ON Wednesday morning next the season for trout fishing in New York State will open under the new law signed by Governor Dix on April 15. The change from April 16 to May 1 is regarded by the majority of persons interested in such matters as a wise one, while as for those in the minority, they will exercise a little patience or be liable to punishment. Combined with the efforts put forth to provide better trout fishing, the postponing of opening day until May 1 is worthy of the approval of every good citizen. April fishing in an average year is more harmful than it should be, for the streams are high, discolored and cold, the trout do not rise, but seek their food on the bottom, where insect life is abundant, and therefore worm fishing is at its best. At that time, too, the small trout are readily taken, and those that are too small to be kept legally are more likely to die after they have been returned to the water than would be the case if taken with artificial flies. Trout that take flies from the surface are usually hooked lightly in the tough cartilage of the mouth, whereas those that gorge worms on the bottom are hooked too far back to be removed without injury from the hook, hence they die.

These conditions apply at present. The season is backward, there is little to be seen in the woods that tells of the vernal season, and the streams are very cold, so that it will be well along in May before satisfactory trout fishing may be had in the hill country.

While the protectors were ready to enforce the new law on short notice, it is known that in many places trout fishing was done on April 16. In the majority of cases the violators were innocent of wrong intentions, as they were out of touch with news, but in others there was a tendency to break a law that, through the Governor's waiting until the last moment, did not give intending anglers a day's notice of the change. In one instance a daily paper that has considerable influence advised its readers to fish on the sixteenth despite the new law, and no doubt its benighted advice was taken by a few persons who are wont to be led astray by the yellow journals.

Through the turmoil of uncertainty that marked April 15 and 16 as days to be remembered by anglers, the rumor that the new law would not become effective until next year was circulated with a persistency worthy of a better cause. FOREST AND STREAM was swamped with inquiries, and although the replies left no room for doubt, it was not until the end of that week that inquirers ceased to insist that the mistake was ours and not their own. Some of them believed that the new law would not go into effect until May 1, others twenty days, still others thirty days, and although it was not a pleasant task to state the facts, there was nothing else to do, and many a tired business or professional man put away his tackle and went back to his desk with a sad heart, for a few days more meant a great deal to those who were told at the eleventh hour that they could not go to the trout streams next day, as they had so long intended to do.

In New Jersey, where the season had been open since the first, there was little to cheer the angler, for the woods and meadows were bleak and cold, with only the skunk cabbage, the leaves of the earliest spring flowers, the red maple blossoms and a few early birds to prove that April

was here. Among the hills whose altitude ranges from 500 to 1,200 or more feet above sea level there was no rise of trout in the cold streams on the twentieth. Caddis flies were emerging from the water in the warm sunlight, but there was no evidence then that the trout were watching for them, and even the worm fishers said that there was nothing to be taken save the baby trout which could not be legally kept.

In some of the streams that flow through meadowlands near tide level, where the sun warmed the water slightly on the few bright days, there was fair fishing, but even there May day will be early enough for anglers who fish for pleasure and not for heavy baskets of trout.

HENRY J. WILLINGHAM, superintendent of education of the State of Alabama, has named May 4th, the anniversary of the birth of Audubon, as Bird Day in Alabama. As usual, John H. Wallace, State commissioner of fish and game, has issued the "Alabama Bird Day Book," for the occasion. This excellent little publication is being sent to all the school children, the bird societies and individuals who are identified with the work of song bird protection. Beautiful colored plates of birds, accompanied by brief descriptions of the birds and their economic and esthetic value, and verses on the subject make the book an especially attractive one to children, and for use in the schools. Mr. Wallace is doing excellent work, work that is bearing abundant fruit, in a State that is more or less popularly believed to be free foraging ground for all-the-year-round market shooters.

THE supreme court of Illinois has refused to grant a rehearing in the celebrated Spring Lake case. The court in a recent decision found against the drainage commissioners of the Spring Lake district, perpetually enjoining them from interfering with the lower end of Spring Lake, maintaining that this section was navigable and therefore not under the control of the commissioners. Judge T. Harris, in the Tazewell county court, decided against the sportsmen and others who opposed the commissioners, but the upper court set aside this finding. It may be that the drainage board will not attempt to carry the case further, but will accede to the wishes of the hunters and fishermen.

A FIRE swept through a large section of woods near Millville, N. J., recently, and for a time it was beyond control of the wardens and citizens who assisted them. Some of the railways in that State require their employes to exert every effort to prevent fires along their rights of way, and to put out fires that have been started by locomotives. The rural mail carriers have also been instructed by the postoffice department at Washington to watch for and report fires along their routes. The plan is to have them notify the nearest fire wardens, in order that no time need be lost.

A HARRISBURG firm has made plans to give 25,000 young maple trees to the school children of that Pennsylvania city on Arbor Day, the little sprouts to be planted in and about the city.

TWENTY-THREE THOUSAND aluminum canteens and cups of an approved pattern are to be made for the United States army.

YACHTING

Ticks from the Ship's Clock.

The New York Y. C. has now 488 vessels in its fleet and the gross tonnage is 66,269.84. Of these 93 are schooners of 8,714.40 tons; 99 sloops and yawls of 2,882.77 tons; 197 steam yachts of 49,239.85 tons, and 109 power boats of 5,432.82 tons. In addition to these there are 75 motor launches specially listed in the club.

At a recent meeting of commodores of several yacht clubs it was decided to hold a motor boat race on Decoration Day, the course to be from New York to Albany. Mayor Gaynor is to send a message to Governor Dix, it is hoped, by the winner.

The racing schedule for the Bristol Y. C. this season is one regatta shorter than previous schedules, according to the list of events arranged recently by the Narragansett Bay Yacht Racing Association. There is to be no September regatta in Bristol, unless the Bristol club holds a special race.

Usually there have been open regattas in June, August and September. Whether there will be a Brenton Reef cup race this season for a special cup is not definitely known. Last season such an event was eliminated from the schedule for the reason that the annual run on the excursion steamer to the King's cup race more than made up for the contest to Brenton's Reef and return. Bristol's first regatta will be on June 29.

Nat Herreshoff's new 50-foot power boat, which is being constructed at the shops of the Herreshoff Manufacturing Company in Bristol, will be ready the latter part of May.

Former Commodore Arthur C. James received his new mahogany speed boat as a tender to the steam yacht Aloha last week at Newport, the little craft proceeding from Bristol under her own power, making about eighteen miles an hour.

Seawanhaka-Corinthian Y. C. is arranging a regular series of contests for the jewel S class yachts each Saturday afternoon during the season. This class is about 19 feet waterline and 28 feet over-all, designed by Cox & Stevens in 1909 and built by Robert Jacob, at City Island, at a cost of \$1,100 each. The club has options on six at \$700 each, which will be turned over to members purchasing.

The talk of challenge from Chicago Y. C. to the American Y. C. for Manhasset cup has been received. The yacht building at Woods Yard, City Island, to defend the International trophy on the Great Lakes will be the entrant. The race will be sailed before July 1.

150-Mile Big Schooner Race.

The first event on schedule of the Eastern Y. C. will be the race from Newport to Marblehead, the most important long distance race of the season, with classes for big schooners, smaller schooners, and one for sloops and yawls, over a course of about 150 miles.

The big schooners will race for the gold cup offered by Commodore F. Lewis Clark. Last year Elena won one leg on the cup. The smaller schooners and the sloops will race for prizes presented by two other members of the club. In this event entries will include Elena, Irolita, Enchantress, Sea Fox, Princess, formerly Elmina I.; Taormina, Vagrant, Shimna, Avenger, Adventuress and Acushla II.

On the same day the club will hold a regatta at Marblehead for yachts of not more than 46 feet rating, and in this there will be the regular rating classes, and probably the Sonder class and Marblehead one-design classes.

On Tuesday the annual regatta of the East-

ern Y. C. will be held off Marblehead, in which all the yachts taking part in the ocean race will enter.

On Wednesday evening there will be a captains' meeting on board the flagship, and early on the morning of Thursday, July 4, the fleet will start on the cruise to Bar Harbor.

For the racing runs there will be regular club prizes each day, while special prizes for the yacht making the best total corrected time on all the racing runs of the cruise have been offered by Commodore Paine, for first division schooners; Vice-Commodore Sears, for all auxiliaries sailing in one class; Rear-Commodore Whitehouse, for first division sloops and yawls; M. F. Plant, for second division schooners; Fleet Captain Emmons, for third division schooners, and Arthur Winslow, for second division sloops.

On Friday afternoon, July 12, the race for the Norman cups from Bar Harbor to Marblehead will begin. Ample time will be allowed for yachts wishing to take part in Larchmont regatta, beginning July 20.

The Eastern Y. C. will give a special race off Marblehead for yachts of not more than 46 feet rating on Aug. 5. This will be the first day of the regular Marblehead race week in connection with the midsummer series of the Corinthian Y. C.

Camden (Me.) Y. C.

THE new club house of the Camden Y. C., located on the site of the old lime kiln property on the south side of the harbor, will be ready for occupancy in early June. It is of wooden construction, provided with a wide piazza on three sides and with all facilities of a modern club house. The main room is 89 feet long and 58 feet wide. The dock has a granite bulkhead and is 167 feet long, and there is twelve feet of water in front of the dock at low tide. At one end of the property, in a separate building, is a large storeroom and locker room, which will be used for skippers. Seventy-five feet of frontage provides ample room for boats or tenders.

This year the club will provide a water boat for the convenience of its members and guests. The commodore is Cyrus H. K. Curtis, of Philadelphia.

Corinthian Y. C. Schedule.

THE schedule of the spring series races, race-about class, of above club for the season are as follows:

Saturday, May 11; Saturday, May 18; Saturday, May 25; Thursday, May 30; Saturday, June 1; Saturday, June 8; Saturday, June 15; Saturday, June 22; Saturday, June 29. Open to raceabouts belonging to all organized yacht clubs.

Prizes.—A prize will be awarded in each race in which two boats start with full intention of completing the course; a second prize, in which four or more start with like intention; and a third prize, in which seven or more start with like intention. A series prize, presented by Vice-Commodore C. Howard Clark, Jr., is offered for the winner of the greatest number of points. Points to count as follows:

In each race, each boat competing will be credited with as many points as the number of boats she defeats, with one point added as a premium for sailing race.

A boat that starts and does not finish will receive no point, but will be counted as a defeated boat in crediting points to boats that complete the race.

The award of points will be made each day on the basis of the largest number of boats starting on any day, it being assumed for the purpose of this competition that the number of boats starting is the same each day.

Courses.—The committee will decide on the morning of the race which course will be sailed, and will announce the same at least one hour before the preparatory signal.

Racing Signals.—1:55 P. M., preparatory signal, blue peter; 2:00 P. M., starting signal, red ball dropped. (The red ball will be hoisted one minute before gun-fire; the signal to start will be the fall of the red ball and gun-fire.)

Entries.—All boats shall carry racing numbers, which shall be placed above the reef points, at equal distance from the luff and leech, on each side of the mainsail. No boat will be timed which does not display her racing number.

A race in which no boat has finished at one-half hour after sunset shall be declared off.

Opening of Delaware Season.

THE yacht racing season of the Corinthian Y. C., of Philadelphia, will open May 11, to be sailed off Essington. The series will last until June 29, the races being sailed on Saturdays and Decoration Day.

A prize will be awarded in each race in which two boats start with full intention of completing the course; a second prize, in which four or more start, and a third prize, in which seven or more start. A prize is offered by Vice-Commodore C. Howard Clark, Jr., in the series to the winner of the greatest number of points.

Entries should be made before May 11. Addison F. Bancroft (Chairman), George Breed and Charles Longstreth constitute the race committee.

Yacht Sales.

THE Hollis Burgess Yacht Agency has sold the 33-foot waterline sloop yacht Lady Mary, owned by Gifford K. Simonds, of Fitchburg, Mass., to Philip L. Saltonstall, of Boston. Lady Mary is a Lawley built cruiser formerly owned by Senator Nelson W. Aldrich, of Rhode Island, and will be changed by Mr. Saltonstall to an auxiliary for use on Vineyard Sound.

The same agency has also sold the crack Herreshoff 25-footer May Queen, owned by J. C. McCoy, of Providence, R. I., to J. S. Crosby, of New York, who will race her on Long Island Sound.

Motor Boating

San Diego Cruise.

THE cruise committee of San Diego Exposition held a meeting yesterday and settled some of the details of the cruise.

Competing yachts will leave New York early in September, 1914, and thereafter, according to the handicaps allowed to each under normal conditions, should they arrive at Colon within a few hours of each other. The cruise is divided into two sections, one from New York to the canal, the other from the canal to San Diego, prizes being offered for both legs. Pacific coast yachtsmen will participate in the latter leg, so that when the fleet leaves Panama northward along the Pacific coast, it will be made up of the best power yachts of Atlantic and Pacific clubs.

Bermuda Race.

COMMODORE WHITAKER, of the Yachtsmen's Club of Philadelphia, announces that that club will handle the Bermuda power boat race this year and that the start will be made from Philadelphia on July 27. This race previously has been conducted by the Motor Boat Club of America. It was not held last year because the date was set too early in the year to permit boats to get ready. The committee in charge to assist J. G. W. Whitaker is comprised of M. E. Brigham, Chairman; A. Harry Edson, Mr. Field, Charles Lagen, Mr. Cartledge, Jr., R. M. Vanderherchen, F. G. Strassburger and Dr. Eugene Swayne, Secretary.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Central Division.—W. H. Hoffman, care of Heeren Bros.; T. R. Barlow, care of E. V. Babcock Co.; S. B. Ridge, care of Bell Telephone Co., and Earle Moon, care of Arbutnot Stephenson Co., all of Pittsburgh, Pa., and all by Wyn B. Morris and Frank C. Demmler.

Western Division.—Benjamin S. Pfeiffer, 1108 N. Madison avenue, Peoria, Ill., by A. M. Callman; Donald W. McAllister, 328 N. Main street, Rockford, Ill., and W. C. Wilcox, 407 North Avon, Rockford, Ill., both by J. W. Barker; Elmer E. Magor, Culhane Building, Rockford, Ill., by H. F. Norris.

NEW MEMBERS ELECTED.

Central Division.—6388, Grove M. Parker, 785 Potomac avenue, Buffalo, N. Y.

Eastern Division.—6389, Otto C. Schmidt, 19 Johnson street, West Roxbury, Mass.; 6390, Alonzo Q. Thayer, 21 Hanson street, Boston, Mass.; 6391, Robert F. Kelly, 30 Alaric street, West Roxbury, Mass.; 6392, Walter B. Buttinger, 74 Weld Hill St., Forest Hills, Mass.; 6393, Leo Weise, 6 Germania street, Boston, Mass.; 6394, Joseph J. Tagen, 12 Gould street, West Roxbury, Mass.; 6395, William E. Powers, 340 Baker street, West Roxbury, Mass.; 6396, Walter M. Whiting, 41 Hamilton street, West Roxbury, Mass.; 6397, Emil P. Schmidt, 19 Johnson street, West Roxbury, Mass.; 6398, William G. Schmidt, 19 Johnson street, West Roxbury, Mass.; 6399, Hugh D. Macpherson, 20 Newburg street, Roslindale, Mass.; 6400, Richard Roth, 155 Eustis street, Roxbury, Mass.

Western Division.—6401, Ray Fernbach, 1510 School street, Rockford, Ill.; 6402, Thomas C. Angell, Dundee, Ill.; 6403, Harry L. Boynton, Dundee, Ill.; 6404, Albert M. Vilas, Lake and Curtis streets, Chicago, Ill.

Saginaw C. C.

THE Saginaw Canoe Club of this city contemplate building a new club house and is desirous of securing information as to where plans, detail, etc., can be procured. If possible, we wish you would kindly give us a list of canoe clubs so we may write them for the addresses of the architects who designed their club houses, or possibly you can put us in touch with architects who make a specialty of this kind of work.

Aug. 6-7.—Lock Haven (Pa.) G. C. C. A. Jobson, Sec'y.

Aug. 7.—Madrid (N. Y.) G. C. J. E. Thompson, Pres.

Aug. 7-8.—Lindsay (Okla.) G. C. Robt. May, Sec'y.

Aug. 7-8.—Springfield, Ill.—Illinois G. C. J. R. Leib, C. A. McDermand, Pres.

Aug. 8.—Livermore (Ia.) G. C. J. H. Zigrang, Sec'y.

Aug. 8.—Berwick (Pa.) R. and G. C. W. I. Shrader, Sec'y.

Aug. 10.—Temple, Pa.—Hercules G. C. A. K. Ludwig, Sec'y.

Aug. 10-11.—Chicago (Ill.) G. C. E. B. Shogren, Sec'y.

Aug. 12-13.—Fayette, Mo.—Afro-American Trapshooters' League Grand Afro-American Handicap. T. H. Cohron, Sec'y.

Aug. 14.—Batavia, N. Y.—Holland G. C. Chas. W. Gardner, Sec'y.

Aug. 14-16.—Kansas City, Mo.—The Interstate Association's Seventh Western Handicap tournament, under the auspices of the Kansas City G. C.; \$1,000 added money. The winner of first place in the Western Handicap is guaranteed \$250 in cash and a trophy. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.

Aug. 20-21.—Sioux Falls (S. D.) G. C. A. Olson, Sec'y.

Aug. 23.—Sandusky, O.—Ye Oak Meadow G. C. Ira C. Krupp, Sec'y.

Aug. 27-29.—Portland, Ore.—The Interstate Association's seventh Pacific Coast Handicap tournament, under the auspices of the Portland G. C.; \$1,000 added money. The winner of first place in the Pacific Coast Handicap is guaranteed \$250 in cash and a trophy. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.

Sept. 2.—Ogdensburg (N. Y.) S. A. J. M. Morley, Sec.

Sept. 2.—Bridgeport, Conn.—Western Connecticut Trapshooters' League tournament, under auspices of the Sea Side G. C. Earl R. Lewis, Sec'y.

Sept. 2.—Lima (O.) G. C. A. W. Fisk, Pres.

Sept. 3.—Bucklin (Mo.) G. C. Ed. Herriman, Sec'y.

Sept. 17-18.—Brookfield, Mo.—Linn County G. C. Ed. Barton, Sec'y.

Sept. 5.—London (O.) G. C. H. L. Hildinger, Sec'y.

Sept. 9-10.—Evansville, Ind.—Indiana State tournament, under the auspices of the Recreation G. C. Geo. A. Beard, Cor. Sec'y.

Sept. 10.—McKeesport, Pa.—Western Pennsylvania Trapshooters' League tournament, under the auspices of the Youghiogheny Country Club. R. J. Caughey, Sec'y.

Sept. 10-13.—Denver, Colo.—Rocky Mountain Interstate Sportsmen's Association; \$5,000 added money. Ambrose E. McKenzie, Mgr.

Sept. 17-20.—Atlantic City, N. J.—Westy Hogans of America tournament. Bernard Elssesser, Sec'y.

Sept. 18-19.—Bloomington, Ill.—McLean County G. C. C. A. McDermand, Pres.

DRIVERS AND TWISTERS.

Two things to tack up in your gun cabinet: May 14-16, seventh Southern Handicap, Interstate Association. Columbus, Ga., and on your way back, Ohio State shoot, Dayton, O., June 4-7, under auspices N. C. R. Gun Club.

A new gun club is well under way at Olneyville Station, Providence, R. I. Charles Gans is the moving spirit, and as he is a hustler, it is safe to predict a live organization within a short time. Already a dozen applications for membership have been made.

First registered tournament of the Connecticut Trapshooters' League will be held May 4, under the auspices of the Bethel (Conn.) Gun Club. There will be four merchandise events—Classes A, B, C and D, with handsome prizes in each event. Further information from Secretary C. K. Bailey, Bethel, Conn.

The selection of C. W. Billings, Dr. R. H. Sayre, Dr. G. M. Hamilton, and Lieut. A. Jones as members of executive committee of Olympic games is an excellent one. The first three named are among the foremost trapshooters in this country, while Lieut. Jones has no superior as an authority on rifle and revolver matters.

The Hercules Gun Club, of Temple, Pa., will hold a grand installation shoot on Saturday, May 18, on their grounds, Temple, Pa. Program calls for 100 targets, at one cent each, with \$1 sweeps in each event in five strings of 20 targets, to be thrown from a new Ideal Leggett trap with 16yds. rise and 50yds. flight. Percentage system prevails, and Interstate Association rules govern. Any information can be had by addressing A. K. Ludwig, Secretary, 222 Greenwich street, Reading, Pa.

The fourth monthly shoot of the East Millstone (N. J.) Gun Club, will be held April 27, starting at 1:30 P. M. The program will include six 25-target events, \$1.50 entrance in each. Money divided Rose system, 5, 3, 2, 1. High amateur guns, \$3, \$2, \$1. Anyone may shoot for targets only. Shells will be on sale at the grounds. We will shoot under canvas if stormy. Come, rain or shine. Automobiles will meet the 12:05 P. M. train from New York via the Pennsylvania Railroad, arriving at New Brunswick at 1:11 P. M. F. A. Jackson is Secretary.

The Chicago Gun Club announces the following big shoots during the year 1912: May 12, third annual interstate five-man team match and individual championships; June 15-16, Grand Chicago Handicap; Aug. 10-11, two-day registered tournament; October —, Middle West Championship. The officers of the club are: C. P. Zacher, President; W. F. Riley, Vice-President; W. A. Davis, Treasurer; E. B. Shogren, Secretary, 840 First National Bank Building. Tournament Committee: W. A. Davis, Chairman; E. B. Shogren, W. S. Cutler, C. W. May, Geo. Eck.

Let's blame it on the printer. In our issue of April 13, I referred to the amateur championship shoot at Travers Island as "national amateur championship," when it should have been designated "seventh amateur championship at clay birds." The national amateur championship is held under the auspices of the Interstate Association. Elmer E. Shaner, the dean of shooting college, suggests that the titles be referred to as "the New York Athletic Club's amateur championship of America" and "Interstate Association national amateur championship"—make it so.

The Onondago Gun Club will hold its regular spring tournament on May 1, at the Syracuse Yacht Club range, starting at 10 o'clock sharp. The program consists of ten events, for a total of 175 targets—five 15- and five 20-target events, with a total entrance of \$13. There will be \$25 added money, as follows: \$2.50 will be added to the 15-target events, and \$3 to the 20-target events. Event No. 8 will be for merchandise, entrance \$1.40. There will also be \$30 given for average money, as follows: \$8, \$7, \$6, \$4, \$3, \$2. Targets 2 cents each, included in all entrance. Money divided Rose system—15 birds: 5, 4, 3, 2; 20 birds: 6, 4, 3, 2, 1. Lunch will be served at the yacht club. All trap loads may be had on the grounds. Lakeside cars every thirty minutes.

Mrs. Harriet Kirkwood, widow of David Kirkwood, before his death a prominent gun maker and trapshooter of Boston, Mass., passed away at her home in Malden, Mass., Monday, April 15, in her seventy-first year. Two sons—William and Horace C.—two daughters—Mrs. Will K. Park and Mrs. Harriet J. Miller—and four grandchildren, survive her. The younger son, Horace, was called from Michigan by the death of his mother, and he arrived Thursday morning in time for the funeral. Among the many floral tributes was a large wreath of white roses and English violets sent by the Paleface Shooting Association, of Boston. The body was taken to the Forest Hills Crematory, and the ashes will be placed with those of David Kirkwood, in the Columbarium, since 1897.

W. G. BEECROFT.

Indianapolis Gun Club.

INDIANAPOLIS, April 20.—Moller led in percentage of targets broken, with Parry and Edmonson close up and tied for second place. Moller scored two straights, the others one each. Alig and Dixon tied for the spoon, the former winning on the shoot-off, 24 to 20.

Shot at.	Brk.	Shot at.	Brk.		
Moller	130	125	Lewis	110	89
Parry	130	119	Bell	90	77
Edmonson	130	119	Golden	110	74
Dixon	130	114	Granberry	55	43
Britton	130	105	Clark	25	16
Barr	110	99	Tansel	20	14
Alig	110	97			R. R.

Hyde Park Gun Club.

THE club has really started its weekly shoots for the season, and were favored with ideal weather on April 20. The attendance was fair, a dozen shooters taking part in the events, some of them for the first time since last fall. As the season passes a big improvement will be noticed in the scores of several who are now out of practice. Irwin was high gun to-day, defeating Hammerschmidt, the crackerjack of this section, by one target. The latter braced up after the second event and finished with a perfect score, Irwin making the only other perfect score of the afternoon. Milt Johnson shot a very even gait, but a slight stumble in the fourth event put him in third place instead of in a tie for second. Welsh has not been out for months, so that his score was a good one, even though a little lower than he makes when in practice. Hill shoots too little to keep in trim. More practice would place him nearer the top. Rugg still gets out occasionally, but he doesn't put up the scores he used to when he was a regular. Dr. Phillips came out to-day to get things in working order, and went into one event with fair results for one who has shot so little in the past year. The Oskamps are both new at the game, though good field shots, and require only a little regular practice to make good at the traps. Frohlinger had an assistant to-day, and was able to get in several events. Generally he is too busy scoring, etc., to do much shooting. The team match was a hot one, while it lasted, the winning team having only one target to the good at the finish. A team match with Sam Lever and his bunch of Goshen crack shots is being arranged for, and will be a feature of the near future. Scores:

Targets:	20	20	20	20	20	15	Total.
Irwin	18	18	18	16	19	20	109
Hammerschmidt	17	17	18	18	18	20	108
Johnson	18	18	18	17	18	18	107

Lawrence F. Q. G. P. Ass'n.

LAWRENCE, Mass., April 20.—The Lawrence Fish and Game Protective Association held the most successful shoot in the history of the club at their grounds on Andover street, yesterday. Regardless of the unfavorable weather conditions, the attendance from out of town was large, over fifty shooting through the entire program. Ex-Mayor Reed of Manchester, N. H., was high gun, breaking 145 targets out of 150, and captured the silver cup.

The scores were as follows:

	Hdcp.	Ttl.		Hdcp.	Ttl.
Fanning	12	146	Winslow	5	136
Reed	0	145	Frank	20	136
Williams	8	145	Morse	20	136
Gray	18	144	*Day	20	136
Hanford	29	144	Lagerquist	30	135

Sheppard	59	137			

*Professionals.

Gadsden Gun Club.

GADSDEN, Ala., April 18.—The Gadsden Gun Club held its first shoot of the season yesterday at Elliott Park. On account of the inclement weather there was not a full attendance. A high wind made the clay birds vary a good deal, and considering this fact, some fairly good scores were made. J. S. Paden was high gun, and he also made the only run of 25 straight.

The club shoots will be held regularly hereafter on Thursday, and everyone is cordially invited to witness these shoots. The following scores were made to-day:

	Shot at.	Broke.	Per C't.
J S Paden	100	90	90
C L Gunn	100	87	87
J P Gunn	100	84	84
E C Little	100	82	82
L M Norwood	100	80	80
O W Sibert	100	66	66
W G Bellenger	75	53	71
J G Du Bois	75	49	66
C F Cross	50	32	64

E. C. LITTLE, Sec'y.

Boston A. A.

Boston, Mass., April 19.—The Boston A. A. was greeted with rain and some wind at its shoot this morning. The take-home trophy was tied for by J. L. Snow and C. P. Blinn, and after shoot-off was won by Snow. R. A. Faye, J. L. Snow and J. E. Lynch tied for the take-home trophy over the Sargent traps, and on shoot-off at 25 targets Lynch won.

Record on the Barbey trophy and also for take-home trophy, 50 targets, handicap:

Table with 4 columns: Name, Score, Name, Score. Includes J. L. Snow, C. P. Blinn, C. B. Tucker, M. Ballou, L. H. Davis, H. W. Knights, G. E. Osborne, T. C. Adams, W. B. Farmer, W. C. Brooks, R. A. Faye, J. E. Lynch, F. Whitney, S. A. Ellis, C. B. Clark, J. H. North, C. C. Clapp, G. L. Munroe.

Shoot-off, 25 targets, handicap:

Table with 4 columns: Name, Score, Name, Score. Includes J. L. Snow, C. P. Blinn.

Shoot for take-home trophy over Sargent traps, 50 targets, handicap:

Table with 4 columns: Name, Score, Name, Score. Includes R. A. Faye, J. L. Snow, J. E. Lynch, M. Ballou, J. H. North, H. W. Knights, G. E. Osborne, T. C. Adams, C. P. Blinn, C. B. Tucker, C. B. Clarke, F. Whitney, L. H. Davis, W. C. Brooks, W. B. Farmer, G. L. Munroe, S. A. Ellis, C. C. Clapp.

Shoot-off, 25 targets, handicap:

Table with 4 columns: Name, Score, Name, Score. Includes J. E. Lynch, J. L. Snow, R. A. Faye.

Hunter trophy, 100 targets, handicap:

Table with 4 columns: Name, Score, Name, Score. Includes J. L. Snow, H. W. Knights, M. Ballou, C. P. Blinn, G. E. Osborne, R. A. Faye, C. B. Tucker, J. E. Lynch, J. H. North, T. C. Adams, L. H. Davis, C. B. Clark, W. B. Farmer, W. C. Brooks, F. Whitney, S. A. Ellis, C. C. Clapp, G. L. Munroe.

Shoot for Hunter trophy, 100 targets, handicap:

Table with 4 columns: Name, Score, Name, Score. Includes M. Ballou, J. E. Lynch, H. W. Knights, J. H. North, W. C. Brooks, R. A. Faye, L. H. Davis, W. B. Farmer, J. L. Snow, C. P. Blinn, S. A. Ellis, F. Whitney, C. B. Tucker, E. F. Gleason, T. C. Adams, G. E. Osborne, G. B. Clark, G. L. Munroe.

Afternoon shoot for a take-home trophy, Sargent traps

Table with 4 columns: Name, Score, Name, Score. Includes C. P. Blinn, H. W. Knights, M. Ballou, J. E. Lynch, S. A. Ellis, R. A. Faye, W. C. Brooks, C. B. Tucker, W. B. Farmer, F. Whitney, T. C. Adams, J. L. Snow, J. H. North, G. B. Clark, G. E. Osborne.

C. P. Blinn, H. W. Knights and M. Ballou tied on scores of 50, and on shoot-off, at 25 targets, Knights won.

April 20.—The weather conditions to-day were excellent. W. C. Brooks and C. P. Blinn tied for the take home trophy, and on shoot-off, Brooks won. Scores:

Afternoon shoot over McCrea traps for a take-home trophy, and also for a record on the Barbey trophy:

Table with 4 columns: Name, Score, Name, Score. Includes W. C. Brooks, M. Ballou, L. H. Davis, H. W. Knights, J. H. North, J. E. Lynch, J. L. Snow, R. A. Faye, G. E. Osborne, W. B. Farmer, F. Whitney, E. F. Gleason, S. A. Ellis, C. P. Blinn, C. B. Tucker, T. C. Adams, G. B. Clark, G. L. Munroe.

W. C. Brooks, M. Ballou, L. H. Davis, H. W. Knights and J. H. North tied on full scores of 50, and it took four shoot-offs at 25 targets each to decide the winner, Knights finally winning.

Take-home trophy, 50 targets, handicap:

Table with 4 columns: Name, Score, Name, Score. Includes W. C. Brooks, C. P. Blinn, M. Ballou, J. H. North, R. A. Faye, H. W. Knights, J. E. Lynch, J. L. Snow, T. C. Adams, W. B. Farmer, C. B. Tucker, G. L. Osborne, F. H. Richards, E. F. Gleason, L. H. Davis, G. L. Munroe, F. Whitney, *H. Ballou.

Shoot-off, 25 targets:

Table with 4 columns: Name, Score, Name, Score. Includes W. C. Brooks, C. P. Blinn.

Barbey trophy, 50 targets, scratch:

Table with 4 columns: Name, Score, Name, Score. Includes J. L. Snow, M. Ballou, R. A. Faye, J. E. Lynch, C. B. Tucker, H. W. Knights, L. H. Davis, W. B. Farmer, C. P. Blinn, E. F. Gleason, T. C. Adams, G. H. Osborne, J. H. North, W. C. Brooks, F. H. Richards, *H. Ballou, G. L. Munroe, F. Whitney.

Afternoon shoot to apply on J. B. Hunter trophy, 100 targets, handicap:

Table with 4 columns: Name, Score, Name, Score. Includes J. H. North, M. Ballou, C. P. Blinn, W. C. Brooks, H. W. Knights, J. L. Snow, L. H. Davis, F. H. Richards, G. E. Osborne, W. B. Farmer, T. C. Adams, E. F. Gleason.

Competitors in Fourth Annual Metropolitan Match Offhand Military Rifle Championship of New York. Held under auspices of Cypress Hills Rifle and Revolver Association, Brooklyn. Won by S. W. McPherson, New York.

Table with 4 columns: Name, Score, Name, Score. Includes J. E. Lynch, R. A. Faye, C. B. Tucker, G. L. Munroe, F. Whitney, *H. Ballou.

Royal Gun Club.

Mt. Healthy, O., April 21.—The Royal Gun Club held a special shoot to-day as a means of letting the trapshooters know that they were doing business, and to give them a chance to meet and get acquainted. The club's grounds are fully up to the average shooting grounds. There is a fine sky background, against which the targets are plainly visible as soon as they leave the trap. A light rise in the ground makes the left quarterers rather deceiving, and seemed to bother some of the strangers a little at first. A club house will be erected this season, work on which will start at once, and when this is completed, the club will have a home which will be hard to beat. There was no regular program to-day, most of the contestants shooting at 100 targets in strings of 25, and a few of them finished the afternoon with a couple of events at doubles.

German was high gun. In his first 50 he dropped 2, and then went straight in the last events, scoring 98. "Kid" Kendall was the second man, getting 92, while Charlie Young got in third place on 91. Capt. Dameron was not in form to-day at the start, but he struck his gait in the last two events, breaking 92 per cent., and getting in fourth place. Donald and Hammerschmidt tied for fifth, neither of them shooting up to their mark. Donald was the only shooter, except German and Randall, to go straight in any one of the events during the afternoon. Louis Bittner, a member of the club and new at the game, had the honor of tying with Squier and Holliday, and that is going some for a tyro.

The club will hold an all-day picnic and shoot on June 22, and all trapshooters are invited to come and bring their guns. There will be a good attendance of shooters from neighboring cities, and a number of the prominent professionals will also attend. The next shoot of the club will be held on April 27 and 28.

Table with 4 columns: Name, Score, Name, Score. Includes Young, Frohlinger, Scott, Johnson, J. Weber, Boles, Smith, Huston, T. Mehnert, Menze, Dameron, Hammerschmidt, German, Squier, T. J. Donald, Holliday, Randall, Becker, J. Wertz, F. Moore, Link, Smyers, Woerz, J. Hessler, L. Bittner, J. B. Towler, L. G. Brenig, Collins, Sampson, Irwin, T. Hussy.

Fairmont Gun Club.

FAIRMONT, W. Va., April 20.—With the possibility of winning the E. C. cup, which will be shot in open competition on May 14, on the Fairmont Gun Club grounds, as an opener to the West Virginia State shoot, the members are getting out for practice. We will have the five expert traps set for next Saturday, and then lookout for scores.

At singles:

Table with 4 columns: Name, Score, Name, Score. Includes W. Wiedebusch, Ed Taylor, J. F. Phillips, T. H. Funk, G. M. Lilley, T. A. Neill, H. D. Heckman, R. M. Hite, W. E. Johnson.

At doubles:

Table with 4 columns: Name, Score, Name, Score. Includes W. Wiedebusch, Ed Taylor, J. F. Phillips, T. H. Funk, G. M. Lilley, T. A. Neill, H. D. Heckman, R. M. Hite, W. E. Johnson.

We are sure throwing some doubles, and Wiede has gone 87 per cent at the last 50 pair.

President of County Court, G. M. Lilley, is sporting a new Peerless car, as well as breaking 90 per cent. at targets.

Think it would be a good thing for you E. C. cup entries to happen around about Monday, the 13th, for practice.

We are swelling up to think the E. C. cup will be shot for in open competition the fifth time, and at Fairmont.

If you don't get your program in the next week, please write to Ed. H. Taylor, Secretary, Fairmont, W. Va.

Richmond Gun Club.

RICHMOND, Va., April 15.—The Richmond Gun Club held a practice shoot on its grounds Saturday afternoon, and judging from the enthusiasm displayed by those in attendance, Richmond will have the best club it has had for many years. Brown was high man in twenty-five with a run of 37 without a miss, and his straight was the first made on the grounds this season. Boyd was high gun in fifty, accounting for 47, and Hechler a close second with 46.

The regular season opens Saturday, May 4, at which time a large number is expected to be present. The scores, 50 targets each, were: Boyd 47, Hechler 46, Brown 45, Cooke 45, Tignor 37, Lawrence 42, McClay 24.

Sikeston Gun Club.

SIKESTON, Mo., April 19.—Out of 50 clay pigeons the following scores were made, Friday, April 19: Wm. Leslie 37, Dr. D. E. Sawyer 33, W. H. Tanner 33, Clem Marshall 30, C. H. Yanson 29, J. E. Dover 28.

The Sikeston Gun Club holds practice contests every Friday at 1 P. M. Visitors welcome.

WM. H. TANNER, Sec'y.

Ye Oak Meadow Gun Club.

SANDUSKY, O., April 20.—In the championship pin event, Taylor again won out. On the shoot-off for second place, Zinn won out with 18. The scores: Taylor 62, Strohmeier 60, Zinn 60, Krupp 60, Kuebeler 59, Douglas 55, Marsh 51, Dr. Parker 51.

For the Donahue cup Zinn now leads with a score of 51 with his added targets. Krupp and Taylor are tied for second place with 49. The scores: Zinn 23, Strohmeier 23, Taylor 21, Krupp 18, Parker 18, Marsh 17, Kuebeler 17, Douglas 15.

In the doubles, Taylor again showed up as winner. Scores: Taylor 16, Krupp 14, Douglas 14, Marsh 12, Zinn 12.

SECRETARY.

New York Athletic Club.

PELHAM MANOR, N. Y., April 22.—When the season's curtain was dropped over the traps at Travers Island to-day there was much interest shown by gunners and visitors. R. L. Spotts lined up at the top of the season's average from scratch, and his prize was an exceedingly handsome cup. April trophy went to R. R. Debaecher, Spring cup to T. Lenane. C. W. Billings won president's cup by a very wide margin. D. F. McMahon was high enough to take away Brandenburg trophy.

This has been the most successful trap season thus far recorded at the New York A. C. All contestants have expressed themselves as highly satisfied with the handicapping and management of the events. The annual championship of the club will be held April 27. The scores:

April cup, 25 targets, handicap: R. R. Debaecher (5) 24, C. W. Billings (1) 21, W. J. Elias (2) 21, B. M. Higginson (0) 23, W. B. Ogden (1) 24, T. Lenane (5) 22, D. T. Leahy (0) 17, A. P. Walker (6) 22, G. M. Thompson (3) 24, J. I. Brandenburg (4) 19, R. L. Spotts (0) 18, D. F. McMahon (2) 21, W. J. Simpson (3) 17, G. F. Pelham (2) 22.

Shoot-off of tie for day: W. B. Ogden (1) 22, R. R. Debaecher (5) 20, G. M. Thompson (3) 21.

Shoot-off of tie for cup: R. R. Debaecher (5) 25, W. B. Ogden (0) 22.

String trophy, 25 targets, handicap: R. R. Debaecher (5) 20, C. W. Billings (1) 17, W. J. Elias (2) 23, B. M. Higginson (0) 23, W. B. Ogden (0) 21, T. Lenane (5) 25, D. T. Leahy (0) 16, A. P. Walker (6) 21, G. M. Thompson (8) 21, J. I. Brandenburg (4) 21, R. L. Spotts (0) 20, D. F. McMahon (2) 24, W. J. Simpson (3) 21, G. F. Pelham (2) 24.

Shoot-off of tie for cup: T. Lenane (4) 25, W. B. Ogden (0) 21, J. I. Brandenburg (4) 20.

President's cup, 25 targets, handicap: R. R. Debaecher (5) 24, C. W. Billings (1) 23, W. J. Elias (2) 23, B. M. Higginson (0) 20, W. B. Ogden (0) 20, T. Lenane (4) 24, D. T. Leahy (0) 19, A. P. Walker (6) 22, G. M. Thompson (3) 23, J. I. Brandenburg (4) 23, R. L. Spotts (0) 21, D. F. McMahon (2) 25, W. J. Simpson (3) 19, G. F. Pelham (2) 25.

Shoot-off of tie for day: D. F. McMahon (2) 25, G. F. Pelham (2) 23.

Brandenburg trophy, 25 targets, handicap: R. R. Debaecher (5) 22, C. W. Billings (1) 20, W. J. Elias (2) 22, B. M. Higginson (0) 22, W. B. Ogden (0) 15, T. Lenane (4) 22, D. T. Leahy (0) 15, A. P. Walker (6) 21, G. M. Thompson (3) 21, J. I. Brandenburg (4) 18, R. L. Spotts (0) 20, D. F. McMahon (2) 25, W. J. Simpson (3) 19, J. F. Pelham (2) 23.

Shoot-off for trophy: D. F. McMahon (0) 24, W. B. Ogden (3) 23, G. F. Pelham (2) 23.

Special trophy, handicap, 25 targets: R. R. Debaecher

(5) 23, C. W. Billings (1) 22, W. J. Elias (2) 22, W. B. Ogden (0) 19, T. Lenane (4) 24, D. T. Leahy (0) 15, G. M. Thompson (3) 18, J. I. Brandenburg (4) 19, R. L. Spotts (0) 21, D. F. McMahon (0) 20, W. J. Simpson (3) 19.

Mulberry Grove Gun Club.

REGARDLESS of the extremely severe weather conditions under which the weekly series of shoots for the Du Pont 1912 watch fob trophy was held, our club had a fair attendance at each shoot, and the amount of enthusiasm created over the event was astonishing.

The unusually low scores must be accounted for by the inclement weather, and the fact that trapshooting has just been introduced to the members of the club. From previous shooting it seemed the best policy to pick Ed. Hartley to finish first, but the first shoot was sufficient evidence that O. T. Davis was going to be "up to his neck" in the race throughout. At the end it was found, to the surprise of all, that he made the highest average, 97 out of 150. F. E. Martin was also thought to be a strong contender for high honors, but his 16-gauge was found to be too light for any success with the "clay animals."

Two of our most enthusiastic members—Mr. and Mrs. John W. Ingram—who have been absent for a few months, are making arrangements for their return, which fact goes a long way toward insuring our club the permanent organization, that is here to stay. If the weather ever does get better, the prospects for new members will be much brighter.

The scores of the trophy shoot, 150 targets, follow: O. T. Davis 97, E. M. Ellis 94, Ed. Hartley 91, *Fred E. Martin 89, Yates Ingram 84, D. A. Causey 83, E. A. Glasgow 69.

*Score made with a 16-gauge gun. Four members failed to take part in the trophy shoot because of their inability to regularly attend the shoots, but shot only when their business allowed them to attend.

F. E. MARTIN, Sec'y.

Who's Who in Pacific Indian Tribe.

FRANK C. RIEHL, Herald of the Pacific Indians, has sent us a copy of the "Book of the Pacific Indians," compiled by himself, and it is a worthy production. It tells the why and wherefore of the Indians from papoose state to battlefield or happy trapshooting grounds. It contains portraits of its members, with room for one more at the end. It contains rates to the next pow-wow at Tacoma, Wash., on June 24.

Columbus Gun Club.

COLUMBUS, O., April 18.—The shoot held here to-day on the grounds of the Columbus Gun Club was O.K. A nice crowd of shooters was out, and everyone seemed to have a good time. Some twenty shooters took part. The professionals were very much in evidence. They sure were welcome. Mr. Hassam made his appearance for the first time, and says he will be with us again; he certainly made friends.

The shoot held at the Hotel Bulkhead was a success. There will be another one some time in May—one of those old-fashioned ones with 200-target program, purses divided percentage, like you used to shoot long ago. When you hit them you get paid for it. Keep a lookout for the program, for there is going to be a shooting match sure, and the fishing will be good at that time.

There will be \$100 added to the program of the annual spring shoot on May 8 and 9, at the Columbus Gun Club. The grounds will be open for practice May 7.

The Cireleville twins were missed. Did anyone see them? The fishing at Indian Lake the past week has been fine. Black bass and croppies were biting great. Soon as it turns warm again one can look for fine fishing.

LOU FISHER.

Stamford Rod and Gun Club.

STAMFORD, Conn., April 20.—With the assistance of some of the cracks from New Rochelle Yacht Club, the shoot here to-day was successfully pulled off. J. M. Carr, of Stamford, won both events. The 50-bird sweeps with 47 and the 100 scratch event with 93. E. L. Hatch took second in the first event with 45, followed by A. S. Pitt with 43.

In the 100-bird event second went to Hatch with 90; third to Foster with 86. Other scores were, 50 bird event: M. B. Foster 42, G. P. Granberry and B. R. Stoddard, of New Rochelle, 41 and 40 respectively. 100-bird event: Pitt 83, Granberry 83, Stoddard 75.

The Choice of Thousands of Amateur Winners at the Trap

Mr. J. R. Graham's winning of the 1911 Combined Amateur Average is emphatic proof of the hard, close shooting qualities which recommend the

Remington-UMC PUMP GUN

to novice and veteran alike.

Mr. George Lyon's handling of this arm in winning the E. C. Cup, emblematic of the World's Championship at targets, gave a revelation of its speed at doubles.

Both winnings were made, of course, with Remington-UMC STEEL LINED SHELLS

Remington-UMC — the perfect shooting combination.

REMINGTON ARMS—UNION METALLIC CARTRIDGE CO. - 299 Broadway, New York, N. Y.

Philadelphia Trapshooters' League.

THE following scores compiled by Secretary William E. Robinson show standing of every shooter who took part in the season's matches which ended last week. S. S. White Gun Club won the tournament and had also high individual target breaker, Jesse Griffith getting 89 5-7 per cent., with 314 breaks in seven matches. McHugh, of DuPont Gun Club, broke 313. Charles H. Newcomb, also of White Gun Club, had high score average for the season with 94 in five or more shoots. Geo. McCarthy, of Highland, was second with 93; Richardson, of DuPont, third, with 91 3-5.

Ephrata Gun Club.

EPHRATA, Pa. April 20.—The Ephrata Gun Club held a shoot on their new grounds, 1,255 targets being thrown from two expert traps. The weather was ideal, and a fine lot of shooters presented themselves. The most interesting event of the day was the ten-man team race at 25 targets per man, between the Ephrata Gun Club and the Newmanstown Gun Club. A. K. Ludwig served as official scorer in this race, which resulted in a victory for the Newmanstown team—184 to 150. In this event G. Wallace from Newmanstown, proved the high gun with 23 breaks. Kiehl, Kintzer and Ibach each scored 21 as second high guns. Shanaman and Rader, the two shooting stars, landed in the 20-mark as third high. Rader smiled when the result was announced that his club had won out by 34 targets, and placed a challenge with Secretary John Engle, of the Denver Gun Club for May 4. Good luck, Frank.

Field Captain James Kiehl scored exceptionally well, considering the work with which he was connected. Sprecher and Engle made them step lively.

In the regular events Rader shot a 92.50 per cent. gait. Engle, of Denver, Pa., shot an 88 per cent. gait. Boys, shake hands with Sprecher for 35 out of 50.

A. K. Ludwig, of Temple, Pa., paid the respects of his club to the boys with 31 out of the 50. A 68 per cent. gait for Capt. Kiehl in the regular events at 50 targets. Jim, change to a red tic for luck. Sweigert ahead with 20 goo-goo's out of his 25 targets. Keep up the courage. Your spirit will change your luck. The scores:

Team race, ten men to a team, 25 targets per man:			
Ephrata.	Newmanstown.		
Sprecher	19	Kintzer	21
J Sloat	15	Ibach	21
Fry	14	Zimmerman	12

A. K. LUDWIG.

Buffalo Audubon Club.

BUFFALO, N. Y., April 21.—The bright weather yesterday called out an enthusiastic bunch of shooters to the second April shoot of the Buffalo Audubon Gun Club, nineteen shooters being in attendance, and some good scores were made. F. S. Wright was high with 97 out of 100.

A return match with the Syracuse Gun Club will be shot off at the club grounds in La Salle avenue, on Friday afternoon, April 26, at 1 o'clock. Scores made yesterday follow:

Events:	1	2	3	4	5
Targets:	20	20	20	20	20
Covert	17	17	16	19	18
Smith	20	15	16	18	16

No. 2 was the badge event; No. 4 was for spoon; No. 5 for Lambert trophy.

Speedway Gun Club.

NEWARK, N. J., April 18.—Louis Colquitt was in fine form to-day, and carried off the honors at the regular weekly shoot of the Spcedvay Gun Club. Colquitt fired at 275 targets during the afternoon and smashed all but 13 of them. J. Martin, who was second high man of the day, shot in five events, and missed but 10 birds out of the 125. The rest of the gunners also shot well.

The day was an ideal one for trapshooting. Outside of Colquitt, H. H. Shannon was the only man to be credited with a perfect string of 25 kills. Following are the scores:

E L Haas.....	20	18	23	22	18	19	22	19	21	22	21	21	23
L Colquitt	22	24	23	24	25	25	24	24	24	23	24

Glaizer	20	21	19

SMOKELESS.

WINCHESTER

Loaded Shotgun Shells "LEADER"

You can't buy a safer, faster, harder, a more even shooting or a better keeping load than Winchester "Leader" smokeless powder shotgun shells. For field, fowl or trap shooting, they are in a class by themselves, and give entire satisfaction in any make of shotgun. The results they give are due to their patented construction and the careful and exact manner in which they are loaded. The patented Corrugated Head used on Winchester shells is an invaluable feature. It absorbs the shock of the powder explosion and takes the strain from the paper tube instead of localizing it, as the old English method of metal lining does. That's why "Leader" shells are stronger and less apt to cut off at the mouth of the cup than shells made according to English ideas of long ago.

The Red Shell With the Patented Corrugated Head

Sunbury-Selinsgrove Gun Club.

SUNBURY, Pa., April 18.—The regular weekly practice shoot was marred by the hard rain all afternoon. Everything is now ready for the State shoot next month, the program being on the press at this writing, and it will be ready for mailing by the first of May, when copies can be had by addressing the Secretary, J. W. Schoffstall, Sunbury, Pa. Some of the features are: The merchandise event, Lewis system, which takes care of the poor shooter as well as the good ones. There will be four classes in it, with equal value in prizes in each, so that the medium and poor shot will have just as good and as many prizes to shoot for as the expert shot. The ties for place will be shot off after the event.

The division of the \$1 optional sweeps on each event will be divided high gun system, one money for every five entries or fraction thereof. This makes it worth while to shoot them.

There will be a special event each day for the men that care for them to while away the time between trips down the line in the regular events, these being doubles, singles, miss-and-outs at 10 targets, and an event for an Ithaca gun.

There will be a full line of standard trap loads for sale on the grounds with no inflation of price. They

will be sold at the regular prices that you pay at home. To make sure of your particular load and shell send in your reservation early, and we will see that your shells are in the club house waiting for you.

Programs will be mailed on about the first of May. For programs or any other information, address J. W. Schoffstall, Secretary, Sunbury, Pa. Scores of to-day:

	Singles.		Doubles.	
	Shot at.	Broke.	Shot at.	Broke.

Montclair Gun Club.

THE Montclair Gun Club paid a visit to the Somerville Country Club on Saturday, April 20, and shot an eight-man team race, winning out by 53 points. A battery of three experts were used. The targets thrown were very irregular, and at times very difficult. This accounts in part for some of the low scores. Before shooting, the Montclair Club was right royally entertained at dinner by the members of the Somerville Country Club. The scores:

Somerville Country Club.		Montclair Gun Club.	
Jackson	27	Colquitt	42
Davenport, Jr.	29	Boxall	36
Fields	28	Bush	30
Canfield	32	Frazer	45

E. WINSLOW, Sec'y.

City Park Gun Club.

NEW ORLEANS, La., April 17.—The three-day tournament, under rather poor weather conditions, ended here to-day. The high run of 64, was made by L. F. Lallande.

On the first day, Cocke won first; O'Connell second, and Allen third.

On the second day, Nick Arie and Lallande tied for first; O'Connell, McLean, and Cocke tied for second; Macmurdo third.

Individual medal was not put up, and consequently was not shot for. Money divided.

Third day, O'Connell won first; Arie second; Cocke third.

General averages were won as follows: Nick Arie, first, 284; Dan O'Connell, second, 283; L. F. Lallande third 282.

Hudson Gun Club.

FIND the appended scores of the merchandise shoot of the Hudson Gun Club, held April 20. Dave Engel won the 100-bird event, breaking 87 from scratch, but was beaten for first prize by Hutchings and Hudson. The latter having journeyed all the way from Garrison, N. Y. Hudson received a set of sterling silver spoons for his score of 88; Hutchings a cut-glass water pitcher for a like score. Dickerman with 86 took a sterling silver wine cup.

The office was in charge of Billy Emmons, who took care of all entries and compiled all scores. Carl von Lengerke looked after the ammunition. Joe Whitley was on the job early, and had a steaming hot lunch ready when the first round of the 100-bird race was started. The traps were in charge of the secretary, and in the morning No. 2 set gave a lot of trouble, but after they got started they sent the targets out like a blue streak. There was not a straight score of 25 recorded for the entire day on either set of traps, and remember, we had some of the best amateurs around New York City trying to do the trick, but did not succeed. The trade was represented by Jack Fanning, but Jack always has a hankering for the Hudson's traps when he wants to try a few hard ones, and he has informed the secretary that the Du Pont Company are going to send one of their 1912 trophies for the members to compete for.

The day was ideal and had much to do with the large attendance, and we would like to have them out here again on June 2, when the sixth contest for the Frank Hall trophy takes place. We hold our next club shoot on May 5, and every one is welcome to the use of our traps on shooting Sundays. We start about 9:30 A.M. and shoot as long as you want to. We also have arranged a set of traps for beginners, and they can shoot to their hearts' content, arrange angles or elevations to suit their taste, and they will always find some one that will give them any information that they possess about the shooting game.

Shells are for sale at the grounds, and we serve, gratis, a lunch on all shooting Sundays. Scores:

Attleboro Gun Club.

ATTLEBORO, Mass., April 20.—The most popular tournament ever held here was to-day's meeting, when many prominent New England amateurs and a number of professionals competed. The program called for 150 targets. E. A. Staples, from Franklin, Mass., took the silver urn for high amateur average with 138. Griffiths, of Pascoag tied P. E. Osborne, of Somerville, with 137, but lost on the coin toss. Frank R. Sweet, of the home team, shot well and finished well up in the van with 133. Scores:

E A Staples	138	McArdle	126
G H Chapin	138	Robert Smith	124
W B Darton	137	John Fanning	121

Some Good Reasons Why You Should Shoot

THE PARKER GUN

Be high man at the traps. Shoot the finest brush gun made. Mechanical construction perfect.

Send today for illustrated catalogue.

PARKER BROS.

New York Salesrooms: 32 Warren St.

Meriden, Conn.

The Marlin Model 20 REPEATING RIFLE

You can buy no better gun for target work and all small game up to 200 yards. Without change of mechanism it handles .22 short, long or long-rifle cartridges, perfectly. The deep Ballard rifling develops maximum power and accuracy and adds years to the life of rifles.

The 'solid top is protection from defective cartridges—prevents powder and gases from being blown back. The side ejection never lets ejected shells spoil your bead and allows quick, accurate repeat shots. With simple take-down construction, removable action parts—least parts of any .22—it is the quickest and easiest to clean. A great vacation rifle. Ask any gun dealer.

ASSONET, MASS., U. S. A.

Cleveland Gun Club.

CLEVELAND, O., April 20.—The regular weekly club shoot of the Cleveland Gun Club was held to-day at the shooting park, Mayfield road. It was an interesting affair, seventeen shooters facing the traps with weather conditions ideal.

Mr. C. E. Doolittle was high gun, as usual, breaking 148 out of 150 in the four events, the monthly, the annual and the two DuPont fob shoots, making a run of 128 straight. This is a remarkable shooting record, and would do a professional honor to make it; but Charley is doing great this year and is in a class of his own, as far as Cleveland is concerned. Dr. Brown was next high man with a score of 98 out of 100 in the two regular events. Third place was filled by Hogan. Judd, Stepp and Wallace each broke 91 out of 100. The way the bunch shot, one would think they were shooting for something to eat, as scores are always made at a dinner table.

Next Saturday we expect to have with us Judge Aug and Mr. F. D. Telling, and some of the others who have been waiting for good weather. Capt. Freeman broke 46 out of 50 in the DuPont fob shoots. Rogers and Genner had to wind up the day with three little matches of 25 targets each at 22yds., just to see what they could do. Rogers broke 61 and Genner 56, which was good shooting for long flyers.

Event No. 1, monthly trophy, 50 targets, 16yds. handicap: Doolittle 49, Brown 47, Hogen 47, Wallace 45, Stepp 45, Rogers 43, Judd 43, Burns 42, Parkhurst 42, Rockwell 41, Jones 39, Genner 39, Peebles 38, Freeman 36, Stevens 36, Harding 33, Thorp 32.

Event No. 2, annual trophy, 50 targets, 16yds. handicap: Doolittle 50, Judd 48, Brown 46, Rogers 46, Stepp 46, Wallace 46, Rockwell 45, Genner 45, Freeman 44, Hogen 44, Parkhurst 43, Brown 42, Burns 42, Brainard 40, Stevens 32, Thorp 32, Peebles 30, Harding 25.

DuPont event No. 1, 25 targets, 16yds. handicap: Doolittle 25, Freeman 23, Judd 23, Brown 22, Stepp 22, Parkhurst 21, Genner 21, Rogers 20, Hogen 20, Brainard 20, Burns 20, Stevens 20, Peebles 15, Thorp 14, Harding 9.

DuPont event No. 2, 25 targets, 16yds. handicap: Doolittle 24, Freeman 23, Stepp 23, Burns 22, Parkhurst 22, Brown 22, Hogen 22, Rogers 21, Genner 19, Brainard 18, Harding 16, Peebles 15, Stevens 15.

F. H. WALLACE, Mgr.

Jersey City Gun Club.

JERSEY CITY, N. J., April 20.—Thirteen members were out at the Saturday shoot of the Jersey City Gun Club to-day. It was a fine day for shooting, and the scores were very much better than they have been for several weeks, and had the effect of giving the members more confidence in their ability as shooters, as some of them had about given up the idea of getting back to their usual good form, but to-day everybody was happy, and all promised to show up right along now until we close up for the summer.

The match between Piercy and Hallinger had to be postponed for the time being, as Hallinger failed to put in an appearance, and no one would volunteer to take his place.

Dave Engle was high gun with 86 per cent., and Geo. Piercy second with 84 per cent. McLemore took third place with 82 per cent., which, by the way is the best form he has shown all season. He started for New York looking for Shannon, so as to tell him how lucky he was in not coming over to-day and thereby escaping a good trimming. The scores follow:

Shot at.		Broke		Shot at.		Broke	
McLemore	150	123	Boothroyd	100	57		
Huggins	150	78	Windisch	75	53		
Lawton	75	41	Jones	75	35		
Piercy	125	106	Brady	100	60		
Engle	100	86	Simp	50	30		
Dixon	75	61	Sammy	50	23		
Harvey	125	84					

SECRETARY.

Roanoke Gun Club.

ROANOKE, Va., April 20.—Thirty shooters took their turn on the firing line to-day on the grounds of the Roanoke Gun Club. The weather, while a little cool, was almost ideal for shooting, and some very good scores were made. The weekly medals were won by the following members:

Scratch—First, E. C. Watson; second, W. A. Bloxton. Class A—First, W. S. Jones; second, H. C. Elliott. Class B—First, Bob Hunt; second, A. H. H. Boyd. Class C—First (tie) Jennings and Lightner; second W. G. Bringman.

The scores, 50 targets per man, were:

Shot at.		Broke		Pr.Ct.		Shot at.		Broke		Pr.Ct.	
Watson	48	96	Armstrong	38	76						
Jones	47	94	Bringman	36	72						
Bloxton	47	94	Dyer	35	70						
Hunt	46	92	Lightner	35	70						
Jamison	46	92	Jennings	35	70						
Elliott	45	90	D Richards	34	68						
Wilkinson	44	88	Webb	34	68						
Scholl	43	86	Mansfield	34	68						
J B Cumbie	43	86	Dalby	33	66						
Price	42	84	Blankenship	29	58						
Boyd	41	82	Heins	28	56						
Howard	41	82	Brown	24	48						
Shepherd	41	82	Reamer	19	38						
Battle	39	78	Holland	13	26

JOSEPH DIXON/CRUCIBLE CO. JERSEY CITY, N. J.

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is Lefever Taper Boring.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER
SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N. Y.

E. C. Cup in Open Competition.

As an added attraction to the West Virginia State shoot, May 14, the Fairmont Gun Club have decided to call the E. C. cup and put it into open competition. We have the most regular conditions that can be found, Sargent system—doubles and expert targets will all have the same background. Where the wind has never counted in three years we have had the present grounds, and where, we believe, high scores should be made. We believe there are enough good shots that will attend to make a race of the cup, and also that there are a few shooters in Fairmont who can go some when called upon. The cup is now held by Geo. Lyon and challenged for by Lester German. They will shoot their match on May 4, and the Fairmont Gun Club will then ask for the cup.

The regular State shoot will begin at 9:30 on the 15th, registered, and with \$300 added to the Interstate \$200 in money prizes. We believe in average money, and you can look for some good-sized averages. Programs will be mailed to you about April 25. Better book the dates now and arrange to attend, for this will be one of the good shoots this year. If there is any information you want, write to Ed. H. Taylor, Secretary.

KANSAS CHAMPION- STATE SHIP . . .

Won by H. E. WHITNEY,
Anthony, Kas., April 19, 1912

SCORE: 47 x 50

THE WINNER USED

Rifle and Revolver

Intercity High School Rifle Shooting League.

When the entries were received for the Interscholastic League matches for 1912, it was found that sixteen of them were from public high schools, so it was decided to put these in a league by themselves and the military schools in another league. So as not to extend the matches too long, the schedule was arranged so that by having two matches during two of the weeks the program could be so that each school would shoot one match with every other school and have the matches over in thirteen weeks. The matches began the week ending Jan. 6 and ended March 30.

There was less trouble in getting in the weekly reports of the matches and consequently won publicity through being able to get out the weekly story to the press association promptly.

The result of the matches was never in doubt from the start, as the Iowa boys set a pace that assured them victory unless something unforeseen happened. For an illustration as to what practice will accomplish, one only has to look at the score for the first week's matches and at those of the last week. The following is the first and last score of several of the teams: Iowa City High School, 936-972; Deering High School, 902-958; Baltimore Polytechnic School, 786-970 (184 points); Morris High School, 877-904; Southern High and Manual Training School, 899-914; Salt Lake City High School, 903-921.

At the close of the matches it was found that Iowa City High and Deering High had tied for first place with fourteen wins and one loss each, and these two schools shot off the tie the week ending April 6, with the result that the Iowa boys not only won, but broke the interscholastic record for indoor shooting in doing so, their 972 being two points better than the best previous score of 970 made by Baltimore Polytechnic Institute boys the last week of the matches.

Individual honors of the league were carried off by Lawrence Burns of the Iowa team and Millard Hughey of the Deering team. Both made the magnificent total of 198 out of a possible 200, which is an interscholastic record.

The members of the teams and scores in the shoot-off are as follows:

Iowa City High School.			
	Ten Shots Standing.	Ten Shots Prone.	Total.
Lawrence Burns.....	98	100	198
William Moerschel	96	99	195
Philip Newberry	96	99	195
Fred Boerner	93	100	193
Walter Hurley	93	98	191
Totals	476	496	972
Deering High School.			
George R. St. John....	98	99	197
Dwight H Sayward	96	98	194
Philip M Johnson.....	94	96	190
Harold S Fasset	94	95	189
J Millard Hughey.....	96	92	188
Totals	478	480	958

The list of schools taking part in the league matches and their final standing are as follows:

	Won.	Lost.
Iowa City (Iowa) High School.....	14	1
Deering High School, Portland, Me.....	14	1
Baltimore Polytechnic Institute.....	13	2
Morris High School, New York city.....	11	4

Smokeless Shotgun Powder

(Which Again Proves Our Claim
That **DU PONT** Shotgun Powders
Are Unequaled For Trapshooting)

Ask Department 3 for Set of Booklets describing each of the Famous Brands of Smokeless Shotgun Powders which make and break records at the traps.

E. I. du Pont de Nemours Powder Co.

Pioneer Powder Makers of America

Established 1802

WILMINGTON, DELAWARE

The average for all the matches for the first three teams was: Iowa City, 949; Deering, 935; Baltimore "Teck", 908.

The conditions governing the match were:
Team.—Open to teams from any N. R. A. schoolboy rifle club in good standing. Any number of boys up to ten may shoot on the team, the best five scores to count for record.

Distance.—Fifty feet from one end of rifle to target.
Number of shots, 20 for record—10 standing and 10 prone; 10 shots on a target, no sighting shots.

Target.—The N. R. A. gallery target, 1 to 10 count, to be used. Officially stamped targets for each match will be furnished by the National Rifle Association. No other targets will be received for record. Used targets will be held by the judges until called for.

Position, standing, offhand, body and rifle must be free from all artificial support. Use of strap not allowed in either position.

Rifle, any, .22cal., weighing not over 10lbs.
Sights, any, in front of the firing pin, not containing glass. Telescopes not allowed.

Trigger pull, not to be less than 3lbs.
Ammunition, .22cal. short.

Time Allowance.—Ten minutes will be allowed for each string of 19 shots.
Judges.—The judge appointed by the N. R. A., or his

representative, will act as the executive officer at each contest. He will see that all conditions are adhered to, determine the score and report same to the headquarters of the N. R. A. by mail on the official blank at the completion of each match.

Matches, when Shot.—Salt Lake City, Ogden and Iowa City will shoot on Monday; the two Portland clubs on Tuesday, and the balance of the clubs on Wednesday and Thursday of each week, using the targets stamped for that week. There will be no objection to a club shooting previous to the night set, providing the firing is done the same week.

Entrance Fee, \$3 per team.
Winner, How Ascertained.—The winning team will be figured on the basis of number of wins. If two or more teams tie at the end of the schedule with the same number of wins to their credit, they will shoot off the tie.

Prize.—To the team winning the series will be issued a plaque, and to each individual member of the team a silver medal. To the individual members of the second team, bronze medals.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

FIELD TRIALS.

Oct. 28.—Southern Ohio Field Trial Association's second annual field trials. G. R. Harris, Sec'y, 15 West Sixth St., Cincinnati, O.

Resignation of C. R. Stevenson.

CHARLES R. STEVENSON, who has been secretary and Treasurer of the National Beagle Club of America, and chairman of the Field Trial Committee during the past ten years, has tendered his resignation.

It is learned that Mr. Stevenson's business interests have grown to such an extent that he is unable to give to the affairs of the Beagle Club the time and attention which he thinks it should have.

Mr. Stevenson is a resident of the State of New Jersey, graduate of Princeton University, a member of the Bar of the State of New Jersey, and engaged in active practice, is a member of the Princeton Club of New York, the Art Club of Philadelphia, and is vice-president of the West Jersey Title and Guaranty Company.

Some years ago he made annual entries in the field trials of the National Beagle Club of America, and was the owner of some well known beagles, among them were Champion Nassau Fabian, Miss Bert, Miss Josh, Sniffer, Dorches Woodman, Lipp and Highball.

Long Island Kennel Club.

THE annual show of the Long Island Kennel Club will be held at the Brighton Beach race-track on Decoration Day. Prizes will be offered for all breeds. Judges include some of the best known dog men in the country. They will judge as follows:

Anzi Dodd, of Long Branch, St. Bernards; Edmond Evans, Airedale terriers; Albert Francke, Schipperkes; Dr. H. C. Goubeaud, of Brooklyn, pointers and setters; Mrs. M. E. Harbey, of Southampton, Pomeranians and Pekingese; M. C. Halley, French bull dogs; Miss Mary Henderson, of Brooklyn, English toy spaniels, Japanese spaniels and Griffons; Thomas Holden, of Morristown, bull terriers, black and tan terriers, black and tan Manchester terriers and Pinschers; Harry T. Peters, Russian wolfhounds, Scottish deerhounds, Irish wolfhounds, bloodhounds, mastiffs, old English sheep dogs, beagles, dachshunds, Bedlington terriers, Chow Chows, Samoyedes and Papilions; J. Sargeant Prince, of Philadelphia, Dalmatians, Dandie Dinmonts, Sealyham terriers, Scottish and West Highland white terriers; Mrs. M. Thorpe, of Sheepshead Bay, poodles, pugs, Skye terriers, Maltese and Yorkshire terriers, toy poodles, Chihuahuas, toy black and tans and Italian greyhounds; F. J. Trown, bull dogs; W. H. Sawyer, Boston terriers; B. S. Smith, of Closter, N. J., fox, Irish and Welsh terriers; Henry D. Whitefield, greyhounds; A. Clinton Wilmerding, sporting spaniels; H. P. J. Ernschaw, of Meriden, Conn., collies.

Irish Terrier Club.

THE second annual show of the Irish Terrier Club of America will be held June 1, 1912, at Morristown, N. J. Dr. Henry Jarrett, of Philadelphia, will be judge. The club is offering \$10, \$5 and \$3 in all of the regular classes. Valuable special prizes have been offered, including ten of \$25 cash or plate, several \$10 gold pieces and a lot of \$5 cash specials. The club offers a gold club medal for the best Irish terrier, and in addition to the regular cash prizes \$5 is offered as a special prize in all the classes for the second prize winner. The prizes, both specials and in the regular classes, are to be won outright and

are open to all, whether members of the Irish Terrier Club or not.

In addition to the regular classes there will be brace and team classes, veteran dogs (six years and over), veteran bitches (same conditions), stud dog, with two of his get, and brood bitch, with two of her pups. Checks and prize offers should be addressed to Treasurer John G. Bates, Convent, N. J.

Ladies Kennel Association of America.

THE Ladies' Kennel Association show will be held at the fair grounds, Mineola, L. I., June 4 and 5. Entries close with James Mortimer, Hempstead, L. I., May 16. Judges selected are: Midgley Marsden, Acton Bridge, England.—Bloodhounds, St. Bernards, Irish wolfhounds, Scottish deerhounds, greyhounds, poodles, Pomeranians, English toy spaniels.

J. Fletcher Lutz, M.D., Glen Rock, Pa.—Great Danes.

J. P. Hoguet, M.D., New York city.—Russian wolfhounds.

G. Muss-Arnolt, Tuckahoe, N. Y.—Eskimos, pointers, Griffons (Korthals), German and Belgian sheep dogs, Doberman Pinschers, miscellaneous class.

Dr. Henry Jarrett, Philadelphia, Pa.—Foxhounds, collies, old English sheep dogs, Dalmatians, Samoyedes, Airedale terriers.

Dr. James E. Hair, Bridgeport, Conn.—All setters, retrievers, Chesapeake Bay dogs.

Dr. C. Y. Ford, Kingston, Ont.—Sporting spaniels.

Thomas Shallcross, Providence, R. I.—Beagles.

Thomas Grisdale, New York city.—Bull dogs, French bull dogs.

T. Dickson, Brookline, Mass.—Bull terriers.

Dr. C. F. Sullivan, Dorchester, Mass.—Boston terriers.

W. J. Nichols, Wimbledon, England.—Chow Chows, fox terriers, Scalyham terriers, West Highland white terriers, Dandie Dinmont terriers, Bedlington terriers, schipperkes, Pekinese, Griffons (Bruxellois).

John Sergeant Price, Jr., Chestnut Hill, Pa.—Irish terriers.

W. H. Whittem, Chestnut Hill, Pa.—Scottish terriers.

James Watson, New York city.—Dachshunds, Manchester terriers, Skye terriers, Japanese spaniels, pugs, toy poodles, Yorkshire terriers, Maltese terriers, toy black and tan terriers, Chihuahuas, Italian greyhounds, Shetland sheep dogs.

Messrs. Marsden and Nichols.—Variety classes and unclassified specials.

Entries close Thursday, May 16, with James Mortimer, Hempstead, Long Island, N. Y.

French Bull Dog Show.

THE most successful show of French bull dogs thus far held ended April 20, with Dollar Princess, owned by Mary Winthrop Turner, judged the best French bull at the show. In the open bitches, Dollar Princess defeated Enchantress by whom she was beaten at Westminster Kennel Show. Gamin's Rignet took second honors, and is owned by Grant Notman, of Brooklyn, N. Y. There were 273 entries. Judges were: William Lennox, Henry Brock and S. L. Goldberg.

Nassau County Kennel Show.

THE Nassau County Kennel Show will be held May 5, entries closing May 2, with W. H. Purcell, Supt., Room 358, Fifth avenue, New York city. The show will take place at Belmont Park, Queens, L. I.

Exhibitors living within the quarantine limits of Hempstead and North Hempstead can readily

CARABASSETT SPRING FARM AND COTTAGES

Five trout streams from 5 to 30 minutes' walk from farm. Very best hunting in season. Open for boys from June 30 to Sept. 1. For particulars address N. CHAMPAGNE, Carabassett Spring Farm, Me.

BOWLAN CAMPS

In the wild heart of Maine, on East Branch of Penobscot. Camps in the midst of fifteen ponds and as many brooks, all full of native trout—and such trout! Home and outlying camps, best table, and the wildest, most impressive scenery in all Maine. Booklet for the asking.

CHARLIE McDONALD, Sherman, Me.

procure permits for the removal of dogs from those townships by applying to the sheriff of Nassau county at Mincola. Exhibitors from the town of Islip can procure permits through the sheriff of Suffolk county at Riverhead, L. I. Exhibitors outside of Nassau and Suffolk counties need no permits, as Belmont Park is in Queens county, New York city, and out of the quarantine zone.

There will be a big list of both sporting and non-sporting dogs entered.

Lehigh Valley Kennel Club.

TWELVE new members were elected to Lehigh Valley Kennel Club at the last meeting. Among the number was C. M. Schwab. Others elected were John O. Correll, Easton; Mrs. Leonard Peckitt, Catasauqua; Morris Hoats, Oliver T. Weaber, Frank Whitaker, George Albright, Jr., Walter A. Meeking, John Bronstein, Carl Schnurman, William Ortt and Robert Mertz, of Allentown.

The judges selected for the show, to be held June 11 and 12, are: James Watson, pointers, setters and all terriers; W. S. Gurnee, Jr., Philadelphia, bulldogs; George B. Hooley, Bloomfield, N. J., beagles; W. R. Lowe, New York, spaniels; Dr. J. E. De Mund, Brooklyn, large breeds; Charles Bernheimer, New York, pomeranians and poodles; P. Breeze, French bulldogs.

THE ANGLER IN AUSTRALIA.

Few countries in the world offer votaries of Izaak Walton such unlimited piscatorial sport as is to be found in Queensland. And there is practically no limit, too, to the variety of the species of the finny tribe. Not only do inexhaustible shoals of fishes exist all along the 3,000 miles of coast line, but all the tidal and freshwater rivers and creeks throughout the length and breadth of the State team with them as well. In the rivers and creeks on the Darling Downs, Murray cod, golden perch, bream, dew and rainbow trout abound, and large hauls are frequently made by wielders of the hand line and rod and tackle. At the different seaside resorts in the Brisbane district there are to be found enormous quantities of whiting, flathead, taylor, bream, squire, garfish, rock cod, mullet, eels, etc., while out at sea schnapper, king, parrot, groper, sea perch, cod, mackerel, dugong, flounder, sole, etc., are caught in large numbers. The Central District is the habitat of the barracouta—a fish which attains fairly large proportions, its flesh being exceedingly pleasing to the palate. The barramundi—another tothsome morsel—is found in the tidal streams from Maryborough up to Thursday Island, thence round to the Gulf of Carpentaria. This fish, which is also known in some parts of Queensland as the Palmer, is of decent size, and one usually provides a dainty meal for a small family. To land this denizen of the deep, the angler must needs use a minnow on his rod and tackle, and the sport provided, when barramundi are plentiful, is of the most exciting nature.

The rivers and creeks of North Queensland are simply infested with crocodiles (the Nile variety) of huge size, and sport of a sensational, not to say risky, character is furnished for fearless shootists and trappers. In the Rockhampton, Proserpine, Herbert River and Mossman districts a large number of saurians are either shot or trapped every year, and shipped dead or alive to the Southern States of the Commonwealth of Australia.

In the far north of Queensland there is also a variety of the American alligator, and it is generally to be found in freshwater rivers and creeks. Unlike the crocodile it is not—at least so it is stated—a man-eater. For the enlightenment of your readers (that is, if such is needed), I would point out the difference between these two species of saurians. The teeth of the crocodile resemble a cross-cut saw to a great extent, and when the jaws are closed, the two sets lock together like a vise. The alligator, on the other hand, has long, fang-like grinders, which are fairly wide apart, in both jaws, and the mouth is much smaller.

Resorts for Sportsmen.

THE BELGRADE

Belgrade Lakes, Maine

Chas. A. Hill & Son

April 11th, 1912.

Forest and Stream Pub. Co.,
127 Franklin St., N. Y. City.

Gentlemen—

We realize the advantages of advertising in the FOREST AND STREAM. Have heard it mentioned more than all other sporting publications put together. We have done no advertising whatever for the past eight years, as it has been unnecessary. Everybody knows we have the fishing at Belgrade Lakes. If I should place an advertisement with you it would be because many of our guests ask us "why they have never heard of this place before and why we do not advertise in FOREST AND STREAM?"

We are willing to spend a moderate amount in advertising in your publication, and believe it would be of mutual interest. In the first place, you will send people to a place that will reflect credit to your publication; then again, it will prove an advantage to us.

Under separate cover we are sending you one of our booklets setting forth the advantages of this resort.

You may write an advertisement for us according to your ideas, to run as long as Sept. 1. We are willing to pay \$50.

Now, if you care to do so, kindly send us a copy of what you propose, publishing, and other information which you think will be of benefit to us, and oblige

Yours very truly,
(Signed) Chas. A. Hill & Son.

CAMP RECREATION

In the great Mantrap valley in Lake Park Region, Northern Minnesota. Best of all kinds of fishing, especially Muskallonge and Bass. Beautiful lakes among the pines. Delightful river trips to our outside camps. Log cabins. Central dining room. Booklet.

A. G. IRWIN, Dorset, Minnesota

The crocodile is larger, and has a more elongated head than its compatriot. Experienced sportsmen are able to tell which is which, but the novice is advised to give both a wide berth until he has had an opportunity of performing a dental operation on them.

Ever and anon, the mythical "bunyip" is reported to make its reappearance in the streams on the Darling Downs, but, although many are said to have gazed upon the monstrosity, none of the descriptions given thereof agree to any marked extent. Sceptics discredit its existence, and assert that it is the creation of a fertile brain.

In several of the rivers about Brisbane, Gympie, Maryborough and Bundaberg the ceratodus—a fish which nature has endowed with lungs—glides about in good numbers. It is of a respectable size, and the flesh is calculated to please the taste of even the epicure. Among the fishes which abound in the tidal rivers and on the seaboard in North Queensland are the trevally, trumpeter, flathead, bream, mullet, turtle, crabs, etc. The Great Barrier Reef is claimed to be the best fishing ground in the Commonwealth. The fishes angled for here include bêche-de-mer, sea perch, hussar, emperor, king, dew, epaulette, sweet-lips, parrot, leopard cod, groper, pike. For exciting sport, the trevally is claimed to provide the very maximum. As soon as it takes the bait, the angler is given no end of work to land the fish, as for fully ten minutes it makes herculean efforts to disengage itself from the barbs of the hook. During October last, fully 100 barramundi, ranging in size from seven pounds downward, were caught in a net in the Herbert River district, North Queensland. Quite recently, a sting ray, weighing four and one-half cwt., was hauled out of the briny at Noosa Heads, a watering place on the North Coast railway line.

The streams in the Cairns hinterland (North Queensland) have been stocked with hundreds of thousands of rainbow trout, and it is only a matter of a short time when followers of the art piscatorial will be afforded plenty of pastime.

The reprehensible practice of "fishing" by means of dynamite, indulged in in certain parts of the State, is to be put down with a firm hand. Many of the fishing associations have taken the matter up, and culprits caught red-handed are threatened with severe punishment.

At the rear of one of the hotels in the Herbert River district (North Queensland) there lives, in captivity, in a large underground tank a 12-foot crocodile. It is twelve months since the saurian was snared. The "aquarium" is one of the interesting sights in Halifax.

J. Douglass Ogilby (honorable curator of the Queensland Amateur Fishermen's Association) has received several well-preserved specimens of new fishes from J. Palmer Bulwer, Moreton Island. These include species new to Moreton Bay—a hardihead, materially differing from the common species; a pipe fish, common enough in Port Jackson, but of a genus (*Stigmatophora*) not hitherto found in Queensland; and a new genus and species (*Liocranium prepositum*) described by Mr. Ogilby some years ago from the mid-Queensland coast, and now for the first time obtained in Moreton Bay. In addition, Mr. Ogilby states that the A. F. A. museum possesses a specimen of Mr. Waite's rare sucker (*Lepidichthys frenatus*), which has the duplicate sucking arrangement on the under portion of the body instead of on the back of the head. This fish is of a pink color, with a crimson streak from the corners of the mouth through the eyes to the end of the head, when freshly caught, but, as is usual with most fishes, the colors fade, and the specimen mentioned is now a dull sandy yellow. This is the only specimen of the true sucker fishes ever recorded from the Queensland coast, but Mr. Ogilby is of opinion that others may be found, the localities most favorable for obtaining them being those where loose boulders or overhanging coral are found.—Angler's News.

Resorts for Sportsmen.

Wisconsin.

"KOILA"

12 miles east of Chetek on Potato Lake. The finest view in this part of the state. 120 feet above the lake. The fishing is great for Bass and Muskies and Pike. Chain Lake only ¼ mile by trail, has Muskies and Bass; and Pine Lake, ¼ mile, has Bass and Lake Trout and Pickerel. Lots of shade, spring water, and the best of food. Large rooms. Boats on all lakes. Minimum rates by the week, 2 persons to a room, \$12 each; 1 person to the room, \$15. Roads fine. No charge for ice or boats to guests. Limited to 20 guests. 6 trout streams within 10 miles.

Where are you going fishing this summer, and when? If you'll let us know, maybe we can be of service to you. INFORMATION DEPARTMENT, Forest and Stream.

Small-Mouth Black Bass

We have the only establishment dealing in young small-mouth black bass commercially in the United States. Vigorous young bass in various sizes, ranging from advanced fry to 3 and 4 inch fingerlings for stocking purposes.

Waramaug Small-Mouth Black Bass Hatchery.

Correspondence invited. Send for Circulars. Address **HENRY W. BEEMAN - - New Preston, Conn.**

BROOK TROUT

of all ages for stocking brooks and lakes. Brook trout eggs in any quantity. Warranted delivered anywhere in fine condition. Correspondence solicited.

THE PLYMOUTH ROCK TROUT CO.,
Plymouth, Mass.

CONSULTING FISHCULTURIST.—Founder and late Managing Director of Welham Park Hatcheries, England, advises on all matters connected with fishculture. Donald Walker, Drumlin Trout Hatchery, Barneveld, N. Y.

The annual stockholders' meeting of the **Forest and Stream Publishing Company**, for the election of a Board of Trustees, and for such other business as may be introduced, will be held at the company's office, 127 Franklin St., New York City, on Thursday May 9, 1912, at 11 a. m. Charles B. Reynolds, Secretary. New York, April 20, 1912.

Forest and Stream, New York City:

Dear Sir—I thank you for the exceeding promptness and courtesy with which you corrected the typographical error which appeared in the advertisement of the Orchard Lake Club.

I hardly think that I would be justified in repeating our advertisement in your spring number. From the inquiries which I have had, it would appear that we shall have orders for more than we can deliver.

Next year, however, if we are again in the market to sell either fry or fingerlings, I will certainly use the **FOREST AND STREAM** as a medium.

Yours very truly,

(Signed) **R. L. Low,**
Chairman Fish & Game Committee,
Orchard Lake Club.

Property for Sale.

SALMON FISHING

To lease salmon fishing privilege on Nepisiquit River, N. B., with use of club house furnished, in periods of two weeks or for season. For particulars write **HENRY BISHOP, Bathurst, N. B.**

1000 ACRE PRESERVE

in Blue Mountains. Beautiful lake entirely controlled. **BASS AND TROUT FISHING** Virgin forests, wild as Adirondacks. Attractive camps. **Only 60 miles from New York City** Best club proposition within 100 miles of New York City. Will lease or sell for value of timber.
C. R., care of Forest and Stream

SUMMER HOME FOR SALE.

Catamount Lodge, Adirondacks. Ideally adapted to hunter's requirements. 75 acres. Garage and houses. All in perfect condition. Located near State road. For full particulars communicate with **F. A. TOLHURST, 106 Central Park West, New York City.**

FOR SALE—In Plymouth, Mass., **Wild Fowl Shooting Stand**, including one hundred acres (more or less) of forest lands bordering nearly one mile on two **Great Ponds**, with houses, barn and furnishings. **Good Fishing** during summer. Further particulars on request. Address "A. B. C.," care Forest and Stream.

FOR SALE. Share of stock in Laurentian Club. Address P. M. E., care Forest and Stream, New York.

Wants and Exchanges.

"KOILA"

Partner wanted. Will sell half interest in this fine property. I will reinvest on joint account up to \$7,000, to pay for half dozen cottages, for which there is already demand, more power boats for the Chain Lake, also additional rowboats, to complete the hotel building, and to get a new passenger car. Prefer a young or middle-aged man, acquainted with the fraternity, to take either outside or inside management. This is not a gold mine, just a safe and profitable investment. About \$5,000 required. Principals only. References exchanged.
W. E. BARDEN, Chetek, Wis.

WANTED.

Position as game warden or in charge of club preserves; highest references; four years salaried county officer; 34 years of age. Address E. M. Chadwick, Colchester, Ct.

WOODCRAFT

By **"NESSMUK"**

Cloth, 160 pages. Illustrated. Price, \$1.00.
A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English.

Where?

Some one of the sportsmen's resorts advertised in **FOREST AND STREAM** can probably offer you just what you want for your fishing trip. We are in touch with all of them, and if you will explain your needs to us, we will tell you where we think you would be best satisfied and tell you why we think so.

Maybe none of the resorts advertising with us will just suit your individual wants. In that case we don't hesitate to recommend a resort which doesn't advertise with us.

A two-cent stamp or a postal card will command our best services. The fuller explanation you give us, the more explicit we can make our advice.

Write us to-day.

A Heart Lake Trip

By WALTER B. SHEPPARD

THE trail to Heart Lake, in Yellowstone Park, from the north drops down to the lake along its only considerable inlet, through a weird region. Alongside, and in sight of the trail for several miles, there are literally hundreds, if not thousands, of boiling springs, and not a few geysers, dotting an area of hundreds of acres. The lake at the upper end is perceptibly warm and the inlet for a large part of its course is as hot as one would choose to have his bath at home. In fact, diligent search failed to reveal a spring cool enough to bathe in.

We camped near the beach, a delightful stretch of smooth, white sand, long infrequented. Many years had apparently passed since anyone had stopped there, even the chopped stumps having rotted off at the base. Across the end of the lake and in sight of our camp were two very considerable geysers, whose rising vapor never ceased. One of the geysers spouted every thirty-one minutes. Though not a large one, it seemed more beautiful even than Old

Faithful, which, giant though it be, loses something of its beauty, when surrounded by a crowd of sightseers.

The other geyser had an interval so long that one never caught it, but it was a big fellow. The accompanying photograph shows its mouth or basin. No one can describe the clearness of the water nor the wealth of coloring in the calcareous deposit with which each geyser crater is lined.

A geyser in action is an impressive spectacle; even a hot spring always excites my wonder. For while the spouting is in accordance with well-known physical laws, and can be reproduced experimentally in the laboratory, the source of the tremendous heat is the puzzle. Doubtless the latest theory that ascribes it to the transformation of radium is the most satisfactory.

Heart Lake is a perfect gem, as will appear from the accompanying photograph. Being off the beaten highway, it cannot be visited without special permission. It is a wise provision to keep the average park visitor upon the straght and narrow way, for if every chance comer were allowed to wander promiscuously through the park, there would be no end of trouble with forest fires, game destruction and the like. For

where our pack horses fairly luxuriated. Nor were they alone; every night and morning we saw deer or elk or both from our tent door. And there was plentiful moose and buffalo sign, though sign was all we saw.

The truth is, the park is comparatively barren of game. For one thing, the snow lies too deep in winter, and the winters are too long. The tourist sees the bears around the hotels and the

tame deer and buffalo on their feed grounds and imagines that the whole region is filled with wild creatures. But such is far from being the case. Away from the hotel garbage heaps, bears are very scarce, much scarcer even than they are outside of the park to the south on the Wyoming game preserve. And there are probably five times as many elk east of Jackson Hole as in the park. The fact is, all game in Wyoming is nearing extermination, and the reports of its exceeding plentifulness are greatly exaggerated, when they are not actually manufactured. The sheepmen long to possess all the mountain coun-

SHERIDAN MOUNTAIN AND HEART LAKE, IN YELLOWSTONE PARK.

the park is as a whole densely timbered, and the average camper extremely careless about fires, albeit the most reckless of all people in the hills, as regards fire, is the old-timer, the man who above all others should know and do better.

Not all are that way, however. One of the best trips I ever had was with a Colorado man whose fear of fire amounted almost to an obsession. Once with a large party he had come back to camp at night to find that a neglected campfire had burned up tent, bedding, grub and all. They were not only without food or shelter, but the fire had burned the picket ropes from their horses, so that most of them had gone home. That man's painstaking was so painfully meticulous that it made me nervous.

Our camp was at the edge of bush meadows

try, and the fruition of their desire is prevented by the presence of the game. All the game country is within the confines of some one or other of the National forests, and thus under control. As a matter of fact, sheep are so destructive to all vegetation that they should never be allowed in any National forest. Where they are nothing else can live, tame or wild.

During July and August, Northwestern Wyoming in and about the park is one of the loveliest mountain regions in America. It is one of the few spots where one can get away from the tin-can and the person who carves his name on every smooth quaking aspen. The woods are still pristine, and the game still comparatively tame from lack of pursuit. The timber is mostly lodge-pole pine, interspersed with pretty parks,

and there is no end of running water with trout in practically all of it. The average maximum temperature will not average 70 degrees, even for these months.

To be sure, there are drawbacks. High up there is a frost almost every night. I have seen 20 degrees in July, and there are in the park eight different insect plagues, besides mosquitoes. Some of the larger members of the stinging fraternity are nearly as big as bumble bees, and their ministrations drive horses almost frantic. All day long until the latter part of August the wearing of netting and gloves is practically enforced, unless one is moving rapidly.

And the summer is so short. "The year has only three months," said a soldier to me; "July, August and winter." And such winter! Snow six feet on the level and the temperatures arctic. The minimum record at Fort Washakie is 56 degrees.

Notwithstanding the warm water, the fishing in Heart Lake was excellent. The trout (black-spotted natives) were in fine condition, and perhaps the best-flavored I ever ran across. This would seem to dispose of at least one of the theories advanced to account for the fact that most of the Yellowstone trout are diseased.

Curiously, the Heart Lake fish all have pink flesh. In the Snake, into which the lake empties, the same trout practically all have white flesh. So also in Shoshoni, another park lake, the trout (*Cristovomer namaycush*) all have dark markings and rather a yellowish tinge to the flesh, and never exceed a couple or three pounds in weight, while the same fish in Jackson Lake, a few miles further down stream, are without the dark markings, have white flesh and attain a weight of more than fifteen pounds. In Jackson Lake also the black-spotted natives occasionally reach a size of ten pounds or even more, while in Colorado or Montana the largest I ever caught weighed less than half that. No doubt these differences are due to some peculiarity of environment, such as food supply, but that is merely restating the problem in another way.

In every other Rocky Mountain lake I ever fished, these native trout were found pretty close to shore, in not over ten feet, or at most fifteen of water. Here in Heart Lake we had to fish for them with spoons in mid-lake, with a couple of hundred feet of line. And let me emphasize the exceeding usefulness of the collapsible canvas boat. They are entire practicable, staunch little craft, readily assembled or knocked down, durable and compact, easy to pack even on a horse. No one contemplating a trip in the wilds, where there is navigable water, should fail to get one. The eleven-foot size, with metal ribs, is the best.

The fishing, good as it was, was not what it should have been in a lake several miles long, where it is doubtful if ever before anyone had put a boat. Wyoming has no closed season on trout, and while the Snake and its tributaries within the park boundaries are not overfished, further down the river there has been too much fishing by far, and the park suffers in consequence. There is much fine water in the park that has scarcely a fish in it, and the visitor who expects to have exceptional sport with a fly is pretty sure to meet with disappointment.

The truth is, that to one who has seen much mountain scenery, the park is a pretty tame place, and unless for its geysers scarcely worth

visiting. It was a great mistake that the park's southern boundary was not drawn about twenty-five miles further south to take in part of the Tetons. It is not too late yet, inasmuch as there is practically no land occupied north of the outlet of Jackson Lake, and such an extension would embrace some of the most beautiful scenery in the United States.

The world is too much with us in the park. Whatever may be the record of the United States Army at the Isthmus of Panama, its success in handling the park has not been conspicuous. There may be several good reasons, or excuses, for this. For one thing, the commanding officer, who acts as park superintendent, is under the jurisdiction of the Interior Department, and in his administration politics has been at times allowed to intrude. And the superintendents are men assigned from the regular army without special knowledge of park management, or of forestry, or of game preservation, and changes in tenure are too frequent to permit any incumbent to acquire the knowledge or experience which he lacks. The soldiers have in times past destroyed the very game which it was their duty to protect, and they have little interest in, and still less knowledge about, the purposes supposed to underly the park's creation and maintenance. Men recruited from the cities, subsisting on army rations and drawing the scanty pay of a soldier, are not the proper persons to whom should be intrusted the enforcement of game laws. It has seemed to me that far better results would be achieved if the park's administration were handed over to the Forest Bureau. And there should be an expert landscape gardener, as well as a trained forester on the payroll. Some of the "improvements" are unsightly in the extreme.

In the neighborhood of the hot springs and geysers, snow must lie very thin or vanish altogether in winter, and here it was that we saw the most frequent sign of buffalo. These are not the tame variety, fed every winter, but a remnant of the vast herds that used to range the Wyoming plains. Even now buffalo skulls and horns are still fairly plentiful in the hills south and east of the park. It is odd that the buffalo should have adapted themselves as readily to changed conditions, amid heavy timber and deep snow, as they have also done in Canada, where the few survivors are known as wood buffalo. No doubt if they persist long enough under these new surroundings, changes of type will be evolved.

One day we saw an elk standing close to a geyser when it made its play. The feeding animal never raised its head nor betrayed by any sign that it heard the roar. The truth is, as I have often observed, it is not noise itself that alarms wild creatures so much as unwonted or unexplained or incongruous sounds, or those known to portend evil.

When a herd of elk are feeding through the timber, sticks snap frequently and in every direction, without causing the slightest alarm, and in watching or following them I have very little fear of a stampede caused by my treading on a twig. But a succession of such sounds, coming from the same spot, or an unwonted sound like the click of a heel on a stone, are not expected, will always excite suspicion, and if not explained, alarm.

One evening as I was returning to my camp

near the Hoback, leading my horse, with half an elk on him, I passed close to a bunch of elk, feeding up from water to the top of the ridge, as is their custom. They did not see me, nor did a couple of blacktail bucks feeding nearby. The latter with their heads down heard the clatter which my horse and I were making in the loose rock, but not until we got almost on top of them did they distinguish our noises from those made by the elk. And not even then did they accept the situation and get to cover until their eyes had carefully confirmed the evidence of their ears.

On the other hand, I have seen a bunch of elk, even when bedded for the night upon the snow, manifest acute alarm on hearing a gunshot so distant as to be the merest pinprick of sound through the stillness.

There is something queer about a wild animal's senses. While it was still dark of a morning, I have walked right among a herd of feeding elk, without causing them to run, though of course they showed considerable uneasiness. A friend of mine, an old-time trapper in Wyoming, once rode straight through the middle of a bunch of bedded elk late at night, and they did not bother even to get up. Baillie-Grohman once wrote of a similar experience he had with chamois one very foggy day high up in the Alps.

Most of our wild creatures seem to yield readily to the pressure of advancing civilization, though it is of course too early to say whether all can manage to survive in a new environment. Last summer I saw the western meadowlark at an elevation of 8,500 feet, and the sage grouse even higher. Late in November, when the snow was deep and the weather bitter, I frequently ran across the blue grouse at an altitude of over 9,000 feet on the top of some cold high ridge, subsisting entirely on the needles of the piñon. With all the birds, I think it is anything to get away from the coyote, which has probably done more to exterminate the fauna of the Rockies than all other causes combined.

Even the fish change their habits. In Shoshoni Lake the only food for *namaycush* is a minute species of fresh water shrimp, about as large as a small housefly. And on this trip I saw these lake trout rising readily to suck in insects on the surface. I tried them with artificial flies, but they had not advanced as far as that.

Clark's crow, when hard put to it at the end of the season, will store scraps stolen from camp, evidently in anticipation of winter and in imitation of his cousin the camp-robber jay.

Fish also learn the aspect and danger of certain kinds of artificial bait. When the whirling spinner was first patented in the Eastern waters I used then to fish, the pickerel and bass fairly cried for it, but after a little it became little, if any, more effective than the old brass and copper spoons. And I repeated this experience more recently in several Rocky Mountain lakes fishing for trout with this same spoon. The greatest success I ever had with the black-spotted trout of the Rockies was with a royal coachman fly, yet that same fly in these same waters is to-day almost worthless.

Heart Lake is not shaped at all like the organ after which it was apparently named. As a matter of fact its real name is Hart, derived from a trapper who made this region his headquarters in the early part of the last century.

The vagaries of the Government map makers leave much to be desired in the matter of names. One of the branches of the Upper Snake is named after that intrepid man, a member of Lewis and Clarke's party, who first and alone visited what is now known as Jackson's Hole, in 1809, and whose adventures make wonderful reading. But his name was Colter, not Coulter. The stream down which the Astor expedition of 1810 first reached the new waters of the Columbia was fittingly called after one of the guides, John Hoback. The name still appears on many maps, but on the latest production of the United States Geological Survey the stream now figures as Fall River. But the park map is filled with such perfectly lovely creations as Sylvan, Lily-pad and Fern Lakes, Iris, Mystic and Rainbow Falls, Purple Mountain, Phlox, Spirea, Campanula and Stellaria Creeks. I suppose Hoback was too uncouth for sensitive ears.

The park itself was never noted for the number of its beaver colonies, and they are now pretty scarce, notwithstanding the fact that no trapping is allowed. But beaver are excessively easy things to trap, and the law does not enforce itself. And as a whole the park is wonderfully deficient in small birds and mammals. One may actually travel all day long through the woods and not see a bird or even a squirrel or

chipmunk. About all there are to enliven the landscape or likely to be seen, are the elk and deer, and a few white pelicans, gulls and eagles, brown and bald. Yet Wyoming has probably more game than any other State, and is said to have more different varieties of birds.

The white pelican, a rare and interesting bird, breeds here and is fairly plentiful in all this region. Unlike the gray variety common on the Pacific coast, they appear seldom or never to dive for their prey, but seem to do all their fishing along shore in shallow water. They make a pretty picture after the day's work is done, perched on some stump or rock projecting from the water, far enough from shore to be safe from predatory animals. They are quite tame when unmolested, or the accompanying photograph would not have been gotten.

Never until here, at Heart Lake, did I see an elk swim for the mere fun of it. It is well known that when frightened or hard pressed, like nearly all quadrupeds, they can take to the water. Coming back to camp one night, coasting the shore in the little boat, we saw a small bunch of cows and calves that had come down to drink, as is their habit at dusk. Not content with squatting around and playing as most young elk do, some of the more venturesome put out from shore and swam around a little,

but there was no attempt to go any great distance. I have seen moose in the act of crossing a lake a mile or more wide, and that, too, not under compulsion, but merely to avoid the bother of going around the end of the lake. But I have never heard of elk doing anything like that.

After all, there is only one way to travel in the Rockies, and that is with a pack outfit, and in the company of one kindred spirit. That means work, but the returns are worth the outlay, and if your companion is not a shirk or a quitter, your labors will not be arduous. Merely to lie about camp and be waited on is tameness itself. To wrangle pack horses and rustle firewood and pitch the tent and throw the diamond and wield the skillet, are not only interesting in themselves, but they give an appetite and a sound sleep that the mere idler seldom has. And somehow the hired help, with which some choose to surround themselves, always detracts from my enjoyment of the game. Last, but not least, you and your companion can spend a month in the hills by yourselves for about what three days would cost you with a retinue. But it must be said that the game cannot be learned in a day or on one trip. But it is worth learning and the essentials are not at all difficult of mastery.

Across the Plains in Early Days

By SAMUEL MANSFIELD STONE

(Continued from last week.)

IT was a raw, chilly morning that greeted our awakening, with sky overcast and indications that a storm was brewing. After breakfast we held a brief conference on our plans and decided to remain in camp pending meteorological results. First we removed our plant an eighth of a mile down the scrub for the sake of the horses, they having denuded the first locality very effectually of herbage, which grew but scantily even beside the timber belts in that country.

"Next on the program is a nice shelter tent," was John's first observation after we had securely staked the horses.

"Do you happen to have one about your clothes?"

"I've got half of one," pointing to his rubber blanket, "and with yours we've got just what we want to make as nice a waterproof house as a body needs in summer."

Going to the timber where there were plenty of dead dry poles, we secured a couple with crotched tops. Taking these along with a third pole from which we broke the limbs, wishing the while for a good, sharp hatchet, we proceeded to a gently sloping bluff and began operations.

With John's hunting knife we cut and set two slanting holes eight feet apart, a short distance from the bottom of the slope. Into these we stepped the butts of the crotched sticks, laying an end of the third pole into the intersecting forks and thrusting the other end into the ground ten feet

up the slope. Taking the two blankets, which were fortunately each of one size, we placed the longer edges together, rolling the selvage once over to make a firm joint. Then tying the strings which were in one end of the blankets, we cut a half dozen holes at regular intervals, inserted strings and tied the blankets firmly together. Throwing them over the ridge pole so that the seam came on top, we brought the edges down and tied them to short stakes thrust into the ground. This gave us a "house" open in front, the sloping hummock forming the floor and rear wall, and of sufficient size to admit of our sitting or lying down as best suited our mood.

Making another trip to the timber we broke off all the small oak branches we could comfortably carry, which with the adhering leaves formed a good foundation upon which to spread our heavy woolen blankets. John had an extra blanket which we reserved for covering. On that trip to the scrub I saw what looked to me like a gray squirrel, and on finishing our house I told John I would go and get a supply of fresh meat. He acquiesced and said he would build a fireplace while I was gone.

Loading my rifle carefully, I returned to the place where I had seen the squirrel, only to find that it had gone. Employing my old-time squirrel tactics, I entered the timber a little way, and seating myself in a position to command an extended territory, awaited developments. It was not long until I noticed a movement in the brush tops some distance down the creek. I re-

mained quiet, hoping the squirrel, or whatever caused the commotion, would show himself. But it proved to be a most disobliging animal, and though I waited for fully ten minutes, it would not come out into the open. Then I left my position and crept as quietly as possible toward the scene of the disturbance. A dead twig snapped under my foot, and at the same moment a pair of fine squirrels sprang into the scrub top, and ran, jumping from top to top in a most tantalizing manner, the foliage being so thick I could not get a fair sight of them. Presently one ran up the topmost bough of an oak, jumped to an adjoining bough, halting as it did so in an effort to get a foothold. I improved that little fraction of time to take quick aim and fire. The squirrel neither jumped nor fell, just remained swinging on the branch for a minute, then fell. It was the most peculiar squirrel I had ever seen, with a nose and face like a fox's, a body too slim to harmonize with the size of its head, and an enormous tail ringed like that of a 'coon. It was also one of the largest squirrels I ever saw, and I congratulated myself on the amount of food it would supply. Lugging the animal back to camp, I tossed it down at the tent mouth, saying: "We'll have one good meal, anyhow."

John looked at the squirrel a moment, then at me with a queer expression on his face. "Do they eat cats where you came from?" he asked.

"What has eating cats to do with this squirrel?" I retorted.

"Honestly, did you take that for a squirrel?" he asked on seeing that I was not joking.

"Certainly I did. What is it?"

"A civet cat; I never knew that they got so far from the mountains as this, but that is a civet sure enough."

Then I admitted that it impressed me as being a very peculiarly marked squirrel, but as I had seen a good many curious animals and birds in that country, I had merely taken this to be a species that I had not before encountered.

John said he had been told that there were squirrels in the timber belts of Southern and Western Kansas, but that he had seen none. But there were rabbits in unlimited profusion all about us, though at that season they were not in the best of condition; still, they furnished more palatable food than jerked beef, dried fish and pilot biscuit. So I retraced my steps to the timber and succeeded in bringing back a pair of large buck rabbits in very good flesh.

We had barely gotten them dressed, and one simmering in the stew pan over John's improvised fireplace, than the threatened storm began. For the first hour the rain was merely a fine mist that failed to extinguish the fire until the stew was done. It was not long, however, before the downfall increased until a drenching torrent converted the plain into a series of rivers and lakes and tested the qualities of our tent severely. There were no overhead leaks of any consequence, but it was not long before we discovered that the surface water had cut a channel directly beneath our domicile, and a good-sized rivulet was laughing gaily in our midst.

John's wise forethought in spreading a thick carpet of oak branches on the floor saved our blankets from a drenching, but still we did not enjoy the aqueous music, knowing not how soon the water would cut out a channel sufficiently deep to plunge us all into its watery depths.

"I'm going to divert that flood," remarked John, as the gurgling continued to increase beneath our blankets. Then he divested himself of his clothing, remarking that "there was nothing like a rain bath for one's health."

Selecting a large, hollow buffalo horn from the scores strewn about in front of the tent, John dug a canal along the side of the hillock just above the tent, and this effectually turned the torrent, leaving us dry. Then we ate a hearty meal, had a good drink of rain water, which we appreciated most heartily after the lime and sulphur-impregnated fluid we had been imbibing for the past month or more, lighted our pipes and talked the afternoon away. Just before night I took out my bundle of ash twigs preparatory to making the usual cordon around our sleeping quarters, when John broke out in a dissertation on "old women's superstitions." He not only ridiculed the idea, but declared that he could not understand how a body of my apparent ability and sense could give credence to it. I told him I was merely acting upon the instructions of old plainsmen, whose experience in such matters ought to carry more weight than a mere theory; anyhow, I proposed to be on the safe side and not take any chances of losing my young life through the medium of a rattler's bite. John said no more, and I strewed the twigs with my customary care, having to exercise considerable skill to make them reach all the way around the tent.

Just as I awakened the following morning,

John was coming into the tent. "I reckon I'll have to concede to you about the ash twigs," was his first salutation. In response to my inquiring gaze he continued: "The rain last night must have flooded out the rattlers; bet I've seen fifty within five rods of the tent, and there's one sure thing, that we'd a had a visit from 'em before now if they weren't afraid o' something."

Whether the ash branches kept the snakes out is doubtless a question, but the fact remains that we were not molested by them, nor could we find one among our blankets. A rattler driven from his nest, especially if the weather be cold or wet, will crawl into the first dry and warm spot it finds, and from their close proximity to our tent, there is no doubt that they found it. John straightway became an enthusiastic convert to the idea which he had so vigorously condemned the previous evening.

Although the rain had practically ceased falling, there was a prospect of more in reserve, and then, too, the wind had risen to the magnitude of half a gale, a fact which wrought havoc with the flap fastenings of the tent. Every now and then the wind would whisk into the front in a sudden blast, inflate the tent for an instant like a balloon, then bang would go the flap pegs, and we would have to grab the rubber blankets to prevent their flying away. While wondering how we could contrive to fasten the flaps, I chanced to recall the skeleton of an enormous bull buffalo which I had discovered in my quest for rabbits the day before. Going to the spot I gathered an armful of the large curved ribs, and these, when used for tent pins with the curve toward the canvas, operated so successfully that the fiercest blasts were impotent to pull them out.

There being no dry fuel to be had, we were reduced to the necessity of banquetting upon our dried stores, despite the fact that we had fresh meat in abundance in the remaining rabbit left from yesterday. We bewailed our lack of foresight in that we had not piled a quantity of fuel into the tent when both wood and buffalo chips were as dry as tinder.

"Never mind," said John, "if this wind will hold without rain for an hour longer we can get all the dry fuel we want." I was strongly inclined to doubt this statement, but soon afterward was taught another wonderful lesson of the plains, in addition to the many which I had already learned. Although in the morning the dead cottonwoods, whose fallen branches we had relied upon chiefly in cooking our meals, were reeking with water, the spongy texture of the grain enabling it to absorb moisture like a sponge, when I went to the timber an hour after John's remark I found that such branches as lay up loosely from the ground were dry and light, as when we gathered fuel for cooking dinner the previous afternoon. Also the surface of the plain, which in the early morning was a slough of deep mud, was now almost as hard and firm as before the storm. Shortly before noon we lighted a fire, though we had to use our spare blanket for a wind break, and made an excellent stew from the remaining rabbit and such herbs and tubers as John could find by the creek side. According to our reckoning the next day would be Sunday, so we decided to remain in camp until Monday. To this end we went out in the late afternoon and shot several good buck rabbits, which we dressed and

put away in our larder, then we took the precaution to stow a quantity of dry wood in the end of the tent for possible emergency. Our final chore for the day was to shift the ponies to a new feeding ground.

The wind went down with the sun, though the sky was still overcast, and there was a prospect of more rain. It came, but not in the orderly, methodical fashion which characterized the beginning of the storm. Some time after midnight we were awakened by an almost incessant blaze of lightning, and the hoarse rumble of thunder away to the northward. The electrical display was simply beyond description. Dazzling chains of crinkling light darted across the sky in all directions, while every now and then broad shafts would shoot from the zenith to the horizon, flooding the entire plain in dazzling, violet-hued light.

John pulled on his boots and went to see if the horses were all right, finding them huddled up with tails toward the coming tempest. He had barely reached the tent when the storm broke, and such a tempest! It had seemed to me that the ultimatum of meteorological phenomena was reached in the storm that I encountered back on the Osage trail. But on this particular night I became aware that nature had unlimited reserve forces at command. It did seem as though they must have been mostly utilized for that occasion. The rain came in horizontal sheets, swept along by the wind with terrific force. The entire plain was aflame with an almost continuous blaze of purplish light, while thunderbolts crashed in a steady succession of ear-splitting detonations which seemed to shake the very foundations of the earth. At the height of the tempest one of the tent poles collapsed, letting the blankets down upon us. Fortunately the old buffalo ribs held firm, and by pulling the folds of the rubbers about us, we were enabled to shield ourselves from the pitiless pelting of the rain, and an occasional volley of hailstones which stung even under the shelter of the tent cover and double blankets.

The wind and thunder passed quickly, but it continued to rain for an hour longer. When finally we crawled out from beneath the tangle of tent cover and blankets, the dawn was faintly breaking and the lightning was drawing strange geometrical figures low down toward the southeastern horizon. The ponies we found in a state of excitement that the storm would hardly warrant, as they were tolerably familiar with such demonstrations. The cause of the unwonted alarm was soon apparent in the carcass of a coyote with a crushed skull, which lay within the radius of Skeezi's heels, while just out of range of John's pony was a little heap of white, freshly polished bones that demonstrated the fate of another of the sneaking little wolves. A wholesome fear of Skeezi's heels had saved the remains of the other coyote from spoliation. When we appeared on the scene the ponies manifested their appreciation of our thoughtfulness by whinnying and rubbing their noses affectionately against our sleeves.

John said that during a temporary lull of the storm he thought he heard an outcry from the horses and suspected that they were contending with something more serious (to them) than the raging of the elements, but declared that he would not have gone out into that storm to have saved his horse's life. He then admitted

that he suffered greatly from fear during such demonstrations. I assured him that it was no discredit to a man to experience fear on occasions such as that which we had just passed through. On the contrary, I had greater respect for a man whom such natural manifestations moved to solemnity. John then remarked that he could not understand how it was possible for a man to disbelieve in the existence of a Supreme Being in the face of such displays of power and awful grandeur. I coincided with him most heartily.

On my manifesting surprise that coyotes should attack horses, especially at that season and in that country where small prey was abundant, John assured me that it was not a case of assault, but rather of fear. He said the wolves were so terrified by the electrical display that they sought the companionship of the horses. The latter manifested their disapproval of such measures by kicking right and left with fatal consequences. John said he could not account for the coyote bones, as those animals were not given to cannibalism unless driven to it by extreme hunger when the plains were covered with snow and small game was not to be found. We decided that some other carnivorous animal had found the carcasses and devoured the flesh in the early morning. John set my heart to beating with anticipation by declaring that there might be mountain lions or wildcats in the vicinity. We made a close search of the adjoining timber, but found nothing to show that John's intimation was correct.

On returning to camp we made the startling discovery that my reserve stock of biscuit and dried meat, which I had in a paraffin wrapper, inclosed in a canvas sack, had succumbed to the heat and dampness of the past few days, had gotten soft and was developing a growth of fungus. We washed and scraped the meat, in the hope that only the surface was affected, but we were disappointed. A musty flavor pervaded the entire lot, making it unpleasant to the taste and nauseating to the stomach. We had almost decided, during our confinement to the tent, that we would spend a week or more in that locality, especially since we had discovered a long stretch of deep, still water near our camp, and in this there were ducks, two species at least, which we took to be the American merganser and the black-bellied tree duck, the latter being much the smaller of the two. We argued that as it was past the nesting period, these birds might be fit for the broiler, in which case they would eke out our larder very materially. But now the outlook was changed. We could not subsist exclusively on duck meat, which as a concomitant is too hearty for a protracted diet. The despised biscuit and dried meat and fish now loomed up as prime necessities which we must have.

After a hearty breakfast on rabbit stew and a handful of biscuit found in my saddle bag, we began preparations for our departure. It was deemed expedient to lay in several rabbit carcasses, lest we find a scarcity of game on the trail. I volunteered to procure them and John seemed in no wise loth to attend to camp duties; in fact, he seemed to lack the enthusiasm in shooting that characterizes most residents of the West. I begrudged the use of a good deer charge on a little rabbit, so I asked the loan of John's rifle, whose bore was much larger than

that of mine, cut a bullet into small slugs, took a couple of the degenerate biscuits and started out to put a scheme of my own into execution. On reaching the rabbit haunts I scattered some biscuit bits over a foot square space, concealed myself in a nearby thicket and awaited developments. It was but a few minutes until a scrambling flock of rabbits were in eager pursuit of the crumbs. It seemed a most unsportsmanlike thing to do, but I reflected, "They are only rabbits," and banged away, knocking over three of the animals, while as many more that escaped were evidently hurt. We wrapped the carcasses in the paraffin paper that had encompassed the biscuit, packed up our traps, loaded the ponies and started on the nearest cut for the river. John figured that we could reach the Arkansas bottom in about three days if we met with no accident. The horses felt fine after their prolonged rest. That night we camped on the prairie, finding plenty of surface water in an old buffalo wallow.

Shortly after noon one day we came up with a caravan of cattlemen bound from Hutchinson, Kans., to the ranges beyond the Cimarron, in what is now Oklahoma. There were fifteen or twenty men with saddle horses and three big prairie schooners, each drawn by four stout Percherons. The company was a combination of three ranchers in Southern Kansas who had joined interests and were bound for a location in the western extremity of the so-called Cherokee Strip or neutral lands, where they proposed to go into the horse and cattle breeding business. They were practically pioneers at that time in what subsequently became one of the most profitable businesses in the great Southwest.

Their business prospects interested us far less than their present commissary department. We journeyed with them until we reached what ordinarily was a dry ravine, but which in consequence of the rains was a sluggish river of unknown depth. In a long swale between the ridges where the buffalo grass grew quite luxuriantly, the horses were staked for the night and camp was made on the slope of an adjoining hummock. Pipes and conversation employed the evening pleasantly, and John and I spread our beds near one of the schooners, declining a friendly offer to share one of the tents. That night we heard the howls of timber wolves, a most terrifying sound to break the silence of those vast plains, but the incident encouraged us, as we were told that the wolves were from the Arkansas bottoms out foraging.

After a good breakfast the following morning I made a dicker with the steward of the party for several pounds of salt beef and pork, some venison steaks, a couple of pounds of sugar, a can of milk and a quantity of hardtack. We also secured a suit each of coarse flannel underwear from their "diddy chest," paying therefor about what four suits of better quality would have cost in Kansas City or St. Louis. I also replenished my flask with an article of corn whiskey which would never lead me into temptation.

Bidding our new-found friends good-bye, we galloped merrily to the southward, ourselves and our ponies in the best of spirits. The heat increased as the day waxed older; even the west wind, which was blowing half a gale by mid-day, seemed to accentuate rather than diminish

its intensity. The air was like the exhaust from a blast furnace, and we wilted under its influence. We were overjoyed when about 1 o'clock we approached a strip of timber and hastened forward to avail ourselves of its promised shade. Though we found the shelter grateful, we found the timber infested by swarms of the most voracious gnats I ever before encountered. Fortunately they were not poisonous, but their constant stinging was exasperatingly annoying.

Along the edges of the timber the buffalo grass grew in luxuriant profusion, while the ground between the tufts was literally covered with chips, the accretion of oft-repeated visits of the now absent herds. The gnats were chiefly confined to the dense shade of the thick wood, hence after staking the horses we decided to make camp alongside this timber. Leaving John to arrange a fireplace, in which labor he evinced especial aptitude, I took my rifle and went up the stream in the hope of finding some edible game. I had proceeded perhaps a half mile when on casting my eye through a rift in the undergrowth I saw in the water, close by the opposite bank, what threw me into a nervous tremor. There, in plain view, affording the prettiest shot imaginable, stood two magnificent deer, a doe and a buck. They had evidently come down to drink and now stood, enjoying the shade, but flirting their heads from one side to another in an effort to drive off the pestering gnats.

I quickly sank down on one knee, my heart beating like a trip hammer. My hand shook so it was with difficulty that I cocked the rifle. I finally succeeded, however, then set the trigger, brought the sights into range, resting across my knee, and was just in the act of touching the hair when my hand gave an involuntary twitch, my finger touched the trigger, and a falling branch five feet above the buck's head showed the course of the bullet.

As the deer bounded away through the scrub I was so utterly disgusted with myself that I just threw myself on the ground and cried with rage and vexation. Circumstances could have favored my bagging a nice fat deer no more completely, and like a great baby I had thrown them all away and permitted my nerves to run riot. What sort of a hunter did I expect to make? Of what service had these weeks of roughing it been to me if such an incident was to unstring me? I stalked back to camp and begged of John to kick me good and hard.

"Oh, you needn't tell me; I know all about it. You've had an attack of buck fever, and like every other man you are mad as wildcats at yourself, but you'll get over it; everybody does."

"What!" I exclaimed, "does every one have such an experience on encountering their first deer?"

"Pretty much, I guess; in fact, I never heard of any one that didn't. I know I had it, not only the first, but the second and third time I got a shot at a deer."

This assurance had a comforting effect upon me, but it was several hours before I could think with anything like calmness of those two fine deer and how I had scared them away. In fact, I lay awake more than half of that night trying to figure out how it was that I could have done such an asinine thing.

[TO BE CONTINUED.]

Game and Fish of Ontario*

By E. TINSLEY

WHILE conservation of natural products of the Dominion is at present receiving, to some extent, from the authorities the attention this very important matter deserves, it is difficult to realize the continuation of the destructive and unwise policy of those entrusted with the formulation of the laws and regulations pertaining to one of the most valuable natural products of the Province, viz.: the fisheries. Nature's laws of reproduction should be observed and strictly enforced. Failure to do so incurs serious penalties. Nature has wisely ordained and provided seasons in each recurring year which the various animals, birds and fish are to devote to the propagation of their respective species. I would like to know what possible excuse or reason the Department of Marine and Fisheries at Ottawa can adduce for their short-sighted and unnatural conduct in abolishing the close seasons, as they have done for a number of years past. Even by the widest stretch of imagination we cannot credit them with having done so with the intention of protecting and perpetuating this very valuable asset of the Province. It is to be hoped that recent changes will result in wiser counsels prevailing, and that the Province will in the near future be conceded its undoubted right to protect and dispose of its own property without vexatious interference.

The wisdom of observing and respecting nature's laws I can illustrate by a practical case. Some six years ago, from a combination of unfortunate circumstances, our most valuable native game bird, whose habitat is the whole Province, the ruffed grouse, more generally known as the partridge, was almost exterminated. What would have been the result had we followed the unwise course the Department of Marine and Fisheries have adopted for years past regarding nature's close season for fish in Ontario? In the case of the ruffed grouse we had two close seasons, and then reduced the open season to one month, with the result that they have been more numerous during the last two seasons in our Northern woods than for many years past. Now, supposing we had been unwise enough to have employed men five years ago to scour the nearly depleted woods to kill the few remaining birds on their nests and destroy the eggs, our partridge would ere this be as great a rarity as the wild pigeon. This is practically what the Department of Marine and Fisheries have been doing with the fisheries of the Province. Whitefish do not spawn in the foul and putrid waters of Lake Erie that extend for many miles from the American shore, but congregate in countless numbers in Canadian waters for that purpose.

To such an extent does this prevail that the authorities of several States bordering on Lake Erie annually ask permission to procure spawn for their hatcheries from our waters not procurable in their own. It will be patent, even to those who are not conversant with fishery matters, that allowing the destruction year after year

of the only reproductive source of supply available, will not have the tendency to perpetuate the incalculably valuable heritage nature has so generously endowed the Province with. We should not have an elevated opinion of a farmer's sanity who, after having at great expense prepared his land for the seed, destroyed the seed instead of sowing it, and then expected crops. This is precisely what divided jurisdiction and certain exigencies have entailed on the fisheries of the Province. During extended open seasons, cars in which shipments of whitefish have been made, have the floors covered inches deep with spawn exuding from the boxes. It is generally understood that bona fide fishermen and reputable dealers are, as a rule, adverse to any meddling interference with the respective close seasons. Of course there are fishermen and fishermen. Those that are not bona fide are capitalists of various degrees, who use all means known to them to procure commercial licenses with the intention of making all the money they possibly can in a few years, irrespective of seasons and without a thought or care for the future of the fisheries. These are the men who are responsible in a large measure for these periodical infractions of nature's laws. Shortly before the close seasons (the month of November for whitefish and salmon trout), the *modus operandi* of these men has been for one or two of these self-constituted philanthropists to visit Ottawa, presumably with charitable purposes intent, and deliver themselves of a hard luck yarn, bewailing the fate of the poor fisherman, stating that the fishing has not been remunerative, and asking that they be allowed to improve it for other seasons by the somewhat questionable methods of destroying with impunity the sole and only source of supply.

There are other causes having most destructive effects on the fisheries, viz.: the widespread system of pollution of our lakes, rivers and streams. Nature never intended these one-time beautiful waters to be turned into death-dealing pestilential swamps and pools. I regret that many tug fishermen are alleged to make a practice of dumping the offal into the waters. This we may cope with to some extent, but in matters of general pollution we are comparatively helpless. There is no doubt that pollution of public waters is increasing at an alarming rate in the lakes, bays and rivers in both countries. Nets set in Lake Ontario seven or eight miles from the outlet of the Niagara River, after a storm, are so saturated with sewage and tangled up with sewer rubbish as to make them worthless. I have dealt with these matters at some length—matters that under some of the unfortunate conditions it is not in our power to improve.

The Department have numerous requests to restock waters with game fish from various parts of the Province; as a rule for waters unfit to sustain fish life. These applicants should remember that the Lord helps them that help themselves. Those who want restocking done in public waters, either to attract tourists or for the pleasure and profit of the residents, must in future either prevent the waters being contami-

nated with sewage or deleterious waste from factories, or do without fish. For several years the department has been doing all possible to prevent the netting and spearing of game fish on their spawning grounds in the spring and prevent the use of the illegal and destructive trap nets, and have met with some success in so doing. I have been told that we are not consistent in preventing farmers and others taking game fish from the spawning grounds for their own use, and allowing the commercial fishermen, under similar conditions, to take whitefish off their spawning grounds with impunity for the purpose of supplying the United States market.

There is urgent necessity, if the fisheries of the Province are to be perpetuated, for the removal at once and for all time of all interference during the close seasons with nature's perfect plan of reproduction from whatever source it emanates. Close seasons should be applicable to the whole Province, and no conditions or exigency should be an excuse for encroaching on the inadequate close seasons provided for by present regulations. If artificial propagation has been the success claimed, why are those States where it has been in use for many years, and close seasons ignored, compelled to procure spawn from our waters, not procurable in their own waters in which such fabulous numbers of fry are alleged to have been deposited annually for the last twenty or thirty years? Hatcheries having failed to keep up the required supply, it seems to me that it would be in accordance with common sense for those responsible for the failure to again revert to nature's perfect plan by establishing and compelling strict observance of close seasons. I have no objection to hatcheries as an adjunct to nature, but am strongly opposed to them being used as an excuse for superseding nature and abolishing close seasons. Even from a business basis, is it wise to incur the expense of building and operating hatcheries instead of allowing the fish to attend to the matter of reproduction more effectively and certainly less costly. I realize that there has been much guess work as to the relative proportion of fry produced by the two systems. Advocates of hatcheries have made the absurd statements that 95 per cent. of the eggs taken from the fish to the hatcheries produce fry, and that only 5 per cent. of those deposited by the fish in the most favorable and suitable spawning grounds and waters do so. While the former statement may be correct, the latter is too absurd even to be considered. I have been paying considerable attention to this restocking from the hatcheries for many years. I have seen the fry dumped into foul, putrid water at outlets of sewers year after year, miles away from pure water and the spawning grounds or beds of the fish working out nature's plan. I have known of large shipments of fry placed in shallow waters near the shores of our large lakes and in a few hours washed ashore all dead. Similar causes may be the result of the unsatisfactory condition of the fisheries in polluted waters in the vicinity of the large cities on the American side of our large lakes.

*From the fifth annual report of the Game and Fisheries Department.

Under the above conditions we may conclude that a very small percentage from the hatcheries becomes mature fish. My urgent plea for close seasons to assist us in perpetuating the fisheries of the Province is strengthened by the knowledge that the most expert authority on the continent—Professor Prince—is a strong advocate for the observance and strict enforcement of close seasons.

Nearly 100,000 small-mouth black bass were raised, and deposited in the various inland lakes of the Province, and in the near future the result of this important work by the Government will be noticeable and appreciated by the tourists who each year come over in increased numbers.

The sale of angling permits was greater than in former years, showing that more tourists are taking advantage of the excellent fishing which this Province offers, and I am glad to say that our officers have had less trouble in enforcing the laws and regulations with regard to angling than in any former year, and in their reports there would appear to be a general desire on behalf of the public to not only observe the laws and regulations, but in many instances to render assistance to our officers, realizing how important it is that the fisheries of the Province be preserved.

It is almost impossible to get a record of moose killed during open season for same, in consequence of so many of the carcasses being given to Indians and guides, sportsmen only taking the heads which are sent to taxidermists in various parts of the Province and United States, but from the reports of Crown Lands agents, rangers and others, there is no appreciable diminution as yet in their numbers.

The wisdom of allowing only one deer to be killed by each hunter instead of two is already apparent. Express companies in 1909 carried 3,923 deer, and in 1910 only 2,468, a decrease of 1,455.

There is no perceptible increase in the number of otter in the Province. Beavers have increased very rapidly, and are returning to the original beaver meadows in large numbers. Complaints frequently reach me to the effect that these interesting engineers are damaging private property by flooding roads and meadows. On investigation it has only been necessary in a few cases to destroy their dams. A large number of mink are killed in the Province. The skins of those killed early in the season are of small value. Muskrats appear to be as numerous as ever, which, when we consider the large number killed annually, is most surprising. A large business is done in all the more common varieties of fur-bearing animals.

Duck shooting has not been as satisfactory as in former years, in a large measure due to the almost unprecedented low water, many of the private preserves having little or in some cases no water in their ponds.

Ruffed grouse have been numerous, affording good sport—sport to such an extent that many so-called sportsmen have forgotten how near extermination of these grand and hardy game birds had been reached a few years ago. If shooters in general in the future are not more reasonable and satisfied with less slaughter, it will be necessary to further reduce the open season and limit the bag. In fact, the time has arrived in the interest of the Province and perpetuation of game in general to impose a general license fee for the privilege of killing any species of game.

Quail is another species of our grand native game birds, as useful as they are beautiful. Severe winters make sad havoc of them, and improved farming and wire fences have destroyed both their winter food and shelter. Since the export of live quail from the United States has been prohibited, we have been unable to procure birds from there as in the past for restocking. Therefore, it may be necessary to establish a small quail-breeding farm in the most suitable locality for that purpose. Such a farm in charge of a man interested in his work, I be-

lieve, would be successful. Quail should be specially available for this purpose. Much has been written and said in favor of introducing game birds from Europe to take the place of our native birds, adapted by nature to withstand and survive our severe winters. We are not likely to be more successful with imports from milder climes.

Snipe, plover and the elusive woodcock are to be found in their usual resorts, but in reduced numbers. Some good bags have been made by the initiated, these being the exception.

Birds in the South.

KNOXVILLE, Tenn., March 25.—*Editor Forest and Stream:* I note with pleasure the protests of men authorized to speak on the subject against the utterances of your contributor, who takes the extreme position that certain species of birds—heretofore sought to be protected—should be exterminated.

Unlearned in ornithology, only a lover of birds, I can but sincerely hope that no case will be made against our feathered friends that cannot be successfully met and defended by those who are qualified to speak on the subject. The many and timely kind words spoken by your contributors in defense of wild life afford me gratification and pleasure, and I feel sure have accomplished much in the campaign of education along this line.

It is a real sorrow to the outdoor man to note the growing scarcity of bird life, and my theory has ever been that ignorance and thoughtlessness are the factors most responsible for this sad state of affairs.

The untaught boy, given a target rifle to make more enjoyable his summer vacation, kills many birds during the nesting season with never a thought of the nestlings left to suffer and die in the little homes among the trees.

On the theory that there is some good in the worst, some bad in the best, I believe that any bird is better than no bird, and would advocate protection for all. Most of us, who were boys a quarter of a century ago, have sorrowful memories of sins we committed along this line, but the average boy of ten is better educated as to the economic and esthetic value of birds now than was the man of that day and time.

A sad memory of childhood is that of an old farmer I once saw guarding a cherry tree with a shotgun. He was fairly intelligent, the owner of a fine Kentucky farm, and yet knew no better than to think he was conserving his interests by pouring load after load of shot into the tree to kill the birds that were coming to take a small toll of the fruit their earlier efforts had conserved. Indeed, as I now know, many of the birds he killed were insectivorous and destroyers of enemies of the fruit and in the cherry tree for that purpose.

Remaining late in Florida one season I saw the gathering of the robins for the Northern migration. They were in countless numbers, and

into their busy throngs—feeding for the long flight—darkeys and small boys, and some men (save the mark) were pouring loads from large bore shotguns, heavily charged. Loads of robins, in sacks, tied by strings and in pockets, were brought into town. It was a sad sight, and deeply impressed upon my mind by after events. That spring, for the first time in years, we missed “our robins” as we called a pair nesting in the yard in a low magnolia tree within a dozen feet of the sidewalk, where pedestrians passed every hour of the day. My little children watched for them, wondered at their absence, and finally mourned them lost, as they were, for they have never come again.

I am proud of my pair of young sportsmen; will back them against the field, with any arm they can handle, but the best thing I can say about them, and the thing that warms my heart most is the fact that they will fight man or beast in defense of the birds they know and love.

Recently I met a man in the sunny South who was bewailing the fact that having taken a river trip for the sole purpose of seeing the birds, he saw, as he expressed it, “only a few cranes and some buzzards.” About the same date my feelings were outraged by the sight of a gunner racing back and forth on the Indian River in a motor boat, shooting the half-tame ducks that had been coming in to the boat landings and wharves, morning and evening, to be fed by those who loved to see them.

The residents are as a rule on the right side of this matter, and almost every one of the beautiful water front homes had its sign, “No Shooting,” but this could not protect the ducks when they went to the mid stream, the navigable water, to rest.

Many feel very deeply the need of stringent legislation along the line of bird protection, and many residents refuse to kill any of the rapidly diminishing game, but not all are as radical as one I heard express himself. He had returned from a trip into the interior, and was asked if he had a chance at a deer. His reply was: “Plenty of chances, but I would as soon kill a man as a deer.” Then after a pause for reflection, he added, “Rather, I believe.”

I am no sentimentalist, but a sportsman and fairly catholic, but refuse to class men as sportsmen, or be classed with those who kill only for the sport of shooting at live targets, or lust of

blood, as I have seen so many of the winter visitors to the South do.

The resident of a semi-tropical country is entitled to his sport in season and moderation, but the man who has his chance in the bracing climate of the temperate zone winter should not pursue game to its sunny retreat where it is neither in edible condition nor full enough of life to make its pursuit real sport.

But this is digression, also dictum—and perhaps offensive—to some, who take a different view of the question. Well, I am actuated by no selfish motive. I was moved to speak by love.

A childless home and a birdless forest are two of the sad sights of this world. The cause of the first has been championed by a man whose splendid achievements have given him world-wide fame; and that of the second will, we hope, continue safe in the hands of FOREST AND STREAM and its able contributors.

LEWIS HOPKINS.

Good Work.

GLOVERSVILLE, N. Y., April 23.—*Editor Forest and Stream:* Inclosed find clipping from a local paper which I am sending you at the request of readers of FOREST AND STREAM:

Antonio Sarro and Mariano Cario, of this city, were fined \$50 each in Justice Gulick's court in the town of Johnstown, Friday, for a violation of the game laws. It has been claimed for some time that the slaughter of birds was being made outside the city. President Clayton H. Masten, of the Fulton County Fish and Game Club, has been making a quiet investigation for some time in the matter. He also interested Game Protector E. T. Burtch and on Thursday both men made a trip to the reservoir of the Gloversville waterworks on the Bleecker road.

On their travels they met Sarro and Cario. Both men carried guns and were apparently returning from a hunting trip. Messrs. Burtch and Masten accosted the pair and asked them what they had shot. The men stated that they had shot nothing. On looking into the game bag the game protector found three robins, one black-bird and a Canadian hare. The hare is one of the number with which the game club recently stocked the vicinity. Messrs. Masten and Burtch confiscated the game bag, its contents, the guns of the men and also their hunting licenses and notified each to appear before Justice Gulick.

C. H. MASTEN.

Wildfowl Gun.

I BELIEVE that most makers recommend that a gun for this purpose should be full choke-bored, and I should, with great deference, like to question the wisdom of this for moderate shots. Wildfowl shooting in the majority of cases includes plover-fighting at both green and golden plover, and sport at shank, curlew and other smaller waders. For any of the above work (especially, say, fighting golden plover in a bad light), a shooter will be greatly handicapped if he is using a gun with a pattern of 212, and the smaller killing circle it entails, unless, of course, he is an exceptional shot. Also, though I have had little experience in this direction, I believe that a wider pattern will be as suitable for shooting duck and the more important wildfowl, as when the game is beyond the ordinary range of, say, forty-five yards, a fair shot will lose in the small killing circle (which covers no error in aim) what he gains in the closeness of the pattern. In addition, the gun will be used for game shooting in many cases, and in this class of shooting a choke bore is certainly a disadvantage. It appears to me that an improved cylinder

(of, say, 150 or 160) in the right and a half-choke in the left (say 180) would be more suitable boring for a general purpose gun to be used by a moderate shot. In this I believe I am supported by a good many professional fowlers. Another point I should like to raise is whether a heavy 12-bore will require a different cast-off to an ordinary game gun. My reason for this inquiry is that for some years I used a light 16-bore, and then purchased a heavy wildfowl gun chambered for three-inch cases. On trying it I found that I invariably shot to the left, although the cast-off (three-eighths inch) was greater than my old sixteen, which was nearly straight. When fitted with a try-gun it was found that I required a cast-off of nearly three-quarter inch, and the gun when built to this dimension fitted me exactly.—*Shooting Times.*

American Game Bird Shooting.

OLD-TIME readers of FOREST AND STREAM, who recall twenty years or more ago the first beginnings of active interest in this country in the beagle as a sporting dog, will remember also the prominent part taken in the discussion of this breed by General Frank A. Bond, then of Maryland.

General Bond, a veteran of the Confederate Army, was one of the earliest Americans to use beagles in hunting the small hare of the South, and if we recollect aright, was the first to bring to public attention the so-called bench-legged beagle.

As many present-day readers are aware, General Bond is still an active sportsman and resides in North Carolina, where he still enjoys excellent quail shooting. His interest in this pursuit is as great now as it was a generation or more ago, and he loves to practice it and to read about it.

A copy of Mr. Grinnell's book, "American Game Bird Shooting," having recently come into General Bond's hands, he has written the author the following letter:

I have just finished reading your book, "American Game Bird Shooting." I have enjoyed it very much. Fully sixty years ago I owned an excellent pair of pointer dogs that I had broken myself. Ever since that time I have owned pointers, setters or droppers and have hunted quail.

I have in the meantime read all the works on the hunting of quail that I could procure. It gives me pleasure to say that the chapters on dogs and quail shooting [in your book] more fully and exactly express my opinions than anything I have ever seen.

I do not feel qualified to criticize any other descriptions, but from the truthfulness of the ones I have mentioned, I feel sure that the entire work is the result of careful and intelligent thought and knowledge.

Hunting in California.

BERKELEY, Cal., April 23.—*Editor Forest and Stream:* The citizens of Placer county have declared war on the bluejay, and a series of shoots has been arranged for. One took place recently in which 200 hunters took part, and it is estimated that 2,000 bluejays were killed, as well as several hundred jack rabbits. Prizes were offered for the largest bags, and teams from Auburn, Lincoln, Loomis, Penryn and Newcastle took part.

Geese are still to be found in large numbers in Merced county and vicinity, and so much damage is being done by them to the grain crops that farmers welcome the presence of

hunters. Market hunters are killing the birds by the thousands, and it is nothing unusual for them to slay forty geese at a single shot from their big guns.

GOLDEN GATE.

Prominent Sportsman Dies.

BERKELEY, Cal., April 23.—*Editor Forest and Stream:* Sportsmen and nature lovers throughout the coast were grieved recently to learn of the death of William James Golcher, which occurred at a San Francisco hospital on April 14. The deceased was a native of St. Paul and came to this city thirty-five years ago and entered the sporting goods business with his father, the firm name being Claybrough, Golcher & Co. Following the fire of 1906 the business was reorganized and since then has been conducted under the name of Golcher Bros., the owners being W. J. Golcher and H. C. Golcher. About a year ago Mr. Golcher suffered an attack of pneumonia and has not been well since. Recently he went to Southern California to recuperate, but gradually grew worse and returned to his home. The deceased was a genuine sportsman, beloved of all who came in contact with him, and was an authority on fish and game matters in California. He was a member of the San Francisco Fly-Casting Club, the Golden Gate Gun Club and the California Wing Club. He is survived by a widow, two sons and a brother.

GOLDEN GATE.

THE TOP RAIL.

"Is otter hunting cruel?" queries a hunting paper from the other side of the Atlantic. To one who has viewed the sort of otter hunting in question from long range I should say that it is cruel—to the men and women who take part in it. Judging again from pictures of many other hunts, to an outsider at least, there appears to be an abundance of humor in the solemn manner in which men and women—especially the latter, slop along through creeks and swamps in their Sunday-go-to-meeting clothes, as if that was the only thing to do. Neither do they wear rubber boots, nor seek dry footing when there is opportunity to wade in a creek; at least, while the photographic lens is aimed in their direction. Surely, John Bull takes his pleasures very seriously, but if he thinks otter hunting is cruel, he should give the bad little children taking part in it a sound spanking and put them to bed while their wet shoes and other things are drying behind the kitchen range.

As for the otter, it must be conceded that in a country where the trout is held in almost as great reverence as is the sacred codfish in Boston, the otter's feelings are not to be considered for a moment, and if he does not enjoy being chased by people who would rather be wet than dry—while there is a camera about—then he should seek a clime where cold lead is swifter than a pack of dogs and stick-carrying persons.

* * *

THE Boy Scouts of Pennsylvania are taking a special interest in the fight that is to be waged this year against the chestnut bark disease, because the supply of chestnuts is being reduced at a rate that is not agreeable to boys. The Scouts are being instructed and will make this a feature of their hikes this summer.

GRIZZLY KING.

SEA AND RIVER FISHING

Personal.

PERRY D. FRAZER, who has been managing editor of *FOREST AND STREAM* during the past six years, has resigned in order to devote his entire time to the making of tapered silk fly-fishing lines and other specialties at Ridgewood, N. J.

Illinois Casting Club.

CHICAGO, Ill., April 15.—*Editor Forest and Stream*: Evidences are already manifest in their preparations for the season of 1912 of the enthusiastic love of their sport which dominates the members of the Illinois Casting Club. To inaugurate the season on May 12 an invitation tournament will be given, to which will be invited the members of all the casting clubs in Illinois which are affiliated with the N. A. S. A. C. Great interest is expected. Following this, the regular season's schedule will commence on May 18 to consist of the following events:

May 18.—Half-ounce accuracy bait, half-ounce distance bait, accuracy fly, distance fly.

June 1.—Quarter-ounce accuracy bait, quarter-ounce distance bait, light tackle accuracy dry fly, light tackle distance fly.

June 15.—Half-ounce accuracy bait, half-ounce distance bait, accuracy fly, salmon fly.

June 29.—Quarter-ounce accuracy bait, quarter-ounce distance bait, delicacy fly, light tackle accuracy dry fly.

July 13.—Half-ounce accuracy bait, accuracy fly, light tackle distance fly, distance fly.

July 20.—Quarter-ounce accuracy bait, accuracy fly, light tackle accuracy dry fly, salmon fly.

Aug. 3.—Half-ounce accuracy bait, half-ounce distance bait, light tackle accuracy dry fly, distance fly.

Aug. 10.—Quarter-ounce accuracy bait, quarter-ounce distance bait, delicacy fly, light tackle distance fly.

Aug. 24.—Half-ounce accuracy bait, half-ounce distance bait, light tackle accuracy dry fly, salmon fly.

Sept. 7.—Quarter-ounce accuracy bait, quarter-ounce distance bait, accuracy fly.

Sept. 14.—Re-entry day.

Sept. 28.—Re-entry day.

Events not completed on date scheduled will be cast the following day.

Afternoon contests begin at 2 o'clock sharp.

Morning contests begin at 9:15 o'clock sharp.

It will be a great accommodation to the captain if members wishing to participate in contests will be on time.

To those who complete their season's scores, honors will be awarded as follows: In fly-casting, members attaining an average of 95 per cent. will be entitled to the degree of proficiency fly-caster; 97 per cent. expert fly-caster; 98½ per cent., master fly-caster; 99½ per cent., artist fly-caster.

To the member making the highest general average in all accuracy fly-casting events will be given the high average fly award.

In distance fly-casting, awards will be given to the members making the highest general average

in the distance fly, light tackle distance fly and salmon fly.

In bait-casting, the following awards will be given: To the members making a general average of 95 per cent. will be given the degree of proficiency bait-caster; 97 per cent., expert bait-caster; 98 per cent., master bait-caster; 98½ per cent., senior master bait-caster; 99 per cent., artist bait-caster.

To the member making the highest general average in quarter- and half-ounce accuracy, will be given the high average bait award.

In the quarter-ounce and half-ounce distance bait-casting, one award will be given to the member or members making the highest general average in either event.

Additional awards: To any member making a perfect score in any of the bait or fly events other than distance events in this club's contests, in amateur team contests, in amateur tournaments of the N. A. S. A. C., or in any amateur contests, wherever the score is credited to this club, will be awarded a suitable trophy, the cost of which shall not exceed \$20. This trophy shall be known as the perfect score trophy of the Illinois Casting Club.

To the member making the highest combined average of the quarter-ounce and half-ounce accuracy baits, and the accuracy fly and light tackle dry fly accuracy, there shall be given the high average bait and fly award and token.

To the member holding the highest average for the season, who has never previously completed a season's score, in either of the quarter-ounce or half-ounce accuracy bait, or the accuracy fly or light tackle dry fly accuracy, there shall be given the novice high average bait or fly award and token. One bait and one fly award.

According to the custom established in 1911 the tokens accompanying each award will consist of engraved gold bars, which are to be attached as pendants to the club badge.

Following the regular season's events will be held the annual tournament for club members only.

A. F. SWISHER, Sec'y.

Opening Day in the Mountains.

HENDERSONVILLE, N. C., April 14.—*Editor Forest and Stream*: At last we have spring with us. The cherry trees are in full bloom, pears also, while apple trees are either in bud or bloom. Everything begins to take on spring dress, and the feathered kingdom seems quite busy.

I have heard the mockingbird, and this morning many thrushes, robins, cardinals, wrens, song sparrows and others were also filling the air with their many and varied sweet notes. Yes, it is spring, and surely if all things on the earth here in these beautiful mountains are filled with song, surely the fish in the waters, if they can't sing, can jump and show themselves lively in the clear rushing mountain stream. I must go and see; it may be to-morrow.

Uncle Sam reported showers for us yesterday, to-day and to-morrow, but so far only a sprinkle has fallen and the time for trout to rise to the

fly has come. Nor is this all. As usual I have read Theodore Gordon's letter in the last issue of *FOREST AND STREAM*. I read them all, and the fever is growing to such an extent that a cure is imperative. There is only one known specific, and it must be resorted to. Of course the remedy is but temporary, but it is the only safe and sane one and I must have recourse to it.

I am just in from Green River. I took the train at 8:05 A. M. and got off at Tuxedo Station, then drove one and a half miles and walked down to the power plant. I began fishing a little after 9 A. M. and soon had a rise, but the fish was very small and I cast over the pool to other points and soon had an eight-inch trout and another in a few minutes. Then I waded below the pool and came up under the far side, under the mountain. Approaching the spot I wished to cast over with great care, I had the satisfaction of getting a rise that was worth while and was at once busy with a good thirteen-inch rainbow. He fought till the net was under him. Then down stream I went, here and there killing a trout till I had seven in my creel and they stopped taking the flies. But I lost my best fish and no doubt from mismanagement. Twice I saw his sides as he dashed at the flies and missed and then I skipped them over him again and again just off the water, and finally dropped them and drew them over him. He struck hard and was fairly hooked. He fought hard and I gradually brought him within reach of the net. Then trouble came. The water was very swift and in an attempt to get the net below him somehow the middle dropper caught in the net and prevented me from using the net to advantage. In trying to get this fly loose I gave him the least bit of slack, no doubt, and he was gone. Anyhow, I had "the feel of him," and is not that something?

Well, this is the first broken dose for the cure of "fishing fever."

It must always be remembered that "broken doses" is the proper method of treatment of fishing fever. I expected a fine catch in the late afternoon, but the trout thought otherwise. A severe thunderstorm came up, the first of the season. I hope for better luck next time, yet I have quite enough for breakfast.

ERNEST L. EWBANK.

Newark Bait- and Fly-Casting Club.

NEWARK, N. J., April 27.—*Editor Forest and Stream*: The schedule of events of the Newark Bait- and Fly-Casting Club for the season of 1912, to be held at club platform, Weequahic Park, is as follows:

May 18.—Half-ounce accuracy bait, half-ounce distance bait, accuracy fly, distance fly.

June 15.—Quarter-ounce accuracy bait, quarter-ounce distance bait, dry fly distance, accuracy dry fly (five-ounce rod).

July 20.—Half-ounce accuracy bait, half-ounce distance bait, accuracy fly, distance fly.

Aug. 17.—Quarter-ounce accuracy bait, quarter-ounce distance bait, dry fly accuracy, dry fly distance (five-ounce rod).

Sept. 28.—Half-ounce accuracy bait, half-ounce distance bait, accuracy fly, distance fly.

Interstate tournament, Sept. 7; re-entry day, Oct. 12.

Trout Fishing.

BY HENRY D. ATWOOD.

I went to fish for trout one day and met a friend upon the way;
He had a rod as well as I, and sought with me his luck to try.
A limpid brook was winding near, its waters running cold and clear;
We walked along the mossy bank, and brushed aside the rushes rank
Until we came upon a turn, whose marge was crowned with flag and fern;
While bending birch and maple spread their moving branches overhead:
And oft above the surface there some sportive trout would spring in air—
A sight to make Piscator smile and ply his art with skilful guile,
In hopes that soon his tempting lure some luckless victim would secure.
With all my skill I cast my flies, but not a trout would deign to rise,
Until at last with lengthened throw I let my line far downward go!
As round the bend it left my sight I felt a sharp and savage bite:
Out spun the line, but I felt sure his struggles long could not endure,
And snubbed him hard with deftest skill, and reeled him up resisting still.
He twisted, turned and ran down stream—Ah! thus to end an angler's dream!
If he should reach yon sandy shoal, it might to him prove safety's goal:
Against some stone the hook might scrape, and so from me he would escape!
In fear of this I wind the reel and fret him with the pointed steel,
Until I see he's failing fast, and then I know he's mine at last!
No more he strives to plunge or spring—and to the shore my prize I bring.
His spotted sides I proudly see—his weight, two pounds at least must be!
What lovely hues! how bright the dyes appear to my admiring eyes!
I'll cast again just as before—in that same spot there may be more.
With cautious tread approaching nigh, I watch the false, delusive fly
Go sailing down the rippling stream, where rays of sunshine softly gleam;
And as it floats beneath the curve, round which the dimpling waters swerve,
There comes a tug upon the line that tells another prize is mine.
I land him soon, and then I hear my own good friend approaching near.
When he arrives, he says, "Well done! Is that good trout the only one?"
And I reply: "I have but two, though good ones both; what luck had you?"
"Oh, well," said he, "my luck was fair—I have enough with you to share.
If you take two, we'll each have four, and equal then will be our score;
For I have six, and caught them all just there below the waterfall.
And now, if you with me will go, perhaps we'll have six more to show."

Angling in Southern California.

LOS ANGELES, Cal., April 10.—*Editor Forest and Stream:* The winter tournament of the Tuna Club has been one of the most interesting and productive of sport since it was started. This has been due in a large measure to the peculiar winter. Heavy or torrential rains, which often come in January, drive the migratory fishes away. This season the rains did not come until March, and there was good yellowtail fishing in Avalon Bay all winter, with the average large. Some of the finest catches have been made by English men and women. Sir and Lady Branton Smith, and Sir Henry and

Lady Bosse have made some remarkable catches of yellowtail and long-finned tuna, considering the time. Avalon Bay is a favorite resort for Englishmen, and every year the Tuna Club entertains scores, many of whom are members of the British Sea Anglers' Society of London. Lord Desborough, president of the latter, is an honorary member of the Tuna Club, and Charles F. Holder, president of the latter, is an honorary vice-president of the British club, so there is an interchange of courtesies.

Being so much in evidence, it is not to be wondered that so many of the club prizes go to England. The record rod yellowtail of the Tuna Club is held by a foreign member, W. W. Simpson, of Whalley, England. He has placed the big 60½-pounder on exhibition with a replica of the rod and line in the British Museum.

The white sea bass season opened early at Avalon Bay, about a dozen big fish having been taken so far. This fish attains a weight of eighty pounds here, but the average fish is forty pounds. It is a big cousin of the weakfish taken in New York Harbor, and of the same genus (*Cynoscion*). These same fish spawn alongshore, near the kelp beds, and there is a war between the Italian and Portuguese fishermen and the anglers to prevent their practical extermination. In March, while fishing near Long Point, J. B. Dempsey, of Cleveland, O., brought to gaff the season's record white sea bass weighing forty-seven pounds. Another good-sized fish was brought to gaff by Miss L. King, of New York city, on heavy tackle.

There are no adequate laws for the protection of the big game and food sea fishes of California, hence the market fishermen loot the sea in season and out. When a catch large enough to affect the market price is taken, it means that a ton, more or less, of fish is dumped, nets are run out from the islands a long distance, and at short intervals, and fish of all kinds are taken, especially the white sea bass. It is apparently impossible to convince the average man that the fishes of the sea can be exhausted; but off Southern California canning companies in a few years have so exhausted the sardine supply that some of them have had to go out of business.

San Clemente Island, forty miles from Los Angeles, is government land. It is the finest big game fish ground in the world, but is being looted, despite the fact that the Tuna Club hires inspectors and pays for prosecutions. A movement is on foot to have this splendid park out at sea made a fish and game or bird refuge or preserve, so that the people can enjoy it for all time.

The Santa Catalina Island is a part of Los Angeles county, and Avalon is a town of six thousand, or seven thousand in summer, the property being owned by people all over the country, while the bulk of the island is owned by a single company. These owners have done what they could to protect the fish, and the Avalon boatmen and allied interests, who have nearly two hundred thousand dollars invested, have done what they could, but the looting goes on. The fact that three kinds of tunas, the long fin, the yellow fin and the leaping tuna, spawn in the Santa Catalina Channel, and have afforded wonderful sport, has attracted the attention of Japan, that has practically looted the

islands of shellfish. They now propose to can the long-finned tuna, and a tunny fishery approximating that of the Mediterranean may be seen here in the near future. The long-finned tuna exists here in such vast numbers that it cannot be depleted, but tons can be taken. Nearly all the market fishermen in Los Angeles are aliens. The fish are taken and much of the money goes to China, Japan and Italy.

The difficulty is to make Californians understand that a sport like angling has an enormous value to the State, and that it exceeds in value the market catches. The economic value of sport to California is not less than three million dollars per annum. That is, anglers in the State and foreign anglers who come to it every year spend this amount, and at least two million dollars is spent by anglers in yachts, power launches, employes, bait, bait catchers, glass-bottom boats, rods, reels, lines, and all the articles used in fishing, transportation, railroads, hotels, etc. As a rule the general public does not appreciate the value of sport to a State. The sport had at the government Island of San Clemente has done more to attract attention to Southern California than the combined efforts of all its real estate "boomers" and boards of trade; and the reason is plain that there is the finest sea angling in the world, within twenty or thirty miles of a city of four hundred thousand inhabitants (Los Angeles); and the result is a pilgrimage of from two hundred thousand to two hundred and fifty thousand people to these localities from all over the world, yet the average deputy game warden will side with the market man against the angler from England or the East, forgetting that each angler employs a boatman who owns a boat that is valued from one thousand to four thousand dollars. The economic value of sport is a question of national importance.

The leaping tuna has been superseded as the great game fish, and the great swordfish, which attains a weight of four or five hundred pounds, has been given first place by the experts of the Tuna Club. In its play, it is more spectacular than a tarpon, but not so hard a fighter as the tuna. As an illustration, the tarpon will rarely make twenty leaps. In my experience, this is a good exhibit, but Gifford Pinchot took a swordfish that leaped fifty times before he landed it. Last season a large number were taken, and they have already been seen off San Clemente, and a good season is anticipated. Long-finned tuna have been taken all winter.

The season for anglers on the mainland beaches has been fair, and surf fish or roncador fishing from the beaches is getting better every day. Anglers have been enjoying the steelhead trout fishing at the mouth of the Ventura and San Ynez rivers, and some ten- and fifteen-pounders taken. The rainbow trout season opened April 1, and a fine season is anticipated in the San Gabriel, Rincon, Ventura, Santa Ynez, Bear Valley, Santa Ana and others.

SEÑOR X.

Why He Didn't Catch Any.

KEEPER—Do you know this water is preserved, sir?

Angler (of little experience, still awaiting a bite)—I thought there was something the matter with it!—Philadelphia Press.

Botany in a City Park

By W. G. BOWDOIN

THE second of the botanical field meetings, under the direction of the Brooklyn Institute of Arts and Sciences, was held at Prospect Park on Saturday, April 20. Under the leadership of J. J. Levison, M.F., B.A., arboriculturist, Brooklyn and Queens Park Department, New York city, an enthusiastic band of some forty institute members and members of the American Association for the Planting and Preservation of City Trees assembled in the early afternoon at the park entrance to study trees. It was a glorious spring day. Much progress had been made by nature during the week preceding, and the trees and shrubs of Prospect Park were all in the process of rapid development.

The first tree to attract attention was the *Cryptomeria japonica*, otherwise the Japan cedar, of which Prospect Park has fourteen examples. It is similar to the sequoia of California, although less gigantic in size. Near at hand were growing other cedars and arbor-vitæ. These can be very easily distinguished, the one from the other, by remembering that the cedars are characterized by sharp leaves, while the arbor-vitæ leaves are rounded.

A handsome ornamental tree nearby was identified as the Colorado blue spruce, now very popular with tree planters in the Northern States. A hedge of this tree may be grown so close that even a dog cannot get through. Within its range it is used both for fuel and timber. A near neighbor was the yew. Thomas Gray makes a well known reference to the yew in his wonderful Elogy. The wood of the yew is very close and heavy, fine in grain, and with lovely gradations of color. It is extensively used for archery bows, knitting needles and rolling pins. The tree forms no forests, but occurs scattered with other conifers.

An Austrian or black pine stood not far away. It resembles the Norway pine and is longer lived than the Scotch pine. From it may be derived much turpentine. This tree was the subject of scale attack that will shortly call for protective spraying.

Next in the order of observation was a European white birch. This differs from the native species in having a smoother bark. The tree is somewhat smaller than some of the white birches, but is popular for ornamental planting. In Russia the bark of this tree is used in the tanning of leather. Many parts of the tree are also used in pharmacy.

Passing the *Koel reuteria*, or varnish tree, of which Prospect Park has several examples, the party came to a Scotch elm. The leaves of this species are somewhat brighter than are the leaves of the American elm. Then came some of the maples. One of these was the silver maple. Its wood is not so hard as the sugar maple, but is like it in so far as its seeds go. These take winged forms that are sometimes called keys. They are windborne in dispersal. The wood of

this tree is much used for shoe pegs. The tree is adapted for a variety of soils and is often planted in city streets throughout the country. The sugar maples in this group are types of the trees from whence we have our maple sugar. It is made by evaporating the sap, which is procured by tapping the trees in early spring, some weeks before the buds begin to swell. About three or four gallons of sap are usually required to make a pound of sugar. Two or three pounds of sugar per tree is the average yield. When tapping is properly done, it does not seriously injure the health of the tree, although tapping in the parks is of course never done for sugar-making purposes. Wood type is made of maple wood. It is also used for making furniture, drawing instruments, butter moulds, churns, handles of tools and clothes pins.

The hemlock observed next was a tall, graceful tree. It is coniferous. Many of our picture mouldings are made of hemlock woods. The bark of hemlock enters most extensively into the tanning of the best leather. Much of the hemlock wood thus used comes from Wisconsin.

An English hawthorn that grew nearby may have been a descendant of the thorny staff of the good saint, Joseph of Arimathea, who in journeying with the Holy Grail to Glastonbury, thrust it into the ground, and it thereupon blossomed as a sign of Heaven's approval, thence we have the hawthorn tree. The English hawthorn makes the hottest wood fire known. Passing a weeping European beech, an Oriental spruce and a black birch, a European copper beach was encountered. This variety of the beech, if not first "made in Germany," certainly came to England from that country a hundred and fifty years ago, and from England here a little later. It derives its name from the fancied resemblance of its leaves to copper color.

Then came an ailanthus. This tree is common on many city streets. It is often considered very objectionable, although its common name is "The Tree of Heaven." Some one has said if it really is the tree of the Celestial regions, the other place might well be chosen by preference. The male is the objectionable tree, since its obnoxious smell arises from the odor of its pollination. The female tree has no odor.

Skirting the Long Meadow, the party had pointed out to them the red oak, planted there to replace the one said to have been cut down by General Washington, and called the Dungan oak. Then came a white mulberry similar to those growing in Trinity church yard. These trees are sometimes also called Russian mulberry. They were introduced into the western section of this country by the Russian Mennonites. The leaves of this tree are well adapted to feeding the silk worm. Next came some hardy catalpas. These trees are very quick growing. Many railroads are planning them along their rights of

way for use as railroad ties. When a catalpa is ten years old, it can be used for tie making.

Other trees met with were the sycamore, mugho pine, blue beech, larch, cypress, Douglas fir, ironwood, useful medicinally in homeopathic practice, bhotan pine, a Japanese pagoda tree, honey locust with spines, yellow locust without spines, sassafras.

Wild cherry, hackberry, dogwood, almost in flower; magnolias in full and glorious bloom, the Carolina poplar, which is extensively used in newspaper making; the Lombardy poplar, the American elm, the tulip, the Kentucky coffee-tree, one of the rarest forest trees of North America; black walnut, yellow-wood, the mockernut hickory, viburnum, paper birch, one of the few woods that burn well when green, and is used by the Indians for covering their canoes and houses, and for the making of baskets; the Camperdown elm, the African larch, the common horse chestnut, the cucumber tree, and several varieties of willow.

Some of the trees observed on this trip were scarred by woodpeckers, either to obtain insects that might have been lurking under the bark or for the purpose of storing supplies.

Because of a fungus disease, all the chestnut trees that formerly grew in Prospect Park have been eliminated.

Last winter, because of unusual climatic conditions which prevailed, some 300 trees, mostly sycamores and lindens, suffered a contraction of fiber. Tree surgery was necessary to save these trees from the effects of frost. Steel rods were used in this connection, and trees that would have split apart and perished were saved by means of this comparatively new practice. In other cases also where trees are attacked by fungus growths it is often possible to save them by means of tree surgery. The fungus growth is scraped out to the necessary depth, which can be determined by experts, the excavated and scraped portions are cleaned out with corrosive sublimate, filled with cement, and the tree wounds covered with tar. Trees otherwise doomed are thus saved.

The hickory trees are now threatened by one of the *Scolytidæ* beetles which, unless its ravages can be checked, will be a very serious matter.

In the shady portions of the park have been planted many tufts of star of Bethlehem grasses. These grow where the shade is unfavorable to the growth of grass seed and are very attractive in bloom. Many thousands of rhododendrons have been planted, and when they come to bloom will be magnificent in display.

Game in the Congo.

Most of the natives of the Belgian Congo live in the most primitive way, depending upon their skill in hunting for part of their food. Elephants are killed for food and ivory, which has always been an article of exchange among themselves and with Arabs and Europeans. Leopards and other animals contribute furs and hides to native and white hunters. Scientific expeditions find here a wealth of natural history specimens. According to the new game laws, the cost of licenses for white men to hunt have been placed at \$10 for antelope and smaller animals, \$40 for buffalo, hippopotamus, and smaller animals, and \$300 for the privilege of killing two elephants.

Published Weekly by the
FOREST AND STREAM PUBLISHING COMPANY,
127 Franklin Street, New York.

CHARLES OTIS, President,
C. B. REYNOLDS, Secretary,
S. J. GIBSON, Treasurer.

CORRESPONDENCE.

FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but are not responsible for the views of correspondents. Anonymous communications will not be regarded.

SUBSCRIPTIONS.

Terms: \$3.00 a year; \$1.50 for six months. Single copies, 10 cents. Canadian subscriptions, \$4.00 a year; \$2.00 for six months. Foreign subscriptions, \$4.50 a year; \$2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line (\$2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra.

Special rates for back cover in two or more colors.

A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Advertisements should be in our hands by the Monday morning previous to date of issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

THE RETURNING BIRDS.

THE enthusiastic angler, pushing his way through meadow and swamp and woodland, rambles in these early May days through scenes of beauty.

By the calendar, spring is already two months old, yet it has taken all these two months to bring into being those visible signs, which make us realize that mother earth has at last awakened from her long winter sleep.

For the most part the fields are yet sere and brown, but little patches of green here and there foretell the coming of universal verdure. Here and there the white bluets are spread so thick as almost to suggest a little skiff of snow. The purple violets scarcely show yet among the brown herbage, but in the moist woods at the borders of swamps their fragrant white cousins already bloom in abundance. Along the borders of the full brooks the golden caltha shines against a background of dark waters, while in the wet swamps bright green skunk cabbages hide the ground, and the yellow blossoms of the spice bush shine above them.

Though it is not yet time for the full beauty of flowers, it is the season of returning birds, and he who knows birds sees them now in wonderful numbers and variety. Barn swallows have returned and are building their homes beneath the eaves; bluebirds are investigating holes in the old apple trees to choose a nesting place; and as one casts his fly into a dark pool under some old bridge, a phoebe flits out almost in his face, and

a brief search will find her mud house firmly fastened to one of the beams. The hedge rows are alive with sparrows of many sorts, and of these the chewink, striking in his livery of black, white and chestnut, is especially conspicuous.

Most notable of all, beautiful for brilliancy and variety of coloring and for quick fairy-like movements, are the warblers, now just making their appearance, and for two weeks longer to be among the most interesting of our birds. Soon—after the summer residents begin to arrive, thrushes tuneful of voice, orioles, tanagers and grosbeaks gorgeous of plumage—the warblers will pass on still further to the north, and will not again be seen in all their beauty of breeding plumage for another year.

That angler will be wise who includes in his fishing kit a pair of opera glasses. To him—if he has the interest and the patience to watch them—will be revealed a series of moving pictures which will well repay inspection.

BEAVER DOMESTICATION.

A CORRESPONDENT, who owns forest land for a mile and a half on both sides of a good-sized brook suitable for a chain of small ponds, has an idea of stocking this brook with beaver colonics. He asks whether experiments of this character have been made, and by whom, and where and with what success.

Such experiments have been made and made successfully in the Adirondacks, but on lands wholly unoccupied, the beaver being protected from molestation by State law. A good many years ago the late Rutherford Stuyvesant introduced on his large preserve in New Jersey a number of beaver which did well, and spread themselves over a large extent of territory in New Jersey, and even over into Pennsylvania.

If the land intended to be stocked produces abundant suitable food, there is no reason why the beaver should not do well there; but unless the landowner is prepared to fence his land in such fashion as to hold the beaver, he cannot be sure that they will not disappear. If for any reason the beaver did not happen to like conditions on this brook, they might start off and travel considerable distances to find a location which pleased them, or, after they had increased in numbers, the young animals might migrate for the purpose of founding colonies of their own. This we conceive is precisely what was done by the New Jersey beaver from Mr. Stuyvesant's preserve.

In some places much complaint has been made against introduced beavers, because they destroy many young trees.

A territory as large as the one in question should hold many beaver, and the experiment would be one of great interest.

It is conceivable that after a time the animals might be handled to commercial advantage, though up to the present day, so far as we have been able to learn, the commercial breeding of fur remains wholly in the experimental stage.

THE Norristown Fish and Game Association, a strong factor in the field of fish and game protection in Pennsylvania, will urge the State Sportsmen's Association, at its convention in June, to endorse the movement to secure a resident license system and to bring about a change in the State constitution to the end that the pro-

ceeds from the sale of licenses may be devoted exclusively to game and fish propagation and protection.

OUTDOOR STORIES.

OLD readers of FOREST AND STREAM will doubtless be pleased to learn that one of the old-time contributors to these columns will be heard from shortly. This is J. A. L. Waddell, who took a few weeks' time from his busy life to seek rest last winter, and who has written his experiences in "Sport in Florida."

The lure of the North Woods has proved too strong to be resisted by Robert E. Pinkerton, who entertained our readers with "Mulligan" and "Two Ways," and he is returning to the woods, accompanied, as always, by Mrs. Pinkerton. While in town, however, he prepared for us an article on canoe trips in the smaller Northern waters, and this will appear in due time under the title, "The Land of Pierre de la Verendrye."

L. Lodian, who has poked about many curious and interesting corners of the world, arctic and tropic, has prepared a paper on "Some Camping-out Foods" in which outdoor people will find many useful suggestions.

"Trapping in the Santa Ritas," by Minnie R. Stevens, relates to the higher parts of New Mexico.

"From Eastern City to Western Forest" is a series of short articles by S. Edward Paschall that are filled with human interest.

John Ehrens will write of an Adirondack canoe cruise—the sort of little journey that is available to New Yorkers who cannot go far away on their vacations—and one which several of Mr. Ehrens' friends have taken at different times.

Other papers that will appear from time to time have been written for us by J. Lippincott Foster, Walter B. Sheppard, Frank C. Pellett, William Perry Brown, Robert S. Lemmon, Dr. Moody, W. R. Gilbert, George A. Irwin, Horace W. Stokes, H. G. Schaupp, O. W. Smith, Mark Robinson, and many others.

And although our good friends tell us that the two special numbers that we have already issued this year have pleased them, we have still another one to add to the series. It will take the place of one of the regular June issues.

FORESTRY is a subject in which the Chinese evince no interest, as there are no forests in that country. The Great Plain, on which Tientsin is located, never had forests, being entirely of delta formation, and the mountainous regions to the north and west were denuded of their forests centuries ago. The surface of these mountains has been washed away, and to reforest them would be a matter of great difficulty.

Consul-General Samuel S. Knabenshue, of Tientsin, says that a British corporation engaged in mining and shipping has a concession for coal mining in the Kaiping district, about eighty miles northwest of Tientsin. The surface of the region is broken by hills 50 to 200 feet high, which are absolutely bare of trees, and the company has begun the work of afforestation. It already has 1,000,000 young trees growing, chiefly acacia, and is preparing to establish a nursery for them on an extensive scale. There are no government forestry officials, schools of forestry or horticulture, magazines devoted to these subjects, or associations of foresters, nurserymen, seedmen, etc.; in China.

YACHTING

Ticks from the Ship's Clock.

At the last meeting of the Long Island Yacht Racing Association, William Hallock was appointed measurer for the association. Mr. Hallock is measurer for the New York Y. C., Larchmont and American, and his appointment to L. I. Y. R. A. is in line with the plan adopted by the Boston Y. R. A. of having one measurer for all clubs. A note has been sent each of the local clubs asking that Mr. Hallock be made their official measurer.

Work is being rushed on the raised deck cruiser that is being built at the yards of Julius Petersen, Nyack, N. Y., for Mr. H. E. Nichols, of Aquada de Pasajeros, Cuba. This cruiser will be 35 feet long, 9 feet beam and will draw 3 feet of water. It is a splendidly finished boat and has been designed to be most seaworthy. The motive power is furnished by a 20-horsepower Standard motor. The cabin is finished in white enamel with mahogany trim, and there are sleeping accommodations for four. The galley is large and light and the boat also carries a 150-gallon gasoline tank and an 80-gallon water tank.

Nearing completion also at Petersen's is a cruiser for Mr. John Bonney, of New York city. This boat is 31 feet long, 8 feet 8 inches beam, and will draw only 28 to 30 inches. It is equipped with a 12-horsepower Doman motor and has a big roomy cockpit aft. All interior bulkheads, lockers, etc., are of cypress, and lockers have been built under the cockpit seats aft, and the fuel tank is also under the aft deck. Two Koven gasoline tanks of 20 gallons' capacity each will be carried on each side of the cockpit under the seats. A special feature of this boat will be the installation of two steering wheels, one on the cabin bulkhead and one inside of the cockpit combing, the owner evidently having an eye to comfort. Mahogany trim is used throughout the cabin.

The French have great faith in the challenger being built in France for the British International trophy, which is to be raced for in American waters this summer. The boat is being built by Despujols-Tellier for M. Dubonnet, a resident of France. This boat will be driven by two twelve-cylinder Panhard motors, each motor developing 600 horsepower. The engines will drive twin screws.

The Titanic was a British ship, built by a British corporation and owned by a British corporation. She ranked as an auxiliary cruiser in the British navy. Her officers were all British subjects and were in the naval reserve. She flew the British flag, she was subject only to British law, and at the time of the wreck, she was in British territory.

J. Stewart Blackton took a trial spin up the Hudson last Sunday in his new Reliance, and after landing, said he had made better than 40 miles an hour over part of the course.

As they reverse the English system of reading, the Chinese reverse the order of life saving. In case of disaster at sea or in fire, the men are saved first, then the children and last the women, the Chinese theory being that the men are most valuable to the State, that children will grow up to usefulness and that widows are destitute and a care to the community.

The name decided on for the Chicago Y. C. Class P boat, being built for the International races on the Great Lakes, is Michikagou, the Indian name for Chicago. Her owners have already issued a challenge to the Atlantic Y. C. for a race for the Manhasset Bay challenge cup,

the only condition being that the race be sailed before July 1.

Commodore Douglass, Boston Y. C., has appointed Charles W. Cole fleet captain and Samuel Crowell fleet surgeon. The Boston Y. C. cruise will start July 20.

The 65-footer Winsome sold by Senator H. F. Lippitt to E. T. Hall, of New York, will have for a skipper this year Edward Willis, who sailed Kestrel, Mimosa II, and Altair in former years. Chris Christiansen will be skipper of Cornelius Vanderbilt's Aurora.

Philadelphia Y. C.

PREPARATIONS are being made for the opening event of the season at the Philadelphia Y. C., the annual flag day, which will be held on Saturday, May 18. The exercises will begin with "dress ship" at three o'clock in the afternoon, which will be followed by the salute to the commodore, the firing to be in order of seniority. From 3:30 to 5:00 there will be a series of receptions aboard the yachts at anchorage. After a collation, served at the club house, there will be dancing until ten o'clock.

The spring cruise will be held on Chesapeake Bay, beginning on the morning of May 30. The fleet will rendezvous off Ford's Landing, on the Elk River, and runs will be arranged from day to day.

The race committee of the club is: John C. McAvoy, Chairman; Thomas W. Boyd and Otto R. Heiligman; Fleet Captain, John L. Bromley, M.D.

Demarest Lloyd Buys Nancy II.

HENRY A. MORSS, of the Eastern Y. C., has chartered the 68-foot schooner Muriel, owned by Charles Smithers, of New York.

Demarest Lloyd has bought the 68-foot schooner Nancy II, from Frederic Gallatin, of New York.

The fitting out of W. S. Eaton's 65-foot schooner Taormina and Commodore Alfred Douglass' 60-foot schooner Shyessa IV, is progressing rapidly.

This indicates that the local waters will see the most interesting big schooner racing of the year. It means that in point of popular interest the New York Y. C. cruise will be overshadowed by that of the Eastern Y. C., where these schooners will come together for the first time.

A Quarter of a Century Ago.

THE death of "Ned" Brandt, the well-known yachting editor, recently recalls a pleasant trip made by the writer in company with him and the late Roland Coffin, of the New York World, one of the ablest reporters of yacht races of that period, says the Marine Journal. It was on board the guests' boat Cygnus on the occasion of the third annual regatta of the American Y. C., whose headquarters were at Rye, N. Y. The start was made off Larchmont and the finish was to be New London. There were entered in the first class two steam yachts, viz.: the Atalanta, owned by Jay Gould, and Yosemite, owned by W. E. Connor. Atalanta won handsomely, conned by the late Capt. John W. Shackford. The writer was the guest of the late John W. Handren with Commodore Chas. W. Loring, U. S. N., and Herman Winter. "Ned" Brandt and Capt. Coffin were the guests of the club representing the Herald and World, respectively. The latter, although bred a sailor, had mastered stenography and through that was able to report the least detail of a race, making his report especially interesting.

An incident in connection with this race will

never be forgotten by the writer in consequence of what occurred that evening. The club and its guests were invited to a dance at the Pequot House, New London. Not being much of a dancer and courting quiet after a rather boisterous day with congenial friends on board the Cygnus, I happened to remember that ex-President Chester A. Arthur, then a confirmed invalid, was stopping at one of the Pequot cottages. I had known Gen. Arthur when he was collector of this port and I had also met him at that memorable convention in Chicago that nominated him for vice-president and of which I was an alternate delegate from Louisiana. Gen. James A. Garfield, it will be remembered, was the nominee for President.

I believe that ex-President Arthur would be pleased to meet me, so I ventured to call. I was politely ushered into his presence by his sister, Mrs. McElroy, but was not prepared for such a change in his condition, as the last time I met him at the White House he was in splendid form, stalwart in stature, perfect in figure, handsome of face and so genial in manner that one was filled with admiration of the man while in his presence. Alas! this magnificent specimen of a man was a mental and physical wreck. He recognized me at first, but very soon lapsed into a state of absent-mindedness that caused me to realize that Chester A. Arthur as I knew him before did not exist. It was a sad sight and one from which I withdrew as soon as I could consistently. He died that fall of Bright's disease.

The American Y. C. was disbanded soon after Jay Gould, one of its active organizers, began to fail in health and thereby lost his interest in yachting. The annual cruise referred to was more enjoyable than some I have attended, as it was free from snobbishness; guests were considered the equal of the club's officers and members and were treated as such. Groups of exclusive persons often met on such occasions those who cause the atmosphere even to become tainted with class and thereby make a sunshiny day cloudy were noticeably absent, in fact were seldom seen in the American's club house, as its members were composed of prosperous business men who attended to it and had made their mark as such.

Club Elections.

The Casco Y. C. members have elected the following officers: Commodore, H. W. Noyes; Vice-Commodore, C. E. Brainerd; Secretary, P. C. Bibber; Treasurer, W. H. Soule; House Committee—C. T. Dillingham, J. P. Merrill and F. S. Soule; Membership Committee, Stephen Mitchell, George L. Small, E. A. Runnels.

The Kalkaska Y. C., of Torch Lake, Mich., has elected the following officers: Commodore, James Greace; Vice-Commodore, Amos C. Beebe; Rear-Commodore, Josh L. Boyd; Secretary, P. W. Pearsall; Treasurer, E. Goodwin; Fleet Captain, B. McDermant; Fleet Surgeon, E. B. Babcock, M.D.; Judge Advocate, E. C. Smith; Trustees—William E. Chaney, George F. Bow and William Lewis. The annual regatta and club cruise will be held the last week in August.

Motor Boating

Confusion over Motor Boat Rules.

THE failure of the members of the executive council of the American Power Boat Association to respond to Secretary Whitaker's call for a meeting on April 23 to clear up the uncertainties regarding rating rules has left the sport of motor boat racing in a condition that is very unsatisfactory to men who are interested in racing, says the New York Times. "There are more racing boats under construction at present than there has ever been at this season of the year," says one well known racing man, "and the motor builders have all the work they

can attend to in furnishing them with motor machinery. Several boat building concerns are turning out 20-foot craft, guaranteed to travel at a speed of 35 miles an hour, and as some of them have demonstrated with their initial products, that the boats can go the pace, there is no lack of buyers. Now the racing men are inquiring as to rating rules, racing conditions, etc., and there is no definite answer from any source. Everybody is in doubt as to whether the many changes in the rules, adopted at the annual meeting of the American Power Boat Association two months ago, are to be brought into play or not. No copies of these changes have been distributed, although Memorial Day, the day usually regarded as that of the opening of the racing season, is less than five weeks away.

"Another matter that is breeding discontent among racing men is the lack of information as to racing events. Very few clubs have made any announcements regarding races, many of them having delayed because of the confusion to racing rules, while others have not as yet begun to consider the season's program. Racing men point out that in the field of sailing races the date and place of every event to be held by every yacht club on Long Island Sound, Gravesend Bay, and near-by waters has been known for more than a month. They say that motor boat racing is a sport that is as important as yacht racing; that the clubs interested in it should get together and establish a system of arranging dates, and that schedules of fixtures should be available early in the season.

"Of course, any club that is interested in motor boat racing may make its own rules, and hold races under them, but the clubs are averse to individual action of this sort. Therefore, they have been waiting for the laws to be handed down to them. Likewise any club may hold a race on any day that it may select, but many of them are afraid that if they fix upon dates other events of perhaps greater importance, not as yet announced, will fall upon the same date, to the great embarrassment of the club of secondary importance or of the club announcing races of the lesser interest. The dates of the National Carnival, the most important motor boat racing event of New York waters, are still undetermined. Heretofore the carnival races have been held in September, but at present there is under discussion a plan of changing the dates to the early part of July. And a consequence of all this is, that with many more high speed racing boats afloat and under construction than ever before, and with a higher degree of enthusiasm among racing men, the outlook for a successful and interesting racing season is not reassuring.

"The Motor Boat Club of America has shown a disposition heretofore to confine its activities to the National Carnival and the international contest for the Harmsworth cup. The Larchmont Y. C. will stand for about one race for high speed boats and one for cruisers in the course of a season. The Atlantic Y. C. shows little, if any, more interest in the sport. The National Y. C. last year held one long-distance race for cruisers, and held itself ready to give races for speed boats, but made no great effort to round up the racers. The Manhasset Bay Y. C. held one race for fast boats last year. It should be remembered, however, that all these, excepting the first named, are yacht clubs, and interested primarily in sailing. The clubs on the Hudson River are much more interested in cruising and long-distance races than in contests for high speed boats. But for all that, the first club of all those mentioned, that will arrange and widely announce an extensive series of races for 1912, and will arrange racing conditions that are acceptable to boat owners, and will carefully and skillfully manage its contests, will take a long step toward a prestige in motor boat racing similar to that enjoyed by the Larchmont Y. C. in respect to sailing contests."

Great Lakes Power Boat League.

THE third annual regatta of the Great Lakes Power Boat League will be held under the auspices of the Royal Hamilton Y. C., Hamilton, Ont., Aug. 8, 9 and 10.

Aug. 8—2 P. M.: Five mile race for boats with two cylinders or less—three prizes. 3 P. M.: Two-mile race, free for all—three prizes. 4:30 P. M.: Ten-mile handicap race—three prizes. 5:30 P. M.: Aquaplane demonstrations.

Aug. 9—11 A. M.: Forty-foot class, 20 miles—three prizes. 2 P. M.: Twenty-six foot class, 20 miles—three prizes. 3:30 P. M.: Twenty-foot class, 20 miles—three prizes. 5 P. M.: Forty-foot displacement, 20 miles—three prizes.

Aug. 10—10 A. M.: Cruisers, 14 miles, Hamilton to Bronte and return—three prizes. 11 A. M.: Thirty-two foot class, 20 miles—three prizes. 2:30 P. M.: Annual International motor boat handicap race, open to any boat of 15 miles or over, 20 miles—four prizes. 4:30 P. M.: Great Lakes Power Boat League championship, 25 miles.

Course, reliability cruise contest of 1912, Commodore Wm. E. Scripps' trophy, as finally revised by the course committee at Hamilton, Canada, April 13, 1912:

Port.	Arrive.	Leave.
Detroit	July 30, 9 A.M.
Toledo	July 30, 4 P.M. July 31, 4 A.M.
Rocky River	July 31, 6 P.M. Aug. 1, 4 A.M.
Erie	Aug. 1, 4 P.M. Aug. 2, 6 A.M.
Buffalo	Aug. 2, 6 P.M. Aug. 3, 6 A.M.
Dalhousie	Aug. 3, 6 P.M. Aug. 4, 6 A.M.
Charlotte	Aug. 4, 4 P.M. Aug. 5, 8 P.M.
Niagara	Aug. 5, 5 P.M. Aug. 6, 12 P.M.
Toronto	Aug. 6, 5 P.M. Aug. 7, 1 P.M.
Hamilton	Aug. 7, 5 P.M.

Hydro-Aeroplane vs. Motor Boat.

THE speed boat entries for the hydro-aeroplane versus motor boat race to be held on Saturday, May 4, under the auspices of the Aero Club of America, include five of the fastest 20-foot boats in the world. Each of the boats is credited with better than thirty miles per hour. They are:

Vita, Jr., owned by Commodore J. Stuart Blackton, of the Atlantic Y. C. She has just returned from Southern waters, where she won first place in 20 and 26-foot classes at both St. Augustine and Jacksonville regattas.

Baby Reliance, a new 20-foot speed marvel, is also owned by Commodore Blackton.

The Bug, Albert E. Smiths' famous little hydro-plane.

A new 20-foot Elco plane, owned by Commodore Aug. Hecksher.

The Cricket, a new 20-foot Reliance monoplane, owned by J. B. Wadsworth.

There is no limit to either the length or horsepower. The race will be 10 miles, starting at the Colonial Y. C., from there to the Columbia Y. C. and back, twice around the course.

There will be two prizes for this race, to be known as the Motor Boat Club of America trophies; the first prize, sterling silver valued at \$200; the second prize, sterling silver valued at \$100. The first and second contests to finish, whether hydroplanes or motor boats, will be awarded these trophies.

New York M. B. C.

A LONG and interesting season is scheduled for the New York Motor Boat Club by Commodore Selden. The opening day is May 26; closing day Sept. 29. The big card is the Albany race, a distance of 235 miles. This will start June 29, and will be open for cruisers and open boats with measurements based upon the American power boat rules of 1911, except that a cruiser's rating must not exceed ten times the square root of her load waterline. This is the longest motor boat race held in eastern waters. There are no restrictions as to crew except that the owner must be aboard and no professional pilots allowed. The race will start at 10 A. M., June 29, which will bring the boats up in the

worst part of the river at night in order to test the navigating ability of the contestants.

On Decoration Day there will be a speed boat relay race to Albany under the auspices of the Hudson River Yacht Racing Association. This is an interesting feature in motor boating.

The annual handicap race to Tarrytown Light and return, 32 nautical miles, is scheduled for June 16. This is for cruisers and open boats and is open to members of clubs enrolled in the Hudson River Association.

July 4 will be the carnival at Tappan Zee (Hudson River Yachting Association). July 20 and 21, annual cruise of the members of the Hudson River Yachting Association to Poughkeepsie.

Aug. 31, annual regatta of the Hudson River Yachting Association, to be held at New York Motor Boat Club, Hudson River and 147th street, which will continue over Labor Day, when the annual championship race will be run.

Sept. 29, annual handicap race to Rockland Light and return, 40 nautical miles; open to all members of the Hudson River Yachting Association.

At the July 4 races at Tappan Zee and all subsequent races the new rules of the Hudson River Yacht Racing Association will be used instead of the American power boat rules.

Canoeing

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Western Division.—Francis Richard Roberts, 2912 Prairie avenue, Chicago, Ill., by Wm. Zellweger.

NEW MEMBERS ELECTED.

Western Division.—6405, S. F. Durga, De Kalb, Ill.; 6406, Elmer D. Becker, 1439 Winona avenue, Chicago, Ill.; 6407, Harold G. Sperling, Title & Trust Bldg., Chicago, Ill.

MEMBER DECEASED.

Northern Division.—1691, H. Markland Molson, Montreal, Que., Can. Mr. Molson was very active in the early days of the Northern Division; was vice-commodore of that Division, and has always kept up his membership, although not very active in A. C. A. affairs in recent years. He was a member of the Lachine C. C. Mr. Molson is reported as one of those who went down, April 14, 1912, with the ill-fated steamship Titanic.

HE DID NOT KNOW.

A WELL-KNOWN Irish angler-naturalist is in trouble. You see, he is an authority on trout, trout fishing, trout preserving, trout complaints and trout diseases, with other things trouty. The other day, says the Shooting Times, somebody sent him as fine a bull trout as ever he, or anybody else, set eyes on. The trout was duly received, duly admired, duly cooked and duly eaten. It was voted very good, too. But our friend is upset somewhat concerning a letter he has just received from the gentleman who sent him the trout. The letter read as follows:

"Dear Sir—I sent you a few days ago a large brown trout; will you kindly oblige by having same examined and analyzed, and let me know soon as possible what it died from."

- May 27-30.—Salt Lake City, Utah.—Utah State tournament, under the auspices of the Salt Lake G. C. E. J. Miller, Sec'y.
- May 28.—Albia, Ia.—Monroe County F. & G. P. A. T. B. Perry, Jr., Sec'y.
- May 28-29.—Benton (Ill.) G. C. W. H. Foulk, Sec'y.
- May 28-30.—Omaha, Neb.—Nebraska State tournament, under the auspices of the Omaha G. C. F. T. Lovering, Sec'y.
- May 29-30.—Greensboro (Ala.) G. C. A. Lawson, Sec'y.
- May 29-30.—Wilmington, Del.—Delaware State tournament under the auspices of the Du Pont G. C. T. E. Doremus, Sec'y.
- May 30.—Cleveland (O.) G. C. F. H. Wallace, Sec'y.
- May 30.—Buffalo (N. Y.) Audubon Club. B. V. Covert, Pres.
- May 30.—Watertown (Wis.) G. C. B. H. Reick, Sec'y.
- May 30-31.—Sikeston (Mo.) G. C. W. H. Tanner, Sec'y.
- June 1.—Royersford (Pa.) G. C. F. A. Anderson, Sec'y.
- June 1.—Bunker Hill (Ill.) G. C. W. Fahrenkrog, Sec'y.
- June 3-6.—Haines Landing, Me.—Maine State tournament, under the auspices of the Mooselucmagentic G. C. R. L. Spotts, Pres.
- June 4.—Pillow (Pa.) G. C. J. A. Bingaman, Sec'y.
- June 4-6.—Mexico, Mo.—Fifth annual State tournament of the Missouri State Trapshooters' Association, under the auspices of the Audrain Country Gun Club, of Farber, Mo. Russell Glynn, Sec'y.
- June 4-7.—Dayton, O.—Ohio State tournament, under the auspices of the N. C. R. G. C. W. F. MacCandless, Sec'y.
- June 5.—Janesville (Wis.) G. C. L. L. Nickerson, Sec'y.
- June 5-6.—Aurelia (Ia.) G. C. Frank R. Welch, Sec'y.
- June 5-6.—Jacksonville (Ill.) G. C. J. A. Groves, Sec'y.
- June 5-7.—Webster, S. D.—South Dakota State tournament, under the auspices of the Webster G. C. John Sherbino, Sec'y.
- June 5-7.—Warm Springs, Ga.—Merriwether G. C. T. B. Slade, Mgr.
- June 6.—Wilber (Neb.) G. C. H. F. Magnusson, Mgr.
- June 6.—Coffeyville, Kans.—Forest Park G. C. Frank L. Ruthrauff, Sec'y.

- June 6-8.—Newark, N. J.—New Jersey State Sportsmen's Association tournament. Chas. T. Day, Sec'y.
- June 8.—Conde (S. D.) G. C. A. E. McMillan, Sec'y.
- June 8.—Utica, N. Y.—Genesee G. C. E. J. Loughlin, Sec'y.
- June 8.—Beaver Dam, Wis.—Recreation G. C. L. H. Zimmerman, Sec'y.
- June 8-9.—Brainerd, Minn.—Riverside G. C. H. L. Paine, Sec'y.
- June 10.—Ft. Wayne (Ind.) G. C. W. H. Scherer, Sec'y.
- June 10-11.—New Madrid (Mo.) G. C. D. R. Hunter, Sec'y.
- June 11-13.—Syracuse, N. Y.—New York State tournament, under the auspices of the New York State Sportsmen's Association. L. H. Schortemeier, Sec'y-Treas., 201 Pearl street, New York.

- June 11.—Washington, Pa.—Western Pennsylvania Trapshooters' League tournament, under the auspices of the Washington G. C. C. W. Peterson, Sec'y.
- June 11-13.—Sioux City, Ia.—Soo Gun Club. W. F. Duncan, Sec'y.
- June 12.—Brodhead (Wis.) G. C. J. B. Pierce, Sec'y.
- June 12-13.—Pine Bluff (Ark.) G. C. E. J. Voss, Sec'y.
- June 12-14.—Hickman (Ky.) G. C. S. L. Dodds, Pres.
- June 13-14.—Indianapolis (Ind.) G. C. J. C. Dixon, Sec'y.
- June 15.—Allentown, Pa.—Lehigh Valley S. A. Allen Heil, Sec'y.
- June 17-19.—Salida, Colo.—Colorado, New Mexico and Wyoming State tournament, under the auspices of the Salida G. C. W. G. Myers, Sec'y.
- June 18-19.—Barre, Vt.—Vermont State tournament, under the auspices of Barre G. C. J. M. Barclay, Pres.
- June 18-19.—Boise, Idaho.—Idaho State tournament, under the auspices of the Boise G. C. W. C. Tatro, Pres.
- June 18-21.—Springfield, Ill.—The Interstate Association's thirteenth Grand American Handicap tournament, on the grounds of the Illinois Gun Club; \$1,500 added money. The winner of first place in the G. A. H. guaranteed \$1,000 in cash and a trophy. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.
- June 19-20.—Idabel (Okla.) G. C. F. C. Butler, Sec'y.

KANSAS, MISSISSIPPI AND NEBRASKA GO

Kansas State Championship is won by Harry Whitney, scoring 47 ex 50 against a field of 60 shooters, with a *Remington-UMC* Pump Gun and Nitro Club Steel Lined Shells.

Mississippi State Championship is won by V. W. Johnson, scoring 95 ex 100 with a *Remington-UMC* Autoloading Shotgun and Arrow Steel Lined Shells.

E. R. Alexander, shooting Arrow Steel Lined Shells, wins the High General Amateur Average.

At the Omaha Gun Club Shoot. B. A. Dixon wins the First Amateur Average, scoring 558 ex 600, shooting Arrow Steel Lined Shells.

Tom A. Marshall and Ed. O'Brien tie for First Professional Average at 577 ex 600, shooting Arrow Steel Lined Shells.

L. H. Schortemeier, Sec'y-Treas., writes: "The New York State Sportsmen's Association's fifty-fourth annual tournament takes place at Syracuse, June 10-13. Those desiring a program will kindly send to our president, Mr. H. W. Smith, 701-715 E. Washington street, Syracuse, N. Y."

W. G. BEECROFF.

Mississippi State Tournament.

LAUREL, Miss., April 25.—Excellent sport was enjoyed for three days here under the auspices of the Laurel Gun Club. A new State champion was made through very good shooting, V. W. Johnson being the man, and 95 out of 100 being the score. Mr. Johnson also headed the team that won the State team championship; he broke 47 out of 50. Dr. N. B. Smith with 41 out of 50, and W. M. Heald with 43 out of 50, were two other team members. E. R. Alexander made the remarkable score of 109 out of 750, and made high amateur average for entire tournament. The scores:

The program consisted of 150 targets each day.

Nebraska State Tournament.

OMAHA, April 25.—Seventy-two ardent gunners were rounded up by the Omaha Gun Club for the State shoot, which ended to-day, after three interesting days. High amateur was B. A. Dixon, with 558; second, W. A. Brown, 555; third, Carey Freel, 545. Mayor Tom Marshall and Ed. O'Brien tied for high professional gun, 577 out of 600. Chas Spencer came next with 574. The scores:

Roanoke Gun Club.

ROANOKE, Va., April 27.—A high wind and prevailing atmospheric conditions made shooting somewhat difficult on the grounds of the Roanoke Gun Club to-day. Twenty-nine enthusiastic shooters were on the firing line. The weekly medals were won by the following members:

Scratch—First, A. M. Shepherd; second, tie between Jamison and Bloxton.
 Class A—First, W. S. Jones; second, J. B. Cumbie.
 Class B—First, Bob Hunt; second, A. H. H. Boyd.
 Class C—First, R. E. Lightner; second, G. L. Kling.

The scores, at 50 targets:

Kansas State Tournament.

WICHITA, Kan., April 19.—Twenty-third annual tournament of Kansas State Sportsmen's Association ran three successive and successful days here under auspices Interurban Gun Club. Arnold took amateur honors with 412, while high professional honors went to C. G. Spencer with 439 out of 450. Harry E. Whitney, of Anthony, became State champion by virtue of breaking 47 out of 50.

Glenwood Country Club.

GLEN HEAD, L. I.—Who ever had charge of scores at the Glenwood Country Club at the invitation shoot on April 20, slept past his station and forgot to send in the scores in time for last issue. Fifty shooters, prominent on the south side of Long Island Sound, took part. Bergen Beach Gun Club furnished the high gun, R. Morgan getting 92 from scratch, which gave him scratch trophy and 96 with his handicap, which would have entitled him to high gun in the event, had he been allowed to take both trophies, which he was not permitted by the rules to do. C. W. Berner and C. R. James tied at 94 for the handicap trophy. The morning 100-target preliminary went to J. H. Hendrickson, of Bergen Beach, with 88.

Morning shoot, 100 targets, scratch—J. H. Hendrickson 88, J. F. James 87, H. L. Hoyt 86, W. Simonson 85, C. R. James 84, W. S. Silkworth 83, H. M. Brigham 83, C. A. Lockwood 78, R. J. Nash 76, F. B. Stephenson 74, F. S. Hyatt 70, H. H. Shannon 70, C. W. Berner 70, H. O. Allyn 70, P. R. Chapman 67, H. K. Morrell 64, J. M. Kissam 55, and W. E. Cannady 46.

Morning shoot, 100 targets, scratch, professional's—H. S. Welles 89, and C. Von Lengerke 82.

Afternoon shoot, 100 targets, handicap—R. Morgan (4) 96, C. W. Berner (12) 94, C. R. James (8) 91, Dr. Griffith (4) 91, H. H. Shannon (6) 90, H. O. Allyn (6) 87, J. H. Hendrickson (0) 87, J. Isaacs (5) 87, A. Ivins (0) 87, J. F. James (4) 86, F. B. Stephenson (0) 86, F. S. Hyatt (12) 85, P. Von Boeckman (0) 85, W. Simonson (0) 84, J. H. Vanderveer (0) 84, R. I. Nash (4) 83, W. S. Silkworth (0) 82, J. Martin (0) 82, C. A. Lockwood (8) 81, H. L. Hoyt, Jr., (0) 80, P. Moeller (16) 80, P. R. Chapman (10) 80, H. M. Brigham (0) 79, S. Van Allen (0) 79, A. V. Suydam (6) 79, H. K. Morrell (10) 78, J. K. Voorhees (6) 74, W. Hyland (10) 73, J. F. Simonson (2) 72, J. M. Kissam (8) 72, C. Gould (16) 72, C. Voegel (10) 65, E. E. Smith (5) 64, C. Berner (16) 62, L. C. Hopkins (10) 59, H. C. Berner (15) 58, J. Fairchild (10) 57, G. F. Parson (10) 55, Dr. Cleghorn (10) 55, A. C. Tracy (12) 56, and J. N. Bryant (10) 54.

Afternoon shoot, professionals, 100 targets, scratch—H. Welles 86, H. Stevens 86, P. Ponton 81, C. Von Lengerke 79, R. Schneider 76, and Captain Doe 68. Shoot-off at 25 targets for prize: H. Stevens 24, and H. Welles 23.

WINCHESTER

Loaded Shotgun Shells "LEADER"

You can't buy a safer, faster, harder, a more even shooting or a better keeping load than Winchester "Leader" smokeless powder shotgun shells. For field, fowl or trap shooting, they are in a class by themselves, and give entire satisfaction in any make of shotgun. The results they give are due to their patented construction and the careful and exact manner in which they are loaded. The patented Corrugated Head used on Winchester shells is an invaluable feature. It absorbs the shock of the powder explosion and takes the strain from the paper tube instead of localizing it, as the old English method of metal lining does. That's why "Leader" shells are stronger and less apt to cut off at the mouth of the cup than shells made according to English ideas of long ago.

The Red Shell With the Patented Corrugated Head

New York A. C. Championships.

PELHAM MANOR, April 27.—The usual surprises in the trap-shooting "championships" cropped up again to-day, when T. F. McMahon became champion of the New York Athletic Club in the rainy day shoot at Travers Island.

The amateur champion, R. L. Spotts, shot into a three-man tie for third with only 179 out of 200. Last year's club champion, B. M. Higginson, broke but 178 for sixth place. In the shoot-off for third between Spotts, Hall and Scott, Hall won with 23 out of 25. Dr. Culver took second with 181. Mr. McMahon's shooting was very creditable under existing weather conditions. His final score was 186, of which 96 were run in second string of 100.

This was the final shoot for the season at Travers Island, and it is safe to say that more consistently good scores have not been made anywhere else during the year. The scores follow:

T. F. McMahon 186, George Lyon 182, Dr. Culver 181, Frank Hall 179, R. L. Spotts 179, Stuart Scott 179, B. M. Higginson 178, A. E. Ranney, 175, F. A. Schaufler 174, W. J. Elias 174, O. C. Grinnell 168, W. B. Ogden 159, T. Lenane, Jr., 156, T. Beale 154, J. Meyer 153, R. R. Debacher 149, C. W. Billings 147, A. B. Walker 145, J. M. Jones 145, and W. J. Simpson 141.

Independent Gun Club.

EASTON, Pa., April 20.—The Independent Gun and Rifle Club held its opening shoot today with a fair attendance, there being thirteen shooters, among them W. H. Maurer, of Jersey City, a member of this club, and O. S. Skeds, formerly of this place, but now of Wilkes-Barre, Pa. Mr. Skeds, just to show his fellow club members that he had not gone back in his shooting, led the field with 133 out of 150. After the blue-rock shoot, a number of members shot at targets with the .22 caliber rifle, which sport is becoming quite popular among some of the members. The rifle shooting was done over the club's new field range at 25yds. with open field sights. The club is making arrangements to hold a series of merchandise shoots for the summer, and with the new blood, the club bids fair to have one of its best seasons. Below you will find the scores of both the blue rock and rifle shoot:

Clay birds:

W. R. IVEY, Sec'y.

Springfield Shooting Association.

SPRINGFIELD, Mass., April 19.—The spring tournament of the Springfield, Mass., Shooting Club was held to-day, starting at 10 o'clock in the morning and lasting all day. The program of twelve events called for 200 blue-rock targets, with \$16 entrance in the sweeps and \$25 added to the purses by the club. Owing to the small number of shooters present, the sweeps were cut out, all shooting for targets only. During the day nineteen shooters took part in the various events, eleven of whom shot the entire program. The disagreeable weather conditions not only kept many shooters away, but played havoc with the targets, causing the scores to run rather lower than usual. The scores:

Shot at.	Brk.	Shot at.	Brk.

Hillside Rod and Gun Club.

FLUSHING, N. Y., April 22.—The Hillside Rod and Gun Club is holding a series of shoots for one of the handsome watch fob trophies presented by the Du Pont

Powder Co. Each member of the club is to shoot at 50 targets on four of the club's shooting days, making a total of 200 targets per man, the total score with handicaps under the added bird system to determine the winner.

Three of the shoots have been completed with the following result:

Shoots:	Hdcp.	1	2	3	Total.
E L Bell	0	43	40	..	83
F R Long	0	43	41	42	126
J S Campbell	23	33	38	38	132
Chas Rieger	11	38	41	41	131
H L Funke	18	38	29	37	122
J W Alker	4	36	40
P A Curtis	10	39	35	37	121
H Ashmore	24	25	28	..	77
T H Foster	0	43	44	45	132

In addition to this competition there have been many team shoots and miss-and-out shoots between the members, with a number of friends and visitors participating, the most prominent and enthusiastic of whom is Mr. Spinola, who likes to shoot so long as there is anyone to shoot with him.

ERNEST BELL, Sec'y.

Highland Gun Club.

PHILADELPHIA, April 27.—The first day of the year's program of the Highland Gun Club was held at Edge Hill to-day. Beginning with the May shoot, the members will start off on even terms again for six months. The winners of the period prize were: Crothers in Class A, with a total of 71 breaks, Jesse Griffith being second with 65. In Class B, J. Franklin Meehan was high with 68. Milton Wentz beat out Perry in Class C, having 61, just 2 more than the Highland captain. The Class D prize went to J. Franklin Meehan, Jr. In the doubles Crothers carried off the honors, breaking 23 out of a total of 30. J. Franklin Meehan got 20 in Class B. The scores in Class C were: Joel Davis 17, Flanagan 16, M. Wentz 16, Laurent 15, Perry 14, and Harkins 13. Thos. Meehan broke 10 in Class D.

The shoot under expert rules was won for the third time by Crothers with 11 out of his 15 targets. In Class B, J. Franklin Meehan and Walter Dalton tied with 8 each, and in the shoot-off Meehan won by one target. Laurent was high scorer in Class C, with 9. The two Meehan boys had the Class D prize to themselves. Thomas beating his brother, J. F., Jr., 8 to 5. The spoon winners were: Jesse Griffith, in Class A, with 10 straight; J. Franklin Meehan, in Class B, also with a straight; Flanagan, Wentz and Laurent tied for Class C, but in the shoot-off the last named was the successful one; J. Franklin Meehan, Jr., broke 8 in Class D and captured the dipper.

The \$5,000 Denver Handicap.

PITTSBURGH, Pa.—*Editor Forest and Stream:* With the opening of the trapshooting season of 1912, I want to say a few words in behalf of one of the largest tournaments scheduled for this year. I refer to the \$5,000 Denver handicap, Sept. 10, 11, 12 and 13. This tournament is to be given under the direct management of Mr. A. E. McKenzie, who has a reputation second to no one as a promoter and manager of large shooting tournaments. The past records show that he is eminently fitted to provide the necessary equipment and to manage a tournament of the magnitude this one promises to be. As president of the Denver Trap Club, he promoted successfully many tournaments, two of which were among the largest added money events ever held, \$3,000 being added at each tournament. In promoting the \$5,000 tournament this year, Mr. McKenzie is only fulfilling a promise made to the trapshooters of America at the close of the first Western handicap tournament given by the Interstate Association at Denver in 1906. I have a personal letter from Mr. McKenzie in which he says the only provision he makes that differs from regular tournaments is that he requires an entry of 300 shooters thirty days preceding the opening of the tournament. To any one in touch with the situation this requirement seems to be a necessity, in view of the fact that all the equipment will have to be installed and the necessary arrangements made and completed for conducting the tournament on a large scale and in an up-to-date manner. Mr. McKenzie also informs me that should there be 400 entries, or near this number, there will be \$1,000 more added to the purse.

It is unnecessary to say that the Denver tournament should be one of the big successes of the year, as \$5,000 added money is an unprecedented event in the annals of trapshooting, and one that is appreciated alike by the sentimentalist and the materialist. Nature has been bountiful to Colorado, and in addition to the attraction of the Denver handicap, the greatest natural scenery in the world can be seen at trifling additional expense—scenery that will repay a journey from any section of the United States or Canada. At the season of the year fixed for the tournament nature is at her best and eloquent, not only to the scientific observer, but also to the non-professional who feels an expansion of the brain that makes his hat feel small. A trip to Denver will pay educationally, though no other advantage be added.

ELMER E. SHANER.

Analostan Gun Club.

WASHINGTON, D. C., April 23.—The members of the Analostan Gun Club made excellent scores at their shoot on April 20. The attendance was small, owing to a counter attraction at the ball park, where the Senators were battling with the White Elephants. The scores:

Shot at.	Brk.	Shot at.	Brk.
Parsons	140	Kirk	100
Barber	125	Luttrell	100
Huseman	125	Stine	100
Stuebener	100	Perkins	80
Monroe	100	Bohnke	50
Ford	100	Moffett	50
Peck	100	Emmons	50

The following scores were made at 24 doubles: Parsons 7, Barber 12, Huseman 14, Steubener 16, Monroe 12, Ford 18, Luttrell 14. Kirk shot at 22 doubles and broke 14.

April 28.—Analostan Gun Club members had a good afternoon for shooting on the 27th. At the commencement of the program rain threatened and the light was bad. Almost all of the boys had trouble during the first fifty, except Huseman, who scored 46, but on the last fifty good scores were rolled up, notably that of Mr. Wagner, who scored 47. Huseman and Wagner were high for the day with 92 per cent. of their targets accounted for. S. A. Luttrell took first on the 12 pairs, scoring 19 of them. The scores:

Shot at.	Brk.	12 Dbls.	Brk.

William Trowbridge	16	21	21

SMOKELESS.

ON THE HILLSIDE GUN CLUB GROUNDS.

N. C. R. Gun Club.

DAYTON, Ohio, April 27.—That the N. C. R. tournaments are popular was evidenced by the fact that thirty-seven shooters entered on April 27, and all shot the entire program. In addition there were a dozen or more who took part in practice events before and after the regular program. It's a pleasure to shoot there. The grounds, 40 acres in extent, are level as a floor, with perfect sky background. The traps, Ideal in one pit and Experts in the other, are in perfect order, and last, but by no means least, the club officers and members are glad to see you and are not backward in letting you know that you are welcome. The day was perfect, not a cloud in the sky, and the air just crisp enough to make a seat in the sun seem agreeable. The only drawback, possibly, was a strong wind blowing in the shooters' faces, which made the targets soar at times, and caused some of the shooters to miscalculate, to the detriment of their scores. The program consisted of two events at 20 and four at 15 targets each.

Taylor and German had a close fight for high honors. At the end of the 4th event German was two targets to the good, with a score of 64 (the first 59 straight) to 62. In the 5th event Taylor gained one target and in the last event two more, finishing one target ahead with 97 to 96. R. O. Heikes was second with 94, and was tied by F. C. Koch, of Phillipsburg, Ohio, who was high amateur. D. W. Gilbert, of Union, Ohio, tied with G. W. Dameron for third high amateur on 90.

The officers of the club are: H. C. Mombbeck, President; W. F. Bippus, Vice-President; W. F. MacCandless, Secretary-Treasurer, and S. W. Everett, Captain. All were on hand to-day and did their part to make the time pass pleasantly for their guests.

Table listing scores for N. C. R. Gun Club members. Includes names like R O Heikes, J L S German, L J Squier, etc., and their corresponding scores.

Buffalo Audubon Club.

THE second leg of the match with the Syracuse gunners was shot off at the Audubon grounds on Friday afternoon, April 26, and resulted as disastrously to the Audubon boys as the first leg, which was shot off at Syracuse on April 13. Now that both legs have been shot off, it will be clearly seen that the Audubons have not a leg to stand on. It is hoped, however, that they will recover and get after the Onondagas at a future date, and come out victorious. At the shoot held in Syracuse, the Onondagas won by 104 targets, twenty men on each team, and at Buffalo they won by 34 targets, twenty-six men shooting on each side.

The day was very windy, with a cloudy sky, which made high scores out of the question.

The visitors arrived at 11 A. M., and were entertained at lunch, after which shooting began and continued without interruption till dark. Nearly 6000 targets were thrown.

On Saturday, May 4, the next regular shoot of the Audubon Club will be held, and a large attendance is looked for. Scores:

Table comparing scores between Syracuse and Buffalo. Lists names and scores for both teams.

Stamford—Greenwich.

STAMFORD, Conn., April 27.—Stamford outshot Greenwich Country Club in a return team match to-day by a score of 499 to 438. J.M. Carr, of Stamford, was high gun with 91 out of 100. Scores:

Table listing scores for Stamford and Greenwich members. Includes names like J M Carr, W E Elder, M R Pitt, etc.

 New Orleans: 321 Magazine Street. LEE OMOHUNDRO, Manager

Hyde Park Gun Club.

ONLY a few were at the shoot on April 27, notwithstanding that the day was a fine one. There was considerable wind blowing, which made the targets rather uncertain quantities, so far as getting a line on their flight was concerned, and scores were not quite up to the usual mark. Porter succeeded in smashing 73 out of 100, but under normal conditions could have done some better. West came second with 63, a low score for him. Hattersley was out for the first time in months, and did some very good work, handicapped as he was by the wind and the use of a 20-gauge gun. Reif was a welcome visitor and shot in his old-time form in the second event. We hope he can be induced to let his motor boat stay at the float once in a while this summer, and get into the game again. Besuden has not been out for a year or more, and showed his lack of practice. Frohlinger, as usual, did the scorer's and cashier's work, and could only get a chance in a couple of events, not doing so well as he is able.

The next shoot will be held on May 4, and every shooter will be welcome. A pleasanter place to spend a summer afternoon cannot be found around Cincinnati, even for those who do not care to shoot. Scores:

Shot at. Broke	Shot at. Broke
Porter 100 73	Reif 50 41
West 100 63	Frohlinger 50 33
Hattersley 75 58	Besuden 50 30

Northern Kentucky Gun Club.

THE first of the club's monthly tournaments was held on April 28, and under very bad weather conditions. The sky was covered with heavy clouds early in the morning, when out-of-town shooters would have to start, and just before noon a down-pour of rain stopped the shooting for some time. There were several showers during the afternoon, which made it very disagreeable. In spite of this, however, there were twenty-five shooters present to take part in the sport, and fifteen shot the entire program. The shoot was given under the N. C. R. system, the program being a duplicate of the one given by that club on April 27. Whether it will be as popular here as in Dayton, is a question that will have to be answered later. It is up to the shooters to signify their approval of the club's policy by turning out at these shoots. The program was two events at 20 and four at 15 targets each, with entrance of \$5; of this, \$1 was taken out for targets and 40 cents for high average money, divided 40, 30, 20 and 10 per cent; the balance, \$3.60, was divided class shooting, 40, 30, 20 and 10 per cent, in each event.

Among the visitors were C. A. Young, Springfield, O.; T. J. Donald, Felicity, O.; G. G. Williamson, Muncie, Ind.; G. H. Hassom, Boston, Mass.; N. Smith, Morrow, O.; Francis and Maddox, Harrison, O.; and Link, Hamilton, O. But for the weather, there would have been a squad down from Dayton. Sam Lever and Dull, of Goshen, O., were present and shot in the practice events. The best shooting of the day was that of C. A. Young, who broke 171 out of 175 in the practice and regular program, and scored 98 in the latter. It was as nice an exhibition of shooting as has been seen on

these grounds in many a day. Williamson was in second place, and won first high average money on a score of 93; then came Hammerschmidt with 92, closely followed by Hassom, a professional, with 91. Dameron and Link tied for third high amateur on 89, neither of them putting up the score that they are capable of. Donald and Maddox got fourth money on 88 each.

The special event, with fourteen entries, resulted in a tie on 25 between Hammerschmidt and Link, the former from 20 and the latter from 19yds. As it was late when the event was finished, and as the trophy consisted of three pieces of silver, they tossed a coin for first choice, and Hammerschmidt won. The crowd was disappointed at not seeing a shoot-off, but the high men were satisfied, and that was all that was needed. Dameron and Williamson finished second in this event on 23 each.

The next of the series will be held on May 26. The next club shoot will be on May 4. The last of the series of matches between Hammerschmidt and Dameron was pulled off to-day, and was won by the former, the scores being: Hammerschmidt 92, Dameron 89. This makes two out of three matches won by Hammerschmidt, but Dameron leads him several targets on the 200. In the special event, the 90 per cent. men shot from 20yds.; 85 to 90 per cent., 19yds.; 80 to 85 per cent., 18yds.; 75 to 80 per cent., 17yds.; all below 75 per cent., from 16yds. Scores:

Marine and Field Club.

BATH BEACH, L. I., April 27.—The Marine and Field Club ended their shooting season at Bath Beach, L. I., to-day, with the largest field of the season. The big event was the final shoot on the April cup, which finally was won by E. H. Lott with a total of 263 out of a possible 300 targets.

A special shoot at 100 targets included several members of the Crescent Athletic Club. C. B. Sayre, of the Marine and Field Club, took the prize with 99. J. F. James, of the Crescent Athletic Club, won the 25-target trophy shoot with a straight score. The scores:

April cup, 300 targets, handicap:	E H Lott..... 0 263	J H Emanuel, Jr. 24 231
	T M Knox..... 48 253	P R Towne..... 12 215
	C M Camp..... 24 241	C B Sayre..... 27 212
	C B Ludwig..... 44 248	

Lott cup, 100 targets, handicap:	C D Sayre 4 99	P R Towne..... 8 83

Ossining Gun Club.

OSSINING, N. Y., April 27.—Rain spoiled what otherwise might have been a fair-sized practice shoot here to-day. Six hardy wielders of the scatter gun showed up, and good scores were made. Event 1 was at 25 targets, for practice; Nos. 2 and 3 made up a 50-target prize event. Bedell won out with 47, with Blandford and Wood close behind. J. H. Moran was alone in Class C, and got the prize without a struggle. Scores:

Events:	1 2 3	Events:	1 2 3
Targets:	25 25 25	Targets:	25 25 25
A Bedell 22 25 22	A P R Wood..... 22 23 22		
C G Blandford... 22 24 22	J H Moran..... 10 10 12		

A miss-and-out match was shot between L. H. Lewis and G. Romaine. It was called off on account of darkness, each having negotiated a target. C. G. B.

Bryden Gun Club.

CATASQUA, Pa., April 27.—The attendance at the semi-monthly shoot to-day was slim. Johnny Englert was high gun with 66 out of 75. Other scores were at 25 targets:
 Event No. 1—Dermer 16, Knoll 12, Englert 21, Haines 9, Bush 17, N. Richards 14, S. Richards 7.
 Event No. 2—Dermer 18, Knoll 13, Englert 23.
 Event No. 3—Dermer 18, Knoll 2, Englert 23, Bush 17.

Boston A. A.

Boston, Mass., April 27.—The weather conditions were unfavorable to-day, it being cloudy and windy. H. H. Knights won the take-home trophy after a shoot-off with C. P. Blinn. R. A. Faye won the leg on the Barbey trophy. H. H. Knights won leg on Hunter trophy:

C. B. TUCKER, Capt.

Jersey City Gun Club.

JERSEY CITY, N. J., April 27.—We had a pretty fair turnout to-day, considering the brand of weather that was served up to us, as it rained hard nearly all the afternoon. Harry Wells, a trade representative, and A. Zollinger, also a trade representative, paid us a visit to-day, and the boys were all pleased to see them. Zolly had some funny stories to tell us of his travels through the scrub trees of Jersey while hustling for business. Wells was busy hanging up the best score for the day, with an average of 92 per cent., and Dave Engle was right after him with 91 per cent. Geo. Piercy took third prize with 88 per cent. The scores follow:

Shot at. Broke		Shot at. Broke			
Wells.....	175	162	Matthies.....	150	107
Martin.....	150	120	Harvey.....	125	94
Metz.....	100	66	Zollinger...	100	62
Piercy.....	175	155	Dixon.....	50	38
Shannon....	200	164	Jones.....	100	70
Engle.....	135	124	Brady.....	100	55
Williams....	125	91	Simp.....	75	40
Danfelfser, Jr.	100	43			

SECRETARY.

Indianapolis Gun Club.

INDIANAPOLIS, Ind.—The following scores were made over the traps of the Indianapolis Gun Club April 22. The wind blew a gale and rain fell betimes:

*Henderson...	200	186	Parry.....	200	164
Straughn...	200	184	Moller.....	200	154
*Stannard...	200	183	*Barr.....	200	152
Wagner.....	200	169	Stoner.....	140	113
*Taylor.....	200	177	Alig.....	105	68
Edmonson...	200	168	Martin.....	70	32

*Professional:
April 27.—The practice squad was favored with ideal weather to-day, but scores were again low, as follows:

Shot at. Broke		Shot at. Broke			
Edmonson...	160	143	Toland.....	100	69
Moller.....	160	137	Wilson.....	100	68
Blessing...	160	109	Golden.....	100	59
*Hymer.....	140	114	Neighbors...	100	57
Britton.....	120	98	Lewis.....	80	67
Crawford...	120	100	Hofer.....	80	63
Alig.....	100	89	Klepfer.....	40	22

R. R.

Robin Hood Gun Club.

STATEN ISLAND, N. Y., April 27.—The gunners were on the job and got wet to the skin, but that made no difference in their scores at the Robin Hood Gun Club shoot, held to-day, for the 1912 cup and other prizes.

Event 1, 100 targets, 1912 cup, handicap:					
B Beyersdoff...	8	89	F Gerbolini...	8	84
C Rowley.....	0	79	G Hutchings...	0	82
C Camizzio...	12	72			
Event 2, 25 birds, Du Pont trophy, handicap:					
B Beyersdoff...	2	21	F Gerbolini...	2	21
C Rowley.....	0	19	G Hutchings...	0	22
C Camizzio...	3	13			

Event 3, 12 pairs doubles for gun case: Rowley and Gerbolini tied on 13 and shot off miss-and-out. Gerbolini missed his seventh bird and lost the case. W. Bush scored 11, G. Hutchings 8 and C. Camazzio 4.

Event 4, 25 birds, team race, \$5 in gold to the winning team. Scores: Hutchings and Bush 23, Conelley and Rowley 20, Gerbolini and Camizzio 20.

G. CONELLEY, Sec'y.

Some Good Reasons Why You Should Shoot

New York Salesrooms: 32 Warren St.

Meriden, Conn.

The Small Game Rifle That's Big Enough For Deer

New Model 27 .25—20 or .32—20 calibres Price \$15

Marlin REPEATER

RABBIT, woodchuck, hawk, fox, wolf and deer fall ready prey to its high velocity smokeless or black and low pressure smokeless loads. For target work it is unexcelled.

Built with the famous Trombone Action and Smokeless Steel Barrel, unobtainable in any other rifle of its calibre. Its solid top and side-ejection protect shooter's face and eyes, and prevent dirt from entering action.

The desirable take-down construction and Ivory Bead sight cost extra in other .25—20 and .32—20 rifles. You pay nothing additional for these in the Marlin.

See this hard-hitting, accurate shooting, perfectly-balanced rifle at your dealer's today.

Send 3c in postage for new catalog showing the complete line of Marlin repeaters, rifles and shotguns.

The Marlin Firearms Co. Willow Street, New Haven, Conn.

TRAINING vs. BREAKING

Practical Dog Training; or, Training vs. Breaking. By S. T. Hammond. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, \$1.00.

FOREST AND STREAM PUBLISHING COMPANY

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He knows it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is Lefever Taper Boring.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS Co., 23 Maltbie St., Syracuse, N. Y.

Durston Special 20 Gauge. Price \$28.00

**Fixtures.****FIELD TRIALS.**

Oct. 28.—Southern Ohio Field Trial Association's second annual field trials. G. R. Harris, Sec'y, 15 West Sixth St., Cincinnati, O.

Kensington Kennel Club.

BURSO BARONET, owned by William Bechtold, was pronounced the best dog in the show at the monthly exhibition of the Kensington Kennel Club, Philadelphia., held April 27 at Arbeiter Sängerbund Hall. Baronet had a big field to compete with, and it was only after considerable eyeing over of the various breeds that the judge finally decided on Burso Baronet. Burso Baronet has won several prizes during the present season, but not until Saturday last did he show off to such an advantage, he being one of the finest looking bull dogs that have been exhibited at the Kensington Club shows for many months.

The entry list was the largest thus far this season. It was pronounced one of the best shows ever held by the Kensington Club, class being there in abundance, and the judges gave general satisfaction. One of the nicest looking Airedales was Rustic Orang. Harry Rawes, the owner, had him groomed to a nicety and had not the least difficulty in leading the field, which was exceptionally large.

Little Sweetheart, a Maltese terrier, won two cups and several ribbons, cleaning up every time she showed in the ring. In the bull dog class, Darby Lassie captured a cup, while Britton's Ruby got a red ribbon, although it would have fared much better if it had been in better condition.

Associated Specialty Show.

THE final returns on the entry for the May 4 show are as follows:

Bull Dogs—Entry, 323; dogs, 144. Boston Terriers—Entry, 201; dogs, 122. Russian Wolf-hounds—Entry, 135; dogs, 39. Collies—Entry, 134; dogs, 60. Dachshunds—Entry, 120; dogs, 59. Airedales—Entry, 55; dogs, 30. Total entry 968; total dogs, 454.

ABRAM D. GILLETTE, Chairman.

A Yard of Griffons.

THE picture over this caption represents the get of the first wire-haired pointing griffons ever brought to this country. The sire and dams were imported from France by Louis A. Thebaud, of Morristown, N. J.

Dog Team in Kansas.

MUSHING his dogs along a frozen trail, Ben Starr, the veteran trapper of Pawnee Creek dashed into Larned with his dog team and sledge on his annual trip to market his furs and pelts, says a Kansas paper.

That reads like it might have come out of Alaska, but it happened right here in Kansas. The great snow of last week made conditions in central and western Kansas similar to those of Alaska, and Larned was suddenly transformed into a Hudson Bay trading post, which Starr and his dogs and sled gave a proper setting.

Two hundred and fifty furs were in the sled load. Hides of skunk, mink, muskrat and badger, with a few civet cats, and coons, made up the cargo.

It is not uncommon for Ben Starr to drive to Larned with loads of pelts he has trapped, but more often he takes them to his nearest railway station, which is Burdette. Not a train has moved on the Jetmore branch of the Atchison, Topeka & Santa Fe since a week ago Sunday and snow drifts from four to twenty feet deep in the highways block all vehicle traffic in Western Pawnee and Hodgeman counties.

With the true spirit of a frontiersman, Ben Starr, under contract to deliver his pelts by March 1, loaded them on a home-made sledge and harnessed his big coon dogs and started on the trip, leaving his home near Burdette at 7:30 o'clock in the morning. Starr made the 24-mile drive to Larned in just nine hours, arriving with his strange team and cargo at 4:30 o'clock in the afternoon.

Starr makes a good living trapping for furs and pelts along the Upper Pawnee, in connection with a skunk farm where he has a couple hundred of animals. For the skunk pelts he gets from \$1 to \$4; for the mink, \$2.50 to \$8; for 'coon, \$1 to \$3.50; badger, 50 cents to \$1; possum, 50 to 60 cents; muskrat, 15 to 50 cents, and civet cat, 15 to 40 cents.

NOT FOR THE PLUMAGE.

THE Ancient Mariner had shot the albatross. "Well, what of it?" he said, brazenly. "I did it to oblige Sam Coleridge. I wasn't going to stand here and see a great poem knocked into a cocked hat for lack of incident."

Which seems to show that occasionally it is necessary for somebody to furnish the Frightful Example.—Chicago Tribune.

The Du Pont Gun Club.

WILMINGTON, Del., April 27.—For the second time in a week J. T. Minnick broke 99 targets out of 100 at the Du Pont Gun Club traps, making a total of 194 out of 200. He missed 5 targets in his first 100 and 1 in his second. This is some shooting for a first-year trapshooter. J. T. Skelley broke 97 out of his 100, and W. M. Foord 93.

In the contest for the Class B trophy, R. S. Wood, the holder, defended his title against E. H. Lambert, the challenger. Wood broke 35 out of 50.

There were thirty-six shooters present. Foord won the Class A prize in the Coleman du Pont merchandise event, breaking 21 out of 25. In Class B Minnick and Victor du Pont tied at 24. In the shoot-off Minnick won, breaking 25 against 22 for his competitor.

Dr. Stanley Steele won Class C, and R. S. Wood was victorious in Class D. The scores, 25 targets each:

W. Edmanson 22, H. M. Dodson 18, Dr. S. Steele 22, W. Mathewson 19, W. M. Hammond 20, W. M. Foord 21, F. Turner 14, W. M. Moore 12, F. Thatcher 6, H. H. Lukens 13, L. C. Lyon 19, E. A. W. Everitt 20, J. H. Minnick 24, A. J. Curley 15, A. D. Chambers 11, Clyde Leedom 15, W. Coyne 20, H. P. Carlon 21, S. Touchton 22, F. H. Lambert 12, G. H. Mitchell 13, R. S. Wood 13, W. G. Wood 21, D. Lindsay 23, Stanley Tuchton 23, Dr. Betts 20, J. W. Anderson, Jr., 19, Victor du Pont 24, J. T. Skelley 24, F. P. Ewing 18, Dr. S. C. Rumford 17, Dr. A. Patterson 21, W. B. Smith, Jr., 19, Z. H. Lofland 15, W. Ward 10.

J. H. Minnick was high gun with 99 breaks out of 100 targets at the midweek shoot. J. T. Skelley killed 98 out of his 100. Skelley and Minnick each broke 123 out of 125 The scores:

Shot at. Broke		Shot at. Broke	
Phil du Pont....	100 81	H Poston	100 93

A S Edmonds....	50 19	A L Snyder....	25 18

Scores made April 20:

Class A, 22yds.: A. B. Richardson, 21 out of 25; Eugene du Pont 16, Henry Winchester 15, W. M. Foord 23, G. L. Lyon 22, J. T. Skelley 21, J. B. McHugh 20, E. E. du Pont 21, D. J. Dougherty 21, W. S. Colfax, Jr., 21, E. A. W. Everitt 18.

Class B, 20yds.—W. M. Hammond 22, Victor du Pont 20, T. W. Mathewson 21, J. J. Magahern 16, W. G. Wood 20, W. P. Northcott 21, H. P. Carlon 20, W. Edmanson 20, L. C. Lyon 20.

Class C, 18yds.: L. H. Hoopes, Jr., 18, Clyde Leedom 21, W. Tomlinson 20, F. H. Springer 19, S. G. David 14.

Birmingham Gun Club.

BIRMINGHAM, Ala., April 26.—No shooting has been done for four weeks past at the Birmingham Gun Club, owing to the fact that the grounds have been used for the aviation meet and automobile show. Shooting will now go on as usual each Friday afternoon. John Philip Sousa was with us again, having returned with the Birmingham shooters from the Mississippi State shoot to spend a few days in Birmingham.

John Fletcher made high score for the day. Gentry Hillman shot well. Sousa broke his gun in the first event and shot away below his average in consequence.

The Alabama State shoot is registered for Aug. 6 and 7, and will be held in Birmingham. The scores made to-day follow:

Shot at. Broke		Shot at. Broke	
J Fletcher	125 112	J P Sousa.....	100 69
H C Ryding....	125 107	Wheeler	100 62
Guy Ward	125 106	O L Garl.....	75 60
A Henderson ...	125 104	Hugh Roberts...	100 57
Ed Cornwall ...	125 100	Nickolson	75 57
G Hillman	100 93	Randolph	100 52
J Hillman	100 90	Carroll	100 47
R R Skinner ...	100 86	Lewis	75 39
L Brown	100 78	Yielding	50 10
C Perry	100 76		

Marion Gun Club.

MARION, Ia., April 27.—For a second-year club, the Marion organization has made rapid progress. From fifteen to twenty gunners turn out at each shoot. Scores of last two meets are appended:

First shoot, April 11, 50 targets each: C. E. Gordon 45, L. O'Brien 45, C. Booth 44, C. Curtiss 44, Mathews 39, U. G. Byerly 38, I. B. Cutler 38, T. B. Nichols 38, L. D. Dennis 37, F. H. Schwartz 35, J. B. Ives 32, J. E. Cook 32, W. R. Harmon 30, G. Johnson 30, J. Booth 29, H. Johnson 26.

Second shoot, April 25, was so windy some of the birds lit back of the trap house. Scores: C. Booth 39, J. Ives 38, L. O'Brien 37, C. Curtiss 38, T. Nichols 34, U. G. Byerly 33, Mathews 32, F. H. Schwartz 32, I. B. Cutler 31, Maxwell 29, O. L. Brown 15, J. Booth 5.

A. C. MAXWELL, Sec'y.

Cleveland Gun Club.

CLEVELAND, O., April 28.—While the scores recorded at the regular weekly shoot of the Cleveland Gun Club, yesterday afternoon, were slightly lower than usual, the work was exceptionally good, as the shooters were bothered considerably by the high wind which blew across the traps. Mr. C. E. Doolittle carried off high honors of the expert class, breaking 94 out of 100 in the first two events. F. W. King was high amateur with a score of 92 out of 100 in the same events.

The monthly trophy contest for the month of April, which ended to-day, shows that the first prize is a tie between Manager F. H. Wallace and A. B. Jones, which will be shot off next Saturday, each contestant having

F. H. WALLACE, Mgr.

Cincinnati Gun Club.

THE club has secured the services of Arthur Gambell as superintendent again, and there will be things doing on the grounds once more, for, if there is any one man who can put the club back on the map, that man is Gambell. An experience of many years in the shooting game, has given him a large personal acquaintance among the shooters of this section, as well as a thorough knowledge of all the details necessary for the success in conducting a gun club.

Pottstown Gun Club.

J. E. BERTOLETTE made the only full score to-day, that being in the second event at 25 targets. There were nine events of 25 targets each. Scores:

First event, 25 targets: Fries 17, A. Eschbach 15, Keely 12, H. Witmyer 15, W. S. Whitacre 14.

Second event, 25 targets: N. Hanley 17, J. E. Bertolette 25, A. Eschbach 9, Fries 17, H. Witmyer 14.

Third event, 25 targets: H. Witmyer 9, A. R. Schwoyer 14, J. E. Bertolette 16, N. Hanley 15, C. A. Fries 16.

Fourth event, 25 targets: J. E. Bertolette 22, H. Witmyer 17, W. S. Whitacre 17, N. Hanley 16, M. Barlet 15.

Fifth event, 25 targets: Wm. Linsibigler 6, F. Ziss 17, J. E. Bertolette 18, N. Hanley 14, A. Eschbach 10.

Sixth event, 25 targets: M. Barlet 13, A. R. Schwoyer 22, N. Hanley 16, W. S. Whitacre 14, A. Eschbach 18.

Seventh event, 25 targets: F. Ziss 14, A. R. Schwoyer 18, M. Barlet 21, H. Witmyer 19, A. Eschbach 12.

Eighth event, 25 targets: N. Hanley 17, W. S. Whitacre 11, M. Barlet 21, H. Witmyer 20, C. A. Fries 19.

Ninth event, 25 targets: A. R. Schwoyer 15, H. Witmyer 16, J. E. Bertolette 16, D. Eschbach 9, A. Eschbach 15. C. A. FRIES, Sec'y.

Clearview Gun Club.

PHILADELPHIA, April 27.—The Riverside team, of Esington, Pa., were carded to shoot the return match with the Clearview Gun Club at Darby to-day, but owing to the weather, postponed the event until more favorable weather. Some of the Clearview gunners were at the Darby traps; they chose sides and ran a six-man team race. The conditions of the match were 50 blue-rocks per man, with the losers to pay for the targets. The squad led by King won the test, they beating the marksmen chosen by McCullough by 241 to 238.

Harry Fisher, shooting for the defeated team, was high gun of the match, shattering 46 of his 50 skimmers. McCullough broke 45 and Oliver registered 44. Scores:

Table with 2 columns: King's Team and McCullough's Team. Lists names and scores for various participants like Oliver, Bonsall, King, Stellar, Bockius, Horn, Fisher, McCullough, Walber, Elwell, Sweeney, Fink.

Registered Tournaments.

THE tournaments registered with the Interstate Association during the week ending April 27, 1912, are as follows:

- July 17.—Tomah (Wis.) Rod and Gun Club. F. L. Fieting, Sec'y.
July 24.—Milton (Pa.) Rod and Gun Club. S. H. Kock, Sec'y.
July 24-25.—Redfield (S. D.) Gun Club. Chas. E. Stutenroth, Sec'y.
Aug. 6-7.—Alabama State tournament, under the auspices of the Birmingham (Ala.) Gun Club. O. L. Garl, Sec'y.
Aug. 6-7.—Wilson, (N. C.) Gun Club. Jas. D. Barnes, Sec'y.
Aug. 7-8.—Concordia, Kans.—Blue Ribbon Gun Club. J. F. Caldwell, Sec'y.
ELMER E. SHANER, Sec'y-Treas.

Oak Meadow Gun Club.

ZANESVILLE, O., April 27.—The championship was won by Fred Zinn, who secured a total of 61. Other scores in the pin shoot were: Kuebler 59, Marsh 58, Douglas 54, Krupp 48, Donahue 45, Graefe 43, Miller 40.

In the Donahue cup competition Zinn is new leading with a score of 74 out of 75.

The shooting for the Krupp cup was started at Saturday's meet and resulted in Champion's taking the lead with 17 out of 20. Other scores in this event were: Douglas 16, Kuebler 16, Krupp 15, Miller 15, Taylor 13.

Rifle and Revolver

Olympic Rifle Team.

WASHINGTON, D. C., April 25.—It has been definitely settled that the United States will be represented by a rifle team at the Olympic games at Stockholm, Sweden.

All but fifteen hundred dollars of the amount necessary to finance the team has been subscribed, and from the way the subscriptions are now coming in this amount will undoubtedly be raised within the next two weeks. Among the recent subscriptions which materially helped to bring this decision about was one of two hundred and fifty dollars from the New York State Rifle Association, and one of one hundred and seventy-five dollars from the First Infantry, Missouri National Guard.

An agreeable feature of the contributions now coming in is the number of small subscriptions received, showing that individual shooters throughout the country are beginning to take some interest in the matter.

Several of the States are planning to hold preliminary tryouts during the period between the 1st and the 11th of May. The men selected at these trials will be sent to Washington to take part in the final trials which will be held at the United States Marine Corps range, Winthrop, Md., May 16 to 20.

At these trials the regular service rifle may be used with the regulation trigger pull as allowed in the National matches.

The officers of the team will be team captain, Lieutenant Commander Harris Laning, U. S. N., who captained the victorious Navy team in the National matches for a couple of years. The team adjutant will be Colonel William Libbey, assistant inspector-general of rifle practice of New Jersey, well known to all the riflemen who have been attending the National matches for some years back. Colonel Libbey is a professor in Princeton University, and is well qualified for the position in every respect.

After the team is selected on May 20, the members will be allowed to proceed to their homes to arrange their affairs, if they so desire. In a few days the team will be reassembled at either the Winthrop, the Naval Academy or Sea Girt range for team practice until June 14, when they will sail on the ship Finland with the other athletes for Stockholm.

The team will leave the ship at Antwerp and proceed by rail to Stockholm, arriving there on the morning of June 25. This will give them four days' practice on the Stockholm range, as the international team match is shot on June 29.

In addition to the team and individual matches for the service rifle it is also proposed to enter the men in the team and individual matches at 300 metres for "any" rifle, in the team and individual matches with the miniature rifle and in the team and individual matches at the running deer.

The executive committee of the National Rifle Association of America may decide later to increase the number of representatives to be sent so as to include one or two men who are especially strong at the "miniature" game or at moving targets, so as to increase the chances of success in those competitions.

ALBERT S. JONES, Sec'y., National Rifle Association of America.

Cypress Hills Rifle and Revolver Association.

THE fourth annual metropolitan offhand military rifle championship of New York, under the auspices of the Cypress Hills Rifle and Revolver Association, on their 200yds. range, was won by S. W. McPherson, of Cypress Hills. The scores:

Table listing names and scores for participants like McPherson, Hoffman, Byram, Otto, Keister, Pagani, Minervini, Boles, Capt Johnson, McCarroll, Gibbs, Christiansen, Sergt Browne, Reali, Roedder, Lieut Wendell, Lieut Bobb, Lieut Porteous, Deming, Coler, Lahm, Corp Walker, Ekerold, Sergt McDermott, Ripley, Cannizzaro.

Resorts for Sportsmen.

Maine.

In the great Mantrap valley in Lake Park Region, Northern Minnesota. Best of all kinds of fishing, especially Muskallonge and Bass. Beautiful lakes among the pines. Delightful river trips to our outside camps. Log cabins. Central dining room. Booklet.

A. G. IRWIN, Dorset, Minnesota

Schoolboy Rifles.

NEW YORK, April 27.—As evidence of the impracticability of choosing a team by elimination, one has only to look at the results of to-day's annual shoot for the Whitney sub-target trophy on the Seventy-first Regiment range. A team composed of five men "left over" after selecting the team to represent Morris High School in the Interscholastic tournament, won the Whitney trophy, defeating the regular Morris High team, winners of the Interscholastic event, and eleven other teams.

Individual championship honors went to Chas. Curren, of Curtis High School. He made the only perfect score of the day. The winning score was 237. Scores:

Morris Second Team.		Manual Training.

SCARECROWS.

ALONG the banks of certain shallow streams in this State [Utah] are to be seen figures that are likely to frighten wanderers who fear desperados. They are harmless, however, for all their hostile appearance. Though far from cultivated fields, they are merely the scarecrows so long familiar on farm lands. They are not to frighten crows, but coyotes which might want a meal of trout.

Reports have come to the State fish and game commissioner in recent weeks that many large fish that have gone up the smaller streams to spawn have been destroyed by the coyotes, which are numerous in certain counties. Hunters and cowboys tell of instances where they have seen the prairie wolves lay in wait for trout and leap into shallow water and catch them. Fishermen declare that the supply of trout has been greatly depleted in this way.

Commissioner F. W. Chambers decided that the best way to keep off the coyotes was to make figures of men at the accustomed fishing places, and this has been done with success. Some of his agents who have been along streams from which complaints formerly came report that the coyotes have not troubled the fish there.—New York Times.

GOES TO HUNT SEA ELEPHANTS.

CAPT. BENJAMIN D. CLEVELAND, the veteran whaling captain of New Bedford, Mass., is to head another scientific expedition into antarctic regions, say the Fishing Gazette. He will sail on the whaling brig Daisy on June 1 from the West Indies, under the patronage of the American Museum of Natural History, of New York, to hunt sea elephants. This will be the second sea elephant hunting trip for the Daisy. About three months will be spent at the island of South Georgia, collecting specimens, zoological, mineral and botanical for the museum, and studying the habits of the sea elephant, sea leopard and other animals of the antarctic region. The Daisy will be absent about a year and will visit other islands of the region lying north of the great ice barrier that incloses the south polar continent. Captain Cleveland is the only professional hunter of sea elephants in the world.

Conservative Investment.

We offer for conservative investment a high grade industrial Preferred stock to net 6% in an old established company commanding large market for its specialty at home and abroad.

Under the most able management. Preceded by no prior lien of any kind. Net earnings equal to more than four times the Preferred Share dividend.

Property for Sale.

FOR SALE, in whole or in part, a preserve of about 600 acres, three hours from Chicago, in the picturesque and beautiful lake region of Northern Indiana. Surrounds and carries private ownership of deep water lake with fine fishing, having 7½ miles of shore line—over 25,000 feet of lake frontage, valued at \$15 to \$25 per foot. Contiguous to the lake are fish hatchery ponds nearly completed. Shore slopes to high ground and is beautifully wooded. The tract is 1,000 feet above sea level and 400 feet above Lake Michigan, and lies one mile from the watershed. It contains \$2,000 worth of standing timber, and has over 300 acres in cultivation and highly productive. Of this, twenty-five acres is splendid celery, onion and mint ground. The farming lands have four houses, each with bearing orchard, barn and out-buildings. There are seven flowing wells. Beautiful site for club house, with road made and avenue of trees planted, overlooking two lakes, with fine ground for golf links adjoining. Strong water power with cement dam and spillway. Investigation and inspection are invited. Address CHAS. A. SUDLOW, President and Treasurer, Syracuse, Ind.

Fishing & Shooting Preserve

A remarkable property value suitable for gentleman's estate, fishing and shooting preserve or small sportsmen's club.

Within easy distance of New York and other Eastern cities. Trout stream on the property.

Located in Vermont, eight miles from railroad. Buildings in perfect repair.

Deer, Bear and Partridge in abundance.

1300 acres, a great part in fine timber and balance under cultivation.

This property is offered at bargain price. Address

C. P., care of Forest and Stream Information Department, 127 Franklin Street.

Camping Ground for Boy Scouts
MASHIPACONG LAKE

Nearly 100 acres of beautiful water on a 1000-acre preserve. The center of many square miles of wild timber country. High in the Blue Mountains. Only sixty miles from New York City. Artistic camp; can be used for mess hall. Fishing, boating, swimming, everything the real scout needs. Moderate carfare. Will rent only to Boy Scouts if enough troops make early application. 50 cents per boy per week.

R., care of Forest and Stream Inf. Dept.

SUMMER HOME FOR SALE.

Catamount Lodge, Adirondacks. Ideally adapted to hunter's requirements. 75 acres. Garage and houses. All in perfect condition. Located near State road. For full particulars communicate with

F. A. TOLHURST, 106 Central Park West, New York City.

FOR SALE—In Plymouth, Mass., **Wild Fowl Shooting Stand**, including one hundred acres (more or less) of forest lands bordering nearly one mile on two **Great Ponds**, with houses, barn and furnishings. **Good Fishing** during summer. Further particulars on request. Address "A. B. C.," care Forest and Stream.

FOR SALE.

Share of stock in Laurentian Club. Address P. M. E., care Forest and Stream, New York.

For Sale.

GAME BIRDS

Hungarian Partridges, Quail, Ring-neck Pheasants, Wild Turkeys, Capercaillie, Black Game, Wild Ducks, Decoys. Beautiful Swans, Fancy Pheasants, Peafowl, Cranes, Storks, Ornamental Ducks and Geese.

"Everything in the bird line from a Canary to an Ostrich."

I am the oldest established and largest exclusive dealer in land and water birds in America and have on hand the most extensive stock in the United States.

G. D. TILLEY, Naturalist

Box "F" Darien, Conn.

RAINBOW TROUT

are well adapted to Eastern waters. Try stocking with some of the nice yearlings or fry from our hatchery, and you will be pleased with the results.

PLYMOUTH ROCK TROUT COMPANY, Colburn C. Wood, Supt., Plymouth, Mass.

The **CELEBRATED HUNGARIAN** and **ENGLISH PARTRIDGES** and **PHEASANTS**, Capercaillie, Black Game, Wild Turkeys, Quail, Rabbit, Deer, etc., for stocking purposes. Fancy Pheasants, Peafowl, Cranes, Storks, beautiful Swans, ornamental Geese and Ducks, Foxes, Squirrels, Ferrets and all kinds of birds and animals. Send 4 cents for illustrated descriptive circulars. WENZ & MACKENSEN, Dept. T, Pheasantry and Game Park, Yardley, Pa.

Small-Mouth Black Bass

We have the only establishment dealing in young small-mouth black bass commercially in the United States. Vigorous young bass in various sizes, ranging from advanced fry to 3 and 4 inch fingerlings for stocking purposes.

Waramaug Small-Mouth Black Bass Hatchery. Correspondence invited. Send for Circulars. Address HENRY W. BEEMAN - - New Preston, Conn.

BROOK TROUT of all ages for stocking brooks and lakes. Brook trout eggs in any quantity. Warranted delivered anywhere in fine condition. Correspondence solicited. THE PLYMOUTH ROCK TROUT CO., Plymouth, Mass.

CONSULTING FISHCULTURIST.—Founder and late Managing Director of Welham Park Hatcheries, England, advises on all matters connected with fishculture. Donald Walker, Drumlin Trout Hatchery, Barneveld, N.Y.

The annual stockholders' meeting of the **Forest and Stream Publishing Company**, for the election of a Board of Trustees, and for such other business as may be introduced, will be held at the company's office, 127 Franklin St., New York City, on Thursday May 9, 1912, at 11 a. m. Charles B. Reynolds, Secretary. New York, April 20, 1912.

Wants and Exchanges.

"KOILA"

Partner wanted. Will sell half interest in this fine property. I will reinvest on joint account up to \$7,000, to pay for half dozen cottages, for which there is already demand, more power boats for the Chain Lake, also additional rowboats, to complete the hotel building, and to get a new passenger car. Prefer a young or middle-aged man, acquainted with the fraternity, to take either outside or inside management. This is not a gold mine, just a safe and profitable investment. About \$5,000 required. Principals only. References exchanged. W. E. BARDEN, Chetek, Wis.

I WANT TO BUY

Foxes, Mink, Wolves, Badgers, Marten and Lynx. Send me list of what you have, prices and how soon delivery could be made. JOHN D. HASLAM, Fortune Cove, Prince Edward Island.

My Angling Friends

Sketches of notable men, Mr. Mather's brethren of the angle, as he knew them, a delightful experience—taught philosophy, and a splendid appreciation of the innate humor of men and things. Cloth, illustrated, 369 pages. Postpaid, \$1.50.

FOREST AND STREAM PUBLISHING CO.

Number One

**CAUSE
OR
EFFECT**

Are sportsmen prosperous because of devotion to outdoor sports?

Or, does prosperity—and increase of leisure—promote a devotion to out-door sports?

The fact remains that of one hundred business men devoted to out-door sports the average of prosperity is considerably higher than that of one hundred business men whose recreation is sedentary.

Personally, I think love of out-door sports is the Cause and prosperity the Result—but what's the use of arguing the matter?

Take the case of the hen and the egg—no man can tell which came first. And no man can tell whether the hen or the egg is the more important to the race.

From an advertiser's stand point, the prosperity of the readers of *Forest and Stream*, and their devotion to out-door sports are of equal importance—because we solicit only such advertising as appeals to the prosperous out-door man. His out-door tastes create the demand for the advertised article, and his prosperity enables him to buy what he wants.

Where?

Some one of the sportsmen's resorts advertised in *FOREST AND STREAM* can probably offer you just what you want for your fishing trip. We are in touch with all of them, and if you will explain your needs to us, we will tell you where we think you would be best satisfied and tell you why we think so.

Maybe none of the resorts advertising with us will just suit your individual wants. In that case we don't hesitate to recommend a resort which doesn't advertise with us.

A two-cent stamp or a postal card will command our best services. The fuller explanation you give us, the more explicit we can make our advice.

Write us to-day.

The One Best Make

I Want To Tell You One Reason Why "White's Canoes" Surpass All Others

There is just one point I want to tell you about in detail. It's the way White puts on the planking. Instead of butting the boards up against each other, as all other makers do, White bevels and laps every seam, thus making practically water-tight craft, before the canvas is stretched on. This method prevents cracks caused by shrinking or swelling, and keeps out the sand which is the ruination of the canvas.

When buying a canoe, ask the salesman "Is the planking beveled and lapped?" If he knows what you are talking about, and is truthful, he will answer "No"—unless it's a "White."

The prices begin at \$30.00 for 15-foot length

May I send you a "White" Catalogue? Or better still, can you call?

THE ANGLER'S WORKSHOP

Rodmaking for Beginners

By PERRY D. FRAZER

Not only Americans, but anglers of Great Britain and nearly every European State, South Africa, Australia, Canada, are making their fishing rods under the simple instructions laid down by the author in this useful little manual. A Japanese, after reading the book took up rod repairing for his fellow countrymen as a business. An Englishman followed it in making several of the sixty-five rods that he has in his collection. A Russian appreciated the book so much that he suggested a Russian translation. The British sportsmen's papers have quoted from it time and time again. In that country it has helped bring about a great change in rod types, and to attract attention to the excellence of American fishing rods. In fact "Rodmaking for Beginners" has become the standard manual wherever fishing with rod and reel is practiced.

The reason is obvious. The book is written in plain English, and all the details are set down so simply that a boy can follow them. All of the types of rods used on fresh and salt water are described and specifications given. Separate chapters cover all details, and the one on split cane rodmaking is the only comprehensive treatise on that subject ever published.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid, \$1.00.

A Canoe Trip in Keewatin

By REV. ARTHUR SANTMIER

WHILE a missionary at Oxford House in the great Hudson's Bay region, I once received an urgent request from my Indian assistant at God's Lake, some ninety or more miles distant, to come at once and officiate at his marriage ceremony. Evidently the poor man was sorely smitten, and the case was an urgent one, so without delay I made the necessary arrangements.

At the time of receiving this request I was busily engaged in rebuilding the church and had a large number of men at work. Although near the close of May the lakes were still covered with ice and the rivers were but lately freed from their crystal covering. Men were scarce, traveling perilous, my work on the church imperative, but when no other clergyman was to be found within a radius of 150 miles, the request of my brother was not to be put aside.

On May 25 at a little after eleven we started on the difficult trip. There were no available men, and so I considered myself fortunate in securing the services of an Indian by the name of Albert. This man was at one time an expert canoeman, York-boat hand and guide, but by reason of broken health and old age his strength had largely become weakness, and he could

neither portage a load nor paddle with the strength of the ordinary canoeman.

Albert possessed a small Peterborough canoe of the racing type that had been set aside by the Hudson's Bay Company when it was no longer safe. As it sat very low in the water, it could not stand rough weather as could the canoes of the God's Lake Indians, which were strongly constructed of birchbark.

About 200 pounds of baggage was loaded into the little boat, and we pushed off into the lake back of Oxford House in the midst of a terrific squall of wind and snow. After crossing this lake our course lay down the rapid Trout River, a shallow stream broken by a number of rapids and one large fall. Two of the company's canoes were ahead, and by 2 o'clock we had crossed our first portage and caught up with them.

This portaging presented unusual difficulties. Our canoe, although a small one, was water-

soaked and consequently very heavy. Albert could not portage it alone and so together we carried it across the portages after first having transferred our loads.

Being stationed in the bow of the canoe and not being familiar with rapid water, we had frequent narrow escapes from smashing up on

A CAMP ALONG AN ICE-BOUND LAKE.

Photo by Rev. Arthur Santmier.

the numerous rocks that dotted the rapids. The day was bitterly cold and frequent squalls of snow and sleet, with high wind, not only impeded our progress, but drenched us to the skin and so benumbed the hands that with difficulty we could hold the paddles.

The beautiful Trout Falls was passed in the midst of a heavy fall of rain and shortly afterward we emerged upon Knee Lake. It is about sixty miles long and of varying width, and is dotted with many beautiful islands. We camped on the shore of this lake not far from the river, and a dreary camp it was. Everything was wet, and there was no time in which to dry our clothing or bedding. During the night a light fall of snow covered the camp and we awoke early to find that another stormy day had dawned. We also found ourselves frozen to the ground and had to literally pry ourselves loose from the mossy rocks.

The canoe leaked badly and the first work at each stopping place was to unload and overturn the canoe to let the water run out and then to search for new leaks. These, when found, were stopped by applying melted pitch from pine trees. The Indian method of finding leaks is a novel and original one. By running his mouth along the seams and strongly sucking at suspected points, he can easily locate the leak and determine its size by the amount of air he can suck through.

Our food consisted of tea without sugar, a few pounds of coarse flour and whatever game and fish we could kill by the way. Ducks were quite plentiful, but wild and hard to shoot. Rabbits, however, were numerous, and sufficient were secured to prevent starvation.

While rapidly passing down the first ten miles of Knee Lake, during a lull in the storm, the sun came out to show us in all its loveliness the scenery of the lake, but the situation soon changed; the sun became obscured by heavy cloud masses and very soon our progress was delayed by a solid field of ice extending clear across the lake. By following a narrow crack close to the shore and finally by portaging across a rotten ice floe, we reached the clear water and paddled straight down

the lake to the mouth of Wolf River. For the remainder of the day frequent storms of great fury annoyed us, and at times threatened to interrupt or possibly to terminate our journey.

At about 2 o'clock the twenty miles of Knee Lake were left behind us and we started to ascend Wolf River. At the very outset we were cut off by troublesome rapids and were obliged to make a half mile portage. These rapids were disturbed by large numbers of suckers forcing their way upward to the still waters above. At the head of this rapid was a fish weir, or trap. This is simply a chute made of poles so tilted that the current runs up the slide and then drops through between the poles. Not so the fish; they are carried up as far as the current goes and left on the poles, one or two cross sticks preventing their return down the slide. This is an Indian contrivance, and as the stream is dammed at this place, and the slide is the only outlet, it

is wonderfully effective, preventing all fish from going up the river and catching all the fish that are going down. Large numbers of suckers, pickerel and wall-eyed pike were seen in this trap, and many lay upon the water and along the shore in a state of decomposition.

Wolf River is about nine miles in length and is very narrow and very crooked, flowing through a wilderness of swamps and dry sticks. Paddling rapidly through this river, we emerged upon a lake three or four miles in diameter, which was still covered heavily with ice. By skirting the shore, the mouth of another river was reached, the Wolverine, similar to the Wolf, draining a similar country, but more crooked and in its upper courses so shallow as to greatly hinder navigation, even in empty canoes. Like the Wolf, the Wolverine ends its nine or ten mile course in a stony rapid which necessitated a portage. We camped upon this portage the second night. Rabbits were plentiful and the rapids teeming with suckers attempting to force a passage to the river above. At this camp I made an attempt to dry my clothing and the single blanket, but the night proved too short, as it was ten o'clock before we ate our supper.

Early in the morning we passed through the Wolverine with nothing of importance to break the monotony of the very crooked river, and at 9 o'clock reached Mossy Lake, which is about ten miles long. It was also covered with ice and we made a wide detour.

We now reached the most difficult part of our journey, the dreaded Mossy Portage. Albert and I upon reaching this portage bargained with one of the company's canoemen to portage our canoe while we assisted in carrying their load of freight. Staggering along under the weight of eighty pounds of soap and sundries, I finally managed to make the crossing in a very bedraggled and worn-out condition. After the crossing of this cruel swamp we ate a meal upon the shores of God's Lake and imbibed new courage with the draughts of tea. The portage was much better for carrying than during the preceding year, but much more difficult transporting the canoes. Usually for nearly two-thirds of its length the portage was traversed by a tiny stream of water which was made to float the canoes in wet seasons, but upon this occasion the streamlet was dry and the canoes had to be portaged the entire distance of two miles, but the drier walking almost atoned for this extra work and certainly made the crossing much speedier.

God's Lake was solid with ice and we were obliged to follow the indented shores through a narrow canal of shallow water. When within about eight miles of God's Lake Post, a large bay four or five miles in width had to be crossed. We discovered an ice crack that apparently extended clear across the bay, and after much deliberation decided to follow this crack rather than to go around, a distance of ten or fifteen miles. Accordingly, we paddled down the ever-narrowing channel until within a few hundred yards of open water on the other side, when the crack suddenly terminated. We looked foolishly at one another for a moment, but the Northern trapper is full of expedients and never hesitates long. So without further parley we jumped on to the quaking ice, carried our loads and canoes across, despite one or two plunges through the rotten ice and re-embarked in open

water on the other side. To carry a heavy load over ice that is liable to drop one into a cold watery grave forty feet deep is a bit risky and somewhat nerve-trying.

We reached the Mission in the evening at 8 o'clock and were warmly welcomed by the expectant bridegroom, the Indian missionary. A supper of baked or roasted whitefish done to a turn before an open fire, following a luxurious bath in the frying-pan, and I curled up in my rabbit skin robe and lay down upon the floor to sleep.

On Monday at 10 o'clock the important ceremony took place. The groom, leading his blushing bride, was followed by bridesmaid and groomsmen, and the church was soon filled with natives, all attired in holiday costumes of various styles, shapes and colors as well as of various ages and periods of antiquity. I read the service in English and asked the questions in Cree. Upon being pronounced man and wife, the groom gallantly kissed the bride and his example was followed by many others present; in fact, the kissing became general and was hard to stop. After adjourning to the open air several salutes were fired from a number of ancient muzzleloading shotguns and muskets. As I had an automatic shotgun with me at the time, I was requested to assist in the saluting. I responded with five almost simultaneous shots that astounded them beyond all reason. After considerable discussion, and after the more timid ones had been quieted, I was asked to kindly repeat the shooting, which I did, to their infinite amusement. The entire congregation was then photographed, after which the bridal party requested me to photograph them. As the groom insisted upon the exposure being made in the face of the sun, it was of course a failure, although it never dawned upon those foggy intellects that the sun had anything to do with it.

Reluctantly I bade farewell to the Lake of the Great Spirit, for I loved its quiet bays, its forest-clad islands and its dusky inhabitants. On Tuesday morning at about 3 o'clock we started upon the return trip, with the other canoes well in advance. The ice had drifted into the shore at one point and we were obliged to follow ice cracks well out on the lake until Mossy Portage was reached and we caught up to the canoes. Portaging the canoes was very difficult work, as a high wind was blowing and the canoes, carried in an inverted position on the shoulders, presented a large surface to the wind and so could not be kept in the proper position for carrying. In spite of difficulties and heavy loads we successfully crossed by noon and ate dinner on an island in Mossy Lake.

Nearly all the lakes were now free from pack ice and the drift ice was easily avoided, and so by keeping a straight course, we were able to reduce the former one hundred miles to about eighty-five in returning. Several portages were made to cut off bends in the crooked rivers and at night we camped at the rapid at the foot of Wolf River within sight of Knee Lake.

During the night a shower of rain fell and Wednesday dawned dull and cold. Although having slept but little owing to the brief period of darkness and the saturated condition of our blankets, we were astir at two and off at three in the morning and made the twenty miles on Knee Lake by 10 o'clock, stopping once for a drink of tea. Albert and I reached the river

first, but at Trout Falls the other canoes forged ahead and left us for a space while ascending the rapids. Ascending the river against a stormy head wind, we found was a difficult task, but we arrived at the lake back of Oxford House with the other canoes and landed there owing to the heavy wind. Our loads were portaged across to the mission about one mile distant. Thus we had accomplished the return trip in less than two days.

During this journey we were constantly wet and cold, with a wet blanket for covering and the wet ground for a bed. Considering this it is no wonder that severe suffering followed.

This canoeing amid great exposure and danger, doing a full share of paddling, portaging and camp work, is more romantic when described upon paper than when experienced as a common part of life amid ice floes, rapids and stormy weather.

This is but one of numerous yearly canoe trips and gives but a faint idea of a regular method of travel in the Northern wilderness.

THE TOP RAIL.

WERE you ever held up "at the point of a pistol?" If so, did the yawning muzzle—as it appeared at the time—resolve itself into a point, or did it resemble more closely the business end of a battleship's bow-chaser? Why the "point" of the average reporter, anyway? Perhaps the expression came down from the days when men carried swords or muskets with bayonets, but as used now it means no more than that other favorite reportorial expression in reference to revolvers "still smoking" long after they have been fired.

There is about as much sense in remarks of this kind as in Paddy's attempt to smoke a pipeful of glass. "Bedad," said he, "they tould me if I'd shmoke a piece of glass I cud see the eclipse."

* * *

ROBERT S. LEMMON contributes the following, which he says strikes him as rather good, and perhaps it touches a new note in the literature of trespass signs:

A ruralist in Missouri posted his lands, the notices reading as follows:

"Notis—Trespaser will be persekuted to the full exten of 2 mean mungrel dogs wich ain't never ben overly soshibil with strangers an' r dubbelp barl shot gun wich ain't loaded with no sofy pillers dam if I ain't tire of this hel-raisin' on my property."

* * *

SOMEONE persuaded Mike to try a few casts with a dry fly for the trout that would not take his gob-of-worms lure. "But," said he, "the trouts wud not let the bug sink at all at all, an ivery toime it struck the wather I had t' jerk it away fer t' prevint three or fure iv thim from fightin' over it."

GRIZZLY KING.

Across the Plains in Early Days

By SAMUEL MANSFIELD STONE

(Continued from last week.)

IN the early morning, before the sun had risen and while the plain was one vast sea of fog, I crawled out of bed without awakening John and tramped off up the timber. The fog was too dense to admit of seeing anything distinctly a few feet away, but I plodded on. All at once there was a mighty thrashing among the short bushes close alongside of me and two shadowy figures sped away into the mist. There, not twenty feet from where I had stood, was the distinct outline in the wet grass of an animal's form and the ground was warm from its body. I had no doubt that it was another deer, and I formed a second exceedingly discreditable opinion of my abilities as a hunter. I then crept along at a snail's pace, for perhaps eight rods, when I espied a shadowy outline of a large animal. I dropped, took steady aim and fired, my nerves true as steel. The shadow disappeared and I went back to camp. After breakfast John and I went together up the wood, and ten rods beyond where I shot lay a handsome doe, dead, but yet warm, shot through the lungs.

The incident of the morning produced a complete revulsion of feeling, and I must have made a first class nuisance of myself, bragging about my shot. John was quite tolerant and let me patter on, thinking, I suppose, that it would relieve my pent-up emotions, which it did. After breakfast, however, when we went up to skin the animal and get a nice fresh venison steak for dinner, my emotions took another turn, and I was almost sorry that I had made the shot. As I have stated, the creature was a doe, and when we came to investigate, we discovered that she was doubtless a young mother. The thought of a little, soft-eyed, innocent fawn starving to death as a result of my recklessness was anything but pleasant. "Why didn't I wait till I could see what I was about and then select a buck?" was a question that would suggest itself to me. In the dense fog I could not even see that I was shooting at a deer. I might have killed a valuable pony had we been in proximity of a camp of travelers, and for all that I knew there were such camps all around us. I made a firm resolve that I would exercise more care in the future.

The animal was not in good condition and the steaks, although tender, were dry and insipid. At the time of our visit to Southwestern Kansas the bottom lands and adjacent plains were literally swarming during certain seasons of the year with deer and antelope, while buffalo in countless numbers roved between the upper and lower grazing grounds. I have often wondered why the Government did not take preservative

measures for these species of royal game. I do not know but there may have been some general legislation touching the subject, but nothing that ever proved effectual. Large hunting parties of both American and European sportsmen (so-called) were wont to rove over those plains during the succeeding ten years, killing vast numbers of animals for the mere sake of slaughter. I recall a statement made by a party of Londoners to the effect that they had "killed over 300 buffalo" during a single trip through their feeding grounds. These animals were left

forest, the fringe of the Arkansas timber lands. We had been warned about camping alone too near the wood, because of the big timber wolves which, though cowardly and undemonstrative in summer, might make things unpleasant for the horses. Feeling that I had ventured westward a sufficiently long distance, I consented to accompany John for a few days; at least, on his journey toward Arkansas City. Hence, after eating and giving the ponies an opportunity to crop their fill of buffalo grass, we took up our route to the eastward, skirting the timber at a distance of a couple of miles, thus escaping the ravages of the gnats and mosquitoes which infested the regions of shadow.

As we rode along we laid plans as follows: We would continue on our way till we found a favorable camping place, where grass was abundant for the ponies, and the water was plenty and of drinkable quality; then we would rebuild our rubber blanket tent and put in a week or two hunting, and if so inclined, fishing. On the second day of our eastward tour we came to a rippling stream of very clear water at the bottom of an alder and wild plum-fringed ravine. It being Saturday, we determined to make camp there over Sunday at least, as I was unable to reconcile my ideas of right with Sunday traveling, especially when no need existed for such action.

The sides of the ravine were steep and slippery, and it was with difficulty that we could urge our ponies over the brink. Skee-

zik ventured first, and finding himself slipping, he sat upon his haunches and slid to the bottom. John's horse, possessing more dignity, attempted to walk down diagonally, but met with indifferent success. He floundered along till about half way down, when he became hopelessly stuck in the soft earth. John was compelled to dismount, and hanging on with one hand, unloosened the saddle girth and relieved the animal of its load, after which it managed to extricate itself and finally reached the bottom, very muddy and demoralized. The bed of the ravine was hard and pebbly, the stream taking up but a small portion of its width. We rode up stream perhaps an eighth of a mile when we came to a branch which cut in obliquely, rising gradually for two or three rods, where it broadened into a little, almost level plateau, with an almost perpendicular wall of limestone on one side and an equally precipitous wall of earth on the other, out of which cropped a broad vein of bituminous coal. To our great surprise in a niche in the limestone wall, which seemed especially designed for its purpose, was a tiny log hut or shack, built close to the wall which overhung and guarded it.

AN INDIAN WEDDING PARTY 600 MILES FROM RAILROAD.

where they fell, though their hides were then worth from eight to twelve dollars apiece in New York. To-day the buffalo is extinct, save for a few semi-domesticated herds, and the deer and antelope are numbered by dozens where thousands formerly roamed.

We broke camp immediately after the midday meal and galloped steadily for four hours in a southeasterly direction. When we halted for the night there was plainly visible from the summit of the little bluff beside which we camped what appeared like the ocean at a distance. We knew, however, that this was the great fog bank which rose nightly from the valley of the Arkansas. The following morning, after the sun had dispelled the mists, the broad timber belt, with here and there a glint of silvery white, lay before us like a vast and indescribably beautiful panorama. The intervening plain was more thickly verdured than that section through which we had traveled, and the dark purple of the buffalo grass blending into the vast sea of green beyond made a picture at once pleasing and restful. Shortly before 1 o'clock we halted for dinner on the outskirts of a great cottonwood

Looking in vain for the inevitable yellow dogs, we rode up to the closed door and shouted:

"Halloo, the house!"

John then rapped on the one window with his quirt, but to none of our overtures was there vouchsafed a response, and we naturally concluded the place was uninhabited.

We dismounted, tethered our horses and tried the door, whose wooden latch yielded and we pushed back the barrier which gave out a remonstrating squawk and groan. John stepped in and I followed, peering cautiously around in the half light fearful of some blood-curdling discovery, yet anxious to investigate. I was about to comment upon the absence of all signs of recent occupancy, when there was a sudden rush of air, and something slapped me in the face as a whirring cloud of something swept past us into the outer air. For an instant the cold shivers ran down my spine, and I failed to quite suppress a cry of fear when we discovered the cause of our unceremonious greeting to be a flock of bats that had made the shack their daylight lodging place.

Recovering from our momentary alarm, we made a careful inspection of the place. The house contained but one room on the floor, though some split logs laid with the flat sides up stretched overhead from side to side of the room, covering about one-half of the space and forming a little three-cornered room, reached by a peg ladder, under the slab roof. A heap of tamarack or cedar boughs in the further end of this up-stairs room showed it to have been once used as a sleeping apartment. The floor of the main room was earth, cleared of obstructions and packed hard. In one end was a chimney of limestone which extended a foot above the ridge on the outside, at the base of which a rude fireplace had been constructed with what especially arrested my attention, an arrangement for burning coal. Two slabs of stone were set on edge, while across the top were laid strips of railroad iron an inch apart, their ends made fast in the sides of the fireplace. John was at first inclined to doubt my version of this contrivance, but when I pointed out a little heap of coal lying near by, he was convinced. At one side of the room, to the right of the fireplace, and almost opposite the window, was a couch made of poles and covered with boughs similar to those we found in the up-stairs room. The condition of these evergreen boughs, and in fact all the surroundings, gave evidence that the place had been deserted for a long time.

In front of the fireplace were two logs, one on top of the other, held in place by four stakes driven into the earth, the tops of which were secured by twisted withes of willow. The upper side of the uppermost log was hewn smoothly, thus forming a most comfortable and convenient settee. A broad slab with three long pegs driven into the rounded side and a fourth lying nearby indicated its use to have been that of a table, and which, on our replacing the missing leg, once more served that purpose.

"This is what I call prime luck," was John's observation after he had finished a superficial survey of the premises. "If we had designed it ourselves, it would hardly be better suited to our purpose. Why, we could live here comfortably all winter."

I agreed with John, but my bump of caution or doubt or whatever it is asserted itself and

suggested the thought which I framed into words:

"But it is evident that someone owns this layout, and first thing we know he, she or it will be coming along and fire us out bag and baggage."

"Even so, we can enjoy it till the owner does come; he can't any more than bounce us, provided we don't steal anything, and for the life of me I don't see what we could steal."

So it was agreed that we appropriate the conveniences during our sojourn, or until we were evicted. Our first thought was to find good grazing grounds for the ponies. On going about a quarter of a mile up the gulch we came to a good, gently-sloping pathway leading up to the plain. And such a grazing ground! It was as luxuriant with buffalo grass and wild clover as though it had been especially cultivated for that purpose. The strip of fifty or seventy-five acres lay in the fork of the larger ravine, and the one in which our house was located, with timber on two sides and the broad plain beyond. John expressed himself as delighted beyond measure at the fortuitous trend of circumstances, while I, as usual, tried to make my satisfaction overbalance my apprehensions. We staked the ponies and returned to tidy up our quarters and prepare for the night.

"This is just the proper kind of a place for rattlers to make their home in," said John, and our first move was to give the premises a thorough ransacking for varmints that might be secreted in obscure corners. There was little in the room to afford a good hiding place for snakes, save only the rough couch next to the fireplace, and to this we directed attention. The tamarack covering was first removed, the spines of which had sifted down between the slats of the couch, making a thick heap on the floor. We dug out this débris with great care, momentarily expecting to hear the warning whir of a rattler. We were happily disappointed, however, though we made another discovery which not only surprised, but interested us. We had raked out the rubbish, dumping the same outside the shack, when John, who had been scrutinizing the floor closely for a possible snake hole, exclaimed:

"Why, the ground is hollow here!"

Sure enough, on striking the surface a resonant sound was given out. On brushing off the dirt we discovered the floor was of wood at this particular point. Closer inspection revealed a door fitted carefully into the hard dirt floor, its size exactly corresponding to that of the cot which had covered it. It was but the work of a moment for John to insert the point of his stout hunting knife under one edge of the door and pry it up. It yielded readily and we lifted it out, there being no hinges, and stood it against the side of the room. When the fog of dust, liberated by moving the door, had subsided, we saw a ladder leading down to unknown depths.

A whiff of hot, fetid air came from the chasm, like that of an apartment long closed. We hesitated to descend and explore, though our curiosity urged us to do so. What ghastly evidences of crime might be disclosed? This and other suggestions presented themselves to our imaginations. Finally I lay flat on the floor and peered downward. As my eyes became accustomed to the gloom I could see the outlines of a large apartment, seemingly more commodious than the one in which we were.

Conveying the result of my inspection to John, he took some matches and descended the ladder, lighting a match on reaching the bottom. The flare disclosed what was evidently a natural cave in the limestone rock. Then I ventured down the ladder and we lighted another match. On one side of the cave a number of rude slab shelves were visible, and on these several boxes. Removing the cover from the first we found it half filled with nails, eight and tenpenny, together with a hammer and a small hatchet. John gave an ejaculation of delight as he seized the latter implement.

"We couldn't have made a more useful find," said he as he scratched another match preparatory to further investigation. The second box was about one-third full of something cold and suggestively slippery, which caused me to draw back my hand with much haste. Another match and John investigated, holding the light so that he could see the inside of the box. With an exclamation of delight he thrust in his hand and drew out several paraffin candles, the sort that plumbers use.

"Better and better," was his exclamation. "These are even ahead of the hatchet; we can see what we are about now after dark." To my mind the candles eclipsed almost anything that I could think of as concomitants to our camp life, positive luxuries in fact, as we had been forced to resort to very inconvenient and primitive measures when light was needed.

Lighting one of our new-found treasures, we were enabled to explore with greater facility, and these comprise some of the things that rewarded our quest: Two tin buckets, one empty and one with a lid which contained some hard-caked and sour corn meal; an iron pot, a skillet and a frying-pan, the head of a pickaxe and a short crowbar, a half dozen steel table knives and forks, very rusty, and several pewter plates, a half dozen britannia teaspoons and three long-handled ones, several pounds of salt, somewhat "rusted," but otherwise wholesome; a square, two-gallon can such as varnish comes in which on uncorking we found to contain what John pronounced to be soft soap, but which I knew to be quite a different compound, there being a factory for its manufacture a short distance from my Eastern home. It was nothing more nor less than nitro-glycerine. We fell to wondering to what use it could have been applied in that sequestered locality. I handled the can very gingerly, knowing full well that a sharp concussion would explode its contents, sending shack and everything in it into space. Back of the shelves, which we were forced to remove to get at, was a large box so heavy that it required our united strength to get it out.

This box, which was made of some dark wood, was in the shape of a carpenter's tool chest, save that it was fully a third larger. The lid was secured with heavy hinges and hasps and a padlock. That it was well filled, its weight gave no occasion for one to doubt. We hesitated about breaking it open, as we would thus make ourselves amenable to the law. Then John recollected that he had a bunch of keys in his saddle bags, and two minutes later we were trying keys to the lock. After several ineffectual attempts, one of the keys turned, clicked reassuringly among the wards and then the lock yielded.

[TO BE CONTINUED.]

Tickling a Bass Water with a Dry Fly

By O. W. SMITH

ONE maddening hot day last summer I said to my fishing companion, who, as every reader of FOREST AND STREAM knows, is my wife: "Chummie, I've got an idea!"

Perhaps it was because of the excessive heat, I hope simply because of the heat, the reply was, "Well, hang on to it for it will be a long time before you will entertain another."

Ignoring the sarcasm after the manner of a well-trained benedict, I continued evenly: "I believe that with a large, gorgeous, flamboyant fly, treated with our paraffine solution, it would be possible to catch bass on the surface." Anticipating the objection, I hurried on. "Yes, I know that bass like to have flies sink now and then beneath the surface, and also are attracted by considerable surface commotion, but just the same they do take flies on the surface; I believe that dry-fly fishing for *Micropterus* will prove successful; furthermore I am determined to try it out instanter." Still the partner of my piscatorial joys hesitated, for the day was woefully hot, but I have not been a family man for fifteen years without learning a thing or two, so I carelessly added: "And you can wear that new outing skirt, you know." She shot a

suspicious glance at me, but my face was as inscrutable as the Mosaic law, so trotted off to pack the lunch.

For some time I have been tying bass flies on eyed hooks, twisting back the wings in spread eagle style, the reverse method, and let me add that I have found bass flies so tied more attractive in the eyes of Mr. Bronzback, but I had never tried coating them with the waterproofing solution, which is to say, I had never actually "dry-fly" fished for bass, though I had often resorted to a modified form of the method. Of course in trout fishing I had early turned my attention to the English practice, following no guide, but blazing my own trail, gleaning hints wherever I could, and succeeding far beyond my wildest hopes. Not all waters are adapted to the dry-fly method, by the way, but where there are broad and deep "swims," as our English cousins would say, the dry fly will coax the wary large fish from the depths; indeed, I have come to the conclusion that as a rule the dry fly is peculiarly attractive in the eyes of large trout. And if trout, then why not black bass?

I looked over my selection of flies, a collection rather than a selection, for I possess not

only types of the standard flies, but objects which resemble nothing in the "heavens above, or in the earth beneath." That is the great advantage of tying your own flies; you can have not only the regular patterns, but special creations at will. Of course I selected the silver doctor, for that is always an attractive bass fly; the next was a creation of my own and may be described as a cross between a "jungle cock" and a cracker, a gorgeous thing, but uniformly attractive; for a third I selected a Cleveland, ending the list with my style of matador, differing but little from the regular type, save that instead of the barred woodduck feathers I use the ocellated

Even a herd of cattle, standing knee-deep in the cool water, were made, all unwittingly, to pose for a very pleasing picture. So interested did we become in our picture taking that the sun had well declined before we noticed, then we were compelled to rush for the lake, the river being so deep that ordinarily fly-fishing was out of the question. No fish will take flies unless feeding upon or near the surface, and where bass have not formed that habit it is well nigh useless to tickle the surface of the water with any combination of feathers, so the would-be dry-fly fisher must seek the shallows close in shore, or along the edges of weed beds, to which

the bass resort at even-tide in search of food.

The enervating heat of the day had been too much for my companion and she elected to remain on shore and watch the gathering of the night from beneath the trees, leaving me to attempt the dry-fly method alone, an arrangement which I did not altogether like, but when a woman wills, she wills, you know, so what could I do? Now, it is woefully hard to handle a boat and a fly-rod at the same time, almost an impossibility, and I set out with misgivings. Fortunately the evening was calm,

hardly a ripple disturbed the surface of the lake, rendering the management of the boat comparatively easy, though under such conditions one must "fish fine and far off."

I circled the lake from inlet around to outlet and back again, but without result, probably because I disturbed the water too much with my boat, then I rowed up into the inlet, threw out the anchor to which was attached a clothes line, and let the boat drift down until I could just reach the edge of the bar which had formed at the mouth of the stream. I was in a position to command a wide stretch of water, and, by simply lengthening or shortening the rope, I could change my location at will, and with little trouble or commotion. There is nothing more convenient than a long anchor rope when fishing where there is sufficient current to move the boat. Sometimes when fishing a lake alone I have used two anchors, one from the bow and the other the stern, each with long lines attached. First I drop one anchor, then row the length of the line and drop the other, or bend on the second anchor rope, and drop the anchor when the line is all out. I can move my boat by simply drawing in upon one line or the other.

A LIKELY SPOT.

feathers of the common barnyard peacock in conjunction with a single white feather which rises between and above the purple. Having made my selection of four feathers, I proceeded to treat them with homemade "dri-fly," simply sprayed them with paraffine oil and a few drops of benzine, a mixture which I keep in an atomizer, a very convenient instrument for spraying, by the way, if one is careful not to use too much of the oil. (My formula is ten drops of benzine to one-half an ounce of paraffine oil.) If one does not apply too much of the oil, the flies will dry in a short time, and will stand casting for several hours without becoming water-soaked. For the atomizer idea I am indebted to a Wisconsin angler.

It was about 3 o'clock when I pushed our boat out into the river and started to float down with the current, planning to reach the reedy lake, our chosen fishing ground, at sunset, for it is not until the evening shadows begin to gather that bass will rise in hot weather. Our river is superbly beautiful, and more than once my wife insisted that I stop while she landed and took a picture, which I was not sorry to do, as photographs help one to live the day over in memory.

It is wonderfully convenient under certain conditions.

To return to my dry-fly fishing. Just as I had got settled for the evening, my wife called from the shore that she wanted to come out, so I was under the necessity of doing the work all over again, and it was well past sunset when we were back in my chosen position. Leaving my companion to tend the anchor rope, I took position in the stern of the boat; we floated down stern foremost, prepared for business. Casting steadily, when I found that I could reach the edge of the bar, I told my wife to fasten the rope, and I gave my whole attention to the matter in hand. I was making good casts. Again and again my single fly sailed out through the air, striking the water with wings upraised. Perhaps a dozen casts had been made to the right, left and straight ahead, then came that for which I had been waiting. The upward rush of a bronze back, and the tightening of the line which betokened a hooked fish. Then ensued a battle royal.

There is nothing quite like the battle of a black bass, unless it be the frenzied struggle of an Atlantic salmon. While the bait-caster enjoys his battles with the king of fresh water fish, the action of the short rod does not compare to that of a six-ounce ten-foot split bamboo. Again and again the fish leaped, shaking the water from his brown body which was twisted into impossible shapes as he fought for liberty. But the little rod won out, as it has formed a habit of doing, and my companion slipped the landing net under the body of our first victim to the dry fly on a bass water.

"Better liberate him," said my companion, a world of pity in her eyes; but that I could not do, for I thought of breakfast.

Removing the jungle cock, as the shadows were quite deep, I replaced it with the lighter colored silver doctor. The fish were not rising; only now and then was there a ripple on the surface of the water, save when some bass struck at my fly, more in anger I thought than from any desire to secure food. I have no doubt that had I used regular flies, allowing them to sink a few inches after each cast, I would have caught fish, but I was dry-fly fishing. Several fish rose to investigate before I hooked a second, which was considerably larger than the first, though he did not put up so spectacular a fight. By the time we had him in the boat it was quite dark, so concluded that we had best make our way up the river if we were to sleep in our beds at all. The full moon was shining, when the river twisted in the right direction, making a glistening path of silver over the water. It was beautiful, restful, refreshing after the torrid day, though I am almost certain that I was thinking more of the bass fishing than I was of the beauties of the mid-summer night, for I had demonstrated to my own satisfaction that bass could be induced to strike at a dry fly.

Another year has rolled round and a bass season is upon us once more. I have made great plans for experiments with this new-old method of fishing. I know a bass stream which one can wade, and I am going to whip early and late, in fair weather and foul, for it is stream fishing that is most attractive as all anglers know. "What fly will I use?" Certainly those I have mentioned, but I have created or evolved several others since that hot evening.

With Lions and Elephants

JOHAN J. WHITE, JR., of New York, spent last winter hunting in Africa. A friend, who hears from him from time to time, permits us to print some hunting notes taken from Mr. White's letters. Under date of Jan. 11, he writes:

"I had a very pleasant month on the Hasinyshu Plateau, though my hopes of trapping and collecting data about the Maraquetts were dashed by the Maraquet uprisings to protect two Elgeyo murderers who had taken refuge with them. The trouble is about over now, and after one battle, in which the troops were nearly led into an ambush, the Maraquetts surrendered one of the Elgeyo and are now looking for the other. The Maraquetts lost about fifty killed, but fought quite bravely, the women and children fighting with the men. One of the soldiers told me that some of the Maraquetts shot at one time as many as two or three arrows from a single bow. I had never heard of anything like that before. Fortunately for the troops, a scout discovered the ambush just in time, and two Maxim guns were turned on it.

"I got a very fine black-maned lion, four lionesses and two half grown cubs last month. Two of the lionesses were secured in a drive. We saw them at the edge of a swamp, and taking up a position at one end of it, put the porters in a big half circle on the other end, and they drove the lionesses straight down on us. We got them both without much trouble, although one of them charged us.

"The day after Christmas we got into a troop of nearly twenty lions. We had seen them once before, but they were too far off to shoot. We got the big lion first, and then about a dozen lionesses bunched up together on some rocks a couple of hundred yards off. We thought they were going to rush us and so prudently retreated, but they separated and we began shooting. It was pretty lively work for a few minutes. One of the lionesses charged, but we stopped her twenty yards off. The grass was very long, and I think we left three dead ones in the ravine which we did not dare go in after."

From here Mr. White went to Masindi, after elephants. The country is very difficult, for at that season the elephant grass was fifteen to twenty feet high, and among it stood clumps of trees, bound together with tropical vines. Little winding paths, which wander and cross each other, lead to native dwellings where are found little clearings in which were huts, like bowls turned upside down, a few banana trees, little patches of sweet potato vines, and perhaps a little cotton.

Near here elephants were found, the herd being discovered after it had been followed for several hours, but even when the hunters had come up with them, they could not see the animals. Fortunately, there was a tree near by into which Mr. White climbed. He could see the long grass and bushes moving, and now and

then an ear flapped or a trunk reached up and pulled down a branch. With a charging elephant behind him, a man on the ground in such territory would have had no hope of escape. A naked native might have dodged aside and hidden, but a white man encumbered with boots and clothing would have been caught at once.

After waiting for a long time a large bull gave a shot, but when it was killed it was found that it had only one tusk.

After some little time here, it was decided that the country was too dangerous, and Mr. White and his safari headed back to Masindi and went south to the Kafu River. He writes on Feb. 22:

"The country along the Kafu was very pleasant with quite a little game—cob, kongoni, bush buck and guinea fowl. It was an ideal country for elephant shooting, the grass short and plenty of little clumps of small trees and undergrowth—just what is required in approaching. Unfortunately the only thing lacking was elephants.

"We were told that there had been a good many about, and from the quantities of old sign we could see that this was true, but as usual they had left that part of the country when the grass was burned. We tried for a day or two to find where they had gone, but without success. We found one fresh track, but could not overtake the animal, which crossed Kafu River and kept on. So again we held a council with our guides and trackers, and decided to head back for the country we had just left, but to keep further south, where the men told us the country was more open.

"We expected to have to travel about three days before arriving where there was much chance of seeing elephants, for the Uganda porter, after about three hours' marching, begins to feel like taking the rest of the day off.

"We were very lucky, however, and the first day after we started our guides found fresh elephant tracks on the road, and followed only a couple of hours before coming up to them. We sent the safari ahead to camp and waited for our trackers, who had gone off at once, to come back and report. We had to wait only a short time. Some of them soon returned, saying that they had seen the herd, six bulls, and had left one of the trackers to keep watch.

"Somehow we managed to miss this man and were much perplexed as to what to do. We did not dare to shout for fear of frightening the herd. At last we heard the tracker whistle, and he presently came up and reported that we were quite near the elephants. The wind was steady from them to us, and the country fairly open. By a careful approach we got within about fifty yards of them without being heard. That was quite close enough for me, as it is always a matter of conjecture which way the herd will run at the shots. They generally run up wind, which was in our favor, but it was possible that this time they might make an exception.

"It is very hard to size up a pair of tusks in a living elephant. The beast is so large that the tusks look small. However, Hoey pointed to the one on my right and said it was a good one. Another good one was behind a tree and two rather smaller ones nearer us on my left. I could see no others. I took plenty of time, knelt down, and gave the bull both barrels of my .450, aiming back of the shoulder. Hoey also fired. The other went off to our left, passing about forty yards distant. The scrub was so thick that I could not see to shoot as they went through it, but Hoey got in a shoulder shot on the next biggest, but it did not stop. The one I hit first faced toward us, and I gave him both barrels again, aiming at the base of the trunk for the brain shot. He turned slowly and I gave him two shots again, aiming for the heart, and as he went off, put two more into his back, trying to break him down. One of my first shots must have touched his heart, though, for he gradually went down, falling on his left side as an elephant almost always does when shot. He had very fine and beautifully shaped tusks which, when chopped out and cleaned next day, weighed ninety-eight pounds.

"I am satisfied now, and I never want to shoot another elephant."

Conservation Committee Appointments.

ALBANY, N. Y., April 30.—*Editor Forest and Stream*: The Conservation Commission announced the following appointments to-day which take effect May 1:

Division chief game protector, Byron A. Cameron, Saranac Lake, in place of Ira E. Featherston, resigned.

GAME PROTECTORS.

Chemung—Michael C. Murphy, Horseheads.
Wayne—George Davis, Lyons.
Washington—John J. McDonough, Granville.
Broome—Dennis E. Keefe, Binghamton.
Fulton—C. H. Masten, Gloversville.
Livingston—Lewis S. Morris, Scottsburg.
Rensselaer—Patrick F. Butler, Troy.
New York—F. Bauernschmidt, 31 Ninth Ave.
Saratoga—Newton A. Scott, Greenfield Center (reinstated).
Ulster—Fred De Witt, Napanoch.
Westchester—Benj. M. Bailey, White Plains.
Allegany—Verne A. Zimmer, Canaseraga.
Albany—W. L. Delaney, Albany.
Onondaga—Elton B. Downing, LaFayette.
Steuben—Henry Hefferman, Hammondspport.
Putnam—Joseph Barry, Carmel.
St. Lawrence—John H. Mallett, Ogdensburg.
Warren—Morgan Leland, Glens Falls (reinstated).

Large Rabbit Crop in Illinois.

BLOOMINGTON, Ill., April 30.—*Editor Forest and Stream*: Antone Shappe and Thomas Faulkner, two young men of Gifford, claim to hold the record for rabbit killing in Central Illinois. They have devoted much of their time to the pastime since the corn husking period of last fall and have kept a careful record of their slaughter. In all 1,400 of the bunnies were laid low and shipped to the markets. Chicago received most of their consignments and the demand has kept up strongly through the winter. The season recently closed was favorable to the sport.

E. E. PIERSON.

The Moa

Speculations of Richard Henry

By ALLEN KELLY

SEVERAL species of flightless birds still exist in Australasia, among them the emu, the cassowary, the kiwi and the weka, but the largest of the type, the moa or *Dinornis*, became extinct so recently that it may be possible that a very old native of New Zealand could have seen a living specimen.

Maoris of this generation assert that their ancestors hunted the moa in the early part of the nineteenth century, and the finding of complete and perfectly preserved skeletons of the gigantic bird seems to corroborate the tradition. The moa was much like the ostrich in general appearance, but much larger and heavier. The leg bones of a complete skeleton in the Auckland museum are heavier than those of a large horse, and the whole frame indicates that the bird was strong enough to carry a man's weight easily. It is a Maori tradition that the moa was used as a mount by the old warriors and was a very fleet and formidable charger, but whether or not there is any credible testimony in support of the tradition I am unable to say. One sees in New Zealand pictures of Maoris riding *Dinornis*, but they are the fanciful productions of artists and are not to be accepted as evidence. Also there are pictures of Maori hunters in terrific combat with the big bird, but the ferocity or pugnacity of the moa is very questionable, and there are reasons for supposing that the bird was no more belligerent than the ostrich.

In a New Zealand Government report, printed some seven or eight years ago, I find some speculations concerning the moa by Richard Henry, the ornithologist in charge of the Government's bird preserve on Resolution Island, from whose reports I have dug out interesting matter now and then for *FOREST AND STREAM* readers. Mr. Henry takes issue with a learned professor, who asserted that sixteen species of moa lived in New Zealand at the same time. The professor, it appears, had been surprised at his own discovery, which, he said, was "a most unexpected result, since all other great flightless birds inhabit each its own country or district. In the whole of Australia, for instance, there are only two species of emeu and one of cassowary, while no fewer than seven species of moa have been found in one swamp." Mr. Henry suggests that it all depends upon what constitutes a species, and says: "Under like conditions the learned professor, with a cargo of bones, would have given us at least fifty different species of dogs, when with only a cartload of bones he made us out a dozen different species of moas. There were tall, greyhound-like moas, and stout massive ones, and on down to Dandy Dinmont things not above two feet high. This great variety living together suggests the interference of men, for surely without such there would not be so many different kinds of dogs and fowls as we have with us now. There were identical species of moas in both islands, which is wonderful when we remember their aptitude for variation, and to my thinking almost proof that the old natives farmed them as we farm sheep and

transported them with the other ground birds from one island to the other."

That the moa was brought from Madagascar to New Zealand by the early Maori navigators, who sailed to and from New Zealand 600 years ago, when Englishmen were afraid to go out of sight of land, is considered probable by Richard Henry. Many words in the Maori and Madagascan languages are identical, which would indicate direct communication. That is only speculation, however, and Henry points out that if the Maoris found the moa in New Zealand, the birds, having no natural enemies, would have been quite tame, and it would have been easy to herd and tend them.

The finding of stone spear heads with moa bones is strong evidence that the bird was hunted, and Mr. Henry argues that the moa hunters were recent Maoris developed into hunters of peaceful men and then following up their calling by hunting the moa off the earth.

Mr. Henry tells of finding in the hills near Manapouri Lake a Maori oven, and near it on the surface a patch of moa gizzard stones. On the south of Te Anau, another lake, a few feet above high water, he says, patches of gizzard stones are easy to find after a fern fire, lying on the surface of alluvial soil quite apart from other stones. They are of any size from that of peas up to small hen eggs, probably representing different sizes or ages of birds, and they tell the story of how the birds died there or the hunter emptied out the gizzards he wanted to carry away for food.

The most convincing evidence that the moa was exterminated but recently is given by Mr. Henry in these words:

"There was an old village at Te Anau occupied perhaps as late as 1840, but also for a very long time previously, as shown by the distance of some of the sites from the slowly receding lake and its driftwood. Yet within a stone's throw of the lake, between the little dunes, a party of us found a basketful of big charred knuckles and broken moa bones, with the charcoal in the fire-place still on the surface, as if it had been used only a few years before. When I first went up there, arrow heads (or spear heads) and pieces of moa bone were common finds."

The following paragraph is from the Otago Witness of the 15th of December, 1898: "Last Tuesday, while two dredgemen belonging to the Earnsclough dredge were breaking down the face to allow of the dredge working into the bank, one of them, Mr. Coad, picked up a moa's egg. A fall of earth consisting of sandy loam had just come down in front of the dredge, when they saw the egg floating into the well hole. Mr. Coad picked it up, placed it on the deck, and proceeded to examine it. The egg was perfect, having all the appearance of having been but shortly laid. There was not a crack in it nor a scratch on it. It measures in length seven and one-half inches and five and one-half inches in width. Mr. Coad has been offered £75 for his find, but he refused the offer."

[Since the first published announcement of the discovery of the moas seventy-five years ago, these birds have been the cause of endless speculation. Their enormous size, the abundance of their remains, and the many curious circumstances connected with them, stimulated the imagination of all who learned about them.

As a matter of fact, nothing is known as to when the moas were exterminated. One naturalist believes that in the North Island they became extinct soon after the arrival of the Maoris, which was 700 or 800 years ago. Another ornithologist thinks that in the South Island they lasted much longer, perhaps "down even to the time that Captain Cook visited New Zealand." What is certain is this, that in dry caves bones with the dried flesh still clinging to them, skin, feathers and eggs of which the inner membrane has not disappeared have been found.

Mr. Henry's conjectures sent us by Allen Kelly are speculations and nothing more. It may even be questioned whether we shall ever learn much about the time when the moas existed.

These great birds, some of which must have stood twelve feet high, were probably herbivorous, and may very likely have fed on the shoots of the ferns so abundant in New Zealand.

Five genera have been recognized, with about twenty species. In size they ranged from that of a turkey to the great height just mentioned.

One of the most interesting things about the moas is the almost complete absence of the wing. These birds were *Ratotæ*—the group containing the ostriches, rheas, cassowaries and emeus.—
EDITOR.]

Camp Foods.

Editor Forest and Stream:

As one of your oldest subscribers, I am going to ask you why you don't give us an article on camp foods?

Like most other readers of out-door magazines, I am thoroughly familiar with the always interesting but somewhat stereotyped lists of foods to be carried when "hitting the trail," a time when every ounce of superfluous weight must be done away with and only the actual necessities for sustenance of life can win pack-room.

But somehow or other most, if not all, of the articles on camping out—and here I am not referring to your publication alone—seem to be based on the idea of the exploring party. Now, I believe that, as a matter of fact, there are one hundred of your readers who spend their summers in fixed camps to one reader who, with a gun, a fish hook, an ax and a pinch of salt, dares the unexplored wilderness.

My own experience of tent-life dates back about thirty years, and while my trips have been confined to North America, yet a man who has tried Nova Scotia and Florida, the Temagami Region and the Texas coast, the Maine forest and the California desert, can claim some little knowledge of how to live out-doors.

Instead of articles telling the readers how much they can do without in the way of extra food supplies and camp comforts generally, why don't you give us an article on the many camp luxuries, insignificant in bulk and inexpensive in price, you can take along with you just as well as not.

When I first began to go on camping trips, about the only foods we had were sardines and

potted ham. Nowadays it is perfectly possible to outfit a camp with package food supplies at a great saving in convenience and at no extra cost, because of the elimination of waste.

Just to mention a few items—there's soup, bouillon cubes, beef extracts, concentrated clam broth, any kind of canned meat or fish you can think of, any kind of vegetable, all kinds of crackers, evaporated milk, condensed milk, malted milk and—but I could spin the list out indefinitely.

Of course, a man could pick up a knowledge of these things by reading advertisements, but these package food people don't seem to advertise in the magazines devoted to men, and the average reader of these publications is too apt to absorb the idea that nothing should be taken into camp that you can do without. Roughing it is all right—within limits. But those of us who spend a good part of each year in the open—at least those of us who "have come to forty year"—see no valid objection to a little comfort along with our fresh air. RICHARD MONTGOMERY.

Massachusetts Stops Sale of Game.

AFTER three months of the hardest fighting ever known in the State of Massachusetts over bills for the better protection of wild life, last week the House of Representatives passed, by a vote of six to one, the Senate's bill to stop the sale of all native wild game in the State of Massachusetts, to promote the sale of game bred and reared in preserves, and to permit the sale of certain species of foreign game. The tagging system, which is working so well in New York, is also provided for. A bag limit bill was also passed, immediately after the no-sale measure.

During the whole of the present session of the Legislature, the market gunners of Massachusetts and certain game dealers have made most determined efforts to repeal the present law that prohibits spring shooting, and also to defeat all new legislation in behalf of game. Five times in quick succession were spring shooting bills introduced and defeated. The advance of the Wharton no-sale-of-game bill was bitterly opposed at every point, and the opposition was strong and well organized.

The wild life protectionists of Massachusetts rallied to the defense of the remnant of game as never before. Lawyers, business men and professors left their offices and devoted weeks and even months of effort to the task of arousing the people's representatives to the serious conditions now affecting the remnant of game and about to compass its extermination. The organized sportsmen of Boston and Springfield, the State Audubon Society, the American Bison Society, the Boston Society of Natural History, and a strong contingent from Harvard University, formed an army of defense that proved effective. The campaign was strongly supported by the New York Zoological Society, a national organization whose field of effort is the whole continent.

During the last two years three of the great national plague centers for the sale of slaughtered game have been literally cleaned up—New York, St. Louis and Boston. There yet remains Philadelphia, Chicago, Baltimore and New Orleans. W. T. HORNADAY.

Boone and Crockett Club Dinner.

THE annual Washington dinner of the Boone and Crockett Club was held at the Metropolitan Club in that city, May 4. About fifty members and guests were present. Major W. Austin Wadsworth presided. Among those present were W. J. Boardman, Admiral Willard H. Bronson, Major Henry T. Allen, Col. D. L. Brainerd, F. H. Newell, Drs. C. H. Merriam, A. K. Fisher and T. S. Palmer, Hon. H. L. Stimson, Hon. W. L. Fisher, Hon. C. Nagel, Arnold Hague, Col. Henry May, of Washington, Royal Phelps Carroll, W. Redmond Cross, Walter B. Devereux, Henry Griswold Gray, George Bird Grinnell, Dr. Lewis Rutherford Morris, Morgan Davis, Chas. Sheldon, W. Fitzhugh Whitehouse and J. Walter Wood, of New York; Geo. L. Harrison, Dr. Cadwalader, Wilson Potter, of Philadelphia; J. Sterett Gittings, of Baltimore, Md., and Congressmen Fitzgerald, Martin and Sulzer.

After the dinner was over the discussion of the evening was devoted largely to the preservation of big game and fur-bearing animals and kindred subjects. Chas. Sheldon, chairman of the Game Preservation Committee of the Boone and Crockett Club, explained at some length the club's past and present activities. Those of the past are sufficiently well known; at present the club is endeavoring to restock with large game certain areas from which that game has been exterminated. With this in view it urges the passage of a bill now before Congress, which will authorize the President to set aside, at the request of the Governor of any State, areas not to exceed 50,000 acres in any forest reserve within that State as a game refuge, to be in charge of the Department of Agriculture. Mr. Sheldon announced that when such a bill should be passed and such refuges established, the club would provide means to stock certain areas with such species of big game as it might deem desirable.

Secretary Stimson, a long time member of the club, a great bear hunter in old days and known as having, with another member of the club, been the first person to climb Chief Mountain from the east side, spoke earnestly in behalf of this measure.

Secretary Nagel made an interesting discourse on the preservation of the fur seals, and announced his agreement with the universal testimony of naturalists that there should be no close season on male seals.

Secretary Fisher called attention to the efforts being made to establish some sort of co-ordination in the management of the various National parks. He referred to the conference of National park superintendents held last year at the Yellowstone Park, a report of the proceedings of which has been published by the Interior Department. He felt that a Bureau of National Parks, or some organization to make the management of these parks more effective, should be established.

Congressman Sulzer spoke interestingly of the importance of preserving wild life, and illustrated his remarks by some accounts of his experience in Alaska, which he has visited no less than fourteen times.

Congressman Fitzgerald, after declaring that he was not a hunter, said nevertheless that like many others he was interested in the preservation of wild life; that he had learned much by what he had heard that evening, and that he

believed that Congress wished to do the right thing in these matters, provided only it knew what the right thing was. Therefore, people who are experts on matters like those under discussion ought to furnish information to Congress so that it might act intelligently.

It seemed the unanimous sense of those present that the bill mentioned by Mr. Sheldon would obviate many objections that had been urged against other bills for game refuges that have been introduced in Congress in past years. The proposed measure leaves the establishment of such refuges for any State, and therefore can in authorities of that State, and therefore can in no sense offend the susceptibilities of the State's right people. The area proposed to be reserved is small. As a practicable proposition it seems to amount to offering to each State a State park to be taken out of the forest reservations within that State, the care of which shall be assumed by the general government.

The meeting broke up at a late hour, and to many of the old members seemed the most successful dinner that the club had ever given in Washington.

New Publications.

SADDLE AND CAMP IN THE ROCKIES, by Dillon Wallace. Outing Publishing Co., New York. \$1.75 net.

This author has spent practically all his life in invading new territory for the benefit of the reading public. His descriptions are always graphic and his details accurate. "Saddle and Camp" covers a 2000-mile survey of the Rocky Mountain region, the greater part of which the author traversed on horseback and almost all with neither guide or companion. The primary object of the trip was to investigate conditions in the big game country and the study of Jackson's Hole, the last camping ground of the American elk. Mr. Wallace has treated the subject in the most readable manner and illustrated it with excellent photographs.

THE GAME-BIRDS AND WATER-FOWL OF SOUTH AFRICA, by Major Boyd Horsburgh. Witherby & Co., London, Eng. 21s. per part.

This is a series of color plates beautifully executed with a text page descriptive of every known bird in South Africa. There are sixteen plates full page size, on which are found three varieties of snipe somewhat similar to those found in North America. The series is issued in four parts; the other three still to be published.

THE HUNTING YEAR, by William Scarth Dixon. W. J. Ham-Smith, London, Eng. 6s. net.

This book is a description of the year's fox hunting. It is written with that swinging style introduced by David Gray in "Gallops." It is prettily illustrated with pen drawings and is a worth-while volume.

THE FORESTER'S MANUAL, by Ernest Thompson Seton. Doubleday, Page & Co., New York. 141 pages, \$1 net.

This is No. 2 of the Scout Manual series. It tells how to identify trees, the properties and uses of the different trees and much other woodcraft so well known to Mr. Seton. It is illustrated with drawings and maps.

Fishing in the Gulf Stream.

PORT CHESTER, N. Y., April 23.—*Editor Forest and Stream*: Lansing Zabriskie, the young son of Mr. and Mrs. A. M. Zabriskie, of Aurora, N. Y., added new laurels to his piscatorial achievements fishing in the gulf stream. Fresh baits were put on two hooks and thrown out. Suddenly Lansing felt his line being pulled down. He had a strike, and great was the surprise of father and son to see a sailfish jump. Mr. Zabriskie saw that his line moved under the line of his son and believed he had a hammer-head shark, but soon discovered that his strike was another sailfish which jumped, and the fun

MASTER ZABRISKIE AND HIS CATCH.

and sport began. Mr. Zabriskie gave instructions to the men in the boat to keep the boat along with the boy's fish. In twenty minutes Mr. Zabriskie had his fish landed, while his son kept playing his sailfish until he had it near the boat and remarked that he was almost done with his work, when the fish went out again, and after the end of another ten minutes, the prize was in the boat. The fish was seven feet and one inch in length and weighed forty-eight pounds. The fish caught by Mr. Zabriskie was smaller. Lansing was only seven years old, and began to handle rod and reel three years ago from the ocean pier, and last season was his first experience at deep sea fishing, and he has most successfully caught kingfish and amberjack.

A. M. Z.

Illinois Casting Club.

CHICAGO, Ill., April 30.—*Editor Forest and Stream*: The opening of our regular season will be on the 18th of May, upon which day the events will be half-ounce accuracy bait, half-ounce distance bait, accuracy fly and distance fly. To the member making the highest combined

averages of the quarter- and half-ounce accuracy bait, accuracy fly, and the light tackle dry-fly accuracy will be given the high average fly and bait award and token.

To increase interest among new members and those who have not been casting regularly, there will be given to the member making the highest average for the season, in either of the accuracy bait events, or the accuracy fly events, the adept high score award and token. One bait and one fly award. Only members who have never before completed a season's score will be eligible to these awards. Above awards will not be given unless competed for by two or more members.

A new and very liberal re-entry rule is in effect. Members who are compelled to be absent on a regular contest day may take a re-entry for that event on any day during the season when such an event is scheduled, or upon either re-entry day at the end of the season. However, no more than two scores of any one event may be cast on one day.

Members desiring to cast their scores on the day following the regular contest days, must give written notice to the secretary prior to the first contest day.

It is very desirable that all members should possess and wear a club badge. The secretary will take orders and furnish the same at \$2.50, actual cost.

The club is provided with a full complement of fly-rods for the use of the members who desire to play any, or all, of the various fly games. These rods will be found at the park every Saturday and Sunday. Keys for the rod locker and for the house and boat will be furnished by the captain, at cost.

For our invitation tournament, May 12, the executive committee has decided upon the following events: The quarter- and half-ounce accuracy bait and accuracy fly.

A. F. SWISHER, Sec'y.

Revised New Jersey Fish Laws.

THE open season in Delaware River and bay, and also their tributaries where the tide ebbs and flows, is as follows:

June 15 to Dec. 1, both dates inclusive, for black, calico, rock and white bass, crappie, pike, perch, pickerel, pike, white and yellow perch and trout.

The open season in lakes, ponds and other waters is as follows:

May 30 to Nov. 30, both dates inclusive, for black bass, Oswego bass, white bass, calico bass and crappie.

April 1 to July 15, both dates inclusive, for trout.

May 20 to Nov. 30, both dates inclusive, and month of January, for pike and pickerel.

May 20 to Nov. 30, both dates inclusive, for pike perch or wall-eyed pike.

The taking of yellow and white perch with hook and line is permitted at all times of the year except in Delaware River and bay, and also their tributaries where the tide ebbs and flows.

Salmon in St. Mary's River.

SHERBROOKE, N. S., April 14.—*Editor Forest and Stream:* Speaking of salmon and trout fishing in St. Mary's River: Those who have fished here, as well as elsewhere, say it is one of the best salmon streams in the Province. Salmon begin running very early, it is believed before the ice is off; but on account of late springs and so much snow water in the river, we do not get many until June. This month is always the best, although some years quite a few have been taken in May, when it so happens that the water is right—i. e., no snow water and not much rain.

Below is an incomplete list of salmon caught with fly in this river in 1910 and 1911. It is impossible for me to get a correct number of fish, so I have only recorded those I got correct weight of. This list only refers to the first mile of river above tide, which is all that we of Sherbrooke fish, as that takes up to a falls, above which we seldom take our canoes, although above the falls there are two miles of good fishing. Then comes two and a half miles of dead water with four or five miles of good fishing above it again. But on this upper part there are generally more rods per pool than down here, so that I think this would be the better place for your correspondent. But if he could be here in June, too, his chances would be good for getting more fish, though the average weight would likely be less. As I have mentioned canoes in the foregoing, I might here say we use a flat-bottomed canoe (punt, or batteau) built for the purpose, as very little of the river can be fished from the shore.

In the following list, though the average weight is small, there are quite a few salmon taken over twenty pounds. Last year twenty-seven pounds was the largest; in 1910, twenty-five pounds.

List of salmon caught with fly in first mile above tide in St. Mary's River, 1910-11:

	Number of Fish.	Average Weight, Pounds.
1911.		
May	6	15
June 1 to 15.....	22	13
June 16 to 30.....	54	8
July	7	6
1910.		
May	12	22
June 1 to 15.....	7	11
June 16 to 27.....	17	12

Although the above list is far from complete, I merely give it to show you that if this river was fished continuously by expert fishermen it would make as good a showing as any. As yet it is very little known, but there are a few Americans who come here every year. Trout fishing on Liscomb River, I believe, cannot be beaten in Canada.

Trout fishing does not begin in St. Mary's River until after July 1, but in a river quite near here there is excellent sea trout fishing in June. It is called Indian River. Last year a gentleman from Ivoryton, Conn., and I went to this Indian River trout fishing, by motor boat, and he had such good luck that he made the second and third trip, each time having such good luck that when he left he said he would go again another year, if spared.

Toward the latter part of May the chances for getting fish from eighteen pounds up would

be good; but as this is a lumber country and there are quite a lot of logs to come down stream this year, a card from you or your correspondent shortly before he is ready to come, asking the state of the river, might prevent his getting here at an inopportune time, or any other questions you may wish to ask, I will only be too glad to answer.

V. J. PYE.

San Francisco Fly-Casting Club.

SAN FRANCISCO, Cal., April 28.—*Editor Forest and Stream:* The second contest of the season was held yesterday and to-day on Stow Lake. The members were favored with fair weather, somewhat variable on both days:

C. A. Kierulff, E. A. Mocker and J. F. Burgin acted as judges; C. H. Kewell as referee, and E. O. Ritter as clerk.

All the fish laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

Fish and Fishing in Illinois.

BLOOMINGTON, Ill., May 6.—*Editor Forest and Stream:* Fishermen along the Du Page River have decided to ask the fish commissioners to forward a stock of bass fry from the State hatcheries, and it is expected that the appeal will be respected, as it has been a number of years since this stream was given any attention of this kind. Fish wardens are now engaged in looking for seining operations. The spawning season opened May 1 and the use of nets is prohibited until July 1. Fishing with hook and line is now a popular sport and fine strings of game fish are being caught in the Illinois, Kankakee, Fox and Du Page rivers. The high water this spring has interfered with the sport to some extent, but an improvement is looked for with more settled weather in May.

E. E. PIERSON.

One of the Old Guard.

NEW YORK, N. Y., April 23.—*Editor Forest and Stream:* I have not written for FOREST AND STREAM since about 1883, when I was an occasional contributor. As a matter of fact I am one of your oldest subscribers, having been so since Charles Hallock, whom I knew very well, first brought out your paper. I have always been a rifle shooter and a big-game hunter, and when I tell you that although sixty-five years of age I shot twelve stags and three roebuck, all with the rifle, last fall in my Scotch deer forest, you can see that I can still hold the rifle straight, and I hope to do as well this coming season.

EDWARD HUBBARD LITCHFIELD.

Fish Warden "on the Job."

BLOOMINGTON, Ill., April 30.—*Editor Forest and Stream:* William Courey, District Fish Warden, objected to the action of the Peoria county State's attorney in permitting Samuel Woodruff to plead guilty to the charge of shipping one black bass after Courey had seized a barrel of the fish said to have been consigned by the defendant. Woodruff was fined \$5 and costs. Courey has sworn out another warrant and declares that he will keep issuing warrants until the courts assess an adequate fine.

E. E. PIERSON.

Fishing Clubs with Stream Rights.

MANY prominent fishing clubs have "fishing rights" to streams. In Pennsylvania we find the Paradise Valley Club, at Henryville, on the west branch of Broadhead. The Blooming Grove Park Club controls the upper waters of Shiloh. In New York State the Wyandanch and Massequogue, at Deer Park, and the South Side Club at Wading River (these three being on Long Island). In Dutchess county, the Clove Club has a fine lease on two well stocked streams.

The National Tournament.

CHICAGO, Ill., May 2.—*Editor Forest and Stream:* The fifth international bait- and fly-casting tournament given by and under the auspices of the N. A. S. A. C., will be held in Chicago on Aug. 15, 16 and 17.

J. M. SMITH,
Sec'y Tournament Com.

NATURAL HISTORY

Botany in the Rain

By W. G. BOWDOIN

IT was a lowering day on Saturday, April 27, the day set for the Brooklyn Institute Botanical Field Meeting at Annadale Station, Staten Island. However, your true botanist is nothing if not enthusiastic, and in spite of threatening weather conditions, E. L. Morris, acting curator-in-chief of the Brooklyn Institute Central Museum, mustered a little company of fourteen, and a start was made to the botanical hunting grounds that had been chosen at Annadale, Staten Island.

One of the first of the botanical units encountered was the prairie willow, characterized by its flowers in catkins. It shone bright green and its leaves were long and inversely lance-shaped. Passing an example of the hobble bush, or as it is sometimes called, the wayfaring tree, the spring beauty in full white flower was encountered. This is a charmingly delicate bloom that is found at its best in open moist woods, and the woods were certainly both open and moist on this trip. Thomas Wentworth Higginson speaks of this flower in his delightful essay, "The Procession of the Flowers," in which he refers to the legend that this flower (*Claytonia*) is the Indian Miskodeed, and was said to have been left behind when mighty Peboan, the winter, was melted by the breath of spring. It often lingers until the end of May. Then came some of the ephemeral wood rushes, and more violets.

The party presently found themselves on the road leading from New Dorp to Tottenville and known as the Amboy Road. Here some sand violets were found, then some osmundas, throwing up their curious croziers or "fiddle-heads" and nestling close beside a pond of dark-colored water. Some members of the pulse family grew nearby. These were the false or wild indigos. From such plants some poor indigo was at one time derived. The blooms have not yet appeared. Almost in the direct path was found a hickory about eighteen inches high. In its immediate vicinity was an oak in the making. It had not reached the height of the hickory, but was a fair example of the genus of which there are eight species in the Staten Island woods. A thistle was next seen with its spiked leaves now very soft and flexible, but which become later very stiff and spiny. Some gray birches grew along the route. Then came some wind-flowers or wood anemones, delicate little plants that are among the first to welcome the spring time. Some of the wood asters showed signs of life and seemed to wish to report progress and give promise of a wealth of flower in August and September. Some dwarf blueberries (early) were growing a little further on. Following these the party found some wood-betony, or lousewort. These will produce yellow and purplish red flowers during May. These follow closely the earliest of the spring flowers. A

little to one side of the indeterminate route taken, the party came upon some rotting wood that becomes phosphorescent in the dark. This phenomenon arises because of the fungus growth upon the woody surface, and differs entirely from the phosphorescence observed in certain of the sea weeds which is due to the fluorescence and opalescence of some of their albuminous substances or from the iridescence of their cuticular layers.

Crossing a little brook some fresh water algae (green slime) was observed. These plants generate oxygen gas and sometimes in sufficient quantities to light bubbles of it with a match. Wild lilies of the valley grew near this brook. This was true also of some wild geranium (cranesbill). The coarse and singular skunk cabbage, with its ill odor, was likewise found here. The inflorescence had passed, but it was growing lustily.

Wild onion, adder's tongue (lily), partridge berry that had survived from last season, small pyrola, common fleabane, not yet in flower, touch-me-not of the jewel weed family, a swamp pink, some sweet white violets, plantain seedlings, young plants of yarrow, wild strawberry plants in bloom, a flowering shadbush or service berry in white flower and indicative of the open season for shad, were also among the botanical finds on this trip. A curious oak gall was also found. This gall was produced by the sting of the gall wasp which deposits its eggs simultaneously with the sting. These cause a malformation of leaf tissue that are called galls. It is generally possible to determine the insect or fungus by which they are induced.

Another interesting find was a chestnut tree doomed by the cank that has wrought so much destruction of these trees in our parks and forests where the chestnuts once grew abundantly.

Just before leaving the woods the party observed some red cedar stumps sawn straight across, which indicated the activity of the lead pencil manufacturer who must have red cedar with which to make the useful lead pencils, even if he has to buy up the red cedar fences around a man's farm, pay for them and throw in a metal fence by way of lagniappe.

Results of Protection.

RALEIGH, N. C., April 17.—*Editor Forest and Stream:* The writer was walking last Sunday, an exquisite day, in the late afternoon in the woods and fields, with some of his little friends, and a lad among them remarked: "Our birds are getting gentler. I told mother the other day I really thought the birds want to play with us, like the squirrels do in the Capitol Square and all about town." Here we were, in the glorious April weather, in a world of flowers; sometimes

the ground all purple with violets, of several varieties; the dogwood almost like a snow drift in the woods, the yellow jasmine tossing its golden bells from many a bush, the azalea holding up its pink trumpets and the trees showing every tint of green; with song birds everywhere, mockingbirds, catbirds, thrushes, red birds, song sparrows and cooing doves, and woodpeckers of several kinds, including the pileated, coming and going or calling. Presently what the little boy had said came home to us, for having gathered a large armful of azalea, a hummingbird, an early visitor, by the way, came right to me and went from flower to flower, dipping also into some purple lilac and jasmine. He did not seem frightened when I called the children to come and see him, and he went round and round the big bouquet, sometimes within six inches of my face; his tiny eyes like beads, and the soft whirr of the wonderful wings as dainty as those of a butterfly, while he turned his delicate bill this way and that into the cups of the flowers, then suddenly, turning about, faced me for an instant and went away like a bullet. The children were delighted at the sight and as we wandered yet further afield, they spoke of what had struck even them as a wonderful increase in the number of song birds. It was almost dusk when we came home, and on the roadside a mockingbird in the top of an oak was doing grand opera and uttering notes which would make even Tetrizzini envious, and in the city, on a tree almost above a street railway line, another mocker was singing farewell to the day. After night had fully come, this same bird was heard continuing his song. The Audubon Society has done much in doing this one thing, the protection of song birds and the bringing about of greater love for them.

FRED A. OLDS.

Plant Lice—A Warning.

THE abundance of plant lice eggs on twigs sent to this office and numerous aphids upon young apple leaves are typical of conditions obtaining in 1909, a year when injury by these prolific pests was exceptionally severe. We then heard for the first time of "Aphis" apples. Apparently all that is required is a continuation of the cool backward weather to duplicate the outbreak of three years ago. The reason for this is that the plant lice multiply rapidly at rather low temperatures, while their natural enemies, such as lady beetles or lady bugs, flower flies and small parasites, are comparatively inactive under such conditions.

It is obviously advisable to watch developments closely and if the aphids become excessively abundant, spray before the leaves are badly curled and the pests therefore nearly inaccessible, using a whale oil soap solution (one pound to six or seven gallons of water), a kerosene emulsion (the standard formula diluted with nine parts of water), or a tobacco solution. There are several excellent tobacco preparations on the market. It is essential in control work of this character to hit the pests with the insecticide. The necessity for this spraying must be determined in large measure by local conditions and the probability of cool weather continuing long enough, so that it is unsafe to depend upon natural enemies. There is an excellent opportunity for the exercise of judgment by the practical fruit grower. E. P. FELT, State Entomologist.

CORRESPONDENCE.

FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but are not responsible for the views of correspondents. Anonymous communications will not be regarded.

SUBSCRIPTIONS.

Terms: \$3.00 a year; \$1.50 for six months. Single copies, 10 cents. Canadian subscriptions, \$4.00 a year; \$2.00 for six months. Foreign subscriptions, \$4.50 a year; \$2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line (\$2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra.

Special rates for back cover in two or more colors. A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Advertisements should be in our hands by the Monday morning previous to date of issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

FOR GAME REFUGES.

THE annual newspaper talk about the starving elk of Jackson's Hole and the Yellowstone Park is over for another season. The snows have largely disappeared from the high country, and the elk have withdrawn from the lower lands to the mountains, where in due time the calves will be born, to swell the herds, which next year will be again driven down by the snows again to starve. It is reported that during the winter about 250 elk were captured in Jackson's Hole and in the Yellowstone Park, and transferred to National and State game preserves in different parts of the country.

This action is not a remedy for the deplorable condition of the elk in the Yellowstone Park; it is only a palliative.

In and about the Yellowstone Park are enough elk to establish important herds in different National parks and in game refuges which ought to be set aside in forest reserves over the Western country, where elk were once abundant. The expense of establishing such herds would not be great, if only we had the place to put them. Many States wish to see the elk replaced within their borders and protected there. Many States—or, if not State Governments, at least the citizens of States—would be glad to pay the expenses of transporting these animals from the place of capture to places within the State where they should be set free.

Within the great forest reserves of the West are many wide areas unsuited for agriculture,

where there is no great amount of timber, and where elk, if protected, would flourish, increase and ultimately scatter out from the protected areas to stock adjacent territory.

There is nothing new about this proposition. Nearly twenty years ago, in the first volume of the Boone and Crockett Club books, it was pointed out that the forest reserves offered then—and they do now—opportunity for the preservation of every species of large game known to the United States, and that by proper protection a full supply of all these animals might be perpetuated for all time. Soon after this the term game refuge—now so well known—was coined and came into use. Game refuges offer salvation to wild things.

There is now before Congress a bill which authorizes the President, on the request of the Governor of any State, to set aside an area not exceeding 50,000 acres in any forest reservation in that State as a game refuge, which shall be under the charge of the Agricultural Department. The passage of such a measure would justify the restocking of such refuges with many sorts of game, and one game protective association, the Boone and Crockett Club, is prepared to furnish funds to restock one or more such reservations with native game, presumably elk.

Those interested in the preservation of our large game animals will feel a deep interest in a work so practical and so useful as this.

FEDERAL PROTECTION FOR MIGRATORY BIRDS.

BILLS to provide Federal protection for migratory birds, introduced in the United States Senate by Senator McLean, and in the House of Representatives by Congressman Weeks, have both been reported favorably out of committee. The former was considered by the Senate Committee on Forest Reservations and the Protection of Game, and the latter by the House Committee on Agriculture.

In urging the necessity of this legislation, the American Game Protective and Propagation Association, of 111 Broadway, New York city, says:

"Millions of dollars can annually be saved to the people of the United States by wise and conservative treatment of the enormous natural resources represented by our migrants. Under present conditions countless numbers of ducks, geese and shore birds are slaughtered at a time when every female killed means the destruction of a small flock. At all times the killing goes on at a rate that is out of all proportion to the natural increase."

E. V. Visart, State game warden of Arkansas, reported in his endorsement of the Weeks' bill that 90,600 birds were sent from Mississippi county in one shipment on Oct. 16, 1911. According to the game warden of Louisiana there were 4,265,585 ducks, geese and shore birds killed in that State during the winter of 1910 and 1911.

The favorable report on the McLean bill by the Senate committee contains the following:

"Game commissioners and other officials representing forty-three of the forty-eight States of the Union, together with some of the leading ornithologists of the country, appeared before your committee and their testimony, based upon years of experience and practical observation, was conclusive of the fact that State control of migratory birds must, from the very nature of

the surrounding temptations and conditions, end in failure."

It is further pointed out in this report that the annual loss to the country through insect pests amounts to from seven hundred and ninety-five to eight hundred million dollars. To bring home the significance of these figures the report adds that "there are about six hundred colleges in the United States to-day. Their buildings and endowments have been centuries in accumulation. The values of the college and university buildings is estimated at \$260,000,000, and the endowments at \$219,000,000. If they should be destroyed to-morrow—buildings and endowments—the insect tax of one year would replace them and leave a balance sufficient to endow thirty-two new universities in the sum of ten million dollars each.

There are, in this country to-day, about twenty million school children, and the cost of their education has become by far the heaviest tax laid upon the surplus of the country, yet it costs more by many millions to feed our insects than it does to educate our children. If there is any way in which this vast and destructive tax upon the national income can be prevented or stayed or resisted in any appreciable measure, it would seem to be the part of wisdom to act without delay.

In conclusion the report says: "All of the foregoing evidence goes to demonstrate the existence of a natural economic relation between these three orders of life (vegetation, insects and birds). There is a sort of interdependence, and the existence of each one is dependent upon the existence of the others. But for the vegetation the insects would perish, and but for the insects the birds would perish, and but for the birds the vegetation would be shortly destroyed by the unchecked increase of insect destroyers.

"It is the earnest recommendation of your committee that the pending bill receive favorable consideration."

It is our observation that State control of migratory birds has been a failure, beyond peradventure; that the sooner we get Federal control of migratory game and insectivorous birds, that much sooner will the destruction of useful migratory birds cease, therefore Congress should pass the McLean bill and pass it at once.

GOVERNOR DIX IN BLACK FOREST.

THAT Governor Dix has forest conservation seriously at heart is evidenced in the sentiment expressed in the following paragraph:

"The principal object this time of my going to Europe is to devote some weeks of study to forestation in the Black Forest, which I have not visited for several years. This subject is of vast importance in America, where a policy of forest preservation and development has become a positive necessity, and I am pleased to think that I have made it one of the features of my administration."

The Governor's action in this case is in line with his attitude in all other forest, fish and game matters that have come before him during his administration. First, to get personal knowledge of conditions as they exist before acting upon them. Second, to sign only such bills as his investigation leads him to believe are just and to the best interests of the greatest number. As Goethe puts it, "Mehr Licht erst," with decisive and immediate action afterward.

YACHTING

Ticks from the Ship's Clock.

The recently organized Twin City Power Boat Club, composed of motor boat owners along the Illinois River and Illinois-Michigan Canal, has voted to construct a boat house at a convenient point near La Salle. F. B. Gerard and E. C. Stafford, members of the club, have two hydroplanes which will probably be the fastest craft of the Illinois Valley, capable of developing a speed of 30 miles an hour. At the last meeting of the recently organized Joliet Motor Boat Club, twenty new members were admitted and various amusement features for the summer discussed. A series of races on the canal will be arranged. Buoys will be placed at dangerous points along the canal and unsightly rubbish along banks will be removed.

The 18-footers on the bay will be designated with their class letter, I, during the coming summer, instead of with an Indian head, as during the past two or three years. This was decided upon at a meeting of the Narragansett Bay Eighteen-Foot Knockabout Association held last week. The reason given for the change is the fact that the sails will fit better, if there is no large red Indian head painted near the peak of the mainsail. The paint makes the canvas stiff and is objectionable, especially on very light sails. During the past few years the knockabouts have been the only boats sailing in the regattas on the bay which have not been designated by a class letter.

A new racing catboat built by Wardwell & Goddard at Bristol for R. G. Meyer, of Providence, is to have a trial this week. This boat is for the 22-foot class and is named Venture. She is 22 feet over all, 21 feet 7 inches waterline, 10 feet 3 inches beam and is fitted with a center-board.

The Rhode Island Y. C. opened its house last Saturday with a mess dinner at which were many members and visiting yachtsmen.

The regatta committee of the Barrington Y. C. elected last week is: Thomas Delano, W. H. J. Watson, Samuel F. Bowden, Jonathan M. Barney and J. Reginald Morse.

Not a single sailing yacht has been built at

Herreshoffs this winter. A few motor boats have been turned out, and as they embody some new ideas in models, their work will be watched. It is the first time in twenty-one years that no sailing yachts have been built at Bristol.

Henry C. Ward.

HENRY C. WARD, a yachtsman well known about New York, died May 2 at his home, 718 Fifth avenue. He was at one time vice-commander of the New York Y. C. The sloop Sagitta and the schooner yacht Clytie were among the yachts which he owned. Mr. Ward was born in New York in 1845, the son of the late Sylvanus C. Ward. He was a member of the New York Chamber of Commerce and a director in the German-American Insurance Company. His clubs were the Union, Union League, Raquet and Tennis, Turf and Field, Country, New York Yacht, Church, Huguenot Society, Ardsley and the Metropolitan of Washington.

Yachts Change Hands.

THE Hollis Burgess Yacht Agency has sold the 35-foot waterline Lawley-built sloop yacht Jane, owned by Robert A. Boit, of Boston, to Hon. William Caleb Loring, of Boston, who will use her on the Maine coast; the 40-foot motor boat Scamp, formerly owned by John D. Crosby, of Boston, for use on the Maine coast; the Hull one-design class 15-foot knockabout Arab, owned by John Griffin, of the Mosquito Fleet Y. C., to Grosvenor Calkins, of Boston, for use at Gloucester, Mass.; and the 30-foot motor boat Puffing Pig, owned by H. P. Benson, of Salem, Mass., to a prominent member of the Boston Y. C.

Delaware River Yachting.

THE nineteen clubs comprising the D. R. Y. R. A. are enthusiastically making preparations for the week's cruise in Chesapeake Bay to start May 22. The very attractive schedule of this cruise was announced in FOREST AND STREAM several weeks ago.

Among the clubs in the association are: Anchor Y. C., of Bristol; Alpha B. C., of Chester; Bridesburg Y. C., of Bridesburg; Cam-

den Motor Boat Club, of Camden; Columbia Y. C., of Bridesburg; Delaware River Club, of Torresdale; Farragut Sportsmen's Association, of Camden; Keystone Y. C., of Tacony; Norristown Motor Boat Club, of Tacony; Morristown Motor Boat Club, Morristown; Philadelphia Y. C., of Essington; Riverton Y. C., of Riverton; Trenton Y. C., of Westville, N. J.; Wilmington Y. C., of Trenton; Westville Power Boat Association, of Wilmington; Wissinoming Y. C., of Wissinoming; Woodbury Y. C., of Woodbury; West End Boat Club, of Chester, and the Yachtsman's Club, of Philadelphia.

Motor Boating

A 50-Foot Fast Cruiser.

A FINE type of the modern fast cruiser is shown in the accompanying plans by Carlton Wilby, of Detroit, for a gentleman well known in Detroit automobile circles. Although only 50 feet in length, this boat has the appearance of a much larger craft, as the design has been worked out to avoid as far as possible that top-heavy and "bunty" appearance, so often noticeable in the small cruiser.

The engines and gasoline tank are located below the bridge deck, which makes it a simple matter to arrange all engine controls convenient to the man at the wheel. As this compartment will have only a little over 5 feet headroom, this location for the engines might be open to criticism were it not for the fact that the forward end of the engine room comes under the raised deck and has ample headroom. At this end are located the work bench and lighting set.

A large double stateroom with clothes lockers and toilet room adjoining are shown forward of the engine room. The after cabin is entered from the bridge with steps on the starboard side. Toilet room and galley are situated at the forward end, and the main cabin with transom berths each side is shown aft.

A roomy cockpit is provided at the after end, with entrance to main cabin. Cockpit and bridge are sheltered with removable canopies, supported on pipe stanchions, and the bridge deck is further protected by a spray cloth.

The power plant will consist of two of the new 50-horsepower Reynolds rotary valve engines, and with this power, a speed of about 17 miles an hour is expected.

The boat is 50 feet in length, 8 feet 6 inches beam and 2 feet 6 inches draft.

A 50-FOOT FAST CRUISER.

Western Power Boat Association.

FIFTY THOUSAND DOLLARS have been subscribed for cups and cash prizes for the Western Power Boat Association's annual championship races at Chicago Aug. 10-17, in connection with the great naval pageant. The carnival will be held under the auspices of the Associated Yacht and Power Boat Clubs of America.

The central location and the unrivaled course which will be provided in the harbor make Chicago the logical place at which to hold the event.

When it was decided to hold the power boat championships here, Commodore William Hale Thompson, of the Chicago Y. C.; Commodore James A. Pugh, owner of the famous Disturbers; Commodore Thomas J. Quail, of the Columbia Y. C.; Commodore Bayard Holmes, of the Jackson Park Y. C., and hundreds of other men prominent in aquatic affairs held a round-up of the yacht and power boat men and the result was that it was decided to make the Western power boat championships and the international yacht race between Canada and the United States the nucleus for a naval pageant that would be on a bigger and grander scale than anything of the kind ever held in this or the old world.

With the power boat races and the international cup races as the base, the men in charge of the project have built up a program including the Lipton cup yacht races, a magnificent Venetian night, United States life saving service exhibitions, swimming and diving contests, water polo, aquatic gymkhana, fireworks displays, naval reviews, naval sham battles, submarines, exhibitions by United States sailors, United States Marine Corps, United States revenue cutter service, naval reserves and cadets from the United States naval training station of North Chicago, Ill.

These are a few of the events which will be carded. Many more will be added and each number will be a national exhibition in itself.

The finest cup ever presented for competition among motor boats is the \$22,500 William Wrigley, Jr., trophy, which stands five feet five inches high. This cup is a perpetual trophy, but the donor, in order that the winner each year should have something to show as a permanent possession for his trouble, has made provision that a 10 per cent. replica of the big trophy shall be given to the winning boat. The big cup is a \$5,000 affair and the trophy which goes into the permanent possession of the winner is therefore a beautiful \$500 cup eighteen inches high and an exact model of the gigantic parent piece of silver.

The big cup is to be handed over to the yacht club whose nomination captures the free-for-all speed race, and is to be returned to Chicago in time for the race the year following. The trophy is expected to excite more interest in fast boats than any other in existence, and there is every prospect that the famous European boats will make an attempt to lift it from the Disturbers, Wigwags, Dixies and other wonderful hydroplanes which will battle for it this summer.

In order that a replica cup shall be provided for every year for the winner of the big race, Mr. Wrigley has set aside an endowment fund of \$17,000. The \$5,000 trophy, together with the \$17,000 trust fund and the \$500 necessary for the replica this summer make the whole gift equal to \$22,500.

Besides this great piece of silverware there are numerous other cups. The Weckler trophy is a \$1,000 affair, while there are dozens of other cups, ranging in value from \$100 to \$500. In addition there is a sum of \$4,750 to be handed out in cash prizes. Altogether there will be over \$40,000 in cups and cash prizes for the motor boat men. There will be prizes for hydro-aeroplane races, and then the \$5,000 Yacht Racing Union challenge trophy, which will go to the winner of the international yacht race, in which the Royal Canadian Y. C.'s entry, Patricia, of Toronto, Ont., will battle with the Chicago Y. C.'s new boat, Michi-Kagou.

The big motor boat cruise of the Great Lakes will end here during the pageant, and this city

will be the headquarters of the power boat brigade of the Middle West.

Commodore James A. Pugh, owner of the famous Disturbers, together with Commodores Thompson and Quail, will serve as directors of the Associated Yacht and Power Boat Clubs of America. The address of the body is 952 First National Bank Building, Chicago, Ill.

John R. Young, who handled the military tournament at Chicago last summer, has been

chosen manager of the big pageant to be held under the auspices of the yachtsmen, and all information can be obtained at the above address.

Lake St. Louis M. B. C.

A REPRESENTATIVE bunch of motor boat owners got together last week in Lachine, Canada, and organized a club under the title of Lake St. Louis Motor Boat Club. The following officers were elected:

Commodore, Mr. Robt. Lucas; Vice-Commodore, J. H. Garth; Rear-Commodore, Morris Shea; Secretary-Treasurer, Alex. Y. Paxton; Committee—W. M. Brown, W. E. Ranger, H. L. Dinning, A. McLean, F. A. Shackell.

These officers are men who have spent seasons on the lake and are thoroughly familiar with conditions. The club fills a long felt want and from the enthusiasm displayed at the meeting, it undoubtedly is going to be a successful club. Applications for membership will now be received by Mr. A. Y. Paxton, Secretary, Lachine.

Atlantic Y. C. Motor Boats.

THROUGH the great enthusiasm of J. Stuart Blackton in motor boating and the fact that so ardent a yachtsman could become devoted almost entirely to the chug chug, the Atlantic Y. C., of which he is commodore, has, for the first time, taken up motor boat racing. Thus far three speed contests are scheduled, the dates being May 30, July 6 and Aug. 23.

A trophy is offered for the boat making the best record in the three regattas. This cup will bear the title, "Motor Boat Championship Trophy of Gravesend Bay," and will be perpetual.

The Atlantic Y. C. will have its formal opening on May 18; commission date, May 25. Yachting will, of course, have the big place on the program of the season. Thus far eight

Saturday races have been arranged with the annual race, Aug. 20 to 23. Annual regatta will be held on Labor Day.

Canoeing

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—Clemens Schroeder, 3056 Perry avenue, New York, N. Y., by Harry J. Dietrich; Harrie Fortye, 547 West 142d St., New York, N. Y., by Albert D. Berning.

Western Division.—Frank W. Coolidge, Jr., P. O. Box 545, Kenilworth, Ill., by Kellogg Huntington; Adolph A. Henkel, 3824 Sheffield avenue, Chicago, Ill., by J. G. Roberts; Milton H. Trigg, 643 East street, Rockford, Ill., by Walter E. Jordan.

NEW MEMBERS ELECTED.

Central Division.—6412, W. H. Hoffman, care of Heeren Bros., Pittsburgh, Pa.; 6413, T. R. Barlow, care of E. V. Babcock Co., Pittsburgh, Pa.; 6414, S. B. Ridge, care of Bell Telephone Co., Pittsburgh, Pa.; Earle Moon, care of Pittsburgh Dry Goods Co., Pittsburgh, Pa.

Western Division.—6408, Benjamin S. Pfeiffer, 1108 N. Madison avenue, Peoria, Ill.; 6409, Donald W. McAllister, 328 N. Main street, Rockford, Ill.; 6410, W. C. Wilcox, 407 North Avon, Rockford, Ill.; 6411, Elmer E. Magor, Culhane Building, Rockford, Ill.

Western Division, A. C. A.

THE members of the Western Division of the American Canoe Association have completed arrangements for a trip by canoe along the Fox and Illinois rivers on May 30, Memorial Day. There will be two hundred in the party. Races at Ottawa and an encampment at Starved Rock for several days, will be a feature. The tour will conclude June 2.

 Jan. 22-25.—Pinehurst (N. C.) Country Club. Leonard Tufts, Pres.

DRIVERS AND TWISTERS.

The Forreston Gun Club, of Bloomington, Ill., has been organized with fifteen members, and it is believed that many others will join during May. A series of tournaments will be arranged.

The Sikeston (Mo.) Gun Club advises us that on account of flood conditions in that vicinity the gun club has decided to postpone to later dates the tournament registered for Sikeston, Mo., May 30 and 31.

Buckwalter's target tournament will be "pulled" May 17 and 18, at the Phoenixville (Pa.) Gun Club. Three trophies are offered. Three moneys will be paid to any one amateur or professional in first three men, shooting entire program. Phoenixville is easy of access, being on both Pennsylvania R. R. and Reading.

Students of the University of Illinois organized the Illinois Gun Club at a meeting held this week. E. Berg was chosen president and Edward Fritchie, secretary-treasurer. A range has been set up on the new Illinois field, and there will be periodical tournaments among the members. Only students of the University of Illinois will be eligible.

Under date of April 30, from Fairmont, W. Va., Ed. H. Taylor writes: "Will you kindly publish the following correction of an error in the West Virginia State shoot program, relating to the E. C. cup race, which is scheduled for open competition on May 14. This event will start at 10:30 A. M. instead of 2 P. M., as stated in the program. The Expert traps and the trap for doubles are all ready and open for practice at any time. Monday, the 13th, will be open for any style of practice."

The Hercules Gun Club, at Temple, Pa., has just installed their new trap under the supervision of Frank Gerbert, of Reading, machinist and leading trapshooter. The club will hold an installation shoot on Saturday, May 18, at 100 targets in five strings of 20 targets. Targets will be thrown about 50yds., at 1 cent each. An optional sweep of \$1.00 in each event. Shoots starts at 1 P. M. on their grounds. Cotopaxi Swamp. All leading trap loads for sale on the grounds. A. K. Ludwig, 222 Greenwich street, Reading, Pa., is secretary.

Seven directors were elected at the annual meeting of the Danville Rod and Gun Club, as follows: Ross Kinningham, John Long, Fay Bartlett, Arch Glover, Edward Donnelly, Charles Sparks and William Wallen. These directors will elect officers at the next meeting. It was voted to hold weekly shoots at the club grounds, the marksman making the best record being awarded the diamond badge presented to the club by Col. J. W. Veatch, one of the most active members of the organization.

The Central Illinois Trapshooters' League has forwarded an invitation to the Decatur Gun Club to join the association, and the offer will be accepted. The Decatur club has completed its organization and secured new grounds two miles from the city. The membership is growing rapidly. Under the new rules adopted, shooters will be classified periodically according to the scores recorded. There will be three classes, A, B, C, and each quarter there will be a revision according to the scores at the traps.

The ninth annual tournament of Alert Gun Club at Phillipsburg, N. J., will be held May 18. It will be an Interstate Association event. Program calls for 150 targets in ten events, entrance total \$15. Money divided Rose system, with Squier money-back proviso. The Alert Gun Club is only ten minutes' ride by trolley from Center square, Easton, Pa., and the grounds are situated within forty yards from trolley line. Phillipsburg can be reached from all sections and out-of-town shooters can come and leave Phillipsburg over the different railroads every hour. Full particulars from Manager Edw. F. Markley, Easton, Pa.
 W. G. BEECROFT.

Meadow Springs Gun Club.

PHILADELPHIA, Pa. May 4.—An ideal day brought out a good entry list. Kelley was high and won a silver spoon. Keenan got a dipper for the best club total, and a leg on the Thompson trophy, an event which opened yesterday. Fish won a leg on the Harvey prize, while Emerson and Gideon each secured a dipper for runner-up scores in the club test.

Kelley and Gideon had a close run for the high honors of the day, the former winning out by a blue rock, he getting 95 of his 100 skimmers. Scores:

	Thompson Trophy.		Harvey Trophy.		Total.
	H. T.	H. T.	H. T.	H. T.

Hyde Park Gun Club.

SUMMER weather arrived in Cincinnati on May 4, and the shooters were mighty glad to hunt a shady spot between events. Milt Johnson was high gun, missing only 6 targets out of 125, scoring 94 in the first 100, and going straight in the last event. Irwin was not in form to-day. Dr. Leighner was with us for the first time since last fall, and will be a regular this summer. Besuden and Reif used to be on hand every week, and we hope they are coming back again. Both did good work after their long rest. Scores:

	15	20	15	15	15	25	Total.
Johnson	13	18	14	20	15	14	119

Princeton—Pennsylvania.

PRINCETON, N. J., May 4.—Princeton University gave Pennsylvania University a bad cracking to-day in a five-man team shoot at 250 birds. Pennsylvania got only 148 against the Jersey students' 205. Bartlett was high gun for Princeton with 46, while Fist made 33 for Pennsylvania. The scores:
 Princeton—Nimick 41, Barnett 35, Bartlett 46, White 45, Simpson 38; total, 205.
 Pennsylvania—Enshaw 31, Fish 33, Fletcher 31, Jones 27, Smith 26; total, 148.

E. C. Trophy Shoot.

WILMINGTON, Del., May 4.—This day at the grounds of the Du Pont Gun Club saw the decision of the eighteenth contest for the famous E. C. trophy, emblematic of the world's championship at targets. The contestants were Geo. L. Lyon, of Durham, N. C. (holder), and Lester S. German, of Aberdeen, Md., who was the challenger.

While the E. C. cup was the main feature on the day's program, there were two other attractions, a 100-target race, open to all amateurs, for a purse and also for prizes offered by the Du Pont Gun Club, the latter being awarded under the Lewis class system, one prize, a souvenir silver spoon, for every ten entries. Another attraction was the shoot-off of a tie between Frank Sidebotham of the S. S. White Gun Club, of Philadelphia, and J. R. Bonsall, of the Clearview Gun Club, for some Class B prizes offered for competition during the recent series of team contests carried to a successful conclusion under the auspices of the Philadelphia Trapshooters' League.

The weather was all that could be desired from a spectator's standpoint. It was bright, clear and warm. Naturally enough, with such a program offered, there

means up to either shooter's real form. How the misses came is shown in the following scores:

German01101111111101101111111	42
Lyon1111010111111100111111111	40

With only a lead of 2 to the good, and 50 targets to be shot at, viz., 25 pairs, it was anybody's race, although it was generally conceded that Mr. Lyon was hard for anybody to beat at that style of shooting, and his stock went above par in consequence. At the start, it seemed as if both men tried to see how many they could miss. German dropped 4 out of the first 10, while Lyon went him one better, losing 5. Then Lyon tightened up and ran 8 pairs straight, following this with a "dutch double"—his 40th and 41st targets—and a run of six pairs, losing the first target of his last pair. This gave him a total of 40, as against 38 for German, who shot away below his form on doubles, and broke only 38. The scores in the doubles were:

German10 11 10 10 10 11 11 11 10 01 11 11 11	38
Lyon10 11 10 01 09 11 11 10 10 11 11 11 11	40

The match therefore went to Mr. Lyon, his score being 174 out of 200 to Mr. German's 170.

Mr. Lyon won't have the satisfaction of holding the trophy very long, as it is understood that the West Virginia State Sportsmen's Association, which holds its annual State shoot on May 15 and 16 next at Fairmont, W. Va., has redeemed the trophy from the winner of to-day's match and will place it in open competition at that shoot. It is possible, however, that Mr. Lyon may journey to West Virginia and try to renew his grasp on the cup.

The winners of the E. C. cup are, up to and including to-day's contest: W. R. Crosby, of O'Fallon, Ill., six times; Fred Gilbert, of Spirit Lake, Ia., five times; R. O. Heikes, of Dayton, Ohio, four times; Geo. L. Lyon, of Durham, N. C., twice, and J. A. R. Elliott, of Brooklyn, N. Y., once.

The shoot-off of the ties for the two Class B trophies in the Philadelphia Trapshooters' League resulted in an even break. Mr. Bonsall, of the Clearviews, won one tie with 36 to 34, while Mr. Sidebotham won the Keim trophy with 40 to 39, both matches being at 50 targets per man.

In the 100-target race there were eighty entries, all

THE E. C. CUP.

was a good attendance, not only of shooters, but of spectators, the latter numbering fully four hundred. That it was an interested crowd was proved by the fact that the club house was absolutely deserted while Messrs. German and Lyon fought the battle over the expert traps at the far end of the club grounds. (All of which goes to show that match shooting—with interesting features thrown in, such as doubles, expert rules, etc.—does attract and hold the crowd.)

Although the main event—the E. C. cup race—was scheduled for 1:30 P. M., it was just about 2 o'clock before a start was made. Ed. Banks was referee; C. H. Newcomb, of Philadelphia, acted as judge for Lyon; W. M. Foord, of Wilmington acting in the same capacity for Mr. German. Bill Joslyn was official scorer; J. A. McMullen was puller and W. Schuyler Colfax, Jr., went into the trap house and drove the trap to perfection.

After the referee had explained the conditions of the race to the spectators, Messrs. Lyon and German went to the score, and as Mr. German had won the toss for choice of position, he stepped up to No. 1 position and opened the hall by breaking a sharp left-quartering target. Nobody dropped a bird until the 9th round, when Lyon let one go, but German refused to take any unfair advantage of him and dropped his 10th. German then lost his 14th, but Lyon missed his 17th and 20th, and was 22 to German's 23, when the first 25 had been shot at. They then went and got 25 more shells and came out and shot the next string, with the result that German lost his 30th and 32d targets, while Lyon dropped his 32d and 39th. The score at the end of the first 50 was: German 46, Lyon 45.

In the second 50 targets Lyon dropped only one, his 84th target, running 44 straight, but German lost his 61st, 65th, 72d, 85th, 92d and 96th targets, ending with only 90 to Lyon's 94 out of the 100. Lyon thus went up to the expert traps with an advantage of 4 targets, somewhat of a surprise, even to his friends, who had figured on his being a few behind at that stage of the game.

The second stage of the match—50 targets, expert rules, one man up—resulted in German's favor by 2 targets, the scores being: German 42, Lyon 40, totals by no

WINCHESTER

"REPEATER"

Smokeless Powder Shotgun Shells

Winchester "Repeater" shells have won first place in the estimation of hunters because they give the maximum efficiency at a minimum cost. Although comparatively low priced, "Repeater" shells are made and loaded with the same care and precision which have made Winchester "Leader" the best shells on the market. Only powder and shot of the highest quality are used in "Repeater" shells, and for any load in 10 gauge up to 3 3/4 drams, and in 12 gauge up to 3 1/4 drams of powder, they give entire satisfaction. No shells, price considered, give better results than the Winchester "Repeater." Try them and you'll be convinced. Ask for "Repeater."

The Yellow Shell With The

Peters

"steel where steel belongs"

FACTORY LOADS

Keep up their great record of winnings. At Laurel, Miss., April 23-25, Mr. H. D. Freeman made the HIGHEST SCORE ON ALL TARGETS,

712 out of 750

And won second general average for registered events, 429 out of 450. Mr. Freeman's recent work, summarized, includes:

Birmingham, Ala., April 2-3,	385 ex 400	} HIGH SCORE AT EACH
New Orleans, La., " 16-17,	295 ex 300	
Laurel, Miss., " 23-25,	712 ex 750	

Users of "steel where steel belongs" shells have a big "hunch" over those shooting ordinary kinds.

THE PETERS CARTRIDGE COMPANY - - - CINCINNATI, OHIO

New York: 98 Chambers Street. T. H. KELLER, Manager
San Francisco: 608-612 Howard Street. J. S. FRENCH, Manager
New Orleans: 321 Magazine Street. LEE OMOHUNDRO, Manager

that the club management could handle in the time allotted for shooting the race, as about an hour and a half had to be taken out for the E. C. cup race. C. H. Newcomb won first prize with the good score of 95. As the prizes were allotted under the Lewis class system, the other seven prizes being won or tied for as follows:

Second prize: Tied for by J. H. Minnick, H. Powers, J. B. McHugh, J. B. Fontaine and A. B. Richardson on 89.

Third prize: Tied for by F. Hineine, W. G. Wood and M. Connor on 84 each.

Fourth prize: Won by Eugene du Pont on 79.

Fifth prize: Tied for by W. B. Abbott and Ward Hammond on 76.

Sixth prize: Won by W. A. Kunkle with 71.

Seventh prize: Tied for by F. Godwin, J. J. Magahern and S. G. David on 65.

Eighth prize: Won by W. J. Highfield on 40.

The scores made in the 100-target race follow, each event at 20 targets, carrying with it an optional sweep of \$100, purse divided, high guns:

Taken all in all, it was just about as good a shoot as any club ever had, the only misfortune being that the hours of daylight were not twice as long, although Lloyd R. Lewis, who ran the office, and Tom Chalfant, who assisted him, would not agree with this statement. That the office was run and run right is plainly shown by the results obtained.

Fairmont Gun Club.

THE regular shoot of the Fairmont Gun Club was shot between showers on Saturday, April 27. This E. C. cup interest seems to be taking hold pretty solid. We now think the fellow who removes it from West Virginia will have to shoot some. Programs went out today and we look for a good attendance. If you did not get yours, let us know and we will send you one.

SECRETARY.

Frontier Rod and Gun Club.

BUFFALO, N. Y., April 27.—All who attended the regular bi-monthly shoot of the Frontiers were treated to a fine exhibition of target shooting. Sim Glover made the remarkable score of 99 out of 100, breaking 87 straight. Although the 88th target was dusted hard, it would not break. Cup race points were won by Wakefield, Thompkins and W. O. Hewitt. Cranston won the point in the Eichberg-E. Bidell trophy race. Fred Clay, one of our regulars, has returned from an extended eastern business trip and expects to get back into the game. Fred Wakefield, the old-timer, hiked in from Middleport and was rewarded by winning the Class A point. The scores:

Event No. 3 was cup race; event No. 4, handicap trophy race.

Michigan Gun Club.

A MEETING of Michigan trapshooters was held at the Wenonah Hotel, Bay City, April 19, when an organization to be known as the Michigan Gun Club League was formed, its object being the promotion and advancement of trapshooting in Michigan. Shooters were present representing clubs from Detroit, Lansing, Saginaw, Owosso, St. Charles, Cedar Springs, Cadillac, Caro, Coldwater and Bay City. After some discussion a set of by-laws was drafted which will take care of the average shooter and protect him from the experts of the game, thus insuring a larger attendance at Michigan shoots than in the past. The following officers were elected: President, B. S. Gaylord, Owosso; First Vice-president, John Becus, Cedar Springs; Second Vice-president, C. Brooks, Cadillac; Third Vice-president, C. Jewett, Howell; Secretary, C. A. Galbraith, Bay City; Treasurer, W. R. Ballard, Bay City. Secretaries of all League gun clubs constitute a board of directors. Bay City was awarded the first State shoot under the new organization, the same to be held in September, when the five-men team, two-men team and individual championship of Michigan for 1912 will be shot for.

Roanoke Gun Club.

ROANOKE, Va., May 5.—Thirty shooters participated in the regular weekly shoot of the Roanoke Gun Club yesterday afternoon, and some creditable scores were made. The weather was ideal for the sport. The weekly medals were won by the following: Scratch—First, Tie, Watson and Bloxton; second, Robinson. Class A—First, W. S. Jones; second, J. W. Poindexter. Class B—First, T. C. Fisher; second, R. G. Dalby. Class C—First, C. T. Jennings; second, Howard Holland.

The scores, 50 targets per man:

Per		Per	
Brk.	Cent.	Brk.	Cent.
Watson	47 94	E W Poindexter	39 78
Bloxton	47 94	Fisher	39 78
Robinson	46 92	Boyd	39 78

Bushong was official referee.

H. F. WILKINSON, Sec'y.

Registered Tournaments.

THE tournaments registered with the Interstate Association during the week ending May 4 are as follows:
 July 7-10.—Helena, Mont.—Montana State tournament, under the auspices of the Helena G. C. Reynolds Prosser, Sec'y.
 July 22-25.—Berterton, Md.—Berterton G. C. James R. Malone, Sec'y.
 July 26.—Bradford (Ill.) G. C. H. A. Swearingen, Sec'y.
 July 26.—Shamokin (Pa.) G. C. S. C. Yocum, Sec'y.
 July 27-28.—Nelson (B. C., Canada) G. C. W. A. Ward Sec'y.
 July 30.—Tyndall (S. D.) G. C. F. F. Chladek, Sec'y.
 Aug. 1.—International Falls, (Minn.) G. C. R. G. Green, Sec'y.
 Aug. 3.—Holmesburg Jct., Pa.—S. S. White G. C. W. E. Robinson, Sec'y.
 Aug. 6-7.—Mitchell (S. D.) G. C. C. A. Ferguson, Sec.
 Aug. 13-14.—Abilene (Tex.) G. C. C. D. Payton, Sec'y.
 Aug. 20.—Marthasville, Mo.—Daniel Boone G. C. J. O. Wilson, Sec'y.

Sept. 11.—Worcester (Mass.) Sportsmen's Club. Jay Clark, Jr., Sec'y.
 Sept. 12-13.—Cincinnati (O.) G. C. A. B. Heyl, Pres. 1913.
 Jan. 22-25.—Pinehurst (N. C.) Country Club. Leonard Tufts, Pres.
 ELMER E. SHANER, Sec'y-Treas.

Jersey City Gun Club.

JERSEY CITY, N. J., May 4.—Fifteen members were out at the regular Saturday shoot of the Jersey City Gun Club today. Several of the regulars were out at the North Caldwell Gun Club attending one of the Frank Hall trophy shoots, trying to win a leg on that very valuable trophy, and so, of course, our attendance had to suffer, notwithstanding that this was about as fine a day as one could wish for to take a crack at the flying targets. Dave Engle was high gun again to-day, finishing with 89 per cent., and North the runner-up with 85 per cent. Of the other scores, why, of course, they speak for themselves; but as they all had a good excuse for their low scores, why should anyone care. Here it is right off the score board:

Shot at.		Shot at.	
Brk.	Brk.	Brk.	Brk.
Engle	100 89	Dixon	100 69
McLemore	150 102	Simpson	100 58
Huggins	100 42	Jones	100 48
Shannon	225 161	Brady	75 33
Harvey	125 86	Bannon	75 40
Lawton	75 44	Sampson	50 15
North	150 128	Eaton	50 23
McGill	100 69		

SECRETARY.

Dublin Gun Club.

DUBLIN, O., May 2.—Sixteen amateur shooters and four professionals took part in our tournament to-day; 137 was high amateur score, made by F. M. Edwards, with 133 for second by C. Coburn, and one less by Bert Wing for place. C. A. Young broke 140 for first professional honors. Scores:
 C Coburn 133
 F P Hall 112

Washington State Sportsmen's Association.

SPOKANE, Wash., April 24.—For the eighteenth time the Washington State Sportsmen's Association held a successful tournament, the last at Spokane being the least successful thus far. P. O. Brien won high average medal for the tournament with 276 out of 300. Spokane won team shoot, Walla Walla was second and the second Spokane team third. Spokesman's Review medal was won by Dr. Fulton. State championship went to F. M. Froeh. P. O'Brien won the Smith gun event.

The E. C. Trophy

THE Eighteenth Contest for the
 DU PONT "E. C. CUP" DU PONT

Emblematic of the World's Championship at Inanimate Targets was shot at Wilmington, Del., May 4, 1912, under the following conditions:

100 Targets, Unknown Angles; 50 Targets, Expert Rules; and 25 Pairs. Total, 200 Targets.

THE SCORES:

	Unknown Angles	Expert Rules	Pairs	Total	Ave.
GEORGE L. LYON, (Holder)	94	40	40	174	87
LESTER S. GERMAN, (Challenger)	90	42	38	170	85

Both Contestants Shot DU PONT Smokeless

I Want Some of

THE BLACK SHELLS

are the words which, if addressed to your dealer, will bring you the best shooting year in your experience.

Our claim, that THE BLACK SHELLS will give you a 5% better record at the traps and 10% better in the field, is worth proving.

Our NON-MERCURIC PRIMER means sure and quick ignition every time. Our FLASH PASSAGE (the hole in the shell base through which the flame from the primer reaches the charge) is 100% larger than ordinary. There can not be a hang-fire of the smallest fraction of a second.

Fog, rain, or even a ducking can not injure THE BLACK SHELLS, as they have our perfect waterproofing.

There are three classes of THE BLACK SHELLS: ROMAX, a black powder shell with 5-16 inch base. CLIMAX, the most popular smokeless (both dense and bulk) shell made. One-half inch base.

AJAX, is the highest grade smokeless (both dense and bulk) shell made. It has a long one-inch brass base.

Send for book about SHELLS. If you enclose 10c. we will send a beautiful, colored poster, 20 x 30 inches, called "October Days." Sure to please every shooter.

UNITED STATES CARTRIDGE CO.
Dept. H Lowell, Mass., U. S. A.

Camden Shooting Association.

CAMDEN, N. J., May 4.—Harvey Wiley broke 93 out of 100 targets in to-day's shoot. Fred Holloway, of Haddonfield, was second with 91. Good weather favored good scores:

Events:	1	2	3	4	Total.
Melrath	11	21	20	18	70
Fred Holloway	21	23	25	22	91
Taylor	15	18	19	18	70

Wiley	23	22	23	25	93
King	19	19	20	18	76
Anthony	17	19	22	22	80

Waneeta B. C. Shoot.

RIDGEFIELD, N. J., May 4.—A two-man team argument that has agitated this burg for some time was settled temporarily to-day by a difference of one bird in the score out of 100 shot at. M. J. Little and L. Lambrix vs. H. G. Brinkerhoff and L. Vincent furnished the afternoon enjoyment. The shooting was decidedly even. In the first 25 Little and Lambrix were three down, of which they made up two in the second string, the final score being 72 to 71.

A return match will be shot at the same grounds on May 18.

The scores, 50 targets per man:
Little 32 H G Brinkerhoff... 36
Lambrix 39-71 Vincent 36-72

Sikeston Gun Club.

SIKESTON, Mo., May 3.—Out of 50 clay pigeons the following scores were made to-day: Lance 37, Booking 36, Russell 36, Wm. Leslie 35, H. A. Smith 35, Dr. D. E. Sawyer 35, Wm. H. Tanner 35, Clem Marshall 31, Wm. Sikes 28, C. H. Yanson 27, J. E. Dover 26.

The Sikeston Gun Club holds practice contests every Friday, at 1 P. M. Visitors welcome.

Wm. H. TANNER, Sec'y.

Hudson Gun Club.

JERSEY CITY, N. J., May 5.—At the bi-monthly club shoot of the Hudson Gun Club this morning, Carl Von Lengerke started the ball rolling with a straight score of 25, and finished with an average of 93 per cent. for the day; this is the first straight score that has been recorded on the grounds for the past eight months, so we think it worthy of mention, when there is one made.

The morning was cold and rainy, with a very poor light to shoot with, and no doubt the poor scores made by some of our members can be charged to the above conditions, as we know that they are capable of returning much better scores under more favorable conditions.

Dr. Groll, W. Hutchings, B. Beyersdoit and W. Roach kept themselves busy at the 20yds. mark, in shooting for purses made up between themselves, and when the game was over, there was not a great difference in their winnings, as all seemed to shoot about the same pace. They have arranged to meet at the next shooting date, May 19, and shot for a very suitable purse, which has been deposited with the treasurer of the club.

Everything is in readiness for the Hall trophy shoot to be held on the Hudson's grounds on June 2, and we expect a large attendance on this date, the grounds will be open for practice at 9:30 A. M., and on Sunday, May 19, our grounds are open for practice, so come out and see us.

Gadsden Gun Club.

GADSDEN, Ala., May 4.—The Gadsden Gun Club held its second shoot of the season to-day at Elliott Park. Only a few of the boys were out on account of the ball game at League Park between Gadsden and Anniston. The members began shooting for a handsome sterling watch fob, donated by the Du Pont Powder Co. This match will be shot in series of 25 birds each practice day until a total of 200 birds have been shot at, the highest score to receive the trophy. C. L. Gunn was high score with only one bird over E. C. Little, who in turn was only one bird over J. S. Paden. Mayor Bellenger, J. E. Little, J. P. Gunn and J. S. Paden tied with a score of 25 in the handicap. The scores were as follows:

Shoot for Du Pont trophy: C. L. Gunn 44, E. C. Little 43, J. S. Paden 42, J. P. Gunn 40, W. G. Bellenger 35, C. F. Cross 29, J. E. Little 21.
Handicap shoot, 25 targets: W. G. Bellenger 25, J. E. Little 25, J. P. Gunn 25, J. S. Paden 25, E. C. Little 22, C. L. Gunn 21, C. F. Cross 20. E. C. LITTLE, Sec'y.

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is Lefever Taper Boring.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS Co., 23 Maltbie St., Syracuse, N.Y.

FOREST AND STREAM PUBLISHING COMPANY

Northern Kentucky Gun Club.

THE weather on May 5 could hardly have been better for trapshooting, and quite a bunch availed themselves of the opportunity to indulge smashing the clays. Capt. George Dameron, the club's best shot, divided high honors with two well-known professionals, O. J. Holiday and J. S. Day, on a score of 94. He and Holiday each went straight in the first event and were the only ones to do this stunt during the afternoon; each broke 48 out of the first 50. Day shot a very consistent race, dropping three targets out of each 50. Ford, of Lebanon, did his best work in the first two events, going at a 90 per cent. gait. George Walker, who has only taken up shooting at targets in the last few months, white flier being his favorite sport, and one in which he was proficient, made second high amateur average to-day, breaking 90 per cent. of targets. He is going to have a try for the prize at the Kentucky State shoot, and if he continues to improve will have more than a fighting chance. Hack is a new one at the game, and was using a strange gun; in the field his score would have been much better, and we look for great improvement as soon as he gets a little more familiar with trapshooting. Gould was on hand, ready to meet his weekly antagonist, J. B. C., but the latter failed to show up, and Doc. was given the match by default.

The next shoot will be on May 12, and the feature will be the match between H. R. Irwin and M. H. Johnson. The latter has been doing some nice work lately, and the race promises to be an interesting one, with the winner in doubt until the last target is thrown. The club will give a registered shoot on Aug. 15 and 16. This will make it an easy matter for the local amateurs to shoot at the 1200 targets necessary to qualify for the Post Season tournament, to be held on the grounds of the Cincinnati Gun Club in October. They can make it by attending the Kentucky State shoot this month at Lexington; the Ohio State shoot at Dayton, in June, and the shoot at the Cincinnati's grounds in September. It looks like there would be a good representation of local shooters in that banner event, for we have a number who can easily make the required 88 per cent. As a finish to the afternoon's sport, Ballard and Holiday shot at 12 pairs, the latter scoring 20 and the former 18.

Targets:	25	15	25	15	25	20	25	20	Total.
Holiday	25	25	23	23	23	23	23	23	94
Ballard	21	23	24	21	24	21	24	21	89
Day	23	24	23	24	23	24	23	24	94

Small	21	21	21	21	21	21	21	21	21

Siwanoy—White Plains.

MT. VERNON, N. Y., May 4.—An interesting match was shot to-day between picked teams of the White Plains Gun Club and the Siwanoy Country Club, of Mt. Vernon, at the traps of the Siwanoy Country Club.

White Plains came one man short, and were given Mr. Dalton, who is a member of both clubs. Mr. Dalton shoots regularly with the Siwanoy team and bears the distinction of being the only amateur who has broken 25 straight at the Siwanoy traps. These are situated in the woods, and the irregular, freakish winds and a background of alternating light and shade add greatly to the difficulties of the shooter.

A return match has been arranged for May 25 at White Plains. The scores were as follows:

Siwanoy Country Club.	White Plains Gun Club.
Offutt	90
Capt Wylie	89
Hill	84
Donovan	78
Barnard	70—411
Ward	86
Petry	83
Dalton	79
Lawrence	79
Capt Townsend	76—403

L. D. HILL, Sec'y.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., May 5.—Dr. Britton broke the first 40 and looked like the day's high gun, but lagged a bit thereafter, and a bunch of the young folks beat him out. Moller, Alig and Parry each got a 20. Edmonson and Lewis were tied for first place in the percentage of targets broken, with Moller less than 1 per cent. back. Teams of five, headed by Parry and Edmonson shot at 200 targets, the latter winning 173 to 168.

Shot at, Broke		Shot at, Broke	
Edmonson	140 129	Crawford	140 118
Moller	140 128	White	140 114
Alig	140 126	Neighbors	140 111
Dixon	140 124	Golden	140 96
Britton	140 123	Lewis	100 92
Parry	140 119	R. R.	

Mt. Holly Gun Club.

MT. HOLLY, N. J., May 4.—Three events were shot here to-day. Each event was at 25 targets. Evans was high in event 1 with 22, closely followed by Foster with 21. In event 2 Davis and Frake tied for first on 22, Foster again being the runner-up on 21. In event 3 Lamb and Davis tied for first with 21. Scores:

Events:	1	2	3	Events:	1	2	3
Foster	21	21	18	Lippincott	14	19	18
Lamb	18	19	19	Frake	21	22	18
Davis	18	22	21	Chimn	13	13	13
Clatts	19	17	21	Evans	22	15	15

Dead Shot is the least affected by climatic conditions

Stored in a high altitude where the atmosphere is the driest, or in the dampest seaboard town in Texas, Florida or elsewhere, Dead Shot will keep nearer perfect than any other powder.

Make the above experiment yourself.

*Use a bell glass as in the above cut, placing the shells under the glass over the pan of water, in a warm room where evaporation is rapid. Shoot a few loads every day until the paper of the shells is so swollen by dampness that you can no longer force them into your gun.

Any amateur shooter may judge for himself the significance of

"Stability-Guaranteed-Dead Shot"

in a competitive test of this kind.

If you wish to submerge your shells in water over night we will guarantee that, if your shells are water-tight, the powder will hold up in velocity.

FIELD TRIALS.

Oct. 28.—Southern Ohio Field Trial Association's second annual field trials. G. R. Harris, Sec'y, 15 West Sixth St., Cincinnati, O.

Associated Specialty Shows.

SIX specialty clubs held individual shows in the Twelfth Regiment Armory on May 4, and each organization announced it was the occasion of the best show thus far.

There were 323 bull dogs, 201 Bostons, 135 wolfhounds, 134 collies, 120 dachshunds and 55 Airedales. The principal surprise was the unusually large entry list in the Dachshund class and the exceptionally weak entry in the Airedale class.

A. C. Madden, judge in the bull dog class, was criticized for giving the gate to Ch. Princess Merlow. His action was based, however, on the unruly acting of Princess Merlow and a twisted underjaw, which he was the first to discover.

Soudan Swiveller took winners in the Airedale class, but Gold Heels, the runner-up, a puppy of only eight months, made a remarkable showing, taking everything from the puppy class to the finals, when development passed the ribbon to Swiveller.

Miss B. V. Brophy's American-bred dachshund, Ramsch II. West End, a remarkably fine specimen, took winners in its class.

With collies, W. E. Mason carried off practically everything without any great competition in the dog classes. Mina Southport Sumptous was winner in the bitches.

In the bull dog class winners: Bitches, Sensation on the Path; dogs, Ch. Rockcliffe Hats Off.

Boston terrier winners: Dogs, Sudbury Nemo; bitches, Craig's Tiny Girl (a toy).

In the Airedale class winners: Bitches, Springbank Sceptre. Russian wolfhound winnings all went to Winnipeg, Manitoba, Canada, winner's dog being Dr. O'Brien's Genest of Rosseau; bitches, Ch. Valeska Bailiff.

The Dachshund Legs.

THE rise of the dachshund from little short of obscurity and only one or two owners interested in the German badger dog here and there throughout the country, to its present prominent position is as remarkable a fact as can be pointed out in connection with dog showing. If we add to that the information that it is almost entirely a woman's breed nowadays we are still more at a loss to give a reason why. Of course, says Jas. Watson, in the Philadelphia Inquirer, there are some men in the fancy, but the leaders are found among the women exhibitors, particularly Mrs. A. Hungerford, of Bay Shore, Long Island, whose kennel now comprises a large majority of the best dachshunds in the country. She showed eight at the New York show and there bought the entire kennel of H. T. Peters, the only exhibitor to hold a decided advantage over Mrs. Hungerford. How many dogs thus passed hands I do not know, but Mr. Peters showed eight at New York, and, of course, had more at home.

The front legs of the dachshund are one of the peculiarities of the breed, as it is about the only dog which can be shown with a desired crooked front. Buffon in his description of the basset, which in general conformation is a counterpart of the dachshund, ascribes the crooked front to rickets and his opinion has been copied in many later books since he wrote his about 1750. That is not the cause at all, for if it was then many breeds in which we have to struggle to get straight forelegs would have the same complaint and rickets is not a disease found in a strong, healthy dog. You never find the tendency to dachshund fronts in any long-

legged breed, but it has to be fought against in all that are short on the leg, such as field spaniels, the cocker, when he was sought for with shorter legs than we now show him with, the Scottish terrier, the Dandie, and in the Pekinese, though that is not exactly a dachshund front. To my mind it is a call of nature for a better support of a low, long-backed dog, something whereby a better balance is obtained. As for it being of great use to the dachshund in going to earth after vermin, that is offset by pointing to the foxterrier, which is perfectly able to dig his way to the quarry underground with his long legs.

Long Island Kennel Club Bench Show.

THE premium lists of the eleventh annual dog show of the Long Island Kennel Club have 305 special prizes for the different events, which will take place on Decoration Day at the Brighton Race Track.

It will, as usual, be a one-day show, and will be the largest in the country, as entries already

TWO SUNNY BRAE STARS.

indicate at least one thousand more than last year.

The German sheep dog, responsibility for the introduction of which belongs to J. G. Sherman, of this city, occupies a prominent position in the program. This is a class upon which a great amount of money has been expended to import only the finest specimens and to breed them to the highest standard.

There are 74 classes. Entries will close May 15, up to which time they should be sent to William H. Purcell, Superintendent, 503 Fulton street, Brooklyn, N. Y.

GOOD, ANY WAY.

WHETHER Grover Cleveland was a fisherman because he was a great man or a great man because he was a fisherman, the fact remains that he was, at least, a good fisherman. Some say that the quiet and solitude of a boat on the waters rests and refreshes the mind, some that in the largeness of open nature man realizes his limitations and becomes great by the development of his recognized gifts. However that may be, it is good to go fishing, if only to get away from the stern demands of all other environment.—Baltimore Sun.

C. B. TUCKER, Capt.

Analostan Gun Club.

WASHINGTON, D. C., May 5.—Twenty-two shooters toed the mark at the shoot of the Analostan Gun Club yesterday. The weather was perfect, barring a fluky wind, which was stiff at times. Notwithstanding this handicap, good scores were made. Phil Steubener again scored high for the afternoon, accounting for 95 out of his 100. He "batted out" 49 out of his first 50. Three of his five targets were lost in the fifth event of 15 targets.

S. A. Luttrell was again in the lead on doubles, breaking 18 out of 12 pairs.

In the spoon contest Steubener won first on 49 out of 50; Brown, Monroe, Hogan and Taylor tied on 44 for second spoon. Luttrell and Lieut. Barber tied on 39 for the third spoon, which Luttrell in his goodness of heart turned over to the Lieutenant. Dr. Stine won the fourth spoon. The scores:

	Shot at.	Broke.	12 Prs.	Spoon.
Barnes	120	95	..	36
Green	120	84	..	37
Perkins	120	76	..	31

MILES TAYLOR, Sec'y.

Jewell Gun Club.

JEWELL, Ia., May 2.—There was a vicious wind all day during the tournament of the Jewell Gun Club, so that the scores were cut down badly. John Maland took high honors with 142, seconded by Frank Campbell with 139, while old reliable Bill Ridley made one less for place. The professional scores were very sad, L. H. Fitzsimmons being high with 134.

The scores, all shooting at 150 targets, except Prof. H. Hezzlewood, who shot at 60 and broke 49:

Frank Campbell	139	O N Williams	116
E C Hinshaw	133	A F Wilcox	124
W S Hoon	136	John Peterson	128
C C Collins	136	John Maland	142

Marlin

Model 1897 REPEATER

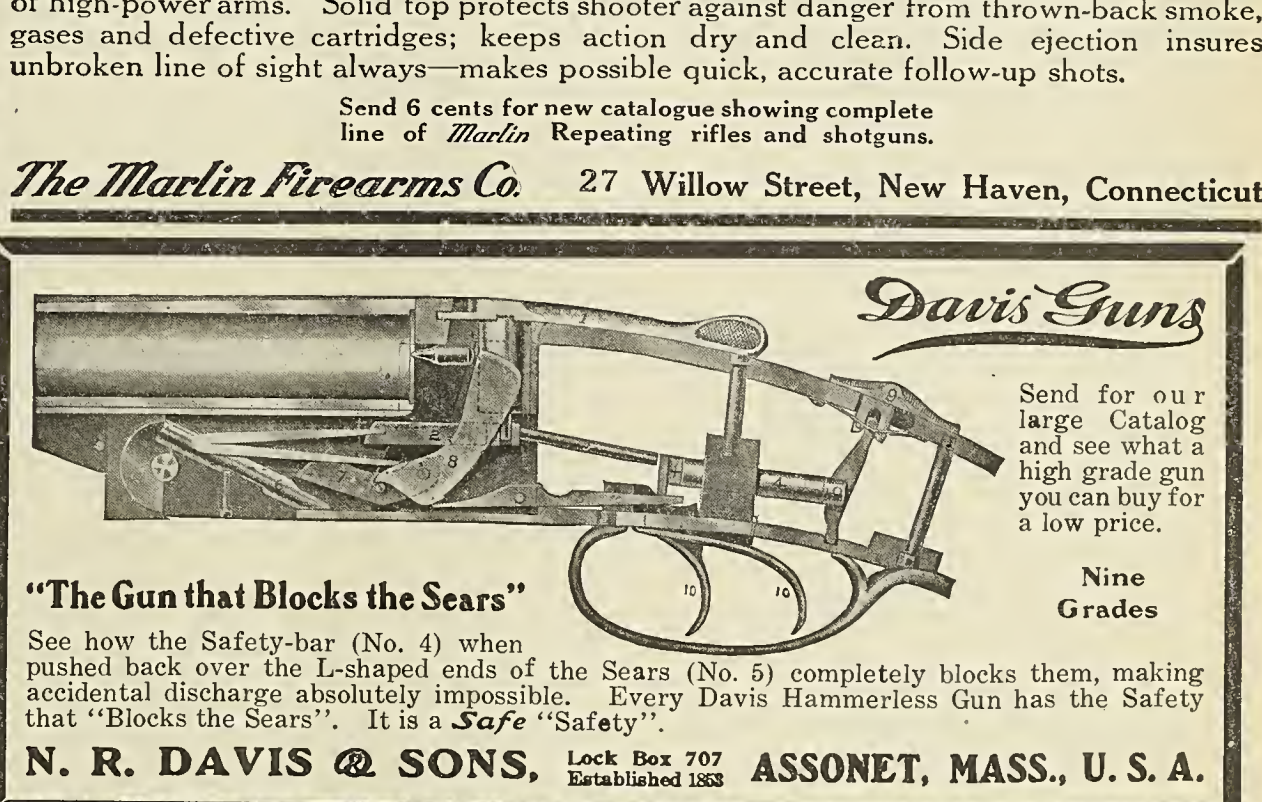

of .22 Calibre—but as Accurate and Dependable as a Big Game Rifle

A SMALL game and target rifle of take-down construction, having special smokeless steel frame and tool steel working parts.

Takes .22 short, .22 long and .22 long rifle cartridges without adjustment. Equipped with Ivory Bead and Rocky Mountain sights. Has lever action like that of high-power arms. Solid top protects shooter against danger from thrown-back smoke, gases and defective cartridges; keeps action dry and clean. Side ejection insures unbroken line of sight always—makes possible quick, accurate follow-up shots.

Send 6 cents for new catalogue showing complete line of *Marlin* Repeating rifles and shotguns.

The Marlin Firearms Co. 27 Willow Street, New Haven, Connecticut

Davis Guns

Send for our large Catalog and see what a high grade gun you can buy for a low price.

Nine Grades

"The Gun that Blocks the Sears"

See how the Safety-bar (No. 4) when pushed back over the L-shaped ends of the Sears (No. 5) completely blocks them, making accidental discharge absolutely impossible. Every Davis Hammerless Gun has the Safety that "Blocks the Sears". It is a *Safe* "Safety".

Importation of Arms and Ammunition Limited

VICE-CONSUL GENERAL CARL C. HANSEN, of Bangkok, says:

"The importation of arms and ammunition in quantities by dealers is prohibited by the Siamese Government. Special individual permits must be secured for each person desiring such goods, and only goods for which these permits have been secured may be brought in. The firm or agent usually carries samples, from which the buyer selects the model desired. Then he secures a permit for himself and the dealer imports goods to fill the order.

"Mannlicher and Mauser rifles and Browning pistols may be brought in personally only by Europeans, and they are required to give a guaranty that such arms will be for strictly personal use and will not be disposed of except by special consent of the Siamese Government.

"The total imports of firearms into Siam during the fiscal year ended March 31, 1911, were valued at \$13,650, of which the United States supplied only \$27 worth. Of the total imports of ammunition and explosives valued at \$21,049, the United States furnished \$11 worth. The United Kingdom and Germany supplied the greater part of this trade."

Shoot at Mt. Healthy, Ohio.

THE attendance at the last shoot of the Royal Gun Club was a little off, owing to the weather. Ed. Bittner led the bunch, and did some nice work in the third event, only one target getting away. Most of the members have shown considerable improvement since the club began shooting a few weeks ago, and will soon be expert enough to buck up against teams of other organizations, and make things interesting. Plans are about perfected for the all-day picnic and shoot in June, and it promises to be a very pleasant affair. The scores:

Towler	53	R Werz	20
Lux	62	Huston	60
Ed Bittner	80	J Wirtz	13
C Werner	16	Becker	45
R Ferriss	7	F Menze	20
Doubles, twelve pairs:			
E Rittner	11	Towler	6
Lux	8		

Smith Gun Club.

NEWARK, N. J., May 4.—At the Smith Gun Club to-day high gun man was F. Apgar. He was pushed closely by S. Castle and J. Collins. The scores were as follows:

F Apgar	20	19	19	20	22	18
H Trimpe	19	14	20	13	21	19
H Willbouse	18	14	13	16	17	20

W Sheppard	20	20	19	16	20	18
F Wilson	17	16	17	13	13	18

A FIGHT WITH A LION.

THIS, says Victor, in the Field, is an account of an adventure while lion hunting in British East Africa, given to the writer by the hero of the exploit, H. Clarkson Williams.

It was in the summer of 1909 that a small party of us, F. C. Selous, W. N. McMillan (who had, a little time before, given ex-President Roosevelt some shooting on his farm at Juja) and myself, were on a hunting expedition after lion. We had reached the vicinity of Mount Elgin, just over the Gwasin Gishu plateau, east of the Victoria Nyanza, and were looking forward to a good hunt, for we were right on the best ground.

The day after our arrival I went out to "lay down" a few hartebeestes, ready, as I fondly hoped, for the next day's kill. I never expected to see lion at once, and, therefore, my surprise can be imagined when, about four in the afternoon, a big one passed along on my right. It was but a few minutes after my last kill of hartebeeste, and he was walking about 300 yards away in the same direction as myself.

I can best describe the country by saying that it was something like English park land, being more or less bushy, and the beast moved slowly and easily along, now in sight and now hidden behind bushes. And, though he walked leisurely, all the time his tail was switching to and fro, ample indication that his kingship had been disturbed, and was angry.

My two "boys" were between two or three hundred yards in my rear, and I was walking quite alone. They had my guns, and kept pace with me, keeping instinctively to cover as they followed. I gave my usual signal for them to come close up, by holding up my hand, and when they reached me, I exchanged the .350 which I was carrying for the .450 which one of them had. Then, with a word of warning to them to

keep behind, I commenced to stalk the lion, walking roughly in the same direction as the beast, but always working away to the right, on as it were, the diagonal line of his track and what had been my own. I had to travel very carefully, and take what cover I could, but gradually I made way on him, until I must have gained quite 100 yards upon him.

He must have known I was after him, yet he never looked round, keeping steadily on his course, and being now, as I had walked toward him on the slant, somewhat to my right front. It was evident that he did not wish to have anything to do with me, for though I stood right up in the open occasionally to attract his attention, he refused to honor me by a single glance, or to alter his pace or direction one iota.

At last I decided not to wait any longer, but to stop him somehow, so, standing up, I clapped the palm of one hand across the back of the other.

This brought Leo round with a jerk, for he turned and faced me squarely, and so we stood and looked at each other while a man might count ten. A frontal shot at a big lion is rarely very successful if the beast is more than eighty yards away, and therefore I did not fire at once, but endeavored to move round, so as to be on the flank of my quarry, a much more satisfactory position from which to shoot.

Apparently, his majesty was either nervous or contemptuous of me, for he suddenly got up, turned right round, and began to make off at a very fast walk.

I made sure that I was going to lose him, and in my eagerness ignored the fact that he was now with his back toward me, in a very bad position indeed so far as the chance of bringing him down was concerned, and I let him have both barrels. By quite a foot the first shot missed him, but the second was better directed, and hit him low down in the rump, causing him to squat down sharply—much as a dog does, only that his tail was stretched straight out along the ground—and to set up a dreadful bellowing.

There was a small thicket just in front of him, and before I could get in another shot, he sprang to his feet and rushed madly into this scrub. Here I could no longer see him clearly all the time, but I noticed that he rolled over and over like a beast in his death agony, and I stood for a few seconds considering how best to finish him.

A badly wounded lion is not good company at close quarters, so I took count with myself before I started on anything so foolish as to rush in and finish him off. The country before me to the right, where the stricken animal was rolling about, and also the country on my direct right, was, just hereabouts, densely covered, and I soon realized that to attempt to stalk him in either of these two directions would be giving him a better chance than I cared about if he wanted to be nasty. For a moment I was at fault, until I saw, a little ahead of me to the left, that the ground appeared more open and seemed to offer some prospect, if I went carefully, of my finding a spot from which I could get a real good clean shot at him.

By this time my boys had come up, and a look at the lion convinced them, as it had me, that I had to deal with a dying and dangerous beast, and it was decided that I move forward to the spot which I had noticed, the two boys remaining where they were. I told them not to move unless I shouted to them.

I had made, perhaps, three or four hundred yards of country, all the time keeping a watchful eye on the patch of cover, where it was possible the lion was lying, when I got into a little clearing. I at once stood up, it being my intention to go straight in to the wounded beast, who was then about 200 yards away, and get a close shot at him.

But he settled that for me, for before I had moved a yard, he was out of his cover and coming toward me like a racehorse. There is no other way of describing the way he came on to attack me, because the action of a lion charging exactly similar to the action of a horse in full gallop. It is a mistake to suppose that lions spring. They do not; they run at you.

His pace was tremendous, and the distance be-

tween us was but a matter of a few seconds to him. He came on, growling, and nobody knows, except those who have been face to face with a similar situation, how terrifying is the lion's growl when he is charging. I held back for a space, not daring to fire at once, but waiting until he was within fifty or sixty yards of me, when I let him have it. Had I not been so confident that I should get him, I should have waited until he was practically on my barrels—especially as the only .450 cartridges that I knew I had were in my rifle, those in my breast pockets being all .350.

My first shot missed his shoulder by a few inches only. I did not wait, but fired again on the instant, and this time I hit him. Unluckily, it was only a flesh wound, and not a telling shot—the bullet went through the muscle of his shoulder, but did not touch any bone—and of course it did not stop him.

My position was now desperate. The lion was but a few yards away, and there was little time for thought. I swung hurriedly round to see if I could see anything of my first gunbearer (the other one only had a 12-bore shotgun with him), but he was not in sight. Evidently he had obeyed the instructions he had received, and stood his ground as he was told.

To run was hopeless and useless; the lion would have caught me in fifty yards. I had no more cartridges, so there was nothing for it but to face the onrushing beast, by this time within twenty yards of me, and hope for the best. I grasped my rifle tightly by the stock, meaning to hit him as hard as I could when he got up. It was, of course, a flash of time before he reached me, though it seemed longer waiting there, and an extraordinary and overwhelming sensation of physical fear gripped me as I stood. My arms seemed completely paralyzed, and I stared, fascinated, at the nearing lion, feeling quite helpless and empty of fight, every scrap of courage having run out of me.

So I waited until he was within two yards of me. He was making straight for my shoulders and neck, and suddenly, as I felt his hot presence upon me, the tension on my arms relaxed, and my strength came back to me to help me to fight for my life.

I hit him with all my force across the side of his head with the steel barrels. My blow did not turn him aside completely. Instead, he ducked and caught hold of my right leg in his mouth, and down we went together. My head and shoulders were pinned down beneath his body, my head being quite close to his hind legs. All the time I clung tightly on to my rifle.

The lion then picked me up by my leg and slung me, first one way and then another. Then he shook me like a rat. I felt that I was a dead man. Chance of escape there was none, and such mortal fear had seized me that all other feeling seemed to have left me. I felt no pain at all, except when he actually put his teeth right into me. I felt rather like a man who was being kicked lightly on the shins—that was all.

After a minute or so I heard my gunbearer's voice over my shoulder, speaking to me as I lay under the lion. He was telling me, in his dialect, that he did not know how to fire the rifle he was holding, the safety bolt being turned over. I told him to hand the rifle to me, and then I found that the weight of the lion pressing on me prevented me dropping my own rifle which I still held with my right hand, so I had to struggle to turn the bolt for him with my left. This I at last managed to do, and the "boy," without waiting to put the rifle to his shoulder, immediately fired straight in through the ribs of the lion. He evidently did not dare to take a shot further forward, for fear of killing me, as the beast was still busy with my leg.

But this last dose was sufficient, though it did not kill, for the lion at once jumped off me and rolled a few yards to the right. Only half-conscious of what I was doing, I put my hand into my hip pocket, and, to my surprise, found that I had two .450 cartridges there. Instinctively I reloaded, and tried to get up that I might finish him.

The great beast was not yet dead, but was still watching me closely, and the moment I tried to

raise myself to fire, he got up as if to come at me again.

Hurriedly I fired both barrels—like my boy, not waiting to get the rifle to my shoulder. The first shot missed, but the second put him down finally. And then for the moment I completely lost my head. I was in such a state that nothing on earth would convince me just then that the beast was dead, so I called to the boy who was by me, and told him, if he had any cartridges left, to go on firing at the body. And this feeling held me until I was carried from the ground where all this happened.

The boy brought me my cartridge bag, in which I always carry a couple of bandages, some lint, and permanganate of potash—and my water bottle, which, as luck would have it, was nearly empty. I did what I could for myself, making a tourniquet out of my handkerchief to stop the bleeding, and dressing up the leg as well as I was able, and then this same boy (who was a cool hand, and who seemed totally unmoved by all that had passed) actually brought to me, while I was lying down, worn out and spent, upon the ground, my small camera, so that I might take a photo of the dead beast lying before me. It was just as if we had shot an ordinary antelope, and not been engaged in a life and death struggle.

Meanwhile, the second gunbearer had run to camp to obtain assistance, and eventually I was carried back there on a litter, to be doctored up by Mr. Selous and Mr. McMillan, as well as they could do it.

It is unnecessary that I should describe my sufferings during the night, but there is no doubt that the care that was given to me by those two men during the evening and night saved me. Next morning, June 19, I left camp and started my journey to Lundiana, being carried on a stretcher. We made this place, 123 miles, in four days and three hours, pretty good traveling in a heat like we had.

At Lundiani I was in touch with the Uganda railway, and a troublesome train journey of nineteen hours brought me at last to Nairobi. Here I received, for the first time, the attention of a doctor. I was taken up to the Government Hospital, where I experienced the utmost kindness and attention from both Dr. Henderson—who has great experience in such cases—and the nursing staff. It was only their unremitting care which enabled me to bring my leg away with me, and I shall always have the most grateful and enduring recollections of that little hospital away in the heart of Africa.

A FAVORABLE OPINION.

MASSACHUSETTS has just passed through its third winter of a game law of great interest to ornithologists, with surprisingly successful results. Indeed, this law is of almost equal interest to sportsmen and to bird lovers in general, and of much importance to the public at large. There have been many of us who have sorrowfully come to the belief that our wildfowl were doomed to extinction. Now we have hopes to the contrary. In spite of a tremendous winter which has taken its tithe of the living birds in a death roll due to severe cold and the starvation consequent on thick ice, there are distinctly more wild geese and wild ducks congregating on our Southern coast and already winging their way northward than for years. This is also in spite of a poor breeding season last summer, when conditions on the great Northern breeding grounds were unfavorable.—Boston Transcript.

CONSERVATION.

"CONSERVATION of natural resources."

That's a familiar phrase, isn't it? We hear it often, don't we? Gosh, everybody's using it—and it's a good thing.

Conservation is only another way of saying common sense. Conservation means efficiency. Efficiency means having enough brains in your cranium to know that you can't waste your cake and still have it. Either you have it or you don't have it. There's no middle ground. To have is to conserve.—Milwaukee Leader.

Conservative Investment.

We offer for conservative investment a high grade industrial Preferred stock to net 6% in an old established company commanding large market for its specialty at home and abroad.

Under the most able management. Preceded by no prior lien of any kind. Net earnings equal to more than four times the Preferred Share dividend.

We recommend these Preferred Shares as a perfectly safe investment, suitable not only for the private investor, but for trust funds as well.

The New Angler's and Sportsman's Guide for 1912
(Formerly the Angler's Guide)

Completely revised with the following new features

"WHERE TO GO DIRECTORY," containing the best hunting, camping and fishing places in America, giving railroads, steamships, hotels, camps, guides and best accommodations.

SPECIAL ARTICLES. Dry Fly Fishing, by E. M. Gill. Tournament Casting, by R. Johnston Held. Surf Casting, by E. B. Rice. Jersey Coast Fishing, by F. B. Alexander. Pacific Coast Fishing, by Charles Frederick Holder. Mounting and Skinning fish, Fishing knots, colored plates showing most effective flies, together with a complete record and photographs of the winners in Field and Stream's Record Game Fish Contest, giving weight, size, place and tackle used in taking the Record Fish caught during 1911.

You absolutely can't get along without it. In the three years we have been publishing this book we have been collecting little tips on the various phases of fishing from expert anglers everywhere and the 1912 edition, rewritten and improved from cover to cover, is the most complete and authoritative book of the kind published. The Fish and Game Laws for 1912, included in the "Guide," are alone worth the price of the book. But the book will also tell you When—the best season,—Where—giving many virgin waters,—and How—telling the best methods of angling used by the most successful fishermen everywhere. Read the partial list of contents given above.

Prize Fishing Contest for 1912

In order to give new readers an opportunity to read the list of prizes in FIELD AND STREAM'S Prize Fishing Contest for 1912, together with stories by the prize winners in 1911's Contest now running each month, we are making the following special offer:

AMERICAN DUCK SHOOTING

By George Bird Grinnell

No single gunner, however wide his experience, has himself covered the whole broad field of duck shooting, and none knows so much about the sport that there is nothing left for him to learn. Each one may acquire a vast amount of novel information by reading this complete and most interesting book. It describes, with a portrait, every species of duck, goose and swan known to North America; tells of the various methods of capturing each, the guns, ammunition, loads, decoys and boats used in the sport, and gives the best account ever published of the retrieving Chesapeake Bay Dog.

About 600 pages, 58 portraits of fowl, 8 full-page plates, and many vignette head and tail pieces by Wilmot Townsend.

Price, edition de luxe on hand made paper, bound in buckram, plates on India tint paper, each copy numbered and signed by author, \$5.00. Price, library edition, \$3.50.

A FIGHT WITH A MASCALONGE.

ELICK, a North American Indian, took me in charge as I set out to camp on the Canadian-French River. Aristocratic blood beat so vitally in his veins that the white of his eyes had yielded itself to the royal cause, and left behind a beady, lusterless expression. He was, I was assured, in the direct line of Ojibwa chieftainship, and had not the ban of advanced civilization fallen upon him and his tribe and relegated them to the prosaic passivity of a Government reserve, he might at that moment have been making the forest ring with his war whoop and annexing scalps instead of a few dollars.

It was interesting to try and discover what survived of the original qualities of the North American Indian. The preliminary survey was not encouraging. A pair of heelless boots and patched jacket and trousers had little in common with the buckskin moccasins and buffalo robes garnished with porcupine quills. An old planter's hat was a long remove from the erstwhile coiffure of golden eagle feathers. But there was reversion to original type despite this sartorial vandalism. The Ojibwa temperament was there, and showed itself under the least provocation. The presumptive chief would sit silent and pensive on a rock like a dethroned Napoleon looking across the waste of a kingdom from which he had been exiled. In motion there was a sleuthness in his tread which pointed to a hereditary connection with the chase, and when the canoe, silently drifting down the rapids, surprised a stag slaking its thirst, the Indian's nostrils would quiver like a staghound's held in leash as the quarry dashed into the forest.

Two centuries ago Champlain, the French pioneer, descending the French River, discovered a tribe of naked Indians gathering berries on the island rocks. They were the Ojibwas, to which my guide belonged. From boyhood, in common with others, he had learnt to shoot its rapids, dive in its pools, trap its mink and beaver, spear its fish, and had even acquired some skill in the more scientific methods of angling. The French River has only been open to the general public for the last two years. Prior to the construction of the Canadian Pacific Railway to Sudbury, it was practically unknown. The line crosses the river at Pickering Landing, and there is a hotel and post office combined close to the spot. The river is well stocked with bass, pickerel, pike, and the lordly mascalonge. This species is allied to the pike in habits, and is similar in appearance, only thinner in proportion to its length. Like *Esox lucius*, it makes the weedy portions of the river its chief hunting ground, and with its body hidden lies on the outskirts ready to pounce on its unwary prey. It surpasses its cousin in fighting power, and is known as the "tiger of the river." It is a cautious feeder, and for days will decline to notice the cunning lures in artificial spoon and natural bait which the angler proffers. On other occasions reserve is cast to the winds, and it will boldly seize the bait, and set the reel screeching and the rod trembling with many a mad rush.

The black bass kept us busy the greater part of the day. Game fish they are, and three or four-pounders are not uncommon. In the deep water, where the bare rocks rise abruptly, they are to be found. The cluster of spruce that crowns the summit casts a dark patch of shadow across the stream, and there, expectant of water shrimp and minnow, the bass keeps its vigil. A few months earlier in the season it was found among the brook trout, and took up its abode in the rapids in quest of floating flies that drifted down the stream. To these the black bass rose, and the angler's artificial fly was often mistaken for the succulent edible. But the spring rise of fly is over, and perch and other fry are flashing their bright sides on the margin of deeper pools. It is there the bass mistakes the metal imitation that revolves on its flanges and radiates its hues of electric blue and silver. How eagerly it is seized and what commotion follows, as the captive dives and curvets and angrily leaps into the air.

There is a large silver and gilt spoon bait on

THE ANGLER'S AND SPORTSMAN'S GUIDE FOR 1912, \$1.00	} Our Special Offer
FIELD AND STREAM, for three months, .40	
Total value . . . \$1.40	\$1.00

FIELD AND STREAM PUB. CO., 450 Fourth Avenue, NEW YORK CITY

a second rod, more in keeping with the appetite of the river tiger. A pike, which regards it as a gift for his benefit, asserts proprietary rights over it in an unguarded moment. He soon seeks to release himself from the consequences of ill-advised precipitancy by plunging into the weeds and seeking shelter of great ledges of rock, where he has pursued unmolested his predatory instincts. But the biter is at last bitten, and is soon lying with the bass and pickerel in the canoe, his broad sides making him *facile princeps* among the dead as he was among the living.

But the evening shadows are creeping along the banks of the river and dulling the burnished silver that all day long flashed with blinding brightness. The mascalonge has not yet emerged from his hiding place. The Ojibwa points to the green patches of river flora, where he is likely to be ambushed, and there is an expectant touch in the swift paddle strokes that bring the canoe half round.

"Line—more!" the words fall in mystic whispers from the dusky, silent figure behind me. I fill in the ellipse by drawing off an additional dozen yards. The water is deep round the weeds, and the spoon bait must search its hidden recesses. The evening is hot and the air is soporific. Queen Mab casts her spell over my heavy eyelids and closes them in slumber—the forest is wiped out, the noise of the distant rapids is hushed, the soft splash of the paddle ceases—oblivion.

"Lunge, lunge!" The cry comes from the Ojibwa, and beats in startling surprise on my slumbering senses, quickening them into activity. A loudly protesting reel as the line flies through the rings, and the rod, bending and quivering to the movements of the far-off quarry, explains the situation. A welt on the surface of the agitated water shows the spot where the river tiger speeds his way. As I grasp the rod and throw it across my shoulder, I feel that angling skill is pitted against no ordinary fighter. Unlike his cousin, the pike, he scorns to seek sanctuary in the weeds, and uses all his force against the strength of the resisting tackle. His method of defense resembles the salmon's, and consists of swift rushes and lordly springs. He has a cunning way of resting on the surface, and thus recovering his flagging powers. Each time the canoe is paddled up to him, he dashes away afresh, with much head shaking and undisguised resentment of the unknown enemy, which matches its witchery against his daring. But the runs grow shorter, and the tiger-born fighter that he is, is compelled to admit defeat and yield himself captive.

We camped by the river side, and amid the stillness the bark of the squirrel and the answering grunt of the porcupine could be heard far into the night. The latter rushed round the tent, scratching it with their stiff quills. I was too tired to notice or appreciate the import of this. But Ellick's grunts I had learned to interpret as signs of dissatisfaction. Their full meaning I understood next morning, when he informed me that the porcupines had made a raid on our provisions, and that one of the intruders had scrambled across my bed and person, an event of which I was happily unconscious. Wild horses would not have disturbed my repose.—J. Adams, in the Field.

VEGETABLE IVORY.

IVORY nuts are a curious Peruvian product, found also in Equador and along the Pacific coast of Colombia. They grow on the tagua palm, and it is the seeds which are utilized commercially in the manufacture of buttons, poker chips, umbrella handles and other articles which can be made from this vegetable ivory substitute for the elephant tusk.

The ivory nut weighs up to ten kilogrammes, growing as large as a fully developed coconut with the husk on, and each nut contains half a dozen or more of the useful seeds, each the size of a small potato. The annual production runs well over 30,000 tons.—Peru To-day.

A Free Book about Casting for Bass

CHOCK-FULL of valuable pointers, on the gamiest of all sports. Tells where, and with what lures, you'll get the big ones—straight, practical stuff proved out in actual fishing. Explains, too, why most of the big "strings" are due to scientifically correct tackle.

Heddon's Dowagiac Genuine Rods and Baits

To catch fish not merely to look "fishy"—that's what genuine Dowagiac tackle is made for. Every Dowagiac Minnow is thoroughly tested as a fish getter—and every Dowagiac Rod must "stand the grief"—before they are put on the market. By the way—if you're looking for a real rod—ask to see the \$5 Heddon. Better than any \$10 rod you ever saw. Now send a postal for your copy of this book about "Casting for Bass." Today!

JAS. HEDDON'S SONS
Box 35 Dowagiac, Mich.

HILDEBRANDT SPINNERS

"THEY SPIN SO EASY" SPIN LIKE A TOP

Made in four finishes and three styles. For bass, rock bass, trout, pike, pickerel, muskallunge, salmon, or any game fish. We also handle a high-grade line of Rods, Reels, Lines, etc.

Some Camping-Out Foods

And Outdoor-Life Conveniences of Other Nations

By L. LODIAN

SEVERAL years ago I penned a number of articles for this journal on my camping experiences in Siberia, accompanied by a profusion of illustrations from Russian-Asiatic photographs. Having traveled through some score of other countries, an insight can be given into various of the commissariat conveniences of journeymen in those lands, confining the descriptions, however, to articles not known generally—in fact, almost entirely un-

known to the American sportsman. The illustrations accompanying were made direct from the actual goods by the editor of FOREST AND STREAM.

foreigners' haunts and colonies in our greater cities, where many importers handle them. The country resident can instruct his town-supply man to round up a collection of the goods. But it is not sufficient to make an article merely interesting or instructive. If possible, it must have a commercial value to the equipment-supply trade. So much is every journal dependent to a certain extent on its advertising patronage, that loyalty to its advertisers—the suggesting of possible markets for useful products—is imperative. There is many an advertiser—and non-advertiser—who has got a thousand-dollar idea from his particular journal (and kept quiet about it!), and all for the price of a subscription! This article, then, not alone tells of food conveniences of other countries, but also largely gives a brief insight into camping life in the various lands named.

IBERIK-AMERICA—SUN-DRIED BEEF.

Iberik-America, like Latin-America, is a useful generic term covering the whole of Spanish- and Portuguese-speaking America from the Rio Grande to Punta-de-Arenas (Point-of-Sands). Through the whole of this vast stretch of some 7,000 miles of territory, you will find the *tasajo*, or sun-dried beef, in use. It is marketed in *lariat* and *sheet* form; also in the whole 200-pound carcass minus a single bone. The former two are the best, as the natives, when in need of thread for sewing, can easily finger out a sufficient quantity of tendon twine.

This unsalted sun-dried beef is the most important article in the Hispano-American ranchman's dietary. It ranks the highest in sustaining power, is cleanly to handle—always an important consideration—and, with the maize tortilla or corn disk, is the real stuff with which the Andes explorer has to do in negotiating those formidable climbs. *Tasajo* can be broken or torn up between the fingers, if thin, and eaten uncooked thus. It is tasty, appetizing, but sometimes toughish. Rapid boiling makes it tougher; prolonged simmering softens it. The pemmican of our American Indians I have often used, but it is distinctly inferior to the unsalted sun-dried *tasajo*.

The *lariat* form of the *tasajo* is often further useful in that, in a shack, it can be unrolled from its narrow belting-like transport form and used as a makeshift clothesline across the hut for hanging and drying clothes on. Once, east of the Andes—not then being very familiar with

the *tasajo* and its extemporized uses—I was amused to see a gaucho cut off a bit of the free end of the "clothesline," and nonchalantly toss it into the soup-pot! That *olla podrida* was all right, however!

CHINA.

Sun-dried oysters are a product of China, and are much used on the great caravan routes. They are cleanly to handle, and can be slowly

A VIRGIN TROUT STREAM.

WHERE FISH KNOW NO LURE.

mouthed and eaten as they are—as is done *in situ* by the Oriental overlander on camel-back—or served hot in the "boil" (stew-pan) on arrival at the caravanseri—the universal half-way house of the interior Asiatic trade routes. Their nutritive value is dubious. I write from actual experience of many a feed on them.

Oyster stew in a shack would be usually pronounced a luxury, but, if wanting them, the reader can buy them by the pound or barrel of various Manhattan Oriental importers—all "dry

as a bone," yet susceptible of far more uses than our unsatisfactory canned oysters.

Cakes of compressed Cathay strawberries are also obtainable—a grateful, nutritious and slightly-aperitive condensed fruit.

COMPRESSED RICE.

Rice is the food staple of the Orientals; and for travelers' convenience there is marketed a rice-macaroni—macaroni is not an Italian word, as commonly supposed, but Oriental—as are maravedi (a coin); saki (drink); padi (rice); litchi (fruit); sakari (sweets); also, hundreds of other semi-linking similarities might be quoted. The Orientals spell the word with a k—or rather their hieroglyphics give the power of a k—not c. This rice-macaroni is compressed, and an enormous saving of bulk effected. The loose stuff is so elastic and wiry that it seems to have a liking to stray "all over the shop." But an amount that would litter up the floor of a big-sized office can be compressed into a tolerable fit-the-pocket briquet. And it stays compressed. It is easily dissociated, per finger, as required.

Those who care for rice in their dietary can get the briqueted rice-macaroni from any Oriental importer. A dropped and broken bag of rice is liable to cause profanity; certainly some loss. The compressed form obviates this. All conveniences that tend to the equanimity of one's mind in camp are laudable. There is usually trouble enough around as it is! Rice-macaroni cooks immediately; rice grains require much soaking or boiling.

Compressed dried fruits have been known to the interior Asiatic traveler since the days of Marco Polo. Being both nutritious and slightly aperient, they are to this day used in lieu of drugs. Besides, in the matter of passing hospitality, how much more pleasant to dispense a few fruits to your guests than to hand round pills or medicines!

Sun-dried bread-sheeting, resembling chamois leather somewhat, is a product of Central Asia; likewise, the sun-made "dipped" stringed walnuts.

UNSALTED VS. SALTED GOODS.

The flowery republic's—for we might as well now call it thus—ripened eggs are also found preserved for years unsalted. They are jet black almost throughout, of nutritious taste, but require getting used to. Although having eaten scores of them myself, I would sooner always prefer the fresh article.

The use of saltless foods by campers also requires getting used to. As Nessmuk has written: "Learn to do without." That is, however, while sounding so simple, a hard thing to learn. "An egg without salt," says an Iberian proverb, "is like a kiss without a mustache." Yet in time the flavor of things can be more appreciated without salt than with. Besides, salt is not a food; it helps lower the temperature in winter and increase it (by thirst) in summer; it destroys part of the nutritive processes of food; it attracts moisture unduly, and thus needlessly increases weight of things to be carried; further, the kidneys are taxed to get rid of this worthless foreign element. For over a decade I have practiced doing without salt, and feel the better for it.

Persons camping near the sea, with plenty of

seaweed available, should know that, in emergency, some common seaweed added to the soup-stock enriches it, as steady boiling resolves it into gelatin, which all helps as a food base. Compressed seaweed is indeed obtainable at various Gotham importers. No American camping-book notes seaweed as a passing contribution to the food supply in case of need, yet our friends the Jon-Chins have had it since the epoch of Yenki-kan, "the white captain."

It is a feature of Oriental preserved foods carried by caravan parties, that not a particle of salt is used in the preserving process. They are just thoroughly sun-dried—that's all. "There's a reason." Centuries of experience in caravaning over waterless wastes has taught them that salted-preserved foods would but add to the terrors of thirst in dry seasons. I have known in Mexico of the thirst-horror; no reader who has not had a touch of it can realize its delirium. So all Oriental sun-dried fish has not a particle of salt, nor their strip-meat, if intended for caravan parties, some of which consist of 15,000 camels, and stretch, always single file, through some fifteen miles of space, taking about half a dozen hours to pass a given point.

EDIBLE "STONE" FISH.

That piece of "fossil" resembling a sharpening stone is from the Oriental mainland, and becomes, after soaking and cooking, a juicy salmon-steak. It is obtainable from Chinese and Nipponese importers in Manhattan, and costs ninety cents per pound—the highest price fish-food on the market. It has only been sun-dried, minus an iota of salinity, from a strip of salmon; the desiccation contracts and hardens it to a horn-like substance. It is always extremely cleanly to handle, and may be carried loose in the pocket.

BRICK TEA OF RUSSIAN TRAVELERS.

Our friends the Cibriaks and Ruskis have been using compressed brick-tea these centuries. A three-pound slab slips snugly into a great coat pocket. Just try to stow away three pounds of loose tea in your pocket, and notice the protrusion! The compressed tea is so hard that it more resembles some stone tiling. It is sometimes vigorous work to break off, with an iron bar, a thimble-size nugget—sufficient for a pot of tea. In fact, the tea-slab itself is often used, at a shift, for a make-do mallet about camp, and nails may be hammered in with it—and it is often hard on the nails, too!

There is only one railroad traversing Siberia, so there is still a vast amount of traveling to right and left of this line by the native wheeled vehicle known as the tapahtac (pronounced tarantac)—dubbed by one much-traveled Yankee scribe as "enough to shake your insides out!"—and the low-lying sani, or sled. When thus traveling, Russian officers have been wont to indite messages en route, using that tea-slab as a provisional writing tablet resting on the knees.

This brick tea is the great standby of the Siberian trapper. He saves and accumulates the exhausted tea leaves for a single purpose: dries them, then drops a couple of handfuls into each of his camel-hair, matted-felt boots to absorb the perspiration. They do this faithfully. Night time, the trapper pours out the

tea leaves (which feel quite damp with the retained perspiration), places them near the stove to dry out, and in the morning they are replaced for more duty. Thus day after day. Here in America we use bran or oats or warm ashes to draw out the moisture from sodden foot-gear in wintry weather, always a menace to health, and ever an unsanitary discomfort. But you have to have about camp the bran or oats—or where are they to come from?—and some of the ashes may slip in so hot as to permanently wrinkle the leather boot or shoe here and there. Whoever has gone through the misery of a wrinkled-by-heat ill-fitting shoe a couple of hundred miles from the nearest relief station, will be cautious about the warm-ashes dodge in future. Besides, look at the floury ash mess always! Try the Siberian trappers' old tea leaves.

The problem of properly and rapidly drying out the interior of boots—particularly rubbers—is yet an unsolved one. One cumbrous device is to carry along a pair of the semi-porous soapstone lasts, but these must be heated first, and care taken not to overheat them. Then it means also the addition of some pounds' weight to your kit. They cannot be recommended. It is indeed a "vicious circle," the trying to dry out quickly damp or wet footgear. I have often known it to take about three days in camp to properly dry sodden boots.

The secret of the Siberian trapper's remedy is simple: The leaves contain a percentage of tannin, or tannic-acid, which absorbs moisture with avidity.

GERMANIA.

The Deutschlanders produce a vast quantity of camping-out conveniences. Their erbswurst or pea-meal sausage, so-styled, is a copy of the centuries-old Scotch oat-bread sausage. The erbswurst is really a sausage of compressed powdered salt, with some pea-meal added. It is not worth carrying on a trip. I have had experience with it for years, spasmodically. Avoid it! Buy your own pure pea-meal loose.

But the smoked pears of Teutonic farm-houses! Now, those are something! They are wrinkled, dried up, uninviting-looking objects, but improve vastly on stewing, and are used, in fact, for all the purposes for which we Americans use stewed prunes. The smoked pear is, like ham, of agreeably smoky flavor, and is slightly aperitive; hence its use by old Deutschers in the Rhineland.

How much better for the camper to so arrange his diet and fare to keep normal than to carry along cathartics or drugs of the "nastoria" type! The latter possess no nutrition, and are a weight and encumbrance—and supposing the bottle breaks and musses up your tobacco; whereas, a properly balanced diet is life-sustaining, and keeps one in even health. Any reader or camper, present and prospective, can experiment to suit himself on suitable foods, and will finally wind up by "hitting it" to a nicety as to a perfectly-balanced fodder supply.

THE North Dakota Board of Fish and Game Control is trying to protect the few scattered antelope that are still to be found in the bad lands of that State, and a number of ranchmen are assisting in the work.

Across the Plains in Early Days

By SAMUEL MANSFIELD STONE

(Continued from last week.)

TO enumerate all of the articles contained in that chest would require a column of space and a better memory than mine after all the years that have elapsed since that notable Saturday afternoon. Suffice then to state that there was a practically complete carpenter's outfit of saws, chisels, gouges, planes, awls and punches, gimlets, bit and brace, with a kit of extra bits, an adze, broad-axe, several big augers with handles, draw-shave, try-square, etc. In a locker at one

John cut a quantity of fuel from the tops of a dead tree that had fallen over the cliff, while I cut some slices of venison and salt pork, which I put to fry in one of the landlord's pans, previously cleansed with sand, soap and water. While eating dinner we speculated as to where we were. That we were on the outskirts of the Arkansas valley was apparent, but as to our position with reference to inhabited localities we were wholly in the dark. We realized what a mistake had

AMERICAN ANTELOPE.
Field Museum Natural History, Chicago.

side was a five-pound can of powder and a large roll of safety fuse, evidently for use in conjunction with the nitro glycerine. There was also a quantity of pig lead and a tripod and melting crucible and several bullet and plummet moulds.

We argued that it would be right to make such use of our unknown landlord's property as our situation seemed to warrant, offering to remunerate him for such use, provided he should return during our sojourn, otherwise leaving a note of thanks against his reclaiming the property at some future time. We speculated freely upon the peculiar situation—a tenantable house equipped with all the necessary fixtures to convenient existence, abandoned in this wilderness, the owner evidently having been gone for years, possibly, there being nothing to indicate how long. Who was he? Is he still living? Why did he, evidently a mechanic, locate so far from all opportunity to ply his craft? These and many other questions we asked each other.

With the hatchet, which was in good order,

been made in neglecting to equip ourselves with a map of the State or at least a copy of the Government sectional survey ere setting out. The responsibility of the omission rested chiefly with me, for John had no idea on leaving home other than to make as short a trip as possible to Arkansas City. Not that he regretted his digression; on the contrary he seemed to thoroughly enjoy our experience. Personally, I was perfectly happy. The surroundings of our present camp were exactly to my notion, game was abundant, we were amply equipped for hunting and fishing, we had a most comfortable and convenient shelter, the nature of whose acquisition failed to worry me after our commendable resolutions as to recompensing its proprietor; I had agreeable company, and above all was in the enjoyment of splendid health. Under these conditions I gave myself up to the enjoyment of what I had always looked forward to as the culmination of worldly happiness. True, closer proximity to a laundry would have enhanced my satisfaction, and I occasionally pined for a

pleasanter smoke than a nicotine-impregnated brier wood and "Virginia plank road" supplied, but I was happy.

We concluded to do nothing about refurbishing the house till Monday, hence we made camp for over Sunday in a sheltered nook a little way up the gulch. We did not care to sleep in the shack until we had thoroughly cleansed and renovated it, having in mind possible contagious illnesses from which former occupants might have suffered. In the chest locker we found a number of sticks of sulphur, and after cooking our Sunday dinner, we placed one of these in the skillet and set it on fire. Closing the door, we left the place to fumigate itself, which it did so effectually that it was impossible to stay within twenty yards of the shack to the leeward without suffocating. Whether this treatment had the effect to destroy any dangerous germs or not, one thing is certain—it drove away the bats which had returned after we first surprised them.

The first streaks of Monday's dawn saw John in a thicket cutting alder and willow twigs, which he fashioned into a very good apology for a broom. With this we swept the shack floor of all the accumulated dirt, as well as the side walls and overhangings of dust. Then, with the tools at command, we cut and made a bedstead, which we put on the opposite side of the room from the original. We fixed a number of shelves near the fireplace for our cooking utensils, and drove pegs in convenient spots on which to hang our saddles, bags and other traps. A new handle was fitted to the pickaxe and John turned coal miner for a half hour, with the result that we had a ton or more of free-burning bituminous coal piled in a home-made bin alongside the fireplace. Not only was this coal a very great convenience in cooking, but it converted the shack into an enjoyable sitting room during the cool evenings common to Western bottom lands. With a lighted candle in a bracket candlestick, one of John's invention, a bright fire blazing cheerfully in the open grate, two youngsters sitting by the fireplace, with halos of tobacco smoke above their heads, you have a picture of homely contentment which was nightly reproduced in that lonely shack on the fringe of the Arkansas Valley. The only thing we longed for to complete our enjoyment was something to read. In a corner of the tool chest, wrapping up some whiting, we found part of a copy of a Topeka paper, printed nearly three years previously. About half of the print was illegible, but what remained was read and re-read until we were able to tell it to each other at night, instead of getting the paper each time.

One serious drawback to the enjoyment of the nights was the presence of great numbers of coyotes which seemed to know of our occupancy of the shack, and every night, just as we were ready to sleep, these yelping brutes would set up the most frightful din imaginable and keep at it during the greater part of the remaining hours of darkness. Occasionally we would go to the door and fire a shot at them, but this would only serve to frighten them for a few minutes when they would return with renewed vigor. One night during a particularly vociferous concert I chanced to recall the presence of the can of nitro glycerine in the cellar. I mentioned it to John with the result that we soon matured a scheme for using the explosive in the interests of peace and quietness. Next eve-

ning we brought the dangerous stuff up the little ladder, taking prodigious care not to jar or drop the terrible compound. I had previously demonstrated that it was not impaired by age or other causes by dipping a hammer head into a few drops of it and striking it on a rock with gun-like explosion. We succeeded in getting it safely to the level plateau on the summit of the ravine wall, at the spot where the wolves did mostly congregate. We then poured out perhaps two quarts of the stuff in the form of a circle, one arc of which came close to the edge of the cliff diagonally across the gulch from the shack and twelve or fifteen rods away. I then removed the bullet from a cartridge without disturbing the powder, and inserted one end of a long strip of safety fuse in the place of the lead, thus forming a perfect detonator. This I placed in the edge of the glycerine circle nearest the cliff, running the fuse down through a seam in the face of the wall, where it was concealed from view to a point easily reached from the foot. The night was almost as light as day, with a full moon half way up the eastern sky, when shortly before midnight we heard the coyotes beginning their nocturnal divertimento. From the window we could see that the animals were much attracted by the spread we had made for them, crowding around it, sniffing, and, as it appeared, licking it up.

"That's right," muttered John; "fill yourselves with the stuff and you'll go off all the easier." evidently unaware of the grim humor of his address.

A great drove of the brutes had collected, and creeping quietly out of the house, keeping in the shadow, John sneaked over to the fuse. A moment later I could see a little sputtering spark creeping slowly up the face of the cliff. John retraced his steps to the house and took up a position beside me at the window.

As the spark neared the top of the wall it occurred to me that if the glycerine did its duty our safety would be jeopardized. Communicating my fears to John we moved down from the window just as there came a crash that caused the ground to reel, followed an instant later by a shower of stones upon the shack roof that made us cower in terror. The very softness of the limestone rock proved our salvation, for it crumbled into minute fragments which rattled down in a harmless shower. As soon as the pattering on the roof ceased, we ventured out. The ravine was thick with smoke and dust so that we could barely distinguish objects a few feet distant. But our ears told us tales of great suffering on the plain above, whence proceeded a perfect bedlam of shrieks and yells.

As we had to walk a half mile ere we could make an ascent, when we reached the scene of the explosion the smoke and dust had cleared away so that the scene of devastation was unobscured. And such a scene! At the top of the cliff where the glycerine was placed was an inverted cone, eight feet in depth by twenty-five in diameter, at the bottom of which was, to the thickness of six inches, a bed of pulverized limestone, shaded red, as were its sides also. All around the edge of this pit extending back for many rods on the plain, the ground was covered with fragments of flesh and bunches of hair, while still further back was a semi-circle of mangled, half dead wolves. We had brought along our revolvers and proceeded to put these

brutes out of misery. Still further away we could see, limping in the bright moonlight and yelling like fiends, the remnant of the great flock whose curiosity had led them to inspect the glycerine ring.

We had no means of estimating exactly the number of animals killed by the explosion, but judging by the original drove and contrasting it with the straggling few that limped away, we came to the conclusion that not less than fifty coyotes departed this life on that occasion. But what caused us much greater satisfaction than the mere slaughter was the fact that no more coyotes trespassed upon our self-claimed preserve during our sojourn. It seemed probable that the survivors told their companions about the catastrophe, unless, as John suggested, the entire coyote contingent of that section of Kansas was present on the fatal night. We often heard the howl of wolves afterward, but they were mostly of the timber species and were at a great distance from our camp. But we still staked our ponies in the gulch.

Here then at last was I, fairly installed in that sportsmen's Mecca that had figured conspicuously in my dreams of an earthly paradise from the days of earliest boyhood. Located in a comfortable shack; food in abundance for self and horse; a jolly companion, who entered heartily into the spirit of the situation; a vast forest spread out before me, filled with almost every variety of game, and yet, surrounded by a prodigality of means to enjoyment, I was forced to accept the truth of the old saying: "There's no rose without its thorn."

On the very morning after our wholesale onslaught upon the coyote legions there stole over my physical economy the preliminary symptoms of that scourge of the Southwest—fever and ague. Hot streaks would start somewhere about the base of my spine and shoot upward in tantalizing little spurts till they reached my head; then with the speed of lightning they resolved themselves into trickling rills of ice cold water, which meandered slowly down my back, filling me with shivers and shudders, accompanied by dull, heavy pains in my bones. I imagined that I had taken a little cold out in the dampness of the previous night, and tried to shake it off and pull myself together. My efforts were futile, and I confided in John, telling him my symptoms.

"Why, man, you've got a case of 'shakes' coming on. Have you any quinine in your drug box?"

Unfortunately I had none. When making up the box I tried to think of such drugs as I would be most likely to require, overlooking the one almost indispensable in that country.

"Ten grains of quinine in a glass of your corn whiskey would knock the ague all out of you now, in its first stages," said John, but I failed to derive any comfort from his observation.

However, I argued if whiskey mixed with quinine would effect a cure, a double dose of the whiskey straight ought to go a long way toward the same end, so I took the whiskey. I imagined it helped me; at all events I felt none of the shivers again that day nor on the one following.

[TO BE CONCLUDED.]

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

THE TOP RAIL.

AMBASSADOR JAMES BRYCE, who is an ardent as well as an expert fisherman, could not be induced to shoot a gun at birds nor animal. He was being twitted about his eagerness to pull a hook into the helpless fish, which the twitter argued was just as cruel as killing with a gun. "Well," said the ambassador, "it's entirely different. The animal or bird has no choice. You see him, pull the trigger and he is dead, but with a fish it is different. You cast the fly and—well the fish does not have to take the hook unless he wants to. So you see it is optional with the fish, while the animal shot at has no opportunity to refuse the shot. The shooting game is too one-sided." But the fact is that Ambassador Bryce is too tender-hearted to become a shooting sportsman. He winces at having to bait with live bait for bass, because of the possible pain to the frog or whatever he may be baiting.

* * *

ONE of the writers of so-called nature stories spins a yarn that, if it originated with him, should entitle him to entry into the ranks of great inventors. Someone said an Indian woman had exhibited a scar on one of her legs, saying that she had cut out a piece of flesh for bait with which to fish through the ice, and thus save her own and her infant's lives at a time when everybody else in her village had starved to death.

This smacks of one of Petroleum V. Nasby's stories, but while not so tall, is, no less easy to swallow. Nasby wrote in anti-bellum days of a concoction he planned to sell as a hair grower and which, he said, would make anything grow if properly applied. A poor woman who had only a cow on which to depend for a livelihood, he said, cut a steak from Bossy's hams every day, applied the hair grower, and lo, next day there was enough fresh meat for another steak.

But Nasby did not expect that anyone would believe his yarns, and besides, he lived at a time when writers did not label their inventions in any special way, but ground them out and let the reading public form its own conclusions.

* * *

OUT in Springfield, Ill., they have no Mayor Shanks to keep down the price of food, but they "raised" Indianapolis one—that is, of course, if our correspondent has not been careless in transcribing the following story:

"Mrs. C. H. Cormeny, of Springfield, was surprised to see a fine specimen of the opossum walking in her back yard. Securing a club, she speedily killed the animal, and being an expert cook, she served it for dinner with the traditional sweet potato trimmings. It is rare that these sly animals of the forest find their way into a city yard, and the presence of the marsupial was a surprise to all nimrods."

GRIZZLY KING.

Along Enchanted Ways

By ROBERT PAGE LINCOLN

THE glide of the canoe between the overhanging foliage, the dip of the paddle and the tinkle as the bright drops fall from the risen tip, so the journeying canoeist skims along, always enjoying new scenes and appreciating new sensations the like of which cannot be named in

the branches as they fall low over the waves—here is the greater freedom, the supreme, the mighty.

The canoeist has for his world what the man afoot has for the open road. His is the open way of the blessed streams where the sunlight

love to think of when we look at the sun; the shirt open at the throat and the feet easefully touching the ribbed bottom in every degree of comfort. Of that grandeur let me speak in terms of praise, little as I may have at my command in that line to act upon. But it is the

GOING THROUGH A LOG CHUTE.

A LOG CHUTE.

any other form. With the return of the summer season to the land after a winter of dreaded snows and cold northern gales, the very thought of summer is sufficient to arouse the mind from its dormant state. The spirit craves to be fed with experiences, and these experiences are best enacted where nature is, and where the silence lies complete and unbroken. What then is the fascination that arises so readily when the slen-

filters down through the branches and lingers upon some dark pool; where the leaves gently rustle and where the cool shadows wash the cares away from his tired soul. No more tired. Ah, no. It is as though he has stepped from the prison cell and into the glory of God's own infinitude, held in the embrace of nature, sweet and compromising nature who knows no sorrow but only the joy and the gladness, only the smiles

divinity of it, the superbness, the illimitable visions of purity and tranquility; all put together and gifted to the man who plies the paddle, be it with grace or be it with the faultiness of the amateur.

It is all the poetry of out-of-doors. The true spirit of summer found its ternal abiding place in the heart of earth's minions. By those little rivers, those infinite streams, let me wash what

A NATURAL HAZARD.

GOOD NIGHT.

der craft slips along and the paddles act their part? Who can tell. Of that infinite fascination it holds much of the world's wonderful store of intrinsic value—value such as is not bought in dollars and cents, but can only be purchased by the application of the body and soul to that wonderful agency opened by the lady of moods. I say there is a wealth of godliness attending the progress of the canoeist. His is the supreme joy. For along those smaller streams, in the swirl of the greater rivers and rapids, the splash of the water and the dip of

and the laughing words, only the feeling and the blessedness that are always to be found next to her bosom. What of the ease and simplicity connected with the progress of the canoeist? Ah, it is sublime! The dip of the paddles and the gentle lift and moment of wait ere they touch water again—it is the sweet abandon of care and all those fretting factors that serve to unbalance the rules of thoughtful and considerate nature. Loose clad with arms bare to the mercies of the sun, which is not necessarily the baking heat of torrid August, but that warmth we

of stain I have have in me; let me always glimpse the sun between the boughs; let me always feel the coolness as I drop my hands down into the passing elixir of the earth—truly the wine of God poured from the beaker of heaven into the infinite courses. Always the suns of summer, always the abandon and ease, the forgetfulness of all save that the body is responding in its every agency to the fruitfulness of the serene day.

One day or another it is the same. What of the showers that fall? Is it not by grace of

the call of nature to give its plant life and tree life and earth life the drink it so craves? Is it not to ease the land a while from its usual path and to give it the sweet understanding of variety? True is the word. Let the rivers slip along and let the canoe take its course. Who may say but that around that gentle turn lies some enchanted land never conceived of save in dreams? Who may say but that the sun is gentler there, the music of the earth is softer, that the tinkling of the beaded water from the paddle tip will not have a suprema nuance than has ever before touched the sensitive strings of the memory and communicated the sound to the soul.

As the airy craft slips its way over the unruffled murk of the surface, there is chance for much reverie. Always the thoughts that spring with each forward movement, always that awakened desire to know what lies beyond, always the glamour of the solitude to make for the heart of one a perfect haven. The open road has its lure, its intrinsic lure, its appeal to the soul of one, but shall we then lower the lure of the stream to a second place?

This were impossible. With that path of dreams unfolding before you, with the sylvan grandeur presenting itself in glowing banks on each side, nothing but beauty visits upon the being of one. Now and then a streak of sunlight so soft and diamond clear prints a picture on the water that shall never fade as long as there is a movement of life in the heart. I know some sweet and delicate places. I know some secluded place, and as I sit here before the veteran typewriter I hear over the tap, tap of the type the gentle purl of water; I hear the rumble and the roar of cascades; I hear the minor note of the rapids; now the heavy note and now the gradual pause, and then the whirr again as the waters plunge foam-flecked over the hoary rocks.

I feel the canoe approaching those rapids. We sit tense in our individual places with our eyes riveted upon the crash and roar before us, wondering vaguely if the canoe will be wrecked and we will be spilled into the tumultuous deep so menacing and yet so inviting to the adventurous soul. The canoe leaps forward. It feels the catch of the arms, the water arms as they reach out to seize that seemingly contrivance and dash it to pieces on the rocks below. Here is one of those moments that tests the skill of the paddler. To dash through that boiling, seething pot and come out high and dry on the more serene water—what of skill is there not connected with the manipulation of that 18-foot wonder.

It is moments such as these that add zest to the usual routine. You do not know what is ahead of you. Search out the unfrequented streams and hunt the gold at the rainbow's end so to speak. I want now and then a rapid to boom through; I want always an infinite variety to cool the passion for adventure; and then when I come to the quiet and untroubled streams, the newness will tremble through my veins and fill me with some of that delicious joy that can only be known when experienced.

And now, mind you, I am not going to stop at this; I want more than this variety, for I am a disciple of the honorable Izaak Walton, and to pass by the ideal pools would be to insult the most glorious of pastimes. I want to strike now

and then along the course of some beautiful and untroubled stream certain pools where I can cast a fly. I want with me at my feet the resilient bamboo; I want that tapered line and that smooth, round and hard leader, and I want also a set of flies that match the surroundings, referring to the flies that fall upon that surface to trick the trout. I want to tie the canoe to the willows and there in hiding cast my flies into the dark and promising nooks where the big ones lie fanning the water with their heads pointed upstream. I want to keep out of their sight; I want to make no disturbance, and if success shall come to me, then I shall be doubly glad, but if no success shall approach my dominion, then, too, I shall be glad, for I will have had my wrist in action, I will have flicked the water just right, and at just the right spot. That in itself is part of the wonderful completeness of the day.

I will take just a few so that when the camp is pitched at night under the lordly trees, the aroma of frying fish shall touch the nostrils and fill the breast with joy overflowing. Or when we approach the still-flowing brooks where the transparent water shows us the fish at their play, I want to float my dry flies. I want to see those upright wings flowing along so perfect and so likelike to lure the scientific king of the deep. So let the canoe keep to its course. Nor let this variety be all. With the birds around I would picture them in their haunts and then when the winter hours once more come to shut me in from paradise I can take out that album and turn the leaves of remembrance, living over the scenes that so appealed to me in the past. With the camera I shall record those days and those scenes.

A camp for the night! What memories it will call forth, and what a glory it is after a day's paddling through the golden summer streams! You beach the canoe at a likely spot where the trees form a protecting fringe around the prospective camp location, and there just as the sun is melting the western skies into a liquid dash of luridness, the tent is put up and the evening fire is lighted. Soon the flame shoots up and there in the gathering gloom with the universal stillness of the dying day to calm the heart and bring it added peace, you will gather around the glows and sample the cook's effort at perfection, and that perfection is every bit of the word. With the inner man to appease the appetite responds and soon the coffee is poured steaming hot from the pot. Description of such scenes can never be portrayed in their exact light. We can sense it, but we cannot put it to word. There is the dying day, the shadows creeping in, the lake or the stream perfectly tranquil and not one breeze fanning the trees into life. It is as though it were an hour of reverence of holiness, and that now in silence the minions of the wild are watching with spellbound hearts the efforts of nature to outdo her past efforts in crowning the glory of the day, with the superb sunset illuminating the west with its fingers of crimson, of gold, of bronze and the finer blue that looks out between to add that eternal purity to the vast color scheme, truly the master artist's supreme effort.

There are the woods that lie still and calm; there are the gloomy spots and the silvery light that touches the leaves and makes them the very thoughts of love. There is the camp, the fire

crackling cheerily in the open and the souls gathered around the blaze, gathering from their communion that which is the only thorough system as an aid to healthfulness. Let us look upon such scenes; let us all find them and know them. How can I tell of them; how can I picture them from the tips of my fingers. Out then, mortal souls, where the streams lure you. Let your paddles sink into the soft and cool waters and camp when the night overtakes you, looking up at the stars, sinking to rest with the lull of the breeze through the treetops.

Ridding Your House of Mosquitoes.

BY ALBERT A. BEECROFT.

THE great question of mosquito extermination has been given much space in the papers throughout the country in recent years, but so much of it was of a technical nature that the general public has been more or less "stung." Owing to the fact that the mosquito is not a migratory bug, in the full sense of the word, it is not hard to combat the pest and accomplish much good by observing a few precautionary measures about the private dwellings, but it is quite essential that the next door neighbor give his co-operation, or the work will be greatly hampered. In the early spring the first crop of mosquitoes emanates from the basements, and dry cellars of dwelling houses and outbuildings. It is known as the house mosquito and is not a transmitter of malaria or other diseases, as is the *stigmagoea* of the swamp, but it is most troublesome, because of the fact that it is hatched in the building, and being a most prolific breeder, it is sure to make itself felt at all times. The best method of clearing the house of these pests is to fumigate the cellar by evaporating culicide. The cellar should be closed and as thoroughly tight as it is possible to make it during fumigation. The fumes of the culicide, which may penetrate the upper floors of the house, may be a trifle unpleasant to some people, but they are harmless, and may do the premises a great deal of good.

Anyone that may be skeptical about finding mosquitoes in the cellar in the early spring may prove it to his own satisfaction by looking into the old boxes and barrels, and on top of the cross-sectional floor braces, or in old rags and other materials that may be stored in the basement. Culicide can be obtained at any drug store and costs about sixty cents for twelve fluid ounces, which is enough to fumigate the average house. The second crop of mosquitoes is a much harder proposition to cope with than the indoor variety, owing to the fact that they breed in the most inconceivable places. Great care should be given to the gutters and drain pipes of the house, as the falling leaves and decaying vegetable matter which collects in them affords the finest kind of a place for the development of the larvæ. Old rain barrels, tin cans and garbage cans should not be allowed to collect water, as it is in small quantities of putrid water that the female mosquito prefers to deposit her larvæ, although she will drop them into ponds and larger bodies of both fresh and salt water.

The only way to treat stagnant pools, ponds and other small bodies of water that may collect

about the place after a heavy rain is by oiling the surface of the water with No. 4 unrefined kerosene. Half an ounce of oil will form a film over fifteen square feet of surface, but after every heavy rain a few dashes of oil should be added. The larvæ of the mosquito during their development, or incubation in the water, must have air, and they rise to the surface when very young, on an average of once in fifteen minutes for breath. The oil forms a very fine film over the surface and the larvæ are unable to penetrate it. In places where large bodies of stagnant water, such as swamps and marshes are found, larvæcide should be used, and since this is very expensive, it is far better to place the work in the hands of an expert. The male mosquito subsists on the sap, or juices of vegetation, and it is only the female that is sanguiferous, or blood conveying, and consequently the dreaded *stigmogoca*, which transmits yellow fever, malaria and other diseases, is of this sex.

The Boy Scouts of America are doing more at present to exterminate the mosquito than any organization in the country. In certain sections of the country the Boy Scouts go on Saturday hikes in their own locality and they have a cleaning-up squad, whose duty it is to turn over tin cans, rain barrels, and in fact everything that might hold stagnant water.

Captain B. S. Osbon.

CAPTAIN BRADLEY S. OSBON died May 6 at the Post Graduate Hospital, in New York, aged eighty-four. His long life had been one of stirring adventure, during which he had visited, and fought on, most of the seven seas.

Bradley S. Osbon was only ten years old when he ran away from home to go to sea. At the age of fourteen he shipped on a New Bedford whaler which took him to the Antarctic Ocean and to Australia. While still a boy he signed on the brigantine Swallow for a whaling voyage to the Arctic, and the tale of the Swallow's battle with a Chinese junk, as Captain Osbon used to tell it, was one of thrilling interest. Next Osbon was in the Anglo-Chinese navy, where there was much fighting and some plunder, and for some years he was in the China seas. Between 1850 and 1860 he was a commander in the Argentine navy during a local revolution, and at length returned to New York, some time before the Civil War. When that broke out he joined the navy and was signal officer on Admiral Farragut's flagship when the fleet went up the river to capture New Orleans. Mexico, South America, Europe and Cuba were the scenes of many other adventures in his long and stirring life. Captain Osbon used to tell that during the Spanish-American war he was a volunteer naval scout and was the first to discover Cervera's fleet before it took refuge in Santiago.

In recent years Captain Osbon was secretary of the Arctic Club. He attained some notoriety in connection with the Dr. Cook-North Pole discussion, for he was a partner of Dr. Cook. Captain Osbon was a simple, trustful man and was loyal to his belief in Dr. Cook up to the last.

Captain Osbon published a number of stories of his adventures in FOREST AND STREAM, and was the author of a book entitled, "A Sailor of Fortune."

State Game Refuges.

WE called attention last week to the bill, now before Congress, authorizing the President to set aside in forest reservations small areas to be protected as breeding refuges for big game. If the sportsmen throughout the country shall become interested in this bill and will write to their Congressmen to support it, there is a strong possibility that it will pass during this session of Congress. Bills with a similar purpose, which have been presented to Congress before, have failed.

After careful study of the situation, the game preservation committee of the Boone and Crockett Club drafted this bill in such terms as to eliminate the objectionable features of former bills and at the same time to preserve the object sought to be attained—game refuges in forest reserves. Heretofore game refuge bills have failed for two reasons—State's rights objections and those based on the withdrawing from public use of areas which could otherwise be used for the grazing of cattle and sheep. The former objection is avoided in the bill by not authorizing any area in a State to be set aside unless specially requested by the Governor of that State, thus assuring to each State independent control of the matter. The second objection is obviated in the bill by making the areas to be set aside so small that scarcely any impression will be made on the grazing lands. The game will thus come under the protection of the Department of Agriculture only in these small areas—to be restocked with game animals and reserved as breeding grounds—while the natural increase will be overflowing in areas where the game is under State control. Should this bill become a law, it is the purpose of the Boone and Crockett Club to begin the restocking with elk of some of the areas which the States shall ask to have set aside. After seeing the practical demonstrations thus made, it is hoped that local and other associations will become aroused to the possibilities of restocking breeding grounds in forest reserves and continuing the work begun by the Boone and Crockett Club.

The bill has been introduced in the Senate by Hon. George C. Perkins, an associate member of the club. It has already received the approval of the members of the Senate committee for the protection of game and will be reported favorably. Hon. William Kent introduced it in the House, and it is now before the agricultural committee.

Should this bill become a law, it will mark the greatest advance toward the substantial preservation of our rapidly disappearing big game that has ever been made. The possibility of its passage should give hope to those who have already despaired of the saving of our magnificent big-game animals and should spur each one on to active support of the bill by writing to the Congressman from his district. As a law the bill would make a new era in game protection. Its importance warrants our printing it below:

H. R. 23839.

A Bill for the Protection and Increase of State Game Preserves.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States is hereby authorized, on request in writing by the governor of any State and recommendation of the Secretary of Agriculture, to declare by public proclamation areas which are adapted for the protection and propagation of game or other animals, birds, or fish to be national game refuges, which shall be recognized as breeding grounds therefor—

First. Whenever the Secretary of Agriculture shall certify that he has received in writing from the governor of the State in which such lands are situated a recommendation for the creation of a game refuge on national forests or on other unoccupied public lands; Provided, That the area of any one refuge shall not exceed fifty thousand acres; or

Second. Whenever the Secretary of Agriculture shall certify that lands held in private ownership have been relinquished to the Government for the purpose of establishing a refuge for birds or game; and the Secretary of Agriculture is hereby authorized to accept the relinquishment of such tracts in behalf of the Government of the United States.

Sec. 2. That when such areas have been so designated as provided in this Act, hunting, trapping, killing, or capture of game or other animals, birds or fish upon the lands or within the waters of the United States within the limits of said areas shall be unlawful, except under such regulations as may be prescribed by the Secretary of Agriculture; and whoever shall violate any of the provisions of this Act shall be deemed guilty of a misdemeanor, and upon conviction in any United States court of competent jurisdiction shall be fined not more than five hundred dollars or be imprisoned for a period not exceeding six months for each offense, or shall suffer both fine and imprisonment, at the discretion of the court; Provided, That the Secretary of Agriculture may, when necessary, authorize the capture therein of any animals, birds or fish for propagation or exhibition, may authorize fishing with hook and line, may permit the collection of specimens for scientific purposes, and may exempt from protection and destroy such species as he may deem injurious.

Sec. 3. That it is the purpose of this Act to protect game, mammals and birds, and not to interfere with the operation of local game laws as affecting private or State lands, to encourage the reintroduction of elk and other big game in areas where they have become extinct, and to establish game refuges to serve as breeding grounds from which adjacent parts of the national forests, the public domain, or other lands may be restocked with game.

New Publications.

PITCHING IN A PINCH, by Christy Matthewson.

G. P. Putnam's Sons, New York. Price \$1.

Christy Matthewson has put one right over the pan in the literary diamond with his new book, "Pitching in a Pinch." It is a real baseball story with many illustrations from photographs of close plays and prominent players. If you buy it for your boy, he will have to resort to some "inside" tricks or catch you out at home to steal it from you before you have scored a reading of it.

THE LIFE OF THE COMMON GULL, by C. Rubow. London, Witherby & Co.

A series of half-tone plates from photographs, and a descriptive translation from the Danish. The plates are excellent.

The Problem of the Cat.

WEST HAVEN, Conn., April 25.—*Editor Forest and Stream:* On a wild tract of land in Connecticut used as a game preserve remote from any town or village, during the first year and a half of its recent operation, the keeper in charge killed forty roving cats, and during the next year two dozen more. Many of these were evidently homeless, having relapsed into the condition of wild animals. Others were house cats, accustomed to roam mostly by night miles from their homes. All were preying on birds and wild game. This is no exceptional case, but typical of what goes on everywhere.

People often wonder why our song and insectivorous birds which are protected by law do not increase. The real wonder is that they have not long since been exterminated with an army of hunting felines, especially in the vicinity of towns, roaming everywhere in the breeding season, searching for nests and young birds. If the nest is on the ground or anywhere that a cat can climb, the case is almost hopeless. Even if out of reach, the young, when learning to fly, are almost sure to flutter down and get caught. If one will look around near home, he will often find empty nests which have been robbed of eggs or young.

The cat is a born hunter, and nearly all of them hunt for wild game, even though their owners do not suspect it. It is a very moderate estimate to assume that each cat, on the average, slays one bird a week, say fifty each year. Think of the countless thousands of useful birds thus killed in the United States every year!

In most parts of Europe birds are said to be much more abundant than with us, though they are shot and trapped much more freely. A well known naturalist who has traveled much in those countries considers this due in considerable measure to the comparative absence of cats. It seems to him a local peculiarity of the American people to tolerate in their homes numbers of these half wild animals, a queer, abnormal fad. In Europe the possession of cats is said to be regulated by law.

A common barbarity is the practice of abandoning cats by people changing their residence, leaving them to suffer and to prey upon society. In pity I have taken in these homeless starving creatures and fed them. At one shore resort in Connecticut I have been told that there are from fifty to one hundred homeless cats, abandoned by summer cottagers, eking out a wretched existence around the piers.

With us the cat has no standing in law, and is not recognized as property. No one can obtain redress if his cats are poisoned or shot. Yet even this permission to kill does not abate the nuisance. Alike from the standpoint of kindness to animals, of the owner of the cat, and of the lover of birds, is it not high time that this matter should be regulated by law, how many and what sort of cats one may keep, how they must be treated and restrained? Any one who is sufficiently responsible to be permitted by society to keep a cat ought to have public spirit enough to be glad to pay a small license fee for the privilege. This could be attended to by the same officials in charge of dog licenses. A fund would thus be provided for the maintenance of the work and for the protection and

attracting of wild birds to help save our foliage, fruit, gardens and crops.

Hitherto this matter has been laughed out of court, but the problem has now ceased to be a joke. The many powerful organizations of sportsmen are beginning to realize that quail, grouse and woodcock cannot be expected to raise many young amid this growing host of mauling felines. If they and humane people generally will actively take up this matter, we can soon get wise legislation capable of enforcement.

Meanwhile birds are now beginning to nest and will be under way with family cares nearly all summer, but particularly in June. It is surely a duty to society of everyone owning cats to dispose of all but one, or at most two, and to keep petted pussy under restraint, feeding it properly, keeping it shut up at night, and not allowing it to roam at large. If we keep a cat we should be kind to it, but also be broad enough to be considerate of our neighbors and of the broods of helpless little birds.

HERBERT K. JOB, State Ornithologist.

The Season in Connecticut.

PACKER, Conn., May 9.—*Editor Forest and Stream:* Our spring is lazily lingering in the lap of winter. We have frosts many mornings and ice on the many little pools since May 1. Much more rain than usual has fallen. The brooks, rivers and ponds are fuller than for years, and farmers far behind with their spring work.

Nearly all birds were late in arriving from their winter homes; the bluebirds arriving on March 11, nine days later than the two previous springs. Robins were over two weeks later than usual. The brown thrashers and whippoorwills were the only exception to this rule that I have noticed, both these appearing within a few days.

While late, all fruit and nut-bearing trees and shrubs appear to be budding for an unusually heavy crop. The oaks now look like they would have a record-breaking crop of acorns, and wild berries, huckle and blue, are also after the record apparently. The several years of exceptional drouth, 1911 the worst of all, with a comparative rest for the fruiting trees, probably is in some degree the cause. Peach trees are the one exception, the buds having been badly winter killed.

I saw a bevy of eight quail fly by me in the field on May 2, the first time I had seen them since mid-winter, when their tracks in the snow showed there were eleven of them, the same as at the end of the shooting season. None of this bevy were killed by hunters, I am certain, as they fed in a buckwheat field west of my house, and in a thicket of chinquapin or scrub oak east of me, and roosted in an open field between the two feeding places. I saw and counted them frequently during the fall and early winter. A loss of only three during the past three or four months was surely a light one. It was probably three times that from hatching time to open season. This speaks well for our section as to hawks and other quail-loving vermin. Our winter was exceptionally cold, the coldest for many years, but only a few inches of snow fell, and quail could get grit to grind their acorns on very few days.

My neighbor saw a bevy of twelve quail since the first of the month, a bevy he has seen often during the winter, and which has suffered little if any loss.

Yesterday morning I heard for the first time in 1912 the melodious love song, "bob white," and before noon it could be heard in every direction. In the afternoon I took a five or six-mile walk, hearing the cheering song wherever I traveled. One man told me he had heard it for the first time that morning, while another said he had heard it four or five days earlier. In 1910 I heard the song first on April 21, but the season was far more than sixteen days earlier than is this.

I hope your readers who live in the country are observing quail as to their earliest love-making and will report in your columns.

There is no doubt quail are more abundant in this section than for several years at this season, and with a favorable breeding season they ought to be in large supply "in the brilliant autumn time."

E. P. ROBINSON.

New Mexico.

ROSWELL, N. M., May 10.—*Editor Forest and Stream:* "Camino Real," the automobile route of New Mexico, open to the sportsmen, is a wonderful land. As you enter at Raton on the border of Colorado you at once find the mountains of Green and Palo-Blanco, Tripod and others. Mountain lion and the wildcat tribe will interest the rifle hunter. Mountain quail or "blue bob," wild turkey, band tail pigeon and many strange mountain birds are found. On the south many interesting valleys are found. Mountain streams afford good water. The headwaters of Pecos River and its valley carry the auto over hard watered roads. A few antelope are seen, but being protected are getting less in numbers, as the lobo wolf reduces their ranks every month. At Fort Stanton are found the wonder caves of the West, as yet unexplored. For many years good quail shooting has been found near the old fort, and the many springs forming small streams afford good fishing. Black and rock bass both take the fly or spoon.

On the south to Roswell is found a level plain where cool winds make touring a luxury. From Roswell the route extends to El Paso, Texas, crossing the Sacramento Mountains. Many golden-eye ducks are found in the high lakes. Mountain lions are reported being killed by tourists from California and Texas. From El Paso, Texas, the old Santa Fe trail is opened; where bridges are needed the counties have built them. The route is posted as far as Albuquerque, and is being graded, to the wonder of the cliff dwellers. The deep valleys are alive with large wolves, lions and some bears. The black-tail deer, once so numerous, have been destroyed by the lions and wolves. A natural game preserve is here found, be it State or by private enterprise. It is just the place to build a lodge and a game preserve where sportsmen could for a reasonable rent obtain a week's or a few days' shooting.

With mild winters and cool days all summer in high altitudes, no equal can be found. The climate is just suited to the pheasant or Hungarian partridge. Twenty years ago the writer found many elk and black-tail deer. Mountain sheep are seen at times, but they are very rare, and the rocks are very rough and sharp for the sportsmen of Texas. On "Camino Real," New Mexico's highway, are seen big automobiles from Colorado, California and Texas, and a rifle case is noticed on every one.

ALMO.

Birds in New Zealand.

THE settlement of New Zealand has resulted in the partial disappearance—and in some places extinction—of several native birds of New Zealand. The native quail has become extinct. The settlement of the country destroys the birds' natural homes and their natural food, and thus exercises a most destructive effect on native species even though they may be free from direct attacks by man.

The same thing has been seen in all new countries where civilization has destroyed natural conditions. In early days, New England and the Middle States were the homes of such birds as the wild turkey, the heath hen and the wild pigeon, while multitudes of sea fowl bred along the coast and ducks of many species on the inland lakes and ponds. The same process of extermination is still going on continually and the region of destruction is moving westward with the center of population.

It is an old, old story and one wonders whether the efforts to establish game refuges of one sort and another, and to put in charge of the Federal Government of the United States all species of migratory birds, will succeed in time to permit the migratory species, at least, to re-establish themselves and to survive.

Deer Killed by Floods.

HUNDREDS of wild deer, as well as much smaller game, have been killed by the floods in the Mississippi valley, and hundreds more are now starving in the overflowed territory, according to reports received by the American Game Protective and Propagation Association of New York. One hundred and seventy deer are marooned on two mounds in the submerged Sunflower River district a few miles from Vicksburg, Miss.

In response to requests for aid from game protectionists in that locality, the association has sent one of its special agents, Philip S. Farnham, to investigate and to help in the rescue work.

After leaving Vicksburg, Mr. Farnham will go to Texas to assist in the formation of a State game protective association. Those interested in this will hold a convention at Waco, May 21 to 24.

Commendatory.

NEW YORK CITY, May 3.—*Editor Forest and Stream:* I have just read "A Heart Lake Trip" by Walter B. Sheppard in your issue of May 4, and I want to tell you that I thoroughly enjoyed it. It is "chock full" of interesting notes and observations, and is one of the many good things you are constantly giving your readers. If I wrote you every time I wished to express approval of FOREST AND STREAM articles, I should be at it all the time, but this time I have a favor to ask as well.

Where can I get a folding canvas boat?

Strange to say, I cannot find an ad. concerning them. If you will kindly refer this to your information department I shall be greatly indebted for any information which may be furnished.

DEC. S.

All the game laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

Trout Season in Sullivan and Ulster

By THEODORE GORDON

THOUSANDS of anglers in the big cities and various parts of the country are keenly interested in the trout streams of Sullivan and Ulster counties, in New York State. I have had letters from Chicago and the West, asking for information in regard to the fishing and prospects for sport. Many anglers have already taken a week-end or a few days from the push of business, while others are waiting impatiently for the opportune moment to arrive

THE STREAMS ARE HIGH.

when they can board a fast express bound for the blessed country with its budding leaves, tender green foliage, homely fare—and trout. The season is quite an early one. The streams were high on opening day, May 1, but perfectly clear, and the fish were feeding well. Those I have seen were in fair condition, and several anglers have mentioned the strength and activity with which they fought for freedom.

Cold, pure water makes lively fish, and in May a bad leak in one's waders reminds one of a douche of ice water. At times there has been a good hatch of natural flies, and several of the duns have killed well, medium to dark shades. It is a curious fact that a small royal coachman is often an excellent wet fly early in the season. I do not use it myself, preferring to stick to nature, and a more natural looking fly.

Baskets of from fifteen to twenty-five good

trout have been caught by the fly-fishers. I have not heard of anything very large, but know of a number of fish weighing two pounds or better.

One of the best anglers among my friends killed thirty-five large trout on May 2 and 3, running up to eighteen inches in length. This is surely magnificent sport for hard fished waters that are close to the great centers of population. One might not do as well in the wilderness. Much interest has been manifested in restocking with fingerlings and fry and most of the trout received have been fingerlings, which are far superior to fry. A friend of mine is trying to establish the rainbow trout in the Neversink, and the lower reaches would appear to be well suited to these fish.

At one time they fairly swarmed in the Esopus (Ulster county), and there are a good many now. Rainbows sometimes display a tendency to run down and go to sea, as is the habit of the larger fish in the streams of the coast ranges of the Pacific slope.

I have often wondered if the two high falls on the lower Esopus had not a hand in preventing them from going down to the Hudson. Would their instinct keep them from essaying the descent of a fall so abrupt and high that they could scarcely escape injury? Of course, the salmon family of fishes do accomplish some astonishing stunts in ascending and descending falls.

The birds are here and all nature smiles when the spring sun is shining. We will not think of the days when the wind is from the north-east and chilly. Yesterday I saw two solitary snipe. This bird goes to the north of us late and yet is the first to return in August. The first one we see in that month reminds us that the autumn is near at hand.

The little sandpipers tipped up and down and made short flights in their usual style, and most of our well known birds were well represented.

The wind was strong from the east; clouds were gathering, but the sun continued to shine and we much enjoyed our afternoon as we followed the winding stream through dense cover as well as open meadows. It is a great privilege to have an outing of this sort in the merry month of May. I am hopeful of a good season.

Fishing in California.

BERKELEY, Cal., April 23.—*Editor Forest and Stream:* The fifth annual picnic and field day of the California Anglers' Association was held April 21, at White House Pool on Paper Mill Creek in Marin county, this being the time-honored spot for the annual meeting. The crowd that attended was so great no large catches of fish were made, but almost every one who whipped the stream succeeded in landing a few. No entrance fee was charged and many who

were not members of the association made the trip and joined in the sport. The field committee was composed of Chas. F. Breidenstein, Dr. L. T. Cranz, A. B. Christensen, J. J. Gorman and H. B. Gosliner. The conditions under which the fishing tournament was conducted were as follows: The fishing grounds shall be on the Paper Mill Creek and its tributaries, including tide water. The prizes are for the fish caught on Sunday, April 21, only in compliance with the State law. Fishing must be done with rod and reel and all anglers are on honor for the day's catch. Judges for the prizes will be selected by the field day committee from participants on the grounds at 2:30 P. M. All catches must be reported and registered at the White House Pool not later than 3 o'clock. No angler will be permitted to win more than one prize.

The winners in the different events were as follows:

Event No. 1.—Taken on fly only: Milton Frankenburg, Harry Thomson, J. C. Meyer, W. H. Hall, Chas. Andrews, J. C. Cuttermore, T. Marish, R. E. Lacoste and William Sutro.

Event No. 2.—Taken on fly, bait or spinner: Chas. Arp, W. Arp, S. Tomasello, W. J. Black, A. E. Bennett, Will Swart, A. B. Smith, M. Uri and L. Lamb.

Event No. 3.—Fish over one pound: James Andrews.

Event No. 4.—For boys under eighteen: R. J. Barberi, S. Hermann, A. Gardner, Otto Weissich, Russell Steiger, Albert Metzker.

Event No. 5.—For women anglers: Mrs. L. Stapleton, Miss A. Barberi, Miss L. Andrews, Mrs. D. Bennett, Mrs. K. Mocker, Mrs. J. J. Gorman.

During the afternoon much amusement was created by the holding of mock trials at which F. A. Duryea acted as judge, J. D. Swan as prosecuting attorney and Floyd Spence, attorney for the defendants. Friends of the members were haled into court on the charge of trespass, and most of these were sentenced to membership in the association. A barbecue brought the annual event to a happy ending.

The California Fish and Game Commission has just issued a report showing the take of trout eggs to date, and if the present favorable conditions continue, it is believed that the hatcheries will have the busiest season on record this year. Up to the 1st of April, 7,382,000 trout eggs were secured, and since that time the take has been heavy. These eggs will be propagated in the various hatcheries and distributed throughout the State. In part the report is as follows: "Most of the salmon fry have already been released from the different hatching stations. Within a short time the commission will make a shipment of 300,000 salmon fry from the Sisson hatchery to the Klamath River. The remainder of the fry will be distributed in the Sacramento River. Superintendent W. B. Shebley has set 50,000 quinnat salmon aside to be marked, and after they are in condition they will be released near the city of Sacramento to determine what percentage will return at the end of four years.

"On the 10th of this month Superintendent E. W. Hunt went to the Tahoe station to make preparation for the spring take of trout eggs. The number of steelhead eggs, taken at Scott's Creek, a collecting station, and shipped to the Brookdale hatchery to date, is about 1,750,000.

Superintendent A. B. La Motte, of the Ukiah hatchery, will handle about 500,000 steelhead eggs and about a like number will be hatched at the Eel River hatchery.

"The number of trout eggs on hand March 31, taken from the pond fish kept by the commission for the purpose, make a total of 100,000 brook trout, 1,500,000 Loch Leven trout and 1,031,000 rainbows. Camp Creek has produced 1,300,000 thus far this season, while Shovel Creek has produced 1,389,000, and other stations 1,332,000, bringing the total above the 7,000,000 mark. The low condition of the mountain streams, owing to the scarcity of snow, will necessitate the removal of many thousand young fish to permanent waters. This move will be necessary to save the young fish from dying before they have a fighting chance to become mature. The commission is planning everything possible not only to keep up the stock of fish in the streams, but to materially increase it."

George W. Chamberlin, formerly connected with the Forest Service, has accepted a position as assistant fish and game commissioner and will look after the Plumas county territory. He is calling the attention of interested parties there to the fact that it is a misdemeanor for a person to take water from mountain streams where there are fish, without screening the inlet of the ditch or pipe to prevent the destruction of members of the finny tribe.

From the high sierras word has been received that the streams there are now in splendid condition, and that excellent sport will doubtless be enjoyed when the season opens on the first of May. Last year there was much snow on the ground at this time, and streams were bank high, but this season there is practically no snow and streams are as low as they were last July. The Truckee River is in splendid condition and many anglers are planning to go there on the opening day. This stream is now very well provided with fishways on the California side and is full of fish.

The Fish and Game Commission has been very active of late in apprehending violators of the law, and during the month of March thirty-eight arrests were made in the San Francisco district alone, twenty-four for violations of the fish laws. In these cases there were but four dismissals. A striking example of the fish "hog" came to light recently when Deputy Bert Smith, assisted by Dr. L. T. Cranz, arrested two anglers on Purisima Creek who had 351 fish in their possession, these ranging in size from an inch and a half to seven inches. The offenders were taken to Half Moon Bay and each were fined \$50. At Petaluma, Louis Breing was recently fined \$100 for having nets set in the Petaluma River, and he also paid a fine of \$25 for having wild ducks in his possession out of season. GOLDEN GATE.

St. Louis Fly- and Bait-Casting Club.

ST. LOUIS, Mo., May 7.—*Editor Forest and Stream:* The St. Louis Fly- and Bait-Casting Club held an election of officers for the season of 1912 with the following results: President, M. J. Brennan; Vice-President, Lester I. Heyman; Treasurer, Walter Wimmer; Secretary, Geo. Ashton; Captain, Ed. W. Schloeman; Executive Committee, August Cyran, Z. Geist, Fred Werner.

The club is in an exceedingly healthy and

prosperous condition, and the members are enthusiastic over the bright outlook. This is our third season and the scores of our members, particularly the old ones, are steadily improving, showing that practice under proper conditions will better anyone's casting.

We have a number of new members and welcome the new blood. We usually have some members drop out each season, but they invariably are those who do not show up for practice and thus lose interest.

For our June and July contests we have appropriated a sum of money with which to buy prizes for the various casting events. These prizes are in addition to the annual buttons and bars which will be distributed to the most proficient casters at the end of the season.

Sunday, May 5, we had our first monthly contest. The entries were numerous; the number of visitors present somewhat surprised us. Our lake is at the foot of Art Hill in beautiful Forest Park. At times the road passing one side of the lake was so crowded with stopping automobiles that the mounted police were sent to the lake to clear the way. The weather was perfect, the skies clear and blue, while the warmth was tempered by a gentle breeze, which fanned the surface of the lake, but which was not strong enough to interfere with either the fly or bait-casters.

The winners in the various events were as follows:

Event No. 1, ¼-ounce bait accuracy:		Pr.Ct.	
1. Z. Geist.....	98.9	3. Fred Werner	91.4
2. S. S. Pingree.....	96.6		
Event No. 2, ¼-ounce bait, distance:			
1. S. S. Pingree.....	80%	3. Z. Geist.	62%
2. E. W. Schloeman.	75%		
Longest cast: Mr. S. S. Pingree, 108 feet.			
Event No. 3, ½-ounce bait, accuracy:			
1. Z. Geist.....	97.2	3. Gus Cyran	96.4
2. S. S. Pingree.....	97.1		
Event No. 4, ½-ounce bait, distance:			
1. Z. Geist	144%	3. S. S. Pingree.....	116%
2. Gus Cyran	117%		
Z. Geist and S. S. Pingree tied for longest cast, 155 feet each.			
Event No. 5, fly, accuracy:			
1. B. A. Fleming....	98 14-15	3. Geo. Ashton ...	98 7-15
2. H. J. Brennan....	98 7-15		
Event No. 6, fly, distance:		Feet.	Feet.
1. M. J. Brennan....	73	3. Geo. Ashton	68
2. S. S. Pingree.....	70	3. B. A. Fleming....	68
Longest cast: M. J. Brennan, 73ft.			

North Shore Casting Club.

CHICAGO, Ill., May 6.—*Editor Forest and Stream:* Our season of sport opened under the most favorable auspices, fine weather, favorable winds and a large club representation.

The scores (which follow) show how very rusty some of the reels must have been, also the great necessity of immediately getting them into first class condition, which can be done only by using them more frequently.

I am officially informed that the annual tournament of the N. A. S. A. C. will be held Aug. 15, 16, 17, 1912, in Chicago.

The important information that was referred to in the last letter was that the commissioners of Lincoln Park have stated that we may entertain the National Association members and hold the national tournament on our grounds.

As you know, we have the best arrangements of any club in the United States for successfully staging this event (all things being considered). This being the case, I think we ought to offer our grounds to the executive committee of the National, on those dates, as we will be put to

no financial liabilities, the National having provided for all expenses.

We intend making a strenuous effort to obtain new members during the present month, so as to accomplish our great object, viz.: to make the North Shore Casting Club the best and largest in this country, one of which we may be proud. To accomplish this result, the club is hereby divided into two groups. The members whose names begin with letters "A" to "H" inclusive are under the leadership of T. A. Forsyth, 3238 N. Richmond street. Those between "I" and "Y" inclusive are under the guidance of O. J. Waters, M.D., 3 W. Delaware street.

All requests to the secretary for application cards will be promptly honored.

Scores made in quarter-ounce bait and accuracy fly, May 4:

*F. N. Peet.....	97.4	99 5-15
C. M. Ercanbrock.....	97.7	..
A. M. Hall, M.D.....	98.1	99 9-15
T. A. Forsyth.....	97.1	99 10-15
O. J. Waters, M.D.....	97.5	..
F. E. Adams.....	97.7	..
I. H. Bellows.....	96.9	99 10-15
E. J. Calley.....	97.2	98 13-15
*N. Heston.....	97.4	99 13-15
G. W. Swatek.....	96.6	..
L. G. Moeng.....	95.9	..

NATURAL HISTORY

Botany at Englewood, New Jersey.

BY W. G. BOWDOIN.

SOME thirty botanical enthusiasts, under the leadership of Miss E. Addie Austin, of Brooklyn, visited Englewood, N. J., to study wild flowers. Botany can, of course, be studied from the millinery floral ornamentation of hats, or from the street display of the general grocery store, but far better results may be obtained from a field-flower gathering in the woods and the study of such flowers as those met with at the Donald McKay reservation, near the Hackensack River, at Englewood. The woods, as they

them. Among the ferns were the cinnamon, the grape (lace fern), sensitive and the brake. Seedlings, and young trees in the growing, were everywhere. The skunk cabbage was conspicuous. Its odor suggested carrion, but its combination of colors included madder purple, green and yellow-green that was very striking.

Along the banks of the brook grew horsetails. These are grandchildren of the calamites of the coal measures, that would be worth a lot of money if they could only be converted into the coal carbons by some chemical process. Some of the rushes, sedges and watercresses were near neighbors. The rushes are characterized by hairy leaves and blooms that occur in exaggerated forms in the tropics. Rushes are among the very early spring flowers.

Some wild lilies of the valley was another find. The older botanics credited this flower with offering its perfume to the nightingale as a deserved tribute. It has furnished a fluid extract that has been used medicinally as a cardiac tonic. The Solomon's seal found nearby had a gracefully curving stem. The leader dragged a specimen up by its roots and disclosed the round scars left on the root stock by the dead stalks of the preceding year that do resemble the impressions made by seals upon wax. In decoction it is employed as a domestic remedy to allay irritation of mucous surfaces. Dwarf ginseng, or ground nut, was found nearby. Its roots are in high medicinal favor among the Chinese, and because of its export the plant has, according to F. Schuyler Mathews, become rare. An example of the hooked crowfoot, distinguished by its remarkably hooked seed vessels that develop later, was gathered. Buttercups and marsh marigolds came next; then some cinquefoil and moneywort. This plant can be so easily grown that it is almost true that you can stick a piece of it into some soil, and it will grow of its own accord. It becomes highly decorative in rustic baskets. It is a trailing vine. Some common agrimony, or as it is sometimes called, cockle burr or stick weed, was next found. Some of the visiting botanists called it toxic, and the plants were in consequence passed by with no little caution. The books, however, do not bear out this view of the plant, except in so far as to say that it contains tannin.

There were two notable finds on this excursion. The first was the globe flower, one of the madder family. It is very rare in this section, Englewood being the one locality where it is ordinarily met with. The flower heads of this plant resemble pin cushions stuck full of pins.

The second of the notable finds was the sundew. This is a bog plant and means wet feet in gathering. Its chief interest lies in the fact of its being insectivorous. It is a small and unobtrusive plant which might easily be passed by, even when one is looking for it. It nestles in certain of the mosses in moist places and has a bright red flower stem. It bears from two or three to five or six leaves, generally extended more or less horizontally. These leaves are supplied with gland-bearing filaments or tentacles. The glands are each surrounded by drops of viscid secretion which, glittering in the sun, gave rise to its somewhat poetical name. Should an insect alight upon the central disc of an adult plant, it is instantly entangled by the viscid secretion and enmeshed subsequently by the plant's tentacles, generally meeting death in about a quarter of an hour, according to Darwin, who made researches as to the sundew. The juices of the insect thus captured by the sundew enter into the plant's cells and become nutrition for it. The sundew is by no means common, but a number of examples of it were found on this trip. The juices of this plant are said to cure warts and corns. It was hoped to find some orchids in the bog where the sundews grew, but

GROUP OF BOTANISTS.

are now constituted, are not the primeval forest, but rather cut-over woods, full of botanical treasures. The spring beauties that were sparingly found last week at Annadale, N. J., were encountered at Englewood in masses that grew particularly abundant along the banks of a brook that ran through the rather open woods. The violets were out also in far greater force, in greater variety and more advanced flower. A yellow violet was among the finds made. Another was the dogtooth violet, which is not a violet at all, but rather one of the lily family. It looks just as pretty, however, and smells just as sweet as any violet. The leaves of this plant also offer much in the way of charm, as they are delightfully mottled. This flower is cross-fertilized by the early bees, some of which were already in evidence. The jack-in-the-pulpit was found in perfection.

Fern fronds were abundant, just breaking away from the wooly covering that characterizes

RUSTIC BRIDGE.

none were discovered. Also to be seen were certain of the fresh water algae, diatoms, desmids and other aquatic plants, that are so often revelations under the microscope. Other botanical units encountered were blooming huckleberries, hellebore, poisonous for sheep and cattle; wood anemone, or wind flower, with its five petals; Dutchman's breeches, early meadow parsnip, spice bush, trillium or wake robin (found by Miss Brainerd), wood betony (found by Miss Jacobs) and dandelions in full bloom. When the party started reluctantly homeward, the spring beauties in the open woods were fast closing their delicate petals for the repose of the night that comes alike to the botanical and animal worlds. On the way to the cars a native goat was observed and two Manx dogs engaged in the animal play that Karl Groos has written so entertainingly about. Every vasculum was filled to overflowing, and many of the party carried paper bags filled with specimens.

CHARLES OTIS, President,
W. G. BEECROFT, Secretary,
S. J. GIBSON, Treasurer.

CORRESPONDENCE.

FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but are not responsible for the views of correspondents. Anonymous communications will not be regarded.

SUBSCRIPTIONS.

Terms: \$3.00 a year; \$1.50 for six months. Single copies, 10 cents. Canadian subscriptions, \$4.00 a year; \$2.00 for six months. Foreign subscriptions, \$4.50 a year; \$2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line (\$2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra.

Special rates for back cover in two or more colors.

A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Advertisements should be in our hands by the Monday morning previous to date of issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

STATE GAME REFUGES.

UNUSUAL consideration for the rights and preferences of others has been shown in drafting House Bill No. 23839, which is printed in another column.

It has long been too much the practice for men deeply interested in particular subjects to consider such matters solely from their own point of view and to urge on legislators action which will give them what they desire, without regard to the effect that such action may have, or may be thought to have, on other interests. In drafting the bill in question, for the protection and increase of State game preserves, this has been avoided. The measure forces nothing on anyone, but leaves it to any State to apply for a game refuge if it wishes one. These refuges are to be so small in size that they cannot interfere with the commercial pursuits of any class of the community.

The bill will appeal strongly to all big-game hunters, and to all who are interested in the preservation of the rapidly vanishing species of North American big game. The large and increasingly influential benevolent societies of Elks is likely to feel a peculiar interest in the measure, since the noble animal from which that association takes its name is likely to receive first attention in this protective scheme.

An interesting example of public spirit and of

effort in behalf of the community at large is shown by the Boone and Crockett Club, which has declared that it is prepared—if this bill becomes a law—to restock certain of these game refuges.

Scattered all over the United States are men who are deeply interested in this subject, and each one of these can assist in the passage of this bill by a direct appeal to the Congressman of his district.

CONGEALED SPRING.

THE early May fisherman has been badly treated in the weather line. Baby Spring, due this long time, kicked the bed clothes off when it was yet too cold and retired with a cold in her young head. After a time she emerged with an umbrella and rubbers. She smiled seldom and then without warmth. Back to tears she relapsed. As she grew older she became unkind to the plants and fishes, inviting them out only to give them the cold shoulder, numbing them so that they showed no inclination to take care of themselves, and many perished. The fisherman, so fond of sprightly spring airs, could only sneeze the spring song; he was too stuffed up to sing. The fly-caster, than whom there is no more persistent thing, pulls up his boots and down his slicker, and with icicles in his hair goes on casting the lure to the chilly fishes and wishes for a ray of sun.

GEORGE BORUP.

GEORGE BORUP, after withstanding the rigors of the arctic winter, was drowned a few weeks ago, when he was upset from a canoe in the placid waters of Long Island Sound.

Of all the explorers thus far recorded, Mr. Borup was the only one who found any amusement along the way. His book, "A Tenderfoot with Peary," fairly teems with humorous incident and entertaining anecdote. The many amusements he recites would lead one to believe that while the trip is not all "beer and skittles," neither is it one "demnd horrid grind." He tells of spending a month, in the long night, teaching a dozen Eskimo maidens to dance the pony ballet. Everything with a sunny side found a place in this cheery young man's day's work. Throughout the entire trip he exercised his humor as he exercised his legs, and still found time to contribute his share to science.

ONE MILLION DOLLARS TO AGRICULTURE.

TRADE once more makes a bid for publicity by advertising in the unusual way. Sir Thomas Lipton, recognizing what wondrous advertising could be had for tea and jam, had builded a yacht. Of course Sir Thomas had an eye to the America's cup, as well as to advertising. He got the advertising.

Now comes a Chicago mail order house for its bit of publicity. It is reported to have offered \$1,000,000 to improve crop productions. The first instalment of \$100,000 to be devoted to sending men into one hundred counties to instruct the farmers in the subject of agriculture.

The expenditure of the \$900,000 balance to depend upon results from the first \$100,000. Regardless of the fact that this sounds like an advertising scheme, and whether it is or not, the idea is sound business sense. For almost all mail order business comes from the farmer, so that he is getting back only the interest on the money he has spent. At the same time, in improving the farmer this mail order house is raising money, a large part of which will come back to it. It is putting back into the soil seed money to produce more golden grain, which will profit the farmer, the country and the mail order house in Chicago. This literally is giving back to nature.

THIS IS TOO MUCH.

LAST week Commissioner of Fisheries Geo. M. Bowers issued a statement that if Congress would allow him an appropriation he would put the price of diamond-back terrapin so low as to be within the reach of us all. On top of this comes news from Nova Scotia that lobster shipments from there will be enormous this year, on the strength of which the price in Bangor, Me., already has tumbled to twenty cents a pound. With roast beef selling at a dollar a rib; lamb, in sheep's clothing, almost too expensive to cut; eggs for custard pie parading under the strictly fresh tag at a price beyond the dreams of avarice; when a boiled New England dinner foots up as much as a Delmonico evening meal used to come to, we are on the verge of being saved from impending starvation by foods heretofore served only to patrons of lobster palaces and owners of steam yachts. *Malaclemmys palustris* for the every day man seems beyond our most sanguine expectation. Lobster, for years the companion of the cold bottle, during the closed season on quail and terrapin a staple only at banquets and dinners in high places, to become the white man's hope in reducing the cost of living, passeth all understanding. And yet, Commissioner Bowers is responsible for the promise of terrapin, while Nova Scotia already has brought down the toothsome crustacean. For years past lobster has been sold at fifty cents a pound, while sixty dollars a dozen was not a high price for the diamond-back turtle. W. T. Hornaday tells us, "It is a difficult matter to get a specimen for exhibition purposes that is more than half grown." It is not the red-bellied terrapin, or "slider," that Commissioner Bowers promises to add to the food supply of the underfed populace, although that often is served in the guise of diamond-back. It is the genuine *Malaclemmys palustris*, of the flavor that lasts, that has fattened epicures and been sung by the poets fortunate enough to have sat at the table with it. It is the practice of terrapin breeders to herd these costly reptiles in yards and feed and fatten them for winter market. The time seems to be imminent when terrapin yards will be dotted about like chicken coops in every salt water section. The water farmer will drive into town with crates of terrapin to the exclusion of poultry. The Bureau of Fisheries is ready to begin culture work at the Beaufort, N. C., laboratory as soon as the appropriation be forthcoming from Congress. The reduction of cost of living was not hoped for from such a quarter, and the assurance seems too good to be true; in fact we may say again—This is too much.

YACHTING

Building a Small Houseboat

By **GEORGE ETHELBERT WALSH**

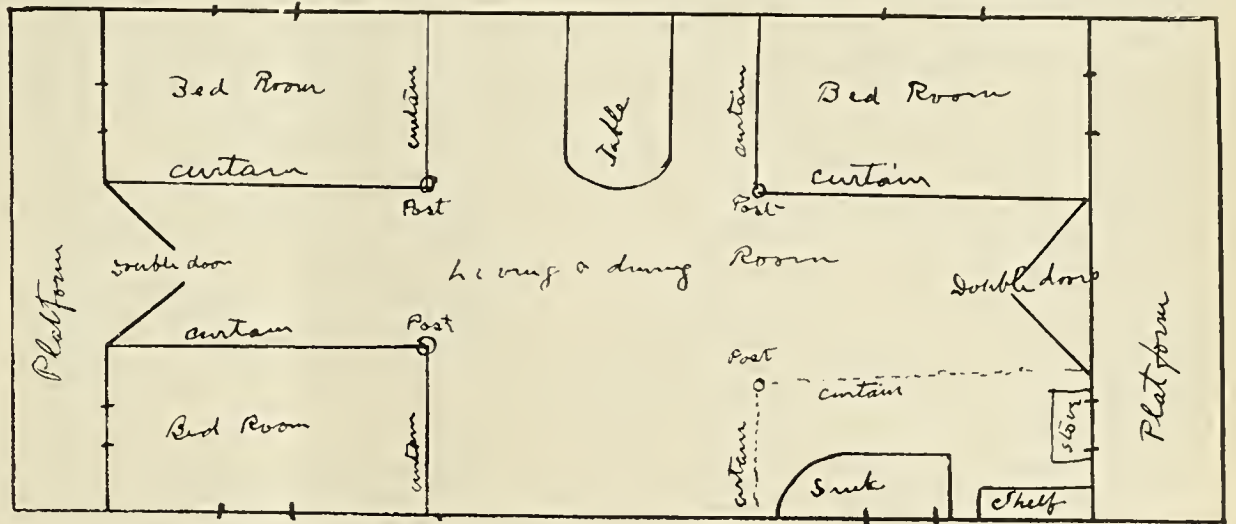

A SUMMER spent in a camp has many advantages over life in a boarding house or hotel, but a vacation on a houseboat has both methods of summering "beaten to a standstill," to use a slangy expression. The houseboat is really a floating camp, with the advantage of a substantial roof over the head, and hence dry quarters in rainy weather with the greater convenience which comes from being able to move the camping site from place to place on short notice without packing up household belongings.

But houseboating to many seems unattainable. We have such palatial houseboats pictured so often to us that we dream of this sort of life in a floating home, but never really expect to live it. Few of us have the thousands or even hundred of dollars necessary to purchase and equip such houseboats. Yet houseboating the world over is purely a relative matter, and the cost is likewise as variable as the pocket books of the people. On the Canton River, in China, nearly 200,000 people live on houseboats which cost all the way from \$25 to twenty times that amount. On the Mississippi River there are hundreds of houseboats, or "shanty boats," whose owners live on them through the summer as low as twenty-five cents a day for each person. These shanty boats are built in all styles, and cost the owners little or nothing to build.

On the Willamette River, near Portland, Oregon, there are houseboat colonies which line the shores for miles. Many of these creations are merely cheap houses built on platforms, and

ceeds that of an ordinary camp equipment. Such inexpensive houseboats furnish as much pleasure, in a way, as the more elaborately equipped affairs of the wealthy. The owners who build them get nearly as much pleasure in the work of designing and constructing as in living on them.

The idea of building your own houseboat seems like a monumental task to many, and so it is if one allows his ambition to run away with him. An inexpensive houseboat has for its foundation a platform resting on half submerged barrels, and this is the cheapest form of construction and the lightest. It is one that can be handled by any one, and the craft is so buoyant that it can be towed with a rowboat. Compared with a

INTERIOR PLAN OF HOUSEBOAT.

others are substantial affairs constructed on flat bottom boats. On the River Henly hundreds of cheap and expensive houseboats accommodate a considerable population in the summer.

In many parts of this country houseboats are constructed every year at a cost that hardly ex-

ceeds that of an ordinary camp equipment. Such inexpensive houseboats furnish as much pleasure, in a way, as the more elaborately equipped affairs of the wealthy. The owners who build them get nearly as much pleasure in the work of designing and constructing as in living on them.

Second hand cider, oil or similar barrels can

SUPERSTRUCTURE.

BARREL FASTENING.

be secured at an average price of fifty cents each. These will support a foundation much better than flat bottom boats or the scow type of boat. They can also be replaced at little ex-

ARRANGEMENT OF BARRELS.

pense if any of them leak after one or two seasons. Usually a good tight barrel will last three or four years before it leaks, and by replacing a few each spring the houseboat can be kept in condition indefinitely.

The barrels are not nailed to the foundation of the houseboat, but float loose in a sort of frame provided for them. They cannot work loose or get out unless they get filled with water and sink below the level of the surface. An old one is thus easily removed and a new one put in place by filling it part full of water. With a boat hook it can be shoved in place, and then the water pumped out with an ordinary hand bilge pump. Calked up then the barrel is ready to do its work indefinitely.

The average cider or oil barrel holding fifty gallons has enormous buoyancy. It will take over 400 pounds to sink it below the surface. Half this weight, or approximately 200 pounds, has been found to be what is called a safe load. It will float 200 pounds easily. This fact will enable one to work out the problem of building his houseboat. Allowing 200 pounds approximately for every barrel, it is possible to decide about how many will be needed for a houseboat of any desired size. In estimating the weight of the furnishings of the houseboat and the weight of the people living on it must be taken into consideration.

A small houseboat 12 by 20 feet will accommodate from two to four people comfortably. Twenty barrels will support a houseboat of this size easily and leave sufficient allowance for half a dozen people aboard at any one time. For ten dollars the barrels can be obtained, and the rest consists of lumber, nails, paint and furnishings. The cradle or the foundation, which rests on top of the barrels, is really the only difficult part of construction that may require the services of a carpenter.

The cradles are made of wooden joists running lengthwise of the boat in two sections, and nailed together so as to fit the chime of the barrels. When the barrels are placed beneath the cradle, they float there and hold the boat up. When the cradles are finished and placed over the barrels, they are securely fastened together, and then the planking or flooring of the houseboat is laid on top. This flooring can be made of second hand lumber and covered with matting or canvas.

Before the floor boards are laid down, the upright posts for carrying the sides and roof must be put in place. These corner and side posts must be nailed to the cradles so that the weight of the roof will fall on them. The sides of the house can be covered with ordinary clap-boards laid lengthwise and overlapping, or shingles may be used. That is merely a matter of preference.

The roof, however, should be made of boards similar to the flooring, for the roof of the houseboat is the summer garden or roof garden of the home. An awning or tent placed up here will double the space of the houseboat and furnish a fine place for lounging on hot days. The lower part of the house is the living quarters. In making a flat roof there is always the danger of leaks. There is one sure way to overcome this. When the boards have been laid, cover the top with canvas, paint it or cover it with pure linseed oil. This will make it watertight. Another way is to use thick, heavy building paper, but the canvas is better. If this is repainted each spring, no leaks will develop.

There should be a platform on either end of the houseboat, and the inside should be divided up with a view to making work aboard comfortable and convenient. A boat of this size should

have a kitchen and dining room and one or two bed rooms. A sink should be provided in the kitchen, with a few closets for dishes. An oil stove is better than a coal or wood stove. It is lighter and more convenient. Double doors should open at either end of the houseboat so that the whole interior can be aired out at any time.

Bed rooms should have corner locations so that each can have two windows opening on the two sides. This will furnish an abundance of ventilation. From the diagrams it is easy to see how this can be arranged. Moreover, the whole construction of the houseboat can be understood from the diagrams so that any one could build the craft or instruct a carpenter how to do it.

A houseboat of this size and general style can be built for about \$100, if one performs most of his own labor. If a carpenter is hired to do all of the work, it may cost \$25 more. Here are the figures and itemized cost:

Lumber	\$50.00
Twenty barrels at 50 cents....	10.00
Roofing canvas	10.00
Nails and spikes.....	2.00
Paint and stain.....	10.00
Extra help and labor.....	12.00
Total	\$94.00

These figures are approximately correct for almost any part of the country, but if second hand lumber can be obtained, the cost will be less. In hiring labor for this work a man who works for \$1.50 a day is often as satisfactory as a high priced carpenter who may charge four or five dollars. If one has the design and plans well in hand, it is a simple matter to direct a hired man in his work.

The interior of the houseboat is not finished off at this price, but that is a matter that can be taken up later. Houseboats of this character can be finished off inside by cutting strips of birch bark and nailing them to the studding or plain canvas or curtains can be used. None of these are really necessary, for if the sides are properly put together, the walls are not unpleasant looking.

The equipment of a small houseboat should not cost much more than that for a camp, although one is apt to install in it a few more luxuries. These can be shipped down as needed. If one wants an awning for the roof garden of the houseboat, an extra allowance must be made for the canvas. A good canvas for an awning can be purchased from \$8 to \$10, and if it is painted before being put up with linseed oil, it will last for years without rotting. Untreated canvas is apt to get mildewed and develop rot.

When we consider the cost of board and camping outfits, it will not require much figuring to show that a homemade houseboat is after all the cheapest investment. If two or three join together in sharing the expenses, the cost is very small. For less than the rent of a house or bungalow one can own a houseboat and have the freedom of its occupancy year after year. In the fall of the year the houseboat is drawn upon shore or anchored in some quiet nook until needed another season.

A houseboat needs a rowboat to make the life complete. The rowboat is the carry-all for the family. It brings the provisions, and can be

used for towing the houseboat to a new position on the lake or river.

There are hundreds of small and large lakes and quiet streams where such a houseboat would prove a blessing and a permanent investment for thousands of people anxious to spend their summer days out in the open. There is no charge for land sites, and if one does not like neighbors or the neighborhood, the home is easily moved to another place. If one has a small launch, the attractions of the houseboat are increased. The launch will tow the houseboat quickly from place to place, and in the course of a summer one may change the residence a dozen times.

Near many of our large towns and cities colonies of houseboats are rapidly springing into existence—not colonies of expensive and elaborate houseboats, but inexpensive ones such as described. Tied down to business the owners can go back and forth to the city and still enjoy all the comforts of a home. In prolonged rainy weather life under a tent is not always the most enjoyable experience, but a watertight houseboat offers all the protection and comforts of a cottage. An ordinary small oil-heating stove added to the equipment will then keep out dampness and chilly winds, so that existence is made doubly comfortable.

Ticks from the Ship's Clock.

Mr. Hollis Burgess, the Boston yachtsman, has purchased the 21-foot waterline centerboard sloop yacht *Little Haste* from A. D. Cummins, of Philadelphia. She left Philadelphia last Tuesday on deck of the barge *Ruth*, and has just arrived in Boston. *Little Haste* was built for Thornton K. Lothrop, Jr., of Boston, and won the championship of the 21-foot Massachusetts Bay cabin class in 1902. She is 39 feet 10 inches over all, 10 feet 6 inches beam and 3 feet 6 inches draft, and has a heavy-weighted centerboard. She was afterward purchased by Fred B. Thurber, of Providence, R. I., and was raced by him on Narragansett Bay. In 1909 she was bought by A. D. Cummins, of Philadelphia, who used her at Atlantic City, N. J. Mr. Burgess will race *Little Haste* in class A, of the Interclub Yacht Racing Association of Massachusetts, and it will be interesting to see how she performs against keel boats, as keel boats have heretofore shown a marked superiority over the centerboard boats.

The *Eau Gallie Y. C.*, of *Eau Gallie, Fla.*, have elected the following officers for the coming year: Commodore, J. A. Carr; Vice-Commodore, C. C. Booth, M.D.; Fleet Captain, W. J. Redington; Secretary, J. E. M. Hodgson.

Orders for two new Speedway gasoline marine engines have been received for export

Kennebec

CANVAS COVERED CANOES

Canoeing season is almost here. Write at once for our illustrated catalog. Kennebec means perfection of design, best finish, light weight combined with strength. Our special type of sponsons (air chambers) make paddling, sailing or motor canoes absolutely safe.

to Amsterdam, Holland—one 4-cylinder, 4x4½ inches and one 4-cylinder 4½x5 inches. These will be shipped next week.

The schooner yacht Savarona, is at Shepard's shipyard, Essington, Pa., installing a 130-horsepower Standard engine and fitting out for the season. At the same yard, the 71-foot motor yacht Arawan II., belonging to Mr. Chas. Longstreth, Philadelphia, Pa., was launched on May 8th. This yacht, while not of high power, is a very comfortable and roomy boat, with a beam of 16 feet, and a draft of 3 feet 6 inches. It is equipped with Murray & Tregurtha engines, a Commercial acetylene lighting plant, and is heated throughout with hot water for winter cruises.

The 23-foot runabout Why Not I, exhibited by the Reliance Motor Boat Company in the New York motor boat show last February, was recently tried out and showed 25 miles per hour. This boat was built for Mrs. Margaret Ames. It is a comfortable six-passenger runabout of very graceful lines, and beautiful in workmanship and finish. Another 23-footer of like model, built by the same company, was delivered to Mr. L. M. Clark, of Philadelphia. This boat, called the Turk, ran side by side with Why Not I, affording an inspiring sight to those who happened to be on the Hudson. Another of this class is ready for delivery to Mr. George Vigoroux, editor of Mining Age.

On May 28 the defender in the international cup races on the Great Lakes will be launched at Wood's shipyard on City Island. The design is by William Gardner, and is one of the most beautiful models so far seen. She will be named "Michikagon," this being the Indian name for the capital of Cook county.

Fred Wenck's ferry line between Seacliffe, L. I., and Rye, N. Y., began operations last Sunday. The schedule has boats leaving Rye on the even hours from 10 A. M. to 8 P. M.; Seacliff on the odd hours from 9 A. M. to 7 P. M. This makes a very convenient mode of transportation between the yacht clubs on the south shore of Long Island Sound, and those on the north shore.

Medora, H. G. S. Noble's new 46-foot racing sloop, designed by William Gardner, was launched last week at Wood's shipyard, City Island. The new steam yacht Lyndonia, built for William A. Lyndon, of Chicago, started for the owner's home last week by Halifax, the St. Lawrence River, and the Great Lakes. She is due in Chicago about May 28. This boat also was designed by William Gardner and is 215 feet over all, 175 feet on the waterline, 26 feet 6 inches beam, 12 feet 4 inches draft. She is lighted by electricity, with all modern conveniences, including a refrigerating plant.

The Knickerbocker Y. C., of which William E. Spencer is Commodore, announced at the "going into commission" party last Saturday the following schedule for the coming season: Annual regatta, June 1; first race for Kayak cup, July 4; rear-commodore's cruise, July 6; second race for Kayak cup, July 21; clambake at Port Washington, July 27; third race for Kayak cup, July 28; annual cruise, Aug. 10; vice-commodore's cruise, Aug. 31; clambake at College Point, Sept. 14; out of commission, Sept. 28.

America's Cup Challenge?

THE Duke of Sutherland, popular in England, has come to this country apparently for one purpose; that of presenting to the New York Y. C. the sternboard of the old yacht America, but obviously for the purpose of sounding the New York Y. C. committee on the subject of an English challenger, of what in America is known as Class K, to this type belonging Rainbow, Yankee and Minneola, and while it is not so stated, officially, the Duke of Sutherland represents the Royal Yacht Squadron on this trip.

Seaside Y. C.

THE Seaside Y. C., of Atlantic City, N. J., whose membership comprises prominent business men who live at this resort the year round, is preparing for an active season. At a recent meeting the following officers were elected: Commodore, Allen K. White, owner of the world's champion, Sand-Burr II.; Vice-Commodore, Dr. J. B. Thompson; Rear-Commodore, Alfred E. Burke; Secretary-Treasurer, Dr. Talbot Reed. The Regatta Committee consists of Dr. J. W. Hughes (chairman), Chas. D. White, Walter T. Reed, Lewis Bowker and Stanley French. Boat Measurer, Frank Errica, Jr. Estimates are now being received by the club for a handsome new club house to be erected upon an ideal location overlooking the inlet.

Messrs. Allen K. and C. D. White are having a new and much speedier Sand-Burr built and predict many broken records for 1912. Capt. N. W. Young, an ardent speed enthusiast, owner of the Dart II., has just completed a new tri-plane, equipped with a 6-cylinder, 90-horsepower Fox motor geared back to the propeller. Great things are expected of this new boat.

Vice-Commodore J. B. Thompson's new bi-plane, equipped with a 6-cylinder Watertown motor, has shown 33 miles and better on her maiden run and, it is hoped will bring her owner's colors to the front during the series of races to be held by the South Jersey Racing Association. The new Appel monoplane, a later model than the Sand-Burr II., building for Mr. Louis Burk, of the Seaside Y. C., is rapidly nearing completion and will be tried out shortly, as will also the new biplane being constructed for Mr. Walter T. Reed, owner of the fast displacement speed boat Vanish.

All these craft will do better than 33 miles per hour, and it is predicted that the Seaside Y. C. can select a team of 20-footers that will show a clean pair of heels to any equal number from any club in the country. The Seaside Y. C. besides belonging to the South Jersey Racing Association, is also a member of the American Power Boat Association, and its flag has been carried successfully all over the country.

Columbia Y. C.

THE Columbia Y. C., on June 8, will open its season. The regatta committee has arranged races for all classes of motor boats to start at 2 o'clock. These races will be open to boats owned by members of recognized yacht or motor boat clubs—American Power Boat Association rules to govern.

Open boats of less than 14 miles an hour, all ratings, will go twice around a 5-mile triangular course in front of the club house. High speed boats making more than 22 miles an hour and hydroplanes in separate divisions will go to Ardsley and back, 30 miles. Cruising yachts will race twice over the 5-mile course and semi-speed boats, 14 to 22 miles, will go around three times. All starts will be made in front of the club house at the foot of West Eighty-sixth street.

Entries for these races will be received up to 4 P. M. on June 4 at the club house. A certificate of measurement must accompany each entry.

Crusader III.

ATLANTIC CITY, N. J., May 10.—What is believed to be the fastest motor boat in the world was shown to-day in the try-out of the Crusader III., on a straightaway course here, when the craft covered one mile in one minute and eight seconds. The boat was built by Adolph E. Apel for Fred M. Works, of Akron, Ohio. After the first mile had been taken the breaking of the bronze propeller prevented further trials.

The builder has guaranteed the owner that Crusader III. will have a speed of 55 miles an hour, a record which has never been attained by boats on either side of the ocean. The new marvel is built along the lines of the Sand Burr II., owned by C. D. and A. K. White, of this

city, which won the world's championship title in the 20-foot class last year. It is 26 feet in length and built with a 12-cylinder Van Blerk engine.—New York Times.

Prof. Hallock Ill.

IT is a sad blow to the prominent yacht clubs; in fact, all yacht clubs, that Prof. William Hallock, of Columbia University, who for a number of years has been measurer of the New York Y. C., and was this year elected to fill that position for Larchmont, Indian Harbor, American and the Yacht Racing Association of Long Island Sound, is seriously ill from a stroke of paralysis, which probably will prevent his officiating during the season. Prof. Webb, of Columbia University will substitute for Prof. Hallock during the latter's absence. Prof. Webb has been assistant in this department for some time, having acted for Prof. Hallock during the latter's absence in Europe a year or two ago.

Western Power Boat Championships.

THE enthusiasm of William Hale Thompson over the yacht carnival and Western power boat championships, Aug. 10, is unsurpassable. He left last Tuesday for England with the idea of encouraging the owners of the Pioneer, Maplecroft and other fast motor boats to send representatives to race for the \$60,000 in prizes to be offered at that meet, and knowing Mr. Thompson's energy, he undoubtedly will be successful in his trip. Norman Gooderham, of the Royal Canadian Y. C., at Toronto, has notified the committee that he will enter his new speed boat in the Wrigley trophy event.

New Jersey Y. C.

THE New Jersey Y. C., of Bayonne, has elected the following officers: Commodore, Minor Pepper; Vice-Commodore, William Welter; Rear-Commodore, William Cook; Fleet Captain, Charles Roehrich; Secretary, John Denning, and Treasurer, William C. Collins. The club will hold a series of regattas this year and one for power and sailing boats will be around Staten Island.

Canoeing

Not the Same.

PROVIDENCE, R. I., May 11.—*Editor Forest and Stream:* I note item in current number, under yachting, of death of Henry C. Ward, of Fifth avenue, New York.

Henry C. Ward, A. C. A. 982, life member No. 39, of 56 Maiden Lane, New York city, is one of our members, and I should sincerely regret to learn that our Mr. Ward is the same as the one mentioned in your item.

Mr. Ward has been very active in the Atlantic Division, and Mrs. Ward is associate member No. 173, of the A. C. A.

SAMUEL B. BURNHAM,

Treasurer A. C. A.

[H. C. Ward, known to canoeists and yachtsmen as Harry Ward, is still much alive and very active. He is in the insurance business at 31 Nassau street, New York city.—ED.]

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—Powhatan R. Robinson, 24 West 56th street, New York, N. Y.; R. M. Davis, 17 Warren street, New York, N. Y., and Anthony Fiala, 1320 Broadway, New York, N. Y., all by Francis C. Buchenberger; Jos. J. N. Hoffman, 2679 Third avenue, Bronx, New York, N. Y., by A. D. Berning.

NEW MEMBERS ELECTED.

Western Division.—6416, Francis R. Roberts, 2912 Prairie avenue, Chicago, Ill.

TRAP SHOOTING

If you want your shoot to be announced here send a notice like the following:

Fixtures.

May 30.—Cincinnati (O.) G. C. Arthur Gambell, Supt.

- May 30.—Buffalo (N. Y.) Audubon Club. B. V. Covert, Pres.
- May 30.—Watertown (Wis.) G. C. B. H. Reick, Sec'y.

DRIVERS AND TWISTERS.

Owing to the wide devastation in the Ohio and Mississippi valleys, and to the task of caring for hundreds of flood-stricken people, the Hickman (Ky.) Gun Club has considered it advisable to cancel its tournament registered for June 12-14.

B. R. Buffham writes from Roswell, New Mexico: "Today I am the dean of American trapshooters. I put up the first ground traps in 1865 at Hoboken cricket grounds, New York. I do not know of any left. We met at Harry Hill's. First lot of birds came from Buffalo. I met Bogardus in Chicago, about 1874."

Mr. Elmer E. Shaner writes us as follows: "Our mailing list, covering programs for the Grand American Handicap tournament, has reached such proportions that we are compelled to revise it to keep within our limit of five thousand programs, consequently some sportsmen will not receive programs this year who regularly received them in the past. We will be glad, however, to mail a copy of this year's program to any person writing for one."

The New Jersey State Sportsmen's Association will hold its ninth annual tournament on the grounds of the Smith Gun Club, of Newark, N. J., June 6-8, and great preparations are being made in anticipation of its being a record-breaker for New Jersey. The tournament will be conducted under the Squier money-back system, and with the various added moneys is creating lots of interest, and all the cracks in the State are pairing up for the two and three-man team trophies, and wondering who is going to get the much-contested State championship cup that has been shot for more times in the last three years than in all its history. There will be a merchandise event to wind up the day's shooting of good and useful articles, well worth taking home. Active preparations are going on on the grounds to get everything just right, having profited by last year's experience. All

events (except the State championships) will be open to amateurs from everywhere, and everything will be done to make everybody welcome. In the shoot of last year, after all losses had been paid to those who had not won back their entrance there was over \$150 to be divided among the high guns who shot through the three days' program. So, if you think you can shoot some, come to Newark on June 6, 7, and 8, and help to make things interesting. Programs are ready for distribution, and any who have not received one may have one or more sent on receipt of postage to Chas. T. Day, Secretary-Treasurer, 618 North Seventh street, Newark, New Jersey. W. G. BEECROFT.

National Gun Club.

THE National Gun Club, of Riverside, Ill., held a registered shoot Thursday, May 6. The weather was ideal and exceptionally good scores were made. J. R. Graham was high amateur and F. G. Bills high professional, each breaking 149 out of a possible 150. Several exceptionally long runs were made—F. G. Bills 147, Geo. McDermott 135, H. C. Kirkwood 127, J. R. Graham 100. Numerous other shooters also made creditably long runs.

J. R. Graham and R. W. Clancy still retain the double championship by defeating the challengers, Ray Loring and H. W. Cadwallader, 169 to 139.

The scores:

Shot at.	Brk.	Shot at.	Brk.		
*F G Bills.....	150	149	Ray Loring	150	131

Clearview Gun Club.

DARBY, Pa., May 11.—The Clearview Gun Club had very little trouble in winning the return target match from the Riverside Club, of Essington, Pa., yesterday at this place, for the local clay pigeon smashers. The conditions were 50 targets per man with the ten highest scores to constitute each team's total. Out of their 500 targets the ten high Clearview men broke 401, while the eight Riverside men managed to break but 168.

Gideon with but three misses out of his 50 targets, led the entire field, with Oliver second with 45. Steller with 42 was the only visitor to finish with a high score.

Clearview.		Riverside.	
Gideon	47	Steller	42
Oliver	45	Donohue	36
Paul	43	Kotts	36
Fisher	43	Horne	32
Bonsall	38	Wiltbank	25
Shuster	41	Warbon	15
King	38	Eisle	12
Elwell	37	Willard	10-168
Bockius	35		
Paulson	34-401		

Meadow Springs Gun Club.

A SMALL, but select field participated in the weekly shoot of the Meadow Springs Gun Club, held May 11, at Fifty-seventh and Lancaster avenue. A cross wind played havoc with the bluerocks and shattered many a good score; but some of the gunners, despite this handicap, wound up the program with high totals. Armstrong and Thompson both shot well, tying for the high net total of the day with 93 smashes.

Armstrong won the club spoon with a straight score of 25, being aided by his handicap, while Renner secured the dipper offered for the runner-up score in the club test. Thompson, besides winning the spoon for high actual score got a win on the Harvey trophy. Scores:

	B. B.	H. T.	H. T.	B. B.	Total.
Armstrong	7	12	3	25	319
Thompson	9	12	2	21	224
Watson	9	13	2	20	221
Letford	7	10	2	19	217
Renner	7	10	1	23	212
Henry	6	9	2	21	18
Gerber	7	14	0	18	24
Jackson	6	8	2	16	18

Boston A. A.

RIVERSIDE, May 11.—The Boston A. A. gunners had excellent weather conditions for their shoot to-day. R. A. Faye won the leg on the Hunter trophy with 98 from scratch; he also won the leg for the Barbey trophy on a score of 49. In the contest for the take-home trophy F. H. Richards and M. Ballou tied on full scores of 50, and on shoot-off Richards won. Scores:

R. R.

Capt. A. W. Money.

WILMINGTON, Del., May 8.—*Editor Forest and Stream:* I have just received a letter from Captain A. W. Money, dated April 23 last and written from his present home at 5 Trinity Gardens, Folkestone, England, which was in reply to a letter I sent him shortly after my return from the Sportsmen's Show in Madison Square Garden, March 9 last. By way of explaining the Captain's reference to "the slips from your notebook," would say, that during the Sportsmen's Show so many of the old-timers, etc., asked me, "How's the Captain?" that I decided to have them sign their names on leaves of the pad in my pocket memorandum book, so that I could send the signatures (several of them with sentiments attached) to the Captain, so that he could see that, although he is no longer with us in this country, he was not forgotten. That portion of the letter which refers to Noel Money and also to Harold will, I know, be also read with much pleasure. Below I quote you portions of said letter referred to:

"I have been a long time answering your most welcome letter of March 21, but I never seem to be able to get any time these days for any letter writing. This is such a busy little town, and there is such a lot always going on, especially at this time of the year, that one always seems booked for something or another—Badminton, lawn tennis, bands playing on the Leas, and the ladies wanting to be escorted, etc., etc. It seems to monopolize every moment of one's time, and if I do sit down to my desk I find such a lot of unanswered letters that must be attended to. Your letter is most interesting reading, and the slips from your notebook with those signatures, etc., made me long to be back with the old friends and at the old game again. God bless them all. I don't believe there is a country in the world that produces such a lot of jolly good fellows, and it makes my old heart rejoice to know that they have not forgotten me, any more than I have them. I had a good deal of shooting during the season and did not find myself a bit handicapped by age, and did not come across anyone who could claim to be able to beat me, and strange to say the longest days did not tire me in the least, though some of it was pretty nearly as rough walking as it is at Oakland (N. J.). I don't find any of it to come up to the ruffed grouse shooting, and I would give a lot to be going to have another day with your old self and Colin Wise at Ocean Park."

The Captain then goes on to say that he is looking forward to some good shooting next season, as his son-in-law, Mr. Charles Bayley, who has been in the tea and rubber business out in Ceylon, has retired and is coming to Great Britain to live, and has taken a house and large shooting up in Argyleshire, Scotland. Noel Money, too, the Captain's oldest son, who will be readily remembered by the old boys among the trapshooters as secretary of the E. C. Powder Company in

its early days, and as a rattling good pigeon and target shot, and also a jolly good companion to boot, has gotten a new home in Herefordshire, "with no end of shooting."

Regarding trapshooting in England, Captain Money says:

"Trapshooting of every kind is a dead letter in England, but I may possibly shoot some pigeons at Boulogne later on, as it is so easily reached from here and one can return by boat same evening."

And now for some news of Harold Money:

"Harold is doing wonderfully well in Ceylon, and only wishes he had gone there years ago. His heart is in his work and he doesn't spare himself, and is looking forward before long to being put in charge of one of the rubber plantations, either in Ceylon or on the Malay Peninsula. He seems to have mastered his work and to have picked up the Tamil lingo in a very short time, and has had several tempting offers, but means to stick where he is till he gets something really tip-top. * * * Do write again soon, all news about our mutual friends is very welcome."

From all the above you will readily see how much the Captain enjoyed reading the little items of news which I sent him regarding his old friends over here.

EDWARD BANKS.

The Grand American Handicap.

THE Interstate Association's Thirteenth Grand American Handicap Tournament will be held at Springfield, Ill., on the grounds of the Illinois Gun Club, June 18 to 21, inclusive.

The Grand American Handicap at Targets, inaugurated in 1900, has grown year by year in magnitude. It is the greatest battle between America's trapshooters, and it can be safely asserted that this year, even though marking the fateful thirteenth renewal, there will be no diminishing in magnitude; no lessening in competition; no dwindling in popularity.

June, the month of roses, has generally been honored with the trapshooting classic. This year there will be no departure from old lines in respect to dates. The days chosen belong to the third week of that glorious month, a period when every trapshooting devotee is in his finest fettle. This assures the highest standard of excellence in the combat for fame and fortune. There will be an innovation, however, characterizing the competition. Heretofore the main event, the Grand American Handicap, has been "open to all," but this year that particular event is confined to amateurs only. In fact, the entire tournament has been arranged for amateurs, with the exception of two events, which are open to professionals only.

A change has also been made in the order of scheduling the events. It has been the custom in the past

to conduct the National amateur and the National professional championships on the final day of the tournament. The order will be reversed this year, these highly important events being scheduled for the first day, a change bound to appeal to all prospective entrants.

A popular feature introduced last year, namely, the guarantee of \$1,000 in cash, in addition to a beautiful trophy, to the winner of first place in the Grand American Handicap, will be continued. The trapshooting fraternity put the stamp of approval on this step in 1911 in no uncertain way, and the Interstate Association, ever mindful of trapshooting's interest and the advancement of the sport, has ruled to make this feature a fixture.

Springfield, capital city of Illinois, is known far and wide as one of the leading convention centers of the West. A veritable network of railroads radiate from Springfield in all directions, and this attribute in connection with extraordinary facilities for housing large gatherings and the possession of hotels, the equal of any in the country, has served to attract to this city conventions of every description.

The Illinois Gun Club, of Springfield, on whose grounds the tournament will be held, was organized in the early eighties. From the time of its inception it was one of the foremost organizations of its kind in the country, and numbered among its members many of the best shots of the time. In the spring of 1909 a reorganization of the club took place under the old State charter of the Illinois Gun Club. Edmund Burke, State's Attorney, who had been instrumental in the reorganization of the club, was elected president, and has been re-elected annually since that time. The success of the club has been signal, developing some trapshooters that have taken their places at the top of the ladder and held it with the best of the country. There has been no notable tournaments held in the Middle West in recent years at which the Illinois Gun Club has not been represented, and usually by a full squad or more.

There is every reason to believe that when the final gun is fired, and the thirteenth Grand American Handicap has passed into history, that it will be fully up to the high standard set by its predecessors. Entries close Saturday, June 8.

Gun Clubs of New Mexico.

Most every town boasts of a gun club. Many experts from the large gun factories visit the clubs, and local sportsmen are found able to keep with the professionals.

A Pecos Valley tournament is now being discussed, and is on to make it open to the world, as Texas did twenty years ago, when every man was a hunter and a born sportsman. Cheap auto transportation will bring the clubs together.

ALMO.

TWO EXCELLENT DESIGNS.

These houses can be built well at a small figure. The upper one costs complete \$700. The lower one only \$500. Full working blue prints with specifications will be sent free upon request from gun club members or anyone contemplating the organization of a club.

Kankakee Gun Club.

KANKAKEE, Ill., May 3.—The two-day registered tournament ended to-day, and while the second day was not as well attended as day one, the event, thanks to the Interstate Association and Secretary E. F. Radeke, was eminently successful. Forty-eight shooters tried the score and a number of excellent scores were hung up. Bart Lewis got the big piece of melon with 286 out of 300. Frank Kammerman made 3 less for second, while place went to J. S. Young with 282. Lewis shot in great form, getting 119 straight, missing only 3 out of his first day's quota. Among the "Kank" shooters, A. J. Brown looked brightest, getting 267—lower than usual, on account of blue rock ague, due to the presence of so many advertised crackers. H. Kirkwood was high professional with 288. The scores:

	1st Day.	2d Day.	Total.
W L Brown	125	131	256

New Hyde Park Shoot.

THERE was a shoot at New Hyde Park on May 4 for "the championship of Long Island." At least, that is what the proprietor of a hotel out there called it, and as he held the shoot, he ought to know what it was. However, my impression added to a number of letters from prominent trapshooters on Long Island, who hold the same impression, only more so, is that Dr. A. F. Griffiths, who won the alleged championship, is no nearer being the champion of Long Island than a Manhattan elevated clock is to being right. Not that Dr. Griffiths isn't in the championship class, because he is an excellent shot, but no shoot can be a recognized championship without having a representative entrance of trapshooters. This shoot was not advertised, notices were not sent to the sporting papers, and only a few Long Island trapshooters heard the shoot was to be held. Only twenty shooters took part and the names of only a few high average shooters appear on the list. Dr. Griffiths broke 45 out of 50; P. Von Boeckman smashed 44 and Wm. Simonson cracked 42. The trophy was a silver cup.

To-day (May 11) at 2:30 a shoot will be held with a silver cup and the "championship of Nassau county" as the incentive.

Long Island cup, 50 birds, 16yds.:

Tracey	29	D K Morrell	36
W Simonson	42	F R Chapman	30
Keppler	34	F L Rowland	30
Dr Griffiths	45	C Vogel	38
P Von Boeckman	44	Capt Doe	39
Wm M Hyde	38	Wm Highland	33

Grafton Gun Club.

GRAFTON, W. Va., May 3.—Quite a few ladies attended the regular Friday afternoon shoot, and a few tried their hand at the game for the first time. Scores were made as follows:

Shot at.	Brk.	Shot at.	Brk.		
Gerstell	90	80	Durbin	50	25
Reffee	65	54	Miss Flannery	10	4
Turner	65	50	Miss Durbin	10	2
Murray	50	40	Miss Mayden	2	1
Shai	50	38	Miss Love	2	0
Peck	35	20	Mrs Shai	2	0
Kerr	50	15			

Cincinnati Gun Club.

THE annual meeting of the club, held on May 10, was well attended, showing that there is still enough of the old club spirit left to place the organization again in the front ranks of trapshooting clubs. The first step was taken when Arthur Gambell was secured as superintendent, and in electing a board of directors at this meeting, the club chose men who will back him up in his efforts for the betterment of conditions. The following were elected: Dr. R. Lee Bird, H. S. Connely, R. F. Davies, Dr. A. B. Heyl, H. J. Pfeister, Dan Pohlar, F. A. Pope, L. J. Squier and R. G. Ward. The directors will meet on May 14 and elect officers.

There will be no shooting at the grounds until the house-warming event on May 30, which promises to be a regular old-fashioned Cincinnati Gun Club shoot.

Mecklenburg Country Gun Club.

CHARLOTTE, N. C., May 10.—"The music master" played a prominent part here the last day of our tournament. He—John Philip Sousa—of course, won a silver

cup in the consolation gallery, where he stole a march on the 83 per centers and cracked 42 out of 50 rocks. The winner of the tournament was H. A. Morson, who, unlike the men in the chain gangs, enjoys "breaking rocks," and so tallied 263 out of 300. He also won the championship of North and South Carolina, carrying that title with 47 out of 50.

All shot at 250 targets each day with the exception of L. C. Grant and L. B. Townsend, who both shot at 200 targets on the second day, and J. H. Daingerfeld, who only shot at 50 targets and broke 41. The scores:

	1st Day.	2d Day.		1st Day.	2d Day.
H A Morson	232	231	R H Crichton	202	222
C C Bates	224	228	L B Townsend	194	169

WINCHESTER

"REPEATER"

Smokeless Powder Shotgun Shells

Winchester "Repeater" shells have won first place in the estimation of hunters because they give the maximum efficiency at a minimum cost. Although comparatively low priced, "Repeater" shells are made and loaded with the same care and precision which have made Winchester "Leader" the best shells on the market. Only powder and shot of the highest quality are used in "Repeater" shells, and for any load in 10 gauge up to 3 3/4 drams, and in 12 gauge up to 3 1/4 drams of powder, they give entire satisfaction. No shells, price considered, give better results than the Winchester "Repeater." Try them and you'll be convinced. Ask for "Repeater."

Du Pont Gun Club.

THE weekly shoot at the Du Pont Gun Club brought out a number of interesting features on the 11th inst. The team race between Westchester Gun Club and Du Pont was exceedingly close throughout. The match was at 50 targets per man, ten high scores, unlimited entries the count. The final score was 428 to 415. Edmunson succeeded in having his name engraved on the Connable trophy by virtue of his breaking 22 out of 25, this being one more than his nearest amateur competitor, D. Lindsay. The scores in the team race were:

West Chester Gun Club.		Du Pont Gun Club.	
C Barnes	46	J B McHugh	48
D Mace	44	J H Minnick	46
G Baldwin	41	W M Hammond	45
G Cleveland	41	S Tuchton	43

*Not eligible.

Analostan Gun Club.

WASHINGTON, D. C., May 12.—The Analostan Gun Club had very good, but exceedingly windy weather for their shoot on May 11. Twenty-one shooters were on the firing line and some good scores were rolled up. Steubener, as usual, lead with 94 out of 100; Brown was a

close second with 93, and E. W. Ford came third with 89; and it was good shooting, considering the wind. It was so strong at times that it would pick a target up and hoist it clear of the charge, or tumble it to the ground unbroken. Ford also shot well in doubles, leading the procession with 19 scored out of 12 pairs. The scores:

Singles:		Shot at. Broke		Shot at. Broke	
Perkins	125	92	Parsons	100	67
Green	125	74	Wagner	80	63
Holmead	115	86	Talbott	80	42
Steubener	100	94	Emmons	80	24
Brown	100	93	Kirk	75	56
Ford	100	89	Monroe	50	44
Huseman	100	82	M Taylor	50	44
Barber	100	80	Barnes	50	40
Bray	100	75	Bohnke	50	33
Leight	100	74	Peck	100	68
Stine	100	72			

Doubles:		Shot at. Broke		Shot at. Broke	
Holmead	10	4	Bray	24	12
Steubener	24	13	Parsons	24	16

Howe	117	105	Amman	...	89		

Professionals:
O'Brien 146 147
Crosby 146 141
Carter 134 139

Crescent Gun Club.

WHITE HOUSE, N. J., May 11.—The second shoot for the championship of Hunterdon and Somerset counties was pulled off here to-day. Shooters from all over these two counties came here to carry away the two valuable silver cups. R. C. Stryker duplicated his performance of last month and won both cups, but not until he had been given a hard fight. Mr. Miller, of Peapack, tied him, and it was only after the shoot-off that he was able to claim the double championship. Enoch Gary, of

Sunnyside, was the runner-up in the singles, which was at 100 birds. The doubles were at 10 pairs. The scores:

Reg. Dbls.		Reg. Dbls.			
R Stryker	89	14	*Capt Doe	81	12
E Gary	78	10	J Weinrebe	82	10
E Gardner	77	10	E Carpender	81	..
E Wyckoff	77	9	J Degnan	69	..
H Miller	73	14	B L Lindsley	84	11
G Cramer	75	11	F A Jackson	74	9
Dr Rufe	72	9	G Metz	..	10

In a special three-cornered match between E. Gary, E. Gardner and R. C. Stryker, at 100 targets, the scores were as follows: Stryker 95, Gardner 87, Gary 87.

R. C. STRYKER, Sec'y.

Hyde Park Gun Club.

AFTER a heavy down pour of rain lasting nearly all the morning, the sun shone brightly, and the afternoon of May 11 was as pretty shooting weather as we would wish to see. Seven members assembled at the grounds and enjoyed a couple of hours' sport. J. Day was high gun with 95. H. R. Irwin was in fine form and made a good try for first, finishing only four targets behind Day. Hill had one of his off days, and didn't pull himself together until the last two events. Johnson did not travel the gait of a week ago by a good many targets, but says he'll come back for his race with Irwin.

Events:	1	2	3	4	5	6
Targets:	15	15	20	15	15	20
Day	15	14	19	14	15	18
Irwin	14	14	18	13	14	18

Johnson	14	11	15
Leighner	13	13	15
Schaefer	14	11	9	..
Frohlinger	14

Richmond Gun Club.

THE shoot the other day was well attended, and considering the high wind, excellent scores were made. Hammond was high gun with 47, with Hammond, Jr., Lawrence and Boyd tying for second honors with 45 each. Several new shooters were present and made good scores, especially Williams. Hammond, Jr., won high honors in 100, scoring 90, with a run of 34, this being the longest run made this season.

Next Saturday the club will shoot with the Richmond Yacht Club. Boats will leave the wharf, foot of 28th street, at 3 P. M. All members of the club are especially invited to attend this shoot.

Events:	1	2	Events:	1	2
Targets:	25	50	Targets:	25	50
Hammond	24	47	Houseman	21	41
Hammond, Jr	23	45	Tignor	22	38

Brown	22	44	Crenshaw	12	25
Parker	22	42	Jack	17	31
Scott	22	42	Henry	18	..

Vergas Rod and Gun Club.

VERGAS, Minn., May 9.—The first registered tournament held at our little city was very well attended. There were twenty-five shooters registered and all shot through the program—a record any club should be proud of. There was some wind, but it did not seem to bother any of the shooters, as the scores were high. Of the professionals, H. G. Taylor broke 145, H. C. Rinkle and R. R. Barber 142, and J. H. Starr 139 out of 150. The scores of all participating were as follows:

R L Baumbach..... 111	W R Jung..... 118
G W Holt..... 126	S F Anderson..... 119
C Tonsager..... 114	Jos Mettel..... 103
C Fankhanel..... 121	C A Peterson..... 113
M A Nashold..... 139	J L Smith..... 135
L Jensen..... 128	M J Garber..... 128
E C Cooper..... 123	W J Reames..... 113
F H Bailey..... 138	P E Robinson..... 136
A C White..... 124	E D Gerber..... 104
G E Trent, Jr..... 136	J H Hertel..... 99
F A Allen..... 135	

Professionals:
H C Riehl..... 142 R R Barber..... 142
H G Taylor..... 145 J H Stair..... 139

L. Jensen, who runs the Little Rodisson Hotel at Vergas, with the able assistance of C. A. Peterson, a very successful hardware merchant of said village, managed the shoot, and made such a success of it that all shooters wished it had been a two-day tournament, so they could have stayed longer.

Vergas is a little village situated in Ottertail county, Minn., within six miles of twenty-two of the finest fresh clear-water lakes in any State in the Union. These lakes abound with fine bass, pike and other game fish, and in the fall the duck shooting here cannot be surpassed.

Mr. and Mrs. Jensen did everything they could to make the visit of the shooters a pleasure, and were very successful. As a sportsman, I can truthfully say to anybody wishing to spend a pleasant vacation, to go and visit them during the fishing or shooting season and enjoy one of the best outings of their life.

R. R. Barber shot a repeating shotgun for the first time at a tournament, and judging from his score he had better stay by it.

H. G. Taylor has no sense at all. Wasn't even sociable, with 145 out of 150.

Rinkle, Barber and Stair had quite a race on for second place, but Stair couldn't keep from slipping over one about every event; he lost out by 3 birds. He is talking about putting a bell muzzle on his crutch, and if he does, he will make 'em all go some.

E. C. Cooper went pike fishing, but he couldn't keep the "black suckers" from getting on his hook, so he had to quit.

Nashold was up to his old trick of "fudging," and at that he carried off high amateur average.

Dr. Bailey was the life of the tournament, and kept

everybody feeling good with his original wit and humor.

Bill Brown was there and helped H. G. Taylor cashier the shoot. Bill kept us all guessing in the special event of 50 targets, when with a strange gun he broke 48. Wish Bill was back in the game.

Here's hoping we all may meet next year at Vergas, Minn for a two-day shoot.

Columbus Gun Club.

COLUMBUS, Neb., May 8.—The two-day tournament closed to-night. The program consisted of 150 targets each day. Scores:

Cleveland Gun Club.

CLEVELAND, O., May 12.—The weekly shoot of the Cleveland Gun Club was held at Shooting Park yesterday afternoon, and remarkably good shooting was done, considering the weather conditions, which were anything but ideal for trap sport—wind and rain keep the scores of most of the shooters below par. Dr. Brown led the field for the day with a score of 142 out of 150 targets shot in all the events. The doctor is doing some great shooting these days, but every shooter has his day; then there are times when he thinks there is nothing to it, and there are days when he would sell his gun for 15 cents and never shoot again; but that is the way with everything. You must take the good with the bad. But the real day is coming, May 30, when all hands will have a chance to see what they can do. The tournament of the Cleveland Gun Club will be up to date in every way. It will be a Squier money-back system shoot. President A. J. Stevens will present two beautiful silver loving cups in this contest: the first open to everybody, as he says, and let the best man win. Now, if you are on your nerve here is the chance of your life to get a piece of silver for your wife or your best girl. These trophies are given to see a real match, and we want to see you all on hand. The following are the scores of yesterday:

Event No. 1, monthly trophy, 50 targets, 16yds.: Judd 45, Doolittle 45, Brown 45, Hogen 43, Williams 42, Dibble 42, Stepp 41, Jones 40, Freeman 39, Rogers 34, Rockwell 34, Wall 34, Thorp 30, Stevens 30, Isenhauer 30.
Event No. 2, annual trophy, 50 targets, 16yds.: Brown 41, Judd 43, Williams 42, Jones 41, Rogers 40, Thorp 40, Doolittle 40, Freeman 40, Stepp 40, Hogen 37, Wall 37, Rockwell 28, Stevens 26, Isenhauer 26.
Event No. 3, Du Pont fob, 25 targets, 16yds.: Brown 25, Wilson 23, Hogen 21, Jones 20, Doolittle 20, Rogers 19, Williams 19, Stepp 18, Freeman 17, Thorp 14, Stevens 15, Isenhauer 13.
Event No. 4, Du Pont fob, 25 targets, 16yds.: Brown 25, Williams 24, Doolittle 23, Stepp 21, Rogers 20, Wilson 20, Freeman 20, Hogen 19, Stevens 15, Isenhauer 15.
F. H. WALLACE, Mgr.

Sikeston Gun Club.

SIKESTON, Mo., May 10.—Out of 50 clay pigeons, the following score was made to-day:

Art Killam .. 46	Fred Lance .. 35

Marlin

Model **REPEATER**
1897

of .22 Calibre—but
as Accurate and De-
pendable as a Big
Game Rifle

A SMALL game and target rifle of take-down construction, having special smokeless steel frame and tool steel working parts.

Takes .22 short, .22 long and .22 long rifle cartridges without adjustment. Equipped with Ivory Bead and Rocky Mountain sights. Has lever action like that of high-power arms. Solid top protects shooter against danger from thrown-back smoke, gases and defective cartridges; keeps action dry and clean. Side ejection insures unbroken line of sight always—makes possible quick, accurate follow-up shots.

Send 6 cents for new catalogue showing complete line of Marlin Repeating rifles and shotguns.

North Caldwell Gun Club.

NORTH CALDWELL, N. J.—May 4.—There was a good attendance of shooters at the third shoot for the Frank Hall trophy held here to-day. The leaders were: L. Colquitt 94, Dr. Culver 94 (not eligible), W. Trowbridge 92, and W. Hassinger 92. In the first half Ivins and Colquitt led with 48, closely followed by Shanley, Day Hassinger and Baldwin with 47. Colquitt finished his second half with 46, thereby proving the winner. Trowbridge was high in the second half with 48, which landed him in a tie with Hassinger for second with 92.

WM. KUSSMAUL, Treas.

Birmingham Gun Club.

BIRMINGHAM, Ala., May 5.—Three professionals took part in the shooting this week. Ed. Holt being high professional. John Fletcher was high amateur, closely followed by John Warren. Mrs. Garl is again shooting and as well as ever. She has been very ill for some weeks. J. C. Broyles shot very well until the last event, when he dropped 5 targets, which left him out of the winning. There will be a special shoot next Friday, Aug. 6 and 7 have been chosen and registered for the Alabama State Shoot.

Scores were made as follows:

Yale—Harvard.

NEW HAVEN, Conn., May 11.—In a 5-man, 50-bird team match, Yale defeated Harvard on Saturday by a margin of 33 targets. Weather conditions were fine, with the exception of an erratic wind. Individual honors went to Dimock, of Yale, while Lockwood was high for Harvard. The scores in detail follow:

Harvard.	Yale.
Lockwood	42
Weston	33
Cutting	36
Mixer (Capt) ...	36
Silsbee	34—181
Biddle	44
Emmet	42
Scott	37
Thompson	45
Dimock (Capt)...	46—214

The match was shot over the Yale traps. Harvard was unfortunately handicapped by the absence of Bartholff, one of her best shots.

G. E. DIMOCK, JR., Capt.

GLACIER NATIONAL PARK

St. Paul, Minn.

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He knows it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is Lefever Taper Boring.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N. Y.

Durston Special
20 Gauge. Price \$28.00

Smith Gun Club.

NEWARK, N. J., May 14.—Twenty-six shooters broke more than 3000 clay pigeons yesterday afternoon at the Smith Gun Club traps. The monthly merchandise prize shoot for members only, was the main event of the day, although considerable sweepstake shooting was done. In the prize event three men tied for first honors. They were W. Hassinger, Louis Colquitt and Charles T. Day, Jr. In the draw for prizes, Hassinger drew first prize, Colquitt second, and Day third. Each man broke 49 out of 50 targets. F. Lindel captured fourth with 43. Fifth went to W. Trowbridge with 42, and in a tie for sixth place with 41, L. Trowbridge beat out C. W. Billings in a draw. Scores:

Jersey City Gun Club.

JERSEY CITY, N. J., May 11.—Seventeen members took advantage of the fine weather to-day and came out to enjoy a good afternoon's sport at the Jersey City Gun Club. The only cause for trouble was a strong breeze from the south, which kept all our scores below 80 per cent., with the exception of North, who finished in grand form and with an average of 87 per cent. for the day, which is going some, compared to the other scores. Burlington was second high with 79 per cent., and Martin and Percy divided third prize, each having 78 per cent. Dr. Culver was out for the first time in several months and shot all his targets à la Olympic style, so as to get plenty of practice before starting for Stockholm in June. The scores follow, in strings of 25:

Dr Culver	22	15	22	19	20	18	19	17	21
Prof. North	19	22	24	21	23	22
McGill	17	15	18	17	17	18
Martin	17	21	23	18	19	19

Our club will shoot each Saturday during May and June, and we extend an invitation to all shooters in this vicinity or who may be here temporarily, to pay us a visit and enjoy a gentleman's sport for a few hours. Take Plank road trolley from Newark, or Jersey City, to east side of Hackensack River.

SECRETARY.

Gadsden Gun Club.

GADSDEN, Ala., May 11.—The Gadsden Gun Club held its third shoot of the season yesterday at its grounds at Elliott Park. The day was an ideal one, but a variable wind made the clay birds jump, with the result that no high scores were made. Two new shooters were with us—Dr. H. J. Savage and E. M. Stewart. This was Dr. Savage's first shoot at clay pigeons. At first he could not get on to them, but along toward the last he was breaking them like a veteran. Mr. Stewart shot well indeed, tying up with E. C. Little for second place. Mayor Bellenger was shooting in his old time form, getting 40 out of his 50. Mr. J. S. Paden, one of our most en-

thusiastic members, was not with us, and we all missed him. Dr. Savage is one of the finest quail shots in the State, and will no doubt make a fine shot at clay birds. Mr. Stewart was shooting a strange gun, and considering this fact, he beat everybody. Scores:

	Shot at.	Broke.	Average
C L Gunn	50	42	84
E C Little	50	41	82
F M Stewart	50	41	82
W G Bellenger	50	40	80
O W Sibert	50	39	78
C F Cross	50	35	70
J P Gunn	50	33	66
J E Little	50	28	56
Dr Savage	50	19	38

The standing in the handicap for the watch fob is as follows:

O W Sibert	25	25	100
J S Paden	25	25	100
E W Stewart	25	24	96
W G Bellenger	50	46	92
J E Little	50	46	92
C L Gunn	50	46	92
C F Cross	50	45	90
E C Little	50	44	88
J P Gunn	50	41	82
Dr Savage	25	18	72

Sunbury-Selinsgrove Gun Club.

SUNBURY, Pa., May 11.—The regular practice shoot of the Sunbury-Selinsgrove Gun Club was held on Thursday with quite a few shooters present from out of town, who wished to shoot over the traps that will handle the Pennsylvania State shoot next week. The grounds are now ready for the 21st to arrive, as everything is in good shape. The extension of the club house is finished and will now accommodate about 150 shooters with their equipment. Thursday's scores follow:

 Aug. 23.—Gouverneur (N. Y.) R. and G. C. W. R. Patrick, Sec'y.

ELMER E. SHANER, Sec'y-Treas.

Rifle and Revolver

Interscholastic Championship for 1912.

The fourth annual competition for the Astor cup and the interscholastic rifle shooting championship of the United States gallery ranges was shot during the period of April 12 to 20. Eighteen teams competed, which was one less than last year.

For the second consecutive year the match has been won by the same school, to wit, Iowa City (Iowa) High School. In the winning of the Astor cup for 1912 the rifle team of this school covered themselves with glory by putting up a score which far surpasses any previous record for gallery rifle shooting, both interscholastic and intercollegiate, and compares very favorably with the work of the expert civilian shooters.

The excellent work of the five boys composing the team can be no better demonstrated than by stating that of the one hundred shots fired, eighty-two of them were in a space the size of a ten-cent piece, and all the shots fired, with the exception of two, would have hit a twenty-five cent piece.

The total score made, 980 points of a possible 1,000—is eight points better than the previous interscholastic record, and seven points better than the present intercollegiate record now held by the Massachusetts Agricultural College.

The Secretary of War, on hearing of this phenomenal shooting, at once sent the following telegram to the principal of the school:

"Principal, Iowa City High School, Iowa City, Ia.:
 "Congratulations to the rifle team of your school in winning the interscholastic rifle shooting championship of the United States for 1912 with a record score.
 "Your work represents a high class of patriotism and deserves the emulation of every high school in the land."
 "H. L. STIMSON, Secretary of War."

The second highest team in the competition was the Deering High School, of Portland, Me., who made the very excellent score of 962. The third team was the St. John's Military Academy, of Delafield, Wis., with 937, and the fourth, the Morris High School, of New York city, with 934.

A rather melancholy feature of the competition was the fact that the cup that was being competed for was presented by Colonel John Jacob Astor, who went down on the Titanic.

The conditions governing the competition and the scores in detail for the first three teams and in total for the balance of the teams firing are as follows:

CONDITIONS.

Open to teams of five pupils from any N. R. A. rifle club in good standing of any public or private preparatory school. Each team may shoot as many members up to ten as desired. The best five scores to count for the team's record score.

Distance—Fifty feet.
 Target—The N. R. A. 50 feet gallery target, especially stamped for the match, must be used. The targets to be returned to the office of the N. R. A. after being fired upon.

Number of Shots—Twenty for record, each boy, ten standing and ten prone. To be shot in strings of five. Two sighting shots allowed at the beginning of score. Boys to shoot in pairs, if the target facilities permit. The entire team must shoot at the same time.

Positions—Standing, body and rifle must be free from all artificial support; prone, head toward target, rifle free from all artificial support. Match shot without the use of strap.

Rifle—Any .22 caliber rifle, with sights (other than telescopic) in front of the firing pin.

Ammunition—.22 caliber short.

Time Limit—Ten minutes for each string of ten shots.

Eligibility—Competitors to be bona fide scholars of the school which they represent, certificate to this effect to be furnished by some duly authorized authority. Entries of more than one team may be made from the same institution, provided an entrance fee is paid for the extra team or teams. A competitor is not allowed to shoot on more than one team.

N. R. A. Judge and Witnesses—The National Rifle Association will appoint a judge and witness to supervise the firing of each team entered, and no scores will be accepted unless such judge and witness is present when the scores are shot. The official targets will be sent to the judge, who will take entire charge of same before, during, and after the shoot. The judge and witness will certify to proper carrying out of the conditions of the match only. The determining of the value of shots will be done by a special committee, in the office of the N. R. A., who will announce the results.

Entrance Fee—Two dollars per team. For extra teams, \$2 per team.

Prizes—The "championship" Astor cup, to be held by the school represented by the winning team for one year, when it will again be put in competition by the National Rifle Association of America. Silver medals to the individual members of the winning team; bronze medals to the members of the second team. The cup will become the property of the school winning it the most times in twenty years.

Won in 1909 by Morris High School, New York city.
 Won in 1910 by De Witt Clinton High School, New York city.

Revolver Team Match.

THE first of a series of team matches between the Cincinnati (Ohio) Revolver Club and the First Regiment, O. N. G., was shot on the Brandamour range on May 8. This range was recently built by the Brandamour Company, and is appreciated by the revolver and rifle shooters of the city, as there has long been a demand for a range in the heart of the town where those who did not care to visit the public galleries could meet for practice and to pull off matches. The range is in Fountain Square, cars from all parts of the city passing the door every few moments. It is fitted with all conveniences for handling the targets, scoring, etc., and as it becomes better known to the local marksmen will be well patronized.

The regiment team was weak, the absence of two of the members being a considerable handicap, and the fact that since the reorganization some of the best shots are no longer connected with the regiment. The average of the scores made by those shooting was used for the two missing men, making the team total 396. Capt. Meyers was high man for the team with 142, which was third high score in the match. In the rapid fire round he was high man. The other members of the team have been shooting but a short time, and were outclassed by their opponents.

Among the civilians Dr. Thompson was high with 153, and tied with Cox for second high in the rapid fire. Ten of his slow fire shots were in the black, six of them in the center. E. Pugh tied Thompson for high five-shot score, each making 45 in their second round of the slow fire. Dr. Yungblut was second high with 146. The team won with a lead of 279 points, which the soldiers assured them would not happen again. The return match will be shot on the Armory range May 22. Match, 15 shots, slow fire; 5 shots rapid fire; .38 cal. revolvers; 20yds., standing target:

snowfall is deep enough to protect the grain against severe winter temperature, say from 2½ to 3½ feet. Rye is hardier than wheat and therefore the more successful of the two grains; but it is expected that the experiment station will develop varieties of these grains suited to the climatic conditions. Siberian alfalfas which the Department of Agriculture secured through Prof. N. E. Hansen, of South Dakota, from the vast semi-arid regions of Western Siberia have been introduced, and have been grown at the experiment station at Rampart in latitude 65° 30', where all the experiments with grains and various plants are conducted. If another year should prove that they can maintain themselves, an important problem in Alaskan agriculture has been solved, as a leguminous plant was needed, not only to furnish feed for live stock, but to aid in the maintenance of the fertility of the soil.

The climate of the coast region is modified by the proximity of the Pacific Ocean. The winters are comparatively mild, but the summers are cold and moist. The lowest temperature at Sitka the past winter was 14 degrees above zero, and the highest temperature on record at the same place during a period of upward of seventy-five years is 87 degrees. The maximum temperature frequently does not exceed 75 degrees and sometimes it does not reach that high during the entire growing season. The difficulty with apple-growing in the coast region is not that the winters are too cold, but that the summers are not warm enough to mature the fruit. In the interior, on the other hand, the summers are warm enough, but the winters are too severe for the trees to survive without protection. The probability is, therefore, that fruit growing aside from berry bushes will never be a success in interior Alaska.

The Fairbanks Station, which has ninety acres under cultivation, has the task of demonstrating how far general agriculture, such as would be practiced by the average farmer, can be made a success in that region. Fairbanks is located in the Tanana Valley, in which it is estimated there are about 15,000 square miles of land available for agriculture. Grain growing and the cultivation of vegetables, particularly potatoes, are the lines of work followed at this station. By way of demonstration that potato growing can be made a success in that valley, thirty tons were raised on seven acres the past season, which, if sold at the low average price of five cents a pound, would be worth \$3,000. Last year the station sold several tons of potatoes at the rate of \$180 a ton. It is interesting to note that the first self-binder which has been brought to Alaska was operated in the grain fields of the Fairbanks Station in the summer of 1911.

The Rampart Experiment Station is located in the Yukon valley in latitude 65° 30' north. Thirty acres of land are at present under plow, all of which is devoted to strictly experiment, the production of new varieties, the growing of pedigree grains, and the introduction and testing of forage plants which give promise of being useful.

The Kodiak Experiment Station, located on the island of the same name, is devoted exclusively to cattle breeding. Eighty-five head of pure-bred Galloway cattle of all ages are now at this station. There is also a flock of long-wool sheep, which appear to be remarkably well adapted to the climate. The Galloway breed of cattle was chosen for the reason that their original home, southern Scotland, has a similar climate. Nature has provided them with a very heavy coat of long hair which protects them against the cold rains; they are very excellent rustlers and can find their own living wherever the snow is off the grass; moreover, they have no horns and can, therefore, be shipped and handled with greater ease than horned cattle. They are an excellent beef breed and there is a ready market for beef in towns and settlements along the Alaska coast, but they are poor milkers, and one of the problems which this station is trying to solve is the evolution of an all-purpose Galloway cow, that will give milk as well as provide good beef, and doubtless the efforts will be a success.

SPORTSMAN'S HAND BOOK

I have written a new book that I believe will interest Sportsmen. I had in mind the out-door-man's viewpoint rather than the strictly commercial idea. It represents four months of hard

work, and many years of practical experience in the wilds.

Everything the Sportsman Needs.

Of course this catalogue is intended to sell goods, and I believe you will agree with me that the prices we charge are reasonable. I know the many articles we illustrate are of good quality, and well adapted to the Angler, Camper, Hunter, Trapper, Ranchman or in fact, any one who enjoys out-door recreation.

Let me send this Out-door Guide—FREE.

I am an enthusiastic out-door-lover, and this business is my pride. I want to become acquainted with you, and this new book—434 pages—will serve as an introduction. May I send you one? Please ask for No. 530.

Olympic Rifle Team Selected.

WASHINGTON, D. C., May 17.—Scores in the trial for places on the army, navy, marine corps and militia rifle team to be sent to the Olympic games in Sweden this summer were announced from the naval rifle range at Winthrop, Md., this afternoon. The twelve were:

Captain A L Briggs, U S A	440
Lieut C S Osborn, U S N	439
Capt T S Sylvester, N J N G	438
Capt C L Burdette, W Va N G	435
Capt S T Hurd, Iowa N G	434
Sergt U S Adams, U S A	433
Chief Gunner's Mate F L Dieueonne, U S N	433
Private R N Henshaw, U S M C	432
Sergt J E Johnson, Iowa N G	432
Capt N C Stiles, Maine N G	432
Capt R C Foster, Maine N G	432
Capt H B Myers, U S A	432

The contestants fired 90 shots each, 30 at 200yds., 30 at 400yds., 15 at 500yds. and 15 at 600yds. The highest possible score was 450.

U. S. Rifle Team.

THE United States rifle team, whose members are to take part in the Pan-American tournament, arrived at Buenos Aires, Argentina, May 17, on board the Verdu, and were accorded a hearty welcome. The team is under the command of Col. Charles D. Gauthier, of the Maryland National Guard, and Capt. J. A. Moss, of the general staff, is acting as adjutant. The other members of the team are Capt. S. W. Wise, Massachusetts N. G.; Corporal John Kneubel, 74th New York N. G.; Capt. W. P. Hyde, Tennessee N. G.; C. N. Schriver, United States Marine Corps; Sergt. C. A. Lloyd, U. S. Marine Corps; John W. Hessian, Bridgeport, Conn.; Lieut. Wm. C. Stoll, 29th U. S. Infantry.

Sharpshooters, Dayton, O.

C. W. SANDER won the first of the monthly cup shoots of the Sharpshooters, with a score of 104 out of a possible 120. The season was opened at the club's range, south of the city, on May 14. The cup contest is open to members only, 5 shots, muzzle rest, 200yds. Free-for-all matches are also shot, and C. W. Sander was also high man in these; D. D. Bergk, Adolph Schwind, Chas. Long and G. H. Sander following in the order named. The club is planning to celebrate its fiftieth anniversary Sept. 12 and 13, with a two-day shoot, when a gold medal and other valuable prizes will be competed for.

Du Pont Gun Club, Rifle Dept.

THE scores made by the pistol and rifle branch of the Du Pont Gun Club made the following scores on May 11:
Rifle: R. S. Wood 193, W. J. Conner 190, J. Frier 220, E. H. Lambert 195, 207, 198; W. G. Long 192, 205, 186, 189, 193.

Pistol: L. C. Dorsey 84, 89, 80; W. E. Steen 55, 60, 47.

TRAP NOTES.

Hudson Gun Club.

JERSEY CITY, N. J., May 19.—Twenty-one members took part in the bi-monthly shoot, held here to-day. Dr. Groll, with his 32in. gaspipe, was the high man, snuffing out 89 targets out of the first 100 shot at; Durkec with 80 and Von Lengerke with 79 being the nearest ones to him.

The morning was warm and sultry, but along toward 12 o'clock a stiff wind sprung up, which made the targets dip and duck in all shapes and angles, which made shooting very difficult and high scores at a premium.

After most of the shooters had left the grounds, several of the "stay lates" arranged some sweepstake shooting. Everybody got in the game and shot until the sun started to sink in the west, when they packed their guns in their cases, and, like the Arabs, they silently went away home to think of the very pleasant day they had spent at the grandest of all outdoor sports. Scores:

D D Engle	20	19	20	18	18
J H Williams	16	17	17	15	18
C W Durkee	21	21	20	19
J Putney	16	21	17	19	21	18	..
W Hutchings	17	15	17	15	15	17	..
C A Kurzell	15	13	16	15
E Malcomb	13	16	11	14	17
C E Phelps	23	19	18	18	19
C Phelps, Jr.	16	15	15	18	18
J Williams, Jr.	13	17	19	17	16
W Roach	16	14	19	20	20	21	19
C von Lengerke	22	19	20	18	18
C von Lengerke 2d	15	13	15	13
T H Kelley	19	19	20	20	16	18	..
Dr Groll	22	24	22	21	16	17	16
J G Whitley	15	18	16	20	18
R W Strobel	17	15	18	17	16
R Perry	11	13	14
F Gondet	9	12
Y Burgess	15	17	19
T H Farbey	16	15	11

The next shoot will be held June 2, when the fifth contest for the Frank Hall trophy will be shot. Our grounds will be open for practice at 9:30 A. M., and the trophy event starts at 2 o'clock sharp. The Turnpike car from the Jersey City Ferry, or any transfer point in Newark, is the only way to reach the grounds. Ride to the west side of the Hackensack River Bridge and walk north along the river bank to the club house. All standard loads for sale at popular prices. T. H. K.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., May 18.—Our old friend and long-time neighbor, Jimmy Bell, was a welcome visitor, and showed us how targets are broken in St. Louis. Incidentally our Uncle Tom showed how some of us do it. Scores were not high, but very good indeed, considering the conditions. Blessing, Alig and Neighbors tied for the spoon, the former winning in the shoot-off. Alig beat Lewis for the one carried over from last week. Scores, figures in parentheses denoting number shot at: Parry (140) 128, J. W. Bell (140) 127, Edmonson (140) 125, Moller (140) 119, Alig (120) 102, Blessing (120) 97, Neighbors (120) 87, Dixon (100) 84, Foland (100) 69, Britton (100) 65, Hawn (100) 58, Golden (100) 56, Lewis (80) 63, Bestall (60) 25. R. R.

Camden Shooting Association.

CAMDEN, May 18.—With ideal weather conditions prevailing, twenty-two marksmen participated in a 100-bird shoot at the new grounds of the Camden Shooting Association to-day. High gun honors went to McHugh, of Du Pont Gun Club with 92. Only one behind him, Jim Morris walked off with second money, his clean score in the last event putting him at McHugh's heels. J. M. Davis, with 89, was third, and three tied for fourth money with 87 each—J. M. Foster, Wakeman and Joslin. Scores: Ayres 76, J. M. Foster 87, J. M. Davis 89, Wender 79, Kunkel 74, Wakeman 87, Morris 81, Parker 79, Chalmers 86, McHugh 92, Joslin 87, Martin 89, Judson 82, Taylor 58, Fleming 73, Dungan 73, Melrat 73, Radcliffe 78, Platt 85, J. Antony 75, Ochletree 75, Wiley 76.

IF YOU OWN A BOAT, you are interested in all the latest devices that tend to make her more comfortable and give you better service.

IF YOU WANT TO BUY A BOAT, you are interested in the latest designs in craft and engines.

THE BOAT BUYER IS A MAGAZINE PUBLISHED FOR THE MAN WHO OWNS A BOAT AND THE MAN WHO PROPOSES TO OWN ONE.

It contains no pretty pictures, no thrilling adventures or cruising descriptions.

BUT it is full, from cover to cover, with illustrated descriptions of the latest in craft, engines, boat fittings and accessories, and is of the greatest possible assistance to the boat owner or prospective boat owner, who wants to keep up to date on all the latest wrinkles.

If you are a boat owner, fill out Coupon No. 1, describing your present boat, and mail it to us; we will gladly send you a complimentary copy of our big June issue. If you are about to purchase a boat, fill out Coupon No. 2, describing the type of craft for which you are in the market; we will be glad to send you also a copy of the big June issue.

As the BOAT BUYER is of no earthly interest to any reader except the boat owner and the prospective boat owner, we cannot mail it to those who do not fill out one of the two following blanks:

From Eastern City to Western Forest

Chapter I.—The "Getting Out"

By ERION

A FEW years ago I was a city man; that is, I hunted money among tall buildings and in crowded streets, along with thousands of other anxious folks. Money is best hunted where it is most abundant—which is true of all sorts of game.

I used to meet on a busy thoroughfare every now and then a little Quaker gentleman, an acquaintance of long standing. He was active and cheerful with always a good word on his lips. At times he was given to a certain sort of bantering humor. He had a way of pretending at first not to see me; then of suddenly springing a question or comment.

One day he came toward me on the sidewalk with his eyebrows elevated and said: "Why, when did thee get out?"

Whether he referred to a prison, a reformatory or a feeble-minded institution I did not stop to inquire, but simply answered, "I am not yet out." Continuing, I told him of unceasing hopes and efforts to exchange urban for rural life; not because of a dislike for the former, but on account of an ever-increasing desire for the latter.

My city office was in one of those monstrous structures called "skyscrapers" well toward the top. The building seemed like a huge bird box on a lofty pole, except that the holes or openings occurred all the way down the sides. It differed from a colony house for birds in another respect, for whereas feathered tenants can use outside routes of ingress and egress, it is necessary for human tenants to use inside routes. Sometimes I felt more like a monkey than a bird; a monkey daily ascending and descending the inside of a great hollow tree.

There would have been a grand eastern outlook from my window, extending over miles of roofs, with a river and green fields in the distance, except for the fact that it faced another window in another lofty wall some twenty feet away. And every day another monkey looked out of that window toward me. "Out," indeed! We were both truly in cages.

Across my corridor with unobstructed windows facing the west, a quiet old gentleman had

his business home. I had a nodding or "Good morning" acquaintance with him; nothing more. He once went so far in the way of conversation as to express a wish that things would "brighten up a little," but he never complained. The noisy street, 200 feet below his office windows, had probably forgotten his existence.

It was a pleasure to go occasionally into the old man's office for the sake of the view from the windows. The foreground was artificial; the

home and takes permanent root, and who profits by the labor of his predecessors. In obtaining a home in a forest-surrounded valley, I entered as the third man, and soon was able to realize the economy of paying cash for improved land as compared to taking unimproved land from the Government free of cost or at a nominal price.

Both of my predecessors did good work; the first in making a home, and the second in making a wagon trail to it. The first owner "packed" his supplies from the village, or from a nearer point on a public road; that is, he carried things on his back. The second owner made it possible for wheeled vehicles to enter the valley.

The story of the first comer, the original homesteader, is full of encouragement. He was fifty-seven years old when he began the great battle with the wilderness. He took up two "forties" from the Government, and maintained a two-sided struggle for more than twelve years. He was obliged to destroy before he could create. He waged destruction with axe and fire, and he waged construction with plow and spade. For instance, he burned down sixteen forest giants to secure a certain quarter-acre of bottom land.

One of the great trees fell in an unexpected direction, bridging the stream and almost crushing the cabin. (By to-day's measurement that stump is nearly 300 feet from the cabin.)

Thirteen auger holes were made in the trunk of that noble tree, and fire put in each hole. At night there were thirteen beacon lights across the valley. In a few days nothing remained except a line of ashes.

Waiving the question of wisdom or unwisdom in thus wiping out of existence a large amount of valuable timber, we cannot but admire the patient courage of the pioneer who successfully overcomes such physical odds, and who makes a meadow of a marsh and an orchard of a forest.

It may be noted that the old homesteader did not quit because of age or infirmity. At seventy he was still at work in the woods, and to this day he occasionally returns to look at his former home and to talk of the past.

FAR FROM THE SKYSCRAPERS.

background natural. Near at hand were solid blocks, then scattered buildings, then green fields and woodlands, then blue hills along the skyline. I used to wonder what was behind and beyond those remote blue hills in the west.

In the fullness of time, way opened to travel to and through and a thousand leagues beyond that same blue horizon; to exchange the near Atlantic for the near Pacific; to make a reality of what had been a dream and a dream of what had been a reality. Men and animals soon adapt themselves and their habits to a changed environment. I presently felt at home in the woods.

There is a saying in the newer parts of the United States that the man who homesteads raw land seldom remains long upon it; nor does his immediate successor. The struggle with primeval forest or unbroken prairie is too severe to be endured. It is the third comer who finds a

I took the place because of its intrinsic worth and its beauty; its grass, fruit, running water and still uncut timber. My working outfit includes household goods and garden implements, also cows and poultry, also a library of several hundred volumes, also a rifle, a shotgun, some fishing rods and a large number of pocket notebooks. The dates in the earlier note books are nearly five years old. The place is now home. The creatures of the forest know and are known. Fishing rods are meant for attack, but my firearms are strictly defensive in character and use.

The above paragraphs explain my "getting out." The subsequent story is a jumble; that is, a mixture of events, because life is made up that way. People come and people go. Animals, birds and fishes arrive, linger and depart. A man with a family may be busily and profitably employed in the midst of a forest as I discover.

The note books do not forget incidents and dates, and some things may be worth printing.

CHAPTER II.

SOME STORIES ABOUT SALMON.

In Chapter I. reference was made to the exchange of city life for country life; to a removal from the Atlantic seaboard to the Pacific seaboard; to a complete change of environment in a geographical sense. But I found farm life (or ranch life) in the West quite the same in detail as in the East; just as hard and just as easy. Cows, horses and poultry have the same daily requirements. Soil is soil all the world over, and grass is grass. A perfect apple can be no more than perfect anywhere.

But just as it is true that in some parts of the country the original forests have not yet disappeared, so it is true that the original inhabitants of the land and waters have not yet ceased to exist. It is thus with salmon. The trout stream on the ranch seemed too small for big fish of any sort, and I could not at first give credit to the neighborhood stories of what would occur in late autumn. We took the place in May. The great fish came up that autumn later than usual.

On the 22d of November, just before sundown, I was watering a cow at the lane ford; a commonplace incident. It was a quiet afternoon and that branch of the stream was but little above its usual level.

Without warning there was a splash and a rush and something resembling a submarine boat passed close to the cow's nose. The drinking animal was indeed astonished, but not by the fish, for the sight was not a novel one to her. For more than half a dozen years she had seen such performances in the late autumn; not one fish, but scores and hundreds of them. It was the human conduct that caused bovine surprise; the dropping of rope, pursuit and capture of fish, and then the sight of the prize on the bank with wounded side.

The salmon had attended strictly to its own affairs, with no turning to right or left, and with no halt or hesitation. And it had been speared and tossed upon the back to die. It was good table food, as it proved, but not so good as if it had been taken out of salt water, three miles down stream.

The next year the salmon arrived at the ranch on Nov. 2; the succeeding year, Nov. 2; the next year, Oct. 21; and so on. These dates show that salmon runs are not regulated precisely by the

almanac, but depend on weather and water conditions and perhaps on other causes.

Soon after the beginning of the run that first season, when the water had become high, we one morning heard a nearby rifle shot, and presently an Indian came to the door with a twelve-pound offering. He had a smile on his face as he presented the fish—a beautiful "silver" salmon. Then he made an apology for his poor marksmanship. The bullet hole was two inches back of and half an inch below the eye. "I mostly hit just back of the eye," he said; "don't know how I came to shoot so low."

The same day, an hour or two later, a white man came to the stream to get a fish. He said his wife was amiss and needed food, and he requested permission to shoot near the cabin. He was of course allowed to do so, and more than one fine fish was pointed out to him. Shot after shot was fired, but his rifle secured him no food.

It is not easy to locate a moving target in a bankful stream, with water running like a mill race and slightly tinged with color. And yet the Indian had done it.

The final outcome of the matter was that half the Indian's salmon went to the home of the man whose wife was sick. The Indian's story was no idle boast, as after events proved. He was not "putting on airs" when he apologized for a half-inch error. More than that, he was as famed for his skill with axe as with rifle.

Salmon are no longer disturbed in our own meadow waters. The ranch has become a sanctuary for the spawning fish. Once here they are safe; safe until they pass on up stream, at least.

Near the center of our cleared land is the junction pool, the place where two considerable streams meet and unite to form the little river that descends seventy feet to the mile to the salt water of the bay. When the fish reach the junction pool on the upward journey, they always halt for a time, as though deciding which route to select, and they appear to make occasional mistakes, going up a short distance, and then returning again to the pool, and going up the other channel. One stream seems as good and as fit as the other, and many salmon ascend each, but to the fish themselves there may be a difference. In the summer season the so-called mountain stream is always four degrees cooler than the so-called lake stream, but it is not likely that the temperature varies much during the season of high water in late autumn and early winter.

Down stream from the ranch there are a series of log jams, places where fallen trees or other obstacles have caused rubbish to accumulate. In one case a log jam may be a screen filled with small holes. In another case the jam may result in a flight of wooden steps, one above another, with a waterfall over each.

There is no better sport, nothing better for a fisherman's nerves, than to select a log jam (the worse the better) and then watch the salmon read and solve the fearful riddle. A majority of the salmon will reach the same conclusion; mostly a jump. But there will be exceptions.

One or two seasons back, when the run was at its height, I chose a place especially calling for a leap, and it was royal sport to watch fish after fish making the ascent in perfect safety. It was difficult to imagine how there could be

an upward motion in a downward pouring column of water, yet the thing was done over and over again. No photograph (except a moving picture) could convey or portray the inspiring spectacle, and even a moving picture would lack the music of the roaring water.

I noticed, now and then, a fine silver salmon making an effort to find a way around the fall, and that there was, in fact, a sort of back stairs to the coveted upper story. The fish mounted successfully one step at a time until the level of the upper pool was reached, but there was a cross log at the very top that defeated the trip, and retreat was the only alternative. The effort was repeated several times, always resulting in failure, yet it was evident that the purpose of the fish would cause it to continue the same fruitless endeavor, so I made out to shift the upper destruction a few inches.

After a short rest the salmon again began the ascent, and as before reached the top. This time there was a change for the better, and the situation was instantly acted upon. The beautiful fish turned a shining side to the sky, and with a single tail stroke squeezed under the log and entered quiet water.

The next log jam, as one goes down stream, is of another sort; not of the mill dam kind, with check of current and overflow, but rather a mass of roots, broken branches and trunks, horribly interlaced and interlocked; a great wooden filter or strainer. Many a toll of fin or flesh is exacted of the fish which have to pass up through the meshes of such a net.

We watched a pair run this gauntlet. The day was quiet in a salmon sense, and few fish were moving. The smaller of the two fish, presumably the male, wound himself through a narrow aperture and waited for his mate. The latter again and again made the effort, but could not get through. Then the male with difficulty squeezed himself down stream again, through the difficult passage, and joined the female. Presently both were above the place by some method not understood to us, but one of them carried a scar. There is something pathetic in a scarred fish. The scar tells of courage, faith and a purpose that is invincible.

More refreshing, more inspiring, more encouraging is this high water fishing; this fishing without hook or spear than any other sort within my own experience; this fishing in which the stage setting is perfect, yet in which there is no taking of life; this fishing in the presence of water that is rushing and roaring and singing and sometimes speaking in almost human tones.

Human tones?

Yes, human tones, for time after time, even when entirely alone, with knowledge of being alone, I have looked around half expecting to face a human being among the logs or along the banks. [TO BE CONTINUED.]

New Publications.

HIS FIRST DAY'S WORK, by G. J. Bridges. James Nisbet & Co., Ltd., London, Eng.

Here is a little book that is just the size to put into your pocket on your next fishing trip. When the sun is high and the trout won't come out, read a few pages of "His First Day's Work." Its humor, pathos and human interest are so intermingled as to make an interesting half hour's reading.

THE LAST CARRY.

Sport in the Yellowhead Pass

By W. R. GILBERT

FEW districts in Canada that are not far removed from the beaten track can offer such opportunities to the sportsman as the wild country around the Yellowhead Pass, the rugged territory in the Rocky Mountains on the eastern border of British Columbia. I spent several weeks in this district, and shot a variety of game. This country had not been much frequented by the white hunter hitherto, owing to the difficulty of access. To gain the pass it was necessary to embark upon a pack train journey from Edmonton. The going, however, is so bad that few attempt the journey, the pack trail being of the worst description, and so badly neglected that we found it littered with rocks and deadfalls, rendering it well nigh impassable to the horses. Twelve miles a day of ten hours was reckoned fast traveling. This state of affairs, however, is now becoming a thing of the past, for the railway is being pushed through this pass, and the adjacent country should soon be accessible.

The district is very wild in character, densely forested, with here and there vast tracts of burnt country, the deadfall of which has piled up to a height of ten or twelve feet, thickly

interwoven with poplar and cottonwood undergrowth, rendering it an ideal haunt for black, brown and grizzly bears, while partridges, grouse and prairie chickens may be found in abundance. The districts will become a finer field for the sportsman ere long, owing to the action of the Government, whereby 5,000 square miles of country among the mountains on the Alberta side of the inter-provincial boundary has been taken over as a natural park. This will provide a sanctuary for all kinds of game. The red man in the past has wrought sad havoc among the game, merely killing for the sake of killing or for hides and fur. The game within the inclosure multiplying unchecked will become so abundant that it will restock the surrounding country.

Moreover, the Government in response to the agitation of Canadian and British sportsmen is keeping a more watchful eye on the Indians. If unmolested, these red men will entirely deplete twenty or thirty square miles of the best game tract within two years. It is due to the Indians' unprincipled slaughter that the hunt for the mountain goat, sheep, caribou and moose has

become so difficult. A notable instance of this ruthless killing was brought before my notice while on the trail. A herd of eighty deer in migrating came near a colony of Indians, who rounded up the herd and killed every one. They took what meat they wanted, which was very little, and left the rest to rot.

The rolling country around Tete Jaune cache and through the Thomson Valley on the west side of the Yellowhead Pass a few years ago teemed with game. To-day one has to scour thirty or forty miles, and high up on the mountains to get a shot. The same applies to the rivers. The Indian constructs a trap at a likely point and catches them by the hundreds. He will take one or two from the trap and leave the rest to perish or throw them away. Often he will not go near a trap for days, during which time it will become choked with fish, the greater part of which suffocate. Some of the white settlers in the vicinity of the best rivers upon discovering a trap promptly smash it and tell the owner to cease such methods under threat of being thrown into the water.

The hunting equipment need not be of a very

elaborate description, and indeed the simpler the type of gun carried, the better. For bears and moose a .33 or .35 bore is the best rifle, while for goat, sheep, deer and caribou almost any rifle will do. A good revolver should be carried for emergencies, especially when tracking bear. So far as feathered game is concerned, any good shotgun will suffice, for the birds are very tame.

Caribou, deer, mountain goat and sheep afford plenty of exciting sport. They require careful stalking, for they frequent the rugged mountain slopes well up near timber line. Perhaps the greatest excitement is provided by bears, grizzly and silver tip. The country is piled up with a maze of dead burnt trees, uprooted and stacked criss-cross. These, combined with the dense undergrowth, render it an ideal haunt for big game. Often when climbing over the deadfall you may come unawares on a black or grizzly bear, and then it is that a heavy revolver comes in handy. The latter species is especially a tough customer to meet in an awkward corner, and though the dead timber is exceedingly difficult for a hunter to climb over, a bear makes light of it. Tackling a full grown grizzly, especially when he is wounded, calls for a certain amount of nerve, particularly at close range. To turn and run, as the experienced prospectors and guides say, is to court certain death, while a severe mauling is not unusual if the animal is not stopped by the first shot. Many guides will tell you that it is impossible to stop a wounded bear even with a soft-nosed jacketed bullet from a .30-40, and that if aimed at the head it will simply strike the frontal bone and glance off. This, however, is a fallacy, as was demonstrated to us. Our hunting guide set up the head of a grizzly after capture, posing it at the same angle as it would assume when the animal was charging, and then from forty paces he fired at it. The bullet struck the nose and passed right through the skull, smashing it. No bear could have survived such a blow. But a bear has remarkable vitality, and the only way to prevent a rush is to hit him in the spine either near the shoulder or in the middle of the back. Owing to the density of the tall brush it is seldom that one can fire at a bear except at short range, and one has then necessarily to shoot straight and quickly.

So far as fishing is concerned, we had ample sport, the catch comprising for the most part rainbow and speckled trout, the Dolly Varden trout, pike, salmon trout and in the neighborhood of Tete Jaune cache, salmon, for these fish travel as far up the Fraser as this point to spawn on the sandbars. The country is freely intersected with creeks and mountain streams feeding the Athabaska, Miette, Moose and Fraser rivers. The Athabaska yielded fine pike from five to seven pounds. The best bait was an artificial minnow or gudgeon. A piece of bacon the fish took voraciously, especially if it was a bit "high."

The rainbow trout has a delicious flavor and is very abundant. At Trout Lake a couple of dozen ranging from seven to twenty ounces were caught with two rods in less than half an hour. This lake, in fact, teems with these fish, which rise readily to the fly. Dolly Varden refused the fly, but bit readily at fresh meat or bacon. The fresh bait comprised squirrel or chipmunk flesh, easily secured. The big eddies on the Fraser River yielded the primest Dolly Varden.

The Fraser River offers fine sport when the salmon are on the run, and Tete Jaune cache is

about the highest point on the river which they reach, since just above is a waterfall twenty feet in height, which is beyond their leaping powers. They likewise failed to rise to the fly, but fell ready victims when tempted with the eye of a consort as bait.

Those contemplating hunting in this country should secure an experienced guide. There are many prospectors in the district who know the mountains intimately, and have acquired a good knowledge of the likeliest haunts of game. Those men are now, in view of the advance of the railway and an anticipated larger influx of sportsmen, giving closer attention to fitting out and accompanying parties, and their services will be found of great use, more particularly in regard to crossing the many mountain torrents. It is expected that when the railway has threaded the district, a large center for the outfitting of hunting parties will be established in the vicinity of Mount Robson. Certainly this would be a convenient and desirable rendezvous, as the dense forests around the foot of this mountain hold plenty of bears and other game, while the close proximity of the Fraser River insures good fishing. Another similar establishment is projected for Tete Jaune cache, which will be central to the main range of the Rockies, the Mica Mountain range, the Albreda Pass and the Thompson and Kamloops valleys.

Conservation of American Wild Life.

ROCHESTER, N. Y., May 14.—*Editor Forest and Stream:* It may be an interesting news item for you to learn of the lecture which was given in the Rochester Mechanics' Institute on the evening of May 2, by T. Gilbert Pearson, secretary of the National Association of Audubon Societies. Mr. Pearson came to Rochester under the auspices of the Irondequoit Fish and Game Protective Association which has been very active in Monroe county for the past two years. Mr. Pearson lectured before a large and representative audience on the subject of "The Conservation of American Wild Life." The lecture was illustrated by about one hundred beautifully colored slides and photographs taken in the field.

At this time Mr. Pearson took great pains to point out to the great number of sportsmen present that the National Association of Audubon Societies was not opposed to the legitimate taking of game birds. He stated that the Audubon Societies had a task before them in endeavoring to correct the impression which had somehow or other gained ground that the Audubon Society was opposed to the shooting of all birds under all conditions. This, as you may probably know, is not correct. However, the society is waging a relentless war against the millinery interests which are fast exterminating several of the most interesting and beautiful of the American birds, simply by reason of their commercial plumage value.

A case in point is the white and snowy herons of the South, which are being slaughtered from their nests wherever found in order to secure the aigrettes. Of course the shooting of these birds is always opposed by the Audubon Societies, unless the shooting of the specimen is required for purely scientific purposes. The Audubon Societies are also endeavoring to protect the native song birds against the millinery shooters.

J. W. JOHNSON.

THE TOP RAIL.

"Did you ever see a bass murder a pickerel? Well, I have," said one of our inveterate fishermen while anecdoting the other day. "I was casting in a small Jersey lake one day when a big pickerel went past the boat close to the surface. It traveled like it had been sent for. My guide said: 'Watch and you'll see a bass after that bird.' Sure enough, a two-pound bass scudded by in the pickerel's wake. Out toward the middle of the lake we saw a foamy splash and went out to it. On the surface floated a dead pickerel, ripped across the stomach and through the wind pipe. We picked it up and it weighed over three pounds. The guide explained the mystery. He said: 'The pickerel was chased by the bass, and when overtaken the bass passed under the fresh-water shark, traveling in the same direction, and when ahead of him reversed his fins, extending his dorsals edge first so that when the pickerel passed over he just naturally ripped himself open on those sharp fins.'" Query: Was it murder or suicide?

* * *

ONE of the manufacturers of fishing tackle in the Middle West obtained a nice bit of advertising in an unusual manner on a recent blustery day in New York city. Where they came from originally was only open to conjecture, but a certain street was literally carpeted for four or five blocks with circulars illustrating and describing the fishing lures made by a man whose name is familiar to all anglers because of the judicious advertising he places. Evidently some truckman bumped into another one and spilled a box of the circulars, which the wind took care of in its own peculiar way. And as sometimes happens, the literature fell on fertile soil, for the vicinity is one frequented by anglers. It is not likely, however, that the printer's bill for circulars distributed in this way will ever be presented, though he would have fair grounds for believing that not every wind is a foul one for everybody.

* * *

A FISHERMAN who lives in the country has often been heard to express the regret that, while there are several streams nearby in which he can fish, there are no pools near his home adapted to practice casting. By accident the situation has changed within a few weeks' time. The brooks are bank full since the heavy storms, and fly-fishing is therefore not available at present, while as for practice casting, within a block there appeared a pond of goodly area and in every way adapted to the pastime. A culvert was filled with stones and gravel by the freshets, and the springs that flow into the natural basin left the new pool clear and fresh. This was the situation until a gang of men with long-handled shovels hove in sight on a recent morning. Casting did not appeal to them, and they quickly removed the pond from the local map.

Across the Plains in Early Days

By SAMUEL MANSFIELD STONE

(Concluded from last week.)

IT was my fond wish to take back East with me a deer's head with enormous antlers of my own capture. With this end in view we cleaned up our weapons, loaded them with extra care and plunged into the dense wood, and on finding a deer lick at a broad place on the creek, took up our positions within easy range and awaited developments. The gnats were out in force, compelling us to divide our time between them and watching for the deer's appearance. Finally, after what seemed an hour of tortured silence, our vigils were rewarded by the presence of a doe and very little fawn at the lick. The doe walked into the stream and drank thirstily, the fawn attempting to follow, but was deterred by the apparent fear of wetting its feet.

Having satisfied its thirst, the doe stood at the creek's edge cropping the new growth from the bushes which lined the bank, when John nudged me, indicating with his eyes for me to look into the thicket. Following the direction of his gaze I discerned the outlines of a good-sized and well-antlered buck, almost concealed by the underbrush, who seemed to be guarding his wife and child. In attempting to change my cramped attitude in order to relieve the tension of my nerves before risking a shot, a dry twig snapped beneath my foot. It was but a faint sound, yet the acute ears of doe and buck detected it and both bounded away. The buck dashed into an open glade, and though nearly twenty rods distant, both John and I improved the opportunity to shoot. To our surprise the animal fell and rolled partly over. Springing to our feet we raced over the intervening space to end the buck's struggles with revolver or knife. Ere we had covered half the distance, however, the brute was on his feet again and making lusty leaps to escape.

"He's a goner," said John disappointedly, when the deer fell once more and rolled and kicked tremendously.

Out came our revolvers and a hasty shot from each sped after the struggling creature with the only apparent effect to spur him to renewed effort to escape. He clambered to his feet, but instead of running away turned and faced us menacingly. We fired again, when shaking his head, the buck charged directly upon us. We sprang aside, running in opposite directions, and the brute put after John, who gave him another shot, then ran for dear life. I dared not fire for fear of hitting John, so I improved the occasion to reload my rifle. By this time John had wriggled into a dense thicket through which the deer's antlers would not allow him to follow, especially as they were yet tender from the spring shedding.

I managed to get into position for an unobstructed shot and let drive, aiming as best I could just back of the brute's fore leg. Being on his right side the chances of the shot proving fatal were greatly lessened. Still the bullet gave a serious wound, and though the buck ran, his gait was wobbly and weak. John had reloaded his rifle by this time and he sent a bullet speeding after the vanishing animal. We had

no difficulty in tracing the buck, but unfortunately for my purpose the antlers were in velvet and soft and imperfectly developed, and the best prong had been broken in the animal's struggles, so that it hung limp, spoiling the effect of the whole arrangement. With John's knife we skinned a portion of the carcass and retraced our way back to camp.

On coming within sight of the plateau where our ponies were staked during the day time, we were alarmed to behold a couple of wagons and a dozen horses halted on the upper side of the branch, across the gulch from our ponies. Our first thought was that the owner of the shack had returned, and that we would have to get out of a bad scrape as best we could. As we approached our ponies, several of the men came to the brink of the ravine on their side and inquired where they could find a place to cross the gulch. We assured them that we were strangers and were consequently unable to enlighten them. Further conversation assured us that our fears as to their possible identity were groundless, they being unaware of the existence of the shack. They were cattlemen, bound for Western Kansas.

After a little further conversation John and I started down the gulch to the shack, leading our ponies to their usual place of tether. We had an excellent meal of tenderloin cuts and spent the evening planning for the next day's hunt. But that hunt was destined not to take place. Just after breakfast the next morning I experienced a recurrence of the ague symptoms with this difference, that it was much more severe than the former one.

"There's no two ways about it," said John; "you've got to break up that ague or it'll break you up."

"How am I to do it?"

"Quinine's the only thing on earth so far as anyone has ever found out that'll do the business," and John regarded me in a manner denoting anxiety, and I shall always believe that there were tears in his eyes, as he said I would have to get to a drug store "just about as lively quick as yer pony can hustle."

A sudden thought seemed to strike John; for he jumped up as though something had stung him, dashed out of the shack and off up the gulch before I could recover from my surprise enough to ask an explanation. He was soon back, bringing a dose of quinine that he had gotten from the travelers on the plateau.

"I happened to think that may be those folks might be supplied with quinine, for it is considered one of the prime necessities of life in this region. But they only had a short supply, and as three of their men are using it every day and they have no idea when they'll be able to get any more, they were mighty saving of it. I don't see any way but you'll have to put for civilization as fast as yer pony'll take you," and the poor fellow turned and walked away.

Then John said that two more men had joined the party up the gulch during the night, coming

in a single wagon. They didn't want to take the wagon any further, and he thought they'd sell it very cheaply. I asked him what he wanted a wagon for and he looked at me pityingly.

"You are the jayhawker, old man, that'll need the wagon before you are many days older."

I tried to laugh him out of the belief, but he was persistent in the declaration, saying that I would find myself so weak before I could find relief that it would be simply an impossibility for me to sit in the saddle. Thus he convinced me and as I felt unequal to the task I requested him to go and make a dicker for the vehicle. He soon returned to the top of the bluff in front of the shack with the whole outfit, naming the price its owner demanded. I quickly closed the bargain, which also included the harness.

The next morning, feeling well and strong again, I tried to convince John that the threatened ague was but a myth, that I had, in fact, recovered already and felt as well as ever, but he assured me that the disease was intermittent and would at the outset return every second day. I then determined to fit the harness on SkeeziK and give him a turn to the wagon. He had become such a mild-mannered, tractable brute that I anticipated no trouble, although a stranger to wagon work. The pony maintained his wonted phlegmatic attitude during the harnessing process and he was soon between the shafts, and I seated in the wagon ready for a start.

"Get up, SkeeziK," I remarked, giving him a gentle flick with the whip. He made a single step forward and stopped. Up went his head with a snort. Cocking one eye around, he gave me a sort of funny look as much as to ask if I was really in earnest. My response was another cut with the whip. Then the fun began. Starting off at a round lope as if under the saddle, he made the discovery that the wagon was following. The animal evidently thought he was being pursued by something foreign to the situation. In fact I more than half believe he had in mind the locomotive that chased him and tooted at him. At any rate, he lit out for all he was worth, buckling right down to a hard run across the plain. For a time I let him follow his own bent, then fearing we would get further away than we could retrace that day, I bore with a firm hand upon one rein, thus giving a curve to the course which would ultimately fetch us back somewhere near the starting point. Things seemed to go all right for a while and then the surface of the plain began to grow humpy. This lent variety to the experience, but did not especially enhance its pleasures. In fact, it seemed as though the wagon was in the air about as much of the time as it was on the ground. As we were going in a circle, it required some ingenuity to prevent the vehicle from landing on its side instead of on the wheels, when it would take an extra high flight after hitting a hummock.

His inability to escape from the pursuing attachment evidently pained SkeeziK. After fifteen minutes of running tactics without distancing his

pursuer, Skeezik resorted to kicking. His execution of this determination was so sudden that I barely escaped his heels. Not so the dashboard, but as this was a creation of wrought iron and strong leather, it still retained its shape, though the force of the impact bent it over as one would close the cover of a book.

Still the brute ran, and we laid out a mighty ellipse on the plain. As we came down the home stretch, the pace began to tell, and the foam-covered animal flew with lessened speed. Finally, as we came toward the starting point, Skeezik appeared to realize that the wagon was there to stay, and with his accustomed philosophical way of looking at things, he yielded the point and came down to a demure walk, maintaining the same till we reached the starting place.

John, who had watched our mad career first with fright, and then with amusement, declared that I must have some Roman blood in my veins and that my ancestors must have been chariot-eers. We gave Skeezik a good rubbing down, tied the wheels of the wagon and returned to the shack and made preparations for breaking camp. Somehow it seemed like giving up an old home. We had worked hard at tidying up the place, and in planning for the future we had employed many a pleasant hour, and now it was all to go for naught. It seemed as if we had always known each other, though but a few days comparatively had elapsed since we met for the first time. But conditions such as we were placed under have a tendency to cement friendships quickly and firmly. John insisted that I should take most of the provisions, for he said he would be better able to supply himself than I would. He even offered to accompany me until we reached a ranch, but I assured him that this was unnecessary.

We replaced such articles belonging to the house as we had used in practically the same condition as we found them, ate supper and passed our last evening together. We made faithful promises to write each other at the first possible moment. (I did write on receipt of a letter some three months afterward, in which he said he and his uncle failed to harmonize, and that he contemplated going to California. I have never heard from him since, and if this sketch comes to his notice he will know that I have not forgotten him.)

True to John's prediction, the chills returned the next morning with increased severity. I shivered with cold, was burned up with fever and drenched with perspiration alternately till past the middle of the forenoon, when the symptoms abated. We both felt that I ought to lose no time in getting to where I could receive treatment, consequently when the chill passed I took a stiff dose of corn whiskey and loaded up the wagon. John was enthusiastic in praise of that wagon after he had carefully inspected it, finding it sound and strong.

"After the banging you gave it yesterday, it's a wonder there's a whole piece in its make-up." He was also unstinted in his praise of the pony's running qualities, declaring Skeezik to be the toughest bit of horseflesh he had ever seen.

I will not tax the reader's patience with a detailed history of my experience between that lone shack in the Arkansas bottoms and the little working station at the then terminus of the Santa Fe line, some distance north of Vinita. Long

before I reached the railway I was suffering from daily attacks of the "shakes" in their worst form. Much of the time I was practically oblivious to the course taken by Skeezik, who was left to his own sweet will. And I most heartily pay him the sincere tribute of true gratitude, as I recall how he piloted me over those trackless wastes with an almost human instinct. True, he carried me many long tedious miles out of the course that I had planned to follow, but he did it in safety, much of the time without care, food or water.

I forded many streams, in some instances the water coming into the wagon box. One day, after striking a wagon trail, I came to quite a broad river—the Verdigris, I think—where the wheel tracks led down to the brink, denoting, to my mind, that it was a fordable stream. But Skeezik positively refused to enter the water. As this was unusual for him, I believed that he was developing a spirit of insubordination, so I applied the whip with vigor, but to no purpose. The brute simply thrust his fore feet into the sand and stood immovable, taking his punishment with dogged stoicism. I was getting all out of patience when from the thicket beside the trail came a voice: "Hey, strawnger, wot you 'uns tryin' t' do?"

Before I could reply, a brawny specimen of femininity, wearing a man's frock coat and a long pair of rubber boots emerged from the bush with a long tin horn on which she sounded a blast that sent the echoes ricocheting over to the other shore.

Then out of the overhanging bushes there slowly floated a big raft, which I could see was attached to a cable by two painters and a pair of pulleys. The raft was propelled by a man and a boy who seized the cable with cant-hook-like contrivances and pulled with main strength. Reaching my side of the stream the crew carried the cable end a distance up-stream, where they made it fast. This, the man assured me, was to take advantage of the force of the current to propel the loaded raft. Skeezik stepped gingerly upon this strange craft, but required no urging.

"How deep is the water?" I asked the ferryman. "'Bout forty feet 't this season o' year."

Then I appreciated Skeezik's reluctance to enter, and going to his head I patted and hugged him and he understood.

Eventually I reached the railway, near its southern terminus, and found a teamster who consented to take care of Skeezik until such time as I could send for him.

There were no regular trains running, but a construction train with a boxcar attached was about starting for the distributing point 110 miles up the road. Telling the conductor who I was and showing him a thousand-mile ticket which I had over the completed portion of the road, I secured permission to occupy the boxcar till we reached the point where I could take a regular train.

I had already gotten through with that day's shake, but the extra exertion, excitement or something brought on a second attack, and I lay on the floor of the car and shook myself into semi-oblivion. I have no clear recollection of the remainder of that long, tedious journey to Kansas City. I remember going to the desk of a hotel and telling the landlord I was very ill and must have a bed.

Then followed weeks, most of which time is a blank to me, as I was seized with intermittent fever, and being so reduced by my long fight ere getting remedies, I was too ill, even on the "off" time of the fever, to take cognizance of my surroundings. It was three months ere I was able to board a train for the East.

I left instructions for Skeezik to be brought to the city when I got better, but found that owing to the length of time elapsed since I left him, he had been sold for his keep. Whoever bought him secured an equine jewel, and with all solemnity I say it, if there is such a thing as reward for faithful service outside the genus homo, I mentally award the richest of all to Skeezik.

Deer in Captivity.

BY RALEIGH RAINES.

THAT the raising of deer is becoming popular is evidenced by the large number in deer parks and private preserves in this country. The deer expert of the Government estimates that there are between 50,000 and 60,000 deer in private preserves in the United States, including all kinds foreign and native varieties. He states that Missouri has the largest number of deer within her borders, the total number being near to 5,000, one preserve on the White River in that State having several thousand head. New Jersey and Pennsylvania having, it is estimated, over 3,000 each. While no complete census of the deer in parks and preserves in the United States has ever been taken, several States requiring licenses for keeping deer are thus enabled to know with moderate accuracy the total number within the State borders. Of course no estimate can be made of the wild deer, but their number appears to be very large. The Biological Survey of the Department of Agriculture has been encouraging deer raising, and believes that deer may be raised for the market or home consumption as cheaply, if not cheaper, than beef. Venison has been plentiful in the Washington markets during the present season and sold for fifty cents per pound with a steady demand, though not over popular, as the high price prevents any but the rich from enjoying what was once the food of common people in the early days. That the United States Government might use the national forest reserves for the propagation of our native game animals such as deer, elk, antelope, moose, appears to be a practicable thing to do. There are at present 165 national forest reservations comprising approximately 198,000,000 acres with about 8,000 foresters and forest rangers employed. These reservations might well be stocked with the native game under the supervision of the rangers which would cost very little. After the game had increased to a certain number, the people might be allowed to kill certain numbers of the game thus raised, the number to be taken annually to be regulated by law. This policy, if followed, would operate to preserve the native game, and at the same time furnish a great number of people with opportunities to enjoy at least an occasional taste of venison. It is encouraging to note that a number of organizations have lately taken up this proposition to stock the forest reservations with native game, and if the matter is sufficiently agitated, it may yet be realized. While black bear meat has also been plentiful in this market at thirty cents per pound,

it has by no means been so popular as venison among those who relish wild game. The venison has been supplied from the nearby States, while in most instances the bears have been shipped from the Adirondack Mountains, so the dealers claimed.

Probably one of the oldest deer parks in this country is on the Mount Vernon estate, the home of President George Washington, located on the Potomac River, fifteen miles south of the national Capitol. The park, which was first established by Lawrence Washington, the older brother of the President, and from whom the latter inherited the estate, now contains only a dozen head of the fallow deer. They are kept for ornament and for sentimental reasons, as no effort is made to breed them extensively. Occasionally one is sold, permission first being secured from the ladies' association which own the estate. During one of the wind and rain storms in December last, one of the deer became frightened and leaped over the inclosure which is located between the mansion and the river, and after surveying the situation sprang into the river and swam to the Maryland shore, disappearing in the woods beyond. President Washington was very fond of hunting and kept the very best hunting dogs and horses. Although the Virginia forests abounded with game, he always kept up his deer park, using them for venison whenever occasion and increasing numbers of visitors drew too heavily upon his time and opportunity for the chase. That deer may be raised at a profit by anyone at prevailing prices is apparent, for with venison selling for fifty cents per pound, it is very much more profitable than raising beef. Live deer for stocking purposes may be easily secured and are quoted to-day at \$60 each for the fallow and \$35 each for the Virginia. Most any sportsman who has a few acres of ground can easily raise his own venison. To those interested, the United States Biological Survey will offer information and instruction.

Government agents protecting the herds and seal hunters alike, domiciled through the long arctic days on the Pribilof Islands, off Alaska, will in future years feast on venison. Two herds of reindeer have been transported from the main land by the revenue cutter Bear, one of the herds going to St. George's Island and the other to St. Paul's Island. The deer were shipped from St. Michael, Alaska. According to reports from St. Paul Island, the herd there is flourishing under the skilled hand of Oliver Angoolook, a Government herder. The herd has twenty-one cows and four bulls, and the St. Paul islanders are counting on twenty-one calves in the spring. Most of the bulls in this lot of calves will be killed for food. Since their landing the reindeer have ranged the island pretty widely. These deer are some of the offspring of the original reindeer imported into Alaska from Russia, which have been domesticated within the last ten years or so. The United States Government finding the necessity of furnishing meat to the natives, the bureau of education undertook to furnish this fresh meat diet to the inhabitants by teaching them to raise reindeer which has become a part of the household necessities of the Alaskan as with the Laplander. Not only is the reindeer being raised for the domestic use of the natives of Alaska, but has become a source of profit to them, for they are now shipping the venison to the Washington and California markets.

A Motor Cycle Hunting Trip.

BY EDWARD RYAN.

THOSE who have trekked across fields and through woods in search of game and eked out several hours unsuccessfully know something of the sting of disappointment which had been the lot of hunters in lower New York before the advent of the motor cycle. Complains that game was "dying out" served as excuses for luckless sportsmen. They said the fascination of a day's outing and the pleasure of finding an abundance of game had passed away with the Dutch pioneers.

Like many hunters I shared this pessimism. My hunting jaunts were fruitless. Cottontail,

A DAY'S BAG.

woodcock, partridge, quail and other game seemed to have left no ancestors except the tame creatures in the zoological gardens. My motor cycle had been carrying me to so many seemingly impossible places that it was appealed to at last to take me to the byways and hedges. I hoped by leaving the beaten path to find the rabbit or game bird at play.

The two routes generally taken by hunters, the public highway and the railroad, led almost always to beautiful, but gameless woods and fields. My motor cycle proved the last resort. It was capable of making any road at any season, but it seemed too much for my hunting dog to have to follow me for fifteen or twenty miles and then chase up the game. To leave him behind was impossible, for without a good dog, hunting loses much of its charm. I at last succeeded in fastening a basket on the rear guard and strapped him inside. Then it was only a "twist of the wrist" and I was on my way.

I surprised the rabbits at their game of hide and seek in the underbrush, and the game birds who expected no intruders became easy prey. My machine was soon laden with the fruits of a day's recreation, and I felt no fatigue, although I had spent the greater part of the day roaming

about the out of doors. A former day's trip even with pockets laden with game would have been spoiled by the tiresome "hike" home. With my motor cycle the return merely added more pleasure to the day's hunt.

For three years now, in either winter or summer, my "little brother to the automobile" has taken me to many hunting grounds about Poughkeepsie. Even "fisherman's luck" has been dispelled. Big game, too, was added to my list when last fall I shot a fox, one of the species abundant when New York was wilderness.

Economic Value of the Pheasant.

ALBANY, N. Y., May 15.—*Editor Forest and Stream:* The economic value of the pheasant is the subject of an interesting report to the Conservation Commission by Superintendent Rogers of the State Game Farm. The popularity of the pheasant in New York State has steadily increased since the introduction of this splendid game bird a few years ago. Although the output of pheasants and pheasants' eggs at the State farm will be more than doubled this year, the 5,000 pheasants and 30,000 eggs now in prospect for this season will not supply more than one-fourth of the demand.

Superintendent Rogers goes on to say in commendation of the pheasant:

"The economic value of the pheasant far exceeds that of the quail. Both are insectivorous birds, but the quail only to a certain extent. Investigations show that over 130 species of insects are sought for food by the pheasant. As an insect destroyer the pheasant has no equal. The pheasant will consume enormous quantities of the wire-worm or potato grub, as well as the potato bug and other ill smelling bugs which many other birds avoid on account of their obnoxious odor. Prominent among the other insects which the pheasant devours ravenously are the Colorado potato beetle, the squash bug, the cucumber and bean leaf beetle, the tomato and cut worm, the cabbage worms and the millers which deposit eggs for wire worms.

"Pheasants are tireless in their search for insect food. In winter they can be seen looking over dead leaves, picking off the larvæ of the different tree insects deposited on the under side and inspecting every old stump or fallen tree to find some delicacy to add to their daily menu.

"In addition to destroying enormous quantities of insects injurious to growing crops, they also consume obnoxious weed seeds, such as thistles, wild carrot, mustard seed and the seeds of the milk weed."

Superintendent Rogers reiterates the importance of the pheasant as a game bird. The pheasant is much more hardy and prolific than the quail, usually rearing two broods each season, and from fifteen to twenty birds in a brood. The pheasant is able to withstand severe winter conditions, and thrives in this climate where weaker game birds perish during the season of deep snows and low temperatures.

CONSERVATION DEPARTMENT.

Hunting Ducks Along the Illinois.

BLOOMINGTON, Ill., May 2.—*Editor Forest and Stream:* Hunting ducks along the Illinois River is no longer a sport for the man with limited resources. Instead, it may be termed the pastime of kings, or at least for those with a good sized roll. As one veteran nimrod put it: "The farmers along the river have gone money mad." In the good old days, not so very many years ago, a hunter got first class board for \$1 per day. The hunter and his partner, if he had one, would employ a "pusher" paying him \$2 per day. This brought up the total expense for the day to \$2 for each hunter and the poor men had an equal chance with the rich. At the present time the hunter who goes to the river discovers that \$1.50 per day is the minimum and the exception for board. More often it is \$2 and frequently the charge is \$2.50. The quality does not vary much if the price does. The farmers are growing more wise with each recurring season, are comparing notes, and the result is that the higher price is now the rule. The principle upon which the tariff is operated is to charge all that the tariffed will stand. It should be explained that the river farmer, the one here considered, is not much of an agriculturist. He has title to land that is too often overflowed to make it practical to cultivate. In addition, in most instances, he is not kindly disposed toward the kind of work that makes crops. He is a man of practical wits and he pays these the respect of depending upon them to make him a living. Manual crop labor is not in his line, never was, and never will be.

Victims report that the duck hunting pusher is a retainer of the river farmer. Naturally the services of the pusher call for more money. A few years ago he could be had for \$2 per day. Now \$4 and \$5 is demanded. The pusher is the man who does the heavy work in duck hunting. He handles the boat, picks out the places for blinds and constructs them. Also he kills most of the ducks and is modest enough never to mention it.

Two city hunters and a pusher go out for a day's hunt and return with thirty ducks. Although the pusher usually gets twenty or more, the thirty always go to the credit of the city sportsmen. It is believed that half the fee of the pusher goes to the farmer and as soon as the traffic will stand it, that a charge of \$5 per day will be made for the pusher, and board and lodging will jump to \$4. The hunter from the city cannot get along without the pusher. The hunter is there to get ducks and the pusher is there to help him get them. The pusher must be in good standing with the farmer; in fact, a retainer of the organization. The hunter might be able to pick up a pusher for less money, but probably would not be happy under his guidance. He might have difficulty in locating the birds. He is a marked man, and the wise farmer chases him away from the hunting grounds.

The city man who makes his first trip to the duck hunting sections soon learns that the birds prefer the places where they can find feed, and that is not in the middle of the river. It is often necessary to secure the permission of the farmer to locate a blind which will be within gunshot range of the wary birds. With the right kind of a pusher that permission goes as a matter of course, but with the strange man,

it does not go. And so the situation has become distressing for the city hunter who does not feel able to spend a lot of money. There was a time, and not so long ago, when he could stay out at an expense of not to exceed \$3 per day. With one thing or another they now have the game arranged so that they take from \$7 to \$10 per day. There is no relief in sight, as the predictions are that the tariff will go higher, not lower. The limit is what the traffic will stand. The man of small means and sporting blood will have to find something else to occupy his time if he has any leisure. Of late many sportsmen are compromising matters. Formerly they hunted ducks fifteen days out of the year. Now he must be content with five days. In another probably this will be cut to three, and perhaps after that it will hardly be worth while to go out at all. However, this is not disturbing the river farmer. He knows that there are others who will come out and contribute to his "money madness."

E. E. PIERSON.

In Ancient Mexico.

AT a meeting of the Biological Society of Washington, held recently at the Cosmos Club, E. W. Nelson, of the Biological Survey, presented a paper of remarkable interest. This consisted of translations of two extracts from the *Monarquina Indiana*, a work by Juan de Torquemada on Mexico. It was originally published at Seville in 1815.

The first of the two extracts gives an account of the famous zoological garden maintained by Montezuma at the time of the Spanish conquest. In this garden were found examples of all the animals native to the country, and also human albinos, dwarfs and cripples. The size of the garden and of the collections is suggested by the statement that 300 attendants were needed to take care of the birds alone. Two hundred and fifty pounds of fish were required daily for the fish-eating birds, and 500 fowls for the flesh-eating mammals. The Spaniards were greatly astonished at the display.

The other extract is the account of a great hunt in honor of the Viceroy Don Antonio de Mendoza, given by the Aztecs in 1540. This was a ring hunt, and 15,000 men went out very early in the morning and surrounded an area more than five leagues square. They advanced from the sides toward a center, and by the middle of the day had formed a close circle, in which were a great number of deer, rabbits and coyotes.

Because of the great number of animals inclosed, openings were made in the circle, and great numbers of the animals permitted to escape. The openings were then closed up and the people again moved toward the center, until the diameter of the circle was little more than half a league, and the wall of men was two or three deep. Killing now began, and 600 deer, 100 coyotes and great numbers of hares and rabbits were destroyed. Among the deer are mentioned some of the pronghorn antelope, the most southerly record ever made for these animals—far south of its present range.

All the game laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief.

New York Audubon Society.

THE report of Miss Emma H. Lockwood, secretary of the New York Audubon Society, tells us that the membership of the society for this State has increased to 13,127.

The past year was one of considerable anxiety for the society in this State, but through the strenuous efforts of the Audubon and other protective societies no backward step was taken during the year.

The long cherished wish to establish traveling libraries in behalf of the work, to assist teachers in schools and to reach homes in rural districts is to be consummated. This has been made possible through the generosity of members of the society.

Efforts were made last winter, as they have been in previous seasons, to induce the children to feed the birds during the bitter weather. There seems to be now less wish to destroy song birds than for many years. Letters received from friends scattered over the State tell of the increased interest in bird protection and especially in increased interest on the part of the children.

The society is in a flourishing condition financially.

Illinois Notes.

BLOOMINGTON, Ill., May 3.—*Editor Forest and Stream:* The close of April marked the wind-up of the waterfowl shooting in Illinois. Snipe and plover were eligible up to May 1, but since that date they are protected as with other waterfowl. All species of game animals and birds are now protected. The ban will be lifted on squirrels on June 1. Until then all sportsmen in Illinois will set aside their guns. Spring shooting this season has been disappointing, nimrods, almost without exception, reporting the most unsatisfactory results in many years. The quarters of the various clubs of hunters along the Illinois River and contiguous lakes have been closed until next fall and the anglers will have the rivers and lakes to themselves until November.

That the total number of hunting licenses issued in Illinois during the past year will reach 200,000 now seems assured from the reports of various central Illinois counties. Many of them have issued more than 3,000 permits, breaking all records. Vermillion county disposed of 3,250 licenses. Madison county leads all of those reported with 6,971, probably the largest in the State outside of Cook.

E. E. P.

Birds of Paradise Disappearing.

PLUMES of the birds of paradise are among the favorite feathers for the adornment of women's hats, and the result of this demand is seen in reports which come from those regions where the birds of paradise are found. It is said that every breeding season all the full plumage males of one species—the greater bird of paradise, found only on the Aru Islands—are killed, and that the species is rapidly disappearing. An English ornithologist, Mr. Walter Goodfellow, who has recently returned from New Guinea, where several species of birds of paradise used to abound, reports that all kinds have become exceedingly scarce and hard to find.

SEA AND RIVER FISHING

A Talk About the Cost of Tackle

By THEODORE GORDON

THE cost of a good equipment for fly-fishing is a matter that has to be considered by many anglers who are not over well supplied with the root of all evil.

In an English contemporary of FOREST AND STREAM one of the favored specialists in dry-fly gear recently published a list of the articles which he considered necessary for the dry-fly man on the first day of May in the year of our Lord, 1912.

After noting that no mention was made of wading stockings and brogues, I got out a stubby pencil and proceeded to change pounds, shillings and pence with dollars and cents at \$4.88 to the pound sterling. The items listed totaled somewhere near \$71.32, and we must add at least \$10 for brogues and waders. Now, \$80 is a tidy sum to invest in these days when we all talk of the high cost of living.

The English dry-fly rod cost \$25.50 and the other articles mentioned were the line, fly box, landing net, bag (for lunch and fish), reel, leaders, flies (about \$9 worth) and a steelyard to weigh the trout, after they are caught.

We all desire the very best of tackle and love a costly rod of fine action, but owing to the great improvements in the design and finish of low priced rods, we can secure a really serviceable tool for \$5 to \$10. Many articles are marketed in small tin boxes which make a good enough fly box and one should carry another little box to place the used and wet flies in. One can buy a net for twenty or thirty cents and make the bow and handle for himself, or in a pinch he can strand his fish and do without a net. If his time for fishing does not arrive until after June 1, he can put on warm woolen drawers and socks and an old pair of shoes and wade just so. The constant hard exercise keeps the blood in circulation and prevents a chill. In May and earlier the water is usually icy cold and it is dangerous to wade without protection. I am afraid that the wading shoes and stockings will have to be bought and \$10 is about the least we can allow for those items. Shoes, \$4; stockings, \$6. Thoroughly well made flies or eyed hooks will endure a good deal of whipping and many trout may be killed with one of them. One should be able to purchase a small assortment of the patterns suited to the water he fishes for about \$5; not less than six flies of each pattern. Six-foot leaders are long enough for practical purposes and need not be thinner than fine natural gut next the fly. The gut may be quite stout where it joins the line. It is a saving to buy a hank or a few dozen strands of the finest undrawn gut to point the leader with—one, two or three of these may be used as the condition of the water and shyness of the trout may seem to require. Three leaders at thirty cents each should suffice to begin with. Then there is the reel, and one can buy a serviceable featherweight

for \$1.50. The only weak point about this reel is the wire spring which is sometimes of poor temper and breaks easily.

I sent one of these reels to one of the English masters of the dry fly and he was pleased with it.

I hate to put trout in a bag, so we must allow \$1 to \$1.50 for a basket. I like a big creel costing more money, big enough to hold the wading gear in traveling and long enough in the bottom to lay out a two-pounder without doubling up. One wishes the trout they have worked hard for to look attractive when turned out of the creel

BEFORE BREAKFAST.
Photo by Lalla Bedford.

It is a great pleasure to give trout to people who appreciate them. I had to eat too many in camp, and an occasional one satisfies me.

A good level waterproof silk line casts very well. Though not suitable for tournament work, it does as well practically for stream fishing as the tapered line, and twenty-five yards of F or E can be bought for \$1.25.

Fortunately there are but few men who have not a few articles in the tackle line to begin with in the spring, and once a fisherman has his bearings and a little experience, a small yearly expenditure will keep him going. Even if you add the cost of all the articles together and make a lump sum of it, the amount is not very large.

I handled rods the other day at \$3 to \$5 that would have been considered good enough for anyone when I was a lad. Our fishing is mostly free and good sport can often be had without taking long and expensive journeys.

The fishing in the chalk streams of the south of England, of which so much has been written, and where the cult of the dry fly has reached its highest development, is very expensive.

A couple of miles of really good water commands a high rental. There is a good deal of expense in maintaining the fishing and a keeper must be employed. The least costly method is to join a small club of dry-fly fishers if you have an opportunity, or one of the larger angling societies that rent a stretch of trout water for the fly-fishers, as well as providing sport for those who angle for 'coarse' fish, chub, roach, pike, etc. I think we can have the counterpart of the chalk stream fishing in this country if we stocked some of the streams I used to fish with brown trout (*Salmo fario*). Food was very abundant; there was much slow water with clean moss and weed that made harbors for the larva of insects and other forms of life. I forget whether the fresh water shrimp was common or not. Had no occasion to look for them and did not study conditions closely. In the South of England streams the average size of the trout is very large, and this is due to the abundance of the food as well as the strict limits placed upon the size of the fish killed and basketed. This limit is as high as one pound and a pound and a quarter on Itchen and Test. Also, no bait-fishing is allowed, and fly only is the rule.

If one had full control of several miles of a large stream well supplied with fish food, I have no doubt that as good an average could be maintained, provided the same rules were enforced, and that restocking was carefully attended to with a strain of good, fast-growing trout. The head of trout to the mile of water was formerly very large, and they were fine native trout. Some time in the near future I hope to revisit several of the large streams which were so well known to me many years ago. Only the other day a traveling salesman told me that large trout were still found in one of them, but I fear that by this time all the good water may be preserved by clubs or individuals. I wish to discover what the conditions are to-day. Formerly small flies were the rule, and it was often necessary to get the color of the fly on the water.

Black Bass Season in Lake George.

ALBANY, N. Y., May 15.—*Editor Forest and Stream:* Conceding the justice of the complaint against the black bass section of the new "uniform" fish and game law, the Conservation Commission has made an order changing the date of the open season for this species back to Aug. 1 in Lake George. The new law made the season open on June 16, and as the bass do not leave their nests in the clear cold waters of this lake until toward the latter part of July, the Lake George Association, through its president, Henry W. Hayden, made a vigorous protest.

On this the commission gave a hearing last week which was largely attended by anglers and residents of Warren county where the lake is situated. Men who had fished the lake for years and were thoroughly familiar with the habits of its fish life testified that the new law did not give the necessary protection, and that the old statute was far better for this body of water and the several other lakes similarly situated in adjacent territory.

Commissioner Fleming and Attorney Decker, who held the hearing, asked many questions. Among them were: "Is it good policy to have exceptions to the general law?" "Would it be fair to fishermen to make this change?" "Must

we not consider the public who want to catch fish as well as the fish when considering protection?" "Is there anything about Lake George that is different from other waters in the State that makes a special season necessary?"

These questions were readily answered by the expert fishermen. They showed that the ice does not go out of the lake before the latter part of April—this year it went out on the 22d—and that none of the fish spawn early. They pointed out that under the new "uniform" law commercial fishermen have already invaded the lake and its tributaries, and are taking out large numbers of pike, pickerel and bullheads. This they stated was not possible under the old law, and they asserted that the result would certainly be detrimental to the greatest attraction of the lake as a summer resort.

But two persons opposed the restoration of the later season. One was the general passenger agent of the Delaware & Hudson Railroad, which has the monopoly of travel to Lake George. He favored an early season because the passenger traffic would begin earlier. The other objector was Dr. Tarleton H. Bean, the State fishculturist, who said that Massachusetts has no close season on bass because "they go on the theory that it is impossible to take black bass by fair angling in the breeding season." He believed that fishing seasons should be uniform as far as possible and remarked that "if the spawning season is freaky, then the law must be freaky." He asserted that "as a fishculturist I would be inclined to increase the quantity of fish by artificial stocking rather than by law, as they do in Massachusetts," and he added his belief that "there are other interests to be considered besides the fish; we must consider the fishermen, but there is no doubt that fish should be protected on their spawning beds always." Two questions asked by President Hayden and answered by Dr. Bean were significant. They were:

Mr. Hayden—As to the question of protecting the bass in Lake George, do you believe they should be protected while on their nests?

Dr. Bean—Yes, theoretically. But other conditions might affect the lawmakers. If you aim at protecting the fish through the entire spawning season, then Aug. 1 is all right for the bass. But planting more bass would be my solution of the difficulty.

In rendering its decision the Conservation Commission considered only the protection of the bass. They state that "so far as additional protection in Lake George for lake trout and pickerel is concerned, the petition is denied for the reason that at the present time the relief could not be granted so as to become effective during the present season."

The Lake George Association will discuss the matter during its meetings this summer, and it is stated that a determined effort will be made to have the protection afforded by the old law fully restored before the fishing season begins another year.

JOHN D. WHISH.

Anglers' Club of New York.

NEW YORK CITY, May 13.—*Editor Forest and Stream:* The Anglers' Club of New York will hold its regular spring tournament on the Big Lake in Central Park, beginning Monday, May 20, and continuing during the week.

The tournament this year will be held under new rules recently adopted by the club. These

rules have been adopted for the purpose of compelling the tournament fly-casters to approximate more nearly to the conditions that prevail upon the streams in actual fishing. The only material change, so far as affects the tournament fly-caster, is that he must carry his reel on the rod and must strip his line from his reel in extending it. Heretofore the fly-caster has been permitted to remove his reel from the rod and, for that matter, his line from the reel. The custom has been to arrange the line in coils upon the platform, and the practice has enabled the caster to obtain very long shoots. These long shoots will probably be impossible under the modified rules. The material changes, so far as affect the tournament bait-caster, have been as follows:

The weight of the line permissible has been increased, so that an actual fishing line becomes necessary—one that will stand the strain of eight pounds dead weight; the weight of the lure permissible has been increased to $\frac{3}{4}$ -ounce, and any standard form of fishing lure may be used; overhead casting has heretofore been required, but under the new rules any form of lure casting is permitted.

New penalties have been added, such as striking the water behind with the fly-line, etc., and averages will be considered, and cups offered for the best average obtained during the tournament.

In conclusion, the changes in the rules have been made, not to disqualify the expert, but rather to encourage the novice. The expert under the old style of casting will be somewhat handicapped, it is true.

JASON G. LAMISON, Secretary.

Illinois Fishing.

BLOOMINGTON, Ill., May 2.—*Editor Forest and Stream:* Hook and line fishing is reported as excellent in the lakes and rivers of Illinois this month. Many fine strings have been caught at Spring Lake. E. W. Graflund, of Galesburg, landed a black bass in Highland Lake which weighed six pounds two ounces, a record for that body of water.

Among the Central Illinois counties along the Illinois River petitions are being circulated among commercial fishermen and sportsmen generally, asking for changes in the existing fish law. One of the proposed amendments relates to the large seines now in use among the men employed by the principal fish dealers. It is asserted that the use of these large seines, capable of handling 40,000 to 50,000 pounds of fish at a haul, kill thousands of game fish and the smaller varieties. This is not only a serious waste, but unsanitary, the decaying fish lining the banks of the river for miles. The offensive odor is a source of annoyance to all persons on the river and near the banks. Another change relates to the shipping and selling of game fish. At present the law protects the black bass and other species of the game fish. It is argued by those circulating the petitions that the law is unduly severe and unreasonable. A fisherman is prohibited from shipping fish that he has caught with a hook and line to a friend or his family, and is also prohibited from purchasing a string if his own luck fails. Fishermen claim that the present agitation and circulation of petitions is only the beginning of a general organization of the seine

and hook and line fishermen of the State with the object of influencing legislation in order that the statute will be drawn to suit them. Those who are allied expect to carry on a campaign and support candidates for the Legislature who are friendly to their position. It is believed that much effective work can be accomplished before the election next November.

E. E. P.

Fish Protection in Alabama.

MONTGOMERY, Ala., May 10.—*Editor Forest and Stream:* State Game and Fish Commissioner John H. Wallace, Jr., cognizant of the fact that the fishing season is at hand, has communicated with all the game wardens of Alabama, directing their attention to the various provisions of the fish laws and urging the greatest vigilance on their part and on the part of their deputies to the end that all efforts be employed to prevent the use of illicit devices for the purpose of taking fish. The instructions of Mr. Wallace are as follows:

"The season is at hand when those who enjoy recreation and pleasure in fishing are thronging the banks of the various beautiful streams which traverse Alabama, in pursuit of sport found in one of the gentlest, yet one of the most splendid of arts—angling. The fish of Alabama constitute a vast asset to the people of our State, therefore every effort to take fish by the means of illicit devices should be suppressed.

"It is unlawful to use seines in any of the streams of this State for the purpose of taking fish, or to employ this means of taking fish except when used by the owner of a pond, lake or reservoir wholly on his private property.

"Hoop nets in which bait is used to attract fish can be employed in taking non-game fish, but should any trout, bass or bream be caught in such nets, the law requires that they be restored immediately to the waters from whence taken.

"The greatest fish destructionist in Alabama is the murderous dynamiter. By employing this death-dealing explosive not only are the large fish killed, but likewise the smallest succumb to the shock. The dynamiter secures only a small per cent. of the fish that he kills, the rest float off—a dead loss to the people of the State.

"The reason for permitting the use of hoop nets for taking fish in the streams of the State is simple. There are many species of fish, notable those which belong to the sucker family, such as the sucker, red-horse, black-horse and buffalo, that are valued by many as food fish, which are taken only in rare instances by the employment of hook and line. The members of the sucker family feast upon the spawn of other fishes, and in the event the ranks of the suckers become greatly depleted, game fish will rapidly increase in the waters of Alabama.

"Be on the alert to apprehend every one who violates any provision of the fish law, and place yourself in communication with all your deputies to the end that those who employ illicit devices for the purpose of taking fish are promptly and vigorously prosecuted and speedily convicted."

All the fish laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief.

Field Work at Valley Stream, N. Y.

By W. G. BOWDOIN

THE Department of Entomology of the Brooklyn Institute of Arts and Sciences held a field meeting on Saturday, May 11, under the leadership of George P. Engelhardt, assistant curator of entomology at the Children's Museum, visiting Valley Stream, Long Island. The object of the trip was to give a demonstration of the various methods of collecting insects and of observing birds in the field.

In the somewhat moist woods at Valley Stream were found many insects. One of the first was one of the click beetles which as wire worms feed upon the roots of grasses and grains. The click beetles are also known as snapping beetles, spring beetles, skipjack and elaters. They are not considered friendly by the farmer. Next came some of the skippers, so-called on account of their peculiar mode of flight. They fly in the day time, darting suddenly from place to place. When at rest they usually hold the wings erect in a vertical position like butterflies.

Several ladybugs were found. They feed upon aphids, other small insects and the eggs of insects. Then came some low bushes upon which the autumnal leaves of last year still clung. Prof. Engelhardt approached these bushes and after carefully opening his umbrella and holding it under them he beat with a birch stick, whereupon several insects fell into the opened umbrella. This is one collecting method. Among the fallen insects was a queen of the social wasps. This mother or queen had wintered and was on the point of starting a fresh colony. She builds her nest of paper, which she makes from vegetable substances worked up with her mandibles and moistened with her spittle. Her first hatches are small undeveloped females or "workers" which form the vast majority in all insect communities. They enlarge the original comb by adding fresh cells around it and aid the queen in feeding the young. A wasp's nest may ultimately hold several hundred inmates. Other wasps found were the white-faced wasps and the polistes which build open nests. Some bumble bees were also observed. These insects perform service in cross fertilization. The clover crop in Australia, for example, was a failure before the introduction of the bees who accomplished the before impossible fertilization.

A four-spotted sap beetle was next found. Then some *Hemiptera*, or true bugs. This family includes the squash bugs that are now so very destructive. We found many chestnut trees killed by the blight. From these trees the bark is disintegrating, and when lifted many insects are found underneath. Some black carpenter ants were found on these chestnuts. Larvæ gallery systems are often constructed by such ants in trees, which aids in the ultimate removal of dead wood. A little further on some much smaller ants were observed. On being disturbed they began straightway to carry out the eggs, which

were in some cases larger than the carrying ants. Some of the ants have the power of ejecting their poison (formic acid) to a considerable distance. It is exceedingly irritable. One of the commensal beetles, which looks like an ant and lives unmolestedly with them, was also picked up.

Another find in connection with the chestnut trees were some of the bark beetles. The space between the bark and the tree proper, as may be imagined, is not very great. These beetles, therefore, are very flat. The larva of this insect are

THE AUTHOR PUTTING INSECT INTO CYANIDE BOTTLE.
Photograph by J. J. Schoonhover.

also characterized by extreme flatness. One of the spiders, not generally classed as a true insect just because he happens to have eight legs instead of the usual six, was found under some loose bark. This particular spider had just finished hibernating.

One of the hisster beetles next found a refuge in one of the cyanide bottles. It was black and very highly polished. This beetle has a gigantic relative living in Senegal. The one found by the party gained its nutriment from excrement and decaying woods.

The tendency on the part of inexperienced insect collectors is toward the gathering of large and spectacular specimens. This is, however, a mistake, since most of these found are well known. The treasures lie rather among the smaller examples where it is still sometimes possible to discover a new species. The man who turns to the collecting of insects as a pastime is sure of much that is interesting in the occu-

patation. For example, some beetles stimulate death when disturbed. They make off when left to themselves and are quickly out of sight. Now and then in turning up fallen leaves, rocks, pieces of wood or other matter in the field, a snake, a salamander or a newt is encountered.

In passing one of the chestnut stumps the track of one of the land snails was seen. Such a snail in crawling exudes a kind of slime that marks its trail with a very brilliant iridescence. Some of the prehistoric snails crawled across certain muds in a similar fashion, and the mud being transformed into stone we have in geological cabinets the tracks of worms and snails. but the worms themselves have long ago disappeared. Some slugs were seen. One of the angle worms came into view when some of the mast and fallen leaves were scraped away. These worms do much work in the way of soil fertilization. A single true mosquito was in evidence. The observed specimen seemed rather weak or at least gave no demonstration of the fine work that some of its family will do later on.

A metallic beetle was found under some bark. Then the larva, which burrows into the bark, was turned up, also one of the parasites that lay their eggs in the larva as a host was the final find in the life history of this entomological unit.

On the banks of a rather large and swiftly flowing stream crossed by a rustic bridge many aquatic forms of natural history life were found. One of the water spiders was skating merrily over the surface. Some young eels were captured. Several forms of the nests of the caddice flies were found free floating. Some of these were built of fragments of partly decayed wood, others of grass laid crosswise, and still others of small stones or grains of sand. One of the isopods belonging to the crab family was brought to land. Fishing also resulted in catching a fresh water snail with extended foot that was quickly drawn in and concealed by means of the operculum, some fresh water sponges that resembled moss that had survived from last year, some of the vegetation that makes a balanced aquarium possible, some water cresses and sow bugs.

One of the ways of collecting in brooks and streams is to remove a stick from the water and let it lie in the sun. When the stick dries, the beetles, if any are on it, will start to run, when they can be caught. Drowning out, as it is called, is another way. This consists in throwing the stream water with the hand upon the bank which tends to make the hidden insects show signs of life and movement. "Sweeping" is another collecting method used in the fall. It is accomplished by means of a butterfly net of stronger material than ordinarily used.

A number of birds were identified by the party. These included several specimens of the gorgeous scarlet tanager, both male and female, wood thrush, black and white creeper, warbler, song sparrows, catbird, kingbird and brown thrasher.

On the way home some hanging cocoons of the *promethea* moth were found and gathered. The largest beetle found on the trip was also met with in the person of the carabus beetle which feeds on the cut worms that are such foes to the agricultural worker.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

CORRESPONDENCE.

FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but are not responsible for the views of correspondents. Anonymous communications will not be regarded.

SUBSCRIPTIONS.

Terms: \$3.00 a year; \$1.50 for six months. Single copies, 10 cents. Canadian subscriptions, \$4.00 a year; \$2.00 for six months. Foreign subscriptions, \$4.50 a year; \$2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line (\$2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra.

Special rates for back cover in two or more colors.

A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Advertisements should be in our hands by the Monday morning previous to date of issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

CARE OF NATIONAL RESERVATIONS.

THE haphazard slap-dash way in which our national parks, national monuments and other reservations are managed is disgraceful. Scattered about in different departments and under different bureaus, they are far more expensive than they should be; and there is no settled policy with regard to their administration and no co-ordination in their management.

Last year Mr. Fisher, Secretary of the Interior, took steps to secure information about our parks by calling a conference which was held at the Yellowstone National Park in September, to which were invited all interested in the matter, including the transportation companies, the concessioners and those charged with the administration of the parks. In the discussion and the papers read there, much interesting material was brought out, and this has recently been published by the Interior Department.

In the proper care of our parks the public has the greatest interest of all, but the railroad interest is scarcely less. People wish to visit the parks and to be well-served on the way. Many of them would like to go from one park to another, and the railway companies should be able to sell tickets which would enable travelers to make the round of two or more national parks at moderate cost. It is to the interest of railroads and public alike that the way through the national parks should be made smooth and easy. This will mean comfort for the public, and so

greater popularity, and a constantly increasing number of visitors, and this means greater earnings for the railroads.

The local officials of the park are in some cases army officers and in others civilians. The troops in charge of the parks have, we believe, invariably done their duty remarkably well. So also for the most parts, have the civil employes; but in some cases, where these have been appointed through political influence, they have not been efficient. The position of superintendent of the national parks or national reservations should not be given to a good political worker without regard to his fitness for the place.

A bill now before Congress providing for the establishment of a Bureau of National Parks deserves careful attention, and after having been studied and amended, and approved by the Secretary of the Interior, ought to be passed.

The national reservation—by whatever title it may be called—is as necessary to the public welfare as is the city park, and if there is no political advantage to be gained by legislating for its proper care and management, there is at least a great advantage to the public.

SHORTSIGHTED ECONOMY.

THE agricultural bill, which passed the House of Representatives a month ago, contains a reduction of over one million dollars from the present appropriation for the Forest Service, and this cut is made almost wholly from the funds available to prevent and fight forest fires. The current appropriation of \$500,000 for building roads, trails and telephone lines needed to call and get men quickly to the fires is reduced to \$275,000, and of the emergency fund of \$1,000,000 for fighting forest fires, only one-fifth remains. The House, by a vote of seventy-four to seventy, restored the \$225,000 cut from the appropriation for roads, trails and telephone lines, but on the final reading of the bill, the amendment for this increase was defeated.

These cuts are made in the face of the record of 1910, in which seventy-nine fire fighters and twenty-five settlers were burned to death in the National forests, and twelve million dollars' worth of timber was destroyed, and in the face of full knowledge that as the result of insufficient appropriation, the National forests, which constitute about two billion dollars' worth of public property, are in grave danger of even greater loss from fire.

The protection of public property and of the lives of settlers, their wives and their children, as well as of the public servants within the National forests, lies close to the public welfare. It is easy to malign the Forest Service, as certain members of Congress are accustomed to do. But it is much easier to malign the forest ranger than it is to do their brave and efficient work on the fire line. We must not let false economy further imperil the safety of public resources and the protection of human lives.

It is time for Congress to face the facts. Before the National forests can be made reasonably safe against fire, they must have ten times the present trails and six times the telephone lines now built. It has taken six years for Congress to appropriate enough money to build this small part of what is urgently needed. The standing timber alone on National forests is worth not less than five hundred million dollars.

In twenty years it will probably be worth well over one billion dollars. If Congress gave the Forest Service the five hundred thousand dollars a year it asks for, to build trails and telephone lines, it would give only one-fourth of one per cent. of the value of timber standing to-day in the National forests.

The preservation of this standing timber controls the preservation of stream flow, whose value is many times that of all the wood which the National forests contain. The value of the range in National forests, which again is largely dependent upon forest preservation, is incalculable. The fees for grazing alone bring into the public treasury every year twice the appropriation asked for trails and telephone lines. Without these improvements the forests cannot be made safe, even with ten times the present patrol.

The one million dollars asked for actual fire fighting and cut by the agricultural committee to one-fifth that amount is simply a fund made available for the use of the Forest Service in times of grave emergency. It may be less necessary than the money required to build roads and bridges, telephone lines and trails. Unless the fires occur, this money would be neither needed nor spent. But should the need arise, there could be no more criminal extravagance than not spend it. It cost \$900,000 beyond the appropriation of the service to fight the big fires of 1910. If this money had not been spent, these fires would probably have wiped out the bulk of the forests of Northern Idaho, Montana and Western Washington.

It would be hardly less unpatriotic and unwise to withhold money to equip troops against an invading army than to refuse the appropriation needed to fight these fires and prevent the greater fires which may easily follow.

A REMARKABLE illustration of what an earnest worker in a worthy cause may do without money was given at the recent Forestry Conference in Nashville. The game and fish department of Tennessee receives practically no support from that State, its expenditures being guaranteed by J. H. Acklen, State Warden. Despite this handicap, Colonel Acklen has had safety devices put on all railway locomotives that are run through the forests, and has induced the railway companies to maintain clear rights of way as a precaution against woods fires. Last year not one of the forty-three woods fires reported to his department originated along a railway. Colonel Acklen pointed out the need of a paid warden service in Tennessee. He has given time and money to this work for eight years, and there is a limit to human endurance.

AFTER all, what does it matter whether American athletic and rowing clubs are represented by a crew at the Olympic games. This class of sport in America savors of professionalism and is indulged in by only a very few. In all probability crews from Oxford and Cambridge, the representative oarsmen of England, will not have an entry at the Olympic meet; therefore, should one of our crews win, it would not mean any great honor in the rowing or sporting world. It looks as though America would be just as happy if no crews went to Sweden this year or any other year.

YACHTING

Ticks from the Ship's Clock.

Reginald A. Morse has been appointed chairman of the regatta committee of the Barrington Y. C. He announces the schedule of the club races this season: First regatta on Saturday, June 8, and then a regatta every other Saturday for the remainder of the racing season, with special races in between, if possible.

Ogdensburg, N. Y., has a new yacht club. It is called Oswegatchie. The officers are: Commodore, C. D. Hoard; Vice-Commodore, H. A. Lord; Secretary, C. R. Flos; Treasurer, Ralph Tallman; Trustees—Capt. D. H. Lyon, J. C. Howard, E. L. Strong, Felix Hulser, I. P. Wiser, A. R. Porte, Andrew Irving and Charles H. Simmons. The first regatta will be held on July 4.

Alexander Winton's motor yacht, La Belle, the former flagship of the Lakewood Y. C., Cleveland, O., is in drydock No. 3 of the American Shipbuilding Company for the finishing touches of the spring fit out. La Belle, the largest gasoline yacht ever built, was designed by Cox & Stevens, and built in the yards of John A. Dialogue & Son, Camden, N. J., last spring. Commander Winton is expecting to take several long trips on La Belle, in company with his family.

Oscar Peterson and Louis Johnson, chairman of the sail and motor regatta committees of the L. Y. C., went to Vermilion last week to make arrangements for the Labor Day events. They were accompanied by Otto Nehrenst, Fleet Captain, of the L. Y. C., and after submitting their plans to several of the leading merchants and to Commodore Wakefield, left confident that the Vermilion people will witness the best program ever held under the auspices of the L. Y. C. on a Labor Day. Besides the sailing events, it is planned to have motor races and to hold water sports, including aquaplane riding, the latest marine sport.

The new yacht club at Bayside has taken the title of Little Neck Bay Y. C. This lusty marine infant has decided not to give up the bottle, so a policy common to infants will be carried out—it will be "wet." There will of course be a rocking chair fleet to keep the infant happy while a most able staff of nurses has been selected to keep the new baby healthy and to help her grow up. They are: Commodore, William Parkinson; Vice-Commodore, James F. McKenna; Rear-Commodore, Otto Mueller; Secretary, Cyril E. Arrindell; Treasurer, Oscar Engel, and Fleet Captain, D. R. Henderson.

Decoration Day will slide Whitestone Y. C. into the water for the season. The tar-tars are prepared for a gala year.

Eastern waters are to lose one of their most ardent yachtsmen when George P. Granberry leaves next week for Chicago. The Chicago Y. C., with their mammoth carnival looming majestically before them, have engaged Mr. Granberry to manage their regattas during the coming season. This is work Mr. Granberry is eminently fitted for, as he has successfully handled the handicap class, of which he was president, on Long Island Sound.

For the seventh successive season Theodore Granberry, of New Rochelle, has been appointed official handicapper of yacht handicap class.

Speejacks, the new flagship of the L. Y. C., has returned to Rocky River from Port Clinton,

where she has been overhauled and fitted out. Commodore A. Y. Gowen will give the local public a chance to see his flyer in some fast heats in the coming motor races of the L. Y. C.

Edgewood (R. I.) Y. C.

THE schedule of events for the season is as follows: May 22, smoker; June 8, ladies' day, regatta for all classes and formal opening of the club house, with music and dancing, afternoon and evening; June 12, dance; June 19, dance; June 20, smoker; June 26, dance; July 3, dance; July 10, dance, July 13, regatta for all classes; July 17, dance; July 18, smoker; July 24, dance; July 31, dance; Aug. 7, dance; Aug. 14, dance; Aug. 20, race week, regatta for all classes, followed by smoker in evening; Aug. 21, race to Fall River, all yachts sailing as one class; Aug. 21, dance; Aug. 28, dance; Sept. 4, dance; Sept. 7, regatta for all classes; Sept. 11, dance; Sept. 18, dance; Sept. 19, smoker; Sept. 25, last dance of season.

The officers of the club are: President, James T. Thornton; Commodore, F. W. Bartell; Vice-Commodore, Walter D. Wood; Rear-Commodore, Thomas J. Critchley; Secretary and Treasurer, Harry Fulford; Board of Directors—Benjamin Peckham, James W. Dennis, Walter R. Taft, Richard W. Jennings, Emil G. Pieper, John M. Latham, John H. Caton, Jr., B. B. Manchester, Jr., and Howard N. Knight; Fleet Captain, Carlton E. Taft; Fleet Surgeon, Ralph W. Hayman, M.D.; Measurer, T. R. Goodwin. Ernest L. Arnold is Chairman of the Regatta Committee.

East Greenwich Y. C.

THE races that are planned by the East Greenwich Y. C. for the season of 1912 are as follows: Open regatta under rules of Narragansett Bay Y. R. A., June 1. Club regatta, also special race for one-design sailing class, June 15. Also club regattas on the following dates: June 29, July 13 and 27, Aug. 31, Sept. 14 and 28, and on Aug. 17 the club will hold an open regatta in connection with ladies' day.

There have been a number of new boats added to the fleet of the East Greenwich Y. C. quite recently. These are the auxiliary yawl Sivad, 72 feet over all, owned by F. T. Rogers; Myosotis II., 35 feet over all, owned by Nelson McIntosh. Among the new boats which will soon be added to this fleet are Topaz, a 43-foot cruiser, designed and built by Frederic S. Nock, of East Greenwich, R. I., for J. Richmond Fales, and the 60-foot coast cruiser Artmar, designed and built by Mr. Nock for C. M. Dunbar. There are also the 30-foot, raised-deck cruiser Teddy B., owned by Thomas M. Allen, and the 32-foot auxiliary sloop Alletse, owned by Elmer Lindberg.

At the boat yards of Frederic S. Nock, East Greenwich, R. I., a special power tender has been completed for W. S. Milne, of Cleveland, Tenn., and is to be carried on the davits of his yacht Ocoee. This boat is fitted with a Fay & Bowen engine and should make an excellent type of power tender with unusual carrying capacity.

New York A. C. Yachtsmen.

THE New York A. C. yachting division, organized a good many years ago by members of the club, with R. W. (Shorty) Rathborne as Commodore, recently rejuvenated, has elected officers and adopted a constitution and by-laws, is now a full-fledged yacht club, and entitled to representation on the Long Island Regatta Committee. The officers are recognized by the Board of Governors of the New York A. C. as their duly authorized representatives, and

are on a par with the ranking officers of other yacht clubs along the Sound.

This separate organization on its present basis is a distinct advance in the growth of yachting in the New York A. C.

W. McCullough, well-known designer and builder, at present engaged in the construction of a 70-foot launch, as well as several 35- and 45-foot motor boats, has been engaged. He has just finished for a New York A. C. member a \$4,000 five-room houseboat.

Bergen Beach Y. C.

At the last meeting of Bergen Beach Y. C., ex-Commodore Edgar H. Watson, who served the club as senior flag officer for several terms, was represented by Captain Daniel Riordan, on behalf of the club with a diamond pin with the emblem of the club in colors. In presenting the token, Capt. Riordan referred to the splendid manner in which the club had been represented by Commodore Watson and to the unselfish spirit displayed by him in all sports and pastimes of the club. Commodore Watson made an appropriate response. An interesting schedule of events has been arranged, commencing on Saturday, June 8, when the club will go in commission with its new commodore, H. J. Hildebrand in command. The first regatta will be held on Sunday, June 23, an event for sneak boats. There will be shore dinners, water sports and cruises during the season.

Indian Harbor Y. C.

THE schedule of races for the season of 1912, as announced by the Regatta Committee, is as follows:

May 30, Thursday—Spring race for yachts in Classes K (65 feet), P (31 feet) and the L. I. Sound schooners.

June 19, Wednesday—Cruising race to New London, for yachts of over 25 feet rating.

July 13, Saturday—Annual regatta for all classes.

Sept. 7, Saturday—Fall regatta for all classes of sloops.

Sept. 21, Saturday—Race for the Corinthian cup, for yachts of 31 feet rating and under.

Karina Sails for England.

AFTER champing at her bits for a week or more, awaiting good weather, Karina, Commodore Robert E. Tod's three-masted schooner, finally got away on the 17th for her trans-Atlantic voyage. Commodore Tod was at the wheel, when at 10 o'clock in the morning the anchors were weighed and the beautiful steel schooner headed toward Ambrose Channel Lightship with everything set, pushed by a 48-mile-an-hour breeze almost full astern. It is calculated that when last seen she was making better than 15 miles an hour.

Babylon Y. C.

COMMODORE GEORGE COX, of the Babylon Y. C., has issued orders for the club to go in commission May 25. The appointments are: Arthur Monjo, Fleet Captain, and Harold E. Hewlett, Fleet Surgeon. Committees: Regatta—T. R. Lane, Chairman; Frank Orr and A. L. Steutenburgh, House—Charles Searle, Chairman; James Russell Curley, Charles L. McGatty, Membership—John S. Foster, Chairman; John Snedecor, James Magee, Measurer, Joseph W. Lawrence.

Bayside Y. C.

THE Regatta Committee of the Bayside Y. C., Bayside, L. I., has announced: Open regatta, May 30; Independence Day regatta, July 4; Larchmont race week, July 20 to 27; Atlantic race week, Aug. 19 to 24; Labor Day regatta, Sept. 2; fall regatta, Sept. 7; Manhasset Bay Y. C., Sept. 14. The fleet will start on its annual cruise on Aug. 7.

Yacht Columbia a Houseboat.

WITH her polished decks denuded of spars and her keel removed, the old schooner yacht Columbia, one-time defender of America's Cup, is now rated as a houseboat and owned by a Baltimorian. This old ship, built in 1871, a testimonial to the grade of workmanship to be had at that time, is in perfect repair. She is owned by Charles A. Tucker, and is his permanent summer residence.

Motor Boating

American Power Boat Association.

ON May 15 the American Power Boat Association went into session at the Waldorf, New York, and after ten hours' debating, voted to establish a commission for power boat racing. This commission shall have control of all racing matters, and shall harmonize the conflicting interests and methods of racing throughout the country; shall tabulate and record all events for reference, inspection, and use of every club represented in the board; shall adjust the representation on an equitable basis and shall extend its membership to include the adoption of rules for measurement, classification, rating, and control the whole field for the government of trials of speed and endurance between them, and disputes arising therefrom. In short, every branch of racing shall eventually be brought under the jurisdiction of this commission, and it shall have complete sway of all matters relating to its field. This commission shall have absolute power and independence of action. On this basis only can an effective organization for control operate for the best interests of the whole sport.

The simplification of all racing rules and the division of boats, with proper definitions as to the types, occupied the attention of the council until nearly midnight. The definition included the cruisers, open boats, racers, and hydroplanes. Under the new rules any boat is eligible to compete against a hydroplane, but the latter is not permitted to enter the same class as the cruisers, open boats, and racers or any other displacement boat. The hydroplane is now divided into four classes in accordance with the over-all length. These classes are 20, 26, 32 and 40 feet. Any boat is permitted to race with boats of greater length, but no boat will in future be allowed to compete with boats of less over-all length without handicap. This ruling gives owners of boats a chance to compete with larger boats if they desire to do so, but protects the smaller boat from unjust handicapping. No restrictions have been placed on beam or horsepower, and the class is regulated by length only. Should the owner of a three-cylinder boat desire to race against a boat of double horsepower he can do so under American Power Boat Association reasonable rules.

In order to prevent future disputes, the seniority of the vice-presidents have been determined. The seniority will apply according to date of application for admission of section, giving the oldest section the right to the first vice-presidency, and continued down the line. At present there are three sections, with two forming, and the new vice-presidents are: First Vice-President, Charles M. English, One Thousand Islands; Second Vice-President, Alfred F. Dohn, Buffalo, and Third Vice-President, Dr. C. S. Street, Delaware Y. R. A. This establishes the date of entry and gives the oldest sections the right of seniority according to experience. The fourth and fifth of the vice-presidents will be appointed according to the application from the two sections to be formed.

The deed of gift of the Gold challenge cup race has been extended to allow any boat under 40 feet to enter. Heretofore the length was placed at from 32 to 40 feet. The race will be held on the St. Lawrence River, Aug. 1, 2 and 3.

Opposition to the date of the annual meet has been met by changing the season from February to November, the actual date to be an-

nounced later by the council. It was felt that February was too near the racing season to allow members to build new boats to comply with the changes in the rules. The agitation to change from early spring to late fall has been going on for six years. The new date will give owners six months to prepare for the racing season.

Great Lakes P. B. L.

THE third annual regatta of the Great Lakes Power Boat League will be held under the auspices of the Hamilton Y. C., at Hamilton, Canada. The races will extend over a period of three days from Aug. 8 to 10 inclusive, and the program is as follows: Aug. 8, 5-mile race for boats with two cylinders or less; 2-mile free for all; 10-mile handicap race. Aug. 9, 20-mile races for the following classes: 40-foot, 26-foot and 20-foot, as well as a 20-mile race for the 40-foot class open to displacement boats only. Aug. 10, 14-mile race for cruisers; 20-mile race for the 32-foot class, and the annual International motor boat handicap race of 20 miles, open to any boat capable of 15 miles or better. The final event of the meet will be the Great Lakes power boat championship, the distance of which is 25 miles.

An interesting feature in connection with the selection of Hamilton for this race meet is the fact that the course over which the boats will compete was accurately surveyed on the ice last winter by the Dominion land surveyors. The Scripps' reliability cruise will also finish at Hamilton on Aug. 7, being scheduled to leave Detroit on July 30 and reporting at the following places en route: Toledo, Rocky River, Erie, Buffalo, Dalhousie, Charlotte, Niagara and Toronto.

Motor Boat Speed.

A FEW years ago, a speed of 20 miles an hour for a motor boat was considered high mark for safety, as well as probability. In 1904 the motor boat world was set agog by the speed made by the Ving-Et-Un in a race with the Fiat III. for the auto boat gold challenge cup. She traveled at the rate of 22.31 statute miles an hour. In 1904 the Challenger in the qualifying trials for the boat to go to England after the Harmsworth cup, made 26.5 statute miles. In 1908 Dixie II., in the race for the Harmsworth cup at Huntington Harbor, traveled at the speed of 32 statute miles, while a little later she made 36.05 miles. In 1910 Dixie III., in the Harmsworth cup race off Larchmont, made 34.70 miles. In 1911 at Huntington Harbor in the race for the Harmsworth cup, Dixie IV. made what seemed to be about the height of motor boat speed, when she covered 45.22 statute miles in an hour. This is the greatest speed ever made by a motor boat in an official trial; however, it is said that Oregon Wolf, with half the power of Dixie IV., on Feb. 25 last, made 42.73 statute miles. A few days ago the report came from Atlantic City that Crusader II., a little chap of the Sand Burr II. type, made 52.94 statute miles. What may be expected of the French challengers for this year's races for the Harmsworth trophy is a matter of conjecture, but it looks as though 55 miles an hour is not beyond the range of possibility.

Lady Betty—Yacht.

COULD there be a prettier or more euphonic name for a yacht than Lady Betty, which is that of a new power boat built for Walter Lippincott, launched at Morris Heights last week.

Lady Betty is 123 feet over all, 112 feet on the waterline, 18 feet 6 inches beam, and 5 feet 9 inches draft. The hull is built of wood. The deckhouse, skylights and all wooden deck fittings are of teak. The joiner work below is of white pine panel work, finished in white. Doors, bureaus, fronts of berths, lockers and furniture are of polished mahogany. Lighting is by electricity and the vessel is equipped with a heating plant.

She will be driven by two 100-horsepower Twenty Century motors and twin screws. Lady Betty is the largest and one of the most attractive and conveniently arranged motor boats launched this year.

Huntington Harbor Gets Harmsworth.

As was predicted generally, the Harmsworth cup races, emblematic of the world's motor boat speed championship, will be held on Huntington Bay, Long Island, Aug. 29 and Labor Day, Sept. 1. Should a third race be required it will be held on Sept. 3, over the same course. The elimination trials to select the American team of three boats will be held over the Huntington Bay course on Aug. 26, 27 and 28. In selecting the three last-named dates the committee considered the interests of the entrants so that their boats would be in proper condition and on the scene to begin the contest for the International cup as soon as the elimination trials are decided.

The Motor Boat Club of America will, of course, manage the competitions, and the rules governing the contest will be the same as last year.

The meeting which was held May 15 was attended by Commodore H. H. Melville, Commodore August Heckscher, Commodore J. Stuart Blackton, A. E. Smith, P. F. Chesbrough, Morris M. Whitaker, and Henry R. Sutphen.

Nothing has been heard from the French motor boating authorities, although it is understood that a French entry is probable. Three British owners are entered, and reports speak highly of the speed of the entries of Mackey Edgar, of the Royal Motor Boat Club, and Fred May, of the Sussex Motor Boat Club.

TRAP SHOOTING

DRIVERS AND TWISTERS.

The Freeport, Ill., Country Club, composed of the leading business men of that city has voted to install trapshooting and form a gun club among the members who wish to practice at target shooting.

The regular monthly shoot of the Gem City Gun Club will be held on May 30 at Laramie, Wyo., on the grounds of the Club, north of the University. Program commences at 10 A. M. For further particulars, address D. A. McLean, Secretary, 465 North Fourth street, Laramie, Wyo.

Decoration Day is the date of the registered tournament of the Buffalo Audubon Club. Regular program, 10- and 15-target events, \$1.40 entrance for each event. Sweeps optional. Special 25-target merchandise handicap, and 15-target prize handicap. Rose system money division.

Under date of May 20, Elmer E. Shaner, Secretary-Treasurer, writes that "in accordance with a resolution adopted by the Interstate Association at its annual meeting in 1910, I beg to advise you that Mr. Vassar Cate, Brunswick, Ga., was the winner of the Seventh Southern Handicap, shot at Columbus, Ga., May 16, 1912. Mr. Cate used a Winchester gun, Remington Arms-U. M. C. shells and Schultze powder."

Articles of incorporation have been issued by the Secretary of State for the Illinois State Sportsmen's Tournament Association. C. A. McDermid, of Bloomington, is president. The object of the association is to promote annual tournaments for trapshooters of Illinois. Although the association has been in existence for a number of years, it has not been incorporated until this time.

C. A. Young, who won the E. C. cup, emblematic of the inanimate target championship of the world, at Fairmont, W. Va., on May 14, has already received a challenge to a match for this cup, the challenger being H. D. Freeman, of Atlanta, Ga., who has been shooting in remarkable form this year. Mr. Young has accepted the challenge and will name a date and place for the match as soon as possible, but owing to business engagements, the contest will probably not take place until June or July.

The Hunters' Club, of Onondaga county, will hold a registered tournament on July 4, 1912, on their range at Rockaway Beach, Syracuse. In addition to the \$50 donated by the Interstate Association, the club has added \$50, making a total of \$100 in added money. A merchandise handicap will be shot in addition to regular events. We cordially invite you to come and shoot with us at our first registered tournament. Detailed program will be mailed you at a later date. The managers are O. E. Carpenter and Chas. Stanard.

One of the latest additions to the membership list of the Du Pont Gun Club is Mr. W. P. Northcott, vice-president of the Hawtin Engraving Co., Chicago, Ill. Mr. Northcott always makes it a point, if possible, when in the East, to visit the Du Pont Gun Club grounds and take part in the regular Saturday afternoon shoot, where he always leaves his mark. The club's management is looking forward to a visit which Mr. Northcott hopes to make the end of this month, so that he can take in the Delaware State tournament, May 29-30.

Cleveland Gun Club will hold a registered tournament on May 30. It will be the thirty-second annual Decoration Day event. Shooting begins at 9 A. M. Squier money-back system in force. Ten 15-target events on regular program. Specials: 25-target trophy; 25 targets for Greater Cleveland contest; 25-target extra prize trophy event. President A. J. Stevens, of the Cleveland Gun Club, has donated two silver loving cups for high averages. F. G. Hogen, C. E. Doolittle and E. S. Rogers comprise the Tournament Committee.

W. G. BEECROFT.

Gadsden Gun Club.

THE fourth shoot of the Gadsden Gun Club for this season was held Thursday afternoon at the club grounds at Elliott Park. Only a few of the faithful were on hand, and those present experienced some of the hardest shooting ever seen over the local traps. An extremely high wind kept the targets on the jump the entire afternoon, which accounts for some low scores which were made. E. C. Little was high gun, getting 45 out of 50 shot at. J. S. Paden was next in line with 43 out of 50. C. L. Gunn was not shooting up in his usual good form, as he only got 33 out of his 50. Dr. Walter Gunn, of the Guntersville Gun Club, was a visitor with us and he demonstrated to our satisfaction that they

have some good shooters in his town. The scores:

	Shot at.	Broke.	Per Cent.
E C Little	50	45	.90
J S Paden	50	43	.86
Walter Gunn	50	37	.74
Perry Gunn	50	35	.70
C L Gunn	50	33	.66
J G DuBose	50	31	.62
C F Cross	50	29	.58
H J Savage	50	24	.48
H L Appleton	50	12	.24

The standing in the handicap for the watch fob is as follows:

O W Sibert	25	25	100
J S Paden	50	48	.96
E M Stewart	25	24	.96
J E Little	50	47	.94
W G Billinger	50	46	.92
E C Little	75	69	.92
J G DuBose	25	22	.88
J P Gunn	75	66	.88
C F Cross	75	65	.87
H J Savage	50	43	.86
H L Appleton	25	21	.84
C L Gunn	75	63	.84

The Southern Handicap.

COLUMBUS, Ga., May 18.—With trapshooters present from all over the country, the Interstate Association's Seventh Southern Handicap tournament was given at Columbus, Ga., on May 14-16, under the auspices of the Columbus Gun Club.

Two years ago, when this tournament was held in Columbus, all records for attendance were broken, and so fine were the local grounds, so perfect the arrangements for the sport, and so cordial and genuine the welcome extended to the visitors by the people at Columbus, that it was not improbable that this year the city would break its record along that line.

Two years ago there were 128 entries in the main event, this being just one more than the number present the year before, at Nashville, Tenn. Last year the big event was held at Charlotte, N. C., and the total number of entries in the main event was exactly 100.

The Columbus Gun Club is noted as one of the most progressive and hospitable organizations of sportsmen in the South, and its members did everything in their power to make this tournament, if possible, more successful than the one two years ago. Many members were on the shooting grounds each day, and the visitors were given a warm welcome to Columbus.

Mr. R. S. Grier, treasurer of the Columbus Gun Club, was in charge of placing the grounds in shape, and working with characteristic thoroughness, had everything in apple-pie order. A large tent, 100 feet long, had been erected for the use of visitors and also ammunition representatives. Recalling the attendance two years ago, Mr. Grier had the tent this year considerably larger, and it was ample and commodious. Many chairs were in place for the use of visitors, giving a fine, unobstructed view of the shooting grounds from a point that was cool and comfortable. For the benefit of those who wished to get a little closer to the firing line, Mr. Grier had bleachers built. The club house was utilized as an office building for the officials of the tournament, such as cashier, compiler of scores, clerks, etc. Near the large pavilion tent was another tent devoted to the selling of refreshments and the serving of luncheon. Ladies of the several churches in Columbus were in charge of this feature, and it goes without saying that the luncheon served was first-class in every respect. The ammunition companies had quarters in the large tent, there being ample accommodations for all.

Practice Day, May 13.

The program for practice day was simple enough, there being four events of 15 targets each, and two events of 20 targets each, a total of 100 targets.

F. G. Bills led in the preliminary shooting, breaking 98 out of the 100 targets. Four shooters were a close second to Mr. Bills, for Messrs. H. D. Freeman, W. Henderson, J. M. Hawkins and C. G. Spencer each lost only 3 targets out of the 100. Walter Huff was in the 96 class, as was W. R. Crosby, J. R. Taylor, J. S. Day, and last, but not least, Geo. H. Waddell, of Columbus, whose score of 96 led all the amateurs.

The scores of practice day follow:

Table with columns for 'Shot at. Broke' and 'Shot at. Broke' for various shooters like W Huff, G H Waddell, C D Hunt, etc.

First Day.

Ideal weather marked the opening of the great tournament, for it was a cool, clear morning, and developed into a perfect May day. Beginning at 9:45 o'clock, the shooting continued until about 4:30. In the afternoon the sport was largely attended, there being many visitors on the grounds.

Nine o'clock was the time set for the opening, but it was deferred on account of a party of shooters being delayed in reaching the city. This party wired Secretary Shaner from a point in North Carolina Monday night, stating that their train had been delayed by high water, and as a matter of courtesy the formal opening of the shoot was deferred until they could reach the city.

There were 80 entries, this being somewhat less than the number at the opening of the tournament two years ago. The decreased attendance is explained by the extraordinary flood conditions throughout the South. Memphis, Vicksburg, Greenville, New Orleans and other cities in the Mississippi valley, which are usually represented in force on such occasions, were conspicuous by their absence this year, there being present only a few persons from that section of the country. In many cases railroad schedules in the Mississippi valley are so badly disrupted that it was impracticable to make the trip, and in other cases the delayed planting operations made it extremely inconvenient for numbers of sports men, large planters, to leave home at such a critical juncture. The floods have been more general and the hampered business conditions, the result of the extraor-

dinary weather all this year, of greater extent than generally realized.

The feature of the opening day was the record made by George W. Maxwell, the one-armed shooter. Out of 150 targets he missed only one, his score being 149. Mr. Maxwell's miss was when a group of gentlemen strolled over from the cashier's office to see him shoot. The manner in which he handled the gun with his one arm was wonderful, and they were curious to note the exact manner in which he manipulated the weapon. It was just a happen-so, of course, but just as the admiring group came up in the rear he made his one solitary miss in the entire ten events.

J. W. Hightower, of Americus, Ga., and H. B. Pottinger, of Charleston, Mo., made the highest record among the amateurs at single targets, each score 144.

H. D. Gibbs, W. R. Crosby, J. R. Taylor, W. Henderson and Homer Clark, professionals, each scored 147.

In the double-target event, L. S. German, Aberdeen, Md., made the highest score. Out of 25 pairs, he broke all except one lone target that managed to elude the load of shot and sallied serenely away until it finally fell down near the river bank. A record of 49 out of 25 pairs is remarkable shooting.

An amateur, H. W. Kahler, of Philadelphia, tied with W. H. Heer, professional, for second place in the double-target event, breaking 47 out of 50 targets.

The youngest shooter present was Vassar Cate, of Brunswick, Ga., aged eighteen, a student of Stone Mountain, Ga. Mr. Cate, who has been shooting three or four years, obtained leave of absence from the Academy at Stone Mountain to take part in this tournament. In the singles he broke 142 out of 150 targets, and in the double-target event his score was 45 out of the 25 pairs.

The program consisted of ten events of 15 targets each and one event of 25 double targets. The scores of the first day follow:

Table with columns for '150 Singles', '25 Pairs', '150 Singles', and '25 Pairs' for various shooters like W Huff, G H Waddell, C D Hunt, etc.

Second Day.

The feature of the second day of the tournament was the performance of Gentry Hillman, an amateur, of Birmingham, Ala., in breaking 148 out of 150 single targets.

Mr. Hillman was not alone in making the high record of the day, for H. D. Freeman and W. Henderson, professionals, also broke 148 each. At the same time it was a wonderful record for an amateur to make, and was the one topic among those who witnessed this shooting. Gentry Hillman is a prominent business man of a coal and iron company of Birmingham.

The next highest record in the singles was 147, and was made by Fred Gilbert, John R. Taylor and W. R. Crosby, professionals, who thus tied for second place.

For second place among the amateurs in the singles J. W. Hightower, of Americus, Ga., and George M. Collins, of Due West, S. C., tied, each scoring 145.

The shooting at double targets to-day determined the ownership of the Carpenter Café trophy, won by H. W. Kahler, of Philadelphia. This cup was to be awarded to the "amateur contestant who makes the highest general average, shooting in all events scheduled at double targets." Mr. Kahler broke 42 out of 25 double targets to-day, and on Tuesday he broke 47, thus his record for the two days was 89 out of 50 pairs.

The attendance of local people was again good, there being many ladies present. At one time in the afternoon the weather was a bit threatening, but the rain that seemed somewhat imminent did not materialize.

The scores of the second day follow:

Table with columns for '150 Singles', '25 Pairs', '150 Singles', and '25 Pairs' for various shooters like W Huff, G H Waddell, C D Hunt, etc.

Table with columns for '150 Singles', '25 Pairs', '150 Singles', and '25 Pairs' for various shooters like J A Blunt, C E Goodrich, F Roberts, etc.

Third Day.

Vassar Cate, handicapped at 19yds. who broke 93 out of 100 targets to-day, was the winner of the Seventh Southern Handicap.

The young shooter not only outclassed all the other amateurs, but had a clear lead over the professionals. The highest professional score in the handicap was that of George W. Maxwell, who, standing at the 21yds. mark, broke 91 out of 100 targets.

Cate received first money in the handicap, \$250, and also a handsome gold watch, presented by the Interstate Association.

There were 106 entries in the Southern Handicap this year, against 100 at Charlotte last year, when W. T. Laslie, of Tuskegee, Alabama, was the winner, breaking 96 targets from the 19yds. mark. Two years ago there were 128 entries and the winner was J. S. Young, of Chicago, who, handicapped at 22yds., scored 96. The high score this year was not up to normal, due to the fact that a stiff breeze was blowing which made difficult shooting.

Southern Handicap.

H. W. Kahler, of Philadelphia, won the beautiful Columbus, Georgia cup. Out of 600 targets, the total number shot at during the entire tournament, he broke 557. The second highest amateur record was that of Vassar Cate, who brought down 552 targets. It was reported on the grounds at one time that the young Georgia shooter had won the cup, but congratulations extended him were premature. Six hundred targets, the basis of this contest, included all targets in singles, doubles, and in the handicap.

Among the professionals, Fred Gilbert, of Spirit Lake, Ia., made the highest record for the entire tournament, breaking 565 out of 600 targets. It will be noted that he was eight targets ahead of the highest amateur.

The high professional record for the tournament was based on the single targets shot from the 16yds. mark. Four hundred targets were shot at, under this condition. The highest professional record was that of H. D. Freeman, of Atlanta, who smashed 394, letting six escape.

The high amateur record of the tournament, figured on the same basis, was that of H. B. Pottinger, of Charleston, Missouri, who brought down 382 out of the 400.

The money winners in the Southern Handicap were as follows:

Southern Handicap Purse.

Forty-eight regular entries at \$8.....	\$384.00
One penalty entry.....	13.00
One penalty entry for targets only.....	2.00
Added by the Interstate Association.....	201.00
Total.....	\$600.00

One Thousand Dollars in Gold

The Interstate Association Guarantees

That the winner of

THE GRAND AMERICAN HANDICAP

will receive, in addition to a trophy of the value of \$100, the sum of

One Thousand Dollars in Gold

The entrance fee in the G. A. H. is only \$10

Worth taking a chance, isn't it?

[NOTE: The Grand American Handicap will be held on the grounds of the Illinois Gun Club at Springfield, Ill., June 18-21, 1912. Entries close June 8. Programs ready for distribution May 15.]

ELMER E. SHANER, Sec'y-Treas., 219 Coltart Ave., Pittsburgh, Pa.

AN UNPRECEDENTED RECORD

Southern Handicap Honors and the Famous "E. C." Cup won in the same week with

Peters Shells

At the Southern Handicap, Columbus, Ga., May 14-16, nearly a clean sweep of averages and trophies was made by users of "steel where steel belongs" shells:

HIGH GENERAL AVERAGE, - - - 394 ex 400
Including runs of 131 and 109 unfinished
By H. D. Freeman.

\$500.00 COLUMBUS CUP, - - - 557 ex 600
For High Score on all targets, including doubles
and handicap event, by H. W. Kahler.

THE CARPENTER CUP, - - - 89 ex 50 pairs
For High Amateur Score on Doubles, by H. W. Kahler.

High Average for Doubles, - - - 93 ex 50 pairs
By Lester S. German.

2d in Handicap - from 23 yards, 89 ex 100
By H. W. Kahler.

So complete a victory has never been won at an Interstate Association Handicap Tournament by any make of ammunition.

At the same time the guns were cracking at the Southern Handicap there were some "big doings" at the West Virginia State Shoot, Fairmont.

The "E. C." Cup

Representing the World's Inanimate Target Championship

First shot for in 1896, and the coveted prize in eighteen contests since then, was placed in open competition by the Fairmont Gun Club, and 20 amateurs and professionals entered. C. A. Young, of Springfield, Ohio, not only won the trophy, but did so by

A RECORD SCORE
184 out of 200

Unknown Angles, - 98 ex 100
Expert Rules, - - - 44 ex 50
Doubles, - - - - 42 ex 25 pairs
Total, - - - 184 ex 200.

Mr. Young won **HIGH PROFESSIONAL AVERAGE, 288 ex 300**
and **HIGH AVERAGE for ALL EVENTS, 405 ex 425**

All of which goes to prove that **PETERS Shells**, with "steel where steel belongs," are *actually the best ever*, and remember, the "TARGET" and "HIGH GUN" are **HIGH GRADE** at a **MEDIUM PRICE**.

THE PETERS CARTRIDGE COMPANY - - - **CINCINNATI, OHIO**
New York: 98 Chambers Street. T. H. KELLER, Manager
New Orleans: 321 Magazine Street. LEE OMOHUNDRO, Manager
San Francisco: 608-612 Howard Street. J. S. FRENCH, Manager

Mr. Woodruff, while not an active trapshooter, is a high class expert when it comes to handling the office work of a tournament. Messrs. Garrett, Wadsworth and Morton, were the clerks who handled the score sheets and compiled the records for the local daily press and sportsmen's journals.

At the close of the tournament the trophies were formally awarded, the ceremony taking place under the large tent on the grounds. The crowd quickly gathered when summoned by Secretary-Treasurer Shaner and the officials of the association were the center of a large and interested group.

Mr. Shaner presented President J. T. Skelly, of the Interstate Association, who made quite a happy little speech. Mr. Skelly said that they were assembled to place the trophies in the hands of the winners, and that it gave him pleasure to do so. The tournament held here two years ago was a good one, and so was this meet. It was true that the attendance was slightly off, but this was due to the floods and other unusual conditions. The present shoot has been conducted even better than the first held in Columbus, he said for all have profited by experience. The members of the local gun club shot better, the lunches were even more appetizing than they were two years ago, and if possible, the Columbus ladies were even better looking than they were in 1910.

President Skelly then presented to Vassar Cate a handsome gold watch, presented to him by the Interstate Association as a trophy that went with the winning of the Southern Handicap. Mr. Skelly remarked that he considered this feat second only to the Grand American Handicap. The young winner received the trophy gracefully and modestly.

In conclusion President Skelly thanked the Columbus Gun Club and the ladies and the citizens generally for their hearty co-operation in making the tournament a success. He was warmly applauded by the crowd.

Roanoke Gun Club.

ROANOKE, Va., May 19.—After a week of inclement weather, a large and enthusiastic number of shooters took part in the weekly contest on the grounds of the Roanoke Gun Club on Saturday afternoon. The weather was ideal and some very good scores were made. It was the pleasure of the club to have as its guest Mr. C. H. Newcomb, of Philadelphia, Pa., one of the best amateur shots in the country. We trust to have the pleasure of seeing him in our midst again in the near future. The weekly medals were won by the following members:

Scratch Class—First, A. W. Howard; second, tie with Jamison and Scholl.

Class A—First, E. W. Poindexter; second, W. S. Jones.

Class B—First, tie with Fisher and Ferguson; second, MacFerrin.

Class C—First, R. E. Lightner; second, W. C. Bringman.

The scores:

	Shot at.	Broke.	Per Cent.
Newcomb	100	96	.96

H. F. WILKINSON, Sec'y.

Deer Lodge Gun Club.

DEER LODGE, Mont., May 12.—The first shoot of the lately organized Deer Lodge Gun Club was very enthusiastic and well attended. A strong wind from the north interfered somewhat and few high scores were made. Most of the members are new to the game, this being the first time they had shot over traps.

The officers of the club are: President, Frank Conley; Vice-President, E. L. Baker; Secretary, J. N. Talbott; Treasurer, C. E. Larabie.

Following are the scores made at 16yds. rise over western auto traps:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	25	25	25	10	Targets:	25	25	25	10
Conley	17	17	Shaw	12	10
Baker	14	17	..	9	Trask	7	13
Wilson	11	9	Zimmerman	2	4
Sidenberg	20	16	Grimes	7	12
Talbott	20	24	Dye	2	11	18	..
Larabie	14	16	Coleman	11	12	..	7
Day	13	11	10	..	Perkins	3
Barrhill	14	12	..	5	Crabb	6

Georgia Trapshooters' Association.

With trapshooters from the various sections of the State in attendance, the Georgia State Trapshooters' Association was organized with enthusiasm at a meeting at the Columbus Board of Trade Hall, Columbus, Ga., on Monday night, May 13.

The association begins life with a membership of ten Georgia gun clubs, and this number will no doubt soon be increased to fifteen or twenty, as much interest has been manifested in the proposed organization.

J. W. Hightower, of Americus, was nominated for temporary chairman of the meeting and took the chair, and Charles B. Woodruff, of Columbus, was selected as temporary secretary.

Elmer E. Shaner, of Pittsburgh, Secretary-Treasurer of the Interstate Association for the Encouragement of Trapshooting, was present, and was invited to address the meeting, stating what benefits would accrue from having such a State association. Mr. Shaner responded in a clear and interesting talk, in which he showed the advantages of State organization and affiliation with the Interstate Association. Tournaments are registered and protected when such organization is had, and it is easy to arrange State shoots when there is a State organiza-

tion. The Interstate Association encourages trapshooting by making an appropriation for every registered tournament. When a good many tournaments are held in a State, this amounts to a substantial appropriation.

Mr. George Waddell favored having a State association, and moved that they go ahead and organize. Discussion as to some of the practical details followed.

Walter Huff said that he would nominate for president of the State Association a man who had worked hard in behalf of the movement, giving freely of his time and thought, George H. Waddell, of Columbus. Mr. Waddell was elected unanimously.

Henry B. Crowell nominated A. J. Hill, of Dawson, for vice-president, and he was the unanimous choice.

For secretary-treasurer, Henry B. Crowell was nominated by Mr. Huff and received the vote of every one present.

These three officers will be members of the board of directors, and they were empowered to select the other four members of the board.

The gun clubs forming the State Association are those of Albany, Americus, Atlanta, Augusta, Columbus, Dawson, Macon, Rome, Savannah, and Warm Springs.

The initiation fee was fixed at \$3. The annual dues will be small, possibly only \$2.

The Grand American Handicap

Will be held at Springfield, Ill., June 18-21, 1912

Du Pont Gun Club.

WILMINGTON, Del., May 18.—The most interesting event on to-day's program for the "regular Saturday afternoon shoot" of the Du Pont Gun Club was the final shoot-off for the Class C trophy. This trophy was one of four put up for competition some months ago by the Capelle Hardware Company, of this city, the trophies being divided among the four classes into which the club's members are divided. Each cup has to be won by ten different persons, each winner to be a member of the respective class to which that trophy belonged. Any shooter once winning a leg on the trophy was to be entitled to a chance in the shoot-off for final ownership, no matter whether he moved into a higher or lower class after having won the leg. To preserve the equity that should go with such a shoot-off, it was provided that the club's management should handicap all contestants in the final race for ownership, which race was to be at 50 single targets per man.

In to-day's race all the previous winners, with but one exception, turned out and took part in the event. J. H. Minnick, by virtue of the wonderful spurt he has recently made in his work at the traps, was the sole 20yd. man, and he landed in second place with 43 to his credit, a great score for one who has not been shooting at targets more than a few months. All the other contestants were placed at 16yds. by the management, and Clyde Leedom, a popular member of the club, and a comparative novice like Minnick, won out by breaking 45. The scores in the race were as follows, 50 targets per man:

Clyde Leedom, 16..... 45	Dr Stanley Steele, 16.. 38
J H Minnick, 20..... 43	J W Anderson, Jr.,... 36
W E Smith, Jr., 16.... 41	F F Lofland, 16..... 35
Dr A Patterson, 16.... 39	L H Hoopes, Jr., 16.... 27
Walter Tomlinson, 39	

In addition to the above race, both the Class A and the Class B Cups were up for open competition, the holders of the respective cups not having received a challenge in the stipulated period of time. Class A was won by A. B. Richardson with 25 straight, and S. J. Newman and J. B. Brier tied for Class D with 16 out of 25.

In the regular weekly prize contest for the Coleman du Pont spoons, the following were the winners: Class A—A. B. Richardson with another straight string of 25; Class B—J. J. Magahern with 24; Class C—Clyde Lee-

dam with 23, and Class D—tied for by J. B. Grier and S. J. Newman with 16 apiece.

The best shooting during the afternoon was done by Mr. Richardson who ran his first 50 straight, but slipped up on an easy one early in his third string, scoring 74 out of 75. He also shot 50 from the 20yds. mark, making a good total. J. H. Minnick broke 95 out of 100 from the 16yds. mark, while straight scores of 25 were made by W. M. Hammond, Dr. Stanley Steele and Eugene E. du Pont.

The attendance at the club was not as large as it would have been had not several members gone over to Camden, N. J., and other points to visit with the local clubs and take part in the contests.

Full scores in the Coleman du Pont spoon contests follow, 25 targets per man:

W M Hammond 21	W Tomlinson 16
T E Doremus 19	Henry Winchester 19
L H Hoopes, Jr..... 17	S G David 14

BLUE HEN.

Buffalo Audubon Club.

BUFFALO, N. Y., May 19.—The regular semi-monthly shoot of the Audubon Club was held yesterday. Only a small number attended, and a high wind prevented high scores. The badges were won by Messrs. Lambert, Imhoff and Immel, the spoons by Kelsey, Wacker and

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He knows it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring**.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. **LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N. Y.**

Durston Special
20 Gauge. Price \$28.00

Immel, and the Lambert trophies by Smith, Imhoff and Blackmer. The Audubon Club will hold an all-day registered tournament on Decoration Day at the club grounds at Main and La Salle avenue. The public is invited. Scores:

Events:	1	2	3	4	5

Event No. 2 was for the badge. Event No. 4 was for the spoons. Event No. 5 was for the Lambert trophy.

Canandaigua Sportsmen's Club.

THE Canandaigua Sportsmen's Club held another of its popular fortnightly shoots on May 18, at Lakeside Park, and although the weather was calculated to be discouraging, eighteen enthusiasts faced the traps and shot in one or more events. Harry Loomis and Williams, of Geneva, were guests of the club, as were also Lawrence, Nichols, Baxter, Burke and Stewart, from Halls and Shortsville.

In the championship event Dr. D. A. Eiseline, of Shortsville, who broke only 28 out of 50 targets in the prize event, came back with a score of 38 out of 50 birds, which tied W. J. Kibbe, the defender of the title. In the shoot-off, only one kill by the medico was necessary to transfer the badge and title, as Kibbe scored a goose egg.

The scores follow: Soule (10) 50, Mason (8) 49, Curtice (11) 47, Kibbe (5) 45, Stoddard (0) 39, Barringer (15) 36, Eiseline (6) 34, Mason 51, Baxter 48, Loomis 39, Nichols 36, Martin 23, Lawrence 22, Stewart 17, V. Wormser 17, Sanford 12, Williams 4, Burke 3, Soule, Jr., 3.
W. J. KIBBE, Sec'y.

West Virginia State Tournament.

FAIRMONT, W. Va., May 18.—Under the auspices of the Fairmont Gun Club, the State tournament was held here on the 15th and 16th, forty-two amateurs and nine professionals taking part in the exercises. Painter was high amateur for the two days with 291. Edwards, only one target behind, for second place. Professionals could not reach the figures hung up by the amateurs, 288 and 287 being the best Young and Welles could do. Individual State championship was captured by J. F. Phillips with the corking good total of 49 targets. Phillips was also on the winning two-man team for the State championship, T. A. Neil being his team mate, winning the event with 97. Scores:

Marlin

Model 1897 REPEATER

of .22 Calibre—but as Accurate and Dependable as a Big Game Rifle

A SMALL game and target rifle of take-down construction, having special smokeless steel frame and tool steel working parts.

Takes .22 short, .22 long and .22 long rifle cartridges without adjustment. Equipped with Ivory Bead and Rocky Mountain sights. Has lever action like that of high-power arms. Solid top protects shooter against danger from thrown-back smoke, gases and defective cartridges; keeps action dry and clean. Side ejection insures unbroken line of sight always—makes possible quick, accurate follow-up shots.

Western Connecticut Trapshooters' League.

BETHEL, Conn., May 4.—The first tournament of Western Connecticut Trapshooters' League was held to-day under auspices of the Bethel Gun Club. Seventy-five shooters took part. Chas. Sherwood and A. L. Chamberlain tied for high gun with 139 out of 150. In the shoot-off at 25 targets, Sherwood won with 23 against 19 for Chamberlain. The program consisted of 150 targets. L. Durkin and D. J. Darsey shot at 25 and broke 16 and 21 respectively.

Bridgeport won the 5-man team event. The scores:

Chas Sherwood	139	G M McDonald	115
A L Chamberlain	139	W B Judd	115
H E Dickerman	138	Dr P Sunderlang	115

Mt. Holly Gun Club.

MOUNT HOLLY, N. J., May 15.—The attendance at our registered tournament was pretty good, totaling twenty-eight, including a few top-notch professionals. Plum copped first amateur "fundamentals of all wrong doing" with 141 out of 150. Neaf Apgar was walking delegate among the professionals, missing five out of his allotment. In a 50-target handicap race, Powers and Dellette tied on 48. The scores:

Shot	at.	Brk.	Shot	at.	Brk.
Plum	150	141	Kelley	150	140
Lamb	150	128	*Apgar	150	145

Boston A. A.

RIVERSIDE, Mass., May 18.—Staples was high gun in the shoot for the Barbey trophy with a full score of 50. Osborne was high in the Hunter trophy shoot with 100, aided by his handicap of 12. Fay and Snow tied for high net score, and on shoot-off, Fay won, 25 to 24. Blinn won the take-home trophy with a score of 49. There was a high cross wind and bright light. Scores:

Barbey trophy, 50 targets: *Staples 50, Ellis 48, Snow 47, Osborn 47, Fay 46, Knights 45, Blinn 44, Brooks 43, Ballou 42, Farmer 42, Richards 40, North 39, Davis 38, Lynch 35.

Short Jaunts for Little Money in Glacier National Park

Season June 15 to October 15, 1912

Comfort in modern hotels—amid towering mountains—tours on foot and on horseback, camping, fishing—everything the heart desires in a vacation awaits you in Glacier National Park.

A complete tour of this new playground has been made possible in 1912 by the erection of hotel colonies located at Two Medicine Lake, Cnt Bank Cañon, St. Mary's Lake, The Narrows, Gunsight Lake, Sperry Glacier Basin and Lake McDermott. Rate per day at each hotel, \$3.00.

Camping parties can tour the Park at a cost of \$1.00 to \$5.00 per day. The favorite tour of this Summer will be the circuit from Midvale to Belton, or vice versa, taking in the most beautiful sections of the Park—a week or ten days required for the trip.

Send for the "Glacier National Park Library"

consisting of nine splendid pieces of literature, including a remarkable "Aeroplane View" of the Park. All yours for 20 cents in stamps (to cover postage). Or, fine descriptive booklet for 4 cents.

Also ask concerning low summer tourist rates and extra low convention fares on special dates.

Summer tourist tickets on sale daily June 1st to September 30th, inclusive. Address

KENNEL

Americanizing the Shetland Sheep Dog.

THIS variety of dog, although popular for many years in the Shetland Isles, has only recently come to the notice of the British fanciers, and much more recently has it been imported by American fanciers.

The first importations of good specimens of the Shetland sheep dog were made by T. D. McChesney, while responsibility for the improvement in the breed rests with J. G. Sherman, of New Rochelle, N. Y. Mr. Sherman, realizing that the Shetland has been

The accompanying photographs were taken for us and represent the best specimens of the breed in America to-day, the lone picture being Lerwick Bess, winner at the Westminster Kennel show this year, imported by Mr. McChesney. The other photographs represent the get of Lerwick Bess, bred and owned by J. G. Sherman.

Best specimens in this country to-day are Lord Scott, owned by Mrs. T. D. McChesney; Lerwick Bess, owned by J. G. Sherman, and Shetland Rose, owned by Mrs. Kenneth McMurrick.

Springfield Kennel Club Protest.

THE Springfield, Ill., Kennel Club registered such a vigorous and convincing protest against the proposed ordinance of the city of Springfield requiring that dogs be muzzled, that this feature was removed. The club maintained that the act to require dogs to be muzzled was inhumane and calculated to produce madness. The club also fought a proposed license by which dog owners were to be required to pay an annual fee to the city. As the county assessor also collects a tax on dogs, it was held that the second tax was unjust and illegal. A compromise was reached by which owners of dogs are to be held responsible for any damage charged to the canines.

Nassau County Kennel Club.

THE first exhibition of the Nassau County Kennel Club, the president of which is Alfred B. Mackay, was held at Belmont Park on May 18. It was one of the most largely attended shows ever given; the entry list included practically every prominent dog in the eastern district. A good many of the winners at the Westminster show figure as winners here, and Mrs. Tyler brought her old English sheep dog, Champion Slumber, once more into the limelight, as about the best thing in the canine world. He came away winner in the special class for the best dog or bitch of any breed owned by a member of the club; also was awarded the ribbon for the best dog or bitch in the show of any breed.

Ladies Kennel Club Show.

PREMIUM lists have been distributed for the tenth annual dog show of the Ladies Kennel

very loosely bred, up to the present time, is devoting considerable attention, and no small amount of money to its up-lift.

The breed within the past few months has made tremendous strides toward popularity, a good deal of the impetus being furnished by the adoption of the Shetland sheep dog by Lady Aberdeen. This, of course, on the part of Lady Aberdeen, is not remarkable, because the breed is flourishing at the present time on many farms in Aberdeenshire. It was not until Lady Aberdeen took up the breed, and after considerable effort on the part of Messrs. McChesney and Sherman that the American Kennel Club was willing to recognize the breed, and while this dog undoubtedly belongs to the collie family, the Kennel Club decided that its classification would cause less comment if placed under the head of sheep dog.

The origin of the Shetland sheep dog is little known, but undoubtedly there is a mixture of collie and terrier somewhere back in its history. The animals vary considerably in color; black and white; sable and white being accepted. The outer coat should be long; under coat wiry and dense; ears small, erect; expression keen and foxy; tail well feathered; limbs straight; eyes dark. It is an animal that makes an almost perfect house dog, as its temper is even and it may safely be mauled by children.

Williams'

PAT. EN. TED
Holder Top Shaving Stick

New!

The "Holder Top" acts as a holder for the stick and enables you to grasp it firmly until the last fraction is used. The stick is the same as you have always known in the familiar Hinged-cover, Nickeled Box.

Northern Kentucky Gun Club.

MAY 12 was a poor day for trapshooting. Black, heavy clouds threatened to spill their moisture at any moment; the light was poor, and a forty-mile wind, right quartering toward the traps, kept the shooters guessing as to the flight of the targets. The right-angle targets were especially hard, as the wind beat them down, at the same time accelerating their speed, and causing the shooters to send the load well over them. Some of the straightaways developed into climbers as soon as they got clear of the trap house, and it is safe to say that the contestants got not only unknown angles, but also unknown flights. The attendance was small, owing to the weather, only six men facing the traps during the afternoon. The feature of the shoot was the match between H. R. Irwin and M. H. Johnson, at 100 targets. The match was a close one, but neither man shot up to his average. At the close of the second round Johnson had a lead of one target; this lead he increased to three in the third round, and added one more in the last 25, going out with four targets to the good. Irwin did his best work in the second round, when he scored 23, the best single round score of the match. A return match, same conditions, will be shot in the near future, probably on the Cincinnati Gun Club's grounds.

W. R. Chamberlain, of Columbus, was high man for the afternoon, with 94. He gave a remarkably fine exhibition under the hard weather conditions, breaking 49 out of the last 50, and making a run of 53 straight. Lawrence, of Corydon, Ky., also a professional, was second high man with 81, a score several targets below his mark.

In a match between Hammerschmidt and Johnson, at 25 targets, the latter being allowed three added targets, the result was a tie. The shoot-off, under the same conditions, was won by Johnson, with a lead of one target. H. R. Irwin then tackled Hammerschmidt under the same conditions, the latter winning by six targets.

There will be a good representation of the Northerners at the house-warming shoot of the Cincinnati Gun Club, which will be held on May 30. The next monthly tournament of the Club will be held on May 26, and a good bunch is expected, as it will be the last chance for practice before the big Decoration Day shoot, and then many of the boys are anxious for all the work they can get in order to get in trim for the Ohio State shoot at Dayton the first week in June.

Birmingham Gun Club.

BIRMINGHAM, Ala., May 12.—The attendance at the special shoot of the Birmingham Gun Club was very small, especially local shooters, probably on account of the Golf Tournament and other attractions. Guy Ward was high on all program targets. J. K. Warren was high amateur on all program targets. H. D. Gibbs broke 98 of his 100 single targets, which was a phenomenal score, owing to the fact that Guy Ward outshot him on doubles, he failed to be high man. Most of the day was taken up with handicap and special events. The scores:

	Shot at.	Brk.		Shot at.	Brk.
H D Gibbs	100	98	James Hillman..	100	83
Guy Ward	100	95	C J Broyles	100	80

Tom Cassity	19	Leach	14
C J Broyles	19	L M Norwood	14
R R Skinner	18		

Canadian Olympic Tryout.

MONTREAL, Can., May 15.—The preliminary Olympic trapshooting trials for the Province of Quebec were held on Saturday afternoon at St. Lambert. The weather was all that could be desired, except that at times the wind caused the birds to take uncertain courses.

It was unfortunate that more were not present to qualify for entrance in the final trials, which will be held on the 24th inst. Even Mr. W. H. Ewing, the present world's champion trapshooter, was unable to be present.

The conditions of the shoot were 100 birds each in ten 10-bird events, 17½ yds. rise, six men up, moving after each bird. The results were:

	Shot at.	Brk.		Shot at.	Brk.
R B Hutchinson	100	89	R Lewis	100	69
T O Lyall	100	75	J H Maher	100	63
J H Canyon	100	73	R W Watson	100	51
T Jones	100	69	H Brainerd	70	25

Spoon shoot, 25 birds, handicap: Lyall (2) 24, Kenyon (2) 22, Hutchison (scratch) 20, Jones (7) 20, Maher (2) 21, Lewis (1) 11.

Association of America, which will be held at the Mineola Fair Grounds June 4 and 5. As usual, the classification is of the most extensive and up-to-date character, as many as 869 regular classes being provided for. In addition to the latter there are fifteen variety classes with four money prizes of \$20, \$10, \$5 and \$3, respectively. Apart from this several hundred valuable cups and trophies are offered for competition, among them being cups for the best packs of foxhounds and beagles, some of the donors being Miss Anna Sands, Mrs. Hamilton Fish Webster, Mrs. Clarence Mackay, the late William C. Whitney, Mr. and Mrs. Henry Payne Whitney, August Belmont, Mr. and Mrs. Payne Whitney, Mr. and Mrs. Ogden Mills, Miss Lucille Alger, Miss Louise Grace, Henry B. Hollins, E. D. Morgan, Mrs. Roy Rainey, Mrs. Herbert M. Harriman, Winthrop Rutherford, Hollis H. Hunnewell, Mrs. Hobart Ames, Mr. and Mrs. Reginald Vanderbilt, Mrs. J. G. Dutcher, Mrs.

Sidney Dillon Ripley, Mrs. Moses Taylor and Lathrop Ames.

The total number of actual dogs shown last year fell just short of four figures and for the coming meeting Miss Alger, Miss Bird and Miss Sands, the bench show committee, are making every effort to attract an entry which will exceed the record gathering of twelve months ago.

GOOD FRIDAY.

"Now, boys," said a Sunday school teacher, addressing the pupils of his class, "can any of you tell me anything about Good Friday?"

"Yes, sir," spoke up one bright little fellow, bursting with knowledge. "Yes, sir, it was him as done the house work for Robinson Crusoe, sir."—Brooklyn Citizen.

 DRUGGISTS.
 OR 93 HENRY ST. BROOKLYN, N.Y.

New E. C. Cup Winner.

A NEW world's champion at inanimate targets was unearthed at Fairmont, W. Va., on Tuesday, May 14, last, when C. A. Young, of Springfield, Ohio, marched off with the E. C. cup and high honors in the open competition for the trophy and title. Mr. Young had nineteen competitors, but he finished with a comfortable margin of four breaks over his two nearest opponents, W. A. Weidebusch, of Fairmont, and H. S. Welles, of New York. Dr. F. M. Edwards, of Columbus, Ohio, and Ed. H. Taylor, of Fairmont, and secretary of the West Virginia State Sportsmen's Association, were only one behind second place. The individual scores were: C. A. Young 184, W. A. Weidebusch and H. S. Welles 180, Dr. Edwards and Ed. H. Taylor 179. Each man shot at 200 targets.

The conditions of the race were the same as for challenge matches, viz., 100 singles, unknown angles; 50 singles expert rule, one man up, and 25 pairs.

The weather was none of the best, being for the most part dull and decidedly cool, with a wind that swept up the hill and smote both shooters and targets in the rear. Shooting conditions, so far as trap layouts, etc., were concerned, were certainly peculiar, and for that reason the high totals made by the leaders were all the more remarkable.

The race between the five leaders was a warm one from the start. On the 100 singles, unknown angles, Young had 98, Dr. Edwards 97, Welles and Taylor 96, and Weidebusch 95. On the 50, expert rules, Taylor led with the excellent total of 46, Young had 44 and Weidebusch 43, Welles 41 and Edwards 40. Thus when the 25 pairs were started Taylor led by one target, with 142 to 141 for Young. Weidebusch had 138 and Welles and Edwards 137. On the doubles Welles led with 43, starting out with his first ten pairs straight. Young, Weidebusch and Edwards each had 42 out of their 50, but Taylor fell away, scoring only 37.

Among the others, G. E. Painter, of Pittsburgh, looked very dangerous when he had scored 74 out of his first 75, but a 20 on his last string spoiled his score. He broke 43 at the expert traps and thus had Welles and Edwards tied with 137, when he went up for his pairs; 36 was, however, the best he could do, getting a poor start, but finishing very strongly. His total of 173 landed him in sixth place. The scores were:

	Unknown Angles.	Expert Rules.	Doubles.	Total.
C A Young	98	44	42	184
H A Weidebusch	95	43	42	180
H S Welles	96	41	43	180
Dr F M Edwards	97	40	42	179
Ed H Taylor	96	46	37	179
G E Painter	94	43	36	173
T H Funk	91	41	39	171
Rich Gerstell	90	41	39	170
Ed Banks	91	43	36	170
John Hawkins	91	39	39	169
C F Moore	91	37	39	167
H M Shaul	89	43	33	165
C W Phellis	90	35	38	163
R J West	83	42	38	163
D W Goshorn	87	33	38	158
Geo Hassam	91	30	27	148
Hite	75	30	38	143
W E Johnson	86	31	26	143
J T Morrison	86	26	29	131

George Lilley also shot, but retired at the end of the second round in the singles.

Luther Squier refereed the greater part of the race, assisted by John Garland as scorer.

The above completes the story of the nineteenth contest for the E. C. cup and the title of "World's Championship at Inanimate Targets." Those who have won the title and held the trophy are as follows:

W. R. Crosby, six times, Fred Gilbert five times, Rolla Heikes four times, George Lyon twice, J. A. R. Elliott and C. A. Young once each.

JAKE.

Analostan Gun Club.

WASHINGTON, D. C., May 19.—The Analostan Club enjoyed pleasant weather for their shoot on the 18th. However, a high wind made the shooting difficult, as is evidenced by the scores. Mr. S. A. Luttrell was high man in the singles and Wagner and Taylor, high in the doubles. The scores:

Singles:			Doubles:		
	Shot at.	Brk.		Shot at.	Brk.
Dulaney	100	76	Dulaney	24	15
Perkins	175	125	Green	14	5
Green	160	102	Huseman	24	14
Huseman	155	127	Barber	24	17
Barber	120	97	Luttrell	24	15
Luttrell	100	88	Wagner	24	20
Wagner	100	86			
Holmead	100	82			

MILES TAYLOR, Sec'y.

Sikeston Gun Club.

SIKESTON, Mo., May 17.—Out of 50 clay pigeons the following score was made to-day:

Dan McCoy	43	Wm H Tanner	35
Dr D E Sawyer	41	J E Dover	34
Clem Marshall	39		

The Sikeston Gun Club, of Sikeston, Mo., holds practice contest at 1 P. M. every Friday. Visitors welcome. Wm. H. TANNER, Sec'y.

Salesville, Montana.

Forest and Stream, New York City:

Dear Sirs—Please publish once in your paper the enclosed ad.

The ad. you published recently brought more replies than both the other papers together in which I advertised.

Please send me a copy of your paper, as I have never seen onc. Yours truly,
Miss Jessie H. White,

Delaware State Sportsmen's Association.

The prize list for the first annual (registered) tournament of the Delaware State Sportsmen's Association places in competition two new trophies, one "open to all amateurs," the other "open to State amateurs only."

The trophy that is open to all amateurs is a very handsome bronze statuette of an archer, 29½ inches high, valued at \$100, to be held for one year by the amateur making the highest total on the 300 16yds. targets on the program for May 29 and 30. It will be competed for at the State shoots in 1913 and 1914 under the same conditions, and will then be shot off for by those who have won it at the above three shoots.

The employees of the traffic department of the Du Pont Company have donated to the State Association a sterling trophy that will be known as the Amateur State Championship Trophy. This will be shot for under precisely the same conditions as the Caldwell trophy, with the exception that it is of course open only to amateur members of the State association.

There also has been donated a handsome silver punch bowl, holding many quarts, which will go to the amateur making the longest straight run in the two-days' tournament.

For merchandise prizes a specially valuable and probably the most unique list of prizes and specials. These range all the way from a \$100 violin to a safety razor; from a music cabinet and duet bench to a \$10 meerschau pipe; from a pedigree French bulldog puppy to a hunting vest; from a pedigree pointer pup to a cut-glass berry bowl.

Forty prizes have been set aside for the "open to all amateurs" merchandise prize event in the afternoon of May 29, while the list for the same event on the afternoon of Decoration Day, and which is "open to State amateurs only," will have in the neighborhood of 75 to 80 prizes—possibly more.

Each event is at 25 targets, entrance \$1, including price of targets, handicaps 16 to 23yds., an optional sweep of \$2 will also be run in connection with this event, shooters entering or not "for the money" just as they please.

In awarding the prizes the following rule will be observed: High gun will have first choice; second high gun, second choice; and so on. In case of ties, these will be decided by lot.

With so small an entrance fee, and such a valuable lot of prizes to be shot for, the Du Pont Gun Club looks for a bumper entry list each day—if only the clerk of the weather bureau would let up on them for a short while. Three Leggett traps will be in commission, so that there will be no trouble in carrying out the program; also there will be a good lunch served in the clubhouse at popular prices, so that the inner man should at least be assured of comfort.

United Sportsmen of Pennsylvania.

The annual convention and shooting and fishing tournament of the United Sportsmen of Pennsylvania will be held at Johnstown, Pa., June 18, 19 and 20; headquarters, Crystal Hotel. The shooting tournament will be on June 18 and 19, and will be, as usual, under the management of J. Franklin Meehan, of the Highland Amateur Shooting Association of Philadelphia. The program will be held under a classification system, enabling the poorer shots to have an equal chance with those of greater skill.

This is the third annual tournament, and the growth of the organization and the interest in trapshooting have been remarkable. At the first shoot there was eight entries, at the second shoot thirty entries, at the last shoot fifty entries. It is predicted that there will at least be seventy-five take part at Johnstown. The success of the organization in shooting matters is due entirely to the fact that classification system is used in all events, shooters being classified by a committee selected for that purpose. Since the system has been used there has never been a single objection and every one has left the tournament well pleased and prepared to come again the next year.

J. FRANKLIN MEEHAN.

Orange Gun Club.

ORANGE, N. J., May 18.—Charles Day, Jr., of the Smith Gun Club, was high with a score of 91 at the fourth meet for the Hall cup, which took place to-day at the Orange Gun Club. Lewis Colquitt was second with 96.

There will be matches for the trophy at the various clubs through the summer, and the final match will be in September. Frank R. Wickes, of Orange, and State title-holder, Brickner, tied for third place with scores of 95 each.

Twenty-two of the men made averages of 90 per cent. Twelve were better than that. There were 3975 targets thrown. Joseph Taylor, a coffee planter from Java, East Indies, was a guest of the shooters. It was the second time he was at traps anywhere. His score was 80, and he was so pleased he said he would spend the remainder of his spare time in this country shooting clay pigeons. The scores: Vanderveer 87, Ivins 91, Baldwin 83, Gardner 85, Trowbridge 94, Dukes 91, Colquitt 96, Higgs 94, Day 97, Percy 92, Young 94, Hallinger 83, Kusmall 76, Billings 85, Brickner 95, Hall 92, Wickes 95, Hassinger 83, McMahon 93, Perkins 84, Geiger 89, Lockwood 88.

W. Fred Quimby.

WE have just had a telegram announcing the death of that popular trapshot, W. Fred Quimby. The wire reads: "We deeply regret having to advise you that W. Fred Quimby passed away at 5:15 this morning in St. Paul, Minn., his death being due to pneumonia. In view of Mr. Quimby's very large list of warm personal friends in the trapshooting world, we ask you to find room in your issue of the 25th for mention of the sad fact."

Spring Valley Gun Club.

THE registered tournament of the Spring Valley Gun Club at Spring Valley, Minn., was held on the 15th inst. On account of the inclement weather, the entrance was small and the scores not very good. The high gun was won by J. V. Winter, with 136 out of 150; second man, J. W. Jones, who broke three targets less, third, H. W. Converse, who made 131. H. G. Taylor was high professional with 142. The club lays particular stress on the assistance received by Messrs. Rinkel and Hurscky, of the Winchester Repeating Arms Company, in cashing the event. The program consisted of 150 targets.

Table with 2 columns of names and scores for the Spring Valley Gun Club tournament.

Table with 2 columns of names and scores for professionals at the Spring Valley Gun Club tournament.

Long Run Trophy Winners

WILMINGTON, Del., May 16.—Following are the names of the winners of the Du Pont 1912 solid gold long-run trophies thus far this year:

WHO has not heard of the Waltham Riverside movement? For a full generation, the reliability of this famous movement has never been questioned. It is trusted and respected in every civilized country. It means something to have the name "Waltham Riverside" on a watch movement.

WALTHAM

RIVERSIDE WATCHES

The Riverside movement is made in various sizes for ladies and gentlemen. We especially recommend the Riverside in the thin graceful Colonial style illustrated. This model is a watch of exquisite design and is the thinnest reliable timepiece made. It is adjusted and cased at the factory and priced according to the grade of movement and quality of case. All 19 jewel Riverside movements are tested for temperature, isochronism and five positions.

Handsome booklet describing various Waltham movements and full of valuable watch lore, FREE on request.

On Your Camping Trip

With a stock of Carnation Milk in the camp kit, you will always have pure, rich, sweet, fresh milk for your coffee or for drinking.

You can carry a can of Carnation Milk as far as you like on the hottest or coldest day and jounce and jostle it over the roughest road. Yet when you open it, it is always sweet and fresh—far better than the ordinary milk you get at home.

CARNATION MILK

From Contented Cows

is richest cow's milk—nothing else—evaporated until of the consistency of cream. Nothing is added; nothing but water is taken away.

Carnation Milk is superior to raw milk for all uses—in coffee—for cooking and drinking—and far more convenient. When you next open a can note the smoothness, richness and creaminess of Carnation Milk.

Keep a case of Carnation Milk in the pantry of your home—on your yacht or in your summer or winter camp—and you'll always have pure, sweet, creamy milk—rich in butter fat—instantly available.

Rifle and Revolver

Shooting Teams for Olympic.

THE following entries have been sent to Kristian Hellstrom, secretary of the Swedish Olympic games at Stockholm:

Rifle Shooting—Allan E. Briggs, H. T. Bartlett, C. Osburn, W. A. Sproul, Harry Adams, Fred S. Hird, John E. Jackson, C. L. Burdette, F. K. Lang, W. Neil McDonald, E. L. Anderson, W. F. Leushner, A. S. Jones, John J. Dolly, R. B. Dennis and Harris Lanning.

Revolver and Pistol—Dr. Reginald H. Sayre, Walter Winans, Hans Roedder, James E. Gorman, John A. Dietz, J. R. Hicks, Thomas Le Boutillier, German F. Hoffman, G. R. Armstrong, Dr. Irving Calkins, Robert B. Dennis, P. J. Dolfin, A. P. Lane, P. Hanford, J. A. Baker, Dr. Harry E. Sears and O. F. S. Snyder.

Clay Bird Shooting—Charles Billings, John H. Hendrickson, E. F. Gleason, Daniel E. McMahon, R. L. Spotts, Joseph R. Graham, F. Hall, D. R. Culver and W. Libbey.

American Rifle Team Wins.

BUENOS AIRES, May 23—The American rifle team won the Pan-American international match here to-day, leading by a total of twelve, with twenty shots unfired because of darkness.

Capt. Wise, of the Massachusetts National Guard made the highest score ever made at a distance of 250 meters with a military rifle. The victory of the American team proved to be a most popular one, and aroused much enthusiasm. The vice-president of the republic and the minister of war personally congratulated each member of the team.

Rifle Note.

THE fifty-fifth annual shooting festival of the N. Y. Schützen Corps, will be held at Schuetzen Park, Union Hill, N. J., on Wednesday and Thursday, June 19 and 20. All riflemen and lovers of this sport are cordially invited to participate. Open to all comers. Shooting on the first day will commence at 1 o'clock and close at 7 o'clock P. M. Shooting on the second day commences at 9 A. M. and closes at 6:30 P. M. Shooting on the eagle commences on the second day at 11 A. M. The well-known shooting rules will be in force.

TRAP NOTES.

Roanoke Gun Club.

Clothes for Outdoor Life

Clothes that stand the racket of fishing, tramping, hunting, and look well through it all — they must have good stuff in them.

Forestry Cloth is made by the American Woolen Company especially for this purpose. It is pure wool, protects the body, guards against chill.

It is closely woven, turns wind and showers. Soft gray green, blending with rocks and foliage. All weights. The registered trade mark name

FORESTRY CLOTH

IS STAMPED ON THE BACK OF THE CLOTH

Forestry Cloth is used by the U. S. Government for its Forestry Service.

For riding, motoring and golfing suits, the American Woolen Company makes a pure wool fabric, Olivauto Cloth — that has style on top of wearing quality. Fashionable olive brown. Closely woven. Doesn't show dust or grease spots.

Samples of Forestry and Olivauto Cloth sent on request. If your tailor cannot obtain them we will supply you through regular channels as we do not sell at retail. Send check or money order for quantity desired (3½ yards for man's suit). Olivauto Cloth, \$3.50 per yard; Forestry Cloth, \$2.75 for medium weight.

Vacation Reveries

By B. FRANK OGLE

IN midsummer we went from Chicago to a village in New Mexico, where we were met by friends whom we visited on their ranch, a few miles from town in a beautiful and fertile valley more than a mile above sea level. Nearly all of the days are sunny, the atmosphere is dry and stimulating, and throughout the year one must sleep under blankets in order to be comfortable. Our views were of immense scope and surpassing beauty, and a vast range of mountains formed an imposing background. The sunsets were glorious beyond the understanding of those who have not viewed, under conditions most favorable, the western splendor of the departing day.

Each day we drove to the village, whose postmaster is a Mexican. We saw two village Mexican women repairing the flat roof of their adobe house. One woman mixed earth, water and broken straw, and placed the compound in a pail which, by means of a rope, was drawn to the roof by the other woman, who plastered it on the leaky spot, and when sunbaked the work was finished.

Five days after our arrival we went to Las Vegas, remaining over night, and the next day a wagon carried us far into the mountains. The scenery was sublime. During the forenoon most of our trip was over a road hewn in the mountains by convicts. We saw a Mexican woman washing linen and Navajo rugs in the Gallinas River. The washed pieces spread upon bushes were drying.

Bright plumaged American magpies flew from tree to tree. We passed through five Mexican villages and the Pecos National Forest, where reforestation is one of the duties of the forest ranger. By the side of a mountain stream we took lunch and then proceeded to a ranch 10,000 feet above sea level. A half dozen log houses furnished our party and other guests present with the necessary comforts. For supper we had mountain trout and other things delectable. A log fire in the open grate made us comfortable. We were stimulated by the dry mountain air, which was heavily laden with the agreeable odors of the great forest surrounding us. We retired early and never before were we so pro-

foundly impressed with the full meaning of silence. Securely fastened high in a tree was a bell with clarion notes, attached to it was a rope which reached nearly to the ground. In the morning our host rang the bell as the old time curfew bells were rung. This was the signal for us to forsake dreamland; a half hour later the mellifluous notes of the bell again surged forth, reminding us that breakfast was on the table. Poor appetites had become good and good ones better. Under the spell of

shelving rock, the outer edge of which is continually washed by a clear, cold mountain stream from which we all drank. In the shade were luxuriant ferns. The end of the jaunt had been reached and there we saw Harvey's Falls, noted not for its size, but for its transcendent beauty.

We returned in time for dinner and then our burros, which had been watered and fed again, faithfully carried us over a winding trail through a forest of aspens, and mutely and forcefully did this imposing family of trees appeal to us.

No bickerings were there, nor conflicting emotions, yet he who is versed in woods lore knows that strife is an inherent quality of forest trees, and that the survival of the fittest is one of the immutable laws of nature. Time turns not backward to view its explored territory; it stands not nor loiters; ever its velocity is uniformly great. To us the hours were as minutes and the minutes so small and fleeting that an effort to reckon them would have been preposterous. We saw a gray squirrel and several chipmunks. Our trail divided one of nature's wonderful flower gardens, whose zephyr-blown scarlet blossoms seemed to nod hospitality to their admir-

ing visitors. We saw some horned toads and small lizards, while a pair of plump grouse, alarmed by our approach, flew quickly away.

From Twin Peaks we had a magnificent view of valleys, mesas, ranches and mountains, covered with dense forests, over which hung a blue haze touching the tree crowns. At the close of the day we arrived at the lodges and after supper enjoyed a dance in the dining room.

On the following day our sure-footed burros carried us to the summit of a high mountain from which we had a good view of Point of Rocks, a massive red-brown mountain supporting very little tree or plant life. Far in the distance two lakes shimmered under the azure sky with its fluffy clouds; to our right across a monstrous cañon was a tree-covered mountain range; to our left another great cañon separated us from a gigantic treeless mountain, the side of which was almost perpendicular. A pair of eagles soared above us, their notes of alarm indicating that not far

REVERIES ON THE WAY.

nature's enchantment we were now truly living.

An hour later each of us mounted a burro, none of which could be likened unto a fiery steed, but they could pick their way unerringly over mountain passes and steep declivities. Each animal knew its name and some of the names were fantastic. They carried us down an enchanted valley past a willow-fringed stream, limpid and musical. We were in tune with the harmonies. Necessarily we traveled in single file and our cavalcade would have delighted the producer of moving pictures.

The trail was devious and as our coign of vantage changed continuously, so did nature's wondrous and inimitable pageantry appear to us successively in its varying forms and colors. At the end of a long descent our beasts could no longer safely carry us, so we tethered them and continued our way afoot. The roughness of the trail caused two of our party to fall, but neither was hurt. At last, we reached a huge

away their young were in the nest. On our return, as we were approaching the lodges, an owl perched in a tree viewed us seemingly as trespassers.

The next day two of the men of our party went fishing and returned with a well filled creel. One of the men and two of the ladies had an enjoyable walk to a garnet mine, where they were welcome to such garnets as were found near the surface.

On Monday morning we took a new trail, and accompanying us were two sisters, one a smiling baby and the other forty months old, who were comfortably quartered in boxes securely strapped on each side of a wise burro who stepped cautiously, seemingly aware that he was in charge of a precious burden. Moss hung in small festoons from the trees. We saw alpine junipers, balsam firs, pinons, spruce and many kinds of wild flowers, including Mariposa lilies, buttercups, floral firecrackers, bluebells and columbines. Wild strawberries were ripe and sweet. We lunched in one of nature's parks beside a cold spring, and our burros then carried us to the summit of Elk Mountain, about 12,000 feet above sea level, where with wonder and delight we looked first in one direction and then another, upon the stupendous and sublime panorama which completely surrounded us.

It is remarkable how far the vision reaches

when one is high up on a mountain. Several mountain ranges were visible. Miles away near two peaks great quantities of snow accentuated the dark, intervening mountain shadows. At all points of the compass we had an unobstructed view. Clouds were above and below us. Far away in different directions, widely separated by ethereal space, we saw at one and the same time, five distinct showers of rain. To us this was one of the seven wonders of the world, or to be more explicit, one of the seven times seven wonders of the world, for wonders are plentiful and apparent to those who make use of mind and eye conjointly.

After a night's rest our minds were surcharged with thoughts, which for days had peacefully slumbered. Duty had beckoned us; on poesy we had feasted and gaiety had been denied by fate. Hasty preparations were made for a return to what is known as advanced civilization, where man ignobly tramples on his brother in the mad race for supremacy. Bettered physically and spiritually, regretfully we departed from that sky land of romance, enchantment and day dreams—the place ideal for driads, naiads, elves, Pan and his nymphs. Nature's symphony expressed in high elevation forest, stream, wood life, water life and sapphire sky. Soon we were again of that ebullient and incongruous sea of humanity, with its jetsam, flotsam, maelstrom, compelling ebb and flow, storm and calm.

In June the royal coachman is by far the best fly, although I use a hackle as a second. Later on I have better success with a silver doctor and in September, when the water is lower and clear as crystal, a black gnat seems most efficient. At times almost any fly is eagerly taken, provided its color is not too brilliant. I have tried by way of experiment the parmachene-belle and Montreal, but have never got a rise with them.

Great quantities of beaver inhabit the stream, continually working and damming, transforming the slues and inlets into miniature lakes from which I have landed many big fish. Some years, when there is a heavy snow fall in the mountains, the river overflows its banks considerably, and on receding leaves quantities of fish in these ponds and there they stay for several years in luxury. These ponds are too deep to wade and are difficult places for casting on account of the pussy-willows that surround them, but one is well repaid when he hooks a big fellow, fat and full of argument and alertness.

For a variety of excellent trout fishing in a most delightful and invigorating climate, I doubt if the upper part of the Big Laramie River has an equal.

Trout Fishing on the Big Laramie THE TOP RAIL.

By R. W. RATHBORNE, JR.

THE Big Laramie River, although not as large as its name implies, is a fair-sized stream, rising at an elevation of about 10,000 feet, not far from the summit of the Medicine Bow Range, in Northern Colorado, and flowing northward. At first it is a merry little stream, romping through the willows, then out into the sunshine, full of miniature cataracts and whirlpools. Later it is augmented by mountain streams from either side, spreading with more dignity and composure, and after leaving the mountains winds across the Laramie plains quite placidly. It is a pretty valley through which it first wends its way, the pine-clad slopes of Medicine Bow on one side and rugged mountains of lesser magnitude on the other; in summer a sunny fairyland set out in white-barked aspen trees, carpeted with a great variety of brilliant colored wild flowers, and here and there clumps of blue Colorado columbine. The river falls from twenty to forty feet to the mile, but gradually creating conditions which afford all kinds of sport to the fly-fisherman.

The fishing is better in the mountains, or before the river reaches the Laramie plains, where the water is colder and entirely free from alkali.

The upper part of the river is rather off the beaten track, and to one fastidious in his tastes, the food is far from dainty, though ample and wholesome, and would make him yearn for a cuisine of more variety and luxury. But to the true and enthusiastic disciple of Izaak Walton,

paradise holds no greater charm than this river affords.

Anybody can catch some fish here, but the scientific wielder of the rod may hook as many as he desires, seeking the big ones in their still pools, tempting the more restless and active in the ripples, or whip the stream in any kind of water that suits his fancy. The average catch will be lively ones weighing a trifle over a pound, and the good fisherman will have several from two pounds up to six. I have seen a nine-pound German brown trout taken from the river and some rainbow even larger. The law allows a daily catch of twenty pounds, but I have never noticed anyone weighing his basket, and have known of individuals catching more than one hundred in a day.

The Wyoming fish commissioners and not God Almighty, planted these rainbow, German brown, Eastern brook and salmon trout in this stream. The Indians and early settlers found no fish in the Laramie, save the red horse sucker and a specie of mullet.

The Colorado fish season opens the first of June and closes the last day of September. Wyoming has no closed season, but as the river is too high and often too muddy from washouts for fly-fishing in the spring, the wriggling worm invariably finds its way to the mouth of a sucker. Colorado might quite as well follow Wyoming's example in regards to its portion of the Laramie River.

A CHICAGO amateur fisherman had fished all day, but could not seem to drop the fly where the fish were. As he trudged home, he tried to forget the jibing his club friends would cast his way. Wading up the stream ahead of him he saw a man, creelless, and with a fine string of trout strung over his shoulder. Being in Illinois he knew he could not catch a mess of speckled beauties with a silver hook, but he did want to take home at least a sufficient number to prevent his reputation being imputed. He overtook the fisherman, a young Irishman, whose flies were dug from the garden back of the barn. By way of introduction the luckless fisherman opened the conversation in the usual way: "Fine string of fish you have." "Yes," said the Irishman. "Are you fond of fishing?" asked the luckless. "Fond av it, did you say! Shure, it's me besettin' hin. You might say," said the Irishman with a twinkle in his eye, "it's the hin as lays the golden eggs. I see ye have no fish. No! Put it right over on that stump; thank ye," and in the State where a silver hook is legally outlawed, the man luckless with a fly profited by "the besettin' hin."

* * *

C. C. BATEMAN, of Carlock, Ill., transferred five eggs which he found in an owl's nest in the timber near his home to a dove cote at his home. The owls were hatched by a pigeon and all are thriving. The pigeon has registered no objection to the changelings, but is feeding them and giving them as much attention as if they were of the same species. The unusual mixture is attracting much attention. GRIZZLY KING.

Through North Woods by Canoe

By JACK

Photographs by the Author.

ON a Saturday afternoon about the middle of September Jack was walking up Broadway, New York, when he met a friend, Ansel by name. A few minutes' conversation disclosed the fact that both were on the eve of taking a vacation for two weeks. One proclaimed loud praises of a "beautiful" trip up the Hudson River above Albany, then through the "magnificent" Delaware & Hudson Canal, but the other stood firm for a trip through the Adirondacks. After several minutes of arguing, Ansel said he would talk it over with his "buddy" Johnny. At a meeting next day all three agreed on a trip through the North Woods, starting that same night.

Jack's knowledge of going light on trips where considerable portaging was necessary was depended upon in making up the outfit. We decided to take a seventeen-foot canoe, some six or seven years old. It was in use almost constantly, even going so far as sliding it over large cakes of ice, and pushing through floes during the month of February to cross the Hudson River.

After packing the outfits in the duffle bags, Johnny and Jack paddled to the West 130th street station pier, where Ansel had already been waiting for them with an armful of cookies and crackers and a can of tongue, with some fruit, which we ate with relish. On reaching Albany the next morning we carried the canoe and outfit across the railroad tracks to the station. The simple matter of finding the proper place to check our outfit for express shipment caused so much delay that we missed our connection, which meant

we would arrive at Old Forge, where we were to begin our cruise into the North Woods, four hours later than planned. To partly overcome this delay, we purchase food stuffs and a few other small but useful articles at Utica, also satisfied the yearning of our digestive organs for work.

This was the second day after the opening of the deer season, and we were a little dismayed to find from information obtained from the hunters and natives with whom we became acquainted on the train that our apparel was anything but correct for the protection we desired. Having left New York in the clothes we intended to wear at our arrival at Old Forge, it was only necessary for us to shove off the boat and put aboard the duffle and be away. The first camp was made on Fourth Lake, and not without a little confusion, as we had paddled until darkness had overtaken us. To make matters worse a fog made it difficult to find a suitable camp site. After a hurried meal we threw down our small paraffin lean-to on the wood-strewn beach and in a few minutes were asleep.

By the next morning the fog had thickened, and the tent, with which we had protected our blankets, was covered with a very heavy mist. From later experience we found this condition to be characteristic of the Adirondack region at this period of the year. We were well on our way across the "carry" from Fourth to Seventh Lake, when we met a party of hunters hiking for the woods in search of game, and from the guns in their possession it was easily seen they were out for business. Being desirous of seeing as much of the country as possible, we immediately launched our canoe into Seventh Lake, after making a purchase of homemade biscuits, and in quick time passed through it and carried one mile into Eighth Lake, whose shore had barely received the wash from our canoe when we began the mile and a half carry into Brown's Tract stream, a winding brook about two miles in length, which flows into Raquette Lake.

At Raquette Lake railway station we each ate a refreshing plate of ice cream and Johnny showed his "speed" with the weaker sex by exhibiting a fist full of postal cards, the addresses for which were copied very carefully from a list that he had. At every stopping place Johnny would send his usual number of cards and letters, some of which contained as many as twenty pages, although the first class matter always carried the same addresses. On account of the easy going up to this time we did not consider it necessary to consult any maps to find the outlet of Raquette Lake, which resulted in four miles of extra paddling. Sunset found us at Raquette Lake dam, where we made camp, and while Johnny was cooking the evening meal, Jack and Ansel pushed off in the canoe and struck out for bass. At dusk they returned successful their lure being a brown palmer, cast along the shore, and wherever these gamy creatures signified their presence by splashes.

After partaking of a breakfast of bacon and

eggs, we crossed the half-mile portage to Forked Lake, over whose surface we paddled for a short time when the rapids of the Raquette River came into view. The compactness of our outfit made it possible for one man to carry it, and gave us two men to handle the boat. As the leaky craft was gradually becoming water-soaked, weighing about 110 pounds, the additional man helped to considerably increase our speed over the portages, and the one and a half mile carry beside the Raquette River was quickly covered. The low level of the water only enabled us to be afloat for about fifteen minutes, during which time we were kept busy dodging rocks and sandy ledges. Before reaching Buttermilk Falls we had a short, but rough, carry to maneuver. On this carry we saw fresh deer tracks. Here our canoe almost came to grief by being tossed from the shoulders of Ansel and Jack, who had slipped on some moss-covered cobbles, and lost their balance while crossing an extremely muddy part of the trail.

At Long Lake village we purchased a few supplies, and then continued to the end of Long Lake, where we entered the Raquette River once more and made camp in a beautiful birch grove highly situated on the bank of the river, from where we had a splendid view of the surrounding country. The long night seemed to us like an hour, and ere the morning mist had cleared away, we were off, the steady current of the river helping us onward. Several times the shallow condition of the water left us hard aground on ledges of sand and bark, but we escaped the

necessity of getting out and wading by using the paddles as poles and working with increase effort. Shortly we came to Raquette Falls, which is one and one-half miles in length, but the portage is made easy by a road the entire distance, although if desired a wagon can be called by telephone which some up-to-date farmer, with a sense for making money, has installed. From the number of wagon tracks it is evident that this conveyance is very popular with the canoeing element who pass through this section.

On reaching the end of the carry we immediately loaded the canoe and very soon reached the entrance to Stony Creek Ponds, but on account of the low water in the channel one of us was obliged to walk. On a bridge which crossed the inlet was a band of six or eight men with high-powered rifles who had been out in search of deer, but were unsuccessful and were celebrating by having target practice shooting into the woods at everything and anything. One fellow in particular was so careless with the handling of his gun that it accidentally went off in the midst of the crowd, but luckily did not do any injury, excepting to make an indentation in the iron lattice work and spatter the lead in every direction. We asked to stop their shooting until we had passed around the bend. Notwithstanding this request, the firing was continued, and for some time we were in constant fear of a bullet being shot into our vitals.

Ansel, who walked up the road, told us that he had seen a black bear a short distance beyond, pointing in the direction from whence he had come, and after being led back to the spot on a "double quick" we were surprised to find Mr. Bruin chained to a stake. A half-mile carry brought us to Upper Saranac Lake, whose surface was like a sheet of glass. Our time on this lake was shortlived, however, for after traveling about three-quarters of a mile we came to a carry around the Saranac Club, about 200 yards, to Middle Saranac Lake. On reaching its outlet we made camp, but had no sooner partaken of supper and erected our lean-to, when it rained and blew. As the tent was pitched in a spot sheltered by pine trees, we were very comfortable.

Being a couple of hours' run from the town of Saranac Lake, we did not bother to prepare breakfast, but started out for town in a cold drizzle. Before reaching the end of Lower Saranac Lake, the rain stopped. To reach the town required a carry of two miles.

Jack carried the outfit, and his two companions doubled up on the canoe. After the former had covered about half a mile, he was invited to complete the journey in a touring car, and accepted after a little persuasion. When his two companions arrived with the canoe, all reported a tremendous appetite and made a beeline for a restaurant.

The town was full of hunters, some carrying rifles, others pack baskets. The general opinion was, however, that very few deer had been shot up to this time on account of the thick foliage, which kept them from view. With a liberal dish of bacon and eggs, some pastry and coffee put under our belt, we were eager to get away down the Saranac River, which we figured from the map would be a gradual drop of 1800 feet to the level of Lake Champlain. Our grub supply being low, Jack proceeded to do some purchasing, while Ansel and Johnny wrote some letters.

Our start was made from the railroad bridge at the end of some rapids, where the water was just about deep enough to float our craft loaded as it was. The width of the river at this point was between fifty and sixty feet, and the speed of the current below the rapids was about one mile an hour. For quite a distance the river, which soon narrowed down to a winding brook twelve feet wide, took us through a low-lying and grassy valley, until about nine miles from Saranac Lake, where it widened out to possibly 100 to 125 feet, and the water became deeper as we progressed. The banks were lined with white birch, all timber of any size seemingly having been logged or burned. It might not be amiss to state that our idea of the Saranac Valley was one of a deep swift-flowing stream, with mighty pines along its shores. Therefore, you can appreciate this was quite a surprise to us.

The sun was fast nearing the horizon when we rounded a bend in the river and immediately were confronted with rapids as far as we could see. We began to get up speed, and in the excitement did not discover we were going at a good clip down an incline, until without warning the canoe ran upon a boulder, which was hardly two inches below the surface. The boat did not stop until the contents of the canoe began to raise, showing that we were hard aground, and as it began to swing around broadsides to the rapids, Jack jumped out and held her nose upstream; Johnny slid overboard next and the canoe was towed to shore. Johnny volunteered to take the boat down the rapids with the outfit and in the descent many rocks were bumped and the result was a badly battered canoe, one rip being fully ten inches long. Jack was drying out his clothes at the end of the rapids, and Ansel had just finished buying apples from a passing farmer, when the canoe with Johnny in the center mounted on the duffle bags was spied coming down stream under a good headway. After landing and dumping out the water we paddled half a mile further and made camp for the night in a center of an old stage road at a height of about thirty feet from the river.

A bridge, which was the connecting link with the road on the opposite side of the stream, had been removed, as its usefulness had gone with the opening up of the new State road from Saranac Lake to Plattsburg. While eating supper a smell of burning rags was in the air and when Jack arose later to get his socks that were drying out before the camp-fire, he was chagrined to find the only pair he possessed with their soles burned off. A single owl in a nearby tree was our only company that evening, and he seemed to want to impress that fact upon us, judging from its continual hooting.

The next day we were away early, and as the current gradually became swifter, we were not surprised to soon find ourselves obliged to land and unload the duffle for a carry. Jack offered to take the canoe down the rapids to the dam at Franklin Falls. As the water was quite swift, it seemed only a few seconds before he reached the dam. The rapids here rushed through a tunnel beneath the dam with considerable force, and he decided to undertake the passage through, but when hardly a canoe's length from the entrance, he saw there was a drop of fifteen feet into a pit of foaming water surrounded by logs and with a thrust of a paddle brought the canoe broadside to the opening and jumped out on the

base of the dam. The boat immediately began to fill, and it appeared as though it would be crushed by the rushing water, but with the aid of the bowline he managed to pull it to shore. His companions noticed the predicament and came to his assistance, whereupon the canoe was portaged around the dam and our troubles were ended for the time.

After proceeding a distance we entered a flat country that had been used for the storage of water for power purposes. A more dilapidated and ghostly scene had never before met our eyes and the thousands of dead trees, some standing and others uprooted and covered with mud, were mute evidence of the terrible destruction. We paddled with increased vigor to get out of this gloomy place, but it seemed hours before our task was accomplished, the snake-like windings of the channel making it necessary for us to cover practically three times the distance as the crow flies. Presently we arrived at the village of Union Falls, whose population consisted of one family and a cottage, not to forget a team of horses and a flock of chickens.

We portaged one-quarter of a mile to the power house. Johnny and Ansel melted some tar, which they found here and smeared it over the rips in the canoe, as it was leaking so badly now that we found it necessary for one man to keep bailing continuously. Jack spied a small school of catfish or bullheads, and with two worms caught thirty-six of them in less than that many minutes. The place seemed fairly alive with these fish, and view them from the shade as they sunned themselves, was a beautiful sight. The lone attendant at the power house seemed surprised when we left, taking the fish we had caught with us, for as he stated he did not think they were good to eat. On his advice we stopped at the farmhouse of Simon Perkes, whom we hired to drive us to Clayburg, about six miles distant. The river from here to that point is very shallow, and the road is such a distance back that in the event of a carry being necessary, much time would be lost, and then again unless we followed the banks of the river, it would be hard to tell where the canoe could be put afloat again, which would result in a lot of unnecessary portaging which, with a hot sun beating upon us, did not appear very pleasant. We traveled for almost two hours as passengers of "Si," who was a talkative and interesting character, and when we put off on reaching our destination, Clayburg, the history of this section of the Saranac Valley was no more a mystery to us. From a high ridge we could see Mt. Marcy and Whiteface; whose summits were covered with snow. We soon discovered that the water at this point was not deep enough to float the entire outfit, so Ansel and Jack walked along the road, while Johnny took the duffle and canoe down stream. After covering a couple of miles in this manner, Jack got into the canoe also, as it appeared some swift rapids were ahead, and Johnny would need assistance. To avoid the discomforts of a spill in the only clothes we possessed, both donned bathing suits and tied the duffle bags securely.

On a Steaming Idaho Creek

By MRS. E. H. PLOWHEAD

Photographs by the Author.

THE cool babbling brook and the icy spring have become so closely associated with the ideal mountain camping ground that it seems almost incongruous to tell of a vacation spent in the heart of the pines camping on the banks of a steaming hot creek. It was delightful—that summer spent in the outskirts of the Seven Devils' Mountains of Idaho, at the Starkey Hot Springs—and the women of the party voted our camping grounds almost ideal.

To only the favored few has it yet been revealed that Idaho has vast possibilities as a pleas-

ture and health resort, and these chosen few are more than enthusiastic. To the bracing mountain air and the majestic mountain grandeur are often added healing hot mineral waters, for Idaho abounds in hot creeks, hot springs, hot lakes and hot artesian wells, the homes of her capital, Boise, being piped with natural hot water and her streets so sprinkled.

Where there are women and several children in a mountain camping party, even the most scientific of "scientific shirking" will not wash the greasy frying-pans, bathe the babies, cleanse the necessary clothes, nor prevent the ordinary camp stove from smoking and acting bewitched when one endeavors to heat a boiler of water, or hasten the fire for the belated fisherman's dinner. But here were gallons of steaming hot water—thousands upon thousands of them rushing by our tent door every minute, and as if nature was trying to see how accommodating she really could be, she placed a pure little bubbling hot spring at the foot of our camp stove. The water was hot enough for an extemporaneous cup of cocoa, for drinking, or provided a warming oven where the tardy arrival's dinner was always warm.

Oh! how the mother of the camp reveled in the inexhaustible supply of hot water. She had lived for some time upon a dry homestead where water was more precious than rubies, and we now accused her of being very extravagant in the matter of clean clothes and enjoying the sensa-

tion of wasting any amount of perfectly good water. These hot waters were supposed to possess many virtues and medicinal qualities—beauty, youth and happiness would follow her who faithfully drank "two glasses before each meal, two between meals and two upon retiring," but if the too fastidious camper scorned our offering of sulphur and iron nectar, flavored with such glorious promises, he had but to take a short climb up the hill to find plenty of cold water at the junction of the cold and hot creeks. Here a cold

stream was fed by twin springs, gushing forth side by side from underneath huge rocks—one a sulphur, the other an iron spring. The creek thus formed was perhaps thirty-five or forty feet in width—a typical mountain stream in every thing except temperature, as it dashed over huge black boulders, tumbled over fallen logs, rippled on the sands and foamed in dancing waterfalls.

Mornings and evenings it presented an interesting appearance when the condensing steam arose in clouds above the banks. We had been camping in the higher mountains, and had been driven down to the hot springs partly by too closely approaching forest fires. The first morning after our arrival, when we gazed from the windows of the small hotel where we temporarily stopped, it seemed as if we had jumped from the frying-pan into the fire, literally as well as figuratively, for the underbrush, which skirted the creek, seemed to be a fog of dense smoke. It took us but a minute to discover that it was only the condensing steam which arose in immense clouds, especially if the nights were cold, but the

sight was one which we never tired of watching each morning until the sun dispelled the vapors. The picture of the hot creek was taken just before the sun peeped over the hills one morning, and gives but a faint idea of the real appearance of the steaming creek.

The same springs which fed the creek, furnished hot and cold mineral water which was piped to a small sanitarium and mountain resort near our camp. There was in connection a splendid little plunge, where one might rent bathing suits and enjoy the early morning or evening hours in swimming, diving and enjoying the warm plunge generally. The plunge, being piped with hot and cold water, was usually of a tepid temperature. Sometimes, however, a mischievous youngster would turn on the hot water full force about an hour before the general bathing time, then it was comical to see the bathers, especially newcomers, endure the water for a few minutes and emerge in great discomfort, looking like the proverbial lobster.

Being one of those unfortunates lacking a statistical memory, I cannot give the exact temperature of the water. The creek which rushed by our camp was too hot for one to bear her hands in. Remembering that this creek was originally a cold creek, reinforced by hot springs, one can well realize that the original springs, while many degrees below the boiling point, were still very warm.

Other sports and amusements were not lacking. Many mountain creeks furnished excellent trout fishing, some of the women of the camp proving themselves almost record-breaking anglers. Larger fish were often caught in the Weiser River, which flowed nearby, our party being several times treated to large salmon roasts which came from salmon weighing from twenty to twenty-five pounds.

There were diversions for those of even milder tastes—the hillsides, white with syringa, or mock-orange bushes (Idaho's State flower), long delicate sprays of clematis and spirea, tempted the girls forth on many an exploring expedition. Some of the booty thus secured in the shape of tiny plants, is now being successfully naturalized in home gardens.

Our regrets at leaving so delightful a spot were tempered by the fact that with the approach of fall, the very cold nights made our outdoor sleeping rooms rather chilly propositions, in spite of hot water bottles reinforced by the creek water, but we all hope to again some time spend a summer camping in so alluring a spot.

SOMETIMES WE DIDN'T FISH.

"THE GROVES WERE GOD'S FIRST TEMPLES."

"Now, that Reminds Me"—I.

By O. W. SMITH

Photographs by the Author.

WHEN a company of fishermen are gathered about the camp-fire, pipes lighted and good fellowship reigns supreme, the events and happenings of the day are recounted, laughed at and exclaimed over. Then, as the flames leap higher and higher and tired muscles relax, the happenings and events of other days are levied upon, as narrated incidents recall them to mind, until in retrospection many a distant forest-bound lake and wild mountain torrent has been revisited. Retrospection is as truly enjoyable as actual fishing, though the cynic of the party listens with a supercilious smile upon his face, remarking *sotto voce*, "That story has grown somewhat since I last heard it." But

of May, a little matter for which we paid a good price in June, but that has nothing to do with this story.

"There were four of us in the party, all good fishermen, one being a member of the Assembly and noted for his eloquent addresses upon 'Law and its Observance,' a subject popular to this day in the Badger State as you know. Though we reached the stream a day before the law was out, none of us expected to wet a line until the morning of the next, for did we not have with us the honorable so-and-so, also a certain theological student who expected to teach the moral law in the near future?"

"Well, after dinner we strung up our rods

"Then it was that the honorable member of our party 'rose to the exigencies of the occasion like a trout in fly time.' 'Boys,' said he, heaving a great sigh of resignation, 'there is but one thing that will fill the bill now, and that is a worm; if I had one I'd put it on.'

"'But, but,' sputtered the theological student, 'what would you do if a fish took the bait?'

"The member from —nth district gave him a withering glance before replying, then, with high and lofty scorn, 'My dear boy, I'd very kindly *unhook it and let it go its way.*' Somehow, as I think of it now, he gave the last part of the sentence peculiar emphasis. I can see him yet as he stood there in the rays of the bright April sunshine, his hands shoved deep into his pockets, his eyes alight with fun and mischief. Suddenly his face went grave, and with a great show of astonishment he drew out a baking powder can and opened it. It was filled with worms, great healthy kickers.

"'Well—I—swan!' he slowly ejaculated, 'if I didn't clean forget that can!' And he looked at us sharply to see if we doubted his word, but not a muscle of our faces quivered.

"Then the theological student of all men fished out a can, the exact counterpart of the one the honorable gentleman carried, while the glance they exchanged suggested the suspicion that perhaps the whole thing had been prearranged, though be it far from me to utter such a thing. In less time than it takes me to tell it we had paired off, I going with his honor, while the fourth man disappeared under guidance of the budding preacher. Now, I do not pretend to excuse our action, nor will I attempt to do so, though I am sure all true fishermen can appreciate the temptation. Even as I followed that erstwhile champion of 'Law and its Observance,' I found myself exclaiming with David of old, 'How are the mighty fallen!' Then I saw him land a half pound trout and slip it into his basket, and up to that moment I had not noticed that he had it with him.

"'But, but,' I gasped, grasping as a drowning man is said to do at a straw, 'how in the world are you going to reconcile that action with what you just told the theological student?'

"'I told him,' replied my companion with fine dignity, 'I told him, that if I hooked a trout I would unhook it and let it go its way, and I assure you that that fish went its predestined way. Hello, as I am a Presbyterian, here is another to keep it company.'

"The sight of the second fish was too much for me, so I threw my scruples—I am very certain that I had some—to the wind and joined in the illegal sport. How those trout bit! They say that fish bite best on Sunday, a matter concerning which I know nothing, but I am certain that I never found them more ravenous than they were that afternoon. As the honorable gentlemen carried the only basket, it speedily grew heavy, but we did not stop fishing until the approach of night compelled us to do so, then the fifteen-pound creel was full, full.

"The night had fallen, black and somber, when we essayed to cross the little country cemetery, where the 'rude forefathers of the hamlet sleep,' the humble couch of each marked by a leaning grave stone. So dark was the night that we would not discover a stone until almost upon it, then it would seem to jump out at us, apparently with the intention of saying 'boo,' but only

PINE RIVER.

the true angler disregards the cynic's twisted smile and ungracious remarks, knowing full well that God did not make him so.

"Now, that reminds me." What pleasant happenings and wonderful experiences are prefaced with that simple phrase, more meaningful than the story book "once upon a time." It shall be my pleasant task, to record in simple language a few of the yarns spun by the side of a certain camp-fire. I shall tell you nothing of the narrators sitting by the camp-fire; they are only anglers, but if you, reading between the lines, think you discover traits and illusions which remind you of mart, forum and pulpit, you will kindly let it pass, for it would not be surprising if the color of a man's narrative were tinged with the pigment of his work-a-day world.

* * * * *

"'Now that reminds me' of the time I was fishing Pine River, down in Waushara county, Wisconsin. Let's see, that was several years ago, so many that I do not care to remember exactly how many, but the month was April, and a beautiful April it was, too; almost like the last

and spent some time practicing casting in which the theological student easily lead us; then the honorable so-and-so suggested that we go down to the river and try our hands there, 'just to make it more natural, you know.' So in due time we were lined up along the water's edge, casting down stream. Suddenly our stickler for law and order said that he was going to add the weight of a hook to his line, 'just to overcome the weight of the line.' Such is the power of example that in a few moments we had all attached hooks to our lines and were casting away for dear life.

"Now, boys, I swear to you that I was innocent of all guile, so when the leader of the party suggested that we add just a wee bit of weight to the hooks, again 'to make it seem more natural,' I began to search the stream's bank for some object that could be attached to the bits of steel without interfering with the casting, but search as I would, nothing came to hand. We went through our pockets, at least I did mine, without discovering so much as a split shot or a lath nail.

to slink away into the darkness, while another rushed up to meet us. It gave me a decided creepy sensation, and I am sure had we not found where the old path united with the road when we did, I would have made a run for it, and had I done so I would have been chased by every one of those ghostly grave stones.

"'Say,' remarked his honor, when we felt the good sand beneath our feet, 'you hurried through that grave yard as though you thought the shade of old man Gardner was close after your heels.' Old man Gardner was a one-time character who fished the Pine River with a long cane pole, caught fish and doubt's anodyne, whose ashes rest

in peace above the stream he loved so well in life. I let it go that it was Gardner's shade which bothered me, but I knew it was the knowledge that my companion toted a basket of fish, every one of which was taken illegally.

"We sneaked into the barnyard of the farm where we put up, felt our way into the granary, and buried our trout deep in the oat bin; then entered the kitchen of the farmhouse where we were entertained and tried to look as though we had simply been on a prolonged casting expedition. If the good agriculturist had any suspicions he did not manifest it by look or remark. So we sat and visited until the theological stu-

dent and his companion came in, after they, too, had made a surreptitious visit to the granary, then we had a hot supper and retired. The farmer calling to us as we climbed the creaking stairs, 'I hope you will have good sport on the morrow,' and we felt somehow that there was gentle chiding in his kindly wishes.

"That happened long ago. Honorable so-and-so, to whom the fishermen of Wisconsin owe the planting of many a stream with trout fry, has gone to his long reward, while the other members of the group are widely scattered, but I, as fourth member, will never forget the only time I fished before the legal season opened."

From Eastern City to Western Forest

Chapter III.—Visitors to the Ranch

By ERION

CHAPTER I. referred to my escape from city life and Chapter II. contained some salmon stories, but it must not be inferred that I am a "sporting farmer." A man who has his own work to do on a dozen acres of land (without hired help) has few idle hours. The regular chores are relentless and exacting and would be unbearable except for the pleasure of doing them. Live stock must be fed and looked after during seven days of every week, and the same is true of things indoors. Fuel has to be supplied and errands done. There is garden work and orchard work; always something from sun to sun. Work of this sort cannot possibly be very profitable in a financial sense, even where the sales of produce are considerable, but there are dividends, nevertheless. Perceptions are made clear, all the wholesome appetites are whetted, and sleep is sweet and refreshing. And one's interest in humanity is made acute rather than dull by a partial renewal from the hubbub of the world.

Out of the woods one spring day came a little smiling fisherman. I knew him to be a dominie from his dress. He was using flies in his quest for trout. Our stream is not adapted to fly-fishing, being for the most part lined or half covered with shrubs and brush, but this man's skill and patience overcame all obstacles, and he was taking a good many fish.

What a pleasure it was to discover a personal friend in this way; a man never seen before or since, but who knew far-away places and people known to me, and who used for bait the same flies that I had used years before in Eastern waters.

Another man came out of the woods another day; very early in the morning. He knocked on the cabin door and asked his way. He did not ask to enter, but turned to take the trail to the village. He was thoroughly wet and evidently cold.

His act in turning away from shelter, warmth and food instantly won sympathy. He was taken in and put by a warm stove. His shoes and stockings, coat and vest were removed. He emptied his pockets of papers, maps, a Bible and various small articles. He was made dry

and comfortable and supplied with coffee and broiled trout. His face changed shape and became broader, and his tongue found itself. He had been on a real estate errand the previous day, and on his return had attempted to make a short cut and had become lost. He had a compass, but as night came on he could not recognize the north end of the needle. In trying to make a fire he used match after match, until the supply was reduced to one, but that match, the last, gave him a blaze, and he had not suffered from cold during the night. With early dawn he was again on foot, but unable to tell whether he was on the east or west side of the peninsula. He shouted and called, again and again, but could get no response, and all the time he was becoming more and more wet, partly from the bushes and partly from the rain. Finally he did the sensible thing—followed down a running stream in the certainty that it would lead him out of the wilderness.

"The smoke coming out of your chimney was a most welcome sight," he said. Doubtless that was true, for a man who is tired, hungry, cold and wet may feel miserable enough.

Hunters of deer and bear sometimes knock on the cabin door. Such a man came during a rain storm in autumn. He was afforded temporary shelter and directed as to the best and shortest way to the steamboat landing. He was a young man of pleasing address, hailing from the city. In the course of a week he was back again with a comrade. They asked permission to sleep in the barn, which was granted. Before daylight they had breakfasted in the kitchen, and were

off to the woods. They took the western of the two valleys that converge near the cabin.

Hardly had the two city hunters disappeared from sight when along came one of my neighbors, an Indian-footed white man, destined for the same valley. I halted him and explained the situation ahead. He promised to be careful, but nevertheless when he overtook the hunters he found himself looking at two rifles pointed his way.

The three men walked together up the wooded valley for a time and then separated. My neighbor crossed the stream and presently forged ahead of the others. He afterward explained that he knew it was out of the question for a party of three to surprise a bear, as his two companions were making considerable noise as they went along.

In an hour or so the foremost hunter found a bear on a log jam looking for salmon. He shot and killed the animal, removed the entrails, and made ready to carry it home. He made withes or ropes by twisting young cedar boughs, bound hind foot to fore foot on each side, and then worked himself inside of and beneath the carcass; that is, bear's body on human back, bear's head above human head and bear's arms around and under human arms. In this manner the game was carried down the valley.

It seemed then and still seems to have been a dangerous procedure, for the other hunters might have mistaken the dead animal for a living one, as it approached them. But no accident happened, and the ranch was reached in

(Continued on page 709.)

Some Notes on American Camping Foods

By L. LODIAN

A MILMOT or thousand-word article like this can but give a brief passing survey of a big subject, with some suggestions pointing out a few of the medical values of foods carried by out-campers. Without realizing it, many of our commonest foods possess remedial virtues for the occasional setbacks or ills of outdoor life—as chills, fevers, worries, bowel troubles—which, used appropriately and in time, keep one in normal health.

The five essentials in camping-out foods are meat, bread, sugar, tea and coffee; and a person could camp from coast to coast on these five—at a push. But, the monotony of the thing. Hence variation in the fodder supply is a necessity to comfort. Cheese and eggs and nuts are splendid auxiliaries to meat; canned vegetables of the bean family help out the hardtack; dried fruits supplement the sugar; and cacao is an important variant, all of which beverages are made more homey by adding evaporated milk.

But the average American camper very properly requires variety in his bill of fare; and the catalogs of our outdoor life supply houses' list quite a lot of condensed foods suitable for all climates and purposes. For the novice contemplating a camping trip, the best thing for him to do is to get copies of catalogs, and purchase specimens of the provisions, and try them out on himself in his own home of an evening and morning (if a business individual), and particularly on Sundays. If possible, in fact, live for days exclusively on this camping out fare—see how it agrees with you—for, recollect, when in the wilds you may have for days no other fare than these goods you carry.

Trying out the goods, first, at home, will also enable you to get your hand in at cooking—sometimes a most important desideratum in the open. Not all men are handy at cooking; and much food is wasted and disgust caused, sometimes, by the bungling of the cook of a party.

Every experienced camper should know how to serve up hot biscuits of a morning, and have them light without yeast; to make a good enough fire from rubbish knocking around, if there is no wood; to extemporize a shower bath with a minimum of water; to obtain a light if lacking matches; to sharpen a razor on the gritty particles imbedded in a shoe sole, if lacking a hone; and a hundred other wrinkles of woodcraft.

The novice who expects to have the sheer lazy, criminal time-wasting time he was wont to have lying prone in the hammock on a veranda of a New England farm—the annual “outing” of thousands—is in for a jolt! Genuine camping is the strenuous life carried on in the open—a species of leg and arm athletics in the wilds. It has been the salvation of many a man—es-

pecially to the fevered brain of a speculator. He gets that touch of nature which drives home into that fevered brain the realization that there is something more in this life than dollar-getism.

* * * * *

The present scribe has done a vast amount of camping out over the globe, but this was very rarely for the “fun of the thing,” but in the course of the sheer struggle for life, while at real hard work on railroad location work and surveying, inspecting manufacturing plants, mills and mines; erecting machinery as a practical mechanical engineer; canal and irrigation work; and the like outdoor working “recreation.” In these multifarious duties he has had experiences from the St. Lawrence to the Rio Grande, and half a dozen thousand miles beyond—to the sand-plains of the Plata; from the

A STACK OF TEA COMPRESSED.

Paramata (Australia) to the Ganges (India); from one end of Siberia to the other; and of European countries, repeatedly. Hence the authority of these notes.

There is a difference in the opinions of those who camp out for a few weeks “for the fun of the thing,” and those who camp out month after month through all the rigors of a Siberian winter, because their work obliges them to do it! You then begin to realize the superiority of fairly strong tea over any other beverage; of white bread (no wheat hardtack) over all other breadstuffs and vegetables; of loaf sugar over every other form of sweetener; and of dried, unsalted meat and desiccated eggs and evaporated milk and cream over other diversified animal products.

An explanation of why tea is more “stay-ing” as a camping beverage than coffee, is in order. It retards the waste of tissue. Why? Tea contains tannin; and, just as tannin preserves skin (and, if the process is continued long enough, converts it into leather), so does the tea infusion, in a measure, help preserve the bodily organs.

Of the teas, the pure black teas like cian-chang (suchong), kongu and asam are more sustaining than Ceylon teas, and require slightly less sugar than green or mixed teas.

Medicinally, strong hot tea, without milk, is a splendid stand-by in bowel trouble, and I have often checked by it apprehensive signs of a choleric threatening. In headache, and to cure melancholia, it is superb.

Coffee has not the sustaining or carrying power of tea. All Arctic workers testify to their preference for tea, though American campers prefer their coffee. There is no saving effected in carrying along coffee extracts (mostly of dubious origin), as you have the weight of the bottle, and the water holding the essence of the extract, to carry along. The powdered form is best, in tight cans. A coffee paste on the market is—well, just “stuff.” Coffee tablets, of German origin, have been imported and tried, but died in the “borning.”

Cacao, erroneously called cocoa by some, is only useful as an occasional change. None of the numerous outdoor life tribes or parties of the New England or the Western States have ever adopted it; and only occasional Arctic folk have “sung its praises.” Contrary to popular notion, cacao and chocolate are not the life-sustainers commonly thought. They are useful as adjuncts; alone, you might starve on them, particularly if quite pure—i. e., without a particle of sugar.

Cacao the write has often taken along, but in the form of the crude cacao beans—purchasable at most large city groceries. To use, roughly crush them in a leather bag or extemporized mortar, and drop for five minutes into scalding water. Or, they can easily be chewed whole as you go along, and keep away the pangs of hunger. Can be carried loose in the pocket, and are always cleanly to handle. A handful crushed with a couple of lumps of sugar, yields an ideal-tasting chocolate.

The medicinal value of cacao should not be overlooked. It is (in chocolate form) of great use in throat trouble, as tonsilitis, quinsy, et al. So, in fact, is sugar alone, often bringing at once grateful relief. All goods containing salt immediately irritate and aggravate the disease.

A rather dolorous exhibit in the camping supply catalog of to-day, is the pocket case of medicines to be carried. Better carry along nature's own medicines, in the foods you take—wherever practicable. For this reason I have noted here and there in this short article the medicinal value of things consumable.

* * * * *

Dried cream and milk have entered the camping-out life in the past decade only, but have been known for over half a century. It is all right; and even butter can be churned from the dried cream, after diluting, but with oh! such a flat taste compared to the fresh dairy article.

Dried eggs are also “alright.” I once had

dried-egg fare, from a small barrel of them, for over a couple of months—in principally scrambled eggs—but the daily need of a combination fruit fare with them is indeed imperative!

Dried strawberries have been on the market the past five years or so, and are the highest priced of all the dried fruits. They are difficult to produce satisfactorily. Campers can now have—with the dried and evaporated creams—the luxury of strawberries and cream any time, even if midwintering in Alaska, or summering on the banks of the historic Tigris and Euphrates rivers west of Bagdad. But never expect the same fresh flavor of fresh strawberries and cream! These preserved provisions—whether dried or canned—have lost their natural fresh flavor for all time. Who cannot tell the difference between a pie made of fresh peaches and one made of the dried article, with their peculiar, slightly “leathery” feel in the mouth? Strawberries, be it known, are slightly remedial of rheumatic troubles, as they contain a trace of salicylic acid.

It should be noted that the dried cream and milk—take care not to have dried skimmed milk palmed off on you!—and the dried eggs are useful to stop over-looseness of the bowels, while dried apricots are useful in fevers and anti-scorbutic.

Compressed package fruits—like seedless raisins, pitless prunes, stoneless dates, compacted figs—it is well to include in every camping outfit. For three reasons: They are useful variants; are sustaining foods (a handful of figs and a hunk of bread will afford a fair lunch), and are all slightly aperient—keep one “just right.” Isn't that better than carrying along cathartics or drugs of the “nastoria” type? Don't occupy space with uninteresting pills or dried castor oil powder (an innovation of the last few years), but take along things which are both foods and “keep righters.”

Salt, pepper and spices offer variety to the meal, while pickles and chow chow add greatly to a meal of fresh fish or game killed en route.

* * * * *

Readers should have the note of warning sounded to them regarding some so-called foods which are more stimulants than are foods. Ex gratia, the much-vaunted beef extracts. Their originator, Liebig, himself many years ago sounded the warning note against regarding them as other than stimulants and tonic pick-ups. Excellent for enriching soups, yet an ounce of the extract has less muscle-building property than that hunk of bread you eat with the soup.

Package gelatins for making jelly are much in evidence. These are a delicacy, like mushrooms, and are lacking in nutrition.

Alcoholic drinks—even the best cognac—are not worth carrying. “Useful in case of illness,” you may say. But, usually, when the illness comes, it is discovered the drinks went for “night caps” long ago; or that Pop Red-nose, the guzzler of the party, had not been able to resist his city-acquired habit.

* * * * *

The sugar allowance should always be liberal all round, because sugar is both a food, an energizer, and “warming” in cold spells or regions. All listings of sugar among provisions

(Continued on page 710.)

Trouting in Green River, N. C.

BY ERNEST L. EWBANK.

THE fishing season is now open, I suppose, pretty much all over the country, and many anglers in many States are getting ready no doubt for their annual outing in the woods to catch the speckled beauties of the clear mountain and woodland streams.

No doubt many, very many, of these anglers can cast a fly better than the writer of this letter. But it is not all in casting the fly. One great prerequisite to killing or catching trout is that the angler must not show himself. Nor is this all. One not knowing how quick trout are to “locate the angler” will very often approach a beautiful bit of trout water—a pool or either good stretch of live water with the sun shining directly from behind him, thus throwing his shadow across the water, and the lower the sun the longer his, the angler's, shadow in the afternoon or morning. He has not shown himself to the fish, but has done just as bad. This shadow has suddenly moved across the water and immediately the fish are in hiding of course. And why has he done this? Is it because he has been advised only to fish upstream, or only down stream? Or is it simply he did not know? In any case, the fish knew he was there, and that is, or was, enough. An observant angler will learn the streams and fishes, and learning them will learn, too, the general character of trout streams and the kinds of water the trout like best at certain times. And he will be guided by the day, the time of day, and other attendant circumstances as to whether he will fish up stream or down stream and how.

Recently I went to Green River, as I did on April 15, and again a very dull cloudy day, and the wind shifted to the east. I have found, as have other anglers, that Green River rainbow trout object to being taken on an easterly wind. But this wind was not all day and so I took several nice trout “between winds.” Walking down to the power plant I fished the pool there with no results, as a bait fisherman had been just before me and left his long cane rod set well out and in the way. So I went on down stream and caught several trout eight to nine inches long, but it looked so much like rain and the cool breeze blowing over me was anything but comfortable, as I do not wear waders; simply an old hunting coat with breeches to match and hob-nailed shoes. I wear leggings and take the wetting.

I left the river thinking I might as well go home on the mid-day train, but when I reached the cotton mill the clouds did not look so threatening, so I decided to walk myself warm by going to the head of the deadwater of the dam, some two and a half miles. This I did and began fishing up stream. At a point a half mile from where I began there is a large boulder in mid-stream and on my side of the stream a rushing torrent of water caused by this large boulder; then midway a submerged sandbar, then just a little pool. I call it a pocket. Below the boulder the water spreads out, but I seldom find fish below it.

Going with much care across this swift run (it was necessary really, else a fall would follow), I got near enough to gently drop my flies at the furthest corner of the pocket and let them float down. A rainbow stopped them before they had gone two feet, and then we fought it out. Back and forth, up and down that little pool he went till at last I dipped my net under him and soon he was in my creel.

I measured him with my usual hand measure; fourteen and one-half inches. This was 1 P. M., and at 7 P. M. he measured with yard stick just fourteen inches exactly. With a change of wind to the east I did little more, and I walked back to the power plant, another good three miles.

In the swift water below the plant I soon hooked and lost with the fly a fish of about nine to ten inches. Just there is a little run of water of great strength. I could not have walked through it but for a heavy iron pipe that was lodged across it, and as I was anxious for a cast on the pool under the mountain, I got in above the iron pipe, and holding to that got over safely. Then I stalked the run up under the mountain to just where it breaks around the rocks; always nice trout there. Keeping well back out of sight (the sun could throw no shadow of mine on the pool), I cast my fly just a few feet beyond the rocks and let it float down, keeping in the slack with my left hand, and what a beauty shot out from those rocks! I struck promptly, and we made close connection. Then the fight was on. Twice I got my net under him and he was away again, but the third time I dipped him up.

Killing him, as I always do with knife, before taking him from the net, I looked for the fly. It was out of his mouth. By my usual measure I made him sixteen and one-half to seventeen inches. He afterward measured seventeen inches with yard stick. The east wind again being rather cold, I left the stream for the railroad depot and home. I did not like to stop at the time of day the largest trout usually rise there, but I cast and cast to no purpose, and so having been quite wet from 9 A. M. to 6 P. M. and no sun, was a bit trying. So I had to give it up. My two largest trout were quite enough for breakfast for four of us, and the smaller ones I gave to one very glad to receive them. Yes, the first lesson in catching trout is, don't show yourself either in shadow or substance. There are many other lessons in the school of experience in trout fishing.

North Shore Casting Club.

CHICAGO, Ill., May 20.—*Editor Forest and Stream:* Considering the weather conditions which prevailed last Saturday, the subjoined scores are very good.

I am notified by the national secretary: “The tournament held under the auspices of the N. A. S. A. C. has been assigned to the Angler's Pool, Washington Park. The dates are Aug. 15, 16 and 17.”

A hearty welcome to all members has been extended by the secretary, and these dates do

not conflict with our event days, we are all duty bound to attend.

The captain wishes it known that hereafter the first game on each event day will be started at 2 P. M. sharp.

Practising Fly-Casting.

THE Springfield, Ill., city council received a petition from the Springfield Bait-Casting Club, asking permission to practice fly- and bait-casting in the lake of Reservoir Park, one of the public resorts of the city. The lake is well stocked with fish, but no one has been permitted to seek the finny tribe. After considerable discussion, it was finally decided to grant permission to the club in accordance with the petition, but in order to avoid any accusation of partiality, the freedom of the lake will be given to all persons on each Saturday. The casting club wished the exclusive privilege in order that they would not be disturbed by others. It is likely that the club will seek some other lake in which to practice the casting art.

Illinois Casting Club.

CHICAGO, Ill., May 21.—*Editor Forest and Stream:* The opening contests of the season were held on the 18th inst., as scheduled, under rather adverse weather conditions.

A number of the members present did not cast their scores, as they declared their intentions to join the class which will cast on the day following regular contest days. Owing to the 19th being the date set for the invitation tournament, the members of this class will take re-entries for these events at a later date.

Weather: During the accuracy bait, wind S. W. and puffy, during distance bait, wind S. W., velocity approximately eight miles per hour; during accuracy fly, sky cloudy, calm.

Following are the scores in the order as cast:

Half-ounce accuracy bait:		
J. W. Tice.....	98.8	R. N. Abbey..... 97
O. C. Wehle.....	98.2	H. C. Humphreys... 99
A. D. Whitby.....	98.9	N. C. Heston..... 97.7

W. H. Ball.....	89 3-5	
Accuracy fly:		
W. J. Jamison.....	99 4-15	L. E. De Garmo... 99
W. H. Ball.....	99 12-15	J. E. Ammon..... 99 5-15

*Guest.
Attention is called to the excellent scores made in the accuracy fly; W. H. Ball's fine score of 99 12-15 establishes a new club record. The distance fly event was postponed. It is gratifying to note Brother Humphrey's high score of 99 per cent.

It is with pleasure that we announce the official notification that the N. A. S. A. C. tournament for 1912 will be held at our lagoon in Washington Park on Aug. 15, 16 and 17. This will probably be one of the largest meets in the history of the national organization, and in planning vacations, it will be well to bear these dates in mind.

A number of ladies graced the occasion by their presence during the major portion of the day.
A. F. SWISHER, Secretary.

Newark Bait-and Fly-Casting Club.

EAST NEWARK, N. J., May 19.—*Editor Forest and Stream:* Following are the scores of the first club contest of this season held at the club platform, Weequahic Park, Saturday, May 18:

Perry Frazer, salmon fly, distance, 118ft.		
Distance fly, feet:		
Mapes	89	Marsh (visitor)
Doughty	87	Frazer
Endersby	72	Muldoon
Frazer and Muldoon used heavy rods; the others 5oz. rods.		
Accuracy fly, demerits:		
Frazer	12	Endersby
Doughty	23	Muldoon
Mapes	23	Marsh
Doughty beat Mapes in casting off tie, with 10 demerits to Mapes's 19.		
Accuracy, bait, per cent.:		
Muldoon	98	Jacobus
Doughty	97 12-15	Endersby
Mapes	97 2-15	
Distance bait, average:		
Doughty	176%	Jacobus
Endersby	148%	Muldoon
Mapes	147%	

LOU L. SANDS, Secretary.

Illinois Rod and Gun Club.

WHAT is asserted to be the finest club house for sportsmen in Illinois, is that of the Illinois Rod and Gun Club near Astoria. This club was organized a year ago and has been incorporated under the laws of Illinois. The officers comprise the following: President, H. A. Jansen, Moline; Vice-President, D. R. Lane, Davenport; Secretary-Treasurer, W. A. Schaeffer, Rock Island. The new club house is a model, and its large size and comfortable furnishing has attracted much admiring attention from sportsmen of the Middle West. The membership of the club is closely censored, and only those are invited to join who are acceptable to the entire membership. As the attitude of farmers in Illinois is such that shooting conditions are rapidly approaching those of Europe, where it is necessary to own or lease preserves in order to secure game or fish, the sportsmen are providing for private hunting and fishing resorts. The Illinois club has unexcelled preserves and offer the finest possible opportunities for enjoying rod and gun sport.

Dixon (Ill.) Fishing Club.

THE Dixon Fishing Club, of Dixon, Ill., was organized with fifty-seven charter members at a meeting held recently. Officers were elected as follows: President, H. O. Wheeler; Secretary, J. W. Staples; Treasurer, A. B. Whitcombe. Any person willing to aid in the enforcement of the State laws protecting fish is eligible to membership. The club will look after the stocking of the Rock River with game fish and otherwise look after the fishing interests of that stream. It is likely that the membership will rapidly increase as the object of the organization becomes known.

San Francisco Fly-Casting Club.

SAN FRANCISCO, Cal., May 12.—*Editor Forest and Stream:* The third contest of the season was held yesterday and to-day on Stow Lake. Weather was variable and cloudy on Saturday, fair on Sunday:

SECRETARY.

Salmon Fishing Good at Lake Sunapee.

THERE is better salmon fishing at Lake Sunapee this year than ever before, and the fishermen are having excellent sport. Most of the fish so far have been taken trolling with live smelt, and range from two to nine and one-half pounds.

Over 300 fish have been taken, and the trolling should hold good until the first of June. After that the fish can still be taken still-fishing.

Ten thousand large rainbow trout were planted last fall and it is expected that some excellent fly-fishing for them will soon result.

A few of the hotels have opened and others will open about June 1.

GAME BAG AND GUN

Certain Birds and Man.

THE relations to man of certain common game, aquatic and rapacious birds, is discussed in a recent Bulletin from the Biological Survey, prepared by W. L. McAtee and F. E. L. Beal. It is shown that many of the game birds have a high agricultural value from the number of noxious insects that they destroy. Some birds, like grebes and terns, which by many people are supposed to feed chiefly on fish, actually feed largely on crawfish and insects, while few of the fish eaten by terns are of any economic value. On the other hand, certain gulls and terns destroy great numbers of insects, and most people familiar with California in the spring have seen gulls following the plow and devouring the insects exposed by its passage. Certain shore birds are regarded as highly useful. Hawks and owls, which have a bad name, are believed to do much good.

Fourteen birds are described and figured in this Bulletin—the prairie chicken, California quail, ruffed grouse and introduced pheasant, the upland and killdeer plover, the horned grebe, Franklin's gull, and five species of terns, Cooper's, the rough leg and the sparrow hawks, and the long-eared and screech owls.

The prairie chicken or pinnated grouse, once extending from the Atlantic coast to the border of the western plains, has been destroyed over its range by over-shooting. As is well said by Mr. McAtee, "Many sportsmen declare allegiance to the highest principles of game preservation, yet fail to practice these principles. Our present game laws, even though efficiently administered, will save no species of birds, as the rapid growth of the army of sportsmen and pot hunters more than counterbalances the effect of the shortening of open season and reduction of bag limits." The prairie chicken is useful to the farmer. Fifteen per cent. of its food consists of weed seeds, and another 15 per cent. of insects, mostly injurious. The California quail is another bird whose seed-eating habits commend it, but on the other hand it is accused of devouring grain and fruits, and no doubt does so to some extent.

The ruffed grouse is a wild feeder and does no harm while destroying some harmful insects. It is far better able to take care of itself than any of its near relations.

The introduced pheasant has its friends and its enemies. It is well known that the pheasant is a fighter, a hearty feeder and a bird of much energy. Some landowners in Ontario county claim that the loss suffered on account of pheasants has been twice the amount of their taxes.

The birds are said to have destroyed cornfields and to have dug up oats, barley, beans and garden truck. When the farmer knows—as most do—how much damage his poultry cause, if they get into the garden, he is justified in suspecting the pheasant.

Ninety-seven per cent. of the food of the upland plover consist of insects, chiefly injurious, and the killdeer has a record not far behind that. The latter is said to be peculiarly destructive to the alfalfa weevil, and both are useful birds.

The horned grebe lives almost entirely on crawfish and other crustacea and on water insects, many of which devour small fishes and the food of such fishes. It is thus useful.

Gulls and terns destroy great quantities of insects, and it is recalled that in 1907, at the time of the Nevada mouse plague in the Humboldt

FEEDING THE YOUNG.

FED.

valley, gulls were present in great numbers. Some of the terns, as the royal and Foster's tern, feed largely on fish; others, like the common tern and the black terns, eat a great deal of insect food. The fish consists chiefly of small minnows along the shore, which never grow to any size, or of the young of the menhaden, which is destroyed in great quantities for its oil or fertilizer.

Cooper's hawk is distinctly injurious, while the rough-legged hawk is regarded as useful, because it is largely nocturnal in habit and catches great numbers of mice. The sparrow hawk feeds largely on insects, but is known sometimes to destroy song birds, as shown some years ago by Wilber F. Smith, of Connecticut.

The little owls named are useful birds, though to be sure the screech owl during the migration kills not a few small birds.

Exotic Birds in New Zealand.

OWING to the paucity of New Zealand's bird fauna, the settlers there have been unusually active in introducing exotic birds, and more than twenty species have been liberated. Several of these have been pronounced very harmful. As might be expected, the English sparrow is the worst leader in destructiveness, followed, it is

said, by the skylark and the blackbird, the latter a relative of the American robin. The Australasian colonies of Britain have certainly paid dear for their thoughtless haste to interfere with the processes of nature.

New Publications.

IN NORTHERN LABRADOR, by William Brooks Cabot. Richard G. Badger, Boston, Mass. 292 pages, illustrated.

This work shows an intelligent study of the great subject of Northern Labrador. In addition to its being an intimate treatise of the country and its people, it also will interest the sportsman because of its description of the fish and fishing in that cold country. The sea trout, the square-tail and the lake trout; the former from Un'sekat and the latter from Assiwaban River brings action to the heart of the angler. The book is worthy of a place in the sportsman's library.

PRACTICAL DRY-FLY FISHING, by Emlyn M. Gill.

Price, \$1.25 net; by mail, \$1.35. Charles Scribner's Sons, New York.

At last Americans have a book on the dry-fly, and it comes at an opportune time, for the interest in this form of angling has been growing rapidly the past year. It is an old story in England, where many anglers have used the floating fly for upward of thirty or forty years. In

America its users have been comparatively few. Mr. Gill treats the subject in a thoroughly practical and instructive manner. Having become a dry-fly enthusiast himself a few years ago, he explains that he desires his position to be understood as that of "a beginner lending a helping hand to other beginners." Notwithstanding the practical side of the book and the modesty of the author, it will undoubtedly interest all fly-fishermen, whether experts or tyros. The author, after describing the methods of the English purist, modifies them to fit the different conditions on American streams. He describes rods, lines and flies, and gives concisely the rules for using them, first on a hypothetical pool, and then on a real pool, from which the reader, accompanied by the author, takes a few trout. He shows how the dry-fly may be used successfully upon our streams, more turbulent than the placid chalk streams of England; explains the drag, and gives rules for overcoming it; differentiates wilderness fishing from angling for "educated" trout, gives a list of artificial flies for use on American streams, with descriptions of the living *Ephemeridæ*, and after an interesting relation of some personal experiences on various streams, gives a history of the dry-fly and its interesting literature. It will undoubtedly solve many problems for those who are interested in this form of angling, but who are puzzled as to how to go about it.

CORRESPONDENCE.

FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but are not responsible for the views of correspondents. Anonymous communications will not be regarded.

SUBSCRIPTIONS.

Terms: \$3.00 a year; \$1.50 for six months. Single copies, 10 cents. Canadian subscriptions, \$4.00 a year; \$2.00 for six months. Foreign subscriptions, \$4.50 a year; \$2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line (\$2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra.

Special rates for back cover in two or more colors. A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Advertisements should be in our hands by the Monday morning previous to date of issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

THE GAME REFUGE BILL.

A BILL authorizing the President to set aside, on the application of the Governor of any State, an area of the forest reserves in that State not to exceed 50,000 acres, as a game refuge, was introduced in the Senate in the same form as the bill, H. R. 23839, printed two weeks since, and the favorable report of the Senate Committee on Forest Reservations and Protection of Game is given elsewhere.

The general and increasing interest in game refuge legislation is indicated by the fact that in the last twenty-two years more than thirty bills, exclusive of bills for national parks, have received consideration by Congress. Of these thirty, five have been favorably acted on, and game refuges established in one form or another under their provisions. These refuges are the Wichita Game Refuge, which became law in January, 1905; the Grand Cañon Refuge, June, 1906; the bill for the National Bison Range, May, 1908. The bill to establish the Olympic Game Refuge was afterward replaced by a National monument established by proclamation, while a bill for a game refuge in Minnesota was later included in the Superior National Forest as a State refuge.

It is hoped that before long the House bill will be favorably reported from the Agricultural Committee, and that the measure may be passed by both houses of Congress.

Thus the work goes on, far less rapidly

than its advocates would wish, yet it goes on, and it will go on with constantly increasing momentum. Should this bill become law the Boone and Crockett Club is prepared to proceed with the stocking of the first refuges established, so soon as the season comes for capturing the required animals.

WILDFOWL WINTER-SUFFERING.

It is known to many people that portions of some of the lakes of Central New York, as Seneca, Cayuga and Keuka, remain open throughout the winter. Here, during the bitter weather of January and February, are found large flocks of canvasbacks, redheads, bluebills and other ducks, together with many grebes and loons. Under ordinary conditions the vegetation growing at the bottom of these lakes and the small fish that are found in them give good feeding to these birds, many of which remain until early spring.

Last winter the unusual cold partly closed up these waters and partly shut off the food supply, and great suffering ensued among most of these winter birds.

The loons perhaps suffered least, but the grebes, weakened perhaps by lack of food, perished in numbers. A single red-throated loon was caught in the ice near Utica, but died after being chopped out.

On the other hand, the State Conservation Commission did good work in feeding the ducks, and Mr. Legge, the chief game protector, is quoted as saying that 5,000 ducks were cared for in Seneca Lake in waters kept open over a large spring hole.

Verdi Burtch and his companions saw many canvasbacks, black ducks and scaups alive, but very weak, and some were found dead; and as the weather grew more and more severe, and the food more and more scarce, the birds disappeared, going no one knows where.

Birds are constantly exposed to danger from unfavorable weather conditions, and naturalists recall many examples of this in bird literature. One of the most extraordinary winter killings was that reported many years ago by Arthur H. Wayne, in a Southern State, and quoted by Mr. Grinnell in his "American Game Bird Shooting," under the head, perhaps, of "Woodcock." Years ago enormous destruction of Lapland longspurs occurred in the Northern Mississippi watershed, and other examples are frequent.

We talk of Mother Nature, but she is a stern parent.

KEEPING FLIES OFF CATTLE.

THE director of the dairy department of the Kansas Agricultural College has published the following recipe for keeping flies off horses and cattle in hot weather: "Dissolve two cakes of laundry soap in warm water and add one and one-half pounds of rosin and one-half pound of fish oil and boil until the rosin is thoroughly dissolved, then add enough water to make three gallons. Apply to animals with brush or spray pump at the rate of about half a pint of liquid to each animal three times a week until the coat is pretty well covered with rosin. The fly pest can be still further reduced in the stables by putting dark covering over the windows and pieces of slit gunnysacking in the doorways through which the animals must pass in going to their places."

Now, if some kind soul will give us a recipe for keeping black flies and mosquitoes away from humans, while paddling up stream, or landing the biggest fish, we all will thank him.

THE FISHING GOVERNOR.

A MAN may be a good politician and a poor fisherman or a good fisherman and a poor politician, but to be a good governor and an equally good fisherman is a tribute few State executives may lay warrant. Governor Shafroth, of Colorado, fishes and governs equally well, and we all know how well Colorado is governed. So as a fisherman, Governor Shafroth has promised, in fact has in preparation for FOREST AND STREAM an illustrated article on fishing in Colorado. This article will be to fishing what John McGraw knows about baseball—inside stuff. It will appear in an early issue of FOREST AND STREAM.

Everyone knows Colorado streams and lakes teem with game fish of all sorts, but like Little Bopeep and her lambskins, everyone does not know where to find them.

Who, then, should know more about the subject of Colorado fish and their dwelling places than the Governor of the State? And so—knowing all this—Governor Shafroth will, at our urgent supplication, tell fishermen of FOREST AND STREAM all about Colorado fishing.

TODD RUSSELL.

IN the death of Todd Russell the outdoor world has lost one of its most ardent exponents and the magazine reader one of nature's most accurate portrayers. Mr. Russell has long been a contributor to the columns of FOREST AND STREAM, as well as to other outdoor magazines. He was most resourceful and accomplished in various outdoor sports, being an expert angler, trap and field shot, equestrian and tennis player, as well as a foremost authority on hunting dogs. Todd has left many good friends to mourn him and many clever writings to perpetuate his memory. He died on May 21 at Albuquerque, N. M., after an illness of several months. He leaves a widow, mother and four sisters.

THE INCIDENT IS CLOSED.

THE Senate Committee, under direction of William Alden Smith, has placed the blame for the Titanic disaster. It has blamed Captain Lord, unsusceptible to rocket and racket, the dead Captain Smith; the harassed J. Bruce Ismay; the laws of far away England; in fact, everything comes in for a share of blame for the disaster—excepting the iceberg. And the result—may we predict? The incident, like the hole in the ocean through which the Titanic sunk—is closed.

THE first quarterly ivory sale for 1912 in Antwerp comprised the following quantities, in kilos (of 2.2 pounds each): 52,485½ Kongo (hard), 3,377 Kongo (soft), 37,412½ Angola, 1,316 Senegal, 466 Ambrize, 1,049 West Coast, 814½ Egypt (soft), 277 Egypt (hard), 1,182 Sudan (soft), 182 Sudan (hard), 850 Abyssinia (soft), 19 Siam, 71 hippopotamus tusks, 3½ curiosities; total, 99,505. Also 160 kilos of rhinoceros tusks. The first sales in 1911 and 1910 aggregated 90,850 kilos and 89,202 kilos, respectively. The next quarterly ivory sale will take place on April 30.

YACHTING

Ticks from the Ship's Clock.

Regular races of the Warwick Neck one-design class at all of the club regattas on the bay appear to be probable within reasonable time. An order, received at Nock's yard, East Greenwich, recently, for three more of these boats brings the total on the bay to fifteen, thus making it practically certain that there will be ten or twelve in each race. The guaranteed date for delivery of the new boats is June 22, and it is expected that they will enter their first race on Saturday, June 29. With the increasing number of these boats in the lower bay and the greater recognition of the amount of sport that can be secured from them, it is believed by many yachtsmen that clubs in other parts of the bay will take them up and include them on their regatta programs.

The United States Government has purchased from the Regal Gasolene Engine Company of Coldwater, Mich., one of their 10-horsepower medium-duty engines for use in connection with the fish hatchery at Gloucester, Mass. This engine will be installed in a boat 25 feet long with a 7-foot beam, the framing of which is of native New England white oak. The boat has been built to stand rough service, and is of very substantial construction throughout. It will be in use the year round as a tender and work boat attached to the U. S. Fish Hatchery at Ten-Pound Island near Gloucester, Mass.

Larchmont Course Altered.

THE Regatta Committee of the Larchmont Y. C. has been in communication for some months with racing men of Long Island Sound, asking opinions regarding the turning of the southwest stake boat of the regular Larchmont courses. In courses that have to be sailed twice it has been found that the big sloops and schooners interfere with the smaller classes, and that in turn the little fellows are always in the way of the larger boats at this stake boat. The consensus of opinion was that it would be advisable to place two stake boats at the southwest mark, which is directly opposite the anchorage of the club, and send the large yachts around one and the smaller ones around the other mark.

A mark boat will be placed about 100 yards northeast by east of the present southwest stake boat, and the new mark will be turned by Class N and larger. The smaller boats will turn the old mark, as in other years. It is believed that the change will be a great improvement.

The Larchmont Y. C. will enforce the rule recently passed by the Yacht Racing Association of Long Island Sound regarding the placing of racing numbers on the sails of competing yachts. Under no consideration will the regatta committee time any boat that violates this rule.

Club Elections.

At the annual meeting of the Beechhurst Y. C., held May 14, officers elected were: Commodore, L. F. Eggers; Vice-Commodore, E. D. Sinsabaugh; Rear-Commodore, J. H. Surridge; Fleet Captain, Victor H. Cohn; Fleet Surgeon, Dr. R. Folger; Treasurer, J. J. Iris; Secretary, D. E. Holmes; Financial Secretary, Walter Clifford. The House Committee is D. E. Holmes, S. M. Sidgel, Victor H. Cohn, A. A. Andruss, W. H. Reddy, A. E. Meeks and L. F. Eggers. The club will have its official opening on June 1.

On account of the resignation of Commodore R. V. Mooney and Vice-Commodore T. J. Morrison, the board of directors of the Arcanum Y. C. elected Frank H. Graf Commodore and Frank D. Brown Vice-Commodore. Frederick Petry was elected a director. The club

will go into commission Saturday afternoon, May 25.

At a recent election of the Ocean Y. C., of Stapleton, S. I., the officers selected for 1912 were as follows: Commodore, Casper G. Laine; Vice-Commodore, Charles Hamilton; Rear-Commodore, Leo Rostetter; Fleet Captain, Wm. Spiegelberg; Treasurer, J. Schmeiser; Financial Secretary, John Schron; Corresponding Secretary, F. G. Almstaedt; Measurer, James Dunn. Their first event of the season will be a 35-mile race around Staten Island to be held on May 30, Decoration Day.

THE first meeting of the newly organized yacht club of the New York Athletic Club, under the direction of the Board of Governors of that organization, was held in the New York Athletic Club on March 23. The following officers were elected: Commodore, Dr. Emile Heuel; Vice-Commodore, Edward A. Sumner; Rear Commodore, John H. Wallace; Secretary, Charles L. Burns; Treasurer, Albert E. Feterech.

The regatta committee is composed of the following members: J. Mahlstedt, Secretary Burns and Treasurer Feterech. The representatives to the Long Island Yacht Racing Association is Harry L. Jackson, formerly chairman of the yacht committee.

Yachts Change Hands.

THE Hollis Burgess Yacht Agency has sold the crack 22-foot cabin sloop yacht Nereis, formerly Opitsah V., owned by S. Reed Anthony, of Boston, to Herbert A. MacInnis, of the Boston Y. C., who will use her for racing and cruising.

The 21-foot waterline knockabout Jacobin, owned by the estate of Theodore W. King, of Dorchester, Mass., to Charles F. Adams, of Brookline, Mass.; the 21-foot raceabout Loafer, owned by Horace B. Stanton, of Boston, to Sylvester L. Gookin, of the South Boston Y. C.; the 25-foot waterline auxiliary yawl Brynhild, owned by Elmer F. Smith, of Marion, Mass., to John C. Edwards, of Brookline, Mass.; the 21-foot raceabout Opitsah III., owned by John C. Edwards, of Brookline, Mass., to a prominent member of the Boston Y. C.

Massachusetts Motor Boat Protective Association.

DELEGATES from various yacht clubs near Boston met in the committee rooms in the Tremont Bldg. on May 25 and formed a temporary organization known as the Massachusetts Motor Boat Protective Association.

The association will be incorporated under the laws of Massachusetts and perfect the organization on June 21, when a code of by-laws will be adopted. The committee on by-laws consists of Dr. J. C. Burrows, of the Jubilee Y. C.; C. C. Lee, of the Chelsea Y. C., and David Hickey, of the South Boston Y. C.

The object of the association is to afford protection to power boat owners from illegal prosecution. It will also make an attempt to secure legislation which will protect power boat owners and to repeal certain statutes now in force which are detrimental to the sport.

One of the essentials for membership in the association will be that every applicant must have his boat properly equipped according to all the laws as they now stand.

The temporary officers are: Commodore Whitney, of Beverly. President; Frank E. Thisel, of Beverly, Secretary; Ed. Pickett, of Beverly, Treasurer; F. L. Roberts, of Beverly, Financial Secretary; the officers, with A. H. Menslage, J. R. Groce, David Hickey and John J. Harlan, of South Boston; F. L. Dodge and J. C. Saunders, of Saugus; C. E. Webber and

Dr. J. C. Burrows, of Beverly; C. C. Lee, of Chelsea, executive committee.

Atlantic Y. C.

GRAVESEND BAY yacht racing started May 25. The Atlantic Y. C. held its opening regatta with twelve class Q yachts.

A light north-northwesterly breeze rippled on the water, when five class Q boats started.

Alice was first across the line with Grayjacket just astern to windward. Soya, Suelew and Joy strung out in that order. The boats went over on a close reach, with booms to port. Grayjacket and Alice soon drew away from the others and kept the lead to the finish line, and in the last hundred yards Grayjacket won by three seconds from Alice.

Careless got away from Gunda at the start in the handicap division and bettered her lead to the finish of the class X entrants. Mouse out-distanced Slow Poke and Pike and was the first boat of any class to cross the finish line.

The regatta committee was: Carlos de Zafra, Chairman; Alvah Nickerson, H. S. Scribner and Horace E. Boucher. The summary:

Sloops—Class Q—Start, 3:00—Course 6 Miles.		
	Finish.	Elapsed.
Gray Jacket, F. C. Noble.....	4 49 33	1 49 33
Alice, G. Davis	4 49 36	1 49 36
Soya, W. A. Barstow.....	4 51 40	1 51 40
Joy, L. Savage and Geer.....	4 54 15	1 54 15
Suelew, E. F. Luckenbach.....	4 56 13	1 56 13
Handicap Class—Second Division—Start, 3:05—Course, 6 Miles.		
Careless, R. Rummell	4 56 48	1 51 48
Gunda, W. H. Hall.....	5 04 58	1 59 58
Corrected times: Careless, 1:51.48; Gunda, 1:56.3.		
Sloops—Class S—Start, 3:10—Course, 6 Miles.		
M. and F. H., Camp & Marchant.....	4 53 33	1 43 33
Cyric, Dr. C. L. Atkinson.....	4 54 15	1 44 15
Sloops—Class X—Start, 3:15—Course 4 Miles.		
Mouse, R. Dingman.....	4 23 18	1 08 18
Pike, R. Rummell, Jr.....	4 34 44	1 19 44
Slow Poke, F. L. Durland.....	4 43 10	1 28 10

Seawanhaka-Corinthian Y. C.

OYSTER BAY, May 25.—Nine yachts competed for prizes offered by the Seawanhaka Corinthian Y. C. in its first race of the season today. It required nearly six hours for all to complete the course.

It was initial day for New York Y. C.'s one-design 30-foot class, and the race was a special one. The Seawanhaka's 15-foot sloops, which started in a race over the Oyster Bay inside course, gave up for lack of wind.

The start, at 12:15, was pretty. With a light breeze from the north-northeast and nine yachts, with booms to port on a reach for the buoy with a free sheet, flattening as they closed up on it. All luffed at the start.

With sheets flat on the port tack each yacht was just able to lie the first leg of the triangular course across the Sound. While the little fleet was well bunched at the start, J. H. Mahlstedt's Okee and G. E. Roosevelt's Dahinda had a little the best of the weather positions. Alera's skipper put her about for a hitch to windward.

It was a four and three-quarter mile beat to the red spar buoy off Greenwich Point, and they made slow progress. After rounding this mark the wind freshened a bit and came out of the northwest, so the yachts, with free sheet and booms to starboard, made fairly good time to the second mark, five miles to the eastward.

To the finish it was a five and three-quarter mile leg, with S. S. W. ¼ W. as the course. After rounding the second mark the wind shifted to the southwest, making it a beat. At 4 o'clock J. P. Morgan, Jr.'s, Phryne, sailed by the owner, was ahead. She was within a mile of the finish when the wind died. Caprice and Nepsi, holding a light air and being further to the westward, passed Phryne and finished in that order, Caprice winning by 3m. 14s., Phryne being third. The summary follows:

	Finish.	Elapsed.
Nepsi, J. De Forest.....	5 29 43	5 14 43
Phryne, J. P. Morgan, Jr.....	5 44 25	5 29 25
Alera, J. W. and E. P. Alker.....	6 05 48	5 50 48
Dahinda, G. E. Roosevelt	5 55 50	5 40 50
Carlita, C. B. Kulenkampff.....	6 01 15	5 46 15
Caprice, B. N. Ellis	5 26 29	5 11 29
Okee, J. A. Mahlstedt	5 44 45	5 29 45
Rowdy, H. S. Duell	5 45 10	5 40 10
Juanita, S. C. Hunter.....	5 48 00	5 33 00
Caprice wins by 3m. 14s. from Nepsi.		

Motor Boating

Atlantic Y. C.

THE Regatta Committee, consisting of Carlos de Zafra (Chairman), Alvah Nickerson and J. Lewis Luckenbach, announce that a series of three races for motor boats and hydroplanes will be inaugurated by the Atlantic Y. C. on Gravesend Bay on Thursday, May 30 (Memorial Day); Saturday, July 6, and Friday, Aug. 23 (race week). All races to start promptly at 3 P. M. Hydroplanes and displacement boats will be run as separate types; hydroplanes running in two classes, namely, 20-foot and 26-foot classes, and displacement boats in two classes, boats under 32 feet in length and boats 32 feet and over in length. The course will be a triangular 3-mile course—one mile to the leg—five times around; total, 15 nautical miles, in full view from the club house. No handicap or time allowance.

Prizes—The Atlantic trophy, constituting the motor boat championship of Gravesend Bay, and open to the above classes, will be awarded for the best performance during the season, to compete for which a boat must run in each of the three races of the series. In addition prizes will be given for all races as follows: A first prize when two or more boats start with full intention of completing the course, a second prize when four or more start and a third prize when seven or more start in any class.

Entries—Entry blanks may be obtained from the Regatta Committee or by application at the club house. All entries shall be made in writing and shall be signed by the owner or his representative, and should be filed with the regatta committee not later than forty-eight hours before the time of starting. The regatta committee may refuse or accept, at its discretion, any entry received after the time of closing. The regatta committee reserves the right to reject any entry.

Contestants should report at the regatta committee room at the Atlantic Y. C. club house not later than one hour in advance of time of starting, to receive instructions as to course, signals, etc. Unless otherwise provided for, the rules of the American Power Boat Association will govern.

Narragansett Bay Racing Rules.

THE "Racing Rules" of the Narragansett Bay Y. R. A., as the new annual volume is called, are being distributed.

One of the important new features is a change of Sections 4, 5 and 6 of rule XVI, tending to simplify the taking of appeals from a decision of a regatta committee to the executive committee of the association, making impossible a repetition of the mixup over the Hugi and Anore which took place several seasons ago.

Under the new arrangement the decision of a regatta committee on a protest, as far as the facts go, will be final. The only question which can be taken before the executive committee is the question of an interpretation of the rules. No new evidence can be presented to the committee.

To make this possible, Section 4 requires, (1) that the decision of the regatta committee shall state the facts as determined by that committee; (2) the rules the committee deems applicable; (3) the committee's disposition of the protest. The last two paragraphs of Section 4 read: "If either party is dissatisfied with the regatta committee's determination of the facts, he may within five days ask the regatta committee for a rehearing, which they may grant or refuse in their discretion. But no appeal may be taken from the regatta committee's determination of the facts.

"The decision of the regatta committee shall be final unless an appeal is taken in accordance with these rules."

The new Section 5 reads: "The owner of any interested yacht may take an appeal to the ex-

ecutive committee of the association from the decision of the regatta committee on any question of the application of the rules as contained in the decision, but not otherwise, by taking the following steps: First, written notice of intention to take an appeal from the decision of the regatta committee shall be given to the regatta committee within five days after the announcement of their decision. Second, the appeal shall be filed with the secretary of the association within ten days after the announcement of the decision appealed from, together with a deposit of \$5, which sum shall be returned to the appellant if the appeal is sustained; otherwise it shall go into the treasury of the association."

The book contains, as during the past two or three years, a foreword by W. Louis Frost, the editor. On page 51 there is a list of the boats which were entered with the association secretary last year, with their racing measurements and the racing numbers of those which had them.

The last year was the first year during which Association Secretary W. L. Frost took charge of the entries. The results were very satisfactory, as more entered for the season than has been the case at any time in the past. When a yachtsman enters his boat with the secretary it carries him through the whole season and makes it unnecessary for him to present a certificate to each regatta committee.

This year the rule requiring a racing number and class letter is to be strictly enforced. Application for one must accompany an entry blank and measurement certificate. Measurements made last year will not be good this year.

Canoeing

Drips from the Paddle.

Fox River members of the Western Division of the American Canoe Association have planned a trip by canoe to La Salle, starting May 30. There will be two hundred or more in the party. Stops will be made at various points of interest along the way and camp will be pitched at night. It is planned to reach Ottawa on Saturday when the annual races are to take place. After the races the party will paddle to Starved Rock and camp there. Sunday will be devoted to sight-seeing at the new State park, after which the canoeists and their boats will return to their destinations by rail. Canoeists at various points along the river are arranging a reception to the tourists.

Condukeag Canoe and Country Club.

BANGOR, Me., May 15.—*Editor Forest and Stream:* The canoeing contingent of this club desiring to awaken interest in water sports among its members would like to get into communication with other canoe clubs in this section, with a view to arranging a meet with contests in paddling, canoe sailing, etc.

Would thank you if you could give us the addresses of canoe clubs or of individuals in this section having such information and interested in canoeing.

BARTHEL JUWEL YACHT STOVE

**If You Ever Try a
Barthel Jewel**

yacht stove in your boat, you'll never take another cruise without it. This is the most practical stove for any boat, from a little open motor boat to a big cabin cruiser. The Jewel stove generates its own gas from kerosene, giving a concentrated blue flame of extreme heat. Burns absolutely without odor. There is no wick and the solid brass air-tight tank keeps it clean and free from the odor of kerosene. It is absolutely safe even if overturned while lit. Barthel Jewel Stoves are economical, safe, clean, compact, durable and highly efficient. Money refunded without question if the Jewel is unsatisfactory.

Write today for catalog and prices of the different styles and sizes.

"Old Town Canoe"

The "Old Town Canoe" is the modern perfection of the red man's birch bark. It is true in line, true in balance, light, strong and durably constructed. Properly cared for, it never warps, bulges, splits or leaks. It is the choice of experienced campers, hunters and professional guides. It is known the world over. Wherever canoes are much used the owners of Old Town Canoes are the envy of the others. We have agents everywhere. 2000 canoes in our storehouses insure prompt deliveries.

Our illustrated catalogue full of canoe pictures and canoe facts, sent free for 2 postal.

TRAP SHOOTING

If you want your shoot to be announced here send a notice like the following:

Fixtures.

- Sept. 12-13.—Cincinnati (O.) G. C. Arthur Gambell, Supt. REGISTERED TOURNAMENTS.
- June 1.—Royersford (Pa.) G. C. F. A. Anderson, Sec'y.
- June 1.—Bunker Hill (Ill.) G. C. W. Fahrenkrog, Sec'y.
- June 3-6.—Haines Landing, Me.—Maine State tournament, under the auspices of the Mooselucmaguntic G. C. R. L. Spotts, Pres.
- June 4.—Pillow (Pa.) G. C. J. A. Bingaman, Sec'y.
- June 4-6.—Mexico, Mo.—Fifth annual State tournament of the Missouri State Trapshooters' Association, under the auspices of the Audrain Country Gun Club, of Farber, Mo. Russell Glynn, Sec'y.
- June 4-7.—Dayton, O.—Ohio State tournament, under the auspices of the N. C. R. G. C. W. F. MacCandless, Sec'y.
- June 5.—Janesville (Wis.) G. C. L. L. Nickerson, Sec'y.
- June 5-6.—Aurelia (Ia.) G. C. Frank R. Welch, Sec'y.
- June 5-6.—Jacksonville (Ill.) G. C. J. A. Groves, Sec'y.
- June 5-7.—Webster, S. D.—South Dakota State tournament, under the auspices of the Webster G. C. John Sherbino, Sec'y.
- June 5-7.—Warm Springs, Ga.—Merriwether G. C. T. B. Slade, Mgr.
- June 6.—Wilber (Neb.) G. C. H. F. Magnusson, Mgr.
- June 6-8.—Newark, N. J.—New Jersey State Sportsmen's Association tournament. Chas. T. Day, Sec'y.
- June 8.—Conde (S. D.) G. C. A. E. McMillan, Sec'y.
- June 8.—Utica, N. Y.—Genesee G. C. E. J. Loughlin, Sec'y.
- June 8.—Beaver Dam, Wis.—Recreation G. C. L. H. Zimmerman, Sec'y.
- June 8-9.—Brainerd, Minn.—Riverside G. C. H. L. Paine, Sec'y.
- June 10.—Ft. Wayne (Ind.) G. C. W. H. Scherer, Sec'y.
- June 11-13.—Syracuse, N. Y.—New York State tournament, under the auspices of the New York State Sportsmen's Association. L. H. Schortemeier, Sec'y-Treas., 201 Pearl street, New York.
- June 11.—Washington, Pa.—Western Pennsylvania Trapshooters' League tournament, under the auspices of the Washington G. C. C. W. Peterson, Sec'y.
- June 11-13.—Sioux City, Ia.—Soo Gun Club. W. F. Duncan, Sec'y.

DRIVERS AND TWISTERS.

The Indians will hold their thirteenth annual tournament and pow-wow at Cedar Point, O., Aug. 27-29.

Yale got away with the intercollegiate trap shoot, held May 18 at Wellington, Mass. Dartmouth, Princeton and Harvard finished in order named. Thompson, of Yale, was high gun with 95 out of 100.

The Shelby County Gun Club was organized at a meeting held this week. Twenty-five marksmen signed the charter roll, and many more members are looked for prior to the next meeting. New officers are the following: President, H. J. Hamlin, Jr.; Secretary, C. B. Welsh; treasurer, George L. Dearing. Semi-monthly tournaments will be given during the coming summer.

The Jersey City Gun Club is going to hold an all-day shoot on June 19, commencing at 10:30. This will be the last program shoot before closing for the summer, and will consist of 200 targets, divided into ten events of 20 targets each, and the entrance will be \$2 for each event. Programs are being printed, and will be mailed in a few days. Money will be divided by the Rose system.

The fifth contest for the Frank Hall trophy will be held on the grounds of the Hudson Gun Club. A hot lunch will be served gratis to all shooters and their friends. Take the Turnpike car from the P. R. R. Ferry at Jersey City, or any transfer point in Newark, to the west side of the Hackensack River bridge, and walk north along the tide bank to the D., L. & W. R. R. tracks, where the club grounds are situated. We will be open for practice at 9:30 A. M., and the trophy event starts at 2 o'clock sharp.

W. G. BEECROFT.

Popularity of Trap Shooting at Summer Resorts.

CLAY pigeon shooting is becoming more and more the pastime of the man of outdoor instincts. In almost every club devoted to any sort of outdoor sport, one finds a trap layout, at which on Saturdays and holidays the red-corpuscle members are found burning powder, improving their marksmanship and enjoying the air and exercise. So when these same men go away for the summer they miss their weekly divertimento. Summer resort owners have come to appreciate this growing condition and have taken care of the "blood-thirsty craving" of their patrons by putting in a trap or two, a supply of targets and the necessary shells and loads.

The sport is growing so in popularity that trap editors of sporting magazines get many letters asking if such and such a resort has clay pigeon traps, and if not, what resort in Maine or elsewhere has traps.

The value of trapshooting as a resort builder is shown in the popularity of certain Southern resorts, for instance, Pinehurst, N. C., has been introduced to a large extent through its trap tournaments, more even than through its golf course. General Bond's resort at Buies, N. C., keeps a full house all winter and he attributes a great part of this popularity to his traps. "They keep the guest entertained in rainy days when he can't hunt or fish." In Maine, Haines Landing draws many all-summer guests through its trapshooting tournaments held during the summer. Ralph Spotts, a member of the Olympic team and one of the best amateur shooters in the country spends his summers there, and among the guests' names are recognized many New York Athletic Club trap shooters.

If those hotel men who have not yet taken up this sport realized the many hours' pleasure it afforded the guests, they soon would put in a trap house and the equipment that goes with it. The expense is very slight, while there is a profit on every target and cartridge shot. The announcement that trapshooting was a feature soon would draw real outdoor men who might be depended upon as "regular" year after year.

Traps may be purchased as low as \$4.50 each f. o. b. factory; better styles from \$6 to \$6.50 f. o. b. factory.

STEEL LINED SHOT SHELLS

== Clean up ==

The Illinois State and Los Angeles Shoots

ILLINOIS

J. R. Graham wins the Illinois State Championship, scoring 50 straight, shooting a *Remington-UMC* Pump Gun and Arrow Steel Lined Shells.

2d. B. Jackson, score 49 x 50 shooting a *Remington-UMC* Pump Gun and Nitro Club Steel Lined Shells.

L. C. Smith Cup. Alex. Vance ties with F. B. Sullivan scoring 25 straight. Mr. Vance won the shoot off with 19 x 20. Both men shot Nitro Club Steel Lined Shells.

Jefferson Hotel Trophy. Geo. Roll and E. K. Crothers, shooting Nitro Club Steel Lined Shells, tie with 48 x 50. Mr. Crothers wins the shoot off with 19 x 20.

Board of Trade Badge. Won by J. D. Martin shooting a *Remington-UMC* Pump Gun and Nitro Club Steel Lined Shells.

LOS ANGELES

High Amateur Average. R. H. Bungay, shooting a *Remington-UMC* Pump Gun and Arrow Steel Lined Shells, ties N. Keen shooting a *Remington-UMC* Autoloading Shotgun, for first place with a score of 561 x 600.

Further proof of the close shooting, hard hitting qualities of *Remington-UMC* Steel Lined Shells.

Remington-UMC — the perfect shooting combination.

REMINGTON ARMS—UNION METALLIC CARTRIDGE CO. - 299 Broadway, New York, N. Y.

Automatic traps are somewhat more expensive. The cost of clay targets varies with the distance from the manufacturing plant. An average price to hotels would be: East, \$4.50 to \$5 per thousand. Middle West, \$5 to \$5.75 per thousand. Missouri River points, \$5.75 to \$6.25 per thousand. Western States, \$6.25 to \$6.75 per thousand. Pacific States, \$6.75 to \$9 per thousand.

As a sport for women, trapshooting is rapidly growing in popularity. Hundreds of women are taking up the pastime, and in many cases are proving themselves formidable competitors for high honors.

Makers of shotguns have perfected 16-gauge and 20-gauge guns which women may use at the traps. However, a considerable number are using the standard 12-gauge gun, in preference to the smaller sizes.

At all of the big shoots you will find women on the firing line, asking no odds of their masculine competitors, but shooting in their class without protest against the prescribed handicaps.

Indications justify the prediction that the next few years will see as many women trapshooters as there are women golfers.

The growing interest of ladies in the sport is exerting an influence which will do much to give it the place it deserves. Few resorts can find space for golf links, but every hotel or camp can set apart a small space for traps, and in a short time golf will give way to clay bird shooting as an adjunct to fishing and other summer recreations.

Mount Morris Gun Club.

MOUNT MORRIS, Ill., May 21.—Inclosed find scores made by professionals and amateurs at the Mount Morris Gun Club tournament held on May 23. Forty-two amateurs entered for the entire program and many others for the special trophies. Over one thousand targets were trapped during the day. High winds caused many of the contestants to shoot below their average score.

Five professionals entered for the Rice & Rice trophy, 50 targets, which was won by Ed. Graham with a score of 48 out of 50. The gun trophy was won by Wm. Stannard for shooting the entire program. The amateur trophy for program was won by J. Young. Trophy for amateurs, 25 targets, was won by G. J. Roberts. Ward Burton acted as cashier with Buzz Reeder assistant for the day.

Table with columns: at. Brk., Shot, at. Brk. Lists names and scores for various categories including professionals and amateurs.

Registered Tournaments.

The following tournaments have been registered with the Interstate Association during the week ending May 25: Aug. 14-15.—Montgomery, Ala.—Capital City G. C. M. Moore, Pres. Aug. 15-16.—Dayton, Ky.—Northern Kentucky G. C. Dr. L. P. Gould, Sec'y, Bellevue, Ky. Aug. 22.—Ebensburg, Pa.—Central Pennsylvania T. S. L. tournament, under auspices of the Ebensburg G. C. W. R. Thompson, Sec'y, Ebensburg, Pa. Aug. 28-29.—Baltimore, Md.—Maryland S. S. A. State tournament. Geo. P. Mordecai, Sec'y, 215 American Building, Baltimore, Md. Sept. 2-3.—Lynchburg, Va.—Virginia State tournament, under auspices of Lynchburg G. C. W. R. Winfree, Sec'y, 1008 Main St., Lynchburg, Va. Sept. 5.—Holdrege (Neb.) G. C. Thos. Hufford, Sec'y. Sept. 17.—Huntingdon, Pa.—Central Pennsylvania T. S. L. tournament, under auspices of Alexandria G. C. L. M. Hagerty, Sec'y, Alexandria, Pa. ELMER E. SHANER, Sec'y-Treas.

Sikeston Gun Club.

SIKESTON, Mo., May 24.—Out of 50 pigeons the following score was made to-day: Dan McCoy 45, Clem Marshall 42, H. A. Smith 40, C. H. Yanson 40, W. E. Derris 38, Dr. J. H. Hunt 36, Wm. H. Tanner 35. The Sikeston Gun Club, of Sikeston, Mo., holds practice contest at 1 P. M. every Friday. Visitors are welcome. Wm. H. TANNER, Sec'y.

Kentucky State Shoot.

The tenth annual target tournament of the Kentucky Trapshooters' League was held on May 23 and 24, under the auspices of the Fayette Gun Club, of Lexington, and proved to be one of the best ever given by the League. The attendance was good on both days, fifty shooters taking part in the program events and specials. The weather was of the best, and there was a good turnout of ladies and gentlemen interested in the sport to watch the contestants. This was especially so on the last day, when the State championship event was pulled.

The club has as fine grounds as can be found anywhere—good sky background, easily accessible (only ten minutes' ride from the city), with good club house and all facilities for the comfort of the shooters. There are two sets of expert traps. The officers of the club are: George B. Kinkead, President; J. G. Woolfolk, Vice-President; F. C. Bell, Secretary and Treasurer. They were all at the grounds during the shoot, and to their efforts the success of the tournament and the good time enjoyed by the visitors are largely due.

The office was in charge of Robert Smith, cashier, and Secretary Bell. The work was of course well done, and proceeded without a hitch. The referees were J. D. Noel and J. M. McCormack; scorer, B. Adams and George Offett, all of whom performed their duties satisfactorily.

First Day.

Opening day was pleasant, but too hot for comfort, with wind strong from the west across the traps. The start was late, it being nearly 10 o'clock when the first squad took its place. The regular program was finished about 3, and the specials at 5:10. Forty-six shooters entered the regular events, forty-one shooting through. T. H. Clay, F. M. Edwards and W. Q. Stephens had a close race for high gun among the amateurs, the former finally landing the honor by one target, with 139. Stephens shot an even gait from his third to his eighth event, but lost out in the ninth, going in second place, with Edwards on 139. Edwards found his Waterloo in the seventh event, when he let 4 targets get away. J. D. Gay was third with 136; J. J. Richardson and W. H. Hall tied for fourth on 135. It was a fight between Henderson and Pop Heikes, the former having a lead of 3 targets at the end of the eighth event, but in the last time up he dropped 3 out of 15, and finished in a tie with Heikes for first place on 144; E. C. Goodrich was second with 143, and J. R. Taylor third with 139.

The first special event at 25 targets was won by F. M. Edwards on a score of 24. He was tied by Taylor and Henderson beat him with a straight score, but both being professionals, were not eligible to win. Conditions were a trifle better for the second special or else the contestants were just getting into shape, for the finish found Edwards, Beard, C. Strather and Goodrich each with a straight score. The latter was out of the competition, and the others shot off the tie at 25 targets. Beard dropped his second target and then his 17th; Strather lost his chance early in the event, dropping his 5th and 11th targets; Edwards let his 13th get away, and won the event with 24 to 23 by the others. Scores:

Table with columns: Shot at, Broke, Shot at, Broke. Lists names and scores for various events including regular and special events.

Table with columns: Events, 1, 2, Beard, Events, 1, 2. Lists names and scores for special events.

Annual Meeting.

The annual meeting of the League was held on Thursday evening at the Leonard Hotel. Vice-President J. H. Kemper, in the absence of the president, Mr. T. H. Clay, Jr., presided. The roll call found the following clubs represented: Mason County, Northern Kentucky, Dayton, Cynthiana, Hill Top, Paris, Fayette, Lexington, Winchester, Jefferson County, Louisville, and Mt. Sterling. The minutes of the last annual meeting and the report of the treasurer were read and approved, and on

motion of Mr. J. Q. Ward, a vote of thanks was extended to Secretary-Treasurer Frank Pragoff for the faithful performance of his duties. The committee on publicity—Messrs. J. G. Denny and J. Q. Ward—was called on for its report. Judge Denny, as chairman, responded, but stated that he thought Mr. Ward could give a more detailed report, and the latter was called upon.

The next business was the selection of a place for the 1913 target tournament, and annual meeting. C. Strother made a request for the event in the name of Winchester Gun Club, and H. R. Irwin presented the claims of the Northern Kentucky Gun Club, of Dayton. A vote by clubs was taken, and the meeting was given to Winchester, the time being set as some date in May, not to conflict with other local events taking place in that month, and the contest to be registered. The annual live-bird tournament was given to the Jefferson County Gun Club, Louisville, with the understanding that if the Hill Top Gun Club, of Paris, should wish to hold the meeting the former club would give way.

The election of officers followed. Mr. Denny presented the name of T. H. Clay, Jr., for President, and asked for his unanimous election. This was by a standing vote, and it is unnecessary to say that no one remained in his seat. Mr. J. H. Kemper and Frank Pragoff were then nominated for Vice-President and Secretary-Treasurer respectively by Mr. Ward. The motion was put by Mr. Kinkead and carried unanimously. The meeting then adjourned.

Second Day.

The second day dawned with nearly a clear sky, and prospects for a delightful day, but this was the outlook at 4:30 A. M., several hours too soon to get the contestants lined up. When the shooters began to get out to the grounds the aspects of the weather had changed. Heavy clouds covered the sky and gave promise of a wetting, which happily was not realized. A few drops fell during the first event, but after that the sky cleared somewhat, and the balance of the day was good, though too hot for comfort. The wind was light at the start, but soon shifted from the west into the south, and blew hard the rest of the day.

The event was started at 9 o'clock and finished at 1:50, and the last squad sheet was turned into the office at 2:45.

There was a little delay in getting the championship event started, owing to an extra 10-target event which was shot after the regular program was finished. This was put in to make up the contest for the challenge cup, which consisted of the last six events of the program and an event at 10 targets, total 100. The championship event began at 3:15, and was concluded at 5:40, when the tie in the cup event was shot. Fifty shooters entered the events, forty-seven shooting through the program. High amateur average for the day went to T. H. Clay with 142, a slight improvement on the first day's work. W. G. Greene was second with 140; J. D. Gay was third with 138 and F. C. Bell fourth with 137. The professionals let up a little on their first day's record. Henderson got high gun honors with 143; R. O. Heikes and E. C. Goodrich second with 142 each; J. R. Taylor 136. The contest for the challenge cup was started with the fifth event, and Judge Kinkead announced that fact before the first squad took its place. There were twenty-seven entries for this event, all but two or three completing the 100 targets by shooting the extra 10. The result was a tie on 95 between T. H. Clay and J. D. Gay. W. G. Greene shot a fine race and was second with 94; F. C. Bell scored 92, and J. J. Richardson and G. A. Beard got 91 each. These scores show the class of shooters who will be likely to put up a fight for the cup, and of course eliminate all but the topnotchers. However, future contests will be well worth seeing, as they will bring out the best that Kentucky has to offer in the trapshooting line. The tie was shot off after the championship race, resulting in a victory for T. H. Clay on a score of 24 to 22. The championship race had thirty-two shooters, of whom thirteen were not eligible to win. The watch was won by G. G. Greene, of Maysville, on a score of 95. He was tied by F. M. Edwards, the Ohio amateur. C. Cochran, of Bristol, Tenn., struck his gait in this match, missing but 2 targets in the 100 and making high score. J. H. Kemper, the winner last year on the same score, was not in form to-day. C. Strother got down to business with the championship cup to shoot for, and bettered his score made in the cup event by 19 targets. This event was at 100 targets in strings of 20 each, entrance \$5, money divided 35, 25, 20, 10, and 10 to the club. The cup was presented to the winner by J. Q. Ward, and his remarks were such as might be expected from one of his experience, appropriate and to the point. High amateurs for the two days in the regular events were: T. H. Clay 281, J. D. Gay and W. G. Greene 273 each; W. Hall 270, F. M. Edwards 269. The professionals finished with W. Henderson in the lead with 287, R. O. Heikes 286, E. C. Goodrich 285. The winners of the previous target championship events are: T. H. Clay, Jr., in 1903, 1904, 1907 and 1908 on scores of 93, 95, 96 and 96 respectively; Emil Pragoff in 1905 on 94; W. Henderson in 1906 and 1909 on scores of 98 and 95 respectively; J. D. Gay in 1910 on 94, and J. H. Kemper in 1911 on 95.

Seventeen shooters shared in the money-back purse in sums ranging from 75 cents to \$16.65. The day's broke:

Table with columns: Shot at, Broke, Shot at, Broke. Lists names and scores for the money-back purse.

The Superior Shooting of the **WINCHESTER** Repeating Shotgun

WON THE SOUTHERN HANDICAP

VASSAR CATE, of Brunswick, Ga., won the first Interstate Handicap for 1912, with a score of 93 x 100 from the 19-yard mark, using a Winchester Repeating Shotgun.

HIGH AMATEUR AVERAGE: Won by H. B. Pottinger, of Charleston, Mo., with a score of 382 x 400, shooting a Winchester Repeating Shotgun and Winchester Loaded Shells.

HIGH PROFESSIONAL AVERAGE: Won by H. D. Freeman, who scored 394 x 400, with a Winchester Repeating Shotgun.

HIGH AVERAGE FOR ALL TARGETS: Won by Fred Gilbert, who broke 565 out of a total of 600 targets, shooting Winchester Loaded Shells. John R. Taylor, Second High with 561, and W. R. Crosby, Third, with 559. Both shot Winchester Loaded Shells, and Mr. Taylor also shot a Winchester Repeating Shotgun.

The above statement of winnings shows that Winchester goods were high in all events of the shoot, which demonstrates their superiority over all other makes competing.

W. Fred Quimby.

To "die with one's boots on" has from time immemorial been the wish of the virile man—the man who did things.

When W. Fred Quimby passed away at 5:15 A. M. on the 21st inst. at the Magee Hotel, St. Paul, Minn., he may be said to have passed away "in harness" or "with his boots on." Only a day or so before, as late as Thursday, May 16, he called upon customers and friends in Minneapolis, although at that time he was suffering from a severe cold that had been troubling him for some time. He kept his troubles to himself, and the first his employers, the Du Pont Company, knew about his illness was a telephone message on Saturday afternoon, the 18th, from Mr. J. R. Rainey, of Hackett-Walther-Gates Co., of St. Paul, to Mr. Dale Bumstead, the company's Chicago office manager, telling that Mr. Quimby was seriously ill at his hotel in St. Paul. Mr. Bumstead at once got in touch with Mr. W. S. Magill, a representative of his office, whose home is in Minneapolis, told him the circumstances of the case and urged him to see that all was done that could be done. Specialists and trained nurses were unable to do anything, and Fred Quimby passed away quietly and apparently without pain early on the 21st.

It has been written of many men that they leave a gap that will be hard to fill, but of none could it be said with greater truth than of Mr. Quimby. He has for years been an intimate friend and business associate of the sporting goods trade, wholesale and retail. He possessed to a remarkable degree that tact which goes so far to eliminate the border line between business acquaintanceship and personal friendship. He had a peculiar knack of making and keeping friends, and to them the sad news of his death will come as a shock. For many years he was engaged in the canvas and

leather sporting goods business for himself, but later abandoned that pursuit and became the traveling representative of the American E. C. & Schultze Gunpowder Co., Ltd., in 1894, associating himself with Capt. A. W. Money, the general manager of that company, and Noel E. Money, its secretary. He has been with the Du Pont Company since 1904. He was thus in direct touch with the ammunition trade for the last eighteen years.

In his earlier days he was a first-class pigeon shot, and held his own with the best of them, scoring 24 out of 25 in the last Grand American Handicap at pigeons, shot at Blue River Shooting Park, Kansas City, Mo., in 1902. The records of trapshooting in New Jersey, his native State, show the name of W. Fred Quimby as one of its crack marksmen in the late '80s and early '90s.

At the time of his death he had just entered upon his sixty-second year, having been born May 12, 1851, in Morris county, N. J. He is survived by a widow, a son and a daughter and six grandchildren.

His body was brought to Newark, N. J., his late home, on Thursday, the 23d, by his son, J. Whitney Quimby, and the funeral service was held at his late home, 566 Warren street, Newark, N. J., Saturday afternoon, the 25th inst., at 2 P. M.

Birmingham Gun Club.

BIRMINGHAM, Ala.—There was only a small number of shooters at the weekly shoot of the Birmingham Gun Club, owing to the fact that most of them were over at Southern Handicap and were shot out for the week. All report a good time at the Southern Handicap.

Lambeth did most phenomenal shooting at the weekly shoot. He met with an accident last week, but is now entirely recovered. Mrs. Garl is having a new gun made, and promises to clean up with the boys when she gets it. Scores as follows:

Shot at. Broke		Shot at. Broke

PENNSYLVANIA CHAMPIONSHIP

Won at Sunbury, Pa., May 21-24, by
Mr. Harry W. Kahler, using

Peters

“steel where steel belongs” shells.

Mr. Kahler's shooting at the Pennsylvania State Tournament was phenomenal and his record of winnings has probably never been equalled at a single trap shooting event, as the following list will show:

Penna. State Championship and Dupont Challenge Trophy	} - -	434 ex 450
Wolstencroft Trophy State Championship at Doubles	} -	43 ex 25 Pairs
Merchandise Match	1st place,	50 straight
Harrisburg Trophy (3-man teams), 1st place,	25 straight on winning team (Highland of Philadelphia)
Reading Trophy (4-man teams), 1st place,	25 straight on winning team (Highland of Philadelphia)
High General Average, regular program,	434 ex 450
High General Average, all 16-yard targets,	679 ex 700

At the Sunbury Tournament, Mr. Howard Schlicher, using PETERS Shells, was high on winning team in Milt Lindsley Trophy event, 33 x 35, and second in Merchandise event, 48 x 50

Texas Championship

Won at Waco, Tex., May 21-23, by Mr. J. D. Allen of Fort Worth—47 out of 50, 25 straight in the shoot-off, using PETERS Shells.

Arkansas Championship

Won at Camden, Ark., May 8-9, by Mr. J. W. Alston of Little Rock. Score 49 x 50, using PETERS Shells.

Kentucky State Shoot

High General Average won at Lexington, Ky., May 23-24, by Mr. Woolfolk Henderson, 287 x 300, also High Average on all targets, 427 x 450, using PETERS Shells.

To choose the P brand of shells for use at the traps is the first step toward VICTORY. Up-to-date shooters all over the country are “wise” to this. Are YOU a PROGRESSIVE?

THE PETERS CARTRIDGE COMPANY - - - **CINCINNATI, OHIO**

New York: 98 Chambers Street. T. H. KELLER, Manager

New Orleans: 321 Magazine Street. LEE OMOHUNDRO, Manager

San Francisco: 608-612 Howard Street. J. S. FRENCH, Manager

Sunbury-Selinsgrove Gun Club.

SUNBURY, Pa., May 25.—Inclosed find the carbons of our State shoot held during this week. The office was in charge of Lloyd Lewis, with Messrs. Kinney and Rippel having charge of the carbons and figuring sheets. Every man that shot the program came to the office complimented them.

This was one of the shoots that had absolutely no trap troubles of any kind. There were over 6500 targets thrown without a spring or anything at the traps breaking or getting out of order. This made possible the fact that we were through shooting the regular program every day by about 2:30 P. M., with the shooting starting exactly at 9:00 A. M. each morning at 9 and not at 9.30 or 10:00. It was also due to the fact that the professional shooters, who kindly helped to train the trap crews to their work, and supervised their work until they were proficient in it. All the professional shooters were on the job and helped to boost the attendance as well as helping at the traps and along the firing line.

The Wolstencroft trophy was won by Harry Kahler, of Philadelphia, with the score of 43 out of the 25 pairs.

The Milt Lindsey trophy, a two-man team race, was won by the Lehigh Valley Rod and Gun Club with 64 out of 75. This was at 25 singles and 5 pairs doubles. The Sunbury-Selinsgrove No. 1 and the Highland Gun Club of Philadelphia were tied for second at 63.

The Harrisburg trophy, the three-man team, was won by the Highland Gun Club of Philadelphia with the score of 71 out of 75, the Lehigh Valley Shooting Association, of Allentown, and the South End Gun Club, of Reading, tying for second with 67 out of the 75.

The Reading trophy, a four-man team race, was tied for by the Sunbury-Selinsgrove Gun Club and the Highland team at 89 out of the 100 targets shot at. In the shoot-off the Highland team won out with the score of 92 to 88.

The Senator McNichol trophy was won by Adams, of Reading, who by winning it this time obtained permanent possession of the magnificent trophy.

The Du Pont trophy was won by Kahler, of Philadelphia, he topping out the entire field of shooters.

The following targets were made in practice, 150 targets comprising the program:

New York Salesrooms: 32 Warren St.

Meriden, Conn.

Marlin

Model 1897 REPEATER

of .22 Calibre—but as Accurate and Dependable as a Big Game Rifle

A SMALL game and target rifle of take-down construction, having special smokeless steel frame and tool steel working parts.

Takes .22 short, .22 long and .22 long rifle cartridges without adjustment. Equipped with Ivory Bead and Rocky Mountain sights. Has lever action like that of high-power arms. Solid top protects shooter against danger from thrown-back smoke, gases and defective cartridges; keeps action dry and clean. Side ejection insures unbroken line of sight always—makes possible quick, accurate follow-up shots.

Send 6 cents for new catalogue showing complete line of Marlin Repeating rifles and shotguns.

The Marlin Firearms Co. 27 Willow Street, New Haven, Connecticut

LIKE TEDDY—IT'S MAKING A HIT

The Famous B.S.A. AIR RIFLE

Its Reliability, Power and Accuracy are amazing

This wonderful air rifle—made by the Birmingham Small Arms Co., of England, is a *real* rifle, comparing favorably with any high grade .22 Caliber. The .22 bore air rifle has 600 feet per second velocity, makes little noise, no smoke and no fire, its use entails no messy cleaning troubles and the ammunition is *cheap*. Write for particulars.

ONLY THREE

working parts in the Lock Mechanism of the

A. H. FOX GUN

Too strong to break—too simple to get out of order.

Fox new models for 1912, 16 and 20 gauges, designed from special models for each grade—the same mechanical perfection as the Fox 12 gauges. The Lock Mechanism and all working parts are made identically of the same high grade material, by the same skilled workmen, tested with enormous over-

charges as required by European Government. The barrels of these 16 and 20 gauges are made of Fox "Chromox" High Pressure Fluid Steel, an entirely new steel created especially for us. Fox "Chromox" by actual government test shows the highest known tensile strength.

Prices for these gauges will be the same as for the famous Fox 12 gauges. Sportsmen will do well to call on dealers early to see these new models. If your dealer has not been supplied, write us for descriptive bulletin and full particulars.

THE A. H. FOX GUN CO.

4670 N. 18th Street, Philadelphia, Pa., U. S. A.

Supplement to Game Laws in Brief

SO many and important changes have been made in fish and game laws in a number of States, during the past winter, that we have found it necessary to issue an eight page supplement of these changes. Paste these eight pages in the back of your copy of GAME LAWS IN BRIEF and you will have complete and correct laws to June 1st, 1912, governing fishing and shooting in every part of the United States and Canada.

Ten Cents is the price of this addenda. Mailed to any address upon receipt of price.

NEWFOUNDLAND

A Country of Fish and Game. A Paradise for the Camper and Angler. Ideal Canoe Trips. The country traversed by the Reid Newfoundland Company's system is exceedingly rich in all kinds of fish and game. All along the route of the Railway are streams famous for their SALMON and TROUT fishing, also Caribou barrens. Americans who have been fishing and hunting in Newfoundland say there is no other country in the world in which so good fishing and hunting can be secured and with such ease as in Newfoundland. Information, together with Illustrated Booklet and Folder, cheerfully forwarded upon application to

J. W. N. JOHNSTONE, General Passenger Agent, Reid Newfoundland Company, St. John's, Newfoundland.

Analostan Gun Club.

WASHINGTON, D. C., May 26.—The high north wind, direct in the faces of the shooters, an extremely dark afternoon and a very swift target all conspired to make low scores at the regular weekly shoot of the Analostan Gun Club yesterday. E. W. Ford was the particular star of the afternoon, scoring 47 out of his 50, and going out with 89 out of his 100. U. M. C. Anderson, Monroe and Peck were next in line. We had as visitors E. H. Storr, of the Peters Cartridge Co.; J. A. Anderson, of the U. M. C. Remington, and T. A. Davis, of the Winchester Co. The scores were as follows:

Shot at.	Brk.	Shot at.	Brk.		
Green	135	80	Emmons	100	36
Huseman	115	92	Storr	95	82
Ford	100	89	Dr Taylor	80	67
Anderson	100	84	Bradford	65	17
Monroe	100	83	Brown	50	43
Peck	100	82	M Taylor	50	40
Luttrell	100	79	Barnes	50	39
Wagner	100	76	Leight	50	40
Maddox	10	65	Bray	50	24
Kirk	100	51	Murray	35	20

MILES TAYLOR, Sec'y.

TRAP SHOOTING

“The Sport Alluring”

Solves the “Slow Days” of Vacations

THERE are days of your vacation when you long for something to do. You crave excitement. The “slow days” are the zeros in your vacation score. Each day should have its mission to enable you to realize fully the recreation benefits of anticipated holidays.

PLAN your outing to include Trapshooting. Then you will have the ideal diversion for the inevitable hour or day which lacks the activity to make it fully enjoyable. It affords opportunity to shoot midst surroundings assuring pleasure and that healthy stimulation which makes vacations truly beneficial. In popularity, it rivals baseball, golf and tennis.

LOOK for the summer resort including Trapshooting amongst its attractions. Plan your recreation days so you will be “on the firing line” with other enthusiastic and companionable shooters, so that your vacation days will not be marred by a lack of invigorating sport.

TO excel at the traps, be sure your shells are loaded with either “Infallible” or “Ballistite” brands of Du Pont Smokeless Powder. Only the highest grade of materials are used and they are manufactured into powder under most rigid inspection to insure absolute reliability as to quality and be a dependable aid to all shooters.

DU PONT

SMOKELESS POWDERS

Are fully described in a set of interesting and helpful booklets. Send a postal today for these so you may select the brand to meet your requirements, thereby enabling you to make notable scores amongst all competitors. :: :: :: :: :: :: :: :: Address Dept. 3.

Du Pont Powder Co., Wilmington, Del.
 America's Pioneer Powder Makers

Here is Six Times 22 Years' Experience

ANY shortcomings the shooter finds in his gun are problems which—you may be sure—the maker has not overlooked but has been unable to solve.

The stubbornest gun problems have all yielded to the inventions of L. C. Smith and the precision workmanship of the six Hunter brothers. To account for each and every supreme quality in Smith guns would be to account for six men pursuing a single purpose for twenty-two years.

The simplest gun mechanism and "six times 22 years' experience" best explain the gun that never fails.

For Instance:

No one ever saw a loose Smith Gun. The double-wedging bolt compensates by wedging through the extension rib into the frame with a double rotary grip.

Accessibility. A single screw releases both locks with all parts attached, all ready for cleaning and oiling.

One Trigger

The Hunter One-Trigger cannot balk or double; prevents fumbling and delay. Guaranteed for five years.

Ask your dealer to show you the new L. C. Smith 20-Gauge. From butt to muzzle it is 20-gauge. Write for Catalog of Smith Guns—every grade from \$25 net to \$1500 list.

Illustration shows \$102.50 grade. Dealer's net price, with ejector, only \$75; with Hunter One-Trigger, \$100 net.

*Shot at 120 each.

Boston A. A.

BOSTON, Mass., May 25.—The weekly shoot of the B. A. A. Gun Club at the Riverside traps to-day was marked by good scores. L. H. Davis won the take-home trophy and had the best record in the competition for the Hunter trophy.

L. G. Osborn was high gun for the Ballou trophy in the special 200-target shoot. R. A. Fays, scratch gun, led for the Barbey trophy and was second in the take-home trophy match.

The last shoot of the season will be held next Thursday, all day. There will be a 200-target shoot for the club championship, and the winners of the Hunter, Barbey and Knights trophies will be announced. The scores:

Take-home trophy:					
L H Davis	5	50	W C Brooks	4	46
R A Faye	0	49	C P Blinn	5½	45½
G L Osborn	6	49	S A Ellis	2½	44½

Genesee Gun Club.

UTICA, N. Y., May 25.—J. E. Conley, of Herkimer, again won the semi-monthly pigeon shoot of the Genesee Gun Club to-day. Conley scored 24 out of a possible 25 and won the trophy handicap and captured high average for the day's program. Second high average was held by W. E. Corfield. Several new members joined the ranks and shot well. The scores follow, No. 6 being the trophy handicap:

Events:	1	2	3	4	5	6	7	8
Targets:	10	10	10	15	10	25	10	15
Borden	9	12	9	12	8	23	8	14

Du Pont Gun Club.

WILMINGTON, Del., May 25.—Alden B. Richardson, of Dover, son of Senator Richardson, won a remarkable match for the Class A challenge cup on the grounds of the Du Pont Gun Club to-day. He successfully defended the trophy. His opponent was J. H. Minnick, of this city, who has lately been shooting in great form. Although the conditions governing the prize called for two events of 25 targets each, it was necessary for each man to shoot at 100 targets before the event was decided. The final score was: Richardson 98, Minnick, 94.

The contest was a great display of marksmanship throughout. At the end of the first 25, Richardson had a straight score and his opponent made 24. At the end of the second 25, conditions were reversed. This made the score: Richardson, 49; Minnick 49.

In the shoot-off at 25 targets the men again tied, each missing one. On the fourth round of 25, Richardson made a straight score and Minnick broke 21. This decided the match.

The Class B spoon event was also a close contest. W. G. Wood, L. C. Lyon and H. P. Carlon each broke 24 out of 25. In the shoot-off at 25 targets Wood and Carlon each broke 21, while Carlon scored 20. In the second shoot-off between Wood and Carlon, Wood broke 22 to his opponent's 18.

Forty-five marksmen were before the traps and there were a large number of spectators. Mr. Minnick won the Cole du Pont Class A spoon event with a straight score of 25. L. L. Jarrell won Class C event with a score of 23. J. B. Grier and Charles R. Kenworthy tied in Class D with scores of 18.

The scores in detail follow: H. W. Bush 17, A. B. Richardson 21, L. W. Crawford 13, J. W. Highfield 10, W. A. Joslyn 23, W. P. Northcott 23, Eugene du Pont 23, Thorpe Martin 18, L. L. Jarrell 23, W. L. Smith 19, L. C. Lyon 24, Clyde Leedom 17, W. A. Casey 16, L. H. Hoopes, Jr. 11, E. A. W. Everitt 24, L. L. Jarrell 24, W. M. Hammond 23, F. P. Ewing 21, H. P. Carlon 24, J. B. Grier 18, Dr. E. O. Bullock 13, S. G. Davis 16, R. L. Connor 20, W. M. Foord 20, J. B. McHugh 24, J. J. Magahern 18, J. T. Roberson 23, W. G. Wood 24, J. H. Minnick 25, G. V. Leach 3, H. Cannon 14, A. Ellinger 7, N. K. Smith 23, Victor du Pont 18, W. B. Smith, Jr., 17, D. A. Grier 18, Dr. H. Betts 19, C. D. Prickett 20, C. H. Simon 15, C. R. Kenworthy 18, D. Lindsay 23, S. Tuchten 18, W. Tomlinson 18, Dr. Patterson 20, E. E. du Pont 24.

Another Victory for

THE BLACK SHELLS

At the Texas State Shoot, Waca, Nic Arie, Shooting THE BLACK SHELLS in a pump gun, won the State Championship for doubles, breaking 43 x 50. He also won amateur, high, general average for three days, breaking 472 x 525, under difficult conditions.

Nic Arie also won high amateur average for two days' shoot, breaking 424 x 440, at the Texas Handicap, Houston. Nine of the 16 birds lost by Mr. Arie were from the 22 yard handicap. Of course he used THE BLACK SHELLS.

These Records are further demonstrations of the reliability and uniformity of THE BLACK SHELLS, and their smooth working through the pump gun.

Bide-a-Wee Show.

SOUTHPORT STAMP, owned by Mrs. L. L. Andruss, won the cup offered by Mrs. Benjamin F. McGuckin, president of the Bide-a-Wee Home for Stray Dogs at Orange, N. J., for the best dog in a show held last Saturday.

Blarney Brickbat, Irish terrier, owned by John Grenville Bates, was awarded the prize for the best in an open air show of several breeds of terriers held last Saturday on the grounds of Francis G. Lloyd, at Bernardsville, N. J. Reserve honors went to Robert Goelet's West Highland terrier Rumpus, of Glenmore.

Iowa City Gun Club.

THE Iowa City Gun Club has concluded an unusually successful two days' shoot at Rundell Park, with some of the best records ever made in the State. John W. Garrett, of Colorado Springs, was high professional for the two days, making a run of 145 targets the last day without a miss, while George Maxwell, the wonderful one-armed shot from Hastings, Neb., was a close second, missing only 13 targets.

Of the amateurs, Mr. Potter White, of Watertown, S. D., was high, tying Maxwell's score by losing only 13 out of 300 targets.

W. Ridley, of What Cheer, Ia., the winner of the Western Handicap last year at Omaha, came in third.

W. Whitlief, the holder of the State championship, was unable to be here the second day, but he made a remarkably good score of 140 out of 150 the first day.

Portland—Paleface.

WELLINGTON, Mass., May 23.—In the closest match thus far shot between Portland Gun Club and the Paleface Gun Club, the latter won by six birds in a 10-man team race at Falmouth to-day.

If it had been a 5-man picked team race Portland would have won, for her five highest men shot many birds better than the first five Paleface shots. Silas Adams, the New England champion, was high gun, breaking 96 out of his 100 targets.

Hinds and Al Dow, who usually enter the 90 list, had an off day, being low men on the local team.

The total scores, including those of the individuals who did shoot in the match, were as follows:

Boston—Swett 93, Clark 89, Burnes 89, Frank 89, Sibley 86, Mayor Reed 84, Steele 83, Blinn 82, Marden 81; total 875.

Portland—Adams 96, C. Randall 95, E. Randall 91, Coleman 90, Hunt 87, Spotts 85, A. Read 84, Thurston 84, A. Dow 83, Hinds 75; totals, 869.

Individuals—N. Taylor 85, F. Gray 83, Hill 83, Dimick 82, Osborne 81, Blanchard 79, Webster 77, W. Taylor 75, Weymouth 74, Dyer 47.

Grafton Gun Club.

GRAFTON, W. Va., May 25.—The following scores were made at the traps here yesterday:

	Shot at.		Broke.			Shot at.		Broke.	
	at.	Brk.	at.	Brk.		at.	Brk.	at.	Brk.
Gerstell	50	43	Miss Dorsey	10	4				
Riffel	50	47	Miss Flanery	10	3				
Flanagan	50	45	Miss Love	10	1				
Murray	50	40	Miss N Fahey	10	2				
Dr Star	50	39	Miss R Fahey	10	2				
Mambourg	25	19	Mrs Flanagan	11	3				

The ladies are taking quite an interest in the game. Last Friday there were seven to face the traps.

Don't Wear a Truss!

Brooks' Appliance is a new scientific discovery with automatic air cushions that draws the broken parts together and binds them as you would a broken limb. It absolutely holds firmly and comfortably and never slips, always light and cool and conforms to every movement of the body without chafing or hurting. I make it to your measure and send it to you on a strict guarantee of satisfaction or money refunded and I have put my price so low that anybody, rich or poor, can buy it. Remember, I make it to your order—send it to you

—you wear it—and if it doesn't satisfy you, you send it back to me and I will refund your money. The banks or any responsible citizen in Marshall will tell you that is the way I do business—always absolutely on the square and I have sold to thousands of people this way for the past 30 years. Remember, I use no salves, no barness, no lies, no fakes. I just give you a straight business deal at a reasonable price.

D. E. BROOKS, 1230 State St., Marshall, Michigan

FROM EASTERN CITY TO WESTERN FOREST.

Continued from page 691.

due time. The man's face was covered with sweat and his clothes with blood. The bear was a young male, weighing (without entrails) 157 pounds; no great weight for a strong man on level ground, but a heavy burden for a log-strewn trail, partly through water and everywhere brush covered. The hide was a beautiful one, and the meat was sweet and palatable.

Fishermen passing up and down the little river must of necessity come close to our cabin; that is, the steep hills compel them to travel through the narrow valley and across private property. These men and boys are all native lovers, whether they know it or not, for they are not very well paid by the comparatively few small fishes which they capture. They surely find something else in the waters, or they would not come again and again. They are almost invariably pleasant and willing talkers, ready to report their “luck” and to tell about their bait, and even to open the creels for inspection, especially when there happens to be something handsome inside.

Angle worms and salmon eggs are the most usual lures for trout. Flies are exceptional, as would be expected in a densely forested region. It is common to employ a small, bright whirling spoon or shiner to attract the attention of the fish. The average trout size is not large; perhaps just about the same as on the Atlantic slope, but a trout is a trout, and every fisherman loves him, regardless of his inches or his ounces. There are several sorts of trout on the Pacific coast, including some (or many) hybrids. Certain of the salt water forms follow the salmon into the streams in autumn and remain there all winter, affording fine sport to anglers in the spring.

The salmon of the Pacific (five species) belong to a different genus from the salmon of the Atlantic. All the salmon of the Pacific, it is said, ascend the streams but once. After spawning, they perish.

My personal knowledge of salmon is confined to a short and partial acquaintance with two species; the two which enter our stream every autumn. In respect to one of them there is good reason to say that all die soon after spawning, as none are ever seen going down stream. But in respect to the other (the so-called “silver” salmon) the case is not so clear, for it is not uncommon to see them drifting tail foremost toward the sea.

The trained observers who state that all the Pacific salmon ascend the rivers but once are probably correct, but the behavior of the silver salmon suggests interesting possibilities. It is not impossible that this species shows something of an ancestral trait; something of the habit of returning to salt water. Time after time I have detected a silver salmon descending the stream. Taking note of its behavior and speed I have gone down to a lower point of observation, there to await its coming with a certainty of seeing it.

That these spent fish actually reach salt water is pretty certain, as they are reported in the bay. But that they live is not certain. They are identified by their bruised and used-up appearance, and it is quite probable that they soon perish and become food for the gulls.

SOME NOTES ON AMERICAN CAMPING FOODS.

Continued from page 693.

place the sugar per capita too low. It should be at least two pounds for a person per week. Besides, sugar makes a very fair candy at all times; and is prized as a makeshift for yeast in leavening bread.

The loaf sugar, or domino sugar, is always the best form. Granulated is a nuisance. If the container bursts or breaks or spills over, there is always some loss.

Never trouble about the fraudulent misnamed sweetener called "saccharin"—a chemical product. I have had over a dozen years' experience with it on and off. It hasn't a particle of food value, like cane sugar. It's no use trying to cheat your stomach! You'll find that out quickly enough!

* * * * *

Many persons make a failure at camping because they find everything so different to home or town life. When a person goes mountaineering, the comforts of the drawing-room in mountain shacks are not to be expected. Similarly, in the forest, no push-the-button conveniences should be anticipated. The luxury of fresh bread, of juicy beefsteaks, of buttered toast, etc., etc., have to be dispensed with, except if happening across the hospitality of a farmhouse or inn. But—and herein comes one of the true charms of the outdoor life—on returning home we appreciate all the more the comforts of home. The rough-and-tough experiences of camping we now begin to laugh over, and even poke fun at; and ere a few weeks or months have elapsed, we are already saying: "Oh, yes, we'll go again next year!"

The subtle charm of life in the open has begun to tell on us! It is the call of the open!

WOMAN TREE CHOPPER.

D. WOODBURY BACHELDER, of this city, engaged in the lumber business at Damariscotta, Me., has in his employ a most remarkable woman as regards strength and endurance. She is Mary Gregory, wife of Frank Gregory, says the Boston Globe.

She first entered the employ of Mr. Bachelder to provide meals for the fourteen men in the camp. This she was able to do and have half a day left in which to engage in the work of the men, and asked permission of Mr. Bachelder to take her place with the choppers.

Mr. Bachelder gave his consent and was astonished to see her perform. She wielded an ax as expertly as any man in the crew and made a record one day of chopping, splitting and piling three cords of wood, a task that most men, hardened to the service of the woods, are incapable of equalling. Mr. Bachelder says:

"She is the strongest woman I ever saw. No sooner does she fell a tree than she is on top of it, limbing it out and in every line of work she is the equal of the men in camp. She handles a crosscut saw with all the skill of a man and not a laborer in the camp can surpass her in the amount of work accomplished."

She is 35 years old, weighs about 175, stands 5 feet 8 inches and is as quick as a flash. She is fond of sport and expert as a wrestler. Mr. Bachelder says he has yet to see a man in camp who can match her at wrestling. She is not afraid to try conclusions with any of them. She has put every man who has been willing to wrestle her on his back and yet is modest in speech and manner, the mother of seven children, a native of Nova Scotia, and prior to making her home in the Maine woods, lived in Massachusetts.

Her husband works in the woods with her, but is far from being her equal in strength.

Resorts for Sportsmen.

ARE YOU A GUNNER?

Do you love to follow your good dog over the fields in search of quail or chickens, or to struggle through swamp or along thick grown hillside, expecting to hear the roar of the ruffed grouse or the twitter of the fall woodcock? If so, you should have this new book.

AMERICAN GAME BIRD SHOOTING

By **GEORGE BIRD GRINNELL**

(New—Just Published)

This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys.

The first part of the volume is devoted to a description of the various species and their habits—the way in which they live their lives.

The second part of the book is devoted to upland shooting and treats of the methods by which all the upland birds are pursued and taken. The chapter "Aids to Shooting" describes the clothing, guns, and loads and dogs that the gunner may profitably use; while the last section of the book treats of the shooting of the future and the efforts to rear our native quail and grouse in domestication.

The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full page portraits of different game birds and hunting scenes, with a number of cuts in the text.

Cloth. About 575 pages. Price \$3.50, net. Postage 25 cents.

This book is of inestimable value. It contains the genuine hunter-naturalist facts given in the most entertaining and interesting style.

FOREST AND STREAM PUBLISHING CO., 127 Franklin St., NEW YORK CITY

Getting a Rise

Fly-fishing, bread making, ballooning and advertising depend very much on one thing—

Getting a Rise

An advertiser often overlooks the fact that much depends on his copy, as applied to a certain class of readers. He must put the "I know your wants and means" idea into his copy in order to

Get a Rise

from the reader. Last winter the writers of the following letters told FOREST AND STREAM readers what kind of shooting was to be found at the places advertised, that the rate for board, while not cheap, was worth the money asked. They told the truth in their copy, and if you will take time to read their letters, printed below, you will see that it paid to

Get a Rise

from the readers of FOREST AND STREAM.

HUNTERS' LODGE, ROBESON COUNTY, N. C.
GENERAL FRANK A. BOND, PROP.

Buies P. O., N. C., March 23, 1912.

Forest and Stream, New York:

Gentlemen—You sent me scores of applicants, and my house was filled to overflowing, and I really think I turned away quite half as many as I could accommodate. I feel myself deeply indebted to you for the valuable recommendations you gave me.

Yours truly, FRANK A. BOND.

PINE TOP LODGE.

C. AND L. P. BLOW.

Crowell, Halifax Co., N. C., March 23, 1912.

Forest and Stream, New York:

Gentlemen—At the close of a most successful season, in closing up my books, etc., I want to thank you for the very substantial contribution your magazine has made to the success and pleasure of our winter's work at Pine Top Lodge. I think the men you sent us would heartily endorse this, for they were not a few, and they were "the right sort," and I am sure they got what they came for, a pleasant outing, and everything that goes to make it so.

Yours was the pleasant task of bringing the sportsman what he was seeking—good sport; ours, the no less pleasant one of seeing that he got it and all the other essentials, such as good dogs, plenty of game and a well appointed Lodge.

For years we have been constant subscribers to *Forest and Stream*, and through its agency have made the acquaintance of many of the leading sportsmen of the North.

Yours, truly, C. & L. P. BLOW.

MAGNOLIA INN, AIKEN, S. C.

HENRY BUSCH, PROP.

Aiken, S. C., March 29, 1912.

Forest and Stream, New York:

Dear Sirs—We take this opportunity to acknowledge our appreciation of *Forest and Stream* advertising. The business received through our ad. has been entirely satisfactory.

Yours truly, MAGNOLIA INN, Henry Busch, Prop.

COCOA HOUSE.

E. E. GRIMES, PROP.

Cocoa, Florida, March 24, 1912.

Forest and Stream, New York:

Dear Sirs—I was very much pleased with my ad. in your paper this season. It brought several people, and I will be glad to recommend your paper.

Yours very truly, E. E. GRIMES.

LAKE VIEW HOTEL.

PRIVATE OFFICE E. C. WORRELL, OWNER AND PROP.

Leesburg, Fla., March 22, 1912.

Forest and Stream, New York:

Gentlemen—After one of the most successful winter seasons we have ever had, I feel that I should write you in acknowledgment of the efficient service rendered by the Information Department of *Forest and Stream*.

It pays to advertise in certain mediums for certain purposes, and having such excellent possibilities here for the sportsman and fisherman, our ad. in *Forest and Stream* has more than paid.

Thanking you for your kind recommendation to those coming South, I am, respectfully,

C. E. WORRELL.

HOW A LION PREPARES HIS MEAL.

In an article on lions in the June American Magazine, Stewart Edward White describes the manner in which a lion kills his prey. Mr. White has just returned from a year's hunt in Africa, during which he saw 71 lions and killed several. Following is an extract:

"The lion generally springs on his prey from behind or a little off the quarter. By the impetus of his own weight he hurls his victim forward, doubling its head under, and very neatly breaking its neck. I have never seen this done, but the process has been well observed and attested; and certainly, of the many hundreds of lion kills I have taken the pains to inspect, the majority had had their necks broken. Sometimes, but apparently more rarely, the lion kills its prey by a bite in the back of the neck. I have seen zebra killed in this fashion, but never any of the buck. It may be possible that the lack of horns makes it more difficult to break a zebra's neck because of the corresponding lack of leverage when its head hits the ground sidewise.

"Once the kill is made, the lion disembowels the beast very neatly indeed, and drags the entrails a few feet out of the way. He then eats what he wants; and, curiously enough, seems often to be very fond of the skin. In fact, lacking other evidence, it is occasionally possible to identify a kill as being that of a lion by noticing whether any considerable portion of the hide has been devoured. After eating he drinks. Then he is likely to do one of two things; either he returns to cover near the carcass and lies down; or he wanders slowly and with satisfaction toward his happy home. In the latter case the hyenas, jackals and carrion birds seize their chance. The astute hunter can often diagnose the case by the general actions and demeanor of these camp followers. A half dozen sour and disgusted looking hyenas seated on their haunches at scattered intervals, and treeful of mournfully hump-backed vultures sunk in sadness, indicate that the lion has decided to save the rest of his zebra until to-morrow; and is not far away. On the other hand, a flapping, snarling Kilkenny-fair of an aggregation swirling about one spot in the grass means that the principal actor has gone home. It is ordinarily useless to expect to see the lion actually on his prey. The feeding is done before dawn, after which the lion enjoys stretching out in the open until the sun is well up, and then retiring to the nearest available cover. In an undisturbed country, or one not much hunted, the early morning hours, up to say nine o'clock, are quite likely to show you lions sauntering leisurely across the open plains toward their lairs. They go a little, stop a little, yawn, sit down a while, gradually work their way home. At those times you come upon them unexpectedly face to face; or, seeing them from afar, ride them down in a glorious gallop."

THEN AND NOW.

When the dewdrops bright in the dawning gleam,
And the dimpling waters in beauty shine,
As the breathing of morn with odors teem,
With my rod and reel and its silken line,
And a feathered hook of a quaint design,
Tiptoe on the bank, in the dewy grass,
At the foot of a giant Norway pine,
I cast the fly for gamy bass.

When smooth as a mirror are lake and stream,
And the shady pools hold the quiet kine,
And pond lilies float in a noontide dream,
With my rod and reel and its silken line
I hie to the sylvan shades, and dine
Beneath the groined arches that far surpass
The Gothic of man; then in dreams divine
I cast the fly for gamy bass.

When the setting sun, with its crimson beam,
Transmutes the waters to ruby wine,
I return again, in delight supreme,
With my rod and reel and its silken line;
And there, in the hour of day's decline,
As the exquisite moments swiftly pass,
With a joy that language cannot define,
I cast the fly for gamy bass.

Dear fellow: ensconced in this den of mine,
With my rod and reel and its silken line,
In your "Pipe Smoke Carriers" alone, alas!
I cast the fly for the gamy bass.

—J. S. Z., in the Chicago Tribune.

FOREST AND STREAM PUBLISHING CO.

HITTING vs. MISSING

By S. T. Hammond ("Shadow").

Cloth. Price, \$1.00.

Mr. Hammond enjoys among his field companions the repute of being an unusually good shot, and one who is particularly successful in that most difficult branch of upland shooting, the pursuit of the ruffed grouse, or partridge. This prompted the suggestion that he should write down for others an exposition of the methods by which his skill was acquired. The result is this original manual of "Hitting vs. Missing." We term it original, because, as the chapters will show, the author was self-taught; the expedients and devices adopted and the forms of practice followed were his own. This then may be termed the Hammond system of shooting; and as it was successful in his own experience, being here set forth simply and intelligently, it will prove not less effective with others.

A Northern Elysium

THAT was exactly where the rub came. How could it be possible that, within such a trifling distance, within but a few hours' railway journey of their old familiar haunts, lay concealed somewhere a veritable "Fairy-Land." A "Fairy-Land" such as they had heard about; such as they had read about; such as they had talked about, but such as they had contemptuously ignored. Someone had made a most pertinent allusion to the fact that in their craving to investigate the attractions of "all the world," they had completely overlooked the advisability of "beginning at Jerusalem," and this caused them to think.

What had the Highlands of Ontario to do with Jerusalem? they asked each other. Nothing whatever; it was purely a figure of speech. Then why adopt incomprehensible metaphors? The question was asked and simultaneously the light dawned. The connection was plain as a pike-staff, and the more they realized the true gist of it, the more they were set thinking.

Of course it took some little time, but at last they heard the plaintive appeal of their own lovely North-Land, to come and worship at her shrines of beauty and enchantment, and they went. They saw, and were conquered.

Their determination was laudable; it was the tardy outcome of a patriotic resolve, but there still was time to wipe out the stigma and disloyalty and acknowledge in sack-cloth and ashes, their sins of omission.

An occasional sigh might have been heard to escape them as they packed their grips. A strong determination, not to look backward, consumed them as they wended their way to the depot with something akin to the air of martyrs about to suffer in a righteous cause. Within twenty-four

hours, however, they knew they were right; they were convinced that in departing from the old order of things, in spending their holidays in one or other of the numerous delightful resorts so prodigally distributed by bounteous nature within their own land, they were contributing their quota to the support and maintenance of their country's interests. In plain every-day parlance, they were supporting "home industries."

Their return was heralded by a patriotic wave, which received expression in a most pronounced "I told you so" sort of air. Hesitancy and apprehension had been supplanted by delighted eloquence. In return for a wavering faithfulness what did they receive? "Good measure pressed down and shaken together and running over." Each man a Benjamin's portion.

Truly, in this old world of ours it is not every man who gets his deserts.

And thus it is with every tourist, holiday maker as well as every jaded member of the great human family who flies to Ontario's North-Land. The *quid pro quo* system of this delightful country is most assuredly based upon the most generous principles. The presence of the individual is the only stipulation laid down, in return for which Dame Nature, dressed in her most attractive garb, comes to meet him at the landing, and with her sweetest of smiles and her coyest of looks, escorts him through the inextricable mazes of surpassing beauty, scattered broadcast throughout this delightful northern land.

Most people know that Huntsville is but 145 miles north of the city of Toronto on the Grand Trunk Railway, but how many know anything of the charming country of which it is the hub? The day is not far distant when this northern town will have to own its greatly increased popu-

larity to its proximity to this "Fairy-Land" of Ontario.

"Superlativeness" is akin to extravagance, and frequently possesses a smack of the "deluderin" talk of Paddy, yet there are occasions when we poor mortals are perforce compelled, for very lack of words, to wax descriptive by the aid of such questionable means. Alexander Pope, in his immortal lines, "True wit is wisdom to advantage dressed, what oft was thought, but ne'er so well expressed," suggests the existence of similar difficulties 200 years ago.

The vista from the deck of the steamer, as Fairy River is navigated, and later, the lovely stretch of water cunningly named Fairy Lake, while Huntsville is fading into the dim distance, is in itself more than sufficient to compensate the most reluctant visitor for any risks taken. It is somewhere in this locality that the transition takes place from doubt to delight, from uncertainty to certainty. It is here he metaphorically shakes hands with himself, feels on the best terms with himself, and congratulates himself on the possession of that undoubted perception, that inexplicable acumen which alone could suggest such a heavenly resort. Even the visitor to Canada's "Fairy-Land" takes a modicum of credit unto himself for the existence of these northern glories that is only human nature.

Narrow channels, beautiful bays and rocky declivities, all surrounded by tiers of balsam, spruce and cedar, through all of which the beautiful Muskoka River insists in playing his part, as though imbued with a set determination that this picture would be incomplete were he not to lend his fascinations to the perfection of everything.

As one visits the numerous spots of enchantment in this "Fairy-Land" he cannot help won-

dering why nature should select any one spot, and why this district was especially chosen for her particular attentions for such unusual prodigality. Away, hidden in some most inaccessible part, she conceals her most priceless gems as though her innate modesty forbade her revealing them in haunts more conspicuous, where lurked the eye of the inappreciative. In her seclusion she gloats over her treasures and reserves them for the lucky ones who discover her while this mood lasts.

Here a lovely tree-fringed bay or inlet; there some bold promontory and charming waterway, while from somewhere in close proximity comes the sweetest of music across the fragrant invigorating air, of some swollen hill stream or purling brooklet in the waters of which many an unsuspecting trout is ready for the fly. Surely, it was mid some such scenes as these that Tennyson conceived his daintiest of poems, "The Brook," and as we pause at the foot of that declivity, and watch the murmuring stream trickle lazily at our feet, we find ourselves unconsciously repeating the familiar lines:

"I come from haunts of coot and hern
I make a sudden sally,
And sparkle out among the fern,
To tinkle down a valley."

While memory is further awakened by the graceful serpentine movement in some spot deeper than the rest, which has its counterpart in the lines:

"I wind about, and in and out,
With here a blossom sailing,
And here and there a lusty trout,
And here and there a grayling."

"I slip, I slide, I gloom, I glance
Among my skimming swallows;
I make the netted sunbeam dance
Against my sandy shallows."

* * * * *
"And out again I curve and flow,
To join the brimming river,
For men may come and men may go,
But I go on for ever."

As we leave the deck of the steamer at Portage, it is small wonder if the scriptural allusion to commencing proceedings with the best comes to mind, and then, "when men have well drunk," having recourse to "that which is worse."

There is a cunningness about the above method which has no place here. Despite the fact, however, that Fairy River and Fairy Lake are permeated with a charm which is hard to describe, it cannot be said that either the above system or the reverse has been adopted. These waters of "Fairy-Land" grow on one, begetting an enthusiasm which, in every sense of the word, is justifiable, and by the time the magnificent southern hostelry is reached, not one soul can lay the charge that the Lake of Bays is one whit inferior to her less pretentious northern rival.

The shores of this lake speak of its growing popularity as a holiday resort, and the charming spots on her shores draw attention to a host of delights which cannot be compassed within the limits of a few weeks. On many a future holiday, however, shall we avail ourselves of their proffered hospitality and temptations to "stay a while and rest."

A brief sketch is manifestly not the place in which to look for details, and the intending visitor, that loyal one who, imbued with the paramount claims of his own country, will be able from official circles to obtain all the information necessary.

Seen at night from the beautiful wooded banks, these delightful lakes are particularly fascinating. In and out, among the headlands and bays, glide like huge illumined swans gayly lighted boats, while the banks are shrouded in the silent solemnity of the summer night. A merry laugh, a lusty call, only add an impressiveness to their charm, while the touching, appealing voice raised in the rendering of some well-known old-time melody, the refrain of which is agreeably taken up by an invisible chorus far across the placid,

darkened waters, creates an impression that will remain long afterward, reminding the visitor in some far-off clime perchance of the pathos, intermingled with the unspeakable pleasure of a night in this "Fairy-Land" of the North.

If the scenery necessary for the full enjoyment of a summer holiday could be regulated or measured by quantity or quality, there is surely sufficient in this one district of these Highlands of Ontario alone for the perfect delectation of a whole continent.

More than one has compared these tranquil waters, and their environment, to the beautiful Sydney Harbor in Australia, deemed by many to be peerless. The one conspicuous difference, however, felt by all those familiar with the grandest and most picturesque of all sea harbors, is the exhilaration, the new life, given gladly and freely, sleeping and waking, to all who render an affirmative response to the appeal of this Northern Elysium.

A Volcano that Became a Lake.

UNIQUE among the natural wonders of America is the lake in Crater Lake National Park, in Oregon, which is described in a publication entitled, "Geological History of Crater Lake," just issued by the Department of the Interior. The traveler who, from the rocky rim of the lake, looks across its limpid waters to the cliffs beyond stands where once the molten lava of Mount Mazama boiled and seethed in its efforts to find an outlet, for Crater Lake is all that remains of a great volcano that ages ago reared its lofty summit high above the crest of the Cascade Range.

Before the Cascade Range existed the region now included in the State of Oregon was a great lava plateau that extended from the Rocky Mountains to the present Coast Range. Gradually mountain-making forces became operative; the surface of the plateau was arched and there rose the great mountain system which is now known as the Cascade Range. With the hardening of the crust the centers of eruptions became fewer until they were confined to a few high mountains that were built up by the flows of molten lava. In this way were created Hood, Rainier and Mazama, from whose sides and lofty summits streams of lava poured across a desolate land. Hood and Rainier still lift their snowy caps to the clouds and fling a defiant challenge to the mountaineer to scale their steep, ice-covered slopes. Mazama alone is gone, engulfed in the earth from which it came. In what is left of its caldera lies Crater Lake.

Mount Mazama in its prime rose to a height of over 14,000 feet above the sea. Mount Scott, which towers above Crater Lake on the east, was only a minor cone on the slope of Mount Mazama. The portion of the mountain that has been destroyed was equal in size to Mount Washington in New Hampshire and had a volume of seventeen cubic miles.

From the crest of the rim surrounding the lake the traveler beholds twenty miles of unbroken cliffs which range from 500 to nearly 2,000 feet in height. The clear waters of the lake reflect the vivid colors of the surrounding walls, and whether in the soft glow of early morning, in the glare of the noonday sun, or in the rosy hues of the dying day, the view is one of awe-inspiring grandeur and beauty.

NATURE'S PLAYGROUND.

Through North Woods by Canoe

By JACK

(Concluded from last week.)

WE had only gone a hundred yards and were in the first of the rapids when we saw ahead a series of drops varying from five to eight feet and large boulders strewn everywhere, but as we could not paddle to shore, an immediate action was necessary. Both jumped out and managed to stop the wild flight of the canoe and its contents to certain destruction. The force of the water almost carried us off our feet. However, we slowly worked in toward shore and with a sigh of relief sat down and viewed our feet and legs which had been scratched by the sharp rocks. As the sun was already behind the hills we portaged the canoe up a steep embankment to a road and turned it bottom up. Putting on some clothing we started down the road, each with a duffle bag on his shoulder. On inquiry we were told there was a hotel a short distance below the bridge, named after the village, Redford. It was one story high, with a gable roof, which part contained the sleeping rooms, and one section of the ground floor, the village grocery store and butcher shop. A stoop ran along the front of the building with benches distributed here and there which at the time were occupied by old bearded inhabitants and hangers-on, who gazed at us in astonishment.

A good wash put us in fine fettle, and the amount of grub we made to disappear (for which we paid the munificent sum of twenty-five cents a plate) would give a city restaurateur heart failure. Finished with supper, we sat around smoking and swapping yarns with the proprietor and his "Dad," the latter being eighty years of age. The place of business, he informed us, was established when he was a boy, and his stories of the Saranac Valley fifty years ago, the log drives down the Saranac River, the log jams at High Falls, and the wild time when the river men "hit" the town were very interesting. Later in the evening Johnny inquired out of curiosity whether there was anything to drink in the house, no bar being in sight, at which the proprietor took up a lantern and led us to the rear of the building where there was a small room about six feet wide and twelve feet long, containing a small counter. In the good old days during the drives we were told the principal part of the riverman's earnings were spent here, but the county having gone dry, he regretted not being able to serve us with anything stronger than ginger ale.

At 9 o'clock the old cronies who had been lounging around left, and the proprietor began a series of yawns, from which we deduced that it must be bed time, so with him in the lead, lantern in hand, we ascended a flight of uncarpeted stairs, then ducked to escape an overhead

beam and were ushered into our sleeping quarters for the night.

We were awakened next morning by the crowing of the roosters in the barnyard, but as all was still, both within and without, we took a beauty sleep for an hour, when a knock on the door notified us to prepare for breakfast. Our meal over, we hiked up the road for the canoe, to put it afloat at the foot of the rapids, our intention being to let one man take the boat and outfit down, and the other two to walk along the road, until the water should become deep enough to float us. Reaching the canoe, we discovered that during the night some prowling beast had cleaned us out of the mess of catfish we had hidden beneath it.

As to the character of the country we had still to pass through before reaching Plattsburg, we

like "Si" Perkes, were very talkative and interesting, and when we stopped at noon to feed the horses, they proposed our sharing in their lunch, but as we had been munching on cakes and eating pears from their surplus stock all morning, we refused the offer with many thanks. Half an hour's rest, and we were on our way again. Coming to a stop before a steep hill, one of the farmers jumped out of the wagon and beckoned us to follow him. He led us through a strip of woodland until we came to a high bluff. Below, the water rushed through a cañon, increasing in speed at every foot, now slipping over rocks at a very steep angle and dashing and tumbling until it appeared like a mass of foam, then making a final drop of forty feet, which splashed the spray in every direction. At the foot of the hill we again got aboard for the last time.

On arriving at Morrisonville our outfit was unloaded, and we found the water was too low to navigate, so Johnny once more put off in the canoe, attired in a bathing suit, while his other companions walked along the road with the duffle. It seemed the further we traveled the further away the road became from the river, so when a light runabout containing three young sports stopped beside us and asked us to climb aboard, we did so without hesitating. On reaching Plattsburg we made inquiries as to the condition of the river upstream, and were informed there was a number of dams, the first one about

were told that the going would only be rough for a "short piece," which we could not estimate, for we had never heard such an expression of distance before. Our information came in such bad form and mixture of "short pieces" and "long pieces," one informant being contradicted by the other before the words had hardly left his lips, that we decided none of them knew what they were talking about. We felt, however, that being still quite a distance from Plattsburg and about 1,200 feet higher than the level of Lake Champlain, that the outlook was quite dubious, as far as paddling was concerned from the low condition of the water, so that when two farmers returning home from a week's paddling trip through the country offered to take us as far as Morrisonville for the small amount of \$2, we accepted it immediately.

The canoe was lashed to the wagon and the duffle, which we picked up at the hotel, was stowed in a barrel and roped to the side. We covered mile after mile in this fashion, and now and then as we caught a glimpse of the river, apparently nothing but a mass of boulders for long stretches and hardly any water, we congratulated ourselves on our good luck in securing this conveyance. Our farmer acquaintances,

five miles distant, which furnished water power for a paper mill. Within a short time we were in connection with the mill by telephone, also with Johnny, who assured us everything was all right, having borrowed an overcoat, and made arrangements to sleep in a farmhouse, also to have the canoe trucked down to the lake front in the morning. Jack and Ansel camped for the night in the rear of a private dwelling, situated in the center of the town.

With the dawn of day, the rain, which had started to come down heavy at midnight, turned into a drizzle, but nevertheless we packed up our outfit, and after a breakfast supplied by a French-Canadian family who owned the property on which we had camped, the duffle was carried to the lake, where we awaited Johnny's arrival. About 10 o'clock he showed up, and in a short time we started down Lake Champlain, hugging the shore, so as to make a hurried landing in case of a "blow," which we were warned against at this time of the year. We passed to the lee of Valcour Island, and about 3 o'clock the east wind, which was blowing, increased, and by the time we had reached Port Kent, the water was breaking on the shore like surf. At an opportune moment we shot in behind a rocky exten-

sion, but as the boat touched shore, a wave broke over the stern and we hauled at the canoe until it was high on the beach. The sea kept increasing in fury. At sunset it was a veritable ocean, and we shuddered at the thought of being five miles offshore in our frail craft, heavily loaded. After an extremely good meal we turned in. It rained all night, but about 10 o'clock in the morning the sea abated sufficiently to make us decide to move on again.

Ansel then complained of having a fever and left for home on the noon train. Jack and Johnny started south by canoe with a following sea and made below Essex at sunset. We were about to land, when a party in a launch hailed us and offered the use of their boat house for the night, which was accepted. In the morning we made arrangements to leave, but the high seas made it impossible to even get away from shore without swamping, so we had to be contented with a hike through the country to while

away the day. During the night we had a terrific rain storm, accompanied by a howling westerly wind. The following day broke clear, however, but a cold north wind kicked up such huge waves, that in passing a place, Shelving Rock, where we received the recoil, our boat was nearly swamped by a comber which broke over the boat at the center, but a bailing can saved the day.

After rounding Button Island the lake was calm, and the wind died out entirely. At Port Henry the water took on a muddy color, and the scenery seemed to have lost its charm. Sunset found us at Fort Ticonderoga, our day's paddle having netted us thirty-eight miles. We hauled up the canoe and walked into the town of Fort "Ti," about a distance of one and a half miles, where we made all kinds of foods disappear. During the day we had each eaten two apples, which seemed to increase our hunger rather than to appease it.

On our return to the lake we had an opportunity to observe the moon, encircled by a halo, which to us spelled "rain," but as no wood was handy, and the shore being rocky, we did not take the trouble to erect the tent. At somewhere around three in the morning it began to rain, and quickly we put up the lean-to, with the aid of the paddles and a ridge rope which we weighted down with rocks. At daybreak it was raining heavy, but later on turned into a drizzle. However, we put off in our canoe, but had not covered two miles, when the heavens seemed to open over us, and we sought shelter under a shelving of rock. When the shower had slackened somewhat, we started off again and covered eleven miles more, reaching Putnam Station. The weather conditions continued unfavorable, and as we had practically reached the end of the lake, we boarded a train for home, having covered about 250 miles in our cruise through Northern New York.

Her First Moose

By MABEL W. RICHARDS

The Head Illustrated on Front Cover.

HERE is the tale of an undersized moose hunter:

It was on my second hunting expedition that I achieved the feat of killing the big moose; my first effort having been made the year before in another section of New Brunswick on a trip full of hardship and misfortune, but one that afforded no better result for me than the sight of two cow moose, each with a calf, and the shooting of an old porcupine—just to get even.

When my husband decided to make this second trip, he did not so much as suggest my going, thinking that I could not possibly be willing to face further exposure such as we had had the preceding year, but when I reminded him that I should like to at least be invited, he arose to the occasion and I promptly did the good sport act and accepted.

So hurried was the preparation, and so inadequate my outfit for the cold weather and the high-stepping over logs and into greasy puddles, that we bought at Bathurst No. 6 men's moccasins, which fit me as neatly as a pair of boats, and in camp I built for myself, from a gray camp blanket, a wonderful pair of bloomers, wielding for the purpose the cook's spike (meant for a needle) filled with heavy black cotton. If the moose had seen me, the shock alone might have killed him.

Our camp was situated on Gordon Brook, a stream of many widths and depths and of decidedly serpentine trend. It was the full moon period, the weather clear and the woods glorious. After a few days' unsuccessful and very chilly hunting we packed up things enough for camping a night near "Dancing Pond," a few miles above our camp. Peter, my guide, Fred the cook and I set out ahead in a big canoe, and my husband and his guide followed about half a mile behind. My two men paddled and poled and dragged the canoe through the varied waters of the brook, the guide in the stern and the cook in front, while I sat on a folded tent in the middle with my .38-55 carbine rifle on my lap,

awaiting possible opportunity. For the most part we preserved the usual hunter's silence, broken only occasionally by a little vainglorious boasting on the part of Fred—the little cook—as to how "he was pretty handy at the pole, eh, Peter?" and big Peter handed out generous praise. There was, however, perfect stillness when at about 11 o'clock we were poling through

CALLING A MOOSE.

a portion of the stream wide and deep as a small river and at our left heard a sharp crack of a twig. In just a few seconds Peter exclaimed, in a whisper, "Look! look!" I stood up and cocked my gun and looked—looked hard and listened to a great swish, swish, swish through the tall grass, until suddenly the whole horizon seemed to be filled with horns. And there, stock still, three-quarters broadside, stood the big moose. I took careful aim, first at his shoulder, according to instruction I had received, and then thinking to be on the safe side, pulled back a little and fired—straight through his heart! Another one of my instructions had been to "keep pumping lead," so without a moment's hesitation I pulled down the lever and

dropped out the shell and took another good aim at the moose which, without so much as turning his head, had continued on his original course until he reached three-fourths of the way across the brook, and there stopped. But the gun would not go! My heart sank heavily enough. Peter snatched the gun. I was afraid the temptation would be too great and that he would shoot my moose. But he only closed the lever—the little detail I had overlooked—and handed back the rifle. Again I aimed and planted a shot close to the first one. With that the moose scrambled on to the bank and fell among the alders. "Pole up, Fred," said Peter. "My God" (Canadian for dear me), "how *can* I pole?" said Fred, he that was "so handy." Fred was saffron colored. He had been having a few bad moments through the belief that I would surely shoot him. But we got up alongside the moose and I shot him a third time and then—that great head with the sixty-three-inch spread of antlers fell back and it was all over. He died of an internal hemorrhage, shedding not a drop of blood.

I will not describe how I felt at this juncture—it might suggest something weak and effeminate, attributes that could not belong to a mighty huntress like me. And if I described Peter's antics—well, I could not if I would.

The moose was old and battle-scarred, his hair almost gray. The broken prong had a bullet buried in it, and when the head was skinned a splintering of the jaw bone was brought to light, evidently an old wound well healed.

On our way back to camp Peter asked me how much I weighed. I told him 105 pounds. This pleased him so much that I predicted that as he could not make the moose larger than just sixty-three inches—the largest one taken out of that section for ten years—he would probably gratify his love of exaggeration by making me even less than my little 105, and that is just what he did do when we got back to Bathurst, knocking off the odd five pounds and leaving it an even hundred.

Some Camping-Out Foods

And Outdoor-Life Conveniences of Other Nations

By L. LODIAN

Photographs from Original Article.

(Concluded from page 622.)

ARABIA AND SARACEN COUNTRIES—A POCKET COFFEE-MILL.

The inventive ingenuity of the Arab nomad is manifested in his pocket coffee-mill. He has had it these hundreds of years. Anybody is free to copy it and make it. The mill is, in-

adjusts the screw under the bottom of the mill (which extends part-way down into the lower half of mill); the slight turning of this screw gives a fine or coarse grinding of the coffee. Usually, the Arab wants flour-like coffee-powder. It can indeed be arranged to produce

an impalpable powder like wheat flour, but then the exertion of turning the mill through so fine a sieve is too great. However, crude pepper can be reduced in it with a minimum of effort, and as fine as the store-sold article.

FRUIT-SHEETING

The central Asiatic and Syrian nomads are never without their fruit-sheeting. This resembles a side of leather, and is made from apricots. It is of refreshing acidulated taste, and can be used for all the purposes for which we use dried apricots. Its use is reglementary in the

Turkish army, as it is anti-scorbutic and gently aperitive.

The wandering tent-dwellers use a strip of this fruit-sheeting as a family barometer. On the approach of unsettled weather it becomes limp, the citric-acid content attracting the moisture. Dry spells are indicated by it drying up, leather-like. The seaweed barometers outside the doors of our Gloucester fisherfolk are a kindred institution; in this case the salt-content attracting humidity from the air.

AUSTRIA—COMPRESSED COFFEE.

The advantages of the fig-coffee of this and other Teutonic countries is its adaptability for use either for forming a coffee-like beverage or as a sustaining fruit-food.

Fig-coffee has been in use in the Tyrol region of central Europe for over a century. It first came into vogue about 1806, when, due to the victorious French so crippling British commerce on land and sea that little of the real coffee berry got into the continental ports, the mid-Europeans turned to dried figs as a substitute. These were roasted, ground and compressed into handy pocket briquet sizes. They are thus made to this day.

The infusion is prepared more simply than ordinary coffee; thus, there is no question of

grinding, but you just break off a piece the size of a walnut, drop in cup, pour on the scalding water, and the trick is done. So no coffeepot even is necessary, as you imbibe direct from the grounds à la Osmani. The beverage is an agreeable coffee-like one, of figgy flavor, and should be sweetened to taste; but it lacks the essential vivifying twang of the pure Mocha or Colima berry. No coffee substitute or extract ever yet approached the genuine article. I have for years tried the whole gamut of them, in various parts of the globe, and, truth to tell, there is nothing to equal the genuine genial berry.

As a food the fig-coffee has its sole advantage over the products of Arabia, Java, the Antilles and Latin-America. It can be and is used as a concentrated sustaining food. Guides and mountaineers in the Tyrol carry it. It has probably saved many a life. If you were canoeing or boating, and were so unfortunate as to have a "spill" that deprived you of all your provisions, save a package of ground coffee that chanced to be in a coat pocket—and all happening at a distance of maybe a couple of days' journey from the nearest relief post—why, things would look comical (or serious) for you on that sole base of lone coffee. You could keep up some on it as a stimulant, but it is not a food, and even at that you would need a fire to make it—but lo! you lost the matches, or they may be water-soaked in your pocket. True, an entirely passable coffee may be made with cold water, and you can thus momentarily be independent of even the ghost of a fire, but this requires time—an hour or two. I have frequently resorted to this cold-water coffee—put a handful of it into the canteen or the impermeable leather bag, with the requisite water, let it soak an hour or so till the coffee grounds repose at the bottom (proof that they have yielded their virtue to the water), and the result has often been a delicious refreshing coffee drink. If marching at the time, either per caravan or alone, the disturbing effects of jolting on the water-container will be such that the coffee is "done" much sooner, say, in half an hour. As this cold-water coffee idea will not be found in any travel or camping work, it is listed here, *en passant*; but I hesitate to assert that I ever "invented" it. Cold-water tea may be prepared similarly.

But with the compressed fig-coffee, in an emergency, you have only to break off a small nugget-sized chunk at a time, and, by rigorous thrifting of it, could make a pound briquet of it serve as a sustaining food for a couple of days, and thus turn a mishap into a comedy. The flavor is of a decidedly caramelic-bitterish sort, rather flat, but the life-supporting sugar is there in a somewhat altered form. That sugar is of course its all-important feature over ordinary coffee.

Even as a coffee-infusion, the fig-coffee grounds are always edible, and form a food in emergency; whereas, coffee-bean grounds possess no more nutrition than sawdust.

OAT-BREAD SAUSAGE-LINKS—SCOTLAND.

The oat-bread sausage of Scotland is without doubt the most life-sustaining bread known on this globe. It has been familiar to the clan shepherds of the Highlands since the days of Bruce. When minding their flocks, that pure oat-bread sausage, with cheese and buttermilk,

1. Pocket Coffee Mill (Arabia). 2. Handle of Coffee Mill (slips inside for carrying). 3. Stone Dry Fish (Japan). 4. Stringed Walnuts (Asia Minor). 5. Compressed Rice Makaroni (China). 6. Ball Butter (Prato-Italy).

ternally, like our own coffee-mill mechanism, but the case is no bigger than a small marine telescope, so the whole affair can be carried in saddle-bag or pocket. The awkward handle of our own grinders is circumvented by the Arab having a foldable and detachable handle, which may be slipped inside the mill. The bottom part forms a permanent cup. The case is of brass, built to last for years. The specimen illustrated cost at an Arabian importer's in Manhattan \$2.75, but bigger ones can be obtained up to \$6—all, however, kept within pocket dimensions. The duty on hand-made goods (45 per cent. ad valorem) puts the price up. American firms could turn them out in aluminum for a couple of dollars. Sheet-iron ones are undesirable; brass is too heavy; it verdigrises on neglected grease-contact, and gives a brassy odor to the hands in warm weather.

It is in the handle of the coffee-mill that desert-craft shows itself. There are more travel "wrinkles" learnable in the tropics than in the Arctic. Arctic-craft is still an unknown problem. Your Arab takes that detachable handle and uses it as makeshift nut crackers, or as a temporary pincers or nippers or wrench, or as a hammer for small purposes. The same handle

forms a substantial daily diet. It can be eaten either cold or warmed up, the last method largely increasing its tastiness. Coarse oat-bread is somewhat aperient.

Scotch fisherfolk, anglers, gunners, guardians of the moors and heaths, gamekeepers, and so forth, find the oat-bread sausage a superb standby. Of all breads, oat-bread is the most warming—far superior to barley-bread (another well-known cereal bread of Northern parallels)—hence its advantage for camping in the wintry months. It has this great advantage over the oat-bread hardtack—it can be carried loose in the pocket, is always cleanly to handle, and is non-staining. The ordinary sausage skin or casing is employed just as for pork sausages, which they closely resemble. The filling machine stuffs the coarse oat-flour, with some fat seasoning, into the lengthy casing at a rapid rate. They are then sectioned off, by twisting, like ordinary sausages, and steamed perfectly in big batches. Various Caledonia bakeries in Manhattan make them for the numerous hard-working Andys in our midst. Here are also turned out barrels full of the oat-bread flat disks, which the tripper to Paris, Scotland and Ireland will come across, especially in the latter two countries. They are also called bannocks, walis, and so forth. The walis or bannock cannot, however, be recommended for its keeping qualities for camping parties, as it acquires a semi-acrid or rancid taste, besides being quite brittle. It is the natural oil-content of the oat grain which, on oxidizing, gives this bitterish taste. The thrifty Scotch gamekeeper camping on the lonely moors who finds his oat-disk supply developing "the bitter-sweet," uses it up gradually by chucking a few now and then into the perennially simmering soup-pot. This enriches the soup, and every suggestion of rancidity is dispelled by and in "the steamy vapors." The rancidest of butter they also economically use up for soup enriching—the acidity disappearing in the steady boil. Soup, like charity, covereth a multitude of sins—and mysteries! It is well that the camper, to whom the narrowing food supply is often a problem, should know how to utilize valuable foods which he might otherwise be disposed to throw away, due to a developed bad taste therein.

Fortunately, the oat-bread sausage does not rancify, due to its protection from air-spoiling by the well-nigh impervious casing. This skin is also eaten—same as we eat that of meat sausages. If kept week after week for months, this oat-bread becomes hard as a board almost, yet is always edible, even in its cold state. Of course, then, fair teeth are necessary, as with sailor's hardtack.

ITALIAN BALL BUTTER.

The essential thing in camp life is to take along things that have many uses. Italian military officers, guides, mountaineers, tourists, motoring parties, picnickers, and the like, recognize this when they carry the ball butter, which is found in the Italian butter and cheese trades. This is a pure, unsalted butter, put up in ball form, in an envelop of pure hard cheese. The butter may thus be preserved sweet for years. It is totally different, and bears no comparison whatsoever, to the stuff called ghee butter, which the much-traveled reader may have come across in the Ganges region, and overland to the Indus, Euphrates-Tigris,

and Bosphorus—made by melting and boiling pure fresh butter (the sin of the thing!), thus completely driving off its virgin fresh taste, so that on cooling it resolves into a semi-granular mass like overboiled mutton or beef fat will do, and is retailed in Oriental commerce with an almost ever-present partly rancid taste. I had enough of it in the Ganges delta years ago. However, it comes in handy sometimes as boot or cart grease!

Every part of the ball butter is edible—both butter and its protecting envelop of pure cheese. It is cleanly to handle, can be carried loose in the pocket, although, of course, a paper covering of any sort is better to prevent—especially in warm weather—possible staining from the cheese envelop, as this cheese contains its natural cream fat intact. There is no bulk of any metal container to carry around, as with our own preserved salt butter.

In emergency—for an extempore night light in a mountain shack or tent—the Italian camper sticks one of the longish wax vestas (diminutive candle-matches) into an open ball, and, if required, it will burn all night or more. Stick in two or three of these little match candles, and a small tin bowl of water (enough for one's coffee) can be brought to a heat sufficient for the beverage in a score or so of minutes. Rather long to wait, but it's better than nothing, at a shift. If doing other trifling chores meantime, the waiting seems to be an entirely negligible factor. I have seen this done a score of years ago on the Italian Riviera; and noticed how, so soon as the water showed the first sign of heating up by a slight steam arising, the requisite ground coffee was dropped atop the water. This spread at once over its entire surface, kept the heat of the water in, and thus hastened what invariably proved to be a cup of coffee of superb relish. If the vessel is kept covered by a sheet of glass, mica, card, piece of board, or anything handy for the purpose, it is surprising what a little factor like a couple of extemporized night lights can do in heating up the water.

When empty, the ball butter cheese-covering can be used as a makeshift cup, and if dried, it becomes horn-like, and will stand boiling-hot coffee or tea, and only slightly soften with the heat. Drained and dried after every such use, it will last for months; and the thrifty Italian camp cook will eventually consign it to the soup-pot, where prolonged boiling gradually emulsifies it into enriching the evening sopa.

CASING PLUM DUFF (SICILIA).

Another exhibit (not illustrated) is

the peculiar rich plum pudding—the "plum duff" of the camper of Southern Europe. It is put up in hog bladders, and looks like common black pudding. Cut it with a knife, however, and you will see it studded with luscious raisins. The white spots here and there are not suet, but pine nuts—the little and expensive piñoles. The cereal flour used is rye; and the very dark color of all is due to the use of, not water in the making, but one of the pure and almost black Italian wines.

This plum duff can be kept for months. When empty, the container can be used as tobacco-pouch, or as a makeshift pint cup.

BREAD FROM MACARONI.

Good fresh bread is made from macaroni by Italian forest and mountain tourists. This substance is ground wheat reduced to a paste, then dried, so it can be used in camp for making a splendid soup or dish, or for bread. Soaked for an hour or less in warm water, it resolves into paste, which is more or less firm according to the water added; the leaven is a bit of the "sour" left over expressly for a couple of days, if no compressed yeast is available. Baking powder is rejected, because of its disagreeable "dry" taste. This macaroni dough is usually prepared over night, and hung in a warm place in a seamless rawhide thin split-leather bag to "rise." Hot rolls with the coffee in the morning are a certainty. What camper will say nay to hot rolls on a chilly morning?

The macaroni sticks are often useful about camp, as you can extemporize one as a blow-pipe for rousing a sluggard fire, or, if having no cup handy, for imbibing water from a stream when thirsty, which is far better than the undignified going down on all fours, with its back-racking strain.

Flour for bread-making is too much of a mess to carry along. It is always soiling; gets air-spoiled; whereas, macaroni is a form of preserved flour. Besides, on a pinch, you can carry a handful of macaroni bits in your pocket, and slowly let them moisten in the mouth to a paste, when they thus become a

1. Sun-baked Bread Sheeting (Palestine). 2. Smoked Pears (Germania). 3. Fig Coffee, unwrapped (Austria). 4. Fig Coffee, wrapped. 5. Brick tea (Russia). 6. Candle Matches (Italy).

sustaining food. Italian soldiers do this at maneuvers.

* * * * *

Campers are fond, especially in their city or suburban dens, of accumulating souvenirs of their journeyings. These mostly relate to arms, trophies of the chase, angling, etc. But I never knew one to harbor a collection of these curious keepable-for-years tent-life foodstuffs of the nations—of the greatest interest to one's friends, but whose belief is often sorely taxed on being told that a stone-like plaque is a high grade of compressed tea, or that a piece of blackish "mineral" can be developed into a juicy salmon-steak. So on through the lot, it is a collection of food mysteries. My own den collection of these useful foods is fairly elaborate, yet represents only a portion of the sum total. Any reader interested, who desires to, is welcome to look them over; and could himself form a collection by getting around among the foreign importers of any of our big cities.

I have thus told about some of the outdoor-life food conveniences of other races, yet have only touched on a tithe of them—just "scratched the surface," so to write. However, a representative selection has been made, enough to give an idea that the subject is a big one, and that "we Americans don't know everything." Many conveniences met with abroad are not imported by foreign merchants into this country; for on repeated inquiry I have failed to get many articles required for illustration, as the biltong of the Afrikander; the dried banana-bread of tropical America; the compressed raisin-bread of Central Asia; the barley hardtack of North Europe; the whole-leaf, stone-like green tea slabs or plaques of Nippon, and many others.

If it is found that these outdoor-life concentrated or condensed foods of the nations arouse the readers' interest, the subject may be taken up again later; also, briefly, various of the unknown camping-out conveniences, articles and "wrinkles" of tent-lifers of other climes.

New Publications.

HARPER'S GUIDE TO WILD FLOWERS, by Mrs. Caroline A. Creevey. Harper & Brothers, New York. Price, \$1.75 net.

Mrs. Creevey, the author of "Recreations in Botany" and "Flowers of Field, Hill and Swamp," has now given us a book in which much space is devoted to flower identification by means of color. They are also considered in relation to their habitats and according to season. The volume is based on the new classification adopted in the seventh edition of Gray's Manual, published in 1908, and embodies the decisions of the Vienna Congress of 1905. A chapter on Vines and Shrubs is also included. It is adapted for use as a field book. Features of the illustrations are eight colored plates.

THE MYSTERY OF GOLF, by Arnold Haultain. The Macmillan Co., New York. 249 pages, 50 cents net.

This book is in its second edition, and for the very good reason that it tells the story of the game of golf interestingly and comprehensively to the player and the non-player. It is decidedly well written and a thorough treatise.

From Eastern City to Western Forest

Chapter IV.—Our Small Neighbors

By ERION

PREVIOUS chapters have told of leaving the crowded city, of finding a distant home among wooded hills, of the autumnal uprush of salmon to their spawning beds, of chance human visitors to our ranch, and so forth. This chapter has to do with visitors of another sort.

We came to the Pacific wilderness in pursuit of life, liberty and happiness, just as the ancestors entered the Atlantic wilderness from Europe two or three hundred years ago. And like those ancestors of ours and yours we brought necessity with us; necessity, that blessing which prevents men from dawdling their lives away. Being busy every day and all day with what are called

that is, by fearing them. Before the cabin was finished they used to come into our bed rooms at night, and it was like having spooks about us. But they never did harm.

One night during a skunk raid or period of visitation the little visitor was plainly seen by lamp light. The hour was near midnight. It moved about the floor like a black shadow, but presently withdrew. An hour later there was a commotion in the poultry house, and I was there in a few minutes with gun and lantern, prepared for action. Half a dozen hens had been pushed off the roost and were on the floor, but not one was hurt. As each hen had dropped

WE FOUND NEST OF PARTRIDGE EGGS.

practical duties, we have little or no time for scouring the woods, either for study or adventure, but there is abundant time and ample opportunity for observing many small neighbors—the creatures that live in field and wood—for these things do not have to be hunted. They come voluntarily, exploring everything, and taking most careful note of what they see, hear, feel and smell. The larger animals are quick to learn the danger lines, established by humanity; lines which are never crossed. The smaller animals, being less discriminating, perish in great numbers.

The destruction of encroaching animals ought to be tempered with mercy and guided by knowledge. Some killing is necessary, but it should be humane. And, curiously enough, as human intelligence increases, the slaughter of animals becomes less and less imperative. To spare the life of a skunk, for instance, is to rid one's premises of scores or hundreds of mice, for the skunk is a mouser.

I began wrong with the skunks at the ranch;

she had squalled out in fright, and had thus given the alarm. The skunk was in a nest when I arrived, looking for eggs or for mice. No damage had been done, but I nevertheless killed the intruder and made a bad mess of it. Some six of the animals were shot or trapped before that year's visitation came to an end.

Then came the deer mice, or maybe the deer mice were there first, and the skunks in pursuit of them. At any rate, the mice were legion, and I had weeks and months of work in getting rid of them; work that the skunks would have performed for me had they been let alone.

It is now clear to me that skunk slaughter is not only unnecessary, but actually a mistake. My dwelling house and poultry houses have long since been made practically vermin proof, and we have never yet lost a fowl or chick by either skunk or weasel. More than that, I have been at close quarters with skunks a number of times by day and by night, and they have never acted on the offensive. Their horrid odor is strictly

defensive, and so far as I have noticed, is never emitted except when the animals are in extreme pain or fright, or when dying. Sudden acute alarm causes the offensive excretion, but otherwise the animal is harmless. Twice I have been able to estimate the distance to which the fluid can be projected, and in neither case was that distance as much as two feet; not much over twelve inches.

There is only too good reason to connect the presence of intolerable numbers of mice and voles with the absence of skunks; mice in the house and barn and voles in the fields. The word vole is a name applying to any one of the several species of short-tailed field mice. Voles become exceedingly troublesome sometimes in meadows, orchards, vegetable gardens, flower beds, etc., and even in the root cellar and the apple bin. They spend the winter in brush piles or along fence rows or under any sort of litter that will afford protection.

White-bellied deer mice, with large eyes and ears, are quite as much at home under a roof as the common mice of pantry and garret. It is interesting to note their peculiar ways. They are more provident than the semi-domestic mice, retaining the habit of filling granaries with food. It is surprising, for instance, to find one's shoe converted into a storage place for wheat; maybe a cupful of grain in the toe of the shoe when you attempt to draw it on in the morning. You are sure there are no mouse holes anywhere about the room, and equally sure that no wheat is in storage anywhere in the house, yet there is the wheat in the shoe—or emptied on the carpet of the room by yourself.

But you left your window open for air, did you not? And there is wheat in the feed box at the poultry house, is there not? That explains it. Even if the wheat was carefully covered the previous night, or the previous week, the deer mice at some time found it. If they did not bring it direct from the poultry house, they brought it from some granary of their own that had been filled at some previous date. Before night you forget the incident. Next morning there is wheat in your shoe again.

Deer mice are easily caught in traps, but not so the voles. The short-tailed field mouse (myriad as to numbers) is the worst of all American thieves and destroyers; an obnoxious pest the world over; hard to entice and impossible of extermination. Poison will effect a partial cure, but prevention is better. Skunks, weasels, hawks and owls are cheap and effective workers. The cost of the poisoned grain, plus the cost of labor, is just that much in addition to the heavy loss already inflicted by the voles. Nature's police force, if undisturbed, will hold the rabble in check.

Only one hawk has been killed at the ranch in four years. Surely that is a good record, especially in view of the fact that hawks are constantly passing over the valley, and undoubtedly make their nests near us. It is evident, however, that they are not yet preying much upon poultry in this new country.

Our poultry yard, as originally made, was triangular in shape. I one day noticed the fowls all huddled together in one corner; not making much noise (though there had been an outcry), but showing signs of great fright. In the most distant angle of the yard a large hawk was perched upon the side of a full grown pullet

that was still alive, but which had ceased to struggle. The bird of prey was tearing morsels of flesh from the side of the fowl, and was evidently very hungry; so hungry that the meal was continued until ended by means of a shotgun. The fowls in that yard never entirely recovered from their fright and were always alarmed at sight of a gun.

The killing of this one intruder was either a lesson to the other hawks, or else (as seems more likely) the situation of the yards was not to the liking of the birds, inasmuch as escape from a deep and narrow valley would always be difficult. At any rate, no more large hawks ever troubled our poultry. It is to be noted that some hen yards are much more open to attacks by hawks than others.

We are sure that arrivals do not forage very far from their chosen homes, also that a new arrival is much more easily captured than an old resident. It is evident that changes of home are sometimes made. It is the rule of the ranch, therefore, that quick and persistent warfare shall be waged against those new arrivals which are not welcome. The application of this rule has kept the premises absolutely free (most of the time) from such things as house rats and muskrats. Two or three of each come now and then, but are at once destroyed. The same is true of minks.

The most fearless and impudent intruder that ever came on the place was a young mink that once put in an appearance in broad daylight. The animal walked boldly into the poultry yard while the housewife was feeding her flock. A fowl was seized and killed, regardless of human protest. The woman's sole offensive weapon was a tin pan, which compelled the self-centered little hunter to make a temporary retreat, but a shotgun had to be used to get rid of the animal permanently. In a previous chapter I spoke of keeping firearms for defensive uses. This is an illustration. Traveling animals and birds know nothing of local dead lines and have to be dealt with accordingly.

It is pretty well established that water courses are highways for birds and animals as well as for fishes. A fine mink was seen passing down our stream one day, and I was at once sure of two things: that it was a stranger in the neighborhood, and that it had a fine pelt. A local resident would not easily be overtaken in daylight, there being countless hiding places along the bank, but a traveler would hold to the water's edge and proceed steadily down stream. I took note of the animal's speed, and went to a downstream point to await its arrival. The mink was there on the minute and was shot. The fur was excellent. But since our fowls are so well protected against vermin, there is less reason than formerly for killing minks.

With weasels the case is different, and although we have never suffered loss by them, we have been attacked; that is, our fowls have been attacked, but fortunately escaped. There happened to be a rifle at hand. Our greatest loss caused by a weasel was the destruction of a family of young snow birds close to the cabin door; a mishap much regretted by all of us at the time. The weasel was seen, but it escaped.

A neighbor's chicken coop was visited one night or early morning by a weasel and a lot of dead birds left on the ground to tell the story. The circumstances indicated that the trespassing animal was a stranger; an adventurer without a home, and pretty sure to be found wandering near the scene of its raid. Fearing for my own fowls, I made diligent and repeated search; not spending many minutes at a time, but going to the place every few hours the next day. Toward evening I found the weasel in motion and killed it.

The hare of my present locality, though of a different species, resembles the cottontail of the East in its general deportment, and is equally good in point of table quality. It is not destructive to crops in its prevailing limited numbers, and the only excuse for taking its life is for food purposes.

In a trap set for a hare, near an apple tree,

AND THEY FOUGHT FOR SUPREMACY.

a raccoon was recently caught; the first and only one thus far seen. The animals are common enough, as indicated by their tracks in snow and mud, but they are extremely shy. So far as our experience goes, they are entirely harmless. The hind foot of the one that was killed was about four inches in track-making length, and as soft and smooth as velvet. Such a track in the sand by a brook looks not unlike the imprint made by the foot of a human infant.

This 'coon was strong enough to break the stick to which the trap was chained, and to make off with the trap and chain, but as there was a little snow on the ground, it was easy to follow and discover the poor animal. It seemed a pity to point a rifle toward that alert, intelligent face, with its bright eyes, but there was no help for it. Neither hide nor flesh was allowed to go to waste. It was before the arrival of the salmon before the raccoons had begun their annual work as scavengers.

Chipmunks have to be trapped or shot, as they pay no heed to warnings. They are inordinate feeders, and quick to take every advantage, and each individual seems to have friends without number. Give them quarter and they take full possession of one's barn. Tolerate them in the garden, and they eat half of every berry crop. They take no hints; the death of one does not deter another. It is different with the squirrels which seem to have better reasoning powers.

THE TOP RAIL.

CLAIMING that their profits from cattle raising have dwindled to practically nothing, Frank Young and Eric Johnson, cattle raisers at Minatare, Neb., have decided to fatten fish instead of steers for the market, and have asked the State fish hatchery for a supply of minnows with which to start their fish ranch. A unique feature of the experiment is that instead of establishing fish ponds, the farmers will utilize the big irrigation ditches of the district in which to raise their fish. These ditches are filled with water from the Laramie Mountains, pure, clear, snow water—just the kind for mountain trout and other game fish to thrive at their best.

"It's a whole lot less expensive to raise fish than cattle," says Young. "There's always a demand in this Western country for fresh fish, and instead of shipping our product to a distant market, we can ship to the surrounding towns and to the mountain cities. Worms and things of that kind will be utilized for food, and that beats feeding 60-cent corn to a steer."

* * *

A HOME run hit made in a ball game at Plainfield, Ill., was found to have killed a rabbit. When the outfielder located the sphere, he found the dead bunny, it having been struck on the head by the ball while lying in the grass, writes a correspondent. This is not the first death due to the altitudinous spheroid.

GRIZZLY KING.

Tournament Anglers' Club of New York

NEW YORK CITY, May 28.—*Editor Forest and Stream:* Inclosed herewith find scores and results of the annual tournament of the Anglers' Club. The tournament this year was held under the new rules adopted by the club, and we believe that they were generally well accepted by casters. The new rules were adopted primarily to make tournament casting approximate stream conditions.

JASON G. LAMISON, President.

The seventh annual fly- and bait-casting tournament of the Anglers' Club of New York was held at the Big Lake, Central Park, New York city, on May 20 to May 25, 1912.

OPEN TOURNAMENT.

Unless otherwise specified, rules of the National Association to apply. The committee reserves the right to reject or refuse any entry in any event, and to examine and pass upon the tackle of every contestant. Entries may be made at any time up to the hour set for any event. Entrance fee \$1 for each event. In any event there must not be less than two competitors, or it will be declared no contest. Flies to be furnished by the committee. Hooks must be removed from all lures. No one allowed on the platform during any event except the referee and contestant.

The tournament committee of the Anglers' Club of New York consisted of G. M. L. La Branche, Harry Friedman, E. E. Spencer, E. F. Todd, A. B. Hubbell, W. C. Metcalfe and Walter McGuckin, Chairman.

LIST OF EVENTS AND WINNERS.

MAY 20.

EVENT NO. 1.—BAIT ACCURACY. FIRST COMPETITION.

Winner to receive a silver medal and 15 points. Second, a bronze medal and 13 points. Third, 11 points. Fourth, 9 points. Fifth, 7 points. Sixth, 5 points. Seventh, 3 points. Eighth, 1 point.

Five casts at each target, 50, 65 and 80 feet from platform. No restrictions as to rod. Reel must be free running. Line must stand test of eight pounds. One preliminary cast allowed. Any style of casting and any form of fresh water artificial lure suitable for fishing may be used. The contestant receiving the smallest number of demerits to be the winner. In the event of two or more contestants having received the same number of demerits, they shall make five more casts at the first target to determine their positions.

	Demerits		Pr. Cent.
H. Friedman	18	15 14-47	96 13-15
E. F. Todd	4	22 21-47	96 13-15
G. M. L. La Branche	11	7 56-74	95 1-15
C. H. Higby	21	21 42-84	94 6-15
Warren Miller	51	155 74-280	81 5-15

Cast off of tie for first, at 50 feet:
H. Friedman..... 14 E. F. Todd..... 19

EVENT NO. 2.—DISTANCE BAIT HANDICAP.

Winner to receive a cup. Silver medal for second; bronze medal for third.

Handicap to be computed on the basis of allowance of one-half of the difference between contestants' best previous half-ounce average records and on a basis of 125 feet for contestants without records. Any form of fresh water artificial lure suitable for fishing may be used, but weight must not exceed three-quarter ounce. Restrictions as to rod, reel and line same as in Event No. 1. Best average of five casts to win.

	Average.	Handicap.	Score.
H. Friedman	110.0	3.3	113.3
C. H. Higby	110.6	...	110.6
E. F. Todd	93.4	3.1	101.5
H. Elliott	51.4	45.4	96.8
J. G. Lamison	81.8	14.9	96.7
King Smith	48.4	45.9	94.3
J. E. Tevendale	73.9	14.9	88.8
J. G. Fulton	60.8	14.9	75.7

MAY 21.

EVENT NO. 3.—FLY ACCURACY. FIRST COMPETITION.

Winner to receive a silver medal and 15 points. Second, bronze medal and 13 points. Third, 11 points. Fourth, 9 points. Fifth, 7 points. Sixth, 5 points. Seventh, 3 points. Eighth, 1 point.

Five casts at each target, 30, 35 and 40 feet from platform. No restrictions as to rod, reel or line. Leader must be at least six feet in length and reel must be in place on rod. The preliminary casts at first target to be made at will, and when contestant calls "Ready," the next fifteen consecutive casts to count to score. Line may be extended in air at any time, but after preliminary casts have been made every time the fly strikes the water, it counts as a cast. Penalties: If fly is retrieved from water before judges signal permission, one demerit. If fly touches water at back of caster, five demerits; if lost, ten demerits; when lost fly is replaced contestant may extend his line to the first target at will and when he says "Ready" the next cast to count from where he left off. The contestant receiving the smallest number of demerits to be the winner. In the event of two or more contestants having received the same number of demerits, they shall make five more casts at the first target to determine their positions.

W. McGuckin..... 2 G. R. Jenkins..... 7

EVENT NO. 4.—DISTANCE FLY HANDICAP. FIRST COMPETITION. FOUR-OUNCE RODS.

Winner to receive a silver medal and 15 points. Second, bronze medal and 13 points. Third, 11 points. Fourth, 9 points. Fifth, 7 points. Sixth, 5 points. Seventh, 3 points. Eighth, 1 point.

Handicap to be computed on the basis of allowance of one-half of the difference between contestants' best previous four-ounce records and on a basis of seventy feet for contestants without records. Reel must be in place on rod. No stripping of line from reel allowed before casting. Each contestant allowed eight minutes. No time allowance. Cast not to count if fly

or line touches water at back of caster. In case of tie, five minutes' additional casting allowed to determine positions.

MAY 25.

EVENT NO. 13.—DRY-FLY ACCURACY.

Cups for first, second and third. Rod, reel and line unrestricted. Leader must be at least six feet in length and reel must be in place on rod. Five casts at each target, 27½, 35 and 42½ feet from platform. A fly cast lightly within the target and floating to be perfect. One demerit to be scored for each foot or fraction thereof from target to point where fly falls. Each time fly strikes the water in front cast is to count. Not less than three false casts in the air to be made between each scoring cast. When fly is resting on the water beyond first target after a cast has been made, it must not be retrieved until judges signal permission, and it must be then slowly stripped in along the surface of the water until it reaches the first target, when it may be retrieved. Retrieve must be

made with minimum disturbance of surface of water. Fly to fall by its own weight without a splash under penalty of one demerit. If fly fails to float, five demerits penalty. If fly strikes the water at back of caster, three demerits penalty, and five demerits if fly is lost, and contestant after replacing fly must extend his line in the air to where he left off. In case of a tie, five more casts to be made at first target to determine position. The sum total of demerits divided by fifteen and deducted from 100 shall constitute the percentage. The highest percentage to win.

Fishing Lines.

A TOTAL of 100,000,000 wall-eyed pike and 4,000,000 brook trout will be distributed throughout the lakes and streams of Minnesota this year. The last of the trout are just leaving the hatcheries, and crews of men are in the great North woods gathering pike spawn to be hurried to the hatching tanks. Within sixty days the distribution will be completed and a record established of 396,573,709 small fish or "fry," as commonly called, liberated in free waters within seven years by the United States Fish Commission. This record is probably unequaled.

Henry Hanley, a farmer of Limestone township, in Mason county, Ill., has been guarding his cornfield with a shotgun during the past week. The recent high water flooded his land and hundreds of good-sized fish from the Illinois River were stranded when the water receded. Nearby residents have been seining the fish from the low places and carrying them off. His crop of corn being ruined by the high

water, Hanley proposes to sell the fish and get his returns in that direction.

THE Springfield Bait-Casting Club, which recently asked permission to practice the art of fly-casting in the reservoir lake, owned by the city, has been granted additional privileges. City commissioners agreed to permit the club to cast in the lake at any time.

Sheriff Reid, of Lec county, Ill., has launched a campaign against illegal fishermen. He and his aides are now patrolling the Rock River, seizing and destroying all seines which are not authorized by law. The sheriff proposes to drag the river at intervals all summer and destroy every net which does not comply with the statute.

A. LURE.

Change in Bass Season for Long Island.

UNDER the new forest, fish and game law, signed April 15, by Governor Dix, the opening of the bass season on Long Island was changed from May 30 to June 16. It now conforms to the open season for bass in other parts of New York State.

All the fish laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

 127 Franklin Street, New York.

CORRESPONDENCE—FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but, of course, are not responsible for the views of correspondents. Anonymous communications cannot be regarded.

SUBSCRIPTIONS: \$3 a year; \$1.50 for six months; 10 cts. a copy. Canadian, \$4 a year; foreign, \$4.50 a year. This paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS: Display and classified, 20 cts. per agate line (\$2.80 per inch). There are 14 agate lines to the inch. Covers and special positions extra. Five, ten and twenty per cent. discount for 13, 26 and 52 insertions, respectively, within one year. Forms close Monday in advance of publication date.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

THE LAST STEP.

THE bills designed to afford Federal protection to migratory game and insectivorous birds, introduced by Senator McLean and Congressman Weeks, have been reported favorably by the committee and are now in order of passage.

With regard to the necessity of this legislation, naturalists and sportsmen are of one mind. With the enormous increase of the number of gunners and the steady decrease of woodcock, wildfowl and the other migratory species, alternating with periods of temporary increase in certain localities, but general and marked as applied to a period of years in a large extent of country, it is apparent that unless such action is soon taken, the death knell of this kind of game has been sounded.

In 1857 the Legislature of Ohio refused to furnish requested protection to the wild pigeon and passed a resolution, which read in part as follows: "The passenger pigeon needs no protection. Wonderfully prolific, having the vast forest of the north as its breeding grounds, traveling hundreds of miles in search of food, it is here to-day and elsewhere to-morrow, and no ordinary destruction can lessen them or be missed from the myriads that are yearly produced." Comment on this resolution is unnecessary except to point attention to the fact that this should not be the attitude of the lawmakers of to-day. It will not be if the sportsmen exert themselves and show our representatives that the protection is required.

Clubs and individual sportsmen should urge upon their Senators and Congressmen the necessity of passing the McLean and Weeks bills. Personal letters will let them know that you feel the necessity of passing this great conservation measure. Now is the time for action. Do not wait till, as in the case of the passenger pigeon, it is too late.

VOLUME ONE—NUMBER ONE.

MAY 28 marked the fiftieth anniversary of the departure of the Twenty-second Regiment of New York for the front. The occasion fittingly was commemorated with a banquet at which only twenty, all that remains of the regiment, were present. Our interest in the regiment is personal as well as patriotic, for among the twenty sixty-oners was R. T. Greene, of Boston, who terms himself Volume One, Number One, because he bought a copy of the first issue of FOREST AND STREAM and has been a continuous subscriber ever since that day—Aug. 14, 1873. In these many years, fishing, shooting and reading FOREST AND STREAM have been Mr. Greene's three principal recreations. He can tie a fly with the most expert, one of his own flies, Ethel Greene—named for his daughter—being sold by Boston tackle dealers.

Mr. Greene and his daughter spend every summer in the Maine woods fishing, and few more successful anglers are to be found whipping the streams and flicking the fly on the lakes than Volume One, Number One and his charming daughter.

DR. RAINSFORD GOES HUNTING.

DR. WILLIAM S. RAINSFORD, who for many years has been a mighty hunter, in a religious and a big-game sense, has relinquished the ministry to become a layman. In early fall, Dr. Rainsford will take an expedition to East Africa to secure specimens of black rhinoceros for the American Museum of Natural History. The museum is anxious to get a black specimen, as a mounted mate for the white rhinoceros killed by Theodore Roosevelt last year. Dr. Rainsford has supplied many wonderful specimens to the museum, including implements of war used by the East African natives, as well as natural history exhibits. Dr. Rainsford has been one of the most conscientious men in the service of the church, and his understanding of, and popular ty with, young men has done much toward bringing young America into the fold of Christian religion. He has grown white-haired in the service, and has earned a rest from active duty.

CALIFORNIA BIG TREES.

THE Forest Service is raising several acres of big tree seedlings on the Tahoe National Forest in California at a more northerly point than any natural big tree grove. While the giant sequoias are found in the forests of the Sierras at various points throughout a total range of some 250 miles in the northern two-thirds of this range, there is practically no natural reproduction. It has consequently been a question whether the species would not practically disappear from this region when the present mature trees die.

The most northern existing grove of big trees is on the Tahoe forest, but about thirty-four miles southeast of the site selected for planting. This site is on a moist flat not far from Nevada City, and is about 2,700 feet above sea level. The first seeding was done in the fall of 1910, with very successful results, and last fall an additional area was seeded.

The method used in planting the seed was that known to foresters as "the seed spot method." Spots about six feet apart each way were prepared by pulverizing the earth with a

garden hoe. Seeds were then dropped on these spots and lightly pressed in the soil with the foot. The flourishing condition of the young seedlings gives good reason to expect a future growth of big trees at this point. With protection of forests from fire there seems to be no reason why the big trees should disappear, even though scientists regard them as survivals from a past age, botanically speaking.

MIXING OCEANS' FISH FAUNA.

ONE novel effect of the completion of the Panama canal will be the intermixing of the fish fauna of the Atlantic and Pacific coasts of the isthmus, according to the fish experts of the United States Bureau of Fisheries who have completed a survey of the isthmian waters. S. F. Hildebrand, of the Bureau of Fisheries, and Dr. S. E. Meek, of the Field Museum of Natural History of Chicago, have just returned from the Canal Zone after completing a collection of the fishes indigenous to Zone waters for the Smithsonian Institution. All of the fishes of the Canal Zone, including the fresh water varieties of the inland streams and lakes, are represented in the collection. A second survey will be made in from five to ten years to verify the prognostication of a complete intermixing of species of the two coasts after the canal is opened.

GAME LAWS IN LOUISIANA.

It is almost certain that the present Legislature in session in Baton Rouge, La., will amend, in many important particulars, the present game and fish laws and abolish the game warden system. Governor Hall, in his inauguration speech a few days ago, advocated the conservation of the natural food supply and a Statewide system which will not centralize too much power in the chief executive or any commission and impose unnecessary or costly burdens upon the people. Governor Hall is opposed to the abolition of all laws on the subject of conservation of every character, and a wise law should be enacted on the subject.

BAIT AD LIB.

MYRIADS of grasshoppers and mosquito hawks visited New Orleans one day last week just before a big rainfall, and many fishermen made efforts to secure some of the insects for baiting purposes. Several fishermen explained that the insects were driven to the city by the high waters some miles above the city. It is declared by many that they never saw as many grasshoppers and mosquito hawks before, and the numbers are estimated in the hundreds of thousands. They attracted much attention. Many of the insects landed on the sides of buildings and remained for some hours.

UNLAWFUL CATCH FOR CONVICTS.

THE fish and game commissoin in California recently removed all the confiscated fish and game, the result of raids made several months ago, from cold storage houses in San Francisco and shipped it to San Quentin prison, where it was prepared for the convicts there. The lot included 100 pounds of striped bass, 90 pounds of catfish, 100 pounds of salmon, 100 pounds of trout, 7 dozen quail, 5 dozen robins, 2 sides of venison, 80 pounds of elk meat and 60 pounds of sole.

YACHTING

Ticks from the Ship's Clock.

Harry Brindle, of the San Francisco Y. C., formerly the owner of the yacht Neva, has purchased the Irene and now has this craft in commission.

Now that the Universal Rule for the measurement of yachts on San Francisco Bay has been generally adopted by the clubs there, there is quite a rush being made by yacht owners to have their crafts officially measured. About twelve of the boats of the Corinthian Y. C. have been measured, and the rest will be placed in the hands of the official measurer before any prominent races come off.

The Biloxi, La., Y. C., at a meeting during the week, decided to hold their annual regatta July 15. It was also decided to make improvements to the club house which was opened on June 1. One of the novel features in the regatta this year will be a schooner race. The Biloxi Club has taken on new life, and it is expected the regatta will be the most successful of recent years.

The 65-footers, 31-raters and other yachts will start in the annual regatta of the Manhasset Bay Y. C. to-day.

C. M. Camp has won three races and twice defeated Cyric, winner of the Lipton cup last season, in his new boat, M. and F. II.

An item of importance to motor boat owners is that they must carry two copies of the regulations and two copies of the pilot rules. These may be obtained from the Steamboat Inspector's office in the Custom House. The laws will be strictly enforced this year.

Very comfortable repairs have been made to the club house of the Lake Champlain Y. C. at Burlington, Vt., since the fire last July. The club is now in full commission and all visiting yachtsmen are invited to make this port. The annual regatta will be held Tuesday, Aug. 6, the program of which is now being arranged by the regatta committee. Good prizes will be offered and the races will be open to all comers.

Knickerbocker Y. C.

FIFTY starters took part in the Knickerbocker Y. C.'s annual regatta on Long Island Sound on June 1. J. P. Morgan's Jr.'s Phryne won her first victory of the season in that class, while W. Butler Duncan, Jr.'s new class S schooner, Vandalia, won from two others of her class.

Piute, of the Knickerbocker special class, won from the Bonnie Kate, although she started twenty-two minutes late. Other winners were Lewanna, More Joy, Mlle. Boss, Cliphora, Alert, Red Wing, Amanita IV., Ada, Little Dipper, Hornet, Tautog and Go Go.

The closest race of the day was between the two handicap class, second division sloops, Red Wing and Amada, which covered a ten-mile course. The former won by one second on corrected time.

The fifty starters were divided among seventeen classes, and the Regatta Committee, consisting of Messrs. O. H. Chellborg, Harry Stephenson, Louis Sands and J. O. Sinkinson, had no difficulty in getting all of them away without a hitch.

The starting and finishing line was between the committee boat and the black and red buoy to the northward and eastward of Execution Light and the warning signal was given at 1:50 P. M., and the preparatory signal at 1:55.

Shortly before the signal was given for class Q the American Y. C. raceabouts and the

Manhasset Bay class, at 2:30, two of the small schooners, Alicia and Moira, which had been towed out from Manhasset Bay, arrived, and with Vandalia, this new class got away.

W. Butler Duncan, Jr., jockeyed Vandalia into the best position and went over in the lead of Moira and Alicia and held the lead all the way to the finish.

George A. Corry's Star class boat, Little Dipper, and George W. Kear's class R Arizona, not having classmates, agreed to sail a match race, Little Dipper adding another to her long string of victories.

On the second leg of their respective courses the boats had a broad reach of it, the larger ones making for the Week's Point buoy and the remainder for the Scotch caps buoy, with the wind holding true from the west-southwest.

Then came the windward work, in which the earlier boats to finish, the N. Y. Y. C. thirties, made well in along the Long Island shore and were able to lay their courses for the finish line, but the strong ebb tide, combined with the constantly diminishing breeze, caused later ones to make several legs before they completed their day's work. The summary:

Sloops—N. Y. Y. C. 30-foot Class—Start, 2:10—10 Miles.

Bensonhurst Y. C. Regatta.

In a good breeze from the west by south the Corinthians, of the Bensonhurst Y. C., held the opening regatta of their season on Gravesend Bay on June 1. The feature was in the Q division, made up of Grayjacket, Alice Soya and Suelew. The boats got away on port tack for a beat to buoy No. 11, the first mark.

Grayjacket was the first at the weather mark, followed by Alice. The two boats kept abeam, and in the run to Fort Hamilton, Grayjacket was the first to turn. A reach to Bensonhurst and then another windward leg home.

The times at the end of the first round: Grayjacket, 4:14:44; Alice, 4:15:50; Suelew, 4:19:14, and Soya, 4:23:48. No change during the second round, Grayjacket winning by 1m. and 14. The summary:

Sloops—Class Q—Start, 3:00—Course, 12 Nautical Miles.		
	Finish.	Elapsed.

National Y. C. Regatta.

THE annual regatta of the National Y. C. sailed on Decoration Day on Gravesend Bay was spoiled by bad weather. Only eight boats crossed the starting line. The committee, Peter Bentley, Daniel Toffy and H. D. Scribner, Secretary of the Yacht Racing Association of Gravesend Bay, had to change several of the courses, owing to the weather.

Class Q was stopped at the end of the first round, and at that time Suelew was leading Joy by 1m. 59s. The little boats rode out the blow, and in the X class, R. E. Dingman's Mouse, sailed by R. B. Moore, was the winner by 2m. over Skylark, which belongs to M. Howard. Gunda had a sailover in the handicap class. The summary:

Sloops, Class Q—Start 12:30—Course, 6.3 Miles.		
	Finish.	Elapsed.
Suelew, E. F. Luckenback.....	1 32 51	1 02 51
Joy, Le Sauvage and Geer.....	1 34 50	1 04 50

Lloyd's Regatta.

THE annual "unique" of the Lloyd's Harbor Y. C., which was a race from New Rochelle to Lloyd's Harbor, starting at midnight, was won this year by the schooner yacht Zurah, owned by Henry Doscher. This ship, although the largest of the fleet, made considerable time allowances to the other entrants. In mid-Sound a motor boat, without running lights, ran into Lady M., but caused only delay and a little damage. The summary:

	Finish.	Corrected.
Zurah, Henry Doscher.....	3 41 00	3 41 00
Surprise II., M. S. Kattenhorn.....	4 39 00	3 43 45
Robin Hood, George Malloy.....	4 31 50	3 49 51
Ramallah, E. H. Tucker.....	4 18 30	3 54 11
Maddeeha, H. H. Moulton.....	4 48 50	4 00 13
Surprise I., R. Salles.....	5 18 45	4 03 37
Hussar, A. P. Bennett.....	4 14 30	4 14 30
Lady M., E. C. Myrick.....	4 58 00	4 33 41

Eastern Y. C.

THE first race of the Eastern Y. C. one-design 17-footers was sailed from Neponset to Marblehead. Nine of the twenty-three boats made the trip in a fair sailing breeze.

That eight of the nine swung over the finish line within 10 minutes of each other in a race of 20 miles shows how evenly built they were and how evenly skilled are the crack Corinthian skippers of the Eastern Y. C.

The winning boat was Constance, owned by C. L. Dane, finishing one minute ahead of Atlanta, owned by Robert E. Stone, donor of the special cup for which the boats were racing. J. L. Saltonstall's Daddy B., E. H. Pentecost's Dick, H. M. Sears' Daffydil, C. H. W. Foster's Lolita, J. S. Lawrence's Squaw and George Atkinson's Viva finished in the order named. J. J. Storrow's Jay Jay came in nine minutes later.

It was a beautiful start in Dorchester Bay, Daddy B., Constance, Lolita, Dick and Viva going over at the whistle with so little difference it could hardly be noticed. E. H. Pentecost's Dick had the weather, however, almost shaving red spar buoy. From the start to Deer Island was close.

All the way to Tinker's Island the boats hung closely together. No. 13 slowly losing on the bunch. When nearing Tinker's Island the fleet split up, Constance, Atlanta, Daddy B. and Dick electing to take a chance by going inside. They increased their slight lead on the other boats by so doing.

The northwest wind made it possible to sail the entire race, with the exception of the last quarter mile—coming into Marblehead Harbor—without a tack.

So great was the interest of yachtsmen at large in the 17-footers that special classes for them have been arranged by the Corinthian and Boston yacht clubs, as well as the Eastern Y. C. The summary, times unofficial:

	Elapsed.
Constance, C. L. Dane.....	2 53 00
Atlanta, R. E. Stone.....	2 54 00
Daddy B., J. L. Saltonstall.....	2 54 20
Dick, E. H. Pentecost.....	2 57 58
Daffydil, H. M. Sears.....	3 01 05
Lolita, C. H. W. Foster.....	3 01 50
Squaw, J. S. Lawrence.....	3 01 50
Viva, George Atkinson, Jr.....	3 02 35
Jay Jay, J. J. Storrow.....	3 10 20

Atlantic Regatta.

ONCE more one of the freak boats built for speed, with no regard for safety, a cockle shell built of the flimsiest material, has come to grief through running into a shingle or some other obstruction during a race. This time it was the Baby Reliance, built by the Reliance Boat Company, and owned and steered by Commodore J. Stewart Blackton, of Atlantic Y. C. The accident occurred during the Decoration Day regatta of the Atlantic Y. C. at Sea Gate. The event was the class in which were entered A. E. Smith's Bug, Baby Reliance and Mrs. J. Stewart Blackton's Vita Junior. Owing to misunderstandings, fog and other unforeseen circumstances, only Vita and Baby Reliance were on hand at the start. Commodore lost his bearings in the fog, got off his course, and after striking the obstruction, his boat went to the bottom in mid-channel, leaving the Commodore and his sailing partner, Wallace Van Nostrand, floundering in the water. They were provided, however, with cork jackets, and after floating about for ten or fifteen minutes, were picked up by a Coney Island boat. Baby Reliance was a 20-foot hydroplane driven by a 120-horsepower motor. She is alleged to have made 45 miles an hour, but this is more or less estimated time, as she has not been tried over a measured course, nor in competition. Vita Junior turned turtle, but it seems that through some oversight an air-tight compartment must have been left in her, after the delicate operation of building was completed, as she floated bottom up and was towed to the club house. Fortunately, Mrs. Blackton was wise enough to stay on shore and let the representatives of the Reliance Boat Company take their chances of a swim to shore. The remainder of the regatta was hodgepodge, as Tiny Tad lost her pro-

pellor, and the other two entrants turned the wrong mark, so there was no race. The club went into commission at noon without accident, signal being given from Commodore Blackton's flagship Paula.

White Bear Y. C.

AFTER being out of the racing game for two years, Stuart Markoe's Butterfly sprung a surprise at the annual Memorial Day races of the White Bear Y. C., St. Paul, Minn., by winning over all the "B" boats, both old and new, by 1m. and 35s.

All the "B" class boats started at 3:20 and all crossed the starting line within a second of each other. Oriole had the windward position and Gunon easily took the lead, but was unable to keep it long, being handicapped by having to use a small jib. Yaconia, sailed by Maurice Taylor, broke her jib just after the start and the delay in fixing it probably lost the race for him.

Butterfly passed Oriole half way to center and kept the lead. Oriole stayed second. Clarkson's Blue Hen held the third position throughout the race.

There being no other "A" class boat on hand, Harold Spink's new boat, Handy Andy II, had to go it alone. Spink started five minutes after the "B" class boats and gained one minute and 40 seconds on the other boats. The summary follows:

Class A.	
Handy Andy II, Harold Spink.....	1 16 00
Class B.	
Butterfly, Stuart Markoe.....	1 17 45
Oriole, Stuart Lemon.....	1 19 20
Blue Hen, Worrell Clarkson, Jr.....	1 21 00
Yaconia, Marris Taylor.....	1 24 40

Course No. 5—Home to center, to Wildwood, to center, to home, to center, to Clark avenue, to center, to finish. Trophy, pennant. Winning crew—Stuart Markoe, Joe Goodwillie, Roger Tawney, William Markoe and Robert Gall.

Seawanhaka-Corinthian Y. C.

FOUR of the one-design 15-footers of the Seawanhaka-Corinthian Y. C. sailed the first race of the first series of the season off Center Island on June 1. The contest was decided in a west breeze. S. L. Landon's Imp was the winner. The summary:

Sloops—Class S—Inside Course—Start, 3:10.		
Imp, S. L. Landon.....	4 45 45	1 35 45
Iris, E. Tuckerman.....	4 46 15	1 36 15
Hen, G. Nichols.....	4 46 50	1 36 50
Thelema, C. Mackenzie.....	4 50 20	1 40 20

Indian Harbor Y. C.

FOUR of the new 41-foot schooners of the Long Island Sound sailed their first race under the auspices of the Indian Harbor Y. C. on Decoration Day. Vandalia, owned by W. Butler Duncan, Jr., won from Clarkson Cowl's Moira. Medora, a new M boat, which belongs to H. G. S. Noble, also was under sail. Having no class competitor, the craft sailed in the wake of the K boats and did well against the larger craft. It also was the first appearance this year of the big sloops.

South Shore Y. C.

THREE races were decided at Freeport on Decoration Day. In the open boat class the winner was Don Mackay's All Wool. The cabin class was taken by Wesley Miller's Old Fashion. In the race for speed boats, several of the craft broke down. The event was taken by Marie II, which belongs to W. Smith, of Babylon.

New York-Albany Record.

ON Decoration Day a letter from Mayor Gaynor, of New York city, was delivered to Acting Governor Thomas F. Conway, at Albany, by a motor boat in the best time ever made between New York and Albany, a dis-

tance of 140 miles, the time being 8 hours and 28 minutes. This was in the speed contest given under the auspices of the New York Motor Boat Club. L. C. Tienken's Question took the message, while Commodore Seldon's Merlin accompanied her.

New Orleans Regatta.

THE interest in the sixty-third regatta, held under the auspices of the Southern Y. C. on Lake Pontchartrain at West End, New Orleans, during the week, was not very enthusiastic. The entries were not so numerous as during the past few years. There were very few new sailing craft entered, and many of the old boats were not in the best of condition. The public at large has apparently become apathetic toward regattas here, and it seems almost impossible to arouse a very great deal of enthusiasm. The people, as a rule, seem to prefer autoing and land sports to aquatic diversions. There was a time not very long ago when the announcement of a regatta at West End excited the greatest interest and pleasure and thousands went out to witness the contests; but that day seems to have passed not to return soon. The public does not express much interest even in motor craft, although they are more popular than sailing boats here. Many who in times past took part in regattas are now giving their spare moments to automobiling or to fishing or land games or diversions.

Bensonhurst Y. C.

THE Bensonhurst Y. C.'s program for the season follows:

July 4, annual regatta, classes M and under; Aug. 24, championship races of Gravesend Bay, classes M and under; June 19, cruise to Southwest Spit and return; June 30, cruise to Sandy Hook; July 21, Bensonhurst to Larchmont cruise for Gravesend Bay knockabouts; Aug. 11, cruise around Ambrose and Scotland lightships; Aug. 25 and Sept. 8, special cruises.

The Regatta Committee is: H. D. Scribner, Chairman; W. V. Collins, R. W. Rummell, Jr., F. P. Currier and W. T. Davis.

Yachting in California.

THE pronounced success of the annual race from San Francisco to Santa Cruz has led the yachtsmen of Southern California to consider the proposition of holding a race each year from Long Beach to the northern pleasure ground. It is believed that arrangements can be made for a race this year and plans are also being discussed for a race home to be participated in by some of the San Francisco yachts. The Southern California yacht clubs are to hold a meeting at Santa Cruz from July 22 to July 27, this being the week during which the annual race from San Francisco is held, and the northern and southern yachtsmen will be brought in close contact.

Manhasset Bay Y. C.

THE annual regatta of the Manhasset Bay Y. C. will be sailed on Saturday, June 8, for all regular classes of schooners, sloops, one-design and handicap classes.

STARTING AND FINISHING LINE.

The race will be started off the red and black buoy to the northward and eastward of Execution Light.

The starting and finishing line will be between a white flag on the committee steamer and a stake boat flying the club burgee, starting from west to east, finishing from east to west.

STARTING SIGNALS.

The starting signals will be called by gun or whistle.

Will Sail Course No. 1: 12:00 P. M.—Warning; a square white flag. 12:05 P. M.—Preparatory; blue peter. 12:10 P. M.—Schooners; all regular classes; one red ball. 12:15 P. M.—Class K; one white ball. 12:20 P. M.—Classes L, M and N; one blue ball.

Will Sail Course No. 2: 12:25 P. M.—Class P; two red balls. 12:30 P. M.—N. Y. Y. C. thirties; two white balls. 12:35 P. M.—Buzzard's Bay, one-design class; two blue balls. 12:40 P. M.—Long Island Sound one-design schooners; one white and one red ball.

Will Sail Course No. 3: 12:45 P. M.—American Y. C. raceabouts; first and second divisions, handicap classes; one white and one blue ball. 12:50 P. M.—Larchmont Interclub class; one blue and one red ball. 12:55 P. M.—Third and fourth division, handicap class; one red, one white and one blue ball. 1:00 P. M.—Classes Q, R and S; one red ball under white flag. 1:05 P. M.—Manhasset Bay twenties, Jewel S class; one white ball under white flag. 1:10 P. M.—Bayside bird class, Manhasset raceabouts and New Rochelle one-design classes; one blue ball under white flag.

Will Sail Course No. 4: 1:15 P. M.—Manhasset bug and star one-design class; one red and one white ball under white flag. 1:20 P. M.—American dories, Stamford Y. C., Bayside Y. C. and Port Washington Y. C. one-design classes; one blue and one white ball under white flag.

Each starting signal will be class preparatory signal for the next class to start.

Postponement of the start of the race, if necessary, will be for fifteen minutes, or a multiple thereof, and will be signalled by code flag "G".

If it should be necessary to sail course in opposite direction, it will be signalled by code flag "B". Marks will then be turned to port.

Should a yacht cross the starting line before her starting signal is given, she will be hailed and must return, giving way to other yachts crossing the line at the proper time.

Race off for the day will be signalled by code flag "H".

All yachts in regular classes must file measurement certificates.

This does not apply to one-design, restricted or handicap classes.

No protest of any kind will be considered unless made in writing and given to Race Committee prior to noon of June 10.

Special prizes have been presented by flag officers and members. If two or more yachts start in a class a first prize will be awarded. If four or more, a second prize, and six or more, a third prize will be awarded. No sailover prizes will be given.

The rules of the Yacht Racing Association of Long Island Sound will govern, except where otherwise specified.

Entries must be received by the chairman of the Race Committee at 29 Broadway, New York, before 4 P. M. June 7.

No special classes will be arranged on the day of the race. If owners of two or more yachts not provided for wish to arrange a special match, arrangements must be made at least twenty-four hours prior to the start. No sub-divisions of one-design classes will be made.

SPECIAL NOTICE.

Racing number with class letter or class

distinction mark directly above them must be displayed on both sides of the mainsail. They must be painted in dark color of clear-cut block type on rectangular pieces of canvas and securely attached to the sail, so that the bottom of the number will be on horizontal line with throat of sail and midway between luff and leach, and parallel to waterline. The size of the numbers, letters or distinction mark shall be not less than 15 inches each in height for yachts of 30 feet and under waterline, and not less than 18 inches each in height for yachts over 30 feet waterline. Time may not be taken if this rule is not complied with.

The Race Committee consists of James W. Alker, Chairman; William Gardner and A. W. Nilsson.

Waterways League.

PRESIDENT GEORGE J. VESTNER, of the Waterway League of Greater New York and Long Island, has sent a letter to the clubs in the league telling of its work and what it wishes to do. He says the league now has 1,670 active members in 194 clubs and hopes that before the year ends that the members will be far in the thousands and the influence of the league increased, and wishes to unite boatmen in the greatest of all leagues of loyal and public-spirited men; to purify and improve our waters for public health and common good, and to compel a just consideration of the needs of boatmen. In addition to our efforts this winter to stop pollution and collect drift, to connect the bays of New York and Long Island, an opportunity should be offered to our vast army of boatmen to become more proficient in navigation. In my judgment our members would welcome a move in that direction.

The Waterway League objects are: Inland waterways connecting bays and rivers with New York Harbor and Long Island Sound; lighted buoys for all navigable waterways; closer relationship of boat, yacht and sporting clubs; purification of waterways and protection of water food; stocking and protecting fishing grounds; widening, deepening and clearing channels; removing grass, rocks and sandbars; securing just laws beneficial to those who use the waterways for health, pleasure or profit; supporting and encouraging water sports and racing; securing stations for communications and supplies at reasonable rates; securing a cosmopolitan winter club house with meeting halls, model rooms, bowling alleys and gymnasium; protecting members through admiralty board; taking care of their grievances, righting their wrongs and fighting for their rights. Members will have the right to fly the league flag—emblem of good fellowship, signal for help in times of distress, sign of safe moorings in welcome harbors.

Canoeing

Drips from the Paddle.

Tippy Canoe Club, with its new \$12,000 club house at Glen Over, on the Allegheny River, went into commission on May 29. On the 30th an interesting program of races was given.

The Toronto Canoe Club, having won the Shea shield, emblematic of the war canoe championship of Toronto, three years in succession, the shield has become their property outright.

F. H. Gooch, father of the well-known Toronto Canoe Club paddler of that name, has donated a shield to replace the Shea trophy. The Gooch trophy will be competed for at the spring regatta of the Toronto Canoe Club on June 22.

The Maryland Canoe Club has under construction a modern canoe club house on the south side of the Patapsco River, near Brooklyn. The new home of the club will be equipped with mechanical devices for handling

canoes. The club was incorporated in 1911 and has done much to encourage canoeing in local waters. Its weekly canoeing parties up the river every Saturday afternoon are popular. The officers of the club are: W. T. Haydon, President; Elmer C. Smith, Vice-President, and E. G. Hooper, Secretary, and Treasurer.

Washington I. C. A.

THE tenth annual regatta of the Washington Intercity Canoe Association May 30 at Sycamore Island, on the broad water course, was marked in every respect with pronounced success. Performances of R. Rutherford, of the Washington Canoe Club, and Charles H. Wagner, of the Potomacs, were commendable, but the canoe club star may claim the honors of the afternoon by three single victories and a win with his boatmate, Crane. In the double events Mrs. Charles H. Wagner and H. Rivero won from W. Crane and Miss Hardell. The summaries:

Novice, Singles—Won by P. D. Gibson, Tech-Analostan; second K. Hansen, Y. M. C. A.

Tail-End Race—Won by Thurston Johnston, Washington C. C.; second, C. D. Davidson, Washington C. C.

Association Championship, Singles—Won by C. H. Wagner, Potomac B. C.; second, F. H. Heidenreich, Washington C. C.

Novice, Doubles—Won by E. P. Ansley and R. B. Miller, Washington C. C.; second, G. Law and K. Hansen, Y. M. C. A.

Association Championship, Doubles—Won by W. R. Crane and R. Rutherford, Washington C. C.; second, W. R. Rogers and R. Garrett, Washington C. C.

Mixed Doubles—Won by Mrs. C. H. Wagner and H. Rivero, Potomac B. C.; second, W. R. Crane and Miss M. Hardell, Washington C. C.

Club Fours—Won by Potomac B. C. (Vandergrift, Wagner, McDonald and Chamberlin); second, Tech-Analostan.

Upset Race—Won by R. Rutherford, Washington C. C.; second, K. Hansen, Y. M. C. A.

Expert Singles—Won by R. Rutherford, Washington C. C.; second, F. H. Heidenreich, Washington C. C.

Cruisers Race—Won by H. Rivero and H. T. Chamberlain, Potomac B. C.; second, G. Law and K. Hansen, Y. M. C. A.

Expert Race, Doubles—Won by W. R. Garrett and F. H. Heidenreich, Washington C. C.

Tilting Contest—Won by R. Rutherford and W. R. Crane, Washington C. C.; second, C. H. Wagner, and H. T. Chamberlin, Potomac B. C.

A. C. A. Cruise on Ramapo River.

ON May 11 and 12, forty-five members of the American Canoe Association cruised down the Ramapo River from Suffern, N. Y., to Mountain View, N. Y.. Many rapids and dams were encountered, the water was running quite swiftly. There were numerous spills, and in general, the cruise was very exciting. The party stopped at the Norton House at Pompton for dinner, and at the rapids below the dam, many a good canoeist met his fate. The cruise then continued to Mountain View, N. J., which was reached in a heavy rain storm. A luncheon was served here, after which the cruisers disbanded.

A. D. BERNING.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division—Raymond C. Odell, 23 Hooker avenue, Poughkeepsie, N. Y., by H. Jorgensen; Dr. Edmund Y. Hill, 445 West End avenue, New York city, by Louis Reichert.

Eastern Division—Charles H. Shippee, Jr., 206 Smith street, Providence, R. I., by A. W. Hazard.

NEW MEMBERS ELECTED.

Atlantic Division—6426, Chas. V. Beaver, 288 East 164th street, New York city; 6427, John S. Hallam, 302 West 173d street, New York city.

Western Division—6428, Dr. Wm. M. Thompson, 32 North State street, Chicago, Ill.

TRAP SHOOTING

If you want your shoot to be announced here send a notice like the following:

Fixtures.

Sept. 12-13.—Cincinnati (O.) G. C. Arthur Gambell, Supt.
REGISTERED TOURNAMENTS.
 June 8.—Conde (S. D.) G. C. A. E. McMillan, Sec'y.
 June 8.—Utica, N. Y.—Genesee G. C. E. J. Loughlin, Sec'y.
 June 8.—Beaver Dam, Wis.—Recreation G. C. L. H. Zimmerman, Sec'y.
 June 8-9.—Brainerd, Minn.—Riverside G. C. H. L. Paine, Sec'y.
 June 10.—Ft. Wayne (Ind.) G. C. W. H. Scherer, Sec'y.
 June 11-13.—Syracuse, N. Y.—New York State tournament, under the auspices of the New York State Sportsmen's Association. L. H. Schortemeier, Sec'y. Treas., 201 Pearl street, New York.
 June 11.—Washington, Pa.—Western Pennsylvania Trapshooters' League tournament, under the auspices of the Washington G. C. C. W. Peterson, Sec'y.
 June 11-13.—Sioux City, Ia.—Soo Gun Club. W. F. Duncan, Sec'y.
 June 12.—Brodhead (Wis.) G. C. J. B. Pierce, Sec'y.
 June 12.—Coffeyville, Kans.—Forest Park G. C. Frank L. Ruthrauff, Sec'y.
 June 12-13.—Pine Bluff (Ark.) G. C. E. J. Voss, Sec'y.
 June 13-14.—Indianapolis (Ind.) G. C. J. C. Dixon, Sec'y.
 June 15.—Allentown, Pa.—Lehigh Valley S. A. Allen Heil, Sec'y.

DRIVERS AND TWISTERS.

F. H. Wallace, Manager of the Cleveland Gun Club, announces a tournament of that club on July 4.

Another of those popular up-State tournaments will be held by Canandaigua Sportsman's Club, on June 28. This will be the ninth year. The club officers are: A. Sterling, President; C. A. Soule, Vice-President; W. J. Kibbe, Secretary-Treasurer.

The creepings of progress and improvement at last have reached even the gun club. Down from the New Haven Gun Club comes a score sheet made out on the typewriter. For this much thanks. We offer our congratulation to Secretary W. F. Alcolm, and to other secretaries may I say—Go thou and do likewise.

The Dominion of Canada Trapshooting Association tournament will be held Aug. 20-23. New grounds are being sought. J. H. Kenyon, W. R. Davies and R. B. Hutcheson have been selected to represent the Dominion at Olympic games. Walter Ewing, the present holder of the championship, will not defend his title this year.

The sixth annual spring target tournament of the Hercules Gun Club, Temple, Berks county, Pa., will be held on June 14, 1912, at Temple, Pa. Open to all amateurs. This shoot promises to be some shoot for money, fun or prizes. It begins at noon and ends—well, later. Full particulars from A. K. Ludwig, Secretary, 936 North Front street, Reading, Pa.

The Tri-State individual and team championship tournament will be held at Vicksburg, July 3 and 4. As the amateur shooters of Mississippi, Louisiana and Tennessee are about equal in efficiency, it is expected that this shoot will be the best attended in this section for 1912. It is seldom that \$200 actual cash is offered for one day's competition. July 3 will be preliminary prize day.
 W. G. BEECROFT.

Analostan Gun Club.

WASHINGTON, D. C., June 2.—The Analostan Gun Club held one of its most successful shoots this season on Decoration Day. The sum of eighty-four dollars was set aside as prizes. This was distributed as follows: Ten dollars to the high gun; five dollars each to the next five; four dollars each to the next five; three dollars to the next five; two dollars each to the next five, and one dollar each to all those who participated and did not get into the money division. The contests were open to members only. An event at doubles was also held for several merchandise prizes. Twenty-six men were on the firing line and 3,200 targets were trapped during the afternoon. The wind was very high and the only professional present, J. A. Anderson, of the U. M. C.-Remington Co., who was high professional, stated that in all his experience he had never shot at such hard

targets. The scores were low, but good under the conditions. C. B. Wise signaled his first visit to the grounds this season by winning first. He was far-seeing enough to bring out his heavy gun and used a good, stiff load and scored 90 out of his 100. Dr. B. L. Taylor and Phil Steubener were the runners-up with 88. Dr. A. B. Stine landed in third place with 85. There were five 20-bird events and the results were as follows: Wise 90, Dr. Taylor and Steubener 88, Stine 85, Brown, Hogan, Barber and Monroe 83, Wagner and Anderson 82, Ford 81, Ferguson 78, Wilson 77, Parsons, Harrison, M. Taylor and Farnham 76, Bray 75, Huseman 73, Bohnke and Luttrell 69, Perkins 67, Peck 61, Ta bott 54, Green 52, Emmons 47.

In the doubles, 12 pairs, Phil. Steubener led with 20, Wagner 19, Barber 18, Brown 17, M. Taylor and Anderson 16, Bray, Ferguson, Hogan Luttrell, Ford and Huseman 15, Monroe, Dr. Taylor and Perkins 14, Talbott and Stine 12, Parsons and Harrison 11, and Wilson 9.

After the good attendance at the Decoration Day shoot it was not expected that many would turn out for the regular shoot of the Analostan Club on Saturday, June 1. However, that being the day for the monthly spoon shoot, eighteen men responded to the call. The afternoon was perfect for shooting. Some good scores were made, notably that of Robert T. Bray, who scored 21 out of 12 pairs. Following are the scores:

	Shot at.	Broke	Spoon Contest.	Doubles 12 Pairs.
Ford	100	88	42	20
Peck	100	85	45	..
Perkins	100	78	33	..
Huseman	100	76	36	19
Stine	100	75	38	..
Green	100	71
Bray	100	69	33	21
Parsons	100	68	38	14
Emmons	85	36	26	..
Wagner	80	63	42	..
Barber	80	51	31	18
Luttrell	80	51	31	16
Bohnke	75	59	38	..
Barnes	65	56	41	..
Wilson	65	46	36	..
Monroe	65	42	34	16
Miles Taylor	50	47	47	19
Brown	50	44	44	..

Wagner and Ford tied for the spoon in Class B. In the shoot-off, Ford won with a straight of 15. Wilson and Huseman tied for the "C" spoon. Huseman won the shoot-off. Luttrell and Barber tied for the "D" spoon, and the former won in the shoot-off.

MILES TAYLOR, Sec'y.

Adel Gun Club.

ADEL, Ia., May 15.—There was a goodly attendance of rock breakers here during our two-day tournament yesterday and to-day. Patter White was winner with 283 out of 300. S. A. Huntley made one less for second, while Billy Hoon could break only 273, enough for third money. Chas. F. Clarke is the club's new secretary. The scores:

Nebraska State Sportsmen's Association.

OMAHA, Neb., May 20.—Sixty-four gunners spent three days at our tournament just ended, and all were made happy. High gun was twins—Sam Huntley, of Sioux City, Ia., and E. W. Varner, of Adams, Neb., shooting remarkably well, finishing with 429 out of 540. Varner took State championship with 49 out of 50, and a gold watch. Ed. O'Brien was high professional with 431.

Du Pont Gun Club.

WILMINGTON, Del., June 1.—The third of the series of shoots for the F. L. Connable cup was held to-day. It was won by H. P. Carlon. After Mr. Carlon had broken 2 out of 25 targets, this score was tied by Isaac Turner. Both men shot from the 25yds. mark. In the shoot-off, Carlon won, scoring 20 out of 25 targets against 19 for his opponent.

There were thirty-nine marksmen before the traps to-day. A tie that occurred several weeks ago for the Class D challenge cup between S. J. Newman and J. B. Grier was decided. Newman, one of the oldest members of the club won with 23 out of 25. Grier, the youngest member, broke 19 out of the same number. Grier was more fortunate in the shoot for the Coleman du Pont spoon, winning this event with a score of 19.

Alden B. Richardson, of Dover, who won the open State championship and the amateur State championship at the State Sportsmen's tournament last week, made 95 out of 100, a portion of these targets being broken from the 22yds. mark.

J. H. Dinnick made 25 straight from the 21yds. mark. Dr. A. Patterson also had a clean score of 25. H. P. Carlon broke 47 out of 50 from the 20yds. mark.

The scores were:
 W. M. Hammond 22, Eugene du Pont 20, Clyde Leedom 18, J. W. Mathews 19, W. A. Joslyn 21, A. J. Curley 16, J. A. Macmullen 19, A. B. Richardson 22, W. A. Casey 16, T. W. Mathewson 20, L. H. Hoopes, Jr., 13, L. L. Jarrell 15, W. Tomlinson 21, S. J. Newman 16, F. P. Ewing 21, H. W. Bush 19; J. H. Minnick 22, S. G. Davis 12, H. Dure 5, J. B. Grier 19, W. B. Smith, Jr., 19, H. M. Anderson 22, A. F. Hickman 19, E. H. Anderson 5, H. T. Reed 10, Dr. E. O. Bullock 7, H. England 12, Wood 15, I. Turner 23, Z. H. Lofland 18.
 C. R. Kenworthy 9, E. E. du Pont 21, Dr. H. Betts 16, Dr. A. Patterson 21, S. Tuchten 21, W. G. Wood 16, H. P. Carlon 23, J. T. Roberson 18, F. L. Litten 19, R. S. Pistol scores: D. Appleby 93, 85, 84, 83; L. C. S. Dorsey, 83, 84, 83; W. E. Steen, 49, 57, 34.
 Rifle scores: J. Birch, 223, 232, 204; W. Wood, 191, 204.

Galion Gun Club.

GALION, O., May 22.—Forty-six amateurs and four professionals made the biggest tournament thus far held here. Scores were not particularly good; neither was the weather. Geo. Volk won with 128 out of 135, A. B. Jones was next with 123, and third place was a tie between G. A. Barton and C. E. Doolittle on 122. The scores:

Cincinnati Gun Club.

THE Cincinnati Gun Club will hereafter be an active factor in the sport in Southern Ohio. Under the management of Superintendent Arthur Gambell, it will soon recover its position as one of the leading trapshooting clubs of the country. Its large membership has remained loyal through all its vicissitudes since it left St. Bernard, and many of the old members will rally to its support.

The house-warming shoot on May 30 was an auspicious omen of good things to come. Twenty-seven shooters took part, with one hundred visitors, among them many ladies, witnessed the shooting. It was like a page from the past history of the club, to see Messrs. R. Davies, Schatzman, Horace Bonser (the boy wonder), J. Schreck and "Eph" Randall on the

firm line with Len Shepard refereeing and scoring, Arthur Gambell hustling squads, and one of Mrs. Gambell's famous chicken dinners served at noon. And the best of it is that Gambell promises, and he will make good, that this is only the beginning of a revival of the old good times.

The weather cleared soon after noon and remained pleasant. W. Henderson got first on a score of 97. High amateurs were Medico and H. Bonser, 94 each. The latter shot for the first time on the club's grounds at St. Bernard, several years ago, and went into the 90 per cent class at the start. He has not shot at the traps before to-day for four years, but came back in fine shape. Coburn was second with 93, and T. J. Donald third with 92. Practice events were shot in the morning.

The winners in Class A were Bonser and Medico; Class B, Smith and Ertel; Class C, Dameron and Schreck; Class D, Hill and McArdle. Class A took in scores of 89 or better; Class B, 85 to 88 per cent; Class C, 83 to 84 per cent.; Class D, all below 84 per cent.

Squier and Randall shot a team race against Medico and Hammerschmidt. The latter team won with 184 to 172.

The grounds will be open for shooting on every day, the regular club events being held on Saturday and Sunday of each week. The scores:

Medico	100	94	Henderson	100	97
Hammerschmidt	100	90	Bonser	100	94
Schreck	100	83	Frohliger	100	80
Coburn	100	93	J B Towler	100	56

Jersey City Gun Club.

JERSEY CITY, N. J., May 25.—We had a very good turnout at the Jersey City Gun Club to-day, as the day was an ideal one for the trapshooter—a good clear air and no wind. Lee and North tied for high honors for the day with an average of 90 per cent. Shannon was next in line with 89 per cent., and Martin was third with 88 per cent. Dr. Groll and Shannon were fighting it out all afternoon, and Shannon did him up at the 16yds. game, but in the 20yds. event, Doc. got the jump on him and won out by a good margin.

We are going to shoot all through the month of June and hope to have a good crowd out each Saturday. The club is an easy one to reach, only thirty minutes from down town in New York. The scores:

Events:	1	2	3	4	5	6

Birmingham Gun Club.

BIRMINGHAM, Ala., May 27.—The following scores were made at the Birmingham Gun Club. The first 50 targets count on the Du Pont badge added bird handicap. Ed Cornwall and R. S. Kennon tied with their handicaps for the badge. In the scores on 100 for the day, John Warren was high with 96, with John Lambeth in second place.

We are very proud of Gentry Hillman's good shooting at the Southern Handicap. The scores:

Shot at.		Brk.		Shot at.		Brk.	
John Warren	100	96		Mrs Garl	100	77	
John Lambeth	100	91		L M Norwood	100	76

STEEL LINED SHELLS

== Win at ==

NEBRASKA AND DELAWARE

Nebraska State Championship

Won by Ed. Varner, of Adams, Nebraska, scoring 49 ex 50, with *Remington-UMC* Nitro Club Steel Lined Shells.

Delaware State Shoot

High Professional Average

1st. H. H. Stevens, 292 ex 300, shooting a *Remington-UMC* Pump Gun and Arrow Steel Lined Shells.

2d. L. S. German, 290 ex 300, shooting *Remington-UMC* Arrow Steel Lined Shells.

These are the steel lined shells whose speed plus pattern has earned them the title of the Handicap Winners of the U. S. A.

Remington-UMC — the perfect shooting combination.

REMINGTON ARMS—UNION METALLIC CARTRIDGE CO. - 299 Broadway, New York, N. Y.

The Delaware State Championship.

First Day.

The first annual tournament of the Delaware State Sportsmen's Association was held May 29 and 30, at Wilmington, under the auspices of Du Pont Gun Club.

Some great shooting was done in both sections of the program, the ten regular events each at 15 targets, producing a fine race for first honors on the 150 targets shot at by each man.

German broke 147 out of 150, while Minnick's score was 146. W. S. Colfax, Jr., another local crack, was right on Minnick's heels with 145.

H. W. Kahler, of Philadelphia, tied for fourth with two professionals, H. H. Stevens and Neaf Apgar, all three scoring one less than Colfax.

The scores of the ten regular events follow:

Table listing scores for the first day of the Delaware State Championship, including names like T. H. Keller, Sr., F. Coleman, H. W. Kahler, etc., and their scores in various events.

Second Day.

On the 150 targets in the regular program, H. H. Stevens easily led the field, running his first 139 straight, and losing only two out of 150.

The last 100 targets on the program constituted the race for the open championship of the State of Delaware, and in this event Richardson won with 96 out of 100.

The Delaware State championship at targets, open to all residents of the State, won by A. B. Richardson, with 96 out of 100.

The Delaware amateur State championship, open only to amateurs who are residents of the State. Won by A. B. Richardson, with 285 out of 300.

The Millard Davis loving cup. Won by Allen Heil, who broke 68 straight, the cup being donated to the amateur who made the longest run of the tournament.

Table showing targets and broken targets for the second day of the Delaware State Championship, including names like T. H. Keller, Jr., F. Coleman, etc.

Main table of scores for the Delaware State Championship, listing names and their scores in various events.

Northern Kentucky Gun Club.

There were only a few shooters at the weekly shoot on June 1, most of the members having had their fill of shooting at the Cincinnati grounds on Decoration Day.

Small table listing scores for the Northern Kentucky Gun Club, including names like Dameron, Walker, Simmons, etc.

Cincinnati has landed the match for the E. C. cup, between C. A. Young, of Springfield, O., and H. D. Freeman, of Atlanta, Ga. This will be shot on the afternoon of July 4.

There was a good bunch at the grounds on May 19. The weather could hardly have been better and some good scores were made.

summer is over. Voige has not shot since last fall; that's why he missed so many. Shooting at doubles after the regular events were over.

The second in the series of monthly tournaments will be held on May 26. This is shot under the N. C. R. system, 100 targets in four events at 15 and two at 20 targets each.

Scores follow: Holaday (100) 96, Dameron (100) 84, Day (100) 96, Ertel (65) 50, Richey (50) 28, Jones (80) 64, J. B. C. (100) 76, Walker (50) 40, Myers (60) 39, Ludwig (65) 56, Voige (50) 30, Gould (50) 37.

Hudson Gun Club.

Jersey City, N. J., June 2.—At the fifth contest for the Frank Hall trophy, held on the Hudson Gun Club grounds to-day, there was an attendance of only thirty shooters.

The day was warm, which had to do with the slim entry for the cup. The next contest takes place at Newton, N. J., on June 22. There were 5,500 targets trapped, and only one straight score of 25 was recorded.

Table showing scores made in practice for the Hudson Gun Club, including names like Engle, Wynne, Putney, etc., and their scores.

Table showing scores for the Hail trophy, 100 targets, including names like Wynne, Culver, O'Brien, etc., and their scores.

T. H. KELLEY, Sec'y.

Chesapeake City Gun Club.

At the regular blue rock shoot of the Chesapeake City Gun Club, June 1, some fairly good scores were made. In the Du Pont trophy event, eight gunners tied for spoons.

Table showing scores for the Chesapeake City Gun Club, including names like W. Stevens, W. A. Brown, N. Bouchelle, etc., and their scores.

Mt. Kisco Gun Club.

Mount Kisco, N. Y., June 3.—The first of a series of shoots at the Mount Kisco Gun Club was held on May 30. Eleven members and three visitors faced the traps.

Table showing scores for the Mt. Kisco Gun Club, including names like F. H. Miller, *C. Zarr, *Wm. Huff, etc., and their scores.

The Superior Shooting of the **WINCHESTER** Repeating Shotgun

WON THE SOUTHERN HANDICAP

VASSAR CATE, of Brunswick, Ga., won the first Interstate Handicap for 1912, with a score of 93 x 100 from the 19-yard mark, using a Winchester Repeating Shotgun.

HIGH AMATEUR AVERAGE: Won by H. B. Pottinger, of Charleston, Mo., with a score of 382 x 400, shooting a Winchester Repeating Shotgun and Winchester Loaded Shells.

HIGH PROFESSIONAL AVERAGE: Won by H. D. Freeman, who scored 394 x 400, with a Winchester Repeating Shotgun.

HIGH AVERAGE FOR ALL TARGETS: Won by Fred Gilbert, who broke 565 out of a total of 600 targets, shooting Winchester Loaded Shells. John R. Taylor, Second High with 561, and W. R. Crosby, Third, with 559. Both shot Winchester Loaded Shells, and Mr. Taylor also shot a Winchester Repeating Shotgun.

The above statement of winnings shows that Winchester goods were high in all events of the shoot, which demonstrates their superiority over all other makes competing.

FOR WINS, SHOOT ONLY RED W GOODS

New Haven Gun Club.

NEW HAVEN, Conn., May 25.—The best shoot ever held by the New Haven Gun Club was that of to-day. We had sixty-nine trappers out and great enthusiasm. The best in Connecticut vied for cash and merchandise, the latter events offering ninety possibilities. L. C. Wilson shot well and ran away with first "root of all evil" on a score of 144 out of 150. L. H. Bradley cracked 138 for second lucre, which he had to divide with Chamberlain and Hall. Dimmock, Yale's crack student of ballistics, made 136. Among the professionals, H. H. Stevens made the big killing, getting the gold goods offered by the club to premier professional gun man. The program consisted of 150 targets per man. The scores:

Registered Tournaments.

THE tournaments registered with the Interstate Association during the week ending June 1, follow:

July 4.—Roanoke (Va.) G. C. H. I. Wilkenson, Sec'y.

Aug. 3.—Pikeral Lake, S. D.—Sisseton G. C. Maurice Schindler, Sec'y.

Aug. 15.—Rio (Wis.) G. C. Bert Thompson, Sec'y.

Aug. 20-23.—Montreal, Canada.—Dominion of Canada T. S. A. T. Claude Cooke, Sec'y.

Aug. 21.—La Crosse G. C. J. V. Winter, Sec'y.

Aug. 27.—Canonsburg (Pa.) G. C. A. S. Anthony, Sec'y.

Aug. 27.—Mechanicsburg (O.) G. C. F. J. Coburn, Sec'y.

Aug. 28-29.—Fulda (Minn.) G. C. H. W. Converse, Sec'y.

Aug. 29.—Celina (O.) G. C. Geo. Kistler, Sec'y.

Aug. 29-30.—Sedalia (Mo.) G. C. John McGrath, Sec'y.

Sept. 2-5.—Bay City, Mich.—Michigan State tournament, under the auspices of the Bay City G. C. C. A. Galbraith, Mgr.

Sept. 2-3.—Paducah (Ky.) Target Club. C. E. Pursell, Sec'y.

Sept. 19.—Springfield (O.) G. C. Harry C. Downey, Sec'y.

Sept. 26-27.—Capron (Ill.) G. C. Alex. Vance, Sec'y.

Oct. 3.—Elkton (Md.) G. C. H. L. Worthington, Mgr. ELMER E. SHANER, Sec'y-Treas.

Delta Gun Club.

DELTA, Colo.—Scores of tournament May 23 and 25. The conditions for shooting during the tournament were perfect and good scores were made, as will be seen from the sheets.

There were eight shooters here from over the mountains, and Mr. Moritz, from Denver, seemed to be adapted to our conditions, for he made excellent scores.

The Denver Post trophy was won by R. A. King, of Delta, Mr. Moritz and Mr. Burt being second and only one bird behind. The trophy was won with a score of 96 out of 100.

"Bill" Bowman won high professional average for the regular program. George Burt won high general average for professionals. King won high average for the amateurs and Mr. Moritz was second, being one bird lower than King. The program consisted of 150 targets each day. The scores:

	1st	2d		1st	2d
	Day.	Day.		Day.	Day.
R A King	147	141	E G Palmer	123	120

Boston A. A.

RIVERSIDE, May 30.—The morning shoot at 100 targets, 50 over the McCrea traps and 50 over the Sargent traps, resulted in C. B. Tucker winning the Sargent event with 50 and L. H. Davis the McCrea event after a shoot-off.

In the afternoon shoot, same conditions as in the morning, L. H. Davis won the Sargent event with 50 and W. C. Brooks the McCrea event after a shoot-off.

J. E. Lynch won the Barbey trophy with a score of 495 out of 500, and C. B. Tucker was second with 492.

L. H. Davis won the Knights trophy with a score of 300 out of 300.

C. P. Blinn won the J. B. Hunter trophy, with a score of 1164 out of 1200; second, R. A. Faye, 1160; third, M. Ballou, 1146; J. L. Snow, 1146.

The championship shoot was at 200 targets, and resulted in T. C. Adams winning with a score of 192; E. F. Gleason, second, 190; R. A. Faye, third, 184.

Take-home trophy, McCrea traps, morning shoot:

Cleveland Gun Club.

CLEVELAND, O., May 26.—The regular weekly club contest of the Cleveland Gun Club was held on Saturday afternoon, May 25, at Shooting Park, Mayfield road, was fairly attended. The weather conditions were of the best for the game and some good scores were put up. Brother Rogers and Doolittle were the banner team, each breaking 96 out of 100 in the first two events, and in the two Du Pont fob contests, Doolittle broke 50 straight, and Rogers 49 out of 50, and some thought they both had an off day.

The May trophy contest that was brought to an end showed that Mr. Dibble was the winner of first prize for the month, having 15 points, and Mr. A. B. Jones was second with 14 points.

The Du Pont fob shoot, which has been going the round for the last two months, April and May, was also ended to-day, and the fob was awarded to C. E. Doolittle, who broke 122 out of 125, taking his best five scores out of seven shoots of 25 targets each. Dr. Brown kept Charlie moving all of the time, and at the close of the contest the doctor was only one bird to the bad. The scores:

Event No. 1, monthly trophy, 50 targets, 16yds.:			
Rogers	49	Stevens	42
Doolittle	47	Williams	42
Archer	47	Hopkins	40
Brown	46	Genner	40
Judd	46	Freeman	38
Rockwell	45	Thorp	37
Dibble	45	Gould	37
Stapp	43	Brainard	34
Wallace	43	Mould	25

Event No. 2, annual trophy, 50 targets, 16yds.:			
Doolittle	49	Wallace	44
Brown	48	Freeman	43
Williams	48	Stapp	43
Rogers	47	Brainard	41
Genner	45	Stevens	41
Westcott	45	Mould	36
Judd	44	Hopkins	34
Rockwell	44	Thorp	34

Event No. 3, fob contest, 25 targets, 16yds.:			
Doolittle	25	Stapp	22
Williams	25	Genner	22
Rogers	24	Judd	21
Westcott	23	Hopkins	21
Archer	23	Brainard	20
Brown	23	Stevens	18
Freeman	22	Mould	17

Event No. 4, fob contest, 25 targets, 16yds.:			
Rogers	25	Stevens	20
Doolittle	25	Archer	20
Brown	24	Stapp	19
Genner	24	Hopkins	19
Brainard	22	Mould	19
Freeman	21	Williams	16
Judd	20		

THE Decoration Day tournament of the Cleveland Gun Club, held Thursday, May 30, at the shooting park of the above-named club, was a success. The weather could not have been better and the scores of

some of the shooters were gilt-edge. Shooters came from everywhere, and forty-four took part in all events, thirty-seven shooting through the program of the Squier money-back system and twenty-one in the special.

The trade was represented by Pop Heikes, J. R. Taylor, R. S. Pringle and W. R. Chamberlain. Mr. Chamberlain took his friends into camp and dished the good things out to them to the tune of 218 out of 225, shooting in all events of the program, which gave him high gun for the day over all, and winning the Stevens high gun trophy, which was open to all. The next good man of the bunch was Wm. Webster, who walked away with high gun amateur trophy with the fine score of 216 out of 225. Webster always wins on the Cleveland grounds just like a baby drinking milk, and puts the other boys to sleep. The winners of the special events were Dr. D. Parker, C. E. Doolittle and R. W. Ewalt in the first special. Second special: D. A. Wilcox, A. B. Jones, C. E. Doolittle. Third special: R. E. Rogers, D. A. Wilcox and G. E. Burns.

Miss Alice Kosht, of Norwalk, O., was on hand to show what a lady can do with a gun, and she put up a score of 129 out of 150, which put some of the men to the tall timber.

The Waynesburg Gun Club was on hand with a good bunch of shooters, and may they come again. Scores: Regular program, 150 targets per man:

*W R Chamberlain..... 147	E S Rogers..... 129
W Webster 145	F Gruber 128
R W Ewalt 142	J P Troxler 127
J Deist 142	F W Judd 127
A E Brown 142	J H Mear 125
*R O Heikes..... 143	F Rownds 124

Robin Hood Gun Club.

RAIN spoiled the attendance of the regular holiday shoot for the fifth leg on the 1912 cup. Six gunners were on the job and did some good shooting for the cup. All six were red hot after the fifth leg, which was won by Conelley.

Cup, 100 birds: Connelley 86, Curry 85, Beyersdorf 84, Cleveland 78, Reirson 76, Bowley 75.

Du Pont job: Beyersdorf 21, Bush 21, Connelley 20, Reirson 20, Curry 19. Shoot-off, 10 birds: Bush 8, Beyersdorf 7.

Gun case, 25 birds: Bush 23, Rowley 23, Cleveland 21, Conelley 22. Shoot-off, 25 birds: Bush 21, Rowley 19. GEO. CONELLEY, Sec'y.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

TRIUMPHS and TROPHIES

Won By Shooters Of

SMOKELESS POWDERS

At The First Annual Tournament

— OF THE —

Delaware State Sportsmen's Association

The notable scores made by winners at the traps of the Du Pont Gun Club, Wilmington, Del., May 29-30, prove that skillful marksmanship and reliability of powder make a victorious combination for trapshooters at all tournaments.

Delaware State Championship Won By

A. B. Richardson, Dover, Del., 285 x 300, - with "Schultze"
And Mr. Richardson also won the Delaware Open State Championship, 96 x 100, - - - - - with "Schultze"

High Averages For Entire Tournament Made By

H. H. Stevens, Roselle Park, N. J., 292 x 300, with "Schultze"
L. S. German, Aberdeen, Md., 290 x 300 - with "Du Pont"

Longest Run Of The Tournament Made By

H. H. Stevens, Roselle Park, N. J., 147 straight, with "Schultze"

Longest Amateur Run Made By

Allen Heil, Allentown, Pa., 68 straight, with "Du Pont" which secured for him the "Davis" silver punch bowl, and Mr. Heil also made 12 straight during the two days, thereby winning the "Capelle" Trophy awarded to the contestant making the greatest number of perfect scores.

Why Not Shoot Du Pont Loads and Join the Winners?

Supplement to Game Laws in Brief

SO many and important changes have been made in fish and game laws in a number of States, during the past winter, that we have found it necessary to issue an eight page supplement of these changes. Paste these eight pages in the back of your copy of GAME LAWS IN BRIEF and you will have complete and correct laws to June 1st, 1912, governing fishing and shooting in every part of the United States and Canada.

Ten Cents is the price of this addenda. Mailed to any address upon receipt of price.

FOREST AND STREAM PUBLISHING COMPANY
127 Franklin Street
New York City

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He knows it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is Lefever Taper Boring.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N. Y.

Durston Special
20 Gauge. Price \$28.00

Trap at Indian Lake, O.

INDIAN LAKE, O., May 28.—Al Hill was high man at the shoot held here to-day. Fisher was second and Downey third. Of course, the weather man had to be bad, as usual, so the scores were very low. After shooting some practice and some doubles, the program was started. Only half of the program was shot, on account of the weather.

After the shoot, all went fishing, and some nice fish were caught. All went straight at the dinner table. Shobe says don't bother me. Just busy. The fishing has been fine with the black coming in. In June there will be some fine strings caught. Don't forget to bring your gun along, for you can shoot targets, too. Everything for sport at this place. Come again. Scores:

Shot at.	Brk.	Shot at.	Brk.
Shobe	100 74	Duckham	100 78
Winkler	100 78	Wagner	100 71
Downey	100 81	Holden	100 70
Hill	100 87	Miller	100 69
Guy	100 73	Stephenson	50 35
Bay	100 72	Crothers	50 30
Coburn	100 79	Shellenberger	50 35
Brown	100 75	Hoover	30 16
Fisher	100 83		

LON FISHER, Mgr.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., May 25.—To-day was marked by the return of Parry to his best form, from which he had been separated for a time. His total of about 95 per cent. was ornamented by a run of 50. Dixon shot into second place with a percentage of 90. The scores:

Shot at.	Brk.	Shot at.	Brk.
Parry	160 151	Nesbit	120 94
Hymer	160 119	Foland	120 86
Dixon	120 108	Neighbors	80 43
Lewis	120 105	Arnold	60 51
Britton	120 100		

R. R.

Buffalo Audubon Club.

BUFFALO, N. Y., May 30.—Our Decoration Day tournament was well attended, and while no great scores were made, the affair was a real success. F. S. Wright won first place with 142 out of 150, being four up on R. Day Hilliker, who beat out E. E. Hilliker by 3.

Cheap Ammunition

for .22 High Power

Factory .22 H. P. cartridges cost \$34.20 net per 1000—too expensive and too powerful for general use. Save your fired shells; reload with this Ideal gas check bullet; you have 1000 excellent cartridges for hunting and target requirements up to 300 yards or more for \$9.34. Making your own gas check bullets, your total cost per 1000 cartridges is only \$6.17.

For short range use 53-grain lead bullet. Cast these bullets and reload your shells; you have 1000 extremely accurate S. R. loads for \$3.37. Free circular gives full details. 160-page Ideal Hand Book tells about reloading all cartridges; mailed for 6c postage.

The Marlin Firearms Co., 27 Willow St., New Haven, Conn.

NYOIL Best Revolver and Gun Oil

Unless your revolver is in smooth working order when you want it, you will be likely to regret that fact as long as you live. NYOIL contains no acid, prevents rust, will not gum or chill. Put your weapon away in NYOIL and you can catch it up a year later in perfect confidence. Ask any hardware or sporting goods dealer for NYOIL. Large bottle (cheaper to buy) 25c.; trial size, 10c. Take it with you when you go gunning, fishing, bicycling, motoring.

KENNEL

Long Island Kennel Club Show.

HEAVY showers lessened the attendance at the eleventh annual dog show of the Long Island Kennel Club at Brighton Beach race track on Decoration Day. Many of the dogs that had been entered were not exhibited, but the 500 that were led to the rings kept the judges busy from 10 o'clock in the morning until nearly 5 o'clock in the afternoon.

When the judging was resumed after luncheon the rain ceased to fall and those who had been crowded into places of shelter circulated among the improvised kennels and tried to get a line on what the judges were going to do about it. The general impression appeared to be that the judges were to have a hard day of it because of the fine display of well bred canines of every size, shape, color and variety. Among the dog fanciers who cast their trained eyes along the line were Raymond Belmont,

WHITE PRINCESS.

who had a number of entries; Charles D. Bernheimer, George Greer, W. S. Burnee, Jr., Mrs. C. M. Hamilton, Harry T. Peters, Mrs. Josephine Reuter, Winthrop Rutherford, Mrs. M. Thorpe and J. G. Sherman.

There were more than a hundred bull dogs of various classes entered. Hewlett King Orry, owned by Mrs. C. M. Hamilton, took away the first prize for the dogs, and her Champion Florence Blunder also took the first prize for the bitches. Raymond Belmont also was a consistent winner. He took two firsts and two reserves in this class with his Champion Windholme's Governor, Belray Finder II., Belray Spangle and Belray Kitty.

The Pomeranians were there in great numbers. Vi Sin, of Alderbourne, that distinguished Pekingese spaniel, given a luncheon May 14 at Hotel Vanderbilt, took first prize in his class. The Shetland sheep dogs, only recently accepted as a breed in this country, drew much attention, J. G. Sherman's Jack McEwen winning.

Those who took charge of the task of seeing that the prizes went to the right places were Amzi Dodd, Rudolph Vohl, Harry T. Peters, Henry D. Whitfield, Dr. H. C. Goubeaud, A. Clinton Wilmerding, H. P. J. Earnshaw, Mrs. M. Thorpe, J. Sargeant Price, Jr., Thomas Holden, F. J. Brown, Edmund Evans,

A. McC. Halley, W. H. Sawyer, B. S. Smith, Albert Francke, Mrs. M. E. Harby and Miss Mary Henderson.

The committee which had charge of the arrangements for the show was composed of Charles D. Bernheimer, Chairman; Dr. J. E.

Irish Terrier Club of America.

WITH seventy-seven dogs and 146 entries the second specialty show of the Irish Terrier Club of America, at the Morris County Golf Club June 1 proved one of the most interesting given in this country. Dogs were on view from Boston, Chicago, Philadelphia, St. Louis, Pittsburgh and Seattle.

J. R. Thorndike's Thorncroft Marksman was given the award as best dog in the show. The dogs were judged by Dr. Pency Jarrett, of Philadelphia. The committee in charge of the show included John G. Bates, of this town, Chairman, and Singleton Van Schaick, J. R. Thorndike, L. Losing Brooks, George S. Thomas, M. N. Buckner and William P. Wolcott. The winners' classes were as follows:

Dogs—First, J. R. Thorndike's Thorncroft

QUEEN OF PEARLS.

Marksman; France G. Porter's Abbey Playboy, reserve.

Bitches—First, Frances G. Porter's Abbey Redfly; John G. Bates' Blarney Buttercup, reserve.

Brace—First, John G. Bates' Blarney Buttercup and Blarney Belinda; Frances G. Porter's brace, reserve.

Teams—First, John G. Bates' Blarney Buttercup, Belinda, Blarney Bandit and Blarney Belle; Mr. Bates' No. 2, reserve.

Veterans, Six Years Old and Over—First, John G. Bates' Blarney Redeemer; Mrs. Singleton Van Schaick's Pat, reserve.

Veteran Bitches, Six Years and Over—First, John G. Bates' Blarney Bessie; H. P. Martin's Edgecomb Party, reserve.

Stud Dog—First, John G. Bates' Blarney Redeemer; William P. Wolcott's Thorncroft Sportsman, reserve.

Brood Bitch—First, John G. Bates' Blarney McChree.

FEEDING WILD TURKEYS.

A SPLENDID flock of wild turkeys is being kept from starvation along the public road between this city and the White Deer Valley by several sportsmen from this city who make regular trips on alternating days with food. The distance is six miles, but the satisfaction they get out of the work repays for the trouble. The food is placed in the road along the ridge upon which the turkeys stay. The other night the big birds came into the road where a sleighing party was passing that way, showing no fear, but rather expecting the noisy merrymakers to show them some attention in the way of food. Many persons throughout this section have turned their attention this year to feeding turkeys, quail and pheasants.—Williamsport (Pa.) Correspondence, North American.

MUSKEETOPUNK CO., Dept. F, PEKIN, ILLINOIS.

"Open to Amateurs Only."

COLUMBUS, Ga., May 14.—While down here attending the Southern Handicap, I find that the new move of the Interstate Association in favor of the amateurs, namely, the barring of professionals from taking part in the division of purse of the Grand American Handicap seems to be but little known. It has occurred to me, therefore, that if you could devote some small portion of your valuable space in your next issue or so, toward the further enlightenment of the amateur trapshooters of this country on the above subject, it would be of great mutual advantage, and would be appreciated accordingly.

As has already been stated in your columns, the Grand American Handicap, the premier shooting event of the year, is no longer "open to all." It is "open to amateurs only," professionals shooting along "for targets only," handicapped just the same as ever, but competing against each other for a valuable trophy offered for that purpose by the Interstate Association.

This action of the association, and the fact that it has also guaranteed that the winner of the Grand American Handicap will receive \$1,000 in gold, in addition to a diamond trophy worth at least \$100, ought to insure there being a record-breaking entry list at Springfield, Ill., June 20 next. Entries close June 8, and programs will be ready for distribution May 15.

ELMER E. SHANER, Sec'y-Treas.

Sikeston Gun Club.

SIKESTON, Mo., May 31.—Out of 50 clay pigeons the following score was made to-day: Dan McCoy 44, Walter Brookings 40, W. H. Tanner 39, Clem Marshall 38, J. E. Dover 36, C. H. Yanson 35.

Gun and Ammunition Chat.

Neaf Apgar, the genial and popular expert shot, representing the Peters Cartridge Company in its eastern territory, also widely known as the president of the famous Westy Hogans, is doing some of the best shooting of his career this year, of course shooting the now widely known "steel where steel belongs" shells. As an example of his work, on May 15, at Mt. Holly, N. J., he won high general average, 145 out of 150; May 16, at Scranton, Pa., he won high general average, 144 out of 150; May 17, at Pottsville, Pa., he won high professional, 136 out of 150; May 18, Phillipsburg, N. J., he won second professional, 142 out of 150. This shooting is of a very high order and can be attested by others in attendance at the tournaments referred to, as the conditions were anything but conducive of high scores.

W. R. Chamberlain, shooting Peters factory loaded target shells, with "steel where steel belongs," won second general average at Logansport, Ind., May 15-16, with a score of 276 out of 300.

The famous E. C. cup, which has been contested for from time to time since the year 1896, and which is emblematic of the inanimate target championship of the world, was placed in open competition by the Fairmont (W. Va.) Gun Club at the West Virginia State tournament on May 14, and was won by C. A. Young with a score of 184 out of 200, the highest that has ever been made in these matches. Mr. Young thus wins the inanimate target championship of the world and by a score which will probably stand as a record for some little time. He used Peters factory loaded shells with "steel where steel belongs," the famous red "P" ammunition that is creating a sensation among trap and field shooters. In addition to the winning of the cup, Mr. Young won high professional average, 288 out of 300; high general average on all the program events, 409 out of 425, and had long runs of 111 and 90.

Peters "steel where steel belongs" shells cleaned up the entire field of amateurs and professionals at the Illinois State shoot at Peoria, May 15-17. Bart Lewis, of Auburn, Ill., shooting the red "P" target shell, broke 440 out of 450, an average of practically 98 per cent. He led all the amateurs and professionals present, amounting to nearly 100, and his shooting was a fine exhibition, not only of marksmanship, but of ammunition quality; Mr. Lewis also won the trophy for the longest run of the tournament, 129 straight.

At Houston, Texas, May 14-15, the Texas championship event, which was open to all Texas amateurs and professionals, was won by Mr. H. A. Murrelle with a score of 100 straight, shooting Peters factory loaded Premier shells. Mr. Murrelle and Mr. H. J. Borden tied for high professional average, 410 out of 440, including 100 targets from 22yds., and Mr. Murrelle made the long run of the shoot, 144 straight. Mr. Borden also shot Peters Premier loads.

At the Southern Handicap tournament, Mr. Woolfolk Henderson, shooting Peters "steel where steel belongs" shells, won fourth general average, 387 out of 400, with long runs of 135 and 120. Mr. J. S. Day had a long run of 108, also with Peters shells.

At Nevada, Ia., May 17, Mr. Wm. Hoon, of Jewel Junction, Ia., won second amateur average with Peters shells, 143 out of 150.

AMERICAN DUCK SHOOTING

By *George Bird Grinnell*

A most complete work, dealing with every phase of the sport of duck shooting, thus forming a complete treatise on American ducks, geese and swans. It gives details of the natural history, habitat, and characteristics of every American species.

Part I contains descriptions with plates of each species.

Part II tells of every method of swan, goose and duck shooting practiced in North America—east and west, on Atlantic and Pacific and in the interior—and gives thrilling accounts of the splendid sport.

Part III deals with the art of duck shooting, including guns and loading, the Chesapeake Bay retrieving dog, decoys, blinds and boats, and finally discusses the causes of the decrease of wildfowl and tells what may be done to increase their numbers.

It is most fully illustrated with 58 portraits of North American swans, geese and ducks, by Edwin Sheppard, with 8 full page plates, and with numerous vignettes in the text by Wilmot Townsend.

Cloth, heavy laid paper, 58 illustrations, eight full-page plates, 627 pages. Postpaid, \$3.50.

FOREST AND STREAM PUB. CO. :: 127 Franklin Street, NEW YORK

ARE YOU A GUNNER?

Do you love to follow your good dog over the fields in search of quail or chickens, or to struggle through swamp or along thick grown hillside, expecting to hear the roar of the ruffed grouse or the twitter of the fall woodcock? If so, you should have this new book.

AMERICAN GAME BIRD SHOOTING

By *GEORGE BIRD GRINNELL*

(New—Just Published)

This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys.

The first part of the volume is devoted to a description of the various species and their habits—the way in which they live their lives.

The second part of the book is devoted to upland shooting and treats of the methods by which all the upland birds are pursued and taken. The chapter "Aids to Shooting" describes the clothing, guns, and loads and dogs that the gunner may profitably use; while the last section of the book treats of the shooting of the future and the efforts to rear our native quail and grouse in domestication.

The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full page portraits of different game birds and hunting scenes, with a number of cuts in the text.

Cloth. About 575 pages. Price \$3.50, net. Postage 25 cents.

This book is of inestimable value. It contains the genuine hunter-naturalist facts given in the most entertaining and interesting style.

FOREST AND STREAM PUBLISHING CO., 127 Franklin St., NEW YORK CITY

HOW THE FORESTS FED THE PIONEERS.

Mrs. EMMELIN HEISKELL, a niece of Dr. Johnston Lykins, the first Mayor of Kansas City, who has spent the winter in Kansas City and who went there in 1852, said that it was a mistaken idea that the pioneers of the West were entitled to any sympathy. According to a correspondent of the Star of that city, they had an abundance of nature's food supply and kind neighbors and were content and happy.

"Actually we would not have suffered nor felt greatly inconvenienced in earliest times if we could not have had a dust of flour or a pound of store sugar," says this correspondent.

"In our list of indigenous food were walnuts in superabundance, a few butternuts, hazelnuts in plenty, hickory nuts—the mammoth variety and the plump little shellbarks—to say nothing of chinquapin and other acorns. These last were abundant and nourishing enough to fatten our hogs until the hardening of the flesh necessary before 'killing time,' when some corn was given them. Wagon loads of all these native nuts were to be had for the mere gathering.

"Wild fruits were quite as plentiful as the nuts. Almost anywhere, but more especially along the edge of the timber around prairies, the wild goose plums, yellow and red, large, juicy and sweet, we gathered by bushels. No 'dinky' little baskets were carried to bring them home. Tubs were taken in wagons and carriages and quickly filled.

"Housewives had barrels in cellars filled with plums, rainwater poured in to fill the interstices, and they made pies from the supply throughout the winter. By the following fall the water remaining in the barrel was the finest kind of vinegar. You remember what Thomas Benton said in his report of his visit to Kansas City and vicinity about 1853:

"In driving over the flower bedecked prairies the horses' hoofs were crimson—dyed with the juice of wild strawberries, which almost covered the surface of the ground beneath the varied blossoms alone."

"Blackberries were in such profusion that half were not gathered by us or the birds, and the same can be said of wild gooseberries. Raspberries were not so abundant but plentiful in some localities. A few service berries, black and red haws, sweet and succulent—not the dry, tasteless variety we find here now. Groves and clumps of wild crabapple trees, whose pretty pink blossoms filled the air with sweet odors for rods around, furnished an excellent fruit for making jelly. Slough grapes—the sweet, almost seedless fruit—whose vines festooned every bush and tree in the island off the coast bottoms and along the Kaw and Missouri River lowlands were used fresh and preserved in syrup for pies—and powerful good ones they made.

"The 'winter grapes,' so abundant, so sour before frost, it was said the pigs squealed in merely passing beneath the vines, yet so fine after being slightly frozen, were not only mighty good for food, but considered a specific for chills and fever, so prevalent in newly opened sections. What was called the summer grape (why, I know not, for neither was it good until after frost) was a most delicious variety, almost as large as Concord, and a lot superior. These grew in abundance hereabouts, especially on higher land. Occasionally we would find trailing along a rail fence, vines of the fox grape, the fruit nearly as large as partridge eggs, somewhat pleasant to eat, but as we had such an abundance of better, we rarely robbed the foxes of their favorite food.

"Persimmons enough and more for possums and people we had here. If eaten at the proper stage persimmons are as delicious as any prepared conserve. Mushrooms were abundant in rich timbered land and along the bluff sides. And pawpaws—Missouri bananas, they are sometimes sacrilegiously called—this juicy, sweet scented, abundant fruit of the forests, could be eaten all day by their admirers without producing a sensation of surfeit, so digestible and wholesome are they. But, like per-

simmons, these must be eaten at the proper stage of ripeness.

"Then meat! What didn't we have in abundance, and the choicest? Buffalo to begin with, because it was our biggest game. We hung hindquarters of young buffalo in the cool smokehouse or other protected places—we scorned the other portions—and cut from them while they lasted the sweetest, juiciest steaks and roasts. We also prepared or bought a goodly supply of 'jerked' (dried) buffalo meat, which we shavers carried in our lunch baskets to school and in pockets, and a group of youngsters in 'playtime' and surreptitiously in study hours gnawing away on the delicious handy edible accessory resembled the gum-chewing friends of later years.

"Deer, though not often seen in our immediate neighborhood, were numerous nearby and the finest venison hams could be bought for five cents a pound; sometimes less. Wild turkeys trotted in the timber and we had about all we cared for of this superior fowl. Wild ducks, geese and prairie chickens were almost as numerous as blackbirds. We only used the young, tender squirrels and rabbits, as the ample supply permitted picking and choosing. 'Possum and sweet tater,' prime and cooked to a turn, could be had any time during the winter.

"And groundhog—why, even this varmint is edible, but a little goes a long way. Quail—not partridge—we called, and still call, that perfection of game birds. It seemed almost blasphemy to designate this *piece de resistance* by so suggestive an epithet as quail—were so numerous that we actually tired of them at times. I remember when one could buy all he wanted for twenty-five cents a dozen.

"Our turbid old Missouri River furnished oodles of fish—the best in the world we then thought. An old-time lady said when salmon, lake trout and other varieties were brought to her: 'I wouldn't give a good steak from a young hen catfish for all these pale, sickly looking things brought from the lakes and elsewhere.'

"There was a grove of sugar maples about (now) Cleveland avenue and Ninth street to Twelfth street and eastward on the Daniel Stone plantation. From these Judge Carey's family procured sufficient syrup and sugar for family use. There were other sugar trees scattered about this section, but did not pay for sapping. The common hickory tree contains saccharine sap—not so sweet as the sugar maple, but abundant and deliciously flavored. When the big logs of this wood were burning in our wide fire-places we children gathered in spoons the sweet sap which oozed from the cut ends of the logs.

"The Rev. J. T. Peery, a grand and honored old-timer, whose home was at (now) St. John avenue and Spruce street, one evening laid a huge green hickory log on the broad stone hearth to dry out for the morning fire. When he arose and went to place the log on the bed of live coals he found beneath each end a little cake of sugar. The heat had started the flow of sap, and the same influence caused evaporation and left the pure sugar on the stone. The good preacher told this himself, so we know it is gospel truth."

AN ANCIENT FISH STORY.

THE pike is a fish for which now there is little demand. Yet Edward I., who regulated the prices of different fish, that his subjects might not be at the mercy of the venders, fixed the value of pike higher than fresh salmon and at more than ten times that of the best turbot. Pike are supposed to live longer than any other fish, in spite of their former popularity as food. Gesner relates that in 1497 a pike was caught in Swabia with a ring attached, inscribed: "I was first put into this lake by the hands of the Governor of the Universe, Frederick II., Oct. 5, 1230." This is the fish's story.—London

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Conservative Investment.

We offer for conservative investment a high grade Industrial Preferred stock to net 6% in an old established company commanding large market for its specialty at home and abroad.

Under the most able management. Preceded by no prior lien of any kind. Net earnings equal to more than four times the Preferred Share dividend.

We recommend these Preferred Shares as a perfectly safe investment, suitable not only for the private investor, but for trust funds as well.

The Lure of the Allegash

By ETHEL DORR MELLOR

Photographs by B. F. Mellor.

TO those whose idea of a summer vacation is a few weeks spent on the piazza of some fashionable hotel, the Allegash has no message, for it boasts no hotels at all, and its only piazzas are those which nature has carpeted with green moss and pine needles, and roofed with the branches of the tall trees of the forest along its banks. Nor will the Allegash River canoe trip of over 200 miles along the lakes, streams and rivers of Northern Maine appeal to those strenuous souls who wish to rough it and are looking for the kind of vacation trip which hardens, toughens and brings out those heroic qualities of fortitude and endurance, engendered by the discomforts and hardships supposed to be necessary accompaniments of camp life; unless, indeed, they choose to undertake it without guides, in which case it will have difficulties in generous measure, with enough of the spice of adventure and even danger thrown in to satisfy the most venturesome spirit, for there are rapids and stretches of white water along the way which were sufficiently exciting to us even with the skilled boatmanship of our experienced guides between us and disaster.

But, if you wish to reach the haven of "the blessed freedom of all outdoors" on "flowery beds of ease" made up of the comfort and luxury of living, with which these Maine guides surrounded us; if you wish to drink in the delights of the wilderness in full measure, with the smallest possible portion of the dregs of discomfort at the bottom of the cup; if the lure of the forest, in its native wildness appeals to you, then you will find, as we did, infinite joy in the swift-gliding motion of this mode of travel; in the living in canoes by day and in tents at night; in the delicious fragrance of the fir balsam beds and their springy softness when properly made, and you, too, will become a willing captive to the charm of this sweet wayward wandering through the unbroken wilderness, carrying our tents and provisions with us, our motto, "Wherever night finds us there is our home."

Of the many hardship we had been warned, by our pessimistic friends to expect, we encountered none but what may be cheerfully endured by anyone who loves nature and life in the open.

One of the bugbears was to be the bough beds filled with hard, woody ends coming into unpleasant contact with various protesting parts of our anatomy, but the guides about Kineo are the best in the State, which is saying much, and

know how to make a bough bed, cutting the fir tips all of uniform length, and sticking the hard end of each one into the ground in close even rows overlapping each other like the shingles on a roof, the soft, spring ends uppermost.

Another discomfort was to be the weather, but although it rained during some part of the twenty-four hours nearly every day, we were surprised and not a little gratified to find that properly equipped with oilskin slickers and soft felt hats which shed the rain, we could travel on a wet day with comfort, and in the serene consciousness of having **nothing** on that would spoil, could abandon ourselves to the joys of a rainy day like real water ducks.

And then the delight of coming into camp after a rainy day journey and watching the marvelous skill with which our guides set to work to turn what ought in all reason to be discomfort, into comfort! It was miraculous how quickly they cut tent poles and pegs, collected boughs for our beds, made an impromptu table and benches for our out-of-door dining room, with an open fly tent overhead if stormy, got a big camp-fire going, and in wet weather even built a fire before the door of each sleeping tent, and all done with such quickness and skill that before we realized what was taking place, our row of picturesque white tents was up under the tall fir trees, our beds, with a little birch bark table at the head, made, and the appetizing meal which they always "get a-goin'" the moment the fire is built, was on the table.

And such cooks as these guides of ours were! There may be poor ones among the two or three hundred around Kineo, but none such fell to our lot. Such delicious flaky biscuit, such bannock, such Johnny-cake and "flapjacks" were never seen, and once, when we camped in the same place on Lake Churchill several days, for our two anglers and their guides to

make a side trip to Lake Pleasant for some special fishing, we had old-fashioned yellow-eyed beans baked over night in the ground in a hole previously prepared by keeping a fire going all day heating stones which were placed with the hot coals all around the pot of beans, which was covered with more hot stones, then with earth, and left to bake slowly all night in true lumberman fashion, to come out in the morning a delectable dish beyond the power of achievement by the most famous French chef.

Then, too, we had bean "swagin," a kind of bean chowder which makes a most appetizing supper dish, and all the trout we could eat throughout the trip. When we tired of it fried, they made it into chowder, an ignoble fate for such a royal fish as those handsome speckled mountain trout. They fried fresh doughnuts for us, and even made pies from evaporated apples, which by some magic they made to taste as if fresh from a Maine orchard, and we always had plenty of bacon, ham, butter and fresh eggs, though no fresh meat, as it was close season for game, and our guides were strict in their observance of the game laws.

You will wonder how we could, traveling through a region devoid of markets, and even of habitations, have such variety, when everything had to be carried with us in canoes, not only our tents, blankets, extra changes of

SENSIBLE WOODS COSTUMES.

STARTING ON WEST BRANCH.

clothing and ponchos, but all provisions and cooking utensils, including two Dutch ovens. These made of tin are placed in front of the camp-fire and bake by reflected heat. Our little flotilla, however, had beside its six-passenger canoes with a guide, one passenger and a fair share of baggage in each boat, a seventh canoe for extra baggage, and the guide who managed that, a strong, sturdy fellow, we called the 'baggage man.'

We must have been a picturesque sight, our seven graceful canoes gliding along lake, stream and river, sometimes abreast, sometimes in single file and sometimes each one following its own sweet will.

"And so we followed the waterways of Northern Maine in our canoes all the way from Moosehead Lake to Fort Kent on the Canadian line, every foot of this journey of over 200 miles by water, with the exception of two 'carries' less than five miles in all where the lakes and streams do not connect."

The skill of our guides inspired in us such confidence that even the mad rushes through the "quick water" of the rapids, which sometimes dashed water and spray into our canoes and all over ourselves, were only an exhilarating form of intoxication to us, for they had proved their skill and judgment over and over again. Shall we, who witnessed it, ever forget that breathless moment when, "snubbing" his canoe in the angry rapids, just above the dangerous Allegash Falls, Black Hawk's paddle snapped in two near a treacherous rock, and how, with rare presence of mind he, without a moment's hesitation, flung the useless paddle aside and sprang to his "setting pole" in time to gain control of his canoe and keep it from drifting into the current heading toward the brink of the falls? And so competent had they shown themselves, so thoroughly at home with pole or paddle in hand, that we were confident that any one of the seven would have met such an emergency with equal presence of mind. They had taken us out of a pocket formed by a floating log as we were passing through a jam in the river, and in a strong current had guided our canoes safely around and through narrow passages in a jam of logs, when to strike would mean a crushed canoe.

I shall never forget one exciting rush through

the only danger in overturning is a good wetting, for the brook is not deep enough to endanger your life, but each time the rush of the current sends your canoe straight for a big rock in midstream, you thrill with excitement lest you strike it, and each time your guide swings the bow around just in time to avert disaster and heads directly for a still more dangerous, because hidden, rock, you thrill with admiration for the keen eye, quick hand, and almost unerring judgment which sees ahead the only channel in the shallow stream deep enough to take your boat through without scraping the bottom. Sometimes you do strike bottom, and sometimes, in very shallow water you feel the ribs bend and strain under you as the frail shell of a boat is forced over the pebbles at the bottom of the stream, making you feel, as you sit low in the bottom of the canoe, what a thin partition separates you from a watery bed, but giving you a delightful intimate sense of being a part of it all: and over and through it all is the enchantment of all the sweet swells of the woods, and that delicious, rippling music of the water running merrily over the moss-covered stones, to which is added at intervals the sweet note of some wood bird, perhaps a swamp robin, a "pee-be-dee" or a hermit thrush.

You feel intensely thankful that you are alive and privileged to be in the midst of such beautiful things. It is well for us that we first learned confidence in the skill of our guides on the smaller streams, for later, on the Allegash River we found rapids exciting enough to satisfy any but the most reckless craving for adventure. Here is no rippling, singing music of a mountain brook, but a broad, steep pathway of turbulent, boiling water, which hurries along with such force that to be swept on to one of the many wicked looking rocks in its pathway would mean not only an upset, but a broken canoe. Our guides said the water in the Allegash was much higher than is usual at that time of the year, but that was so much the better for us. We found it wildly exhilarating even to the point of intoxication; first a smooth downhill pathway with a glimpse ahead of white water, which, as we neared it, was seen to be a rushing, swirling mass of foam, so set with big, ugly rocks that we wondered how so frail a craft as our

an open race-way at the head of the Caucungomac, in a dash of foam and spray and with a delicious catch of the breath, as the canoe made the first downward plunge, covering me with spray, and filling the sleeves of my slicker with water to the elbow, and my soul with a reckless longing to go back and try it all over again. And, oh! the joy of canoeing down the tumbling, bubbling waters of these musical little mountain brooks of the Maine woods! There is nothing in the world like it. You know that

canoe could ever live through it, but the quickness and dexterity of our boatmen in making the many sharp turns necessary to avoid these dangers carried us safely through, and we knew that when we came to rapids where it was unsafe to take a risk, they would make us get out and walk along the bank, while they took the boats through alone, as at Chase's Carry, where "the stones is jest as thick as they ken be planted." It is impossible to describe the sensation that comes to you as you reach the head of one of the many steep pitches on this stream, which vary in length from eighty rods to nearly two miles of rushing, boiling, white water, and look down on the broad downhill sweep of the pathway ahead, so steep that you wonder what prevents the water from rushing down even faster than it does. At one place, near "The Devil's Elbow," a sudden turn of the river makes it look as if we were certain to strike head on the steep side of the wooded cliff straight ahead. I am sure that ten years hence I can shut my eyes and see it all again as vividly as now. "Lest we forget" was not one of our watchwords on this journey, for how can we ever forget these things?

Our beloved Allegash bore us relentlessly on into the larger, broader St. John's River, which has a much greater volume of water, flowing now in smooth stretches, and then in dangerous looking rapids which we approached with a quickened breath and a tightening of our grip on the canoe rail. Though larger, deeper and stronger than in the Allegash, the rapids in this river, formidable as they seem, are really no more dangerous, as there are fewer hidden rocks to threaten disaster.

How we resented the signs of civilization as they appeared on the river banks in occasional farm buildings and cultivated fields, for we loved our swift-flowing, turbulent Allegash with its wooded banks of spruce and fir, and this is truly "the country of the pointed firs."

When the little toy village of St. Francis came in view on the Canadian side of the St. John's River, we knew that our "little journey to nature" was nearly finished, and we tried to stifle our longing to set back the calendar, consoling ourselves with the thought that the memory of all these dear, delightful things would always remain with us.

How can we ever forget our first sight of a moose, after several unsuccessful "moose hunts," or the excitement of wakening in the night to hear the peculiar breathy whistle of a deer just outside our tent door, or the night we were wakened just at midnight to see, through the open tent door, our friendly moon just setting over the edge of the lake, or the evening a frightened rabbit bounded by close to our tents, or the dainty little does who ventured into our camp on Round Pond so close to us that we could plainly see the beautiful markings about her eyes and ears?

We came so intimately in contact with the life of the woods, the downy-headed ducks swimming with their broods of little ones, the wood-birds, the loons, and the beaver villages; and one day we visited Gull Island, a tiny rock of an island on Churchill Lake, dotted with the nests of the fresh water gulls, and shall we ever forget the soft feel of the tiny baby gulls and the beat of their hearts against our hands as we held the pretty little balls of spotted gray down

for a moment and let them go to hide their heads again in the crevices of the rocks like little ostriches?

We realized how imminent was our return to the common, prosaic things of civilization, and how surely we should miss these tall, straight firs of the Maine forest. I love them every one, and the graceful deer, whom we have come to look upon as familiar friends. A forest without them will always seem to us now unoccupied and lonely. We love the memory of our camps, each one of which we have named "Moose Horn Camp," "Bide-a-Wee," "Camp of the Pointed Firs," "Sunnyside," "Deer Camp," where the pretty little doe passed right before our tent doors; "Marauders' Camp," where we unwittingly disturbed a nest of robins; "Camp of the Twin Sisters," where we first saw the dainty little wild flower of that name; "Camp Ararat," and all the rest. We shall miss the pathway of the moonlight on the water, which we could see at night from our bough beds through the open doors, and the falling asleep to the dancing light of the camp-fire on cold nights, and its comfort when we came in wet from a rainy day of travel. Such warmth and good cheer come only to mortals who, like us, are leading a wandering life in the wilderness, following the woodland waterways of Maine.

Without doubt, the love for camp smoke is an acquired taste, yet we cling to it as we do to the precious fund of woods lore which we acquired in those three short weeks, and in my capacity as keeper of the log, or camp historian, the acquiring of information devolved upon me as an official duty, and "live and learn" was my motto. My thirst for information promptly earned for me the title of the "eternal question" and "the interrogation point," but with such a fund of knowledge to draw from as these experienced Maine guides, how could one forbear to ask questions?

We have learned that to "snub" a canoe is to check or stop it suddenly; we have learned to know the "deer line" which shows plainly along the edge of the woods how far up the deer can reach in their browsing; we have seen an Allegash tow boat, a quaint species of local watercraft, which is in a class entirely by itself, and on the St. John's we saw a "pirogue," a tiny eggshell of a boat about one-quarter the size of a canoe, and the guides say, about four times as dangerous. We have been initiated into the mysteries of baking biscuit in a Dutch oven, an operation which, in our cooking stoves at home, is always conducted behind closed doors, and no child for the first time watching "the wheels go round" in a watch could be more

fascinated than I was to stand there behind the camp-fire and be able to see the white dough gradually rise to the top of the tin, then harden, turn to a delicate brown, then a deeper shade as Walter pronounced them done and drew the oven back from the fire. We learned to understand what was meant when, during the process of baking, the question was asked, "How's she actin', Fred?" and the answer, "Comin' fine," also the exact shade of meaning implied in the question, "How's the fire, braain' up a little?" and after our first few days of rankest greenness, we knew enough to answer "Yes" to the inquiry, "Tea a little too stout fur ye?"

We learned to know that no offense was intended when two of the guides were referred to as "over there swappin' lies," and when we heard the question, "Where's Jim?" and the answer, "Out pickin' feathers," we knew that Jim had gone to gather fir balsam tips for our beds.

We learned to love their homely, idiomatic speech which is far more expressive than the most forcible slang, as this from Richard: "A cigarette 's jest about as near nothin' as a thing ken be 'n yet not be nothin'; I never smoked but one in my life, 'n I've be'n ashamed o' myself ever sence."

[TO BE CONCLUDED.]

The Lures that Catch Elusive Fish

By EMLYN M. GILL

THE subject of dry-fly fishing has become so important in America this spring, and as thus far the most comprehensive article on the subject, other than those that have already appeared in *FOREST AND STREAM*, by Theodore Gordon, is one that was published in *Leslie's Weekly* a few weeks ago, written by Emlyn M. Gill, author of "Practical Dry-Fly Fishing," by permission of the author, and publisher, we take pleasure in reproducing part of the article herewith.

While fishing for fresh water bass, both small-mouth and large-mouth, furnishes an immense amount of sport to anglers in nearly all parts of the country, it is undoubtedly true that fly-fishing for trout has held a place in the affections of its devotees, and also in angling literature, for more than two centuries, that can never be replaced by any other method of angling. The principal pleasure to be derived from its practice is not the heavy creel at the end of the day's sport, but the very attractions of the game itself.

In much fished waters, where the trout are scarce and very shy, the utmost skill is required to present an artificial fly in such a manner that the fish is completely deceived and takes the artificial lure without suspicion that it is not about to enjoy a repast upon one of nature's dainties.

In discussing the various methods commonly used by fly-fishermen, it is necessary to divide trout into two classes—those that are caught in wilderness waters, where they are seldom visited by an angler and therefore are unfamiliar with his lures, and those inhabiting streams

nearer civilization that are constantly fished day after day in season and whose trout become accustomed to the sight of artificial flies of all descriptions. In these streams trout become "educated" and most difficult to deceive. The wilderness trout, unaccustomed to the wiles of sportsmen and in keen competition for food, fall easy victims to almost any pattern of gaudy flies, tied with silks and feathers of brilliant hue and frequently made without intention of imitating either insect or other living creature. Some of the flies most commonly used for this style of fishing are the Parmachenee belle, invented by the late H. P. Wells to imitate the belly-fin of a trout; the silver doctor, a lure with a bright silver body and wings of fancy feathers; the royal coachman, professor, Montreal, red

ibis, grizzly king and others, all without living counterpart in nature.

Nor are these flies, as a rule, presented to the fish in a manner in which they would reach it naturally. A weak, flying insect of any kind would be utterly unable to swim against a heavy current, and yet in this style of angling the lures described are often cast down stream and pulled up stream against the current by a series of jerks, or thrown across stream and forced to swim across the heavy flow of the stream, apparently against great odds. These flies are known as wet flies or sunken flies, for when cast upon the stream they immediately sink beneath the surface. The belief is held by many that wet flies, presented in the manner described, are not taken by the trout for winged insects, but for minnows or other small fish.

About the middle of the last century a Mr. Pulman made a discovery that has revolutionized the methods of fly-fishing on the celebrated chalk streams of Southern England, and which bids fair to have a potent influence upon American angling. He realized that, while trout at times were accustomed to feed below the surface, eating the larvæ or nymphs of aquatic insects, yet frequently their favorite food seemed to be winged insects that had emerged from their larval state, and which, with wings erect, floated on the surface of the stream. So Mr. Pulman advocated the use of a floating fly, to be cast up-stream and allowed to drift down with the current over the feeding fish. And from this

Fly-casting is an art that requires something akin to genius. The left picture shows the proper position of rod and hands at end of back cast; the right shows proper position of rod and hands at end of forward cast.

Imitation flies used in dry-fly fishing, the two top rows showing sizes commonly employed in England and the bottom row larger flies used on American streams. These are exact sizes.

beginning came that great school of English dry-fly fishermen, whose ranks embrace nearly all of the most expert fly-fishermen of England, and who use the dry fly exclusively in their angling for trout.

To the author, who for several years has been a dry-fly enthusiast, this manner of taking these cunning game fish seems the most logical, the most natural and most successful, under many conditions, of all known methods. It truly "holds the glass up to nature" and presents an imitation winged insect to the trout in the only natural way in which it can be presented; in fact, the whole theory of dry-fly fishing is based upon exact imitation of nature. The flies are tied to resemble a natural insect—generally one of the duns of the family of the *Ephemerida*—in size, shape and color. So far is the exact imitation theory carried that counterparts of both the male and female insects are made, the slight differences between them being clearly shown by the skillful fly-tier. As the duns are small, with the exception of the May fly, August dun and one or two others, so are the imitation dry flies minute and tied on very small hooks. They are made of materials that will not absorb water readily, and, to increase their floating capabilities, the angler anoints them with paraffine oil. Not only must these flies be tied in exact imitation of natural insects, but their action upon the water must resemble the action of the living fly. The only motion that one of these insects, among the most frail of nature's creatures, can have upon the surface of a stream is that naturally imparted by the current. So the dry fly must be cast up-stream and allowed to float down wherever the current takes it.

This most fascinating method of fly fishing has been well known in England for sixty years or more and has become almost the sole method of taking trout from many of its celebrated trout streams. Little has been known about it in America, and many anglers, having heard that it was a scientific method invented for use on English chalk streams, rivers of gin-like clearness and with gently flowing currents, have thoughtlessly come to the conclusion that it was not suitable for American streams, in which the currents are frequently strong and turbulent; in fact, it has often been dismissed as merely an English "fad."

But is it not reasonable to suppose that an exact imitation of a fly upon which a trout has been accustomed to feed, floating over it precisely as it has seen all other insects approach it, would be greedily seized by any feeding fish, whether its habitat was in English streams or in American waters? In fact, it is needless to argue this question, for a comparatively few American enthusiasts have used dry-fly methods for years on many streams and have succeeded in taking trout under conditions in which the wet fly would prove to be entirely unavailing. In early spring time, when the water is high, turbulent and often discolored, the user of the wet fly finds his most favorable conditions and gets his big bags of trout. But when the streams have gone down after the spring freshets are over and the water has become low and of crystal clearness, the user of the sunken

fly is often in despair and frequently passes many days on the streams without taking a trout of respectable dimensions. These are the conditions most eagerly welcomed by the dry-fly angler.

Fishing up-stream, he approaches a trout from behind—for all fish lie with their heads facing the current—and allows his tiny dry fly, tied to a gossamer leader, to fall gently upon the surface of the water. There is no splash or anything else to startle the trout. The lure floats gently down over the fish and is at once taken, if the trout happens to be in a feeding mood. The English dry-fly "purist," as he is known, fishes only the rise; in other words, he remains upon the banks until he sees the rise of a trout on the placid waters of the stream stretched out before him. He then "stalks" the fish. Carefully approaching to within casting distance of the rise, he throws the fly so that it falls gently upon the water on the spot where the rise took place or slightly above it. He then waits until he sees another rise before again wetting his line. But an angler might pass many days upon some of our American streams without seeing a good-sized trout rise to the surface; so American anglers "fish the stream," casting wherever their judgment or angling in-

stincts tell them that there may be a trout worth while taking. The author might relate many instances of success with the floating fly upon American streams, where under the same conditions the wet fly seemed utterly powerless to lure the wily trout.

While, as a matter of fact, a wet-fly fisherman need not go to the expense of buying a new outfit, with the exception of flies and possibly leaders, to practice the art of dry-fly angling, yet I will describe briefly the tackle best suited to this mode of fishing: The rod should have considerable backbone and not be weak or whippy; the line should be of waterproofed silk, heavier than the line ordinarily used in wet-fly fishing, and should be tapered at both ends; ordinarily the leaders should be nine feet long and tapered from a heavy leader at the line end to the finest of undrawn gut at the end to which the eyed hook is attached. But a single fly is used. Up-stream fishing is the method adopted by all dry-fly anglers. The fly, cast up-stream, is allowed to float down with the current, while the angler carefully strips in with his left hand the slack line, being careful, however, not to exert any pull upon the fly. After the fly has drifted down a short distance, it is carefully lifted from the water and another cast is prepared for. Unlike the method of casting with the wet fly, the dry fly is not allowed to touch the water until it has reached the exact spot picked out by the angler, and the line is always lengthened by means of false casts or casts in the air. Between casts also the fly is whipped back and forth in the air a few times to rid it of superfluous moisture; in other words, to dry the fly.

The writer strongly advises all beginners with the dry fly to fish all good water carefully and not to attempt to see how much of the length of the stream he may cover in a day. "There is no surer sign of an unaccomplished dry-fly fisherman than hurrying," says a celebrated expert. If the angler comes to a spot that he feels must be the hiding place of a good fish, he may to advantage float his fly over this one spot many times, and over all good places he should cast the fly at least two or three times.

One of the banes of dry-fly fishing is what anglers have termed the "drag." There is a

Typical American artificial flies—exact sizes used in wet fly-fishing.

well established theory that if a floating fly has any unnatural motion whatever, a trout will not take it; this cunning fish does not like to see even a live insect perform unnatural feats. It will be readily understood that if a fly is cast up and across stream and lights on a slowly moving current near the opposite bank, while the current in the center of the stream is swift, the line, falling in the swifter water, will be carried down stream faster than the fly would naturally move on the sluggish surface. The force of the strong current upon the line would exert an influence upon the motion of the fly, and an inevitable drag would set in. In order to over-

come this, anglers make what is known as the slack-line cast.

Instead of using a barely sufficient length of line to enable the fly to reach the spot where it is supposed to alight, when making the false casts in the air, the fly is allowed to go beyond this spot. Before the end of the forward cast the forward sweep of the rod is retarded or stopped entirely for a moment; the movement of the fly through the air will be checked and a slight backward impulse will follow; then the tip of the rod is dropped, the fly will light gently, and the line, instead of being taut, will fall loosely, in curves or waves, upon the water.

A drag may take place under all conditions where there is a difference in the strength of the current where the fly lights and where the line falls, and the one way of overcoming its disastrous results is this loose line cast.

The varieties of imitation flies are many, but nearly all are imitations of the duns. For American streams I can confidently recommend the whirling dun or Wickham's fancy, and for late afternoon fishing the pale evening dun. Other favorites are the olive dun, iron-blue dun, jenny spinner, willow fly, soldier palmer and white miller, while the old favorite coachman, tied dry, often proves a killing lure.

Canoeing on the Delaware

By HENRY B. FORT

THERE are times when a man can sit down and calmly think of camping trips and cruises he has made, of the many amusing and instructive features in connection therewith, and also of the enforced idleness during the winter months from the pursuit of these enjoyments which are near and dear to the heart of every canoeist. Such a time has caught me, and I will endeavor to make my thoughts intelligible.

Winter is the time dreaded by the true canoeist. November finds us of the fraternity of campers and canoeists almost ready to call it quits, and substitute therefor the companionship of fellow enthusiasts around the open-grate fire of the club room, where yarns of all kinds (true and otherwise) fill the place with "hot air" which bids fair to rival the heat from the aforesaid grate; where we talk over trips that have been taken, of the pretty "spills" that have occurred on long cruises, particularly from the Gap down the Delaware where rapids and dams and falls are abundant; of the friendly but fierce contests in regattas; of who was the best cook in camp and who was the biggest eater; and of the coming season's promises in the possibility of a change in cruising waters by shipping your duffle to some distant railroad station and there embarking on a cruise in an entirely new section of the country with still greater beauty of environments than those near at home. So that, between talks of the past and hopes of the future we manage to exist during the winter months, until that dear old time—spring time—comes around again, when we get together and brush off the accumulation of dust, old paint and varnish. Then the smell of new paint and varnish permeates the air, already filled with joyous exclamations of anticipation as to the coming season's promises, and we are ready to start all over again.

People of this section of New Jersey have awakened to the fact that canoeing and camping, once participated in, always are looked-forward-to pleasures. One does not have any idea of the many intensely interesting and pleasurable trips that can be taken, even in this non-mountainous section, unless he has been there with the boys. On July 6, 1898, the Lakanoo Boat Club was organized at Burlington, N. J. Previous to that date, canoeing was an almost unknown pastime in this immediate vicinity. Since that time one cannot

look upon the Delaware without seeing a canoe gliding silently along, its occupant giving no thought to anything commonplace, but rather to Mother Nature, and possibly to the fair one with him, if he be so fortunate. Saturdays and Sundays, particularly, one cannot go a hundred feet along the river without stumbling over camps, so numerous are the many beautiful spots suitable for these temporary dwelling places of those who would be near to nature's heart. The Rancocas, Assiscunk and Neshamony creeks afford as many beautiful watery paths along which hour upon hour can be whiled away, unconscious of the fleeting time, until a realization of it is forced upon you by the setting of the sun, or the going down of the moon. Week-end trips are very popular, and the coming of Saturday is looked forward to with restless anticipation by the fellows who are employed during the week. Saturday afternoon finds them packing up tents, cots, blankets, pots, pans and good things to eat; then, running their canoe down to the water's edge, throw their duffle in, jump in after it, and away they go, to return Sunday evening or Monday morning.

One naturally turns to the important question of how he can reduce to a minimum the weight and bulk of his camping equipment, when it is necessary to carry his all and everything in a sixteen or seventeen-foot canoe. If we consult catalogues of camp outfitters we find something new in every edition, but the question is just what to get that will fill the bill perfectly in every way. If enjoying a permanent camp, one may indulge in luxuries such as folding cots, tables, chairs, wall tent and plenty of cooking utensils. When cruising with as light a kit as possible, it is an entirely different matter. During the thirteen years of my canoeing experiences I have reduced the bulk and weight of my cruising outfit to about one-half of what it originally was, and I think there still is room for improvement. I have started on cruises with my good wife when I would stow away in that canoe everything that I could think of, and would only have about three inches freeboard amidships after we were aboard.

Members of clubs located along the Delaware, between Trenton and Philadelphia, are most fortunate in having, within easy reach, many small

LAKANOO CLUB HOUSE EN FETE.

Photograph by Stephen C. Singleton, Jr.

streams emptying into that river upon whose waters many an enjoyable cruise can be taken, and on whose shores good camping places can be found. The Delaware River itself presents attractive cruises between different points, but I will not dwell upon its many good features, as much is already known of them among canoeists of both the Delaware and Hudson rivers. However, I might briefly outline a trip down the river, starting at Park Island, which would allow a visit to be made to each club house along the line. Park Island, situated in the middle of the Delaware some two or three miles above Trenton, is the home of the Park Island Canoeing Association, who claim they have the finest spot in the United States. Having been there on numerous occasions I am inclined to the same opinion. The summer houses of the Trenton and Mohawk Canoe Clubs are located at Trenton.

Across the river, at Morrisville, we find the Chipewewa Canoe Club, a comparatively new organization, the membership of which is composed exclusively of canoeists. A visitation to any of these clubs will be well worth the while, and they will make you feel at home in their own inimitable way.

A paddle of six miles after we leave Trenton brings us to the Yapewi Aquatic Club at Bordentown. If you tarry here you will be treated most hospitably and will regret leaving the "Yaps." Five miles further down the river we stop at the Mohican Boat Club, at Florence, an organization of young canoeists who are fast coming to the front as enthusiasts. They are always glad to entertain men who are older in the game and who can give them a few good points. After paddling another five miles we arrive at the Lakanoo Boat Club, at Burlington.

The latch string is always hanging out within reach of every cruiser, and you will be accorded a warm welcome there. From Burlington to the next club of particular mention is a distance of twelve miles, but "the further you go the better is the going" is a true saying in this instance, and it is with this thought that we paddle the twelve miles cheerfully to the Red Dragon Canoe Club at Wissinoming. Here we find a manifestation of the true spirit of a canoeist in the hand shake and salutation, "Glad to see you." We have now taken a cruise of some thirty miles and at all times have been within almost hailing distance of the homes of the Delaware River canoeists. We have mingled with the members of the different clubs located along this beautiful river, and at the same time had some good paddling, and what better cruise could a man desire of its kind?

From Eastern City to Western Forest

Chapter V.—Two Deer Stories

By ERION

PREVIOUS chapters have explained why my hunting is all done at home; why I am compelled to wait for animals, birds and fishes to come my way. It is not a bad method of hunting, though it occasionally results in a mix-up of things tame and things wild.

Our family cow is a fawn-colored Jersey, with deer-like eyes and ears. She finds pasture sometimes in the lower meadow. When I bought her she was a woods runner and a log jumper, but being of a gentle disposition she soon accepted the tether and learned to be contented under restraint.

One day she was tied near the lower edge of the meadow, just back of a huge log and close to the forest. The grass there was abundant, and she was well satisfied, but she nevertheless looked expectantly over the log as I approached her at milking time. Her head was up and her ears well forward, and she received the word that she anticipated. As the nights were cool, she was taken to her usual indoors bed, and I then went about other chores.

It happened that another errand a little later took me again to the lower meadow. Darkness was approaching, but all things were as yet visible in clear and distinct outline.

Routine work soon becomes mechanical; we do things from habit that are done every day. We even do them without thought.

It did not surprise me at all to see the cow standing behind the log, with head up and ears well forward. But it surprised me that she had been forgotten; surprised me into a sudden halting. Then the mental fog lifted, and I knew what had happened.

Without moving I gave the "come" signal to the household, and the cabin folks responded quickly. Wife and daughter were soon at my side. The "cow" did not stir and presently we saw that she had a fawn with her. Her distance from us, as afterward determined, was fifty paces, and she held her place while the

younger member of our party approached to within thirty paces. Then the "cow" and fawn trotted off into the woods, rattling the gravel as they crossed the stream, and clearing a great fallen log on the opposite bank. The beauty of this animal and her trustfulness made us forget for the moment that she had been a great trespasser and destroyer of our garden crops; that she had been eating nearly everything, from beets and carrots to strawberry plants and young raspberry bushes. It is a reasonable presumption that this doe had long lived near us and had often looked upon human beings.

Another deer story had a different ending and had to do with a big knife. My latter day weapon of defense, when alone in the primeval forest, is a pocket knife with a blade two and one-quarter inches long; the same knife with which I used to sharpen lead pencils in that eastern city of yesterday. But before knowledge had come, before fear of bears and cougars and cats had wholly faded away, I once bought a fine, strong knife of the pocket-breaking sort. (It has since been lying in a drawer for years.)

The new knife was of high repute, with heavy blade and keen edge. And the very day it reached me I was whetting it and oiling the stiff spring and telling a visitor about its merits. My neighbor spent the evening with me and then started home. It was a night of blackness; an exceedingly gloomy night, so far as weather was concerned.

For some reason I did not at once go to bed, but sat by the stove, still clicking and working with the stiff spring of the new knife; a proceeding not to my wife's fancy, for women always dislike the click of a sharp pocket knife.

Presently there was a rifle shot and then a cry; the despairing wail (it was not a howl) of a large animal in great pain. Then a voice came out of the darkness: "Come quick, and bring a knife!" Then a lantern sent a flash in our direction, followed by darkness. Then once

more came that awful wail or bellow of pain, fright and anguish. It was a most despairing, heart-rending, frightful sound.

Of course response was instantly made to the human call for help, and I was with my neighbor in a few moments. He was leaning and half lying on a prostrate deer; the man helpless by reason of some strange furniture on his back, and the deer paralyzed by a rifle ball in the spine.

Doing as bidden, I plunged the blade of the new knife into the animal's throat and felt warm blood flow in streams over my hands; at first in great regular pulsations; then more faintly; then not at all. It was not pleasant work; not hunting and not sport, but it was doing service to a neighbor.

Turning backward in thought toward that event, it is still a marvel that my neighbor was not badly hurt by the hoofs of that wounded deer, for the animal had no small amount of life and energy even when I arrived upon the scene.

It seems that the young man had been annoyed a good deal by trespassing deer, which came at night and devoured his vegetables. The animals came close to his cabin and made sport of the dog sent out to drive them away. Finally somebody told him that if he would fasten a lamp on his hat or above his head, he could get near enough to the intruders to shoot and kill them.

On the way home from his evening with me he had heard deer among his apple trees, whereupon he had somehow lashed a pole to his back, suspended a lantern over his head, taken his rifle and fired a shot. The lantern bobbed around for a few moments after the rifle had been discharged, but when an effort was made to hold the struggling animal, the light was extinguished.

There was something ludicrous in the situation, for the man could neither hold on nor let go; he was crippled in the back, somewhat

like the deer. He could not reach his knife; in fact, could do nothing but call for help.

There had recently been an argument in our neighborhood as to the voices of deer; whether or not they had voices. One disputant said deer never made any sounds whatever; another contended that both deer and their fawns had characteristic vocal calls. But nobody said a word about the death wail, or whether such a wail or vocalized snort is common or uncommon. By day or by night a sound of this sort is not to be forgotten. I am not opposed to hunting, and like to quote certain lines or phrases referring to the chase, but when it came to killing and butchering a helpless deer, the matter somehow seemed different and less attractive.

But I am very clearly of the opinion that the common law does and that the statute law should in every case and in all cases warrant a landowner in protecting his crops against trespassing. Also that it is clearly the duty of landowners to destroy all trespassing animals.

I have good reason to think that the trespassers in my own neighborhood and elsewhere are few in numbers. The killing of one deer or two deer will usually end the trouble. The doe heretofore mentioned (possibly visited now and then by a buck) apparently caused all the damage which my garden suffered during a term of three years. When she was shot by some hunters near my place the damage ceased entirely. Others will doubtless come to take her

place, but as the garden is now protected by a high picket fence, I do not fear them. Indeed, there are deer signs within a short distance of the garden this year, but not a track has been made in the lower meadow since the death of that famous old trespasser that once imposed herself upon me as a cow.

It seems to me that it is time for some new and wiser legislation, all over the country, in regard to both game and fish. Heretofore the laws have been framed to suit the views of hunters and fishermen, rather than the views of farmers and the consuming public; farmers who grow crops and working people in the towns who need food.

The States are not so jealous of each other as formerly and a good law of one is likely to be copied by others. We can have much better hunting and fishing for the asking. We need more legislation of an affirmative character; laws that will encourage the production of game, as well as affording protection to the natural supply; laws making the State liable for damages caused by State-protected deer or birds; laws that will put game animals, birds and fishes on the stalls of the public markets; laws that will attract rather than repel visitors from other States; laws that will avert the dangers to human life resulting from congested seasons of hunting; laws that will give everybody some sort of interest in everybody's property—if the State's game can be called property—in a word sane

wholesome laws; safe hunting and fishing, with better bags and creels.

CHAPTER VI.

FINANCE AND FEAR.

Would-be dwellers in the open air (and there are thousands of such people in the towns) are ever confronted by two important considerations when the matter of a country home is under discussion. These considerations, which amount to obstacles, are money and isolation, or finance and fear. Poverty and loneliness are almost equally to be dreaded, and neither can be ignored in the making of plans for the home of one's self or family.

There are people who go from town to country to spend their money. They rightly expect the land to yield them many luxuries and pleasures, but they do not demand profits. People of this class get a great deal of happiness out of life, but their way of living is not the one which folks of limited means should adopt.

The matter of how to safely exchange a salary-producing city occupation for a profit-earning country occupation is one involving the personal equation, differing with each individual. The general statement will stand, however, that a family in the country can live comfortably (and with many things besides necessities) on a much smaller amount of actual cash than in the city; possibly on half as much, or even less.

THE ORIGINAL OWNERS.

The true plan, as outlined to me by an old and successful man long ago, long before I had ceased to think as a child, is for an inexperienced person to hire himself out for a year or two, regardless of the rural wage. This amounts to going to school. It is getting experience at minimum cost.

Heretofore this course has been followed mainly by foreigners; not much by Americans. Results are visible on every hand. Former laborers or tenants now own land.

But a change seems to be at hand, and it is not now uncommon to see good American families moving into such localities as certain of the fruit-producing districts of the West, where every grown or half grown person may find suitable employment at immediate wages.

Taking the country as a whole, the movement of population is still toward the cities, but the counter current, even if smaller, is becoming more and more significant. Upon that counter current—the return to the soil—rests no small part of the hope of the nation.

The matter of rural loneliness, so often mentioned by city visitors to field and forest, cannot be altogether ignored, though of less moment than in by-gone times. Recent improvements in the way of both communication and transportation are doing away with this drawback or objection to life in the country.

As to lonesomeness, in the sense of depression or apprehension caused by solitude, there need be small concern felt. It is a ghost or spook with no reality beyond a name and an abiding place. It is often caused by poor newspapers or sensational books. It can be cured by calling in wholesome visitors—human or literary. Lonesomeness is a sort of habit, and a bad one. It is mental or moral dyspepsia.

Fear is somewhat more reasonable in its nature, whether grounded or groundless, because it leads to caution. Having been a timid person myself when a city worker (why not confess it?), I used to read out-of-doors articles with an eye always open for personal testimony concerning the safety or danger of places remote from centers of human population; especially the wilderness where wild animals exist. It was not hard to find such testimony, and it was a pleasure to observe its cheering and assuring nature. There seems to be a decreasing tendency toward romance and sensation and an increasing tendency toward accuracy of statement. In the past there have perhaps been too many persons going into the wilds for fame as well as for game. Such observers would not be likely to underrate their hardships nor the ferocity of their real or imaginary foes. But when science entered the forests and the waste places, a different report was made. Science, which is both humble and truthful, brings stories of tranquility, peace and safety; not that there shall be no more fear and no further caution, but the simple message that the wild creatures seldom or never attack man; in most places absolutely avoiding him.

The writings of one fearless man (who never attacks and is never attacked) showed me even while I was of the city that the waste places of the whole world are comparatively safe, so far as evil beasts are concerned; safer, indeed, in a statistical sense than are the cities and towns in respect to human injuries.

Once death or injury came close to me in the

forest, but it was not in the form of a beast or a serpent. It was a falling tree trunk. It fell between two of us who were not a man's length apart. It came without warning, so far as my ears were concerned. But the old woodsman who was my comrade, heard, saw and acted on the instant. His signal gave me time to move back a little. He was himself pinned down, as his foot caught in some twigs.

After the dull crash of the heavy, half-rotten mass I peered over the log. "No, I'm not hurt," said a cheery voice, "but please get the cant hook and ease the weight off my leg." He was on his feet in a few minutes, entirely uninjured. He had been saved by a slight depression or hollow in the ground.

"Do you know," he said, "that it was lucky this leg and not the other one was caught? The other one always breaks." And with that he left me, laughing as he went. But I got hold of his right hand and shook it before he went away. A brave man, surely; just like others of his occupation. Bravery calls for judgment as well as for sacrifice.

Another tree-fall may be mentioned. An enormous cedar, several centuries old, but long dead, went down with a roar one mid-April day. My notebook entry says: "Early afternoon; clear; no wind. Daughter had just passed along the trail." Indeed, the girl had passed that way only a few seconds (scarcely minutes) before the crash. She suffered no harm.

The reason for mentioning falling trees is to direct attention to real forest dangers and to divert attention from imaginary dangers from animals. Danger to life and limb is not to be wholly escaped anywhere in the world, but in a statistical sense the wilderness is safer than the town. Falling signs, bricks and scaffolds inflict more human injuries than falling boughs or trunks.

For years I have carefully inquired about the behavior of wild animals in these forests, and have listened to the telling of a number of cougar tales. But in no instance has the cougar begun the attack. A scientific party on a mountain side some time ago had occasion to send a man back over the trail. He met a cougar, which sprang to one side and disappeared. The animal had been on the trail for miles. The object of the pursuit was shown when the previous camp was reached. The cougar was after table scraps. Snow prints told the story, told where the animal had found food near the cook's tent.

The paragraphs of this chapter are meant to partially answer questions that are constantly and repeatedly asked. Safety of purse and safety of person are even in the minds of people who wish to exchange city homes for country homes. Many letters reach my out-of-the-way cabin in the course of a year, and not a few persons use the two trails that enter the valley. But this location is not widely different from other places. Things are pretty much the same in all parts of the country. Nor is any rural location without a special charm of its own, something not easy to duplicate.

The essential part of the rural picture is not the geography of the spot, nor the fertility of the soil, nor the purity of the water; it is the heart that dwells there.

In the year 1768 White, of Selborne, wrote: "All nature is so full that that district produces

the greatest variety which is the most examined." White's words apply to the things of to-day. That rural home is best where things are "most examined."

[THE END.]

THE TOP RAIL.

Of course these are not true, but the writer says they are funny; are they?

* * *

The voracity of fishes is very great. A remarkable demonstration of this fact was made before the London Zoological Society by Dr. Houston in 1847 when he exhibited there the skeleton of an angler (*Lophius piscatorius*) two and a half feet long. Inside its stomach was the skeleton of a codfish (*Gadus morhua*) two feet long, within whose stomach again was contained the skeletons of two whiting (*Gadus merlangus*) of the ordinary size, while inside the respective stomachs of each of these fish lay numerous half-digested bones of little fishes, which were, however, too small and too comminuted for it to be possible to identify the species to which they belonged.

* * *

A more recent example of the voracity of fishes was cited not long ago by a Tribune correspondent who set forth that about a year ago last October, Prof. Adam Bigsel, of Harvard, went to Cuttyhunk to fish for bass. While he was engaged in making a cast from the rocks there, he chanced to observe a mallard duck (*Anas boschas*) with its brood, swimming about. Suddenly as he looked, a large bass (*Micropterus salmoides*) jumped up, grabbed and quickly swallowed one of the ducklings. Shortly afterward this fish was taken by the professor, after an exciting play that would have interested good old Izaak Walton. He took the captured fish home with him and placed it in a large tank for observation and study. About six weeks later he discovered a duck swimming about on the surface water of the tank. The bass had evidently coughed up, the duck having so increased in size by feeding on the fish's roe that it was impossible for her to keep it down any longer.

The mallard fattened up very quickly, and being kept under close observation, the professor soon saw it in the very act of disgorging a lot of bass fry that had developed from the roe eaten by the duck during its remarkable imprisonment.

The president of the New York Fish and Game Association has been able to purchase of Prof. Bigsel the tank with its contents and it has been placed on view, as Exhibit A, at the Sportsman's Club, where it is naturally attracting much attention on the part of members and those fortunate enough to obtain cards of admission.

GRIZZLY KING.

SEA AND RIVER FISHING

Fishing Lines.

THE Milneberg, La., Improvement Association, which is composed of many fishermen, held a meeting during the week and petitioned the Legislature for an amendment to the fishing laws. They advocate an open fish season the year round.

TWITCHELL CREEK, town of Webb, N. Y., one of the finest trout streams in upper New York State, is again posted to remain so until 1917—a continuous embargo of ten years.

AT the initial tournament of the year, given this week by the Danville Rod and Gun Club, Danville, Ill., Ross Kiningham won the diamond medal presented to the club by Col. J. W. Veach, of Rossville. The club voted to purchase the grounds previously rented. The artificial lake will be enlarged and the grounds beautified in many ways. Monthly tournaments will be given during the coming summer.

A CONSIGNMENT of 400,000 pike and perch from the State fish hatcheries were placed in Richmond creek near Orangeville this week. It will require three years for these fry to attain their full growth. A. LURE.

New Orleans Fishing.

THE fishing season has been delayed in nearly every section of Louisiana, especially salt water fishing, on account of the frequent storms and protracted rainy spell. It is perhaps no exaggeration to say that fewer pleasure-loving fishermen have enjoyed the sport at the resorts near New Orleans this spring than in many years. The excessive high water and the floods in Northeast Louisiana have militated very greatly against fresh water fishing. Even the market fishermen have found it difficult to bring fish to New Orleans, and as a consequence the finny tribe has brought higher prices than usual.

Several parties who ventured at the Rigolets, Chef Menteur, Lake Catherine, Waveland and North Shore brought back some fair catches of reds, speckled trout, sheepshead, bass, flounders, green trout and other species. Shrimp for bait have been scarce and the water rough and often muddy and most too fresh in places for much success. Various clubs near the Lake Borgne, Lake Catherine and Mississippi Sound are preparing for many visitors.

ELBERT HUBBARD, the man who made the Philistines famous, besides boosting the price of real estate in East Aurora, has compiled a series of twenty of the world's greatest men. It is arranged as an essay, published in book form by the Roycrofters. In this he refers to Joseph Dixon, the graphite manufacturer, as a man whose work has "profoundly influenced civilization, yet strangely enough, a man of whom the world at large knows little." Copies of the book may be had without charge, upon request to Joseph Dixon Crucible Company, Jersey City, N. J.

Trout in Northern Wyoming.

BY N. H. HILTON.

TROUT fishing with the fly in Northern Wyoming will be a little later than usual this year, on account of the high water, as there is about four feet of snow in the Big Horn Mountains at this date (June 1, 1912). I think it will be about the middle of June before we can start the finny fight.

There sure will be some great fly-fishing on the Little Horn this summer, as all indications point to a plentiful supply of trout. The fish have wintered well in the beaver dams about two miles below Walsh. In January I happened to be near the dams and was surprised to see so large a number of fish. The water was not over two feet deep and clear as crystal.

The high water has just started, but a week ago I caught a fine mess with a royal-coachman

A BIG HORN CORNER.

fly in about twenty minutes. It is no trick to get seventy-five to a hundred trout in the Little Horn in a day, and they will all average eleven to twelve inches. They sure are some fighters.

The river can be waded at any point, and is easily fished. We use four- to six-ounce rods about nine or ten feet long; and for flies, my book contains, after much experience, the royal-coachman, professor, white-miller, cow-dung, gray-hackle, queen-of-the-waters and the stone fly, and I have them all made with a No. 3 sneck hook.

My record last year for speed was seven trout in nine minutes with a royal-coachman fly. The trout were all over twelve inches

In the morning we generally take saddle horses and ride up the creek a way, send the horses back with a man, and fish down to the lodge. This fishing down is a departure from angling rules, I know, but it does not diminish our catch any. No one in the West walks a foot if they can ride. There are twelve good miles of fishing in the Little Horn River, and there are four other streams, full of trout, within easy riding distance. All of these streams are just naturally full of fish and perfectly good trout holes.

There is no closed season for trout in Wyoming, which shows that we have plenty.

Stocking Illinois Streams.

BLOOMINGTON, Ill., June 8.—*Editor Forest and Stream:* The Illinois fish commissioners are now engaged in distributing fry among the rivers and lakes of the State, and millions of young fish have been secured by the various fishing clubs of central Illinois. The Wilmington Hunting and Fishing Protective Association received 1,000,000 wall-eyed pike this week, and these were placed at various points in the Kankakee River. The Frankfort Fishing Club received a shipment of a half million wall-eyed pike which were deposited in Hickory Creek near New Lenox. The recently organized Dixon Fishing Club has made requisition for a consignment of black bass. Applications were sent to the Government and State hatcheries, and when a supply is received, will be deposited in the Rock River. Many other streams will be given a supply of small fish during the coming season.

E. E. PIERSON.

Canadian Fishing Licenses.

CANADIAN fishing licenses issued to United States fishermen during the fishing season of 1911:

Mr. Parkins and family, Travelers' Association, Nos. 754, 755 and 756; fee, \$5 each.

Mr. Tallman, Ogdensburg, No. 817; fee, \$10.

J. N. Jarvis, New York, No. 757; fee, \$5.

Kimball C. Atwood, New York, No. 758; fee, \$5.

David T. Abercrombie, New York, No. 759; fee, \$5.

Mr. Atwood, Jr., No. 811; fee, \$10.

W. A. Whiting, New London, Conn., No. 761; fee, \$5.

L. Schalob, 375 Broadway, New York. No. 762; fee, \$5.

H. F. Nuzam, New York, No. 763; fee, \$5.

J. H. Morecrip, Columbia University, N. Y., No. 812; fee, \$10.

H. W. Webb, Columbia University, N. Y., No. 813; fee, \$10.

Wm. Pollion, New York City, No. 764; fee, \$5.

Thos. T. Seelye, No. 765; fee, \$5.

Franklin Carter, New Haven, Conn., No. 814; fee, \$10.

Ralph Bombard, Vermontville, N. Y., No. 815; fee, \$10.

The Elgin Anglers' Club.

ELGIN, Ill., May 27.—*Editor Forest and Stream:* The Elgin Anglers' Club held its initial fishing party on Sunday, May 19, at Buffalo Park, nine miles west of Elgin, on Fox River. President Elliott and forty members participated in the outing. Messrs. Newton, Saunders and Kadow carried off the fishing honors, catching several pickerel and black bass. Dr. C. T. Dahlin outclassed all the members at the dinner which was prepared and served in the open, consisting of broiled steak, fried black bass and pickerel, bacon, eggs, etc., which was ably prepared by brothers Retan, Bordeau and Hawthorne. President Elliott, Bordeau, Torrey and Solomon made the trip in canoes, the rest of the party going by automobiles. This was one of the first of a series of fishing parties the Elgin Anglers' Club have planned for the coming season with the regular semi-monthly casting events at the club's lagoon in Wing Park.

R. F. KADOW, Sec'y and Treas.

Asbury Park Fishing Club.

JERSEY CITY, N. J., May 27.—*Editor Forest and Stream:* In the course of some comments, which FOREST AND STREAM appended to a plea of the writer's in favor of the use of three and four-ounce leads in surf-casting tournaments made in your columns in the early part of the winter, the question was asked whether the Asbury Park Fishing Club would adopt the V-shaped court, provided the other clubs would take up the three and four-ounce leads, which have always been used by the Asbury Park Fishing Club.

The suggestion was valuable. It pointed to common ground where fair comparisons between the records of the various clubs could be made provided concessions be made to reach that ground. It is noted with pleasure that the Anglers' Club of New York used the three-ounce lead in their recent contest, a bold step in the right direction. The Asbury Park Club have always maintained that the two and one-half-ounce lead as a single standard was inadequate in that it was too light for use as a general fishing weight, and they have stood firmly for the three and four-ounce leads. But in the hope of leading other clubs to the light, your suggestion was taken under serious consideration, and the fruits thereof are to be seen in No. 4 of the following list of events to be cast at the annual tournament of the club at the corner of Eighth and Park avenues, Asbury Park, on Saturday, Aug. 3.

Event No. 1.—Club members only, three-ounce lead, 30-foot lane.

Event No. 2.—Club members only, four-ounce lead, 30-foot lane.

Event No. 3.—Club members only, accuracy.

Event No. 4.—Open to all, V-shaped court.

Event No. 5.—Open to all, longest individual cast. No lane or court restrictions.

For the benefit of prospective visiting contestants it may be stated that the casting will commence about 8:30 A. M., continuing throughout the day. The contestant may cast at any time he chooses, simply announcing the number of the event in which he wishes the score counted. The lanes and court are laid out on a grass-covered plot. An attractive list of prizes is offered in the two open events, the idea being to induce some of our friends and neighbors to come along and beat us so that we may preserve our modesty and humility. The full program will be sent as soon as printed. SWITCH REEL.

Fishing in California.

BY GOLDEN GATE.

SOME splendid sport is now being enjoyed by anglers in fish and game district number three, which embraces most of the Sierra Mountain district in Northern California, the season having opened there on May 1. The streams are all extremely low for this season of the year, and even at this early date fly-fishing in some sections is being successfully carried on. Usually most of the fishing done during the months of May and June is on the smaller streams, but ever since the opening of the season good sport has been had this year on such large streams as the Klamath River and North Middle Feather Rivers. On the latter stream some exceptionally fine catches of large fish have been made. While fishing near Cromberg recently J. W. Knight, of

Quincy, landed a six-pound rainbow, the largest taken in those waters in several seasons. In the small streams around Cromberg limit catches are made without difficulty.

In the Lake Tahoe district the season opened June 1; that is, on the California side of the lake. Large fish are sometimes secured here, and for these the regulation lake rig is a short heavy rod and heavy reel with a copper cable for a line. Brass spoons with baited hook or a spinner forms the ordinary lure. Efforts are being made to secure uniform fishing laws along the boundary line between California and Nevada, and these would be of special advantage in Lake Tahoe through which the line runs.

One of the largest sturgeon that has been landed in this State in several seasons was taken by Rich Dietz, a salmon fisherman, in his nets near Corning, recently. The fish measured ten feet three inches in length and weighed 712½ pounds.

A phenomenal run of quinnat salmon was experienced on Monterey Bay on May 12, and during the day anglers caught between 650 and 700 fish, ranging in size from three to twelve pounds. The run continued for about a week. C. J. Sadlier, of Reno, Nev., and W. D. Burlingame and R. B. Murdoch, of San Francisco, landed the best boat, having fifty-eight fish to their credit. These were all taken with rod and line, the torpedo sinker equipment being used. Many used only handlines. Old-time anglers state that such a run of salmon at this time of the year is a very rare occurrence.

The fish distributing car of the California Fish and Game Commission is now out of the repair shop and is in use again. A trip will be made soon with a large quantity of fry into the Feather River country over the lines of the Western Pacific railroad. This section was visited by thousands of anglers last year, and many streams will be stocked this season for the first time.

W. C. Whiting, of San Francisco, will doubtless be less confiding in the future when he chances to meet strangers while on a fishing trip, especially under circumstances similar to those in which he recently found himself. While whipping Austin Creek, near Cazadero, recently he met Deputy Henry Lencioni and confided, not knowing to whom he was speaking, that he was having splendid luck, having landed ninety-one trout. The deputy promptly placed him under arrest and took him before Judge Trosper at Cazadero, where Whiting explained that some of the fish belonged to a friend. However, as that constituted an offense, the fish were seized and the angler was released on his own recognizance.

The report of the California Fish and Game Commission for the month of April indicates that violations of the law are being closely followed up. During this month there were forty-seven arrests made for violations of the fishing laws, forty of these being in the San Francisco district. Fourteen arrests were made for breaking the game laws and nine for fishing and hunting without licenses. During the month a number of cases were tried in the courts and fifty convictions were secured with but two acquittals and nine dismissals. Fines aggregating \$1,301 were imposed as well as jail sentences, aggregating twenty-one days. The seizures for the month included 246 crabs, 189½ pounds of

striped bass, ten pounds of catfish and 3,500 pounds of miscellaneous, the latter from the Los Angeles district. There were also thirteen set nets and forty-one deer hides confiscated. During the month forty-eight mountain lion skins were brought in, and the bounty claimed, Del Norte county sending in the greatest number. The financial report for the month shows that during this time the disbursements amounted to \$17,619.01.

Opening Day in Ye Olden Time.

BY THEODORE GORDON.

YEARS ago the opening of the trout season was looked forward to most eagerly by men who spent the first day or two in the Big Spring in Pennsylvania. There was usually quite a gathering of anglers from all parts of the country. The law was well observed and for a few days the trout were easy. They soon acquired a little education on that slow-flowing water. I had a very good time on the occasion of my last visit many years ago, although the weather was far from balmy. The rains descended during part of the night and we feared that it would be no good in the morning. However, we had a jolly evening in the travelers' room of the hotel. Everyone smoked and told fish stories. There were two beautiful sportsmen from New York. Such nice velvet suits we had never seen before, and they were good looking chaps, too. After listening to the fish stories of large trout and full baskets for an hour or two, they got interested and, going upstairs brought down their rods and tackle. Putting the rods together, attaching the reels, running the lines through the rings and lastly putting in the leaders with their flies in each, they hung up the rods on the nails prepared for them and went to bed.

At a late hour we all followed suit, but after he had gone to bed, those prepared rods and flies began to trouble Jim M. He always was a devil, and remembering that he had a small pair of pincers in his kit he stole downstairs and proceeded to improve the flies by breaking off the barbs of each hook. The morning dawned cold and raw and by the time we had breakfast it was snowing. However, we all started up stream in a body and were encouraged when we saw good fish rising in the first dam below the road. Wading in only ten or twenty yards apart, we began casting our flies and soon everyone was busy. The trout rose freely and everybody was killing trout, except the two dead game sports from New York. They had as many rises as the other anglers, but strange to say could not land a fish. The trout played about for a few seconds and then got away. Occasionally one would be brought almost to the net.

At last one of the New York men had occasion to look his flies over. He was a fine looking gentle-appearing man, yet his language was horrible. He was really profane when he inquired in vociferous tones who had been meddling with his cast and flies. However, it was a great day and all the anglers got trout. One boy caught three strings and sold them for five dollars apiece.

P. S.—The total catch that day, April 1, for native and visiting anglers was 3,800 trout, and for years it ran over 3,000 for the first day of the season. Of course the number of fishermen was very large.

 NATURAL HISTORY

Botany and Nature Study at Milburn

By W. G. BOWDOIN

NOT A BRIDGE OF SIZE.

AN enthusiastic party assembled at Milburn, N. J., under the leadership of Miss Gertrude S. Burlingham, Ph.D., of the Brooklyn Institute of Arts and Sciences, to study botany and other subjects more or less related. The locality is historic, the battle of Springfield having been not far from the hunting ground.

Skirting the local paper mill where all sorts and conditions of wrapping paper are manufactured, the party came upon the deer paddock of the Essex County Park preserve. Nearby there was a wealth of wild flowers and many birds. One of the first observations was a blackberry bush which had been attacked by a rust that had covered its foliage with yellow coloration. The color was exceedingly pleasant, but the plant's leaves were curling together in a manner that suggested death and destruction. Nearby some blue-eyed grass was befittingly growing, since blue is complementary to yellow. This grass belongs to the iris family. It is sometimes called blue star. As on most of the other excursions the common cinquefoil was found more or less abundantly. Some English plantain was blooming not far away. In Shakespeare's time the plantain leaf was used as a plaster for broken shins, and its cooling application seems to be instinctively known to all schoolboys. The old herbals were full of cures credited to this plant. So frequently does it spring up in the track of the colonist that the Indians called it "Englishman's foot."

Passing by a sturdy oak, some poison ivy

was seen growing luxuriantly upon this tree intermingled with woodbine, making a curious combination of the harmless and the toxic. The woodbine has five leaflets, however, while the poison ivy has but three. The ivy was in flower; the woodbine will flower later. The woodbine is the plant from which the Greeks and Romans got some of their ornamental inspiration.

A sassafras tree in the making could have traced its ancestry back as far as the Tertiary if it had cared to undertake the fascination of "family trees."

Some young mulleins grew by the wayside. These impart a natural glow to complexions. In Germany this plant is sometimes cherished under the name of "American velvet plant" and given a place in the house with the dignity of a pot.

In descending the precipitous sides of a dingle, a member of the madder family was met with, in the person of a sweet-scented bedstraw. The blooms were exceedingly small, but the plant has, when dried, a pleasant fragrance. Some of the late spring beauties were found. The flower is upright, but the buds and seeds

both depend. The jewel weed, or touch-me-not, was in bloom. Specimens found on this trip were of considerable size. This plant throws its seeds to some distance when the pod bursts. The osmundas were common and luxuriant. The Christmas fern was another find. So also was the sensitive fern. But the most delightful of all the ferns was the maiden hair. These were fairly numerous.

The Milburn woods are somewhat damp and swampy. Little streamlets flow here and there, and many ponds are nearby. Much aquatic vegetation grows along banks and in the water. Dragon flies could be seen darting in search and pursuit of their prey. A curious habit on the part of dragon flies is that various species feed in certain well-defined air stratum. Among the swampy plants observed were the arrowhead, horsetails in large numbers, skunk cabbage, now well advanced, and many of the grasses and sedges.

Passage through the woods was hampered by the cat briers. This served as an extra stimulation, however, when the party came upon a carrion flower, beautiful in spite of the carrion-like odor.

The party came upon a magnificent spider's web. Did you ever notice one of these geometrical triumphs on the part of a spider? This masterly engineering work in web construction is overlooked by most of us because it is so common.

Near the spider's web was growing some

basswoods. All the leaves on them were full of galls. Some of these were growing above and some below the leaf surfaces. The appearance was curious in the extreme. Another gall-bearing shrub observed was a hobble bush or moosewood. The galls on it differed entirely from those on the basswoods. The oak galls were still another variety to which attention was drawn by actual observation.

Some fungi, in which the leader was especially interested, was found growing on charred wood left by campers. These proved to be mycena. The color differed in the several specimens, one being a brilliant red, but they all went into the vasculum for laboratory examination and study. The lifting power of mushrooms is exceedingly great and is capable of displacing large boulders. In one case a cement sidewalk was penetrated by growing mushrooms. In Russia it was stated by one of those on this trip to be a custom to gather mushrooms indiscriminately, good and bad, harmless and toxic, and all of the gatherings are then soaked in vinegar after which they are drained and then eaten without danger. Some little caution may safely be exercised in following the Russian example, however.

Other flowers that were gathered on this expedition were the false Solomon's seal, the true Solomon's seal, bread and butter, the meadow rue, live-for-ever, yellow-eyed grass, rattlesnake plantain, one of the orchids, everlasting, cancer root, one of the broom rapes, dogwood in flower, partridge berry, princess pine, spotted wintergreen, very similar to that found by the leader some time ago in North Carolina; jack-in-the-pulpit, nearly two feet in height; deerberry, goat's beard, not yet in flower; wild rhododendrons, wild geraniums, Canada violets, pinks and early buttercups.

While the botanists were making these rich finds, the bird lovers had not been idle, but working with field and opera glasses they had seen and identified the warbler, red-eyed vireo, red-winged blackbird, thrush, woodpecker, whose attacks had scarred one of the cherry trees seen; redstart, catbird, black-billed cuckoo, ovenbird, the ground robin and indigo bird.

New Publications.

LLOYD'S REGISTER OF YACHTS, by Lloyds, No. 7 Fenchurch street, London, England. Price, £1 1s.

The 1912 Lloyd's Register of Yachts has just been issued. It is the same handsome volume as its predecessors, but contains a number of valuable addenda, classified with the usual Lloyd's accuracy. Its information includes particulars and distinguishing flags of yachts and motor boats, alphabetical list of owners with their addresses, flags of the principal yacht and boat clubs, with the names of the officers, etc. It is a volume of 1,054 pages, or twenty-four more than the volume for 1911. It seems improbable that any yacht or boat owner would want to be without a copy of this work.

LOGGING AND LUMBERING, by C. A. Schenck. L. C. Wittich, Germany.

This is intended as a manual for forest schools, the author being Director of Biltmore School. Undoubtedly, for this purpose it is unsurpassed. It is, however, a volume whose contents should be read by everybody interested in conservation of forests.

Published Weekly by the
FOREST AND STREAM PUBLISHING COMPANY,
 CHARLES OTIS, President.
 W. G. BEECROFT, Secretary. S. J. GIBSON, Treasurer.
 127 Franklin Street, New York.

CORRESPONDENCE—FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but, of course, are not responsible for the views of correspondents. Anonymous communications cannot be regarded.

SUBSCRIPTIONS: \$3 a year; \$1.50 for six months; 10 cts. a copy. Canadian, \$4 a year; foreign, \$4.50 a year. This paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS: Display and classified, 20 cts. per agate line (\$2.80 per inch). There are 14 agate lines to the inch. Covers and special positions extra. Five, ten and twenty per cent. discount for 13, 26 and 52 insertions, respectively, within one year. Forms close Monday in advance of publication date.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

"OLD CLOTHES."

HAVE the days of old clothes gone by? If so, the fun of summer living has passed away for all time. Time was, when we went to the woods our old togs were as essential as rod or gun. Now many sportsmen's resorts compel good clothes in the dining room and on the piazzas. Hotel proprietors, who know only formality and never have experienced the pleasure of baggy trousers, have an idea that the patrons demand style. A ballot from the guests would show that only suffragettes and wall flower resorters want "glad rags" on the premises.

Much has been done to ruin resort business by the Café de l'Opera suggestion. We all are willing to show our respect to the ladies, and those that come with them, by "dressing for dinner," but the man who goes to a resort where fishing is good, goes first for the fishing, next for the food and bed, and last for any "hit" he may make among feminine boarders.

The hotel wise enough to advertise "old clothes may be worn here" will be popularized by real outdoor men and women.

RAKING THE SEA.

WHEN the Scotchman curls upon the ice, the "curling iron" is preceded by brooms to sweep away minute obstructions.

When the ponies race, the dirt track is raked to take up pebbles and to give the horses a foothold, and so, in the course of racing events it becomes necessary to skim the seas with a fine mesh net to get up loose flotsam and jetsam that the shells, now put over the course in motor boat events, shall be protected from disaster.

The time was when the racer was prepared for the elements. Now it seems that the sea must be prepared for the racer. In order to "keep down the weight," racing power boats to-day are built of such heftless material that, like a silk hat brushed the wrong way, they fre-

quently must be sent back for repairs before they are fit for further usefulness.

In the recent Atlantic Y. C. regatta, Commodore Blackton's skeleton-built boat ran into an obstruction, possibly only an orange crate, and was at the bottom of eight fathoms of water in a trice. Since that sinking, the Atlantic Y. C. has decided to abandon racing in the lower bay, because it is too dangerous.

Long Island provides a speedway for motor car races. It seems likely now that Long Island Sound may be called upon to provide a tideless, flotsamless, jetsamless course for water flyers.

It is too bad Central Park lakes are too small for speed boat races; the surroundings would be ideal.

PIQUE KILLS AGRICULTURE BILL.

HON. WELDON B. HEYBURN, U. S. Senator from Idaho, was so incensed at what he termed "arbitrary and inquisitorial methods," pursued by representatives of the United States Forestry Service, that he poured vituperation on the heads of these representatives in such depth as to cause the drowning of the agricultural appropriation bill in Congress, thereby floating it back to "conference for revision," which is a polite way of saying "sweet dreams."

The vote was 36 to 27, opposition coming from Western Senators who objected to "the present policy of administering the forest service and wholesale withdrawals of public lands for forest purposes." Maybe a "particular friend, of a particular friend" of a Senator couldn't get any greater mineral prospecting or timber cutting privileges than an ordinary citizen of the United States of America was allowed.

FISHING FOR FISH OR FUN AND FISH.

As an example of the difference in human dispositions we cite two cases:

Out in Toledo, Ohio, Lacey Y. Williams, a manufacturer and a man of influence and wealth, after thinking over the hooking situation, decided that so many small fish, taken on the barbed hook, died after being returned to water, there should be something done to save the under-length fish caught. He invented a barbless hook which, when pulled into a fish too small for the creel, could be taken out without injury to the little fellow. At his own expense he had made hooks suitable for all game fish, and has put these hooks on the market at a nominal sum.

Directly underneath his advertisement, in a current sporting magazine, we find the advertisement of a concern in Iowa, offering three "marvel hooks" and a box of "fish lure." The alleged theory is that this "lure" will call the fish, while a patent hook, that "blocks the sears" when struck, shoots a rat trap hook into the back of the head of the fish so that he cannot get away. The idea is that all you need is the hooks, and "lure," and without any ability as a fisherman you can land any fish. Of course no real fisherman would fall for such an un-sportsmanlike proposition.

On the other hand the only man who would try to beat the law on the length of fish taken would be most apt to use this "rat trap."

The Forest, Fish and Game Commission of every State in the Union should bar this "novelty," making it a misdemeanor to use anything in the way of a trap hook.

BREEDING OF CAPTIVE BLACK BEARS.

SEVEN or eight years ago FOREST AND STREAM published a brief account of the breeding of American black bears at Silver Lake Park, near Akron, Ohio. Shortly before that A. B. Baker, now assistant superintendent of the National Zoological Park, had also published an account of the breeding of these bears during a period of twelve years. Mr. Baker has recently announced in the Smithsonian Miscellaneous Collections further notes on the breeding of the American black bear in captivity.

The data concerning the breeding of these Silver Lake bears extend over a period of twenty-one years. They bred when three and a half years old, producing their first cubs seven months later, on Jan. 23, 1892. The bear had young very regularly thereafter, missing only five times in eighteen years, with a total of thirty-four or possibly thirty-five cubs.

Two other young females bred up to January, 1912, ten litters of twenty-two cubs, and five litters of twelve cubs, respectively. This gives a total of sixty-eight or sixty-nine cubs in twenty-one years.

An important feature of the bears' quarters is the retiring den, used in hibernation, where the young are born. The coupling season is the last ten days of June, and the first week in July.

In autumn the bears become very fat. At the approach of cold weather large quantities of dry leaves are thrown into the pit, and these the bears carry into the den.

As a rule they come out from hibernation early in March. When they emerge they are still fat and do not appear to be hungry, and it is not until three or four days, or even a week later, that they begin to eat with the usual appetite.

In considering the litters of cubs born by these three females from 1892 to 1912, it appears that there were three litters of one cub each, twelve litters of two cubs, eleven litters of three cubs and two litters of four cubs.

No cubs have been lost except through accident, and the death of a twenty-months-old bear was the only one by disease.

The food supply of these bears approximates that which the animals get in their wild state. These are miscellaneous scraps or refuse, food from the hotels and picnic tables; green food, such as dandelion tops, clover, green corn, watermelons and berries for the summer; for the fall, acorns, dried sweet corn and wind-fall apples. No meat is fed except a little that has been cooked.

The surplus bears are usually sold at eight or ten months old to animal dealers, at \$25 or \$30. The highest prices obtained were \$75 for a grown bear, and \$50 each for two cubs. A few were sold at two years old for meat at \$25 or \$30, the skin and head being reserved. There is a standing offer of \$25 each for future cubs.

The present value of the black fur is about \$25 for No. 1 large Northern skins, and 20 to 40 per cent. less for those from Middle and Southern regions. For ladies' wear, prime silky skins of cubs and yearlings are worth up to \$15.

Both bears of the original pair, now twenty-four years old, are still in excellent health, though the male does not become as fat in autumn as he did when younger, and the female has had no cubs for the last three years.

Ticks from the Ship's Clock.

ON June 8, at 5 o'clock P. M., the Larchmont Y. C. went into commission. In the evening a dinner was given to Commodore Richards.

Clinton Mackenzie's Thelma beat G. Nichols' Hen in the Seawanhaka Corinthian race to-day on inside course. Only these two boats were entered.

The three-masted schooner yacht Karina, navigated by her owner, former Commodore Robert E. Tod, which sailed from Ambrose Channel Lightship at 10:42 A. M., on May 17, dropped anchor in Cowes roadstead, opposite Southampton, England, at 6:24, on June 2, after a pleasant passage from port to port of fifteen days, nineteen hours, twenty-four minutes. On the first day her run was 302 miles.

At a meeting of the members of the St. John's Y. C. the following officers were elected for the season: Commodore, W. F. Thayer; Vice-Commodore, A. N. Hebert; Executive Committee, G. R. Futvoye, D. Imerie, F. Camaraire, L. E. Church, W. J. Menhennick; Hop Committee, J. Lane, F. Rollo, W. J. Menhennick; Captain, Dave Imerie; Secretary, L. E. Church.

L. E. Church was also elected secretary of the Eastern Division of the Canadian Canoe Association who are holding the divisional meet on the course of the St. John's Y. C., on July 20.

Commodore Thompson, of the Chicago Y. C., who for several weeks has been in Europe in the interest of the coming pageant, has cabled Vice-Commodore Quail here that he has obtained the entries expected from Great Britain and France.

Restless, the Tams, Lemoine & Crane speed boat, of which so much was expected and so little realized last year, will be entered in the international races this year. Her engines, which caused so much trouble last year, have been overhauled and put into condition.

With the resumption of motor boating on the rivers of Illinois, complaints are being filed concerning the absence of lights at night. The laws are strict governing this point, and officers of the Government have commenced a patrol system, and all who have failed to display lights at night will be given a heavy fine.

Commodore Blackton's toy ship, Baby Reliance, has been dredged from the bottom of Lower Bay, and after a wash up and a yard or two of patches, will be ready for whatever else may be next on her schedule.

Manhasset Bay Y. C.

LACK of wind put a quietus on the Manhasset Bay Y. C.'s regatta last Saturday. The start was made off Execution Light with the yachts barely under steeerage way. Sloops in P class got away first at 12:25, led by Corinthian. On the starboard tack Joyant was second away and passed Corinthian to windward. Cara Mia tacked immediately.

Nine of the New York Y. C.'s 30-footers started next in the following order: Caprice, Rowdy, Carlita, Alera, Juanita, Phryne, Dahinda, Nepsi and Ibis. These and the P class boats sailed a 1 3/4 mile course, rounding marks off Oak Neck and Parsonage Point. The smaller classes sailed nine and six mile courses respectively.

Four of the new small schooners made a pretty start, Vandalia leading in the weather berth, Daffodil, Rival and Helen following. Sixteen sloops of the handicap class started and fourteen finished.

Corinthian crossed the line and defeated Joyant by 2m. 7s. Caprice won in the "thirties" by 36s. from Nepsi, and schooner Daffodil by 1m. 17s. from Rival. The winners in the other classes were Sue, Redwing, Festina, Kanaka, Scylla, Curlew, Little Dipper, La Rochelle, Tautog, Okee and Go Go.

The committee boat was Lady Jane, owned by Commodore J. F. O'Rourke. The summary:

Sloops, Class P—Start, 12:25—Course, 15 1/4 Miles.	Finish.	Elapsed.
Corinthian, H. C. Smith.....	6 12 28	5 47 28
Cara Mia, W. Wainwright	6 23 03	5 58 03

Southern Y. C.

IN the regatta of the Southern Y. C., of New Orleans, La., the opening of the season, which was on May 25, the following were the winners: Cabin sloop class, Cadillac; yawl-rigged cabin sloops, Alga; knockabout cabin sloops, Sinner; open sloop racing machine, Seawanhaka; open sloop dories, St. John; catboats, Gwawise. In the handicap race between Agnes and Schemer, Agnes won. The regatta was held on Lake

Pontchartrain at West End in the presence of several hundred people.

The greatest interest was centered in Seawanhaka, Stranger and Senorita, each boat having many admirers and backers, but the Seawanhaka retained the championship and won easily. No records were broken and the breeze prevailing was moderate, at times amounting to almost a dead calm.

Indian Harbor Y. C.

THE seventh annual race of the Indian Harbor Y. C. from Greenwich to New London will be sailed on June 19. The race is for all classes, including auxiliaries of over 25 feet rating, enrolled in recognized committee on or before June 18.

Entries should be made to the regatta and members of the club in each class, and there will be a second prize where there are four starters.

The yachts are to sail in cruising trim, except that clubtopsails may be carried. The warning signal will be made at 8 o'clock and yachts will be timed as they cross the line.

The course will be from the starting line, between a stake boat, anchored one-half mile south of Great Captain Island light, and a white flag on the committee boat to the finish line, which will be between the foremast of the Bartlett Reef light vessel and a white flag on the committee boat. Distance seventy-two nautical miles. Yachts crossing the finish line after dark shall burn the night signal of the clubs from which they are entered, and shall hail the committee boat, giving their name and racing number. Should the committee boat be absent from the finish line, yachts will take their own finish time, when Bartlett Reef Light vessel bears north, one-half west and New London light bears between northeast one-quarter north, and northeast three-eighths north, and shall hail the light vessel. The race will be sailed under the racing rules of the club, which are identical with those of the Yacht Racing Association of Long Island Sound. The race will be sailed without time limit.

The committee is E. Burton Hart, Chairman, Greenwich, Conn.; Henry C. Pelton, Abbott P. Brush.

Marblehead Corinthian Y. C.

THE regatta committee of the Corinthian Y. C., of Marblehead, has announced the condition of its annual ocean race over the Cape Cod course on June 22.

Class A, Handicap—Sloops and yawls over 30 feet waterline: First prize, trophy presented by the club; second prize, \$15; third prize, \$10; fourth prize, \$5.

Class B, Handicap—Sloops and yawls over 21 feet and not over 30 feet waterline: First prize, trophy presented by ex-Rear Commodore Harold S. Wheelock; second prize, \$15; third prize, \$10; fourth prize, \$5.

Schooner Class, Time Allowance—Schooner yachts at their regular ratings: First prize, trophy presented by the club; second prize, \$15; third prize, \$10; fourth prize, \$5.

No second prize will be awarded in any class unless three or more yachts start; no third prize unless five or more start; no fourth prize unless eight or more start.

The course will be as follows: From starting line off club house, leaving Cape Ann whistling buoy on starboard, Wood End bell buoy 1A on starboard, to finish line off club house. Distance, ninety-five miles. The start and finish line will be between flag buoys anchored off club house. At night white lights will be displayed on the buoys. The committee will have a tug at Cape Ann whistling buoy and at Wood End bell buoy, and each yacht must hail the tug when rounding and give name.

Entries, which should be made in writing to the chairman of the regatta committee at the club house before 8 P. M. Friday, June 21, must give the name of the yacht, ownership, rig and measurement as required for her class. Handicaps for classes A and B will be adjusted by the regatta committee and posted at the club house the evening before the race.

Edgewood Y. C.

A FRESH southwest wind and clear skies made racing conditions almost ideal for the opening regatta of the Edgewood Y. C.

Walter P. Wood's Dorothy took her third straight victory.

Haffenreffer's speed boat, Meteor, attracted considerable attention. This boat went over the 13½ nautical miles through the heavy swell below Conimicut and back over the tops of the waves in 49m. 32s.

E. L. Arnold, the only member of the Edgewood regatta committee, who put in an appearance, had his troubles keeping things going according to schedule. He found that neither Wanderer VI. nor Hugi had been officially measured for the season, and that there were one or two others who had neglected this formality. They were not disqualified, however, as no protest was made, and he was inclined to be lenient in view of the extremely bad weather, which has caused delay in putting boats into commission. It was announced though that the rule will be rigidly enforced at next Saturday's regatta at the Rhode Island Y. C. The summary:

Class P—Start 2:45.		
Momo, W. E. Butler	2 56 04	2 56 04
Class Q—Start, 2:48.		
Molly, Oscar Howes	2 49 30	2 47 21
Paloma, W. E. Darling	2 53 23	2 53 23
Rambler, Buffington	2 58 25	2 58 25
Nimbus III., Frank Weaver	3 06 00	3 03 00
Class E—Start, 2:56.		
Gilt Edge, W. E. Simmons	2 45 23	2 45 14
Bother, Frank Sweet	2 50 10	2 48 35
Netor, A. C. Arnold	3 03 00	3 01 17
Trouble, A. G. Benson	3 13 30	3 12 15
Venture, G. U. Meyer	Did not finish.	
Omeme, F. J. Holt	Did not finish.	
Class X—Start, 2:59.		
Scud	2 48 30	...
Scout, Barlow	Did not finish.	
Class Z—Start, 3:02.		
Rube, Peckham	2 02 50	2 02 50
Little Mother, Smedley Bros.	Did not finish.	
Puzzle, Frank Killian	Did not finish.	
Class I—Start, 3:07.		
Dorothy, W. D. Wood	4 48 00	1 41 00
Wanderer VI., D. W. & H. J. Flint ..	4 49 10	1 42 10
Hugi, Arthur P. Brayton	4 50 53	1 43 13
Bonito, Frank Ames	4 59 30	1 52 30
Motor Boats—Start, 3:10.		
Meteor, Haffenreffer	0 49 32	Corrected.
Netol, Hammond	0 54 11	...
Helen, Lehmann	Did not finish.	

Meteor only boat measured; does not count for championship.

Atlantic Y. C.

HENDON CHUBB'S class Q Spider won the first race to score in the Gravesend Bay championship. Six boats started and had a splendid race in a wholesail breeze.

The course gave the boats a run, with spinners to starboard, from the starting line off Sea Gate to a mark off Bensonhurst. Here booms were jibed and a long reach on the port tack followed to Fort Hamilton. Suelew had the better of the start and was leading when the boats went on the wind at Fort Hamilton for a stiff beat down the channel to Ambrose Channel Buoy No. 24.

Suelew and Spider had a splendid beat to the weather mark. Midway down the channel Suelew fouled Spider, and Captain Luckenbach withdrew his craft. The withdrawal of Suelew left Spider at the head of the division and she led at every other mark. The summary:

Sloops, Class Q—Start, 3:00—Course, 12.5 Miles.		
Spider, Hendon Chubb	5 21 23	2 21 23
Grayjacket, F. C. Noble	5 21 29	2 22 29
Alice, G. Davis	5 24 03	2 24 03
Florence, R. A. Brown	5 25 12	2 25 12
Soya, W. A. Barstow	5 30 07	2 30 07
Suelew, E. F. Luckenbach	Disqualified.	
Handicap Class, 1st Div.—Start, 3:05—Course, 12 Miles.		
Joy, Le Sauvage and Geer	5 30 50	2 25 50
Cubana, J. H. Ives	5 36 48	2 31 48
Clare, W. C. Van Clief	5 53 12	2 48 12
Corrected times: Cubana, Joy, 2:17.05; Clare, 2:37.50.		
Handicap Class, 2d Div.—Start, 3:05—Course, 12 Miles.		
Careless, R. Rummell	5 24 22	2 19 22
Gunda, H. W. Hall	5 34 05	2 29 05
Corrected time: Careless, 2:19.22; Gunda, 2:22.49.		

Sloops, Class X—Start, 3:15—Course, 8 Miles.		
Mouse, R. B. Moore	4 59 35	1 44 55
Suffragette, Platt and Tiemann	5 05 45	1 05 45
Skylark, M. A. Howard	5 07 27	1 52 27
Merry Widow, Bailey et al.	5 07 34	1 52 34
Slow Poke, F. L. Durland	5 14 15	1 59 15

Sloops, Class S—Start, 3:10—Course, 12 Miles.		
Cyric, Dr. C. L. Atkinson	5 31 14	2 21 14
M. and F. II., C. M. Camp	5 32 22	2 22 22

Cambridge Y. C. Regatta.

MILES H. WOOLFORD, secretary of the regatta committee of the Cambridge, Md., Y. C., announces its annual regatta on June 27 to July 2.

June 28—Races of all classes, power and sail, from Baltimore to Cambridge.

June 28 and 29—Races of 20-foot, 26-foot and free-for-all classes of motor boats at Cambridge. The special trophies for these events will be Commodore Alfred I. duPont Atlantic Coast championship cups, one for each class.

Other events on these days will be a free-for-all speed boat race for lady pilots, for the Mrs. Alfred I. duPont ladies' championship cup.

Race for working schooners for Chesapeake Bay championship.

Races for all classes of sail and power craft for suitable trophies.

Whaleboat race among crews from the United States Naval Academy, the United States revenue cutter service and the Maryland Naval Brigade.

July 2—Long distance race from Cambridge to Baltimore, seventy-eight miles, open to all speed boats, for a special cup offered by Phillips Lee Goldsborough, Governor of Maryland.

Regatta at Baltimore, July 4, under the auspices of the Chesapeake Bay Yacht Racing Association. This will be an open event.

Yachts Change Hands.

A BOSTON yacht agency has sold the 25-foot waterline sloop Novice, owned by Hjalmar Lundberg, of Boston, to Cyrus K. Small, ex-commandore of the Mosquito Fleet Y. C., and a prominent member of the Boston Y. C.

The 26-foot waterline cruising yawl Olwyn, owned by Commodore Cyrus K. Small, of Boston, to A. D. Seymour, Jr., of the New Rochelle Y. C.

The catboat Mildred, owned by Walter H. Nichols, of Quincy, Mass., to T. Esmond Peck, of Montreal, Canada.

The 21-foot waterline knockabout Kanaka, owned by Augustus Poole, of Beverly, Mass., to E. E. Tilden, of the Boston Y. C.

The 18-foot waterline knockabout Shrimp, owned by George S. Smith, president of the Boston Chamber of Commerce, to Dr. Farrar Cobb, of Boston, Mass.

Three-Hull one-design class 15-foot waterline knockabouts—Vera, owned by W. G. Torrey; Mink, owned by Edward Foley; Fanchon, owned by Walter P. Keyes; all of Boston, Mass., to members of the Havana Y. C. of Havana, Cuba.

The same agency has chartered the 35-foot waterline cruising yacht Varande, owned by Rev. Frederic W. Perkins, of Lynn, Mass., to Charles R. Joy and Arthur P. Hawes, of the Boston Y. C.

Stamford Y. C.

THE one-designers of the Stamford Y. C. continued to-day their races for the Point trophy. Killie won. The summary:

One-Design Class, Stamford Y. C.—Start, 3:15—Course 6½ Miles.		
Killie, Bartholomew Jacobs	5 06 06	1 51 03
Fiddler, E. Y. Weber	5 09 08	1 51 08
Curlew, G. G. Dominick	5 16 10	2 01 10
Dart, S. Gillespie	5 19 18	2 04 18
Kelpie, C. D. Lockwood	5 20 43	2 05 43
Kittewake, H. C. Fleitmann	5 21 42	2 05 42
Snapper, Edward Corning	5 22 45	2 07 45

Motor Boating

Columbia Y. C.

TWENTY-NINE boats started at the Columbia Y. C.'s opening motor boat regatta last Saturday in which Bunk III., Gunfire, Jr., Tiny Tad, Kitsix and Question were winners in their classes.

Conditions were as nearly perfect for the participants in the races and the spectators as could be. The Race Committee, consisting of James R. Torrance, John McKinlay Wight, Charles F. Muller and Frederic N. Collins, handled all events successfully.

The high speed boats were divided into two classes, one for displacement craft and one for hydroplanes, both of which were sent over a 30-mile trip to Ardsley and return, while the semi-speed boats went three times over a five mile triangular course and the slower open boats and cruisers made two rounds of the triangle.

The preparatory signal was set at ten minutes past 2 o'clock and six of the open boats went over the line with Gray Hare in the lead.

Gunfire, Jr., Vita and Edith II. started at half-past two, with Gunfire, Jr., having the better of Vita and Edith II., well in the rear, while at twenty-five minutes to three the two hydroplanes, Tiny Tad and Skid started.

In the cruiser class eleven boats, well bunched, made for the line at 2:55, and after they had all gone, Kitsix rounded the mark boat.

Six of the semi-speed boats, with Rookie in the lead, were the last to get under way.

First of the boats to return was Skid, with R. P. Breese and H. G. Chapman as crew. As Skid came racing down the river, planing beautifully, it was thought she had broken the record, but later she was disqualified for turning the wrong mark, giving the race to H. Z. Pratt's Tiny Tad, which made the thirty miles in 1h. 30m. 27½s. elapsed time.

Sisput was disqualified for passing the wrong side of the stake boat off the starting line, and Mrs. Paula H. Blackton's little Vita, which was well inside of her handicap time, was stopped within a few feet of the finish line to avoid running into a passing boat, and before her motor could be started she drifted over the finish line and was disqualified, while Gunfire, Jr., whose motors were running as smoothly as clock work, crossed the finish line at 3:45:51½ and won.

Among the yachts at anchor off the club were Idylease III., Natchez II., Watawaga, Paula II., Cynthia III., Ethel May, Amrita, Achelous and Peter Pan, Sr., all power craft. The summary:

Open Motor Boats. Less than 14 Miles—Start, 2:15—Course, 10 Miles.		
	Finish.	Elapsed.
Bunk III., Clement Firth	3 19 05	1 04 05
Merlein, W. S. Selden	3 12 35	0 57 35
Elise, T. Kirk	3 12 55	0 57 55

Kennebec
CANVAS COVERED CANOES
Spend your summer outings and vacation canoeing. Send at once for illustrated catalog of Kennebec paddling, sailing and motor canoes. Unequaled in design, finish, lightness and strength. Our special type of sponsons (air chambers) make either style absolutely non-capsizable. Prices reasonable.

Nassau County Y. A.

THE Nassau County Yacht Association, made up of Long Beach Motor Y. C., Keystone Y. C., of Woodmere; Nassau Y. C., of Rockville Center, and Hempstead Bay Y. C., of Freeport, will try an honor system of handicapping, because of the chaotic condition of the American Power Boat Association rules. No handicaps based on ratings are to be used by the Nassau yachtsmen, but the boats will be raced on the basis of maximum speed. The owners will make statements of the best time made over a measured mile course and the boats will accordingly be classified.

A boat which exceeds the maximum speed as certified to by its owner more than 5 per cent. will be disqualified. It is expected that this system will work out well. Without time allowance the first boat home in each class will be the winner.

The first race under these conditions will take place on the Long Beach Channel on July 4, at the second annual regatta of the association. Entries are being received by Capt. I. I. Dal Molin, of Rockville Center, secretary of the association. Similar rules will be used for the regatta of the Long Beach Motor Y. C. for the Long Beach challenge cup, now held by W. A. Moffitt's Willow Brook, of the Bay Shore Y. C.

Cape May Race Rules Issued.

PETER BENTLEY, Harvey B. Griffin and Daniel Toffey, of the regatta committee of the National Y. C., have issued conditions to govern the annual race for motor boats of the club over the Cape May course. If eight or more start there will be two classes—60 to 80 feet and 40 to 60 feet. If there are less than eight starters, there will be one class, 40 to 80 feet. All yachts entered must be approved by the regatta committee before being allowed to start. They must carry gasoline in tanks or can, provided the cans are securely fastened. There must be water and stores on board sufficient for five days.

English Entry at Chicago.

ONE HUNDRED horsepower hydroplane Baby VI., owned by Mawdleley Brooke, of London, has been officially entered in the championship events which are to be held in connection with the naval pageant of the Associated Yacht and Power Boat Clubs of America, at Chicago. The craft will sail under colors of the Motor Boat Club of England in all the championship races.

Block Island Race.

THE New York Athletic Club's fifth annual power boat race to Block Island for the Day cup will start on June 22, and a special class has been established to be known as the Viking class, limited to bona fide cruising boats, not exceeding 40 feet over-all, with rating not exceeding ten times the square root of the load waterline, as defined by the A. P. B. A. rules of 1909.

Entries close on June 18. Entrance fee \$5. The crews must be composed of amateurs only, all of whom shall be members of bona fide yacht clubs.

Each boat finishing the race within three hours of the actual time of the winner in this class will be presented with the Viking trophy, a fac simile of the Viking ship recently discovered near Christiania, Norway, and each boat owner and member of the crew will be admitted as a charter member of the Order of Vikings, to be organized at Block Island at the finish of the race.

The course is from Whortleberry Island to West Harbor of Block Island, disregarding buoys, a distance of one hundred miles, and the start will be at ten minutes of 5 P. M.

The Block Island race was won in 1908 by Erovel, S. Cochrane; in 1909 by Martha, P. Kossek; in 1910 by Elmo II., F. D. Giles, and in 1911 by Ruth II.

Canoeing

Eastern Division A. C. A.

OWING to the fact that it is impossible to make a satisfactory arrangement with a capable caterer, the Campsite Committee with the advice of commodore and purser have decided to run as a strictly camping meet the annual on June 15, 16, 17 at Lakeville, Mass. It will be necessary, therefore, for the fellows to do their own catering. King Philip's Tavern, a first class automobile house, is located on the trolley line about five miles from camp. There is also another road house, The Birches, somewhat nearer. Over at Lakeside Park is a small refreshment stand where sandwiches, ice cream and coffee can be obtained. At Sisson's Grove, about six miles from camp, also on the trolley line, but toward New Bedford, on Sundays a clambake is run. At Harrington's store all kinds of groceries, together with eggs, butter and canned milk can be obtained. It is difficult to obtain fresh milk near the camp, although eggs can be obtained from the farmers within half to three-quarters of a mile of the camp.

The Dedham Boat Club propose to give the canoeists Saturday night a Dutch supper—lots of frankfurters, sauerkraut, rolls, doughnuts, cheese, and Pete Cormerais says, "beer and lots of it, and good beer."

Let us make this a regular camping meet, and certain members of the Campsite Committee and the commodore will be very glad to coach the amateur cooks, although they will not do the cooking.

The committee advises clubs shipping canoes to send them over the road, provided they have enough for a load, but independent men are advised to consult with clubs in their vicinity who may possibly be able to take along an extra boat or two.

The Transportation Committee has made arrangements for carrying canoes and duffle from Myrick's and Harrington's store.

B. L. GOODWIN, Chairman.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—John A. Mott, 19 East Thirty-fourth street, Bayonne, N. J., by R. H. Nash.

Eastern Division.—Arthur Boyle Cady, 85 Homer street, Providence, R. I., by William A. Heath; Gordon L. Burrows, 68 Chestnut street,

Waltham, Mass.; Peter N. Graverson, 814 Main street, Waltham, Mass.; William N. Stone, 342 Crescent street, Waltham, Mass.; Fred J. Thompson, 144 Cherry street, West Newton, Mass.; George D. Brackett, Fiske avenue Waltham, Mass.; Edward Hines, 58 Myrtle street, Waltham, Mass.; Harry S. Blatchford 20 Woerd avenue, Waltham, Mass.; Wilfred W. Demara's, 25½ Ash street, Waltham, Mass., and Franklin J. Burke, 99½ Crescent street, Waltham, Mass., all by Fred Brodbeck; Clarence B. Phetteplace, 153 Narragansett avenue, Providence, R. I., by A. W. Hazard, Jr.; S. G. Greenleaf, 344 Center street, Jamaica Plain, Mass., by Wm. G. Schmidt.

GUINEA PIGS AS LAWN MOWERS.

AN agricultural writer for an English newspaper in a recent article says:

"A curious, but successful experiment is being made on a number of private lawns in Kent, and is about to be tried by a golf club in the neighborhood of Greenhithe. The idea is the novel one of substituting the guinea pig for the mowing machine and the weed killer.

"Around the lawn is arranged a low wire barrier, and into the inclosure are turned a number of guinea pigs; or better, a passage is made from their hutch to the lawn. The animals at once attack all the worst weeds—the plantains first, then the dandelions and daisies. These broad-leaved plants, which no mowing machine will touch, are killed by the persistent cutting of the guinea pigs' teeth. When they have finished the weeds, which are broad-leaved and succulent, they proceed to the grass. In a short time the lawn looks as if it had been cut by the closest machine. The persistent cutting of the leaves kills the weeds, which can stand almost any other treatment, but does no harm to the grass.

"One lawn, formerly a mass of weeds, has been made to grow nothing but the finer grasses. Another is still under process of treatment. The half of it in which the guinea pigs were first set to work has been cut quite even and very close. For golfing it is as fast again as it was under the administration of the mowing machine, and not a weed is visible. Other half, where the animals have just been turned loose, is a mass of dandelions.

"In this neighborhood it has been found that the guinea pigs do not suffer at all by being left to work in winter as well as in summer. Indeed they are healthier than under the usual treatment of those who keep them as pets. An astonishing demand for the animals has grown up in the neighborhood, and if the inland golf clubs, which have great difficulties with plantains, take to the new method, the guinea-pig population is likely to go up in the ratio that the natural fecundity of the animal suggests."

SUCCESS WITH FISH.

I KNEW a man who managed once a fine aquarium, And asked for hints on his success, and so he gave me some.

"I keep my shad in shadow, and my sunfish in the sun; My trigger-fish most carefully I fix upon a gun. The bass in baskets you will find, and carp in carpets rolled.

And jellyfish preserved in jars will never, never mold. I keep the skate on ice, of course; my perch on perches perch.

And when the day is fine, I send the angel-fish to church.

I file away my filefish, so I know just where they are; My swordfish in a scabbard lies, and thus escapes a mar. My sea-horse and my barnacle are always in the stable, And signs like these I keep in sight as well as I am able:

"Please do not stir the sturgeon up, and do not poke the pike;

And kindly do not maim the limpet by a careless strike. Pray, do not whale the gentle whale, nor rock the reekfish small,

And do not fly the flying-fish; it would not do at all. Please do not muss the mussels up, nor saw the sawfish slim;

And do not smoke the pipefish—it would make an end of him.

Please do not light my lamprey. These are just the hints you wish.

Because I follow them myself, I have success with fish."

—Youth's Companion.

TRAP SHOOTING

If you want your shoot to be announced here send a notice like the following:

Fixtures.

- Sept. 12-13.—Cincinnati (O.) G. C. Arthur Gambell, Supt.
- REGISTERED TOURNAMENTS.**
- June 15.—Allentown, Pa.—Lehigh Valley S. A. Allen Heil, Sec'y.
- June 17-19.—Salida, Colo.—Colorado, New Mexico and Wyoming State tournament, under the auspices of the Salida G. C. W. G. Myers, Sec'y.
- June 18-19.—Barre, Vt.—Vermont State tournament, under the auspices of Barre G. C. D. M. Barclay, Pres.
- June 18-19.—Boise, Idaho.—Idaho State tournament, under the auspices of the Boise G. C. W. C. Tatro, Pres.
- June 18-21.—Springfield, Ill.—The Interstate Association's thirteenth Grand American Handicap tournament, on the grounds of the Illinois Gun Club; \$1,500 added money. The winner of first place in the G. A. H. guaranteed \$1,000 in cash and a trophy. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.
- June 19-20.—Idabel (Okla.) G. C. F. C. Butler, Sec'y.
- June 22.—Long Hill, Conn.—Western Connecticut T. S. L. tournament, under the auspices of the Hillside G. C. Homer F. Sherman, Sec'y.
- June 22.—Newmanstown (Pa.) G. C. F. S. Rader, Sec'y.
- June 23-24.—St. Louis, Mo.—Blue Wing G. C. H. F. Grundman, Sec'y.
- June 25-28.—Eugene, Ore.—Pacific Indians. F. C. Riehl, Sec'y.

DRIVERS AND TWISTERS.

Freehold (N. J.) Gun Club will hold its first annual registered tournament, June 26 and 27, at Freehold, N. J. E. I. Vanderveer and Frank Muldoon, are the managers; Maltby W. Conover, cashier.

The New Jersey State Rifle Association Gun Club shoots at Sea Girt, N. J., on July 17 and 18, for the Sea Girt championship, for amateurs only. Valuable trophies will be given. Write for program to H. G. Aspell, Secretary, Sea Girt, N. J.

An all-day shoot will be held by the Jersey City Gun Club on June 19. Shooting will commence at 10:30 sharp. Money will be divided by the Rose system, 5, 3, 2, 1. For information write, R. Young, Secretary, 383 Fairmount avenue, Jersey City.

F. C. Butler, Secretary, Idabel Gun Club, says: "The Idabel Gun Club, of Idabel, McCurtain county, Oklahoma, in the heart of the great game country of Oklahoma, will hold a two-day tournament on June 19 and 20; \$400 added money. We extend a cordial invitation to the sportsmen at large to take part therein."

Elmer E. Shaner, Secretary-Treasurer, Interstate Association, writes: "For the benefit of gun clubs applying for or holding registered tournaments, please announce in the Trap department of FOREST AND STREAM that, on account of the Grand American Handicap tournament, the office of the secretary-treasurer of the Interstate Association will be closed from June 15 to June 22, inclusive."

J. T. Skelly, manager sporting powder division, writes: "You will be interested to note that in practice shooting at Haines Landing, on June 2, our mutual friend C. W. Billings, shooting Olympic style—that is, gun below armpit, use of two barrels—broke 98 out of 100, a mighty good score, and shows up well for the success of the United States team. I am sure a notice of Mr. Billings' good shooting will be pleasant reading for all interested in the success of the Olympic team."

A. B. Brickner, Secretary, Newton, N. J., says: "The Frank Hall cup championship will be held at Newton Gun Club grounds, June 22. Shoot starts at 2 P. M. sharp. The Newton Gun Club wants to show Mr. Frank Hall that they appreciate his good sportsmanship in donating this cup to the trapshooters of New Jersey, and desire, above everything, to make this the banner event of the series. We would like to see every trapshooter in New Jersey that day. Shooting commences on arrival of 10:20 A. M. train."

W. G. BEECROFT.

Ohio State Shoot.

THE twenty-sixth annual tournament of the Ohio State Trapshooters' League was held under the auspices of the N. C. R. Gun Club at Dayton, O., on June 4 to 7, the regular program beginning on the 5th. The weather during the entire shoot was perfect, and every minute of the time was enjoyed by the visitors. Over 60,000 targets were thrown, and every arrangement for the comfort or convenience of the visitors which Secretary MacCandless could think of, was carried out.

The office was in charge of L. J. Squier, cashier. W. R. Chamberlain (Roundy), of Columbus, was compiler of scores, being assisted in these duties by R. Davies and Bert Call; the former a prominent figure in Cincinnati shooting circles a few years ago and recently elected secretary of that club.

Trap No. 1.—Referee, G. M. Wilson; scorers, H. D. Kenny and H. Schaefer; puller, W. Finfrock; trapper, L. P. Stengel.

Trap No. 2.—Referee, L. R. Brewer; scorers, H. Cairn and A. Cooper; puller, C. Charles; Trapper, T. Larke.

Trap No. 3.—Referee, Frank Oswald; Scorers, C. G. Wells and J. Mann; puller, R. McCabe; trapper, D. C. Davidson. Substitute or relief man, T. Welch.

The troubles of the shooters who were after the "just right" were attended to by Messrs. Roy Updike and Clyde Beaver, and they kept everyone in good humor. Ross Mombeck was assistant to Secretary MacCandless. The whole policy of the club in arranging for this tournament seems to have been to see how much could be done for its prospective guests. The shooters appreciate the efforts of the club's officials and the welcome received.

The attendance was good throughout the week, there being an average of over one hundred shooters each day. The value of the money-back system as an inducement to keep shooters in to the end was again demonstrated.

Practice Day, June 4.

There was a large attendance at the grounds on Tuesday, June 4, 72 shooters taking advantage of the opportunity for a little practice before starting in the regular program. This may be set down as a record practice day entrance for any tournament, barring the Grand American Handicap. The program was at 100 targets—four events at 15 and two at 20 targets each—with the usual entrance and an optional \$1 sweep.

The weather was fine, the only drawback, from a shooter's point of view, being a brisk west wind, which swept across the traps and made rather difficult targets. Everything worked smoothly during the afternoon, the hundred-odd spectators being treated to an exhibition of good shooting by several of the contestants. Rolla O. Heikes, being in his home town, was obliged to uphold the honor of the Gem City, which he did by making high score of the day, 96. For a while it looked like he might divide high place honors with Frank Foltz, an amateur from McClure, as they were tied at the end of the fifth event on 78 out of 80, but in the last round Foltz struck a snag and finished with 95. R. W. Clancy, of Chicago, finished in second place among the professionals, on 94, tying with F. M. Edwards, of Columbus, and George Volk, of Toledo, who secured a similar place in the amateur ranks. Two professionals—C. A. Young and L. German—tied on 93, with two amateurs—H. Hirth and C. Coburn. It required two events for Wagner to get in trim; he lost nearly twice as many targets in the first two events as in the last four events. C. E. Doolittle, one of the Cleveland contingent, did not make so good a showing as on his home grounds. F. M. King fell down in the first event, but recovered himself for the balance of the program. G. H. Hassam, of the Boston Palefaces, was altogether out of form to-day. The two Donalds from Felicity shot pretty nearly up to their average, doing better toward the last. J. A. Penn could not recover from the effects of his bad luck in the first event. Geo. Volk, of Toledo, used four or five different guns in the six events, but it made no difference, he broke them just the same. Lester German did not strike his gait by several targets. W. Henderson went out with a straight. The genial Tom Marshall kept his place in the 90 per cent. class. R. R. Dickey, president of the League, was followed by bad luck, and dropped below his average. J. R. Taylor shot an even gait, but it was not the fast clip we look for from him. Horace Heikes has been out of the shooting game so long that he couldn't get back to-day. Roundy Chamberlain got scratched in the fifth event, but he was figuring the money in the office and couldn't leave. His score was not up to his mark. Secretary MacCandless managed to find time from his duties to get into a couple of events. He loves the game and has put much time and work into the preparations for this tournament, and was feeling too good over its success to be able to get down to business on the firing line. The program was finished soon after 5 o'clock, and a pleasant afternoon brought to a close. Scores:

First Day.

Wednesday, the first day of the tournament, proved an ideal day for outdoor sport, the only drawback being a strong west wind. An even one hundred men were entered on the shoots, ninety-seven of them fighting it out to the finish. The opening event was the N. C. R. special at 25 targets, giving the new-comers a chance to get a line on conditions before getting into the main fight, and at the same time to cop a little easy money, if they were good enough. Three contestants tied for first place on 25 straight—C. A. Young, a professional; B. Wing, F. Foltz and George Volk, amateurs. The last two named are old-time partners, and have won more than one two-man team match. The shooting was a little late in starting, and the program was not finished until well along toward evening. The last event was the two-man team race for the Review trophy, at 25 targets per man. The Springfield team No. 2 (Hill and Shobe) went out with a total of 49, but it was decided that they were not eligible, under the following section of the rules: "Members of teams must be bona fide members of the clubs they represent, and reside in the same county that the club is located in; except that shooters residing in adjoining counties may contest if they are not members of any regularly organized gun club."

This left the contest a tie between Frank Foltz and Geo. Laskey, and the Hickville No. 2 team—C. E. Maxwell and G. C. Maxwell—the score being 48. When the event was finished it was too late to decide the tie, and it was postponed until the next day. In spite of the wind some very good scores were recorded, J. R. Taylor leading the bunch with 197; L. German and W. Henderson were second high professionals with 145, and R. W. Clancy came next with 144. C. Coburn was high amateur with 146, which gave him second high made on this day. J. A. Markham and J. A. Smith divided third amateur average on 143. Squad No. 3—Hirth, Koch, Coburn, Cain and Clancy—made the day's record; they missed only 2 targets in the first event. Coburn made the long run, 109, and later went out in high place. John Taylor had a run of 81. Scores follow:

Springfield No. 1.	
C E Winkler 23	H C Downey 22-45

ANNUAL MEETING.

The annual meeting of the League was held on the evening of June 5, in the N. C. R. Industrial Hall. W. F. Bippus, vice-president of the club, presided, and after calling the meeting to order, he stated that he had been deputized by the Mayor to extend a welcome to the city of Dayton, and to express his regret that he was unable to be present to welcome the shooters himself. The visitors were also assured of the pleasure of the N. C. R. Company at having them as guests. Mr. Bippus said that the company believed in outdoor sports, and would welcome any suggestions to make the shoot better and more pleasant to the shooters, and would carry them out, if possible, before the tournament was over. In many written suggestions, which were handed

to the chairman, there was not an adverse criticism of the arrangements for the shoot or the way it was being handled. Some of them were of a humorous character and created much amusement. Mr. Bippus then called upon several of the visitors for remarks. Mr. T. A. Marshall started the "talk fest," and as usual was most entertaining. Among other things, he said that this was not one of the best, but the best State tournament he had attended this year, a sentiment that was heartily applauded. He had nothing but praise for the manner in which the shoot was handled.

Among the other speakers were Messrs. R. O. Heikes, F. E. Pond, H. L. Mombeck, president of the club, and W. F. MacCandless, secretary, who is largely responsible for the success of the tournament.

The business meeting was then begun with President R. R. Dickey in the chair. He thanked the officers of the gun club, as well as the officers of the N. C. R. Company for their efforts to make the annual tournament a success. The reading of the minutes of the last meeting was dispensed with, and the roll call of clubs was the first order of business. There were twenty names read, and ten were represented at the meeting. Then the place for the next meeting was selected. The Ideal Gun Club, of Circleville, and the Columbus Gun Club made offers for the tournament. Mr. Smart moved that the nominations be closed, as no other club seemed inclined to bid, and balloting proceeded. The first ballot was a tie, and the second resulted in favor of the Circleville Club.

The following officers were unanimously elected: W. I. Spangler, President; E. M. Stout, Vice-President; J. S. Ritt, Secretary-Treasurer, all of Circleville. Directors: Dr. F. M. Edwards and J. H. Smith, of Columbus; H. D. Smart, Galion; E. S. Rogers, Cleveland; Dr. Wm. Shattuck, Coal Grove.

The resolutions against the use of any money collected for gun or hunting licenses for any purpose except the protection and propagation of game and fish, which has been accepted by a number of State leagues of trapshooters, was introduced by Dr. Edwards. Its purpose, and the reason for it, was explained by Mr. Marshall, and the motion to accept was carried. The League also voted to become a member of the National Association for the Protection and Propagation of Game and Fish.

Mr. Bippus moved that the money in the treasurer's hands be turned over to the Circleville Gun Club, and that it be used as added money for next year's tournament. Mr. Spangler moved an amendment that it be used to purchase trophies for the next shoot. The amendment was accepted, and the motion carried. Mr. Smart offered a resolution, signed by 91 of the 102 shooters present, that the next G. A. H. be held at Dayton. It is needless to say that the resolution was adopted unanimously. Mr. E. S. Rogers moved that a vote of thanks be tendered to the N. C. R. Gun Club, and to the

N. C. R. officers, for the courtesies which had been shown the visitors. The motion was carried. Mr. W. R. Chamberlain asked permission to donate a trophy for the next annual tournament, the conditions governing the contest to be announced later. His generous offer was accepted. A motion to adjourn was carried.

Second Day.

The second day was partly cloudy and cool, the mercury standing below 80 nearly all day. The wind still prevailed and was howling in the shooters' faces, bothering them considerably. The targets also continued to make upward flights, and the close of the day found many of the shooters just a little lower than on the first day. There were 107 shooters during the day, and 103 of them shot through the program. Squad No. 4 (German, Henderson, Marshall, Edwards and Foltz) started out with a record in the first event, Foltz being the only member so unfortunate as to drop a target, the score was 74 out of 75. The special events for the day were the Heikes special at 25 targets, entrance \$1, divided 40, 30, 20 and 10 per cent., \$25 added by the club. The five-man team match for the Shooting and Fishing trophy, at 25 targets per man, same entrance and division. It was decided not to start the day with one of the specials, but that they should both be shot after the regular events. The first squad was in place early, and right on the stroke of 9 the first call of "pull" was heard. At 4 o'clock the regular events were finished and the specials started; but it was after 6 when the last squad sheet was brought to the office. There were a few who did not show up after the first day, but their places were more than filled.

The five-man team race started with eight teams entered, the Columbus team (Fisher, Webster, H. Smith, F. M. Edwards and J. H. Smith) coming out with 7 to the good over Cleveland. Cincinnati had a team entered, but none of the members shot up to their mark, and she was one of the "also rans," a position which she seldom finished in in the old days. Fisher and Cain were the only two to go straight in this event.

The tie for the Review trophy was then decided, being taken by Foltz's team.

Johnnie Taylor started accumulate a few broken targets, and after missing the ninth one he shot at, he bagged them all until the first one in the eighth event, securing a long run of 96. George Kistler, J. M. Markham, Lon Fisher and Rolla Heikes went straight in the Heikes special. W. Webster was high amateur for the day with 144; Markham and Fisher close seconds with 143, and Mombeck coming next with 142. John Taylor finished first among the professionals with 146, German and R. O. Heikes following with 144 and 142 respectively. On the two days at 300 targets, J. M. Markham had one target the best of Coburn with 286 to 285; Lon Fisher was next with 284, followed by W. Webster with 189, John Taylor had 293, and L. German 289.

AUTOLOADING SHOTGUN and ARROW AND NITRO CLUB STEEL LINED SHELLS WIN AGAIN

Utah State Championship, won by Moroni Skeen, scoring 429 ex 450 with a *Remington-UMC* Autoloading Shotgun and Nitro Club Steel Lined Shells.

3d. A. P. Bigelow, scoring 427 ex 450 with Arrow Steel Lined Shells.

Idaho-Utah High Average Medal, won by A. P. Bigelow, scoring 552 ex 580 with Arrow Steel Lined Shells.

Idaho Falls Medal, won by Moroni Skeen, scoring 100 straight with a *Remington-UMC* Autoloading Shotgun and Nitro Club Steel Lined Shells.

Browning Medal, won by D. Holohan (19 yards) with 50 straight, shooting Arrow Steel Lined Shells.

At Greensboro, Ala. W. T. Laslie wins First Amateur High Average at Greensboro Gun Club's shoot, scoring 144 ex 150 with Nitro Club Steel Lined Shells.

SHOOT TO WIN Shoot *Remington-UMC* Arrow and Nitro Club Steel Lined Shot Shells for speed plus pattern in any make of shotgun.

Remington-UMC — the perfect shooting combination.

REMINGTON ARMS—UNION METALLIC CARTRIDGE CO. - 299 Broadway, New York, N. Y.

MacCandless was on the job all right. The boys left him there when they went home at night, and no one was able to get out to the grounds ahead of him. He never sleeps during a State shoot, and if the G. A. H. comes to Dayton, he'll forget what it seems like to take a nap. Tom Marshall was the happiest man on the grounds to-day; he wouldn't say what it was, but went around from one group to another whistling like a mockingbird; the secret will out some day. It is a proverb here that "everything good comes to Dayton." Seems like they can even get good weather by boosting for it. Messrs. MacCandless and Bippus really got busy about the G. A. H. for Dayton; the only thing for the authorities to do is to follow the example of Col. Scott's coon, and come down. Scores:

Table with columns for Heikes (Reg. Spl.) and scores. Includes names like T J Donald, T E Donald, M H Johnson, etc.

ing off winnings, taking entries from the late comers, advising a shooter when his squad will finish the last event, how much it paid in the third event, etc., as though he were a thousand miles from nowhere. The regular events were finished about 2 o'clock, and the championship event at 50 targets was begun as soon as one of the traps was clear, being finished at 5. There were 111 shooters at the grounds taking part in one or more events, 98 shooting through the program.

The championship race was a close one. F. W. King, of Columbus, won on a straight score, tying with John Taylor, who was, of course, not eligible. High amateur for the day was B. Cooper with 143. H. E. Smith came second with 142, and Lon Fisher fell into fourth place on 140. German was high professional with 142, tying with second high amateur; Henderson landed in next place on 141; Taylor and Heikes 140 each.

Lon Fisher won the gun cabinet for high score in the three specials at 150 targets, missing but 6 targets altogether. The Anderton trophy for high professional on the three days' program, 450 targets, went to J. R. Taylor, who scored 433. German came next with 431, R. O. Heikes 423, W. Henderson 422. The amateurs finished in the following order: Lon Fisher first with 424, W. Webster, C. Coburn and H. E. Smith 417 each; F. M. Edwards 416, J. M. Markham 414. T. E. Donald did nice work all through the week, and put up a score of 410.

At the close of the program the shooters assembled in front of the house and Mr. Bippus presented the various trophies to the winners, performing this pleasant duty very acceptably, and not forgetting to put in a word for the 1913 G. A. H. John Taylor, high professional, in replying to the presentation of the Anderton trophy, said that he hoped to attend the G. A. H. here next year, a sentiment which evoked the applause of all present.

The money-back purse amounted to \$1,030.45. This was made up of \$300 added by the Interstate Association; \$456.75 from the targets thrown at 1 cent each, and \$1 extra entrance; \$274. The total losses were \$502.85, leaving a surplus for the high average moneys, of \$527.60, a nice little bit to divide up.

During the week 63,665 targets were trapped without hitch of any kind. The tournament was the largest given this year, with the exception of the Southern Handicap, and it was surely the most enjoyable one which has been given this year or any other year, at least that is what many of the visiting shooters said. It did not take long to figure up the moneys after the last sheets were entered, and soon after 6 o'clock, all hands were on their way to the city. Scores in regular program:

Third Day.

Friday, "get-away day," the last day of the most successful and enjoyable tournament in the history of the League, and that is a statement which the shooters present will endorse without exception. Early in the morning, say about 4, not a cloud was visible, but when the shooters arose, refreshed and ready for the day's sport, scarcely a patch of blue sky was to be seen, and those who had rain coats and umbrellas were considered lucky, but nothing came of it. "Dayton luck" prevailed, the threatened shower disappeared, the clouds broke away, and we had one of the most comfortable days of the week. The first squad was hustled up, the gong rang a trifle earlier than on other days, and a few minutes before 9 the first shot was fired. There were several new men present, having come to enter in the Ohio State championship race. The usual bustle of a tournament last day prevailed, and every one was on edge. "Roundy" even got a "rise" out of Davies, and that's going some in the kidding line. If a charge of dynamite was to go off in the building it is possible that Luther might take notice, but he is so used to the confusion of breaking up day at a tournament that he proceeds with the work of straightening the accounts, pay-

Maine State Shoot.

HAINES LANDING, Me., June 6.—The Maine State shoot came to an end this afternoon. The high average man was L. W. Colquitt, of East Orange, N. J., with a total of 550 out of 600. B. M. Higginson, the amateur champion, and R. L. Spotts tied for second with 548 each. Colquitt not only carried off high gun honors, but won the Rangeley Lakes championship with 96. F. A. Hodgeman, of New York, won the Rangeley Lakes preliminary with 95. R. L. Spotts won the State championship with a total of 89, and was also high gun the first day. B. M. Higginson was high gun on the fifth and sixth. Colquitt on the fourth.

The five-man State championship team race was won by the Portland Gun Club team No. 1; Mooselucmaguntic Gun Club second. Team scores:

Portland G. C.	Mooselucmaguntic G. C.
E A Randall..... 86	R L Spotts..... 87
C S Randall..... 86	W D Hinds..... 83
W N Taylor..... 74	D F McMahon.... 83
E E Sinnett..... 82	G A Hobart 84
S B Adams..... 88-416	H L Welch 75-412

The intercity team race was very close, and was won by New York; Portland being second. Scores:

N. Y. City No. 3 was third, 436; N. Y. City No. 2 was fourth, 428; Portland No. 2 fifth, 410.

The guides event was won by Dana Blodgett, of Rangeley, with Ben Gile, also Rangeley, second.

The professional high average medal went to W. B. Darton.

Next year the State shoot will be held under the auspices of the Portland Gun Club. This year's winners were: C. S. Randall won his third leg and possession of the Glen House cup. In the fishing contest, W. N. Boylston, of Boston, won the silver cup and fly-rod, landing a 5 1/4 lb. salmon, trolling; A. W. Church, of New York, won the prize for the largest fish taken, casting; his best being a 2 1/4 lb. salmon. A. E. Ranney had hard luck landing a 6 lb. brook trout on a 2 1/4 oz. rod two days before the fishing contest started. Scores follow, 150 targets constituting the program of each day:

Roanoke Gun Club.

THIRTY-ONE shooters took advantage of the good weather to visit the traps of the Roanoke Gun Club on Saturday afternoon, June 10, and some good scores were made. The shooting of the new members is showing an improvement each week, which we trust will continue. The club had as its guest C. O. Le Compte, a trade representative, who is en route to the Grand American Handicap. The weekly medals were won as follows:

Scratch.—First M. S. Battle; second, tie, Atkinson and L. G. Richards.

WINCHESTER

Repeating Shotguns and Shotgun Shells cop the High Scores at Big State Shoots :: :: :: ::

The unexcelled shooting qualities of Winchester Guns and Loaded Shells are always evident at trap shooting contests, and particularly where there is a large entry. Recent State shoots have brought out this fact more prominently than ever.

IDAHO-UTAH STATE SHOOT

INDIVIDUAL CHAMPIONSHIP: Won by D. Holohan with a Winchester Gun.

GENERAL AVERAGE FOR INTERSTATE PROGRAM: Won by L. A. Cummings with a Winchester Gun and "Leader" Loaded Shells, score 432 x 450. Mr. Cummings also won the General Average for all 16 yard targets, score 559 x 580; also General Average for all targets shot at, score 665 x 695.

HIGH AMATEUR AVERAGE FOR ALL 16 YARD SINGLE TARGETS: Won by Fred Dryden with "Leader" Loaded Shells, score 554 x 580. Dr. J. F. Sharp, shooting a Winchester Gun and Loaded "Leader" Shells, won High Amateur Average for all targets shot at, score 660 x 695. The longest Amateur Run of the tournament was made by Fred Dryden with "Leader" Loaded Shells, score 168.

MISSOURI STATE TOURNAMENT

GRAND MISSOURI HANDICAP: Score 94 x 100, won by Clayborne B. Eaton, Fayetteville, Mo., from 20 yards, shooting "Leader" Loaded Shells.

HIGH GENERAL AVERAGE: W. R. Crosby won High General Average for all registered targets, scoring 445 x 450 with Winchester "Leader" Loaded Shells.

NEBRASKA STATE SHOOT

HIGH GENERAL AVERAGE: Ed O'Brien, shooting a Winchester Repeating Shotgun, made High General Average for the three days, scoring 431 x 450 targets.

RESULTS TALK!

In a court trial evidence determines the verdict. In trap-shooting the same rule applies. The ammunition that wins the High Averages, Championships, Trophies, etc., and is used by a big proportion of contestants, proves its superiority and wins the case. The list of recent winnings by users of Peters Shells is so extended that it is the most conclusive kind of evidence of the superior shooting quality of

PETERS "steel where steel belongs" FACTORY LOADED SHELLS.

High Average at Southern Handicap	394 ex 400	by H. D. Freeman
High Amateur Average at Southern Handicap (all targets)	557 ex 600	by H. W. Kahler
High Amateur Average on Doubles at Southern Handicap	89 ex 50 pairs	by H. W. Kahler

High Average at Greensboro, Ala., May 29-30	287 ex 300	by H. D. Freeman

Isn't that a great two weeks' record? It can't be beaten or equalled. Why not shoot Peters at the Grand American?

THE PETERS CARTRIDGE COMPANY, CINCINNATI, OHIO

NEW YORK: 98 Chambers St., T. H. Keller, Manager.

SAN FRANCISCO: 608-612 Howard St., J. S. French, Manager.

NEW ORLEANS: 321 Magazine St., Lee Omohundro, Manager.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., June 1.—Dixon, "still without a trophy" and with but one spoon, started a hot tune to-day by breaking a 20-straight, and another one just to show, perhaps, that it wasn't a fluke. He also made a run of 49, which was beaten only by Edmonson's 64. The latter posted four straights, and every one else had one or two. The scores are good to look at, and are seldom beaten in this neck o' the woods. Smoke, with 96 per cent. broken, beat Edmonson and Parry by a small fraction.

Edmonson	Shot at. Broke	140	134	Smoke	Shot at. Broke	100	96
Parry	140	133	*Hymer	100	93

Siwel	120	108					

R. R.

Mulberry Grove Gun Club.

MULBERRY GROVE, Ill.—The afternoon of Memorial Day, was pleasantly spent at the traps of this club. A full attendance of all members was expected; however, a few of them failed to put in their appearance. Practice has been frequently indulged in of late, as we are anxious to show Mr. Killam and Mr. Warren (professionals) our ability to hold our own with them when they call on us.

E R Enloe	Shot at. Broke	75	57	Joe Enloe	Shot at. Broke	25	16
D A Causey	25	20	Edgar Ray	25	16		
*F Martin	50	29	Dr Poindexter	25	11		
Ed Hartley	50	27	O T Davis	25	16		
John Ingram	25	18					

*Score made with 16-gauge gun.

June 5.—Almost the entire day was consumed in this the most successful shoot ever held at the grounds of the above-named club. Beginning at 9 A. M., a continuous stream of lead was defiantly hurled after the twisting targets, hostilities ceasing only for lunch. From 1 P. M. until 4:30 P. M. the morning's happenings were again gone through with, ending the day's pleasure in due time for supper. Mr. Killam, who was scheduled to shoot with us, failed to put in his appearance; however, Messrs. Warren, McCurdy and Golden "filled the bill," as their scores show. Mr. Golden shot for the first time since 1903, but his score leaves the impression that he has not, by any means, forgotten "how it's done." One of the noticeable features of the afternoon was a race between Warren, McCurdy and Causey, the former falling below his usual score by breaking only 19, while

the other two got away with a tie, breaking 22 each. Four events were shot, 25 targets each. A few of our shooters were a little off form, while others shot clear "out of their head." Scores:

Events:	1	2	3	4	5
Targets:	25	25	25	25	25
Warren	20	19	23	22	19
McCurdy	19	19	19	23	22
Hartley	19	18	21	20	22
Causey	..	18	..	23	22
Martin	21	..	19	21	..
Golden	17	..	19	16	..
Enloe	16	..	12	14	..
J Ingram	17	22	..
O T Davis	15	..	15
Y Ingram	20	..
W E Ellis	20	..
W E Davis	14
Dr Poindexter	13
Dr E A Glasgow	11
I Grothe	9	..

The installation of two expert traps was the result of a few members trying for the first time their luck on

doubles. Of these, Enloe broke 3 out of 4; Martin 9 out of 10, while the correct scores of Warren and Golden were lost; however, they were creditable ones.

F. E. MARTIN.

Wilber Gun Club.

WILBER, Neb., June 6.—E. W. Varner with 140 out of 150, won the tournament honors here to-day. W. D. Townsend was second with 134, third going to A. A. Chubb on 127.

E L Stockman	86	F Dunakas	120
Joe Kotone	107	W D Townsend	134
A A Chubb	127	W T Waidley	124
H F Magnusson	106	Ray Shepherd	111
G Boyer	98	J Gausman	125
E W Varner	140	Ed Gausman	105

Professionals.

C L Baker	118	G L Carter	125
D D Gross	126		

MT. MORRIS GUN CLUB.

Greensboro Gun Club.

GREENSBORO, Ala., is a small and prosperous town in the southwestern part of Alabama, situated on the Southern Ry. branch. The town is situated in the Black Belt of Alabama, famous for the fertile soil. The Southern University is located here. Greensboro is noted throughout the South for its hospitality. It is the home of Jeff Blunt, one of the most popular shooters throughout the country; also Dr. Lamson, E. V. Otts and Chas. Wheeler, well-known shooters.

The Gun Club of Greensboro is made up of twenty shooters, some being beginners, who will, in time, be good shooters. The tournament was under the management of E. V. Otts and Chas. Wheeler, an assurance that it was a good shoot. The grounds are located at the edge of a grove of trees, and shooting to the east, the glare was rather bright in the morning, but ideal in the afternoon.

A few professionals and local amateurs were out on practice day, May 28. On the arrival of the south bound train on the 29th, were shooters representing clubs from various parts of the country: Cocke and McMurdo, of New Orleans; Chas. Dunlap and several others from Eutaw; Warren Skinner and Garl from Birmingham; Simon and Byrne from Mobile, and several others. Wm. Laslie and several others had arrived the day before.

H. D. Freeman fired the first shot, and the race was on for high honors. There was a race between Freeman and the leading amateur, Wm. Laslie, Laslie winning the first day and Freeman the second, tying on 479 out of 500 for the two days. Jeff Blunt was shooting away below his average, owing to the fact that he was convalescing from a recent spell of illness. Dr. Lamson shot good throughout the tournament, as did also Simon, of Mobile. More shooters were expected to attend this tournament, but for various reasons were unable to reach the grounds. Chas. Dunlap broke his gun early the first day, which made him fall down some and kept him out of the running. E. R. Holt shot well the first day, making a run of 99 straight. C. Otts handled the office and did most excellent work, as each shooter was handed his share at the end of each day's shooting. Scores:

Du Pont Cups.

The conditions governing the competition for the 1912 challenge cups (Classes A, B, C and D), which started June 8, are as follows:

Open only to club members, 25 targets per man; high score in each class first time up, over two traps, wins the cup. At least two contestants in a class must compete in order to make a contest. Winner's name to be engraved on the cup. Only scores made on regular Saturday shoots to count. The only exception being for those shooters who find it impossible to contest on Saturday. Arrangements may be made with the secretary to shoot on Thursday, provided notice is given in writing or by phone before 4:30 P. M. the Wednesday previous. Telephone notice must be confirmed in writing. Contestant by giving such notice of his desire to shoot on Thursday is then ineligible to shoot for the trophy on Saturday. All challenges must be made in writing and handed to the cashier. Challenge matches may be shot on Thursday or Saturday at the option of both parties. Challenge matches to be at 50 targets, the loser to pay for the 100 targets shot at. If holder cannot accept challenge and shoot within two weeks from the date of the challenge, the cup is to go to the challenger, but without his name engraved thereon; he must then defend the cup. Successfully defending the cup will entitle him to have his name engraved on it. If the holder is not challenged within three weeks of the date of his win the cup then goes into open competition. Any contestant successfully defending a cup for three successive challenge matches must turn in the cup for open competition. After each cup has been won by ten different shooters, the final ownership will be decided by the ten winners shooting off at 50 targets per man, distance handicap to govern. The cups, which are on exhibition in Room 466, du Pont Building, are most attractive.

T. E. DOREMUS, Sec'y.

Supplement to Game Laws in Brief

SO many and important changes have been made in fish and game laws in a number of States, during the past winter, that we have found it necessary to issue an eight page supplement of these changes. Paste these eight pages in the back of your copy of GAME LAWS IN BRIEF and you will have complete and correct laws to June 1st, 1912, governing fishing and shooting in every part of the United States and Canada.

Ten Cents is the price of this addenda. Mailed to any address upon receipt of price.

FOREST AND STREAM PUBLISHING COMPANY
127 Franklin Street
New York City

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He knows it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring**.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. **LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N. Y.**

Worcester Sportsman's Club.

WORCESTER, Mass., June 5.—The club has elected the following officers: President, J. F. Scherer; Vice-President, C. R. Blanchard; Secretary and Treasurer, Jay Clark, Jr.; Executive Committee, Harry L. Snow, Harry H. Wright, Hartley W. Bartlett, Hiram S. Powers and Jay Clark, Jr.

During the season we propose to hold at least two registered tournaments. The first one on June 26 and the second one Sept. 11, or as near those dates as possible. Weekly programs will consist of a regular program of 50 targets at 1c. each. Any member desiring to shoot more than the regular program will have ample opportunity to enter extra events for practice. With our handicap system the beginner has a better chance to win trophies than the more experienced shot.

The annual dues are \$2.00. If you desire to become a member, kindly send \$2 to Jay Clark, Jr., Treasurer.

At the weekly shoot of our club on the above date, the following scores were made:

	Reg. Prgm.		Johnson Total	
	H. B. T.	Cup.	Broke.	
J Powers	18 31 49
Wilson	25 29 50
Delaney	23 26 49
Crompton	7 35 42	21 10	66	
Harrington	22 28 50
Prentice	24 30 50
Walsh	23
Pecot	25 17 42
Allen	20 21 41
Clark	3 41 44	18 15	74	
Emory	7 38 45	17 14	69	
Snow	6 42 48	25 15	82	
Sherer	13 36 49	20 5	61	
H Powers	9 31 40	18 11	60	
Wells	25 29 50
Dodge	15 30 45	17 8	55	
Doten	5 45 50	20 5	70	
Gould	20
Wright	11 31 42	13 11	55	

In shoot-off for du Pont trophy, contestants re-handicapped on actual breakage in regular program of 50:

Harrington	9 1/4	19	28 3/4
Prentice	8 3/4	10	18 3/4
Wells	9 1/4	14	23 1/4
Doten	1 1/4	21	22 1/4

Holland Gun Club.

BATAVIA, N. Y., June 8.—At our regular shoot today Gardiner was high gun with 84 out of 100, winning point on the Du Pont trophy with 23 out of 25 in the last event. Fanning was second, 80 out of 100, shooting a strange gun. "Thirty-nine," Baker and Williams tied for the cut-glass dish on the regular program of 50, with added target handicap. They tied again on the shoot-off in the last event, and then it was a miss-and-out, "Thirty-nine" winning on the fifth target. We were very glad to have as guests to-day Messrs. H. D. Fanning, New York City; Ebberts, Buffalo; Kershner, Rochester; Fisher, Elba. We are revising our mailing lists for our tenth annual tournament, which will be held Aug. 14. If you did not get a program last year please send your name and address for our list. Scores follow:

Targets:	10	15	10	20	20	25
Gardiner	6	14	8	17	16	23
Ebberts	6	8	10	19	15	20
Walls	4	11	9	17	17	20
Fanning	5	13	8	17	16	21
Watson	7	10	7	14	13	19
Thirty-nine	3	15	7	13	14	16

Owens	3	4	7	4
Kershner	6	17	16	..
W Knickerbocker	13
Mason	3	7

CHAS. W. GARDINER, Sec'y.

Hyde Park Gun Club.

THE attendance at the weekly shoot of the club was fair, though several of the regulars had their fill of shooting at the State tournament and stayed at home to rest. Hammerschmidt was high gun, breaking 48 out of the last 50 and going out with 109 out of 125, or 88 per cent., a mark lower than usual for him. Besuden is coming back into the game again, and will do better work after more practice, he broke 44 out of the first 50, but failed to keep up that gait. Eustis was out for the first time this year; his score is not what he puts up when in practice. The next shoot of the club will be held on June 15, when several visitors from other local clubs are expected. Weston is a new man on these grounds, but evidently not new in the game. Barrett only gets out once in a long time; he shot a 74 per cent. gait in the first 50, but fell down in the 25s, probably they were too long for him. Frohlinger did his shooting, as usual, when someone else had got through, so that he could be spared as scorer, etc. Ertel is a frequent visitor across the river, but seldom gets out here; his score was lower than he makes on familiar grounds.

Shot at, Broke		Shot at, Broke	
Hammerschmidt	125 109	Eustis	50 39
Besuden	125 98	Frohlinger	50 39
Weston	125 92	Redus	50 29
Barrett	100 64	Ertel	25 19

Analostan Gun Club.

WASHINGTON, D. C., June 9.—The Columbus memorial unveiling here yesterday militated against the attendance at the regular shoot of the Analostan Gun Club. However, fourteen of the faithful were out and had a good time. We had as a visitor Col. G. F. Hamlin, of the Du Pont force, stationed at Philadelphia. All enjoyed meeting this genial gentleman. He maintained his reputation as a shot, and that of his firm by being the high man for the day, scoring 92 out of 100. Let me tell you, it was good shooting, too, for the targets were hard. Lieut. Barber was next with 85, while Perkins and Huseman were next in line with 84 and 83 respectively. Ford was high in the doubles, scoring 21 out of 12 pairs, and would have made a much better showing in his singles, had he not been shooting à la Olympic, and doing other fancy stunts. The scores:

Shot at, Broke		Shot at, Broke	
Green	140 77	Kirk	100 56
Col Hamlin	100 92	Parsons	90 62
Barber	100 85	Ford	75 57
Perkins	100 84	Peck	50 41
Huseman	100 83	Luttrell	50 35
Wagner	100 67	Bray	50 33
Emmons	100 58	Monroe	50 28

The scores at the 12 pairs follow: Col. Hamlin 17, Barber 15, Perkins 18, Huseman 13, Wagner 17, Emmons 7, Kirk 13, Parsons 18, Ford 21, Luttrell 13, Bray 10, Monroe 13.

MILES TAYLOR, Sec'y.

New England—Delaware.

THE next shoot of special importance scheduled at the Du Pont Gun Club will be the 100-bird race on June 29, between a ten-man team representing "all New England," and a ten-man team representing "all Delaware." Teams will be made up of the best shots from the New England States, and from the flower of Delaware's shooting fraternity. The New England team will arrive in town from Boston on the Federal Express, reaching Wilmington Saturday morning 7:10 A. M., and will be entertained at breakfast by the management of the gun club. The morning will be given over to further entertainment for the visitors, showing them the town and in practice shooting. The race itself will start shortly after 1:00 P. M. The visiting team, which is under the management of the well-known Paleface Shooting Association of Boston, will probably be made up from the following amateurs: W. F. Clarke, Frank Hilliard, Dr. Newton, Chas. Blinn, G. L. Proctor, E. Randall, E. C. Griffith, Ray Richardson, C. H. Marden, H. L. Snow, Mayor E. E. Reed, H. H. Knight, Silas B. Adams, Guy Randall, S. W. Winslow, Jr., R. L. Spotts, W. D. Hinds.

The "all Delaware" ten-man team will probably be chosen from the following shooters, whose names regularly appear among the high score winners at the local club: A. B. Richardson, Wm. Foord, W. S. Colfax, E. A. W. Everitt, J. B. McHugh, J. H. Minnick, Eugene du Pont, E. E. du Pont, Ward Hammond, Henry Winchester, W. Edmanson, N. K. Smith, Stanley Tughton, W. A. Joslyn, H. P. Carlon, H. W. Bush, J. T. Roberson, W. G. Wood, L. C. Lyon, Vic. du Pont.

Benton Gun Club.

BENTON, Ill.—A rainy day for the first day cut down the attendance some at our tournament, May 28-29, but at that we had one of the best shoots that has ever been held in southern Illinois, for there was a bunch of jolly good shooters here. There were a number of professionals, who took care of the shooting. Louis Ebbert, a trade representative, was cashier, so there is no question but what his end of the shoot was ably handled. A. Anmann was as jolly as ever:

Out of a program of 300 targets, the following scores were made:

W H Foulk	256	Hamlin	256
Geo Roll	275	Howlett	262
Bart Lewis	294	Dearing	254
J Barto	274	Venable	275
I Galbraith	289	C Fitzgerald	255
R C Rains	274	S Eskew	267
T A Warren	273	E McIntire	255
H B Pottinger	290	J Morris	237
J Bug	279	Byrn (75 tgts)	71

W. H. FOULK, Sec'y.

Registered Tournaments.

THE following tournaments have been registered with the Interstate Association during the week ending June 8, 1912:

- July 5.—Lethbridge, Alberta, Can.—Alberta G. C. W. Stickley, Sec'y.
 - July 22.—Sheridan (Wyo.) G. C. J. H. Bradfield, Sec'y.
 - Aug. 21-22.—Garrison, N. Y.—Garrison-Highland R. and G. C. F. N. Limdebjerg, Sec'y.
 - Aug. 29.—Wheeling, W. Va.—Big Game Rifle, Rod and Gun Club. H. G. Frederichs, Sec'y.
 - Aug. 31.—Menominee Falls (Wis.) G. C. Jas. A. Pike, Sec'y.
 - Sept. 2.—Hammond (Ind.) G. C. J. C. Becker, Sec'y.
 - Sept. 10-11.—Caro (Mich.) S. A. F. W. Bowles, Sec'y.
 - Sept. 26-27.—Baltimore, Md.—West Forest Park G. C. Richard L. Collings, Sec'y.
- ELMER E. SHANER, Sec'y-Treas.

Cheap Ammunition

for .22 High Power

Factory .22 H. P. cartridges cost \$34.20 net per 1000—too expensive and too powerful for general use. Save your fired shells; reload with this Ideal gas check bullet; you have 1000 excellent cartridges for hunting and target requirements up to 300 yards or more for \$9.34. Making your own gas check bullets, your total cost per 1000 cartridges is only \$6.17.

For short range use 53-grain lead bullet. Cast these bullets and reload your shells; you have 1000 extremely accurate S. R. loads for \$3.37. Free circular gives full details. 160-page Ideal Hand Book tells about reloading all cartridges; mailed for 6c postage.

The Marlin Firearms Co., 27 Willow St., New Haven, Conn.

MAXIM SILENCER

Stops the old-fashioned noisy report and vicious recoil kick. Doubles the pleasure of shooting and is a wonderful aid to marksmanship. Made in all calibres with coupling for immediate attachment to rifle.

Ask your dealer to show you one, or write us make, model and calibre of your rifle, giving dealer's name and we will send complete information.

Insist upon a silencer equipment when ordering a new rifle.
MAXIM SILENT FIREARMS COMPANY
17 Colts Armory Hartford, Conn.

New Jersey State Sportsmen's Association.

NEWARK, N. J., June 8.—The biggest tournament thus far held by the New Jersey State Sportsmen's Association was shot at Smith Gun Club grounds during past three days. Harry Kahler won high gun honors for the three days; J. H. Schlicher second, and A. B. Richardson third.

The three-man team championship cup was won by F. R. Wickes, Thos. Dukes and E. von Lengerke, representing the Orange Gun Club. Wickes and Von Lengerke, representing the same club, captured the two-man trophy. The individual championship cup was captured by B. M. Shanley, Jr. It was not won without a hard battle. Three men—Dr. W. H. Matthews, B. M. Shanley, Jr., and E. von Lengerke—tied for the cup with 49 breaks each out of the possible 50. In the shoot-off at 25 targets, Shanley broke 23, Von Lengerke 21, and Matthews 20. Scores:

Janesville Gun Club.

JANESVILLE, Wis., June 5.—The reputation of the West for interest and attendance was kept up at the meet here to-day, when fifty-nine shooters "toed." The scores ran well up, J. S. Young getting 145 for first, followed by F. J. Dreyfus with one less, and Wm. McVicar with 141. As one sheet of our score was duplicated, may be a bunch of higher guns appear on missing sheet, in which case correction will be made in next issue. There is one thing certain, H. D. Freeman was high professional with 145 out of 150. Scores:

PARKER GUNS

Wear Well, Shoot Well and Handle Well

Wear well because they are made of the best material by the most skillful craftsmen. Shoot well because they hold the charge compactly together at extreme ranges. Handle well because the greatest attention has always been paid to the distribution of wood and metal, to insure perfect balance and the most symmetrical outline. Twenty-bore Parkers have set the pace for small bores in America, and are growing in popularity every year with the most progressive sportsmen.

For further information regarding guns in gauges ranging from 8 to 28, address

Patented, Feb. 20, 1912.

SPORTSMEN'S GLASSES REVOLUTIONIZED

by our new shape of AKOPOS CRYSTAL; far superior to the old style amber. This is our own exclusive product but may be obtained through your dealer. Before buying a field glass or binocular at least hear what we have to say upon the subject. American agents for B. S. A. air rifles. Sole owners of the King-Adolph Rifle Telescope, used and endorsed by Lieut. Townsend Whelan, E. C. Crossman, Stewart Edward White, Chas. Newton and others.

The F. W. King Optical Co., 450 Ellastone Bldg., Cleveland, O.

Climb a Glacier in Glacier National Park

Located in Northwestern Montana—in the very heart of one of the wildest and most magnificent sections of the Rocky Mountains—this gigantic scenic amphitheatre is attracting tourists from all over the world.

Towering into the sky, massive mountains lift their snow-capped heads among the clouds; on their sides hang slowly grinding glaciers. In the deep-cleft valleys lovely lakes reflect the overhanging crags. Vivid contrasts abound. Above, eternal snows glinting in the sunlight—at one's feet, the evanescent beauty and warmth of flowers.

"See America First"

Take the Great Northern to the official gateway—the only main transcontinental line to border on a national park. Luxurious travel comfort—unexcelled service—the great national highway to Glacier National Park and the Pacific Coast. All Great Northern Coast Trains run via Glacier National Park.

Send at once for the Glacier National Park Library

nine pieces of remarkable literature, including a striking "Aeroplane View" of the Park. Twenty cents in stamps (to cover postage) will bring the complete set—each piece beautifully illustrated. Four cents brings a splendid descriptive booklet.

Round-Trip Summer Tourist Tickets on sale daily until September 30th

 Panama-Pacific International Exposition, San Francisco, 1915

KENNEL

Ladies' Kennel Association of America.

SOCIETY was well represented on June 3 and 4, when the tenth annual exhibition of the Ladies' Kennel Association of America was held on the Fair Ground at Mineola, L. I., it being the first open air dog show held in Long Island this season.

All sizes—all classes of dogs, from the tiny Pomeranian and Pekinese to the giant St. Bernards and plain "hounds"—met on one common ground, each one voicing his anticipation of coming honors in his own particular language.

A notable victory was scored by Mrs. Roy A. Rainey with Endcliffe Snowman. He was shown in the class for West Highland white terriers, and in capturing the blue for the class defeated some of the best terriers in the country. Mrs. Frank T. Clarke's collection of Pomeranians landed the lion's share of ribbons, being victorious in both classes for dogs and bitches.

In the variety classes and unclassified specials, Mrs. Tyler Morse's old English sheep dogs divided the honors with the Red Brook kennel's French poodles. The President's cup was presented by Miss Anna Sands to a poodle belonging to the Red Brook Kennels. The Vice-President's cup went to Mrs. Tyler Morse's champion Slumber for the best of the opposite sex to the winner of the President's cup.

Mrs. R. F. Mayhew's Fox Hills McDuff retained his fame of having never been beaten in his class, either here or abroad, by capturing

J. G. SHERMAN'S SHETLAND SHEEP DOG.

all the honors in the collection of English toy spaniels.

Sporting dogs were splendidly represented by pointers, English setters, Irish setters, beagles, spaniels, etc.

In the pointer dog class J. C. Weiler's Rostrevon Rattler won first honors. Bitches honors were won by B. F. Lewis's Saucy Queen. C. Wren's Kerry Bell took reserve.

The honors in the English setter class were taken by Meadowview Kennels' dog Meadowview Rock; bitches won by B. F. Lewis's Lansdowne Lena.

Irish setters—dogs—won by Muskerry Kennels' Muskerry Fen; reserve taken by J. C.

Hanna's Lansdowne Shamus. Bitches won by Miss A. B. Lewis's Lansdowne Rum nanthy Rhu.

Beagles—dogs—won by H. C. Phipp's Wheatly Chorister. Bitches, won by H. C. Phill's Wheatley Fearnot.

Clumber spaniels—dogs and bitches—first, George R. Preston's Fielding Queenie, of Ormonde; reserve Hubert Van Wagenen's Beechgrove Jacques.

Cocker spaniels—dogs—won by Mepal Kennel's ch Mepal's the Judge. Bitches, won by W. T. Payne's Medpiff Dariole.

Bulldogs—dogs—won by T. W. Lawson's

BIFF BANG.

Dreamwold Dotham. Bitches, won by R. R. Littlefield's Sensation of the Path.

In the unclassified specials the Ballyhoo challenge cup was won by Muskerry Kennel's Muskerry Fen for the best American bred dog or bitch bred by a member. Mrs. Frank Clarke's Wee Oliver won \$250 in gold for being the best toy of any breed. The Copthorne Cockney trophy for best other than Pomeranian was won by Mrs. Tyler Morse's Heroine.

American Kennel Club.

A SPECIAL meeting of the American Kennel Club will be held at its offices, 1 Liberty street, New York city, on June 18, at 3 o'clock, to consider a proposed amendment to Rule V., which makes only American bred dogs eligible to compete in the novice classes. This was originally intended to protect American dogs from competition with English champions, which might step in and win a novice class. The amendment proposes that the novice classes shall be open to dogs bred in the United States, Canada, Mexico or Cuba. The entry blanks must state the name of the breeder and the place of birth.

POSSIBLE NEW CAMPER'S FOOD.

AN American breakfast-food manufacturer is in Hawaii investigating the taro plant with the view of putting on the market a new food product made therefrom. Taro is a popular name for Colocasia antiquorum, and especially for its variety esculentum, a tropical plant, grown in the islands of the Pacific, where it forms a principal food. Its starchy, stemlike tuberous root is now boiled or baked, made into bread or into poi, a fermented product. The young leaves and tender leaf stalks are used, respectively, like spinach and asparagus.

Cassava, or mandioc, another starchy tuber, which grows abundantly in tropical America, might also prove valuable for conversion into breakfast foods. Cassava has long been sold in flaked form in India.

Bananas and plantains are also now flaked and crisped, samples of toasted plantain flakes from the Dominican Republic being among the exhibits at the Bureau of Manufactures in Washington.

Du Pont Gun Club.

WILMINGTON, Del., June 8.—The main feature at the regular weekly shoot of the Du Pont Gun Club yesterday afternoon were the first contests for the Eugene du Pont class cups, one for each class, A, B, C and D. Fifty-three shooters took part in the contests, and as weather conditions were favorable, scores ruled high.

For the Class A cup, Mr. Du Pont himself won first place by making a straight score of 25. In Class B, Isaac Turner and H. P. Carlon tied at 23 each. On the shoot-off Turner won 22 to 21. R. P. Choate won the Class C trophy with 22, and H. C. Pollock the Class D trophy with 20.

Several high scores were made during the afternoon's shooting. W. Edmanson led the field with 96 out of 100, running the last 68 straight. This was a remarkable total. W. S. Colfax, Jr., was second with 95. W. P. Northcott was third with 94.

Scores in the Eugene du Pont class cup contests were as follows:

W. Edmanson, 22 out of 25; W. A. Joslyn 23, N. K. Smith 17, Thorpe Martin 20, W. P. Northcott 23, Eugene du Pont 25, Clyde Leedom 19, Dr. Stanley Steele 19, H. W. Bush 15, J. A. MacMullen 18, Dr. Lewis Rumford 19, W. M. Hammond 21, Dr. H. Petts 16, J. T. Skelly 23, F. P. Ewing 21, J. B. McHugh 24, L. L. Jarrell 22, T. B. Wright 11, T. W. Mathewson 19, Victor du Pont 20, W. S. Simpson 13, J. J. Magahern 22, H. P. Carlon 23, S. J. Newman 10, H. C. Pollock 20, Dr. E. Q. Bullock 13, S. G. David, 13; W. Tomlinson 17, H. Winchester 21; J. H. Minnick 24, J. T. Roberson 20, Dr. A. Patterson 19, J. B. Grier 21, E. E. du Pont 20, C. H. Simmon 21, D. Grier 19, W. G. Wood 22, J. W. Anderson, Jr., 16, R. P. Choate 22, C. R. Kenworthy 14, W. M. Francis 10, Dudley S. Wood 14, David Lindsay 18, E. A. W. Everitt 21, W. B. Smith, Jr., 19, Stanley Tughton 22, William Coyne 18, R. P. Willis 22, Isaac Turner 23, W. O. Mechem 13, W. S. Colfax, Jr., 24, L. D. Willis 23, Z. H. Lofland 17.

Rifle and Revolver

A Good Score.

Capt. C. L. Burdette, of the West Virginia National Guard, a member of the United States Olympic team, at Indianapolis, made the remarkable score of 22 bullseyes out of 75 shots on June 8, at the 600-meter range. The bullseye in use was 4in. smaller in diameter than that generally used at the 600yd. range in the United States, the distance being about 56yds. greater.

Du Pont Gun Club, Rifle Dept.

WILMINGTON, Del., June 8.—The pistol and rifle scores made at the club's ranges yesterday were:

Pistol scores: L. C. Dorsey 84, Victor du Pont 43, Clyde Leedom 48, E. A. W. Everitt 53, W. P. Northcott 72, 75, 76 and 72; J. T. Skelly, 73, 72 and 77; E. E. du Pont, 62.

Rifle scores: J. T. Birch, 223, 232 and 219.

TWO IMMORTALS.

"I KNOW a big fish by the swirl it makes when playing near the surface," said the Haji. "This is a good one, I'm thinking." It was undoubtedly a strong fish, but he went again and again into the big pool under the cliffs where the blue rock pigeon breed at Sulphur Springs, and, hauling one foot after the other out of the deep mud of the bank on which I stood, little by little I strove to get back to firmer ground. Weaker and weaker became the rushes until the big mahseer rolled on his side in the shallow water and the Haji waded out for him with the landing net. And then, all of a sudden, despite my light, careful strain upon him, by one of those lamentable mischances against which no mortal is immune, out slipped the hook from his mouth and five strenuous minutes' worth of my time darted back to deep water in evident surprise at his regained liberty.

"A gallant fish," I said to the Haji, "he almost deserved to get off." "Twelve pounds if he was an ounce," gasped the Haji. "God no doubt meant him to live."

And thus a good fish, too lightly hooked, added to the roll of the "immortals," those fish, fowl or beasts that I have missed, when my shikaris—race of fatalists—have invariably pronounced "things immortal was never meant for death."

This was the fourth fish on a morning that would have been well enough in itself but for the disappointment that has been recorded above and the one that remains to be told. The other three fish, weighing just over four pounds, dangled on the stick that the Beloch lad who accompanied us, was carrying; and the day was still before us.

Splendid cuisine. Orchestra.

Send for handsome illustrated Catalog 81
BOWRING COMPANY, 17 Battery Place, New York

"We'll try the Chieftain's pool next," said my mentor, Imam Baksh, "the heir was drowned there half a century ago trying to get through at the ford on his mare. He was a fine young fellow and a great swimmer. Some said his sword that was in his hand got wedged under a rock and drew him down; some that he got a knock on the head, as the current took him. The first his father knew was that the mare, who loved the young chief like a dog, came back of herself to the home, whinnying with distress and refusing to be comforted."

I started at the top of the pool, Sher Ali, Lance Daffadar, watching from cover of a rock the movement of the fish. A three-quarter-pounder took my bait with very little delay and was hauled in without much ado. Soon the float was taken under again and I struck, but not soon enough. I reeled up and adjusted another bit of paste, Sher Ali indicating to me by excited pantomime that the fish was worth having. Nothing big, however, came in that particular spot, though several small fish were added to the bag.

The sun was now beginning to get hot and I was glad of the generous helmet which I always keep for fishing days. We were now at the deepest part of the pool and several times in succession my bait was sucked off before I could strike. "Something big and crafty," I supposed, but was saddened to find it was only a quarter-pounder.

Great were the maledictions bestowed upon the unfortunate fish by my followers.

"Oh, son of an immortal mother," said one. "Have you no shame to push in thus before your elders?" "Pilferer and thief," said another, as I put the little creature back, "begone, and let this be a lesson to you."

But now came the tragedy of the day. I had been using all day a hook tied on the best double salmon gut made by the most reliable of makers and right well it had stood the strain. But it now showed signs of wear, and, knowing the reputation of the Chieftain's pool, I put on a new hook and trace, exactly similar to the first one, carefully damped, and cast my line out as far as a long and powerful rod could send it.

For the first minute or two nothing happened. My bait soaked away from the hook and had to be renewed. But, with the next there came a deliberate downward settling of the working end of the float, and my challenge with the rod tip was answered by the indignant rush of a monster fish that ripped the line off the reel with a scream. I was evidently in for something bigger than I had ever met before on this stream, and I reeled up with the utmost caution after the first run was over, holding tightly, but firmly, and waiting.

Ah, the giant was off on a second mad rush and gave him all he wanted, which was a lot. Again I reeled in, and then, why then, to the demonstration of the eternal fallibility of human devices, the line came back to me, the gut collar broken just above the hook.

"God's will," said the Haji.

As for me, words failed me, and I simply laughed. The Haji looked at me approvingly and made some flattering remark about my temper. "Oh, don't compliment me on my temper," I said. "I have lost it completely lots and lots of times over the most trivial things. It is the magnitude of the thing that knocks me. Have you ever seen anything to beat those two rushes?" And the Haji had to admit he never had. I went on fishing till my watch told me it was time to be moving on to my next stage, where breakfast and my work awaited me, and before long the gray outline of the old Fort, in a room of which I was to stop, appeared in sight.

The Haji told me one of the many stories that have attached themselves to the building—a story hoary with age, going back to the times before the Mahomedan invasion, when Hindu Kings ruled the land.

"There was a Raja called Sirkap, or the 'Headsman,' who founded the town and built himself a palace here. The reason for his name was that being very fond of the game of dice, he invited all who would to come and play with

him, the stakes being on the one side the hand of the Raja's beautiful daughter, Kokola, and on the other the head of his adversary.

The Raja never lost, because he had a tame rat which he had taught to turn with his tail unobserved, the dice after they had been thrown. One day, however, there came along the hero, Rasala, of whom you will have heard. Having seen the Princess Kokola, he was determined to win her, so he continued disguised as a servant when a royal competitor was playing with the Raja, and it was not very long before he spotted the trick of the rat. By the time his turn came to compete, he had provided himself with a cat, whose presence so demoralized the rat that he was afraid even to leave his hole. The result was that Rasala, who was as good at dice as he was every other kind of noble accomplishment, won hands down.

"The Headsman" was not altogether sorry to get so fine a son-in-law, while Princess Kokola had fallen in love at first sight with Rasala, so they all lived happily ever after."

The Haji's story ended simultaneously with our arrival at the fort. I dismounted, and after bidding my cheery companion farewell, went to make myself presentable for the day. Before long, there came to me in my tub, the smell of some of my fish frying, and I expected that, after all, despite my two never-to-be-forgotten losses, ten fish weighing nine pounds was what some folk would be thankful for.—Sarhaddi in the Asian.

TO PREVENT FIRES.

UNDER general orders issued Feb. 1 and in force throughout the territory traversed by the Philadelphia, Baltimore and Washington, the Northern Central and the West Jersey and Seashore Railroads of the Pennsylvania Company, particular emphasis is placed on the control of forest fires both by preventive measures and in activity fighting fires when they do start. Engine men are ordered to observe every precaution to prevent the setting of fire both in the care and use of their engines. Trainmen are ordered to notify the superintendents and section gangs as soon after discovering a fire as they can, and freight trainmen are also instructed to stop and extinguish small fires wherever practicable.

Trackmen are instructed to extinguish all fires that start on or near the right-of-way, and give all possible help in fighting fires both on and off the company's property and to do necessary burning of old ties, debris, etc., when there is the least danger from fire. Supervisors are ordered to have the right-of-way burned over to a plowed line 100 feet from the track wherever this is possible, this provision being a practical adoption of the requirements of the New Jersey Railroad fire line law. They are to further notify the State fire warden in Maryland, New Jersey and Pennsylvania if a forest fire occurs on land not owned by the company. Operators are required to transmit without charge all messages relating to forest fires on or near the company's property.

This is the most thorough and detailed provision for the control of forest fires yet made by any of the railroad companies of the State—Newark Call.

TUNA BAITS.

THE leaping tuna, which affords such sport on the Californian coast, is, we believe, identical with the fish to be found in the Mediterranean and off the Spanish coast. The fish is caught by trolling, and we have taken them on a hook dressed with a bunch of the leaves which inclose the ears of maize. When drawn through the water, these strands quiver and somewhat resemble the motion of a flying-fish. On the Pacific coast the usual bait is a flying-fish, and the fisherman endeavors by the action of his rod to give a lifelike action to the bait, making it leap and squatter along the surface of the water.—Shooting Times.

I have written a book that I believe will help you to realize the possibilities of nature from the stand point of health, pleasure and comfort. I had this in mind as well as the commercial idea, for, of course, this book is intended to sell goods.

I am a child of the Big Outdoors

I have camped, canoed, hunted and fished from my childhood days—often far from the usual haunts of man. I am a baseball, tennis and golf enthusiast as well. I ought to understand this business thoroughly; at any rate it is my pride. May I send this book—No. 530?

SPOTTED STING RAY—9 feet long, weight 250 pounds
 Described in Robert Sedgwick's "Florida Fishing," beginning in this issue.

EVERY maker gets occasional victories, but **why** does the Factory of Precision secure such sweeping victories in various Rifle and Shot-gun competitions? Many of not National but International importance.

See Here:—

The **World's Record** was established with Stevens Rifle and Stevens Telescope, March 15, 1911, at the Annual Indoor Championship of the Zettler Rifle Club Tournament, New York City. A. Hubalek, Brooklyn, N. Y., was the marksman and scored 2484 out of a possible 2500 at 75 feet distance and shooting offhand. Every shot went within the twenty-four ring.

Also Here:—

Park Rifle Club, Bridgeport, Conn., winners of U. S. National Championship. National Rifle Association Inter-Club League. Winner of 1912 Eastern Inter-Club Rifle League Championship. Establishing **World's Record**, 996 x 1000—25 yds. Won with Stevens No. 404 Rifles.

This One:—

Deering High School, Portland, Maine. Holds High School Rifle Team **World's Record**, 969 x 1000. Made with Stevens No. 404 Rifles.

And Another:—

The Amateur event of the year—the 1911 National Amateur Championship—was won with a regular stock "Trapshooter" Grade Stevens Repeating Shotgun—by the remarkable score of 196 ex 200—18 yards rise.

ARE YOU A GUNNER?

Do you love to follow your good dog over the fields in search of quail or chickens, or to struggle through swamp or along thick grown hillside, expecting to hear the roar of the ruffed grouse or the twitter of the fall woodcock? If so, you should have this new book.

AMERICAN GAME BIRD SHOOTING

By **GEORGE BIRD GRINNELL**

(New—Just Published)

This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys.

The first part of the volume is devoted to a description of the various species and their habits—the way in which they live their lives.

The second part of the book is devoted to upland shooting and treats of the methods by which all the upland birds are pursued and taken. The chapter "Aids to Shooting" describes the clothing, guns, and loads and dogs that the gunner may profitably use; while the last section of the book treats of the shooting of the future and the efforts to rear our native quail and grouse in domestication.

The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full page portraits of different game birds and hunting scenes, with a number of cuts in the text.

Cloth. About 575 pages. Price \$3.50, net. Postage 25 cents.

This book is of inestimable value. It contains the genuine hunter-naturalist facts given in the most entertaining and interesting style.

FOREST AND STREAM PUBLISHING CO., 127 Franklin St., NEW YORK CITY

ORIGIN OF COLORS IN YELLOWSTONE PARK.

THAT the harmonious and brilliant tints in the geysers and hot-spring pools are due mainly to plant life is one of the interesting statements made in a publication entitled "The Geological History of Yellowstone National Park," just issued by the Department of the Interior. Algæ flourish equally well in the waters of all geyser basins and on the terraces of Mammoth Hot Springs. Wherever these boiling waters cool to the temperature of 185 degrees algous growths appear, and by the lowering of the temperature on exposure to air still more highly organized forms gradually come in. It is said that at about 140 degrees the conditions are favorable for the rapid growth of several species. The development of plant life at such excessive temperatures and on a scale of such magnitude seems a marvelous thing. Nowhere else can this be seen so well as in the Yellowstone Park.

As the water in shallow pools chills rapidly, corresponding changes in color follow. No life exists in the center, where the water is boiling. On the outer edge certain colors prevail, and in the cooler overflow channels still other colors predominate. In a geyser basin, the first evidence of vegetation in an overflow stream consists of creamy white filamentary threads passing into light flesh tints and then to deep salmon. With distance from the source of heat, the predominating colors pass from bright orange to yellow, yellowish green, and emerald, and in the still cooler waters various shades of brown.

The marvelous colors in the Grand Cañon of the Yellowstone are mainly due to mineral matter, the pigments being derived from the lavas. Along the base of the cañon thermal and solitaric agencies have been at work through long ages, slowly but steadily decomposing the rhyolite rock that forms the walls. Upon the buttressed walls and sculptured amphitheaters tints of green and yellow are intermingled with red, the colors being blended with singularly harmonious effects. From the roaring turbulent river at the bottom to the somber green forests at the top, the abrupt walls seem aglow with color.

This publication contains an account of the geologic forces that have caused the wonderful natural features that have made the Yellowstone famous throughout the world. It is illustrated by photographs of some of the principal features of the park and is written in non-technical language, so that it may be readily understood by persons without scientific training.

THE AGE OF ANIMALS.

DR. CHALMERS MITCHELL in making investigations into the longevity of the animal kingdom asserts that only mankind, whales, elephants, eagles and parrots live to be 100 years old. In a recent lecture Dr. Mitchell presented a schedule of the average prospects of life in lower orders of birds and animals, of which a number of his tabulations are reprinted here:

	Average Years.
Elephants	100
Whale	100
Eagle	100
Parrot	100
Owl	80
Orang-outang, chimpanzee, gorilla	70
Rhinoceros	60
Crow and raven	60
Lions, tigers, bears	50
Horse, deer	40
Goose, duck	30
Cattle, sheep	20
Squirrel	20
Canary	20
Cat	20

In the main the more highly organized animals are the longer lived, as the doctor shows in comparing the chimpanzee, with seventy years, to man's 100 years and to the twenty-five years' life in the lower orders of apes.—Chicago Tribune.

Would you like to catch a 500 pound fish that leaps like a Salmon?

Tuna Fishing
25 Hours from Boston

YOU can leave Boston at one o'clock on the fine Dom. Atlantic steamer and be actually fishing the next afternoon for the most tremendous game fish that swims.

Mr. Ross showed the wonderful possibilities by his feat at North Sydney (see picture above). We have a place

500 miles nearer

Log Cabin in pine grove on sea-shore
More tuna and easier to get at
Good guides, good food, good equipment
Private motor boat (that motes!)

Fish of 800 lbs. actually taken in nets

Season is July, August and September.
Better write to-day to

L. D. MITCHELL
Liverpool Nova Scotia

If you can get your mind down to it, there's also: fishing for striped bass, pollock, trout, land-locked salmon; seal shooting, shore birds; woodcock and duck in September.

Log of a Fishing Cruise on the East Coast of Florida

By ROBERT SEDGWICK (THE SCRIBE)

In Two Parts—Part I.

WE are not as young as we used to be, but no pack of school boys could have been lighter hearted than we three when we found ourselves comfortably ensconced in the drawing room and adjoining section on the Florida Special, pulling out of the Pennsylvania Station at 1:26 P. M., Saturday, March 2, bound for Miami. A daily paper published some years ago, when Miami was struggling to be more than a flyspeck on the map, about sixteen different

vert thousands of acres of useless, swampy mosquito-haunted lands into prosperous homesteads. Wonderful tales are told of the advance in real estate in the limits and suburbs of this booming little tropical city, now numbering 10,000 inhabitants. Certainly the fertility of its soil and the genial climate guarantee large profits to growers of garden truck for the Northern markets. The marl, or soft gray clay, which is dredged up from the bottom of the cut, is now piled high on

that we would buy everything non-perishable at home and ship it down by freight, except meats, ice and gasoline, as that course would indubitably prove much cheaper.

Thursday morning, March 7, opened rainy and cool; thermometer, 76 degrees. All thermometric readings during the cruise were made at 8 A. M. from a Fahrenheit thermometer hanging in a cool spot in the cabin, where the reflection from the sun on the water could not

AUXILIARY YACHT SAMOA.

TARPON, SHARK, COBAS, TARPON, JEWFISH.

ways of pronouncing the name, but time has now set the seal of approval on "Myāmā," and you will find yourself fashionable in calling it that.

We arrived there exactly on time at 3:30 A. M. on Tuesday, March 4, but as the Florida East Coast considerably drops the Miami car, we did not emerge from dusty sheets until 7 o'clock, when we repaired to the hotel for baths and breakfast. Our first thought was to inspect what was to be our floating home for three weeks, the yacht Samoa. As she was out with a party, we beguiled the time by taking a trip up the Miami River in the small launch Joker past ship works, roller skating rink, golf links, orange groves and pleasure parks, to the cut, or canal, that is to drain the Everglades and con-

the banks. It is found to be an excellent material for road making and is being extensively used about Miami. This marine marl, or soft coral, was also of vital assistance in the construction of the Key West extension. It contains about 90 per cent. carbonate of lime and becomes hard as rock when exposed to the air, presents a smooth, firm surface to the waves and successfully resists the suction or under tow.

The yacht arrived Tuesday evening. Wednesday was spent in getting supplies aboard. The steward submitted a formidable list, which was approved, and purchased at local shops, but it may be interpolated here that when we audited all bills and added up the "demnition total" at the end of the cruise, we unanimously decided

strike it. A few friends gathered at Tuttle's dock to go through the customary formalities incident to a send-off. The burgee of the New York Y. C. was broken out and toasted, and at 10:40 A. M. we proceeded under power south to Angel Fish Creek, say thirty-five miles, arriving at 4:30. It may be mentioned here that our chartered craft Samoa, Captain Charles H. Thompson, is an auxiliary, centerboard sloop, 60 feet over all, 16 feet beam, 4 feet draft, with a heavy duty 4-cylinder engine, which would drive her in smooth water with boats in tow about seven miles an hour. We had a plain, useful, working launch, 22 feet long, and two rowboats, one fitted with two revolving chairs for anglers and the other with one. Interior accommoda-

OUR LARGEST TARPON, 185 POUNDS, 7 FEET 8 INCHES.

tion consisted of roomy general cabin, with large transom and three staterooms, one double with bed and berth, occupied by the gunman and the photographer and one single for the scribe, the captain sleeping in the third. Forward were galley, ice boxes, lockers and forecabin, where three men could stow themselves away. Our crew embraced the skipper, one deck hand, one oarsman for small boat, and a cook and steward combined in the person of Harry Oakley, who proved an admirable chef, not to say a veritable *ordon bleu*. How he managed to produce such satisfactory results in a mite of a galley with two gasoline burners was always a mystery to us.

At Angel Fish Creek we immediately wet our lines on small game. The gunman got his first and the only bone fish that day, and the bag by dark included one Spanish mackerel, one moray, three groupers, twelve grunts and four snappers. These small fish afford good sport on a light trout rod, are toothsome as pan fish for breakfast, and prove acceptable to their larger brethren as bait. We also annexed that delectable salad *pièce de résistance*, the stone crab, a special favorite of the scribe.

Next day, March 8, dawned warm and clear, with light southeasterly breeze; thermometer, 84 degrees. Under power at 9 A. M., seven miles through Turtle Harbor to the edge of the reef and anchored within a stone's throw of Carisford Light. All three out trolling in the launch, practically all day, it being an exceptional day on the reef, with sea smooth as glass, taking into camp nineteen barracuda, several kinds of grouper, Spanish mackerel, red snapper and beautiful blue parrot-fish. This was our first day with big fish, and we missed a good many, owing to flabby city muscles and lack of practice.

Late in the afternoon we visited Carisford Lighthouse, built in 1852. The present light, the

scribe has been informed since, is to be improved this summer, and a new one installed, having increased power and wider range of the "Red Sector." There is a chain of five lighthouses along the reef from Miami to Key West, covering a distance of about 160 miles, being in sequence from north to south; Fowey Rocks, Carisford, Alligator, Sombrero and American Shoals, and they serve a double purpose of lighting the straits of Florida to the south and the Hawk Channel to the north of the reef. The crew of each consists of a keeper and two assistants; salary of the former ranging from \$720 to \$840 per annum, of first assistants from \$510 to \$600, and of second assistants from \$456 to \$480. In addition to salary each keeper is allowed thirty cents per diem for rations or commutation thereof. The lighthouses are supplied every six months with a regular allowance of staple articles and provisions, such as pickled meats, sugar, etc., these being paid for by the Government and deducted from the allowance of thirty cents per man per day, the balance being commuted to the keepers in cash.

Before turning in that night, Harry, the deckhand, rigged the shark gear and left it trailing all night, and on the

morning of March 9 all hands were summoned early on deck to haul alongside a large shark which had taken the twenty-five pounds of barracuda bait. At this point the gunman scored with his reliable .44 caliber revolver, shooting a soft-nosed jacketed bullet, and three shots reduced our captive to subjection. We hoisted her up in the starboard rigging, with the throat halliards, and on being opened, she contained twenty-four pups or young ones, fully one and one-half feet long, which wriggled about in most lively fashion on the deck.

The day was delightful, absolutely cloudless, smooth sea, thermometer 82 degrees, and we took advantage of it by making a long run in the launch to the wreck of the steamship Hannah M. Bell, of Stockton, England, which lay stranded on the edge of the reef and presented a sad, but interesting spectacle. The port side of her upper deck was flush with the water, and we boarded her, getting a snapshot of an immense solitary pelican, perched on the forward bulwarks, the only sign of life about the vessel, except her hold full of tiny fish. She seemed better fitted than the ordinary tramp. Her masts and stack were standing; her bits, binnacles, winches and other movable fittings remained, so we wondered she had not been stripped by native wreckers. On our return to New York the scribe was obligingly informed by Mr. Herbert B. Saunders, marine surveyor and salvage expert, of 15 Whitehall street, that the Hannah M. Bell, Captain Thompson, bound from Boston to Vera Cruz, was stranded at night, about April 4, 1911, as it was claimed,

through the inefficiency of the Carisford Light. She was a very fine steamer, built in 1893, registered tonnage 2,998, length 319 feet, beam 40 feet 6 inches and valued at \$120,000. An effort was made to raise her by the late John R. Arbuckle's condensed air process, with Peary's famous steamer Roosevelt, but it failed, and she is now doomed to leave her bones upon the treacherous Elbow Reef.

The morning's bag was a very fine and rare South African pompano, cleverly landed by the gunman, a dozen grouper, including Nassau, tiger and strawberry, sixteen barracuda, a shark four and one-half feet long which put up a hard fight, and two large succulent Spanish mackerel. In the afternoon we ran back to Angel Fish Creek, eight miles, and anchored for the night well off shore to dodge mosquitoes. The gunman went stone crabbing and got fifteen, also conch, which the natives eat raw with avidity and ascribe to it marvelous recuperative powers.

It blew up very fresh in the northwest in the night, and Sunday, the 10th, was a cool, windy day; thermometer, 77 degrees. We tried bone fishing, but they acted very shy, and the scribe was the only one to score. After lunch we opened a large female shark caught last night. She weighed 400 pounds and had nine well-grown "kittens" or young ones in her. Sailed a 3 P. M. and anchored in Card Sound, about seven miles, one mile south-southeast off Card Point. The wind blew hard at night, and it felt quite chilly on deck.

Monday, the 11th, was a bone fishing morning, with light northeast breeze, clear, sunny; thermometer, 78 degrees. The gunman and the photographer had all the luck, getting seven between them without shifting the boat, one nine pounds and two of seven each. In the afternoon we steamed through Angel Fish and Steamboat creeks from Card Sound to Jewfish Draw-

BONE FISH, EIGHT POUNDS EACH.

bridge on the Florida East Coast Railway, where we met quite a fleet of yachts—Commodore James in Lanai, W. J. Matheson in Namona, Hugh D. Auchincloss in Nirodha, and the Buffalo under charter. We were glad to get a bunch of letters and telegrams from home and anchored for the night in Blackwater Bay.

It was blowing half a gale dead ahead southeast on the 12th, thermometer 82 degrees, when we proceeded under power at 9 A. M. for Jewfish Bush, forty-five miles, and anchored at 4 P. M. The captain made the launch fast alongside and kept her engine running full speed to furnish additional power. This was a memorable date, as we started our first tarpon fishing immediately after anchoring, and did not come aboard until long after dark. There were plenty of fish about and the gunman was the only lucky angler, getting one, 100 pounds weight, 6 feet 2 inches long. He proved a very game little fish, putting up a long fight. The scribe must shamefacedly admit to getting five strikes, all of which

he missed, partly because he was shaking with excitement and partly because his old-fashioned reel is powerless and out of date. Registered a vow to replace it with a modern one at Long Key fishing camp. We were all delighted with the gunman's success and sat down in high spirits to dinner at 9 o'clock. A heavy thunderstorm at night, and the scribe's skylight being open and he sleeping like a log, did not wake up until pretty well soaked.

The gunman was tired after his struggle last night and refused to leave his bunk, but the photographer, scribe and captain went out at 6 A. M. for tarpon on the 13th. It was a perfectly still, dull day, thermometer 82 degrees, without a ripple on the water, and we did not get a strike. Back to the yacht and under way at nine for Long Key fishing camp, ten miles, where we spent the morning ashore. The gunman left his tarpon, an enormous shark's jaw and barracuda head to be mounted, and the scribe invested in a powerful new reel with

patent drag, which did good service later. Departed for Knight's Key at noon and anchored at 3:30 P. M. near Colonel Thompson's yacht, the Everglades, and close to the railway trestle. Off we all went for tarpon, and the Scribe promptly tied up to a beastly five-foot shark, whose throat Bill cut with gusto and a knife. The hatred of any sailor man to a shark can only be matched by the devil's dislike to holy water. Also the gunman did the shark act, and the scribe accounted for an 18-pound "horse-eye" jack. After dinner the photographer and the scribe had another hack at them with the captain, and the photographer struck a large fish in the dark, supposedly a tarpon, but lost him. The scribe's fate was a snook or rovalia, sixteen pounds, about as large as they come. Glad to turn in at eleven after a busy day. The Florida East Coast repair and machine shops are about two miles west of our anchorage at Marathon on Knight's Key, where the road employs 1,000 men and the plant is said to be as complete as any in the country.

The Lure of the Allegash

By ETHEL DORR MELLOR

Photographs by B. F. Mellor.

WE have enlarged not only our vocabulary, but our circle of friends, for we count every one of our guides as such. Some one has said, "You will get along all right with your Maine guide if you are willing to take him at his own valuation, which is high," but why should they not value themselves highly if they are like ours—honest, intelligent, and trustworthy, and each one a true gentleman at heart.

But the time came, all too soon for us, when we must leave our romantic wandering in the "silent places" of the forest and come down to such commonplace things as hotels and railway trains. Our hearts sank and we knew it was "all over" the moment Fort Kent came into view around a little bend in the river. Our college girl sighs and says: "What a commonplace ending to such a wonderful trip!" with a lingering caress on the "wonderful." It has been a joy to us all, but I never saw a girl so absolutely happy as she. The guides declare that they never had such a girl with them before, and she a college girl, too! She has learned to manage a canoe very creditably, even attempting to pole up rapids where her indulgent guide thought it safe, and endured, without complaint, being nearly eaten alive by black flies the two or three days they descended upon us in clouds. Talk about roughing it! These little pests were the only hardship we endured on the whole trip, for we were waited on like queens by seven willing,

trustworthy subjects, who did everything possible for our comfort. I, for one, have never been waited on so much in all my life, even at the best hotels in Europe or this country, and all done so simply and willingly. Truly "guiding" is more than

Lake, we took a steamer to Northeast Carry at the head of the lake, the very last outpost of civilization before striking into the woods. Here we spent the night in log camps and started next morning on a pleasant two-mile walk through the woods to the West Branch of the Penobscot, where we embarked in the canoes which were to bear us to the unknown paradise of our dreams. Down the Penobscot to Chesuncook Lake where we deviated from our course for a side trip to Caucumgomac Lake, Round Pond and Poland Pond, then back again to Chesuncook to follow the Umbazooksus stream to Umbazooksus Lake. There, after crossing the lake, we came to a private log camp, uninhabited except by the caretaker, who keeps a strong pair of horses to carry canoes across Mud Pond Carry to Mud Pond, a distance of about two miles. The walk through the evergreen woods afforded us a pleasant change before we took our canoes again to cross Mud Pond, then along a charming little brook to Chamberlain Lake. At the upper end of this lake our guides had to carry the canoes

MAKING CAMP AFTER A RAINY DAY'S TRIP.

an occupation; it is one of the fine arts. Fortunately colder weather and rain sent away our insect pests after a few days, and they returned only in such numbers as could easily be managed by smudge fires and head nets.

If you will take a good map of Maine and follow our route for these three weeks, you will see what variety this Allegash trip affords. Leaving the train at the foot of Moosehead

over the Lock Dam into Eagle Lake; next Churchill Lake; and then along the fascinating length of our lovely, changeable Allegash with its beautiful falls, and the three sheets of water—Umsaskis Lake, Long Lake and Round Pond, interrupting and giving variety to its course. Then the broader St. John's River carried us to Fort Kent, where we packed our canoes, tents and duffle bags to be taken by train back to

DAM AT HEAD OF CAUCUMGOMAC.

Greenville Junction at the foot of Moosehead Lake.

We spent that night at the little village hotel in Fort Kent to be ready early next morning for the long train ride in a roundabout way across the State to Greenville to await the arrival of our trunks, which we had telephoned to be sent down by steamer from Northwest Carry where we left them when we entered the woods three weeks before.

Our pride had something of a setback in having to take the train at Fort Kent in our woods costume consisting of the oldest suits the men owned, and for the four ladies, short skirts and high boots which met just below the knee, and sweaters and felt hats which had many times been wet through. Now this costume, which had been the height of style and appropriateness in the woods, was not exactly like the gowns of the other ladies in the trains and hotels, and our feeling of elation at having been, as one of the guides said, "The most sensibly dressed ladies he ever took into the woods," changed to the embarrassed consciousness of the overgrown school girl who feels, like the spider, "all legs." Our elegant "custom made" high tan boots, which had been the pride of our hearts in the woods, now asserted themselves in glaring conspicuousness whenever the eyes of a curious fellow passenger involuntarily traveled downward, after a first glance at our healthy looking faces and tanned cheeks, but at Greenville we again felt complacent, for the people about Moosehead are used to the sight of "sports" returning from the woods, and realized the significance of our costume. When we go again our skirts will not be one inch the longer, so great is the comfort in being able to step over fallen trees in the pathway without danger of catching or tearing the skirt, and of sitting in a canoe without fear of wetting the hem of the dress from water which has splashed into the bottom of the boat, for it will splash in when you shoot rapids or cross a large lake in a heavy sea.

My advice to any woman going into the woods is: "Cut your skirt just as short as your conscience will allow, then shut your eyes and cut off three or four inches more." It will be neither immodest nor improper in the woods

smutty side of the camp spider, soon changed it beyond recognition. Suitably dressed, a woman may enter upon this trip with the rarely blissful consciousness that she may take no thought of her clothes. The head guide sees to it that his party may feel free to "take no thought of the morrow," for he is expected to attend to all the details of the journey, such as buying the provisions, engaging the necessary number of guides, and providing a sufficient number of tents and cooking utensils. Each guide furnishes his own canoe and tent, but his passenger, unless he requests the head guide to purchase them for him, brings his own head net and blankets or steamer rugs (we found United States Army blankets highly satisfactory) and, if he prefers an air bed to one of fir boughs, he may add that, too.

The Allegash trip up as far as Fort Kent is about 150 miles, without any side trips, and may be made in two weeks, though it is much more desirable to take three or even four, thus allowing time for some of the delightful side trips to other lakes and streams, and for lingering several days in camps, which are particularly attractive. Certainly it would be a crime to rush it through in such remorseless haste as did the energetic New York lawyer who, having only a short vacation, insisted on making the most of it by taking this trip in a week, assisting in the paddling, and planning each day's journey from his map. The guide who was so unfortunate as to pilot, or be piloted by this strenuous individual, said that in order to make the required mileage of one particularly hard day's journey they made camp after nightfall, too dead tired even to build a fire or pitch a tent in the dark, just taking a cold bite and rolling themselves up in their blankets for the night.

This ultra-American method of taking a holiday with all the fun and play left out may be all right as a record-breaker, but as a holiday it bears too close a resemblance to the play of Hamlet with Hamlet left out. As a hunting party our expedition was eminently successful, for we saw five moose and 105 deer along the way without the slightest desire for a shot except with the camera, and the men caught all the trout we could eat, handsome speckled beauties. I could write volumes of the delights of

with high boots or leggings, and its comfort is beyond measure; but have it of strong dark woolen cloth that will stand the wear and tear of roughing it—an old walking skirt cut down preferred, so says the lady of our party who entered the woods gowned to perfection in an immaculate new gray sporting suit on which she later gazed ruefully, for the havoc wrought by the combined effects of the sun, rain, citronella oil and a varied accumulation of camp grease and dirt culminating in her inadvertently sitting on the

camp life, of the stories of the moose, bear and deer hunting which the men told us as we sat around the blazing camp-fire at night, of the wild creatures of the wood which we have seen and heard, the weird call of the loon over the water at midnight, and one dark night the screech of a wildcat; the cow moose and her baby calf, which we surprised eating lily pads at the head of the Allegash, and the beautiful dainty deer, which appeared to us all along the way, only to vanish with an upward whisk of the white tail at our near approach; of the big jam of logs caught on the Allegash Falls, and the thousands of them we saw further down—but I must content myself with the hope that I have succeeded in helping other forest lovers share in some small degree the joy of this life in the wilderness, which will always remain to me a delightful memory.

[THE END.]

THE TOP RAIL.

A CALIFORNIA newspaper tells the following: "Steve Ghio caught an eight-legged fish that has a ravenous appetite and barks like a dog off the Lower California coast, and took it to San Diego with a rope around its neck.

"It has teeth like a dog, gills and dorsal fins, scales like a fish, and is two feet long. It eats raw potatoes whole, but will not touch meat. It cannot remain out of water long."

* * *

FISHERMEN in California have a brand new excuse for an empty creel, according to a Los Angeles correspondent.

The invasion of millions of caterpillars in the San Bernardino Mountains has interfered with trout fishing, according to nimrods who have encountered poor luck along the best streams in the range.

The worms are blown from the trees into the water and the trout feed on them. Fish caught shortly after daybreak were found gorged on worms. The appeasing of the appetite so early in the morning has caused the fish to pass up the most tempting bait.

* * *

GOVERNOR LUTHER HALL, of Louisiana, and a party of political friends, had a peculiar experience on the new shell roadway near West End in New Orleans a few days ago while automobiling. Their car collided with a five-foot alligator in the middle of the roadway. The chauffeur could not stop his conveyance and ran over the head of the saurian and stunned it. The party alighted and after considerable trouble captured the alligator by lassoing him with a rope. They tied the animal to the steps of the auto and brought him to the business section of the city where he was disposed of. It is thought the alligator was driven out of his haunts by the recent high waters. He was very vicious.

GRIZZLY KING.

The Dry-Fly on the Rondout

By WHIRLING DUN

AT last I have seen the Rondout, a beautiful stream in Npper New York State, which certain associations have made me desire for a long time to visit. Rising among the beautiful hills, something like twelve miles from Shokan, its waters, as clear as crystal, ripple and tumble down between the mountains far removed from any possible chance of contamination. And cold, as I had reason to know when one morning I stepped into a pool and discovered to my chagrin that a long slit had been cut in one of my waders, new only a few days before.

Oh, Dr. Breck, of Nova Scotia fame! Where did you ever get the idea that brook trout, our good old *Fontinalis*, would not take the dry-fly? A veteran, who had fished this stream for over a quarter of a century, tried the floating fly for the first time during my visit and admitted that he had never seen these trout take the wet fly as they rose to the floating lure. Incidentally, having unlimited time on our hands, we made many tests of the comparative efficacy of the same fly fished wet and dry. I would stand below a stretch of good water, and for fifteen minutes fish a whirling dun, watersoaked and sunk. The water was gin-clear, and as a rule I could plainly see the fly come down toward me beneath the surface. Then the same fly would be dried and floated down. The number of rises averaged about six or eight to one in favor of the floating lure.

The whirling dun, on a 10 or 12 hook seemed to be a prime favorite; in fact, toward evening, when past experience told me that a pale evening dun should be the correct fly to use, I soon switched back to the whirling dun with better results. I wish that Mr. Theodore Gordon, or some other angler who has made a study of insects on our New York streams,

would classify a fly with yellow wings, flitting over the water at this season of the year in fairly large numbers. It is, I believe, a member of the *Ephemeridæ* family. I saw many, and tried to catch them in my hands, but alas, they eluded me, and waders are not helpful to one trying to catch an insect rapidly flying up stream. Perhaps greater efforts would have rewarded me with a closer examination of this fly. I had in my box only one fly with yellow wings. I took with it a rising fish at the first cast. That was my last experiment with it. What is the use of telling just how one loses a fly? One never realizes how far he can cast until he makes connections with a tree apparently situated in a neighboring county. This single specimen came from England a few years ago, with eleven others like it, all evidently sent by mistake, as I had not ordered them. I have searched Halford's books and the works of other angling entomologists in vain for a description of this yellow-winged floater. Last year I used it with success on another stream when these same yellow insects were over and on it.

What a splendid idea it would be if anglers would examine the insects they see on trout waters and send descriptions of them to FOREST AND STREAM! We would soon have an American entomology. Dr. Breck made this suggestion years ago, but without results.

I found the Rondout trout rather small, but plentiful. Many ran from eight to eleven inches. There must be larger ones there, but they did not happen to come up to my fly. I was told that the stream was much too high for dry-fly fishing. The field of my operations was at Peekamose, near the head of the stream. Maybe the fish run larger further down.

Foreign Camping Foods.

ANNAPOLIS ROYAL, N. S., May 22.—*Editor Forest and Stream:* To the minds of some of us the article by Mr. Lodian on foreign foods is a trifle aggressive. No doubt the foods he describes are the proper things in the places where they are to be found, but with very few exceptions we have substitutes for them already that better suit our needs; at least, for the North woods. His Chinese dried oysters are amusing, but not convincing, and as he himself remarks, "Their nutritive value is dubious." Rice is a fine food and is rightly becoming more popular with us, but the advantage of "briqueting" it is small, since it is already dried and hard. Mr. Lodian worries about the profanity attendant upon a "dropped and broken bag of rice." It must be a very flimsy bag that would burst at a dropping. In a life time of carrying bags in the woods I have never known it to happen. Compressed dried fruits are no new thing with us. We have the most wonderful thing now in that line, the dried peaches and apricots and prunes, and especially the evaporated apples, most delicious with a little lemon peel cooked with them, as well as healthful. Mr. Lodian's Chinese eggs "require getting used to." According to reports I have had of other travelers, this is true with a vengeance. Unsalted foods are common in some places, but only where salt cannot be obtained. For example, the Indians of interior Labrador use little or no salt, for the good reason that it is difficult to obtain. Brooks Cabot rather easily fell into the habit of eating his caribou flesh without salt. Seaweed is a good suggestion, but we all know of it and have used it. However, it "fills no long-felt want," because we have substitutes that are better. Excellent bricked teas are already on our market.

Mr. Lodian conjures up a harrowing picture of a man trying to dry out his rubber boots with heated bran. "You have to have the bran or oats about camp" for this purpose, he says. Very odd! I have never seen either of these things in a camp of experienced woodsmen. Why? Because Mr. Lodian is wrong when he opines that sodden shoes, and wet feet, are unsanitary. If woolen stockings are worn, this is not true. The old woodsman is most apt to let his things dry on him, and proper shoes or moccasins for the woods cannot really be wet, because they are full of oil. It is only necessary to let them drain, and put on dry socks.

One of Mr. Lodian's chief offenses is the decrying of the German erbswurst, or peameal with bacon, which he describes as mostly made up of "compressed powdered salt." It is very evident that he knows little of what he writes, and has not tried out the erbswurst, say, after a tramp in the face of a November wind in the North woods. My only regret in regard to the erbswurst is, that no American firm has had the enterprise to make it on this side of the water. It is one of the very best emergency foods to be had.

EDWARD BRECK.

[Mr. Lodian's article is intended to acquaint readers with foreign foods as an item of interest, not with a view to practicability to American campers. He has used all foods and treatments he mentions, and of the former has exhibits to prove their existence.—EDITOR.]

ON THE RONDOUT, ULSTER COUNTY.

"Now, that Reminds Me"—II.

By O. W. SMITH

Photograph by the Author.

"NOW, that reminds me' of the only time I ever went night fishing for trout, for I fished the 'Dane's Meadow' of Pine River, and every angler who has fished that water has a warm spot in his heart for the 'Dane's Meadow,' as ideal a bit of fishing as one can find anywhere beneath the blue. I shall always remember that portion of Wisconsin's famous trout stream as it appeared the last time I visited it, some five or six years ago. It was the fag end of the trout season, mid-August, and the summer was dying in a blaze of gold and purple. Yellow sun flowers and black-eyed Susans stood almost

fellows to rise to my flies was something I seemed unable to discover. I resorted to bait, worms and grasshoppers, but they proved unattractive. I was at my wits' end, for while the stream was beautiful, I was reasonably certain that I would be more appreciative of that beauty could I but catch a few real fish.

"In my perplexity I made my Welsh host play the part of a father confessor, and he as a confessor should listen patiently to my tale of woe without comment. When I had finished he considered the matter in silence for some time, for my Welsh friend moved only after due deliber-

some good fish, while the deep hole at the foot of the rapids below it is the most likely place for a record breaker in the whole meadow. Another reason why I selected that portion of the meadow was because the farmers had cut the grass close up to the water's edge, and I had no desire to crawl through dew-soaked marsh grass and waist high golden rod.

"Standing by the bridge I listened. Below me the little rapids were boiling away, sounding unduly loud in the unnatural silence, while from the trees upon the other side of the meadow an owl was calling mournfully. A muskrat, frightened by my approach, plunged into the little pool above the bridge and swam to the opposite side of the stream. Again silence, save for the rattle of the water over the stones. Then a trout leaped. To an old trout fisherman there is no mistaking the sound.

"Hastily I unfastened my hook from the reel, a No. 18, to which was tied a gray midge fly, for I figured that if rising, the trout would be taking small flies or 'skeeters.' Standing where I was, some ten feet from the edge of the pool, I sent the single fly out into the thin fog which clung to the surface of the water, yet did not wholly conceal it. Just where my fly struck of course I could not know, but instantly there was a commotion in the water and I felt that it was time to strike. I did so, giving the fish the butt with vim. 'Hooked, by George!' I exclaimed, as the light rod bent into a straining parabola. I knew that it was a good fish and my heart sang a glad duet with the line. As the trout raged up and down, forth and back, I speculated on its weight, every surge adding a pound until I felt certain that I was playing the heaviest brook trout that ever happened. You see it was impossible to catch a glimpse of the fish through the low lying mist, and my imagination seized the opportunity to insist that we were playing an absolute whale. But that fish had not lived long without learning a few tricks. Oh, he was learned all right, very learned. Suddenly realizing the need for heroic measures he turned and rushed down to and under the bridge with the speed of an express train. The line caught on the rough edge of a plank, there was a sharp snap, and I stood holding my inert rod, a sadder and I trust, a wiser man.

"Now, don't tell me what I should have done; any fool knows enough to lock the barn after the horse is stolen. Fervently cursing fate, the trout, the fog, the bridge, myself and even my Welsh host who recommended night fishing, I liberated my line and discovered that the leader had parted at the first knot. Then I set about repairing the damage, a difficult task in the semi-darkness, but by holding the leader up against the star-bespangled sky, I succeeded after a fashion, and bent on another tiny bunch of feathers. How I cursed my thoughtlessness in leaving my electric flashlight at the house. With that repairs would have been easy, and it also would have been a great aid in playing the fish. Another barn locked when too late.

"I made my way down stream. Though I whipped the rapids to the best of my ability, not a fish responded, and I was forced to the conclusion that at night trout forsake such places in favor of the larger and quieter pools. Below me was the deep pool below the bridge, the scene of many a former victory and defeat. Well I knew the pool. Eight rods of swift

DANE'S MEADOWS.

shoulder high, while graceful golden rods bowed and swayed in the breeze, and thousands upon thousands of asters, from pinky-white to purplish-black, vied with the more gorgeous flowers for notice and appreciation. I honestly think I never saw anything so ravishingly beautiful as was that meadow in the early morning before the air began to quiver with the torrid mid-summer heat.

"Of course the water was low, the lowest I ever saw it, and I have fished the Pine since boyhood. Naturally the trout were exceedingly shy and easily frightened, therefore I caught few fish, and those which I succeeded in landing averaged small. It certainly was a discouraging proposition from an angler's viewpoint, though I thoroughly enjoyed wandering up and down the resplendent banks of the gentle and retiring stream. I usually began my fishing below the 'old mill' and followed down to the first bridge where I left the stream, striking in again at the 'Old Pine' and fishing down to the 'Island,' when I would give up in disgust. That many of those pools throughout the length of the Dane's Meadow contained lusty trout I knew full well, but how to compel the wary

ation, then sententiously remarked, 'Try night fishing.'

"Now, I had always considered night fishing almost, if not quite, unsportsmanlike, probably because I was born in a state which has seen fit to prohibit night fishing for trout, and because, too, the practice has always been frowned upon by certain good friends of mine. However, under the circumstances I felt that I would be justified if I silenced conscience and failed to remember the admonition of my friends.

"The moon had not yet risen when I left the comfortable farmhouse of my Welsh host and turned my footsteps in the direction of the 'Old Pine,' familiar and well-beloved landmark of the Dane's Meadows. Very ghostly the little flat appeared in the dim light, and I found myself stealing through the fragrant and dewy grass with as much care as I would have exercised had I been stalking feeding deer. The course of the creek was marked by a cloud of vapor, which would rise and spread as the night lengthened until the whole valley would be overhung with its clinging cerements. The little bridge below the 'Old Pine' was my objective point, for I knew the little pool above it always sheltered

rapids above, a long stretch of shallow water below, plenty of deep water in which to fight the battle. My blood was up. The big fish were feeding in the night; that was why I had taken none during the days I had wandered up and down the old stream. But all was changed; with the setting of the sun my day of victory had dawned.

"Close to the edge of the lower pool a bunch of golden rod offered shelter, so standing close to the marge, I sent my single white miller out through the mist. Two distinct splashes told me that it had descended amid the bunches of foam which I knew were circling 'round and 'round out there beneath the fog, the contribution of the rapids above. That fish I did not hook; it did that for itself. Oh, but he was a great fighter, just great. After a time I led him down stream, and when well away from the pool, into the net. That first capture was so large that I was unable to introduce him into my basket through the hole in the cover, but was compelled to open the top.

"Wiping the perspiration from my forehead I was sweating in spite of the chilly night. I made my way back to the pool and cast again. Another fish promptly took my offering, a goodly fish it was, too, and another battle was on. Oh, what sport it was! How the doughty rascal fought down beneath the fog and gloom of the

night! What the struggling fish was doing of course I could not know, but I could hang to the rod, giving line only when I felt that I absolutely was compelled to do so. That fish, too, surrendered in due time, and I led him into the net there in the mists and deep shadows; my nostrils filled with the heavy odors of the reeking plants.

"Four times I made that trip up to the pool, each time returning with a goodly fish, such fish as one seldom takes from the much-fished Pine River. Then the pool above the bridge gave up its leviathan, though it was not half so large as I imagined, when it rushed me and broke away; still it was a good fish. Everywhere the trout were leaping; that is, in the pools; they were not to be found in the rapids. Up and down the stream I ranged, casting wherever the stream was open enough to warrant my doing so. I speedily learned that I must give trees and all obstructions a wide berth, for it was woefully hard to judge distances in the darkness.

"Leaving the stream at the 'Old Pine' I followed the highway to where it touches the stream at the head of the meadow, and those deep pools, always unapproachable in the day time, were easy of access, and wonder of wonders, their shy denizens could be caught. As my basket grew heavy, my heart grew corres-

pondingly light, and I developed a passionate fondness for the Welshman of few words.

"Out of curiosity I changed my gray and white flies for those of dark colors, browns and blacks, but the fish would have none of them, and as soon as I returned to light flies again success was mine. Somewhere I have read that trout feed upon crickets in the night, and therefore black flies are to be selected for night fishing, but that night dark-colored feathers proved utterly unattractive.

"At 11 o'clock the moon showed above the treetops, and coincident with her appearance the fish ceased feeding; either they would feed only in the 'dark of the moon,' or their hunger was satisfied. I did not linger long after they had ceased to bite; for why should I? I was more than satisfied.

"When I reached the farmhouse, of course, I found the family in bed, and it was with utmost difficulty that I crept past the vocally sleeping Welshman's bedroom door. I wanted to go in and hug him, for I felt that I owed him the evening's sport. Strange as it may seem, since that summer I have never been able to visit the Pine River, but I am going again some time, and when I do, you may rest assured that I shall try night fishing on the Dane's Meadow, even if some people consider it unsportsmanlike."

Trailed by Timber Wolves

By J. B. THOMPSON

ONE fall, after an unprecedented period of drouth, Captain L. asked me: "How would you like to take a load of produce to Corning? You know that you will get several shots at turkeys and other game." He knew my weakness for invading new regions and went into details.

"Corning is just twenty-five miles from Bethel bridge, on Little Black River, and it is one swamp clean through Clay county, Arkansas. The trip can be made now, as since the drouth you will find very little water, but instead plenty of bothersome sand. You can leave here by 4 p. m. and by taking it slowly, you can reach Corning by morning. You know where the bridge is at the foot of the hills? I can only give you an idea of the route. You will just have to guess the logging roads from there. Do you want to try it?"

I knew why he wished me to make the trip during the cool of night. It would be less effort for the team, and the return with an empty wagon during the heat of day would not be much of a task for the wiry mares, Dulce and Daisy.

By 4 o'clock I had crossed the rather risky contrivance for a bridge and was in the swamps. For a short distance I found the trail good, and by circuitous windings and unprepared deviations managed to avoid the holes of liquid mud. Just then the two dogs belonging to the captain put in appearance. They had trailed the team. Clo was a questionably bred Irish setter, a very ordinary shooting dog, but one of the most de-

termined scrappers I had ever seen; in fact, she would fight anything irrespective of size or kind. Prince, her running mate, was a spaniel—our standby for turkey or duck. While Prince had won no renown as a fighter—invariably meeting with defeat—he had not lost hope, for he tried every animal he met with under the commendable inspiration that he would eventually gain the same prestige in fighting as his more favored red companion.

I knew the futility of trying to drive the rogues home, for an attempt only resulted in their hastening to cover, to appear later a hundred yards ahead of the team, perfectly unconscious that I had objected to their presence a moment ago.

WOLF HUNTERS' CABIN.

But in the big woods of giant water oak and slashes of still larger and more stately cypress, I appreciated the companionship. Clo was a nuisance, spoiling several nice opportunities at turkeys, but the gray squirrels were plentiful and I shot several for supper.

Keeping a trail leading southeast, I crossed a cypress brake just as the sun dropped behind the barriers of huge timber, then I came to a clearing of about twelve acres. At a house near the road I stopped and watered my team, the two women on the porch wondering no doubt, what I was doing at that late hour in the swamps. Rehooking the team to the single trees I heard the elder of the two say to her companion:

"Dit à lui pour rester jusque la lune s'éleve!"

I answered in French: "Thank you, I will go to the end of the lane as far as the road into the Palatka swamp, and camp there until the moon comes up. That is, if it is the right road to Corning."

Assured that I was on the right route, and also informed that they were Caudians, and that their men were getting out ship timber for a New Orleans contractor, I went on my way and pitched my camp on a deep slough. Now, it made an especially fine camping place, the marsh grass was plentiful, so Daisy and Dulce rested contented in devouring the luscious growth after they had eaten their meal of oats. I began supper, Prince and Clo eyeing my every movement with expectations of a generous share. The Duprez dog—Duprez was the name of the family where I watered—a large cur, ventured near camp

as a visitor, but my two battlers would not permit the familiarity and made immediate attack on the friendly canine. It took laborious work to separate the combatants, but peace finally restored, I resumed my performance at the fire until the meal was consummated.

Knowing the moon would rise at 10 o'clock, I cast a blanket on the knoll, covered my head to prevent invasion by the numerous mosquitoes and prepared to sleep.

To the northeast, just as the earth was wrapped in its dark covering of night, I heard the baying of coarse-toned hounds; at least, so I imagined it to be. At the distance it appeared like the treed-note of a pack, for in the swamps sounds are magnified beyond comprehension. Evidently no one came to the treed signal. The dogs opened up again, this time apparently on a hot trail, which lasted ten minutes, then suddenly ceased in a storm of belligerent growlings. (Afterward I learned that a yearling had been killed the same night back of the Duprez shack.) The pack began again, swinging in a wide circle around us. There was something strange, something unfathomably sinister in their tonguing expressions that puzzled me. The sounds were more prolonged, deeper and far more piercing than I had ever noticed in any pack, but I attributed it to the swamps and the heavy night air.

They began to shorten their circles as the moon shot over the tops of the cypress and silvered the sands of the bottoms. I could distinctly hear the movements of the pack as they suddenly stopped 200 yards from my fire. They opened up once more, my horses became restless, and instead of Clo and Prince pouncing into an engagement as I expected, the reverse happened. Clo's hair bristled on her back, she gave a frightened yelp and with Prince in the lead leaped on the wagon seat.

For the first time that night I realized that my pack of hounds were timber wolves. I was not afraid, knowing there was no danger or mischief from them. Still I had the old feeling which inevitably comes to everybody when alone in a wild country when he senses that for the nonce he is the subject of cynosure for a pack of wolves. I leaped to the seat, uncovered the shotgun and slipped in two shells loaded with BB's.

I confess I remained in my lofty position undetermined what to do, and perfectly satisfied of the improbability of a display against me by the wild creatures. Nevertheless a creepy sensation took possession of me, which the gun in hand only comforted slightly. The moon had climbed straight overhead and illumined a dim lizard road through the timber, the pack had hushed, and I thought I heard them stealthily sneaking away. Unexpectedly, in the center of the road and in the full moonlight, not thirty steps from my fire, I saw a wolf move from the cover, then stop and lift a sorrowful wailing plaint directly at the moon.

Letting the ivory sight repose full on the head of the beast, as it was the most conspicuous part, I pulled the trigger. The reverberations of the animal's voice far back in the overflow died with the report of the gun. I saw the animal whirl in a circle, snapping like a dog in a fit, then it sank in the broad shadow of a tupelo-gum. The forest was silent for the instant; Clo and Prince gained courage as I lighted the lantern and followed me to where

I had fired at the wolf. I found the beast stretched dead in a bed of soft sand at the foot of the gum. The lower jaw was almost entirely torn from its head by the charge; it was a female and possibly would have weighed seventy pounds. I robbed her of her scalp and dragged the remains far back into the drouth-stunted switch cane, for I had doubts of ever getting the team past it.

As I came by the Duprez home the following day they hailed me: "Vous avez attendu les loups?"

Then I pulled the scalp from under my seat cushion and held it out to them for answer. And while for many years I have heard the timber wolves at their nightly swamp rabbit hunts, none impressed me so much as on the night I killed my first timber wolf.

Angling in Southern California.

BY SENOR X.

THE angling season in Southern California is on in full force.

The outlook for sea angling on the Coast is promising. Gifford Pinchot and Chas. F. Holder, of the Tuna Club, make a killing at Santa Catalina Island that gave the angling community a thrill. With Dr. Holder they started for "Ship Rock," off the town of Cabrillo in the west end of Santa Catalina. Dr. Holder had written to Mexican Joe to have some fifty pounds of white sea bass "tied up" for the party, but Joe made a mistake and evidently substituted yellowtail, as no sooner had they reached the rock, which is an extraordinary likeness to a ship, than Pinchot struck a 33-pound yellowtail on his nine-ounce rod, and the fight was on. The fish fought like demons and at the strike the boatman was forced to tow them two hundred feet into deep water where they were played.

Mr. Pinchot gave some fine illustrations of the handling of big fish with light tackle, experimenting with all the Tuna Club tackle—(1) tuna tackle; (2) nine-ounce rod and No. 9 line; (3) six-ounce rods and No. 6 line. On the latter he landed thirty-pound fighters in thirty minutes. On the second it took fifteen and on the heavy tackle eight or ten minutes. The marvelous strength of the fish was shown on the heavy tackle, and they could have broken it easily in unskilled hands.

On the first day Mr. Pinchot landed nine yellowtail, all over twenty pounds, ranging up to thirty-three pounds. On the second day he took thirteen, all on rod and reel, not to speak of numerous bass and whitefish. This was the virtual opening of the season of the Tuna Club tournament, and the catches created great excitement among the tourists who were anxious to see the conservationist angle. Pinchot crossed the Santa Catalina channel with Mexican Joe in a search after swordfish and tuna and returns to the islands in late summer. Colonel John F. Stearns, vice-president of the Tuna Club, attracted much attention this week in the channel fishing with a tuna plane or kite for tuna, coming down before the wind with the "plane" a hundred feet in air ahead of the launch and manipulated by its inventor, Captain George Farnsworth. The idea is to imitate the leap of the flying fish and keep the bait away from the boat.

Colonel Stearns has made many notable catches and last year, among the tunas and

swordfish, he landed a bottle-nosed dolphin weighing 600 or 700 pounds.

Many famous Eastern anglers are at the island, among them Mr. Hooper, president of the Tarpon Club of Texas; Mr. Conn, whose yacht is being made ready at Avalon for cruises after tuna; Sir H. Blosse and Lady Blosse, and many more. Leaping tunas have been seen, and at the present writing a large school has been sighted off the southeast end of Santa Catalina, promising good sport in smooth or dead calm water. Swordfish have also been seen, and it is expected that the rod record of 1911 (thirty-four) will be exceeded. In August and September last year there were schools of thousands of little fishes which were so ravenous that they bit at every thing.

The mainland sea anglers, who frequent the beaches of Long Beach, Redondo, San Pedro, Ocean Side, Del Mar and Venice, are having fine sport with surf, roncador and spot fin, and those who go out into mid channel get albacore, bonita and other game in water nearly a mile deep, taken by trolling. At Newport yellowtails are often taken. The large and influential Los Angeles Rod and Reel Club, of which Max Loenthal is president, does much of its fishing at these places, surf angling from the beach having many charms. Among the experts are Mr. Max Loenthal, Mr. Chas. V. Barton, of Los Angeles; Mr. T. McD. Potter, Mr. Henry Loenthal and Mr. Cox.

Trout fishing has not been overpoweringly fine, but some good catches have been made by anglers in the Sespe, Dr. Page, of Pasadena, taking the limit on this beautiful stream. On the San Gabriel, T. McDonald Potter has made some fine catches of rainbow near Pincon, and Dr. George E. Hale tried the main stream with the dry fly with general satisfaction. One of the finest baskets taken in the San Gabriel this year was by Ormsby Phillips, of Pasadena, who took some large steelheads and rainbows. Mr. Phillips had a record last year for second biggest steelhead, a fine photograph of which graces the Tuna Club.

The season for trout at Bear Valley and in the headwaters of the Santa Ana, 5,000 feet above the sea, in San Bernardino county, was opened by Mr. Thad. Lowe, of the Valley Hunt Club, with one of the finest catches ever taken from this water since snow was on the ground, but the anglers had remarkable sport and took out the limit of trout, running up to six and seven pounds. Bear Valley Lake is a big reservoir and high enough to keep cool during the

summer, and the resort of many anglers.

Black bass is the rarest game fish in southern California. At San Diego the big log dam is socked. The Bolsa Chica Club has a preserve and there are a few others. Another club is at the Mathewson ranch, mid way between Los Angeles and Santa Barbara. Here a deep lake or natural reservoir has been stocked with bass, and great things are expected for the club whose president is Mr. Tufts, of Los Angeles, a devotee of the rod and reel.

Among the attractive trout streams reporting good catches are the San Luis Obispo River at San Luis; Hot Springs, the Santa Ynez, near Lompoc; "San Marcos," "Follows Camp" and "Rincon" on the San Gabriel; "Wheeler's, Cold Springs," on the Sespe River; Ventura, on the Santa Maria; Lytle Creek Cañon and Losadina, on the Arroyo Seco. Angling is one of California's important assets, but it is not appreciated yet by the Californians as in the Maine and New York forests. Sport is said to mean five millions annually to the State of Maine and six million to Canada. Under proper care sport should bring into California as much as this per annum. In all the States the true value of sport as an economic asset is not as well appreciated as it should be.

Big Sand Pond.

The Home of the Great Northern Pike.

BY THEODORE GORDON.

THERE are good fishing waters in the State of New York that seem to be comparatively unknown to fishermen at large. Big Sand Pond lies a few hundred feet from Lake Ontario. It is six or seven miles long and a mile or more in width. There is a natural outlet into the big lake near one end, but years ago the Government cut a ship channel about midway in order to create a harbor of refuge for shipping during the violent storms that sometimes vex Ontario.

A good depth was secured for a time, but the channel was partially filled by the action of the winds and waves, so that the pond is not used by vessels. The depth runs to about eighteen feet or more, the bottom is covered with grass, and it is simply alive with food for pike and bass. Early in the spring there is a great run of "mooneyes" through the channel into the pond, and then small fish are followed by the pike and bass from the lake. It is said that none of these ever return to the big lake; the feeding is too good to leave. Later in the season there is a great run of ciscoes, averaging one-half to three-quarters of a pound; another source of food supply for the large fish. They are taken in great numbers in nets. As soon as the weather turns warm, the mooneyes begin to die and large quantities are collected and used by the farmers to fertilize the land.

Both pike and bass run to a large size and very big baits are often used. A drive of eight miles from Pulaski on the New York Central will bring the angler to Big Sand Pond. There is a good hotel of the plain sort; simple, well cooked food, with accommodations for ladies in the main building, and rooms for about twenty stags over the boat house. The expense, including good boats and guides, is about \$3.50 per day. Altogether the place is worth making a note of. The northern pike is next to the mas-

calonge in quality and affords good sport. The bass average well, but are not so numerous as the pike. May is said to be a good month for the latter fish.

Illinois Casting Club.

CHICAGO, Ill., June 1.—*Editor Forest and Stream:* A clear sky, light south winds and generally good conditions greeted the casters assembled for our second contest day on June 1.

Owing to many members not having returned from their Memorial Day fishing excursions, the attendance was not large.

As shown by some of the scores recently cast, the work at the national tournament this season promises to be of a very high order, and it will not be surprising if the excellent records already established are exceeded.

In the quarter-ounce distance event our guest, Mr. Ligenfelter, met with an unfortunate breakdown which spoiled his score. He was going "great guns" at the time, having already made a cast of 176 feet, which we believe is within one foot of the longest cast recorded for the quarter-ounce weight. Following are the scores in the order in which they were cast:

Quarter-ounce accuracy bait:	
Amman	99.2
Asper	98.2
Hartley	98.7
Linder	99.4
Wehle	98.8
McCandless	94.9
Hornstein	94.8
Heston	98.7
Tice	97.0
McFarlin	96.8
Hartstall	95.4
Swisher	97.7
Kerr	97.3
Pierson	98.5

Quarter-ounce distance bait:	
Linder	65 1/2
McFarlin	113 3/4
Wehle	96 3/4
Amman	71 1/2
Heston	82
Swisher	69
Hartstall	81 1/2
*Ligenfelter	113 3/4

*Guest.

A. F. SWISHER, Sec'y.

Newark Casting Club.

THE enthusiasm which pervaded the large number of casters who assembled to participate in our complimentary tournament on May 26 demonstrated that the object of this meeting was fully realized. A kindly spirit of comradeship and friendly rivalry was evident throughout the entire day, and it is to be hoped that many more such meetings may be held in the future.

The progress made in the game of scientific casting for points is shown in the scores made at this tourney. In each of the bait events nine men scored 99 per cent. or better. In the fly contest the scores show that eleven men scored 99 per cent. or over.

Many of the older members of the various clubs were participants in all of the events and contested every point as keenly as the younger members. The scores follow:

Accuracy, quarter-ounce:		Tournier		98.0
*Perce	98.0	*Eldred	97.8	
Beatty	99.6	*C Nordholm	98.7	
*Campbell	94.7	Whitby	98.6	
*Bellows	97.6	*Kleinfeldt	96.1	
Ball	99.1	Heston	98.8	
*Hinterleitner	98.1	*T Nordholm	98.8	
Tice	98.2	*Faber	88.4	
*Grey	96.2	Wehle	96.0	
Place	97.7	Jamison	98.1	
Clifford	97.4	Pierson	99.0	
*Naylor	99.0	Asper	98.4	
Bauer	97.1	Griffiths	93.9	
*Maloney	95.0	*Cooley	98.9	
*Peet	97.3	Humphreys	99.2	
Stanley	99.0	Kernaghn	98.4	
*Smouse	96.1	*Adams	98.8	
Hartstall	95.0	McFarlin	96.5	
*Johnson	98.2	De Garmo	99.0	
Nicholson	99.4	Hornstein	97.1	
*Burke	97.2	Linder	99.3	
Amman	99.0			
*McCarthy	96.5			

Winners of prizes in this event: First, Beatty; second, Nicholson; third, Linder; fourth, Humphreys; fifth, Ball; sixth, Stanley.

Guest trophies for visitors only: First, Beatty; sec-

ond, Naylor; third, Cooley; fourth, Adams; fifth, Cooley; fourth, Adams; fifth, T. Nordholm; sixth, C. Nordholm. Adept trophy, Humphreys.

Accuracy, half-ounce:		Heston	97.9

Dr. C. A. Vosburgh..	70	66

GEO. ASHTON, Sec'y.

Louisiana Fishing.

WITH the abatement of the streams and rainy spell, interest has increased in the sport of fishing at the several gulf resorts, and many parties have gone out during the week to enjoy the diversion. A large number enjoyed the sport Sunday, and several large strings were brought back to the city. Speckled trout and green trout, reds and sheepshead were plentiful. Croakers are said to be more abundant than usual. Shrimp are becoming more plentiful. The clubs at the Rigolets, Lake Catherine, Chef Menteur, North Shore, Lookout and other resorts are entertaining many visitors. Quite a few families have gone over to Waveland, Bay St. Louis, Pass Christian, Gulfport, Biloxi and other places for the summer. A number of business men go over daily to be with their families on the Louisville and Nashville and enjoy a day or two out of each week fishing. The season was delayed on account of the unfavorable weather this year.

Beam Trawlers.

BY RALEIGH RAINES.

THE House committee on merchant marine and fisheries was the scene of an interesting gathering representing the deep sea fishing interests recently. The occasion was the hearing granted by the House committee on the Gardner bill to prohibit the importation into the United States of fish caught by beam trawling. The bill introduced by Representative Gardner, of Massachusetts, seeks to prohibit the importation or landing of fish within the borders of this country that have been caught by beam trawling, or by any method which essentially consists of dragging a net or cage along the bottom of the sea by a vessel in motion. During the hearings it developed that the deep sea fishing is greatly menaced by the beam trawlers, which it is alleged destroys the young fish and otherwise operates to the disadvantage of the fisheries of the country.

There were present at the hearings many of the prominent members of the Gloucester fishing interests, Dr. Field of the Massachusetts Fish Commission, naturalists and fish experts, all of whom testified to the iniquities of beam trawling. Two concerns, one in New York and the other in Boston, who are engaged in beam trawling, appeared by representatives and attorneys to fight any efforts of the fishermen to secure remedial legislation through Congress. Representative Gardner, who spoke in behalf of his bill, declared that the Canadian Government has now a similar measure under consideration, and the matter is being held in abeyance until some action is taken by this country that both governments may co-operate along similar lines looking toward the preservation of the fishing interests and regulating or prohibiting the destruc-

tive methods incident to beam trawling. Friends of the old Gloucester fishermen fear that the beam trawler will destroy not only the fish life of the North Atlantic banks, but will attenuate the virile qualities of seamanship for which the fishing folk of Gloucester have always been famous.

James B. Connolly, author of "Tales of the Gloucester Fishermen," was also a spokesman in behalf of the fishermen. In discussing the condition of affairs, Mr. Connolly said: "We are acting in the interests of the great body of American bank fishermen. We protest not against the use of steam vessels in the fishing industry, but against the use of beam or otter trawls with which these steam vessels are equipped. This beam trawl, which is dragged along the bottom of the ocean, is a most destructive agent. It scrapes the bottom, leaving a bare surface to which fish will not afterward resort. Fish are afraid of the ocean bottom where it is not covered with a growth of some sort. Beside the material damage to American fishing interests, the steam trawlers, if they are allowed to continue, are certain to drive from the sea the present fine type of deep sea fishermen. Another thing, the present sailing men work on shares; that is, it is a purely co-operative business; there is no wage system. The steam trawling crews all receive regular wages. There is a small percentage which the steam crews receive in addition, but it is so small that it requires an extraordinary catch to make it worth while. On steam trawlers the crews do not have to go in dories, but work entirely from the decks of the steamers. The result is that instead of real fishermen their crews are made up of men who need to know nothing of the sea. They are merely landsmen afloat, but these landsmen all profit by the initiative, the resource and daring of the real fishermen, for the steamer crews do not seek out new grounds or even new places to trawl. They invariably upon arrival on the grounds pick out some sailing schooner, with her dories around her and already at work, and using her as a guide, they begin to drag the bottom in a circle around her. The result is that a great deal of the fish are driven away by the racket made by the steamer. The sailing schooner already there is not given a fair chance for a catch. By their methods the steam trawlers also destroy so many fish that are too small for the market that the waste from an old-fashioned fisherman's point of view is criminal. They also destroy much of the sailing schooner's gear; that is, their lines, hooks and bait, especially in foggy weather, when no watch can be kept on them. And this gear so destroyed must be paid for, not by any vessel owners, but by the fishermen themselves."

The Gloucester delegation called upon President Taft, and upon a number of representatives and senators at the Capitol. The Canadian Government regards the use of steam trawlers as a menace to fish life, and to the sturdy qualities which the fishing industry under sail gives to the nation. Great Britain has been indisposed to back up the Canadian Government's desire for an international agreement restricting the use of trawls, because Great Britain is already a party to a European agreement under which trawling is conducted in the North Sea. Notwithstanding the attitude of Great Britain, Canada has taken the position that in case this

country restricts steam trawling, she will probably follow suit.

The House committee, having supervision of the fishing interests of the nation, is ably presided over by Representative Joshua W. Alexander, of Missouri, who, with twenty other representatives, look after the merchant, marine and fisheries, seals and navigation laws. There are among these gentlemen of the committee many who are adepts with rod and gun, and probably the most celebrated of the number is Representative James W. Collier, of Mississippi, who has long been a full fledged member of the sporting fraternity, being a famous breeder of dogs, and equally proficient with the rod and gun. It is understood that the committee will refer the entire question of steam trawling to the United States Bureau of Fisheries for a scientific investigation and report on the entire question, after which the committee will recommend action to the House, looking to the restriction of steam trawling.

Fishing at the Beaverkill.

BY ONE WHO WENT.

THERE are fine boarding places at Beaverkill and De Bruce, both of which places I visited. You can recommend Jay Davidson's at Beaverkill, \$9; and Mrs. Cooper's or Miss Royce's, at De Bruce, \$9, to people who want good boarding places near the best fishing that the country affords. If I were to go up there again, able to do some fly-fishing, I should go first to De Bruce, stopping at one of the two places mentioned (they are run by sisters and are close together), and if I did not get trout there, it would be a short trip to Beaverkill, Lew Besch, Willowemoc, etc.

It is all a beautiful country and the larger streams are about ideal for fly-fishing. I wet a line only twice for an hour at a time and both times got fish.

Another thing—this season is late, but even in ordinary years the best time in that country is probably not earlier than from about May 15 to 20 on into June.

California Fishing.

CAPITOLA, Cal., June 12.—*Editor Forest and Stream:* Last Sunday was a great day for those fishing in the waters of Monterey Bay, off Capitola and Santa Cruz, as the salmon are running in large numbers and the catches were all big, over 800 of these beautiful fish being caught on hook and line.

Trout fishing in the streams in the vicinity of Santa Cruz and Capitola has been all that could be desired, since the season opened on April 1, and it is with little trouble that the angler is able to creel the limit of fifty fish.

From present indications it would appear that this will be a banner year for all variety of fishing in the vicinity of Santa Cruz and Capitola, and that those royal game fish, the quinnat, salmon and steelhead trout, will afford the angler great sport until the season closes.

WALTER R. WELCH,

Fish, Game and Fire Warden.

NATURAL HISTORY

Nature Study on Long Island

By W. G. BOWDOIN

MISS LOUISA BRUCKMAN, B.S., was the leader at the Brooklyn Institute Field Meeting at Cold Spring Harbor, L. I., June 1.

When Cold Spring Harbor was reached, the first find was celandine, a common weed naturalized from Europe, of the poppy family, and its saffron juice stains whatever it touches. It is

JOHN McCALLUM.

called "the swallow" because its flowers appear with the swallows. Its fresh juice was used by the fathers of medicine as an application for corns and warts. It should be used cautiously, however, as it is extremely irritating. It now enters into no official preparations. The plants found had progressed so far as to have developed the seed pods.

The sweet cicely found nearby had seeds that were very similar to those of the beggarticks, which stick closer than a brother. The cicely seeds were in the making and the prongs were soft and unable to take the strangle hold they will take later on.

By the winding road along which the party wandered care free, was growing a young ash. It was covered with many galls, because of which the leaves were curling and covered with gall of a purple tint. Cutting one of these galls open, a wiggling mass of maggots was revealed. Other galls were observed later on an old ash tree; some on maple leaves gave a polka dot effect to these leaves; some that grew on a wild cherry were fully half an inch in height and had curious growths that resembled moss growths, while others grew on various oaks. On cutting open one of the oak galls but a single larva was found, which exemplified something of the variety in the life history of gall insects. From one of the oak galls we have the nut gall of commerce which enters so largely into the manufacture of inks and writing fluids.

A number of nettles grew by the roadside.

These had stinging hairs, containing pure formic acid that is similar to the poison secreted by certain of the ants.

Thistles with barbarous spines that might easily have caused the barefooted soldier to cry out with pain, and thus brought about the salvation of Scotland and her admiration for the thistle, grew about. Bouncing bet, called by John Burroughs a "vegetable tramp," was next found. It has a backyardish appearance, though cultivated to some extent.

The leader was interested in milkweeds, looking them carefully over to find out if the monarch butterfly had laid her eggs upon any of the plants. As it was early for the butterfly, no eggs were found.

Along the wayside ran a little brook, and on its banks grew the veronica, otherwise the water speedwell. It belongs to the figworts. This flower was a favorite with Rousseau. In England it is also called "eye-bright" fluellin and Paul's betony. On the specimen found was a small green bug with brown trimmings all around him. He presented a fine example of protective coloration, for when he was at rest the eye of the observer could with great difficulty distinguish between it and the plant.

Entering the preserve of Mary E. Jones, trailing bindweeds were recognized. Then sweet bay bushes from whence we have the bayberry candles of ye olden time that frequently figure in the art craft shops. The legend is that if you burn these candles on Hallowe'en, all witches, pixeys and little devils will be discomfited and put to flight. Wood sorrels grow at Cold Spring Harbor as elsewhere, and when they gain a foothold they are hard to eradicate.

Some blue toadflax was next found. The country folk call it "butter-and-eggs." The juice of the toadflax is expressed, and when mixed with milk is sometimes used as a cosmetic. It is also used to attract flies in these days when young and old are campaigning to "swat the fly." The old monks cultivated it as a garden flower. Wild ipecac, red in color instead of the usual green, fell to our search. From this plant and its Brazilian relatives we have ipecacuanha, of the materia medica. It is useful as an emetic. Wild ipecac is related to snow-on-mountain.

Many of the mosses are everywhere at Cold Spring Harbor. Some of these forms of plant life met with in the Jones' reservation were the coral tipped mosses, the tops of which are brilliant red, the pigeon wheat moss, with capsules, and the so-called cup mosses. Suddenly along the narrow wood road came a horseman wearing a soft hat and sitting easily upon his mount. It was Theodore Roosevelt. He raised his hat in passing, and the botanists forgot their wild nature study until he was out of sight.

Resuming the study of botanical life, next in order came pitch pine trees upon some of which were embryo cones. On other similar trees in the same locality were the same cones, but of the second year of life. Some arbutus still lingered, the blooms long since passed.

Passing by sundry monuments marked "J" and the pumping station on the left, the nature students came upon a young tulip tree. The blooms emanated a sweet perfume. The petals began with a study in green that went off into soft and patterned orange that merged again into green, making a color combination that no painter can excel in charm. The leader gave a little lesson on the tulip tree leaf development that was illustrated by living examples derived from the tree under which the lesson was given. The tulip woods make a beautiful trim, much used in interior decoration.

Many magnificent wild azaleas were growing in luxuriant abundance all along the line.

In a shallow pool by the wayside grew masses of duckweed. This is free floating and resembles green scum upon the water's surface. Darting here and there beneath the duckweed were many of the smaller polywogs. Duckweed is sometimes used to make a balanced aquarium.

Passing quickly by pepper grass, shepherd's purse, a giant sycamore tree, with peeling bark that makes it look scarred, a linden tree with winged seeds that fairly fly in seed dispersal, hop clover and several mushrooms including the *Collybia platyphylla*, the explorers came to the New York Fishery Commission Building (1887) where trout hatching is extensively conducted.

Nearby is the Biological Laboratory of the Brooklyn Institute of Arts and Sciences, whose session for the current year begins on June 26, (Continued on page 804.)

 127 Franklin Street, New York.

CORRESPONDENCE—FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but, of course, are not responsible for the views of correspondents. Anonymous communications cannot be regarded.

SUBSCRIPTIONS: \$3 a year; \$1.50 for six months; 10 cts. a copy. Canadian, \$4 a year; foreign, \$4.50 a year. This paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS: Display and classified, 20 cts. per agate line (\$2.80 per inch). There are 14 agate lines to the inch. Covers and special positions extra. Five, ten and twenty per cent. discount for 13, 26 and 52 insertions, respectively, within one year. Forms close Monday in advance of publication date.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

MEADOWLARK IN CALIFORNIA.

It is only natural that California, with its well developed fruit and grain industries, should be troubled with all sorts of pests. In order of economic importance, insects naturally come first. Anything, therefore, which tends to keep in check the great hordes of injurious insects must be considered a direct benefit. Probably next to insect parasites, birds are the most important factor in checking the increase of insects. This brings about an important problem, the solution of which, to say the least, is difficult. For on one side we have certain birds which act as checks on insects, and on the other side the same birds causing considerable loss by their depredations in the orchard and grain field.

One of the most noted birds belonging to this general class is the meadowlark. That its depredations in grain fields are real must become evident when it is known that in the last two Legislatures bills have been introduced taking protection away from this bird because of its destruction to sprouting grain. The continual complaint against this bird by ranchers and the strong defense of the bird by others caused the Fish and Game Commission to take up a scientific investigation into its food habits.

As the only fair test of the value of a bird to the people of California is a thorough knowledge of the food habits of the bird throughout the year, it was determined to obtain this knowledge by field work supplemented with stomach examination of birds taken in many different parts of the State each month in the year. Many interesting things that have been demonstrated in the work thus far are of general interest.

Abundant proof of the depredations of the meadowlark in the grain fields has been afforded by the stomach examination. Birds taken during the winter months are found to contain little else than grain. As many as thirty kernels of

oats with enough hulls to account for as many more grains have been found in a single stomach. In the field investigation it has been found that the birds prefer oats and often do considerable damage to a field, especially where the birds are numerous and the amount of grain small. It is indeed astonishing to see the skillful way in which the birds follow the drill, and digging down beside the sprout, pull out the kernel. The fact that meadowlarks damage a field only when the sprout is just coming through the soil and not after it has reached a height of two or three inches, makes the period of time during which damage can be done of short duration. The fact that oats and wheat are the only grains damaged to any extent also minimizes somewhat the amount of damage done.

After the presentation of this side of the bird's life the question naturally arises: Can the meadowlark possibly pay for the damage done by destroying injurious insects which would also cause a loss to the rancher? The investigation has not progressed far enough to admit of a final answer. However, some definite statements can be made as to the value of the meadowlark as a destroyer of injurious insects.

Stomach examination has shown the food of the meadowlark to be made up largely of beetles, cutworms, grasshoppers, crickets, ants and wood crickets (commonly called Jerusalem crickets.)

As a destroyer of cutworms and grasshoppers the meadowlark is probably unequalled by any other bird. As many as sixty-six cutworms have been found in a single stomach and as many as thirty pairs of mandibles of grasshoppers. When it is known that the time of digestion of these insects is only two to three hours, it becomes very evident that the number of these injurious insects destroyed in a day is very great. It thus appears that the birds in the same locality where they do damage later on perform a valuable service in exterminating insects which are well known as destroyers of grain.

A HOBBY.

Is it not remarkable what a hobby will do, particularly an outdoor hobby? Take woman as an example. Seldom one hears of a woman golfer, trapshooter, yacht owner, tennis player, autoist, or poloist in the ranks of suffrage. We never hear of such cases as that of Rose Pastor Stokes, in her efforts to Pastorize the waiters. We men all admit our moral cowardice in tipping waiters for services rendered restaurants and hotels in which they are employed, but if Rose Pastor Stokes had an outdoor hobby, would she waste her time on a "fight" for the waiter? We think not. No department of menial service is better supported by the public than the waiter, and it needs no help from the suffragettes. Man never yet objected to woman taking part in his outdoor recreation, and in some outdoor sports women excel. For instance: How many trapshooters can break more clay targets than Mrs. Ad. Topperwein? Mighty few. How many big-game hunters have bagged a sixty-three inch moose head, such as Mabel W. Richards has to her credit? How many men can do the trudgeon further than Miss Golding? Not many—and yet among this class of women, how many are suffragettes? None.

The fact is that when a woman or a man has an outdoor hobby to take up spare time, the

mind is occupied in carrying out the physical construction, so that what gray matter might be wasted on the personal ego, is devoted to the contest. In other words, instead of following the adage, "For mental ills take liver pills," try the more modern suggestion—for mental ills take exercise.

WHERE DOES CHARITY BEGIN?

A SHORT while ago an appeal was made for money for survivors of the Titanic disaster. Hundreds of thousands of dollars poured from American pockets; more money than actually was needed. This might be termed a foreign charity, as practically all the money was expended on "prospective residents" of our great country. It was a good work well done, perchance a little over done. Shortly following the Titanic sinking the same element that caused so great a loss of life let loose its incomprehensible energy, flooding out and drowning like rats thousands of families along the Mississippi River. Subscriptions were started, but strange to say this calamity called forth much sympathy and a shamefully poor cash contribution. Here was a home charity passed by "on the other side," by Americans and foreigners alike.

More people, of the better and more useful class, were made homeless by the Mississippi flood than through loss of the Titanic, and yet financial help is not forthcoming. Can it be that the present day relief fund builders must be shocked into giving? Do they require the dramatic and spectacular to loosen their purse strings, or do they feel that because the planter along the Mississippi has more or less trouble each year from floods that financial help is not necessary even though he, his family and help are without home, clothes or food? Reports from Louisiana show conditions to be even worse than generally is supposed, that immediate financial relief must be forthcoming. If "charity begins at home," let us turn on the tap leading to its source and help the once prosperous, now dependent and suffering American planter to a fresh start. His needs are incomparably greater than were those of the Titanic foreign victims, and far more pressing.

CHESTNUTS.

MUST the boy be deprived of his chestnuts? It begins to look so, and yet a fall without a chestnut hunt will make Jack an unhappy boy. It seems, however, that a blight has zealously selected the small boy's favorite for destruction. The chestnut blight, scientifically termed *Dia-portha parasitica* Mur, knows no sectional prejudice. It has gone from State to State, creating havoc everywhere. The only remedy thus far discovered is that of chopping down the affected tree, which not only is expensive, but evidently not efficacious. In New Jersey the damage already done amounts to five million dollars. It is the white plague of the forest, although unfortunately it cannot be checked by sending the patient to a different climate, for all climates alike seem unable to offer resistance to this fungus growth that destroys the bark and cuts off nourishment to the tree. When tree doctors disagree, the pleasures of chestnutting will be an etching on the small boy's memory instead of a pocket full of chestnuts.

YACHTING

Ticks from the Ship's Clock.

The Geodetic Bureau has just issued chart 228, covering Cape Neddick Harbor, and York River at York Beach, Me. Cape Neddick will be buoyed by the Lighthouse Bureau during the present season. The Bay Haven Y. C., of York Beach, Me., welcome visiting yachtsmen.

Official entry blanks for the Cadillac speed boat races at Detroit, Mich., to be held here July 23 and 25 during the Cadillac carnival, were sent out to-day. Assurances have been secured that Kitty Hawk III., holder of the world's racing record for hydroplanes—43.20 miles per hour—and John J. Ryan's Reliance will take part in the contests. The feature race will be held on July 25, when a 40-mile free-for-all contest for the Cadillac championship will be decided. It is claimed that the local motorboat racing course is the fastest in the world.

Plans are completed for the regatta to be held by the Cambridge Y. C. on June 28 and 29. This promises to be the largest regatta ever held in Maryland waters, and its promoters believe that it will eclipse any regatta of its kind ever held in this country.

Ankle Deep, an eight-cylinder hydroplane of the 32-foot variety, has been added to the list of nominations for competition in the August naval pageant races. The craft is owned by Casimir S. Mankowski, and is entered under the colors of the Glens Falls Y. C., of New York. It is expected to be an entry in the cross-lake race.

The 21-foot motor boat Gymgirl has left Geneva, N. Y., en route for St. Albans, Vt., manned by five young ladies, who intend to make the trip without any masculine help. The owner, captain and engineer of Gymgirl is Miss Mabelle M. Ford, of Cleveland, Ohio, instructor of physical culture in the Young Women's Christian Association. The four girls who are her companions are friends from Cleveland and vicinity. Their route is from Geneva via the Seneca and Cayuga Canal to the Erie Canal, thence east through the Erie to the Delaware and Hudson Canal, thence north to Lake Champlain, where they follow the west shore to Plattsburg and across the lake to destination. Gymgirl is powered with a 5-horsepower, single cylinder engine, and is equipped with a spray hood and extension in case of rough weather or rain.

New York Y. C.

WITH excellent weather, brisk wind and a goodly entry list, the Sound regatta of the New York Y. C. was sailed on June 13. There were twenty yachts entered, among them schooners Irolita and Elena, in the first race of the season.

Elena has been fitted with a new boom and new sails. She was sailed by Capt. William Dennis. Irolita, ex-Queen, was sailed by her owner, E. Walter Clark, commodore of the Philadelphia Corinthian Y. C. Elena finished 2m. in the lead, but was beaten on corrected time by Irolita.

In the 65-foot class Aurora, sailed by Cornelius Vanderbilt, gained the lead, turning to windward and held it to the finish, with Istalena second and Winsome third.

Medora, the new Gardner-boat, built for H. G. S. Noble, showed up well in a race against Avenger. Avenger, owned by Harry L. Maxwell, rates more than seven feet above Medora, so that the new yacht is entitled to an allowance of about 6m. over the 18-mile course sailed. In reaching, the extra canvas and length of Avenger told greatly in her favor,

but on the wind, the black-hulled Medora outpointed and outfooted Avenger, so that on the second leg of the triangle she took the lead. Then followed two legs of reaching and Avenger was able to gain an advantage which Medora was unable to overcome, but she finished near enough to Avenger to win the race on corrected time.

Cara Mia, sailed by Stuyvesant Wainwright, won the race for 31-raters. Nepsi, sailed by Johnston de Forest, won the race for 30-footers.

The new schooners sailed close together, with Vandalia in the lead, closely pushed by Helen II. On the last leg Moira held to the west and carried a better wind and was able to outfoot her two black-hulled competitors. The summaries:

Schooners, Classes A and B—Start, 12:30—Course, 23 $\frac{3}{8}$ Miles.

	Finish.	Elapsed.
Elena, Morton F. Plant.....	2 31 50	2 21 50
Irolita, E. Walter Clark	2 33 50	2 23 50
Corrected time: Irolita, 2.18.09; Elena, 2.21.50.		

Sloops, Class K—Start, 12:15—Course, 23 $\frac{3}{8}$ Miles.

Aurora, Cornelius Vanderbilt.....	2 55 33	2 40 33
Istalena, G. M. Pynchon	2 59 59	2 44 59
Winsome, E. Trowbridge Hale.....	3 01 08	2 46 08

Sloops, Classes L and M—Start, 12:20—Course, 18 $\frac{1}{4}$ Miles.

Avenger, H. L. Maxwell.....	2 36 31	2 16 31
Medora, H. G. S. Noble.....	2 38 24	2 18 24
Corrected time: Medora, 2.11.26; Avenger, 2.16.31, estimated.		

Sloops, Class P—Start, 12:15—Course, 18 $\frac{1}{4}$ Miles.

Cara Mia, Stuyvesant Wainwright.....	3 13 46	2 48 46
Joyant, W. H. Childs.....	3 14 24	3 49 24
Corinthian, H. C. Smith.....	3 16 44	3 51 44

N. Y. Y. C. 30footers—Start, 12:30—Course, 18 $\frac{1}{4}$ Miles.

Nepsi, Johnston de Forest	3 22 20	2 52 20
Alera, J. W. and E. P. Alker.....	3 24 25	2 54 25
Caprice, Ralph N. Ellis	3 26 58	2 56 58
Phryne, J. P. Morgan, Jr.	3 27 47	2 57 47
Ibis, H. W. Maxwell	3 30 32	3 00 32
Juanita, S. C. Hunter.....	3 31 59	3 01 59

One-Design Schooners—Start, 12:35—Course, 18 $\frac{1}{4}$ Miles.

Moira, Clarkson Cowl.....	3 48 19	3 13 19
Helen II, D. H. Morris	3 49 33	3 14 33
Daffodil, E. Randolph	3 49 35	3 14 35
Vandalia, W. B. Duncan, Jr.....	3 49 53	3 14 53

Larchmont Y. C.

SEVENTY-FOUR yachts took part in the spring regatta of the Larchmont Y. C. last Saturday. Irolita again beat Elena.

Class L sloop, Avenger, was beaten on allowance by Medora, which won handily on her allowance.

E. Trowbridge Hall's Class K sloop, Winsome, won this event, while Vice-Commodore Pynchon's Istalena was second and Mr. Cornelius Vanderbilt's Aurora a close third.

Harold S. Vanderbilt, after the race, discovered that his schooner, Vagrant, had rounded the wrong easterly mark on one round and withdrew her, giving the race to George S. Scott's Miladi.

Arizona and Avis were disqualified for not having their racing numbers properly placed, and Mayfly was ruled out because she did not respond to a recall after having crossed the line in advance of her class signal.

Many of the finishes in the smaller classes were close, but the Regatta Committee, Messrs. Boucher, Sperry and Dalley, caught them all. The summary:

Schooners, Classes A and B—Start, 12:40—Course, 30 $\frac{1}{2}$ Miles.

	Finish.	Elapsed.
Elena, M. F. Plant	3 13 08	2 33 08
Irolita, E. W. Clark	3 16 21	2 36 21
Corrected time: Irolita, 2.29.06; Elena, 2.33.08.		

Schooners, Class F—Start, 12:40—Course, 23 Miles.

Vagrant, H. S. Vanderbilt	Withdrew.	
Miladi, George W. Scott.....	3 54 31	3 14 31

Sloops, Class K—Start, 12:45—Course, 30 $\frac{1}{2}$ Miles.

Aurora, C. Vanderbilt	3 43 54	2 58 54
Istalena, G. M. Pynchon.....	3 42 45	2 57 46
Winsome, E. T. Hall	3 41 28	2 56 28

Sloops, Classes L and M—Start, 12:50—Course, 23 Miles.

Avenger, H. L. Maxwell	3 44 15	2 54 15

New Meadows Y. C.

AT a meeting on June 12 Hartley C. Baxter, of Brunswick, Me., owner of Cruiser Kanawha, was elected Rear-Commodore of the thrifty New Meadows Y. C. Mr. Baxter succeeds the late W. R. Merrill.

The new house of the New Meadows Club is located at height of navigation on New Meadows River, and, it is expected, the fine new building will be completed by July 1. The club already has 160 members and a representative yacht list of the best in the east. The officers are: Commodore, Charles F. Mann; Vice-Commodore, Capt. Isaac Trufant; Rear-Commodore, Hartley C. Baxter; Secretary, George Leonard; Treasurer, Harry W. Varney; Fleet Captain, Fred W. Larrabee; Measurer, Ernest F. Kelley; Surgeon, Dr. E. G. A. Stetson; Trustees—C. F. Dolliver, H. W. Libby, Fred W. Brown, Thomas H. Pelley, Zina Clifford, Humphrey A. Owen and F. Melcher.

New York C. C.

LAST Saturday furnished the usual New York C. C. weather, raw, rainy, rotten, as they say down at Gravesend. Q class attracted most attention. Six boats made up the division. On the greater part of the first round Alice led, but when the boats went on the wind at Fort Hamilton, Grayjacket went ahead and was leading at the weather mark.

Soya was sailed by W. A. Barstow, her owner, who has just returned from Europe after crossing the ocean with Commodore Tod in the latter's schooner, Katrina. The positions of the craft did not change during the second round, and Grayjacket defeated Spider for the prize by 1m. 10s.

Joy won the first division of the handicap class, and the second division was taken by Careless. S division was won by M. & F. II. Mouse won in the knockabouts of Gravesend. The summary:

Sloops, Class Q—Start, 3:00—Course, 12 Miles.		
Grayjacket, F. C. Noble	4 54 45	1 54 45
Spider, H. Chubb	4 55 55	1 55 55
Alice, G. Davis	4 58 40	1 58 40
Suelew, E. F. Luckenbach	4 59 50	1 59 50
Florence, R. A. Brown	5 00 10	2 00 10
Soya, W. A. Barstow	5 02 10	2 03 10
Handicap Class, 1st Div.—Start, 3:05—Course, 12 Miles.

Slow Poke, F. L. Durland	4 58 20	1 53 20

New Rochelle Y. C.

THE New Rochelle Y. C. opened its racing season last Saturday. On the first round of the 9/4-mile course the first four boats came in well grouped, but in the home-stretch of the journey, Thistle, owned by Joseph H. Wallace, won by over a minute.

Although rated sixth best in the group of eleven that started, Thistle made the third best actual time of the day, 2h. 6m. 18s. Kathmar II., the scratch boat in the race, a graceful 12-knot 60-footer, beat the winner's time, but only by 9m. The summary:

	Start.	Finish.
Thistle, J. H. Wallace	3 23 09	5 29 27
Patricia, H. M. Hirschberg	3 22 09	5 30 04
Hopalong, W. King	3 09 27	5 35 30
Kathmar II., R. T. Fowler	3 48 11	5 41 14
Marie, Dr. L. Neuman	3 40 05	5 44 30
Gypsie, F. M. Miller	3 09 13	5 49 11
Triune, M. H. Houck	3 42 43	5 49 40
Muskeget, C. A. Voltz	3 37 02	5 53 20
Floella II., A. H. Bullard	3 32 08	5 53 25
Albina, G. A. Fisher	3 00 00	5 54 00
Apache II., C. A. McGill	3 18 18	6 03 32
Elapsed time: Kathmar II., 1.53.03; Marie, 2.04.25; Thistle, 2.06.18; Triune, 2.06.57; Patricia, 2.08.31; Muskeget, 2.16.18; Floella II., 2.21.17; Hopalong, 2.26.03; Gypsie, 2.39.58; Apache II., 2.45.14; Albina, 2.54.00.		

Corinthian Y. C.

LAST Saturday was opening regatta at Marblehead Corinthian Y. C. The 15-footers of the John G. Allen design had their tryouts, four going out in weather that kept many boats of double their size at moorings.

The new class proved stiff and well suited for Marblehead weather. Alfred Chase's Picayune won the race with a lead of 1m. 21s. over D. R. DeLorela's Half Moon. The leading boat finished less than 2m. behind the last boats of the Marblehead 17-footers, thus demonstrating their speed.

Marblehead 17-footers, the one-design class of the Eastern Y. C., gave a fine exhibition. Lolita, owned by C. H. W. Foster, won her first race with only 9s. over Tower and Stone's Atlanta.

The Class P boats showed that they will come out this season to furnish good sport,

Sayonara, Amoret, Italia and Winanno smashing their way over the long course. Italia went under one reef. Vernon F. West's Sayonara won the race. The summary:

Corinthian 15-footers.	
Picayune, Alfred Chase	Elapsed. 1 05 00
Half Moon, D. R. DeLoreia	1 06 21
Wee Three, R. W. Rose	1 09 55
Bon Soir, I. C. Wright	1 11 50
Marblehead 17-footers.	
Lolita, C. H. W. Foster	0 58 00

Tabasco, J. S. Proctor	2 28 17
Sonder Class.	
Dorothy, G. L. Batchelder	2 10 20

Beverly Y. C.

THE yacht racing season on Cape Cod was opened to-day by the Beverly Y. C. with a regatta off Wing's Neck. There were fourteen boats that started and one new boat, Skate, built by W. E. C. Eustis during the winter, did not make a very good showing, but the yachtsmen believe that as soon as she gets tuned up she will start something.

Foraminifer, which won the championship in the 21-foot class last year, had to give way to Saracen and Selwonk to-day.

The boats of the 21-foot class were sent over course No. 9 to Bird Island and Scraggy Neck and return, 13 3/8 miles. There were only two Sonder class boats out. Slacoon beat Sally VIII. These boats were sent over the same course as the 21-foot class.

Three 15-footers crossed the line. Vim defeated Pronto by less than half a minute. Endeavor was nearly 3m. behind Vim. They were sent over course No. 15 to Bird Island and Beverly Y. C. buoys, about 8 3/8 miles. The summary:

21-Foot Class.	
Saracen, R. Winsor, Jr.	Elapsed. 1 50 31
Selwonk, W. S. Knowles	1 51 48
Foraminifer, D. L. Whittemore	1 51 01
Pollywog, F. C. Hood	1 52 30
Skate, W. E. C. Eustis	1 52 55
Terrapin, F. L. and G. B. Dabney	1 53 31
Phantom, F. W. Sargent	1 55 19
Makabaro, Galen Stone	1 56 45
Sonder Class.	
Seacon, J. L. Stackpole	1 54 00
Sally VIII., C. E. Hellier	1 54 42
Fin, H. Stockton, Jr.	1 58 02
15-Foot Class.	
Vim, W. O. Taylor	1 49 32
Prouto, Sidney Hosmer	1 50 01
Endeavor, G. H. Fiske	1 52 23

Lakewood Y. C.

FUDGE, sailed by Charley Beeman, last Saturday took the first race of the Lakewood Y. C., Cleveland, O., in the 18-foot class. Jerry, sailed by Harry Spalding, finished first in the catboat class.

Both events were started with a fine northeast breeze. Fudge, Fannette and Milillian crossed the line in the order named. Fannette, pointing higher and outfooting Fudge, soon passed her, beating her by a minute and a half to the third mark. Fudge started gaining on Fannette on the first leg out and, with the breeze getting lighter, passed her rival on the second leg on the slide and continued gaining on the spurt home, finishing a minute ahead of Fannette.

The catboats put up a great race. Spalding found weather conditions just to his liking and beat his old rival, Fehrenbach, handily. The latter lost her advantage of being the first boat to cross the line at the gun by splitting tacks and standing on the shore leg, while the others got better wind standing out in the lake.

Frank Buehler sailed the Red Head into second place, having purchased the Bressington boat the day before and entering into the game on short notice. The summary:

18-Foot Class—Start, 10:05—Course, 9 Miles.			
	First Round.	Finish.	Elapsed.
Fudge, Beeman	11 17 08	12 38 18	2 33 18
Fannette, Wood	11 15 38	12 47 58	2 37 58
Milillian, Malin	11 18 05	Did not finish.	
Catboat Class—Start, 10:15—Course, 4 1/2 Miles.			
	Finish.	Elapsed.	
Jerry, H. Spalding	11 44 33	1 29 33	
Red Head, Buehler	11 46 18	1 31 18	
Uncle Biff, Smith	11 47 05	1 32 05	
600, R. Spalding	11 47 08	1 32 08	
Tom, Fehrenbach	11 47 33	1 32 33	
Doc, Pelton	12 00 06	1 45 16	

Bayside Y. C.

IN a nasty rain and a strong southwest wind, three boats in the Bird Class race of the Bayside Y. C. last Saturday afternoon lowered the old record for the 6 1/2-mile triangular course on Little Neck Bay. Loon, owned by A. W. Knapp, finished in 1h. 21m. 57s.

In the one-design, or "P" Class, Betty, owned and cleverly sailed by W. H. Johns, won, with Peggy, J. H. Shiras, owner, a close second. The summary:

Bayside Y. C. Bird Class.—Start, 3:45—Course, 6 1/2 Miles, Triangular.		
	Finish.	Elapsed.
Loon, A. W. Knapp	5 06 57	1 21 57
Skylark, J. Dayton	5 08 00	1 23 00
Dodo, H. E. Andrews	5 08 53	1 23 53
Plover, C. G. Meyer	5 09 48	1 24 48
Curlew, C. W. Willard	5 17 07	1 32 07
Teaser, A. Nesbitt	5 17 30	1 32 30
One-Design Class—Start, 3:50—Same Course.		
Betty, W. H. Johns	5 27 33	1 37 33
Peggy, J. H. Shiras	5 28 02	1 38 02
Rowdy, A. Medicus	5 29 17	1 39 17
Mary Jane, W. E. Banks	5 29 44	1 39 44
Edna J., A. Nesbitt	5 31 50	1 41 50

Stamford Y. C.

THE third in the Stamford Y. C.'s series for the club one-designers was sailed last Saturday in a moderate breeze. It was won by Bartholomew Jacobs' Killie over course No. 1 of 6 1/2 miles. The summary:

Start, 3:07.	
Killie, Bartholomew Jacobs	Elapsed. 1 22 35
Kelpie, C. D. Lockwood	1 23 50
Osprey, Douglas Elliman	1 24 00
Kittiwake, H. C. Petman	1 25 10
Fiddler, Webber & Weed	1 25 43
Dart, Schuyler Gillespie	1 26 40
Snapper, Edward Corning	1 30 34

Ocean City Y. C.

TO-DAY, June 14, was devoted to laying the cornerstone of the new club house at Ocean City, N. J. Former Commodore William E. Hexamer, as chairman of the Building Committee, treated the club's guests to a roast ox, weighing nearly 800 pounds.

By tapping the cornerstone gently, Commodore J. Ralph Wilson brought down the rain and the ceremonies were adjourned to the old club house. Mayor Headley welcomed the guests on behalf of the city, the yacht club

and the motor boat club. He commended the energy of both the yacht club and motor boat club members.

Thomas Armstrong praised the good work of Commodore Wilson, former Commodore William E. Hexamer and Vice-Commodore Charley J. Curran.

There was a reception and dance at the club house.

Motor Boating

Cleveland Power B. C.

THE Cleveland Power Boat Club, of Cleveland, Ohio, is having a busy racing season. The club course is on Lake Erie off Gordon Park, and is a triangular one of three miles. The handicaps are figured by the Race Committee, each boat being taken over the course by a member of the committee in order to establish its rate of speed. In the actual races the slowest boat in each class starts first, each other entrant starting on its handicap time. The number of the boat to start is displayed from the committee stand. The various classes are Class B, open boats up to 20 feet; Class C, open to boats over 20 feet; Class D, cabin cruisers, and Class E, speed boats. There will be races during the season on June 30, July 4, July 21, Aug. 4, Aug. 24 and 25. On Sept. 8, under the auspices of this club, will be held the Ohio State championship race for speed boats. The club will wind up its racing season on Sept. 25, when the final events will be held for all classes.

The Cleveland Power Boat Club has a membership of eighty-two prominent yachtsmen in and around Cleveland, and its officers are as follows: Commodore E. E. Haeefe; Vice-Commodore, C. C. Wadsworth; Rear-Commodore, C. Johnson; Secretary, P. L. Stoller; Treasurer, Ferd. W. Eiche; Fleet Captain, Paul Erdman. The Regatta Committee consists of Chas. Randall, Chairman; Joseph Lucas, Harry Squires, Paul Erdman and Edw. Daniel

Marylands's 200-Mile Race.

ON June 29 the Maryland Motor Boat Club will hold a 200-mile race, open to any power boat, wether affiliated or unaffiliated with any club.

The club proposes to make this even an annual affair, to be held the last Saturday in June. In this 200-mile race there will be three classes, known as A, B and C. The boats will be rated under the American Power Boat Association rules.

Class A will be boats rating 50 feet and more.

Class B—Boats rating more than 40 feet and less than 50 feet.

Class C—Boats rating 40 feet and less.

The boats contesting must comply with the Federal regulation as to equipment. Each boat must carry a crew of not less than four. The races are confined to power boats propelled by internal combustion engines. The race will start on the afternoon of Saturday, June 29, from the stake boat off the club house. The course will be to Point No Point and return.

Canoeing

Canoe Cruising on Rancocas.

BY BENJAMIN A. SLEEPER.

THE third annual cruise of the Atlantic Division, A. C. A., on the Rancocas Creek was held on May 25 and 26, and proved very successful and enjoyable to those participating. The clubs represented were as follows: Lakano B. C., twenty members; Chippewa C. C.,

three; Philadelphia C. C., three; Yapewi Aquatic Club, two; Inwood C. C., one; Red Dragon C. C., one; Keystone Y. C., one; Coatesville (no club), two; Philadelphia, (no club), three.

Those present for a whole or a part of the cruise numbered thirty-six, as follows: Vice-Commodore H. B. Fort, Rear-Commodore A. D. Berning, H. T. Mooney, H. H. Baylie, E. D. Baylie, R. Y. Page, Lloyd Jones, F. E. Soule, A. C. Biles, M. E. Southard (Purser), Franklin Gauntt, W. M. Johnson, Wm. Parsons, Ira Davis, E. R. Coleman, Lewis Fretz, A. E. Svenson, Millard Troxell, Mrs. Fort, B. A. Sleeper, J. B. Probasco, E. M. Simons, W. C. D. Gauntt, J. S. Page, J. G. Downward, Amos Creeley, Alonzo Shinn, E. B. Ayres, I. C. Hendrickson, "Mac" Blumner, Stanley Crawford, Walter Sharp, Harry Blumner, H. L. Walker, C. M. Swart, Jos. Broomhead.

The vice-commodore, with J. S. Page, started the game by making camp at Browns-Mills-in-the-Pines on Thursday afternoon. These strenuous workers were so lonely that they decided to unload the entire carload of canoes and duffle and transfer them to camp. This action, while inexplicable to their intimate friends, was much appreciated by their fellow cruisers who wish me to extend to them our thanks for the saving both of hard work and of demurrage.

Camp was made on the island in the lake, just above the dam, one of the prettiest spots and most suitable for the purpose, to be found in the State. After supper the advance guard started a mosquito crusade. This was evidently very successful as the mosquitoes did not bother us on Friday, but judging from the appearance of the crusaders it must have been a hot fight.

Friday morning the second division arrived at camp, and after getting in supplies, all started for Hanover Furnace. I believe, of course, that all canoeists are truthful, but must certainly express my admiration for the imagination of anyone who says he has paddled all the way from Browns Mills to Hanover. Until within a half mile of Hanover the route is quite clear, although very narrow, swift and with a course much like that of some of the salt creeks along the "Shore" which were formed (according to legend) by the "Devil" chasing a snake. Very often we met ourselves "coming back," and twice Commodore Fort had a head-on collision between the bow and stern of his canoe. Near Hanover the creek spreads out among the stumps and bushes, forming innumerable channels, none large enough for a canoe over five feet in length. The writer attempted to find the course for the rest of the bunch by wading through the bushes. It's great; you are knee-deep in the black water for two steps, on the third "splash" up to your neck, on the fourth step you put your shin out by colliding with a stump, then you climb up to wade again in water ankle-deep. Is it any wonder Commodore Fort likened me to a turtle (snapping variety), when I emerged in the nice wide stream at the Hanover Bridge? Above the bridge is quite a large and a very pretty lake, well worth the trouble in getting there. After lunch at Hanover, the pilgrims returned to Browns Mills and the camp, finding most of the stumps but without serious damage to any excepting one very old and rotted one, which was displaced by "Bill" Gauntt and his Peterborough "Nancipoo." "Nancy" is quite a frisky heifer and some stump finder.

During the afternoon and evening there were several arrivals at camp. Two Coatesville boys appeared, minus canoe and duffle, which they had shipped some time before, but which, according to the usual custom of the railroads didn't show up until the morning after. Strangers at first, they soon became acquainted and added much to the enjoyment of the trip. A great commotion at the station caused us to think "Taft" had appeared, but proved to be only the longest man in the A. C. A., "Hike" Berning, from New York.

After supper, a pilgrimage to the hotel was led by the Vice- and Rear-Commodore, where the annual pool tournament was held, "Hike" carrying off the honors, as usual.

In the evening a thundershower threatened to cause trouble, but only resulted in satisfying us that a good tent is waterproof, and Amos Creeley that a canoe will leak from below if bottom upward. Amos is willing to admit that pine logs are hardwood, at least hard enough to use for a bed.

Saturday morning the cruise got under way about nine o'clock, and we had a very enjoyable trip down the beautiful Rancocas, stopping at Pemberton for lunch. Some especially enjoyable features were added to the usual trip. Real fast water was found above the dam at Birmingham and in the raceway at Mount Holly, and we had the pleasure of shooting the dam at Birmingham.

Camp for the night was pitched at Cedar Springs, below Mount Holly. By this time the number of cruisers had considerably increased. Arrivals during the evening made the total attendance for the cruise as listed above. After the long day's journey, supper was very welcome. Tents were pitched and everything made ready for the night. The grand campfire was lighted, refreshments were served and the hours of song and story passed very enjoyably. Special features were tales by "Mac," Shakespeare by "Big Chief," monologues by "Hike," attempted firelight pictures by "Shinny" and the many songs led by "Whitey" and "Axle."

Sunday morning all arose early, getting breakfast in time to leave camp about noon. The cruise proceeded lazily with the tide, passed the industrious city of Centerton, where the "dead ones" were left, and paused at the Rancocas Country Club. Here we were welcomed in great style and certainly were made to feel at home. Would there were many more such clubs along our cruises. At the club house a very good lunch was enjoyed by all, after which the cruise continued to the Delaware and up river to Burlington, leaving the cruisers here and there by the wayside.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—William A. Bartholomew, Jr., W. 207th street, and Bolton road, Inwood-on-Hudson, N. Y., by Fred W. Baldwin; Theo. G. Altener, 2024 Ruscomb street, Germantown, Philadelphia, Pa., by Victor P. Abel.

Eastern Division.—Chas. B. Janes, 47 Washington avenue; Ed. Prescott, 143 Crescent street; Edward MacDonald, 7 Brown street; Henry J. Colon, Endicott street; Roy B. Stevens, Crescent Park; Frank V. Carpenter, 285 Moody street; James G. Burgin, 279 Crescent street; H. H. Blanchard, 70 Chestnut street; Stanley West, 190 Moody street, and L. W. Furbush, Pumping Station No. 1, all of Waltham, Mass., and all by E. A. Rolland; Clarence H. Hill, Howard, R. I., by Fred C. Rexford.

Western Division.—Arthur Edward Sunny, 4933 Woodlawn avenue, Chicago, Ill., by J. W. Barker; Charles C. Elliott, 851 Center street, Elgin, Ill., by Ralph Rogers; Albert H. Vilas, 124 South East avenue, Oak Park, Ill., by John N. Deneau; Frank C. Pundt, Dundee, Ill., and Arthur L. Torrey, National House, Elgin, Ill., both by H. L. Boynton.

NEW MEMBERS ELECTED.

Atlantic Division.—6429, Raymond C. Odell, 23 Hooker avenue, Poughkeepsie, N. Y.; 6430, Edmund Y. Hill, 445 West End avenue, New York city.

Eastern Division.—6431, Charles H. Shippee, Jr., 206 Smith street, Providence, R. I.

NEW LIFE MEMBERS.

Western Division.—No. 91 (A. C. A. 385), J. Herbert Ware, Chicago, Ill.

Atlantic Division.—No. 92 (A. C. A. 2950), E. Howe Stockwell, New York city; No. 93 (A. C. A. 6280), F. C. Buchenberger, Brooklyn, N. Y.; No. 94 (A. C. A. 4632), Louis Reichert, New York city.

MEMBER REINSTATED.

Western Division.—385, J. Herbert Ware, 647 Rush street, Chicago, Ill.

TRAP SHOOTING

If you want your shoot to be announced here send a notice like the following:

Fixtures.

- Sept. 12-13.—Cincinnati (O.) G. C. Arthur Gambell, Supt.
- REGISTERED TOURNAMENTS.
- June 25-28.—Eugene, Ore.—Pacific Indians. F. C. Riehl, Sec'y.
- June 26.—Worcester (Mass.) Sportsmen's Club. Jay Clark, Jr., Sec'y.
- June 25-26.—Du Bois (Pa.) G. C. E. W. Kelly, Sec'y.
- June 26-27.—Freehold (N. J.) G. C. M. W. Conover, Sec.
- June 27.—Hicksville (O.) G. C. W. B. Bricker, Pres.
- June 27-28.—Spencer (Ia.) G. C. G. O. Round, Sec'y.
- June 28.—Toledo, O.—West Toledo G. C. Geo. Volk, Sec'y.

- June 29-July 2.—Niagara-on-the-Lake, Canada.—Canadian Indians. Court Thompson, Sec'y.

DRIVERS AND TWISTERS.

The New York State shoot in 1913 will be held under the auspices of the Buffalo Audubon Gun Club.

A. E. Ranney, drawn as a substitute on Olympic team, did not accompany the team. Dan McMahan went along as sub.

On June 29 a team of amateurs from down East will shoot against an all-Delaware amateur team at Du Pont Gun Club, Wilmington.

The third annual Fourth of July shoot of the Sunbury-Selinsgrove Gun Club, Inc., will be held July 4, shooting to begin promptly at 1:15 P. M. There will be seven 15-target events. Optional sweeps. Total entrance \$4.25. J. W. Schoffstall, Sunbury, Pa., is Secretary.

Pahquoique Rod and Gun Club, of Danbury, Conn., are making great preparations for the fourth tournament of the Western Connecticut Trapshooters' League, July 20. Last year's entries numbered 110 shooters, and this year all indications point to a larger number. A third set of traps has been installed.

Canandaigua Sportsman's Club will hold a tournament on Friday, June 28, at Canandaigua, N. Y. There will be ten events at 15 targets each, entrance \$1.50. No. 9 is at 25 targets, \$2 entrance, for merchandise. Jack Rabbit system in the 15-target events, 50, 30, 20 per cent. Merchandise event, distance handicap, \$200 in prizes. Forty dollars added.

J. T. Skelly, manager sporting powder division, Du Pont Powder Co., writes: "H. D. Freeman, of Atlanta, Ga., has challenged C. A. Young, of Cleveland, O., present holder of the E. C. cup. Under date of June 10, Mr. Freeman sends us check for \$25 as forfeit. The shoot is scheduled for July 4, on the grounds of the Cincinnati Gun Club, Cincinnati, O."

Wilmington sportsmen have incorporated a gun club and purchased a shooting preserve in South Carolina, on the Kenloch River. The club is known as the Kenloch Gun Club. The incorporators are: Major W. G. Ramsay, Alexis du Pont, and Josiah Marvel, all of Wilmington. The capital stock is \$60,000. The tract consists of between 6,000 and 7,000 acres.

The Chicopee Falls Rod and Gun Club will hold their sixth annual tournament, June 29, on their Liberty street grounds, Chicopee Falls, Mass. Shooting will start at 9:30 o'clock, rain or shine. Program calls for ten 15-target events; fourteen events sweeps; one event merchandise; \$27 added money; \$75 worth merchandise prizes. Targets, 2 cents each, included in entrance. Percentage system, 40, 30, 20 and 10 per cent. Sweeps optional. Any one may enter for targets only. Trade experts shoot for targets only. There will also be a three-man team race; a cup to each man on winning team. Any club may enter as many teams as they wish. All teams that enter must have bona fide club members of club they represent. Ship shells to F. E. H. Sheldon, Chicopee, Falls, Mass., prepaid. W. G. BEECROFT.

Missouri State Trapshooters' Association.

MEXICO, Mo., June 6.—The three-days' tournament ending to-day constituted what may be termed a ripper. Attendance was good, scores excellent and program unique. The "cute" little event was old man's race, entrance 60 years or better. A string of 25 was shot at. W. H. Haws made 23 clean smashes, with Dud Athey and Ash Gray tied for place with 16. On the shoot-off at 10 aerosaucers, Dud Athey won with 7.

H. E. Snyder was high gun for three days with 436; second, Bart Lewis, 432; third, C. B. Eaton, 430. On doubles at 10 pairs, Joe Gray, Eaton and Snyder tied with 17. Fred Gilbert, professional, missed only one of his allotment.

Grand Missouri Handicap was taken by Galbraith with 95 out of 100 from 19yds. Scores:

Fort Wayne Gun Club.

FORT WAYNE, Ind., June 10.—From Crownwell came the winner of our tournament, and he did the trick by a margin of 4. His name is H. H. Hontz and his score was 142 out of 150. He has been heard of before in gunning circles in the neighborhood. Place was divided between K. C. Shepherdson and Geo. Miller, each having the eye for 138. High professional was J. R. Taylor, who snuffed out 146, smokelessing out Lester German by one rock. In practice events, M. Witz shot like a rooster, getting 98 out of 100, beating J. M. Barr by a couple. The scores:

Practice events:

	Shot at.	Brk.		Shot at.	Brk.

Hudson Gun Club.

JERSEY CITY, N. J., June 16.—Appended find scores of the regular bi-monthly shoot of the Hudson Gun Club, held this morning. The day was a miserable one for trapshooting, and our attendance suffered in consequence, as there were only ten shooters who took part in the several events that were carded for the day. Dave Engle was high gun with an average of 85 per cent., with George Piercy finishing one point shy for the honor.

Whitley and Williams, Sr., shot a 50-bird race with Kelley and Williams, Jr., but Joe Whitley being a little out of form, his team mate had to suffer the pangs of defeat. Scores: Whitley 12, Williams, Sr., 22; total 34. Kelley 23, Williams, Jr., 23; total 46. Kelley and Whitley tried their hands at 25 birds, Whitley shooting from 16yds. and Kelley at the limit, 24yd. mark. Scores: Kelley 19, Whitley 18.

Our next shooting date will be June 30. On this date there several matches have been arranged by some of the members that bid fair to watch. Bring your gun along and get in the game. Grounds are open at 9:30 A. M. every other Sunday, and everybody welcome here.

Targets:

D D Engle	25	25	25	25
J Williams	21	23	17	24
T Kelley	20	21	20	18
G Piercy	21	18	22	21

A Kurzell	12	11	15	12
24-Gauge	13

Hyde Park Gun Club.

JUNE 15 was hot, too much so for comfort, and several of the regulars failed to attend the weekly shoot. Sam Leever, of Goshen, came down for a final warm-up before going to Springfield for the Grand American. He was high gun with 91—very good under the hard conditions caused by a strong cross-wind, which affected the flight of the targets. The Oskamps did not put up their usual score, as they were trying out new guns. Porter fell down after starting out well in the first event. Frohlinger shot about as much as usual, but with not quite his usual success.

Sam Leever	24	21	21	25	91
Porter	24	19	16	...	59
W S T Oskamp	12	20	13	13	58
Frohlinger	16	20	36
G Oskamp	12	15	27

The Eastern Handicap.

THE Interstate Association's Seventh Eastern Handicap tournament will be held at Bradford, Pa., July 9-11, under the auspices of the Bradford Gun Club. One thousand dollars will be added by the Interstate Association and the Bradford Gun Club.

Bradford, McKean county, Pa., is located in the foothills of the Allegheny Mountains, at an altitude of 1,425 feet. It is in the heart of the oil field, and has properly been called the Queen City of the oil regions. The city is supplied with pure, clear water from mountain springs, and its reservoirs are high up in the hills, making its advantages for motor power and fire protection second to none.

It is one of the most attractive localities for business and residential purposes in Northwestern Pennsylvania. In the business and manufacturing portions of the city the buildings are substantial and well adapted for the uses to which they are devoted. The residential portion is handsomely laid out, with well-paved and brilliantly lighted streets along which luxurious homes have been erected.

The principal industries are the manufacturing of engines, boilers, couplings, oil well tools, etc., but the manufacturing interests are not confined to oil well supplies alone, as there are many other factories, such as cutlery, silk mills, carbon plant, wood alcohol and acids. Bradford claims the distinction of having the only oxalic acid plant in the United States.

Bradford possesses public spirit, and that is an important characteristic of an ideal city. Its school buildings are models of modern architecture, and its educational system the very best. It has pure water, excellent electric railway service, ample telephone service, electric light and natural gas for residence and business houses. The city is famous for its beauty, its health, its energy, its prosperity, its industrial, educational, religious and social advantages, and for its broad-minded progressive business men.

Bradford can be reached by the Pennsylvania, Erie, and Buffalo, Rochester and Pittsburgh railroads, as well as by the Western New York & Pennsylvania Traction Company, thus making the railroad facilities superior to most cities of its size.

The Bradford Gun Club was organized more than thirty years ago, and at present has a membership of one hundred, with a waiting list—its membership being limited to one hundred. The club owns twenty acres of land and has one of the finest club houses in the country, which adds greatly to the convenience and comfort of the shooters and their friends. The grounds are easily reached by the electric cars, being only fifteen minutes' ride from all hotels in the city.

The membership of the Bradford Gun Club is composed of representative citizens, among them many of the best business and professional men of the city noted for

their hospitality, which will be generously dispensed during the coming tournament. Visiting sportsmen have always been cordially received by citizens, as well as by the club's members, and everything possible will be done to make the visitors to the Seventh Eastern Handicap tournament feel at home while in Bradford.

The conditions governing the Eastern Handicap are as follows:

One hundred targets, unknown angles; handicaps, 16 to 23yds.; high guns, not class shooting; \$200 added to the purse. The number of moneys into which the purse will be divided will be determined by the number of entries. Entrance, \$10, the price of the targets being included.

The winner of first money is guaranteed \$250 or more. If first money falls below \$250, the difference will be made good by the Interstate Association. A trophy will be presented by the Interstate Association to the amateur contestant who makes the highest score.

Regular entries must be made at the cashier's office, on the shooting grounds, before 5 P.M., Wednesday, July 10. Penalty entries may be made Wednesday, July 10, up to the time the first gun is fired in event No. 5, Thursday, July 11, by paying \$15 entrance, targets included.

The moneys will be divided as follows:
Regular program and double-target events—Rose system, ratio 5, 3, 2, 1.

Optional Sweepstakes—Percentage system, 40, 30, 20 and 10 per cent.; class shooting. Ten entries and under, three moneys, 50, 30 and 20 per cent.

To be eligible for the Squier money-back system, a contestant must compete in all regular program events.

The special events at double targets and the Eastern Handicap are separate from the regular program, and it is optional with the contestant whether or not he makes entry for them. The Squier money-back system does not apply to the double-target events and the Eastern handicap.

New Jersey State Association.

GUNNERS from States who are not friendly with New Jersey will be barred from shooting in that State in the future. The marksmen in this State want reciprocity and voted to that effect at the annual meeting the other day after the day's shoot was over. Until the New Jersey State tournament gunners from other States were welcome to shoot in any tournaments that were held in this State. Jersey marksmen, however, were barred from shooting in other State tournaments unless they were members of some club in the State in which the affair was being held. The new rule was passed unanimously, and it hits directly at New York and Pennsylvania, as Jersey gunners are barred in both of these States unless members of State clubs.

During the first two days of the last tournament, out-of-town gunners, especially New York and Philadelphia men, won the majority of the prizes.

Eight new clubs elected to the Association are: Salem Gun Club, Speedway Gun Club, Atlantic Gun Club, Mt. Holly Gun Club, Riverside Gun Club, New Jersey State Rifle Association of Sea Girt, State Fish and Protective Gun Club and the Belvidere Gun Club. Where the next shoot will be held was not decided upon and was left for the officers of the Association to decide.

A few changes were made in the officers of the association. George H. Pierce, of Jersey City, was re-elected President, while B. M. Shanley, Jr., of the Speedway Gun Club, was elected First Vice-President in place of John S. Fanning. Frank I. Heneline, of Camden, was re-elected Second Vice-President. The Board of Trustees will be composed of F. R. Wickes, H. W. Mathews and James F. Murphy.

Greenwich Gun Club.

ON Thursday, July 4, the Greenwich Gun Club will hold a shoot at Island Beach, Greenwich, Conn. Program commences at 10:30 A. M. There will be ten events. Nos. 1, 2 and 3, at 15 targets each, entrance 65c., are for merchandise prizes. Nos. 4, 5 and 8, are at 20 targets, 70c. entrance. Nos. 6, 7, 9 and 10 are at 15 targets each, 65c. entrance. Optional sweeps in events 4-10.

Events 2, 3, 4, 5, 6 and 7 constitute the championship of Greenwich, for the Island Beach cup. Events 8, 9 and 10, five-man team race for trophy.

Rose system of division of sweeps, 5, 3, 2, 1. Targets to be deducted from sweep and merchandise at 1c. each. Contestants may shoot for targets only at 1½c. each. Ten cents each from events, 4, 5, 6, 7, 8, 9 and 10 to go toward high averages for the day, divided 4, 3, 2, 1. Medal for the longest amateur run. Championship of Greenwich for resident shooters only. Professionals shoot for targets only. Standard loads for sale at 65c. per box. Perfect background. Ideal location. All trophies donated by Island Beach corporation. Refreshments on grounds.

Shoots will be held every Saturday afternoon, regardless of weather. Boats leave Island Beach dock, near railroad station every half hour. For further information address J. H. Finch, 93 East Elm street, Greenwich, Conn.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

WINS AGAIN IN Missouri, New Jersey and Georgia

MISSOURI STATE SHOOT

1st Amateur Average, H. E. Snyder, scoring 436 ex 450, with Nitro Club Steel Lined Shells.
3d—W. L. Mulford, scoring 431 ex 450, with Nitro Club Shells.

Grand Missouri Handicap.

1st—Ira Galbraith, 19 yards, scoring 95 ex 100, with a *Remington-UMC* Pump Gun and Arrow Steel Lined Shells.
3d—E. S. Collier, 19 yards, W. L. Mulford, 19 yards, and H. E. Snyder, 20 yards, tied at 93 ex 100, all shooting Nitro Club Steel Lined Shells.

NEW JERSEY CHAMPIONSHIP CUP

B. M. Shanley, Jr., W. H. Matthews and E. Von Lengerke tied at 49 ex 50, all shooting *Remington-UMC* Steel Lined Shells. B. M. Shanley won, scoring 23 ex 25 in shoot off.

WARM SPRINGS, GEORGIA

1st Amateur Average, A. J. Hill, scoring 290 ex 300 with Arrow Steel Lined Shells.
2d—W. T. Laslie, scoring 289 ex 300, with Arrow Steel Lined Shells.
3d—Vassar Cate, scoring 288 ex 300, with Arrow Steel Lined Shells.
4th—E. R. Alexander, scoring 285 ex 300, with Arrow Steel Lined Shells.

1st Professional Average, H. D. Gibbs, scoring 293 ex 300, with *Remington-UMC* Pump Gun and Arrow Steel Lined Shells.

Consistent winnings at the trap prove *Remington-UMC* as always—the perfect shooting combination.

REMINGTON ARMS—UNION METALLIC CARTRIDGE CO. - 299 Broadway, New York, N. Y.

Lehigh Valley Shooting Association.

THE weather was very unpleasant on June 15, at the tournament of the Lehigh Valley S. A., as it rained off and on all afternoon. Most of the boys shot with their rain-coats on. This lowered their scores to some extent. A. S. Heil, secretary of the Association, was kept busy hustling the squads amid the rain. E. H. Adams, of Reading, the banner amateur of the South End Gun Club, led the field of forty-five amateur shooters with 146 breaks out of his 150 birds. Ed. wants the whole hog or none. The Reading boys are proud of his career, as he shot Melchior's double-barrel gun during the entire tournament.

A. S. Heil, secretary, and W. S. Behm, of Reading, tied on 142 out of their quota, for second high amateur. These two chums are of the same height, same weight, both single and no strings of cottontails near them. Why should they not tie on such an event.

W. Hepner and A. J. Mengie, of Reading, tied on 140 as third high amateurs, with J. G. Englert right on their heels with 139.

Arthur Rasmusson, pitcher of the Allentown ball team, landed 138, which was tied by F. B. Ziegler, of Royersford; E. R. Christman, of Royersford, and R. J. Budd, of Lykens, Pa.

Both Fred Coleman and C. F. Kramlich fell a little below their average with 136 breaks. Melchior, Jones, Ball and Gerhert, four leading chums of Reading, each broke 133. F. S. Rader shot six events and had to leave for home. Mr. Daub, of Muir, shot a good race to-day. M. R. Eshelman, the oldest man in the race, landed 125 targets. G. E. Brown, president of the Bryden Gun Club, was low gun, with 87 breaks and 63 goo-gooes. He received \$2.50 for this record.

E. O. Smith, of Bethlehem, gave the boys a good race. A. K. Ludwig, who was in the office, was busy hustling squads, preparing scores, etc.

J. M. Hawkins led the professional field with 145 breaks. Hank Stevens was second with 140, and H. L. Brown with 135 to his credit was third. L. R. Lewis scored excellently, while assisting in the office work.

This was F. M. Fay's first appearance; he broke 130. A number of visiting shooters were present, and good care was taken of them. Fine chicken dinner was served at the hotel.

In the ten-man team race between the South End Gun Club, of Reading, and the home club, the Reading team won by 35 targets. The scores in the team shoot follow:

Table with 2 columns: Reading and Lehigh Valley. Lists names and scores for various participants.

Ed Adams had a straight run of 68, and A. S. Heil one of 52.

The mainspring broke at 5:30, but H. L. Brown was on the job and delayed the game but eight minutes.

The first gun was fired at 10:15 A. M. and the last at 6:20 P. M.; 6690 targets were thrown during this period, and was well done, considering the weather conditions.

H. J. Schlicher, former State champion, could not be present on account of attending a funeral.

Treasurer M. E. Desch served as referee, while Pop Knauss had the official scores.

Many of the boys promised to attend the Hercules Gun Club's registered tournament at Temple, Pa., on Aug. 10.

Complete scores of the tournament:

Table with 2 columns listing names and scores for the tournament.

Table with 2 columns listing professionals and their scores.

Sunbury-Selinsgrove Gun Club.

SUNBURY, Pa., June 14.—The regular weekly practice of the Sunbury-Selinsgrove Gun Club was attended by most of the regulars and also by some beginners. The fact of the State shoot being so recent in date and all the men having had their fill of shooting, held the attendance down quite a bit.

The final leg of the Du Pont trophy was shot, with Brian Teats being returned the winner with the good score of 190 out of 200 shot at, including his handicaps.

Howell was right back to form again. Recently he was far off his usual pace, getting down to 80 and 82 per cent. But yesterday he had his old-time down pat, and broke them with his old snap and ginger.

Teats bought a new gun at the State shoot, and at once jumped to 90 per cent. figures. The fact that it is not a flash in the pan, is shown by the regularity with

which he makes 23s and 24s. A little more steadiness and he will make them all hustle.

Sulouff, Moeschlin, Yeager, though new to the trap-shooting game, made a very creditable showing. With more practice, they will there with the goods.

Scores at practice:

Table with 8 columns (Events 1-8) and rows for participants: Howell, Hartman, Hawley, Teats, Schoffstall, Cummings, Yeager, Sulouff, Huff, Moeschlin.

Starting with the first July shoot, there will be spoons for the men to shoot for. They will all be classed according to their ability, with a spoon for each club. There will be a beautiful silver cup for a challenge trophy. The man winning it five times will retain permanent possession, and we will then get another.

SECRETARY.

Tournament at Nichols Park.

JACKSONVILLE, Ill., June 6.—Conditions were hard, the wind blew a gale and rain stopped the program on the first day, which was finished this morning. The trap broke down, causing a delay of an hour. Not a powder representative was present; but as the shells were loaded with powder, every one used it. Scores:

Table with 4 columns: Name, Shot at, Broke, Shot at, Broke. Lists participants and their scores.

Professionals:

Table with 4 columns: Name, Shot at, Broke, Shot at, Broke. Lists professional participants.

The shoot was a big success, but not as many entries as there would have been had the farmers been up with their work. Some of our home boys and our best shots were unable to come.

G. T. Hall and S. D. Workman, of Loami, autoed down and gave good reports of themselves.

The ladies' circle furnished good eating. We let down the trap about 15yds., but still there were no big scores.

A. C. Connor went to the Macon, Mo., shoot, but was here in time to shoot the program through.

Riverside Gun Club.

BRAINERD, Minn., June 8.—An unusual feature of this shoot was the winning of both high averages by father and son, Geo. Trent, Sr., of the Remington-U. M. C. Co., being high professional, and Geo Trent, Jr., being high amateur. Senior made 283 and Junior 277. The scores:

Table with 4 columns: Name, Shot at, Broke, Shot at, Broke. Lists participants and their scores.

Professionals:

Table with 4 columns: Name, Shot at, Broke, Shot at, Broke. Lists professional participants.

Brodhead Gun Club.

BRODHEAD, Wis., June 12.—High gun was a double-barrel here to-day, one barrel going J. S. Young, the other to A. F. McLaughlin, each breaking 142 out of 150. Next to them was A. J. Wagner with 140. Professional high was also twins, E. G. Graham and W. D. Stannard, each getting 144. The scores:

Table with 4 columns: Name, Shot at, Broke, Shot at, Broke. Lists participants and their scores.

Professionals:

Table with 4 columns: Name, Shot at, Broke, Shot at, Broke. Lists professional participants.

ENTRANCE TO MOOSELUCMAGUNTC GUN CLUB, HAINES LANDING, MAINE.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., June 14.—Two days of ripping good sport ended to-day at the close of our tournament. Webster made high average with 288 out of 300, while McKinnis and Wise hooked up into a tie for second with 232. Day one was clear and fine; day two dampened considerably toward noon. The program consisted of 150 targets each day; but several extra events were also shot on each day. Scores:

Meriweather Gun Club.

WARM SPRINGS, Ga., June 14.—The tournament just over at the Warm Springs, under the auspices of the Meriweather Gun Club, was in every way a success. The amateur highest aggregate score over the first two days was made by A. J. Hill, of Dawson, winning the Warm Springs amateur cup. Ten events at 15 and four at 25 targets were shot on each first two days.

Geo. H. Waddell, of Columbus, won both the amateur and the free-for-all handicap trophies, at 50 targets each, shot on the third day.

The scores were about the best that have been made by amateurs. C. E. Goodrich, of Chicago, led the professionals with 247 out of 250, making 150 straight. Ten men lost only 120 targets out of 3000—a remarkable score, most of the shooting being done in a heavy rain.

Event No. 1 on the third day was the Warm Springs amateur handicap; No. 2 was the free-for-all.

WINCHESTER

Repeating Shotguns and Shotgun Shells

Again Loom up at State Shoots

In the face of large entries and strenuous competition, Winchester Guns and Shells showed clean heels at recent state shoots.

NEW YORK STATE SHOOT

STATE CHAMPIONSHIP: Won by Frank S. Wright, South Wales, with a Winchester Repeating Shotgun and "Leader" Shells. Score, 469 ex 500, and 25 straight on shoot-off.

HIGH AMATEUR AVERAGE FOR SHOOT: Won by Frank S. Wright. Score, 424 ex 450. Mr. Wright has won the High Amateur Average and New York State Championship four years in succession, and on each occasion he has shot the dependable Winchester guns and shells.

NEW JERSEY STATE SHOOT

HIGH PROFESSIONAL AVERAGE: Won by J. M. Hawkins, with a Winchester Gun and Winchester Loaded Shells. Score, 424 ex 450.

OHIO STATE SHOOT

STATE CHAMPIONSHIP: Won by F. W. King, with Winchester Loaded Shells. Score 50 straight.

HIGH GENERAL AVERAGE: Won by John R. Taylor with a Winchester Repeating Shotgun and Winchester Loaded Shells. Score, 433 ex 450.

SO. DAKOTA STATE SHOOT

HIGH AMATEUR AVERAGE: Won by J. P. White with a Winchester gun. Score, 421 ex 450.

HIGH PROFESSIONAL AVERAGE: Won by John W. Garrett with a Winchester Gun and Winchester Loaded Shells. Score, 419 ex 450.

The Winchester Red W Combination wherever entered figures largely in the reported winnings, particularly in the important events. The most prejudiced mind must admit no guns and shells are superior in reliability and shooting qualities to the Winchester Red W Brand.

Pine Bluff Gun Club.

PINE BLUFF, Ark., June 13.—E. J. Voss won State championship here to-day, after running into a tie with John Myar, with 49 out of 50. In the shoot-off at 25 rocks, Voss missed only one, while Myar slipped up on two. Nick Arie was high gun for the two days, getting 288 out of 300. H. B. Pottinger took second with two less.

"steel where steel belongs"

Peters Shells

Won the 1911 Grand American

Harvey Dixon's record score—99 out of 100 from 20 yards—which won the Grand American Handicap last year, is typical of the success which has attended users of "STEEL WHERE STEEL BELONGS" shells in the past twelve months.

Table listing various shooting events and winners, including World's Indoor Target Championship, High Average at Southern Handicap, and various state championships.

Use the Red P Shells. They will HELP YOU TO WIN.

THE PETERS CARTRIDGE COMPANY, CINCINNATI, OHIO

NEW YORK: 98 Chambers St., T. H. Keller, Manager.

SAN FRANCISCO: 608-612 Howard St., J. S. French, Manager.

NEW ORLEANS: 321 Magazine St., Lee Omohundro, Manager.

Forest Park Gun Club.

COFFEYVILLE, Kans., June 12.—Harvy Dixon was high gun here to-day with 140 out of 150.

Table with columns: Name, Reg. Pgm., Shot at, Broke, Specials. Lists scores for various shooters like Geo K Mackie, C Dixon, H Dixon, etc.

Du Pont Gun Club.

WILMINGTON, Del., June 13.—Eugene du Pont won by 3 targets from J. T. Skelly, the 1912 Class A challenge cup, on Saturday, June 8.

Sixteen shooters took part in the afternoon's sport. High man was J. H. Minnick, 96 out of 100.

J. T. Skelly 91, W. S. Colfax, Jr., 87; H. P. Carlon 85, G. H. Simon 81, W. B. Smith, Jr., 80, Z. H. Lofland 78, C. T. Martin 73.

Shot at 50: Clyde Leedom 37, Dr. H. Betts 31. Shot at 25: C. C. Mammelle 22, W. G. Good 18, J. H. Steelman 12.

Some targets were also shot at from the 20yds. mark, the best scores being: J. H. Minnick, Eugene du Pont and J. T. Skelly, each 23; W. S. Colfax, Jr., 20, and H. P. Carlon 19.

June 15.—Twenty-nine marksmen participated in the weekly shoot of the Du Pont Gun Club. Shooting à la Olympique, Carlton and Colfax showed form.

The Coleman du Pont spoon event was hotly contested in all of the club's four classes. In Class A, W. G. Wood and J. H. Minnick tied at 23, Minnick breaking 25 straight in the shoot-off.

The scores in the Coleman du Pont spoon event, 25 targets per man, follow: W. Edmanson 22, I. Turner 23, C. Leedom 23, W. A. Joslyn 20, F. P. Ewing 23, H. W. Bush 19, T. E. Doremus 18, W. S. Colfax 21, A. J. Curley 16, L. C. Lyon 18, H. P. Carlon 19, V. du Pont 17, W. M. Hammond 24, A. Bird 17, W. Matthewson 17, Everitt 21, S. J. Newman 20, S. Touchton 21, L. L. Jarrell 18, W. B. Smith, Jr., 20, C. Mammelle 12, W. M. Armistead 21, J. H. Minnick 23, Dr. H. Betts 15, C. Kentworthy 18, Dr. Patterson 17, Z. Lofland 20, W. S. Wood 23, J. Montgomery 8.

Birmingham Gun Club.

BIRMINGHAM, Ala., June 10.—A good bunch of shooters were at the weekly shoot of the Birmingham Gun Club. E. C. Little, the popular Gadsden, Ala., Gun Club secretary, was with us, and did good shooting.

Table with columns: Name, Shot at, Brk. Lists scores for shooters like J K Warren, R R Skinner, Ira Armstrong, etc.

Roanoke Gun Club.

A BRISK wind, causing the targets to leap, had its effect on the scores at the traps of the Roanoke Gun Club, Saturday afternoon, June 15, when there were twenty-seven men on the firing line.

Scratch—First, P. T. Jamison; second, E. C. Watson. Class A—First, G. G. Moore; second, tie, Wilkinson, Jones and E. W. Poindexter.

Table with columns: Name, Broke, Pr.Ct. Lists scores for Jamison, Jones, Hunt, Watson, etc.

Recreation Gun Club.

BEAVER DAM, Wis.—High gun here to-day was won with 142, with A. F. MacLachlan as the man behind it.

Table with columns: Name, Shot at, Broke. Lists scores for J S Young, J D Pollard, J Raup, etc.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Soo Gun Club.

STOUX CITY, Ia., June 13.—The three-day tournament just finished resembled in enthusiasm and attendance a meeting of the G. A. H. Ninety-eight shooters were present, and most of them played through the entire program, and at the end of the game were ready for more. The program called for 200 targets per man each day. Several top-notch scores were made, with Billy Hoon topper with 583, trailed by Joe Kautzky with 576. John W. Garrett took first professional honors with 584.

Supplement to Game Laws in Brief

SO many and important changes have been made in fish and game laws in a number of States, during the past winter, that we have found it necessary to issue an eight page supplement of these changes. Paste these eight pages in the back of your copy of GAME LAWS IN BRIEF and you will have complete and correct laws to June 1st, 1912, governing fishing and shooting in every part of the United States and Canada.

Ten Cents is the price of this addenda. Mailed to any address upon receipt of price.

No Shortcomings—Not One

ANY shortcoming in a shot gun, which seems almost trifling, may cause the gun to go wrong in the field, and spoil a long-planned expensive hunting trip.

The Smith Gun has no shortcomings—not one. The six Hunter Brothers with inventions, precision workmanship, and experience, kept after the shortcomings for 22 years, until the last and least important one was wiped out.

"6 times 22 years' experience" gives the shooter of a Smith Gun the fullest possible pleasure in the field, and the maximum game in his bag. A Smith Gun is "two guns in one," bored to meet the combined requirements of field, blind, and trap.

Ask your dealer to show you the new L. C. Smith 20-gauge. It is 20-gauge from butt to muzzle. Write for catalogue of Smith Guns—every grade from \$25 net to \$1500 list.

Illustration shows \$102.50 grade. Net price, with ejector, only \$75; with Hunter One-Trigger, \$100 net.

L. C. SMITH GUNS

HUNTER ARMS COMPANY, 76 Hubbard St., FULTON, NEW YORK

New York State Sportsmen's Association.

THE most successful assemblage of members of New York State Sportsmen's Association occurred at the three days' tournament, closed at Syracuse, N. Y. on June 13. Ninety gunners blazed away through the ambient atmosphere, doing more or less damage to the aerosaucers in proportion to the trueness of the point, which in most cases was satisfactory, although the scores are so illegible on the carbon sent us that we don't know who were the high guns.

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He knows it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is Lefever Taper Boring.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS Co., 23 Maltbie St., Syracuse, N. Y.

Durston Special 20 Gauge. Price \$28.00

Cheap Ammunition

for .22 High Power

Factory .22 H. P. cartridges cost \$34.20 net per 1000—too expensive and too powerful for general use. Save your fired shells; reload with this Ideal gas check bullet; you have 1000 excellent cartridges for hunting and target requirements up to 300 yards or more for \$9.34. Making your own gas check bullets, your total cost per 1000 cartridges is only \$6.17.

For short range use 53-grain lead bullet. Cast these bullets and reload your shells; you have 1000 extremely accurate S. R. loads for \$3.37. Free circular gives full details. 100-page Ideal Hand Book tells about reloading all cartridges; mailed for 6c postage.

The Marlin Firearms Co., 27 Willow St., New Haven, Conn.

NYOIL

Nyoil Absolutely Prevents Rust

Use it on your gun, revolver, bicycle, talking machine, reel—in fact, for any purpose for which a fine, pure, lubricating oil is desired. It never chills or hardens, "gums" or smells bad. Ask sporting goods or hardware dealer. Large bottle, cheaper to buy, 25c.; trial size, 10c.

"A Pleasant Surprise."

NEW YORK, June 17.—*Editor Forest and Stream:* The most pleasant surprise of my life came to-day with the arrival of a perfectly handsome gold watch, which was sent me by the sportsmen who assembled last week at the New York State Fish and Game Association tournament at Syracuse. No cup, medal or other trophy ever brought so much pleasure to me. I don't think I have ever been so grateful, nor felt such pride before.

Though long accustomed to the good fellowship of these boys, such an unexpected and substantial expression of such sincere friendship has stirred me, heart and soul.

I have given the best that my life could give to the shooting game, to good fair sportsmanship and to good fellowship, and this splendid remembrance cheers me as perhaps but few will understand, because it means they who gave it appreciate the lifetime efforts of your humble servant.

It is no doubt through the modesty of those who

remembered me so handsomely that I am unable to express my appreciation to each one to whom it is due. So in your esteemed paper will you please say, "Boys, Jim and Jim's heart, both thank you."
J. A. R. ELLIOTT.

Genesee Gun Club.

UTICA, N. Y., June 8.—The weather was ideal for the opening of the registered tournament at Riverside, Saturday. The members of the Genesee Gun Club and several of their guests saw some excellent shooting. Nearly 4,000 targets were thrown during the program. O. F. Carpenter, of Syracuse, was high man with 144.

Canandaigua Sportsmen's Club.

CANANDAIGUA, N. Y., June 14.—The home shooters trimmed the bunch from Shortsville to-day. A. E. Mason took championship title and medal from Dr. D. A. Eiseline by one aerosaucer. Total 42 out of 50. Bottles of Nyeoil were given as souvenirs, so that smooth working guns may be expected from now on.

Kibbe and Eiseline were tied for first on the prize events, but in the shoot-off, Kibbe won out by a margin of one bird, taking the silver spoon, and Eiseline the cut-glass. Mason was third in the shoot-off with Soule.

Edward Cox and C. W. Fletcher, of Buffalo, who were returning from the State shoot at Syracuse, stopped over during the shoot, and Mr. Cox tied with several of the local shooters with a score of 39. The following scores were made:

Kibbe	15	50	Curtice	10	37
Eiseline	15	50	Van Wormer	0	37
Mason	7	45	Cox	0	39
Soule	4	45	Cayward	0	22
Stoddard	5	44	Chesebro	0	9
Barringer	15	42			

The Du Pont silver watch fob trophy, which was won by A. E. Mason, has been in contest for a series of three meetings, comprising 150 targets, in which the scores were: Mason 136, Stoddard 129, Eiseline 128, Curtice 123, Kibbe 123.

Analostan Gun Club.

WASHINGTON, D. C., June 16.—The Analostan gunners encountered bad weather for their shoot on the 15th. The afternoon was very dark, and a drizzling rain interfered with the shooting and spoiled the attendance. The scores:

	Singles.		Doubles.	
	Shot at.	Broke.	Shot at.	Broke.
Green	135	90	16	8
Peck	125	108		
Huseman	125	104	24	20

Wilson	30	14		

*Visitors.
Preliminary arrangements are being made for the club's registered shoot, which will be held on July 27.
MILES TAYLOR, Sec'y.

Registered Tournaments.

The following tournaments have been registered with the Interstate Association, week ending June 15:
June 29-July 2.—Niagara-on-the-Lake, Canada.—Canadian Indians. Court Thompson, Sec'y.
July 29-30.—Revelstoke (B. C., Canada) G. C. A. J. Mac-Donnell, Sec'y.
Aug. 14.—Lancaster (Pa.) G. C. W. T. Krick, Sec'y.
Aug. 27-29.—Cedar Point, O.—Indians. C. W. Budd, Sec.
Sept. 2.—Ft. Collins (Colo.) Shooting Club. Jos. Garst, Sec'y.
Sept. 5.—Cumberland (Md.) G. C. F. Billmeyer, Sec'y.
Sept. 20.—Sangerfield (N. Y.) Country Club. R. H. Terry, Sec'y.
ELMER E. SHANER, Sec'y-Treas.

PARKER GUNS

Wear Well, Shoot Well and Handle Well

Wear well because they are made of the best material by the most skillful craftsmen.
Shoot well because they hold the charge compactly together at extreme ranges.
Handle well because the greatest attention has always been paid to the distribution of wood and metal, to insure perfect balance and the most symmetrical outline.
Twenty-bore Parkers have set the pace for small bores in America, and are growing in popularity every year with the most progressive sportsmen.

For further information regarding guns in gauges ranging from 8 to 28, address

PARKER BROS. :: Meriden, Conn.
New York Salesrooms, 32 Warren Street

ANOTHER WIN FOR THE BLACK SHELLS

At Pine Bluff, Ark., registered tournament, June 12-13, Nic Arie, shooting **THE BLACK SHELLS**, was high gun for the two days' shoot, breaking 288 x 300.

Mr. Arie gives credit for this remarkably uniform shooting to the reliability and quickness of **THE BLACK SHELLS**.

For strength, uniformity, reliability, cleanliness and smooth working through pump guns, **THE BLACK SHELLS** are unequalled.

"The Gun that Blocks the Sears"

See how the Safety-bar (No. 4) when pushed back over the L-shaped ends of the Sears (No. 5) completely blocks them, making accidental discharge absolutely impossible. Every Davis Hammerless Gun has the Safety that "Blocks the Sears". It is a *Safe* "Safety".

N. R. DAVIS & SONS. Lock Box 707 ASSONET, MASS., U. S. A.
Established 1853

Jersey City Gun Club.

JERSEY CITY, N. J., June 15.—Ten shooters were game enough to come out and face a rainstorm accompanied by a strong wind from the east, at the Jersey City Gun Club to-day, and while conditions were such as to keep down scores, everyone enjoyed a good afternoon's sport just the same. State champion B. M. Shanley, Jr., of Newark, a member of our club, was out and set such a hot pace for the rest of us that we all got dizzy trying to keep up, and when it was all over he had an average of 85 per cent. for the day, which was traveling right along, considering the day. W. Hassinger, also of Newark, was second with 83 per cent., and old reliable Dave Engle captured the third cup with an average of 82 per cent. The scores follow:

Table with 4 columns: Name, 20, 21, 22, 24, 18, ..

Conde Gun Club.

CONDE, S. D., June 8.—The annual registered tournament held to-day was happily run off, twenty-four shooters being on the grounds. High gun was J. E. Wilson with 206 out of 220; second, F. F. Slocum, 204; third, J. R. White, 198. The scores:

Table with 4 columns: Name, Shot at, Brk., Name, Shot at, Brk.

Hercules Gun Club.

TEMPLE, Pa., June 14.—The weather was ideal, while a strong gale of wind blew from the southwest, raising some of the targets suddenly, which made difficult shooting. W. A. Joslyn led F. M. Fay by 7 targets, with 132 out of his quota in the professional race. Alexander Reed, of Pottsville, and W. S. Behm tied on 137 for high amateurs. In the shoot-off Reed missed one, while Behm broke straight, which entitled him to the Hercules cup. Mr. Reed received the Cotopaxi cup.

The club will hold their registered shoot on Saturday, Aug. 19, when a number of amateurs will participate for high honors.

A race at 5 pairs of doubles was shot, A. A. Fromm winning with 8 breaks.

Table with 4 columns: Name, Score, Name, Score

Cleveland Gun Club.

CLEVELAND, O., June 8.—Below are the scores made to-day at our weekly club contest, at our shooting park, Stop 16A Mayfield road:

Event No. 1, monthly trophy, 50 targets, 16yds.: Brown 46, Ledgett 46, Judd 45, Wilcox 45, Frank Brown 43, Wallace 42, Freeman 41, Jones 40, Brainard 38, Thorp 32, Rockwell 31.

Event No. 2, annual trophy, 50 targets, 16yds.: Brown 48, Wilcox 47, Judd 46, G. E. Burn 46, Judson 46, Wilson 45, Jones 42, Brainard 41, Ledgett 41, F. Burns 41, Wallace 39, Rockwell 36, Freeman 35, Thorp 31.

Buffalo Audubon Club.

BUFFALO, N. Y., June 15.—The following are the scores made by the above club to-day:

Table with 4 columns: Name, 17, 12, 17, 16, 17

Are We Breeding Usefulness out of Our Dogs?

MARCEL BOULENGER writes in the London Field: "The man who would talk of coursing and field trials to any of those individuals who organize dog shows or to those well known specialists who breed what is generally known as show dogs, or even to one of the redoubtable judges who apportion prizes and honorable mentions, finds very little encouragement. Far better not to mention in their presence any practical test, such as getting a sheep dog to guide and look after a flock of sheep, a police dog to be after evildoers, a sporting dog to retrieve game, a greyhound to pursue hares, a fox terrier to catch rats or a bull dog to guard a house; some habitues of the dog shows are fond of sneering at the idea of such sporting trials. The point they profess to be interested in is what they call the beauty of a dog, and thus beauty has become to them a definable, measurable and weighable quantity, according to an invariable standard, established once for all; but what is one to understand by the beauty of a dog? Who has determined it? Who has established the standard of such single breed? Whose authoritative advice, whose master taste has been the guiding principle?"

Sportsmen have found out that certain conformations enable an animal to do a certain thing better than any other one. Thus it will be seen the sportsman's notions about the shape of a dog are well founded. His decisions are not accidents; he does not guess, he knows. Where has he learned it all? During field trials, on the coursing ground, in public open air tests, on flat country, on the hills or in the woods. The perfect type of each breed has been fixed after long deliberations, and the dog who has been found the best in public trials is also the most beautiful for the true sportsman. The standards of beauty in Paris, in London and in Berlin, are quite different. For instance, judges in Paris prefer the tail hair rather long, the London judges only admit short-haired tails and the Berlin judges only appreciate excessively long hair. If, however, public sporting trials were the guiding principle in the judging of dogs, an admirable certainty results. If a certain dog works better than his competitors he is the finest of them, all no matter in what country he may happen to be.

Mr. Boulenger finishes by saying that, although dog shows are undoubtedly good fun, the beauty of a breed is established, maintained and controlled by public sporting trials only. Show judges are liable to errors, too impressionable and capable of being influenced by outside considerations.

NATURE STUDY ON LONG ISLAND.

Continued from page 791.

and not far away is the department of experimental evolution of the Carnegie Institution of Washington under the direction of Prof. Charles B. Davenport, Ph.D. In connection with this institution there is a bird house where many experiments as to color are now in progress, a cellar where experiments as to the effect of light on cave animals and insects and as to the effect of the exclusion of light upon light loving animated nature are now going on, a cat house for the breeding of Manx, Persian and other cat species.

A little further west and one week later, June 8, John McCallum, who is now doing special collecting work for the Brooklyn Institute of Arts and Sciences, acted as leader and guide to Queens.

Don't Wear a Truss!

Brooks' Appliance is a new scientific discovery with automatic air cushions that draws the broken parts together and binds them as you would a broken limb. It absolutely holds firmly and comfortably and never slips, always light and cool and conforms to every movement of the body without chafing or hurting. I make it to your measure and send it to you on a strict guarantee of satisfaction or money refunded and I have put my price so low that anybody, rich or poor, can buy it. Remember, I make it to your order—send it to you

—you wear it—and if it doesn't satisfy you, you send it back to me and I will refund your money. The banks or any responsible citizen in Marshall will tell you that is the way I do business—always absolutely on the square and I have sold to thousands of people this way for the past 30 years. Remember, I use no salves, no harness, no lies, no fakes. I just give you a straight business deal at a reasonable price. U. E. BROOKS, 1230 State St., Marshall, Michigan

For further information, address
B. C. RUMSEY ROY SNYDER

On of the first of the flowers found was the Philadelphia fleabane, with materia medica connections. It is one of the yellow flowers that attracts attention. The plant is hairy. The scent is strong and disagreeable to fleas. Blanchan states that when the fleabane is dried, reduced to powder and sprinkled in kennels, that even the dogs are driven away. Doubtless in such cases the fleas go also. White, red, yellow, sweet and hop clovers were found in quick succession. Another nearby flower was the daisy or Marguerite that grew in bunches that invited picking.

It was receiving day for the figwort family and the mulleins, and toadflaxes were on the reception committee. With them was mad-dog skullcap of the mint family. Three members of the mustard family were likewise on the receiving line.

Jack-in-the-pulpits next interested us. There is a wide divergence in this plant. According to the books some of the Indian turnips have flowers that are "staminate"; others, on distinct plants, are "pistillate" and still others have both male and female florets seated on the same club. The true flowers are within the so-called spathes near the base of the smooth, glossy columns that characterize them. These flowers are exceedingly minute.

One of the rare beech ferns was found by Miss Brainard. Its downy light green and triangular frond is daintily pretty. Some of the rushes were next encountered. Many of these small plants have formidable latin names that are awe-inspiring, but the plants are interesting in spite of that handicap. The leaves and stems are woven into matting and chair bottoms, and the pith of some species is used for the wicks of candles (rush-lights). Blind hand craftsmen use these plants in some of their wonderful work. The specimens found had curious hairy growths upon them that looked like spider webs.

The lemon-scented horse balm, otherwise lemon balm, stone-root and rich-weed, to whose ingenious scheme of insect fertilization W. Hamilton Gibson was the first to direct attention, was one of the finds.

In a little group of ferns growing in a kind of colony were the New York ferns that are readily distinguishable from their tapering at both ends, the ever graceful maiden hair fern and the lace fern.

Some spikenard, useful in medical botany from its aromatic and stimulant properties, was here gathered into the vasculums. Skirting a pond, sassafras leaves were packed and eaten as a relish. In the pond were some Rixia (algæ) that comes into the making of a balanced aquarium; also some golden clubs of the arum family. One botanist found a ripe wild strawberry.

Young grapes were observed in miniature now, but full of future promise for the autumn. The partridge berry found had a twin flower. The shin leaf was next found. It was so-called from its early use as a shin plaster when in the alphabetic development of first aid to the injured it was thus utilized.

Perhaps the most interesting find was one of the orchids which was not identified in the field, but was borne home for identification. Even the most expert botanist cannot know just what flower is found in every instance in the field.

A large tway-blade was another odd specimen. It was named in allusion to the plant's shining leaves.

FIELD AND STREAM PUB. CO., 450 Fourth Avenue. NEW YORK CITY

PURE AIR BY DIFFUSION.

BY DR. JOHN F. LOCKWOOD, KANSAS CITY, MO.

We use natural gas as a fuel and for lighting purposes. There is little or no odor about our natural gas, and it is therefore not discoverable by the sense of smell when it happens to escape into the living apartments.

Last night the gas in our residence was lit in the upper hall, which communicates freely with the sleeping rooms. The gas pressure lowered and the jet went out unnoticed by us. Later, as is usual, after everybody has cooked the evening meal, the gas pressure rose and all night long the gas poured into the sleeping rooms. The family slept in these rooms and passed the night quite comfortably. It was at 5 A. M. that we awoke and heard a roaring. It did not sound like steam from the steam radiators, so we arose to investigate. Then it was that we discovered that gas had been escaping all night long. When we realized that we had been safely delivered from what might have been a case of wholesale methane poisoning we began to praise the bridge that had brought us over. Let us here deliberately detail to the reader the "bridge." Please patiently follow:

Last fall, as cold weather began, we put into practice the following scheme for ventilating the sleeping rooms: It consists of providing each bedroom with a yard square of "gills." We call them gills because of their similarity of purpose with the gills of a fish—supplying oxygen. One window in each bedroom is selected and the lower half is fitted with a light frame (or the summer screen may be used) covered with 6½-ounce drill or muslin sheeting. This forms the "gills." Now for the modus operandi: In the summer time when the temperature of the air is such that drafts are not dangerous we have no trouble in getting the right quality of air to breathe, but when the cold weather comes we are driven indoors and in anticipation of sudden cold snaps we seal our houses, filling cracks and crannies until not a breath of fresh air can enter. We have two reasons for doing this: One is to prevent cold drafts striking us, and another and principal reason, it may be, is to economize in fuel.

In sealed houses in winter we breathe and rebreath the same air and each time we inspire it we rob it the more of its oxygen and laden it the more with carbon dioxide.

When one retires to sleep in a pent-up atmosphere, vitiating it more and more each hour, toward morning one feels the need of more covers, for the feet are cold. Why? Oxygen which unites with the fat in the blood and thus by combustion warms the body is much exhausted from the sleeping apartment, and so the morning finds the sleeper chilly, not rested, not refreshed, not repaired; the head aches, there are malaise stupor, and a disinclination to begin the day. Now had the same time been spent in a canvas inclosure the air would have been continuously replete with that life-giving quality—oxygen. Such environment tends to keep the atmospheres equal or even in quality. Air is a mixture, not a chemical compound; therefore to rob it of oxygen does not disintegrate it, but only lessens its life-sustaining quality.

	Per Cent. Inspired Air.	Per Cent. Expired Air.
Oxygen	21	16.6
Nitrogen	79	79
Carbon dioxide04	4.4

With each inspiration fully one-fifth of the oxygen diffuses into the blood. Do we know this to be true experimentally? We surely do. Herein is a practical demonstration of a gas diffused into a liquid through a moist intercepting membrane (the wall of the blood vessel). How rapid the process must be that it should be performed between the acts of inspiration and expiration! Patiently consider with me the steps: When we inbreathe, the air tubes, terminating in blind ends, expand, enlarge, the residual air in the lungs retires into these blind ends followed in by the tidal air, the oxygen from the tidal air leaps into the residual air and on into the blood through the moist membrane (blood container), changing the blood from a

Muskeetopunk advertisement featuring an illustration of a mosquito and text describing it as the best relief from mosquitoes for camp comfort.

purple to a bright scarlet, from the venous to the arterial state. This is called oxidation.

This process is almost instantaneous, and yet it is performed where the intercepting membrane is of so dense a structure that it will retain a pulsating stream of blood. Surely it is axiomatic that oxygen diffuses faster in air than in liquid.

May we lay alongside of the above detailed process another similar process: That of air purified by diffusion through a septum of porous cloth: that of a canvas inclosure—a house tent for a consumptive, it may be. Conceive with us the situation. Surrounding this canvas inclosure is a great reservoir of pure free air, the inside air is being depleted of its oxygen and vitiated with carbon dioxide by the indwellers, but the two atmospheres are in contact through the meshes of the cloth. These atmospheres have easy access to one another for the process of diffusion of their gases. This tireless automatic process is keeping the inside atmosphere like the outside up to its full quota of oxygen (one-fifth) by diffusion.

"Gases are to each other as a vacuum" is a familiar rule in physics. It is the application of this rule that saved the household from suffocation when the natural gas was poured into the sleeping apartments all night long and yet it was diffused out through the muslin-covered window openings and that so rapidly that it did not interfere with reparative sleep.

We would impress upon the reader that though this process is invisible, it is none the less effective. We believe because it is invisible it is not appreciated as it should be. We have seen the brightest patients in hospitals where much of the window space was (intentionally) covered with muslin, replacing the glass. The most cheerful children in a child's ward equipped extensively with these "gills." And why not?

A young lady patient with heart disease (dyspnea) thought it was draft fanning her face that rescued her, but she was thoroughly calmed all night long with "gills" in her bedroom window (and no drafts). The oxygen was supplied to her in proper proportions.

Does not the very use we put pure oxygen gas to in emergencies bespeak a place for our process—pure air by diffusion? Give pure oxygen gas to the suffocated pneumonic patient. Give pure air by diffusion to the consumptive twenty-four hours out of every twenty-four hours and he is gradually restored to a life of usefulness.—Medical Record.

THE CAMP-FIRE IN THE CANYON.

When the purple shadows gather in the cañon all aglow, When the silence and the twilight come across the crimsoned snow, When the far peaks bow and vanish in the eerie, wavering haze, It is built in sheltered places where the wind but softly plays. It will cook the pork and flapjacks, it will boil the coffee, too, It will serve the coal that's needful to the pipe of comfort true; But it does one greater service for the breed o' roving men, For they watch it flame and flicker till the old time comes again.

It can bid the thousand valleys and the trails that follow these Swing across its light and shadow—panoramic memories; Soft, dark eyes and raven tresses, and a singing vesper bell, Or the up-flung trails of Chile, or the steel-gray Bering swell; It can paint with softest magic what a man has known of old, It can build with splendid passion visions born of toil-won gold; Joy and sorrow, hope and failure, all life's triumphs and mistakes, It can bring to live a little in the pictures that it makes, Oh, there are fires wind-beaten, roaring down the reaches wide, Whelming all that dares their power, laying waste a country-side; There are fires that drowse on altars, never burning fierce and free; There are witch-fires born of driftwood gathered by the sleepless sea; There are other fires than camp-fires, many fires of many kinds, And their devotees are many—each a chosen pleasure finds; But the camp-fire is the king fire—all its soul with art runs rife, For the rover loves it truly, and it paints him truly—life! —Chas. C. Jones in Leslie's Weekly.

A PROBLEM'S SOLUTION

Log Cabins and Cottages

How to Build and Furnish Them

A seasonable book when all minds are bent on the problem of getting close to nature. Mr. Wicks in this delightful book offers timely advice to every one who wants to build a simple summer home at one with its surroundings of wood or stream or shore.

This is a thoroughly practical work, treating of the how, the where, and the with what of camp building and furnishing. It is helpful, too, in regard to furnishing, and withal a most beautiful work.

Cloth, profusely illustrated, \$1.50 postpaid.

The Fish Pirates

By ALICE A. CLARK

IN one of our middle Atlantic States there is a goodly number of sizeable lakes. There is one that falls far below any of the others in the scale of beauty, but which excels them all in fish. The pike and bass caught in this lake bring the highest price in the New York markets of any fresh water fish, and are advertised on hotel menus by the name of the lake itself.

Amateur sportsmen from far and near have long made periodic journeys in season for the fishing, but as a general thing little luck attends their patient persistency. The fish pirates scoop out so many with nets in season and out of season that the hook and line business is poor.

The sportsmen appealed to the State a few years back, and an appropriation was made for the purpose of scaring off the pirates. That appropriation has been increased from time to time, and game constable after game constable has been appointed. They all approach the task with high boasts and a great splashing of oars freshly painted in honor of the occasion. One after the other they all inconspicuously retired from the office. Still the carloads of fresh finnies go down to the metropolis to swell the purses of the lazy illegal fishers. The State continues to buy choice spawn for the lake, and the hook and line business grows steadily poorer.

The game warden usually approaches the citizens of standing for information against the suspects. Nowadays he never gets any help, although the citizen may be honest as the day is long, and hate the illegal fisher with all his heart. They have had examples of what happens to tattlers.

A few years ago a wealthy hotel owner who had a farm and summer home bordering on the lake openly bragged that if the warden would come to him, he would give him some news. One day he was seen talking with the warden and several arrests shortly followed.

A night or two later the hotel man was aroused toward morning by the agonized screams of his horses. Hurrying to the stables he found several expensive animals lunging in pain caused by cutting off their tails close to their bodies, and a rude scrawl tacked to the stable door warned him to let the fishermen alone.

Another man suspected of giving information to the constable, awoke at night to see his barn in flames, and the finest herd of cattle in the county was cremated with the barn.

A man who was at odds with some of the pirates, over burning a net found on his beach, failed to arrive at his home one evening after

a walk to the postoffice. Finally the family set out with lanterns to look for him. In a fence corner he was found unconscious with a bloody gash on his head, evidently caused by the fence rail that lay across his body. The perpetrators of these deeds were never placed.

Others who feared to give information and said so, aired their opinions nevertheless, and in due season reaped their measure of punishment. New boats left tied at their landings were seen

There is of course only one way of illegal fishing in season, and that is with nets which take minnows and all when a school is scooped. The warden thinks that he has done a good day's work when he has burned thirty or forty nets (for they cost from twenty to fifty dollars and more, according to size). However, when a pirate's net has been captured, the rest all turn in and help him make a new one.

Once a warden, who was sneaking across the

"JIM'S PLOWING THE DEEP."

no more; young orchards disappeared root and branch, and a series of nagging misfortunes followed the man who "blowed his mouth too much." The citizen now maintains a discreet silence.

Sometimes it happens that he stumbles upon groups where his room is better than his company. If his demeanor under such circumstances is satisfactory, he will probably find a few choice messes of fresh fish hanging on his back door on summer mornings, or he may say to a pirate after the game warden has driven by: "Harry, I want a mess of fish."

"All right, I'll see that you get them," answers the pirate.

Such men help fight the wardens, but would be surprised if you accused them of it.

county on foot in order that he might not be seen and recognized in time to warn the fishermen, came upon an old sugar shanty in a lonely piece of woods. Hearing voices inside he cautiously peered through the window. Four men were inside making a net. One was the postmaster of a small town; another was a prominent farmer, and the others were plain pirates. They were so intent on a critical part of their task that he moved away unobserved. Their arrest followed, and they paid big fines. They could afford to do so, for the profits are enormous.

One young man who was in jail several months refusing to pay the fine imposed upon him by the court made nets all that time. There was no law prohibiting his making nets if his friends provided the twine.

Frequently, if a man is not able to pay his fine, the pirates will club together and raise the money rather than see him go to jail. In the case of an honest old man who, because he was so desperately poor, had hired to a pirate and both were captured and sent up, a subscription was circulated, and everyone assisted in his release, for he was nearly heart broken over the disgrace of imprisonment.

When a stranger settles in the neighborhood, it takes years for him to distinguish between the pirates and the honest citizen, because the nets are hauled at night in most cases.

A minister who was calling at a young farmer's house one evening inquired after the husband. The young wife hesitated an instant and replied that he was plowing. The minister professed astonishment at his ambition, and she assured him that Jim often plowed on moonlight nights. When the good man had departed her sister asked her why she had lied to him.

"I am not lying. Jim is plowing; he is plowing the deep," she retorted.

The game warden is generally frightened out

of his office. He trips over wires and ropes in unexpected places, stones fall out of clear skies, and beer bottles filled with wet sand drop out of trees. He steps into steel traps and plunges from a safe looking bit of plank into a nasty pool of water.

Undoubtedly some have been bought off, to be dismissed later, for inefficiency.

Sometimes a pirate offers to help the warden, claiming that he is sick of the business. He is of course in the pay of the fishermen also, and makes a neat sum by steering the constable to a spot where he can drag the lake for a week without touching a net.

So, frightened out, bought off, tired and disgusted, the game warden owns to the fruitlessness of his search, and retires a sadder, wiser man.

Empty boxes are shipped to the lake ports for kindling and go back where they came from full of sawdust.

The city visitor going down to the lake for a plunge at early dawn sees the strange spectacle of five or six rowboats full of excited men who

are dragging their hands heavily in the water. Suddenly they leap out of their boats and scatter in a big circle, still pulling at something in the water. The city visitor rolls a pebble under his feet; they turn and see him. To his utter amazement when he looks up there is not a man to be seen in the spot where he has been gazing. But for the softly rocking boats he would think it a dream. He watches sharply for half an hour and nothing disturbs the scene. There are the same stones sticking out of the water, or are there more? He gives it up and walks off to the bathing house.

Almost before he is out of sight they spring out of the water and haul the squirming load upon the sandy beach, the gasping minnows to die before being rudely thrown back into the water, and the uneatables flung in a heap to rot. One or two pirates hurry for help to dress the catch of the season, and by 9 o'clock hundreds of fresh fish are on their way to New York, and the city visitor fishes all day in the broiling sun, and the next day and the next, and never catches even a "pumpkin seed."

Log of a Fishing Cruise on the East Coast of Florida

By ROBERT SEDGWICK (THE SCRIBE)

In Three Parts—Part II.

EARLY next morning we ran down to Bahia Honda, 12 miles, and anchored off the reinforced railway trestle, across the channel from West Summerland. It was a warm, clear day, thermometer 81 degrees, and our appetites were whetted by seeing a yacht at anchor with three tarpon in her rigging. We spent the rest of the morning catching the indispensable mullet in the cast net for bait. The gunman killed with a fine shot a large needle fish under water. Started tarpon fishing in the afternoon, the gunman and scribe in the big boat with the captain and photographer alone with Bill. It was "some" afternoon, too. The scribe got two sharks and an 18-pound carvallo; the gunman a brother to it; the photographer two sharks and a huge yellowtail jack. As the afternoon waned, nobler sport came to hand. The photographer hooked two tarpon, got them up to the boat after long play and most provokingly lost both, in one case the line parting and the other fish being carried off when exhausted by a large shark. The gunman lost his only strike after having him on for fifteen minutes. The scribe's first one got round some spiling under the railway trestle and frayed the line in two, but he landed the second on the beach in the darkness, a short thick fish weighing ninety pounds. By that time it was blowing hard, with a lumpy sea against the tide. We were glad to get aboard, well soaked, for a late dinner. All night it blew a young southeast gale, which whistled through the rigging, and this day, March 15, was dull, thermometer 81 degrees, with yacht rolling at her anchor, water very roily and not a tarpon in evidence, so we went after needed mullet bait, annexing a baby jewfish, thirty-two pounds, and a thirty-pound yellowtail en route.

After an early tropical thunderstorm, March 16, the wind veered round from southeast to northwest, thermometer 77 degrees, and we were out for tarpon at 6 A. M. The scribe landed a nice gamy fish, 125 pounds, 6 feet 6 inches long. We met a Spanish Jew employed by the Florida East Coast Railway that afternoon, who was very bearish on the chances of success of the Key West extension, and said "F. E. C." was interpreted by the men as "Flagler's Easy Coin." The scribe's impression is that the greatest difficulty the road has to encounter is the entire absence of any water but rain water at Key West, its southern terminal. Rain water alone is too precarious a supply for a great railway system to depend on, and although the road has driven wells some 800 feet deep, it has obtained no water suitable for locomotives. All the water the railway now uses is transported from Homestead in huge wooden tanks bolted to flat cars, and the bulk of the traffic seemed to us to consist of these trains carrying water to Key West and returning empty. On the northern trip they are exposed to the scorching rays of the sun, which start the seams, making the tanks leak badly. This is an expensive and partially inadequate supply, and it is understood that the railway has in contemplation an extensive condenser system, which it is hoped will solve the water problem. The indefatigable photographer went out for tarpon after dinner, although it was blowing very fresh. He reported four strikes, but they all got off in the wind and darkness.

The captain woke up all hands Sunday morning, the 17th, at 4:45 by clanging the ship's bell, and we tumbled out at that unearthly hour with a chorus of growls to find better weather conditions, moderate easterly breeze, thermometer 82

degrees. But the water was roily and disturbed from the blow, and tarpon are shy about coming back to the channels until it clears. We wallowed about in the small boats in a tremendous flood tide and choppy sea and gave it up at eight, seeing no fish rolling anywhere. The gunman accounted for a 75-pound shark, which his ever ready gun put out of business, and after dinner we must confess that overpowering sleepiness laid undeniable hold on us, while the captain, who is a combination of rubber and steel, with an infusion of dynamite, and has the advantage of us in years, put us to shame by going forth with deckhand Harry, and came back triumphant with two tarpon, 86 and 40 pounds.

March 18 was a royal day, hot and sunny, thermometer 86 degrees, and we started in on the first of the ebb at 10 A. M., after beaching the yacht to repair a slight leak in the stuffing box. The scribe landed an unusual fish, 51 pounds, not mentioned in Gregg's book, but pronounced by Bill to be a "cobao," flat, broad head, lightish brown color, except patch of pure white on belly from ventral fin to gills. The gunman hooked on to a 130-pound jewfish, and that determined little gentleman pumped away at the logy brute till he got him to gaff, an exhausting operation calling for patience. This was a day to mark with a red stone for the scribe, as he tied to a big tarpon one trestle east side of the central arch and landed him after fifty minutes' play—a royal bird he proved, 185 pounds, 7 feet 8 inches long. In the afternoon we went in the launch for bait and tied up alongside the West Summerland trestle. A sudden and very heavy squall of wind and rain jammed her against the dock, tore off part of her bow and stove in port

HANNAH M. BELL ON CORAL REEF.

side, a space a foot square. We plugged her with sponges and anything to hand and got her over to the beach, where Bill, who is a ship carpenter by trade, patched her up very neatly. During the squall the gunman, photographer and scribe took refuge in a frame building, used for postoffice, engineer's quarters and officers, which had heavy wire cables run over the roof and through the rafters to hold it down in case of a hurricane like the one of 1906, which cost some 500 lives, or the one of 1909 when the wind reached a velocity of 125 miles an hour, destroying long sections of the wooden trestle, yet failed to damage those arches and bridges which were reinforced with concrete. Resting on his laurels of the morning, the scribe went out after dinner with the gunman and captain, not fishing for fear of crossing our lines in the darkness. The gunman got four strikes, the last one parting his line, which had been sorely strained by his battle with the jewfish.

The 19th was one of those exasperating East Coast days, warm and sunny, thermometer 82 degrees, but blowing great guns northeast, and a bad lookout for tarpon. Nevertheless we all turned to early, and the photographer scored high with the real thing, forty-five minutes to gaff on the beach, 165 pounds, 7 feet 6 inches long. He got another one in the afternoon, a 20-pound mite, and the scribe had a fine fish on for twenty minutes, but he escaped. This shows the elusiveness and attraction of the sport. It was so windy we expected nothing, but were kept quite busy. The men at the scribe's suggestion, cut out the tarpon eyes and boiled them in salt water. Polished later with sweet oil and soft flannel, they look like moon stones or rock crystal and are rather a taking trophy.

The less recorded the better of the next two days (20th and 21st) from the tarpon point of view. It blew northeast to beat the band, with sunny skies and warm weather.

We pulled out on Thursday morning for thirty miles against wind and tide for Long Key,

which is more sheltered and where we hoped to fish under a lee, and before starting experienced a sad loss. The gunman's jewfish had been attached to the yacht with a long rope through his gills and had become one of the family. He splashed about contentedly alongside. We fed him with small fish, grape fruit, rotten tomatoes, empty boxes and other dainties. We had christened him "Mr. Rosenberg" and had mapped out his brilliant future as an ornament to the Long Key Aquarium. Imagine our sorrow when a pull at his rope, equivalent to a call for breakfast, produced his head only in response, cut off at the neck by some monstrous shark. Thus did this sad tragedy of the sea take place while we slept. A mighty shark it must have been, to bite off and swallow, especially tail first, 100 pounds of tough jewfish, with rough skin and sharp fins.

Anchored at Long Key, Thursday afternoon for the night. The photographer and the scribe got their respective decorations from the Long Key Tarpon Club and awoke Friday, the 22d to find it still blowing hard northeast, thermometer 85 degrees, with bright sun and cloudless sky. Spent a pleasant morning on Mr. Worthington's new ketch-rigged power yacht Naya and devouring our mail. Took on ice and steamed ten miles to Jewfish Bush, anchoring after dark.

The same old gale from northeast was in evidence on Saturday and continued all day. We went for amberjack out in the channel, but with rough sea and roily water did no business.

Same weather conditions on Sunday, with tropical downpour of rain. It was a threatening evening, black as ink, except for the lightning flashes, and blowing in heavy gusts. The little power yacht Cynthiana moved up from the trestle, where she caught the full force of the wind, so as to get a lee near us under Jewfish Bush Key.

Monday, the 25th, wind shifted to north-northwest, cloudy and felt cold, thermometer 75 degrees. Our time was growing short and with such adverse weather conditions we decided to work north, hoping to pick up a tarpon or two in Barnes Sound. Weighed at 7 A. M. and proceeded under power across the Bay of Florida, with jib set to steady Samoa. The captain conned her neatly through Cowpen's Passage at dead low water, the flats bare on both sides. We scared up a "rookery" of upward of fifty pelicans perched on mangroves, and they soared gracefully about, gliding long distances on the stiff breeze at great speed. Passed through Jewfish Drawbridge at 3:30 P. M., and anchored six or seven miles further on in Barnes Sound.

A still, windless morning was the 26th and with thermometer as low as 60 degrees. Heroically and stoically we took our

morning salt water dip, which has been one of the joys of the trip, but to-day was robbed of all its pleasure. The launch went back to the drawbridge station for our "lost, strayed or stolen" groceries, and returned without them, so we find ourselves eggless and short of other supplies. With the exception of harpooning a sting ray and getting some pan fish for breakfast, in place of eggs, we cannot boast of to-day's bag. Bill and the scribe were stalking bone fish this morning and he did a "neat turn." The small rowboat was anchored in the usual fashion, with an oar driven into the sandy bottom and a half hitch of the painter round it. The scribe noticed Bill noiselessly divesting himself of his sneakers and depositing his pipe, tobacco and matches therein. Then, in an instant he made a graceful parabolic dive from the bottom boards of the boat and came up in a twinkling, shoving a 100-pound logger-head turtle in front of him. The brute was snapping about with his horny eagle-like beak in savage fashion, and the scribe rendered an amateur's assistance by grabbing his hind flippers and hauling him over the gunwale, when he lay on his back on the bottom of the boat, beating his breast with his front flippers in the saddest possible way, like a sinning soul, until Bill bored a hole through them and made them fast with a bit of line. The scribe watched this operation in speechless horror, but the turtle gave no shrinking or sign of pain nor did a drop of blood exude, and he really believes the animal did not suffer. This was a comparatively still moonlit night, the heavy dew was noticeable, almost like a shower of rain.

MODERN RIDING AND HORSE EDUCATION, by Major Noel Birch. Wm. R. Jenkins Co., New York. 301 pages, \$2 net.

Every man or woman interested in horseback riding naturally wants to know all about the horse. Major Birch, of the Royal Horse Artillery of Great Britain, has done justice to this subject in his book. He tells how to ride and ride well; the use of the spur; the selection of equipment and the training of horses. It is a book the equestrian should have.

MOUTH OF MIAMI RIVER FROM ROYAL PALM GROUNDS.

By Grace of the Red Gods

By ROBERT PAGE LINCOLN

A HEART-RENDING screech split the morning air in twain. I was just completing and rounding out a wonderful tour of the lakes in the midst of my dreams, and it goes without saying that luck was favorable when this unlordly happening presented itself in the shape of a rude, unbalanced human utterance in high G, and I sat up on the cot throwing the blankets away, with my hair upright. The next moment a set of features were thrust into the space offered by the tent flaps, and somewhere in the midst of a grin came the words: "So up you are at last!"

I opened my eyes and blinked at the intruder. "No, you bonehead," I said in even words, hurriedly going through my mind for

others arose and all took up the refrain, touched by the universal tranquillity that lived upon the waters, and in those dusky dew-wet nooks.

Leaping into the boat I slid out into the waters—out, out, until I was at about the right place, and then slipping in the oars I dove down into the depths. How good was the touch of the cool water as my body cleaved its way through that transparent surface and sent up a shower of bubbles to mark the path! How wonderfully pure and invigorating to the body after a good, refreshing sleep through the hours of night time! How clarifying to the vision and how perfect to thus begin the day and to make for a keen appetite such as is sure to reward the man who lived out-of-doors, drinking in the

Hastily drying myself I slipped into my clothes, and without making any noise dipped the oars and proceeded to the land.

"A big one was it?" asked Jack as I told him my little story and I nodded.

"I have half a notion to try for him with the bamboo and a fly," I told him, and he suggested that it be done. The breakfast of bacon, fish, fried potatoes and an ample supply of coffee and bread was soon done away with, and after we had washed up the dishes and had put them away, I uncased the bamboo, slipped the reel into the bands and tightened them, threaded the line and took out my fly book for a review of the lot. I had carefully selected only the best ones for bass, such as I had used in the past

AT THE BEND.

THROUGH THE PASTURE.

some prompt reply at this favorable moment. "I am sound asleep in the Waldorf-Astoria, and I am dreaming of the days when I squandered my millions on wine, women and song. Further information in the rear at the ticket window."

This tickled Jack not a little, and he went into a roar from which he emerged tear-eyed. Whether it was at the failure of my reply, or the wonderful completeness of it I never knew, or was destined to know.

"Sun's been up a half hour, and I have the fire going, the pot a-boiling, and the frying-pan doing duty. Get into your clothes and we will take in the point before the sun is too high."

With this information to encourage me I was soon up and running down the path for a plunge in the lake before I donned my apparel. As I sped down to the water's edge I was followed closely by a potato, wielded with more or less dexterity by Jack, but I escaped unharmed. It was truly a fine morning, with the sun one great round ball of fire, hanging seemingly suspended over the eastern horizon. The morning air was just stirred by a slight breeze that ruffled the bosom of the lake, and circled gently around one to remind one of the infinite grandeur of that awakening day. In the woods, which were so silent, and so wrapped up as yet in the dreams of night, came the notes of the risen birds. Clear and sweet their notes wafted out, and presently, as the moments gathered,

beauty of the day and exercising his limbs as they should be nourished!

I was just rubbing down when there was a splash in the water ahead of me, and—splash!

Again came the warning, and I stopped where I was, with the towel in my hand, and with my eyes directed upon the spot ahead of me, where innumerable small ripples were receding from one central spot where I judged some fish had risen. The water gradually calmed, and owing to that vast transparency offered in certain Minnesota lakes, I was able to see out ahead of me some twenty feet and able to discern everything that went on below. There, clearly marked with black stripes, idly fanning the water, and evidently on the lookout for anything that came his way, lay a huge black bass, the size of which caused me to hold my breath in a sort of awe. Further away from him, also marked by black stripes so plainly visible through the pure and serene water, lay others, all of them feeding, and in a humor to snatch up anything that had the resemblance of food.

For a moment I stood watching them and trying to figure out what the big fellow had leaped for, but I was unable to gain by this conjecture, and so took it for granted that it was a winged insect such as were wont to fall on the waters. Glancing inshore I saw that Jack was systematically laying out the food and evidently taking much pride in his performance.

with success. I had much confidence in those I had in the book which held the coachman, Henshall, oriole, royal coachman, silver doctor, Ferguson, Montreal, Parmachenee belle, scarlet ibis, grizzly king, brown hackle and brown palmer. After some deliberation I chose a royal coachman for a leader and followed it with a brown hackle.

Everything put in order around the camp, with the tent flaps wide open to allow as much atmosphere as possible to circulate through, we went down to the shore and slid in the boat. So clear, so transparent was the water that one could easily make out the swelling tops of the trees—an inimitable picture enacted upon an inimitable lake, and a memory fit to store away in the books of remembrance, and cherish all through life. The oars in the hands of Jack soon caused the boat to slip out into the lake, leaving the shore behind. Now as we neared the feeding grounds of the big fellow I had previously noted, I kept my eyes upon the water ahead of me, while Jack manipulated the oars, taking care to make no noise, or unnecessary disturbance that would cause the fish to become suspicious of our approach. Rising to my feet I could glance far out, and there I saw first one, then another, and finally a little to one side, and close to two spear-like weeds that thrust themselves out of the water, down next to them lay the king of Placid Lake, with his head pointed toward me

so that I could get a full glimpse of his rotund, prosperous form.

There he lay, and with a whispered word to my companion I got into action. The bamboo responded like a thing of life, and without becoming excited, though within me there was a sense of breathless expectation. I sent the fly out to its destination, being sure that my footing was good and my position just right.

The flies dipped, the leader touched the surface, and its mate came a close second. Tiny ripples spread; it was just a moment, a bare space of time counted in seconds, and with my teeth clenched and my heart still, it happened. It happened, I say, and it happened with inconceivable rapidity; in fact, I was almost taken off my feet by the impetus of that strike. What I had counted on from the time I first laid eyes on that fish was now to be experienced. A feeling of great jubilation surged through my form. My nerves settled down and the wildness in me became of a fixed nature, acquired from being brought face to face with many a captured bass, and being the active member of many a fight on stream and lake.

"You got him! You got him, bless my soul!" caroled Jack, with his head turned and his eyes, seen just for a moment, all alight with the fire of battle. He dipped the oars and waited for my word.

Barely had that fellow struck than he rose high and dry of the surface and made an upward flight straight up, and when he had reached the apex of his endeavor he shook his form like a mad dog would shake a woodchuck, and then realizing that he was unable to get loose from that detaining contrivance, he dove down again into the deep and thus began the fight.

Keeping the line more or less taut, I worked the line with my left hand, watching and waiting for the moment when the daring and pugnacious fish would rush toward us at that rate of speed that only too often proves a handicapping factor to the fisherman. I was sort of bent forward, giving out line as the big fellow raced out in a semi-circle and ended up his wild career in that direction by darting out of the water on a slant that sent a shower of sparkling drops off of his form, each seeming to be touched with brightness, for the sun, now high above the treetops, illuminated with a dazzling flood of light the whole scene that lay around us. He shook himself again with his gills distended wide, and heavens, such a fish!

"Hold close! Hold close, and don't let him get the best of you!" shouted Jack, from the center of the boat. "He will try something different now. Don't try to play him with the line; use the reel, and watch out when he goes under the boat. He'll be sure to do that."

Jack had gauged the situation rightly and I was of the same opinion, as with another dive into the water the slack line that had accumulated was eaten up, and when the main part of the line again got into motion, it showed that the big bass was darting our way like a shot from a gun, fairly cutting the water with the line. I was in a pleasant fix; the line accumulated thick and fast. I held the rod high and strove to reel in as fast as possible, but it was of no use.

"There he goes," shouted Jack again, laying down the oars and bending forward to get a glimpse of the fighting fish, now seemingly fran-

tic and aroused to a pitch that held all the vitality in his body. I reeled in the line as quickly as it was possible for me to do. Under the boat he shot, but Jack, who was a king among oarsmen, had his hands working, and by a gentle turn, got fair and clean away from the fish and the line. So far so good, but—

"The net, Jack! The net!" I broke out, swinging in my tracks, and taking up the fight on the other side. I knew that the battle would soon be ending, and I wanted to be fit for the climax.

A muttered exclamation greeted my request, and then Jack swore roundly. "We failed to bring the net along. I left it up there on the shore when we came down to the boat. When I threw in the anchor I laid down the net and forgot to put it in."

"Never mind," I said, giving line again to the fish, which was gradually slowing down and evidently showing signs of fatigue. "I think I have him pretty well under control now, but sort of help me when I get him up to the boat."

Suddenly, and without any warning, the fish again came toward me, but slowed down to such an extent that I was able to spool in all the remaining line. Step by step I brought him in from the deep, and presently I had him close up to the boat. He was a monster, if ever there was one, and for just a moment there we stood and sat and looked down at him in wonder.

"Six pounds if he's an ounce," breathed Jack, with his hands grasping the edge of the boat, and half risen with his head thrust out and a look of gratification illuminating his sun-browned countenance. It is a fact that Jack gains more from seeing others fight and bring in the fish than to do the playing himself. He loves to row you out among the lily pads, and in every way, shape and manner make your tour of the waters a glorious success. Anyone who could have seen Jack thus viewing the lordly one would have sworn that of the two of us the man bending over the edge of the boat was the happiest.

With the rod high over me, and bent in a perfect arch, I told Jack to grasp the leader, and by a quick movement, transfer the denizen of the deep from his home to the bottom of the craft. Jack wasted no time, but took the leader, and with a handy movement—splash!

What happened in those intervening few moments it is hard to say. There was a flash of arms, sundry and various exclamations, intermingled with sulphurous phrases, and Jack, half out of the boat, announced that the fish was in the deep, free from the hook. The creature had shaken loose from the barb, and like the countless hosts that had followed before that had saddened the hour of many a piscatorialist, it was another of the big ones that got away.

"It was like this," said Jack, and was it a tear or just common, unpolluted lake water that glistened in the corner of his eye. "You see, when I pulled up on the line he made one gigantic plunge, and wrested the hook out of his mouth, and while I tried to hold him with my hands, the fins just naturally brought blood and pain."

I sighed long and deeply. "Jack, do you know that I have a slinking notion that we can get that identical big fellow at twilight at this same spot just out there where the weeds thrust themselves out of the water? We will let him forget it through the day, but take my word for

it, as a man who has plunked artificial minnows day in and day out through various summers, who has cast live frogs equally as much, that if we will use the steel rod and a nice little green frog on the weedless, it will prove the downfall of the big bass of Placid Lake, as I shall immortalize the occasion in print."

There was a wrinkle in the middle of Jack's forehead that foretold a disbelief in our being able to overcome this proceeding, and that it would be many a day before the bass would take bait again before he was sure it was the real thing.

"There is no use mourning over his loss," I said, with the pipe between my teeth. "There are others down there by the point that will need looking after. We'll try the point first and then the little bayou across there." Jack livened up and soon we were on our way, with the oars creaking merrily, with future opportunities looming up big before us. Briefly to say, we caught our share of the black bass between the two points mentioned, and spent the rest of that day enjoying ourselves. I routed out the typewriter and hammered out my usual number of words, but found that inspiration was more or less lacking. Always there seemed to come between me and the white face of the keys the scene that had been enacted during those morning hours. Strange to say I did not feel satisfied. There was something missing in filling out the wonderful completeness of that day, and I knew what it was. I had failed to catch my fish, and I felt an eagerness come over me to sense the old fighter again on the hook. I rolled out the last paper of copy and tucked it away, and it then being about 3 o'clock and still early, Jack nowhere around and everything agreeable, I laid down in the hammock to enjoy a bit of sleep.

That sleep was an extended one. The languor of the pleasant summer day had gotten into my veins, and somehow or another I slept longer than I thought. When I came to I found that the sun was climbing down over the treetops. I rose hastily and glanced around, and what should I behold with eyes that were bulged out of my head. There, dangling from a convenient limb, fat and husky, with every trace about his body as that of a fighter, was one of the biggest bass I have ever seen. One glance was sufficient. I had a startling idea.

A second glance showed me Jack with a smile three-quarters of a mile across, just preparing the fire for the evening meal. We looked at each other. We looked again, and then I looked at the fish, and then again at Jack.

"Of all the ornery, shrewd and withal wonderful men, it is you," I remarked, hunting for my pipe. "I take it that during my pleasant nap, all unaware, you went out and caught one of the wisest fighters of our Northern waters, said fighter having once escaped a certain fellow's lure, but which was to eventually meet his fate at the hook if a well-laid plot was to find birth. This, I take it, is the big black bass of Placid Lake."

"The same," said Jack, and then he up and told me all about it. "I saw you were contentedly sleeping, and I didn't want to disturb you. It was getting about bass time and so I hunted up a cute little frog, went out and caught the fellow. I fought him about twenty minutes and say, of all the fighting!"—

I lit my pipe.

Hikes Near Town

By PERRY D. FRAZER

ON Broadway, New York city, at this season you see men carrying fishing rod cases or canoe paddles or some part of a camping outfit, and you naturally wonder where each one is bound for and wish you could go along. Express wagons and trucks, heavily laden with boxes and parcels, frequently carry canoes and camp duffle on their way to the railway terminals, and you try to picture the sort of people they belong to, and whether they have chosen a place of all the many within a comparatively short distance of town that is really worth while. This sets you to thinking of ways and means to follow suit, and the more you ponder the subject the more difficult you find it to decide just where you would go if you had time.

Take the canoeists, for example, for they are scattering everywhere and poking into odd corners no one thought of visiting a few years ago, when handy light outfits were not to be had so easily as now. A favorite trip with them is to paddle up the Hudson to South Nyack, on a Saturday afternoon and Sunday, have their canoes and duffle carted up over the big hill to West Nyack and stored in a barn or other convenient building until the following week. Then they launch the canoes on the narrow but pretty Hackensack River, and spend two or three days in following that winding, shaded stream down through the woods to tide water at New Milford and on to Hackensack—not over thirty miles by train, but very much further as the stream winds about. And at the finish it is only a short distance back to the Hudson again, by rail.

If you have never seen the Hudson from a canoe, this is a grand season to do it, and the possibilities of good fun are almost unlimited. There are so many nooks and corners that should be investigated that a number of weeks might very well be spent in a cruise to Albany. Starting on a Saturday afternoon, the first stopping place should be Hermit Point, where the canoeists hold their week-end powwows and fill up on grub such as mother never used to cook. Then off on the flood tide to Croton Point, plenty far enough for the first full day. We used always to go back into the Croton River, but camping on the islands there is no longer attractive. Jim's Cove, across the bay from Peekskill, is the next campsite near a good spring, but Popolopen Creek at old Fort Montgomery is more attractive, and a few days spent there offer abundant opportunities for hikes back into the hills, to Highland Lake, Popolopen Pond and a number of ponds and brooks where fishing is fair to good.

Faring along, day by day, you will find dozens of little coves and creeks on both sides of the river, and all worth an hour or two of investigation, particularly if you carry along a camera. Some of them furnish very good fishing for bass, pickerel and perch. Most of us grow lazy on the way, however, and when we see a tow coming we throw the painter to a good-natured barge captain and take it easy as the flotilla moves along Albanyward. You miss a lot in this way, but it is good to be on the river

anyhow, and when the tide is flooding you make good time.

One of the nicest short-time hikes is to take a light camp outfit and your trout tackle and go to Stroudsburg, Pa. Hire a spring wagon and drive up the East Branch of the Brodhead about three miles above the junction of the two streams, or some eight miles in all, and make camp alongshore. Here is good brown and brook trout fishing, and being on the spot, you get the cream of the fishing, early and late. Anyway, you do not have to climb over the mountain to Anomalink or Henryville to eat and sleep, and campsites are numerous and delightful.

A bit nearer is the Delaware, with campsites and good bass fishing galore, and the great Water Gap to fill the eye with pleasure. Better fishing, however, is to be had further up the river, but it is difficult to choose between Callicoon and Narrowsburg, the most convenient places, either for camping or hotel living. Of course the best plan is to float down from Hancock in a canoe, but if your time is limited, plan to move very slowly from Hancock to Callicoon or Cocheton village and fish carefully all the way; or as far as Narrowsburg. Most of the

canoeists move too rapidly to get the best fishing, and try to cover too great a distance. In this way they pass good water without trying it out, or they try it at unfavorable hours. I have camped alongside good bass water without having much success at first, due to rain or a little rise in the river, to find the bass striking at any sort of a lure later on or next day. As the farmers say, "You can't always sometimes tell" until you have tried out a good-looking stretch of water. And in this river you have to "first find your bass" before you can catch him. He may be at the tail of a rift when the signs point to the head of the fast water, and if you think he should be looking for a meal at the top of a pool, he may be lying at the head of the next rift, taking whatever comes his way, and ready to receive your prickly visiting card the moment you present it. It is good fun to adopt trout tactics and wade the rifts while casting a bass fly. Someone tells a wonderful tale of big bass and lots of them in the Delaware, but while they are abundant they do not run into pounds, as a rule. In that swift cold water, however, the pounders and two-pounders are good enough for me when I cast with a five-ounce fly-rod, and

NOT FAR FROM THE PALISADES.

bass fishermen who have had far more experience on the Delaware than I have had or hope to have, confirm my opinion that a really big bass is rare, and a four-pounder is something to talk about for years. The biggest Delaware bass I ever saw looked like a four-pounder; it was estimated to weigh a half pound more than this, but I did not see it weighed, and do not know what its weight was. It was taken trolling in the river at Pond Eddy.

Another short trip nearby is the Rancocas, taken over Decoration day by members of the Atlantic Division of the American Canoe Association. Buy your ticket to Browns Mills in the Pines, N. J., and the canoe may be taken along as excess baggage for a dollar extra. On arrival, purchase a few necessities and start down Rancocas Creek, taking it easy in order to fully enjoy the beauties of that winding stream. And after you reach the Delaware River you can turn up stream and go as far as time will permit, or go down to Philadelphia or any nearer point before returning home.

Still another short trip attracting canoeists down the Ramapo River, from Suffern, N. Y., to Pompton Lake, shipping home from Pompton Junction, or leave the outfit at the boathouse, at that village, going back for another week end of poking into picturesque spots. The Ramapo is a fine stream, pouring along at

the foot of the mountain of the same name, now deep and sluggish, now purling over riffles in the open. There is fair fishing toward the lower end, but pollution has spoiled the best of it, both in the river and in Pompton Lake.

Esopus Creek is the old standby of men who prefer trout fishing to other amusements. The fishing in June should be good, for the stream has been high and fishing unsatisfactory through May. The crowd goes to Big Indian, while others scatter along the stream as far down as Boiceville, stopping at Shandakin, Phoenecia, Mount Pleasant and Cold Brook, according to personal preference. There are satisfactory stopping places everywhere; in fact, there are few places where you can hang up your fishing hat in any man's house as you can generally do along the Esopus, with the assurance of meals and a bed. Of course when the summer boarders begin to flock there, the story is different, but in June one seldom finds a crowd. Take along full length waders if you have them and a five- or six-ounce rod, for the Esopus is a strong stream.

A fine tramp may be made from Stony Point on the Hudson back over the mountain to Cedar Pond, following the brook of the same name to the divide, thence down the west side to Harriman and the Ramapo valley, and home by train. It is not a long or difficult tramp and

may be made in one day, but if you carry a small outfit and camp one night at the pond, the additional time may well be devoted to exploring and fishing. There is also some grand country for tramping trips west of the Ramapo River, among them one from Suffern over the mountain to Big Bear Swamp and on to the Wanaque River, Post Brook or West Brook, Macopin Lake and Butler or Newfoundland. Good fishing along the way. Take Government maps along.

Greenwood Lake and Lake Hopatcong are of course fine places for short trips, and the fishing is good as a rule, considering how much this is practiced. Small boating is good fun at both lakes, and if you like you can ship a canoe up there and come back under a spruce breeze to Communipaw, via canal.

There is much fairly wild tramping ground within two or three hours' travel by train from New York city, and it is good fun to buy several of the Government maps, study them and lay out little jaunts. Send five cents to the Bureau of Publications at Washington for each one of the maps covering the country west of the Hackensack River, with Greenwood Lake for the northern, Newark for the southern, and the Delaware River for the western boundary, and you will find many interesting places, most of them well worth investigating.

The Land of Pierre de la Verendrye

By ROBERT E. PINKERTON

PIERRE GAULTIER DE VARENNES, Sieur de la Verendrye!

Did you hear of Pierre, Mr. Smith, as you paddled from the boat house to the point, had your lunch, and drifted back in the moonlight?

Did you hear anything of Sieur de la Verendrye, Mr. Jones, when you took that three-day trip down the river, your paddle strokes in rhythmic accord with the chugging of motors, your day's journey ended when the whistles sounded six?

Did you, Mr. Brown, when you made that two-weeks' trip into the Canadian wilds, with the two guides, the well loaded canoes, the air mattress and waterproofed tent—did you, as you stepped from the train into the canoe, happen to hear anything of Pierre Gaultier de Varennes, Sieur de la Verendrye?

The chances are that none of you canoeists ever heard of Pierre, yet he was the pioneer of you all, the first of the many who, two hundred years later, journey to the North country for a trip of a week or a month across the lakes and down the streams of Canada or along the northern border of the United States.

Pierre Gaultier de Varennes, Sieur de la Verendrye, was the original canoeist. He should be an honorary, and honored, spirit member of every canoeing organization in the country. For Pierre did things that, while not so important historically, overshadowed, in obstacles met and overcome, the journeys of those better known canoeists—Father Marquette, La

Salle, Du Luth, Joliet, Father Hennepin, and that pioneer nature faker, Jonathan Carver.

Pierre Gaultier de Varennes was born in France in 1685, came to this continent when a boy, entered the service of the king, was sent into the extreme West—Sault Ste. Marie—and there gained the confidence of his superiors in the scattered army that guarded the outposts of the New France.

Daring, adventurous, Pierre longed to go further into the unknown West than any of his countrymen. Finally he obtained a commission from another Pierre—Pierre Francois Rigard, Marquis de Vaudreuil, governor of the New France—to penetrate the Western and Northern forests, establish posts, and, if possible, find the Western ocean.

Pierre started on the first of his wonderful canoe journeys. It was in the first quarter of the eighteenth century, in the days when, if a man wished to go from Montreal to Green Bay, Wis., for instance, the only means of travel was by canoe up the St. Lawrence and the length of three of the Great Lakes and a part of a fourth. It meant being gone six or nine months, more probably a year.

Pierre knew he might be gone a long while. So did Father Marquette when he discovered the Upper Mississippi, or the other great explorers along the great river. But their route was almost definitely known before they started. Information from the Indians told of the one big river flowing on smoothly until it reached the greater river, and of the greater river flow-

ing on until it met the sea. Exploring is a comparatively easy task when you float down one stream, into another and on and on.

But Pierre, from meager reports received of the great country to the north and west of the greatest of the Great Lakes, knew he was to enter a land cold and rugged, of innumerable lakes of all sizes, of countless streams large and small, of twisting, devious routes, of endless chains of lakes and rivers which led on and on, even the Indians not knowing where. He knew there would be countless portages, a journey so much slower than those of his countrymen in the region of the great river to the south that it would be impossible to carry supplies for any length of time—a journey that would necessitate his living for two or three years as did the savages.

But Pierre started. He went north from Sault Ste. Marie along the east and north shores of Lake Superior until he came to a point where the shoreline turned toward the southwest. Then he struck inland, straight west, guided by the Indians in his party. Paddling up small streams and across lakes, toiling over long, high, rocky portages, enduring the chill of the nights and the rain of the days, Pierre and his little band of red and white men finally crossed a low divide to find streams that flowed westward. Down these and across lakes they went, until the white men were lost in a maze of rocky shore and dense forest, of lakes so countless that even Pierre could not remember the way.

The lakes and streams grew larger, until one morning, after a camp on a portage around some rapids, they swept out of the stream onto the surface of a long, broad lake that lay glittering in the sunshine, its surface broken by countless islands, its shores rocky, steep, forest clad. Across this lake the party paddled, and Pierre named it Lac La Croix. Nowhere had he ever seen so beautiful a body of water.

They left the lake for a stream, and went on through other lakes for two days. And then, after portaging around a big falls, their birch canoes suddenly turned a bend, and they were on a lake the opposite shores of which were below the horizon.

"Te-ka-ma-miou-en," said the Ojibway in the stern of Pierre's canoe, and Pierre was the first white man to see Rainy Lake, as the Indians called it.

We won't go on with Pierre, far west past Winnipeg to the Saskatchewan, where a post was established on the bank of that great river of Western Canada, nor even tell how he reached the west end of Rainy Lake and established Fort Pierre, two miles east of where the Hudson's Bay Company later built Fort Francis. Nor will we tell of Pierre's other journeys, nor of how he died one winter on the bleak shores of Lake Winnipeg, nor of how his son continued the work of the father. We will go back over his route and see if something cannot be found that would interest a city man who wishes to do a little make-believe exploring, in a shorter time, of course, and without the risks and hardships of Pierre's journey.

Take Lac La Croix, for instance, the beautiful lake with the islands, with the wonderfully clear water, the rugged shore line, the surrounding forest inhabited only by a small band of Indians on the bank of the lake's outlet,

Nameukan River, and traversed only by the forest rangers of the Canadian and United States governments.

For Lac La Croix is a boundary lake and is the center of a country of wonderful possibilities for the present-day Pierres who, with their modern canoes, outfits and guides, with the Pullman stopping in or on the edge of the wilderness, can have many of the experiences of Pierre without the necessity of a years-long journey, the food of the savage and the hardships and risks.

Supposing you wish to reach Lac La Croix. There are several ways to do so, and, in the routes to be described, one can find most any degree of wilderness travel, of "roughing it" or of frontier comfort.

You can travel the route of Pierre, which was later the route of Simon Dawson, a far-sighted man who did not see the railroads coming, but who did see the necessity of a route to the prairies of Western Canada; you can travel in the wake of the forest rangers as they paddle through that beautiful country, guarding the forest from fires that, many times, you are responsible for starting; you may leave these routes and, if you have the inclination, start an exploring trip of your own through a country in which only the Indian lives and which has infinite possibilities in the way of adventure and of "conquering the wild."

Until the last few years no one ever took a pleasure trip through this country that Pierre discovered so long ago. In the last three or four years there have been as many as a dozen or fifteen canoeing parties each year, but most of them have traveled only one route, or a variation of it, and there is an immense country to the north in which you can travel for a month and never see a white man nor a sign of one.

The best known route is from Ely, Minn., to International Falls, or to Tower. Each is about 150 miles, but each lies in a district into the borders of which motor boats, settlers and lumber camps are penetrating. You can depart from them, however, at almost any point and lose yourself for as long as you desire. If you live in the Middle West, perhaps any one of these three towns would be the best starting place.

If you live in the East and have exhausted the possibilities of the well known routes in Eastern Canada and the United States, perhaps it would be better to enter the country by way of Canada. Go to Port Arthur, and then on west on the Canadian Northern one hundred miles, and you can leave the train at any one of the small towns or places where the train will stop, and be in the middle of the most wonderful canoeing country you ever knew—wonderful not only because there are rapids that require skill, lakes large enough to test your ability, routes and combinations of routes without number, but because it is absolutely virgin, is known only to a few timber cruisers and to the Indians who spend the winter trapping in the forest and the summer gathering in the villages to smoke and visit and to enjoy themselves as white men seldom do.

Leave the train at Windigo, for instance, a town named for Lake Windigoostigwa, and you are on the route of Pierre and Simon Dawson, and you can travel on southwestward through French Lake and French River, Pickerel Lake and Deux Riviere into Sturgeon Narrows and Sturgeon Lake, down the Maligne River, and sweep out into Lac La Croix, just as Pierre did two hundred year ago. From there you can go north and west down the Nameukan River until you reach the mouth of Quetico River, turn up this stream to Beaver House Lake, into Quetico Lake and on to Atikoken, a town on the Canadian Northern west of Windigo.

Or you can continue on west from Lac La Croix along the route that Pierre and Simon took and paddle the length of Rainy Lake to Fort Francis, where you can take the train back east through Canada or south through Minnesota.

Again, you may take the train to Fort Francis and reverse the trip, or you may paddle straight north from Fort Francis for thirty miles to the Devil's Cascade at the north end of the north arm of Rainy Lake and there begin to ascent the Manitou River and keep on for nearly 150 miles, through many lakes and with only seven or eight portages, until you come to Wabigoon, on the Canadian Pacific. And in all that country there is not a white man.

Still again, from Fort Francis there are three routes to the Lake of the Woods, one down the Rainy River and the other two through an amazing network of lakes to the northwest.

If you wish to explore you may start north from almost any of the little stopping places along the Canadian Northern and travel for weeks through streams and lakes, or turn south across Hunter's Island and reach Ely.

If you wish only a short trip, two weeks, for instance, and do not wish to take the chance of running astray in the country just described, start from Ely, Minn., a town at the end of the Duluth & Iron Range and take the regular

NAMEUKAN RIVER.

canoeing route through Fall, Pipestone, Basswood, Crooked and Iron lakes, into Lac La Croix, and then west to International Falls, or to a trading post called Harding, on the border, from where a twenty-six mile portage—with team and wagon—will land you within twenty miles of Tower by steamboat. Or, if you care to reverse the trip and begin your vacation with some hard portages, leave Tower, paddle across big Lake Vermillion and go down the Vermillion River to the border. The river is about fifty-five miles long, but there are nine portages, and two are a mile each.

The routes through this country are innumerable and of infinite variety and length. Except when near Fort Francis, Tower or Ely, you will always be in the virgin forest, in a country inhabited only by Indians, in a region to which the lumberman has not penetrated.

The lakes, except Rainy Lake and a few near the towns, have not been fished, and in June or in the fall the pike fishing is exceptional at the rapids and falls in the rivers. In the spring and fall lake trout take a spoon, although you will have to search for the few small land-locked lakes in which these big fellows spend the summer in the cool waters eighty or one hundred feet below the surface.

If you are a big-game "looker," there is no country which offers such possibilities. To the north of the Canadian border are caribou, and throughout the entire district described are moose so plentiful that your canoe will nose them out of the streams. This is not an exaggeration. I have stopped my canoe to shout at a cow to move out of the channel, and one of the forest rangers on the border far east of Ely complained last summer that he could not get good drinking water in the streams because the moose kept them so muddy. In any river you will see grasses floating, dropped from the jaws of feeding moose, and you should not boast if you see twenty moose in a day. I once saw forty-one, a total of eighty-four in four days, and I was not looking for them—they happened in the course of the day's work. Take a camera if you wish to have a real moose hunt, one that will give trophies as productive of after-season pleasure as a big head.

Once a trip has been made through this district, it is sure to be only the forerunner of many. The thought of the lakes and rivers will be with you until the next year. There is a wonderful lure in a map of such a country, a lure in the names. Cannot you feel it in these? For instance: Kabatogama, Nameukan, Quetico, Seigenagaw, Kawawagamog, Kanipiminanikok, Lac La Croix, Lake Louise, Deux Riviere, Sturgeon Lake, Otterback Lake, Loon River, Crooked Lake, Sunday Lake, Saturday Lake, Jackfish Lake, Snowbank Lake, This Man's Lake, That Man's Lake, The Other Man's Lake, Manitou River, Brule Narrows, Bear Pass, La Seine River, Tamarac Creek, Vermillion River, Little Vermillion Lake, and any number of others. Do they not make you think of things?

Maps? Guides? The country is too new to have regular guides, but at Ely, International Falls, Tower, Fort Francis and other towns men may be found who will take you on a trip. But the maps are good, and why not be an explorer? In Duluth, from any land attorney, you may get county maps that are perfect so

far as your needs are concerned. From the Ontario government you may get the topographical sheets—those of the English and Rainy River districts are the ones you want.

You may rent a canoe at any of the starting places and buy most of your outfit at Duluth or Port Arthur. "Traveling light" applies especially to this country. There are portages galore, and some of them stretch into two miles of mud and steep, rocky hill. Others are short, but of irritating frequency.

Dress warmly, in wool, for it is a country

where snow falls sometimes in June and heavy frosts come in August. There may be much rain in June and July, and in those months the flies, all the varieties, will be bad. In August they will be gone, but the moose will not be seen so often in the lakes. September may be a month of snow and storms, but October, with its clear, bright days, the ice forming at night on the edges of the streams, with a possible light snow and the necessity of a roaring fire at night in front of your lean-to—October is one of the best months of the year.

North Shore Casting Club.

CHICAGO, Ill., June 10.—*Editor Forest and Stream:* The third event of the season, cast on June 8, shows splendid work by all of the participants.

The club average for the accuracy bait is 98.4 per cent., which is a great showing. Our captain deserves especial praise for the very competent handling of the sportsmen, starting them on time, keeping the different games following without the slightest waiting.

Without doubt the meet was the best we have ever held. The increased interest in the distance events shows the great ability of the members in any and all of the divisions of the sport. There being so many entrants, the time was too short to run off all of the games, therefore the salmon fly, from June 8, distance heavy tackle fly, from May 4, and distance quarter-ounce bait from May 18 will be cast off June 18. (Score will appear in next issue of FOREST AND STREAM.) Target practice for the games to be played June 22, as well as the fly games, will be open for all. Who says that the N. S. C. C. is not going some?

The scores for June 8 follow:

	1/2-oz.	H.T.D.F.	Acc'y Fly.	1/2oz. Longest Dist.	Cast.
W. Liddell	98.3	..	98 3-15	128	180

C. O. DORCHESTER, M.D., Sec'y-Treas.

Tuna Fishing in Nova Scotia.

LIVERPOOL, N. S., June 2.—*Editor Forest and Stream:* Some of your readers may be interested in the tuna fishing in our harbor here at Liverpool.

We have great numbers of tuna in the summer months, ranging in weight from 300 to 800 pounds. One gets trout and salmon fishing also at Liverpool, with good moose hunting within half a day's travel from the town.

L. D. MITCHELL,

President Nova Scotia Guides' Association.

San Francisco Fly-Casting Club.

THE fifth medal contest of the season was held at Stow Lake on June 8 and 9, wind variable, weather cloudy, with results as follows:

SATURDAY, JUNE 8.

Fishing Lines.

WEST VIRGINIA, Virginia and Washington fishermen have a bone to pick with the Maryland Legislature. A law passed by the recent session of the Legislature contains a provision, putting a tax of \$10 on non-residents of the State. The law will affect fishermen in West Virginia, Virginia and the District of Columbia accustomed to slipping over to Harper's Ferry early Sunday morning to enjoy a day's sport in the Potomac.

JOSEPH IRISH, John Lyons and William Melchoir, Illinois fishermen, made the record catch for this season, securing forty-six fine black bass, ranging from one to two pounds each, all

secured with hook and line in Forked Creek, a tributary of the Kankakee River near Wilmington. Hook and line fishing has been unusually good this year.

Illinois Casting Club.

CHICAGO, Ill., June 18.—*Editor Forest and Stream:* Owing to vacation periods and "fishing weather" the attendance at our contest, scheduled for the 15th inst., was rather light. Those missing this event may take re-entry as in accordance with new rule as well as in the salmon fly event postponed.

The weather during accuracy bait was light south and southwest winds, conditions favorable;

during accuracy fly there was a light northwest wind and conditions favorable; during the distance bait the wind was southwest, velocity 21 miles. Following are scores in the order cast:

Half-ounce, accuracy, bait, per cent.:	
McCandless	97.0
De Garmo	97.9
Wehle	98.4
Buchanan	96.6
Tice	97.4
Tournier	98.7
Whitby	98.6
*McCandless	97.4
Jamison	98.6
Half-ounce distance, bait, feet:	
Jamison	55
De Garmo	71 ½
Accuracy fly, per cent.:	
Ball	99 8-15
De Garmo	99 8-15
Pierson	99 5-15

*Re-entries. †Guest. A pleasing feature of the day occurred when

Mr. Perce, of the Chicago Fly-Casting Club, presented our president a silver and gun metal cup engraved on both sides. Mr. Perce, in presenting the gift on behalf of President Beatty and members of the Chicago Fly-Casting Club to the members of the Illinois Casting Club, alluded in graceful and most eloquent terms to the fine spirit of friendship that has ever existed between the two clubs and his address—responded to briefly by our president—will live long in the memory of those present.

Attention is called to the magnificent casting in the half-ounce distance bait by C. E. Lingenfelter, of the Anglers' Club of Chicago, whose average of 228 2/5 feet, and longest single cast of 251 feet, both exceed all national and club score records of which we have knowledge. For the information of those interested in records it may be stated that the official weather conditions at the hour of casting were, wind southwest, maximum velocity 21 miles, and humidity 82 degrees.

That the practice events run off every Saturday afternoon and the "day following" are of increasing interest to members both old and new is attested by the attendance of twenty-five and thirty-two members on Sundays during the past two weeks. Come join the bunch and get in ninety-nine shape physically and mentally.

Your executive committee expresses the wish that members wear their badges and buttons and bars as well at all contests and thus learn to wear these insignia gracefully for the big event—the N. A. S. A. C. tournament—in August on the 15th, 16th and 17th. The order for additional badges will be placed within a few days, and those members who have not yet made application may do so this week to the secretary.

Members having any communications of interest or suggestions for the betterment of the game will kindly mail to the secretary, and they will be posted or given careful consideration.

Kindly note that the scores credited to Messrs. Whitby and Ball of 99 13/15 per cent. in the accuracy fly in the tournament, May 26, were erroneous, and should have read 98 13/15 per cent. This information for the benefit of record "bugs" and with regrets to Messrs. Whitby and Ball.

On June 29 the events of quarter-ounce accuracy bait, quarter-ounce distance bait, delicacy fly and light tackle accuracy fly will be held. Change your calendar and your weight.

O. C. WEHLE, Secretary pro tem.

Newark Bait- and Fly-Casting Club.

NEWARK, N. J., June 17.—*Editor Forest and Stream:* Scores made at the club platform at Weequahic Lake on Saturday afternoon, June 15, follow:

Quarter-ounce distance, bait:		Longest Cast. Average.	
Mapes	173	158 3/4	
Muldoon	65	46 1/2	
Doughty	142	77	
Endersby	88	66 1/2	
Champion	123	101 3/4	
Neu	125	71 1/2	
Sands	110	...	
Accuracy, fly, demerits:			
Muldoon	35	Mapes	31
Doughty	24	Endersby	53
Champion	31		
Longest cast, dry fly, distance:			
Doughty	58	Champion	64
Mapes	48	Endersby	52 1/2

Muldoon	96 11-15	Sands	90 4-15
Endersby	94		

Lou L. SANDS, Sec'y.

Elk Preservation.

BY RALEIGH RAINES.

FIVE States have been supplied with shipments of elk during the past season, in pursuance of a plan of the general Government to save the animals from such practical extinction as has overtaken the buffalo. Nearly all of the Western States are anxious for shipments of the elk. They are being distributed as fast as possible, but the work is slow and expensive and limited to the winter season. The States supplied this year were Washington, Oregon, Utah, Colorado and Montana. The Biological Survey of the Department of Agriculture has distributed the animals, and has aimed to make the shipments as near twenty as possible. Most of the elk are collected during the winter at Jackson Hole in Wyoming, where the Government has been feeding them with hay under a provision of the agricultural appropriation bill for the current year. About 700 tons of hay were used during the past winter. The animals come in to be fed and are driven into a strong corral, when the ones selected for shipment are captured and placed in cars. It has been a delicate job to secure the big wild animals without injuring them. The original appropriation for the purpose of feeding the elk amounted to \$20,000, a large portion of which was used during the past winter and the previous spring. It is difficult to take an accurate census of wild animals, but so far as the Biological Survey can ascertain, there are now about 70,000 elk in the United States, mostly in the Yellowstone National Park and Jackson Hole region in Wyoming. At one time there were any number of elk in all of the Western States.

When a shipment is collected it is destined for a particular forest, where the animals are released and allowed to multiply. In the national forests, which number about 165, containing approximately 195,000,000 acres, the army of forest rangers, assisted by the State game wardens, extend their protection and care. This policy has long been advocated by the writer and others, and it is gratifying to see at last the idea fast gaining ground and materializing. The immense area of the national forests could be used to propagate native game with little expense, and in time would not only be the means of reclaiming the native game animals, but become a source of profit to the Government in the way of revenue and result in immeasurable benefit and pleasure to many sportsmen who might desire to take one or more of the animals each season.

The Senate committee on agriculture has provided an item for establishing a new fenced elk reservation in the Wind Cave country of Wyoming, and if possible this reservation will be completed during the coming summer. During the past winter there were twelve elk sent by the Biological Survey to the Flathead bison reserve in Montana, which contains an area of 20,000 acres under fence. The conditions are ideal for the bison, where two years ago the Government began with a herd of thirty-six,

which has now increased to more than sixty head. There is a considerable part of the reservation better adapted to elk than to the bison and the two herds are not expected, therefore, to interfere with each other.

The Department of Agriculture hopes for considerable assistance in preserving the elk from the Order of Elks, which two years ago agreed to discontinue the use of elk teeth as an emblem. The Biological Survey is trying to assist in the preservation of the prong-horned antelope much in the same way as is being done with the elk. It is a much more difficult task, however, owing to the habit of the antelope which live by preference in the big stretches of desert where it is almost impossible to protect them from the hunter.

New York State Sportsmen's Association.

NEW YORK CITY, May 25.—*Editor Forest and Stream:* Apropos of the annual convention and tournament of our association June 10 to 13 at Syracuse, N. Y., the following note copied from the archives may interest many of your readers in these days of public interest in conservation of the State's natural resources:

"The thirteenth annual convention met on May 22, 1871, in the rooms of the Central New York Sportsmen's Club in the city of Utica and continued for five days. The officers were: President, Charles W. Hutchinson, Utica; First Vice-President, Wm. H. Bowman, Rochester; Second Vice-President, S. T. Murray, Niagara Falls; Recording Secretary, John B. Sage, Buffalo; Corresponding Secretary, Wm. M. Storrs, Utica; Treasurer, S. M. Spencer, Rochester. Mr. Charles E. Whitehead, of New York, seconded by Mr. John F. Seymour, of Utica, presented a resolution that "in the opinion of this convention the forests of the Adirondacks, being a natural reserve for the recreation of the public, should be preserved by an act of the Legislature, as a public forest inalienable and indestructible forever, for the use of the public." On motion a committee consisting of the Hon. Horatio Seymour, Chairman; Hon. Geo. W. Clinton, of Buffalo; Hon. Jarvis Lord, of Rochester; Hon. George Dawson, of Albany; Hon. Robt. B. Roosevelt, of New York, and Rev. Mr. Huntingdon, of Auburn, was appointed, to embody in writing the foregoing resolution and present the same to the Legislature."

L. H. SCHORTEMEIER, Sec'y-Treas.

Illinois Hunting License.

New hunting licenses for Illinois went on sale June 1. The old permits expired May 31. Squirrels are the only game which may be legally shot this month. It is permissible to kill fifteen per day until Nov. 15. Birds are protected until Aug. 2, when mourning doves may be killed while all species of waterfowl may be killed after Sept. 2. Applications for licenses are few at this season of the year. The rush does not commence until the duck season.

Published Weekly by the
FOREST AND STREAM PUBLISHING COMPANY,
 CHARLES OTIS, President.
 W. G. BEECROFT, Secretary. S. J. GIBSON, Treasurer.
 127 Franklin Street, New York.

CORRESPONDENCE—FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but, of course, are not responsible for the views of correspondents. Anonymous communications cannot be regarded.

SUBSCRIPTIONS: \$3 a year; \$1.50 for six months; 10 cts. a copy. Canadian, \$4 a year; foreign, \$4.50 a year. This paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS: Display and classified, 20 cts. per agate line (\$2.80 per inch). There are 14 agate lines to the inch. Covers and special positions extra. Five, ten and twenty per cent. discount for 13, 26 and 52 insertions, respectively, within one year. Forms close Monday in advance of publication date.

THE OBJECT OF THIS JOURNAL
 will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

AMERICAN FORESTRY ASSOCIATION.

THE directors of the American Forestry Association will hold their midsummer meeting in the White Mountains at the same time as is held the fifth annual forestry conference under the auspices of the Society for the Protection of New Hampshire Forests, in co-operation with the State Forestry Commission and the Association of Northeastern Foresters.

The directors and their guests from the East, South and West will leave New York in special cars on the New York Central Railroad on the evening of July 16, arriving at Concord, N. H., on Wednesday morning. There the party will be received by Governor Robert P. Bass, who is president of the association and chairman of the board of directors, and Col. W. R. Brown, a member of the board. The party will then proceed in automobiles seventy-five miles to Deer Park Hotel at North Woodstock, stopping on the way to see the State Nursery at Boscowan and to lunch at Plymouth. At Deer Park Hotel the party will join members of the Society for the Protection of New Hampshire Forests in a short visit to the most beautiful Lost River Reserve nearby, lately purchased by the society, and will then return to the hotel for dinner and the night.

On Thursday morning, July 18, the party will proceed through the Profit Notch to Bretton Woods, arriving there for lunch and remaining Thursday and Friday. During that time excursions will be taken to the New State Reservation of Crawford Notch and to some of the tracts purchased this month by the National Forest Reservation Commission under the Weeks law, and for which almost half a million dollars will be spent.

It is expected that there will be assembled at Bretton Woods, besides the directors and guests of the American Forestry Association and the other organizations which are to meet there,

several of the governors of New England States, members of the National Forest Reservation Commission, a number of officials of the United States Forest Service, several Senators and Congressmen, and members of the State Legislatures as well as forestry officials from all the States within easy reach of New Hampshire.

The directors of the American Forestry Association expect, as they did during the meeting in the Adirondacks in May, to accomplish much of a practical nature.

ARCHIBALD GRACIE'S TITANIC EXPERIENCES.

WE have in preparation for publication in an early issue an article by Col. Archibald Gracie, on his Titanic experiences. This is not strictly a sportsman's article, but Colonel Gracie proved himself so good a sportsman that his story is worthy of a place in FOREST AND STREAM and a reading by all true sportsmen. Colonel Gracie's experiences, thus far unpublished, are marvelous to a degree, almost beyond belief. No man else ever has been drawn down by the suction of a great vessel and belched, like a torpedo, through fathoms of water and yards of air, propelled by an explosion, of what no one knows, and lived to tell of the experience. The narrative truly is beyond comprehension. Colonel Gracie has only now been discharged from the doctor's care, so that the article is prepared while etched vividly on his mind. The interest is intense throughout his story. Read it.

NON-RESIDENT LICENSE.

PHILADELPHIA, Pa., June 20.—*Editor Forest and Stream:* I saw in FOREST AND STREAM a few months ago a statement that a bill had been introduced in the New York Legislature, having for its purpose the licensing of non-resident fishermen to the amount of \$1.50 a year. Will you not let me know, if you can, what was the fate of this bill. I wish to bring it before the fourth annual meeting of the Camp of United Sportsmen at Johnstown.

W. E. MEEHAN,

Supt. Fairmount Park Aquarium.

[The committee, which codified the game law last winter, had a provision in the law covering the non-resident angling license which was combined with Section 186, and which provided a \$2 fee. This, however, was dropped from the bill in committee. Nobody seems to know exactly how it happened or the reason.—EDITOR.]

LAND TURTLES.

WHILE there is nothing very gamy in the hunt and capture of a land, box or wood turtle, yet they are protected by the game laws of New York State. The man hunting big game in the woods needs no warning against taking a turtle, but his small boy at home—and most of us have 'em—often begins his education in conservation by taking a box turtle, boring a hole in its after shell and tying it to a stake to show dad it was not necessary to have a high power rifle and railroad fare to get a trophy. Therefore this warning may prevent a fine, and at the same time, teach the lad to obey the letter of the State conservation laws—a matter that should be taught all youngsters if they would grow up to be big-game hunters, to find after they have come into man's estate that there still remained big game to hunt.

CARIBOU IN MAINE.

FROM John S. P. H. Wilson, chairman of the Maine Fish and Game Commission, comes the cheering news that caribou are returning to Maine, principally in the northwestern district. It is more than ten years since we had a report of a caribou being killed in Maine, and indications pointed to their having moved so far away as to preclude possibility of return. So the suggestion feels good that some day again we may shoot caribou in Maine. The law is on caribou until Oct. 15, 1917.

"CANADA FISHING WATERS."

AT last the Dominion of Canada has come to realize that to grant privileges to streams within its borders, is to kill, to a great extent, visits from foreign fishermen. Legislation now pending in the Dominion asks for removal of stream restriction and monopoly. This, indeed, is welcome to American fishermen who know that much Canadian water, though restricted, is unfished and offers untold possibilities to anglers from the States.

A MONSTER garfish, weighing nearly 200 pounds, was caught by fishermen in the Du Page (Ill.) River. The huge fish was six feet in length and is the third of large size taken in that stream this year. Owing to the destructive habits of these fish preying upon all game species, the State law calls upon fishermen to kill them whenever caught by seine or hook.

Goin' Fishin'?

By FRANK FARRINGTON.

Fishin' season now's wide open
 On the cricks around up here.
 Every day you'll see us fellers
 Gettin' out our anglin' gear.

Trout 're jumpin' in the brooks and
 Gettin' hungrier every day.
 Gee, Mister, but it's some excitin'
 When we dtop a worm their way.

Once this fishin' fever gets you,
 Winter seems as if 'twould last
 Jest about forever, dang it;
 While you're wishin' it was past.

Ain't no substitute for fishin';
 Nothing else is jest as good.
 Can't put off no imitation
 On a chap with fishin' blood.

Of all the sports, one kind or 'nother,
 Ain't none jest like fishin', quite.
 Always something new a-happenin'
 When the fish begin to bite.

A Fisherman's Pipe.

By J. D. W.

A bowl well browned by years of use,
 A stem half bitten through;
 Such is my pipe, a happy type
 Of friendship, tried and true.
 Though winds may roar and rains may pour,
 Safe in my camp we lie
 And watch the storm, serene and warm,
 My good old pipe and I.
 When weather fair, and balmy air
 Invite us out to fish,
 We sally forth to streams well worth,
 And cast and dream and wish
 To hook the best and leave the rest
 To grow 'til coming years
 Shall bring a spring when birds shall sing
 To younger, happier ears.
 Grant they may be our progeny
 Whose luck we then espy,
 And give us grace, their joy to trace,
 My good old pipe and I.

YACHTING

Ticks from the Ship's Clock.

The Indian Harbor Y. C. race, Greenwich to New London, June 19, was won by Winsome, Istalena second and Aurora third. Wind light at the start, freshening from southwest toward finish. The result, corrected time: Winsome, 6.45.46; Istalena, 6.57.37; Aurora, 7.04.13.

The annual regatta of the Lake Champlain Y. C. will be held Aug. 6, the program for which is being arranged by the Regatta Committee. The races held by this club are open to all comers, whether members of the club or not.

C. Sherman Hoyt has resigned as a member of the regatta committee of the New York Y. C. Frederick O. Spedden will succeed him on the committee.

Once every year the Atlantic Y. C. holds a club run. This year the run will be held on Aug. 25, and the dinner will be held at Huguenot, S. I.

Motor boat racing is going to be fostered by the new Glenwood Country Club. A regatta committee, consisting of Edgar F. Luckenbach, Chairman; Harold Godwin and Burton Thompson, has been appointed by the Glenwood Country Club and has arranged a motor boat regatta on June 29. The race will be held on Long Island Sound, starting at 2 o'clock in the afternoon. Classes have been arranged for hydroplanes and high power motor boats.

Dr. W. W. Grier, commodore of the Capital Y. C., of Washington, and Commodore Carlton Slagle, of the Baltimore Motor Y. C., are logical successors to Commodore Isaac E. Emerson, who resigned as president of the Chesapeake Yacht Racing Association.

Rhode Island Y. C.

TWENTY-SIX boats, twenty-four of which were sailing-craft, started in the Rhode Island Y. C.'s annual ladies' day regatta last Saturday afternoon.

Wasaka won in Class N, Molly in Class Q, Gilt Edge in Class E and Hugi in Class I.

The rough water down the bay prevented several of the speed boats from competing. Neutoi got a sail-over in Class C of the motor boat division. Three cruisers, Maurice, Raymar II. and Chasara started in Class L.

W. E. Butler went over the course alone again in Class P with Momo. There were five starters in the Q class sloops. Molly won by 20m.

Gilt Edge won in the catboat E class. Scud had a sail-over in Class X. Rube and Puzzle ran into trouble on the second round and drifted across the bay. Neutoi went over the course alone in Class C in the motor boat division.

After a little misunderstanding over the starting guns, the power cruisers, Raymar II., Chasara and Maurice started at 4:05:20. Maurice would have been declared the winner if she had been measured and had officially entered. As it was, Raymar II. took the honors. The summary follows:

Sailing Division—Class N—Start, 2:30.

Wasaka, H. B. Scattergood	Elapsed.	Corrected.
Evelyn, H. E. Kimball	2 19 16	2 19 16
	3 32 34	3 32 34

Wasaka's corrected time was not calculated; she is to be remeasured.

Momo, W. E. Butler	2 29 33
--------------------	---------

Class Q—Start, 2:36.

Idler, A. M. Chace	Elapsed.	Corrected.
Molly, O. E. Howes	2 54 45	2 52 40
Rambler, C. G. Buffington	3 28 37	3 26 18
Paloma, W. E. Darling	3 45 50	3 36 41
Nimbus III., F. Weaver	3 52 10	3 52 10
	4 01 29	3 54 18

Idler disqualified for not covering proper course.

Class P Cruisers—Start, 2:39.		
Cara, R. P. Jencks	3 19 48	3 19 48
Calista, F. A. Barnes	3 31 28	3 27 19

Class E—Start, 2:42.		
Gilt Edge, Simmons	3 23 51	3 23 41
Bother, F. H. Sweet	3 27 45	3 26 03
Netor, A. C. Arnold	4 04 53	4 03 01
Omeme, F. J. Holt	4 00 42	4 09 42
Trouble, A. G. Benson	4 13 48	4 12 38

Class I—Start, 2:45.		
Hugi, A. P. Brayton	3 22 56	3 22 56
Wanderer VI., H. J. Flint	3 24 18	3 24 18
Dorothy, W. D. Wood	3 32 40	3 32 40
Bat, J. H. Caton, Jr.	3 44 12	3 44 12

Class X—Start, 2:54.		
Scud, R. W. Otis	1 45 18	1 45 18

Class Z—Start, 2:57.		
Dube, Benjamin Peckham	2 09 25	2 09 25
Puzzle, F. J. Killian	d. n. f.	d. n. f.

Class F—Start, 3:00.		
Mist, Leeman and Moran	1 49 05	1 49 05

Motor Boat Division—Class C—Start, 3:25.		
Neutoi, H. F. Hammond	0 27 03	0 27 03

Class E—Start, 4:05:20.		
Raymar II., Withington	0 24 13	0 22 22
Chasara, C. E. Payne	0 25 24	0 25 24
Maurence, W. W. Massie	0 22 56	0 22 56

Maurence not officially entered and not counted.

Crescent A. C.

THE Crescent Athletic Club sailed its annual regatta last Saturday on the lower bay. It was the third race on the yacht racing championship of Gravesend Bay. Interest centered principally in the Q class, a division that was made up of six well-known lower bay racing craft.

On both actual and corrected time Clare took the first division of the handicap class. The same operation was repeated by Gunda in the second division. M. & F. won in the S class and Mouse took the X division. The summary:

Sloops, Class Q—Start, 3:00—Course, 12.3 Miles.		
Alice, G. Davis	5 34 44	2 34 44
Soya, W. A. Barstow	5 40 00	2 40 00
Grayjacket, F. C. Noble	5 43 39	2 43 00
Florence, W. A. Brown	5 44 17	2 44 17
Sullew, E. F. Luckenbach	5 44 41	2 44 41
Spider, H. Chubb	5 48 01	2 48 01

Handicap Class, 1st Div.—Start, 3:05—Course, 12.3 Miles.		
Clare, W. C. Vanclief	5 58 47	2 53 47
Joy, Le Sauvage and Geer	6 00 11	2 55 11
La Cubana, J. H. Ives	6 25 10	3 25 10

Corrected time: Clare, 2.40.45; Joy, 2.44.47; La Cubana, 3.00.11.

Handicap Class, 2d Div.—Start, 3:05—Course, 12 Miles.		
Gunda, W. A. Howard	5 67 08	2 52 08
Careless, R. Rummell	5 49 35	2 44 35
Blue Bell, Z. Meyhew	6 11 39	3 06 39

Corrected time: Gunda, 2.42.15; Careless, 2.44.35; Blue Bell, 3.00.04.

Sloops—Class S—Start, 3:10—Course, 12 Miles.		
M. and F. II., C. M. Camp	6 04 28	2 54 28
Cyric, Dr. C. L. Atkinson	6 06 31	2 56 31

Sloops, Class X—Start, 3:15—Course, 8 Miles.		
Mouse, R. E. Dingman	5 06 58	1 41 58
Pike, R. Rummell, Jr.	5 17 31	2 02 31
Slow Poke, F. L. Durland	5 19 48	2 04 48
Suffragette, Platt and Tremann	5 39 45	2 24 45
Skylark, M. A. Howard	5 42 27	2 27 27
Merry Widow, Baily and Baily	5 10 34	2 27 27

Merry Widow started too soon.

Manhasset Bay Challenge Cup.

THERE is not much chance of Canada taking home the cup on the Great Lakes this year if the little wonder Michigan repeats her performance of June 24. In the first race for the Manhasset Bay cup she handily trimmed the holder, Joyant, and scored five points on the trophy.

The starting signal was made at 12:40 and the five competitors were jockeying close to the line.

Windward was first across close to Joyant, Cara Mia, Michigan, and Corinthian followed in the order named. The course was twice over a course to and around a stake boat anchored four miles to the south-southwestward of the starting line, sixteen miles, making a windward and leeward course. They rounded thus:

Michigan	2 25 57	Cara Mia	2 28 19
Windward	2 26 17	Joyant	2 28 36
Corinthian	2 26 38		

The crews got out spinnaker and balloon for the run to the mark off Great Captain's Island, completing the first round in the following order:

Michigan	3 02 05	Joyant	3 03 53
Corinthian	3 02 10	Cara Mia	3 04 32
Windward	3 03 01		

They rounded the offshore mark and started for the finish line in this order:

Michigan	3 42 15	Corinthian	3 46 47
Windward	3 44 18	Cara Mia	3 46 52
Joyant	3 44 48		

Quick sail shifting was in order right here as Michigan and Joyant neared the finish close together, and the Western boat's crew did quicker work. Results:

Sloops, Class P—Start, 1:40—Course, 16 Miles.			
	Finish.	Elapsed.	
Michigan, Chicago syndicate	4 17 11	2 37 11	
Joyant, W. H. Childs	4 19 26	2 39 26	
Windward, R. Monks	4 19 35	2 39 35	
Cara Mia, S. Wainwright	4 21 11	2 41 11	
Corinthian, H. C. Smith	4 22 23	2 42 23	

Summary by points: Michigan 5, Joyant 4, Windward 3, Cara Mia 2, Corinthian 1.

The crew of the Chicago yacht included four Corinthians, Henry Johnson, James Sparkman, Butler Whiting and Ogden McClurg, the first three being Long Island Sound yachtsmen.

E. Burton Hart sailed Joyant, with the owner and Abbott Brush, while the Corinthian's amateurs were H. C. Smith, George Nichols and Everitt Dominick; Windward's were Richard and Jerome Monks, William Robertson and L. deB. Hanley, and Cara Mias, Stuyvesant Wainwright, S. C. Hopkins and George Robinson.

Savin Hill Y. C.

MORE than fifty boats sailed in the open regatta of the Savin Hill Y. C., at Dorchester, June 22. The summary follows:

Class A.		
Virginia, Joy and Patterson	1 26 32	1 15 00
Novice, C. K. Small	1 37 31	1 16 04
Chewink, Frazell and Swinson	1 38 11	1 16 44
Mignon, A. E. Coupal	1 40 22	1 17 31
Flirt, J. A. Dykman	1 44 33	1 22 39
Clorinda, Gillis and Irwin	1 48 27	1 24 43

Class B.		
Quakeress, J. W. Dammerell, Jr.	1 41 02	1 16 01
Chevy Chase, Walter Kelley	1 44 15	1 19 14
Sintram, O. L. Brambach	1 41 28	1 19 10
Lethe, H. Burgess	1 45 43	1 20 47
Pirate, R. S. Landers	1 52 05	1 26 17
Winona, R. J. Smith	1 54 30	1 28 06
Caprice, William Bevans	1 51 16	1 29 06
Nasus, C. S. Woodman	1 53 04	1 32 46

Class C.		
Lindsey, Powers and McCarthy	1 36 08	1 19 31
Violet, H. J. McKee	1 44 46	1 25 10

Class S.		
Maritza, C. H. Porter	1 45 04	1 21 39
Winniahdin, James Spratt	1 50 28	1 26 40
Wawenock, W. G. Sargent	1 48 30	1 28 02
I X L, T. E. Smith	1 56 28	1 28 56

Class H.		
Marion III., R. C. Goudry	1 45 18	1 42 18
Zidana, Reed, Homer and Hamilton	1 43 37	1 43 37
Newsboy, A. C. McLean	1 52 13	1 44 13
Sinbad, R. Packard	1 52 55	1 46 05
Carmen, J. F. Rich	1 53 20	1 47 20
Egeria, F. Van Cownenberge	2 17 55	1 47 55
Sond and Dance, F. W. Frazer	2 22 46	2 02 46
Thordes, F. R. Bursler	Withdrew.	

Cabin Boats.		
Isabel, E. L. Hodgkins	1 18 48	0 36 48

Bay Side Y. C.

AN inter-club regatta was held last Saturday, the visiting yachtsmen being from the Manhasset Bay Yacht Club.

The visitors appeared in a special one-design race for which a trophy was offered by the home club, over the six-mile triangular course on Little Neck Bay. W. A. Lindermann's Mlle. Boss won by 26s.

In the Bay Side bird class, Clover, owned by Charles G. Meyer, crossed the line 1m. 8s. ahead of A. Nesbitt's Tease. Charles L. Willard's Curlew finished first, but was disqualified for not turning the first stake according to rule. The summary:

Manhasset Bay Y. C. One-Design—Start, 3:25.		
	Finish.	Elapsed.
Scylla, E. A. Sierck	4 57 11	1 32 11
Mll. Boss, W. A. Lindermann	4 56 45	1 31 45
Bayside Bird Class—Start, 3:30.		
Curlew, C. O. Willard	Disqualified.	
Skylark, John Dayton	5 01 36	1 31 36
Teaser, A. Nesbitt	5 00 39	1 30 39
Loon, A. W. Knapp	5 04 55	1 34 55
Clover, C. G. Meyer	4 59 31	1 29 31
Do Do, A. Andrews	5 01 31	1 31 31
Bayside Y. C. One-Design—Start, 3:35.		
Rowdy, Charles Medicus	5 30 57	1 55 57
Betty, William H. Johns	5 19 10	1 44 10
Edna J., A. Nesbitt	5 24 09	1 49 09
Peggy, William H. Johns	5 19 10	1 44 10
Mary Jane, William E. Banks	5 24 19	1 49 19
Kido, A. Haskell	Did not finish.	
Bayside Handicap Class—Start, 3:40.		
Sport, George Hopwell	5 36 00	1 56 00

Beverly Y. C.

IN the third club race of the Beverly Y. C. on June 22, seventeen boats in three classes started. There was only a gentle zephyr and so no speed could be made.

The 21-foot class went over the course to Bow Bells and return. Foraminifer went over the line first, followed by Saracen. Skate and Selwonk were close together, Terrapin a quarter of a minute behind.

In the sonder class Joyette, owned by J. C. Edwards, sailed by W. W. Hobbs, was the first to finish.

Seven one-designers sailed in the Crane 15-foot class, and the boat owned by George U. Crocker, an unnamed boat, was first. Pioneer, owned by F. B. Austin, was second. The summary:

	Elapsed.
Foraminifer, D. L. Whittemore	3 01 45
Saracen, R. Winsor, Jr.	3 01 47
Skate, W. E. C. Eustis	3 02 15
Selwonk, W. S. Knowles	3 02 16
Terrapin, F. L. and G. B. Dabney	3 02 33
Pollywog, F. C. Hood	3 03 10
Sonder Class.	
Joyette, J. C. Edwards	3 03 33
Fin, Howard Stockton, Jr.	3 03 44
Seacoon, J. Lewis Stackpole	3 05 20
Sally VIII., C. E. Hellier	3 06 20

Bear Y. C.

SPHINX won Class A event, Butterfly Class B and each event was close and well contested. The summary follows:

Class A—Start at 3:45.

	Elapsed.
Sphinx, Harold Spink	1 11 10
Toreador, Jack Ordway	1 11 59
Merlin, Tom Daniels	1 15 11
Swastika, Will Keough	1 19 41
Beta, George Ring	1 16 40

Class B—Start at 3:50.

	Elapsed.
Niomi, Louis P. Ordway, Jr.	1 16 15
Butterfly, Stuart Markoe	1 21 12
Oriole, Stuart Lemon	1 21 56
Blue Hen, Worrell Clarkson	1 22 10

Course No. 5. Start, to center, to Wildwood, to center, to home, to center, to Clark avenue, to center, to finish; eight nautical miles.

New York Y. C. New London Race.

ISTALENA, George M. Pynchon's 65-footer, came back at Aurora and Winsome in the New York Y. C.'s special return race from New London to Matinicock, L. I., last Sunday, finishing ahead by eight minutes, and twenty-five minutes ahead of E. Trowbridge Hall's Winsome.

The sloops raced from Greenwich to New London on June 19, and Winsome beat Istalena by 8m. 35s. to Bartlett's Reef Lightship, while Aurora crossed 15m. 39s. after Mr. Hall's boat.

The return race started off Bartlett's Lightship, Saturday morning at 8 o'clock, with a very light easterly breeze blowing.

Istalena took the lead and held it for half of the distance, when Aurora passed her and kept in that position to Cold Spring Harbor where Pynchon again secured the lead and held it until Matinicock Point, the end of the course, was passed.

The finish times were:

	Finish.
Istalena, G. M. Pynchon	10 08 00
Aurora, C. Vanderbilt	10 20 00
Winsome, E. T. Hall	10 37 00

Bergen Beach Y. C.

It was virtually power boat day on June 23 in the closed regatta of the Bergen Beach Y. C. Fifteen craft started and six sneak boxes sailed the first of a series of three races. The summary:

Open Catboats—Start, 2:32—Course, 10 Miles.		
	Finish.	Elapsed.
Siren, C. Merritt	4 01 01	1 29 01
Zoe, F. S. La Fond, Jr.	4 09 48	1 37 48
Corrected time on Siren, 1.29.01; Zoe, 1.31.30.		
Cabin Sloops—Start, 2:30—Course, 10 Miles.		
Nanon, W. C. C. Pens	Did not finish.	
Baby Rogers, H. C. Boehm	Disabled.	
Cabin Cruisers—Start, 2:35—Course, 10 Miles.		
Onward, Commodore Still	4 23 33	1 48 33
Siren, A. P. Kruger	4 25 51	1 50 51
Francis, H. D. Muller	4 33 55	2 03 55
Echo, W. W. Pynn	4 47 40	2 12 40
Corrected time on Onward, 1.33.18; Siren, 1.41.20; Echo, 1.50.51, and Siren, 2.00.42.		
Open Cabin Launches—Start, 2:40—Course, 10 Miles.		
Hilde, Commodore Hildebrand	4 33 36	1 58 36
Fawn, C. E. Farrington	4 40 05	2 00 05
Cupid, W. F. McDermott	4 43 21	2 08 21
Elizabeth B., J. Burn	Disqualified.	
Minton, C. Chapman	Did not finish.	
Open Launches—Start, 2:45—Course, 10 Miles.		
Carrie, E. Nessler	4 44 14	1 59 14
Katie C., J. H. Willis	Did not finish.	
Order of finish of sneak boxes: A. H. Rowe, E. H. Childs, Jr., J. I. Knight, Jr., R. S. Conover, C. Hough and E. H. Childs, disabled.		

Manchester Y. C.

THE one-designers opened the season on June 17 at the Manchester Y. C. Eight were entered. Three of them were new boats—Teal, sailed by Billie Dexter; Shad, sailed by Phillip Sears; Kiowa II., sailed by J. A. Jeffries. Gnat was there with the speed and took the cup. The summary:

	Elapsed.
Gnat, O. Ames	2 00 23
Ketchup, George and Everette Fabyan	2 01 55
Kiowa II., J. A. Jeffries	2 01 57
Minx, H. S. Grew, 2d.	2 02 17
Shad, Phillip Sears	2 04 05
Hiccough, Edith Fabyan	2 04 45
Teal, Billie Dexter	2 05 10
Vosetta, George Wigglesworth	2 08 08

Seawanhaka-Corinthian Y. C.

SCHOONER yacht Helen II., owned by Edmund Randolph, won the principal prize last Saturday at the annual regatta of the Seawanhaka Corinthian Y. C., sailed on the Sound off Oyster Bay. It was a silver cup offered by Vice-Commodore Harold S. Vanderbilt. Four of this new class of schooners started. Alicia, owned by W. M. Baldwin, was second in the race, which was over a triangular course of thirteen miles. There was even closer racing in the Jewel class, where Jade, owned by E. S. Willard, won by one second from W. J. Bucknell's Brilliant. In the New York Y. C. 30-foot class, J. W. Alker's Alera, sailed by Robert Cuthbert, won from Caprice by 31s., and in the Star class, F. S. Richard's Snake defeated Little Dipper by 33s. The Robert Center cup was won by Imp, owned by H. G. Landon, from Flicker, by 43s.

In the large class of boats, Corinthian, owned and sailed by Howard C. Smith, was the winner. She defeated Alert by 10m. 13s. corrected time.

Forty-two yachts started at 1 p. m. from Commodore August Heckscher's steam yacht Anahma, off Lloyd's Neck.

Larchmont Y. C.

SEVEN yachts of the Inter Club one-design class sailed off Larchmont Sunday afternoon. The course of ten miles was sailed. A. B. Alley worked Festina into the lead, and although closely pressed by Triton, kept in front to the finish, winning by 1m. 4s. La Cygne finished third. The summary:

Larchmont Interclub Class—Start, 2:55—Course, 10 Miles.		
	Finish.	Elapsed.
Festina, A. B. Alley	5 04 09	2 09 09
Triton, W. H. Jennings	5 05 13	2 10 13
La Cygne, David Carl	5 06 29	2 11 29
Whiff, W. B. Manny	5 08 07	2 13 07
Lewanna, Spence Bros.	5 09 56	2 14 56
Dagmar, E. J. Tierney	5 11 00	2 16 00

Toledo Y. C.

ON June 29 will be held the last of the elimination series for the President Taft cup, presented by the President to the Toledo Y. C. The club's program for the balance of the season is as follows: July 4, races open to local clubs, also free-for-all class for the Governor Harmon cup. July 11, 12 and 13, the President Taft races. Winning crew will receive the President Taft cup, also gold fobs and silk flag. The second boat's crew will receive silver fobs, and the third boat's crew will receive bronze fobs. The previous elimination races for this cup were held June 15, 16 and 22. On July 13, there will be a ladies' catboat race for the Commodore's cup. Aug. 10 and 17, third and fourth heats for the News-Bee cup. Aug. 31, sixth annual race for Mills trophy. For Labor Day, Sept. 2, there will again be open races for all classes over the club course, while during the balance of September there will be a squadron cruise of both sail and power boats to Detroit, catboat and sweepstake races, and the long distance sail and power boat cruise to Monroe. The Toledo Y. C. keeps open house all winter, as a number of members own and operate ice yachts from the club. The officers for 1912 are as follows: Commodore, Walter F. Brown; Vice-Commodore, Irving Squire; Rear-Commodore, Edward Ford; Recording Secretary, A. B. Mills; Financial Secretary, Frank R. Frey; Treasurer, C. A. Russel. The Regatta Committee consists of J. W. Taylor, Chairman; R. A. Luedtke, George King, George Snider and S. O. Richardson, 3d. There is also a separate Power Boat Committee composed of S. L. McAfee, Chairman; Geo. E. Hardy, Dr. P. E. Bethards, C. V. Skinner and G. B. Ricaby. Also a Catboat Committee made up of H. J. Ellis, Chairman; Chas. W. Quetschke and R. Bothwell.

Marblehead Corinthian Y. C.

SLOOP Nutmeg, owned by A. C. Jones, won the Marblehead Corinthian Y. C.'s race from Marblehead to Wood End Light, Cape Cod, and return to Marblehead by 23m. The race started Saturday afternoon at 4:15 o'clock and finished Sunday. Four boats in Class B, handicap, finished within an hour on corrected time.

In the Class A boats Wianno, owned by A. W. Stevens, had a close finish with V. F. West's Sayonara, another 31-rater, winning by 14m. in one hundred miles.

Ideal weather conditions prevailed, with a south to southwest breeze. At the start Eleanor parted her bobstay and had to give up the race. A bridle parted on the Porcupine's gaff off Cat Island, costing her about half an hour's time for repairs.

(Yachting continued on page 839.)

TRAP SHOOTING

The Grand American Handicap

Springfield, Ill., June 18 to 21, 1912

THE thirteenth annual Grand American Handicap has passed into history, and should be recorded as one of the most successful of the series. The tournament was held at Springfield, Ill., June 18 to 21, inclusive, on the grounds of the Illinois Gun Club. This club is an active, up-to-date organization, whose officers have given unstintingly of their time in preparing for the big shoot of the year, and they were successful in providing ample accommodations for the convenience and comfort of shooters and spectators. The grounds are easy of access, being located about one block east of the end of the car line, and fifteen minutes' ride from the city.

A large pavilion tent was pitched back of traps 4 and 5, in which were chairs for the use of spectators and shooters, and sufficient number were provided, so that all could be supplied. In this tent was placed the bulletin board, around which a crowd was always collected, following the fortunes of some favorite in the different events. The dining tent was erected at the north end of the grounds back of traps 1 and 2. The dinners and lunches served were the best which have been had at any of the Grand Americans with which the writer is familiar, and received favorable comment from all the shooters. There were three Ideal-Leggett traps, Nos. 1, 2 and 3, and two Western McCreas, No. 4 and 5. The former were in charge of C. E. North, of Cleveland, and the latter in charge of H. E. Winans, of East Alton, Ill. It is needless to say that no delays were caused by any trap trouble.

The office force consisted of Fred C. Whitney, Des Moines, who for the eleventh time acted as cashier, and performed his duties with his usual ability. Bernard Elssesser, York, Pa., for the eighth time fulfilled the duties of compiler of scores to the satisfaction of every shooter on the grounds. The moneys were figured promptly, and what is of more importance, with perfect accuracy. To imagine "Bernie" making a mistake in this position is to imagine the impossible. Clerks, W. E. Hoffman, Chicago; T. Chalfont, Wilmington, Del., and D. H. Eaton, Cincinnati. Elmer E. Shaner was, of course, in charge, and it is superfluous to speak of his abilities in this position. The shooters have seen too many examples of his efficiency to need to have it recalled to their mind. His son, E. Reed Shaner, rendered him valuable assistance as his assistant manager, and was on the spot whenever his services were required.

The field force, a necessary part of the machinery of a big tournament, and an important one, was supplied by the club. The officers were fortunate in their selection of the following men, whose intelligent performance of their duties was a real factor in the smoothness with which the tournament was run off:

Trap No. 1.—Referee, Ed. Neer; scorer, A. Armstrong; puller, Ward; trapper, W. Connor; hustler, Whipp.

Trap No. 2.—Referee, J. L. Buerkett; scorer, James Martin; puller, Lon Burse; trapper, Brown; hustler, Gibson.

Trap No. 3.—Referee, A. B. Cochran; scorer, H. Bennett; puller, Conberry; trapper, W. Emick; hustler, Thompson.

Trap No. 4.—Referee, Levy Graham; scorer, Wilson; puller, N. B. Luther; trapper, L. Emick; hustler, Smith.

Trap No. 5.—Referee, Briggs; scorer, Hickey; puller, Townsend; trapper, Scott; hustler, Devereux.

Substitutes.—Referee, Mayberry; pullers, E. Graham and Longeman; trappers, Talbot and Cheeseboro.

The trade was well represented, not only on the firing line, but by numerous representatives, who circulated among the shooters, making friends for themselves and their companies.

Du Pont Powder Co.—J. T. Skelly, Walter Huff, L. S. German, D. D. Gross, C. O. Le Compte, L. J. Squier, H. J. Borden, H. W. Vietmeyer, W. D. Stannard, Edw. Banks, J. E. Dickey, Fred Gilbert, Art Killam, J. W. Garrett, C. O. Newton.

Peters Cartridge Co.—L. R. Myers, T. H. Keller, H. D. Freeman, C. A. Young, Woolfolk Henderson, J. S. Day, L. H. Fitzsimmons, H. W. Cadwallader, W. R. Chamberlain.

Remington-U. M. C.—H. G. Taylor, G. W. Maxwell, E. S. Graham, W. H. Heer, R. O. Heikes, T. A. Marshall, F. B. Clark, J. L. Head, J. B. Warren, Louis Ebert, L. S. McCoy.

A. H. Fox Gun Co.—A. R. Roll, J. L. Peden.

Winchester Arms Co.—Ward Burton, F. G. Drew, Jules Grimmer, Ad. Topperwein, A. H. Amman, Jas. Lewis, C. F. Sylvester, C. G. Spencer, F. G. Bills, W. R. Crosby, J. R. Taylor.

Hunter Arms Co.—H. McMurchy.

Parker Bros.—S. A. Tucker.

The weather during the week was not very bad, and could hardly be called good. Two showers delayed the shooting a short while, but there were no storms necessitating the postponement of any of the events, which were all finished on the date scheduled. The temperature was rather low, but that can hardly be called a detriment, as every one felt more alive than if the mercury had stood at the top of the tube each day. The wind interfered somewhat with the flight of the targets on two or three days.

The officers of the club are: Edmund Burke, President; A. C. Connor, Vice-President; Dr. J. R. Leib, Secretary-Treasurer, and Paul G. Burns, Field Captain. They all

have put in much work in preparation for the tournament, and everything in their power was done to have things in readiness. That they succeeded admirably is evidenced by the smoothness with which the shoot was run off.

Practice Day, June 17.

The week's sport opened, as usual, on Monday, which was designated "practice day," and on this day the contestants were supposed to tune up for the great struggle before them. Then, too, it gives visiting shooters a chance to get used to the strange surroundings, see how the traps work, how the pullers respond to their call of "pull," and get the hang of things generally. There is always a good number of shooters out on this day, some

W. E. PHILLIPS,

Winner Grand American Handicap, 1912.

of them early in the morning, and others arriving on later trains, who get a chance in the afternoon only. This year was no exception, and the entry was very good, perhaps a little better than at Columbus in 1911. The weather prospects were far from favorable, those arriving on the early morning trains, walking to their hotels in a drizzling rain, which continued most of the morning. In the afternoon it partially cleared off, though the sky was still covered with heavy, low-lying clouds which threatened a downpour at any moment. A very heavy rainstorm on the Saturday previous had left the roads in not the best of condition, and the walk to the grounds, for a part of the way, introduced the strangers to the clinging qualities of Illinois soil when moistened. The light was not of the best, but there was no wind which interfered with the flight of the targets, and some good scores were made. The squads were not shot in sections, but each one took a trip down the line of five traps, three Ideal-Leggetts and two Western McCreas, all of which worked to a charm. The program consisted of five 20-target events in the morning, entries for which were closed about one o'clock, and the same dose for the afternoon. The morning events had 119 contestants, while enough new shooters reached the grounds to fill out an even thirty squads for the afternoon's program. All stood at 18yds., as a preparation for the championship events to be held on the first day of the regular program. The first squad started the battle at about 9:30, and at 4:45 the last squad sheet was handed into the office, and "Bernie" and his assistants got busy with the figures. Good

scores were the rule, the amateurs having a little the best of their professional brothers, and traveling in the same class with them to the finish.

William Ridley, who stepped into the limelight at a former Grand American, took the lead in the morning events, going out with 98, one target ahead of the professionals, W. R. Crosby and Walter Huff, each of whom scored 97. Three amateurs, F. Wright, F. Stanton and Bart Lewis, tied for third place with the professionals, H. D. Freeman and H. G. Taylor on 96. Fred Gilbert had C. D. Henline as a companion in fourth place, each scoring 95.

The afternoon brought out a larger field of shooters, and the improvement in the weather had its effects on the scores, making them climb, until nothing under 95 caused any comment. The amateurs were still going with the experts, and at a good pace, J. S. Young getting in first place with the two professionals, C. G. Spencer and J. R. Taylor, on a score of 98; second place had two amateurs, Frank Stanton and G. T. Hal, tied with four professionals, C. A. Young, H. Clark, H. G. Taylor and George Maxwell, on 97; in third place were M. Arie and A. MacLachlan, amateurs, and the professionals, W. D. Stannard, W. Henderson and H. D. Freeman, each with 96 to his credit. High professionals for the day were: C. G. Spencer and H. G. Taylor, 193; J. W. Garrett and H. D. Freeman, 192 each; H. Clark, Ed. O'Brien, J. R. Taylor and W. R. Crosby, 191 each. The amateurs matched professionals, F. Stanton being high with 193; J. S. Young, 192, and B. Lewis, 191. Squad record for the day was made by No. 5, Barber, Garrett, Stannard, Kammerman and Huff, in event No. 5, when they left the firing line with only one goose-egg decorating the score sheet. During the day there were 26,900 targets trapped. The scores:

Table of scores for the National Amateur Championship Purse, listing names and scores.

broke 94. As soon as the last squad had finished, the tie was shot off. The men shot in the following order, each one standing at the same mark as in the main event: C. E. Orr, 20yds.; W. S. Hoon, 19yds.; L. R. Stockey, 19yds., and J. G. Gray, 18yds. It was generally expected that more than one shootoff would be needed, but this proved to be wrong, as Hoon won with 18, to 17 for Stockey and Gray, and 16 for Orr. Hoon missed his 6th and 15th targets; Stockey his 3d, 12th and 14th; Gray his 1st, 4th and 5th, running the last fifteen straight, and Orr his 4th, 10th, 15th and 16th. Second place honors were divided by A. C. Connor, a local crack, C. H. Peck, A. Skinner, F. Campbell, R. H. Bruns and L. Halverson with 93 each. G. V. Dering, J. C. Davidson, M. Arie, F. Stanton and J. D. Elliott, 92 each.

There were 301 entries in the Preliminary Handicap and 300 starters. Of that number 238 were amateurs, and only thirty-one of them finished with a score of 90 or better. W. R. Crosby and W. E. Grubb tied for high professional honors on 95. H. G. Taylor and H. C. Kirkwood were second with 93 each; R. O. Heikes and O. R. Dickey, 92 each; Homer Clark, C. E. Goodrich and C. O. Le Compte, 91 each. Of the sixty-two professionals who shot in this event, only twelve broke 90 or better.

There were 29,780 targets trapped to-day in about seven hours, or about 4,264 per hour on five traps, an average of 850 per hour per trap; or 14 per minute. This is going some, and is good evidence of the perfect condition in which the traps were kept. The shoot-off was refereed by Elmer E. Shaner; E. Reed Shaner, scorer; Chas. E. North, puller. The section system was again proven to be all right. The five sections finished with only twenty minutes separating the first and last sections. There were forty-eight moneys in the purse, the 89s just getting in.

The dinner and lunch served in the dining tent was pronounced to be the best ever had at a Grand American Handicap. The food was plentiful, of good quality, well cooked, and well and promptly served. The prices were reasonable, and were not boosted, as they have been at times in the past.

NATIONAL AMATEUR CHAMPIONSHIP PURSE.

There were 137 entries at \$16 each, or \$2,192; to which \$200 was added by the Interstate Association, making a total of \$2,392.

PRELIMINARY HANDICAP.

Table of scores for the Preliminary Handicap, listing names and scores.

First Day, June 18.

The tournament was formally opened on Tuesday, the National Amateur and Professional Championships being decided on that day, instead of on Friday, as has been done in previous years. The weather was unfavorable. In the morning considerable rain fell at intervals. The rain ceased falling before noon, but the sky was still covered by heavy clouds, making the light poor. There was very little wind during the day. Before starting the shoot, Mr. Shaner made a short speech, a practice which he said he introduced last year, and which he found helped materially in making a tournament run smoothly. The championship events were each at 200 targets from the 18yds. mark. In the amateur race there were 137 entered, a slight increase over last year. The professional race was also better patronized this year, thirty-eight taking part. The squads were divided into sections, seven in a section. The contest for first honors in the amateur race was close and interesting, when it was found that W. S. Hoon, of Jewell, Ia., and E. W. Varner, of Adams, Neb., were tied on 192. In the shoot-off, the former lost his 4th target and Varner his 5th. Hoon dropped his 15th target. Varner won with 19 to 18, making a grand total of 211 out of 220 shot at in main event and tie. Varner did fine work, and certainly deserved his win. He ran the last four events straight. Hoon made a nervy finish. Knowing that he must break the last 20 straight in order to get into the tie, he turned the trick, without a falter, breaking his targets clean. A. F. McLachlan was second high man with 191, and captured third money.

The professional event was won by the veteran of many hard fought and won contests in this country and Europe, W. R. Crosby, of O'Fallon, Ill. His score was 198, and ties the record made by Lester S. German in the same event last year. Fred Gilbert and R. O. Heikes tied for second place on 195.

NATIONAL PROFESSIONAL CHAMPIONSHIP PURSE.

There were 38 entries at \$16 each, or \$608.

Table of scores for the National Professional Championship Purse, listing names and scores.

Long runs were not numerous, nor of any great length. Fred Gilbert succeeded in breaking 103 before the referee called "lost." C. O. Le Compte nearly reached the century mark, breaking 91. Ed. O'Brien ran 77. W. R. Crosby made a run of 74 in the first 100, and one of 70 in the last 100. The amateurs did nothing startling. No long run trophies were won. J. P. White scored 81. A. F. McLachlan was high amateur, making 92 straight, the second high long run of the day.

Second Day, June 19.

Wednesday was cloudy and cool. There was a strong northwest wind. The Preliminary Handicap, 16 to 23yds., at 100 targets. This is the day when the shooters try out the handicap they will use in the big event on Thursday. The Handicapping Committee handed out the stiffest handicaps which have ever been allotted. Only 39 men out of over 300 were given 16yds., and only 24 drew 17. Ten men, among them one amateur, were put at the limit of 23yds. The members of the committee seemed to be in sympathy with the sentiment of the Chairman, J. W. Bell, of St. Louis, who believes in "using the limit, or else lowering it." That the extra yards are a handicap to most shooters may be confirmed by a glance at the scores. The committee apparently did their work well, and succeeded in equalizing the shooters, for the battle between the 300 contestants was a most interesting one, and ended finally in a tie for first place between W. S. Hoon, of Jewell, Ia.; L. R. Stockey, Chicago; James G. Gray, Bloomington, Ill., and C. E. Orr, of East Alton, Ill., each of whom

PUMP GUN and STEEL LINED SHELLS

== Win the ==

Grand American Handicap

Sweeping Victory Scored for *Remington-UMC*
THE PERFECT SHOOTING COMBINATION

W. E. Phillips wins the Grand American Handicap event scoring 96 ex 100—17 ex 20, shooting a *Remington-UMC* Pump Gun and Nitro Club Steel Lined Shells.

National Amateur Championship, won by E. V. Varner, scoring 192 ex 200 and 19 ex 20 in shoot off, shooting *Remington-UMC* Nitro Club Steel Lined Shells.

3d. A. F. MacLachlin, scoring 191 ex 200, shooting a *Remington-UMC* Pump Gun and Nitro Club Steel Lined Shells.

Consolation Handicap, Dr. J. R. Lieb and C. A. Galbraith, 19 yards, tie with a score of 94 ex 100, Dr. Lieb winning in shoot off with 20 straight. Both shot *Remington-UMC* Autoloading Shotgun and Nitro Club Steel Lined Shells.

3d. P. W. Keiser, 16 yards, shooting a *Remington-UMC* Pump Gun and Nitro Club Steel Lined Shells, and F. M. Edwards, 20 yards, shooting Nitro Club Steel Lined Shells, tie with a score of 93 ex 100.

High Professional, Harry Taylor, scoring 94 ex 100, shooting a *Remington-UMC* Pump Gun and Arrow Steel Lined Shells.

2d. R. O. Heikes, scoring 93 ex 100, shooting a *Remington-UMC* Autoloading Shotgun and Arrow Steel Lined Shells.

Third Day, June 20.

Thursday, the feature day of the tournament, was the pleasantest of the week, with a clear sky and bright sunshine in the morning. A light west wind was blowing in the morning, increasing in strength and blowing hard in the afternoon, so that the conditions were more difficult, and some of the shooters suffered in consequence. About 2 o'clock a severe rain and thunderstorm passed over the grounds, delaying the shooting over half an hour. The Grand American Handicap was almost over when the storm broke, less than 200 targets remaining to be shot at, and the delay caused a late finish. There were 377 entries in the event, and 356 starters. The event is at 100 targets, entrance \$10, and \$500 added by the Interstate Association. Winner guaranteed \$1,000. For the first time, this year, the professionals were barred from competing for the trophy or purses, and shot for targets only. The shooting was started promptly at 9 o'clock, J. Ed Cain, of Dayton, Ohio, having the honor of firing the first shot in this classic event, standing on the 19yds. mark. He hopes to have the same honor next year in his home city, and there are many of the shooters who are of the same mind. The storm sent the chances of several of the shooters aglimmering. This was the case with W. S. Hoon. Up to the last string he had dropped three targets, and had a chance to win by going straight, and could miss one target and still get in the tie. But the tricky wind proved too much of a handicap, and he dropped into a tie on 94, losing as many targets in this one string as he had in the other four. When the last squad sheet had been recorded in the office, Mr. Shaner announced that W. E. Phillips, of Chicago, and H. D. Duckham, of Kenton, Ohio, were tied for first place on a score of 96, and that they would shoot off the tie immediately at 20 targets, over trap No. 3. This struggle was expected to be a close and exciting one, but the hopes of the large crowd which assembled back of the trap were not realized, as Mr. Phillips was never in any sort of danger after the fifth round. He lost his 1st, 16th and 18th targets, while his opponent dropped his 3d, 4th, 6th, 12th and 13th targets, the score being, Phillips 17, Duckham 15. This is the first year in which both the Preliminary and Grand American Handicaps have been decided in shoot-offs. There were fifty-three professionals in the event contesting for a special prize offered by the association. This prize, a handsome gold watch, was won by C. A. Young, of Springfield, Ohio, with 95 from the 22yds. mark. Fred Gilbert, 23yds.; John W. Garrett and Ed. Graham, both at 22yds., were in second place with 94 each; Homer Clark, at 22yds., and Del Gross, at 20yds., came next with 93.

Among the amateurs, Max Kneussl, of Ottawa, Ill., was second high man with 95 from the 20yds. mark, and took third money; W. S. Hoon, 19yds.; M. L. Lippott and Andy Meaders, both at 17yds., were third high men with 94 each. There were eight 93s, eight 92s, twelve 91s and twenty-four 90s, making fifty-eight amateurs who landed in the money.

At the conclusion of the shoot-off of the tie, the crowd assembled in the big tent, and the trophies were presented to their respective winners by Mr. J. T. Skelly, president of the Interstate Association and member of the Tournament Committee. Mr. Skelly was very happy in his remarks, and was warmly applauded by the shooters when he had finished. C. A. Young, the winner of the professional prize, could not be found on the grounds, and Mr. Shaner responded for him, in a speech which brought down the "house." Some of the boys said that Charlie could have done no better himself, and he agrees with them. Few men can successfully go up against Mr. Shaner as an extemporaneous speaker, though the Hon. Tom Marshall will run him a good race for place.

PRELIMINARY HANDICAP PURSE.

There were 301 entries in this event: 238 at \$5 each, or \$1,190, and 63 entries for targets only; \$100 added by the Interstate Association, making a total purse of \$1,290.

WINCHESTER

Repeating Shotguns and Shotgun Shells

Do The Most Wonderful Shooting At Grand American Handicap

Read how Mark Arie, of Thomasboro, Ill., with his Winchester Repeating Shotgun, won the admiration of everybody by his wonderful shooting throughout all the events. Notice the summary below which gives but a faint idea of his clockwork-like movements:

Won Amateur Double Championship. Score 89.

High Amateur for all single targets. Score 657 x 700.

High over all for all Handicap Targets. Score 281 x 300.

High over all for all Targets (Singles and Doubles). Score 746 x 800.

High over all for all program targets (Singles and Doubles). Score 558 x 600.

Highest score in Consolation Handicap. Score 96 x 100, from 20 yards.

PROFESSIONAL CHAMPIONSHIP AT SINGLES

Won by W. R. Crosby, with Winchester Factory Loaded Shells. Score 198 x 200. Mr. Crosby also scored 95 x 100 from 23 yards in the Preliminary Handicap, which was the high score for that event.

PROFESSIONAL CHAMPIONSHIP AT DOUBLES

Won by Fred Gilbert, with Winchester Factory Loaded Shells.

The Professional Championship events are always understood to be the most difficult to win on account of the class of entries. Both having been won with Winchester Factory Loaded Shells, is a splendid endorsement of their reliability and accurate shooting qualities.

The Red W Combination Never Fails

Peters Shells

WIN A GREAT VICTORY at the
GRAND AMERICAN HANDICAP

at Springfield, Ill., June 18-21

PRELIMINARY HANDICAP

won by Wm. S. Hoon, 94 x 100 and 18 x 20 in shoot off.

AMATEUR CHAMPIONSHIP

Wm. S. Hoon tied for 1st place, 192 x 200.

GRAND AMERICAN HANDICAP

C. A. Young made High Professional score, 95 x 100 from 22 yards.

Professional Doubles Championship

J. S. Day and Walter Huff tied for 1st, 84 x 50 pairs.

Amateur Doubles Championship

Harry W. Kahler, 2d, 88 x 50 pairs.

High Amateur Average--All Single Targets

W. S. Hoon, 380 x 400.

A fitting climax to a wonderful succession of winners. The superior quality of

"steel where steel belongs"

shells absolutely proven.

SMOKELESS POWDERS TRIUMPHANT

— AT THE —

Grand American Handicap

Springfield, Ill., June 17-21, 1912

*Notable and Remarkable Victories Achieved
by Amateur and Professional Trapshooters*

THE tests of marksmanship displayed over the traps of the Illinois Gun Club are indicative of the superiority of Du Pont Smokeless Powders. The triumphs attained by the victors are tributes to the wise discrimination they exercised in selecting powder.

High Amateur Scores on Practice Day

First: Frank Stanton, Long Lake, Ill. - 193 x 200, shooting Dupont
Second: Bart Lewis, Auburn, Ill. - 191 x 200, shooting Schultze

National Amateur Championship

Won by E. A. Varner, Adams, Neb.

E. A. Varner, Adams, Neb., and W. S. Hoon, Jewell, Iowa, tied on 192 x 200, both shooting Dupont. Result of shoot-off: Varner, 19 x 20—Hoon, 18 x 20.

National Professional Championship

W. R. Crosby, O'Fallon, Ill. - 198 x 200, shooting Dupont

Preliminary Handicap

Won by W. S. Hoon, Jewell, Iowa

W. S. Hoon, Jewell, Iowa - 19 yds., 94 x 100, shooting Dupont
L. Stockley, Chicago, Ill., - 19 yds., 94 x 100, shooting Ballistite
J. G. Gray, Bloomington, Ill. - 18 yds., 94 x 100, shooting Ballistite
C. E. Orr, East Alton, Ill. - 20 yds., 94 x 100, shooting Schultze
Result of shoot-off: W. S. Hoon, Winner, 18 ex 20

Preliminary Handicap—Professional Scores

W. R. Crosby, O'Fallon, Ill. - 23 yds., 95 x 100, shooting Schultze
W. E. Grubb, Laddonia, Mo. - 19 yds., 95 x 100, shooting Schultze

Consolation Handicap

Won by Dr. J. R. Leib, Springfield, Ill.

Dr. J. R. Leib, Springfield, Ill., Hdcp. 19 yds., 94 x 100, shooting Ballistite
C. A. Galbraith, Bay City, Mich., Hdcp. 19 yds., 94 x 100, shooting Ballistite
Result of shoot-off: Dr. Leib won with 20 straight

Professional Championship at Double Targets

Fred Gilbert, Spirit Lake, Iowa - 84 x 100, shooting Dupont

Join the WINNERS whose scores emphasize so clearly the assertion that DU PONT brands of Smokeless Powders are essential if you would "make and break records at the traps."

THE BLACK SHELLS WIN

G. A. H. High Amateur Average

At the Grand American Handicap, Springfield, Ill., Mark Arie, shooting **THE BLACK SHELLS**, won the Amateur High Average on all targets during the shoot, breaking 746 x 800.

Mr. Arie also won the Amateur Championship for Doubles, breaking 89 x 100, using **THE BLACK SHELLS**.

These splendid records were made possible by the uniformity of pattern, instantaneous ignition and absolute reliability of **THE BLACK SHELL**.

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He knows it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring**.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N. Y.

Durston Special
20 Gauge. Price \$28.00

The Small Game Rifle That's Big Enough For Deer

New Model 27
Price \$15 .25—20 or .32—20 calibres

Marlin REPEATER

RABBIT, woodchuck, hawk, fox, wolf and deer fall ready prey to its high velocity smokeless or black and low pressure smokeless loads. For target work it is unexcelled.

Built with the famous Trombone Action and Smokeless Steel Barrel, unobtainable in any other rifle of its calibre.

Its solid top and side-ejection protect shooter's face and eyes, and prevent dirt from entering action.

The desirable take-down construction and Ivory Bead sight cost extra in other .25—20 and .32—20 rifles. You pay nothing additional for these in the **Marlin**.

See this hard-hitting, accurate shooting, perfectly-balanced rifle at your dealer's today.

Send 3c in postage for new catalog showing the complete line of **Marlin** repeaters, rifles and shotguns.

The Marlin Firearms Co. 27 Willow Street, New Haven, Conn.

Your old guide would appreciate a complimentary copy of **FOREST AND STREAM**.

No Shortcomings

The Smith Gun has no shortcomings—not one. The 6 Hunter brothers, with inventions, precision, workmanship and experience, kept after shot gun shortcomings for 22 years, until they had wiped out the last and least important one.

"6 Times 22 Years Experience" gives the shooter of a Smith Gun the fullest possible pleasure in the field, and the maximum game in his bag.

Ask your dealer to show you the new L. C. Smith 20-gauge. Send for Catalog.

Fourth Day, June 21.

The final day of the tournament was cloudy and comfortably cool all day. There was very little wind at the start, but late in the afternoon it breezed up a little, though with no bad effects on the targets. As is usual on the last day of a tournament the attendance was much smaller than on any day of the week. Many of the shooters left town on Thursday night, having sated themselves with shooting, and not seeing any chance for a killing if they should stay over. The events for the day were the Consolation Handicap, and the Amateur and Professional championship events at double targets. The Consolation Handicap was first on the program, and is this year all that its name implies, for no amateur who had won any part of the purse in the National Amateur Championship, Preliminary or Grand American Handicap events could enter in this event. This event has not been on the program for several years, and the entry of 71 amateurs who needed some consolation for the troubles they had gone through in the past three days, would indicate that it might well be retained in future programs. There were 126 entries in this event, one man failing to put in an appearance, so that 125 started. Of these, there were a number of professionals and amateurs who shot for targets only, not being eligible to go in for the purse or trophy. Mr. Shaner announced the conditions of the contests, and at a few minutes past nine, the first shot was fired. At 9:15 the first squad sheet was handed into the office, and the event was finished at 12. A short time was required to fix the traps for the doubles, the first squad sheets coming in at about 12:20; at 3:05 these events were concluded. There were 60 amateurs and 40 professionals.

The Consolation Handicap was at 100 targets, \$7 entrance, handicaps of the Grand American to apply; \$100 added to the purse by the Association. The result was a tie between Dr. J. R. Leib, secretary of the Illinois G. C., and C. A. Galbraith on 94. The shoot-off at 20 targets resulted in an easy victory for Dr. Leib on a score of 20 to 17, Galbraith missing his 9th, 15th and 20th targets. Mark Arie, shooting targets only, made the high score in this event, missing but 4 targets.

The Amateur Championship at Double Targets was won by M. Arie on a score of 89; his nearest competitor was H. W. Kahler with 88.

The professional race in the doubles was a closer and more interesting contest than that of the amateurs, although the scores made were not so high. The result was a tie between Ed. O'Brien, J. S. Day, Fred Gilbert and Walter Huff. Three shoot-offs were required before the victor was decided. In the first shoot-off, Ed. O'Brien and Huff dropped out, the former scoring 11 and the latter 14. Gilbert and Day each broke 16. In the second shoot-off they tied on 18, Gilbert making a "Dutch double" in his seventh pair, and the latter missing the second target in his first and fifth pairs. In the third shoot-off, Gilbert went out ahead with 17 to Day's 15. The shooting was all over by 3 o'clock, and before 4 o'clock all moncys were paid out by cashier Whitney and the grounds practically deserted. The thirteenth Grand American Handicap had reached its close, and will be remembered by the participants as one of the most enjoyable of the entire series.

PARKER GUNS

Wear Well, Shoot Well and Handle Well

Wear well because they are made of the best material by the most skillful craftsmen. Shoot well because they hold the charge compactly together at extreme ranges. Handle well because the greatest attention has always been paid to the distribution of wood and metal, to insure perfect balance and the most symmetrical outline. Twenty-bore Parkers have set the pace for small bores in America, and are growing in popularity every year with the most progressive sportsmen.

For further information regarding guns in gauges ranging from 8 to 28, address

Short Jaunts for Little Money in Glacier National Park

Season June 15 to October 15, 1912

Comfort in modern hotels—amid towering mountains—tours on foot and on horseback, camping, fishing—everything the heart desires in a vacation awaits you in Glacier National Park.

A complete tour of this new national playground has been made possible in 1912 by the erection of hotel colonies located at Two Medicine Lake, Cut Bank Cañon, St. Mary's Lake, The Narrows, Gunsight Lake, Sperry Glacier Basin and Lake McDermott. Rate per day at each hotel, \$3.00.

Camping parties can tour the Park at a cost of \$1.00 to \$5.00 per day. The favorite tour of this Summer will be the circuit from Midvale to Belton, or vice versa, taking in the most beautiful sections of the Park—a week or ten days required for the trip.

Send for the "Glacier National Park Library"

consisting of nine splendid pieces of literature, including a remarkable "Aeroplane View" of the Park. All yours for 20 cents in stamps (to cover postage). Or, fine descriptive booklet for 4 cents.

Also ask concerning low summer tourist rates and extra low convention fares on special dates. Summer tourist tickets on sale daily June 1st to September 30th, inclusive.

Notes.

Shoot-offs were required in all three of the handicaps. This is the first that such a thing has been known in the history of the Grand American tournament.

Everybody paid off before 4 P. M. on the last day. Pretty good work for compiler of scores, Bernie Elsesser. The local daily papers were quite liberal with space, and E. I. Banks filled all they allowed him, with mighty good stuff.

A. C. Connors says the price of beef has "triz" in his shop since the G. A. H. Even the Consolation Handicap did not create a bear market.

Mr. Tucker, of Parker Bros., gave an interesting talk on "Gun Cranks I Have Known." He had an audience of two only, but they enjoyed it.

George Maxwell was up against it for fair on the 20th. After breaking his first 60 in clean fashion, he struck a snag somehow and dropped 9 in the last two events.

Luther is a success as a passenger agent. He knew what he wanted, went after it, and got it—a Pullman through to Cincinnati. It is certain that the Queen City bunch appreciated his efforts.

Patne's moving pictures of the G. A. H. Watch out for them.

At noon on Thursday, all lined up for the circuit camera man. A fine picture of 600 or 800 people was the result. You can pick out your friends.

Try Whit's new game. It's a winner—for Whit.

J. P. Sousa has shot at 3,400 targets this year in registered tournaments, a record not equalled by any other amateur in the country. He is thinking with regret of the opening of his season at Ocean Grove on Aug. 15, when he must quit the firing line for a long period.

N. C. R. stands for a record-breaking G. A. H. at Dayton, O., in 1913. That's what MacCandless says.

J. Ed. Cain, of Dayton, O., fired the first shot in the G. A. H. this year, on Thursday. He would like to do the same thing next year at Dayton.

Several cities are after the next year's G. A. H. Springfield wants it again, and has good claims in urging that she receive the preference. Columbus, O., is another city well-known to all shooters; Chicago has been the scene of this classic several times and wants it again; and last, a new claimant has appeared in the shape of the N. C. R. Gun Club, of Dayton. There is no question but that any one of these claimants could take care of the tournament in good shape, and possibly Dayton may be given a chance to show how she ranks with the other places as a tournament giver. One thing is sure, she will not get the shoot unless the authorities are convinced that it is for the good of the game to go there, and if she does get it, the club will show the attending shooters the time of their lives.

F. G. Bills was working a rabbit foot over-time on Thursday. The charm must have been out of order, or there would have been more men in the tie.

Bills and Stockley made a sensation on Wednesday evening. Where did Bills get the big star he wore on his coat lapel?

Milt Johnson couldn't forget the three extra yards in his handicap, and a few lost targets resulted. However, Milt is a game one, and will be seen next year on the firing line, just the same. We wish him better luck in 1913.

Any one who thinks a tournament is just nothing but a lark for all connected with it, should take a peep into "Bernie's" room any night about midnight and have the idea dispelled. "Slaves" is the pet name the shooters have for the force, but they know that Bernie will have things all right in the morning, so that they will have no trouble in getting all there is of fun at the shoot.

Lost, a long run, the property of Luther Squier. The run was lost on the 19th. The finder will receive a suitable reward on its return to the owner.

A record of 1 out of 20 targets was made on the 19th. This is not the maker's average, by any means. The record will probably never be excelled.

Fred Whitney was just as snappy as ever, but the boys all like his particular brand of snap.

J. P. Sousa handles his gun in the same masterly style that he does the leader's baton in his band.

Luther Squier was doing good work for the Westy Hogans' shoot next September. It will be at Atlantic City, and will be a corker.

J. W. Garrett was boosting for the big Denver handicap, with \$5,000 added money. L. R. Myers was going some on practice day, 90 per cent after a year's rest is worth mentioning.

Bernie Elsesser amused himself on Monday evening by looking after an elusive dollar on the cashier's sheets for that day. He found it at last, and also, of course, found that some one else was the cause of its loss.

Doc Shattuck and Coburn were discovered on Tuesday morning looking up trains which they could get home on. But they were induced to stay over for the rest of the shooting.

Col. Jim Head was with us again. A G. A. H. without his genial presence would hardly seem just right.

C. M. Power, after two years' absence, was again among the entrants at the G. A. H. His long lay-off

 DRUGGISTS,
 OR 93 HENRY ST. BROOKLYN, N.Y.

did not seem to have done him any harm, as he finished with the top ones.

A. F. MacLachlan shot well, getting the first 80 in the second 100 on Tuesday, straight.

One shooter was heard to say that he had five targets given to him in one of the events. Lucky man. He had no kick coming, and did not come to the office to have the squad sheet dug up for examination.

Capt. Jack Wulf, of Milwaukee, was a noticeable feature of the tournament. He is a good shot to begin with, and was envied by some for the possession of an Indian bead-worked shell bag, and a handsomely carved meerschaum.

Targets trapped during the week: Practice day, 26,900; Tuesday, 35,000; Wednesday, 29,780; Thursday, 35,020; Friday, 22,300; total 149,000. A little figuring will show that there was 11,640 pounds of lead distributed over the ground at this tournament, or over 5 3/4 tons. That is some lead for one shoot.

M. Arie was high amateur on all targets shot at during the week, breaking 746 out of 800. At 300 handicap targets he broke 281; at all single and handicap targets, 500, he broke 469; at singles, doubles and handicap targets, 600, he scored 558; at all singles, including practice day, 700, he scored 657. He led all the shooters except at 700 targets, when H. G. Taylor, a professional, scored 660.

Western Connecticut Trapshooters' League.

LONG HILL, Conn., June 22.—Amateur high gun was won by W. A. Gregory, Danbury, Conn., which gives him a win of a leg for the Dupont Connecticut amateur trophy and one leg for the Western Cartridge Co. gold fob, thus being tied with Charles Sherwood and L. C. Wilson, who have each won a leg and have only three more tournaments to shoot. H. E. Dickerman, of Chicago, had longest straight run of 59 targets. High gun in Class B was H. Sherman, Long Hill; Class C, W. B. Judd, Bethel.

The New Haven Club sent over a large delegation of their crack shots, of which A. L. Chamberlain and

Wisconsin.

"KOILA"

12 miles east of Chetek on Potato Lake. The finest view in this part of the state. 120 feet above the lake. The fishing is great for Bass and Muskies and Pike. Chain Lake only 3/4 mile by trail, has Muskies and Bass; and Pine Lake, 1/4 mile, has Bass and Lake Trout and Pickerel. Lots of shade, spring water, and the best of food. Large rooms. Boats on all lakes. Minimum rates by the week, 2 persons to a room, \$12 each; 1 person to the room, \$15. Roads fine. No charge for ice or boats to guests. Limited to 20 guests. 6 trout streams within 10 miles. W. E. BARDEN, Chetek, Wis.

W. W. Rice were the leading men, with a score of 139 each. The Bridgeport Club sent the largest delegation, and, it is needless to say, some of the best shots in the country. E. R. Lewis of this club went straight in the special event of 25 targets, winning \$20 in gold. C. Fox, of the same club, was second with 24 breaks, winning \$10 in gold. There were also shooters from Waterbury, Bethel and Danbury clubs, the latter club being represented by high gun of the day, W. A. Gregory, who broke 141 out of 150.

A large number of spectators were present and a goodly number of the fair sex, among them many who seemed to enjoy the sport equally as well as the men. The scores:

Jersey City Gun Club.

THERE was a small attendance at the all-day shoot of the Jersey City Gun Club on July 19, only eighteen coming out; but those who were there enjoyed a good day's sport. Of those who shot through the entire program, D. T. Leahy, of New York, was high gun with an average of 91 per cent.; Joe North and G. H. Piercy tied for second with one target less, and W. Hassinger was third with an average of 89 per cent.

Of the professionals, T. A. Davis finished high with plenty to spare. The scores, in strings of 20 targets, follow:

B M Shanley.....	18 16 17 18 17 17 19 17 16 20
Joe North	19 17 19 19 19 18 18 18 16 18

E A McLenore..... 15 15 13
A Huggins 13 14 15

*Professionals. Geo. Piercy, after having a good safe lead up to the last event, had the misfortune to catch a real live Jersey skeeter in his winning eye and lost 6 out of his last 20.

Dr. F. W. Matthews made his first appearance at the trap for over one year, and shot in good form, considering.

Shannon was busy trying to find a gun something like the one he had sent to the repair shop, and found one just a little too late to help him get the money.

Security and Substantial Profits

A GROWING UNDERSTANDING that a reasonable high rate of return is not necessarily a sign of weakness has of late contributed materially to the enlarged investment popularity of the unlisted stocks of high grade industrial corporations.

STOCKS PREFERRED AS TO ASSETS AND DIVIDENDS give strong security, plus the profit-sharing possibilities of a successful partnership.

AMPLE SECURITY, SUBSTANTIAL RETURN, ready marketability and high collateral value are some of the strong features of the shares we offer.

OUR CIRCULAR contains an instructive discussion of this subject. Sent on request.

Du Pont Gun Club.

WILMINGTON, Del., June 22.—Forty contestants took part in the shoot here to-day. The main attraction was the Connable trophy, distance handicap event. Mr. Carlson again won the trophy, beating the field with 24 out of 25 from 21yds. J. B. McHugh and J. H. Minnick tied for Class A on 25 straight; Wm. Edmanson and H. P. Carlson tied for Class B on 24; Dr. Arthur Patterson, won Class C on 22, while H. C. Pollock took Class D with 19 out of 25. Ties will be decided on June 29, when contestants' score in the "all New England" and all Delaware match will be taken.

Special matches during the afternoon were: R. P. Choate and L. L. Jarrell tied for the Eugene du Pont Class C cup, Jarrell winning by 20 to his opponent's 18 in the shoot-off. Jarrell also successfully defended the same cup on a challenge from W. B. Smith, Jr., his score in the race, which was at 50 targets, being 41 to Smith's 37.

The "first" Class D cup, held by S. J. Newman, was also shot for and successfully defended, Mr. Newman's score being 41; his opponent, J. A. MacMullen, making 38 out of the 50 targets.

The following challenges were handed in during the afternoon, and matches will be arranged for at an early date:

D. Lindsay challenges holder of Class B cup; R. S. Wood challenges holder of Class C cup.

The Du Pont Club is proud of the distinction it has due to a world's record being made on its grounds Thursday, the 20th, when Mr. Minnick defeated G. H. Mitchell in a race consisting of 500 targets per man. Mr. Minnick's score of 477 out of 500, eclipses the former record, held by John W. Garrett, of Colorado Springs. Scores:

Table with columns for Class A, B, C, D, Yds., T'l., and names of contestants like I T Roberson, J H Minnick, W G Wood, etc.

Rocky Mountain State Association.

SALIDA, Colo., June 19.—R. S. King took high gun trophy in our three-day tournament, with 430 out of 450, his shooting being exceptionally good, though inconsistent.

Table with columns for 1st Day, 2d Day, 3d Day, and names of contestants like Hanley, W Shemwell, I Rohrer, etc.

Marion Gun Club.

MARION, Ia., June 22.—Below are the scores of our last shoot, held June 20. A fierce rainstorm just at noon, kept down the attendance. Each man shot at 50 targets: S. O'Brien 50, J. Ives 48, L. D. Dennis 48, F. Schwartz 47, C. Booth 46, I. B. Cutter 42, U. G. Byerly 42, G. Mathews 35, G. Johnson 32, A. C. Maxwell 32, H. Johnson 31. A. C. MAXWELL, Sec'y.

Vermont State Trapshooters' League.

BARRE, Vt., June 19.—W. P. Springer, from Northfield, became the new State champion to-day with the excellent score of 92 out of 100. D. M. Barclay, C. H. Burr and W. P. Twigg broke together for place, each cracking 91. Dr. C. H. Burr took high average for the two days, shooting consistently for a score of 280 out of 300. J. M. Gates was rather a distant second with 274. Frank Adams and D. M. Barclay tied for third with 269. H. H. Stevens broke rocks to the extent of 286 for first professional joy. The tournament was eminently successful, and we congratulate Secretary Frank E. Adams on the clear and comprehensive score sheets sent us.

Three extra events were shot, which are not counted in the totals, No. 13 being for merchandise prizes:

Table with columns for First Day, Second Day, Shot at, Broke, and names of contestants like J M Gates, G B Walton, H B Moulton, etc.

Anolotan Gun Club.

WASHINGTON, D. C., June 23.—The following scores were made at the regular shoot of the Anolotan Gun Club yesterday:

Table with columns for Shot at, Broke, Dhls., and names of contestants like Green, Huseman, H B Wilson, etc.

*Visitor. †Used 20-gauge gun. The program for the registered shoot on July 27 will be issued about July 1.

MILES TAYLOR, Sec'y.

Newton Gun Club.

NEWTON, N. J., June 22.—The Frank Hall 100-bird championship race was shot to-day at our traps, and a classy field participated. Twelve men shot through and only two under 90 per cent. F. R. Wickes, Orange Gun Club, was high with 97; L. Colquitt and A. B. Brickner tied with 95 each. The scores follow:

Table with columns for Shot at, Broke, and names of contestants like F Lawrence, L S Page, W Hassinger, etc.

J. H. French and F. Lindle shot a series of matches for the dinner and a nice cold bottle, which ended in a tie. Mr. W. Dutcher, of Paterson, assisted the managers in every way possible, and it was appreciated. A. B. BRICKNER, Sec'y.

Sikeston Gun Club.

SIKESTON, Mo., June 21.—Out of 50 clay pigeons the following scores were made to-day: Dan McCoy 43, Clem Marshall 38, W. E. Derris 37, W. H. Tanner 36, L. R. Bowman 34, Harry Smith 32. Wm. H. TANNER, Sec'y.

Fort Wayne Gun Club.

FT. WAYNE, Ind., June 10.—H. H. Hontz, from Cromwell, took away high amateur average with 142 out of 150. J. R. Taylor added another high honor to his incalculable number of wins getting 146. Scores:

Table with columns for names and scores of contestants like K C Shepherdson, W J Blunt, H H Hontz, etc.

Professionals: R O Heikes..... 143 J R Taylor 146 C A Young..... 139 W D Stannard..... 139 L S German 146

Glen Willow Gun Club.

THE open target tourney of the Glen Willow Gun Club drew out 17 shooters to the Manayunk traps on June 22. Charles S. Newcomb, of Independent Gun Club won with 91 out of 100.

R. Hall and E. Kinchiner led Class A, each smashing 89, and on the shoot-off for the trophy, Kinchiner won out. Dr. Pepper won the Class B donation with 80, and William Free the Class C prize with 72. Oscar Wilde won trophy for the best member's score, with 91. Scores: King 75, Stern 77, Weinman 70, Rhinifer 69, Reicheldifer 78, Bickings 75, Schwartz (40) 32, Dr. Pepper 80, Hall 89, McClennen 76, A. George 59, Morris 92, Platt 95, Fisher 95, Clegg 78, Bender 35, Levering 31, Armstrong 58, Kinchiner 89, Cook 93, Smith 87, Plum 94, Oliver 94, Newcomb 97, Ford 84, Stevens 72, Pratt 83, Wilde 91, Letford 88, J. Mattis 70, R. Mattis 75, W. Carter 64, Riggs 92, Lehman 82, Eyre 92, McGrath 56, Free 72, Haerberline 55, Schultz 84, D. Peters No. 8, 83, Fredrick 88, Redmond 75, Hinkle (40) 20, J. Shuster (40) 34, Lawrence (20) 6, Fogarty (20) 7, G. Shuster (40) 34, Gerhart (40) 37, Lehman (20) 17, J. Mattis (20) 11.

DRIVERS AND TWISTERS.

The Mississippi Valley Gun Club, composed of sportsmen of Fulton county, Ill., has been incorporated. The directors are: George Denton, William Hinrichsen and George Harms. It is proposed to give shooting tournaments at intervals during the season.

In reporting the Ohio State shoot, held at Dayton, June 4, we gave the address of the winner, F. W. King, as Columbus. Mr. King is from Cleveland, and is none other than the gentleman who manufactures the celebrated shooting glasses, the aid of which undoubtedly had much to do with Mr. King's remarkable run of 50 straight in the championship event.

The Du Pont Gun Club will hold a shoot on July 4. No. 1 event is a merchandise shoot at 25 single targets, entrance 25 cents, including cost of targets; eight prizes; Lewis class system of division. Event No. 2 is at 10 pair of doubles, re-entries unlimited; entrance 15 cents, two prizes, high gun. Practice shooting during the day. No one barred. Practice targets, 15 cents for 25. Grounds open at 10 A. M. Entries close at 3 P. M. First scores made to count for prize in event No. 1. Lunch served on the grounds.

W. G. BEECROFT.

Rifle and Revolver

Du Pont Gun Club, Rifle Dept.

WILMINGTON, Del., June 22.—The following scores were made on the rifle range of the Du Pont Gun Club: Rifle, German ring target, possible 250: J. T. Birch, 227, 224, 221; A. P. Shivery 223, 214, 209; H. C. Mode 195; W. R. Huey 185; V. du Pont 160. Pistol, possible 100: W. E. Steen 62, 56, 65, 56, 61, 60, 56; E. S. England 71, L. C. S. Dorsey 87, 87, 85.

CARTAN & JEFFREY CO., Wholesale Brokerage and Commission OMAHA, NEB. June 3d, 1912.

Forest and Stream Advertising Department, New York, N. Y.: Gentlemen—Answering your letter of May 31, we would say that certainly it is to our interest to sell all the Carnation Milk possible, and that without any regard whatever to our friends in the advertising business. We are glad that the Pacific Coast Condensed Milk Co. has an appropriation for advertising in publications such as yours, as we believe this will open up practically a new field for the milk. Yours truly, CARTAN & JEFFREY Co.

Block Island Race.

JUST why so excellent an opportunity as that offered in the New York A. C.-Block Island race was overlooked by so many motor boats is beyond explanation. Only seven entries were received, one of these, Anna, being a post entry. The course is one that requires navigation skill which proved itself in the fact that out of seven entrants only three finished.

Joseph H. Wallace, one of the best amateur navigators, and an ardent racing sailor, won with Thistle five minutes ahead of the record for the course. He reached West Harbor, Block Island, at 3:35 A. M., seven hours ahead of Debut, which took second place. Debut did remarkably well considering a breakdown at Faulkner's Island. Repairs took three hours and fifty minutes. Debut's owner, Al. Nachmann, saved many miles by his knowledge of short cuts. His crew was Dion Underwood, whose duty it was to operate the fireless cooker, and W. G. Beecroft, navigating officer.

Annie, owned by E. J. Winterroth, took third place. In the sailing class Debut used a kerosene gas producer, which worked remarkably well every minute.

The sloop Interim, owned by R. N. Bovier, New Rochelle, won both the time and handicap prizes. Her time was 13h. 6m. Amada (B. R. Stoddart) was second; Crescent (H. C. Southwick) third; Duchess (M. Miller) fourth; Robilla (H. J. Diem) fifth; Okee (Commodore E. C. Myrick) sixth.

New York C. C.

THE forty-second annual canoe regatta of the New York C. C. was held off the club grounds on Gravesend Bay last Saturday, June 22, 1912. Judging from the number of members and their guests present it was the most successful regatta held in recent years. Over eighty persons remained for dinner. The summary of events were: First race, open canoe, sailing three miles, won by W. Carmalt; second, A. M. Barnes; third, E. Patrick. Second race, half-mile, single blade, won by Thos. Zulk; second, E. C. Kelly; third, Geo. Esselborn. Third race, half-mile tandem, single blade, won by Kelly and Molan; second, Finn and Marshall; third, Zulk and Erlingden. Fourth race, tail end, quarter-mile, won by J. Marshall; second, F. W. Roloff; third, E. C. Kelly. Fifth race, hand paddling, quarter-mile, won by B. F. Ketchum; second, C. T. Brown. Sixth event, tilting, won by Esselborn and H. Berning. Seventh event, swimming race, won by Geo. Esselborn; second, Thos. Zulk; third, A. Berning.

Atlantic Y. C. Mess Dinner.

THE flag officers of the Atlantic Y. C. were feted at the first mess dinner of the club on June 19 at Sea Gate. Charles B. Ludwig, Chairman of the Board of Trustees, was toast-master.

Capt. Gherardi Davis promoted interest in the deadly pill by presenting Commodore J. Stuart Blackton, Vice-Commodore Taylor and Rear-Commodore Teele each with a silver cigarette box. Commodore Fred B. Dalzell, Unqua-Corinthian Y. C.; Fleet Captain Daniel G. Probst, Larchmont Y. C.; Commodore George R. Le Sauvage, Bensonhurst Y. C., and Col. Cecil, U. S. A., all had words of joy to unloose.

Jamaica Bay Y. R. A.

THE delegates to the Yacht Racing Association of Jamaica Bay at a meeting on June 18 arranged the final details for the handicap races June 30. It is quite certain there will be at least 100 starters in the events for sailing and motor boats. Small craft will race over the Broad Channel course. Larger boats will sail from Sheepshead Bay to Ambrose Channel buoy near Sea Gate, and home. Half the fleet will sail outside course. Commodore G. W. Norris, of the Rockaway Point Y. C.; C. A. Merritt and the Bergen Beach Y. C. have offered cups.

JONES CAMPS

MOXIE POND

We have the finest trout and salmon fishing in Maine. Trout from 5 lbs. down. Salmon, from 6 lbs. down. Good accommodations for ladies. Good garden, good cows; in fact, everything to make our guests comfortable. Write for circulars. **GEO. C. JONES, Mosquito, Maine.**

CARABASSETT SPRING FARM

AND COTTAGES

Five trout streams from 5 to 30 minutes' walk from farm. Very best hunting in season. Open for boys from June 30 to Sept. 1. For particulars address **N. CHAMPAGNE, Carabassett Spring Farm, Me.**

BELGRADE LAKE

is the **best bass lake in Maine**, and Thwing Bros. Camps is the best fishing resort on the lake.

We cater to fishermen and their families

Individual camps with bath—excellent table, spring water, fine beds and personal attention of the management—**trout and salmon fishing unexcelled.**

THWING BROS., Belgrade Lakes, Maine

Jamaica Point Camps

Situated on Belgrade Lake. Open May 15th. **New camps**, with bath and telephone. Fine fishing section for bass and trout. Ideal spot to spend vacation days. Write for booklet to **MARSHALL & STONE, Oakland, Me.;** after May 15th, Belgrade Lakes, Me., Water Route.

TRY GRAND LAKE STREAM
"FISHERMAN'S MECCA"

For spring fishing or vacation trip. Best territory in Maine for Fishing, Pleasuring or Hunting. Fine table, good beds, beautiful outlook, restful and comforting.

GRAND LAKE STREAM COMPANY,

Owners of

Ouaniche Lodge, Sunset Camps, Grand Lake Norway Pines House and Camps, Dobsis Lake W.G. ROSE, Grand Lake Stream, Washington Co., Me.

Property for Sale.

Salmon Club Share For Sale

I have one share to dispose of in a most exclusive and carefully run salmon fishing club. Season, June 1-Aug. 15. Easily reached; 125 miles east of Quebec. Forty miles of club fishing water. Comfortable cottages on premises. This is a rare opportunity. Particulars on **Box A - - - Forest and Stream**

Great Opportunity

Trout Lake, club house and 1500-acre fishing and hunting preserve. Greatest chance in the State for club or private owner. Address: **T. W. WESTON, care of FOREST AND STREAM.**

SALMON FISHING FOR SALE.

Outright ownership. No license fee to government. Annual expense nominal. Accessible location, North East Branch of Marguerite. Short drive over good road from Tadousac on lower St. Lawrence. Fine large camp fully equipped. Fish abundant and large. Season last of June to middle of August. Price, \$18,000, including land, buildings and full equipment. Apply to **H. W., care Forest & Stream.**

WOODCRAFT

By **"NESSMUK"**

Cloth, 160 pages. Illustrated. Price, \$1.00.

A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English.

FOREST AND STREAM PUBLISHING CO.

Supplement to Game Laws in Brief

SO many and important changes have been made in fish and game laws in a number of States, during the past winter, that we have found it necessary to issue an eight page supplement of these changes. Paste these eight pages in the back of your copy of **GAME LAWS IN BRIEF** and you will have complete and correct laws to June 1st, 1912, governing fishing and shooting in every part of the United States and Canada.

Ten Cents is the price of this addenda. Mailed to any address upon receipt of price.

FOREST AND STREAM PUBLISHING COMPANY

New York City

One Reason Why

"White's Canoes" Surpass All Others

There is just one point I want to tell you about in detail. It's the way White puts on the planking. Instead of butting the boards up against each other, as all other makers do, White bevels and laps every seam, thus making practically water-tight craft, before the canvas is stretched on. This method prevents cracks caused by shrinking or swelling, and keeps out the sand which is the ruination of the canvas.

When buying a canoe, ask the salesman "Is the planking beveled and lapped?" If he knows what you are talking about, and is truthful, he will answer "No"—unless it's a "White."

May I send you a "White Canoe Facts"?
Or better still, our complete Catalog No. 530?

Jawhatau R. Robinson President
