer, J L Snow, J E Lynch, U. S. M. C., A T Foster, A C Spencer, S Winslow, Jr, T A Whidden, W A Hurd.

High gun for B. A. A., T. C. Adams; for U. S. M. C., A. T. Foster

Sunbury-Selinsgrove Gun Club.

SUNBURY, Pa., Feb. 17.—At the regular practice shoot of our club on Feb. 15, the regulars were all present, with several new men, to get in shape for the big shoot in May.

Things are framing up nicely for our State shoot in May. Everyone is on the job already, so there will be something "doing" in May.

Table with 2 columns: Name and Score. Includes Howell, Hartman, Teats, Hawley, Schoffstall, Rhymestine, Shaffer, Troxell.

Table with 2 columns: Name and Score. Includes Howell, Schoffstall, Teats.

Larchmont Y. C.

LARCHMONT, N. Y., Feb. 18.—The Sunday shoot of the Larchmont Y. C. proved one of the best of the season. Eighteen gunners divided into squads of six each shot in the ten matches decided.

G. W. Lembeck returned the best score in the 100-target handicap contest, breaking 94. R. H. Nickols was the runner-up with 93.

Registered Tournaments.

THE following tournaments have been registered with the Interstate Association during the week ending February 17: May 1.—Crete (Neb.) G. C. R. G. Spadt, Sec'y.

Queens Country Club.

QUEENS, L. I., Feb. 17.—W. Simonson shot excellently to-day, getting 96 out of 100 from scratch. J. L. Simonson got second with 2 less birds.

Table with 2 columns: Name and Score. Includes W Simonson, J S Simonson, D K Morrell, C Vogel, R Ramapoe, C H Denton, Dr Cleghorn, H Stein, T R Chapman, J H Cole, W Seaman, K Kiengle.

Greenwich Country Club.

GREENWICH, Conn., Feb. 17.—N. Webb, with 24 handicap and E. C. Wills, with 25 tied in to-day's match, each getting a full score.

Table with 2 columns: Name and Score. Includes N Webb, E C Wills, C S Wills, M B Foster, Baron von der Ropp, E T Hall, J W Masury, G M Pyncheon, W B Sewell, F R Kimbley.

Repeating Shotguns—12 and 16 gauges; (6 shots), solid frame and take-down; many grades and styles; with special models for trap and field shooting, etc. Prices \$19.50 to \$95.00.

Every Marlin repeating shotgun has the Marlin solid top, side ejector and closed-in breech. It can't freeze up with rain, snow or sleet.

Do it now! Send three stamps postage and get our big catalog of all Marlin repeating rifles and shotguns by return mail.

The Marlin Firearms Co. 27 Willow Street New Haven, Conn.

Bergen Beach Gun Club.

BROOKLYN, N. Y., Feb. 2.—The Bergen Beach Gun Club held a shoot to-day, with the thermometer at 6 to 10 degrees above zero, and the wind shifting from northwest to west.

Table with 2 columns: Name and Score. Includes J H Hendrickson, G Piercy, L H Schortemeier, P S K Remsen, G von Boeckman, G K Kouwenhoven, *H Welles, R Morgan, John Voorhees, C A Medler, J F Simonson, F R Long, M A Kelsey, Dr Gunther, A V Suydam, H Bergen, J Gaughn, H W Dreyer, Dr Welzmuller, H D Tracy, L G Lawrence, *H Keller, Dr Groll, A R Metz, R Young, J H Richmond, C A Brown, *Tom Davis, Tom Short, R Abele, J Wellbrock, D C Van Valer, Dr Sauer, Hewins, O'Neil Sevier, Dr Lynch, Raymond, Huron, O N Vail.

Feb. 17.—Twenty-one gunners took part in the sliding distance handicap of the Bergen Beach Gun Club to-day. The best score was made by Sim Glover, who broke 91 out of 100.

Table with 2 columns: Name and Score. Includes Sim Glover, P Von Boeckman, J Voorhees, D Sauer, W Silkworth, A Griffith, W L Skidmore, R Morgan, H D Bergen, D Judd, A V Suydam, C Brown, Dr MacEvitt, Dr Duffield, C Crawford, H W Dreyer, W Sevein, Dr Moeller, H Tracey, G Gates.

Marine and Field Club.

BATH BEACH, N. Y., Feb. 17.—The weather conditions were perfect to-day and high scores were the rule. The summaries:

February cup, second leg, 100 targets, handicap:			
E H Lott.....	0 91	C H Camp.....	8 73

W Raub	20	Miller	24
Markley	19	Dorp	21
W Roberts	16	Eberts	22
Stahn	20	Koch	16
A Hartman	20—196	Hartzell	22—208

Sweepstakes followed.

Laurel Gun Club.

LAUREL, Miss., Feb. 8.—At the regular weekly shoot of the Laurel Gun Club, to-day, the following scores were made:

Shot at. Broke.		Shot at. Broke.	
Dr C M Davis..	75 62	Rumble	50 39
George Bacon ..	50 39	Johnson	50 36
Wilkinson	75 52	Neil	50 22
Decker	50 32	Evans	50 28
Stevens	50 38	Smith	50 36
Green	75 66		

The Mississippi State tournament will be held in Laurel on April 23, 24 and 25.

H. N. ROGERS, Sec'y.

South End Gun Club.

PHILADELPHIA, Pa., Feb. 17.—Only seven of the regulars took part to-day at the weekly shoot of the South End Gun Club. The winners were: Lippincott and Wakeman, the former making 48 with 8 added targets, while Wakeman was the scratch man. The program called for 50 targets with added birds, and Wakeman and Horner had a great race for high net score. Scores:

Lippincott	8 48	Anthony	10 38
Wakeman	0 41	Holloway	3 37
Horner	0 40	Johnson	3 35
Lichenstein	12 39		

Huntington Valley C. C.

JENKINTOWN, Pa., Feb. 17.—Eight shooters turned out to-day, and with no regular match events scheduled, the target smashing was confined to general work. J. W. Lippincott won with 60 out of 80. Reeves got a total of 52 out of 80; Harrison, 45 out of 55. Madeira's best shooting was in a 25-bird event, in which he broke 16. Frazier took part in three events with high scoring in a 25-bird event. Watts shot in three events, getting 30 out of 45 targets. Hutchinson took part in three events, shooting in fair form, and breaking 27 out of 35 targets.

Some Good Reasons Why You Should Shoot

Rifle and Revolver

Rifle Matches.

WASHINGTON, D. C., Feb. 17.—Iowa City High School maintained its lead in the Intercity High School Rifle Shooting League, having as a result of this week's matches nine wins and no defeats. The week's double match results were:

Business, of Washington, defeated Central Manual, of Philadelphia, 885 to 804; Southern, of Philadelphia, defeated Brookline, of Massachusetts, 885 to 833; Morris, of New York, defeated Southern, of Philadelphia, 912 to 906; Morris, of New York, defeated Central, of Philadelphia, 898 to 807; Deering, of Portland, Me., defeated Brookline, of Massachusetts, 917 to 816; Baltimore Poly defeated Western, of Washington, 904 to 775; Iowa City defeated Deering, of Portland, Me., 959 to 949; Portland, Me., defeated Manual, of Washington, 881 to 876; Manual, of Washington, defeated De Witt Clinton, of New York, 862 to 851; Iowa City defeated Western, of Washington, 954 to 0 (by default); Portland, Me., defeated Central, of Washington, 882 to 0 (by default); Baltimore Poly defeated De Witt Clinton, of New York, 936 to 0 (by default); Business, of Washington, defeated Salt Lake City, 858 to 0 (by default); Central, of Philadelphia, defeated Central, of Washington, 862 to 0 (by default); Central, of Philadelphia, defeated Ogden, 845 to 0 (by default).

Deering High, Portland, Me.; Southern High, Philadelphia, and Baltimore Poly are tied for second place with seven wins and two defeats.

Inter-Club Results.

Each of the ten teams in the National Rifle Association's Eastern Inter-Club Rifle Shooting League made a score above 950 out of the possible 1,000 in this week's matches. New Haven, which made 995, leads the league with eight wins and no defeats. Bridgeport stands second, with seven wins and one defeat. Results were:

New Haven defeated Bridgeport, 995 to 990. Cleveland defeated Manchester, 994 to 961. Warren, Pa., defeated Erie, 983 to 965. Boston defeated Philadelphia, 981 to 958.

Intercollegiate Results

Princeton and Massachusetts Agricultural College are tied for first place in the Eastern Intercollegiate Rifle Shooting League as a result of this week's matches, each having seven wins and no defeats. Results were:

Massachusetts Aggies defeated New Hampshire, 950 to 805. North Georgia Aggies defeated Maryland Aggies, 925 to 849. Pennsylvania defeated West Virginia, 922 to 892. Harvard defeated Norwich, 921 to 878. Princeton defeated United States Veterinary Surgeons, 915 to 851. Louisiana defeated Delaware, 887 to 862. Iowa University leads the Western Intercollegiate League with six wins and no defeats. Minnesota and California are tied for second place with five wins and one loss. The week's results were: Iowa defeated Purdue, 955 to 920. Minnesota defeated Nebraska, 946 to 861. California defeated Kansas, 910 to 0 (by default). Michigan Aggies defeated Arizona, 902 to 871. Michigan defeated St. Thomas, Col., 888 to 811.

Rifle Note.

On Feb. 12, the rifle team representing the Cuyahoga Rifle Club in the N. R. A. interclub matches, made a score of 994 out of a possible 1000, equaling the world's record. The individual scores of the team are as follows: F. C. Fry 200, J. Humphry 200, M. M. Foster 199, W. C. Andrews 198, G. L. Hale 197, total 994. The entire team used Peters factory loaded .22cal. long rifle semi-smokeless cartridges.

Seventh Regiment Rifles.

The eighteenth competition for the Abel trophy was held Feb. 13 and 14 on the Seventh Regiment ranges. Company M won with a score of 633, just beating Company G on a tie. The high individual score was made by Quartermaster Sergeant Walter Hinman, of Company L, with a 68. The scores:

HARRY OVERBAUGH.

Shooters Going to France.

WASHINGTON, D. C., Feb. 16.—The National Rifle Association of America, in addition to sending teams to the Olympic games at Stockholm, Sweden, and to the Pan-American shoot at Buenos Ayres, Argentina, this summer, has decided also to be represented at the international Continental rifle matches at Bayonne-Biarritz, France, late in July.

The three teams going abroad will carry with them

official invitations to the riflemen of Europe and South America, to come to the United States next year.

Although the United States has been a member for several years of the International Union of National Rifle Associations, in which fourteen nations hold membership, and under whose auspices the French meet is being held, this year is the first time this country will be represented. The try-out to select the men for the team will be held at Camp Perry, O., in the latter part of May. The International Union will be invited to hold its meet next year at Camp Perry.

A HUNT AT BEAR HOLE.

Continued from page 238.

George also. The dogs could not follow an inch. They bothered for a long time. The bushes were all cut away at the point where I aimed. George said, "Do you believe that rabbits can withhold their scent?" I said, "I have seen happenings that would make me think so." "I know so," said George. But thoughts or imaginings would not help the case. The rabbit was gone, and the dogs could not find him.

Now, during all this time the rabbit was speeding away unharmed. He fled directly back to the part of the wilderness where he had come from just before my shot. Finally the dogs disappeared in the brush, and for some time afterward nothing was heard of them. George left me and soon called out: "Come down here! There is a wood road where we will have a good chance to shoot if the dogs can pick up the track." So I went in his direction, came to the road and leaped down by his side. Then George passed up the road to a little elevation, and I went down about a gunshot from him, and there I stood mid-way between him and Doc, whom I could see at a turn in the road below me.

All at once the dogs sung out in full chorus, thereby informing us that they had got Bunny again on the jump. Presently I heard Doc's gun, and looking down the road, I saw the quarry lying in the rut dead. The rabbit looked as if every shot in the gun had struck him, and Doc said that the rabbit was blown right into the air by the force of the discharge.

When the dogs came up, they had the happy privilege of tasting the game—the little dog, Sport, jumping nearly as high as Doc's head to get at him, and the big dog, Spot, sticking his sharp claws into Doc's legs as he sought to get an extra bite at his victim.

Doc reloaded and in we went, passing over ridge after ridge, like the foothills of the Rockies, and all the time drawing nearer to the head of Bear Hole Pond. On the way we flushed a few partridges, at which no one fired—out of season—and a couple of black ducks were seen whirling through the air. We continued on our course for about an hour without finding anything whatever. We went down a road which led us to a spring and partook thereof, and after a little rest, decided to pursue our way back by going on the opposite side of the pond, as by so doing we would not only be hunting over new ground, but would also have better walking. We passed through one swamp on the way, where the alders and birches were thick, and the grass as high as the waist, and the water up to the knee. We did not think our guide had foretold us truly about the good walking, and backing out of the swamp, advanced to higher ground, and just as we got there, Sport started off down the road. Fred called, but in vain. Presently we heard the dog

yelp. Fred went to see what was the matter, while we waited. The dog reappeared, bounding down the high bank toward us with every manifestation of joy, such as a good dog would display at pleasing his master. Fred was calling his dog at the top of his voice, but Sport paid no heed. He preferred to stay with us. We shouted over and over again to Fred that his dog was here and called to him to come back. The wind, however, was blowing away from Fred in our direction, and he never heard a word we said; but we could hear his voice, sounding further and further in the distance. Finally we put in after him, but did not overtake him until we had put forth our utmost exertions for full half an hour.

At Doc's suggestion, it was decided to cross the main highway and try the woods opposite

Lot's house, while I decided to make all speed to the house, especially as rain was beginning to fall.

Arrived there, I was disposed to possess my soul in patience until their return, when all at once a thundering discharge of guns was heard in their direction. I looked on in wonderment as I saw the party returning—Doc with a big handkerchief at his nose—and thought at first that an accident had happened. It turned out that the discharge of small arms was from another party of gunners whom they met in the woods, and they had accordingly returned. Then we started homeward by a different road. Doc for once took my advice, and consequently we reached home safely and without further adventure. I may say, however, for myself, that I have not got over that tramp yet.

Kennel Department

The Police Dog

By THEO. F. JAGER

Author of "Police Dog in Word and Picture" and "The Doberman-Pinscher"

MUCH has been said and written during the past few years of what police dogs are, what they can and must do in capturing criminals, protecting their masters on duty and assisting with arrests. One of the first notable acts of Max, an imported Belgian shepherd dog in New York city, was to discover and report to the precinct station the fact that a man—one of the lower ten, poor, ill-clad, without a home and almost starved—lay asleep in a vacant lot, while a blizzard was singing a lullaby.

passed the days when police dogs were considered toys. Holland is following closely in the wake of Germany, pursuing German methods, while Belgium is still adhering to the pretty but rather useless circus tricks of high and broad jumps, climbing of ladders, etc., that can never be of much value to a service canine. America has in part adopted police dogs, New York city being first to accept them.

POLICE DOG BREEDS.

The society for furthering the breeding and employment of police dogs in Germany approves of the Airedale terrier, German shepherd dog, and Doberman-Pinscher. The Rottweiler Club of that country, judging from the strides toward perfection that the Rottweiler has made, will no doubt see ere long their favorite stamped with the seal of official approval.

These are all good breeds, and to try to make distinctions on main issues would prove a failure. Where one breed may excel in one line, it may be excelled in another at times by some other breed. The fancier preferring an Airedale should get one, and leave pinschers and shepherds alone, and vice versa. As long as we select strong specimens, farm-grown, from a line of ancestors famed for brains, grit and vitality, with good scenting qualities, we are certain to get flattering results in any of the above breeds.

Broadly speaking, we will say, however, if you are looking for a dog for protective purposes and to become excessively sharp on the criminal, if need be, take

Weddo von Eichthal, one of the finest specimens in America.

But for Max this man would have frozen to death. There are many similar instances.

The city of Hildesheim, in Germany, has the distinction of being the mother of police dog interests. It was there that Senator Dr. Gerland, in November, 1896, introduced the first dogs to aid officers on duty. Twelve dogs were secured. From this small beginning, Commissioner Waesmael, of Ghent, Switzerland, in April, 1899, took his cue to add dogs for all officers doing night work.

England has in Major Hautonville Richardson, F.Z.S., M.S.A., a staunch friend of the police dog. He is leaning especially toward Red-Cross dogs and make this sub-branch at Panbridge in Scotland his main duty. His favorite so far is the English bloodhound, but it is said that he will at an early date look into other breeds used for similar purposes.

That England is leaning more and more to German dogs is proved by the many interesting reports that its dailies bring out from time to time, and the discussions thus inspired are bound, finally to see "old Eng'land," too, preferring Dobermans, Airedales (their own anyway) and German shepherds.

France, always in the front rank of progress, has

Imported Hertha Doberman brings home the revolver.

the Airedale terrier or the Doberman-Pinscher; if you value a good nose most, take the bloodhound or the German shepherd, who has inherited from his ancestor, the Siberian wolf, a most excellent scent; if you want a dog to become an adjunct to a life-saving station on the seashore or a watering place, take the Airedale, who, on account of his lineal descent from the otterhound,

is an expert swimmer, and will delight to enter the wet element at any time. The Rottweiler is strong in defense and fidelity, has a good nose, but lacks some of the finishing touches that make the others so attractive to even those that are not specially looking for police dog points. He is a worker in a worker's garb.

Holland and Belgium breed and recommend the short-coated Belgian sheep dogs and the Groenendaals, named after the castle of Groenendaal. Both have

Hertha Doberman, while trailing finds a revolver.

prick ears. There is not much to choose between; they are a trifle lighter boned and shaped than the German shepherds, but in other respects very much resemble them, to which they are a cousin variety.

DOBERMAN-PINSCHER.

A purely German product, produced by a German in Germany out of German breeds. A Herr Dobermann, a native of Apolda, a small city in Thuringen, an ardent dog fancier and judge of doggy service qualities, a man that knew a dog's intrinsic value as a helper, and loved to improve natural inclinations through judicious breeding, careful eliminations and persistent training, has the credit of having given us this now world-famed "dog with human brains."

Dobermann was the official dog catcher, the man that is supposed to do away with the odds and ends that cannot call his native city a home. He has now been dead some twenty-five years; hence I need not mince matters. In connection with two friends, one of them the watchman in the church tower, who had to ring the "alarum bell" whenever fire broke out, or the city fathers were called together for a session, loved, next to dogs, good health-giving beer; and the three to in-

Hertha Doberman follows trail through window.

vest all their earnings in this "liqu'd bread," as they considered it, was a rule of their lives, which they never broke. A bitch, rather small, in color gray and very wiry, exceptionally sharp on vermin, a free breeder, was the favorite and original breeder of Dobermann. She is the greatest great grand-dam of all that now belong to this breed. She was exceptionally intelligent, and could read her master's orders on his face before a word was uttered. In crossing her with various dogs that came into his hands during the natural run of his duties, he finally perfected a larger dog, gave him a stronger physique, and received ultimately a specimen that "carried a chip on his shoulder" at all times. We are not wrong in presuming that the large Tottweiler, a breed formerly largely used by the German butchers, and the black-and-tan German sheep dog had to furnish some blood to make the new breed. The original bitch, "Schnuppe," by name, disappeared after the first few crosses, that produced an improvement and that held her intelligence along with sharpness for vermin in a stronger body. The name Dobermann, or as we spell it here, Doberman, with only one "n," came gradually, because wherever Dobermann or one of his

Bertel Doberman, first American champion, digging hidden plunder.

thirsty comrades saw a dog on the street of the make-up or build they had started, they would sing out at once, "See, there, our dog," or words to that effect, and the children being the first to take it up, did not lag in running for mamma's apron if a Doberman came along. In fact, the very word "Doberman" meant for a time "savageness, ugliness and freedom from restraint," and

Doberman Oriol, owned by Mrs. R. F. Shelley, Geneva, O.

to get away from a dog of that kind was considered the better part of valor. I am glad to state that judicious breeding and training has corrected this original wild blood, turning it into proper channels, and we now have a dog that will not show the inherited tendencies except in the defense, where need be, of his master or his family.

A Mr. Husman, who often imported large droves of cattle from Switzerland, which he drove home to Central Germany aided by dogs, claims that he brought along at one time some that were afterward perfected into what we now call the Doberman police dogs. Others again say that the gray sheep dog, described hereafter, crossed on genuine Russian wolf is in them. Judging

Big Game Shooting in India

To Let.—The exclusive shooting rights over an estate of fifty thousand acres of heavily wooded hill and dale in Western Bengal, in one of the best big-game shooting districts in India. Within 180 miles by rail from Calcutta. Tigers, leopards, bears, bison, wild hog, sambur and other kinds of deer, and wildfowl of many kinds to be had on the estate. The native inhabitants are keen hunters and make good beaters and trackers. Climate good; elevation 2,000 to 3,000 feet. For particulars apply to P. G. C. SHAW, Esq., Solicitor, 4 Clement's Inn, Strand, London, England.

The Result of Over a Century's Experience

Perfection in powder-making is only achieved by exercising the most scrupulous care in the selection and preparation of raw materials, employing skilled workmen exclusively, and using only the most improved modern mechanical equipment.

This is the Du Pont method and accounts for the unequalled reputation among sportsmen enjoyed by the Du Pont brands of Smokeless Shotgun Powders. Two of these brands that are in high favor among shooters are

A perfect shotgun powder with light recoil. Unlike other powders of light recoil, Schultz gives high velocity and remarkable patterns.

These powders positively will not pit the gun barrels.

UNEQUALED FOR FIELD AND TRAP-SHOOTING

See that your shells are loaded with either **SCHULTZE** or **E. C.**

E. I. DU PONT DE NEMOURS POWDER COMPANY

Pioneer Powder Makers of America

ESTABLISHED 1802

Wilmington, Del.

Hard Grain—Smokeless—Uniform. Requires no special wadding to make it do its best. Loaded just as easily as Black Powder. "The Old Time Favorite."

from all reports I am safe in saying, that all may have something in their favor and all may have had something to do with perfecting some particular strain of Doberman police dogs, but the lion's share, the idea original, is certainly in favor of Doberman, "the man with a thirst."

The first dogs of this breed to come to this country, as far as is known at least, came to the Hamburg-American liner S.S. President Grant, a little over three years ago, and found a home in Western and Central New York. From there their progeny has been distributed as far as California, Mexico, Georgia, Mississippi and in about all States between.

The Pinscher, better known as the Doberman police dog, is probably with the Airedale, the most sagacious and most fancied by all who desire good looks to go with ability. His rapid rise into popularity in his fatherland proves his value. I made my first import during the fall of 1907, when I brought over a dog and two females. Mr. Wm. Dobermann, the last of his family and name hailing from Apolda—augmented this first import with others during 1908. Doberman-Pinschers appear mostly in black, with tan markings on legs, breast, below tail and over eyes; these are called the black-and-tan colored. Then we have them a beautiful

seal brown with tan, and blue marked with tan. The latter are very rare and highly prized by sportsmen.

The Doberman male has a shoulder height of 22 to 26 inches, the female of 19 to 22 inches. The head is but slightly domed, broad in the back, and runs into a fairly well-pointed nose. The cheeks are flat and very muscular. The length of the entire head should be from nine to ten inches. The eye is dark brown, medium-large, round, and shows the energy of its owner. Ears are cropped in a semi-circle and must not be too pointed. The legs are very muscular, straight, and the toes rather close and compact (cat's toes). The back must be straight and broad, measuring from neck to tail about 27 inches. This would make a whole length of about 38 inches. Breast is well arched and full. Tail cropped, if not a natural bob-tail, as often happens, should not be longer than 5 inches. The coat is hard, short, and lies close to the body. A little white hair on breast and gray on neck is permissible.

If it is possible for us to think of a dog the size of a well grown collie, rather heavy in muscles and short-limbed, having the courage and staying power of a bull—let him be as fierce as they make him—moving around at the rate greyhounds do, as playful and full of tricks as a terrier, and with the nose of a bloodhound,

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He knows it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring**.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. **LEFEVER ARMS Co., 23 Maltbie St., Syracuse, N. Y.**

Durston Special
20 Gauge. Price \$28.00

we have a fair mental picture of a Doberman police dog. A Doberman should be active, bright, intelligent looking; he must impress the observer at once with the fact that he has brains and he must show beyond his intelligence, "courage twinkling in his eyes." He must have the grit, the looks, the strength and the will to throw fear into the heart of the one prowling around for "forbidden fruit"; he must be able to hold him, check him and deliver him to his master, as well-trained specimens of the breed are figured to do almost daily.

He has a short coat. Police dogs with a long coat are of a distinct disadvantage. If they must enter the water during the colder season their coat holds it long, and often the poor dog has been found a solid mass of ice. Short-coated dogs have a thicker coat of hair and a stronger fat-layer given them by nature to equalize conditions, and really are the hardest—can stand hot and cold better than long-haired specimens.

The Doberman-Pinscher is, above all else, a dog for any purpose. True as steel, a fine game dog, he will attack a bear, point quail and pheasant, run a rabbit; in fact, the gray matter back of his eyes is so easily developed that a short course of lessons on any subject enables him to excel in that line. No man could ask for a better pal, and no home wherein there are children could seek a better nurse. The Doberman-Pinscher is a dog par excellence.

TWEET—HIC—TWEET!

ACCORDING to a Georgia dispatch the robins hibernating there are conducting themselves in a shameless fashion. A number of the redbreasts have been observed in the stupor of intoxication as a result of eating China berries. The most melancholy part of the dispatch, however, is the closing sentence:

"In a few hours the birds revive and immediately go back to the China berry trees."

As Don Didier would observe, "The worst of it is they like it!"—Evening Sun.

Country Real Estate

The sun begins to get hot about noon nowadays and with it comes the out-of-town fever. Has it touched you yet?

If it has, or when it does, drop us a post card and you will get immediate access to our real estate list.

It is made up in such a way as to locate houses, camps, bungalows and unimproved property on lakes, streams and seashore, where the best fishing is to be found adjacent to the big cities as well as in remote corners of the country. If you have property to rent or sell, that would interest the man and woman of the sort who live the life out-of-doors, send us specifications of the property and we will list it so that those who inquire for corresponding places may get in touch with you.

We charge no commission, nor is there any string attached to our offer in any way other than the fact that you must be a reader of FOREST AND STREAM. Tell us in what State you prefer to locate, whether inland or on the coast and we will do the rest.

INFORMATION DEPARTMENT

FOREST AND STREAM

127 Franklin Street New York

Forest and Stream desires to make an appeal to its readers. It asks that when writing to advertisers for catalogs or prices, or when ordering goods that are advertised, you mention that you "saw the advertisement in Forest and Stream."

This enables advertisers to know that their announcements are being read. They are read, of course; in fact, are studied with great care, because our subscribers know that anything that is advertised in Forest and Stream has merit. But advertisers do not always appreciate the value of any paper that is not mentioned. If, therefore, you will kindly mention Forest and Stream in answering advertisements, you will confer a favor on the

About Buying a Canoe

I have paddled so long and watched their construction so carefully, I know some things that perhaps the average buyer of canvas-covered crafts doesn't realize.

From the start I noticed that some canoes paddled hard, and "hung back," while others, even when heavily loaded, seemed to glide through the water. Some models tipped easily and could not be successfully handled in rough water, while others acted as steady as a ferryboat. Then again, when I got mixed up with rocks and shallow water, some canoes seemed to snag and leak easily, while others took an amount of punishment far in excess of what I thought possible.

I became interested, and began to study the whys and wherefores. I tried all the different makes I got a chance to step in. I called at many factories, and saw the forms they were made on, the kind of material used, and the way the workman put them together. At last I found one shop—a comparatively small one—where design, material, and workmanship seemed to me to be about as near perfect as a human could expect. There was nothing fancy about this little shop or the sturdy proprietors, but they were making the best canoe, from every standpoint, money could buy, and they weren't making any big noise about it, either. I am referring to E. M. White & Co., Oldtown, Maine.

There is just one point I want to tell you about in detail. It's the way White puts on the planking. Instead of butting the boards up against each other, as all other makers do, White bevels and laps every seam, thus making a practically water-tight craft, before the canvas is stretched on. This method prevents cracks caused by shrinking or swelling, and keeps out the sand which is the ruination of canvas.

When buying a canoe, ask the salesman, "Is the planking beveled and lapped?" If he knows what you are talking about, and is truthful, he will answer, "No"—unless it's a White.

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

The Greener Treble Wedge Fast Action.— Many methods of uniting the top of the standing Breech and upper portion of the gun barrels have been introduced, but none are so strong and thorough as the Greener Treble Wedge Fast Cross Bolt, which has been proved by actual experiment to add enormously to the safety and wear of a gun.

At the famous London *Field* explosive trials of 1878, a special experimental gun was prepared by the editor of the *Field*, and the following extracts from his report are a remarkable testimony to the strength and efficiency of this device.

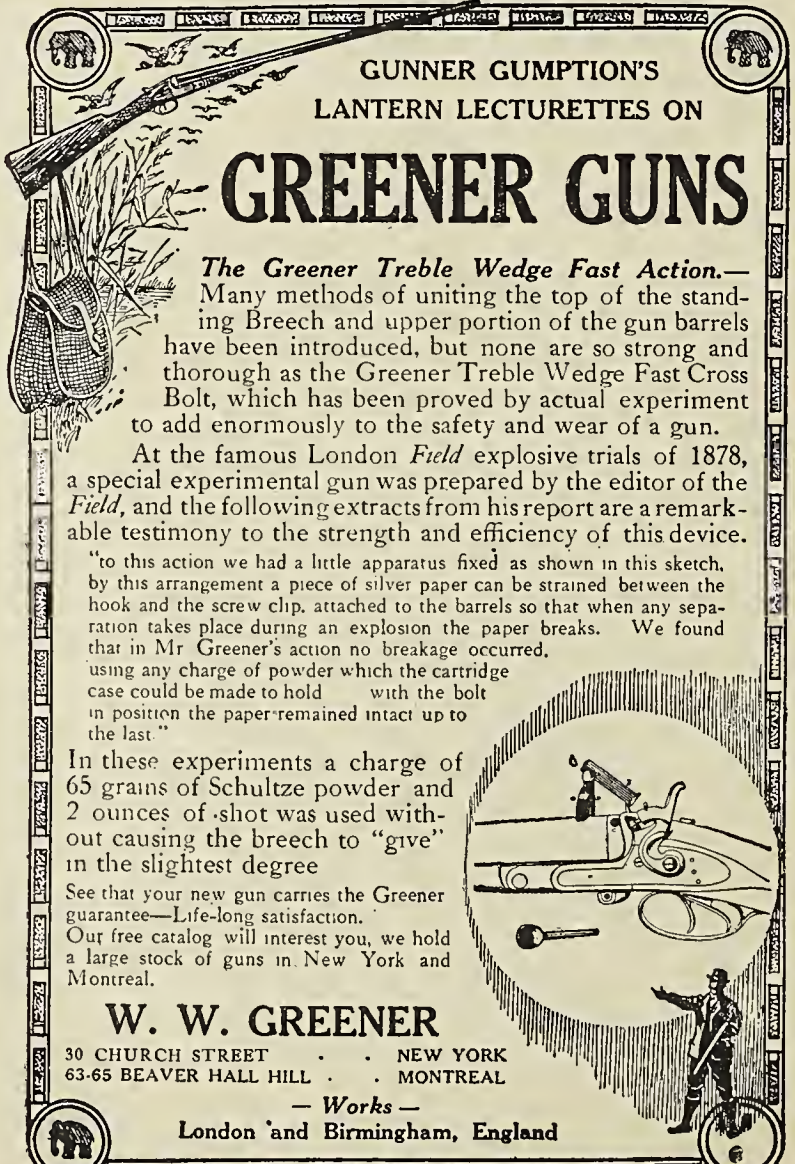

"to this action we had a little apparatus fixed as shown in this sketch, by this arrangement a piece of silver paper can be strained between the hook and the screw clip, attached to the barrels so that when any separation takes place during an explosion the paper breaks. We found that in Mr Greener's action no breakage occurred, using any charge of powder which the cartridge case could be made to hold with the bolt in position the paper remained intact up to the last."

In these experiments a charge of 65 grains of Schultze powder and 2 ounces of shot was used without causing the breech to "give" in the slightest degree.

See that your new gun carries the Greener guarantee—Life-long satisfaction. Our free catalog will interest you, we hold a large stock of guns in New York and Montreal.

FISHING THROUGH THE ICE ON LAKE PEND OREILLE, IN IDAHO

From a photograph by Charles Stuart Moody.

ARE YOU A GUNNER?

Do you love to follow your good dog over the fields in search of quail or chickens, or to struggle through swamp or along thick grown hillside, expecting to hear the roar of the ruffed grouse or the twitter of the fall woodcock? If so, you should have this new book.

AMERICAN GAME BIRD SHOOTING

By **GEORGE BIRD GRINNELL**

(New—Just Published)

This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys.

The first part of the volume is devoted to a description of the various species and their habits—the way in which they live their lives.

The second part of the book is devoted to upland shooting and treats of the methods by which all the upland birds are pursued and taken. The chapter "Aids to Shooting" describes the clothing, guns, and loads and dogs that the gunner may profitably use; while the last section of the book treats of the shooting of the future and the efforts to rear our native quail and grouse in domestication.

The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full page portraits of different game birds and hunting scenes, with a number of cuts in the text.

Cloth. About 575 pages. Price \$3.50, net. Postage 25 cents.

This book is of inestimable value. It contains the genuine hunter-naturalist facts given in the most entertaining and interesting style.

FOREST AND STREAM PUBLISHING CO., 127 Franklin St., NEW YORK CITY

AMERICAN DUCK SHOOTING

By *George Bird Grinnell*

A most complete work, dealing with every phase of the sport of duck shooting, thus forming a complete treatise on American ducks, geese and swans. It gives details of the natural history, habitat, and characteristics of every American species.

Part I contains descriptions with plates of each species.

Part II tells of every method of swan, goose and duck shooting practiced in North America—east and west, on Atlantic and Pacific and in the interior—and gives thrilling accounts of the splendid sport.

Part III deals with the art of duck shooting, including guns and loading, the Chesapeake Bay retrieving dog, decoys, blinds and boats, and finally discusses the causes of the decrease of wildfowl and tells what may be done to increase their numbers.

It is most fully illustrated with 58 portraits of North American swans, geese and ducks, by Edwin Sheppard, with 8 full page plates, and with numerous vignettes in the text by Wilmot Townsend.

Cloth, heavy laid paper, 58 illustrations, eight full-page plates, 627 pages. Postpaid, \$3.50.

FOREST AND STREAM PUB. CO. :: 127 Franklin Street, NEW YORK

WILDFOWL IN A PARK.

THOUSANDS of wild ducks—mallards, teal, sprigtails, widgeons and other varieties—have sought refuge from the hunter in Stow Lake in Golden Gate Park, says the San Francisco Chronicle. There, with the great white swans, the black swans, the wild geese and the myriads of mudhens, they have found a home.

The east end of Stow lake was fairly covered with fowl recently. There, about an artificial island, the ducks have congregated and seem to know that they are safe from the hunters. The chugging of automobiles on the big drive about the lake does not disturb the wild fowl and hundreds have become almost as tame as domestic fowl already.

The other morning several men and women with baskets of bread made the trip to the lake to feed the ducks. There was a wild fluttering of the game birds whenever any one appeared at the lake to scatter the bread crumbs upon the water.

Before noon the ducks were so tame that they flocked about those who fed them.

The mudhens, tamer than the ducks, climbed out of the water and fluttered about the feet of the feeders. The big swans lumberingly climbed from the water and ate from the hands of those who fed them, while wild geese that have made their home on the lake for months walked about the swans and were fed out of hand.

At first the big wild ducks were shy, but after watching the wild geese, swans and mudhens receiving food from men and women without being molested, the ducks swam closer and closer until they were finally fighting for the bread crumbs thrown to them.

Ducks and other wild fowl have taken possession of several of the small lakes in the park, but it is in Stow Lake that the main body of the ducks has taken refuge.

The east end of the lake is roped off and the boating parties are barred from that section, so that the ducks may not be frightened. While they pay no attention to pedestrians walking along the paths about the lake or to the automobiles, the approach of a rowboat frightens the wildfowl away.

THE STRENGTH OF AN ELEPHANT.

I HAD lately to go to the Chiromo Marsh in Nyasaland in search of certain specimens of game which I required, says D. D. Lyell in the Field. The marsh has lately been opened to sportsmen, having previously been a game reserve, originally intended as a sanctuary for elephants. During the months of September, October, and November the heat there is very great, the country being low and damp. In the lowest parts the vegetation consists of heavy reeds rather than grass, and, whether burnt or unburnt, it is a hard country to hunt in under a tropical sun. In pursuit of my object I came across recent spoor of a herd of elephants, and during the following week was constantly coming on their fresh tracks. Having killed several buffalo, waterbuck, sable, and some other game, on Sept. 27, I came to a place where an elephant had scraped up the earth alongside the surface root of a large tree. He had then apparently levered up and broken the root with his tusk, doubtless gripping it with his trunk at the same time. A large piece of this root he carried away, and, after chewing at it, he dropped it alongside his spoor. He evidently was a large, strong beast, for I came on a nkuyu tree of large size which he had broken. At the place this tree was broken it measured, with a steel tape, 52½ inches in circumference. This shows what a full-sized bull elephant is capable of doing.

AN INTERFERENCE.

"How many ducks did you shoot, Pat?"

"The devil a wan! The lake wor full av them. But iv'ry time I'd point me gun at wan, d'ye moind, another wan w'd get betwixt me an' him an' spoil me aim!"—Boston Record.

OUT IN THE OPEN

Through the woods—across the fields—near to nature—a free-to-all privilege. Suitable clothing for such purposes enhances the pleasure. Cloth for such clothing necessitates a fabric of special weave and dependability.

Registered Name **FORESTRY CLOTH** Stamped on the Cloth

in beautiful gray-green—harmonizes with foliage and verdure. A closely-woven, pure-wool fabric, dust and wind proof, made in various weights. The light weight recommended and used for women's skirts and suits—the heavier weights for men's apparel.

Registered Name **OLIVAUTO CLOTH** Stamped on the Cloth

is a handsome olive-brown worsted serge—lightly but closely woven—possessing great durability. Does not show dust or dirt—suitable for tourists' coats and storm coats—also for hunting, golfing and riding suits and motorists' apparel.

Samples of *Forestry Cloth* and *Olivauto Cloth* sent upon request. And if you are unable to procure these fabrics from your tailor, we will see that you are supplied upon receipt of price, through regular channels, as we do not sell at retail. When ordering specify fabric and number of yards desired. *Forestry Cloth*, \$2.75. *Olivauto Cloth*, \$3.50. (3½ yds. to a man's suit.)

Spend This Summer Out of Doors

NATURE possesses many delights that are only revealed to the man who penetrates her secret retreats. You will find no other conveyance equal to the canoe for this search. The more you come to know about canoes and canoeing the more thoroughly you will be convinced there is no canoe equal in thorough satisfaction to the

"Old Town Canoe"

Why experiment when this conclusion is inevitable? Profit by the experience of those thousands of seasoned campers, outers, hunters, pleasure seekers and guides who choose the "Old Town Canoe" because of its workmanship, durability, ease of handling, speed, lightness. Agents everywhere. 2000 canoes in stock insure prompt deliveries.

Our illustrated catalogue full of canoe pictures and facts, sent free for a postal.

DR. MOODY TRIES HIS HAND.

Winter Fishing on Pend Oreille

By CHARLES STUART MOODY

ABOUT Nov. 15 every year the big mill whistles on Lake Pend Oreille bray their information "the day is done" for the last time until spring. The mill operatives are out of employment for the winter, unless they enter the logging camps, which many of them do, but there are not enough jobs to go round. Those who do not find jobs in the logging camps seek employment in a unique manner. Perhaps nowhere else in the United States is the same industry carried on. To understand it, conditions here must be explained.

Lake Pend Oreille, like many of the intermountain lakes and streams of the Pacific Northwest, is filled with Rocky Mountain whitefish (*Coregonus williamsoni*), but nowhere are they to be found in such numbers as in Lake Pend Oreille.

This fish must not be confused with the whitefish of the Great Lakes. Ours is a much smaller fish, averaging less than a pound in weight, though specimens weighing three pounds have been taken. The Rocky Mountain whitefish is a slim, trim built fellow, with pearly white scales and a very small mouth. During summer they remain in the deep, cool water of the lake, coming to the shallow water late in fall for the purpose of spawning, where they remain until late spring.

While the Great Lakes fish is rarely taken on a hook, the Western whitefish takes bait or fly

quite readily. In fact, there is meaner sport than fly-casting for these fish in fall when they first appear in shallow water. They strike eagerly and fight savagely though not so persistently as a trout or bass.

It is when the bays are covered with ice that whitefishing becomes both sport and business; when the men out of employment find a job for the winter.

The "oldest inhabitant" scans with weather-wise eye the northwest and prophesies a storm. The fishing colony begins preparations for the exodus. Steamers, launches, rowboats may be seen making across the lake for Bottle Bay (poetical name), the spawning bed of uncounted numbers of whitefish. Of late years these handsome fish have attained considerable commercial importance as a food fish, and the demand is always greater than the supply.

When the Frost King appears, the shallow, still bay is the first to receive a coating of ice. The fishermen have been busy. White tents dot the lake shore, tar paper cabins nestle in every sheltered nook, canvas shelters built on sleds, each with a tiny Sibley stove, stand ready for the season. The fishermen have laid in a supply of fire wood, hooks and lines prepared, knives sharpened, and most important of all, bait collected. This is essential, for the whitefish is a dainty feeder and scorns plebian fare; at least, until late in the season, when the natural food has

been consumed and hunger drives him to accept almost any offerings. The most taking bait is a certain white larva found in partly decayed pine stumps. The bait hunter may carve a large stump into kindling wood with his axe without finding more than a half dozen worms, then again he may harvest a half pint from a single stump. It is all a matter of luck. Stumps close about the bay have been prospected, the hunter must fare far in the timber for his supply. Improvident ones are obliged to purchase bait at one cent each. Once collected, the bait keep fresh all winter by merely covering them with corn meal.

The method of taking whitefish with hook and line is very simple—and very difficult. The tackle is primitive and consists of a stout oiled silk line, a fine leader, two ounces of lead and a diminutive hook.

The frost comes. The colony awakes in the morning to find four inches of ice covering the bay. Everything is bustle and preparation. The houses on the sleds are pushed out, fires lighted in the stoves, holes cut through the ice, and the sleds pulled over them. The fisherman seats himself, decorates his hook with the tiniest bit of the bait, and lowers it through the ice to the bottom. Gradually he pulls the line up. If the fish are not feeding in that spot, another is tried, and another until the proper place is located. If one of the fishermen finds the feeding ground,

he summons the others, for they are all one family.

There is an art about catching whitefish. The trout or bass angler would suffer hunger were he to depend upon whitefish for food until after he learns the trick. The dainty little mouth of the whitefish is an index to his dainty feeding habits. He does not rush up, seize the bait and scoot away like a negro stealing a watermelon, but creeps up carefully, nibbles with a touch so light that it requires trained fingers to detect his presence. A gentle tug on the line, or at most the slightest pull, and he is gone. The angler must twitch the line at the psychological moment if he wishes to succeed.

I spent three days among the whitefishermen last winter, days chock full of fun and sport. My success the first and second days was not phenomenal. Six lonely fish were all I could show for a whole day in the cold, for I had no shelter. The second day was little better, but the third day redeemed my reputation. There is no more a royal road to whitefishing than there is to geometry. My hostess, Mrs. Burton Harris, stood within a few feet of me and hauled them out by the dozen, much to the amusement of the fishermen, who were delighted to see me "skunked" by a woman.

The uninitiated must not suppose that pulling a whitefish through a hole in the ice is not sport, the fish are very much alive and very much disinclined to leave their element, the hook is small, the mouth tender, the fish must be "handled with care." It is quite the common thing to see dense blue haze floating over one of the fishing shacks and hear language emanating therefrom. One of two things has happened—the angler has lost a fish just as it reached the hole in the ice, or a big charr trout has happened along and walked away with hook, line and sinker. This only happens occasionally. It requires something approaching skill to juggle a ten-pound charr on a fourteen hook through a six-inch hole in the ice. It has been done, but not often. When it is done, it is not done quickly, and the doer is the envy of the whole fraternity.

If the reader will accept apologies, I will allow the camera to tell the tale.

The Old Trapper Speaks.

You are clever, they're telling me, youngster,
With your traps and your poisoned bait;
You travel the plains in a wagon—
We hoofed it with cautious gait;
You sleep every night under canvas,
You've comforts galore when you halt—
But could you take traps and your rifle
And live for a year without salt?

You have kettles and pans—and your wagon
Resembles a grocery store;
We had to depend on our powder
For grub and the clothes that we wore;
You set up your tent in the open—
To us every shadow cried "Halt."
Could you half roast your kill, like an Injun,
And live for a year without salt?

You are skillful, they tell me, oh, youngster,
But would your skill answer their test?
Would you hazard your life on one bullet
With a savage's knife at your breast?
Those were giants—those hunters of beaver,
Whose bravery rose to a fault.
Could you turn to a land that was pathless
And live, as they lived, without salt?

—Denver Republican.

Arizona Ruins

By J. W. SCHULTZ

HERE we are on our third winter outing in Arizona, this time camped on Tonto Creek, sixteen miles north of Roosevelt Dam at Cline, in Gila county. We all agree—the madame, the young person, and I—that we made no mistake in choosing this locality. Since coming here in November the weather has been simply perfect; the days warm and sunny, but not too warm, the nights cool, even frosty.

Cline postoffice is a lone ranch house. Up and down the valley within a distance of ten miles there live a half dozen cowmen; just such rough good fellows as we knew in Montana in early days, and that is some praise for them.

The valley and mesas of Tonto Creek are about five miles wide between the Sierra Anchas range on the east, and the Mazatzals on the west. Northward, about sixty miles away, we can see the sharp rim of the Mogollon range. Deer, wild turkeys and an enormous sized variety of the squirrel family are plentiful in the pines of the Sierra Anchas, twelve miles from camp. So are Mearns' partridges—locally called fool quail—this being about their northern limit. In the Mazatzals—the divide between the Tonto and the Verde, deer are plentiful, and turkeys also in the more northern portion of them.

Right down here on the Tonto the quail are almost unbelievably plentiful. Within two miles of the tents there are no less than thirty coveys, ranging in number from a couple of hundred up to a thousand or more birds. Ducks, mallards especially, feed in the sloughs of the creek in numerous small bunches, returning each night to the great artificial Roosevelt Lake, now twenty-eight miles in length.

The Tonto valley is especially noted for its prehistoric ruined pueblos, as yet unexploited except for the small amount of work I have done in them the past several months. They range in size from a few to a hundred or more ground floor rooms and some contained buildings of two, and even three stories. The walls are all of rock, laid up with adobe. The pueblos mostly stand on the edge of the mesas overlooking the rich bottom lands of the valley, which the prehistoric people largely cultivated. By means of irrigation they raised large crops of corn, cotton, beans, squash and tobacco. I have traced one of the ancient canals a distance of more than three miles.

It is now known that the Southern clans of the Hopi people lived at one time along the Gila River in Southern Arizona, and gradually moved northward to their present habitat either by way of the Verdi or Salt River and its Tonto tributary, sometimes building pueblos in the open valleys, and again inhabiting the almost inaccessible cliffs. From the finds I have made, I am satisfied in my own mind that the builders here were the Hopi, but I still lack conclusive proof of it. I have so far been unable to find a ceremonial room, or kiva, and its distinctive paraphernalia for religious rites, which would definitely settle the question.

In the ruins proper my work has been confined to the excavation of the 12 x 14 ground

floor room of what was a two-story building. This ruin is a large one, consisting of the remains of ninety-four large ground floor rooms and several courts, or plazas, all inclosed by the usual defensive wall. In this room the walls still stand to a height of five feet, and level with the top of them it was filled with a mass of fallen wall material and charred beams and charcoal. Mixed in with this stuff and on the floor I found twenty-two ollas and food bowls, all broken; a metate and ten grinders; a large sea shell; three awls, or daggers, made of deer leg bone; several varieties of paint, a number of stone and obsidian arrow heads, and two stone axes, one of which was perfect. Both here and elsewhere in the place was proof that the pueblo had been destroyed by fire. A cooking pot in which still remained the bone part of a meat stew was evidence that the occupants of the room had left it in a hurry. Certainly they would have taken the axe, and the still more valuable shell, had they deliberately abandoned the place. The largest of the ollas was thirty-five inches in diameter and thirty-nine inches high.

Outside of the ruin, close to the defensive wall, I have uncovered one skeleton, that of an old woman. Beside her were two small food bowls, the usual mortuary offering, both unfortunately undecorated.

But I have found a number of shrines at this and other ruins containing water-worn rocks petrified wood and queer shaped stone, these in no way different from prehistoric and present day Hopi shrines. And again, the pottery here is in color, quality and patterns of the beautifully laid-on geometrical figures, precisely like that from the ancient Hopi pueblos and cliff dwellings, both north and south of the Tonto. Some of these, in fact, are line for line duplicates of those on certain monuments and palaces in Central America, and this is significant: the sedentary, pueblo-building, crop-raising peoples of our Southwest undoubtedly had their origin in tropical America.

Another important find, made by the young person, is a one-room ruin close to an ancient canal, in the floor of which is a small circular hole extending down into the ground the length of a man's arm. This may have been a kiva, the hole in the floor a sipapu, or symbolic passage to the under world, which is found in all Hopi kivas, prehistoric and modern. The young person has sharp eyes, proof of which is a turkey, a bear and a deer, each of artistically carved stone and about a half inch in length. They were recovered from the gravelly mesas in the vicinity of the ruins.

The cottonwoods are leafing out, a sign to us that we must soon move back to cool country. We hope, however, that another November will find us here again with health and strength to enable us to continue the search for the ceremonial room. Certainly no better spot than this for a winter camp can be found in all the land.

No, I have not killed deer or turkeys this season; the ruins have been more to me than shooting.

Pacific Salmon in Eastern Waters

By DR. JOHN D. QUACKENBOS, of Columbia University

FROM the day that mediæval monks, credited with the revival of Roman methods of pisciculture, planted strange fishes in the rivers of Christendom in order to give variety to the fish food enjoined by the church as imperative on fast days, civilized people have sought at intervals to replenish depleted waters with new forms of fish life, or to introduce popular game fishes into strange lakes and streams for the sake of the sport they might afford. The very ocean has interposed no barrier to the enthusiasm of the angler. The black bass has been transported to Great Britain and Germany, our square-tail and rainbow trout have been distributed in European streams; the Loch Leven salmonid is now naturalized in the rivers of India, and British *fario* and salmon have been successfully carried to the antipodes.

All over our own land, attempts more or less successful are making to acclimatize desirable food and game fishes in waters to which they were not native. Prominent among the fish selected for such purpose is the chinook, quinnat or king salmon (*Tschawytscha*), the famous fish of the Columbia River, known to ichthyologists as the *Oncorhynchus* (from two Greek words meaning "hook snout," so-called from the hooked appearance of the jaw in shotten males). This salmon, one of five related species, ascends the rivers of Western North America, and of Asia as far south as Kamtchatka in countless thousands to spawning grounds in some instances 1,000 miles from the sea. It differs objectively from the genus *Salmo* by the larger number of rays in the anal fin, sixteen being the rule, never fewer than fifteen, while the Atlantic and the landlocked salmon have a shorter anal fin with nine to twelve rays. The quinnat is of the greatest economic importance, being regarded from the standpoint of food supply as the most valuable fish in the world. The average take in the Columbia River is 30,000,000 pounds; the value of the entire annual catch is estimated at \$20,000,000.

Attracted by its wonderful fecundity, as well as by its value for food purposes, the students of fish life connected with the United States Commission have for forty years persisted in attempts to naturalize this fish in many waters, including the Atlantic coast streams, the Mississippi and the Great Lakes, but until recently with negative results. A brief review of the life history of the quinnat will throw light on the cause of failure.

Most of the eggs deposited are devoured by other fishes; most of the alevins, helpless during the six weeks required for the absorption of the yolk sac, are swallowed by predatory fishes and birds. So we may start with the fry, drifting down stream tail first, subsisting on floating insects and larvæ, and reaching the ocean when five months old. Their stay here varies from two to four or five years, during which they grow with phenomenal rapidity. But of the life of this salmon in the sea, practically nothing is known. The young are believed to

remain near the mouths of the rivers they have descended, feeding voraciously as they grow on the schools of smelts, silversides, anchovies and other dainties of the deep, and in Alaskan waters on the herring. At Yes Bay, schools of the latter fish herald the approach of the pursuing king salmon.

The size attained during this developmental period differs in members of the same brood. The largest chinook ever taken weighed 125 pounds; the average weight is about twenty pounds. In order that you may form an idea of the countless multitudes that throng the inlets, pushing toward the cold pour of entering streams, I will repeat a statement Prof. Libby, of Princeton, made to me. While studying the language used in an Alaskan Indian village, he paddled out one spring morning with an old chief to see him catch salmon for the settlement. The Indian used a spear weighted at the head, to which was attached a long thong. With no salmon in sight to aim at, the fisher merely hurled the spear into the air, and as it descended and entered the water, it impaled a fish, which was promptly hauled in. Prof. Libby then took the spear and hurled it at random in different directions five times, securing as a result three twenty-pound salmon. To use an Eastern hyperbole, the inlets are "stiff with fish."

Impelled by their instinct to seek fresh water as the organs of reproduction develop, these salmon gradually prepare for their up-river journey by a considerable stay (thirty to forty days) in brackish water, and then stem the current at the rate of two to four miles a day toward the spawning grounds many hundreds of miles up-stream. But the bridal migration is in reality a death march, for in all five species of *Oncorhynchus*, dissolution invariably follows the first act of procreation. Both parents die, whether the hymeneal bed be 1,000 miles or 1,000 yards from the ocean. The day of their bridal is the day of their funeral. An inexorable nature exacts a frightful penalty at the climax of their passion.
