The symptoms which mark preparation for spawning also herald their death. When the up-stream migration begins, the salmon enters on a fast that is never broken. The digestive organs contract, giving the fish a gaunt shriveled, misshapen appearance. There is a consequent loss in weight which ultimates in 30 per cent. After the spawning grounds are reached, and operations begin, the skin thickens, loses its sheen, and becomes discolored and blotched with ulcerations; the fins fray, parasites attack gills and intestines, the males develop the hooked jaw which gives the species its name, armed with enormously enlarged front teeth, fungus blinds the eyes, and the post-nuptial history of this great food fish is the most pathetic in all the happenings of nature. Exhausted by procreation and the long residence in fresh water, scarred by bruises, shorn of their fair proportions, sightless, deformed, without instinct to return to the sea, the spent and leprous fish-forms give themselves to the current heart broken and helpless, to drift to an ignominious death, and pile the river banks with

festering bodies that contaminate the water and taint the air—an end ill-fitting the prince of anadromous fishes, whose Atlantic congener returns none the worse to the sea. My friend, Lieutenant Stoney, who explored Alaska north of the Yukon and discovered the Kubuk River, which he called the Putnam, and ascended for hundreds of miles, described to me the ghastly cemeteries of fish bodies that sickened his men, and the troops of bears and other four-footed ghouls and birds of prey that feasted on the putrid carcasses. This great waste is now forestalled in the Southern rivers by canning establishments at their mouths, where the fish are caught and preserved for use while at their best before the richness of the flesh is impaired by sexual development. And Government fish hatcheries now do nature's work far better than nature herself.

In vivid contrast to this tragic scene is the honeymoon of our own charrs, our Eastern trout, the square tail and the aureolus of Sunapee that look their best on their connubial days. The brook trout is a passionate lover and wooer. Clad in lustered wedding garment, he seeks the upper waters of the streamlets with his more plainly attired bride, flashing his painted sides before her eyes to inflame her love—acting and reacting the part, to quote Myron Reed, of "the gold-sprinkled living arrow of the white water, able to zigzag up the cataract, able to loiter in the rapids, whose dainty meat is the glancing butterfly." Both fish are at their prime and after spawning they retire with dignity to rest and recuperate.

But beautiful as is this marriage of the brook, it is cast into shadow by the nuptial festival that takes place every autumn on the mid-lake reefs at Sunapee—a festival in which a thousand alpine or golden trout celebrate their matrimonial rites. As the October pairing time approaches, the Sunapee fish becomes resplendent with the flushes of maturing passion. The steel green mantle of the back and shoulders now seems to dissolve into a dreamy "bloom" of amethyst, through which the daffodil spots of midsummer blaze out in points of flame, while below the lateral line all is dazzling orange. The fins catch the hue of the adjacent parts, and pectoral, ventral, anal and lower lobe of caudal are marked with a lustrous white band. It is a unique experience to watch this American saibling spawning on the Sunapee shallows. Here in all the magnificence of their nuptial decoration flash schools of gauded beauties, circling in proud sweeps about the submerged bowlders they would select as the scene of their espousals—the poetry of an epithalamion in every motion—in one direction uncovering to the sunbeams in amorous leaps, their golden-tinctured sides gemmed with the fire of rubies; in another, darting in little companies, the penciled margins of their fins seeming to trail behind them like white ribbons under the ripples.

There are conspicuous differences in intensity of general coloration, and the showy dyes of the milt are tempered in the spawner to a dead luster cadmium cream or olive chrome, with opal spots. The wedding dress nature has given to this charr is unparagoned. Those who have seen the bridal pageant of these glistening hordes, fresh-run from icy depths in love and pomp of action, pronounce it a spectacle never to be forgotten. And not a spent fish dies.

*Read at the tenth anniversary dinner of the Canadian Camp, New York, Feb. 26.

Since 1873 when experiments with the chinook salmon began, twenty-two million fry, fingerlings and yearlings have been distributed by the Government. Of this vast number, not twenty-two have been recorded as caught in Atlantic waters until after Lake Sunapee, N. H., was selected in 1904 for further trial. Here the chinook salmon has found conditions favorable to its growth. The fish were planted as fry. In 1908, six-pound specimens were taken; in 1909,

habits and the laws of their nature? The lake is their ocean, but in the case of Sunapee there are no rivers for them to ascend, only shallow brooks that will not cover their dorsal fins.

In the headwaters of these brooks some of the fry have been distributed. But their natural carelessness as to personal safety makes them an easy capture for the spotted trout. Last August I took seven salmon each two inches in length from a brook trout seven inches long,

chinook as a desirable acquisition to Eastern fish life. Others, including my friend the Massachusetts commissioner of fisheries, present here to-night, do not regard their introduction into Sunapee as a mistake. Influenced by the success attending the planting of chinook salmon in this lake, the United States Bureau of Fisheries in 1910 stocked Lake Champlain with fingerlings, and Superintendent Walters, of the Cold Spring Hatchery, distributed several thousand fingerlings in the lakes of Southern New York, where it is believed they will become naturalized. They have also been landlocked in Newfoundland Lake, N. H. But the preferable fish is the steelhead trout of the Pacific slope, which has been successfully introduced into Lake Superior, where the United States Bureau of Fisheries has been taking eggs for several years.

As a table fish, the chinook salmon is unexcelled. As a game fish, it is inferior to the landlocked salmon, seldom leaping from the water and lacking fighting energy; although in the bays and inlets of the west coast it displays game qualities that are unrivaled. John C. Klein, of the New York Times, recounted to me a few days ago his struggle off the mouth of the Columbia River with a sixty-pound fish that repeatedly leaped from the sea, fought wickedly, and tried his nerve to the utmost, while a ninety-pound salmon was reeled in by sheer force against dead weight. That the chinooks will attain any such size in Sunapee is not expected.

All fish, however, grow to extreme size in this lake. Brook trout have reached the ten-pound limit; the aureolus or saibling, 8; the landlocked salmon, 19 to 22; and the brown trout, planted by the speaker in an entering stream in 1897, 14

THE QUINNAT OR CHINOOK SALMON OF THE COLUMBIA RIVER.

200 of much larger size were captured with hook and line; and in 1910, the catch amounted to 500. The largest fish taken in 1911 weighed twenty pounds, and I have the pleasure of showing you to-night this specimen, handsomely mounted.

Whether the stocking of Lake Sunapee with this salmon will prove successful, depends upon the breeding of salmon in the lake or their capture in sufficient numbers by the United States fish culturists to afford eggs for hatching and so maintain the stock.

It is held by some that they interfere with the native trout, which have been noticed to decrease in numbers after the introduction of landlocked salmon, specifically in the Rangeley Lakes. But at Sunapee the case is different. Here the brook trout and the landlocked salmon have been growing fewer for years, but the aureolus is caught in as large numbers as usual, both by anglers and fish culturists. More than 700 breeders were corraled last autumn in the Government tanks. Whereas, it is true that the chinook salmon are predaceous and greedily devour other fish without regard to family ties, trout two pounds in weight having been found in their stomachs. They in common with the other salmonids subsist largely on the landlocked smelts which swarm in immense schools in the lake. The fishing results at Sunapee during the past three years have certainly demonstrated the fact that chinook salmon, black bass, saibling, ouananiche and other *Salmonida* that have been planted can live and increase in the same waters where the conditions are favorable—to wit: where the water is deep and cold, and the bottoms are sandy or gravelly, provided there be abundance of smelt food. What the chinooks are going to do when acclimated in fresh water lakes awaits revelation. Will they die after spawning, as they have done in France in all the experiments of the Société d'Acclimation, or will the new environment change their

and three from another trout of five inches. In contrast to this helplessness, note the skill in eluding pursuit evinced by the baby brook trout and silverlings in the same streams. Here it is amusing to watch the little fry hiding behind

STEELHEAD TROUT: UPPER, MALE; LOWER, FEMALE.

sticks and gravel from the keen-eyed larger trout and minnows, or darting about with an air of security over the clean bottom in water too shallow for their enemies to penetrate.

Most of the fry and fingerling chinooks (150,000 have been planted in Sunapee in the last four years) are placed in the open lake and have fallen prey to the predatory fishes of strange waters. So it takes thousands of planted young to produce one fish big enough to catch.

Some anglers are not enthusiastic over the

pounds. The goods are here for your inspection.

So far no attempt at spawning has been made by the strangers in our lake. Where they are congregated in October and November, no one has discovered. It is probable that they become more or less sluggish, if not dormant, and do not move about and feed as much during the winter months as is indicated by the lines of growth on the scales.

There can be no doubt as to the economic value of the chinook salmon.

The Deer's Eyes

By W. P.

IN the issue of FOREST AND STREAM of Dec. 23 William Fitzmuggins said that a deer swings his head, sees things, swings again, finds you have appeared within his sight, and though you may be stationary, his suspicions are aroused and he is off. He says, further, that "a deer's eyes will more often serve the cervine than his ears or nose."

I do not dispute the correctness of this as far as Western deer are concerned, but I do not think it is true of the Virginia deer of the East. I judge from what I have heard from other hunters, and from my own experience in still-hunting in Northern Ontario, that while the scent and hearing of the Virginia deer are wonderfully developed, his sight is not remarkably sharp. I think, too, that this applies to bears and other animals which inhabit the bush of the East, too dense, as a rule, for their eyes to serve them were they ever so keen. They have to depend chiefly on their scent and hearing, which nature therefore has developed more than their sight.

I shall give some personal experiences. When I began still-hunting I soon learned to always face the wind, if any could be noticed, to move slowly and cautiously, and as noiselessly as possible. I found that unless I did so there was small chance of approaching deer closely, and that however careful I might be, I often alarmed and started them before I could see them or they me. Their noses or ears, not their eyes, served them. Several times I saw deer standing, looking straight at me. Though there was nothing to conceal me from their sight, they did not move until I raised my rifle, which I did quickly, knowing no reason why I should not. In every case the deer bolted before I could line my sights on him, and I had a difficult shot, generally missing. Though I am pretty sure of a standing or walking deer, when I kill one running, unless very close, I think it is rather a case of good luck than good shooting.

In one case I was in the open, a burned-over slashing. I climbed to the top of a rocky ridge, looked down into a gully and saw the head and neck of a large buck about sixty yards away. I must have showed plainly against the sky and he was looking at me, but apparently his sight was not so good as mine, and he could not make out what I was. Up went my rifle and off went the buck. I fired three shots at him and wounded him slightly, I hoped, as I did not get him.

I told a more experienced still-hunter of this and other like experiences and was told in turn that had I raised my rifle slowly I would have had a standing shot. I kept this in mind, tried it the first time I got a chance, found it correct and killed the deer. Since then I have killed a number of others in the same way. Though they stood looking at me, evidently having heard or scented me, and suspicious that something was wrong, as I made no sudden movement, they waited long enough to give me my shot. Among them were some very large, old bucks, the most wary and suspicious of deer. In some cases I stood in the open, but that made no difference. In two of them I was walking along

log roads through the bush, hardly hunting, when I saw the heads and shoulders of bucks facing me forty or fifty yards away on my right or left. In both I did the slow act and got standing shots as usual and my deer.

Another time I was going through the woods to camp for dinner and saw the head and a small part of the neck of a particularly large buck about sixty yards ahead. I aimed at his neck and cut his jugular, but did not touch his spine. He ran perhaps a hundred yards, the blood spurting right and left, and dropped, bled so thoroughly that when I put my knife into his neck it seemed hardly necessary. By the way, this buck has the finest head I ever secured.

One more buck story. One morning I was hunting in a slashing. Seeing a large pine tree which had been blown down, but not flat, having caught so that the trunk sloped gradually from the root so that the trunk, where the branches began, was about twelve feet from the ground, I walked up to that point, as it seemed a good one for a survey of the neighborhood. Just as I reached it I saw a large buck walking a little over a hundred yards away. Before I could shoot he was concealed by the branches of the hemlock which stood close to me. I

advanced a step or two to see past it. I had made no noise, as I wore moccasins; but the buck must have winded me, for he was standing braced, ready to jump, with his head down, and he was taking stock of me. I got in my shot by the slow movement, placing a ball from my .45-90 in his neck, close to his shoulder. It reached his spine and he dropped in his tracks.

I have told of deer shot while they must have seen me, but which seemed to see indistinctly. Many are shot by the still-hunter standing near or walking past where he stands unconcealed, but which do not see him. In a number of cases I have come on fawns which I did not want, and have stood watching them for some time before purposely starting them off. One day I was sitting on a rock about ten or twelve feet high, eating my lunch, when a fawn appeared on my right, walked past within ten yards of me, and disappeared on my left without seeing me. This may not be considered remarkable, as fawns are less wary than the mature deer, but I have had a similar experience with a big buck. It was on the day before the beginning of the open season, our camp had been put in order, and I was out with my shotgun after ruffed grouse. I was on a "cadge" or "tote" road and in the middle of it, when the buck walked across it in my front, so close that I think I might have killed him with my small shot. He did not see me nor change his gait. I tracked him for some distance to make sure and found that he had walked as far as I went.

Old Game Laws

GAME legislation in this country has had an interesting history. Deer were the first game animals to be protected. As early as 1769 a law was passed in South Carolina forbidding their destruction during the months from January to July, while Vermont prescribed the same closed season for deer in 1797.

Massachusetts in 1817 protected deer during a similar season, followed by Virginia in 1820. Little other legislation, except in New Jersey in 1846, is found until after 1850, when Missouri, Ohio, Alabama and California prescribed closed seasons, and Delaware in 1852 prohibited the killing of deer at any time.

In the '60s came Kentucky, with protection for females only, and later Illinois, Kansas, Pennsylvania, Nebraska and Minnesota followed, the last State including elk in its protective measure.

Less stringent were these early laws, says Case and Comment, for in numerous instances the prohibition was not extended to game found on one's own land. This is to be noted in 1817 in a Massachusetts enactment, and later in New Jersey, Delaware, Maine, Iowa, Ohio and as late as 1861 in Kentucky.

The earliest instance which has been found in the United States of an enactment to protect fur-bearing animals is that prescribing a closed season for the muskrat, in Vermont in 1812. It was a prohibition which covered practically the entire year, it being lawful to take the muskrat from March 15 to May 25.

Ohio protected the muskrat in 1830, and New Hampshire in 1843, prompted evidently by a de-

sire to be rid of certain undesirable animals, passed a law providing for the "destruction of noxious animals and the preservation of game," the game referred to being the muskrat, beaver, mink and otter.

In some States there came at the same time with protective legislation for deer a recognition of a similar need in the case of partridge, quail, grouse and woodcock, and in those States where they were found wild turkey were early included in enactments providing for a closed season.

Thus in Massachusetts these birds, with the exception of the wild turkey, were included in the statute of 1817. In most cases, however, legislation to save the game birds was much later, and very few of the States had such until after 1850.

The lowest penalty for killing deer appears to have been that named in a North Carolina statute passed in 1854, which provided: "If any person shall kill or destroy any deer running wild in the woods or unfenced grounds, unless on his own lands, by gun or otherwise, between the 20th day of February and the 15th day of August next succeeding, he shall forfeit and pay for every offense \$4 to any person who will sue for the same."

The penalty for killing deer in Ohio in 1857 was but \$5, an increase to \$10 not coming until 1879. Higher amounts for deer seem to have been the rule, and even as early as 1853 Maine prescribed \$20 and \$40 for killing moose. Fifty dollars for deer was the amount in Pennsylvania

in 1869, and in North Carolina in 1871. For the destruction of game birds such as the grouse, partridge, prairie chicken, quail and woodcock the amount has been as low as \$1 in Connecticut in 1843, and as high as \$25 in the same State in 1874. Ten dollars was perhaps the average amount.

During the seventies and eighties a number of States incorporated into their statutes sections forbidding the use of any gun other than such as is commonly raised from the shoulder and fired at arm's length, such legislation having become necessary because of the use by pot-hunters and even so-called sportsmen of the swivel gun in shooting wildfowl.

What has been known as night hunting, especially with fire or artificial light, has been the subject of prohibitive legislation since an early date, South Carolina having forbidden taking deer by that means in 1769, and Tennessee in 1774. Such acts had for their end, however, the protection of domestic animals whose destruction was a common accompaniment of this means of pursuing the deer. Later statutes of this character clearly had in view the saving of the game which this method of hunting rendered wholly at the hunter's mercy.

In later years the States have commonly resorted to the plan of protecting certain game during long periods, such protection being State-wide or restricted to certain counties and other geographical districts. An act of the latter sort was passed in Connecticut in 1875.

Idaho in 1883 passed a law which prescribed a four-year period during which quail or partridge could not be killed or their eggs taken, with a minimum penalty of \$50 for a violation. Delaware in 1885 protected partridges, quail and pheasants for nine years and jack rabbits for four years.

A ten-year period for elk was provided for by Michigan in 1879, with a \$50 fine for violations. Pheasants and their eggs, especially the imported varieties, have been commonly protected of late years by means of such legislation.

Limitations upon a day's bag of game has also been a more or less effectual means of checking wholesale destruction of game, but such provisions are of later date, most of them having come into the laws since 1880.

Total prohibition of transportation of game was provided for in many States, Oklahoma in 1890 enacting that "no person shall kill, ensnare, net or trap any quail, prairie chicken, turkey or any deer, fawn, antelope or other game within this Territory, to export to any State or Territory," and North Carolina in 1876, North Dakota in 1887, Kansas in 1877, Michigan in 1881, made the prohibition absolute as to certain varieties.

The restriction of hunting to residents of the State came into protective legislation at a comparatively early date. In 1846 New Jersey prohibited non-residents from hunting on another's land, with a penalty of \$15 and the forfeiture of the offender's gun.

The Reason.

REV. MR. HOLLERS—Mistah Johnsing, what foh you call dat son of yoh's Izaak Walton, when he was baptized George Washington?

Mr. Johnson—Because, suh, dat rascal's reputashun foh verac'ty made dat change imper'tive. —New Orleans Picayune.

Canadian Camp.

MORE than 900 members and friends of the Canadian Camp met last Monday night at Hotel Astor, New York city, to eat, reminisce and hear tidings from those who have done things. The banquet was good, but after the inner man had been satisfied, the dessert, which followed, was, we think, more generous and varied than has before been offered in one evening.

Prof. Hiram A. Bingham, whose business is that of searching for antiques outside the Fifth

A FINE CANADA GOOSE.

From a photograph by E. E. Pierson.

avenue shops, and whose charming personality had pervaded the entire atmosphere, long before he spoke, told entertainingly of his Yale-Peruvian expedition with stereopticon illustrations.

Paul Rainey showed a wonderful collection of moving pictures of his African hunt. The tracking and killing of a tremendous lion by a pack of American foxhounds was so realistic as to cause the people near the screen to shift uneasily in their seats. To one wishing to see wild animal life in its natural state, these pictures should be seen.

Prof. Raymond McFarland was placed in an unfortunate place on the program, as he followed Paul Rainey's live portraiture, but he gave an attention-compelling canoe trip to Labrador.

Dr. John D. Quackenbos' paper on "Pacific Salmon in Eastern Waters," printed in full in this issue of FOREST AND STREAM, was a charming poetic description of the mating of the fish.

Dr. Robert T. Morris told of foods provided by nature, not generally known to man. He

spoke of foods found in the country in which Leonidas Hubbard lost his life that would possibly have been the means of saving that life had Whitney and Dillon Wallace known where to look for dishes to replenish their depleted larder.

L. O. Armstrong, who knows Canadian fishing better than most anglers, took the audience on an illustrated paddle along that great trout stream, the Nipigon River. It was a rare treat.

Melvin Vaniman unfolded the plans of his new airship that has, he says, solved forever the problem of air navigation. It is what he calls a discovery in physics—perpetual air balance. Through the use of piano wire he has made a gas resistor that will enable him to fill the gas bag, seal it and, through the resisting power of the wires, prevent the heat of the sun expanding the gas, making the confined gas lift the balloon beyond control.

Julian Burroughs set the room agog by declaring that many of our song birds are destructive; in fact, are worthy assistants of insect agriculture destroyers. The Baltimore oriole, robin, blackbird, starling and many other "lawn birds" he hoped might be exterminated. He said it was the cannibalism among insects that prevented their increase.

William T. Hornaday brought this message from the wild animals: "Mine enemies compass me round about," and preceded that by taking issue with Mr. Burroughs on the question of birds as insect destroyers and crop preservers. He said that yearly he examined the crops of hundreds of birds categorized by Mr. Burroughs as useless and found the contrary to be true. Dr. Hornaday cited instances of the nearness to extermination of many species of big game. He decried the fact that while millions of dollars were given for libraries, art and charity each year, no one came forward with finances to help in the great proposition of game preservation.

President G. Lenox Curtis made an address of welcome. Dr. Edward Judson asked grace and J. C. Allen, D.D., was toastmaster.

Trespassing.

BLOOMINGTON, Ill., Feb. 24.—*Editor Forest and Stream:* The Anti-Horse Thief Society, of Sangamon county, finding its occupation practically gone owing to the rarity with which equines are stolen nowadays, has turned its attention to the prosecution of trespassing and illegal hunters. This week the society procured the arrest of four men on the charge of trespassing upon the farm of T. C. Elmore. All were fined \$3 and costs. The society has posted a warning to all hunters that all cases of trespassing and other violations of the law by hunters will be prosecuted.

Wildfowl, which have been feeding in the vicinity of Dixon, are said to be a northern species which do not go further south than Illinois during the winter season. Owing to the extreme weather of the past month they have been forced further south than customarily in order to find open water. E. E. PIERSON.

Mr. Thompson's Work Appreciated.

CARUTHERSVILLE, Mo., Feb. 19.—*Editor Forest and Stream:* Of late I have noticed with great admiration the articles by John W. Thompson, of Doniphan, Mo., and I believe I voice the sentiment of a great many readers in asking for more of them. What chiefly attracted me to them has been the wonderful knowledge of wild life displayed in everything Mr. Thompson has written. Possibly no writer to the sportsmen's press of late years has shown such intimate knowledge of the denizens of the woods and streams.

My home is at Cleveland, and I travel in this district occasionally and met Mr. Thompson a few days ago. He is rather a quiet, unostentatious man, but his remarkable work in enforcing the game law to the letter is very astonishing, considering the vast territory and the lawless element he is obliged to contend with; in fact, the only real thing on the force.

I am always anxious to say a good word for the only real sportsman's paper and would be pleased indeed to see more in print from the source mentioned above. W. R. GREIB.

Winter Killed.

LAS ANIMAS, Colo., Feb. 21.—*Editor Forest and Stream:* After the most severe winter weather experienced for twenty years, we are able to compute approximately our loss of feathered life. Seventy-five per cent. of the quail have succumbed throughout the irrigated district, and about twenty-five per cent. of meadow larks. In the rough cedar-covered sections south of the Arkansas River the loss among the quail was much lighter. The ground sparrows suffered severely, while the English sparrow seems to have come through in good shape. Many cottontail rabbits starved to death, while the deep light snow of January made the jackrabbit easy prey for hawks and coyotes.

Through January and the earlier part of February the prairie dogs were buried under the crusted snow, and now they are to be seen apparently as numerous as ever. So far as I can learn, these animals provide no winter food, but hibernate as occasion requires.

On Jan. 15, while driving, a jackrabbit jumped from under a soapweed just in front of my team, and was pounced upon by an eagle. The bird's talons were so deeply imbedded that he had some difficulty in loosening them. I was so nearly upon him before he extricated himself from the rabbit that my horses shied. I watched the bird closely and observed that he did not use his beak. The rabbit was a large one and was killed instantly, the eagle's talons penetrating from either side through the vitals.

F. T. WEBBER.

Hearing on the Conservation Bills.

THE second day's hearing before the joint Senate and Assembly Committee of Forest, Fish and Game at Albany on the bill to amend the conservation law in relation to lands, forests and public parks, developed lively opposition on the part of lumbermen to sections 88 and 89 providing for State regulation of cutting on private lands and for taxation relief for reforested lands. Some representatives of lumber companies contended that the law regulat-

ing cutting to a minimum of eight inches for the conifers and twelve inches for hardwoods, except on permission from the commission to meet certain conditions of wooded areas, was unconstitutional. Gifford Pinchot and other representatives of the Campfire Club contended that the police power of the State could be employed to save the Adirondack forests. Chairman Roosevelt of the Senate Committee was of the opinion that the bill met the requirements of the constitution.

A representative of the Brooklyn Cooperage Co., a subsidiary of the Sugar Trust, declared that his company was in favor of good forestry and preserving the forests. This prompted Forester Pinchot to report that the forests in which the Brooklyn Cooperage Company had lumbered presented the worst scenes of devastation and waste which he had encountered anywhere east of the Rockies.

The Conservation Commission agreed to restricting the limitation of private cuttings to the forest areas within the blue line.

The lumbermen contended that the bill gave the commission arbitrary power. Its advocates contravened that and declared that public sentiment now demanded the exercise of a State control that would put a stop to the wholesale denuding of the forests which protect the great watersheds of the State.

A Dreary Picture.

MONTCLAIR, N. J., Feb. 24.—*Editor Forest and Stream:* I saw in a recent issue of FOREST AND STREAM that the Conservation Commission of New York State had for free distribution 30,000 pheasant eggs and 5,000 pheasants. It is certainly encouraging to note such efforts to restock our depleted game covers.

But it occurred to me as I read this announcement, what is being done to save the ruffed grouse? Year after year this splendid bird is relentlessly hunted down, and in spite of legislation or through lack of it, continues to dwindle in numbers, so that in many parts of the East it is extinct. And still comes the annual distribution of European birds and eggs. The State authorities certainly do not hope to give the American sportsmen a game bird more worthy of the name than the ruffed grouse. Pheasants have qualities that recommend them both to the gunner and to the farmer, and should be welcomed to our covers, but not at the expense of our native birds. An adequate portion of the time and money at present spent in raising and liberating foreign birds should be devoted to the propagation of the grouse. It has been successfully reared in confinement in the past, and it is a waste of words to have to argue such action for the future. The ruffed grouse is surely going. Northern New Jersey is a fair example of that fact.

This condition can be remedied, though; of course delay only removes success further beyond. And let me protest against the sentiment sometimes expressed of a proneness to be satisfied with foreign substitutes for our native birds. It would indeed be a dreary picture to imagine the American sportsman returning home after a day afield with only a bag of Hungarian partridges, because the still October woods no longer echoed to the drumming of the ruffed grouse. J. J. WELCH.

Violations of the Fish and Game Laws.

SAN FRANCISCO, Cal., Feb. 20.—*Editor Forest and Stream:* Japanese fishermen operating on the east side of the bay have become careless in regard to the size of the fish retained by them.

Many complaints have been made of late to the effect that ducks have been slaughtered in the marshes about Vallejo after nightfall, but the offenders have been wary and escaped arrest until a few days ago. Deputy Armstrong managed to get near three offenders one evening and cornered them in a boat in the tules. Two of them got away, but the third, Louis Nicholas, jumped out of the boat, hoping to be able to swim away. Instead, he sank in the soft mud and refused to come ashore for two hours, but at the end of this time was glad to give himself up. He then gave the names of his two companions, Owen Genty and Ben Sage, who were arrested later.

Deputy fish and game commissioners are still active in their raids on restaurants and markets in San Francisco, and large quantities of game are being seized. As a result of these raids, many of the prominent restaurant and hotel owners have signed an agreement with the commission permitting deputies to enter their places of business at all times without a search warrant for the purpose of seeing that the law in regard to the limit quantities of game is not being violated.

On Feb. 3 a raid was made by the deputy commissioners on transfer companies, and over 1,000 wild ducks were seized. These game transfer companies have been formed for the purpose of getting around the provision of the law that specifies that no one shall have more than twenty-five ducks in his possession in one day. It has been found that in almost every instance the ducks were consigned to the man who consigned them, the transfer company being merely a dummy. These companies will no longer be recognized as legitimate transfer concerns and express companies will not be permitted to deliver to them more than the legal limit of game. All other shipments will have to be delivered direct to a designated consumer. The American Game Transfer Company has applied for an injunction against the commission seizing further consignments of game, but this has not been acted upon. GOLDEN GATE.

Game Birds Hard Hit.

NORWALK, Conn., Feb. 19.—*Editor Forest and Stream:* The abnormal cold spell, which has held the country in its grasp for the past six weeks, has caused great suffering among the ducks in this locality. The shores of Long Island Sound have been ice bound, the ice extending over a mile out into the Sound and leaving no shallow open water for the ducks to feed in.

I have had several cases brought to my notice of black ducks being picked up on the ice, they being nothing but skin and bone and unable to fly. It was reported that there were large numbers on the breakwater at Stratford, and that thirty-eight ducks were found dead. This seems very strange in the case of a migratory bird and causes one to wonder why they did not move further South.

Black ducks have increased to a marked degree since spring shooting was stopped, and it

seems a great pity that they have received such a set back.

How the quail and partridge have fared I am unable to say, but fear the quail have had a hard time. In a two hour tramp about three weeks ago I put up one small covey and found the tracks of another bunch, but could not flush them. We also raised four good strong partridges.

Last fall we had a good flight of woodcock and it is a shame the way they were slaughtered. I know of a number of cases where twenty were killed by one gun in the day and heard of one case of fifty. This is all wrong, and means the end of the woodcock if continued. There is no doubt we need a bag limit on woodcock as much as on quail or partridge.

The Hungarian partridge does not seem to me to have been a success. There has been a large number liberated in this neighborhood in the past three years and we have nothing to show for it. They have bred, as I have heard of a number of nests and also broods of young, but when fall comes they have disappeared, and what becomes of them is a mystery. Either they are an easy prey for vermin or they migrate. I heard of a case where a small flock were liberated in a large meadow and were seen there for several days. One morning a friend of mine noticed a large hawk hunting the meadow very carefully just above the tops of the grass, and the little flock was never seen again. The hawk may not have got them, but it looked very much that way.

It seems to me that the same amount of money spent on our native birds would have brought greater results.

WOODCOCK.

New York Legislature.

ALBANY, N. Y., Feb. 26.—*Editor Forest and Stream:* Senator Murtaugh, of Elmira, has introduced a bill relating to coarse fish in the Susquehanna River in Tioga county.

Assemblyman Wheeler, of Delaware, has introduced a bill relating to coarse fish in Delaware county.

Assemblyman Pembleton, of Tioga, has introduced a bill relating to certain fish in Tioga county.

Assemblyman Myron Smith, of Dutchess, has introduced a bill striking out the provision that there shall be no open season for grouse and quail in Dutchess county prior to Oct. 1, 1913, but woodcock may be taken and possessed during the open season provided in Section 39.

Assemblyman Richardson, of Allegany, has introduced a bill providing that in Allegany county the open season for hares and rabbits shall extend throughout the year for the first five years after the amendment takes effect.

Senator Roosevelt, of Dutchess, has introduced a bill providing that any dealer in game marked and tagged (as provided in Sections 96a and 96b) may hold during the close season in public storehouse, designated by the Conservation Commission, such part of his stock of game as he has on hand undisposed of at the beginning of the close season. He must give a bond not to sell, use or give away the game during the close season.

The Assembly has passed the bill of Assemblyman Wilson, of Ontario, amending the general municipal law in relation to the acquisition and development of forest lands by counties, towns and villages.

E. C. C.

Little Talks About Fly-Fishing.

SULLIVAN COUNTY, N. Y., Feb. 24.—*Editor Forest and Stream:* The woodchuck did not see his shadow this year, so we may look forward to an early spring; that is, if we have faith in old saws and ancient superstitions. I never saw a woodchuck before April in this part of the country, but settling the weather is an important business engagement which an honest animal would hesitate to neglect.

It is often bitterly cold in February, but the days are perceptibly longer, and sunshiny ones are bright with the promise of spring and fishing.

The pleasures of anticipation, the making, mending or buying of rods and tackle during the long cozy evenings by the fireside; all these tend toward contentment and make this a cheerful season for which we should be grateful.

During the past year there has been much talk of dry-fly fishing and more anglers will try this method this season than ever before. Francis Francis, at one time editor of the English Field, was probably one of the best all-round anglers who ever lived, and in his very comprehensive work, "A Book on Angling," has much to say of the dry-fly, but he loved all kinds of fishing.

It was not until after the publication of F. M. Halford's first book in 1886 that Americans paid much attention to the dry fly as a special art to be studied and practiced on our own waters. To those whose early education had been mostly on slow-flowing streams which were rich in insect life, the change from a wet to a dry fly was not difficult, as they had often used a single small fly fished up stream, and casting to rising trout was a common experience. It must be confessed, however, that we were completely fascinated by the art of the dry fly as practiced by the most scientific anglers on the chalk streams of the South of England. Mr. Halford's *magnum opus* on "The Theory and Practice of Dry-Fly Fishing" charmed many Americans, and for a time we tried to follow the lessons of this book too closely without making allowance for differences in conditions, particularly in mountain streams where there is much fast water.

Wherever trout feed upon surface food, sport may be had with a dry-fly as is proved by the spread of the method, not only in Scotland and Ireland, but in this country. It is not the best way everywhere and all the time by any means, and if a man uses the artificial fly only in his trout fishing, he should (as Francis said) be a master of, or thoroughly understand, dry, wet and mid water fly-fishing. No one man, no matter how skillful he may be, will ever know all that there is in fly-fishing, although there are some who are wonderfully expert, but wherever they go they find new and interesting problems to tackle.

If you find a big trout feeding upon minnows, it will usually disregard the most artfully presented dry-fly, but with patience may be induced to take a wet one. Some waters are much

richer in insect life than others, and whenever there are a lot of flies about the larger or better class of fish take more interest in surface food. A really good rise of the insects born of the water will often put all the fish in the stream on the feed. You have thought perhaps that trout are rather scarce, when suddenly they are everywhere, big and little, in the pools and swift water, on the shallows and in places where you were sure there were no trout.

After heavy rains have washed much c'ay and dust from the roads into a clear stream, and fouled it, a remarkable show of trout may often be seen just after the water has become pure and clear again. It is probable that the discoloration and filth depressed the fish, and they show their pleasure in the return of normal conditions by rising and playing upon the surface. At such times they may neglect the artificial fly and there may be few natural ones on the water. The trout are sporting, not feeding in earnest.

The great floods of recent years have affected the supply of natural flies by carrying away or covering up the larvæ. The enormous quantities of stone, gravel and sand moved by these freshets is astonishing, and this seems the most reasonable explanation of the decrease in the numbers of the ephemera, caddis, stone flies, etc. May and June are the best months. We used to have good hatches of insects all summer, but now the water becomes too warm, most of our summers are very dry and the streams become low and stale. However, there are waters that are abundantly supplied with insects and their larvæ, and where good rises of flies and trout may be seen. There is nothing more fascinating than fishing for rising trout or fish that you can see. It must be the hatching of the stone flies that brings good trout into water only a few inches deep. They know where the food is.

In May it is often cold and there may be no rise of flies until after noon. The trout may feed more or less all day, but the most profitable time will probably come between 12 and 3 P. M. As the weather becomes warmer, the rise comes in earlier and there may be several distinct rises during the day. In June there is always some show of insects after 5 o'clock P. M. I can remember times when the trout rose almost continually from 10 o'clock until 2 P. M. Those were great days, and one was sure to have all the trout he was entitled to between those hours, but it is years since I had anything so good. If you strike a good rise for an hour or two, you are lucky and will enjoy yourself. Of course a man will be happy on the stream, but I think he should have two or three good fish in his creel to feel contented and at his ease. It is depressing to carry an empty basket too long and a man in bad luck is apt to work too hard and become horribly fatigued. One big trout or a little good fortune sweetens a man's temper and enables him to appreciate the beauties of nature. The peaceful spirit and contented mind are what we wish fly-fishing to bring us.

THEODORE GORDON.

The Salmon Record.

ST. JOHNS, N. F., Feb. 13.—*Editor Forest and Stream:* Through the courtesy of Mr. Mercer, secretary of the Inland Fish and Game Commission, I have been furnished with copies of the advance sheets of the official returns from the salmon rivers last season, for the exclusive use of FOREST AND STREAM.

We had more visiting anglers last year than ever; ninety-five per cent. of them were from the United States. We had about eighty rivers wardened during the season, and have reports in from between forty and fifty of them. The fishing was much better, and the extra protection is showing grand results even now, but it is hoped that after four or five years' proper care of the rivers, the number and size of the increased catches will rank New Foundland easily as the chief salmon resort in the world for rod and fly fishermen.

In 1910 the total weight of salmon caught by anglers amounted to nearly 12,000 pounds. Last year the official reports show that nearly 6,000 fish were caught, weighing about 32,000 pounds. Of course, these figures are only approximate; there were many other fish caught that were never reported.

One of the best catches reported is that of Dr. Norris, of Philadelphia, and friend. He is reported for 141 fish, weighing 660 pounds, while his friend caught fifty-three fish weighing 240 pounds. These were caught during a three-weeks' vacation at River of Ponds near Bonne Bay, a neighborhood not much resorted to by anglers.

It was noticeable that a larger proportion than ever before, of the fish caught, went over twenty pounds.

I have had numerous inquiries during the winter from readers of FOREST AND STREAM in all parts of the United States as to the best place for intending visitors to go. The extracts from the official reports subjoined will show at a glance the rivers that gave best sport last season, as well as the name and residence of each fortunate fisherman.

The first list shows the number of fish over twenty pounds, and the second shows grand totals for each river.

American anglers and hunters will be glad to hear that the new Bruce arrived in St. Johns on Feb. 12 to take up her regular work between Port au Basque and Sydney. She is a beautiful ship, and she has been dubbed by the British shipbuilders as the "Marvel of the Clyde." Captain Spracklin, who brought her out, says that he never saw her equal as a sea boat. They had rough weather and she met the ice 200 miles off, and she came through it as if it were brown paper. W. J. CARROLL.

Everett Horton.

EVERETT HORTON died at his home in Bristol, Conn., on Feb. 21, after a long illness, aged seventy-six years. He invented, and for three years manufactured, the Bristol steel fishing rod. His recreation during a busy life was found in the woods with rod and gun, and it was while fishing that he conceived the idea of making a fishing rod from tempered steel tubes.

Mr. Horton's first work as an inventor was done in Dunbar, Conn., where he built looms for the manufacture of crinolines. Later on he was with Landers, Frary & Clark in New Britain, and S. E. Root in Bristol. In 1870 he began to manufacture tools and fine machinery in a factory of his own in Bristol, but ten years later he closed this factory and went into the cut pinion department of the New Haven Clock Company. While he was there he secured about twenty patents. In five years he reopened his Bristol shop, and in 1887 began to make steel rods under United States and Canadian patents secured by him, but in 1890 he sold all his rights in this invention to the Horton Manufacturing Company.

Compliments for Dr. Bean.

ALBANY, N. Y., Feb. 28.—*Editor Forest and Stream:* Dr. Tarleton H. Bean, State fish culturist, is the subject of complimentary notice in Bulletin 79 of the State Conservation Commission recently issued. It says: The Colonial Government of Bermuda has paid the Conservation Commission the compliment of asking its assistance in the scientific classification of the fishes of Bermudan waters. The State fish culturist, Dr. Tarleton Hoffman Bean, one of the most noted ichthyologists in the world, is now in Bermuda and will soon complete the work.

Dr. Bean's accomplishments in practical fish culture and scientific researches have been recognized by many foreign governments and scientific societies. By sportsmen he is known as a genial and delightful comrade, and by scientists as a man who imparts his knowledge to others with rare modesty and grace.

Tarleton Hoffman Bean was born in Bainbridge, Pa., in 1846, and after graduating from the Pennsylvania State Normal School, graduated from the Columbian University, Washington, in 1876. He became the editor of the Proceedings and Bulletins of the United States National Museum in 1878, and later won national recognition as editor of the bulletins of the United States Fish Commission. In 1892 he accepted the post as assistant in charge of the division of fish culture. From 1880 to 1895 he was the curator of fishes of the United States Museum, and his improvements in practical fish culture attracted attention throughout Europe. Dr. Bean gained in prominence in 1897 when he became acting curator of fishes in the American Museum of Natural History in New York.

Dr. Bean represented the United States Government at the Federal fish exhibit at the Chicago exposition in 1892. The Japanese Government placed him in charge of its entire exhibit. As a mark of appreciation, the Mikado decorated the American ichthyologist with the Order of the Rising Sun. He had charge of the United States fish exhibit at the Atlanta Exposition. He was director of the United States Forestry and Fisheries at the Paris Exposition in 1900, and there was decorated with the medal of the Legion of Honor. He has been awarded medals by the German and British Governments.

One of Dr. Bean's most notable contributions to fisheries interests was the result of a year spent in Alaska for the fish commission, making researches into the natural history and fish of Alaska. Dr. Bean has been employed as the New York State fish culturist since 1906 and has been largely instrumental in placing this State in the lead in the artificial propagation of food and game fishes.

He was for years president of the American Fisheries Society; is a member of the Danish Fisheries Society and Finland Fisheries Society; treasurer of the National Association of Shellfish Commissioners; a member of the Washington Biological Society; a member of the American Forestry Association. Dr. Bean is the author of many important works on ichthyology, among them "The Fishes of New York," "The Fishes of Pennsylvania," "The Salmon and Salmon Fisheries," "Oceanic Ichthyology," "The Fishes of Long Island," "The Baßes, Fresh Water and Marine," "The Fishes of Bermuda."

J. D. W.

January Bird Notes.

DELANSON, N. Y., Feb. 22.—*Editor Forest and Stream:* Winter came with the new year, a full month late, announced by unusual signs and portents. Late on the afternoon of the 5th the mercury passed below the zero mark. The west wind roared, driving a fine snow before it, the frozen elms and maples about the house strained and creaked. At intervals during the night we heard the nails draw suddenly in the studding with a muffled report, like small guns firing the first salute to the season. The cold tightened its grip on the 6th. On the morning of the 7th the mercury was eight degrees below at seven o'clock, and at nine o'clock it had risen only two degrees. The sun shone dimly through a falling snow as fine as frost. Two bright sun-dogs were visible, one on each side of the sun. I heard a goldfinch going over, and but for that I should have missed the snow bow, tinted with summer colors, that curved away from the sun, the span of the inverted arch being near the zenith. The sky soon cleared, but as day declined, the sun just before its setting shone on a bank of ragged clouds in the southwest. Straightway all the colors of the morning reappeared there in shreds and patches with intensified brightness. Where watchers further west beheld a perfect bow, to me appeared the wreck of one, its fragments tossed by restless winds into that quiet corner of the heavens.

A few days later I read of a similar phenomenon seen at Greeley, Col. "The spectacle was so unusual," so ran the newspaper account, "that it attracted the attention of almost every one in the vicinity." I turned to Thoreau, remembering how perseveringly he read the face of the sky and found that he recorded but one. On Jan. 7, 1852, exactly sixty years ago, he wrote: * * * "Now * * * I see the sun descending into the west. There is something new, a snow bow in the east, on the snow clouds, merely a white bow, hardly any color distinguishable. But in the west what inconceivable crystalline purity of blue sky * * * and I see feathery clouds on this ground, some traveling north, others directly in the opposite direction, though apparently close together. Some of these cloudlets are waifs and droppings from rainbows, clear rainbow through and through, spun out of the fibre of the rainbow, or rather as if the children of the West had been pulling rainbow (instead of tow), that had done service, old junk of rainbow and cast it into flocks."

Although January broke the record for continued cold, it was a better month for the birds than some that I remember. There were but a few inches of snow, hardly enough for good sleighing, and weed seeds have been available at all times. Snow buntings have been numerous in the upland fields. It is one of the exhilarating incidents of a January walk to see a flock of these birds come rippling down the wind in unison and turn sharply about to face the storm and alight, each bird completing a perfect shepherd's crook of flight as it settles

among the weeds. I never saw so many flocks of goldfinches. For variety we had a pair of red polls in the garden one day, probably stragglers from some large flock. On the 22d a woodchopper reported a robin in Wilbur's woods, and on the 23d I saw a pair of juncos, the first I have observed in January since 1909.

Crows we have always with us. Small flocks go westward every morning, sometimes a long, thin procession, flying low to distant pastures on Oak Hill or along the Schoharie, returning by midafternoon high over head, taking advantage of the prevailing winds. One morning a deeper snow than usual, glazed with a spatter of rain, completely buried the fields, and I saw but one of all the host, flying to and fro like Noah's raven or some dark dove looking for a bare knoll in the white waste.

I have thought sometimes that the chickadee was a weather forecaster, having advance knowledge of snowstorms with Mr. Todd, of Albany. Who has not heard this little bird's whistled prediction, "Knee-deep, knee-deep," and if, as during January, his predictions were unfulfilled, it was only because the weather was too cold for a deep snow. So, too, I like to imagine that the nuthatch has advance information regarding the rare, spring-like days that occasionally come to us in mid-winter.

On the afternoon of the 18th I was busy on the woodpile, when a pair of nuthatches in the dooryard elm went suddenly into ecstasies of delight. All the chickadees on the premises, a half dozen or more, and two downy woodpeckers, were attracted to the scene by their extravagant conduct. How long the entertainment lasted I do not know, but the nuthatches still held their audience when I went into the house. There was something in the atmosphere that afternoon, although the weather was quite cold, that gave the wooded hills far and near, a skyey look, and I was not surprised that we had the only thaw of the month on the following day.

I have taken great pleasure these cold days in the visits of the downy woodpeckers. Looking from the west window, I often have two of the birds under observation, and by going to another room and looking out on the veranda to the east, I usually find another. The male downy is as ungallant as ever, losing his temper many times a day and flying at the female in a rage, where she sits patiently waiting her turn at the fresh pork that hangs by the window casing or in the nearest tree. I was surprised to hear him beat his spring tattoo on the 21st of the month, and every day thereafter, even when the thermometer registered zero. It is usually late in February when he begins to drum, and sometimes March.

The male does not do all the drumming, however. On the afternoon of the 28th I heard a drummer in one of the roadside maples, opposite the house. It was such a cold, dreary day that I went out to see what manner of bird had invoked the spirit of spring. The drummer was a female, the drum a stub of dead branch and not of the best material, for she seemed to have trouble with it. It was amus-

ing to see her move a few inches, change the key without improving the tone and suddenly leave off in the middle of a tattoo to begin all over again in another spot. When she struck the proper place at last, her head moved with the precision and rapidity of a piece of machinery. But I heard no answering drum.

WILL W. CHRISTMAN.

Birds of California.

SAN FRANCISCO, Cal., Feb. 20.—*Editor Forest and Stream:* Joseph Grinnell, of the department of vertebrate zoology of the University of California at Berkeley, recently delivered a lecture on midwinter birds of the university campus in which he said that the campus covered an area of about 530 acres, and that only the species that had been recognized by himself had been listed, and that all of these had been seen on the university grounds. An estimate places the total avian population of the limited area in question at 10,000 individual birds.

Permanent Residents.—California quail, Western red-tailed hawk, sparrow hawk, barn owl, California screech owl, Pacific horned owl, willow woodpecker, red-shafted flicker, Anna hummingbird, black phoebe, coast jay, California jay, Western meadowlark, Brewer blackbird, California purple finch, California linnnet, green-backed goldfinch, pine siskin, English sparrow, Nuttall sparrow, rufous-crowned sparrow, Santa Cruz song sparrow, spurred towhee, California shrike, Hutton vireo, California thrasher, Vigors wren, plain titmouse, bush-tit, intermediate wren-tit.

Winter Visitors.—Sharp-shinned hawk, Say phoebe, crossbill, Western Savannah sparrow, intermediate sparrow, golden-crowned sparrow, Sierra junco, Yakutat fox sparrow, cedar wax-wing, Audubon warbler, Townsend warbler, pipit, Western winter wren, red-breasted nuthatch, Western golden-crowned kinglet, ruby-crowned kinglet, Sitka kinglet, Townsend's solitaire, dwarf hermit thrush, varied thrush, Western robin.

Summer Visitors.—Turkey vulture, Allen hummingbird, olive-sided fly-catcher, Western wood pewee, Western flycatcher, bullock oriole, willow goldfinch, Lawrence goldfinch, Western lark sparrow, Western chipping sparrow, black-headed grosbeak, Lazuli bunting, cliff swallow, Western warbling vireo, Cassin vireo, lutescent warbler, California yellow warbler, MacGillivray warbler, Golden pileolated warbler, Western house wren, russet-backed thrush.

Transients.—Black-crowned night heron, killdeer, long-tailed chat.

Summary.—Permanent residents, 31; winter visitors, 21; summer visitors, 21; transients, 3; total, 76 species.

GOLDEN GATE.

Robins Abundant.

RALEIGH, N. C., Feb. 24.—*Editor Forest and Stream:* The second snow, the deepest this season, has gone. From Raleigh eastward it was heaviest. No sleet fell upon it. Sleet followed the first snow and covered a wide area. Reports do not show that either of the snows caused the death of much game. In the first place there were always sheltered places for the birds, and secondly there was a store of wild food for them. Great numbers of robins were killed soon after the first snow fell, they having made their appearance with the snow, so to speak, but their numbers seemed to increase, and never in all the years since I can remember have they been so plentiful. The State law permits the killing of robins up to the first of March, they being classed as game birds. They are only killed by negroes and a few boys, for sportsmen do not shoot them. Large quantities of field peas were planted last season and many of these were left unpicked. Quail are very fond of this food.

CORRESPONDENCE.

The **FOREST AND STREAM** is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Terms: \$3.00 a year; \$1.50 for six months. Single copies, 10 cents. Canadian subscriptions, \$4.00 a year; \$2.00 for six months. Foreign subscriptions, \$4.50 a year; \$2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line (\$2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra. Special rates for back cover in two or more colors. Reading notices, 75 cents per count line.

A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Advertisements should be received by Saturday previous to the issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

THE LESSON OF THE SUNK LANDS.

A COMMUNICATION which appears in another column draws attention to a matter that would, if fully exploited, astonish the shooting world. This is Mr. Greib's appreciation of the efforts that are being made by John W. Thompson, of the Missouri Game Commission, to break up the wholesale slaughter of wildfowl in the sunken lands of Southeast Missouri.

The work John W. Thompson is doing is deserving of the highest praise. Few men would care to do it, even though their courage be of the highest order. Mr. Thompson operates in one of the greatest wildfowl regions in America, among men who care nothing for the law and who do not hesitate to employ violence in defense of their acts if other means fail. And yet they are being tamed and subdued by this same quiet, unostentatious warden, who employs common sense where it may be employed, and force where force is necessary.

Wildfowl represent good money to the shiftless element in the sunk lands, and their acquisition without unnecessary labor is easy at certain times, and attractive in consequence. The markets of St. Louis, Chicago and many other smaller cities hold out a hand that is never filled to overflowing, there are myriads of avenues open to the shipment of game, and only a few men stand in the way of supplying a part of the demand. Why should the market hunters regard with equanimity the vigorous efforts of one man to stop the flow of money into their pockets? On the other hand, why do not the sportsmen

of Missouri bestir themselves and rally to the support of Warden Thompson when moral support is so badly needed in the southeastern portion of their State? Commissioner Tolerton's hands have been tied by politicians and enemies of game protection, so that he cannot prosecute as vigorous warfare on the market hunters as the situation warrants, but the sportsmen should see to it that more wardens are sent into the sunk lands and kept there until the last violator is jailed or forced to seek another occupation.

There are times, particularly in late winter, when the wildfowl are working north, that they are caught in a "pocket" by sudden cold snaps north and northwest of their line of flight. The sunk lands is one of these pockets. Another famous one is in the Illinois bottoms where, a few years ago, two or three St. Louis men slaughtered hundreds of ducks in an evening and morning flight in February, and took their way across the line hours before the wardens found it convenient to pursue them.

The sunk lands furnish one of the best of object lessons for those who oppose the Federal protection of wildfowl. They furnish a shining example of the fallacy of selling game to-day. They show that State departments, as at present constituted, cannot be bestirred, by public opinion or otherwise, to put a stop to bold violations that by every rule of economy are contrary to the well-being of the people. They show that a great State, one corner of which happens to have been depressed through earthquake, as it is believed, and afterward covered with water, forming a great game refuge, cannot preserve the wildfowl found there for its own citizens, who pay liberally for the privilege of taking a few in season.

Stopping the sale of game in the States where there are large markets will drive the market gunners out of the sunk lands. And any State which refuses to co-operate in this work will involuntarily assist in the passage of a Federal law to protect the wildfowl which that State has failed or neglected to protect.

Since this was written word comes to us that DeLisle Godair, one of the most notorious of Missouri's game law violators, and who was arrested by Warden Thompson recently for attempting to ship one hundred woodducks, has been convicted and will contemplate his recent activities with emotions best known to himself the while he serves the State. Shipping wildfowl has become unpopular for the time being, at least on the Missouri side of the great flowed lands.

THE FUR SEAL BILL.

WITH some slight and unimportant amendments, the bill to carry into effect the convention arranged last autumn between the United States, Great Britain, Japan and Russia, to stop pelagic sealing, passed the House, Wednesday, Feb. 14. The bill provides for a closed season in 1912, and thereafter permits the killing only of three-year-old males. It provides also that a graduated number of three-year-old males, varying from 3,000 to 5,000 a year, shall be reserved for breeding purposes.

The bill was passed after more or less acrimonious debate, which was interesting because on the one side were ranged a number of representatives who, themselves knowing nothing about the fur seals, were influenced by the persuasions of a small party of men who themselves

knew nothing about the fur seals. On the other side, and happily in the majority, were other legislators who were acting on the advice given by the Government fur seal experts and followed the opinions of all the best naturalists in the country.

Of the party who advocated the total cessation of fur seal killing, only one had ever seen a fur seal outside of a cage and had ever visited the fur seal islands and that one not for twenty years, in which time conditions there have so greatly changed that his experience counts for nothing. Most of those who urged the total stoppage of fur seal killing do not know a fur seal from a hair seal, and are no more qualified to give advice on a matter of this kind than would be a sheep man of Montana to advise on the breeding in confinement of the duck-billed platypus.

It is gratifying that the party of reason—the naturalists, the scientific societies, and the Government seal experts—was listened to, and that the forces of ignorance were defeated.

OUR FISHING NUMBER.

FOREST AND STREAM on March 23 will issue a special fishing number with a handsome trout fishing scene in colors on the cover. In stories and pictures it will contain enough reminders of the coming trout season to give every angler, not already under its spell, a genuine case of "fishing fever." Well-known writers will tell of their favorite fishing waters.

This reminds us of a few of the papers and stories that will appear in these columns from time to time, some of them in the special issue. "In the Pulpit," by E. P. Morris is not a sermon, but a whimsical account of a swordfishing cruise. And Horace W. Stokes will give a novice's impressions of this exciting sport. John W. Thompson will write of bass fishing in the sunk lands of Southeast Missouri; Roscoe Brumbaugh of outings near home; Will W. Christman of the birds and beasts an up-State farmer-naturalist is interested in; Frank S. Smith of sport in Australia; Walter B. Sheppard of the many curious natural history facts to be gleaned in Wyoming.

Frederick Arthur Dominy, of the Life Saving Corps, will contribute one of his quaint Long Island stories, "Jimmy, Fisherman." G. Plumley will cater to the wants of the inner man with "Fishing Lunches," and L. Lodian, who has traveled around the globe a few times, will describe the foods campers employ in other countries. Then S. D. Hooper will draw a pen picture of "Angling in the Cascades," and Miss Carita Lemmon will help along the fishing fever with "Half a Loaf" and pictures.

From the Philippines to Alaska is a far cry, but Arthur L. Griffiths will describe deer hunting in the islands and H. G. Schaupp will write of big-game hunting in the land of gold.

Other writers who will contribute papers on healthful outdoor sport are William Perry Brown, Henry D. Atwood, Frank C. Pellett, Theodore Gordon, O. W. Smith, Charles Stuart Moody, J. Lippincott Foster, Robert S. Lemmon, E. E. Bowles, Horatio Bigelow and many more.

CONSUL JOHN F. JEWELL, of Vladivostok, says that a blue fox farm, which is to be started on Karagin Island, Kamchatka, will be managed like similar farms in America.

YACHTING

Ticks from the Ship's Clock.

THE growth of the Ocean City (N. J.) Motor Boat Club has been so rapid that extensive alterations are now made to the club house, which was finished only last year. The roof has been raised and the third floor altered so that there are twenty-five dormitories for accommodating the club members.

The club is unique in the fact that it provides winter accommodation for week-end parties, and is the only South Jersey Club which extends this courtesy and hospitality to its members. In addition to the twenty-five dormitories, six shower baths have been added on this floor, and six hot water baths. There is also a suite of three rooms for the steward and his family who look after the comfort of the members so admirably. These alterations will make the club house one of the finest along the Jersey coast, with its original cost of the house representing an outlay of \$35,000.

It is with great pleasure we print the following card:

"Having been associated for the past twenty years with the late Manning's Yacht Agency, we now beg to advise you that we will continue the yacht brokerage business in all its branches under the name of Jennings Yacht Brokerage Company, Whitehall Building, 17 Battery place, New York city." (Signed by Henry H. Jennings and Herman Jagle.)

Consul James Oliver Laing, at Malta, Maltese Islands, reports that the victory of an American motor boat in a race recently held at that place has caused favorable comment among agents there dealing with motors of various kinds. The dealers in Malta read American motor boat magazines, and already have sold several American motors, the custom of motor boat builders being to build the boat at home and buy the motor abroad.

The King of Siam is about to order a new yacht to replace Maha Chakkri, the present vessel. Representatives of one British and one Japanese firm were recently in Bangkok with a view to obtaining the contract for the new vessel, which, it is understood, is to be of about 3,000 tons, of light draft, and fitted with either turbine or Diesel oil engines. It will probably carry seven 6-inch guns.

The well-known cutter Galatea, 90 tons, built in 1885 by Lieutenant Henn to compete for the America's Cup, and which has been lying at Plymouth, has now been sold by Marvins of the Cowes Yacht Agency for the executors of the late Mr. Henn to Mr. H. J. Beazley, of Southampton, and she will be leaving for the Solent this week. Galatea is of the plank on edge type so much in favor at the time of her build, with a beam of 15 feet only against a b. p. length of 90 feet, while her opponent, Mayflower, was an entirely different type of boat, being a shallow draft centerboard yacht with a beam of over 23 feet on a b. p. length of 87 feet and a measurement (American) of 80 tons and a Thames measurement of over 130 tons. Galatea will probably be worth more broken up than in her present yachting trim, being what is known among yachtsmen as a "lead mine."

Completely recovered from a severe attack of typhoid fever which has kept him at home for two months, Hollis Burgess is back in his office. He had two pleasant surprises during his illness. One was the notification that he had been made an honorary member of the Mosquito Fleet Y. C. through action taken at its annual meeting, and the other that he had been given similar membership in the Inter-Club Yacht Racing Association of Massachusetts. His is the first election to honorary membership in the Mosquito Fleet Club in the last twenty-five years, and the club has had only two other honorary members.

British Motor Boat Club's 21-Footer.

THE new model, here reproduced from Yachting World, is very pretty on the water and practically does not change trim from rest to the highest speed towed at, which was much in excess of that corresponding to the actual performance of last year's boat, the pull being less than that of Angela all the time. There was only a slight film of spray on each side, the stern of the boat passing right over the bow waves. Hitherto the absence of bow waves has only been achieved by so-called hydroplanes meeting the water at speed with a practically flat bottom, as wide or nearly as wide as the boat's greatest beam. This results in the bows of the boat being forced up in the air, it being easier for the water to pass under the boat than to one side. The action of a hydroplane is then similar to that of a man falling flat into the water instead of diving to break the fall, or, in other words, she pounds. Messrs. Cox and King's model splits the crest of waves vertically as an ordinary well-designed boat and keeps her trim without pounding.

Club Elections.

KNICKERBOCKER Y. C.

The Knickerbocker Y. C., organized in 1874, held its annual meeting last week, electing the following officers: Commodore, Dr. W. S. Spencer, auxiliary yawl Yankee II.; Vice-Commodore, W. F. Duffield, auxiliary sloop Maiden; Rear-Commodore, W. D. Griscom, auxiliary sloop Surprise; Secretary, J. O. Sinkinson; Treasurer, George H. Cooper; Measurer, George Stelz; Fleet Surgeon, Dr. W. H. Peer; Directors—Rodman Sands, Harry Stephenson, W. B. Dean, Alfred Schoen and Fred L. Kraemer.

HUGUENOT Y. C.

The officers elected on Feb. 17 were: Commodore, George W. Kear; Vice-Commodore, T. Irving Coe; Rear-Commodore, H. M. Williams; Secretary, J. Myrick, and Treasurer, G. P. Allen.

Others present included Commodore H. A. Jackson, of the New York A. C.; W. S. Creevy, Vice-Commodore of the New Rochelle Y. C., and Dr. Brennan, President of the New Rochelle Rowing Club.

HARLEM Y. C.

At the annual meeting of the Harlem Y. C.

BRITISH MOTOR BOAT CLUB'S 21-FOOTER.

the following officers and trustees were elected for the year 1912: Commodore, John A. Crowley, sloop Ediana; Vice-Commodore, Allan Gibson, yawl Sheelah; Rear-Commodore, Newall L. Mead, sloop Malolo; Treasurer, Edward J. Martin; Secretary, Edward Schaidt; Financial Secretary, Joseph E. Fegan; Measurer, John Wimmer; Fleet Surgeon, Dr. Thomas A. Martin; Chairman of Race Committee, Walter S. Sullivan.

The following were elected trustees of the class of 1912: Edward M. Hartman, Henry M. Schember and Carl Seifert; Class of 1913, Rudolph Weissker, Arthur H. Hall and Godfrey Branfeuhr.

The commodore appointed the following: Fleet Captain, William Yule; Delegates to Y. R. A. of Long Island Sound, Walter S. Sullivan and John Wimmer; Chairman of Entertainment Committee, Messrs. Weissker, Hall and Seifert; Membership Committee, Messrs. Hartman, Schember and Branfeuhr. The chairman of the race committee, W. S. Sullivan, announced the following appointments on that committee: E. M. Hartman and W. J. Fowler.

1912 Motor Boat Show.

WITH attendance and sales records broken, the eighth national motor boat show closed at the Madison Square Garden last Saturday night, the mingled ringing of bells and tooting of whistles sounding an impressive farewell to the annual exhibition. Almost to the last hour crowds as large as on any previous day of the show thronged the aisles, inspecting the medium and high power craft, engines and accessories.

From an exhibitor's standpoint the show has been a financial success, but to the national association it has been epoch making. It marked the first successful attempt of the organization to run affairs under its own auspices, instead of in connection with the Garden management, as heretofore, and there was a decrease of nearly \$30,000 in expenses this year.

A canvass of the many booths disclosed the fact that the majority of the boats on exhibition had been sold during the week and will soon be shipped to the new owners.

Henry R. Sutphen, chairman of the Exhibition Committee, was very enthusiastic over the progress that had been made in a year's time. "The motor boat industry is only in its early stage of growth. A great future lies before it." Mr. Sutphen was positive that the Garden would not be torn down until late in 1913, and that it would be the scene of one more motor boat show.

International Challenge.

COMMODORE H. H. MELVILLE, of the Motor Boat Club of America, received the following challenge for the British International trophy from the Royal Motor Y. C. of London:

"Royal Motor Y. C., London, Feb. 12.
"To the Secretary of the Motor Boat Club of America:

"Dear Sir—I am directed to forward to you a formal challenge of the Royal Motor Y. C. for this year's races for the British International trophy.

"Should be glad to receive your acknowledgment of the same in due course. Believe me, yours truly.

"W. A. JUPP, Secretary."

Commodore Melville held a meeting of the Board of Governors of the Motor Boat Club of America last Tuesday and formally accepted the challenge.

The Royal Motor Y. C. deserves great credit for the perseverance shown by it, as well as other British clubs, to reclaim the cup which stands for international motor boat supremacy. New boats are being built in Great Britain to try as candidates for the challenging team that will be sent to this country.

Mr. Dan Hanbury's new hydroplane, which has been specially designed by Sir John Thornycroft, and is of an improved type of Miranda IV., will be an entrant. One or more boats

have been in construction by French enthusiasts for months, and they undoubtedly will be sent over.

One of the French racers will be fitted with Panhard engines, the aggregate power being stated between 1,000 horsepower and 1,300 horsepower, the machinery installation being in the form of four engines, coupled two in tandem and driving twin screws.

The defense of the cup by the Motor Boat Club of America will be as representative as was the case last year. There is already about completed a defender for Mr. Albert E. Smith by the Electric Launch Company, of Bayonne, N. J., which has been named Columbia, the speed of which may be more than forty miles an hour.

Lawley & Son, of Neponset, Mass., are building a boat with engines of 800 horsepower, from the designs of Swasey, Raymond & Page, of Boston. Rustler II., owned by Mr. P. S. Chesebrough, built last year, but not completed in time for the international racing, will be tried out, and the engines of Dixie IV. will be purchased by a club syndicate and placed in a new hull.

Southern Speed Boats Championship.

THE southern championship races, held this season under the auspices of the St. Augustine Power Boat Club, over their course on the famous Matanzas Bay, opposite St. Augustine, should be the greatest sporting event in the history of the South, and a grat boon to the greatest of all sports—motor boat racing.

The dates set for the holding of these races are April 3, 4 and 5, 1912, and the American Power Boat Association has sanctioned the meet for those dates; all records made will stand as official.

The course will be either one of three and one-third or five miles in length and is triangular in its general shape, with no sharp turns.

Another advantage of this particular course, a chart of which is shown on the back of the enclosed entry blank, is that the boats are never out of sight of the judges, or any one of the many thousands of persons who will be enthusiastic onlookers.

There will be class racing as well as handicaps, based on performance.

The method of obtaining the time from which the handicaps are figured is by putting each boat over the course twice—before the first race—and taking her time then. This is done with every boat not later than the day before the races; the handicaps figured that night; and cards showing starting time and handicap of boat starting just ahead issued. This handicap will apply for first day's racing on all boats, but will be changed for each succeeding day, provided a boat has shown better speed during any race.

A boat is allowed one per cent. excess of speed time handed in for original handicap without penalty. Should this time be exceeded more than one per cent., and not over two per cent., such excess will be added to actual running time; should the time be exceeded more than two per cent. and not over three per cent., such excess will be doubled and added; should the time be exceeded more than three per cent. and not over four per cent., such time shall be tripled and added; should the time be exceeded more than four per cent. and not over five per cent., it shall be quadrupled and added; should such time be exceeded more than five per cent. a boat shall be disqualified for the race.

APRIL 3—MORNING.

10 A. M.—10-mile sprint for boats in 20-foot class. 11 A. M.—10-mile sprint for boats in 32-foot class. 12 M.—10-mile sprint for boats in 40-foot class.

AFTERNOON.

2 P. M.—10-mile handicap for boats of 20 to 25 miles' speed. 3 P. M.—10-mile handicap for

boats of 25 miles' speed and better. 4 P. M.—10-mile handicap free for all.

APRIL 4—MORNING.

10 A. M.—Special handicap for speed boats of less than 20 miles' speed.

AFTERNOON.

2 P. M.—25-mile handicap for boats of 25 miles' speed and better.

4 P. M.—25-mile handicap free for all.

APRIL 5—THE SOUTHERN CHAMPIONSHIP.

The southern championship shall be decided by running two grand handicaps of 50 miles each. Should two different boats win one race each, those two boats shall race off the tie in a 20-mile handicap the following day.

MORNING.

9:30 A. M.—50-mile grand handicap free for all.

AFTERNOON.

2 P. M.—50-mile grand handicap free for all.

Note.—To be eligible to entry in the southern championship a boat must have competed in at least 70 per cent. of the races for which she was eligible or show good cause for not doing so.

It is necessary for a boat to show not less than 20 miles in speed to be eligible for entry for any of the championship races. Special races for boats of less speed will be run if desired. The prizes aggregating \$1,000 in gold are offered, and the winners have the choice of either gold cups to the value of any prize won.

APRIL 3—MORNING.

First race, special cups; second race, special cups; third race, special cups.

AFTERNOON.

First race—first prize, \$50; second prize, \$25. Second race—first prize, \$50; second prize, \$25. Third race—first prize, \$50; second prize, \$25.

APRIL 4—MORNING.

First race, special cup.

AFTERNOON.

First race—first prize, \$75; second prize, \$25. Second race—first prize, \$100; second prize, \$50; third prize, \$25.

APRIL 5—MORNING.

First race—first prize, \$200; second prize, \$50.

YACHT and BOAT SAILING

By the late Dixon Kemp

Tenth edition. Published 1904. We have a copy in fairly good condition, published at \$12, which we will sell for \$9.00.

FOREST AND STREAM PUBLISHING CO.

AFTERNOON.

First race—first prize, \$200; second prize, \$50. There will be many handsome cups offered in addition to the cash prizes.

All prizes will be presented at the complimentary banquet given by the club in honor of the visiting yachtsmen on the evening of April 5. Every prize won will be presented and become the property of the winner at once—no strings being tied to any one of them.

Every boat entering these races must report to the handicapper in charge of the races, Mr. Chas. F. Hopkins, Jr., not later than the day before the first race in order that the time can be taken and the handicaps arranged. Should a boat be later than this in reporting, her time will be taken for entry in races for the following day, but she will not be allowed to enter for the day upon which she arrives.

The regatta committee shall be the court of appeals, and their decision in every case shall be final. Any objections must be filed with the chairman of this committee, in writing, not later than two hours after any race in which the cause for the objection has occurred.

For further information address Chas. F. Hopkins, Jr., Box 696, St. Augustine, Fla.

Joseph Story Fay.

JOSEPH STORY FAY, JR., died suddenly at his home in Boston on Feb. 4 in the 65th year of his age. He had been in failing health for three years, yet his death was not expected.

The deceased was the son of Joseph Story Fay and was born in Boston in 1847. After his preparatory education he entered Harvard, taking a special course in law, later entering upon an active business life.

He was fond of yachting, owning from time to time several small sloop yachts, including Queen Mab. Interested in International races, he sailed with General Paine in his Mayflower, and also Volunteer in the race between America and England.

Canoeing

Eastern Division, A. C. A.

WEST ROXBURY, Mass., Feb. 19.—*Editor Forest and Stream:* The Eastern Division of the American Canoe Association intends holding a dinner on Saturday evening, March 9, at the American House, Boston, and desires to have all members of the A. C. A. who can come and bring friends. The dinner will be \$2 per plate, and notice should be sent at once to Fred Brodbeck, Vice-Commodore Eastern Division, 5254 Washington street, West Roxbury, Mass., by all those intending to attend, stating the number of tickets required.

It is hoped that a goodly number will come together to talk over the Division Meet, which will be held at Long Pond, Lakeville, Mass., on June 15, 16 and 17. Any clothes excepting evening clothes will be full dress, and if members will wear some part or all of the rig that they usually wear to camp, so much the better; but come anyway and meet with all the other fellows, so that when we get into camp we will know each other without a formal introduction, which should never be necessary at an A. C. A. camp.

FRED BRODBECK.

Canoeing on the Lumbee River.

RALEIGH, N. C., Feb. 23.—*Editor Forest and Stream:* Some persons who are interested in camp life in the State have arranged to make a trip in canoes down the Lumbee River, which has its head near Pinehurst, and which runs through the sandhill country, clear and deep until it reaches the coastal plain where it becomes a very remarkable stream. It traverses the country in which live the people formerly

known as the Croatans. These Indians were referred to in a recent article by me. This Lumbee River canoe trip will be found extremely interesting, and the canoes, which are to be manned by Canadian voyageurs, will take the party through the rolling sandhills into the flat lands, all the way through the long leaf pine and further down through quite a lot of subtropical growth. The best fish are black bass, large yellow perch and what are known as the blue bream, which is so fine a fish that the United States Department of Fisheries has taken it up.

FRED A. OLDS.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—Harry S. Gault, 25 Sixth street, Philadelphia, Pa., by Henry B. Fort; Thomas R. G. Phipps, 2552 North Myrtlewood street, Philadelphia, Pa., by H. LeRoy Walker;

Julius A. Leroux, 2513 Seventh avenue, New York, N. Y., and J. Erlandsen, 308 W. 154th street, New York, N. Y., both by Thomas Zuk.

Central Division.—Clyde V. McCurdy, 349 Marguerite avenue, Wilmerding, Pa., by Percy W. Lander; W. Cordes Snyder, Snow Shoe, Pa., by H. E. McLain.

Western Division.—Harold P. Gould, Riverside, Ill., by A. M. Callman; Louis A. Boyle, 133 Fourth street, Aurora, Ill., and Robert J. Nordhold, 1318 Cornelia street, Chicago, Ill., both by J. E. Dixon.

MEMBER TRANSFERRED.

2088, William C. Jupp, 55 Park Row, New York, N. Y., from Western Division to Atlantic Division.

RESIGNATIONS.

Eastern Division.—5706, Wm. B. Carpenter, Providence, R. I.; 4082, Mahlon D. Currier, Lawrence, Mass.; 4112, Dr. L. G. Haskell, Jacksonville, Florida.

TRAP SHOOTING

Aug. 1.—Plattsville (Wis.) G. C. F. J. Bridges, Sec'y.

Aug. 6.—Belle Vernon, Pa.—Western Pennsylvania Trapshooters' League tournament, under the auspices of the Belle Vernon G. C. B. F. Daugherty, Sec'y.

Aug. 7-8.—Lindsay, (Okla.) G. C. Robt. May, Sec'y.

Aug. 10-11.—Chicago (Ill.) G. C. E. B. Shogren, Sec'y.

Aug. 14-16.—Kansas City, Mo.—The Interstate Association's Seventh Western Handicap tournament, under the auspices of the Kansas City G. C.; \$1,000 added money. The winner of first place in the Western Handicap is guaranteed \$250 in cash and a trophy. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.

Aug. 20-21.—Sioux Falls (S. D.) G. C. A. Olson, Sec'y.

Aug. 27-29.—Portland, Ore.—The Interstate Association's seventh Pacific Coast Handicap tournament, under the auspices of the Portland G. C.; \$1,000 added money. The winner of first place in the Pacific Coast Handicap is guaranteed \$250 in cash and a trophy. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.

Sept. 2.—Ogdensburg (N. Y.) S. A. J. M. Morley, Sec.

Sept. 10.—McKeesport, Pa.—Western Pennsylvania Trapshooters' League tournament, under the auspices of the Youghiogheny Country Club. R. J. Cughey, Sec'y.

Sept. 10-13.—Denver, Colo.—Rocky Mountain Interstate Sportsmen's Association; \$5,000 added money. Ambrose E. McKenzie, Mgr.

DRIVERS AND TWISTERS.

Interclub and University handicap will be held at Travers Island under auspices of New York Athletic Club on April 6, and the American championship on April 3 and 4.

At the annual banquet of the Spring Lake Rod and Gun Club at Streator, Ill., plans were discussed for the coming season. The club was organized fourteen years ago and now has a membership of sixty central Illinois sportsmen. Several trapshoots are planned for the spring months.

The Braidwood (Ill.) Gun Club was incorporated last week and will hold periodical trapshooting tournaments. The incorporators are Walter F. Beland, Roy Griffith and D. S. Barr, well-known sportsmen of Braidwood. Marksmen of Will and adjacent counties will be invited to join the new organization.

Trapshooters of Decatur are making an effort to revive the gun club organization which dissolved last fall. H. W. Cadwallader, the well-known trapshot, has been active in working up interest in the organization, and a meeting will be called in March to elect officers. The shooters at Decatur will not re-enter the Central Illinois Trapshooters' League, but prefer an independent organization.

Elmer E. Shaner says: The tournament registered for New Orleans, La., April 15-17, under the auspices of the City Park Gun Club, will be the Louisiana State tournament. The dates of the Camden Gun Club's tournament, scheduled for Camden, Ark., May 15-16 have been changed to May 8-9. The dates of the New York State tournament, scheduled for Syracuse, N. Y., June 10-13, have been changed to June 11-13. June 10 will be practice day."

The newly organized gun club at Hyattsville, Md., has elected the following officers: President, George B. Luckey; Secretary, Judge John Gibson; Treasurer, G. Hodges Carr; Field Captain, C. B. W. Chapman. Some doubt was entertained, in view of the statute against target practice in Prince George's county, where the sport could be legally conducted, and the matter was referred to Messrs. James C. Rogers and Charles W. Clagett, attorneys, for investigation and report. President Luckey and Messrs. J. Lee D. Clagett and Chapman were named to draft a constitution and by-laws. Messrs. Porter and Chapman were appointed a committee to select proper shooting grounds, and also to look into the matter of securing traps and shells. Each charter member will be assessed \$5, it being estimated that more than \$100 will be necessary to inaugurate the project.

Elmer E. Shaner, Secretary-Treasurer of the Interstate Association, writes us: "The many friends of Mr. Bernard Elsesser, the popular secretary of the Pennsylvania State Sportsmen's Association, who has been seriously ill for the past three weeks with pleuropneumonia, will be pleased, I know, to learn that a telegram from his wife advises me that the crisis has been passed, and that the doctors report Mr. Elsesser's condition as being favorable for recovery. I am quite sure that Mr. Elsesser's many friends will join with me in wishing him a speedy return to good health."

The Jersey City Gun Club will hold an all-day shoot on March 20. Shooting will commence at 10:30 sharp. Two McCrea automatic traps will be used. The program will include ten events of 20 birds each, optional sweeps. Should there be twenty to shoot through the program, the club will contribute \$25, to be divided high gun, \$10, \$7.50, \$5, \$2.50. Targets, 2 cents each. Shells of all standard loads and makes for sale. Lunch served at a nominal price. Money will be divided by the Rose system, 5, 3, 2, 1. For information write R. Young, secretary, 383 Fairmount avenue, Jersey City, N. J.

At the annual meeting of the Lock Haven Gun Club the following members were elected to serve as the officers of the club for the ensuing year: R. H. Stewart, President; Dr. H. W. Klapp, Vice-President; C. A. Jobson, Secretary; L. J. Jarshishek, Assistant Secretary; C. M. Flack, Treasurer; P. S. Kift, Field Captain. The annual two days' shoot of this flourishing, up-to-date club will be held on Aug. 6 and 7 next. After the meeting one hundred members and invited guests of the club surrounded the banquet board in the spacious dining room of the new Commercial Hotel, and did ample justice to an elaborate layout of turkey and all the accessories necessary to a first-class dinner. The banquet is an annual affair, and is enjoyed by the members and their friends.

The Spring Valley Shooting Association, of Reading, Pa., will hold a live-bird shoot on March 9, on their grounds at Spring Valley, Pa. Trolley cars leave Fifth and Penn streets on the hour and half-hour direct to grounds. The first event will be the preliminary handicap, 10 birds, \$5 entrance; the second event, the Spring Valley handicap, at 15 birds, \$8 entrance; handicap distance, 27 to 31yds. Percentage system governs all events under Interstate rules. Shoot starts promptly at 1 P.M. Further information can be had by addressing E. H. Adams, secretary, 1805 Perkiomen avenue, Reading, Pa. The Spring Valley grounds are the leading shooting grounds in the State, and always draw a good crowd of shooters. At the recent shoot held there, a 20-bird race, Fred W. Dinger, of Harrisburg, was high gun with 19 kills. Several of the shooters had 18 to their credit. A silver loving cup will be given to the shooter making the highest score in these two events.

In another column will be found a letter from the Olympic shooting committee to every man wishing to offer himself as a prospect for that team. It is hoped that all American amateur shooters who honestly feel themselves eligible for this team will notify R. L. Spotts, 105 Hudson street, New York city immediately. This committee has a tremendous task, albeit a thankless one, on its hands to select the team, and time is none too long before the successful candidates must be ready to go over the water. The committee is working conscientiously and deserves the support of every trapshooter, amateur and professional. Let's all stop the talk of "conditions imposed" by the Olympic committee, and, to quote a letter from Carl von Lengerke, printed in last week's issue of FOREST AND STREAM: "I hope 'our boys' will go over there, meet them at their own game, beat them on their own 'dunghill' and keep up the unblemished reputation of good American sportsmanship, win or lose, and not raise a 'howl' about conditions." This is the spirit of true American sportsmanship. If you haven't it already, get it. Make it contagious, so that when the shoot is over and the trophy is hidden away in America, wherever the imported trophies generally go, there will be no soreheads crying "I didn't get a chance." BEECROFT.

Laurel Gun Club.

LAUREL, Miss., Feb. 20.—At a special shoot this afternoon in honor of Mr. Gibbs, the following scores were made: Shot at. Broke. Shot at. Broke
Dr C M Davis. 75 49 Dr Scarborough 75 40
H D Gibbs..... 75 58 Decker 61 25
V Johnson 75 60 H N Rogers... 50 29
Thursdays are the regular shooting days of this club. H. N. ROGERS, Sec'y.

New York Athletic Club.

TRAVERS ISLAND, N. Y., Feb. 24.—Rattling weather here to-day, but it didn't coax a great entry list. Most prominent was B. M. Higginson, who made 94 out of 100 for high gun of the day, and in Lenane cup event made a full score from 4 handicap. O. C. Grinnell beat McMahon in shoot-off for February cup, which gave him the trophy. D. F. McMahon won leg on Lenane cup after a shoot-off with Billings, Simpson, Huggins and Grinnell. Billings won ten pair doubles scratch event with 14.

Billings won the Billings cup, field position rules, after a shoot off with Grinnell.

February cup, 25 targets, handicap:

------------------	------	-----------------	------

*Guest.
S. A. Ellis was high gun for the day with (6) 147. R. A. Faye was high scratch gun for the day with 124. The wind was still high in the afternoon.
C. B. TUCKER, Capt.

Ohio State Championship.

THE annual contest for the white flier championship of Ohio was held on the grounds of the Crystal Lake Gun Club at Ryland, Ky., on Feb. 22. The attendance was not up to expectations, owing to the bad weather. On Wednesday night a blizzard visited this section, and its force was not spent on Thursday morning, for at train time the wind was still blowing a gale, and the air was full of snow. A dozen shooters, however, went down early, only to find that the supply of birds had not arrived on account of delays to trains. The forenoon was passed with a miss-and-out event at targets. The birds reached the grounds about 2:30 in the afternoon, and the match was started at once with thirteen entries, R. H. West, Jr., acting as referee. The mercury stood at a number of degrees below freezing, and the wind was still blowing hard across the traps, making extremely hard shooting conditions. The birds were the hardest and fastest lot trapped on these grounds for many months, and with the aid of the wind a large majority proved to be screamers. There were very few sitters, and most of these developed a speed, when they did start, that carried them safely over the boundary. Left-quarterers, going with the wind, were the hardest proposition, and unless stopped with the first barrel, invariably got away to be scored "dead out" or lost. The scores give a very good idea of the conditions, as it is seldom that these shooters have so many lost birds recorded against them. Late in the afternoon, it was seen that it would be impossible to finish by dark, so all but the residents of Ohio dropped out on the 33d round, leaving five men, Rowe, Hessler, Johnson, Payne and Hake, to fight it out for the title and trophy. At the end of the 25th round Rowe had lost but one bird, his 4th, dead out, and was 2 ahead of Hake. The last half of the match found both men shooting in poorer form than at first, owing to the cold and the failing light, but Hake made the better showing and led by 2 birds, thus tying the score on a total of 41. In the shoot-off at 5 birds, Rowe killed the first 3 and lost his 4th and 5th. Hake lost his 1st, 2d and 4th birds, and lost the match after putting up a good fight. Payne was second with 40, killing 21 in the last half. Hessler finished third. The afternoon was pleasant with the exception of the wind. The match was shot in strings of 5 birds to each man, in order to save time, and finish the match. Dan Pohlar, the previous holder of the title, was unable to be present. The target event was shot under the old-time rule of "gun below the elbow," and this, together with the fact that the targets were thrown further than usual, accounts for the low scores. Hammerschmidt won with 14, and Johnson was second on 13. The former also won the miss-and-out event, Irwin and Nicholas tying for second place. Scores:

Miss-and-out, \$2 entrance: Hammerschmidt 7, Irwin 6, Nicholas 6, Dameron 5, Rowe 3, Payne 3, Schreck 2, Walker 1, Robbins 1, Hessler 0.

Match: Nicholas 4, Hammerschmidt 4. Kalamazoo championship, 25 targets, gun below elbow: Hammerschmidt 14, Johnson 13, Hessler 12, Schreck 11, Dameron 9, Rowe 8, Payne 8, Robbins 8, Irwin 7.

Ohio State championship, 50 live birds: Hammerschmidt 22-22, Irwin 20-20, Dameron 20-20, Rowe 21-21, Walker 20-20, Schreck 21-21, Robbins 20-20, Hessler 20-20, Johnson 21-21, Nicholas 21-21, Payne 21-21, Voige 21-21, Hake 21-21. Shoot-off of tie, 5 birds: H. Rowe 3, H. Hake 1.

Crescent Athletic Club.

BAY RIDGE, N. Y., Feb. 24.—Under excellent conditions the Crescent Athletic Club turned out in large numbers to-day, and in the seven matches, many full scores were returned.

In the feature contest of the day, a 100 target handicap match for the take-home trophy, H. M. Brigham proved to be the high gun. With a handicap of 1, he broke 95 out of his possible 100 targets. His four strings were: 21, 25, 25, 25. W. Pell was the runner-up with 91. Scores:

Take-home trophy, 100 targets, handicap: H M Brigham 1 95, W W Pell 5 94, F B Stephenson 0 91, J P Sousa 4 91, L C Hopkins 5 89, C Blake 3 88, J F James 0 87, G N Felix 3 87, C Ramapo 3 87, J P Fairchild 1 81. February cup, 25 targets, handicap: F S Hyatt 1 24, C R James 0 24, W W Pell 5 24, C W Berner 2 23, H M Brigham 1 22, G G Stephenson 3 22, J P Sousa 4 21, S C Hopkins 5 21.

AUTOLOADING SHOTGUN

Five shots—Three to get the Cripples. Each separate shot under absolute control of the trigger finger. The action is simple; powerful and sure. Part of the recoil, ordinarily absorbed by the shooter's shoulder, is used to operate the mechanism. Not one single ounce of muzzle energy is lost. Handles the heaviest loads with least punishment. Handles all loads with equal ease and safety, and—a solid wall of steel stands between the shooter's face and the firing chamber always. As a repeater it is better balanced—quicker pointing—faster. As a single-loader it is simpler to operate. The simple completeness of the take-down permits ready cleaning of the barrel from the breech. The take-down screw is large and easily handled. Taken down the Remington-UMC Autoloading Shotgun measures 32 inches over all. Costs a little more because it is worth a little more.

Remington-UMC—the perfect shooting combination

REMINGTON ARMS — UNION METALLIC CARTRIDGE CO. 299 Broadway - - - - - New York City

Best three scores for month: G G Stephenson, Jr. 23 22 24-69, F B Stephenson 21 23 24-68. F. B. Stephenson trophy, 25 targets, handicap: C A Ramapo 4 25, W W Pell 5 25, A Blake 4 25, C Blake 4 25, H M Brigham 1 24, L C Hopkins 5 24, J P Fairchild 2 24, G N Felix 3 23, F S Hyatt 1 22, F B Adams 0 21, J P Sousa 4 21. Best 100 out of 150 targets for month: J P Fairchild 91. F. S. Hyatt trophy, gun below elbow, 50 targets: F B Stephenson 42, G G Stephenson 41, G E Brower 37, H T Spooner 34, W W Pell 34, L C Hopkins 33.

Crystal Lake Gun Club.

THE fourth contest in the series for the club trophy had only seven entries, and was won by Geo. Walker on a perfect score of 25, shooting from 33yds. Roanoke, Jr., kept up with him until the 12th bird, which he missed; his 20th bird also got away, and he finished second with J. Schreck on 23 each. The conditions were fairly good, and the birds an average lot. Walker now has two wins to his credit, and one more will give him the trophy and purse.

Fourth trophy contest, 25 birds, handicap rise: Walker, 33 222121222222222222222222-25, Schreck, 33 222022222222222222212222-23, Roanoke, Jr., 29 1222112111202112111022212-23, Payne, 32 212222201202221222021222-22, D Pohlar, 31 1222110222102221102210211-21, Rowe, 31 2221202022221211110120121-21, Robbins, 28 0221200022.22212222102210-18. No. 2, 10 live birds: Payne 2212122210-9, Pohlar 1102222202-8, Roanoke, Jr. 1221011120-8, Walker 1111000222-7, Schreck 0220202221-7.

Olympic Trapshooting Committee.

HAVING noticed several letters in your magazine relative to the fairness of the trap-shooting rules as adopted by the Swedish Olympic Games Committee—also answering your inquiry as to our opinion of same—want to say we feel it is entirely fair to enforce the "field position," as the United States and Canada are practically the only countries that shoot the gun to the shoulder position, really a small percentage of the countries that will compete, and because we have adopted a style practically of our own is no reason why we should ask to be favored.

The argument, of course, is that it is an amateur world's championship, and that each style of shooting should be given its chance to show its superiority, but against that we must remember that clay bird shooting as we know it to-day is the outcome of the live-bird shooting.

This championship is to decide who are the best shots, and we do not believe that anyone would say but that the "field position" is the natural position from which shooting must be done, especially when one is hunting.

We are entering a team for the United States and are going over there confident that in this country of ours we have just as good shots as there are any place in the world.

The American amateur trap-shooter, we think, is one of the fairest, squarest lovers of good fair sport in the world, and we believe we voice the sentiment of a very large percentage of them when we say that we are going over there to win if we can, asking no favors. If we lose, it is because they have better natural shots than we have in this country.

The amateur shooter of America stands for "good, clean, fair sport," and, we believe, has quite enough ability to adapt himself to any conditions that are adopted by the other countries, and we have yet to meet the first one who asks to be favored or would accept a favor to increase his chances to win. If at some later time these games are held in America, no doubt the rules and regulations will allow any style of position the shooter cares to adopt, but we feel now that it would be unsportsmanlike if the American shooters did enter a protest against the conditions as laid down or ask that they be changed in any way, as we are invited to compete under certain conditions, and when we enter, we accept the conditions, and if we do not care to, we do not need to compete.

Above all things we believe that the American sportsman is not a "quitter" or a "kicker," and do not feel that they want to place themselves on record as such. Also, that the team that represents this country, when finally selected, will go to Stockholm to win or lose gracefully.

We also feel that the public criticism of the program, if continued, will only reflect on the team when they arrive at the games, as we find comments made in this country are published abroad, whether true or not, but we want the good will of all the countries competing.

The Olympic Trapshooting Committee requests that any trap-shooter who would care to make the all-American amateur team to shoot at Stockholm, Sweden, and who is willing to pay his own expense for the trip, send his name in to R. L. Spotts, Secretary, No. 105 Hudson street, New York city.

The team will consist of nine men, six to shoot and three substitutes, and will be selected by the committee from the applications received.

Anyone who does not make the team and who would want to shoot for the "World's Olympic Individual Championship" will have to send in their names as early as possible to the secretary.

Twelve men can represent America.

On receipt of application particulars of style of shooting and instructions will be sent.

C. W. BILLINGS, FRANK HALL, R. L. SPOTTS,

Olympic Games Trapshooting Committee.

International Trapshooting Tournament Program.

Madison Square Garden, March 2 to 9.

FROM March 2 until March 9, inclusive, except Sunday, the traps will be open from 11 A. M. to 2 P. M., and from 5 to 7:30 P. M., for shooters to qualify for the final round in the championship contest, which will take place on March 9 at 5 P. M. Conditions will be as follows: The qualifying rounds will be 50 targets per man, re-entries unlimited, entrance price of targets at 2 cents each. The final round will be 100 targets per man, entrance price of targets at 2 cents each. Those eligible to compete in the final round in the championship will be the ten contestants present having respectively the ten highest scores made in the previous qualifying rounds shot on any of the preceding days of the tournament. No contestant can qualify with more than one score, that score being the highest made by him in any qualifying rounds. As re-entries for the qualifying rounds are unlimited, any contestant can, during the qualifying rounds, try to better any record made by him in the previous rounds.

Prizes.—Prizes in the International indoor amateur championship are as follows: To the winner in the final round of the championship contest will be donated a handsome gold watch fob, emblematic of the international indoor amateur championship. To the contestants making the second highest score will be donated a silver watch fob. To the contestants making the third highest score will be donated a bronze watch fob. In addition to the above prizes, the management will donate a prize each day to the contestants making the highest score in the qualifying rounds shot that day. In case of a tie, such tie will be shot off next day at 25 targets.

Special events will be arranged as the occasion requires. Optional sweeps will be run in connection with all practice and scheduled events. Intercity three-man team races will be shot in connection with the 50-target events. Arrangements can be made with the management for special matches, team contests, etc., to be shot during the tournament.

A special prize will be given by the management to the professional shooter making the best general average during the tournament. To qualify for this prize, the contestant must take part in the competition every day. No re-entry score will be counted. Should a contestant shoot two or more scores of 50 targets each on any day, his score on that day shall alone be credited for this prize. His score on that day shall alone be credited for this average.

Experts will be in attendance each day from 9 to 11 o'clock A. M., to give instructions to novices at the traps. Make your wants known to the management of the tournament. There will be no charge for instructions. A complete assortment of factory loaded shells will be on sale. Luther J. Squier will manage the shoot.

For further information write S. M. Van Allen, General Manager, 339 Fifth avenue, New York.

Ossining Gun Club.

OSSINING, N. Y., Feb. 23.—The annual president's shoot of the Ossining Gun Club was held on Feb. 22. This shoot is so called, for the president of the club, Col. Franklin Brandreth, each year donates prizes for the members to compete for. This year he donated thirty-four silver cups, no two alike. There were thirty-one shooters, so very one got a prize. The shooters were divided into three classes—A, B and C. Each shooter took his choice of a prize according to his score. The following are the scores at 50 targets each:

Table with 2 columns of names and scores for Class A, Class B, and Class C.

Table with 2 columns of names and scores for Class B and Class C.

Table with 2 columns of names and scores for Class C.

Special event, open to all, 15 targets, for three cups, high guns. This is where Lawrence, Jr., put it over his "dad."

Table with 2 columns of names and scores for the special event.

SECRETARY.

Queens C. C.

QUEENS, L. I., Feb. 24.—The principal event was a 50-target match here to-day for a cup offered by T. R. Chapman, which he himself won with a total of 49. In a special prize shoot, C. Voegel, H. K. Morrell and W. Simonson tied with 46 out of 50. W. Simonson won the shoot-off. The scores:

Table with 4 columns of names and scores for Chapman cup, 50 targets, handicap.

Table with 4 columns of names and scores for Special shoot, 50 targets, handicap.

Table with 4 columns of names and scores for Shoot-off, 25 targets, scratch.

Mineral Springs Gun Club.

WILLOW GROVE, Feb. 24.—The Mineral Springs Gun Club held an interesting target shoot on the range of the Mineral Springs organization this afternoon. Hiltbeitel carried off the high-gun trophy, and was also one of four "spoon" winners. Other winners were Cooper, Nice and Beans. The scores:

Table with 4 columns of names and scores for First event, 25 targets, handicap.

Table with 4 columns of names and scores for Second event, 25 targets, handicap.

Table with 4 columns of names and scores for Third event, 25 targets, handicap.

Table with 4 columns of names and scores for Fourth event, 25 targets, handicap.

Harrisburg Sportsmen's Association.

HARRISBURG, Pa., Feb. 22.—The Harrisburg Sportsmen's Association held its annual live-bird shoot on their usual date, Washington's Birthday. The program called for 20 live birds. This was the rawest day of the season, wind blowing a hundred miles an hour, thus keeping many shooters away. The big race could not be shot off. A 10-bird race was opened at \$5 entrance, in which eleven participated. In the second event, also a 10-bird race, fifteen entered at \$5. John Shupp served as referee in the first event, and Lutz in the second event.

In event No. 1, Oliver, of Harrisburg, and John Rehrig, of Port Carbon, Pa., were high guns with 9 kills. This showed exceptional skill in this gale of wind. Dinger, the old "skeeter," and Worden landed second money with 8 kills. Sam Trafford, of Lebanon, Pa., scored 7 alone for third money—a great honor to his credit. Eisenhour lost 6 birds in this event, but showed the boys his skill when he landed for first money in the second event.

Emmers and Ziegler, both of Royersford, Pa., arrived in time to enter in the second event and landed for second money. They invited the boys to their grounds for their registered tournament on June 1, 1912.

Worden and Eisenhour, both of the home club, landed first money with 8 kills. Fred wasn't in it this time. Seven kills was the second money in this event and was won by five contestants, viz., Oliver, Emmers, Ziegler, Schmoyer and Dinger—a sandwich and a cup of coffee. George Washington Trafford got third money with 6 kills and losing 2 dead out of bounds—exceptionally well done for G. W.

The events were completed at 4:30 P. M. with but fifteen contestants, owing to the fearful storm. Two years ago sixty-five shooters had entered the game.

About 900 birds were left untouched, which will very likely be shot on another date.

Hot coffee and sandwiches were always in readiness for the trappers and members.

Lesneski and Schmoyer agreed to shoot a 25-bird race for \$25 in the near future. Grounds neutral.

Table with 2 columns of names and scores for Event No. 1, 10 birds, entrance \$5; and Event No. 2, 10 birds, entrance \$5.

LUDDY.

Registered Tournaments.

THE tournaments registered with the Interstate Association during the week ending Feb. 24, follow:

- List of registered tournaments including Chicago (Ill.), Kankakee (Ill.), Spring Valley (Minn.), Lexington, Ky., Delta (Colo.), Portage (Wis.), Buffalo (N. Y.), Bunker Hill (Ill.), Little Rock, Ark., Plattsville (Wis.), and Chicago (Ill.).

Eagle Gun Club.

MANOA, Pa., Feb. 24.—A dozen marksmen took part in the weekly event of the Eagle Gun Club this afternoon at Manoa, and Wolfenden and Bivens made straights. Dideon had a possible chance to also share in first money until he called for his last bird. That pigeon proved to be a screamer, and taking a left quartering flight, escaped both barrels. This put Gideon in a tie with four others for second money. The scores:

Table with 2 columns of names and scores for Eagle Gun Club.

Montclair Gun Club.

MONTCLAIR, N. J., Feb. 24.—The fourth leg on the members' trophy was shot to-day. It was won by J. C. Atwater. Edward Winslow leads with two victories, while Crane and Atwater each have one. The scores:

Table with 2 columns of names and scores for First round.

Table with 2 columns of names and scores for Second round.

In the shoot-off between Atwater and Crane the former won—(5) 21 to Crane's (6) 22.

Chicago Gun Club.

CHICAGO, Ill., Feb. 18.—A field of forty-six shooters is good evidence that we had a pleasant day for shooting, and it certainly was, as the weather was like a fine spring day, and quite a treat from the weather we have had since the first of the year.

Kammerer, Jeff and Schultz had the best of a special match, with May, Goode and MacLachlan, the race being at 50 targets per man for the dinners.

In the club event at 50 targets, Classes A and B, shooting 50 targets, Bills again topped the list with 49 out of 50.

Jeff and MacLachlan each recorded a score of 21 out of 12 pairs, the latter also getting two 20s and a 19.

Shrigley got into the fray to-day, but does not feel quite strong enough to shoot over 50.

Events Nos. 4, 5, 6, 7, and 10 were at 12 pairs each.

Table with 11 columns (Events 1-11) and 11 rows of names and scores. Includes names like Kammerer, Goode, May, Jeff, MacLachlan, Schultz, Bills, Keller, Davis, Wolfe, Shrigley, Crocker, Fetherston, Graham, White, Meisner, Moore, Keller, Shogren, Walsh, Seelig, Miller, Dickerman, Poole, Hanson, Cutler, Selver, Davis, Wilcox, Cannon, Malmgren, Mott, Boyle, Albrecht, Earl, Bowman, Eck, George, Griffith.

Feb. 17.—The fairly pleasant weather to-day resulted in nineteen shooters turning out. In the club event, at 50 targets, Barto was high amateur with a score of 46, being tied by Amman, Goode being next in line with 45, he being tied by Mitchell.

Table with 11 columns (Events 1-11) and 11 rows of names and scores. Includes names like Barto, May, Goode, Jeff, MacLachlan, Davis, Stannard, Taggart, Mitchell, Ammann, Parker, Young, Paddock, Poole, Spangler, White, Mathews, Fox, Pottinger.

Jersey City Gun Club.

JERSEY CITY, N. J., Feb. 24.—Ten shooters were out at the Saturday shoot of the Jersey City Gun Club on Saturday, Feb. 24. It was one of the finest days for trapshooting that one could wish for, as there was no wind at all.

Table with 4 columns: Name, Shot at, Broke, Name, Shot at, Broke. Includes names like Piercy, Lawton, Engle, Hallinger, Dixon, Flaccus, Kurzal, Simpson, Brady, Bill.

Inter-Club Record Again Boosted By WINCHESTER .22 Cal. Rifles and Cartridges

WONDERFUL to tell, the phenomenal Inter-Club Record of 995 out of a possible 1,000 points made by the Winchester Rod and Gun Club, of New Haven, Conn., has been beaten, but it took the same club to do it and the same shooting equipment.

Composite of the 100 Shots

- G. W. Chesley, - - - 200
Capt. W. H. Richard, - 199
H. S. Williams, - - - 199
M. O. Buttsteadt, - - 199
Capt. A. F. Laudensack, 198
995

Composite of Chesley's Targets

This makes three times in succession members of the Winchester Rod and Gun Club have broken the Inter-Club Record, and in each instance every shooter used exclusively Winchester Rifles and Cartridges. If anything were needed to further convince informed shooters that Winchester Rifles and Cartridges have exceptionally good shooting qualities, these performances would change their conviction into a dead certainty.

You Won't Go Wrong If You Shoot The Red W Combination

Cleveland Gun Club.

CLEVELAND, O., Feb. 18.—The regular weekly shoot of the Cleveland Gun Club, held Saturday afternoon at the club's shooting park, was an up-to-date shooting match with a good bunch of target breakers, and if we had had with us the regulars, it would have been a record-breaking crowd for a winter day; but they are coming, one by one, and will be all on deck by the time the bluebirds come.

The shoot of Saturday was a merry one for high gun between Mr. C. E. Doolittle and W. H. Archer, the former winning by one target, with scores of 95 and 94 out of 100.

The president, E. S. Rogers, who has been away from the city most of this year, has been missed very much; he is always doing something to keep the ball rolling; but his troubles will soon be over, and then he will be at his old stand, which all hands will be glad to see.

would have something to remind us of what they look like, but we would sooner have the real thing, so brace up and renew your acquaintance and refresh your mind and body, which every man needs. Following are the scores:

- Event No. 1, monthly trophy, 50 targets, 16yds.: Archer 49, Doolittle 47, L. M. Weeden 46, Weeden 45, Dr. Brown 45, Flick 43, Mack 41, Stevens 41, Afflick 41, Brown 40, North 38, Wall 38, Morris 38, Rockwell 37, Hopkins 36, Z. Thorpe 29, Brainard 28, F. Thorp 28, Steney 26.
Event No. 2, annual trophy, 50 targets, 16yds.: Doolittle 48, Scott 45, Archer 45, F. M. Weeden 44, Dr. Brown 44, Morris 43, Weeden 43, Stevens 41, North 39, Hopkins 37, Rockwell 37, Flick 36, Wall 36, Hopp 33, Thorp 32, Brainard 31.
Event No. 3, 25 targets, gun below the elbow until the bird is on the wing, 16yds. rise: Dr. Brown 23, Flick 19, F. M. Weeden 18, Hopkins 19, Brown 20, Weeden 17, Stevens 16, Hopp 14, Steney 10.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Mobile Gun Club Tournament.

Tom Cassety ("Rabbit Eyes"), back in the game, is an awfully good thing for the game, and the U. M. C. Co., are to be congratulated on securing his services.

Rabbit's many Mobile friends wish him unbounded success and will do everything in their power to help him along and keep him forever and ever with us and the shooting game.

Walter Huff, as smiling and good-natured as ever, ran in on us with two wild turkeys and treated a number of his friends to an elegant dinner in the Vineyard of Cawthon Hotel. Come again, Walter, with or without turkeys; you are always welcome.

Fred Stone, of Montgomery & Stone Theatrical Co., shot with us part of the last day, and shot well, too. Fred dealt Walter Huff an awful blow during the performance Friday night, by announcing from the stage that Walter had said he never missed a target, and that all targets scored him as lost were made of tin and therefore wouldn't break. Walter got even, though, by making Stone furnish a number of passes to his show which was thoroughly enjoyed.

We are in receipt of a letter from Houston, Tex., signed Sunny South Handicap, telling of a shipment by express or otherwise (the otherwise a cattle car) one Nick Arie, and requesting that immediately after the shoot we tag him for home and see that he got away safely. This Nick won all our money and a silver loving cup, and we understand went home in a Pullman, so he could sleep with his cup under his pillow, thereby keeping his running mate, Ben Schwartz, from stealing same.

Rollo (Pop) Heikes is always a welcome visitor to Mobile, not only by the present-day shooters, but by all living members of old-time clubs.

Mr. H. P. Voss, one of the best-known men in Mobile, and in his day (he is not old yet), one of the best shots, and still an authority on everything pertaining to guns and shooting, was so glad to see "Pop" that he quit his business and refereed for us all of one day.

Guy Ward says that since he has been with Stevens Arms Co., it is next to impossible to keep a gun, as some one will borrow same to shoot in two or three events and then demand that he sell them that very gun. I don't blame the buyer, as a gun once used by Guy Ward must be well trained; but I pity poor Guy, who has to wait until he can get another gun from the factory.

We have known Jake ("Nigger") Gibs a long while, but this is the first time he has honored our city with his presence. Now he wants to purchase the Cawthon Hotel and spend the rest of his days in the Vineyard. If he can't succeed in this, he promises to visit us just as often as his company will allow, and maybe some few times without their knowledge.

Dr. Lawson, of Greensboro, Ala., a bank president, therefore a law-abiding citizen, wouldn't shoot with us on the second day because he unintentionally killed a white flyer target and a sea gull at the same time. We promise to not let this occur again, as we are very fond of the doctor, and want him with us often.

We had a prize for low professional (sack horse feed). It was stipulated that the winner of this prize must

carry same on his back from the shooting grounds to the Battle House, a distance of about five blocks. Clyde Hunter, of Dupont high explosive fame, really won this honor, but being small of build, and really not in the sporting division of Du Pont's big business, the prize was awarded Mr. C. M. Brady, of Union Arms Co., who balked on "toting the sack" so far and gave it away to a local horse owner.

Birmingham Gun Club.

BIRMINGHAM, Ala., Feb. 17.—There was a good attendance at the regular shoot of the Birmingham Gun Club this week, and good shooting was done. R. R. Skinner and James Hillman broke 95 of their 100, closely followed by John Fletcher. H. C. Ryding was high on doubles. Mrs. O. L. Garl's gun broke down when she attempted to shoot doubles after a good start. Some new shooters are shooting very well for beginners.

Programs are being printed this week for the grand Birmingham handicap, to be held April 8-10. Scores were made as follows:

Shot at. Broke.		Shot at. Broke.	
G Hillman.....	175 158	L Moody.....	100 80
*P B Plummer. 150	130	J T Colbourne. 100	78

Twelve pairs doubles: H. C. Ryding 20, O. L. Garl 18, R. H. Baugh 14, R. R. Skinner 13, G. Hillman 11, Dr E E May 11, Ed Cornwell 11, L. Brown 10.

*Professional.

Feb. 16.—There were seventeen shooters at the weekly shoot of the Birmingham Gun Club this afternoon, and considering the cold wind which made the targets very difficult to hit, some good scores were made. John Warren and James Hillman shot high percentage, closely followed by John Lambeth and Gentry Hillman, Ira Armstrong and Gentry Hillman had a race on to see which could blow the targets into black smoke the quickest and quit about even. Mr. Pinkard and Cornwall, Jr., were trying the targets for the first time, and made splendid scores. J. K. Warren is trying out a new gun, and with that lightning speed of his there is nothing left of the targets but a black smoke. Scores follow:

Shot at. Broke.		Shot at. Broke.	
G Hillman.....	125 110	Ed Cornwall... 100	74
J K Warren.....	100 95	Wheeler..... 100	74
J Hillman.....	100 94	P H Lallande.. 100	72

Hudson Gun Club.

JERSEY CITY, N. J., Feb. 25.—There were thirty-four gunners that turned out this morning to take part in the bi-monthly shoot of the Hudson Gun Club. The weather man was certainly good to us to-day, as the brand of weather that was on tap was ideal for trap-shooting, and no doubt was the reason of the boys getting on the job, so as to indulge in their favorite pastime.

Dave Engle showed us all the way this morning, and finished with 86 per cent., with Carl von Lengerke, J. Williams, Billy O'Brien, Billy Emmons and the veterans Geo. Piercy and L. Schortcy chasing him pretty hard for the honor; but Dave managed to scratch out a few points ahead of them in the finish, and won high average for the day.

Another interesting event to-day was the 100-bird race between Tom Kelley and "Pop" Whitley. The conditions called for Kelley to shoot at 75 and break more than Whitley could in 100 targets, and after the first string was shot, it was seen that Whitley was out of it, Kelley breaking 68 out of 75, to Whitley's 51 out of 100.

There were two fifteen-man team races shot, captained by Dave Engle, of the Hudsons, and Dick Young, of the Jersey City Club. Engle was the best guesser, as his team won both races; scores, 296 to 265, and 299 to 230 out of 375 shot at.

Our next shoot will take place on March 10, and we extend a hearty welcome to all trapshooters that care to spend a Sunday morning at the traps. Take the Turnpike car from the Pennsylvania Ferry at Jersey City, or any point in Newark, and ride to the west side of the Hackensack River Bridge, on the Turnpike road, then walk north along the dyke to the club house, where you can shoot to your heart's content. Scores:

Speedway Gun Club.

NEWARK, N. J., Feb. 21.—Good scores were turned in by the gunners who took part in the regular weekly shoot of the Speedway Gun Club, held yesterday afternoon over the Speedway traps. The day was an ideal one for shooting and high-class scores were numerous. B. M. Shanley, Jr., and H. S. Wells were the best shots of the day. The scores:

Events:	20	24	21	20	23	23	24	25	21

SMOKELESS.

Oakbrook Gun Club.

OAKBROOK, Pa., Feb. 24.—A race of 10 live birds was shot on the Oakdale Gun Club grounds for D. E. Wegman's gun. The gun was shot off at \$33 as first prize. A total of \$69 was raised, thus \$36 was left as pot money, divided 60 and 40 per cent, \$21.60 as second prize and \$16.40 as third prize.

Charles Haas, of Fleetwood, Pa., shot his 10 birds straight and received the gun, a new Baker single-barrel model. There were six shooters with 9 kills who received an equal share of the second money, \$21.60, and seven with 8 kills who partook of the \$16.40. The birds were excellent strong flyers, and several escaped the sleepers which heard a dozen or more shots following them.

Wm. Eck was hit on the forehead from a stray shot

Nine Grades

"The Gun that Blocks the Sears"

See how the Safety-bar (No. 4) when pushed back over the L-shaped ends of the Sears (No. 5) completely blocks them, making accidental discharge absolutely impossible. Every Davis Hammerless Gun has the Safety that "Blocks the Sears". It is a Safe "Safety".

N. R. DAVIS & SONS, Lock Box 707 Established 1863 ASSONET, MASS., U. S. A.

fired by one of the outfielders, shooting sleepers. The mud in the field was several inches deep, which made it very difficult to collect the birds.

Each shooter was allowed a re-entry. Mr. Haas had killed his 10 straight early in the day, which made it very interesting, but none could reach the top notch.

A. A. Fink and A. K. Ludwig, the two chubby chums of Reading, Pa., were on the grounds in the interest of the sporting news.

Secretary E. H. Adams of the Spring Valley Shooting Association, announced a live-bird shoot on the grounds for March 9, 1912, to be held on their grounds at Spring Valley.

Event, 10 birds, entrance \$5:

Elsworth, 28	5	Eck, 28	7
Wegman, 28	5	Haines, 29	9
Haines, 29	9	Adams, 29	9
Haas, 29	10	Kern, 27	8
Kurtz, 28	8	Behm, 27	9
Wertz, 29	7	Icc, 28	7
Eck, 28	9	Wentzel, 27	4
Adams, 29	7	Wertz, 29	8
Behm, 27	8	Kern, 27	8
Shupp, 28	9	Lebo, 28	8
Haas, 29	7	Icc, 28	8
Megman, 28	7		

scores. Three strings of 25 birds were shot, and the best two strings counted.

R. A. Gillespie won the high gun cup after a tie with E. L. Hatch at 43. In the shoot-off Gillespie scored 21 to Hatch's 20. V. S. Allien won the handicap cup. Scores as follows:

V S Allien.....	8	49	J M Carr.....	0	40
R A Gillespie.....	4	47	A J Bell.....	6	40
E L Hatch.....	0	43	W W Herrick.....	0	39

A S Pitt.....	8	43	M B Foster.....	8	39

Sweepstakes were won by A. S. Pitt, R. A. Gillespie and V. S. Allien.

V. S. ALLIEN, Sec'y.

Robin Hood Gun Club.

THE shoot held on Washington's Birthday, at Staten Island, was not well attended on account of the cold weather and that 95-mile gale that blew on that day gave them cold feet. Only one event was shot, a 100-target match for the second leg on the 1912 cup. L. Schofield won by breaking his last bird, with 85.

Targets:	25	100	Targets:	25	100
L Schofield	22	85	G Conelley	16	71
B Beversdoft	23	84	W Rohlfis	19	81

GEO. CONELLEY, Sec'y.

Stamford Rod and Gun Club.

STAMFORD, Conn., Feb. 12.—Two cups were offered in a 50-bird shoot at the Rod and Gun Club traps to-day. One was for high gun, the other for best handicap

A Sample of Brandywine Energy.

THAT the management of the Du Pont Gun Club does not intend to let the grass grow under its feet while making preparations for the Delaware State tournament, to be held May 29-30 next, on its grounds in Wilmington, is evidenced by the fact that it has appointed a special committee to solicit prizes for the two merchandise events, which are to be scheduled on its program, one such event for each day. These events will be the most attractive of their kind ever held in Delaware, and will equal, if not surpass similar events given by the much larger and much older associations, which govern trapshooting matters in the States of New York, Pennsylvania, Ohio, etc.

The committee, appointed by the gun club for the purpose of soliciting these prizes, and which committee has been given the title of "Bone Committee," has issued a circular to every member of the Du Pont Gun Club, and has already received many generous responses to the letter, although it was only distributed Monday of this week.

The committee has also received assurance from many of the prominent merchants of this town that they can be counted upon as contributors of either merchandise or cash to the prize fund. The circular referred to reads as follows:

As you undoubtedly know, the Du Pont Gun Club has been granted the honor of holding the first tournament of the Delaware State Sportsmen's Association, on its grounds, May 29 and 30 next. The Interstate Association has also granted permission to the club to have this tournament "registered," or, in other words, given with the full sanction of the Association, which carries with it not only prestige, but also a donation of \$100 in cash toward the purses to be competed for by the amateurs who take part in the shoot.

Thus the Du Pont Gun Club, and that means Wilmington, Delaware, has the opportunity of duplicating the enviable record it made last year in trapshooting circles during the month of July, when the Eastern Handicap tournament was so successfully carried to a conclusion on the grounds of our club.

We want your individual assistance in making our first State tournament one that will set a mark for others to shoot at.

The program which it is proposed to run on the two

days of the tournament, will include "a merchandise prize event" on each day. On May 29 this "merchandise event" will be "open to all amateurs, distance handicap." On Decoration Day, May 30, this event will be "open to amateurs who are members of the State Association, distance handicap"; in other words, it will be a shoot for the "home boys."

The management of the Du Pont Gun Club has appointed the undersigned as a committee to solicit donations, either in cash or merchandise, thereby imposing upon us a duty which we have accepted as an honor, and with a firm determination to show that we are worthy of the confidence reposed in us as a body.

You will readily realize that the duties of this committee are not likely to prove altogether enjoyable, but we rely upon you and other fellow members of the Du Pont Gun Club, to come to the front and make our work as pleasant as possible. All cash donations will be placed to the credit of the club, and will be used to purchase suitable prizes. Should you be willing to offer a trophy of any kind, or some article of merchandise, same will be gratefully accepted and included in the prize list.

Surely we can count on you to help us out. No subscription will be absolutely needed prior to April 1 next, although the program for the tournament must be in the hands of the officials of the Interstate Association at least thirty days before the first day of the shoot.

What can we put you down for? (Please tear off the coupon at the bottom of this sheet, fill in same and return it to the secretary of the committee.)

BONE COMMITTEE.

(Edward Banks, Chairman; N. K. Smith, W. J. Highfield, Stanley Steele, Ward Hammond, Secretary, Room 144, Du Pont Building, Wilmington, Del.)

Our motto is: "Remember what the Old Woman said."

Hyde Park Gun Club.

A FEW of the members visited the grounds on Feb. 22, and in spite of the inclement weather, indulged in a little shooting. The wind made the sport decidedly uncomfortable, and kept scores low. De War was present for the first time in many weeks, and headed the list, though with a total much below his average. Hill finished in second place on a score which has not often been recorded for him, but the stunts of the targets in the wind got him guessing. Redus made his debut as a trapshooter, and likes the game, even if his initiation was a rough one. He will make good before the season closes. We were glad to see Smith once more, and he promised to come out often. Frohlinger shot some lower than usual, but 72 per cent. is not bad under the conditions. Phillips showed his lack of practice, and Sweeney finished at least 10 per cent. lower than usual. Hoggatt will show the way to some of the boys this summer if he sticks to the game. Sam Leeves, and his bunch of Goshenites failed to materialize; the furnace fire had more attractions for them than the firing line in the blustering weather of the day. The club will resume its weekly shoots as soon as the weather is settled. Scores:

Larchmont Y. C.

LARCHMONT, N. Y., Feb. 25.—Everybody took advantage of the warm, clear, windless day and shot as well as he knew how. A number of "full" scores were recorded.

In the 100-bird handicap, T. J. McCahill, with a handicap of 7, R. J. Jones with 10, and E. G. Unitt with 20, tied with 96. In the shoot-off McCahill won. M. B. Short, G. W. Lembeck and M. B. Foster tied with full scores of 50 in the shoot for the accumulation cup, and in the shoot-off, Short was the winner.

In the leg for the February cup, Stuart Scott, T. J. McCahill, B. M. Higginson and H. H. Childs each broke 25, and in the shoot-off, Scott won with another full score. The leg for the Bemis cup was won by R. J. Jones after a shoot-off, and M. B. Short was the winner of the leg for the vice-commodore's cup with a full score, after a shoot-off with Foster. R. L. Spotts won the 155-target scratch contest, and R. J. Jones the 10-target scratch. McCahill and Higginson tied with 110 for high gun for the day.

Plattsville Gun Club.

PLATTSVILLE, Wis., Feb. 18.—The team shoot brought out fourteen shooters. Karrmann's team won by 3 birds. Bellmeyer was high individual with 48. Scores:

Dorscher	43	P Karrmann	43
Bellmeyer	48	Bartling	43
David	43	W Karrmann	42
Bridges	34	C Burg	37
Long	36	Gilmore	37
J Karrmann	29	J Stark, Jr.	27
W Rose	29-262	Eberhardt	36-265

Greenwich C. C.

GREENWICH, Conn., Feb. 24.—The weekly handicap shoot at Greenwich Country Club was won by M. B. Foster. Following are the scores: M. B. Foster (20) 93, N. Webb (24) 87, G. M. Pyncheon (20) 86, Baron von der Ropp (0) 83, C. S. Wills (12) 83, E. C. Wills (24) 83, E. T. Hall (28) 77, J. W. Masury (0) 69, J. R. Johnson (20) 69.

Club championship, scratch: Baron von der Ropp 4 points; M. B. Foster 2; C. S. Wills 1.

Repeating Shotguns—12 and 16 gauges; (6 shots), solid frame and take-down; many grades and styles; with special models for trap and field shooting, etc. Prices \$19.50 to \$95.00. The most extensive line of repeating guns in the world. Insist on a Marlin.

Every Marlin repeating shotgun has the Marlin solid top, side ejector and closed-in breech. It can't freeze up with rain, snow or sleet, rain can't run into the action and swell the shells in magazine; dirt, leaves, twigs and sand are also excluded from the action. Simple, strong mechanism; one-third less parts than any other repeater. The double extractors pull any shell. Handles rapidly, guaranteed in shooting ability—and the automatic recoil safety lock makes it the safest breech-loading gun built.

Do it now! Send three stamps postage and get our big catalog of all Marlin repeating rifles and shotguns by return mail.

Bermuda-Atlantic Line - 290 Broadway, N. Y.

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He knows it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is Lefever Taper Boring.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS CO., 23 Maitlie St., Syracuse, N. Y.

Durston Special
20 Gauge. Price \$28.00

Essex County Country Club.

WEST ORANGE, N. J., Feb. 24.—In all the events except the ten pair of doubles for the cup, and in the two-man team match offered by himself, B. M. Shanley, Jr. was the winner this afternoon at the traps of the Essex County Country Club. He won the leg of 100 on the committee cup with a score of 94 from scratch. The two-man event was won by James A. Hart and Peter Hauck, Jr., with a total score of 45 out of 50. The winner for the Shanley cup was C. H. Daly, who made 15, shooting at scratch:

The scores for the committee cup were as follows: C. H. Daly (0) 86, J. A. Hart (0) 87, B. M. Shanley, Jr., (0) 94, H. W. Traylor (20) 88, Jesse Metcalf (16) 66.

Shanley cup: Daly 15, Hart 14, Shanley 13, Traylor 14, Metcalf 10, Hauck 5, Bryant 9, Plum 6, Headly 11, Ross 11, Stewart 8.

Heller trophy: Daly (0) 24, Hart (0) 23, Shanley (0) 24, Traylor (5) 21, Metcalf (4) 14, Hauck (4) 21, Bryant (7) 19, Plum (4) 17, Headly (4) 20, Ross (7) 17, Stewart (7) 19.

Two-man team match: Traylor and Plum (9) 43; Daly and Shanley (0) 43; Bryant and Stewart (14) 36; Hart and Hauck (8) 45 Ross and Headly (11) 36.

Early Bird string: Daly (0) 23, Hart (0) 20, Shanley (0) 23, Traylor (5) 22, Metcalf (4) 19.

February cup: Daly (0) 20, Hart (0) 21, Shanley (0) 24, Traylor (5) 23, Metcalf (4) 19, Bryant (7) 17, Plum (4) 17, Headly (4) 23, Ross (7) 18, Stewart (7) 18.

Saturday cup: Daly (0) 22, Hart (0) 22, Shanley (0) 23, Traylor (5) 22, Metcalf (4) 14, Hauck (4) 22.

Orange Gun Club.

ORANGE, N. J., Feb. 22.—The big event here to-day was the team shoot with Newton Gun Club, and although the visitors hung a win up on us, the shoot nevertheless was interesting. Some of our best trappers disappointed us in their shooting, Hilsinger being the only one to get a decent score, he made 20 and was high gun of the match. Cahrs was top-cracker for Newton with 19. In regular events Corrmine, of Newton, won out with 83 out of 125. The Winchester gun went to Merrick Baldwin, 32 out of 40. Scores:

Newton.		Orange.	
Cahrs	19	Dukes	15
Brickner	18	Mosler	14
Morford	12	Unger	17
Coe	16	Wickes	14
Kinney	16	Perkins	15

Rifle and Revolver

Philadelphia Rifle Association.

SCORES of the Philadelphia Rifle Association for Thursday, Feb. 22, on the Philadelphia range of the National Rifle Academy, 1234 Filbert street:

Rifle, prone, N. R. A. target, 1 to 10 count; distance 75ft.: J. G. Dillin 92, 94; J. G. Schnerring 95, 93; Harry Overbaugh 90, 92; W. J. Maybee 98, 99; N. Spering 97, 99; C. R. Dougherty 89, 86, 87; R. S. Newbold 97, 95; H. L. Reeves 91, 91; Dr. E. E. W. Given 91, 90, 90.

Rifle, offhand, German ring target, distance 75ft.: E. H. Williamson, Jr., 242, 241, 245, 237, 243, 242, 244, 245, 247, 248, 246, 246; E. C. Goddard 241, 242, 246, 242, 241, 243, 240, 242, 243, 245, 242; J. G. Schnerring 245.

Pistol, Standard American target, distance 60ft.: S. D. Lovegrove 75, 77, 78; H. A. Dill 81, 83, 80, 88, 86; H. L. Reeves 86, 86, 88, 88, 74, 86, 90; Geo. Hugh Smith 80, 80, 89, 81, 90, 81, 90, 82; Wm. T. Smith 88, 88, 84, 86, 88, 89; W. J. Maybee 82, 81, 88, 84, 93; Herman Thomas 92, 92, 89, 85, 86, 94; Miller Forbes 80, 86, 83, 89, 86; R. S. Newbold 78, 85, 85, 75, 81, 84; Dr. E. E. W. Given 54, 65, 55, 73, 67; Nathan Spering 79, 82, 78; Dr. W. E. Quicksall 81, 88, 89, 89, 95.

United States Revolver Indoor League matches: Philadelphia vs. National Capital Revolver (Washington, D. C.):—Herman Thomas 222, Wm. T. Smith 219, H. L. Reeves 215, Dr. W. E. Quicksall 212, Miller Forbes 211; total 1079.

Philadelphia vs. Citizens' Rifle and Revolver (Rochester, N. Y.):—Dr. W. E. Quicksall 230, Herman Thomas 224, W. J. Maybee 219, Wm. T. Smith 215, Geo. Hugh Smith 214; total 1102.

BALLISTITE

A PERFECT
"DENSE" SMOKELESS POWDER.

For Field and Trap Shooters

Ballistite is a perfect "dense" smokeless powder for Shotguns. It has a moderate recoil which commends it to all shooters. Shoots clean—no unburned grains to "blow back." Age does not affect its shooting qualities, which are further enhanced by its water-proof characteristics.

In addition to these essentials of a sporting powder, is the guarantee of quality which is assured to every purchaser of Ballistite Smokeless Powder. 110 years as powder makers enables us to combine practical experience and materials in a manner to insure the production being exactly as required and of uniform quality.

Ask your Dealer for shells loaded with BALLISTITE.

Send for Ballistite Booklet No. 3—
showing proper loads for various game.

HARRY OVERBAUGH.

U. S. R. A. Indoor League.

THE unofficial scores of the various teams in the U. S. R. A. League matches follow:

Match 21:			
Pittsburgh	1069	vs. Chicago	1014
Columbus	1108	vs. St. Louis	1060
Spokane	1108	vs. Federal	1104
Osborn	1015	vs. Belleville	959
Seattle	925	vs. Providence	1122
Los Angeles	1059	vs. Golden Gate	1122
Myles Standish	1043	vs. Philadelphia	1085
Baltimore	1013	vs. Manhattan	1112
Shell Mound	1060	vs. Boston	1033
Oakland	1032	vs. Portland	1117
National Capital		vs. Citizens	

Match 22:			
Columbus		vs. Youngstown	1009
Spokane	1035	vs. Chicago	1069
Osborn	1025	vs. St. Louis	1082
Seattle	939	vs. Federal	1123
Los Angeles	1106	vs. Belleville	946
Myles Standish	1066	vs. Providence	1081
Baltimore	1059	vs. Golden Gate	1096
Shell Mound	1035	vs. Philadelphia	1131
Oakland	1019	vs. Manhattan	993
National Capital		vs. Boston	1142
Springfield	1129	vs. Portland	

Standing of the clubs at the end of the twentieth match: Portland, none; Springfield and Manhattan, one each; Golden Gate, two; Federal, National Capital and Philadelphia, five each; Spokane, six; Columbus and Los Angeles, eight each; Boston, nine and one-half; Myles Standish, Pittsburgh, Oakland, Shell Mound, St. Louis and Providence, eleven each; Chicago, eleven and one-half; Baltimore, apparently sixteen; Seattle, sixteen; Belleville, apparently seventeen; Osborn, seventeen; Youngstown, apparently eighteen; Citizens, twenty.

J. B. CRABTREE, Sec'y-Treas.

N. R. A. Notes.

ANOTHER INTERNATIONAL MATCH.

The international small-bore match for 1912 is on. Word has been received from the British Association allowing the United States to shoot their matches at any time most convenient to us, and in accordance therewith, it is proposed to shoot the official scores about the first week in April. As there will be no opportunity to have preliminary tryouts to determine the personnel of the team in the same manner, as was done in 1910, the secretary of the National Rifle Association has addressed a communication to all of its affiliated rifle clubs carrying on gallery practice, putting in their hands the organization and carrying on preliminary trials within the club. The trials are to consist of 50 shots per man, using the prone position at 75ft., N. R. A. gallery target. The clubs are to report to the Association the ten highest men with their scores. These reports, along with the list of men who have qualified as sharpshooters on gallery ranges during the present season, will be used as a basis from which the executive committee will select the fifty men to compose the United States team. Every effort will be made to retain the De War cup on this side of the ocean. The only change in the match this year is the disallowing of the use of the telescope.

INTERNATIONAL TEAMS.

Interest in the rifle teams the National Rifle Association is sending abroad is not abating. Several States have notified the N. R. A. of their intention to send representatives to the trials on the Marine Corps range at Winthrop. California will send two, West Virginia two, New Jersey four, and Maine and Texas will also be represented. The old standby shooting States of New York, Massachusetts and Ohio have not yet responded, but in all probability will send the maximum six men each. The Adjutant-General of Pennsylvania writes that that great State will not be represented. The Army and Marine Corps will send about twenty each. The Navy has not yet been heard from. Up to the present time the subscriptions toward the fund to send these teams abroad have been very disappointing. The amount received to date is \$1224 of the \$15,000 required.

From \$1224 to \$15,000 is a long road to travel, and will necessitate the rifle shooting fraternity of the country putting their shoulder to the wheel, as we cannot afford to make a failure of this enterprise now.

The First Regiment Infantry, National Guard of Missouri, will hold a review, drill and dance at their armory in St. Louis, on the night of Feb. 29, for the benefit of the fund, and Col. Spencer, an enterprising rifle enthusiast, and commanding officer of that regiment, predicts that at least \$200 will be forthcoming from them.

TARGETS FOR TRYOUTS.

A supply of the Olympic targets are on the way from Sweden. These targets will be used for the final tryouts for position on the Olympic team as well as in the State trials. The N. R. A. has ordered a supply of these, and will be in a position to sell to the States and individuals at 10 cents each. The Association will also in a few days have a supply of sear springs for the service rifle that will pull six pounds, for the use of those who expect to enter the trials for the Argentine team. These springs can be secured from the Association at a price of 10 cents each.

INDOOR QUALIFICATIONS.

From the number of targets arriving in the office of the N. R. A., showing qualifications as marksmen and sharpshooters, it is evident that the qualification as laid down is not difficult, especially that for marksmen. Among those who have the sharpshooter's score and received their silver watch fob may be mentioned Capt. C. M. Cale, I. S. A. P., First Illinois Infantry; Mr. Harry Overbaugh, Philadelphia R. A.; Col. John J. Dooley, of Maine; John E. Hafner, Indianapolis Rifle and Revolver Club; E. H. Besse, Standish Rifle Club; Eugene P. Carver, Jr., Harvard University Rifle Club; Lieut. R. A. Burnham, M. V. M.; E. H. Williamson, Jr., Philadelphia R. A.; Capt. W. A. Murphy, Federal Rifle and Revolver Club, Boston.

The Association is now issuing qualification targets for 50ft. ranges. The new target is a departure from all other targets, in that it has two targets printed on one card. The competitor fires five shots on each target, and thus keeps his entire string of 10 shots on one card. This method simplifies the counting and keeping of records.

AMATEUR STATUS FOR OLYMPIC TEAM.

Word has been received from the Swedish Olympic committee unofficially that the only men who would be considered ineligible to compete in the shooting matches at the Olympic games are those men who are actively engaged in testing and sighting rifles at rifle manufacturing plants. This will bar out very few men in this country, and this interpretation will mean a much larger entry in the trials for the Olympic team.

Intercity High School Rifle League.

LAST week's matches in the Intercity High School Shooting League were productive of a sensational breaking of the interschool rifle shooting record by the Baltimore Polytechnic Institute. Their score of 959 out of a possible 1000 means that five boys succeeded in placing 100 shots in a space that could be covered by a 25-cent piece. This shooting compares favorably with that done by the best civilian and military shots of the country. This score was made against the record-breaking shooters of Iowa City High School, who have been leading the League matches with phenomenal scores.

This defeat breaks their series of victories, and will make a tie between that school and Deering High School, of Portland, Me., for first place, if the protested score between Deering and Southern High is decided in favor of the Maine boys. Two teams have withdrawn from the League—Central High of Washington, and

Ogden, of Utah. There are five more matches to be shot.

The record for the tenth match is as follows: Baltimore Polytechnic, 959, vs. Iowa City, 951; Deering (Portland, Me.), 947, vs. Business (Washington), 850; Salt Lake City, 928, vs. Portland (Me.), 829; Southern (Philadelphia), 898, vs. Ogden, 0; Central (Philadelphia), 881, vs. McKinley (Washington, D. C.), 864; De Witt Clinton (New York city), 860, vs. Brookline (Mass.), 857; Western (Washington, D. C.), 796, vs. Morris (New York city), 0; Central (Philadelphia), 789, vs. Central (Washington, D. C.), 0.

The standing on Feb. 24 was as follows:

	Won.	Lost.
Iowa City High School.....	9	1
Deering High School.....	8	2
Southern High and Manual Training.....	8	2
Baltimore Polytechnic Institute.....	8	2
Brookline High School.....	6	4
Morris High School.....	6	4
Salt Lake City High School.....	6	4
Central High School, Philadelphia.....	6	4
Manual Training School, Philadelphia.....	6	4
Manual Training School, Washington, D. C....	5	5
Portland High School.....	5	5
Business High School, Washington, D. C.....	3	7
Western High School, Washington, D. C.....	3	7
De Witt Clinton High School.....	3	7
Ogden High School.....	0	10

Eastern Inter-Collegiate.

The tie between Princeton University and the Massachusetts Agricultural College for first place in the Eastern Intercollegiate Rifle Shooting League remains unbroken, each team having won its match last week. Harvard University and North Georgia Agricultural College remain tied for second place. The best score made in the eighth week's match was by the Massachusetts Agricultural College with 938 score followed by North Georgia Agricultural College with 931, and Princeton University with 928. The highest individual score was made by A. C. Cosse, of the Harvard University team with a total of 193 out of a possible 200. The scores in last week's matches and the standing to date are as follows:

Harvard, 927, vs. Louisiana State, 907; New Hampshire, 833, vs. West Virginia, 809; University of Pennsylvania, 905, vs. U. S. College of Veterinary Surgeons, 881; Norwich, 886, vs. Maryland Agricultural, defaulted; Princeton, 928, vs. Delaware, 854; Massachusetts Agricultural, 938 vs. North Georgia Agricultural, 931.

Standing to date:

	Won.	Lost.
Massachusetts Agricultural College.....	8	0
Princeton University.....	8	0
North Georgia, Agricultural College.....	6	2
Harvard University.....	6	2
University of Pennsylvania.....	5	3
Norwich University.....	4	4
Louisiana State University.....	3	5
West Virginia University.....	2	6
Maryland Agricultural College.....	2	6
New Hampshire College.....	2	6
Delaware College.....	1	7
U. S. Veterinary Surgeons.....	1	7

Western Inter-Collegiate.

The matches in the Western Inter-Collegiate Rifle Shooting League for the week ending Feb. 24, show no change in the standing, the University of Iowa being still in the lead. The score of the Iowa boys, 964, is a record one so far in the League matches. They defeated their opponents, the University of Arizona by 125 points. Their score was also 26 points better than the best score made in the Eastern League.

The highest individual score was made by a member of the Iowa team, A. I. Arneson, with a total of 196 of a possible 200.

The scores for last week's matches and the standing to date are as follows:

University of Iowa, 964, vs. University of Arizona, 839; University of Minnesota, 935, vs. St. Thomas College, 811; Michigan Agricultural College, 902, vs. University of California, 890; Purdue University, 900, vs. University of Nebraska, 840; University of Michigan, 858, vs. University of Kansas (defaulted).

Standing to date:

	Won.	Lost.
Iowa University.....	7	0
University of Minnesota.....	6	1
Michigan Agricultural College.....	5	2
University of California.....	5	2
Purdue University.....	4	3
University of Arizona.....	3	4
University of Michigan.....	3	4
University of Nebraska.....	1	6
College of St. Thomas.....	1	6

Zettler Rifle Club.

THE following scores of the Zettler Rifle Club were made on Feb. 20: G. L. Amouroux, 1223; A. Begerow, 1159; F. M. Bund, 1214; L. P. Hansen, 1224; F. Hecking, 1180; J. Kaufmann, 1226; A. B. Leavitt, 1211; H. M. Pope, 1238, 1238; G. Schlicht, 1220; C. A. Schrag, 1180; O. Smith, 1219; W. A. Tewes, 1238, 1236; B. Zettler, 1187; C. Zettler, 1219.

Rifle Note.

The annual indoor championships of the United States Revolver Association will be held March 24 to 30, inclusive. These matches are open to every one, and any person wishing to take part should communicate with the affiliated club nearest them, or J. B. Crabtree, 525 Main street, Springfield, Mass.

FIELD TRIALS.

Oct. 28.—Southern Ohio Field Trial Association's second annual field trials. G. R. Harris, Sec'y, 15 West Sixth St., Cincinnati, O.

Norwegian Bear Dogs.

Dog fanciers of this country may within a short time have an entirely new breed of dogs to deal with and to see in the shows. These are Norwegian beardedogs, and what is probably their most remarkable quality is the way in which they combine the qualities of a number of other breeds of canines.

Primarily hunting dogs, though their only identification as hounds lies in their ability to trail by scent, they make splendid companions and will recognize only one master, although they display only gentleness toward other people.

Mr. Edward P. McMurray, of Canton, Mass., purchased two pairs of beardedogs two years ago, and although he was unfortunate in losing one dog through sickness and in having another one stolen, he has successfully raised a litter

of seven puppies, and has since imported another male dog.

The dogs range in color from jet black to a beautiful sabled gray; some of them with a decided tawny tinge in the fluff or under fur, and carrying the same tint into the short hair of the mask.

The coat of these dogs is wonderful. It is a double coat, a sabled, straight-haired outer coat lying smoothly over a fluff, or woolly undercoat which is usually much lighter in color. This is of course the typical coat of all dogs bred in cold climates.

The hair on the neck is erectile, and it rises in an angry ruff when they begin to fight, like that on most fighting dogs. The hair on the breast spreads out like a bib or short ruff, and between the fore legs and down the belly it lies in a raised ridge for all the world as though the dog had been sewn into his skin.

The body is well muscled, especially in the neck and fore quarters, as the powerful shoulders are used constantly in fighting when at the first attack the dogs throw themselves against the enemy to bowl him over, so that they can get their hold before he has recovered from the impact of the rush.

A FAMILY ARGUMENT.

The forelegs are powerful and straight, the dog standing well up on his toes with no "hocking." The upper joint of the hindlegs is long, like the Airedale, and suggests staying power.

The head is broad at the ears and tapers down to a pointed muzzle which distinctly shows traces of descent from the wolf at some far remote period. The forehead is well stopped, showing great intelligence, and somewhat resembles a collie.

The eye is full and round, varying from light to a very dark brown. The ear is pointed and is wide in proportion to its length. In moments of excitement it is pricked straight up and ordinarily at quiet moments it falls forward. The tail is long and is carried curled tightly over the back, similar to the Chow.

The average weight is about thirty pounds and the average height is about eighteen inches at the shoulder. They are beautifully proportioned, as they are neither high on their legs nor bunched, although their coat produces this effect on account of its extreme thickness.

When used for trailing bears they are put into breast harness with the lead attached to

TYPICAL BEAR DOG.

the shoulders. They are used either in couples or in a pack, and when cast off, they will surround the bear, snapping at him from all sides and harassing him until the arrival of the hunter.

In disposition they are tremendously affectionate toward human beings, and in spite of their long coat they are scrupulously clean, and unlike most long-haired dogs, they require no care whatever, and the usual dog maladies are almost unknown to them.

Although they are extremely excitable, they show immense stamina and unflinching spirits, and they can take punishment that would utterly break another dog's spirit. They are adepts at both styles of fighting in-and-outers with a lightning slash of their long tusk-teth, but holders to a finish when they secure a favorite hold.

Mr. McMurtry's success in breeding and raising the pups here is regarded as especially important as it has proved conclusively that this breed can be introduced in the United States, and it is also to be noted that although long-haired, the domestic bred dogs do not suffer from the heat as might be expected.

Briefly summed up, the Norwegian bearded dog, with his intelligence, gameness and his altogether unusual and striking appearance, makes an ideal and lovable companion, whether for the hunting field, in trailing bears or for the more peaceful occupation of household pet.

The English Setter Club of America.

GERMANTOWN, Philadelphia, Pa., Feb. 23.—*Editor Forest and Stream:* The 1912 Field Day Committee begs to announce that the club's seventh field day and meet will be held on Friday and Saturday, April 12 and 13, within a short distance from Philadelphia.

The exact location will be announced at a later date, owing to the weather conditions having prohibited a final selection before this time.

The trials will start on Friday, April 12, and will be continued on Saturday, the 13th, should the number of entries warrant such an arrangement. This is an innovation in our field days, but we feel that in justice to the dogs, we must allow them plenty of time down for fair judgment, and not try and crowd the running of an unlimited number of braces into a limited time. Hotel accommodations and everything for the general comfort of our members and their guests while attending the meet, will be amply provided for by the committee.

Members' English setters will be worked on liberated Hungarian partridges as heretofore, and the derby and all-aged classes will be maintained.

The regular prizes will be medals, ribbons and club certificates.

The "blue ribbon derby cup" is again offered in the derby class.

One judge will officiate in place of three, as has been our practice at former field days. Announcement in this respect will also be made at a later date.

The committee earnestly solicits special prize offers and will greatly appreciate hearing from anyone who may see their way clear to offer some special prize this season in support of our trials.

How about a special prize offer?

Final instructions, entry blanks, etc., will be mailed to the membership within the next two or three weeks. If you know of anyone who might be interested, send us their name and address and we will include same in the mailing list.

Spring Fishing Number

Our March 23 issue will sound the opening note of the spring fishing season. It will be a specially attractive number, having a very beautiful front cover, printed in colors—handsome enough to frame.

It will contain articles by the best writers and will be of intense interest and value to everyone interested in fishing, and will be kept for reference for a long time.

The advertising pages will also be examined carefully because of the valuable helps given in the advertisements of fishing tackle, camp equipment, resorts, arms and boats. Forms close March 16.

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

The Greener Facile Princeps Action.—"Facile Princeps" is a Latin phrase meaning 'Easily First,' and no better name could have been chosen for a gun that has been winning the principal shooting events of the World for three generations. The 'Facile Princeps' is easily first for strength, reliability and simplicity. The lockwork consists of a hammer, a sear, a lifter and a spring, the weight of the barrel cocks the tumbler, everything works smoothly with the minimum of friction, and the striker is just a fraction of a second quicker in its blow than any other type of mechanism; this point alone should be sufficient to secure its adoption by the man who knows.

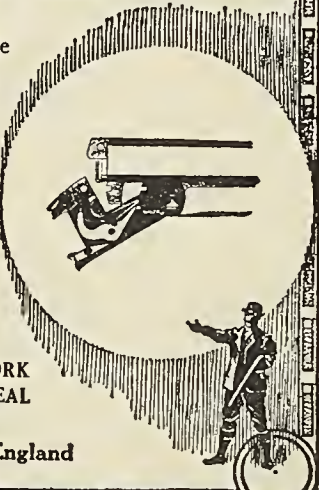

Have you ever calculated how fast a bird travels? If instead of being able to pull the trigger (i.e. fire the cartridge) in 1-200th of a second, you need 3-100ths of a second, the bird will have flown 16 inches further. Think this over, it may account for some of those 'lost' birds.

The "Box" action of the "Facile Princeps" gun is perfectly watertight, yet easily get-at-able for cleaning purposes, only one screw has to be removed to expose the lock mechanism.

Look at the drawing, its simplicity cannot fail to convince you that the "Greener" is the best.

ARE YOU A GUNNER?

Do you love to follow your good dog over the fields in search of quail or chickens, or to struggle through swamp or along thick grown hillside, expecting to hear the roar of the ruffed grouse or the twitter of the fall woodcock? If so, you should have this new book.

AMERICAN GAME BIRD SHOOTING

By **GEORGE BIRD GRINNELL**

(New—Just Published)

This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys.

The first part of the volume is devoted to a description of the various species and their habits—the way in which they live their lives.

The second part of the book is devoted to upland shooting and treats of the methods by which all the upland birds are pursued and taken. The chapter "Aids to Shooting" describes the clothing, guns, and loads and dogs that the gunner may profitably use; while the last section of the book treats of the shooting of the future and the efforts to rear our native quail and grouse in domestication.

The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full page portraits of different game birds and hunting scenes, with a number of cuts in the text.

Cloth. About 575 pages. Price \$3.50, net. Postage 25 cents.

This book is of inestimable value. It contains the genuine hunter-naturalist facts given in the most entertaining and interesting style.

FOREST AND STREAM PUBLISHING CO., 127 Franklin St., NEW YORK CITY

Wonderful Offer to Readers of Forest and Stream

THESE FOUR BEAUTIFUL PICTURES IN COLORS FREE

To every reader of this magazine who loves nature and animals and outdoor life we will send, without charge, the four beautiful pictures shown in the accompanying illustration, which retail at fifty cents each.

These pictures are wonderful examples of the art of color printing. They are reproduced on heavy plate paper without lettering, and can be framed at moderate cost or used just as they are in any room of the house. The subjects represented are such as will appeal to nature-lovers generally; they will add much to the beauty of your home. Exact size of pictures, 10 1/2 x 7 1/2 inches.

Why We Make This Offer

The object of this offer is to acquaint you with our new "Standard Library of Natural History" which has recently been published, after years of labor and at an enormous expense. It is the only work of its kind in existence, illustrated from actual photographs, of which it contains over 2,000, besides many full-page plates showing birds and animals in their natural colors. In many cases special expeditions armed with cameras and dry plates had to be sent to foreign lands to secure the photographs from which these illustrations were made. The work is not technical or dry, but teems with the most interesting and instructive stories of animal life, told by famous naturalists and explorers.

Do not confuse these with cheap pictures. They sell at Art Stores for 50 cents each

Absolutely No Obligation

Your application for these pictures imposes no obligation to purchase anything. On receipt of the accompanying coupon we will forward the pictures, together with description of the books, by mail, postpaid. You will not be bothered by agents or canvassers; this Society transacts all its business by correspondence. Mail the accompanying coupon promptly, as the supply of pictures is limited.

In the Pulpit

By E. P. MORRIS

TWO years ago, happening to lie over in Gloucester Harbor, and having heard from the skipper in hours of calm some exciting tales of his experience as a swordfisherman, we ordered an iron stand or pulpit of the true Gloucester pattern and fitted it on the end of our bowsprit. At the same time we added to our stores the rest of the gear necessary for this sport, and, as I paid the bill, I said to the skipper that the fun of getting one fish would easily balance the outlay. For that summer, however, the pulpit represented aspiration rather than accomplishment. The week that we set apart for fishing happened to fall in a stretch of easterly weather, and I found myself thereafter slightly embarrassed in replying to questions about the number of fish we had taken. Last summer, I am happy to say, wiped out the disgrace, and two good swords, with appropriate inscriptions "in letters all of gold," now hang on the wall of my dining room, where it is hoped that they may catch the eye of the discerning guest and lead by easy stages to a call for the story of the capture.

Of the natural history of the swordfish I know little, and I fancy that not much is known, even to scientific men, of its spawning grounds or habits. It seems to be a deep-water fish which visits the North Atlantic coast in search of food, appearing first in June off the south shore of Block Island. At the same time or soon after, large schools are found on the Georges Banks, and it is there that most of the fishing for market is done. Later in the summer scattered fish are taken north of Cape Cod as far up as Halifax. In general, they do not come into shallow water, and the best fishing is outside the thirty-fathom line, though I have heard of the capture of one swordfish in a Nova Scotia harbor, where it was found entangled in the eelgrass and was ignominiously dragged ashore tail foremost.

Apparently the fish that come to our coast are all adults, for a fish under seventy pounds is rare. A retired sea captain of sober aspect did indeed once relate to me an interesting and circumstantial account of his catching a twenty-pounder on a hook off Montauk Point, when he

was fishing over the side of his vessel for butterfish. This story, I am pained to say, has not been kindly received by my nearest and dearest, and their skepticism is so extreme that I have been unable to convince them that the retired seaman himself was an objective reality. But I here reaffirm in point that there was a cap'n, nor does the tale appear to me incredible. I will own that I wish it hung by something stronger than than a butterfish line.

In moderate weather and especially on warm

ONE OF THE TROPHIES.

and sunny days the swordfish swims lazily about, as sharks do, just below the surface. The large backfin and sometimes the tailfin show above the water and can be seen from a considerable distance, a quarter of a mile or more. But it needs an experienced eye for this and an experienced judgment to distinguish the longer curved fin of the swordfish from the triangular fin of the shark. A fisherman must occasionally follow a fin some distance before he is able to decide which kind of fish is under it. Even a gull sitting on the water may deceive an untrained eye and the proper nautical jibe for this mistake is to say, "Your fish has got wings."

The swordfish is taken by a method something like harpooning. The spear is a pole twelve feet long with a shaft of half inch round iron projecting about two feet. To the end of the shaft

a small bronze "dart" is fitted, but loosely, so that when it is driven in and the shaft is withdrawn, the dart is left in the flesh. By an ingenious arrangement of the barbs and by the attachment of the line to the middle of the dart, the strain of the line draws the dart crosswise in the flesh, so that it holds against any ordinary pull. The line is of six-thread manila, a hundred fathoms long, with a small keg at one end for a buoy.

The striker stands in the pulpit outside the jibstay and spears the fish without letting go of the pole. If everything goes well, the vessel is so handled as to bring him directly over the fish, and he merely strikes straight down, aiming at a point close to the fin and far enough to one side to avoid striking upon the backbone. If the fish happens to turn quickly or the vessel is not well handled, the stroke may be quite difficult, and at the best some accuracy of hand and eye is required to make a good striker. As the line is run up the pole from the dart and looped under a leather strip, one must use a certain degree of care not to be entangled in it, when the fish starts off on his first rush. Success depends chiefly upon the lookout. He must not only have a keen eye and great patience, but must also be able to take charge of the vessel and bring it up to the fish. He will try to get to windward so

that he may alter his course in either direction without tacking, and if the fish is swimming across the course of the vessel, an accurate judgment is necessary to give the striker a fair chance.

It may seem strange that a fish swimming near the surface should not be frightened by the close approach of a vessel. But the swordfish is so large and swift and powerful that it can have few enemies to dread; its habits, like those of the shark, are predatory. At any rate, the only caution given to a striker is that he should avoid quick motions when the fish is near, and should be especially careful not to let the end of the pole or the bight of the line touch the surface of the water. Noise appears to have no effect upon the fish, and the lookout may shout his orders to the steersman in his loudest voice. And of course it sometimes happens that

the fish swims away, as if avoiding the vessel, or takes fright and sinks.

Of the first of our two captures I will say only that it was made ten miles south of Block Island, where we were in company with about fifty other vessels and boats, including one steam yacht, all cruising up and down with men slung in the rigging, until it seemed as if no fish could show a fin without being chased. We sighted several fins and finally the skipper brought us up on one so steadily and smoothly that I could claim small credit for striking him well. Our helmsman was a distinguished physicist, a novice in steering. But so accustomed to measuring a thousandth of a millimeter that such a coarse matter as a quarter of a point presented no difficulties to him. This cruise, which was especially a fishing trip, was curtailed by three days of calm and fog and by a desire to see the Harvard-Yale race at New London. And a sad sight it was for a Yale man.

The second fish was struck—"ironed" is the technical term—late in August off the Maine coast. We had made an early start from the Wood Island anchorage with a fine northwester, and, as we were behind our schedule and were anxious to get around into Southern waters, I was hoping for plenty of breeze and was entertaining thoughts of a run straight through to Vineyard Haven. But the fates willed it otherwise and very much better, which is not always the result when the fates take us in hand. As the morning advanced, no little spots of cloud came up in the northwest to foretell a lasting breeze; instead of that, a faint haze dimmed the clearness of the sky and by 9 o'clock our breeze was gone and a light air had come in from the southward. This ended our hope of a long run, and in a spirit of resignation on the half-a-loaf principle, we rigged the pole and turned to swordfishing. The skipper climbed to the forward spreader and tried to think he was comfortable on that uncomfortable seat. Will took the wheel, Humphrey trimmed sheets, and I went to my post in the pulpit. I would not say that we were quite without hopes, for it was a good day and good fishing ground, and we had heard in Portland that there were fish about, but at that time of the year they were not in schools, and our only chance was the possibility of coming upon some solitary rover. But no more on salt water than along a trout stream is it all of fishing to fish. The day was perfection. There was breeze enough to work the yacht, yet it was mainly aloft and touched the water only in stray patches. For the most part the surface was glassy and there was a very long smooth swell, hardly more than a regular heaving of the sea. We were at this time a little south of Cape Porpoise, some five miles offshore, and we first stood out to the southeast to get into deeper water. A few other boats were out on the same errand as ours, easily distinguishable from other vessels by the dark bunch on the foremast which showed that the lookout was aloft. One boat came near us on which lookout, helmsman, striker and crew were all condensed into a single person. He was what thoughtless people would call an old man, about sixty, I should guess, with a beard as gray as mine and ten inches longer. His boat was sloop-rigged, about thirty feet overall, running under power. He was in the pulpit, ready to strike, with tiller lines rigged forward so that he could steer, and with a trip-line to throw off his switch. Later, when we were haul-

ing our fish, he came alongside to offer congratulations and encouraging predictions as to the probable weight of our catch, and I thought I detected a certain youthful ostentation in the way he displayed the handiness of his rig. And certainly the spectacle of a man of his age—his middle age—swordfishing all alone twenty miles from a harbor was a bit out of the usual.

The day, as I have said, was especially beautiful, and I sat in the pulpit, keeping a fair lookout, though I trusted chiefly to the skipper's keener eyesight, smoking an occasional pipe, a little drowsy at times, but dreaming a pleasant dream. It is an odd position; the yacht is all behind you, and as you look back, seems far away. You sway a little with the motion of the boat, you feel high above the water, and when the vessel comes about, the flapping of the jib makes you clutch the iron rail of the stand. And even on a warm day and in a light breeze it is a surprisingly chilly spot. For nearly three hours we stood quietly to and fro about a dozen miles offshore, and I was beginning to remember that we had breakfasted at five and to think that twelve was not too early for lunch, when the skipper saw a fin and called to Will to 'bring her on the wind.' The fish was as much as a quarter of a mile to windward, his fin standing out black against the smooth water. Even my eyes could make him out, though I lost him when he got into a patch of rippled sea. Then began a chase in a series of short tacks as the fish turned aimlessly one way or another. It seemed to me a long chase and my memory of it is chiefly a memory of my own feelings. I had of course stood up when the skipper hailed and had cleared the lines so that they might run freely, but I must acknowledge that I was distinctly nervous, shaking with "swordfish chill," a malady of the same nature as "buck fever."

The members of my family then on board had not been with us when we got the first fish, and I was for this reason extremely anxious not to miss my stroke and spoil what might be their only chance of seeing a fish taken. Nor was I wholly unmindful of the possibility that discredit might befall a respectable husband and father in the very presence of his family. In short, some highly vivid emotions, of a considerable variety, were chasing each other through my mind, while the schooner chased the fish. I was really bothered also by the fact that I was continually losing sight of the fish and was afraid I might come upon him before I could see him. But the skipper, beside conning the vessel and watching the fish, had a bit of his mind to spare for me and kept directing my poor eyes, until at last, after what seemed a very long time, he said: "Right ahead now; we'll get him on this tack." Then I saw him in a patch of dark water, swimming slowly about, and from that moment I forgot my emotions and fixed my eye and mind upon the spot by the side of the fin where I proposed to put in the iron.

As we came within a hundred feet, he turned toward us and I could see the whole of him, a dark reddish brown creature as big as a boat, suspended in the clear water and swinging his sword slowly from side to side. I could see him then, and I can see him now. When I was within twenty feet, he began to sink, intending no doubt to go under the vessel, but the tip of his fin was still above water when I struck. I felt the iron go well in and saw that I had struck

in the right spot, but to make a sure thing of it, I whirled around in the pulpit and threw my whole weight upon the top of the pole, giving my wrist a wrench which still troubles me in using a pen. When I jerked the pole out, leaving the dart behind, the iron shaft was bent at a point about fifteen inches from the end, and I knew that the dart must be well bedded. Later, when the fish was opened, we found that it had gone through into the stomach and had toggled against the tough muscle.

Long before I had put up the pole and crawled back to the deck (for I was too shaky to do anything but crawl), the skipper was down from the masthead and was tending the whizzing line, keeping a strain upon it and seeing that it ran free. It had of course been carefully coiled to prevent fouling. The usual practice is to haul (that is, play the fish) from a dory, and a regular fisherman will often have several boats out at the same time, but we had no tender suitable to this purpose, and hauling from the yacht had the advantage of giving us all a share in the excitement. We lowered jibs, but kept a steerageway on and shifted from one tack to the other to keep the line clear of the hull. I left the work of hauling to the skipper and had leisure to watch him and lay in some stock of information for future use. In spite of the dart in his stomach, the fish showed plenty of fight. There are well authenticated stories of fish jumping clear of the water or driving their swords through the bottom of a dory, but our fish merely kept strongly on his way toward deep water. The skipper got in line when he could and paid out slowly when he had to, but he could not bring the fish to the surface at all, and twice we were obliged to let the whole line go and see our keg moving off at a rather depressingly rapid speed. This, however, was small gain for the fish, for the towing of a keg and a hundred fathoms of line was of itself enough to tire him fast. At these times we worked to windward and picked up the keg with a boathook.

It was just before twelve that we struck him, and it was after two when he stopped running and settled to the bottom. We let him lie a few minutes and then hauled him to the top, a dead weight. As he showed no sign of life, we put a strap of heavy rope around his tail and could say that he was ours. The photograph gives some notion of his head, but suffers from the foreshortening.

The playing of the fish had taken a little over two hours, and, if we had been ready for lunch at twelve, it will be understood that by 2 o'clock our readiness had not decreased. We laid the course of the vessel for Portsmouth and our own course for the galley, and then spent the afternoon in pure gloating. The fish was, by careful measurement, 13 feet 1 inch in length; the sword, cut down to the solid bone, is thirty-eight inches long, almost perfectly straight and uninjured by nicks or flaws. The bony eyeball, which we cut out and dried, is four and three-quarter inches in diameter. And, to put all my statistics together, the weight after cleaning, with head and fins cut off, was 502 pounds. The skipper, who has taken many fish, says that he has only seen one larger, which weighed 568 pounds. Though it was midnight when we drifted in to our anchorage off Kittery Point, not even a day of twenty hours could dim our satisfaction over such a prize.

Our first fish we carried into the harbor of Block Island and sold—for we could not eat 122 pounds—in a most prosaic manner to a dealer who already had twenty fish in his icehouse. The price was \$9.90 and a dime was added from somebody's pocket to enable us to pin a ten dollar bill to the cabin wall. But at Kittery Point there was no fishdealer and we spent a day in humorous chaffing with a Yankee who wanted the fish, but wanted also to be sure that he was getting it at the lowest possible price. Three visits to the yacht, much telephoning to York and Portsmouth, and many guesses—all too low—as to weight were necessary before we agreed upon seven cents a pound. My bargaining friend very honestly reminded me, before we came to terms, of the peculiar but quite customary deductions that dealers make from the dressed weight, and these are odd enough to deserve special mention. When the fish is cleaned and the head and fins are cut off, the tailfin is left to make it easier to hoist the fish with a tackle. For this a deduction is made by guess, and a further deduction for the bones of the neck if the dealer thinks that the head has been cut with too sparing a hand. Over this point an earnest but good-natured difference of opinion arose between the purchaser and the skipper, the latter maintaining that his years of dealing in the Boston market enabled him to judge with accuracy where the head of a swordfish ends and the body begins. With the recklessness of the amateur, who desires results and is indifferent to principles, I cut in with an estimate of fifteen pounds for neck and tail. This was accepted as fair, and then the final deduction of 10 per cent. for "waste" was made. And with due allowance for the producer's traditional suspicion of the middleman, it is clear that the fisherman is in some peculiar respects at the mercy of the dealer. I have myself been a producer of another sort and was not so much dismayed by the terms as delighted by the likeness between the fish dealer and my own middleman, the publisher. As the dealer offers the hardy fisherman "seven cents on 90 per cent. of the dressed weight, not including neck and tail," so the bland publisher offers to the befogged and simple-minded maker of books a royalty of "5 per cent. on the list price of 85 per cent. of all copies sold, not including those sold for introduction." But the fish dealer is the gentler in that he brings in no bill for proof corrections. The discovery of this interesting analogy gave me such joy that I became indifferent to all considerations of money and accepted with composure the figures presented to me on the back of an envelope: total weight, 502 pounds; minus 15 pounds for neck and tail, 487; minus 10 per cent., 438; at seven cents, \$30.66.

I closed my season as a fisherman, therefore, with gross receipts of \$40.56; the net profit I have not figured out. Nor shall I add to this the sum of \$1.10, received by the two boys from a fish dealer in Cutler, Me., for 220 pounds of pollock at half a cent a pound. As I paid \$2.50 to the fisherman who took them out, and as the boys divided the \$1.10 between them, I consider that my accounts will be clearer if this transaction is omitted.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

The Little Miami

By C. A. V.

INSIGNIFICANT it seems; flowing silently among high hills, overhung and almost hidden at places by great sycamore trees, yet the Little Miami has its place in Indian history and legend. The red man loved it, and on its banks, not far from the present town of Xenia, Ohio, the war-like Shawnee established his headquarters—the large but squalid village of Old Chillicothe. This village is frequently mentioned in frontier annals. From it to the Kentucky settlements ran the famous war trail, along which were dragged, to fates too horrible to mention, many a poor captive. Boone and Kenton passed over this trail as captives, but the fates were kinder to them than to so many others, and they escaped the fagot and stake.

A GLIMPSE OF THE LITTLE MIAMI RIVER.

Retaliatory expeditions from Kentucky also used the Little Miami trail on their missions of rescue or revenge.

Traces of the old road are still visible in places, it is said. At Fort Ancient are extensive fortifications, reared centuries ago by unknown hands. These earthworks stand on a plain, nearly horizontal, 236 feet above the level of the river which it commands. The embankments are steep and are pierced by no less than fifty-eight gateways. Grand old forest trees cover the walls, furnishing the vandal tourist an opportunity to carve his or her name and place of residence for the edification of the next visitor. If memory serves me, there may be found, among many others, the initials C. A. V., which, when a schoolboy, I carved upon a large beech. The habit of carving names on conspicuous objects is an old one and many men of note were guilty of the practice. The names of pioneers and explorers are often met with in out of the way places. Capt. Clark could no more resist the temptation to inscribe his name on an inviting cliff away out in the Northern Rockies than his Spanish predecessors could re-

frain from scribbling over the rocks of New Mexico and Arizona.

In the old days the country along the Little Miami was a hunter's paradise, while the waters swarmed with fish. It was for this reason that the Indian fought so hard and long for its possession. Quail and squirrels are still found in the neighboring hills; an occasional pair of snipe may be started along the thickly wooded banks, while the bass fisherman has a red letter day now and then with his chosen fish. At some places the mud-loving carp and catfish abound as well as several varieties of turtles.

Among the many happy outings of my life, a two weeks' visit with my brother at Oregonia stands prominently fourth. Oregonia was, and

is, a tiny village, nestling among the high hills which begin at the river banks. It then boasted of a flour mill and bridge factory. The former has since "gone up in smoke" and the latter has transferred operations to the larger town of Lebanon.

My brother's house stood on the brow of a high hill, from the foot of which a rugged ravine led down to the river. The sides of this ravine were covered with a dense forest of oak, walnut, hickory and small growth, which were fairly alive with squirrels. Every morning when not fishing, I would take my gun and wander down the ravine and in spite of inexperience, there was always meat in my game bag when I returned. How I loved the solitude of that big thicket! What a splendid place it was to build air castles and dream day dreams. Alas! most of those castles have long since crumbled to dust and the balance are tottering. The work of castle building was often rudely interrupted by the falling of a nut or the barking of a saucy squirrel. The density of the thickets and the steepness of the hillsides frequently made the stalking of a wary squirrel no easy

task, and how happy was I when the experiment was successful! One morning I added a woodchuck to my list of game. I was quietly making my way down the sloping sides of the ravine, eyes and ears alert for squirrels, when I espied a clumsy little animal making its way up the path directly toward me. Every few feet it would stop, look all about and listen. I remained very quiet until it was within gunshot, when I fired; the second shot finished it.

My days on the river were quite as pleasant as those spent in the woods. Below the mill dam at Oregonia there is a small gravelly island, from the upper end of which I have caught some nice strings of fish and from the dam itself I caught my first bass. From the top of an old stump near this dam I also caught nice strings of fish—I say strings, for whoever heard of a boy carrying a pail or basket to put his fish in? The reason is obvious and is not entirely confined to boys, either.

Last summer, while in Ohio, I revisited the scenes of that two weeks' vacation. On the former occasion the twenty-two miles intervening between my home and the river was traversed in a spring wagon. On this occasion I was swiftly whirled along the old familiar road in a motor car. The trip formerly seemed a long one, but this time it seemed as though I had scarcely got started, when on rounding a sharp curve, the peacefully flowing river burst upon our gaze. A few lusty honks warned dogs, chickens, boys, the halt, the blind, the aged and the infirm to seek shelter. We rushed through town and down the lovely little country lane to the fishing grounds, halting under the branches of a wide spreading tree. Somehow I was not pleased. I cannot reconcile myself to a motor car outside city limits. To invade those scenes of peace and quiet with this loud-mouthed, ill-smelling contrivance seemed out of place, although I did not voice my sentiments to the owner of the car.

The fishing did not prove good, although I landed a bass from off the point of the gravelly island. The old stump was gone, and so also were other familiar landmarks, but there were catfish and carp aplenty and so time did not lag. At lunch time one of my companions threw out a line and fastened it to a rock, after which we attacked the dinner basket. All at once my friend jumped up and tore down the bank like mad, calling on all the rest to follow him. Now, I was enjoying my lunch very much, and to be so rudely called away in the very midst of it was unpleasant in the extreme, but judging from my friend's frantic yells that the fate of the nation was at stake, I joined in the race. Jake was hauling away at one end of the line for dear life and the fish, whatever it was, was making things exceedingly lively at the other. We finally landed our fish, which proved to be a big carp, with the aid of the net, after which we went back to our feast. The afternoon wore away without any further excitement or any more fish.

Several days later we again tried the river, some of us with better success, one man catching a fine string of bass at the mouth of Caesar's Creek. Another had some fine sport with those gamy fish about a half mile further up the river. In writing about this particular part of the river a laughable incident of former fishing days is recalled. A crowd of young fellows had

come over to spend a day fishing, and among them was a schoolmate of mine, whom we will call E. E. was a big German boy who was the butt of all the good-natured fun of the community. He fished precisely as he did everything else, by "main strength and awkwardness," as the saying goes, and, needless to say, had poor results. He had borrowed a fine rod from a friend and this he firmly fastened between stones, throwing the baited hook far out into the stream. Then he wandered aimlessly about on the bank. One of the boys, catching a big turtle, carefully drew in E.'s line, fastened the turtle to the hook and replaced everything as it was. The big turtle tugged lustily at the line and the rod bent alarmingly. "Look out, E., you've got a fish!" some one yelled, and

the big German, seeing how the rod was bending, came down the bank with the agility of a sawlog. Jerking the rod from its moorings, he gave a tremendous heave. Snap went the costly rod, but E. began to haul in his fish hand over hand. When the trick was discovered, E.'s face would have made a painter's fortune, could one have been found brave enough to attempt the painting of it. Then followed an interval of picturesque language, Dutch, English and profane; the whole ending in a footrace between the accuser and the accused.

Late in the summer I paid a farewell visit to the river, living over old scenes, fishing and just idling about.

"And from the stream we turn away,
But hear it many an after day."

A Little Cousin of the Beaver

By ELMER RUSSELL GREGOR

THE order *Glires*, comprising the rodents, includes many forms of these interesting mammals, divided into numerous families. No two perhaps bear such a striking resemblance to each other, in form and habits, as do the beaver and the muskrat. Indeed, the latter has been likened to a small cousin, a sort of pocket edition of the former. Nor is the comparison incongruous, for in many respects the two animals show marked similarity.

It might seem almost, when civilization set its heavy foot in the wilderness and drove the beaver from its accustomed haunts, as if the muskrat shrank in size to better avoid detection and so remained in the ponds and rivers deserted in panic by its larger contemporary. At any rate the muskrat has persisted, and stranger still, multiplied in its old abodes.

Mainly in size and a few structural differences sufficient to justify naturalists in separating them into two distinct families, the species differ. In habits, sagaciousness and mode of living they much resemble each other. Both at the beginning of autumn build dome-shaped dwellings in ponds and sheltered lagoons, in which they pass the cold winter months. Many of these habitations are almost identical as regards architecture and composition. True, the beaver lodge is usually the larger, but many times the abode of the muskrat is equal in size. One of the photographs accompanying this article shows such a house. An abode of such size in the case of the muskrats will shelter many individuals and is divided into several good-sized weed-lined living chambers.

Nor does the striking resemblance stop here. In habits as well the muskrat and beaver exhibit many of the same eccentricities. True, the larger animal has learned to build dams which the muskrat seems never to have imitated, except in a small way, for it, too, sometimes piles up mud and sods to form a circular breakwater about the scene of its operations when constructing its home in the fall, no doubt for the purpose of keeping the water back out of its way. However, there is just sufficient difference in the diet of the two species to account for the neces-

sary and greater ingenuity displayed by the beaver in this respect. The muskrat confines itself largely to weed stalks, water plants and lily bulbs and roots in place of the bark and larger growths so delectable to the beaver. Therefore, the smaller rodent has never been compelled to dam the water in order to reach his chosen fare, and by the very lack of ingenuity displayed in doing so, has come less in direct contact with, and opposition to, the will of man, and therefore has been permitted to exist in places from which the beaver has been exterminated.

Like the beaver, the muskrat brings forth its young in a den made in the side of a high bank, if available, and again like its larger relative it wanders about in sociable family parties during the summer. It delights in sunning itself on the edge of a swamp or floating lazily about in some cool, isolated pool. At such times it will often swim rapidly around in a circle, at the same time uttering a peculiar squeaking cry. During the warm days its true home seems to be the marsh, and its well trod, sinuous trails wind in and out beneath the luxuriant growth of water weeds.

If the muskrat has endured less persecution at the hand of man than has the beaver, it has suffered more from birds and beasts of prey. Its smaller size makes it a convenient and easy victim for eagles, owls and the larger hawks, and among its four-footed enemies may be classed the otter, mink and fox, who seems especially persevering in his war against it.

In times of danger the muskrat again evinces a familiar trait of the beaver and strikes the water a warning slap with its hairless tail that serves to send all of its little brown comrades within hearing distance diving hastily out of harm's way, but not before each has dutifully repeated the signal.

The muskrat rears several litters of young each season and this fact no doubt accounts, in a large degree, for its abundance in localities where other wild life has long since succumbed. Of late years, however, its fur has become valuable, and it is now persistently hunted and trapped throughout its range; not only in fall and winter, but far into the spring months as well,

when, unfortunately for it, its fur seems to be at the best, and at that time many of the young are needlessly slaughtered and sold in the fur-market for a small sum as muskrat "pups." How long this interesting little denizen of the wet lands will survive, now that Dame Fashion has stamped its fur with the seal of her approval, remains to be seen. Its pelt, plucked of the guard hairs and properly treated and dyed, is offered to the public as "Hudson seal," "electric seal" and under many equally misleading *noms de plume* at extravagant prices.

The claim has been made, and often on seemingly good authority, that the muskrat at times assumes a most bloodthirsty aggressiveness and has even been known to seek and devour flesh. Many tales of adventure have come from solitary hunters marooned in the center of some dismal swamp where they claimed they had been surrounded and attacked by hordes of these savage little animals. Again have been published still

close up beneath its icy cap, the muskrat is pressed for air in its wanderings, and it is said at such times to rise and expel its breath against the under surface of the ice. A bubble is instantly formed and filled with oxygen, and this the muskrat sucks back into its lungs and proceeds again on its course until compelled to repeat the experiment.

The laws of a muskrat colony seem to almost exactly coincide with those of a beaver colony under like conditions. When the family increases to such an extent that the lodge is overcrowded, we find the younger generation wandering off "in search for pastures new." This restricted migration takes place late in the summer or at the beginning of autumn. Forsaking the home grounds, the pioneers travel slowly along through the woods until they find a place to their fancy; there they make camp and proceed with the building of their home. It is presumably this habit that accounts for the wide distribution of

face exposed. The hind feet, which are slightly webbed, also help materially its rapid progression through the water.

Apparently muskrats have favorite landing spots along the shore where they bring their food to be eaten at leisure and to which they resort for fun and frolic. One of the prettiest sights it has ever been my lot to see was witnessed on a mountain lake at sunset, when an old muskrat and her two young swam noiselessly to one of these landing places, and climbing from the golden-tinted water, the mother with her mouth full of edible water plants, partook of a dainty meal and then indulged in kittenish play.

Whether muskrats are a menace to breeding waterfowl is a question that for some time has agitated the minds of sportsmen. Like its near relative, the common house rat, which often proves so destructive to the eggs and young of domestic fowls, the muskrat, I am inclined to

HOUSE BUILT OF SODS, MUD AND WEED STALKS

LARGE BEAVER-LIKE ABODE OF THE MUSKRAT.

more gruesome accounts of the finding of bodies of unfortunate wanderers, which have been partly devoured by these rodents. There is a possibility that these charges may in some cases be true, and perhaps goaded on by hunger, induced by a scarcity of their normal food supply, the muskrats may have turned with avidity to the opportunity before them. These are extravagant claims, however, and need much substantiating evidence to prove them. I have several times seen muskrats swim out and attack the bodies of dead ducks floating quietly on the water some distance from a blind.

Very similar to the castor sacs of the beaver are the two glands attached to the inside of the leg of the muskrat which especially in the spring give off the strong musky odor from which the animal derives its name. At this time the whole pelt of the creature becomes strongly impregnated with the not unpleasant odor, and in handling skins at such times the trapper soon finds his person strongly scented with the perfume.

In the winter these semi-aquatic mammals spend most of the time, like their larger cousins, swimming about and gathering food in the water beneath the ice. The freshwater mussel seems to be particularly acceptable to the muskrat, and vast quantities of shells in and about the houses give evidence of feasts in which this bivalve has figured prominently on the menu. Often, especially when the pond is high and the water rises

the muskrat over our land. From the Gulf States to the arctic prairies is the compass of its range with slight variations. Then, too, as in the beaver colony, we find individuals, banished from the main village, living alone in small houses of their own. Whether their exile and solitary existence are voluntary or compulsory is difficult to ascertain.

The cabins erected by muskrats are of two different types. Some are built entirely of sods, mud and weed stalks, and these are usually placed directly on a muddy flat or strip of marshland. Others, and they are the ones which most closely resemble those of the beaver, are composed of larger sticks and small logs and are almost invariably started on a sort of foundation made of upturned roots and tangled limbs, the whole intricate affair wedged firmly between willows or other small trees at the edge of the water. This type of house is generally the larger and more pretentious affair and seems to offer evidence of a superior grade of workmanship over that displayed in the creation of the smaller, more primitive abode. The accompanying photographs show very clearly the two types of lodges erected by muskrats.

Like the beaver, the muskrat does much of its building under cover of darkness. However, it may be found abroad at all hours of the day and seems particularly active just about sunset. It swims rapidly along with the top of its head and

believe, would gladly avail itself of the contents of any nest with which its wandering footsteps brought it in contact. However, "there is much of good in the worst of us, and much of bad in the best of us," which is no doubt equally true of the muskrat. At any rate there are no great crimes laid at its door, and so let us tolerate and study these interesting little sharp-eyed people of the marshes. From most of the land the beaver has disappeared, and to the growing generation its instructive habits will be, by force of circumstances, unknown and unlearned. However, its cousin, the muskrat, still remains close at hand for our observation, and by visiting its haunts and stopping at its skillfully constructed lodges, we may even yet learn much of the beaver's mode of life.

So much has been said in favor of poaching by some of our public men, says the *British Shooting Times*, that the rising generation will soon begin to think that it is a royal road to success. Our Chancellor of the Exchequer some time ago boasted of having been a poacher, and a few days ago Sheriff Campbell Smith, who was being entertained at a public dinner, said in reply to the toast of the evening that it had been stated that he had been lenient to poachers. The first night he spent out was with a band of poachers, and one of them afterward became a sculptor and the other a Baptist minister.

Work of the American Association.

THE activities of the American Game Protective and Propagation Association have extended rapidly.

Between five and six thousand acres have been secured in Carver and Plymouth townships, Massachusetts, to be used as a game farm and sanctuary. The land is situated on Cape Cod, near the town of Tremont, about forty miles from Boston. It is approximately five miles long by three miles wide. On it there are thirty ponds and a good growth of pine and scrub oak. During the last three or four years it has been used as a game sanctuary, and as a result there are now many quail and ruffed grouse in the covers. The climate in this section is mild, the winters never being severe enough to kill either of these birds.

At one time the ponds afforded some of the best duck and goose shooting in New England. They lie directly in the line of flight of these migrants, which, since restrictions have been placed on shooting them, have been alighting there in increasing numbers on their northward and southward journeys. Many wild fowl breed there and the association plans to increase this number by affording them unusual advantages in the way of food. The breeding of wild ducks will be the initial work in propagation. A supply of black, mallard and wood ducks will be purchased immediately. Corn will be distributed in the shallow water around the edges of the ponds, so that the flocks brought down by the propagated ducks will be encouraged to nest there.

The eggs laid by the tame flock will be hatched under hens. This method of propagation has been successfully carried on many times, and as black ducks and mallards are great layers, it is estimated that thousands can be raised this year.

Special attention will be given to the wood-duck. The association plans to raise these birds in numbers.

There have been numerous attempts in this country to raise quail and ruffed grouse, but few of them have been successful. On the other hand, efforts to raise pheasants have turned out well in most localities where it has been attempted. In the South and on the Pacific Coast the Hungarian partridge has also thrived to some extent. The reasons for so many failures in attempting to propagate our native birds have been various, but it is not at all strange that we should fail in this country at the beginning. People point to the fact that in England, Scotland and on the Continent, thousands of native wild birds are raised annually, but they do not stop to consider that they are raised by gamekeepers who belong to a race of gamekeepers, father and son having been engaged in this occupation for generations. They have learned the secrets of the trade, while in this country we have given little thought to the matter. It is quite likely that the association will secure an expert gamekeeper from Scotland to take charge of rearing upland birds. The foreign gamekeepers in this country have been very generally successful. Undoubtedly they will teach their

profession to native Americans and will thus start a line of gamekeepers in this country that will play an important part in solving the game problems of the future. Notable successes have already been made in this country, but the number of expert native game breeders is very limited.

The birds raised on the association's farm will be distributed among members for stocking purposes. The association is advocating the establishment of game refuges in all parts of the country. Particularly it believes that every gun club or protective association should get control of a few acres at least to be used for this purpose. Wherever such refuges are situated they will naturally improve shooting in the surrounding country. If the birds have a place where they can raise their young in security and where the coveys will not be reduced to one or two each fall, they will increase so rapidly that they are bound to overflow into the surrounding territory. Next year the association will endeavor to forward shipments of birds to all affiliated clubs that will make some such provision for their safety.

The Massachusetts farm has been secured on a ten-years' lease, with an option to buy for the original price of \$13,000 any time during that period. The land, which is worth many times this amount, was purchased by disinterested sportsmen, each putting in about \$1,000 on condition that no shooting would be allowed upon it. These men have very kindly turned it over to the National Association under the above terms. The only restrictions attached are that it shall continue to be a sanctuary for twenty years after the date of the lease, whether or not it is purchased. It is also stipulated that at least \$500 a year must be spent in reforestation.

The hearty support of sportsmen throughout the country that was so encouraging during the first three months of the association's existence, has been continued, and up to March 1, about \$6,000 had been subscribed. On Jan. 16 the association secured its first patron, T. Coleman duPont, of Wilmington, Delaware, having contributed \$1,000.

Particularly gratifying is the way fish and game clubs and local and State protective associations have joined the movement. Such bodies, situated in all parts of the country, are hastening to affiliate with the National Association, and there is now a long list of such affiliated clubs on its roster.

The Spring Lake Case.

BLOOMINGTON, Ill., March 2.—*Editor Forest and Stream:* The Illinois Supreme Court has come to the rescue of the hunters and fishermen in their appeal to save Spring Lake in Tazewell county from conversion into a cornfield.

Spring lake is nine miles in length and one hundred yards to a half mile wide. Between the lake and the Illinois River there is a tract of 14,000 acres of land which is embraced in a drainage district. Substantially all of this land

is subject to overflow from the Illinois River.

In 1903 the drainage district was organized with the view of removing the water from the Spring Lake territory, and to convert the swampy soil into cornland. A levee was constructed along the south shore of the Illinois River to protect the land from overflow. At the lower end of the district a pumping station was established and for several years the pumps have been at work pumping the water into the Illinois River. For a distance of six miles at the upper end of the district, farms have replaced the swampy section, and all that was left for the hunters and fishermen was the lower three miles which has been in controversy.

The drainage commissioners desired to take the entire tract, but the hunters and fishermen have resisted this procedure on the ground that Spring Lake has always been navigable, and that its ownership was vested in the State and was, therefore, public property. The commissioners were enjoined from constructing a dike across the lower end at the junction with the Illinois River, such a dike preventing all boats from entering the lake from the river, and at the same time enabling the commissioners to pump all of the water from the lake.

In 1906 the commissioners entered into an agreement with the hunters and fishermen, the latter being represented by Attorney-General W. H. Stead, by which it was proposed to construct a lock, connecting the lake and the river. Objection was raised on the ground that during the periods of low water it would be useless, the water on the river side of the lock being so low as to prevent the passage of any boats larger than a skiff. It was further pointed out that the engineer's estimate of the expense of such a lock would be \$50,000 while the expense of constructing a levee on the north side of the lake, which prevents the water from flowing into the cornfields adjacent, would cost an equal sum. Instead of building the lock as per the agreement, the commissioners decided to extend the drainage district and dam the lake at both ends, thus shutting out all water. A bill in injunction was filed to prevent such a move, and after losing out in the lower courts, the commissioners appealed to the supreme body. The latter court has just decided that the agreement must be respected, that Spring Lake was meandered by the Government, and that the title to the bed of the lake is in the State in trust for the use of the public; that Spring Lake, in a state of nature, is a navigable body of water, and that the public has the right of navigation without regard to the ownership of the bed of the lake, and that the commissioners have no right to interfere with or obstruct navigation thereon.

While the commissioners have reached no decision concerning their future course, the chances are that they will decide to abandon the proposed reclamation of the lower end of the resort, thus giving sportsmen a tract three miles in length and about two miles in width. Sportsmen who have for years hunted and fished upon Spring Lake hope that the last chapter in the long litigation has ended, and that the case will not be reopened.

E. E. PIERSON.

All the game laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

The Sportsmen's Show.

MADISON SQUARE GARDEN is witnessing another Sportsmen's Show this week, and it, like all the other shows of this sort that have been held since 1895, has drawn the hunters, anglers, marksmen and campers together and furnished them with amusement and entertainment.

Exhibits are numerous and varied this year and, with the large space allotted to the trap-shooting, they are in a way condensed. There is rifle shooting in the basement, Buffalo Jones and his moving pictures of African and Rocky

hibitions, less of the athletic features that were so prominent several years ago and more of the things that are worth seeing and which drew huge crowds to the shows of the late 90s. Many of the old-time exhibitors, absent for a number of years, are back to stay, and the show in consequence is a real attraction for the sportsmen.

Following is the list of exhibitors. Where the place of business is not mentioned, reference is had to New York city:

E. I. du Pont de Nemours Powder Co., Wilmington, Del.—Powder.
Schoverling, Daly & Gales—Sporting Goods.

Sterling Hardware Co.—Hardware.
Provincial Guides' Association, St. Johns, N. B., Canada—Guides.
Franco-American Food Co., Franklin St., Jersey City, N. J.—Food Products.
Channell Chemical Co., Chicago, Ill.—Polishes.
Walter Hinds, Portland, Me.—Taxidermist.
Indian Exhibits Co.—Indian Handicraft.
The Camp-Fire Club of America.
American Game Protection and Propagation Association.
State of New York Conservation Commission, Albany, N. Y.

SCENIC EFFECT AT THE SPORTSMEN'S SHOW.

Mountain animal-roping in the Concert Hall, trapshooting and fly-casting on the main floor, and camps and commercial exhibits everywhere. When the anglers are not competing and the scattergun men are quiet, Annie Oakley smashes things with gun or rifle, and always draws a crowd.

The exhibits of various business enterprises, railways, backwoods camps, taxidermists and outfitters, and the live fish and game all make the show attractive to a large number of men and women who may be found in the Garden evening after evening, and who never tire of the show.

There is a steady improvement in these ex-

J. Stevens Arms & Tool Co., Chicopee Falls, Mass.—Arms and Tools.

Massachusetts Legislature.

BOSTON, Mass., March 2.—*Editor Forest and Stream*: At the conference of delegates from sportsmen's clubs and natural history societies, in December, committees were appointed to draft laws on several subjects. Frank Murphy and William Minot, of Boston, and C. F. Maynard, of West Newton, were appointed to draw a bill to minimize the damage done to bird life by cats. Several years ago a bill for the licensing of cats was exposed to much ridicule, and "laughed out of court." The committee above mentioned had its bill for a license of one dollar for a male cat referred to the Committee on Agriculture, and our State ornithologist, Mr. Forbush, and the chairman of the Fish and Game Commission, Dr. Field, appeared before the committee in support of the bill, and while it won some friends in the committee, it was so far successful as to win "reference to the next general court." Eventually it is bound to win, I believe.

In reference to the bill for "reasonable restraint of dogs," George B. Clark, of Boston, has given your readers full information. It is only a matter of time with that bill in all probability, for Mr. Clark is hoping to outlive its most formidable opponents, and he is a husky fighter. William P. Wharton has his "armor on" all the time and is an attendant at most of the hearings at the State House. H. H. KIMBALL.

Minot's brief for argument in favor of licensing cats says in part:

An average country cat kills fifty birds each year. If this is so, and each of our 30,000 farms in Massachusetts average five cats, we have 150,000 cats killing 7,500,000 birds per year. This does not include wild domestic cats, which perhaps, kill as many again. A. C. Dike watched a cat for a season and saw it kill fifty-eight birds. How many more it killed we can only guess.

Nearly 100 correspondents of Mr. Forbush all over the State declare that the cat is one of the greatest destroyers of birds. Mr. Forbush states one case where a cat that was watched killed seven birds in one day.

The effect produced by cats is convincingly shown where they have been introduced on islands, i. e., Sable Islands off Nova Scotia and Aldabra Island off Madagascar. In both, the introduction of cats nearly exterminated the birds.

John Burroughs, the eminent naturalist, states that cats probably destroy more birds than all other animals combined. William Dutcher, President National Association of Audubon Societies, considers the cat one of the greatest causes of bird destruction known. Reprint from Year Book, Department of Agriculture, for 1903, "The Economic Value of the Bobwhite," states: "Domestic cats, as well as foxes and certain hawks, prey on their young."

Reprint of Year Book, Department of Agriculture, for 1909, pamphlet called "Does it Pay the Farmer to Protect Birds," by H. W. Henshaw, states: "Above all should the farmer pay attention to the cats on his farms. It is only recently that the extent of the depredations of the house cat on wild life, especially on birds, has been recognized. Many who have studied the matter believe that, taking the year around, cats are responsible for the death of more birds, especially young ones, than all wild animals put together. * * * Even the well-fed and well-housed cat is responsible for many valuable lives."

At a recent hearing upon this subject, Dr. Field brought in a large cock pheasant (as big as a small hen) which he saw a cat in the act of killing.

New York Legislature.

ALBANY, N. Y., March 4.—*Editor Forest and Stream*: The Conservation Commission's bill providing for the immediate development of the hydraulic resources of the State has been introduced in both branches of the Legislature.

The bill amends the conservation law of last year and provides for immediate State construction, control and maintenance of a Statewide system of electric transmission with water storage reservoirs to be constructed by the State for the public use and benefit in accordance with the policy of Governor Dix.

Under its provisions the Conservation Commission will have power to lease, construct, acquire by purchase or condemn any property necessary to the undertaking; and may contract to furnish municipalities with power, energy, electricity or water for the purpose of lighting public streets, highways, public and private buildings, and for heat and power, to the end that the "municipality and the citizens thereof shall secure at cost the benefits to be derived from the utilization of said power and water."

The bill also provides that any existing public service corporation at present supplying a municipality with light and power may enter into a contract with the municipality for the distribution of such current as is furnished the municipality by the State, but only at a rate to be approved by the commission. No contract either with the State or with an existing company can be entered into by the municipality until after the proposition shall have been approved at a special election

at which all electors within the municipality can vote.

The surplus and other available waters of the Barge canal are put under the jurisdiction of the commission, which may lease water wherever the best interests of the State require; or may develop and distribute water, light and power in the same manner as provided with impounded waters. The commission is given authority to contract with riparian or other owners benefited by the regulating of the flow of any stream.

Assemblyman Vert has introduced a bill amending the Penal Law (Sec. 1897) by providing that this section, which prohibits the carrying and use of dangerous weapons under certain circumstances, shall not prevent the issuing of a hunting license under the forest, fish and game law to a person under sixteen years of age, or prevent the offering, selling, loaning or giving to such a minor who holds a hunting license, of a firearm of a size which may not be concealed upon the person.

Assemblyman Shannon has introduced a bill reducing from twenty-five pounds to ten pounds the amount of lake trout that may be transported at any one time by any one person.

E. C. C.

Condition of Adirondack Deer.

ALBANY, N. Y., March 4.—*Editor Forest and Stream*: Wild deer in the Adirondacks have not suffered much from the severe winter now closing. The game protectors employed by the Conservation Commission have been sent out to report on the condition of these animals, and find that the deer have wintered well. One of the protectors who took a snowshoe trip of over forty miles through the Nine Mile Creek and Hamilton Stream sections reported that the woods look like a sheep pasture as far as deer tracks are concerned. He saw a large number of deer which were in fine condition, and the absence of any snowshoe tracks showed that the deer were not being molested.

Another protector who has been investigating the condition of the deer in the vicinity of Saranac reports that at one beaver meadow where hay has been cut and stacked, there were fifteen deer that wintered on three stacks of this wild hay, and they were in prime condition. As the experiment of cutting and stacking wild hay during the summer for the feeding of deer during the winter is proving a success, it will be carried on very extensively by the Conservation Commission hereafter, and no doubt it will be the means of saving a great many hundreds of deer during the more severe winters.

J. D. W.

Hon. George A. Stevens, of Lake Placid, when asked by the Troy Times about winter conditions in the woods, said that there was an unusual lack of snow in the woods and that the ice was about eighteen inches thick. He said that the weather was very cold.

The deer were wintering very well; in fact, they were so plentiful that fox hunters often found them a nuisance, for dogs would frequently start a deer, mistaking it for a fox, and of course the services of that dog were lost for the time being. Mr. Stevens is one of the best informed men about the woods in the Adirondacks.

Feeding Wildfowl.

BUFFALO, N. Y., Feb. 20.—*Editor Forest and Stream:* In a trip around Seneca and Cayuga lakes, which bodies of water have frozen over this winter from end to end, something which has not happened before in a number of years, I endeavored to find out how the ducks managed to winter.

There is a small piece of open water a few acres in extent north of the Central railroad tracks on Cayuga Lake in which were a large number of ducks of several varieties. I saw one fine flock of canvasbacks which were readily distinguishable by their red heads and large black bills, which were not over forty yards from the train and did not leave the water when the train passed.

A man at Seneca Falls informed me that a boy gave him a blue-billed duck which he had found dead. This was picked and found to be in pretty fair condition. It did not seem to have starved to death but was probably killed in some manner. I did not hear of any other ducks being found dead, but think they have had a hard time to get along.

I inclose two clippings taken from a Syracuse paper to-day:

"By direction of the Geneva Rod and Gun Club, H. J. Loomis to-day took to the outlet fifty bushels of wheat to be fed to a flock of about 1,000 ducks occupying an open space in the lake near that point.

"The ducks have been cut off from their feeding places, owing to the freezing of the lake, and about 1,000 have crowded into a small open space. The State has already made arrangements with farmers along Seneca Lake to feed numerous flocks along the lake shore.

"A flock of seventeen ducks near the long pier has become so tame that people, throwing corn and bread to them, have approached within a few feet. The ducks embrace practically all the varieties which frequent this section."

"George Travis, of the village of Cleveland, a game protector, stood guard the greater part of to-day over 2,000 to 3,000 wild ducks in the waters between the bridge at Minetto and the Battle Island dam. The warden secured a vantage point on wooded highlands about a quarter of a mile from the Oswego River. He discovered no violations of the law.

"Mr. Travis said one way he made sure the ducks had not been shot at was that they continued to stay about the bridge. He said if they had been shot at they would become frightened and fly away."

E. P. R.

Game Laws.

W. E. HOOKWAY, of the New York State Sportsman's Association, has written the following letter to members:

I call to your attention the necessity of the shooters in your county doing work in behalf of Bill No. 45, 113 Int. 45, appropriating \$75,000 for six game farms.

I saw an article in the papers, stating that it was proposed to cut down the allowance to about \$25,000. Besides, it is quite uncertain if we get any appropriation. Certainly we will not if we do not work for it.

Besides interesting your Senator and Assemblyman, if you please call personally upon the committee of your county and get them to use their

influence to get the passage of this bill. This will be of the best possible assistance. Unless active work is done in behalf of this appropriation, we will not get it, and sportsmen need the farms.

If the shooters will pull together, we will get it. It will take work and lots of it. Please go for the politicians in your section at once and get the shooters to again write letters to their representatives. We would like to see this bill reported out of finance committee.

Havoc in the Blue Ridge.

BALTIMORE, Md., Feb. 20.—*Editor Forest and Stream:* The severe weather of the last eight weeks in the Blue Ridge Mountains killed scores of game, and has driven to desperation the more ferocious animals. The intense cold had a tendency to bring wildcats and bears from winter quarters for food.

The committee appointed by the Baltimore County Game and Fish Protective Association met Feb. 13 at the Hotel Junker, Baltimore, to draft a bill to be submitted to the Legislature

to control dogs in Baltimore county. There is a State law now on the subject, but like many other Maryland laws, there are no means of enforcing it to the satisfaction of those interested. The committee has in view the extermination of worthless curs, but recognizes that it is hardly feasible to adapt city dog-catcher methods to the country dog. Parts of the State law, such as taxing owners \$1 for dogs and \$2 for bitches were indorsed.

The killing of curs running at large by constables was another feature endorsed. The stumbling block came when the matter of providing for the reimbursement of the constables for killing unlicensed dogs and the disposition of money received for licenses was taken up. Interviews will be had with the county commissioners and others on these points, and the responsibility for the enforcement of the proposed law, if enacted, will be placed. The committee is composed of Upton S. Brady, Chairman, Baltimore; Dr. W. A. Low, Catonsville, Md.; Edward Reynolds, Dr. H. Lee Clarke and Gustave Delcour.

FRANK A. HEYWOOD.

No Break-up Yet.

SULLIVAN COUNTY, N. Y., March 4.—*Editor Forest and Stream:* The cold weather has continued quite steadily since the thaw in February, and the ice holds in the streams and lakes. Of course, this ice is very heavy, and if we were to have a thaw of several days, followed by rain, there would be danger of a bad breaking up. The water would pour off the frozen ground, assisted by the melting snows, and we might see the ice go out on a sudden flood, as we did in mid February, 1908.

There is but little life to be seen in the woods at present. Even crows are very scarce, and for the most part all the land is without life. This will change very quickly, as two days of mild weather would bring the earlier migrants northward. After such a severe winter everyone is longing for spring, they would like to hurry it forward. This can not be done. If we have mild weather in March, we usually pay up for it by cold weather in May, and after the frost has left the ground the air is extremely penetrating, as there is water everywhere and the air is full of moisture. We must wait patiently for the change of the seasons. Everyone hopes for good fishing this year. There is less snow in the woods than is usual at this season.

There is a good deal of speculation in regard to the prospects for sport on the celebrated Beaverkill the coming season. A great many of the brown trout of good size died last year in May and June from some disease, the nature of which was never discovered.

The Beaverkill is one of the clearest and least polluted of big trout streams, and no other fish were affected by the conditions that affected the large brown trout. Quantities of small fish were seen during the summer, and some anglers believe that trout will be as abundant as usual,

only that the average size will be small. A great many fingerlings were turned in last fall and more interest than usual was displayed in restocking the streams in this part of the country.

Nothing is too good for these fine waters and large quantities of our native trout have been introduced during recent years. These will do well in the upper waters and small tributaries, but in the lower reaches, where the water nowadays becomes very warm in summer, it is doubtful if *fontinalis* will thrive. There has been much prejudice against the brown trout, but they have afforded a vast amount of sport during the last fifteen years, and exciting battles with large fish. When one remembers that this is the same trout of which Izaak Walton wrote and around which much of our best angling literature has been written for 400 years, *fario* is a fish deserving of some consideration. I have examined the stomachs of many large trout of this species and never found a trout in one of them, though oft-times they contained many minnows. Yet I have heard many stories of their cannibalistic habits and no doubt there is some foundation for these. I have seen a half-pound native trout with a small brother or sister *fontinalis* in his mouth. Big-game fish will eat little ones if the latter get in the way. A little pickerel or pike is a very good bait for a big one, but they do not make a business of feeding upon their own species; they usually fill up on small fry of some sort or minnows.

THEODORE GORDON.

Dry vs. Wet Fly.

ANGLERS intending to attend the meeting of the Anglers' Club of New York at the Hotel Navarre on the night of March 12 will do well to lose no time in advising the secretary, A. B. Hubbell, 144th street and Southern Boulevard, as the capacity of the room is limited. The

meeting will be held at 8 o'clock, when Walter McGuckin and William C. Metcalfe will present arguments in favor of dry-fly fishing, and the merits of wet-fly fishing will be expounded by Edward B. Rice and R. J. Held. General discussion will follow. Dinner will be served at 7 o'clock, and any angler will be welcomed. Notice of his intention to be present should be sent at once to Mr. Hubbell, together with check for \$1.75 for the dinner.

San Francisco Fly-Casting Club.

SAN FRANCISCO, Cal., Feb. 24.—*Editor Forest and Stream:* The midwinter handicap contest was held at Stow Lake. Wind variable; weather fair. Scores:

E. O. RITTER, Clerk.

Experimenting with a Fly-Rod.

NEW YORK CITY, Feb. 24.—*Editor Forest and Stream:* While experimenting with a fly-rod I devised the following method of determining the stresses and resulting strains, or bending, which under a live load in casting a rod is subjected to.

Figure I. shows the rod AB bent at the moment of greatest stress, while recovering the line after having made a forward cast. S is a spring, B a line eye and SEP a fine wire or line fastened at any point P on the rod, passed through the line eye E and fastened to the spring S. (I used in this case, at the suggestion of E. J. Mills, an automatic reel.) A marker or button is threaded on the line SEP and is free to move up and down on said line if actuated by a force.

Before making the cast, when the rod is straight and the line SEP under tension through the spring at S, the marker is adjusted so as to be just in contact with the line eye E. When the rod is bent by the act of casting, the marker is moved upon the line SEP to the amount the line has been shortened from the point P to E, due to the curvature of the rod. It will,

of course, measure the shortest distance between the points E and P when the rod is under the maximum strain. By taking several points on the rod, the curve it takes, while making the casts, can be reproduced statically with a steelyard or weights. I found the stresses to which a rod is subjected, due to the momentum of the line and friction of the line in the water and air, are much greater than is generally conjectured, and I am led to believe, from my experiments, that when making long casts, or when thrashing out a line against strong wind, a rod is subjected to stresses which, if reproduced statically, would break it or put a permanent set in it. The reason that a well made rod of good material does not take much of a permanent set is due to the fact that the fibres that the rod is made of are alternately subjected to tension and compression.

Figure II. shows the mean of a number of experiments I made with a fly-rod, the dimensions of which are as follows: Length, 10 feet; weight, 5 7/8 ounces; size above handle .404 inch; below first ferrule .308 inch; second joint size, above ferrule, .291 inch; below ferrule, .185 inch; tip size, above ferrule, .177 inch; point, .075 inch.

Figure III. shows the arc the rod took in recovering the line, after making a 75-foot cast. The stress which produced this curve proved to be 1 1/2 pounds in the direction of the line, as shown in the figure. The arc of the curve had a chord of 7 feet 2 1/2 inches, while the greatest ordinate to the chord was 2 feet 4 1/2 inches. I found that the rod, from the point B just above the handle to a point A, 7 1/2 feet from the point

B, took a curve which coincided almost exactly to an arc of a circle, with a radius of 3 feet 6 inches, showing the rod was most beautifully proportioned.

Owing to the rigor of the winter, I was unable to make any experiments in the open, and was obliged to pursue my experiments under cover in a tank only seventy-five feet long. As soon as I have an opportunity, I shall make further and more exhaustive experiments. In the meantime, I should be pleased if some of your readers should be interested sufficiently to make experiments along these lines and so eliminate as much as possible the personal equation.

THOMAS D. WHISTLER.

Casting at the Sportsmen's Show.

A SUMMARY of the events cast including Monday night follows. The scores in detail will be given next week:

Trout fly casting, five-ounce rods, 70-foot class—T. G. Saunders, 68 feet; Willich, 62 1/2 feet; E. F. Todd, 61 feet.

Accuracy bait, quarter-ounce—A. J. Marsh, 97.3 per cent.; F. T. Mapes, 96.5; C. T. Champion, 95.8.

Trout fly casting, five-ounce rods, 85-foot class—Perry Frazer, 78 8 feet; A. B. Hubbell, 74 feet; F. T. Mapes, 73 feet.

Accuracy bait, half-ounce, 97 per cent. class—E. M. Gill, 97; C. H. Higby, 96 4-5; Walter McGuckin, 96 3-5.

Accuracy fly-casting, 98 per cent. class—W. C. Metcalfe, 99.12; A. B. Hubbell, 98.67; A. R. Hanners, 98.33.

February Bird Notes.

DELANSON, N. Y., March 2.—*Editor Forest and Stream:* Our Northern woods are bleak and cold in February, nevertheless I spent some pleasant days on a steep, wooded slope facing the south where I got out fuel to last a year. At the foot of the slope in the shadow of a cliff fifty feet high lay the snow-covered creek quite silent, except for a faint musical murmur where the water slipped over the falls. It was not a place where one who desired companionship or loved society would resort, yet I had company even there. Birds that in rough weather accepted our hospitality at the house—nuthatches, chickadees and downy woodpeckers—came daily inspecting the fresh chips and fragments of bark, spicing their woods fare with ants whose roof tree I had demolished, and on days when the uplands were swept by fierce winds that only the snow buntings dared face, goldfinches worked in the hemlocks and littered the snow beneath with shredded cones. Fellow laborers were they, similarly engaged; I with more foresight, perhaps, storing fuel for the next winter, they storing for next night's or to-morrow's cold.

One day a small owl resembling a large knot was hiding in a low hemlock nearby, but a jay discovered him, and instantly advised me of his presence. When I drew near his perch, he took wing silently, and the jay followed, creaking like a dry wheel from tree to tree.

Another bird, more reserved than these, but one that I sometimes disturbed while on my way to work, was the ruffed grouse that burst out from cover among the creeping juniper, whipping the slender twigs and branches with tense wings. I often saw his track in the clearing further down the creek and might have thought that he was afoot solely for pleasure had I not discovered that he "budded" the low bushes as he walked the snow. Thanks to the foresight of a few neighbors, these hardy birds are not likely to become locally extinct, for on many acres of wild land here, shooting is forbidden and birds find food and shelter throughout the year unmolested by man.

Besides these there were a few four-footed creatures dwelling near that rarely or never ventured abroad during my working hours, but whose travels and adventures were plainly printed in the snow. The gray squirrel visited a hickory in the pasture nearly every morning before I passed, and the fox crossed and sometimes followed my path. The gray rabbit nibbled nightly on the tender twigs of a maple that I had laid low, and I saw where a muskrat that had adventured up to the falls at the head of the gorge had repeatedly attempted to climb the slippery height and each time failed. This was my morning paper, every line of which I read on my way to work.

Those early February days were cold, but as I came down from the woods late in the afternoon I saw a bird flying westward across the pasture that I at first mistook for a crow. I recognized it as a Cooper's hawk by its periodic flapping and sailing, the first hawk I had seen

since December, and the first bird of spring. While the hawk flew low, reconnoitering the witch hazel clumps and hardhack patches, I heard the familiar note that I had had in mind a moment before, and looking up beheld two belated crows, high in air, yet near enough for me to hear their voices raised in derision or anger at first sight of their returning foe.

A snow storm doubled the number of birds that came to the house for food and shelter, and on stormy mornings I, too, was glad to postpone my operations in the woods. Screenings from the thresher, bits of broken buckwheat and seeds of various wild grasses and weeds scattered on the snow kept a dozen or more tree sparrows constantly under observation. Besides these a trio of English sparrows came daily, a pair of purple finches were irregular visitors, and during the first three weeks of the month a solitary female redpoll, the first we had an opportunity to study at short range. The redpoll was a diminutive sparrow-colored bird, with evenly striped or slashed sides below the wings, and wore a little red cap pulled down to her eyes that when touched by the sun quite surpassed the downy woodpecker's. Although abandoned by or lost from a flock of her own kind, I noticed that the tree sparrows had little sympathy for her and hustled her about regardless of her forlorn condition.

One new trait of the tree sparrows, or at least one that I had never before observed, was their fondness for fresh pork and nuts, which led to frequent clashes with the nuthatches and chickadees. The latter birds surrendered every choice morsel without vigorous protest, but sometimes retaliated by carrying away bits of broken buckwheat to even up the score. On the whole, the tree sparrows were not as well behaved at meat as the English sparrows that usually fed with them. There was a truce between the two, while the tree sparrows tilted among themselves if one encroached by an inch on another's rights, but there was evidence of ameliorating influences at work among them, as when one bird fed another. These were our only songsters. However cold or rough those February dawns, under the window came the flock pouring out fine little rills of song in which the ice tinkled.

Among our chickadees was one that we recognized from day to day, a bob-tailed bird whose history was brief and pathetic. We saw him nearly every day from early January until Feb. 10, the coldest day of the month, when we missed him from the flock and conjectured what might be the cause of his absence. The mystery was soon solved, however, for one of the boys found him under the shed dead, where he had sought shelter from the storm.

But after the middle of the month there were mornings, not a few, ushered in by the insistent and prophetic crowing of cocks long before dawn, days when the woodhouse eaves dripped with the melting snow and chickadees bathed in the icy pools along the walk, when a host of hollow spears were suddenly thrust upward through the snow in every stubble field and the first shore larks peeped disconsolately from road-

side walls still fortified by scalloped drifts. On such days some of the chickadees disappeared, but many remained, alternately bathing in the icy pools, as I have said, feeding before the windows, searching the woodpile over for the thousandth time or working on the crimson clusters of the staghorn sumach by the kitchen door. The tree sparrows and the lonely redpoll, forgetful of our hospitality, took all-day outings in weedy fields, and I returned to the woods.

WILL W. CHRISTMAN.

Early Birds.

BALTIMORE, Md., Feb. 23.—*Editor Forest and Stream:* Within the last week I have read two letters that seem to indicate that the birds in New England had "gotten their dates mixed."

A post card from Miss M. T., Center Marshfield, Mass., received on Feb. 22, reports a flock of bluebirds on the 20th, and two or three red-wing blackbirds on the 18th.

A letter from Dr. H. E. M., Winchester, Mass., received on Feb. 14, says: "To-day, to my surprise, I have seen a flock of whistlers, several sheldrakes, three buffleheads and, I think, a flock of redhead ducks, etc., in the water where the East Boston ferry crosses. A few evening grosbeaks are about here for the first time on record. So far I have been the only lucky observer."

He (Dr. M.) goes on to say: "Yesterday I saw a fine specimen of the king rail, which was taken at South Duxbury, Mass., a few days ago, and was, I think, only the fourth bird of that kind recorded in Massachusetts. My friend Barker was at Green Harbor, Mass., two weeks ago to cut ice and he told me that there were many robins there and many quail."

Here, in Maryland, our robins and bluebirds have not come north yet; of course, we have a few stragglers that have braved this unusually cold winter and stayed with us, but the flight has not yet begun.

As to the king rail—well, it is an undisputed saying here that "the first hard frost all the rail leave," and it does not take a very hard frost to send them south, either.

As to the bufflehead ducks, we consider them as one of the small, tender ducks, and like the teal and woodduck, they go south early; that is, before real cold weather, and rarely return until spring has opened.

H. LINDLEY.

Starlings with Crows.

HOLYOKE, Mass., Feb. 29.—*Editor Forest and Stream:* I see you doubt my vision in my account of crows and starlings flying together, but I am certain I was not mistaken, because one Sunday, when they were feeding in the field, I got over the fence and walked within a few yards of them. I certainly knew the crows, and the other birds were about the size of robins, black or brown, light colored tips on feathers, and gave a call like the blackbird. I know they were starlings, because I saw some in Central Park. I have not been to South Amherst this winter, so I do not know whether these birds keep together or not. I never saw birds of two kinds on such intimate terms, but I noticed that when the chickadees come around farm houses, there most always are nuthatches with them.

CORRESPONDENCE.

The **FOREST AND STREAM** is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Terms: \$3.00 a year; \$1.50 for six months. Single copies, 10 cents. Canadian subscriptions, \$4.00 a year; \$2.00 for six months. Foreign subscriptions, \$4.50 a year; \$2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line (\$2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra. Special rates for back cover in two or more colors. Reading notices, 75 cents per count line.

A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Advertisements should be received by Saturday previous to the issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

MIGRATORY GAME BIRDS.

SPORTSMEN throughout the country are expressing a lively interest in the hearings on bills for Federal protection of migratory game birds, which were held at Washington on March 6; the McLean bill before the Senate committee on forest reservations and the protection of game, and the Weeks bill before the House committee on agriculture. The American Game Protective and Propagation Association is backing these bills, and through its efforts a large attendance at the hearings has been assured. State game commissioners and delegates from local and State protective associations have been urged to attend, and many have signified their intention of doing so. This is the first time those in favor of conservation have been given an opportunity to express themselves on this subject with any possibility of definite action as a result, and we hope to be able to report progress.

The scope of the work the American Association plans to carry out is broader than our own country. When Congress decides to assist in the work of protecting migratory game birds—and it is believed that it will do this in time if not at the present session—then will Canada be asked to co-operate. It is but natural that the Dominion should do this, and furthermore, fewer obstacles will be found in her path when she does. There are fewer wildfowlers in Canada than in this country, and the birds are there in greatest numbers in the season of no shooting. Then, too, the Dominion may make regulations covering her entire territory, and it is probable that

laws to protect migrants would not be so vigorously opposed as here, where the States' rights cry is raised in opposition to the passage of migratory game bird legislation.

THE JAPAN CURRENT.

THE frequency with which reports have come from Alaska recently telling of the remarkable mildness of the winter, recalls the study of the Arctic region by our veteran British correspondent, J. J. Meyrick. In an able paper printed in these columns on Aug. 12 last, Mr. Meyrick reviewed the natural history of the Arctic, dwelling with special emphasis on the probability that a great change was brought about suddenly, and concluded that a reversal of present conditions was not only within the possibilities, but may at some future time be brought about by man. He said:

Considering the great advances made in civil engineering during the past two hundred years, and the continually increasing help afforded by the invention of powerful explosives and new kinds of machinery, it seems quite possible that, if several nations combined in bearing the cost, means might be found in the not distant future to widen and deepen Bering Straits and thus restore the whole of the Northern Hemisphere to its former fertility.

Dispatches from Washington indicate ground for the belief that earthquakes in the Aleutian Islands may have brought about changes in the bed of the sea, resulting in diverting the Japan current, or a part of it, and bringing the warm water along the coast of Alaska. The hydrographic office of the Navy Department at Washington is watching the situation. Its chief, Capt. Harry S. Knapp, said the other day:

Our investigations indicate the Alaskan climate is completely changed, possibly forever. We now think the warm water of the Japanese current has been diverted to Alaska, causing the unprecedented warm weather. We think it possible that the change will be permanent. A thorough investigation is being made. Reports are being received from experts in Alaska and from ocean navigators.

The situation will be watched with keen interest by an army of men who look back on their shooting and fishing excursions in Alaska with pleasure tinged with regret that the rigors of the winters there were not to their liking.

Time will tell whether the possible changes pointed out by Mr. Meyrick have been in a small way brought about by nature.

THE SULLIVAN LAW.

ASSEMBLYMAN VERT's bill to amend the Sullivan law and permit persons under sixteen years of age to take out hunting licenses in New York State should be endorsed by every sportsman. There are many boys of sixteen years and even younger who are skilled hunters. Age is of little consequence in this matter, and the shooting accidents are not all caused by boys. "Take the boy along," is a time-worn phrase among sportsmen, and the law that keeps him out of the woods is un-American. The time to train a person to become a good sportsman is during his youth.

But the Sullivan law should be repealed in its entirety. The regulation of the sale and possession of dangerous weapons is a matter which should be left to municipalities. The Sullivan law has not been enforced, it has not put the slightest check on crime, and it has worked a hardship on reputable manufacturers and dealers. A few per-

sons have been made to suffer because they have been found guilty of technical violations of the law, but the criminal classes laugh at it and pursue their hazardous calling with their customary indifference to the laws of the land.

A sensible law to regulate the possession of dangerous weapons in towns and cities may be needed, but a law which places marksmen and respectable citizens in the same class with habitual criminals will never become popular.

THERE are thousands of wildfowl wintering within the borders of New York State. On account of the extremely cold weather, practically every lake and stream in the middle and northern part of the State has become frozen over, preventing the ducks from feeding. As soon as the Conservation commissioners became aware of this fact, protectors were ordered to purchase grain and give their attention to the feeding of the ducks. On Seneca Lake in the vicinity of Geneva there were estimated to be 5,000 wild ducks of different species in one small opening in the lake. As soon as the grain was spread upon the ice, the wild ducks fed upon it as readily as if they were domesticated. The same condition existed on Great South Bay, and on Cayuga Lake in the vicinity of Cayuga, where the ducks have been in the habit of wintering, and the situation was met in the same manner by the protectors purchasing grain and feeding the ducks. In many instances where it was known to the commission that there was a large flock of pheasants, arrangements have been made with a responsible person to see that they are fed.

RECENT press dispatches from Salt Lake City convey the information that Game and Fish Commissioner Chambers will arrange for the liberation of a goodly number of elk in the Sevier National Forest in Utah as soon as they are received from H. W. Henshaw, of the Biological Survey, who is collecting them in the Jackson Hole country in Wyoming. The winters in the Sevier reservation are not so severe as in Wyoming, and it is believed the elk will find the conditions there favorable. The snowfall is not heavy, and there is a large section of comparatively low country where the elk can forage in winter.

If press dispatches state the case fairly, the actions of a game warden in confiscating aigrettes in a crowded department store in Trenton, N. J., were peculiar. Instead of placing the proprietor under arrest, as the warden was justified in doing, the latter is reported to have seized a box of aigrettes from a saleswoman, thereby frightening women and children, who mistook him for a thief. The police being sent for, the warden was taken to the station house and there released. A little tact is a valuable possession, but not every warden is blessed with it.

THE Academy of Sports of France has awarded a gold medal to Admiral Peary in honor of his long continued and successful quest of the north pole. He, says the academy in presenting the gift, has given the world an admirable lesson of physical energy and moral courage in pursuing, in the midst of fatigues, sufferings and difficulties, the conquest of the north pole.

Ticks from the Ship's Clock.

The Board of U. S. Army engineers that has been engaged in surveying the route of a proposed canal across the State of Florida will hold its final meeting on Nov. 8 in Jacksonville, Fla., after which its recommendations will be forwarded to the War Department. This canal is to have an average depth of about twelve feet.

The steam yacht *Liberty*, owned by the late Joseph Pulitzer, and sent to Southampton, England, shortly after his death, has been sold.

The purchaser of the vessel is B. Nicholson, of Gosport, England, and the sale was made through the agency of Messrs. Tams, Lemoine & Crane, of New York. Twenty-six thousand one hundred and eighteen dollars of the \$33,864 thus far paid on foreign-built vessels under the Payne-Aldrich law was paid by the late Mr. Pulitzer on the *Liberty*.

N. G. Herreshoff has sold his steam yacht *Roamer*, after several seasons' use, and is to have a new gasoline-driven yacht this season. Captain Herreshoff is in Bermuda and about two weeks ago he sent orders to the Herreshoffs works at Bristol for a motor boat of the cruising type, 64 feet in length, which will be used during the summer along the coast and in the winter will carry the designer and his family to Bermuda.

Nat Herreshoff's new boat he evolved during his stay in Bermuda, and it may have been that his theories as to power in cruisers were changed when he gave heed to the experiences from the New York-Bermuda power boat races, which were participated in by just such a type of boat as Captain Nat is now about to have built. His new yacht will be 64 feet over-all, 13 feet of beam, a draft of 4½ feet and her oak timbers will be 2½ inches square and spaced 12 inches on centers, facts that go to show that rough seas are being prepared for. She will have a high freeboard with good accommodations in the way of cabins and a raised forward deck to give her power in pounding into a head sea.

George Nash, of the Columbia Y. C., is having a cruising motor yacht built by the Hudson Yacht and Boat Company at Nyack designed by Morris M. Whitaker. This yacht is 55 feet long and 13 feet beam. The interior arrangements have been worked out for the owner's special requirements. This yacht will be driven by two 30 horsepower Sterling motors. The outside fittings will be of mahogany and the interior will be finished in white enamel.

New York Y. C. Schedule.

WITH the intention of not conflicting with the racing dates of other clubs that sail their regattas on Long Island Sound, the New York Y. C., through its regatta committee, H. deB. Parsons, C. Sherman Hoyt and J. M. Macdonough, has arranged its schedule in a way that all the larger yachts, such as the schooners *Elena*, *Westward* and *Enchantress* and the sloops *Aurora* and *Istalena*, may be able to compete for the prizes offered.

The first race will be the annual regatta, to be sailed off Glen Cove on Thursday, June 13. The next will be the race for the Glen Cove cups, to be sailed off the same place on Saturday, July 6. Then comes the annual cruise, beginning with the rendezvous of the yachts, probably at Glen Cove on Wednesday or Thursday, Aug. 7 or 8. The races for the Astor and King's cups will be sailed off Newport as usual during the following week. The club's season closes with the races for the Sound cups off Huntington or Glen Cove on Sept. 5, and the race for the autumn cups off one of those two places on the follow-

ing day. It is quite likely that there will be races for the Brenton's Reef challenge cup, now held by former Commodore Robert E. Tod's three-masted schooner *Karina*, and for the Cape May cup won last year by the schooner *Atlantic* and now in the possession of the New York Y. C.

Y. R. A. of Gravesend Bay.

THE annual meeting of the Yacht Racing Association of Gravesend Bay was held on Feb. 28 in the Crescent Athletic club house, Brooklyn. The clubs represented were: Atlantic, Bensonhurst and National, Marine and Field, New York Canoe and Crescent A. C. Dr. J. E. De Mund presided and L. S. Tiemann acted as secretary. The first business of importance was the election of officers. Charles M. Camp, of the Marine and Field Club, was unanimously elected president to succeed Dr. De Mund. H. R. Scribner, of the Bensonhurst Y. C., was chosen to succeed Mr. Tiemann as secretary-treasurer, and H. J. Gielow was re-elected measurer.

Peter Bentley, of the National Y. C., presented the report of the committee on new courses. He had gone very thoroughly into the matter and arranged several courses that will take the races outside Coney Island and do away with the merry-go-round racing of past years. A chart with the new courses marked was carefully examined by the delegates, and then it was decided to let the matter wait until the next meeting, and in the meantime each delegate will have an opportunity to examine the courses more carefully.

At the last meeting it was decided that the association should take over the handicap class. Commodore G. R. Le Sauvage and Alfred Mackay, of that organization, were on hand to make a vigorous protest against this. They admitted that the handicapping had not met with general approval, but said that things would be bettered. The delegates decided to reconsider their former action and this matter will be taken up at the next meeting, March 12, when a report from the handicap association will be presented.

Hudson River Y. R. A. Secedes.

THE Hudson River Yacht Racing Association, 2,000 strong, has withdrawn from the American Power Boat Association and will hereafter run its regattas on a home rule basis. This decision was made at a meeting held Feb. 26, those present representing the Albany, Rondout, Poughkeepsie, Newburgh, Shattemuc, Tarrytown, Colonial, Tappan Zee and Yonkers yacht clubs, the Highland Boat Club, New York Motor Boat Club and Tarrytown Boat Club.

To quote Commodore Selden, of New York Motor Boat Club, the secession was due to the flagrant attempt of naval architects and engine builders to run the amateurs for professional gain.

"I look for our action to be promptly followed by other racing associations," continued Mr. Selden. "The amateur racing sport of motor boats is now too large to be controlled by the naval architect and engine builder. These gentlemen must either follow the lead of the amateur boatmen or flock by themselves in a class purely professional."

The next regatta of the association will be held at the New York Motor Boat Club on Labor Day. The following officers were elected for 1912: President, E. W. Marshall, Yonkers Y. C.; Vice-Presidents, W. H. Frank, Poughkeepsie; J. P. Olcott, Tappan Zee; R. B. Greene, Tarrytown, and C. F. Chapman, New York; Secretary, Joseph H. Acker, Tarrytown; Treasurer, James Bedell, Shattemuc; Measurer, Charles O. Gunther, Nyack.

Renovating the Hull.

IF a boat has been properly cared for when laid up, the work of repainting and renovation will be much simplified by reason of the lessened amount of labor in preparing and cleaning down the work. But, in case she has not been properly cleaned out in the autumn, we must be prepared for some rather unpleasant work before starting on the more showy part of the job. The first thing to do when commencing on the overhaul of a motor boat is to remove all loose gear to a convenient place, stripping the hull as bare as possible of all portables. The engine should then be removed, if it is to be, and all bad grease and dirt cleaned out from the bilges and around the engine room. The loose gear should be separated into lots, according to whether it is to be painted or varnished, simply stored till again required, or to go into the hands of someone else for repair or cleaning.

The next job is to clean out the bilges thoroughly with soda water so as to remove every trace of grease and oil, for paint will not take and dry properly on a greasy surface. A plentiful supply of hot water is a positive boon when engaged on this work and a little trouble in rigging up some sort of a boiler or kettle will be well repaid. An old cauldron capable of holding five or ten gallons can be rigged up on a few bricks and a fire of wood made beneath it. First of all the bilges should be wiped out as clean as possible with some cotton waste or old rags, and the limbers all cleared to allow the water to drain to the plug hole (one must be made if no proper plug be fitted already). A start should then be made with hot soda water right forward in the chain locker, but care must be exercised that no splashes are allowed to remain on varnished work, or the varnish will be eaten off. About a pound of soda to a bucket of water is strong enough, and a bucketful can be made to go a good long way with care and plenty of scrubbing. A couple of stiff brushes will be required—those with "ears" are best to get up into the corners with.

After a good scouring with soda, the work should be gone over a second time with soap and hot water. All varnished and painted work may be cleaned with this, and the bilges may be finished with it. The work should be divided up into sections and started from the top, so that the soapy water cannot drain down into work already cleaned off.

The next process is known as "rubbing down" and consists of smoothing off all surfaces that are to be repainted or varnished, by means of pumice stone, sandpaper or similar abrasives. Good, fine pumice stone is about the best all-round thing to use, but wants careful handling or the work will be scratched. A supply should be obtained in varying sizes, say from pieces of about two inches in diameter to those of twice that size, according to the class of work. These must be sawed up with an old saw and the flat faces rubbed down perfectly smooth on a piece of flat stone with plenty of water. By the way, the slab should be worked on over the whole surface, or it will go hollow and want refacing. Flat surfaces, or those slightly convex, like the seats, topsides and so forth, can be rubbed down with the pumice, but irregular parts must be done with fine sandpaper or steel wool. The sandpaper can be used wet and works very well so, leaving a smoother surface than it does when used dry. Only sufficient rubbing should be done to get a smooth surface, and no attempt should be made to remove the old varnish in this manner; hand scraping is about the only really satisfactory way to get that off, though there are numerous compositions sold for the purpose. After rubbing down, the whole job would be thoroughly washed with clean water, so as to remove any deposits of dirt or "rubbings" from the many corners, and should be covered up in such a way as to keep dust and dirt from settling in or on the work, and yet to allow of ample ventilation and proper drying. Any little pools of water that accumulate in low places, or where the limbers do not drain properly, must be wiped out dry, and all lockers should be left open so that the air can circulate. The loose gear must be cleaned and rubbed down in the same way

and put aside to dry thoroughly before varnishing.

Any painted or varnished work that has, through age or exposure, become blistered or of bad appearance, should be cleaned off down to the bare wood by scraping or the use of a chemical solvent, or, in the case of paint, by burning off. But such work is not to be lightly undertaken by the amateur, and wants considerable time and care expended to make the result satisfactory. Not only does the cleaning off take some time, but the subsequent recoating is a much longer job than the ordinary "touch-up and one-coat" so that cleaning off should not be started when time is limited.

There are several chemical solvents on the market, and one may use more or less ordinary materials, such as caustic soda, as paint or varnish removers. However, it is better to stick to something specially put up for the purpose, as the very strong alkalies are unpleasant to use, and apt to damage the wood. Some of the best varnish solvents are made with a spirit base and work very well indeed where there is not too great a thickness to remove. None of them are so successful on very old work, usually leaving a patchy effect. They are, too, rather expensive to use in such cases, for several coats must be applied in order that the solvent may get right through the many layers of varnish. We have tried several of the solvents on the insides of old boats, and must confess that the results have been, in every instance, decidedly disappointing, not only as regards the expense, but the appearance when finished. Whatever solvent be used, the greatest care must be taken to insure that it is really killed by washing with the material recommended by the makers. We have found raw carbolic acid to act very well as a varnish solvent on mahogany, and it leaves the wood a good color. It must be thoroughly washed out with plenty of water and to finish with turps. As the washing off wets the wood and causes the grain to swell up, the work wants a thorough rubbing down with sandpaper, or even hand scraping or planing, after the use of any solvent, especially on the softer woods. It is, therefore, questionable if it really pays to use any solvent at all, provided, of course, that the workman be capable of scraping off by hand without ruining the work by scratches and gouging. Generally speaking, we consider their use to be justified on teak work that has but six or eight coats to be removed, and that it does not pay to use them on mahogany at all, except on intricate work where hand scraping would be very difficult.

Hand scraping is, at the best, a tedious process, and one that is apt to become very boring after a few hours' close application. There are two essentials—good scrapers and plenty of patience, and without these the task of scraping a boat is a hopeless one. The roughing scrapers generally used are made of old files and are formed by forging down the end of the file to a thin edge and turning it over into a hook, the edge being filed or ground sharp and slightly rounding to prevent the corners digging in. These are home made, but triangular scrapers may be purchased ready for use. For finishing flat surfaces after rough scraping, a "dumb" scraper must be used, this being a thin, rectangular saw steel blade about five by three inches with the edges ground up square and worked up for use by stroking with some smooth hard steel tool, such as the back of a gouge. The stroking raises a slight burr which causes the scraper to cut properly, but it is practically impossible to describe how such a scraper should be sharpened. One must be shown by an expert, and a good deal of practice is required to acquire the knack of getting and keeping scrapers in good condition. For working out mouldings, beadings, etc., scrapers of special section must be made, and a lot of the work done by sandpaper. It often pays to remove mouldings, or take down work that is screwed up, and use the plane after rough scraping. It is most difficult to make moulding look well if done right through in place.

Painted work is best cleaned off by burning, just as a house painter does a door. A paraffin

or petrol burning blow-lamp is used to heat the paint until it becomes soft, when a blunt, square-ended "stripping knife" is pushed along and peels off a long strip of paint. A little practice will insure a clean strip off without any scorching of the wood, and in this connection it should be noted that a blow-lamp burner with a spreading, instead of a concentrated flame, gives the best results. After burning off, all cracked or loose putty and stopping must be raked out of the seams with a hook, and the wood must be thoroughly surfaced down with sandpaper before priming. Any bad bruises should have pieces of wood neatly let in, and glued and bradded in place, and of course any defective or rotten wood must be replaced by new as required. If one goes to the trouble of burning off, one might as well make a good job of repairs at the same time, and it may pay to fit, for instance, new rubbing pieces of gunwhale cappings, if the old ones be much knocked about.

Fouling and its Prevention.

OF these anti-fouling compositions, as they are termed, one can only speak in general, owing to the extreme variability with which they carry out their duties. It is easier to decide on a composition intended for a ship which travels to and fro through the same, or practically the same, waters—and such a decision can only be arrived at by successive and exhaustive trials—than in the case of a ship visiting port after port around the world. However, even where a ship traverses the same waters, under the same conditions and treated with the same compositions, she will sometimes return foul and sometimes clean, and the causes are next to impossible to explain. Of course, the season of the year and the corresponding conditions of the water affects the action of the composition.

Right from the earliest times, fouling has been a source of much worry and experiment. In the days of the wooden sailing ships, sheathing with copper plates was carried out, and we find it used in many cases to-day. On some of our own and foreign warships, intended to be away from dock for long periods, the steel skin plating is covered with a wood sheathing, outside which copper sheets are fastened.

Copper cannot be attached directly to steel, otherwise galvanic action would be set up and the steel would be eaten away. The wood sheathing is therefore fitted to insulate the one from the other, and extreme care is obviously necessary to prevent metallic connection between the steel and copper.

Copper very easily corrodes in sea water, owing to the action of certain salts, and this results in the appearance of the well-known loose coating of "verdigris." This green coating is very easily removed—in fact, is washed away by the water itself. The barnacles and seaweed which become attached to the copper thus lose their hold, and we have, as a result, a perpetually clean ship. This method is, however, very wasteful, the copper wearing away far too readily, and hence being very expensive. For this reason, patent compositions have been brought out by the score, aiming at greater economy. Most consist chiefly of copper, which is made to wear away at a slower rate. The peeling off is termed "exfoliation." Here again one sees now a composition must be made up to correspond to the usual speed of the ship, so as not to exfoliate too quickly or too slowly. If exfoliation is too slow, of course the growths become attached and will impede the ship. The "verdigris" consists of salts insoluble in water formed by the oxidation of the copper by the sea water. One strange thing is worth noticing, viz., the more impure the copper used for sheathing the more difficult it is to remove the insoluble coat. Poor copper will therefore offer few if any advantages as an anti-fouler, since the growths will not get washed away. If abrasions of the copper sheathing takes place and water gets behind the wood, rusting of the iron ensues, and the action is hidden from view

until noticed from inside the ship, or until the sheathing is removed.

The perfect anti-fouler is probably as unattainable as the elixir of life, for the different conditions under which a ship sails necessitate different qualities in the composition. Some of the compositions work on the poisoning and some on the exfoliating principles; but the majority combine both, and it is in the compromise that the different qualities of the composition appear. Certain growths require more of the poisoning elements; others more of the exfoliating; and so on. The great thing to remember with all growths—seaweed or shellfish—is that they do not get their nourishment through their roots, i. e., through the portions of their structure adhering to the ship. The vegetable growths in water receive nourishment through the pores in their "leaves" and the animal growths through their heads—i. e., the portions farthest from the ship's plating. From this it is easy to see that poisons are of little use unless they attack the growths early in life. The poison leaks from the composition by exfoliation. Hence, if a growth commences while a ship is lying alongside a quay or jetty after coming out of dock, where she has been cleaned and re-painted, the poison has little or no chance of doing its duty, as motion of the ship is necessary to carry out the exfoliation fully, and so release the poison. Afterward it has little chance of reaching the vital organs of the growths. This applies to both animal and vegetable marine life. However, once either is removed it cannot re-attach itself any more than a flower once plucked can re-instate itself on the stem of an ordinary plant.

The poisons used are usually metallic, including arsenic, mercury and copper, and hence these are liable to set up galvanic action with the iron, and it is quite possible for the harm done in this way to eclipse the good effect of the poison. There are also rather complicated chemical reasons which further illustrate the weakness of anti-fouling compositions relying on poisoning principles only. Each particle of poison is surrounded by the oil or varnish used in the manufacture of the composition, and hence in a manner is itself "protected" from the sea water. As we have seen in a previous article, a good varnish only disintegrates after some months of immersion, and it is only after this takes place that the water can reach the poisons and become contaminated by them. The germs of growths attach themselves, in the first instance, while the ship is lying moored in the usually dirty stream and are therefore unharmed by the poisons, and we have seen that once a growth has reached any size it is

ARCTIC HUNTING

For charter, ship fully equipped, specially built for ice work, for one or more months' cruise in Greenland or Spitzbergen and Franz Josef's Land waters, will accommodate party of 5 to 15. Polar bear, reindeer, fox, seal, walrus, Arctic birds, fishing.

practically certain the poison when freed will not affect it. After a long period at sea, too, the perished varnish affords a better hold for the growths and we hence come to the conclusion that exfoliation, to some extent, is necessary. Such a composition losing its surface film allows the growths to be swept away and this, as hinted above, introduces further practical difficulties. It is understood that the mottion of the vessel is necessary for this to take place, and so one that spends most of her time at anchor would benefit but little from a composition which wastes but slowly, and a rapidly wasting composition is expensive. A ship continually under way requires a uniformly and slowly-wearing coating, suited to her general speed, and hence with liners the anti-fouling question is not so difficult to solve as it is with naval ships and ships that only run at odd periods and in a variety of waters.

* * * * *

In general, the most important part is the protective or anti-corrosive coat, since fouling does not affect the plating—only the speed. The fouling may be bad, but with a good protective coat the plating is not likely to suffer. To large ships it is usual to apply two or three coats of protective and then a coat—rarely two—of anti-fouling compositions. If it is anticipated that the ship is to be at sea for a long period—say nine months or longer—a second coat of anti-fouling is usually applied. It is essential to clear all rust and scale away in the first place by clipping, scraping, and sound wire-brushing. The first protective coat is generally of a faster drying nature than the second, and succeeding coats.

The above few notes will tend to give some idea of the difficulties and vicissitudes encountered by the persons interested in a ship's life and behavior at sea and the questions and details which they have to solve and study. The most important thing is to insure a clean surface to coat and next to select compositions suited to the particular service and speed of the ship.—Yachting Monthly.

Things that Color the Seas.

It has been proved that the blueness of sea water is in constant ratio to its saltness. In the tropics the tremendous evaporation induced by the blazing sun causes the water to be much more salt than it is in higher latitudes. For about 30 degrees both north and south of the Equator the waters of the world's oceans are of an exquisite azure. Beyond these latitudes the blue fades and changes to green, and in the Arctic and Antarctic oceans the greens are almost as vivid as the tropical blues.

The extraordinary blueness of the Mediterranean has two causes. One is that very few large rivers of fresh water run into this sea, the second that the Mediterranean is practically land locked, and being exposed to a powerful sun, evaporation is great. By actual test the waters of the Mediterranean are heavier and more salt than those of the Atlantic.

But blue and green are not the only colors observed in the world's seas and oceans. In January, 1909, a river of yellow water three miles wide and of enormous length was observed running parallel with the Gulf Stream. It stretched from Cape Florida to Cape Hatteras and was undoubtedly caused by some tremendous submarine upheaval, probably of a volcanic nature.

Again, about nine years ago, the sea turned almost black off a large portion of the California coast. The whole of Santa Cruz Bay assumed this extraordinary inky hue, and fishing came abruptly to an end. In this case the darkness seems to have been caused by millions of tiny animalcules known as whale food. The dull reddish tint which is occasionally seen in the Red Sea and which has given that sea its name has a similar cause. The water becomes full of microscopic algae—tiny weeds.

China's Yellow Sea is usually supposed to

owe its origin to the flood of muddy water which its great river pours into it. But here again living organisms are responsible for its peculiar tint. Occasionally and for some cause as yet undiscovered great areas of the ocean turn milk white. In March, 1904, the passengers and crew of a Japanese merchant vessel steaming at night between Hongkong and Yokohama ran into a snow white sea. It was not an opaque phosphorescent surface, but an expanse of pure snow white, having a dazzling effect upon the eyes. The phenomenon lasted for six hours.—Marine Journal.

Motor Boat Race Course.

SHALL it be Huntington, Larchmont, lower Hudson, upper Hudson, Gravesend Bay, Sea Gate or—well or what—that is the question to be settled by the Motor Boat Club of America within the next two weeks. Some of the above indicated courses offer possibilities for the international motor boat races this year, while most of them are impossible, though each has the right of consideration. The lower Hudson, though the most popular from the spectator's viewpoint, is decidedly unpopular with the racers because of the debris afloat, which is dangerous to the shell-like crafts built for international event. The upper Hudson is not entirely free from driftwood, but the Tappan Zee course is sheltered from all but the north and is not particularly hazardous in the matter of floating obstacles. Sea Gate is clear, but too much exposed, while Gravesend Bay course would require the racers to cross the channel. Larchmont course is clear and sheltered, but part of the course is over very shoal water which feature has been objected to by racing men. The defect could be remedied by laying the course further to the northeast.

The Huntington course, over which last year's races were held, gave perfect satisfaction to challenger and defender, and from present indications will again be selected for the international event. The conditions governing the British international trophy say that the races must be held over "a suitable course in sheltered waters, not less than 25 nor more than 35 nautical miles, so arranged as to avoid any angle of less than 120 degrees, and there shall be a distance of at least 100 yards between any two marks. The length of each round shall be not less than five nor more than eight nautical miles."

Motor Boat Regulations.

In the motor boat regulations for the year just issued by the Department of Commerce and Labor through the bureau of navigation, the rules of 1911 have been only slightly changed. There are no changes regarding lights, whistles, bells and sound signals from those enacted in 1910.

Where passengers are taken for hire, life preservers stamped by the steamboat inspectors must be carried. The department recommends it in other cases, though it is not obligatory. In other cases life preservers or buoyant cushions capable of sustaining afloat for twenty-four hours a downward pull of twenty pounds will be accepted. No life preservers or cushions filled with granulated cork or other loose granulated material and no pneumatic life preservers or cushions will be approved.

Planks, gratings, floorings, oars, small boats in tow, etc., are not approved as substitutes for life preservers, but wooden life boats may be used not less than 4 feet in length, 14 inches in breadth, 2 inches in thickness and made of well seasoned white pine or of any other wood not exceeding white pine in weight a cubic foot. Samples of other substitutes for the articles mentioned must first be submitted to the supervisor-general of the steamboat inspection service.

The regulations for the extinguishing of burning gasoline remain unchanged, though a number of tested appliances are specified. Besides these extinguishers and suitable chemicals salt or sand in sufficient quantities, or preferably the

two mixed, kept in available pails or boxes will serve the purpose.

Since the law of 1910 was passed, the loss of life from fires or explosions on motor boats has almost ceased, and the number of drownings which could be prevented by life preservers, has diminished fatalities now resulting usually from capsizing.

There are about 150,000 motor boats in the United States. Last season 1,657 violations of the motor boat law were reported by collectors of customs. Motor boat clubs, the magazines interested in motor boating, and the daily press have greatly aided in enforcing the law the last two seasons, and the requirement that every motor boat shall carry two copies of the pilot rules has created a general school in the elements of navigation attended by probably 300,000 pupils.

There is a bill now before Congress which, if it becomes a law, will require licenses from the pilots and engineers of motor boats documented in custom houses to carry passengers for hire and motor boats more than 40 feet in length carrying freight for hire. This bill also requires fishing motor boats and fishing tugs more than 40 feet long to carry licensed engineers. This bill will apply to about 4,000 motor boats and small steamers.

New Motor Boat Record.

THE Oregon Wolf, a 9-cylinder hydroplane, in a sanctioned race against time here on Feb. 25, broke the world's motor boat records on a five-mile course for all distances up to thirty miles.

The Oregon Wolf's time for the thirty miles was 42m. 14 2-5s.; the best previous record over a six-lap course was 44m. 33 1-5s., made by the Dixie IV., of St. Louis, in 1911.

The Oregon Wolf was driven by John E. Wolff, of Portland, Ore., her owner and builder.

The best lap was the last one, the time being 6m. 56 4-5s., or an average of a mile in 1m. 23 3-5s.

Motor Boats in Smyrna.

MOTOR boats are becoming more familiar sights at Smyrna. Three motor boats have been imported from England this year, all built to order by Thornycroft. This firm has now appointed an agent at Smyrna, and a fresh order for a 55-foot boat, to cost \$9,300, has been placed with them, for delivery next spring. It is probable that several of these convenient craft will be ordered by private owners before long.

Canoeing

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—Charles Edouard Stecher, 452 West 149th street, New York city, by Francis C. Buchenberger.

Western Division.—Paul R. Sussman, 332 Twenty-second street, Toledo, Ohio, by F. B. Huntington.

NEW MEMBERS ELECTED.

Atlantic Division.—6344, James W. F. Watson, 210 Dilwyn street, Burlington, N. J.; 6345, Frederick Von Dohln, 880 Cauldwell avenue, Bronx, New York city.

TRAP SHOOTING

If you want your shoot to be announced here send a notice like the following:

Fixtures.

REGISTERED TOURNAMENTS.

- March 14-15.—Holmesburg Junction, Pa.—Keystone S. L. of Philadelphia. H. L. David, Mgr.
 March 21.—Columbus (O.) G. C. L. Fisher, Sec'y.
 March 22.—Royal Centre (Ind.) G. C. J. E. Swisher, Sec'y.
 March 22-23.—Orange (N. J.) G. C. F. R. Wickes, Sec'y.
 March 23.—Temple, Pa.—Hercules G. C. A. K. Ludwig, Sec'y.
 April 2-3.—Birmingham (Ala.) G. C. O. L. Gary, Sec'y.
 April 8.—Mt. Airy (Md.) G. C. Ray Watkins, Mgr.
 April 9-10.—Moberly (Mo.) G. C. L. R. Hulén, Sec'y.
 April 9-11.—Perry, Okla.—Oklahoma State tournament, under the auspices of the Perry G. C. Bush H. Bowman, Sec'y.
 April 10.—Gaithersburg (Md.) G. C. R. M. Purdum, Sec.
 April 11.—Atglen (Pa.) G. C. L. R. Lewis, Mgr.
 April 13.—Rittersville, Pa.—Lehigh R and G. C. H. F. Kock, Sec'y.
 April 15-17.—New Orleans, La.—City Park G. C. E. F. Leckert, Sec'y.
 April 17-19.—Wichita, Kans.—Kansas State tournament, under the auspices of the Interurban G. C. C. W. Jones, Sec'y, 209 N. Main St., Wichita, Kans.
 April 18.—Columbus (O.) G. C. L. Fisher, Sec'y.
 April 23-24.—Spokane, Wash.—Washington State tournament, under the auspices of the Spokane R. and G. C. T. B. Ware, Pres.
 April 23-25.—Laurel, Miss.—Mississippi State tournament under the auspices of the Laurel G. C. Chas. Green, Pres.
 April 23-25.—Omaha (Neb.) G. C. F. T. Lovering, Sec'y.
 April 27-28.—Chicago (Ill.) G. C. E. B. Shogren, Sec'y.
 May 1.—Crete (Neb.) G. C. R. G. Spadt, Sec'y.
 May 2.—Jewell (Ia.) G. C. W. S. Hoon, Sec'y.
 May 2.—Dublin (O.) G. C. N. J. Dominy, Sec'y.
 May 2-3.—Kankakee (Ill.) G. C. E. F. Radeke, Sec'y.
 May 4.—Bethel, Conn.—Western Connecticut T. S. L. tournament, under the auspices of the Bethel G. C. C. K. Bailey, Sec'y.
 May 7.—Pittsburgh, Pa.—Western Pennsylvania Trapshooters' League tournament, under auspices of the Herron Hill G. C. Thos. D. Bell, Sec'y.
 May 6-8.—Vicksburg (Miss.) G. C. J. J. Bradfield, Sec.
 May 7-8.—Des Moines, Ia.—Hyperion G. C. W. E. Moyer, Mgr.
 May 7-8.—Columbus (Neb.) G. C. G. A. Schroeder, Sec'y.
 May 8-9.—Camden (Ark.) G. C. J. P. Wright, Mgr.
 May 8-9.—Columbus (O.) G. C. Lon. Fisher, Sec'y.
 May 9.—Riverside, Ill.—National G. C. C. W. May, Pres.
 May 9.—Vergas (Minn.) R. and G. C. C. Scharf, Sec'y.
 May 9-10.—Charlotte, N. C.—Mecklenburg County G. C. E. P. Coles, Sec'y.
 May 14-15.—David City (Neb.) G. C. E. D. Taylor, Sec'y.
 May 14-15.—Adel, Ia.—Adel G. C. C. F. Clarke, Sec'y.
 May 14-16.—Columbus, Ga.—The Interstate Association's seventh Southern Handicap tournament, under the auspices of the Columbus G. C.; \$1,000 added money. The winner of first place in the Southern Handicap is guaranteed \$250 in cash and a trophy. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.
 May 15.—Spring Valley (Minn.) G. C. J. M. Carey, Sec.
 May 15-16.—Fairmont, W. Va.—West Virginia State tournament, under the auspices of the Fairmont G. C. Ed. H. Taylor, Sec'y.
 May 15-17.—Peoria, Ill.—Illinois State tournament, under the auspices of the Illinois State S. A. Robert Scholes, Sec'y.
 May 16.—Scranton (Pa.) R. & G. C. M. F. Bohn, Sec'y.
 May 17.—Nevada (Ia.) G. C. E. W. Scott, Sec'y.
 May 17.—Pottsville (Pa.) G. & F. P. A. Elvin I. Elliott, Sec'y.
 May 18.—Phillipsburg, N. J.—Alert G. C. Edw. F. Markley, Pres.
 May 20-21.—Iowa City (Ia.) G. C. C. Bothell, Sec'y.
 May 21.—Milton Junction (Wis.) G. C. W. H. Smith, Sec'y.
 May 21-23.—Waco, Tex.—Texas State tournament, under the auspices of the Waco G. C. E. S. Forsgard, Mgr.
 May 21-24.—Sunbury, Pa.—Pennsylvania State tournament, under the auspices of the Sunbury-Selinsgrove G. C. J. W. Schoffstall, Sec'y.
 May 22.—Mt. Holly (N. J.) G. C. A. J. Delleite, Sec'y.
 May 22.—Galion (O.) G. C. C. C. Mandeville, Sec'y.
 May 23.—Mt. Morris (Ill.) G. C. H. W. Cushing, Sec'y.
 May 23.—Portage (Wis.) G. C. J. Raup, Sec'y.
 May 23-24.—Waterloo (Ia.) G. C. J. F. Libby, Sec'y.
 May 23-24.—Lexington, Ky.—Kentucky State tournament, under the auspices of the Fayette G. C. F. C. Bell, Sec'y.
 May 23-24.—Delta (Colo.) G. C. R. A. King, Pres.
 May 24.—Norwich, N. Y.—Chenango County G. C. E. D. Borden, Act. Sec'y.
 May 25.—New Haven, Conn.—Western Connecticut T. S. League tournament, under the auspices of the New Haven G. C. Wm. F. Alcorn, Sec'y.
 May 28.—Albia, Ia.—Monroe County F. & G. P. A. T. B. Perry, Jr., Sec'y.
 May 28-29.—Benton (Ill.) G. C. W. H. Foulk, Sec'y.
 May 28-30.—Omaha, Neb.—Nebraska State tournament, under the auspices of the Omaha G. C. F. T. Lovering, Sec'y.
 May 29-30.—Sikeston (Mo.) G. C. W. H. Tanner, Sec'y.
 May 29-30.—Wilmington, Del.—Delaware State tournament, under the auspices of the Du Pont G. C. T. E. Doremus, Sec'y.
 May 30.—Cleveland (O.) G. C. F. H. Wallace, Sec'y.
 May 30.—Buffalo (N. Y.) Audubon Club. B. V. Covert, Pres.
 May 30.—Watertown (Wis.) G. C. B. H. Reick, Sec'y.
 June 1.—Roversford (Pa.) G. C. F. A. Anderson, Sec'y.
 June 4.—Pillow (Pa.) G. C. J. A. Bingaman, Sec'y.
 June 4-6.—Mexico, Mo.—Fifth annual State tournament of the Missouri State Trapshooters' Association, under the auspices of the Audrain Country Gun Club, of Farber, Mo. Russell Glynn, Sec'y.
 June 4-6.—Webster, S. D.—South Dakota State tournament, under the auspices of Webster G. C. John Sherbino, Sec'y.
 June 4-7.—Dayton, O.—Ohio State tournament, under the auspices of the N. C. R. G. C. W. F. MacCandless, Sec'y.
 June 5.—Janesville (Wis.) G. C. L. L. Nickerson, Sec'y.
 June 5-6.—Aurelia (Ia.) G. C. Frank R. Welch, Sec'y.
 June 5-7.—Warm Springs, Ga.—Merriwether G. C. T. B. Slade, Mgr.
 June 6.—Wilber (Neb.) G. C. H. F. Magnusson, Mgr.
 June 6-8.—Newark, N. J.—New Jersey State Sportsmen's Association tournament. Chas. T. Day, Sec'y.
 June 8.—Conde (S. D.) G. C. A. E. McMillan, Sec'y.
 June 11-13.—Syracuse, N. Y.—New York State tournament, under the auspices of the New York State Sportsmen's Association. L. H. Schortemeier, Sec'y-Treas., 201 Pearl street, New York.
 June 11.—Washington, Pa.—Western Pennsylvania, Trapshooters' League tournament, under the auspices of the Washington G. C. C. W. Peterson, Sec'y.
 June 11-13.—Sioux City Ia.—Soo Gun Club. W. F. Duncan, Sec'y.
 June 12.—Brodhead (Wis.) G. C. J. B. Pierce, Sec'y.
 June 12-13.—Pine Bluff, (Ark.) G. C. E. J. Voss, Sec'y.
 June 12-14.—Hickman (Ky.) G. C. S. L. Dodds, Pres.
 June 15.—Bunker Hill (Ill.) G. C. W. Fahrenkrog, Sec.
 June 17-19.—Salida, Colo.—Colorado, New Mexico and Wyoming State tournament, under the auspices of the Salida G. C. W. G. Myers, Sec'y.
 June 18-19.—Barre, Vt.—Vermont State tournament, under the auspices of Barre G. C. D. M. Barclay, Pres.
 June 18-21.—Springfield, Ill.—The Interstate Association's thirteenth Grand American Handicap tournament, on the grounds of the Illinois Gun Club; \$1,500 added money. The winner of first place in the G. A. H. guaranteed \$1,000 in cash and a trophy. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.
 June 22.—Newmanstown (Pa.) G. C. F. S. Rader, Sec'y.
 June 25-28.—Eugene, Ore.—Pacific Indians. F. C. Riehl, Sec'y.
 June 27-28.—Spencer (Ia.) G. C. G. O. Round, Sec'y.
 July 3.—Catasauqua, Pa.—Bryden G. C. E. C. Jones, Sec'y.
 July 9-11.—Fort Dodge, Ia.—Iowa State tournament, under auspices of the Fort Dodge G. C. Jos. Kautzky, Manager.
 July 9-11.—Little Rock, Ark.—Arkansas State tournament, under the auspices of the Little Rock G. C. Geo. W. Clements, Mgr.
 July 9-11.—Bradford, Pa.—The Interstate Association's Seventh Eastern Handicap tournament, under the auspices of the Bradford G. C.; \$1,000 added money. The winner of first place in the Eastern Handicap is guaranteed \$250 in cash and a trophy. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.
 July 14-15.— Fargo, N. D.—North Dakota State tournament, under the auspices of the Gate City G. C. Albert E. Rose, Sec'y.
 July 16.—Butler, Pa.—Western Pennsylvania Trapshooters' League tournament, under the auspices of the Butler R. and G. C. S. G. Purvis, Sec'y.
 July 20.—Danbury, Conn.—Western Connecticut Trapshooters' League tournament, under the auspices of the Pahquioque G. C. E. H. Bailey, Sec'y.
 July 22-23.—Crookston (Minn.) G. C. W. E. Rowe, Pres.
 July 25-26.—Warroad, Minn.—Minnesota State tournament, under the auspices of the Minnesota State Sportsmen's Association. Peter Alldrin, Sec'y.
 Aug. 1.—Plattsville (Wis.) G. C. F. J. Bridges, Sec'y.
 Aug. 6.—Belle Vernon, Pa.—Western Pennsylvania Trapshooters' League tournament, under the auspices of the Belle Vernon G. C. B. F. Daugherty, Sec'y.
 Aug. 6-7.—Lock Haven (Pa.) G. C. C. A. Jobson, Sec'y.
 Aug. 7-8.—Lindsay, (Okla.) G. C. Robt. May, Sec'y.
 Aug. 10-11.—Chicago (Ill.) G. C. E. B. Shogren, Sec'y.
 Aug. 14.—Batavia, N. Y.—Holland G. C. Chas. W. Gardner, Sec'y.
 Aug. 14-16.—Kansas City, Mo.—The Interstate Association's Seventh Western Handicap tournament, under the auspices of the Kansas City G. C.; \$1,000 added money. The winner of first place in the Western Handicap is guaranteed \$250 in cash and a trophy. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.
 Aug. 20-21.—Sioux Falls (S. D.) G. C. A. Olson, Sec'y.
 Aug. 23.—Sandusky, O.—Ye Oak Meadow G. C. Ira C. Krupp, Sec'y.
 Aug. 27-29.—Portland, Ore.—The Interstate Association's seventh Pacific Coast Handicap tournament, under the auspices of the Portland G. C.; \$1,000 added money. The winner of first place in the Pacific Coast Handicap is guaranteed \$250 in cash and a trophy. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.
 Sept. 2.—Ogdenshurg (N. Y.) S. A. J. M. Morley, Sec.
 Sept. 2.—Bridgeport, Conn.—Western Connecticut Trapshooters' League tournament, under auspices of the Sea Side G. C. Earl R. Lewis, Sec'y.
 Sept. 10.—McKeesport, Pa.—Western Pennsylvania Trapshooters' League tournament, under the auspices of the Youghiogheny Country Club. R. J. Caughey, Sec'y.
 Sept. 10-13.—Denver, Colo.—Rocky Mountain Interstate Sportsmen's Association; \$5,000 added money. Ambrose E. McKenzie, Mgr.

DRIVERS AND TWISTERS.

At the tenth annual registered tournament of the Holland Gun Club, to be held, Aug. 14, will be started the Western New York Championship. The first Watts L. Richmond trophy was won permanently in 1911, and a larger and better cup will be started Aug. 14.

The first installment of shoots for the Frank Hall 1912 cup will be as follows: Jersey City, Wednesday, March 27; Freehold, Friday, April 19; North Caldwell, Saturday, May 4; Orange, Saturday, May 18; Newton, Saturday, June 22; Red Bank, Saturday, July 6; Phillipsburg, Saturday, July 27; Mt. Holly, Saturday, Aug. 17. Chas. T. Day is Secretary-Treasurer.

If the best Pennsylvania State shoot thus far held, isn't pulled off this year, it will not be through lack of effort on the part of Sunbury-Selinsgrove Gun Club, at Sunbury, Pa., under whose auspices the event will be held in May. Not only will good purses be offered, but a great many attractive merchandise prizes may be had. Full particulars from J. W. Schoffstall, Secretary, Sunbury, Pa.

The eighth annual spring prize series of the Bergen Beach Gun Club, of New York, Borough of Brooklyn, will be held on March 12, April 9, and May 14, beginning at 1 P. M. each day. Conditions: Distance handicap, three classes—A, B and C; 16 to 20yds., at 50 targets; entrance \$1 each contest; best two out of three scores to count. Expert traps. Entries close at 3:30 P. M. Club dues \$1 per year. Practice targets 1 cent each. Refreshments gratis, as usual. Regular shoots every Saturday except during the months of July and August. Shooting begins at 1 P. M. To reach grounds: Subway to Flatbush and Atlantic avenues, Brooklyn, then Flatbush avenue trolley car; or from New York City Hall (Brooklyn Bridge) direct; or will transfer to shooting grounds, Avenue N and East Seventy-first street, Bergen Beach, Brooklyn. L. H. Schortemeier, Secretary, 201 Pearl street, New York.

On March 23, the Hercules Gun Club, of Temple, Pa., will hold a grand target shoot on their grounds, Cotapaxi Swamp, only one block from the P. & R. R. Station, Temple, Pa. The program, commencing at 1 P. M., will include five events at 20 targets each, entrance \$1.50; optional sweep of \$1 in each event; event No. 6 will be at 10 pairs doubles, entrance \$1. Percentage system will prevail. All shoot from 16yds. Interstate Association rules govern. Anybody welcome to shoot for price of targets only. Leading trap loads for sale on the grounds. Good railroad facilities on P. & R. R. Trolley service from Reading, Pa., every thirty minutes, direct to the grounds on the hour and half hour. All are welcome. The Hercules cup will be given to the amateur making the highest score in the five target events, a race of 100 targets for the inanimate target championship of Berks and adjoining counties. Second high gun, one-half dozen silver spoons. The three low guns in this race will each receive half a dozen silver spoons. The Hercules cup is a handsome silver loving cup, gold lined, and is on exhibition in Bright & Co.'s window until day of shoot. A comfortable, heated club house awaits you. For further information address A. K. Ludwig, Secretary, 222 Greenwich street, Reading, Pa.

The seventh annual amateur championship of America at clay birds, will be given under the auspices of the New York Athletic Club, at their country home, Travers Island, Pelham Manor, New York, on April 3 and 4. On Wednesday, April 3 starting at 9:30 A. M. there will be four practice events at 15 birds each, entrance \$1, including birds. Also the preliminary, 100 birds in strings of 25; first, second and third prizes; entrance \$3, including birds. On April 4, beginning at 9 A. M., will be shot the seventh annual amateur championship of America at clay birds; first, second, third, fourth, fifth, sixth, seventh, eighth, ninth and tenth prizes. A diamond medal for first prize; 200 birds, in strings of 25. Entrance \$8, including birds. Optional sweepstakes of \$1 may be shot on the practice events; \$2 on each of the 25-bird events; \$5 on the preliminary event, and \$5 on each 100 birds of the championship event. On the 100-bird sweeps there will be two moneys for each five entries. The other sweeps will be divided according to the Rose system, 8, 5, 3, 2, 1. Expert traps, 16yds. rise, 50yds. flight. Squads will not be made up until the arrival of shooters at Travers Island. Errors

in scoring must be rectified before two more birds have been shot at by the shooter making the claim. Professionals and trade representatives will be allowed to shoot for targets only. Not more than two in a squad. Targets, 2c. each. A suitable trophy will be awarded to the professional or trade representative making the highest score in both preliminary and championship events. Shooting up will not be permitted. Ties will be shot off at 25 birds. The committee reserves the right to reject any entry, and will refuse any post entry after No. 1 squad has shot at trap No. 2 on April 4. Guns and ammunition shipped prepaid, care New York Athletic Club, Pelham Manor, N. Y., will be delivered on the grounds. All standard loads will be for sale on the grounds. Address all entries and communications to A. E. Ranney, Secretary, 1700 Broadway, New York. Trains on the main line of the N. Y., N. H. & H. R. R. stopping at Pelham, thence by trolley direct to Travers Island. Trains leave Grand Central Station, New York, 8:05, 9:06, and 10:05 A. M. Trains on the Harlem River Branch of the N. Y., N. H. & H. R. R. from Harlem River to Pelham Manor, thence by trolley direct to Travers Island, 8:00, 9:00 and 10:00 A. M.

BEECROFT.

Speedway Gun Club.

NEWARK, N. J., Feb. 28.—Fourteen gunners took part in the regular shoot of the Speedway Gun Club to-day. Real good shooting was impossible, as a stiff wind blew across the traps. William Trowbridge was the only man to break 25 birds in a row. H. S. Welles and B. M. Shanley, Jr., were the high guns of the day. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
B. Shanley, Jr.	17	24	17	19	21	21	18	22	22	21	19	21	21	23	21	19

Manhasset Bay Y. C.

PORT WASHINGTON, L. I., March 3.—Several interesting events were decided to-day in the weekly shoot. C. E. Berner was the surprise of the day, and won the leg on the yearly cup. C. W. Berner has put up a handsome prize, which will be shot for next week. The event will be at 100 birds, handicap. Another interesting event will be a 500-bird match between two teams of two men. These 2000 birds will be shot in strings of 25 without intermission. Shooting will begin at 11 A. M., and should be finished by 1 P. M. Following are to-day's scores:

Sweepstakes, 25 birds, handicap: J. W. Alker (2) 24, B. G. Loomis (4) 23, H. Berner (7) 23, B. Parsons (7) 22, C. E. Berner (7) 21, H. L. Hoyt, Jr., (0) 21, C. W. Berner (2) 21, W. Silkworth (0) 20, R. Howland (7) 20. Monthly cup, 25 targets, handicap: *H. E. Berner (7) 25, W. S. Silkworth (0) 22, J. W. Alker (2) 22, C. E. Berner (7) 22, H. L. Hoyt, Jr., (0) 21, B. Parsons (7) 21, B. G. Loomis (4) 21, C. W. Berner (2) 20, R. Howland (7) 20. *Not a member. Won by Silkworth on shoot-off. Yearly cup, 25 targets, handicap: C. E. Berner (7) 24, W. S. Silkworth (0) 22, H. E. Berner (7) 21, H. L. Hoyt, Jr., (0) 21, J. W. Alker (2) 21, B. G. Loomis (4) 20, B. Parsons (7) 20, C. W. Berner (2) 19, R. Howland (7) 19.

Terre Haute Gun Club.

THIS club was recently organized with a membership of nearly 200, and Judge John E. Cox as president. A largely attended meeting was held on Feb. 6, at which much enthusiasm was manifested. The ground committee has leased Chelsea Park, containing about forty-five acres, and at this meeting the committee was enlarged, and will have a meeting with the owner of the park to ascertain if it will be possible to buy the property instead of leasing it, so that the club may own its home. The constitution and by-laws of the club were adopted with a few minor changes. The most important change was the addition of an article which enables township trustees, road superintendents and supervisors of the outlying districts to become honorary members of the club without initiation fee. Under the laws of the State, these officials have the same authority as a game warden, and it was for this reason that the club wishes to secure them as members. The committee on trapshooting, consisting of C. F. Loudon, W. L. Hornbrack and Samuel Bridwell, made its report and submitted figures. The report was accepted and the apparatus will be installed at once. The office of financial secretary was created by the adoption of the constitution and by-laws, and Albert Einecke was elected to fill the position. Fifteen new members were taken in at this

meeting. The club will make a lake of several acres on their new grounds for the benefit of the angling contingent among its members, and this will be stocked with fish by the State Game Commissioner. Among the members are many owners of pointers and setters and an amateur field trials will be run some time next fall for their benefit. A trapshooting tournament is on the cards for this spring, and prizes of cups and cash will be given liberal enough to attract a good crowd.

Mulberry Grove Gun Club.

MULBERRY GROVE, Ill., Feb. 22.—Who would have thought anybody wanted to shoot badly enough to wade snowdrifts that were from two to four feet deep. Just the same we have a few "dyed-in-the-wool" shooters, and seven of them waded drifts and enjoyed it, because they had a try at their favorite pastime. To-day should have been the time when the whole club was to have begun a series of weekly shoots for the handsome 1912 Du Pont trophy, but too much snow caused a postponement for a majority of the club members. The most spectacular race that we have witnessed at our grounds was between Hartley and Martin, the latter finally taking the former's measure by one pigeon. Martin also set a club record by breaking 30 straight, then was compelled to stop for the want of shells.

Providing the weather man consents, the whole club will be on hand at our next regular weekly shoot, which will be held next Wednesday. Scores of to-day's happenings as follows:

	Shot at.	Broke.		Shot at.	Broke
F. E. Martin.....	36	33	O. T. Davis.....	50	20
E. Hartley	25	21	*F. Monroe	7	4
F. Ellis	25	15	*W. E. Ellis.....	7	3

*Just to shoot a few loose shells. Martin's score was made with a 16-gauge gun.

SECRETARY.

Pillow Gun Club.

PILLOW, Pa., March 3.—Weather conditions were ideal for target shooting to-day. Owing to the stormy weather on the 2d ult., the Washington Birthday shoot was postponed.

REVOLVER CARTRIDGES

Each *Remington-UMC* cartridge in each box means a sure fire, straight to the mark shot.

The uniform ignition due to perfect priming makes for sure fire, accuracy and penetration.

A *Remington-UMC* cartridge is made, tested and guaranteed for every standard pistol and revolver.

Recommended by Leading Manufacturers.

Remington-UMC — the perfect shooting combination.

REMINGTON ARMS - UNION METALLIC CARTRIDGE CO. - 299 Broadway, New York, N. Y.

Philadelphia Trapshooters' League.

THE S. S. White Gun Club, by winning the Trapshooters' League match on March 3, at Holmesburg Junction, from Lansdale, is assured of the championship.

There is only one remaining shoot, and the best Meadow Springs or South End, which are tie now for second place, can do is to finish second, one point behind the Whites, providing the latter does not win its last shoot.

Highland's defeat at the hands of Meadow Springs dropped the Edge Hill men down to a deadlock hold on third place with Lansdale and Du Pont, the latter by beating Haddonfield advancing from fourth place.

Table with 3 columns: Name, Points, Targets Broken. Lists scores for S S White, Meadow Springs, South End, Du Pont, Highland, Lansdale, Clearview, and Haddonfield.

Meadow Springs—Highland.

Having seven of their official "ten" reach the 40 mark or better enabled Meadow Springs to defeat Highland in a Trapshooters' League match on March 3 by a score of 411 to 376.

Table with 3 columns: Name, Points, Targets Broken. Lists scores for Meadow Springs and Highland players like Mace, Sloan, Zeigler, etc.

Those gunners who failed to qualify for their respective teams follow: Meadow Springs.—Clegg 35, Morris 35, Armstrong 31, Deuley 25, Emmers 28, Hillpot 29, Kernan 24, Wills 23, Wilson 13, Harbert 30, Henry 38, Coyle 36, A. Moore 34, Soley 33, M. L. Emery 29, Lemmon 15, E. G. Garrett 28, Hall 19, MacAlonan 17, Emerson 35, Dr. Jones 36, Christman 32, Renner 28, Chandler 32, Warren 36, Mardin 39, Fish 34.

Clearview—South End.

Clearview and South End engaged in a close and exciting Trapshooters' League match on March 2 at Darby, which the South Jersey men won by a margin of 11 targets, the score being 406 to 395.

Table with 3 columns: Name, Points, Targets Broken. Lists scores for Clearview and South End players like H Green, Hineline, Springer, etc.

S. S. White—Lansdale.

Table with 3 columns: Name, Points, Targets Broken. Lists scores for S. S. White and Lansdale players like Budd, Severn, Newcomb, etc.

Du Pont—Haddonfield.

Du Pont beat Haddonfield to-day by a score of 435 to 370. Sixty-three Du Pont men shot at their 50 allotted targets and every man who succeeded in making the team had to break 42 or better.

smashing 46, while Joslyn, also of Du Pont, shattered 45. Beidman, of the Haddonfields, led his team with 44 breaks, Scores:

Table with 3 columns: Name, Points, Targets Broken. Lists scores for Haddonfield and Du Pont players like Beidman, Halloway, Shreve, etc.

Larchmont Y. C.

LARCHMONT, N. Y., March 3.—Nine events with twelve competitors in each, made to-day's program excellent. Vice-Commodore Geo. M. Pyncheon broke 95 out of 100, taking the 100-target handicap.

Ralph L. Spotts was the winner of the 125-target scratch match with 107, and he also won the 15-target contest with a score of 13 from scratch.

Kahler—Gay.

SEVENTY-FIVE prominent sportsmen of Cincinnati, Philadelphia, Lexington and other Kentucky cities gathered at the grounds of the Hilltop Gun Club at Austerlitz, Ky., on Feb. 26, to witness the first match in the series between J. D. Gay, of Pine Grove, Ky., and Harry Kahler, of Philadelphia.

The conditions under which the match was shot could hardly have been harder. A gale of wind blowing from the southwest, quartering toward the traps, made quick and accurate work absolutely necessary.

Hon. T. A. Marshall, of Keithsburg, Ill., was referee, and Frank Pragoff, of Louisville, Ky., official scorer. Kahler won the toss for position, and fired the first shot at 2:10 P. M., killing his first 12 straight, losing the 13th.

In the next 25 Gay lost but two, while Kahler lost four, and the match was half over with Gay one bird ahead; score, 44 to 43.

The third round of 25 was Kahler's on a score of 20, 50, 19; this made the contestants tied on 63 birds out of 75. During the last round the light was getting rather poor and the wind seemed to increase in force.

Taken altogether, the match was the finest and cleanest exhibition of skill which has been seen at the traps in this part of the country. Scores, first match, 100 birds, 30yds. rise, \$500 a side:

Table with 3 columns: Name, Points, Targets Broken. Lists scores for H W Kahler and J D Gay.

J. D. Gay won the second match in the series with a score of 92 to 81 out of 100. Over two hundred of the sportsmen of the blue grass section, as well as a number from Cincinnati, and other cities watched the contest. Scores:

Table with 3 columns: Name, Points, Targets Broken. Lists scores for J D Gay and H W Kahler.

J. D.: Gay defeated H.: W.: Kahler in the third and last of the series of three matches for \$1,500 a side. It was the biggest white flier match that has ever been shot in America. Scores:

Table with 3 columns: Name, Points, Targets Broken. Lists scores for J D Gay and H W Kahler.

Smith Gun Club.

NEWARK, N. J., March 2.—High scores were made by Chas. T. Day, Jr., W. Trowbridge, H. Higgs, R. Bercaugh, I. Castle, and F. Pohlman, as follows:

Table with 3 columns: Name, Points, Targets Broken. Lists scores for Smith Gun Club members like Dr Mocller, R Trimpi, W Trowbridge, etc.

Birmingham Gun Club.

BIRMINGHAM, Ala., March 1.—Twenty-two shooters were at the weekly shoot of the Birmingham Gun Club. J. K. Warren shot high with 93 out of 100.

C. E. Goodrich, of Chicago, paid his first visit this year. A number of local shooters were out for the first time. C. C. Baxter, of the Powderly Gun Club, became a member of our club.

Preparations for the shooting tournament to be held April 1, 2 and 3 are going on, and great interest is being shown. The money is to be divided 20 and 25 target events, 25-target events to be shot from distance handicap.

The scores:

Table with 3 columns: Name, Points, Targets Broken. Lists scores for Birmingham Gun Club members like J K Warren, John Fletcher, H C Ryding, etc.

Table with 3 columns: Name, Points, Targets Broken. Lists scores for Birmingham Gun Club members in the doubles event.

Columbus Gun Club.

COLUMBUS, O.—The weather was too cold on Feb. 22 for many to try the bluerocks. Seven braved the storm, shot a few and then sought the big log fire.

A nice crowd was out on Feb. 23, and some good scores were made. Jones was high man with 145 out of 150. Jim Smith and Bert Cooper tied for second place with 142.

The next shoot will be March 21, and the writer extends an invitation to each and all to attend the opening shoot at the Bulkhead Hotel at the Lewistown Reservoir, or Indian Lake, in the near future.

Good guides, with blinds and decoys can be had at reasonable prices. The same feed will be given as you get at the Columbus Gun Club. A new manager is wanted for the club. Speak up. Who wants it? Come to Indian Lake.

Table with 3 columns: Name, Points, Targets Broken. Lists scores for Columbus Gun Club members like Coburn, Coleman, Roundy, etc.

LON FISHER, Sec'y.

Marine and Field Club.

GRAVESEND BAY, N. Y., March 4.—Following are the scores for Saturday, March 2:

Trophy shoot, 25 targets, scratch; Paul R. Towne 19, Chas. M. Camp 19, Chas. D. Sayre 19, E. H. Lott 18, J. H. Emanuel, Jr., 17, J. M. Knox 17; H. Bridgman Smith 16. Tie between Towne, Camp and Sayre shot off miss-and-out, and won by President Towne.

Gravesend Bay trophy, 50 targets, handicap; presented by club: P. R. Towne (0) 43, C. M. Camp (2) 32, J. H. Emanuel, Jr. (2) 41, C. D. Sayre (2) 39, J. M. Knox (8) 42, E. H. Lott (0) 36, H. B. Smith (10) 36. Won by President Towne. The conditions with this event were very bad, as the wind swept over Gravesend something awful. Emanuel and Knox were the runnersup.

Club sweepstakes, 25 targets, handicap: C. D. Sayre (1) 23, E. H. Lott (0) 22, C. M. Camp (1) 22, P. R. Towne (0) 21, J. M. Knox (4) 21, J. H. Emanuel, Jr. (1) 18, H. B. Smith (5) 16.

Take-home trophy, 25 targets, handicap: C. D. Sayre (1) 24, C. M. Camp (1) 24, J. H. Emanuel, Jr., (1) 23, P. R. Towne (0) 22, J. M. Knox (4) 22, E. H. Lott (0) 18, H. B. Smith (5) 15. Shoot-off, miss-and-out, won by Camp.

Monthly cup, 300 targets, handicap. Conditions: 100 targets, to be shot each Saturday, taking out three best shoots for the total of 300 targets: J. M. Knox (16) 83, C. M. Camp (4) 82, J. H. Emanuel (4) 79, P. R. Towne (0) 76, E. H. Lott (0) 75, C. D. Sayre (4) 75, H. B. Smith (20) 45.

Mr. Knox gained the first leg on the March cup, with Mr. Camp a close second.

Chicago Gun Club.

CHICAGO, Ill., Feb. 22.—After one of the worst blizzards of the year, on Wednesday, the sun came out bright and clear this morning, and the weather warmed up so that we had a splendid afternoon for our Washington's Birthday team shoot, in which twenty-eight shooters took part, fourteen on each team, and we had a total of thirty-three shooters for the day.

Doc May's team put it over Shorty Jeff's team in all three events, winning the first event of 50 singles per man by a margin of 18 targets. Both double events were close races, the first being won by three targets and the second by five. The rivalry between the two teams was quite keen, and the result of each squad's total was eagerly awaited.

Not the least interesting was the "heavy" work done by both captains, who were continually coaching the different members of their teams, and telling them just how to get the birds.

A good number of excellent scores were made, especially on the doubles, MacLachlan doing extra good on them, breaking 44 out of 25 pairs, and again breaking 21 out of 12 pairs in an extra event in which Jeff also broke 21.

Quite a number of shooters had their first trial at the doubles in events 2 and 3. Scores:

530 190 201

Feb. 24.—We had a fairly pleasant afternoon, and the fourteen shooters whose scores are herewith given, took advantage of the weather to break a few targets. Graham went through the practice frame of 25 without skipping; Goode, White and Bills each making a score of 24; Dickerman and Stannard each scoring 23. Jeff loomed up good and big in the club event with his score of 47 out of 50, Stannard going only one better, while Graham tied Jeff's score of 47. MacLachlan and P. Graham each accounted for 44. Bills tipped the list in a 25-target event at 20yds., when he broke them all, and then finished up with 22 out of 12 pairs, in which he slipped on one of those "Germans." Pat Graham made 20 out of 25 at 23yds., Dickerman, MacLachlan and Stannard each breaking 19. Scores:

Events:	* 1	2	3	4	5	6	7
Targets:	25	50	20	25	25	25	12p
O P Goode.....	24	39	17	..	20	18	12

L A Pottenger.....	15	19

Feb. 25.—A field of thirty shooters was out to-day, despite the fact that it was dark and quite cold, with a raw wind blowing from the northeast, which made it quite uncomfortable when on the firing line. The wind played many pranks with the flying targets, and as a consequence high scores were the exception. Young stood at the head of the list in most of the events, breaking 24 out of 25 in practice, 47 out of 50 in the club event, tying E. S. Graham with 19 out of 25 from 21yds., and also taking first place in the last event at doubles. Kammerer scored a total of 43 in the club event, while May, Goode, Shaw and Winters each broke 42. The above were the leaders in Classes A and B, shooting at 50yd. targets. Phil Miller headed Classes C and D on the 40yd. targets. Goode, Jeff and Schultz each scored 22 in an extra event at 25 targets, Goode finishing up for the afternoon with 47 out of his last 50. Jeff with a score of 42 out of 50, had the best of a match for the lunches, May, Kammerer, Goode and Schultz also being in on this race. Dr. Griffith found the strong wind quite a handicap for his 28-gauge. Winters, Selter and Hanrahan were visiting shooters who were in the city for the day, and came out to enjoy the day at the traps. The scores:

*Practice events. Nos. 9 and 10 were at 12 pairs each.

WINCHESTER

"Tournament" Gun

Specially Designed For
TRAP SHOOTING

List Price
\$42.00

The Winchester "Tournament" gun is made according to specifications which meet the ideas of the most successful trap shots.

It embodies features which count in the making of high scores: such as strong and even shooting qualities, balance and length, drop and shape of stock. The selected walnut stock has a heavy rounding comb, and a well-shaped straight grip. The length of pull is 14 inches, drop at comb 1 3/4 inches, and at heel 1 13-16 inches. The stock was worked out with great care, the intention being to have it, in shape, length and drop, fit the physical requirements of the average shooter. The barrel is 30 inches long and handsomely matted on the top. Almost any dealer can show you one of these guns. It is enthusiastically

Endorsed By Many Expert Shots

Sunbury-Selinsgrove Gun Club.

SUNBURY, Pa., March 1.—In our regular practice shoot on Thursday the weather brought out quite a bunch of shooters and produced good scores. For the local shooters, Hartman was high gun, shooting with all the regularity on midseason. Sigfried and Foster were at the traps for the first time this year, and they made good. Teats and Foster were the only club men that were able to get any straights. The scores made were as follows:

Targets:	15	15	15	15	15	25	25	25
Howell.....	12	12	14	12	12	18	22	19
Hawley.....	10	12	10	10	12	13	14	20

New York Athletic Club.

TRAVERS ISLAND, N. Y., March 2.—B. M. Higginson was high gun for the day, with 82 broken in his first 100 targets, while Fred Pelham, with a score of 80, finished second.

Shooting in field position for the Billings cup, the men proved as successful as at the style they are accustomed to. The winner was R. R. Debacher, who had a handicap of 6 targets.

The best string score of 24 was shot by F. A. Hodgman for the St. Patrick's Day cup. The scores:

March cup, handicap, 25 targets: F. Hall (2) 25; D. F. McMahon (3) 25; G. F. Pelham (3) 24; J. I. Brandenburg (6) 23; B. M. Higginson (1) 22; C. W. Billings (2) 21; G. L. Lyon (0) 21; A. E. High gun trophy, scratch, 100 targets: B. M. Higginson 82, G. F. Pelham 80, C. W. Billings 79, D. F. McMahon 79, R. L. Spotts 78, F. A. Hodgman 77, H. Kirkwood 77, F. Hall 77, G. J. Corbett 72, J. I. Brandenburg 69, A. E. Ranney 68, O. R. Dickey 63, R. R. Debacher 42

Buffalo Audubon Club.

BUFFALO, N. Y., March 2.—Only a fair attendance to-day, there being twenty-two shooters present. Considerable enthusiasm prevailed, however, and from this time until our annual Decoration Day tournament the attendance, we hope, will be greater. A match shoot is being arranged with the Syracuse gunners, and if it takes place before our May 30 shoot, we hope will aid materially in its success. A committee has been appointed, and we expect to have the best one-day shoot in the country. The scores made to-day were very ordinary, caused, I think, by a blinding sun on a field of snow. President Covert won Class A badge; A. C. Suckow won Class B, and J. Ebberts, Class C. In the spoon competition, F. D. Kelsey, E. Wacker and Dr. Burke were winners. Fair scores were made in event No. 5, Olympic rules governing. Scores:

Targets:	20	20	20	20
Ebberts	10	13	11	12
McCutcheon	15	13	16	16
Wacker	12	12	13	17
Eberhardt	10	6	11	13
Cox	16	16	16	13
Wootton	13	13	13	18
Kelsey	14	14	18	18
Squelch	5	10	8	6
Lambert	16	15	18	16
Smith	15	12	14	13
Davis	5	6	11	9
Smith, Jr.	13	9	15	13
Covert	16	17	15	17
Remecke	9	10	9	..
Blackmer	13	12	12	11
Fish	18	14	19	16
King	3	5	6	8
Suckow	13	13	10	13
Howlett	5	5	8	..
Burke	15	10	14	13
Cranston	4	6
Wootton, Jr.	8

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Nassau C. C.

GLEN COVE, L. I., March 2.—Under the most trying weather conditions, the gunners of the Nassau Country Club decided their annual championship at clay birds over their traps here to-day. The winner was Roy A. Rainey with 83. Donald Geddes was second with 73, and then came E.M. Busch with 67.

The final shoot for the committee cup also was decided. Prior to the shoot to-day, B. Tilt and Howard Maxwell were tied with 3 points each. H. M. Cowperthwait had one point to his credit, but as he won the shoot to-day, his total went to 4 points, and he captured the prize. The scores: H. M. Cowperthwait 48, Howard F. Whitney 35, E. M. Busch 34, Donald Geddes 33, A. W. Rossiter 29, B. Tilt 26, Percy Chubb 26, W. E. Kimball 26, Howard Maxwell 26, S. McCullough 22.

Plattsville Gun Club.

PLATTSVILLE, Wis., Feb. 25.—The scores at the trap were unusually poor to-day, owing to a strong head wind. It made the targets look like they had the St. Vitus dance. The scores:

Events:	1	2	Events:	1	2
Targets:	50	25	Targets:	50	25
P. Karrman	41	18	Long	38	18
Bartling	42	21	Dorscher	39	16
Belmeyer	37	20	David	28	16
Burg	33	17	Jones	27	..
Bridges	35	17	McKown	34	..

Indianapolis Gun Club.

INDIANAPOLIS, Ind.—Britton led the amateurs on Feb. 17, with Edmonson close up. Britton beat the handicap in the spoor shoot, as he did on Feb. 10, when Ford was given the credit by mistake. Scores:

	Shot at.	Broke		Shot at.	Broke
*Barr	220	207	Alig	110	89
Edmonson	220	197	Lewis	100	83
Moller	220	186	Hymor	100	83
Britton	150	136	Dixon	100	78

On Feb. 24 Britton led with 92 per cent. and broke the

last 48 straight. Moller started with a 20 and finished with a 25, but wobbled in the middle, and Edmonson again beat him for second place. R. R.

Gloucester Gun Club.

GLoucester CITY, N. J., March 2.—There were two well contested shooting matches at bluerocks here to-day. In the first event Martel and John Hawkins tied, and in the shoot-off the former won. Frank Butler won the second shoot after being tied with Stokes Prickett, Martel and Dasch.

Rifle and Revolver

Hundred Shot Gallery Championship Match.

THE sixteenth annual hundred-shot gallery championship match and prize shoot for 1912 will be held March 9 to 16, under auspices of the Zettler Rifle Club.

Shooting from 10 A. M. to 11 P. M. daily, except Saturday, March 16, when shooting closes at 10 P. M., and the sale of tickets at 9 P. M.

Practice allowed before 10 A. M. each day.

Targets to count on scores must be handled by the committee only until scores are duly recorded.

Shooters tampering with targets shall be disqualified.

CADET CAPT. LEO R. LEEPER, captain of the University of Iowa team, leaders in the western division of the Intercollegiate Indoor Rifle Shooting League, was a charter member of the rifle club of this university, and one of those most active in its organization. For two years he served most efficiently as its secretary, and has been on its team each year, always shooting consistently good scores. He has twice won the Captain M. C. Mumma medal, in 1910 and 1911, given for the highest total score made in the League matches during the year by a member of the Iowa team. His average for the matches of 1911 was 191.25 out of a possible 200; several times he shot 195, which was the record score for the League in 1910. Four years out of five he has won the Colonel Burnett medal, given each year to the best shot in the University Cadet Regiment. Mr. Leeper's work has made him one of the most prominent members of the team, which last year gained the championship of the Intercollegiate League, and whose shooting thus far this year promises to give Iowa a very high rank again.

All targets that are not shot at the close of the shooting each day must be returned to the secretary.

Competitors may hold shooting stations as long as desired, providing, however, they continue shooting.

Any sights, including telescopic as well as palm rests permitted. Distance of all targets 75 feet, only .22 short cartridges to be used. In all cases the decision of a majority of the shooting committee present will be final.

Handling rifles or other property of contestants without permission is strictly prohibited.

Entrance fee \$5. Each contestant to fire 100 shots on 20 targets of 5 shots each, the regular 25 (1/4) inch ring target to be used. To be completed on same day the score is begun.

The shooter making the highest score will receive

The best-made .22 rifle in the world!

Shoots all .22 short, .22 long and .22 long rifle cartridges without change in adjustment; excellent for rabbits, squirrels, hawks, crows, foxes and all small game and target work up to 200 yards.

It's a take-down, convenient to carry and clean. The tool steel working parts cannot wear out. It's Ivory Bead and Rocky Mountain sights are the best set ever furnished on any .22. Has lever action—like a big game rifle; has solid top and side ejection for safety and rapid accurate firing—the real test of a repeater.

Note the beautiful case-hardened finish and the superb build and balance. Examine at your gun store or send three stamps postage for new big catalog of all Marlin repeating rifles and shotguns. Do it now!

The Marlin Firearms Co.
27 Willow Street, New Haven, Conn.

NYOIL WILLIAM F. NYE is the greatest authority on refined oils in the world. He was the first bottler; has the largest business, and NYOIL is the best oil he has ever made. It has no equal. Beware of scented mixtures called oil. Use NYOIL on everything where a light oil is required. It prevents rust and gives perfect lubrication. Ladies, try it on your sewing machines. Sportsmen, use it liberally on your firearms. Hardware and sporting goods dealers sell it in large bottles (cheaper to buy) at 25c. and in trial size at 10c. Made by WM. F. NYE, New Bedford, Mass.

FISHERMEN NEED DIXON'S GRAPHITE

It prevents sticking of ferrules, tangling of line and is good for reels. Fishermen need it. Get free sample and booklet P-52.

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He knows it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is Lefever Taper Boring.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS Co., 23 Maltbie St., Syracuse, N. Y.

Durston Special 20 Gauge. Price \$28.00

the gold championship medal and choice of prizes. Next highest score, second choice, and so on.

Ties will be decided by the value of the next best score or scores of 10 shots.

A prize for all who complete their 100 shots in this match.

There will be twenty cash prizes ranging from \$20 down to \$3.

Seventh Regiment Rifles.

At 200 and 500yds., Lance Corp. J. K. Boles, regimental champion; Corp. J. R. MacGuffie, and Sergt. A. Scholz all scored totals of 69 out of a possible 70 and got away on equal terms for the Expert Class cup.

Lieut. E. McK. Froment, in qualifying as an expert, made a 62 in deliberate fire and 43 in rapid fire for the good total of 112. Corp. MacGuffie's fine score was made on his first entry, and gave him an additional prize. The summaries:

Match No. 4: Expert Class—J. K. Boles, Co. I, 69; Corp. J. R. MacGuffie, Co. M, 69; Sergt. A. Scholz, Co. M, 69. Sharpshooter Class—W. M. Phillips, veteran, 66; Pvt. W. Roesler, Co. K, 65; Sergt. H. J. Connolly, Co. M, 64. Novice Class—Musician C. Figaro, band, 61; Pvt. R. M. Raven, Co. K, 61; Pvt. R. M. Ensign, Co. H, 60.

First entry prize winners: Expert Class—Corp. J. R. MacGuffie, Co. M, 69. Sharpshooter Class: W. M. Phillips, veteran, 66. Novice Class—Pvt. R. M. Raven, Co. K, 61.

Expert Qualifications: Lieut. E. McK. Froment, Co.

CADET CAPT. LEO CHAPMAN, who is secretary of the club, was also a charter member of the Iowa club, has been its treasurer for three years, and was elected its secretary also this year. He is one of the reliables and may always be depended upon to "make his mark" when called to the score.

B, 112; Sergt. J. Milleman, Co. E, 109; Lieut. W. B. Short, veteran, 109. Necessary for qualification, at least 68 in deliberate, and 40 in rapid fire.

Intercity High School Rifle League.

WASHINGTON, D. C., March 2.—Iowa City High School and Deering High School, Portland, Me., both won their matches this week in the Intercity High School Rifle Shooting League, and are tied for first place with ten wins and one defeat each. Results this week were: Iowa City defeated Brookline, Mass., 957 to 834; Baltimore Poly defeated Morris, New York, 944 to 898; Southern, Philadelphia, defeated Portland, Me., 899 to 831; Salt Lake defeated McKinley, Washington, 915 to 859; De Witt Clinton, New York, defeated Business, Washington, 866 to 0 (by default); Central High, Philadelphia, defeated Central Manual, Philadelphia, 877 to 0 (by default); Deering, Portland, Me., defeated Central Washington, 948 to 0 (by default); Western, Washington, defeated Ogden, 806 to 0 (by default).

Western Inter-Collegiate.

Western League results were: Iowa defeated California, 940 to 901; Michigan Aggies defeated Michigan University, 904 to 869; Nebraska defeated St. Thomas, 874 to 813; Minneapolis defeated Kansas, 920 to 0 (by default); Purdue won from Arizona, 903 to 0 (by default).

HIGHEST speed, heaviest "smash," nearest-to-straight-line path — you can aim and hit surely and deal a blow that counts, with

US AMMUNITION

Other cartridges contain fulminate of mercury and ground glass. When these escape into the barrel their destructive effect on the delicate boring is like that of corroding acid. U. S. Cartridges contain neither mercury nor glass. At the touch of the firing-pin upon the primer, a hot, quick, "fat" flame explodes the evenly distributed powder and drives out the bullet with the speed and force of Jove's thunderbolt.

For these reasons U. S. Cartridges have taken first place in U. S. Army tests more often than any other brand, and demonstrated to the Government the necessity of abandoning old-fashioned ground-glass and mercury primers. They are manufactured with such absolute accuracy in powder supply and projectile weight that they command the perfect confidence of users under the most trying conditions. Ask a U. S. Ordnance Officer or any other expert.

Eastern Inter-Collegiate.

WASHINGTON, D. C., March 2.—Massachusetts Agricultural College took the lead this week in the Eastern Division of the Intercollegiate Rifle Shooting League by defeating Norwich University, while Princeton, with which Massachusetts was tied, was defeated by Harvard. The University of Iowa maintained its lead in the Western Intercollegiate League.

Eastern League results were: Massachusetts Aggies defeated Norwich, 956 to 897; Pennsylvania defeated Delaware, 943 to 874; Harvard defeated Princeton, 931 to 929; North Georgia defeated New Hampshire, 928 to 835; Louisiana defeated Maryland Aggies, 925 to 855; West Virginia defeated U. S. Veterinary Surgeons, 914 to 908.

Shooting at the Sportsmen's Show.

THOUGH the big events did not take place until after we had gone to press, a number of good scores have been made at the Garden, even though shooting conditions are hard. Among the professionals H. C. Kirkwood came to the front with a score of 49 out of

50; Sim Glover, 48, and O. R. Dickey, of Boston, 48. Others who are in front in the professional ranks were P. E. Osborne, 48; J. S. Fanning, 47; G. H. Pumpelly, 47; Neaf Apgar, 46; H. H. Stevens, 46; Edward Banks, 46; W. W. Hassinger, 45.

In the amateur division P. E. Osborne, of West Sumnerville, Mass., led with 48 out of 50; C. R. James, of the Crescent A. C., 47, and G. H. Pumpelly, of Owego, a close third with 47. Other top liners among the amateurs were F. H. Schaffler, 45; H. T. Lee, 44; J. F. James, 44; F. B. Stephenson, 43; W. Simonson, 43; F. N. Reed, 43.

Philadelphia Rifle Association.

THE following scores were made by the Philadelphia Rifle Association, Thursday, Feb. 29, on the Philadelphia range of the National Rifle Academy, 1234 Filbert street:

Rifle, offhand, German ring target, distance 75ft.: E. C. Goddard 242, 242, 242, 246, 245, 245, 247, 247, 247, 248; E. H. Williamson, Jr., 242, 244, 245, 246, 248, 248, 244, 249, 242; R. L. Dubbs 238, 243, 244, 240, 241.

Pistol, Standard American target, distance, 60ft.: H. L. Reeves 83, 90, 84; Miller Forbes 88, 89, 86, Geo. Hugh Smith 84, 89, 84; Dr. W. E. Quicksall 88, 91, 89, 92, 84, 81, 90, 83, 88; Herman Thomas 94, 89, 92; Dr. G. G. Davis 63, 74, 80, 82, 78.

HARRY OVERBAUGH.

Schoolboy Rifle Tournament.

OFFICIAL program of the School-Boy Rifle Shooting Tournament, under the auspices of the Public Schools Athletic League of New York:

No. 1. Winchester Cup.—Open to teams representing any public or private school or academy in the United States, not conferring degrees. Conditions: Teams of six; distance, 50 feet; number of shots, 10 standing and 10 prone; targets, National Rifle Association; ammunition, .22 caliber short; rifles and ammunition furnished by the P. S. A. L. Entries of one or more teams allowed from any one institution, but no student can fire as a member of more than one team in this match. Entrance fee, \$1 per team. Prizes: 1. To the team making the highest aggregate, a silver cup (presented by the Winchester Repeating Arms Co.) to be held for one year by the school winning it, when it shall again be put up for competition; silver medals to each member of the team (presented by the Winchester Repeating Arms Co.). 2. Bronze medals to each member of the team making the second highest score.

No. 2. Standard Bearer Rifle Match.—Open to teams of any preparatory or elementary school in the United States, not conferring degrees. Conditions: Teams of eight; distance, 50 feet; number of shots, 10 standing and 10 prone; target, National Rifle Association; ammunition, .22 caliber short; rifles and ammunition furnished by the P. S. A. L. Entries of one or more teams allowed from any one school, but no member can fire as a member of more than one team in this match. Entrance fee, \$1.50 per team. Prizes: A trophy (presented by the Sub-Target Gun Co.) to be held for one year by the school winning it, when it shall again be put up for competition, and a medal to each member of the team.

No. 3. Union Metallic Cartridge Co. Championship Match.—Open to pupils of any high school in Greater New York. Conditions: To the school-boy making the highest aggregate of two tickets; 5 shots standing and 5 shots prone on each ticket and the aggregate high score in the Winchester trophy, Remington trophy, Schoverling, Daly & Gales trophy, Van Allen trophy and Poth trophy to be shot for during the tournament will be given a silver medal emblematic of the School-boy Indoor Rifle Shooting Championship of Greater New York for the year 1912, and to the school he represents will be presented the "Championship Challenge Cup" (presented by the Union Metallic Cartridge Co.) to be held by the school for one year, when it shall again be put in competition by the Public Schools Athletic League of New York or the National Rifle Association of America.

No. 4. Du Pont Match.—Open to teams of any preparatory school in the United States not conferring degrees. Conditions: Team of four; distance 50 feet; number of shots, 7 standing; target, National Rifle Association; ammunition, .22 caliber short; rifles and ammunition furnished by the P. S. A. L. Entries of one or more teams allowed from any one school, but no member can fire as a member of more than one team in this match. Entrance fee, \$1 per team. Prizes: 1. To the team making the highest aggregate, a trophy donated by the E. I. du Pont de Nemours Powder Co., to be held one year by the school winning it, when it shall again be put up for competition by the P. S. A. L.; silver medals to each member of team. 2. Bronze medals to each member of the team making the second highest score.

No. 5. The Peters Match.—Open to teams of high schools in the Public Schools Athletic League; P. S. A. L. rules of eligibility to govern. Conditions: Teams of five; distance, 50 feet; number of shots, 10 standing and 10 prone; target, National Rifle Association; ammunition, .22 caliber short; rifles and ammunition furnished by the P. S. A. L. Entries of one or more teams allowed from any school, but no student can fire as a member of more than one team in this match. Entrance, \$1 per team. Prizes: 1. To the team making the highest aggregate a trophy donated by the Peters Cartridge Company, to be held by the school winning it for one year when it shall again be competed for; silver medal to each member of the team. 2. Bronze medals to the second team making the highest aggregate score in the "Second Team Class."

No. 6. New York State Rifle Association Match.—Open to teams of public and private high schools in Greater New York. Conditions: Team of ten; distance, 50 feet; number of shots, 10 standing and 10 prone; target, National Rifle Association; ammunition, .22 caliber short; rifles and ammunition furnished by the P. S. A. L. Entries of one or more teams allowed from any school, but no student can fire as a member of more than one team in this match. Entrance fee, \$2 per team. Prizes: 1. To the team making the highest aggregate a trophy donated by the New York State Rifle Association to be held by the school winning it for one year when it shall again be competed for; this trophy is emblematic of the Indoor Team Rifle Shooting Championship of Greater New York; silver medals to each member of the team. 2. Bronze medals to the second team making the highest aggregate score in the "Second Team Class."

No. 7. Junior Marksman's Medal.—Open to any school-boy who has not yet reached his nineteenth birthday, attending a public, private or high school. Conditions: Ten shots standing and 10 shots prone at 50 feet on the National Rifle Association target; .22 caliber rifle and ammunition furnished by the P. S. A. L. Entrance fee, 15 cents for each ticket, re-entries allowed until qualifying. Prizes: To any school-boy making a total of 38 points standing and 42 points prone, or a total score of not less than 80 on the rifle range will be presented a Junior Marksman Medal authorized by the Secretary of War. The first qualifying score stands and

no further competition is allowed. (Note—Any boy who has reached his nineteenth birthday and who is a member of a competing team for this match will not be entitled to a Junior Marksman Medal, even though he qualifies.) To the members of the school clubs affiliated with the N. R. A. making the highest score in the Junior Marksman match will be presented a medal authorized by the N. R. A.

Unsquadded Continuous Competitions (re-entries allowed).—Union Metallic Cartridge Co. See match No. 3.
No. 8. The Winchester Trophy.—Conditions: To the school-boy making the highest total score on two tickets; 10 shots standing and 10 shots prone. Entrance fee, 20 cents a ticket; unlimited entries. Prize: To the winner will be given a single shot Winder Musket. Presented by the Winchester Arms Co.

No. 9. The Remington Trophy.—Conditions: To the school-boy making the highest total score on two tickets; 10 shots standing and 10 shots prone. Entrance fee, 20 cents a ticket; unlimited entries. Prize: To the winner will be given a new model No. 2, .22 caliber Remington repeating rifle with case. Presented by the Remington Arms Co.

No. 10. The Van Allen Trophy.—Conditions: To the school-boy making the highest total score on two tickets; 7 shots standing and 7 shots prone. Entrance fee, 15 cents a ticket; unlimited entries. Prize: To the winner will be given a gold watch. Presented by S. M. Van Allen.

No. 11. The Schoverling, Daly & Gales Trophy.—Conditions: To the school-boy making the highest total score on one ticket; 10 shots standing and 10 shots prone. Entrance fee, 20 cents a ticket; unlimited entries. Prize: To the winner will be given a Manhattan Arms Co. hammerless double-barreled shotgun, 12-gauge. Presented by Schoverling, Daly & Gales.

No. 12. The Poth Trophy.—Conditions: To the school-boy making the highest total score on two tickets; 5 shots standing and 5 shots prone. Entrance fee, 10 cents a ticket; unlimited entries. Prize: To the winner will be given a watch fob. Presented by William J. Poth.

There's just the difference between a raw, poorly made Cocktail and a

Club Cocktail

that there is between a raw, new Whiskey and a soft old one.

The best of ingredients—the most accurate blending cannot give the softness and mellowness that age imparts.

Club Cocktails are aged in wood before bottling—and no freshly made Cocktail can be as good.

Manhattan, Martini and other standard blends, bottled, ready to serve through cracked ice.

FIELD TRIALS.

Oct. 28.—Southern Ohio Field Trial Association's second annual field trials. G. R. Harris, Sec'y, 15 West Sixth St., Cincinnati, O.

The Bulldog.

SINCE the days of Bill Sykes, immortalized by Charles Dickens in Oliver Twist, the bulldog has had a reputation for being as ugly in disposition as he is unhandsome of face, and at the same time he has held the enviable reputation for willingness to bear all sorts of abuse from his master and never waver in his affection for, and his desire to, kiss the hand that smites him.

Fortunately there are few Bill Sykes among dog owners to-day. The man who owns a good dog realizes the value of his possession and treats it accordingly. Unknowingly, it is the children that abuse the dog to-day, and it is seldom we hear of a dog biting a child, and when we do hear of such a case, it never is a bulldog that is guilty and not often is the offense committed by a thoroughbred of any kind. The disposition of a bulldog is, like that of any other breed, entirely a matter of training. It can be made ugly or sweet-tempered according to the wish

should use the Airedale or foxhound. The bulldog has become essentially a home dog. He is easily fatigued and therefore shows no desire to wander from home. He has no hunting qualities, excepting possibly a playful willingness to hunt vermin around the house, as he was bred for brawn and not for brain; he is not exceptionally intelligent. His fondness for children is a prominent characteristic as is his ability to do one thing well, know only one master and die

Hewlett King Orry
Hewlett Kennels

CH. FLORENCE BHUNDA.

for him if necessary. No dog in all history has been so abused as the bulldog. In 1835, when English Parliament put a stop to bull baiting, the Bill Sykes element took up the breed and allowed it to deteriorate through abuse into the vicious brute of the English slums.

When the bulldog began again to be bred for points, a number of fakirs tried to assist nature in producing an ugly face for the breed. That the nose might be turned well up and the upper jaw shortened, the "doctors" cut the middle and two side lip strings which connect the gum and upper lip, then a wooden block, hollowed to fit the bridge of the nose, was put on just in front of the eyes and struck a heavy blow with a mallet. This compressed the bone and cartilage and turned up the nose as desired.

This was performed on puppies eight weeks old and was of course not condoned by the bulldog fraternity, and is not practiced at all at the present time.

Winners at the 1912 Westminster Kennel Show

of the breeder. To quote from an article published in England, in 1865:

"The British bulldog is a majestic, ancient animal, very scarce, much maligned, and as a rule very little understood. If treated with kindness, often noticed, and frequently with his master, he is a quiet and tractable dog; but if kept chained up and little noticed, he becomes less sociable and docile, and if excited and made savage, he is a most dangerous animal. He is an excellent guard, an extraordinary water dog, and very valuable to cross with terriers, pointers, hounds, greyhounds, etc., to give them courage and endurance. He is the boldest and most resolute of animals. The game cock is a courageous bird, but he will only attack his own species; but there is nothing a good bulldog will not attack, and ever brave and unappalled, with matchless courage, he will give up only with life itself."

The bulldog was first heard of in England in 1631 when Prestwich Eaton from St. Sebastian wrote to George Willingham, in London, for a mastiff and two good bulldogs. There appears no further back record of the bulldog nor does there appear any authentic statistics of its progenitors, although it is generally conceded to have developed from the mastiff breed. The animal was bred for bull and bear baiting, and as the former atrocious amusement was popular as far back as 1209, it seems probable that some sort of bulldog existed at that time, though, undoubtedly, an animal that would not be recognized as the bulldog of to-day.

If we indulged in animal baiting to-day, we

Rockcliffe Hats Off, open under 45 pounds; Hewlett King Orry, limit and open dogs, 45 pounds and over; Grace Davenport, open dogs and bitches, 28 pounds or less; General Gladiator, Junior; Forward Autowin, puppies and novices, bitches; Bracelet, bitches, American bred and bred by owner; Hermits Ruth, limit, bitches, under 40 pounds; Gloria, open, bitches, under 40 pounds; Deodora Delilah, limit and open, bitches, 40 pounds and over; Merley's Empress, Junior, bitches.

Associated Specialty Shows of New York.

THE details of a scheme that has been in a process of evolution for the past year are now ready to announce.

On Jan. 12 Messrs. John E. DeMund, W. H. Sawter, W. S. Gurnee, Jr., and A. D. Gillette for the Russian Wolfhound Club of America, the Boston Terrier Club of New York and the Bulldog Breeders' Association of America, respectively, at Mr. Sawyer's office organized the Associated Specialty Shows of New York, the plan and scope being similar to the organization that has proved so successful in Chicago for the past two years.

The personnel of the association to date, and possibly the final one, includes the following clubs: The Russian Wolfhound Club of America; The Dachshund Club of America; The Boston Terrier Club of New York; The Airedale Club of Long Island and The Bulldog Breeders' Association of America. There is still a possibility of the Collie Club of America joining.

The association will hold a one-day open show on May 4 at the Twelfth Regiment Armory, Sixty-second street and Columbus avenue, New York. George F. Foley, Lansdowne, Pa., will superintend and Spratts will bench.

The premium lists go to press on April 1 and the entries close April 22.

In effecting this organization due care has been given to keeping the identity of each club intact. Each club will cater to its own breed under separate and distinct bench show committees, the chairmen of each forming a committee in general charge.

Each club's license, classification, prize money and entry fees as well as specials, will be determined and offered separately, though all breeds will be included under cover of one catalogue.

Rearing Puppies.

REARING puppies successfully means that he who tries it must know the essentials of feeding and cleanliness. Cleanliness is far the most important. Dryness is the first thing to be considered in obtaining a perfect state of kennel sanitation.

If one is a small breeder and has the choice of a number of places about the stable and premises for the rearing of a litter or two of good puppies, he can find a dry location in woodshed, haymow, basement, where there is plenty of light and air, or some other building that will answer just as well. I have reared puppies in a cellar that was sunny and dry, keeping them there until time to get them on the grass and wean them from a rather frail little mother. This age was five weeks.

It is a fine scheme to get the little fellows eating as soon as they will lap up milk. Warmed skim milk with a bit of sugar in it is just the thing. The mother's milk has a great amount of sugar in it, and it is from such nourishing food and the germs of filth that generally infest a brood matron's nest, that the puppies sooner or later have worms and the chance of being carried away by them.

When the puppies are whelped, be sure that the bitch is clean. Better bathe her well before they are born and start them right. If she has been brushed out nicely every day, her hair about the teats will not be loose enough for them to get into their little stomachs. Some heavy haired bitches should have the hair trimmed away from the nipples. I have known a whole litter to die of balls of hair in their stomachs.

Be sure the bedding is clean for the matron before she whelps and at all times thereafter. If she lies down in a pool of urine-covered straw or hay, she gets these germs upon her mammary glands and the pups in turn take them into their stomachs. They breed worms. Dusty hay or straw or shavings are not good for the litter of puppies. Long swale grass or rye straw I have found to be the cleanest from dust and dirt.

It will surprise one to know what different

self-termed dog breeders use in the way of bedding. Once I was called out to the kennels of a breeder, or fancier, rather, who was just getting started in the game. He had used nice white sand for the bitch to whelp in, and she had plastered herself in it. The puppies had shoved themselves about in it until their noses were stuffed full and over half the litter had thus smothered.

Some very successful breeders who can watch their matrons closely at whelping times use nothing on the floors, but have them clean and smooth. The matron sometimes decides this, too. If she is heavy and restless the smaller amount of bedding the better. If she is tried and true and one can bank on her to keep the puppies snuggled up to her, she can be allowed to whelp anywhere.

Do not start the puppies eating too much at once. Let their feeding go ahead gradually. Do not have any pot-bellied ones among them, and see that all of them get their share. If they are gradually weaned they will leave the dam in much better shape and there will be no stoppage of their swift growth. I always give them a big dose of sulphur once each week. Put this in milk. It is good to use areca nut along with it. Use two teaspoons of sulphur and one of powdered areca nut for a litter of six setter or pointer puppies or like sized breeds. Mix it up in milk, and then after thoroughly assimilated by the liquid, stir into the pot of stale bread and milk which you feed them.

Stale bread in milk is the fastest growing food I have been able to get for a first month's feeding. Then I add soup bones and vegetables and gradually give them chopped meat. Too much food, especially of meat, will make them stick to one diet and refuse others. Vary it steadily. Three times a day will be about right for the average puppies until they are three months old. After this I feed twice a day and allow them the run of the place. If one had to fence them into a large lot, it is better to give them freedom this way than chain too early.

Robinson Model Canoe

"GOLD ARROW" BRAND MAHOGANY FINISH

For beauty of lines, excellence of material and finish this model stands in a class by itself. It was designed by our President, and constructed by the best builders of canoes in the world—E. M. White & Co., Old Town, Maine.

READ ABOUT "LAPPED JOINT" CONSTRUCTION

Perhaps in no other kind of watercraft is quality and method of construction, and design considered less by the general public than in canvas covered crafts. The method of attaching the planking on "White's make" canoes alone doubles the actual value, as the edges of the cedar board are beveled and lapped, making a practically water-tight joint, before the canvas is stretched over. In other makes the edges of the plank are "buted" square against each other, and when the canoe swells or shrinks, sand works in and the canvas soon gives way.

BUILT LIKE A THOROUGHbred

Selected materials, open gunwales, long mahogany decks and thwarts, double inter-ribbed, adjustable front seat, painter ring in bow, color Indian red with gold arrow trimmings. Light, steady, strong and speedy. Full description upon request.

SALE OF ANGLING LEASES

SALMON and TROUT

The sale of Angling Leases for a term of five years for Restigouche River and ten years for all other streams will be held at the Crown Land Office, Fredericton, N. B. (Canada), on Wednesday, the 20th of March, 1912, at 11 o'clock A. M.

The angling privileges to be sold are considered among the best in the World, and all are easily accessible by rail. No license fee or tax of any kind other than the annual rent is asked of lessees.

Here is a chance for the man, or the big or the small club, looking for a river, or stretch, to enjoy the King of Sport at a moderate cost.

For further particulars as to conditions of sale, the streams sold and upset prices, apply to T. G. Loggie, Deputy Surveyor General.

J. K. FLEMING,
Surveyor General.

Fredericton, N. B.,
20th February, 1912.

IN THE QUAIL COUNTRY
 From a photograph by G. P. Baughman.

ARE YOU A GUNNER?

Do you love to follow your good dog over the fields in search of quail or chickens, or to struggle through swamp or along thick grown hillside, expecting to hear the roar of the ruffed grouse or the twitter of the fall woodcock? If so, you should have this new book.

AMERICAN GAME BIRD SHOOTING

By **GEORGE BIRD GRINNELL**

(New—Just Published)

This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys.

The first part of the volume is devoted to a description of the various species and their habits—the way in which they live their lives.

The second part of the book is devoted to upland shooting and treats of the methods by which all the upland birds are pursued and taken. The chapter "Aids to Shooting" describes the clothing, guns, and loads and dogs that the gunner may profitably use; while the last section of the book treats of the shooting of the future and the efforts to rear our native quail and grouse in domestication.

The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full page portraits of different game birds and hunting scenes, with a number of cuts in the text.

Cloth. About 575 pages. Price \$3.50, net. Postage 25 cents.

This book is of inestimable value. It contains the genuine hunter-naturalist facts given in the most entertaining and interesting style.

FOREST AND STREAM PUBLISHING CO., 127 Franklin St., NEW YORK CITY

AMERICAN DUCK SHOOTING

By *George Bird Grinnell*

A most complete work, dealing with every phase of the sport of duck shooting, thus forming a complete treatise on American ducks, geese and swans. It gives details of the natural history, habitat, and characteristics of every American species.

Part I contains descriptions with plates of each species.

Part II tells of every method of swan, goose and duck shooting practiced in North America—east and west, on Atlantic and Pacific and in the interior—and gives thrilling accounts of the splendid sport.

Part III deals with the art of duck shooting, including guns and loading, the Chesapeake Bay retrieving dog, decoys, blinds and boats, and finally discusses the causes of the decrease of wildfowl and tells what may be done to increase their numbers.

It is most fully illustrated with 58 portraits of North American swans, geese and ducks, by Edwin Sheppard, with 8 full page plates, and with numerous vignettes in the text by Wilmot Townsend.

Cloth, heavy laid paper, 58 illustrations, eight full-page plates, 627 pages. Postpaid, \$3.50.

TRAPPERS' HARDSHIPS.

FIVE days on the trail with the temperature 40 degrees below zero, without water and with only a partridge to eat, was the experience of E. W. Dittmeier, a trapper, who reached Edmonton, Alberta, on Jan. 24 after almost four months engaged in trapping about 125 miles northwest of Edmonton.

A. A. and E. W. Dittmeier, two brothers of Helena, Mont., left on Oct. 8 for Edson. It was during the first week in November that the latter met with the terrible experience which might easily have cost him his life.

The brothers were camping on the Little Smoky River. On Nov. 7 they left camp separately to lay their traps and look for game. A blinding blizzard came up and E. W. became lost in the storm. He lost all idea as to where the camp was, but had not lost his direction. Consequently he set out southwest with the intention of striking the base line which lay in this direction. He followed the course of the river, knowing that in this way he would be sure to locate the line.

Unfortunately, he was travelling through a low, brushy country and this combined with the storm and the fact that the base line had become considerably overgrown made it impossible for him to see it and he passed it unknowingly. Unconscious of the fact that he had passed the line, he kept his southwesterly course, following the river and still looking for the line. For three days he kept up the search for the line wondering if it had disappeared from the face of the country.

The weather was bitterly cold, being in the neighborhood of 40 degrees below zero. On the first night Mr. Dittmeier walked all night, and on the second night he slept between two fires.

"The blazing brush was so close to me," said Mr. Dittmeier in relating his experiences to the Edmonton Bulletin, "that the buttons were burnt off my coat."

All the third day he continued his fruitless search for the base line by means of which he hoped to find his way back to camp.

Meanwhile his brother, who had returned to camp, had become alarmed at his non-appearance and set out in search for him. He took only a loaf of bread and a few slices of bacon. By keeping continually on his brother's tracks, he managed to overtake him on the third day.

Without food and water they immediately commenced to retrace their footsteps for camp. On the fourth day they shot a partridge, which they cooked over a fire.

"That partridge certainly tasted good," said one of the brothers to the Bulletin, "even though we ate it without salt and pepper and without any water to wash it down, and there were no leavings."

On the fifth day they reached camp and immediately began to attack their provisions with zest which threatened serious depletion for a time. Neither brother suffered seriously as a result of the rather hazardous five days on the trail.

It has been a very poor season for trapping north of Edson.

"Had we been after bear we could have obtained plenty, but we did not want them as we had no horses and they were too heavy to get out without equipment," said A. A. Dittmeier. "What we wanted was moose, but we saw practically no tracks while we were there and were unable to get any. We covered an area of about 45 square miles extending from where the ferry crosses the Little Smoky, about 80 miles north of Edson to where you can jump over the river, about 125 miles north of Edson."

A "DRINK" FOR THE FISH.

LAST summer, when the Sheffield Anglers were visiting the town of March, in Cambridge-shire, the following incident took place on the banks of the River Nene: A Sheffielder, who had been fishing for two hours without getting a bite, suddenly took sixpence from his pocket, and, throwing it into the river, exclaimed: "Have a drink, old lad, thou'll take nowt to eat."—Angler's News.

PLANNING A HOUSEBOAT

Houseboating has come among us to stay, and promises to be even more popular than in England itself. Every one who is interested in houseboats or who contemplates taking up this feature of outdoor life, should read Mr. Albert Bradlee Hunt's practical, and, at the same time, beautiful work on the houseboat and its adaptation to American waters.

Houseboats and Houseboating

Covers the entire range of its title, considers the use and opportunities of the houseboat; their relation to city and suburban life; construction, furnishing, motive power, and all the thousand and one details, the knowledge of which spells the difference between success and failure in houseboat building and houseboat life.

Details, plans, drawings and specifications illuminate the text, while life on houseboats is interestingly described. Some of the more noted English and American houseboats and the life thereon are also described at length, with illustrations. Buckram, heavy paper, sumptuously illustrated.

Postpaid, \$3.34.

THE ANGLER'S WORKSHOP

Rodmaking for Beginners

By PERRY D. FRAZER

Not only Americans, but anglers of Great Britain and nearly every European State, South Africa, Australia, Canada, are making their fishing rods under the simple instructions laid down by the author in this useful little manual. A Japanese, after reading the book, took up rod repairing for his fellow countrymen as a business. An Englishman followed it in making several of the sixty-five rods that he has in his collection. A Russian appreciated the book so much that he suggested a Russian translation. The British sportsmen's papers have quoted from it time and time again. In that country it has helped bring about a great change in rod types, and to attract attention to the excellence of American fishing rods. In fact, "Rodmaking for Beginners" has become the standard manual wherever fishing with rod and reel is practiced.

The reason is obvious. The book is written in plain English, and all the details are set down so simply that a boy can follow them. All of the types of rods used on fresh and salt water are described and specifications given. Separate chapters cover all details, and the one on split cane rodmaking is the only comprehensive treatise on that subject ever published.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid, \$1.

A Day With Bobwhite

By FRED E. MARTIN

WE had previously arranged everything, so when we met at six o'clock A. M. we were ready to climb in behind a speedy trotter, and drive to my old homestead for just one day's sport with the bobwhite of Southern Illinois. We had traveled about a mile from town, and were flying along chatting of the way we would declare war on the feathered tribe, when I suddenly found myself scrambling in the bottom of the buggy with the pup, Spot, owing to a sudden jerk Tom had given the reins, caused by the excitement of seeing a fine covey running along on the ground by the wayside. It took me about five seconds to recover from my tumble, and snatching my 16-gauge, I alighted in readiness for the first shot. I fired twice, and—oh, well, I'm not counted any too handy with firearms anyway. Tom, who had been watching from the buggy, relieved my shamed conscience by informing me that my last barrel had disabled half the "running-gear" of the right quartering bird. I was almost positive I had registered two clean misses, but on carefully watching, was highly pleased to see my first bird collapse, after flying about a hundred yards.

The covey flew to a posted field, so we drove on, and on arriving at our destination, found an invigorating farmer's breakfast, "such as nobody but mother can cook," awaiting us, and to which we of course did ample justice.

Breakfast over, father's plans carefully noted, and the responding of Dick, father's pointer, to a shrill whistle, we were off. After an uneventful walk of about a mile through fields barren of game, we encountered a lonely cottontail which coaxed a load from dad's 20-gauge and one from Tom's 12, and spurned his chances of escaping my 16 by turning directly opposite and escaping, none the worse for his experience.

Dick worked the field with an evident desire to start the fireworks, and finally came to a pretty stand at the edge of a cornfield alongside. We circled and came in from behind in order to drive them to open cover, then flushed a small covey and fired five shots, but aside from one unfortunate that chanced to be in the path of a 20-gauge load, the whole covey came to earth in the adjoining open field. There Dick and the pup Spot got in some pretty work on several pretty points on singles. "Could you hit one on the ground?" dad asked, after watching me fire both barrels at a single. I did not like this, because I was anxious to prove that his 20-gauge was too light, so replied. "Never mind, I'll show your little baby up before we

go in." My anxiety for this very thing, I thought, was the principal cause for my constant missing.

We crossed a small field and entered a little hollow, where we failed to find anything, although we had previously flushed two large coveys. Next was a cornfield and we were wondering why we couldn't find any more game

PROUD OF HIS WORK.

From a photograph by G. P. Baughman.

over such excellent hunting grounds, when we noticed that Dick had disappeared, and after several futile attempts to locate him, I dropped back over a little knoll we had just missed, and there I found him stiffened and his head to one side, as though he had stopped very suddenly, and on looking at what seemed to be the object of his gaze, saw two quail within two feet of his nose. I called to father and Tom, but on telling them there were only two birds, they shouted back, "You get them," as Spot was working on something and they would follow

her. I flushed and dropped both, one a straightaway, the other a right-quarterer, but only winged the last one. In my anxiety to prevent its escape I forgot to reload my gun, and on going after the bird, Dick and I rushed headlong into the finest covey we had yet seen, and there I stood with an unloaded gun. In my perplexity over the surprise, I even lost my winged bird. It seemed as though luck was against me.

Toward noon a half snow and half rain set in, making it extremely disagreeable. I watched the covey I had unintentionally disturbed, and made sure of the place where they came to earth in a nice open meadow about an eighth of a mile distant. Father and Tom called Spot off one of her numerous "fake" points, and we followed the covey, but strange to say, we were unsuccessful in finding more than a few scattering ones that evidently thought their chances good for escape, but we bagged some of them.

As we had been out since breakfast with nothing to eat, we began to think of the dining table, so we started in that direction. However, we were due for a few more thrills and very peculiar actions on bobwhite's part before we arrived home. On our way Tom had the distinction of making the prettiest shot of the day, and this came after dad had missed, so I took special delight in telling him this.

Just as we were entering a posted field, a farmer with his whole family approached us with "Get out of here!" and we decided we had best obey, but Dick thoughtfully crossed his field, and when we reached the opposite side, a most pleasing sight met our gaze. A large covey seemingly had taken refuge in this particular place, and instead of lying for the dog, they had run on ahead of him and were just in the act of crossing a public highway into a field where we had gained permission to hunt. This was a sight that would stir the blood of any sportsman, and I longed for my camera. It seemed almost a shame to molest these little creatures that had so obligingly run almost into the jaws of death, but the b-r-r-r-r of the wings of the first that left mother earth caused me to forget all my tender feelings toward them and we fired right and left for the next few minutes.

This very obliging bevy fattened our game coats, but not to such an extent that we were overloaded. We soon drove the quail back to the shelter of the posted field where they seemed to understand they would be protected until another good pointer got wind of them. We decided we had enough sport for the day any way,

so voted that we make tracks toward that too long-neglected dining table. That table was bounteously supplied with everything that tasted good after our long tramp, and we ate several little birds before we turned our thoughts toward the pleasant little village we had departed from so early in the morning. On examining

the contents of each coat we found that we had a grand total of thirty-two quail and one jack-snipe. All things considered, it was as enjoyable a hunt as I have ever taken in the few years that I have hunted. And Tom felt about the same way, for he frequently asked me afterward when we could try it again.

and in this inclosure are now about one dozen native Jersey birds which were captured under special permit from the State, these being absolutely unconfined within the inclosure, which they do not attempt to leave. Also eighteen quail from the northern part of Texas. These seem exactly similar to our bobwhite quail in every way, with the exception that they are of a very light gray color. The accompanying photographs show the coop in which these quail have spent the winter, having endured a temperature of 20 below zero on one day, and many other days and nights not far from zero, without the loss of a single bird.

Mr. Walton also purchased two pairs of Gambell's quail, and although assured at the time of purchase that they would not thrive, and would probably die at a temperature below freezing, they have stood the exceptionally severe winter here better than any other variety. Two of these birds escaped but do not attempt to leave the others still in the coop, and come regularly to be fed.

The theory that is being carried out with a large inclosure such as I have mentioned is that in such quarters young birds which are hatched under natural or artificial conditions can, to a certain extent, forage for themselves and obtain that insect food which is so essential to them when very young.

The State of New Jersey has used this establishment as winter quarters for the birds that it intends using for stocking purposes in the spring. These, to the number of about 2000, are in coops of the style as shown by the picture. They are Oklahoma birds. Under the care of Mr. Walton and wardens Hall and Rheinboldt, they have done remarkably well, the percentage of loss being very small, considering the long journey and severe weather. The birds that they have lost are evidently those that were injured when captured, as they show no evidence of disease, but simply refuse to eat and grow thinner and weaker until they die. In skinning two of these birds, I noticed bruises, which evidently were the cause of their sickness.

It is along such lines as outlined above, and which I believe will be a success in this particular instance, that the salvation of the game will be brought about in this country, and it can be done in practically any locality where a fair amount of natural cover still remains, at a very small expense to the individual.

New Jersey Deer.

EMERSON McMILLAN, the banker, who has a 1100-acre estate in the vicinity of Arlington, tells this experience: "For several years I have fed and fostered deer and other wild animals on my farm. The deer the past few nights have come right to the house and have made so much noise about one to two o'clock in the morning that our housekeeper had to get up and shoo them away. Of course, deer and what other wild animals are on the farm do considerable damage and make it almost impossible to have a garden, but—well, having them around is one of my hobbies."—Wall Street Journal.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

A Nearby Game Preserve

By H. R.

AS I have read so much recently in FOREST AND STREAM in regard to game preservation and propagation, it has occurred to me that your readers might be interested in what is being done near New York in this line by a friend and hunting companion, H. A. Walton, in connection with Edward Chapiman, an extensive landowner of Oakland, N. J.

The first step in preservation was taken last summer when Mr. Walton organized the land-

The result of this policy in one season is very evident. Three small beavies of quail that were in the valley came through entire, and the pheasants, which were put out the spring before by the State of New Jersey, also are in fine shape, and it is estimated that there are at least 300 pheasants on the preserve which will give a fine breeding stock for this spring. This is the only spot in Northern New Jersey that I know of outside of private preserves, where

COOPS FOR STATE BIRDS.

owners and farmers in the immediate vicinity of Oakland into a game association, the result of which was that between 4000 and 5000 acres of land along the Ramapo River were posted. This takes in all the valley land and mountain land on both sides. The idea being, as this had been a favorite hunting ground for people from miles around, that they consequently kept the game pretty well cleaned up, and those who lived there and spent their time there considered that they were entitled to more of the game and the pleasures derived from its pursuits. Three rangers were appointed before the beginning of the hunting season, and were paid to do nothing else but watch for trespassers on the posted land, warning them off in the first case, and if found trespassing the second time, the rangers were empowered as deputy wardens to swear our warrants.

Season permits were issued to anyone known to the association, to hunt over the posted land. For this privilege they agreed not to kill any quail or pheasants, leaving ruffed grouse, woodcock and rabbits, which could be taken.

pheasants put out in covers in the spring, together with the young birds raised, were not cleaned up completely by the hunters last fall.

I understand that the State is now considering passing a law fixing a two years' close season on pheasants. If this is done, they will no doubt become permanently established. There seems to be doubt in the minds of many whether they are a desirable game bird to have, but it is noted by Mr. Walton and myself that in a certain section of the mountains, near Oakland, where the pheasants are most plentiful, that there also the grouse seem to thrive best; and for one year at least, they seem to have lived and raised broods in practically the same covers.

In addition to the above, Mr. Walton has started a private enterprise of his own in the line of propagation under the following conditions:

He has inclosed about five acres of natural cover on one side of the mountain with a ten-foot fine mesh wire fence properly embedded in the ground to keep out minks, weasels, etc.,

Fish by the Million

By FRANK A. HEYWOOD

THE water indented State of North Carolina has over 3,000 miles of riparian rights, and the fisheries are the most important of any in the East, if not in the United States. Nearly half a million yards of seine are operated in Albemarle Sound alone, in addition to thousands of stake, pound and drift nets. Some seines are nearly four miles long. The investment in a large fishery of the Albemarle section sometimes reaches \$30,000, and the annual profits aggregate \$50,000. The statistical review of the fisheries hereabouts represents that they employ some 10,000 people and 5,000 boats, and that the pounds of fish taken yearly exceed fifty million. North Carolina shad command the highest prices because they begin to run first and are early in the market. Leading industries of Dare, Chowan, Tyrrell, Hyde and Washington counties are the taking of fish. The beds of the five sounds are covered with oysters. Formerly there were operated along the shores of Tyrrell county some of the largest seine fisheries in the world, but they were destroyed in the Civil War and have never been refitted.

The great variety of edible fresh water fish taken from the North Carolina rivers is something remarkable. The drag nets of the Trent River often capture twenty different species. Included are large and small-mouth black bass, striped bass, blue and yellow catfish, yellow perch, mudcats, white perch, croppies, mullets, redhorse, sunfish, white and hickory shad, herring, drum, rock, weakfish, pickerel and garfish. Where the streams meet the tide, the anadromous

masses of green. Touches of white in them indicate houses, and patches of gray the weather-beaten wharves. Their deep waters cleared of cypress knees and stumps are of the pleasant

IN THE INCLOSURE.

colors that painters love. Then touches of mist here and there give a mystery to the atmosphere and soften over-rugged outlines. Sailing in upon such lovely vistas in their favorable mood, one can have little reason for the disparagement of

tentena rivers are constantly arriving with fish and oysters, and the market slip at the foot of Middle street is usually crowded with craft. Winter fishing for sea fish is always active from Nagshead to Bogue Sound.

All through December weakfish are abundant. So are drum, spotted trout, mullets, croakers, catfish, redhorse, pickerel and black bass. From Jan. 1 to July 1 fishing improves daily and Spanish mackerel, hogfish, sheepshead and bluefish afford good fishing for hook and line. July and August are poor fishing months. Fall fishing begins in September with a big run of mullets. With November comes the rockfish and perch.

Angling is a dead art in North Carolina waters. Occasionally a venerable negro will take his rickety old punt and steal away to a deep cove, but sportsmen seldom follow the fish in this way. In the autumn they go to the beaches and troll for bluefish from a sailboat or fish with hand lines for weakfish. Pickerel are plentiful in the spring, but are of little account.

The larger number of the fish of North Carolina are taken in long seines, and there are many enormous fisheries on the shores of Albemarle Sound, Roanoke and Chowan rivers. At certain seasons of the year 80 per cent. of the tonnage of the Norfolk and Southern Railroad is fish, shipped from Edenton, Newbern, Elizabeth City, Manteo, Beaufort, Morehead, Hatteras, Swansboro and Nagshead. The common length of the seine is 6,000 feet. Horse and steam power are required for these, the lines running into sheath blocks on the beach, and from time to time shifted to blocks nearer the center of the seining shore as the net draws together. The lines lead up from there to windlasses or drums. For greater economy of time two boats are used in-

WHERE THE TEXAS QUAIL ARE KEPT.

species come up from the ocean to spawn. The fresh water fish drop down from the water sheds to disport in the brackish inflow. Herring choke all the streams. Pickerel sport on the very edge of the tide, and weakfish spawn in the deep fresh water pools in those coves having obvious connection with the ocean.

Of the sound fisheries there are multitudes. The channels leading down among them are of the lovely soft brown of the juniper. The cypress forests draw toward them like single

the first glimpses of North Carolina in the memories of any scene he may have left behind him.

There is no such nursery for fish of all species and proclivities as the Trent River. Most of the channel ways are paved with shell rock, and spawn find choice depositories in the hollows and crevices. All the way up the river for forty miles or more there are fishing stands made of poles projecting from the banks where negroes stand with long-handled dip nets and scoop them

stead of one, as in many sections the seine being loaded from each end, while the middle is being worked up to the shore. When the two boats have the seine on board, they move to the outer boundary of the fishery, and the bag of seine is dropped between them as they move in opposite directions. As they throw out the seine, the boats curve inward to the shore, and when the last of the net has gone overboard, grate upon the gravel. An active fellow in waist boots from each crew wades ashore with the line and quickly fastens it to another lying in the furthest sheath block. The engine starts instantly and the line begins to come in, straining upon the seine with its leads lying upon the bottom a mile away. Like a moving fence it advances shoreward, turning back the bewildered fish, which in the grasp of the net, do not become frightened until it has closed upon three sides, after which only a few find their way around the ends. Steadily the net lines come in.

The crews, in the meantime, preparing for the next haul, take the lines into the boat as fast as they are reeled from the drums, and lay them in great coils along the bottom of the boat. As soon as the ends of the seine reach the shore, its reloading begins.

As the seine approaches the shore, silence prevails. The area of water inside the corks which line the seine shows signs of agitation. Quick swirls and ruffled wavelets cover the surface. Large fishes make rapid curves in and out again.

The catches oftentimes are enormous. On Dr. Capehart's plantation, at Avoca, nearly 200,000 herring have been brought in at one haul of the seine. The pile when on the dock, measured 80 feet long, 22 wide, 2 feet deep. For comparison's sake the fish would have filled twenty coal cars. It has been reliably stated that as many as 400,000 herring have been saved from a single haul of the seine in Albemarle.

THE TOP RAIL.

A PAPER devoted to mechanics describes and illustrates a method which, it says, will help the shooter to hold down light revolvers so that the recoil will not throw the bullet too high. The mechanism consists of a wire attached to the butt of the revolver, then bent so that the free end may be hooked over the wrist. When will the average person cease to give firearms credit for things foreign to them? If the German chemist, who says he has made photographic exposures at a speed of 1-3,000,000 part of a second, is within a mile of the correct time, where is the bullet by the time the recoil begins to act on the short barrel of the revolver? Both theories are pure moonshine. Any person can, with practice, shoot reasonably well with a revolver which has a short barrel. The main cause of apparent inaccuracy is the short distance between sights. Of course a longer barrel in itself adds to precision, while it also permits lengthening the distance between sights.

* * *

SOME of the pheasant shooters on the other side of the water, who are adepts at keeping game—until it is really gamy—sprinkle pepper over the heads of birds and into the feathers and wounds. Such birds, says an authority, should be examined every other day—and he goes no further than that. GRIZZLY KING.

Fish Propagation in West Virginia

By ROBERT K. ROBINSON

WEST VIRGINIA has been very properly called the "Birthplace of Rivers." Almost innumerable streams, originating in the mountains, have their source at the very top of lofty mountain peaks, and flow in all directions, some finding their way into the Atlantic Ocean, and some into the Gulf of Mexico. Amid our mountains and along these beautiful streams are picturesqueness and beautiful scenes unsurpassed in America. I have often wondered why it was that some of our rivers were not stopped in their course to pause here and there to form great lakes and beautiful ponds, but nature has seen proper to allow them to proceed unmolested to the sea. The absence of large lakes in, and of large bodies of water bordering our State, has eliminated commercial fisheries of any particular value from West Virginia. Therefore I shall only attempt to refer, and that briefly, to the game fishes inhabiting the waters of our State.

There are over one hundred species of fishes known to the waters of West Virginia, and among these are some of the finest game and valuable food fishes inhabiting the waters of the United States. The most important species of game fishes are the two species of black bass, viz., the small-mouth and large-mouth black bass; brook trout and rainbow trout. (The latter being an introduced fish.) The principal food fishes are the wall-eyed pike, muskallunge, rock bass, white cat, channel cat, white perch, suckers and a few others of value. All of the fishes named, with the exception of one or two last mentioned, are propagated artificially, and are supplied upon application to the United States Bureau of Fisheries.

One of the most important questions before the people of West Virginia is the conservation of our natural resources, particularly the forests. Upon the solution of this question naturally rests the success or failure of efforts to successfully stock and maintain the fishes in the streams of the State. Greed and indifference along these lines has wrought destruction and brought about a rapid decline in the supply of fresh water fishes in almost every State in the Union, West Virginia by no means excepted. And it has only been within the last few years that this decline in the supply of these fish has been arrested in a number of the States by the extensive fish cultural work being carried on by the Federal and State Governments. During the past summer we have seen the evil effects of deforestation, which, no doubt, was partly responsible for the extremely low waters. Great numbers of small creeks, and even large rivers have gone dry in many places, thus threatening the water supply of our cities, no doubt causing the spread of disease, and stopping navigation on several rivers, to say nothing of the destruction of the fishes. Under these conditions we should not expect the fishes of our waters to survive, much less increase in numbers.

The brook trout, or mountain trout, as they are generally called in this State, is native to our mountain streams, and but within the last

few years were found in abundance. By the stocking of many streams with fish produced at the various Government hatcheries they are still found to be comparatively abundant in many localities.

I know of no other State where the stocking of streams with fish produced by artificial methods so well applies as it does to West Virginia waters. Until within recent years the more common food fishes of our streams were very abundant, but with the great industrial development of our State, of which we are justly proud, have come evils which have wrought destruction and has practically destroyed the aquatic life in many streams, and worked great injury in others. The "unwise and destructive methods of the lumberman and miner," and the pollution of streams by tanners, are largely responsible for this condition. The logging methods have undoubtedly destroyed the natural spawning beds, while the drainage from mines and refuse from tanneries have destroyed and rendered uninhabitable the aquatic life in many streams.

Conditions, however, are slowly changing, and this is most noticeable in regard to the smaller mountain streams. The streams draining various territories, and in which trout and other fishes formerly existed, are no longer polluted and lumbering and mining operations have ceased. Here, then, are streams which can be easily stocked, and restored to their once former condition with regard to fish life. Such is the condition in many localities. Another noticeable and favorable feature is the interest now being taken by many manufacturing concerns of various kinds, as well as individuals, in stocking and protecting streams under their control.

The advocacy of stocking public and private waters with fish produced by artificial methods I believe to be unquestionable, but what are the results? In order to touch upon this question briefly, I quote from authorities on the fisheries of several States in answer to the question: What benefits are derived by the people from the stocking of inland waters by the Federal and State Governments? From the State of Michigan I have this reply: "By this means (referring to artificial propagation) the fishing in these waters is being practically held good, and numbers of streams that were practically fished out are well stocked to-day. The direct benefit to the State is estimated into the millions of dollars through tourists being called here by the splendid fishing, which is wholly maintained by artificial planting of trout." From New York State I have a similar answer with this in addition: "Many species of fish must have become nearly or quite extinct before this time, had not artificial propagation, fostered by State and governmental aid, come to the rescue." The reply from Pennsylvania is especially interesting as the conditions there are very similar to those in West Virginia. I quote from a letter of Hon. W. E. Meehan, formerly Commissioner of Fisheries, as follows: "According to the declaration of fishermen and

the reports of wardens, the good effects of stocking with trout have been phenomenal, especially within the last three or four years. Trout streams declared to be entirely depleted are now found to be full of small and medium size trout. I have personal knowledge of a few streams in the neighborhood of the State hatcheries in which the figures since the establishment of the hatcheries there had been marked. The general sentiment seems to be that since 1906 up until this summer that trout fishing in Pennsylvania as a whole has been better than for a quarter of a century. Of course the terrible drouth will probably put the streams in bad shape for three or four years. From what information I can gather I believe our streams will be restored to what they were in 1907 within three years. Small-mouth bass have increased, partly, it is believed, through stocking and partly by the sharp protection which is given them under the law of Pennsylvania. Pike-perch are more abundant in the Susquehanna River to-day than bass, due entirely to stocking."

Similar reports come from other States, but how does it apply to West Virginia? As an example of the success of artificial propagation, and I only refer to one of many and similar cases as a means of stocking the trout streams of our State, I submit for your inspection a photograph of a catch of fish made by Hon. Andrew Price, of Marlinton. The fish shown in the photograph were caught in Stony Creek, a tributary of the Greenbrier River. [Picture not reproduced.] I understand that this particular stream had, two years previously, been entirely fished out and was then restocked with brook and rainbow trout, some of which were produced at the Government hatchery at White Sulphur Springs. I venture to make the assertion that ninety per cent. of the fish shown in the photograph was produced from eggs taken from domesticated fish hatched and reared to fingerlings by artificial methods. And so I say the tide is turning in favor of the angler of West Virginia. I do not claim that we can ever successfully compete with Maine, New York and Michigan, in attracting tourists, but we can attract them in sufficient numbers that thousands of dollars will be annually spent in the State that would otherwise not result beneficially to West Virginians.

Our Governor, Hon. W. M. O. Dawson, has but recently taken a wise step and appointed a commission to revise our fish and game laws, and favorable results are anticipated from the labors of this commission.

With regard to laws protecting our game fishes, I have in mind what I regard as four important points.

First—The sale of all fish classified as game fish, particularly the trout, should be prohibited. It is a well known fact that in certain localities where trout are abundant, a certain class of individuals make it a business of catching trout and selling them at the lumber camps and in nearby villages. This same proposition has been advocated by some people as suitably applying to our game animals and birds, and of which I approve. Then, if it applies to game animals and birds, it will apply equally as well to trout and bass.

Second—The shipment of trout out of the
(Continued on page 352.)

Mink Farming.

THE raising of wild animals for their fur is a subject of much interest to many persons. This is evidenced by the number of requests for information that are addressed to the United States Department of Agriculture. The department has no publication on the mink, but the Biological Survey offers the following practical hints on mink farming:

Minks should be kept in the proportion of one male to five or six females, and each breeding female should have a separate pen. Rutting begins about the middle of February, and the young are born about the middle of April. The male should be kept by himself except at mating time, when he should be admitted to the female's pen for about one day. The females must be kept separate or they will be likely to kill each other's young. The male would also kill them if he had a chance.

Bread and sweet milk, corn mush and milk or corn mush cooked with bits of meat in it, is the best steady food. Meat (which may be of a very cheap kind) or fish should be provided about twice a week. Feed once a day, except females that are suckling young, which should be fed twice. Provide fresh water regularly. Do not salt the food. Keep pans clean and feed only as much as the animals will eat up clean at each feeding.

Pens should be five or six feet square, the sides of smooth, wide boards cut four feet long and set up with the lower end resting on a footing of stone or concrete eighteen inches in the ground. The sides may be of heavy wire netting instead of boards, but in that case the top would need to be netted or the animals would climb out. Pens may be built economically in groups of four or more. The floor of the pen should be the bare ground.

Boxes about two feet by one and one-half by one and one-half feet in size should be provided for nests, and should have hinged lids so as to allow their being opened and examined. The boxes may be outside the pens, bolted to the fence, with a hole in the fence and box to admit the animals. Boxes should be three or four inches above the ground, and should be as dark as possible, with a hole four inches in diameter for the entrance of the minks. A boarded up passageway is an excellent device to insure darkness inside the nest box. Fine straw or hay should be provided.

A Hunt on Closing Day.

HENDERSONVILLE, N. C., March 9.—*Editor Forest and Stream:* February 29 was the last day of the grouse shooting season here, so I took my setter Nellie, Jr., for a last try at the birds. I boarded the train for Brevard, twenty-two miles west of this town, that afternoon and met two other sportsmen who agreed to join me the next morning, the 29th, and we arranged for a vehicle to meet us at a point in the mountains four and a half miles further west and for an early breakfast.

Between daylight and sunrise on the morning

of the 29th we were on the tramp, borrowing another setter just at the edge of the town from a brother of one of my friends, to aid Nellie in finding grouse. We tramped till mid-day before putting up a bird.

In hunting these ruffed grouse of our mountains one must be all the time on the qui vive, and to tramp for hours without seeing one is not only trying work, but is apt to make one careless. Our new dog kept us very busy. She was as wild as a buck, and no amount of scolding, supplemented by a number of whippings, kept her from rushing on ahead of us and putting up the birds. This was hard on Nellie, and she was handicapped, not being used to hunting with a dog requiring such treatment. A dozen or fifteen birds were put up and three only bagged. I have had only seven shots this season and bagged five grouse.

I gathered quite a large number of galax leaves for the ladies at home, many from five to six inches across, both green and bronzed. The north mountainsides, near the creek runs, are carpeted with millions of these beautiful leaves. Finally we started for the carriage about five and a half miles away, and coming to a wood flume with a nine-inch board by it from five to 25 feet above ground, we took it in preference to the muddy logging road. Now, our dogs evidently thought us as a trio of idiots, for they would not walk that nine-inch board walk, nor would they see us do it; and so after a while, on reaching the road again, two and a half miles below, the dogs were not there. That night they came to the home of the other dog and were fed, but Nellie fled back to the woods in search of me, refusing to be caught.

The next morning I walked over to inquire after her, thus leaving my trail, and a little after one o'clock in the afternoon she again came back, struck my trail and came on to my stopping place.

Nellie is now in durance vile till Jan. 1, 1913, while some 4,000 curs and hounds enjoy the great out of doors the whole of the twelve months. Our train ran over a skunk and the occupants of the first-class car knew it "immediately if not sooner." That skunk was evidently a very able-bodied specimen, for all the car windows and doors were shut, and I only saw one ventilator open, but the odor was very much in evidence.
ERNEST L. EWBANK.

Birds Numerous.

WABASSO, Fla., March 10.—*Editor Forest and Stream:* Mosquitoes have been so bad along the lower east coast this winter that there is little pleasure in hunting quail, although they are numerous. Deer are getting scarce. Hounding, I think, is the main reason. If all goes well I am contemplating a little fishing trip along the keys next summer, and if I do, you will hear from me—if I catch anything.

I have never seen so many song birds since I have made my home in Florida, as I have this winter, but ducks are unusually scarce.

C. A. V.

Notes on Quail Introduction.

WENHAM, Mass., Feb. 24.—*Editor Forest and Stream:* It may be of interest to buyers of quail to note my experience with the importation of some of these birds this winter.

Being somewhat curious as to the localities from which birds were being shipped, I ordered small lots from three sources.

The first lot, which arrived in good condition, was immediately seen to be composed of Southern birds, although they were sold by the dealer as "genuine Western bobwhites." Not until one of them died, however, and I had a chance to carefully compare the bird with the large series in the Agassiz Museum, did I realize that these were Texan quail. The specimen was a rather extreme type of the gray quail, *Colinus virginianus texensis*. These birds undoubtedly came from Southeastern Texas or were trapped across the line in Mexico.

The second lot was sold as home-bred Rhode Island stock. These have not been carefully compared, but are undoubtedly Southern birds, though slightly different from the first lot.

The third shipment came from Kansas City and were regular Kansas quail, large birds, looking just like our New England quail. Unfortunately, however, the Kansas birds were more or less infected with a bacterial enteritis. Some died en route and some soon after arrival. According to the pathologist, the disease exhibited the usual appearance of the intestinal quail disease, which is of bacterial origin. There were numerous small lesions in the lower part of the small intestine, and in one case a focal area of disease in the liver. To me, however, the most curious thing was the absence of emaciation in all these disease-killed birds.

The Kansas quail are of course well adapted to New England use. All live quail are now very expensive, but the Mexican ones cost less than the others. The introduction, however, into our Northern States of these inferior Southern birds cannot result in any good, and where native stock is present, must surely result in a detrimental contamination.

Quail are ranging in price from \$18 to \$36 a dozen. Perhaps \$25 would be about right for the best stock.

I am sure we all wish the best of success to Herbert K. Job in his rearing experiments with quail. The work of an enthusiastic bird man, aided by that of a trained pathologist, ought to result in the discovery of a successful technique, if such a thing is possible. J. C. PHILLIPS.

A Plea for the Shooting Dog.

PHILADELPHIA, Pa., Feb. 20.—*Editor Forest and Stream:* I believe I have found one more inducement to get more men who shoot interested in the game laws, and what goes with them, protection, etc.

How many of us have one or possibly two old dogs—dogs that we have shot over year after year, until they are as much members of the family as anyone in the home circle. Then, when they are getting on, nothing will do but we must have a pup from the old strain in order to keep it with you and pass it along to the youngsters growing up.

Now, what is going to happen to our thoroughbred pointers and setters when there is no game to shoot? Our thoroughbred horses have gone

because they were practically useless on account of a bill passed in New York prohibiting racing, and now we are having trouble getting mounts that have quality for the army.

If the game goes, that is just what will happen to our dogs, for most people do not care to keep a thing that is of no use to them, and many an old tried doggy friend will be put away when he passes out, with no youngster of the same line to take his place in the field and on the heath rug.

Personally I enjoy the work of the dogs when shooting as much as the shooting, and many are the coveys that have roared off while I stood to one side with my camera trying to immortalize some particular hair-raising stand. While I realize that this is extremely far-fetched, I like to think that this article may make some fellow who has not become interested as yet sit back, take a look at the old dog, and then mutter: "By gum! I believe I'll have to do something to help, out, after all." MARK HOPKINS, JR.

A Cold Night in Camp.

LUFKIN, Texas, March 1.—*Editor Forest and Stream:* We have been experiencing quite a cold winter. The weather at no time has been very severe, but it has just been continuous, I might say, since the first week in November. I shall not forget in a long time the night it began in earnest. I was on my way through the mountains of Eastern Oklahoma with a party of men after deer and turkeys. It was a two days' drive by wagon to our camping site. We closed our first day (Nov. 9) by making a temporary camp on Glover River.

The day had been hot; I should say about 85 degrees, and several of the party tried it in shirt sleeves most of the day. It was a matter of some discussion as to our putting up a tent for the night. Some thought it too much trouble, but the older and wiser heads had their way and raised the tent, which proved a blessing to us all, for in less than an hour after dark we had a visit from one of those Texas blizzards, and it was all we could do to keep from freezing even with the protection of the tent and sleeping like sardines in a box. Morning brought a fine snow and plenty of solid ice, and when we reached a town where we could ask about the thermometer, found it registered 12 degrees above zero. That was a cold start, but we were blessed with a fine trip and a successful one.

J. L. PHILLIPS.

The Winter in Idaho.

SAWYER, Idaho, March 3.—*Editor Forest and Stream:* From all appearances, winter is practically over. I do not think that game has suffered very much along the river.

Most of the deer are white-tail, and they are able to care for themselves, except when the snow is crusted and deep. When the crust will hold up a dog or wolf, then the deer suffer most.

Grouse have wintered well. A few quail have wintered near Blanchard, but have had to be fed. Robins have wintered along the river, and a few mallards along the river as well.

Last week one day the men fishing on the Pend Oreille Lake caught thirteen tons of whitefish with hook and line through the ice. They bring from five to seven cents a pound.

LEW WILMOT.

California Quail.

SAN FRANCISCO, Cal., March 7.—*Editor Forest and Stream:* The open season for valley and desert quail ended Feb. 15, and it will now be unlawful to kill these birds until the middle of October. Practically no rain has fallen since the first of the year, and where ordinarily hunting is cut short by storms it has been pursued this season without interruption. The Fish and Game Commission, realizing that something must be done to increase the number of birds, is planning to devote much of its attention this season at the game farm to experimenting with the rearing of quail, and has had trappers at work securing birds. Quail taken in the Coachella Valley have been placed in pens at the farm.

The open season for ducks, ibis and shore birds ended on Feb. 29. The commission is sending out a circular letter to sportsmen asking their opinion as to whether changes in the length of the season would be advisable. The duck season was a uniformly good one, the absence of storms having permitted of shooting throughout the entire open period. Geese are now very plentiful.

The Marin County Game and Protective Association will shortly commence an agitation against the tactics employed by certain interests to secure possession of the only open grounds in Marin county, where non-club members could hunt. Practically all of the tideland from Point San Pedro to Black Point has been filed upon as "oyster beds," although this land is reported to be unfit for oyster culture, being soft ooze. Under the law persons are permitted to inclose the "oyster beds" with stakes and outsiders cannot then enter the inclosures.

At the February meeting of the Fish and Game Commissioners the resignation of Hartley F. Peart as attorney was accepted, and R. D. Duke, of San Francisco, was appointed in his stead. Secretary Schaeffle reported that several elk could be secured from the Yellowstone National Park, and the proposition of securing and liberating them in the northern portion of the State, where there are now a number of native elk, was discussed at length.

The commission's regular monthly report for January follows:

	San Francisco Dist.	San Francisco Office	Sacramento District	Fresno District	Los Angeles District	Total

GOLDEN GATE.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Game in the Cold Weather.

SOMERVILLE, MASS., Feb. 23.—*Editor Forest and Stream:* Since writing of the section bordering on the towns of Bedford and Lexington in which I mentioned having seen nineteen grouse in an afternoon, I have spent a part of Feb. 15 and 17 on these same grounds, partly for the purpose of working my beagles, and partly to put out some grain and see if the birds had found any of that which I had scattered about on previous occasions. Every place that I could remember where I had placed food I found that the birds had discovered and eaten it; in fact, two or three were flushed in the vicinity of these particular spots. I put out more food in these places, feeling sure that it would be found and eaten.

On Feb. 17 Mr. Swenson, who frequently accompanies me, and I in making a circle through this cover flushed six or eight partridges. It being quite a mild day and the snow being soft, we were able to distinguish the fresh tracks of several others that we did not see. At least three times I called my companion's attention to the fresh tracks of birds that had evidently seen us approaching and had gone back without our seeing or hearing them. Two birds were started out of small pines, where they may have taken refuge at sight of the dogs. One of them I took to be a cock pheasant until I saw it sail out into the open. It made such a racket in getting out of the trees. I believe that a partridge can make a much better get-away from the ground where it can take a step or two in starting, although that is not always the case, as they can start without doing so and get under full headway in a remarkably short distance.

We saw no pheasants, but twice tracks were seen that would indicate these birds by the accompanying long unbroken line traced in the snow by their long tail feathers. Sometimes these birds appear to travel with drooping wings, as two parallel lines often show outside the foot prints.

On the 15th I met a gunner who informed me that he had just seen a small covey of four quail which he was surprised to find had survived the long spell of severe weather. I believe that most of the game here has managed to subsist, as we saw nothing to indicate otherwise, with perhaps one exception. Mr. Swenson came across the remains—feathers only—of a partridge which in all probability, although I dislike to say so, was eaten by a fox, as the place was much tracked up by what appeared to be fox tracks. Whether it was a crippled or dead bird, or whether the fox was successful in catching it alive, will never be known. Considering the great amount of healthy outdoor recreation that has been furnished by reynard, I cannot join ranks with those who are clamoring for his extinction. I have a great deal of respect for him as a pleasure producer.

We started but three cottontails, which made short, direct cuts to burrows. While the network of tracks everywhere showed quite an abundance of rabbits, they seemed to be all under ground. Our rabbits here seldom travel much during the day when there is any depth of snow on the ground, although their main tracks show that they must travel a great deal at night. Probably they are aware of the fact that with the small underbrush covered with

snow and the ground so white, that it affords them scanty protection.

I am surprised that there should be so much small game in this particular locality, only a two fare ride on the cars from Boston. Last fall I found with much disappointment that this entire piece of cover had been burned over in the spring, which cleaned it out very clean. Previously it was an ideal piece of cover with the very thick underbrush, and in some places an almost impassable barrier of down timber, the result of a fire a few years ago. The earth last fall was in such a hard, cakey condition that I doubt if the vegetation ever gets started again in some places.

In others of the surrounding towns in which I have been since the cold snap came on, I have found conditions practically the same and feel that the small birds and animals have managed to survive. This past week we have had much warmer weather and considerable of the snow has melted. I fear that the waterfowl have had a hard time of it, owing to so much ice and snow. They must have suffered from want of food and fresh water. There are numbers of ducks frequenting the shipping thoroughfares in the vicinity of the wharves here in Boston.

CHAS. H. SHAW.

Skunk Farming.

MANY attempts have been made to raise skunks for their fur, but the enterprises have usually been given up as unprofitable. According to the Biological Survey, the chief causes of failure have been cost of fencing inclosures, cost of maintenance, or lack of experience, leading to overcrowding and overfeeding the animals. In many cases, where the animals were successfully reared, it was found that the expense of feeding them to maturity exceeded the value of the fur, while in other instances the antipathy of neighbors led to the abandonment of the experiments. At present the value of the best black skins would probably allow a margin of profit in rearing this class of skunks. The Survey gives the following practical hints on skunk farming:

In the matter of food, the chief aim should be to supply a suitable and sufficient diet at reasonable cost. A certain proportion of meat is necessary, but the animals eat also bread, green corn, clover, tomatoes, and many other vegetable substances. Butcher and table scraps given when fresh are the main reliance. The food should not be salted, and fresh water should be supplied regularly.

Skunks are especially fond of insects, and if the pens are large enough and favorably placed, the animals will forage for a part of their food.

At least an acre of ground should be inclosed for each fifty skunks, and even then there is danger of cannibalism unless there are plenty of separate dens for the females. The fence should be made of poultry netting one and one-half inch mesh. The posts should be set in ditches eighteen inches or more in depth, which should be filled with broken stone or concrete. Another plan is to extend the wire netting underground. The fence should be three or four feet high and have an overhang at the top to keep the animals from climbing over.

Skunks breed once a year and produce from six to eight young. They are born in May or June, and mature by December.

New York Legislature.

ALBANY, N. Y., March 11.—*Editor Forest and Stream:* These bills have been introduced in the Legislature:

By Senator Roosevelt and Assemblyman Jones, in relation to the definition of "pike perch." It provides that "pike perch" includes wall-eyed pike, commonly called pike and yellow pike.

By Assemblyman Patrie, relating to suckers in Ulster county.

By Assemblyman Whitney, of Saratoga, appropriating \$60,000 for the acquisition of four sites for game preserves within this State, and the construction of suitable buildings and fixtures.

By Assemblyman Jones, of Jefferson, transferring to the Conservation Commission the powers and duties conferred by this section upon the former Forest, Fish and Game Commission in relation to the assessment of State lands, etc.

By Assemblyman Evans, of Sullivan, authorizing the State Conservation Commission to select a site for a game farm in Sullivan county, and to purchase such land as may be necessary, and appropriating \$20,000 for that purpose.

Appropriating \$20,000 for the establishment of a fish hatchery for bass and other fish. The hatchery is to be established in Sullivan county.

By Assemblyman T. K. Smith, of Syracuse, relating to the State college of forestry at Syracuse University.

By Senator Platt, of Painted Post, reducing from 25 to 10 the number of lake trout that may be taken or transported at any one time by any one person.

The Senate has passed Senator Coats' bill appropriating \$20,000 for the establishment of a fish hatchery in St. Lawrence county.

The Assembly has passed the bill of Mr. Prime, of Essex, relative to the use of tip-ups in Lake Champlain.

E. C. C.

Illinois Notes.

BLOOMINGTON, Ill., March 2.—*Editor Forest and Stream:* Careless hunters continue to antagonize farmers by shooting their stock while seeking game, and with each recurring incident of this kind, the number of "no trespass" signs increase, and the greater the difficulty the responsible hunter meets with in trying to find a place to seek game.

While hunting near Apple River, Albert McFadden killed a fine specimen of the gray timber wolf. The bounty of \$5 was paid for the pelt. Numerous cases of sheep killing were charged to this animal.

Game wardens are bringing in reports that many dead quail have been found, succumbing to the long period of frigid temperature. Game wardens have urged farmers to distribute grain where the birds can reach it and thus prevent the loss of their insect-destroying friends. Many agriculturists are doing this, and it is hoped that the practice will become general.

The Illinois Rod and Gun Club, composed of sportsmen of Rock Island and vicinity, has been incorporated. The incorporators are: Phillip Mitchell, Willard Schaeffer and A. D. Sperry. The club owns a comfortable club house and controls a large tract on the Illinois River.

E. E. PIERSON.

Twenty-Gauge Guns.

HALIFAX, N. S., March 8.—*Editor Forest and Stream:* The article on "Small Bores for Wild-fowl" in a recent issue opens up a subject very interesting to the gun crank, if not to all sportsmen.

Two years ago, though skeptical as to its utility, I purchased a cheap twenty-bore. At the end of the season the gun was for sale, not because of disgust at its performance, but because I wanted to get a better grade for permanent use, which I did.

This second gun is an ejector; single trigger with 28-inch barrels; right improved cylinder, left nearly full choke; weight, six pounds.

The load I use in this gun for quail, snipe, 'cock and grouse over a dog is 2½ drams powder, ⅞-ounce of 8s or 9s in the right and 7½ chilled shot in the left barrel. No, brother, I am not casting any longing glances back at the twelve-bore, now a bit dusty and maybe a bit rusty inside the barrels. On the contrary, I am now studying up a twenty for duck shooting purposes, in spite of the fact that a very deadly old ten-gauge that has a great antipathy to wildfowl stands in my gun rack.

My present idea of a ducking twenty is about as follows: Both barrels full choke, 32 inches long, chambered for 3-inch shells. Load, one ounce of shot propelled by about 2¾ drams smokeless powder. The velocity of the shot in a load of 2¾ drams and ⅞-ounce No. 7 shot, as given by one of our gunmakers, is 974 feet per second, which is a trifle better velocity than that of the maximum load of 3½ drams and 1¼ ounces in the twelve-bore, which is given as 963 feet. Whether the load of powder can be increased in the twenty-bore if we increase the shot load to one ounce, I do not know. I believe, however, that we can increase the shot charge to one ounce when using 6s or larger sizes, as the friction will not be greater than with ⅞-ounce of 9s.

I have not found an American gunmaker, however, who will consent to using over ⅞-ounce shot in his guns. One says the tremendous pressures set up in a twenty-bore using one ounce of shot is appalling. Another says that though the gun may stand it, the shell will not. In spite of this warning I have shot 2¾ drams and one ounce out of the six-pound twenty mentioned above and live to tell the tale; in fact, it did not jar me in the least. I know one man who shoots this load of powder all the time, claiming that he gets a better pattern, though he uses only ⅞-ounce shot.

I have before me the catalogue of a well known English maker who builds a twenty-bore weighing but five pounds fourteen ounces to shoot as high as 1⅛ ounces of shot propelled by 38 grains of Amberite, which is about equal to 2¾ drams. This gun is unquestionably a freak and would be unpleasant to shoot, being too light, but it shows that there is a difference of opinion as to what load this gauge will safely handle.

If you will look at the table showing the sizes of Tatham's shot you will see that from No. 1 to No. 6 the number of pellets in an ounce increase from one number to the next at the rate of about 25 per cent., hence one ounce of 6s contains the same number of pellets as does 1¼ ounces of 5s, and so on down the list.

Therefore, to get as many pellets in a one-ounce load as there are in the 1¼-ounce load, we have only to sacrifice one size of shot.

If we can then get a twenty-bore that will throw one ounce of 6s containing 218 pellets at a greater velocity than a twelve will throw its load of 1¼ ounces of 5s, containing 210 pellets, the two guns will be pretty nearly on a par as to efficiency, and the "man behind the gun" will have more fun.

Information from readers who have experimented along these lines would be very interesting reading, I am sure.

W. H. STARRATT.

Woodcock in the Provinces.

HALIFAX, N. S., March 6.—*Editor Forest and Stream:* In your issue of Jan. 29 there is an article under the above heading by W. H. Starratt, of this city.

Yes, a few robins remain with us during the winter, although he is correct about us hav-

MR. ZELENKA AND THREE RACCOONS.

ing some cold weather, but on the whole it is delightful and there is no reason why our robins should not stay, as there is plenty of food for them above the ground. I have seen several robins this winter.

He next refers to Wilson's snipe; yes, they were unquestionably more plentiful than in any year during the last fifteen. In his next he gets lost, until he finds his dog pointing (he has a good one, I will not dispute that), and immediately advertises for Mr. Ewbank to help him out of his difficulties.

Furthermore, in a letter I wrote you in your issue of Dec. 16 I showed that woodcock were scarcer last autumn than ever in the memory of the oldest interested inhabitant, and as our ruffed grouse were also very plentiful, and Wilson snipe being everywhere, what was his

dog—"standing on" other than terra firma? If by any chance it was a woodcock, I am very sorry, at the same time I almost think it was, and he "hit hard," but did not "bag it" and he thinks as I do—*de mortuis nil nisi bonum.*

J. W. WILLIS.

Quail Reports Requested.

PACKER, Conn., March 7.—*Editor Forest and Stream:* Apparently our game has fared well in spite of the very severe weather since the first of the year. This has been owing to small amount of snow, I believe. Several bebies of quail have been seen during the past few days, and their numbers would indicate that few have lost their lives, either to snow or vermin.

In April, 1910, I reported quail beginning their love song, "bobwhite" on April 21, when apparently every cock quail in this section became busy with his spring music. Later your Mississippi correspondent, Coahoma, reported quail still in unbroken bebies and not yet singing bobwhite. Would it not prove interesting to have reports from your country readers as to first love songs heard this spring from South to North?

E. P. ROBINSON.

[Reports on this subject from correspondents would, indeed, prove interesting reading.—EDITOR.]

Quite Different.

SOMERVILLE, Mass., March 2.—*Editor Forest and Stream:* Having in mind the success with which some birds and animals keep out of sight, I believe that the squirrels, especially the grays, are among the most successful in this respect. While I never shoot squirrels and therefore am not perhaps on the lookout for them, I do not remember having seen a single one in this locality this season. Yet I find their tracks everywhere on the snow and quite fresh, too, as the dogs often notice them, which causes me to look up in the trees, but I seldom see them. While attending our fox hunt at Belchertown last fall, I saw several. I remember one day in particular when I could have easily secured at least a half dozen while sitting in one place at a runway. One of the best ways to get them would be to go out in a likely place and sit down and wait. I see them quite often here in the city, but they are a different animal in the woods. After having seen them so tame here in the cities and parks, the shooting of them does not particularly appeal to me. However, as I have said, they are a different animal in the woods, and furnish good sport to some.

CHARLES H. SHAW.

Coon Hunting near New York.

CONGERS, N. Y., March 9.—*Editor Forest and Stream:* Looking through your journal, the photographs of trappers and hunters and their game induced me to send you a photograph of myself and three raccoons that I shot in less than two hours' hunting along a creek leading from a lake at Congers.

There are plenty of 'coons around for the hunter who has a good dog; also foxes and many muskrats.

Fishing for bass and pickerel and pike is great. Fishermen come in flocks in the open season.

WM. G. ZELENKA.

SEA AND RIVER FISHING

Bass Seasons and Stocking.

PATERSON, N. J., March 5.—*Editor Forest and Stream:* Every year I read a great many arguments in FOREST AND STREAM and other publications honestly devoted to the preservation of fish in favor of a late season for the taking of bass and other fish. The underlying principle of these arguments is that fish should be permitted to spawn, and that consequently they should not be taken during the spawning season. Yet in most of the States the bass season opens in the middle of the spawning period. May I suggest that arguments, perhaps specious, may be found in favor of the prevailing condition of affairs?

Fly-fishing is regarded by a great many as the most exalted department of the sport of angling. In order to take fish with a fly, it is necessary that we should do so while the fish are rising to the fly. The fishing I have done has been confined almost altogether to ponds within a short distance of New York, mainly Greenwood Lake, and my experience has been that if I had waited until every bass had been through spawning, I should have taken few, in many years none, on the fly. Bass rise to the fly while they are in shallow water; the close of the spawning season means warm weather, when the bass seek the deeper water, and when it will be necessary to go after them with bait, frequently laziness with little justification in the way of sport.

I fail to see a great deal of difference between the taking of bass in November and in the following May; yet the former is regarded as almost laudable, whereas the latter is criminal. In the former the eggs and milt are destroyed before exudation; in the latter the eggs have passed an infinitesimal portion of the road toward becoming proper victims for the angler's lure. Why should the egg be a negligible quantity at one time and a jewel a few months later?

In a recent editorial in FOREST AND STREAM it was suggested that perhaps we do altogether too much stocking, and that we pay little or no attention to the welfare of what follows the stocking. I think that is excellent gospel. We should consider a fruit grower very foolish if he were to plant ten million apple seeds in a ten-acre lot after he had reaped a very limited crop of apples, yet that is the principle frequently resorted to in stocking with fish and in the protection of fish during the spawning period. We stock and stock and stock regardless of the fact that the food supply for the young fish is not sufficient for a millionth part of the fish to be produced. If we were farmers, we should cover a field with wheat two feet thick, in order to have a more abundant harvest, and we should prevent the gathering of chestnuts in order that there may be chestnut trees a few years hence.

I have frequently inquired as to the number of black bass that were placed in Greenwood Lake when that sheet of water was first stocked with those fish. I have conversed with men who-claimed to have been present when the fish were first placed in the lake, and not one of them put the figure higher than twenty, this number includ-

ing both large and small-mouthed. Four or five years after this stocking there was better bass fishing in Greenwood Lake than there has been ever since. There is no doubt that the young bass found an abundance of food, and there is also no doubt that this food did not increase in proportion to the increase of the bass. If a score of bass were sufficient to stock Greenwood Lake when the food supply was abundant, would not a far smaller number be sufficient now that this food supply has been materially reduced? Yet we are informed that every year large numbers of bass have been placed in Greenwood Lake, the number placed in the lake in any one year being sufficient to stock a lake many times the size of Greenwood.

Another fact frequently overlooked in our wild desire to stock is that the fecundity of fish reaches its greatest virility the year after the fish has attained maturity, and that from that period on it goes rapidly down until it reaches zero. In one of the Western hatcheries as high as 98 per cent. has been reported in the artificial propagation of trout, these fish being two and one-half years of age. The following year the get of these same fish went down to 70 per cent. What is true of trout, and of all fish with which fish culturists have been able to make the experiment, is also in all likelihood true of the bass, yet bass weighing three pounds and over are placed in Greenwood Lake every year, the presumption being that these bass will aid in stocking the lake, when as a matter of fact they are probably an injury, destroying food necessary for the feeding of spawning fish. To remove these fish would be a benefit to the lake, yet our laws make it criminal.

CHARLES A. SHRINER.

Fishing in California.

SAN FRANCISCO, March 7.—*Editor Forest and Stream:* Ideal spring weather during the past month has drawn great crowds to fishing places in the bay district, and catches of striped bass and steelhead trout have been very heavy for the season. Extremely high water was the rule last year, but this year the snowfall in the Sierras is only about one-fourth the normal and streams will be low late in the season, with the best fishing much earlier than usual.

Deputy A. M. Fairfield, for many years with the Fish and Game Commission, has been appointed supervisor of the operations of the many oil refineries on the bay to see that the waters are not polluted by escaping oil.

The supervisors of Santa Cruz county have made a proposition to the State authorities for turning over to the latter the hatchery that has been maintained by the county at Brookdale. It is proposed that Santa Cruz county be given 500,000 fry each year, the balance of the output of the hatchery to be distributed in other sections of the State.

The experimental fish hatchery established near Sacramento this season is believed to be a great success, and in the future most of the salmon will be liberated in the lower Sacra-

mento River. Under present conditions less than one per cent. of the fish become full sized, owing to the fact that they get lost in the many irrigation ditches further up the river.

GOLDEN GATE.

Casting at the Sportsmen's Show.

GREAT interest was displayed in the casting contests held in connection with the Sportsmen's Show in Madison Square Garden, March 1-9, inclusive, and good casting was done under the circumstances, for there were no opportunities for practice until the show opened, and then only when the trapshooting was not in progress.

There was insufficient space for the long distance casting that many anglers are fond of, but all of the light tackle events were interesting.

The scores follow, event 7 being omitted, as it was not cast. Gold, silver and bronze medals were won as follows:

Event 1.—Trout fly, distance, 5-ounce rods, 70-foot class:
 Saunders 68 E. F. Todd..... 61
 Willeck 62½

Event 2.—Accuracy bait, ¼-ounce:
 Per C't. Per C't.
 A. J. Marsh..... 97.3 Chas. T. Champion.. 95.3
 F. T. Mapes..... 96.6

Event 3.—Distance bait, ½-ounce, 115-foot class:
 Av. feet. Av. feet.
 Fred. T. Mapes.... 67½ W. C. Metcalfe..... 43½
 John Doughty 67

Event 4.—Distance fly, 5-ounce rods, 85-foot class:
 Feet. Feet.
 Perry D. Frazer.... 78 8 F. T. Mapes..... 73
 A. B. Hubbell..... 74

Event 5.—Accuracy bait, 97 per cent. class:
 Per C't. Per C't.
 E. M. Gill..... 97.0 Walter McGuckin.... 96.3
 C. H. Higby..... 96.4

Event 6.—Accuracy fly, 98 per cent. class:
 Per C't. Per C't.
 W. C. Metcalfe..... 99.12 C. H. Higby..... 97.07
 A. B. Hubbell..... 98.67 J. G. Lamison..... 96.80
 A. R. Hanners..... 98.33 Woodward 94.73
 D. T. Abercrombie.. 98.07

Event 8.—Obstacle accuracy fly, open:
 A. J. Marsh..... 98¾ R. J. Held..... 93¾
 C. T. Champion.... 94¾

Event 9.—Obstacle distance fly, open: Darling won; Held second; Hubbell third.

Event 10.—Dry-fly accuracy: Marsh won; E. B. Rice second; L. S. Darling third.

Event 11.—Distance fly, 5-ounce, open:
 Feet. Feet.
 L. S. Darling 76 8 D. T. Abercrombie... 75

Event 12.—Accuracy bait-casting at a moving target.
 Demerits. Demerits.
 A. J. Marsh..... 9 E. B. Rice..... 22
 A. J. Neu..... 18

Event 13.—Accuracy fly, under a bush:
 Points. Points.
 A. J. Marsh..... 68 John Doughty..... 54
 L. S. Darling..... 54

Event 14.—Four-ounce rods, 60-foot class:
 Feet. Feet.
 Perry D. Frazer.... 82 N. T. Towns..... 67 2
 G. P. Cutler..... 67 6

Event 15.—Same, 75-foot class:
 W. Willeck 71 D. T. Abercrombie.. 68
 John Doughty 69

Event 16, same, open:
 Feet. Feet.
 Harry Friedman ... 83 5 Walter McGuckin .. 78
 L. S. Darling..... 79 7

Event 17.—Switch casting:
 Feet. Feet.
 L. S. Darling..... 82 1 D. T. Abercrombie.. 58
 John Doughty 59 6

Event 18.—Accuracy bait, ½-ounce:
 Demerits. Demerits.
 A. J. Marsh..... 28 A. J. Neu..... 47
 E. B. Rice..... 36

Event 19.—Accuracy fly: W. B. Gano won; A. J. Marsh second; Fred. T. Mapes third.

Illinois Casting Club.

CHICAGO, Ill., March 8.—*Editor Forest and Stream:* Our club's opening dinner of the 1912 season will be held Saturday evening, March 16, at the restaurant at 424 South Wabash avenue, at 7 P. M.

The hour between 6 and 7 o'clock will be devoted to an exchange of friendly greetings and social intercourse. A. F. SWISHER, Sec'y.

Praise for the Starling.

SMITHSONIAN INSTITUTION, Washington, Feb. 25.—*Editor Forest and Stream:* Owing to the doubt and uncertainty which seem to prevail in certain quarters in this country concerning the habits and characteristics of the European starling (*Sturnus vulgaris*), an attempt, however imperfect and necessarily brief, to elucidate these points may not be out of place at the present time.

In the first place it should be borne in mind that the starling is originally an inhabitant in summer of the northern and central, and in winter of the southern parts of Europe, extending its range eastward in Asia as far as India, although merging into other species in the larger region. It goes as far north in summer as the Arctic circle, and even somewhat beyond it, being known to have occurred at Quickjock in Lapland at a latitude of 67 degrees north. It is a regular summer visitor throughout Scandinavia, Northern Russia and the British Isles, and has even become a resident in the Faroe Islands.

The following freely translated extracts from Prof. Nilsson's "Skandinavisk Fauna" (Vol. 2, part 1, Birds), will give a fair idea of the habits of these birds in Scandinavia:

"In the beginning of April the starlings here in Scania [Southern Sweden] begin to pair off at their nesting places in the woods. In Central Sweden they appear at their breeding localities somewhat earlier than the middle of April, and from the end of that month to the middle of May their eggs are to be found. About May 20 the birds are feeding their young, and from the beginning to the middle part of June they have left the nests. From this time on several families unite into compact flocks and visit meadows and pasture fields in search of food, often associating with the cattle for this purpose."

Toward evening they may often be seen in great numbers performing flying evolutions in the air, packed tightly together, flying now in one direction and now in another, with the precision and regularity of a well-drilled flying squadron, their beautiful iridescent colors of green, purple and blue showing off to great advantage in the declining sunlight. Their flight is then quite noisy, although the birds themselves utter no sound, and their regular and precise movements give one the remarkable impression of beholding a flock of birds simulating the action of a single animated creature endowed with astonishing powers of flight. The aerial evolutions of these birds already attracted the admiring attention of the ancients, and they are referred to by Pliny the elder in his *Historia naturalis*, x. 24.

"In September and October flocks of the birds are still to be found [in Sweden] either alone, or, as is the case here in Scania, in company with rooks [*Corvus frugilegus*]. In the latter month they gradually disappear from Scandinavia, and the evidence tends to show that they migrate directly to Southern Europe, chiefly Italy and Spain, where enormous flocks of the birds suddenly arrive at this season." Prof. Nilsson further states that he had seen a star-

ling in the middle of winter at Malmö, in Southern Sweden, looking for food in dung heaps in company with jackdaws (*Corvus monedula*).

From this it will be seen that there is nothing improbable in the statement made by a contributor to *FOREST AND STREAM* of Feb. 24, to the effect that starlings had been observed in company with crows on apparently very friendly terms. There can be no doubt as to the habit of the starlings of frequently associating with corvine birds such as crows, jackdaws, etc., being themselves closely allied to the family *Corvidæ*. I am able to confirm this statement from my own personal observation of the habits of these birds in Scandinavia.

Referring to the statement of the editor of *FOREST AND STREAM* (*ib.*), that "for good and sufficient reasons the habits of the bird in England cannot be applied to starlings reared here," exception must, to some extent, be taken. It is perfectly true that naturalized birds and other animals in many cases turn out differently in their new abodes when compared to their mode of life in the original habitat, and unfortunately quite often to their own disadvantage, and that of their adopted country. This fact is generally due to a change of surroundings and conditions of life, such as the comparative abundance or scantiness of certain favorite food supplies, climate, natural enemies, etc., yet it cannot be denied that the nature and habits of a bird as once established in its original home must be used as a basis for future expectations as to its habits and usefulness elsewhere. The nature and habits of the starlings, as established in their European homes, are entirely, or almost entirely, in their favor.

Let us further quote Prof. Nilsson as to the food of this species: "Insects, larvæ, earth worms, slugs and various kinds of seeds and grain. They often alight on the backs of sheep and other cattle in order to pick up flies, gadflies and other insects. Sometimes they will visit carcasses in company with crows and jackdaws, although possibly only in order to secure grubs and insects * * *. They may, therefore, be considered as omnivorous like all other gregarious birds * * *. They nest in the hollows of old trees, church steeples, under eaves of houses, walls, etc. They also build their nests in hollow tree stumps having an opening on the side, put up for this purpose where there are colonies of this bird. Such artificial nests are erected near the houses on high poles, growing trees or even walls of houses, as in Oland (an island of the Baltic), Southwestern Norway and many regions of Russia, where the starling is considered as a friendly visitor and is protected by the landlord, particularly because it keeps the fruit trees free from insects and worms."

So far Professor Nilsson. It may be added in passing that the starling makes a most interesting and attractive cage bird, because of its intelligence and ability to imitate the sounds of other creatures, whistle melodies, etc.

Finally let us quote the opinion of Prof. Alfred R. Newton, the eminent British ornithologist, on the subject:

"A more engaging bird scarcely exists, for its familiarity during some months of the year gives opportunities for observing its ways that few others afford, while its varied song, its sprightly gestures, its glossy plumage, and, above all, its character as an insecticide—which last makes it the friend of the agriculturist and the grazier—render it an almost universal favorite. The worst that can be said of it is that it occasionally pilfers fruit, and, as it flocks to roost in autumn and winter among reed beds, does considerable damage by breaking down the stems. A most ridiculous and unfounded charge has been, however, more than once brought against it—that of destroying the eggs of skylarks. There is little real evidence of its sucking eggs, and much of its not doing so, while to render the accusation still more absurd, it has been brought by a class of farmers who generally complain that skylarks themselves are highly injurious."*

I have personally observed this bird for a series of years in its native haunts in Northern Europe, where it is a great favorite among farmers and bird lovers, and can confirm all the statements quoted above. It is, moreover, difficult to believe that the bird should so suddenly have changed its original characteristics upon its introduction into the United States, that its extermination is advocated even before it has had time to become fairly established in its new home.

To learn that this species has been placed on the list of proscribed birds in New York State is, therefore, somewhat shocking, and while admitting the remote possibility of future developments rendering such a course advisable—which should then also include jays, cow blackbirds, orioles, etc.—it is suggested that the ban on the starling be lifted as soon as possible, and the bird be given a fair chance to show its true qualities, good or bad, under its changed conditions of life.

S. M. GRONBERGER.

* For further information as to the habits of this species, see Yarrell, *British Birds*, Ed. 4, Vol. ii., pp. 229-241.

Ill-Advised Statements.

MINNEAPOLIS, Minn., March 7.—*Editor Forest and Stream:* The old saying, "Many men, many minds," certainly holds good under all conditions. It is interesting to sum up once in a while what we read about game and wild life protection in general, as seen by various writers. Not long ago a person from out West favored the extermination of all the gulls, because they destroy a certain number of young ducks. Another person favors the destruction of all predaceous birds and mammals. Advocates of such measures are, in my opinion, very narrow-minded, only seeing things from one side. All predaceous animals when not too numerous, perform such a useful service in nature that nothing man-made can take their place in effectiveness and cheapness. What can take the place of our raptorial birds, to keep in check the various smaller rodents?

In England, where the owners of the large game-raising estates have kept up an incessant war on birds of prey, it has come to such a point now, that the English farmers are troubled with a veritable pest of rats and mice.

The statement made by Julian Burroughs at a recent meeting in New York favoring the extermination of several species of our useful

birds, is almost impossible to believe. That a man like Mr. Burroughs, who is the son of a man who is considered to be a great nature lover, should come out and make such a statement is a shame. I was glad to see that Dr. Hornaday opposed him.

In the stomachs of the robins, orioles, yellow-headed and red-winged blackbirds that I have examined, I have found that angleworms, insects, caterpillars and weed seed have been the principal food taken. In 1911, when the larvæ of several species of noctuid moths (commonly known as cutworms) were such a pest here in Minnesota, I found that the principal food of the yellow-headed and red-winged blackbird were these larvæ. At Fort Snelling, where I made my observations, I found these two species of birds to make regular excursions from the marsh down by the river up to the lawns at the fort in order to feast on these larvæ. At the lowest I estimated the number of birds at this particular place to 200, and that each bird destroyed ten larvæ a day, this would make 60,000 destroyed in one month. If the injury done by a single larva be put down at one cent a year, the services rendered man by these birds is very great, and yet, these are the very same kind of birds Mr. Burroughs would like to see exterminated. His statements are misleading, harmful and obnoxious. Let us all do our very best to save what remains of the one-time rich fauna of North America. J. W. FRANZEN.

PACKER, Conn., March 6.—*Editor Forest and Stream*: I note your remarks on page 271 respecting Burroughs and Hornaday and their differing views as to birds in relation to agriculture. Can you not publish the views of these two in full as given to their hearers at the Astor? I believe your readers would find them interesting. E. P. ROBINSON.

[We do not think so.—EDITOR.]

Diseased Jackrabbits.

CHARLES CITY, Iowa, March 1.—*Editor Forest and Stream*: In the Jan. 13 number of FOREST AND STREAM there appears an article on "Jack Rabbits," by F. T. Webber. He describes a disease afflicting the jack rabbits of Colorado east of the mountains; and also states the jacks of Utah were in the 80's similarly afflicted, and asks regarding the nature of the disease.

In the Feb. 10 issue of FOREST AND STREAM, C. Obenland, of Pomeroy, Wash., in a short article on "Rabbit Diseases," refers to Mr. Webber's article and says: "F. T. Webber speaks of rabbits being diseased. The rabbits are afflicted here the same way and the disease is called tuberculosis." Mr. Obenland says the cottontail rabbit is not there afflicted with this disease.

I have spent years in the West and Southwest, and as early as 1889 observed on the plains of Southwestern New Mexico that many of the jack rabbits were afflicted with the same disease as mentioned by Messrs. Webber and Obenland. The disease among the jacks there appeared to vary somewhat in intensity with the seasons. I am also aware that the jacks of various regions aside from New Mexico, Colorado, Utah and Washington, are, to a greater or less extent,

similarly afflicted. However, I do not now recall a single instance where the cottontail of those regions are known to be afflicted with this disease. But one or two examples of this disease afflicting the rabbit of Northern Iowa has yet come to my notice.

It is a well known fact that deer, dogs, cats, rats, hogs, cattle, etc., are often afflicted with this disease in some of its varying forms; and it is now generally conceded to be tuberculosis.

For very many years I have known of large numbers of jacks being shipped East "for food for poor people." I consider any animal afflicted with tuberculosis to be unfit for food, and should not be used.

A paper by the writer on tuberculosis among wild and domestic animals, is now in press by one of our leading scientific journals.

CLEMENT L. WEBSTER.

Do We Need Crows?

WEST HAVEN, Conn., March 9.—*Editor Forest and Stream*: That black rascal, the crow, is under fire again—as usual. In a Government bulletin, published in 1895, emphasis was laid upon the value of the crow as a destroyer of noxious beetles, grubs, cutworms, rodents and the like. It has, however, been uphill work to persuade the hard-headed farmer that the crow was any good to him at all. He simply would not believe it. Apparently his scepticism has shaken the faith of some of the scientists, for now the Biological Survey is opening up again the whole question, and has sent out a circular asking for definite information on certain points. Now is the chance for the enemy of the crow to discredit him, if he can, and secure the reversal of the somewhat favorable former verdict.

Conceding that the crow does eat a considerable amount of noxious insects and small vermin, the question is whether it does not in other ways do more harm than good. The present discussion will hinge upon certain points suggested by questions propounded in the above circular for answer by the public. Among these the following are of special interest:

First: "To what extent can the reduction in numbers of our game birds, such as grouse and quail, and many smaller insectivorous species, be attributed to the crow?" If a crow destroys even one brood of insectivorous birds, it does in that one act more harm than it could ever do of good. If it habitually eats the eggs of the partridge and quail, it might be proven an important agent in the lamented disappearance of our native game birds. Some think that only certain individual crows commit these depredations, or that it is done only when chance furnishes special opportunity, of which I have my own doubts. Information sent in from many sources may decide the tenor of the new bulletin.

Second: "Do crows destroy much poultry and many eggs, and does the habit appear to be confined to a few individuals, or is it a more or less characteristic trait of all the crows in your vicinity?" Crows certainly destroy considerable young poultry, and observations on this point will be of great value.

Third: "Does it inflict serious damage upon the corn, either when sprouting or when in the

shock, and does it appear to be as troublesome in your locality as it was fifteen years ago?" This is the old question, one of great importance, opened again for information up to date.

Fourth: "Do farmers in your locality resort to the practice of tarring seed corn? If so, how successfully has it protected the corn?" If this simple operation is really widely effective in saving seed corn from the attacks of crows, or of other birds or animals, the knowledge of this will be of great value.

Information is also asked about winter crow roosts in a locality—numbers of birds, acreage, and characteristic vegetation.

Not many people, probably, are aware that there are two kinds of crows in Connecticut. Along the shore of Long Island Sound a southern species, called the fish crow, reaches its northern limit. It may be recognized by its slightly smaller size and by its peculiar caw, which is short and querulous, with a decided nasal twang. It would be interesting to know how numerous this little crow is in any localities of the State, and the Government also wants information about it along the line of the questions given above.

The State ornithologist will greatly appreciate any items of information about the crows of Connecticut on one or more of these points, and any other observations about our much shot at but persistent black fellow citizen. These will be made good use of for local edification, and will also be sent to Washington for the Government bulletin. So will those who have any definite information whatever kindly inform the State ornithologist whether or not our crows in this State are improving in their morals.

HERBERT K. JOB,
State Ornithologist.

The Broad-Winged Hawk.

IN Numbers 3 and 4 of Volume XXIII. of the Wilson Bulletin, a quarterly of ornithology, published at Oberlin, Ohio, Frank L. Burns has a full article on the broad-winged hawk, perhaps one of the least known of our generally distributed hawks.

Mr. Burns has devoted more than twenty years to a study of this hawk and his article covers 175 pages. Besides his own observations, he has collected a remarkable amount of information from others, and publishes more than a page of notes acknowledging these correspondents' kindness.

He describes the broadwing hawk in its various forms, gives a list of its synonymy, an account of its geographic distribution—twenty-six pages—its flight, its food, enemies, relation to other birds, its relation to man, disposition in captivity, migration, mating, nesting habits, the young and a bibliography, of which last there are about thirty-eight pages.

Mr. Burns has studied the nestlings and kept them for a considerable time in captivity, so that he gives us much information about the molt, which is novel.

All the game laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

Published Weekly by the
FOREST AND STREAM PUBLISHING COMPANY,

 EDWARD C. LOCKE, President,
 CHARLES B. REYNOLDS, Secretary,
 S. J. GIBSON, Treasurer.

CORRESPONDENCE.

The **FOREST AND STREAM** is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Terms: \$3.00 a year; \$1.50 for six months. Single copies, 10 cents. Canadian subscriptions, \$4.00 a year; \$2.00 for six months. Foreign subscriptions, \$4.50 a year; \$2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line (\$2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra. Special rates for back cover in two or more colors. Reading notices, 75 cents per count line.

A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Advertisements should be received by Saturday previous to the issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

THE LESSONS OF THE WINTER.

THE long struggle for supremacy is nearing its close and the sun has gained another victory over his adversary, the winter night. Tomorrow will be St. Patrick's day and the end of the winter season. If a blizzard follows on Monday—well, it is the unexpected that happens in a region of many changes. Even the best guides lose the trail occasionally, and everybody knows that the infinite variety of spring days adds materially to the enduring charm of the vernal season. Who would, if he could, divide the year equally into seasons of snow, of rain, of summer heat, of autumn days or April sunshine, each season complete in itself and to be endured to the bitter end?

Since early December the frost has crept deeper and deeper into the ground, without a single thaw worthy of the name. Lakes and ponds and rivers are still coated with thick ice. Storage houses are filled with it, and the icemen are lying awake nights formulating excuses for next summer's high prices. And if the ice in streams and brooks goes out with sudden freshets, the game fish, which have had an abundance of water since last October, will be swept out as with a broom. In many places the ice on the Great Lakes has provided big game with a means of moving southward, and it is possible that moose and deer will be found, next autumn, in places where they have not been abundant in recent years. Only a few days ago timber wolves were reported in Western Pennsylvania. It is assumed that they came from Canada, cross-

ing Lake Erie on the ice, which has been thick enough for motor car travel.

As a general thing the snowfall has been light and big game has not been confined to yards, hence the winter mortality will be light. In the prairie and plains country, however, the loss of game has been heavy, but there the cold and lack of shelter had more effect than mere depth of snow. Feeding by wardens, clubs and individuals helped, and if this did not actually cut down the loss, it at least furnished an excellent popular object lesson and gave heretofore indifferent persons an insight into the necessity for this, to them, new work. It is now generally conceded that while ground game was capable of finding both food and shelter in the days of its abundance, the clearing of thickets, woodlands and fields and the cutting of forests have left small game very little food and less cover. Augmenting this is the work that has been done during the past two years to prevent forest and woods fires. Even leaf fires, heretofore regarded as harmless, are now known to be detrimental to ground game, and the boys who are fond of starting them are being taught to forego that youthful pleasure.

All of these improvements over old practices are necessary to-day if serious protective work is to be carried on. Fortunately very favorable results are in evidence and the situation is not so black as it is painted by some.

WORK AND SPORT.

A SOUTHERN correspondent, commenting on the recently closed shooting season in the State in which he resides, sums up the reasons for the fairly abundant supply of grouse left over for next season in the following terse sentences:

Plenty of grouse left for seed. Pot-hunters too lazy to bag them.

So there is one place where downright indolence is deserving of the meed of praise it seldom or never receives. We are glad to know it and to have the facts from one who is qualified to speak with intimate knowledge of the subject. Since the days of abundant game and of flintlocks, every town and village has had its few citizens, its characters, if you will, who have, with courage worthy of a better cause, lived up to their reputations; first, as mighty hunters; and secondly, as being too lazy to work.

Traditions have it that these men are hunters because they are too indolent to do anything else, but they, if permitted to explain their status, would put the matter in another light, saying they were unable to withstand the call of the woods and streams and the pursuit of wild life. It is but one of the many ways to express in actions, if not in words, the love of nature that takes men into the big and little wilds of old mother earth. The wealthy man and the hard working citizen seek the outdoors for rest, and are praised for their foresight. Society, being an exacting, straight-laced mistress, decrees that the poor man must first provide for his own and his family's wants before his shooting and fishing excursions shall receive her endorsement. It would be hard to say whether he believes in the ancient saying that "if your business interferes with your fishing, give up your business," but the fact remains that life for him is too short for all the play he would like to indulge in, and all the work society would have him do,

so he follows the line of least resistance, and this leads to woods and waters and peace.

But our correspondent's last statement should be elaborated. To bag grouse is one thing; to hunt for them quite another. In the hill country it is the character of the hunting that wears on the men of minimum energy and maximum capacity for rest. To reduce grouse to possession in those rough hills is not all fun of the sort sought by the easy-going pot-hunter.

Wise old Bonasa. Even if he does not know this, he must at any rate be credited with having found a place where he and his interesting family are safe, at least from the forays of his traditional enemy, the pot-hunter. Long may his shadow darken the drumming logs of the sunny South's hill country and the roar of his drumming be heard in the land.

ACTING DISTRICT FORESTER JOHN H. HATTON, of San Francisco, has prepared a statement that is intended to correct an impression that has become general in regard to hunting within the limits of the National forests. He says that in some quarters the impression has become current that hunting is entirely prohibited, and that on this account predatory animals have been increasing alarmingly in numbers. He wishes it understood that this idea is erroneous, and that the forest service welcomes the extermination of beasts of prey, in many cases employing hunters for this purpose. In some places ammunition and traps are purchased and loaned free to trappers who make trapping a business. In and closely adjacent to the California National forests there were killed during the last fiscal year 743 coyotes, 5 wolves, 5 mountain lions and 195 wildcats. In all the National forests there were killed during this time 6,487 coyotes, 172 wolves, 88 mountain lions and 870 wildcats. The only prohibitions to hunting in these forests are those prescribed by the State laws and there is no difference between the application of these laws outside and inside the forests.

ADMITTING that he has not studied the provisions of the water power bills introduced in the New York Legislature for the Conservation Commission, Governor Dix nevertheless endorses them, evidently because he has a vague idea that they fit in, somehow, with his pet conservation-of-natural-resources scheme. But the Governor need not waste time studying these measures, for if he and the commission oppose the water grabbers' bills, it is a foregone conclusion that the power interests will not permit the passage of any other power bill. The State may embark in the business of furnishing power at some future time, but not with the consent of private enterprises that, combined, are more powerful than appears on the surface of the pool of popular belief.

CORK waste, valued in the markets of Spain at about \$28 a ton to-day, not only had no value a few years ago, but was thrown away in the forests and utilized as fuel in factories. In 1910 about 30,000 tons of cork waste were exported to foreign countries. There is an export duty of \$9 per ton on corkwood in Spain, and the manufacturers are urging an increase in this tax, fearing the increased demand from other countries will cut down their supply.

Ticks from the Ship's Clock.

U. S. Senator Dodson will introduce a bill which provides that it shall be unlawful to use a boat propelled by gas, gasoline, naphtha or similar explosive medium unless the same is provided with an underwater exhaust or muffler, to muffle in a reasonable manner the noise of the explosion. The provisions of the bill apply only to tidal waters and shall not apply to boats competing in a race held under the direction of a duly incorporated yacht club or racing association. The penalty for violation is a fine of not less than \$25.

Members of Lake Champlain Y. C., at Burlington, Vt., are highly pleased over the acceptance of the commodoreship of the club by Dr. H. Nelson Jackson, and great things are expected of him. The doctor is an enthusiastic yachtsman, an excellent executive and eminently popular among club members. A handsome new club house is contemplated and will probably be erected on the site of the house recently damaged by fire. This will depend somewhat upon whether a long time lease on the dock can be had from the Central Vermont R. R. The Champlain club has one of the finest water locations among fresh water clubs. Ten miles of deep, protected waters with unexcelled harborage formed by the breakwaters built by the Government recently. The new committees are: House Committee, F. E. Rodliff, Dr. E. T. Brown, Hobart J. Shanley; Regatta Committee, A. E. Jury, Chairman; J. E. Traill, Secretary; C. H. Jones, Dr. O. S. Nims and L. P. Wood.

The International Sporting Club, of Monaco, announces that up to Feb. 22 entries for the motor boat events, taking place from April 1 to 13, numbered sixty-seven boats. Entry list closed Feb. 29 from which final reports have not yet been received.

Renovating the Hull.

HAVING completed the rubbing down and any scraping or burning off that is to be done, we may turn our attention to the recoating of the work. The scheme to be followed depends upon the type of boat and her size, for, naturally, one would hardly expect to arrange the work in the same way on a small boat that can be done from the ground all over as on a larger one that must be done, more or less, from the inside. Then, again, a good deal depends upon whether the finish be varnish or paint and enamel.

To take the simplest case, that of a small open boat finished with varnished topsides and fittings and painted bottom. The first thing to do, all rubbing down and repairs being completed, is to take a little varnish and thin it down with about half its bulk of turpentine, using it to "touch up" all particularly bare places and any new work. It should not be roughly applied, but well worked into the wood, so as to form a good key for the subsequent full coats, and it may pay to go pretty well all over the job with a coat of thin stuff when the first touch up has had time to dry. In the same way some rather thin lead paint of suitable color should be used to touch up any places on the bottom that look in want of an extra coat, and any seams that require restopping, for stopping will not hold in a seam unless the surfaces have been painted first.

It may be as well here to tender a little advice as to the materials and appliances to be used by the painter. First and foremost, use only the best of materials and get good brushes. Then endeavor to be as thorough as possible in the work, and take great care of the brushes and pots or kettles. A few extra shillings spent on buying a good supply of brushes and kettles instead of the more usual meager allowance will

be well invested, especially when it is remembered that good brushes are well-nigh everlasting in the hands of careful men who have but a small amount of work for them. It is a mistake to get very large brushes for boat work, and inexperienced users find a good deal of difficulty in working with them. At the same time a decent finish cannot be made with very small brushes on a large surface, so that the happy medium should be struck. For varnish the best brushes are made up with copper bindings, but flat ones in tin bindings are used to a considerable extent on the score of cheapness. The varnish tools (tools are the small round brushes for working along the edges and in corners, brushes being the bigger ones for working over panels, etc.) are copper bound, but paint tools are string bound, and paint tools and brushes should have a further binding of twine put on to shorten the effective length when new, the binding being taken off as the brush wears down. There is a good deal of knack in binding a brush properly, and a painter should be bribed to do them, or at least instruct the amateur. If the topsides be finished in white, brushes and tools must be provided and kept for this color alone, and the same with enamel, though where there is not much to be done, one might use well washed out paint brushes for the enamel.

Paint and varnish kettles need not be very large, but are much to be preferred to the assorted pickle jars seen in most amateur paint shops, though the pickle jars with the expanding rubber-jointed covers are very useful for keeping mixed paints and varnish in being airtight. To prevent sticking of the covers, a little linseed oil may be smeared on the surfaces, but this rots the rubber in time. Probably paints will be bought ready mixed, so that a large kettle for pumping will not be needed, though a paint strainer ought to be used for good work.

For priming and ground work of painted surfaces, the ready made paints are not much use, and it is better to get the paint specially made up at an oil and color store or at a regular painter's place, specifying that only genuine lead and materials must be used. The ready made colored paints are all right as stainers, but have not much lead in them, except in the better makes and certain colors, for white lead has such a powerful staining effect that it cannot be used except in light shades. For priming on bare wood that is to be finished white or any light shade, pink priming (that is, white lead paint with a little red lead added) should be used; for dark finish black should be added to make a slate color. On no account should the very cheap paints be used, especially for outside work for they simply cannot be made of good materials at the price sold at.

Now, to return to our job. After the touching up has dried, the stopping must be taken in hand, all open seams and cracks being filled with stopping of the proper shade to match the wood, though unstained stopping may be used on the paint work. The most usual stopping material is ordinary putty, which may be bought at any colorman's shop, and is whitening and linseed oil. If too hard, it may be softened by working into it a little oil, and if too soft may be stiffened by the addition of powdered whitening. Before use a suitable quantity must be well kneaded and worked up to the proper consistency and stained to the required shade with a small quantity of dry color; for under water work, or to toughen it a little white lead may be added. The stopping must be well pressed into the previously primed crevice by a flexible bladed knife and any surplus scraped smoothly off the surface by the back of the knife.

If necessary, a second or third touch up coat can be given and then a full coat of varnish all over the inside work. But, if the boat is just so big that the inside of the bottom cannot be cov-

ered from the outside of her, it may be better to work from the inside and paint inside first (anyway, the inside of lockers should be painted first of all), or the central parts that cannot be reached from outboard. It is usually reckoned to be better to cut the paint in up to the varnish than to do the paint first and have to work the varnish brush over the edge of the painted parts. So that we might paint all the middle part of the bottom, from the keel out toward the bilges, then varnish the inside of topsides, next cut in the paint up to the lower edge of varnish line, and lastly, varnish the seats and other parts that would be liable to get smeared or rubbed if done at first. The gunwales will be done with the topsides and outside work, and will probably want more coats than any part of the boat, excepting the rubbing pieces—which generally want some amount of scraping every year.

Whenever a second coat of varnish is to be applied over one only just put on—that is, as distinct from varnish that has been on some time and has been rubbed down with pumice—the first coat must be carefully rubbed down. To get good results with varnish—with paint, too, for that matter—it is of the utmost importance that each coat be allowed ample time to dry and harden properly before the preparation for the next be commenced. Except in emergency, at least twenty-four hours should be allowed between coats, and twice that time is not at all too much, especially in the winter or damp weather. The first coat having dried hard, the whole surface must be well smeared over with whitening, applied by a soft cloth (a piece of well washed flannel does fine, and should be rubbed on a chunk of whitening and applied to the work) and then lightly rubbed down by the finest glass paper. The idea of the whitening is to stop the gumming up of the glass paper, the working surface of which needs to be continually changed, even with this precaution. The whole of the whitening must be thoroughly dusted off with a fairly soft brush or brushes, a pair of bellows or a good tyre pump being handy to get it out of corners, and just before starting on the next coat, the work should be gone over with a soft wash-leather that has been well washed out and wrung out almost dry, the object of the leather being to pick up any dust adhering to the varnish.—The Yachtsman, England.

American Seamen's Friend Society.

SEVERE storms, followed by wrecks, were more prevalent this winter along the Atlantic coast than for many years past, according to maritime interests. An unusual number of shipwrecked and destitute men have landed in New York during the last four months. These men were friendless and many miles from home; they were without money or prospects; they needed nourishment and clothes.

When shipwrecked and destitute seamen land in New York they come to the American Seamen's Friend Society for aid. Every seaman has heard of this organization. He knows that it helps his stranded mates to their feet. The society has been doing this work for eighty-four years, regardless of race, creed or color. It has had more calls for aid from destitute seamen during the last few months than in any similar period in its history. That the work is a necessity is evident.

To give an instance: A captain and his crew of three men were forced to abandon their vessel off Cape Hatteras. They were picked up and the small boat swamped as they clambered on board the steamship. The four men were landed in New York, and following the custom, applied to the treasurer of the American Seamen's Friend Society, No. 76 Wall street, for aid. All were suffering from shock and exposure. Their story was investigated, and the four men found deserving. They were helped, so far as funds permitted, with food, lodging, clothes and shoes. The captain was sent to his home in Boston, and the men to their homes in Norfolk, Va., where they are known and have better prospects for work. This is only one out of many similar cases that are brought to the society from time to time.

The American Seamen's Friend Society has a building at No. 507 West street, known as the Seamen's Institute. It is a home for seamen when in the port of New York. The men have comforts provided for them at less than cost. During the last four months the number of seamen who were given free food, lodging and clothing at this institute averaged more than 200 each month.

When forlorn and destitute men open the door of the institute, they are welcomed; in fact, even the sailor who spent his money in the saloons on the waterfront and has not a cent in his pocket is given a bed. The bed is comfortable and the room is warm. Many seamen have taken a fresh grasp on self-respect as a result of this human interest. Letters to the society's officers is the evidence to prove it. The ships' apprentices also make the institute their home. Letters are on file from the boys' mothers in appreciation of the society's watchful care over their boys when in port.

Motor Boating

Amateur Motor Boat Men.

COMMODORE WILLIAM B. SELDEN, of the New York Motor Boat Club, has been obtaining the views of prominent amateurs on his questions, "What is an amateur motor boat man?" The questions he submitted were as follows:

First—Should professional sailing masters, pilots, mates, engineers and helpers be barred from amateur motor boat races?

Second—Should the professional mechanic and engineer, working for daily hire at his trade, be barred from such races?

Third—Should the owner of a boat, when the boat is racing, be on his boat even if he is not competent to sail it?

Fourth—Taking into consideration the fact that constant handling of a gasoline engine and ignition systems will in time make any one familiar with their uses and always more expert than the green boat owner; and that the mere selling of boats, engines and accessories, does not necessarily imply professionalism in its true sense; cannot a rule for the racing of motor boats in amateur events be laid down, which, while it would bar the strictly professional, working at his business for hire, would be sufficiently broad and comprehensive in its scope to allow all others to race motor boats as amateur sportsmen?

Thus far Commodore Selden has obtained opinions from those higher up in amateur athletics, who are not qualified to judge as experts because they represent only that branch of sport, the participants in which have their expenses for training, uniforms, transportation and 'living,' while in training, paid by the clubs they represent, while the yachtsman or motor boat owners pay their own expenses from beginning to end. Our answers would be—

No. 1—"No," so long as the professional did not steer the boat nor have charge of the actual running of the engine. Professionals should be allowed to oil or make repairs.

No. 2—"No," under same conditions as in answer to question above.

No. 3—"No." Suppose an owner goes to the expense of sending his boat to Monaco to the races this summer and is taken sick before the race. It would be obviously unfair to him to compel the withdrawal of his boat, and thereby lose his investment, presuming she were built for this particular race, simply because he could not be on his craft.

No. 4—An engine designer or an expert operator who does not earn his living running engines after they have been installed in hulls should certainly not be barred from handling motor boat engines in a race any more than Slazenger, who makes tennis rackets, should be barred from playing amateur tennis did he so desire.

Why not get opinions from motor boat own-

ers who are both amateur and expert and frame up rules based upon a consensus of opinion of these men, exclusive of any advice from the Amateur Athletic Union or the National Association of Amateur Oarsmen.

Tricked by the Compass.

COMPASS troubles are frequent on board a power boat, and in many instances have come very near having serious consequences, says Outing. Mr. Giles, owner of Elmo II., had an experience that under different circumstances might have wrecked his craft.

In the last Cornfield race he had sighted the lightship and was heading straight for it when he began to notice that the compass was swinging gradually around. From east by north it went slowly to east and then to southeast.

He thought at first it was due to the tide carrying him down and did not bother about it, but after a while he realized the deviation was too great, and he called to one of the crew to look around for the cause. The man soon found it. A lantern hoisted at the masthead had broken from its lashings and gradually worked down the stay until near enough to the compass to affect it. Had not the lightship been in sight the change of course would hardly have been observed and there is no telling where the boat might have landed.

Aboard the Kittrois, in the Marblehead race of 1909, something very similar happened. While passing Block Island a screwdriver had to be used, and it was inadvertently dropped beside the helmsman. To the surprise of every one, when Vineyard Sound lightship was raised, it was off the starboard bow instead of being well to port. The true course had been accurately held and every one knew something must be wrong. A search was instituted and the offending screwdriver discovered, hidden under a sweater.

"The most curious episode of the lot I witnessed on another trip. In some unaccountable way the jewel upon which the compass rested was broken during a storm, and although the dial seemed to rotate as usual, it really caught at times and failed to round against the boat.

"We had been skirting the outward coast of Long Island for about four hours in a dense fog and should have been about three miles off shore when one of those unexplainable impulses which prompt us now and then without apparent reason urged me to climb out on the turtle deck and act as lookout. I had been on watch before the fog closed in and knew positively that our bearing at the time and our course since had been right.

"Nevertheless, almost unwittingly, I yielded to the impulse. I had not been forward more than thirty seconds when my heart jumped into my mouth. Dead ahead, not twenty yards away, four or five blackcaps, the vanguard of a rocky shore near Montauk, had suddenly loomed into view. The reverse lever stopped us in time and we backed carefully into deep water, but had I hesitated at all or had it been dark nothing on earth could have saved us from running aground among the breakers at full speed.

"So well have skippers learned to appreciate the dangers from compass vagaries that two and even three instruments are generally carried on various parts of the boat. In the quoted instance we had a standard on the after deck and thereafter stationed a man beside it with instructions to warn the steersman every time he swerved from the course."

Canoeing

Eastern Division Dinner.

THE annual dinner of the Eastern Division of the A. C. A. was held at the American House, Boston, Saturday evening, March 9, and fifty members and guests were present. Wm. W.

Crosby, of the Initou Canoe Club, officiated as toastmaster and called on the following speakers: Samuel Burnham, treasurer of the A. C. A., gave a very entertaining talk on Sugar Island and the general camp, urging all to go there and have a good time. Rear-Commodore John B. Howard spoke about canoe racing and handed out some good ideas on the racing game. Chairman B. L. Goodwin, of the camp-site committee for the Eastern Division, told what had been done so far in regard to the Eastern Division meet, which will be held at Lakeville, Mass., June 15, 16 and 17. He said that about thirty acres of woodland had been procured on the shore of Long Pond where camping facilities were of the very best and that his committee were going to do everything in their power to make the meet the best camping meet in the history of the Eastern Division.

Capt. E. V. Cormerais, of the Dedham Boat Club, who is also chairman of the transportation committee for the Eastern Division, in addition to some very witty remarks, said that arrangements would probably be made to get canvas and duffel to the Eastern Division meet by trolley express. Fred Davis, Fred W. Cramphorne, Louis Stringer and John Robertson spoke entertainingly on canoeing matters.

The gathering broke up with everybody expressing their intention to be present at the division meet in June.

FRED BRODBECK,
Vice-Commodore E. D. A. C. A.

A. C. A., Western Division.

CHICAGO, Ill., March 1.—*Editor Forest and Stream:* The following events are scheduled for the season: Mid-winter meeting and dinner, Grand Pacific Hotel, Chicago, March 16, 3 P. M. and 6 P. M.; Fox River-Illinois River cruise, Aurora, May 30-31, June 1-2; Division Meet, July 4, 5, 6, 7 and 8. General Meet, Sugar Island, Aug. 9 to Aug. 23; Labor Day cruise, Aug. 31, Sept. 1 and 2.

Detailed information concerning each will be given later. F. B. HUNTINGTON, Vice-Com.

CHICAGO, Ill., March 8.—*Editor Forest and Stream:* The annual mid-winter reunion of the Western Division will be held at the Grand

Tenth edition. Published 1904. We have a copy in fairly good condition, published at \$12, which we will sell for \$9.00.

FOREST AND STREAM PUBLISHING CO.

Pacific Hotel, Chicago, Ill., on Saturday, March 16. Dinner will be served at 6:30, preceded by a business meeting, to be called at 3 p. m. at the hotel. The previous dinners at the Grand Pacific are a sufficient guarantee as to the excellence of the meal and its service. The price has been fixed at \$1.50 per plate.

The success attending the previous gatherings this winter leads to the belief that this reunion will be the best in the history of the division, and no efforts will be spared by those in charge to make it a lasting remembrance for all who are fortunate enough to be present.

Frederick A. Fenger, A. C. A., 5789, will give a talk, illustrated by lantern slides, on an 800-mile canoe cruise in the West Indies, taken by him last winter.

Commodore Kretzmer, of New York, will be here to speak for the administration, and to tell of the plans made for the success of the 1912 camp at Sugar Island, St. Lawrence River, Aug. 9-23. Ex-Commodore Thorn, of Buffalo, who so greatly aided in the organization of the Western Division in 1899, will also be here, and can be counted on to say something of interest to all members of the A. C. A.

The selection of the location for the annual camp and meeting of the division, July 4-8, will be made at the meeting preceding the dinner, and representatives from the various localities, who desire to bring their choice for the camp before the meeting, are asked to be on hand with maps and other necessary data, and to voice their sentiments as to the best campsite and plans for the camp.

The division has gained largely by new members and by transfers since Jan. 1, with a number of prospective members yet to be heard from, and this opportunity is taken to impress upon members the necessity of losing no time in securing the applications of friends for publication and election to the A. C. A. at once, to insure their names appearing in the new Year Book.

As this will be the final reunion of the winter season, and as the division will be honored by the presence of Messrs. Kretzmer and Thorn as its guests, it is specially desired that we have a record-breaking attendance, and to that end members are urged to signify their intentions of being present, and to bring with you all the canoeing well wishers in your neighborhood.

F. B. HUNTINGTON, Vice-Com.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—Eugene H. Hunter, 2813 Poplar street, Philadelphia, Pa., by H. LeRoy Walker; Samuel L. Cornell, 507 West 179th street, New York city, by Harold E. Laubinger.

NEW MEMBERS ELECTED.

Atlantic Division.—6347, Harry S. Gault, 25 South Sixth street, Philadelphia, Pa.; 6351, Thomas R. G. Phipps, 2552 North Myrtlewood street, Philadelphia, Pa.; 6353, Julius A. Leroux, 2513 Seventh avenue, New York city; 6354, J. Erlandsen, 308 West 154th street, New York city.

Central Division.—6348, Clyde V. McCurdy, 349 Marguerite avenue, Wilmerding, Pa.; 6352, W. Cordes Snyder, Snow Shoe, Pa.

Western Division.—6346, Harold P. Gould, Riverside, Ill.; 6349, Louis A. Boyle, 133 North Fourth street, Aurora, Ill.; 6350, Robert J. Nordhold, 1318 Cornelia street, Chicago, Ill.

RESIGNATIONS.

Atlantic Division.—807, William J. Haines, Philadelphia, Pa.

Central Division.—5732, Ray B. Kurtz, Buffalo, N. Y.; 5480, Charles A. Searing, Pittsburg, Pa.; 6223, Raymond A. Duke, Wilkinsburg, Pa.

Eastern Division.—4492, J. W. Rice, Winchester, Mass.

MEMBER TRANSFERRED.

3462, T. Rice Davis, care of North West Malleable Iron Co., Milwaukee, Wis., from Atlantic Division to Western Division.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

TRAP SHOOTING

 Sept. 10-13.—Denver, Colo.—Rocky Mountain Interstate Sportsmen's Association; \$5,000 added money. Ambrose E. McKenzie, Mgr.

DRIVERS AND TWISTERS.

Keep a place in your date book for the annual national championships at Travers Island, April 4, with practice day April 3. You will find good company both at the traps and in the club house.

T. H. K., Secretary of Hudson Gun Club, Jersey City, writes: "On April 21 we purpose holding our annual merchandise prize shoot at 100 targets, open to all amateurs. Joe Whitley will preside in the dining hall on this occasion, and we assure you that all hands will be well taken care. Refreshments gratis."

The tournament that was to be held on Feb. 22 by Cleveland Gun Club will be shot April 3. No use telling the regular shooter about the events engineered by F. H. W.'s charges, but in case some of the new shooters do not know the kind they have in Cleveland, I may add: "They don't come any better."

Secretary J. A. Bingaman, of Pillow Gun Club, Pillow, Pa., has pressed the button starting the wheels moving toward making the registered tournament June 14 a great big success. It is safe to say that if the rest of the members of Pillow are as enthusiastic as Brother Bingaman, the shoot will make the rest of the State lean over and listen.

William A. Murdock, to whom is due considerable of the credit for the success of Meadow Springs Gun Club, of Philadelphia, has declined renomination for the secretaryship, because of business obligations. The absence of Mr. Murdock from the busy end of the club will be keenly felt by those who have known him personally or by correspondence. His successor will have to be good to make good.

Elmer E. Shaner, Secretary-Treasurer Interstate Association, writes: "Numerous gun clubs have evidently overlooked the fact that our rules pertaining to the registration of Sunday tournaments have not been changed, as we have lately received several requests to register Sunday dates. For the benefit of all concerned, we thank you to announce in the Trap Department of FOREST AND STREAM that we are not privileged to register a tournament for Sunday only. A tournament which includes a Sunday may be registered, but the scores made on week days only are counted in the official records."

Following out the plan adopted in 1909, the Du Pont Company again offers to both amateur and professional trapshooters of the United States and Canada a solid gold watch fob as its "1912 long run trophy." The shape of the charm is unique, the design being bas relief of a trapshooter in position at the score. The conditions are the same as in the past—i. e., a professional must break 125 straight in a registered tournament to be entitled to a trophy; amateurs must break 100 straight under the same conditions. The only other condition imposed by the Du Pont Company is that the party making the long run must use one or other of the brands of smokeless shotgun powders manufactured by that company. After a shooter has won a "long run trophy," he receives an additional bar for each long run made by him in subsequent registered tournaments.

The revolver shooters of southern Ohio and northern Kentucky who desire to compete for a place on the American team, which will enter the contests in the Olympic games at Stockholm, will have their trials in Cincinnati, the U. S. Revolver Association having selected the Queen City as the place for these trials in this section. The contests will be held out of doors,

and it is probable that the range of the Hyde Park Gun Club will be used. Any citizen of the above sections of Ohio and Kentucky, can enter the trials, which will be conducted under the supervision of a governor appointed by the U. S. Revolver Association. There will be a number of the members of the Cincinnati Revolver Club entered for the trials, and several other clubs will also be represented. Cincinnati is the home of quite a number of good revolver shots, and there is a possibility of one of them making the team. At the club's annual meeting the following officers were elected: Howard Cox, President; Dr. P. K. Phillips, Vice-President; Dr. E. H. Thompson, Treasurer; Dr. A. A. Yungblut, Secretary.

Hudson Gun Club.

JERSEY CITY, N. J., March 10.—Wintry winds or March gales could not keep the members of the Hudson Gun Club from indulging in their favorite game at the traps, as there was an attendance this morning of thirty-one shooters present at roll call.

We had the pleasure of meeting Messrs. Kirkwood and Osborne, who journeyed from Boston, Mass., for the first time at our grounds, and Messrs. Billings and Coffin from Glen Ridge, N. J., who have been strangers here for some time past; and last, but not least, our old club mate, E. B. Staples from Franklyn, Mass., who could not resist the temptation to stay away from his old stamping grounds, so with the assistance of a half dozen boys to carry his luggage, he managed to reach the grounds safe and sound, and showed us that he still knows how to break clay pigeons. Well, they are all fine fellows, and we would be pleased to throw targets for them as often as they come over—and then some.

The wind this morning was blowing a gale, and the day was very cold, conditions that are not propitious to high scores, and the shooter that could keep in the 20 column was going some, and had to keep at it pretty stiff to do so.

Lou Shortey this morning managed to beat out the bunch for high average with 84 per cent., Ed. Staples being the runner-up with 83, and Dave Engle and P. Osborne tying on 82 for third place with the low average prize going to Joe Whitley.

Our next shooting date is March 24, and we are going to have a number of matches between some of our members take place on this date, so if you want to be in line for cigars, ice cream, etc., that will be on hand on this occasion, just be on the job. Everybody is welcome, and if you don't know how to get to the grounds, just ask the first "cop" that you meet.

Essex C. C.

WEST ORANGE, N. J., March 9.—Senator Austin Colgate won a leg on the 1,000-target committee cup with a score of 90 and handicap of 16. In the 25-bird string for the Heller cup, B. M. Shanley, Jr., and Albert O. Headley tied on 23. After three ties in the shoot-off the event was postponed until to-day. The scores:

Committee cup, 100 targets, handicap: Daly (0) 85, J. A. Hart (0) 88, B. M. Shanley, Jr. (0) 91, Gales (0) 77, Colgate (16) 90; H. H. Ross, Jr. (28) 74, Jesse Metcalf (16) 56, L. H. Ross (28) 88, Peter Hauck, Jr. (16) 87, A. O. Headley (16) 85.

Two-man team match, handicap: Daly and Shanley (scratch) 42, Hauck (4) and Hart (0) 50, Ross, Jr. (7) and Gales (4) 40, Headley (4) and George O'Reilly (5) 35. Shanley trophy, ten pairs of doubles: Daly 14, Hart 13, Shanley 13, Gales 11, Colgate 11, Ross, Jr., 11, Metcalf 9, Hauck 11, Headley 11, O'Reilly 7.

Ye Oak Meadow Gun Club.

SANDUSKY, O., March 2.—On the Gillespie cup, Parker and Douglas tied, with Zinn second. Roy Parker won the championship pin at 75 targets. Scores: Championship pin: Roy Parker 60, Douglas 58, Krupp 49, Zinn 47, Bates 45, Champion 44, Donahue 42, Hill 19 out of 50.

Independent Gun Club.

PHILADELPHIA, Pa., March 9.—Although the weather was bad for trapshooting, the entry list was the largest in many moons at the Keystone traps to-day. H. B. Cook won the special cup after a triple shoot-off with Joel Davis, J. B. Fontaine and W. H. Clegg. Chas. H. Newcomb was high gun for the day with 94. Walter Firth was given a spoon as runner-up with a total of 99, while the spoon winner in Class B was Kunkle, after a shoot-off with McKean, the Class C dipper going to Howard George. As a result of the shoot, Cook, Davis, Clegg and Fontaine secure the first wins on the John Philip Sousa trophy.

Sportsmen's Show Shoot.

NEW YORK, March 9.—Philadelphia trounced New York in a team match at the Garden by eight birds. One thousand targets were thrown. The winning team was composed of A. B. Richardson 89, H. W. Kahler 96, J. T. Robinson 91, G. S. McCarthy 94, and William Foord 94. The New Yorkers were represented by F. B. Stephenson 95, R. L. Spotts 96, W. Simonson 93, N. Herrick 93, J. Hendrickson 94. The judges were Neaf Apgar and Jack Fanning.

Newton Gun Club, of Newton, N. J., beat Orange Gun Club by 23 birds in a 250-bird match. Newton: A. B. Buckner 47, E. Cabilis 45, T. Howell 41, C. Mars 41, T. J. Coe 39; total, 213. Orange: F. R. Wicks 43, A. Mosler 31; H. A. Helsinger 32, P. Coffin 41, T. Duke 43; total 190.

Frank B. Stephenson, of Crescent A. C., showed the value of familiarity with arc light shooting, which has been a feature event at Bay Ridge for some time, by winning the indoor championship with the remarkable score of 99 out of 100. During the event he ran 50 straight and missed only one bird out of 150 shot at during the week. Scores: F. B. Stephenson, Crescent A. C., 99; N. S. Herrick, New York A. C., 95; A. Tilt, New York A. C., 95; H. W. Kahler, Philadelphia, 94; R. L. Spotts, New York A. C., 91; J. H. Hendrickson, Bergen Beach G. C., 90; P. von Boeckmann, Bergen Beach G. C., 90; E. von Lengerke, Orange G. C., 90; C. de Quillfeldt, Amityville, L. I., 87; W. Ewing, Montreal, Can., 87.

H. C. Kirkwood won professional "indoor championship" with 334 out of 350. During the event he broke the indoor record with a run of 99. H. H. Stevens finished second in the professional tournament with a score of 329. Other leaders were Neaf Apgar, 328; "Jack" Fanning, 326; "Sim" Glover, 326, and J. T. Skelly, 326.

A young lady, age 14, from Mt. Vernon, N. Y., attracted much attention by her excellent shooting and her grace with the gun. She broke 44 out of 50 targets.

Eagle Gun Club.

A miss of his last bird prevented Harry Morrison, of New Jersey, from securing a victory over the veteran Jack Brewer yesterday in a 100-live-bird contest, under the auspices of the Eagle Gun Club, at Manoa. By losing his bird Morrison was compelled to be satisfied with tying the veteran marksman with 87 kills.

In a 10-bird event George Smith, firing from the 30yd. mark, was the only gunner out of a field of nine to run straight.

Crescent Athletic Club.

BAY RIDGE, L. I., March 3.—The big event to-day, 100-target take home trophy, was won by Charley Blake with 92. He won also the Stake trophy. Other winners were: H. T. Spooner, monthly cup, and Stiner trophy; G. Felix, trophy shoot, and sweepstakes; G. G. Stephenson, Jr., Hyatt trophy, field position. Ties were: J. F. James, W. W. Pell, H. T. Spooner, G. E. Brewer and C. Blake, Vanderveer trophy. C. R. James and G. Felix won the first team shoot, while J. F. James and F. S. Hyatt took the second team event.

Take-home trophy, 100 targets: Charles Blake 92, W. W. Pell 89, H. T. Spooner 88, F. S. Hyatt 85, G. E. Brewer 85, C. R. James 82, G. N. Felix 78, G. G. Stephenson, Jr., 77, J. F. James 77, J. P. Fairchild 71, C. A. Lockwood 66, J. A. Nathan (guest) 73.

Stake trophy, 25 targets, handicap: C. Blake (3) 24; G. G. Stephenson, Jr., (3) 22; F. S. Hyatt (1) 22; H. T. Spooner (4) 20; W. W. Pell (5) 20; G. E. Brewer (5) 20; G. N. Felix (2) 20; G. R. James (1) 18; J. A. Nathan (guest) (0) 18; C. A. Lockwood (3) 16; J. P. Fairchild (2) 16; J. F. James (1) 15.

Monthly cup, 25 targets, handicap: H. T. Spooner (4) 24; F. S. Hyatt (1) 22; G. E. Brewer (5) 22; C. Blake (3) 22; W. W. Pell (5) 21; G. E. Felix (2) 21; G. G. Stephenson (3) 20; J. F. James (1) 18; C. R. James (1) 18; J. A. Nathan (guest) (0) 18; J. P. Fairchild (2) 14.

Trophy shoot, 25 targets, handicap: G. Felix (2) 25; H. T. Spooner (4) 24; C. Blake (3) 24; J. F. James (1) 23; G. G. Stephenson, Jr., (3) 23; C. E. Brewer (5) 23; A. Blake (3) 22; W. W. Pell (5) 21; F. S. Hyatt (1) 20; J. P. Fairchild (2) 19.

Vanderveer trophy, 25 targets, handicap: J. F. James (1) 25; H. T. Spooner (4) 25; W. W. Pell (5) 25; G. E. Brewer (5) 25; C. Blake (3) 25; F. S. Hyatt (1) 23; G. G. Stephenson, Jr., (3) 23; J. P. Fairchild (2) 23; A. Blake (3) 23; G. Felix (2) 20; C. R. James (1) 18.

Stiner trophy, 25 targets: J. F. James (1) 25; H. T. Spooner (4) 25; G. E. Brewer (5) 25; W. W. Pell (5) 24; C. Blake (3) 24; C. R. James (1) 23; J. P. Fairchild (2) 22; F. S. Hyatt (1) 21; G. G. Stephenson (3) 20; George Felix (2) 20; C. A. Lockwood (3) 19. Shoot-off; Spooner 24, J. F. James 23.

Team shoot and sweepstakes, 25 targets, handicap: George Felix (2) 25; H. T. Spooner (4) 24; C. Blake (3) 24; J. F. James (1) 23; C. R. James (1) 23; G. G. Stephenson, Jr., (3) 23; George E. Brewer (5) 23; A. Blake (3) 22; W. W. Pell (5) 21; F. S. Hyatt (1) 20; J. P. Fairchild (2) 19. Won by Felix.

Team race, 25 targets, handicap: C. R. James (1) 23, G. Felix (2) 25; total 48. C. Blake (3) 24, A. Blake (3) 22; total, 46.

J. F. James (1) 23, F. S. Hyatt (1) 20; total 43. J. P. Fairchild (2) 19, George Brewer (5) 23; total, 42. Sweepstakes, 25 targets, handicap: W. W. Pell (5) 24;

George Felix (2) 24; C. Blake (3) 24; G. E. Brewer (5) 22; F. S. Hyatt (1) 21; H. T. Spooner (4) 21; A. Blake (3) 20; J. F. James (1) 19; J. P. Fairchild (2) 16; C. R. James (1) 12. by Felix.

Hyatt trophy (gun below elbow), 50 targets, handicap: G. G. Stephenson, Jr., (3) 337; G. E. Brewer (5) 35; H. T. Spooner (4) 34; C. R. James (1) 32; J. F. James (1) 32; W. W. Pell (5) 31; J. A. Nathan (0) 28; J. P. Fairchild (2) 25.

New York Athletic Club.

PELHAM MANOR, N. Y., March 10.—It was rainy here to-day and a mucky mist came up from the creek back of the traps. Winners were G. W. Billings, St. Patrick's Day cup; ten pair doubles, B. M. Higginson, special trophy, R. L. Spotts, distance handicap. There were four sets of ties, J. G. Batterson and R. O. Muller for March cup leg; G. W. Billings and B. M. Higginson, Billings trophy; G. W. Billings, A. E. Ranney and J. I. Brandenburg, for Pelham trophy; R. R. Debacher and B. M. Higginson, president's cup limb.

Mr. Higginson was high gun for the day with 314 out of 350.

March cup, handicap, 25 targets: G. W. Billings (2) 22; H. Kahler (0) 21; T. Smith (5) 18; G. F. Pelham (2) 23; J. G. Batterson (3) 25; T. F. Patello (0) 16; J. L. Brandenburg (5) 23; T. S. Winchell (0) 10; R. L. Spotts (0) 22; F. A. Hodgman (0) 21; G. J. Corbett (2) 24; B. M. Higginson (1) 24; W. B. Ogden (3) 22; Dr. Johnson (3) 19; R. R. Debacher (6) 20; R. O. Muller (5) 25; T. O. Seltzer (0) 14; G. E. Austin (0) 13, and D. F. McMahon (3) 23.

St. Patrick's Day cup, handicap, 25 targets: G. W. Billings (2) 25; A. E. Ranney (2) 21; H. Kahler (0) 20; T. Smith (5) 20; G. F. Pelham (2) 20; J. G. Batterson (2) 18; T. F. Patello (0) 19; J. I. Brandenburg (5) 20; T. S. Winchell (0) 18; R. L. Spotts (0) 24; F. A. Hodgman (0) 22; G. J. Corbett (2) 19; B. M. Higginson (1) 24; W. B. Ogden (3) 17; Dr. Johnson (3) 20; R. R. Debacher (6) 22; R. O. Muller (5) 18; T. Seltzer (0) 18; G. E. Austin (0) 18; D. F. McMahon (3) 20.

Special trophy, handicap, 100 targets: G. Billings (6) 92; A. E. Ranney (8) 92; H. Kahler (0) 84; T. Smith (20) 81; C. F. Pelham (8) 90; J. G. Batterson (9) 84; T. F. Patello (0) J. I. Brandenburg (20) 86; R. L. Spotts (0) 90; F. A. Hodgman (0) 87; G. J. Corbett (8) 86; B. M. Higginson (4) 96; W. B. Ogden (12) 81; Dr. Johnson (12) 78; R. R. Debacher (23) 90; R. O. Muller (20) 85; D. F. McMahon (12) 84.

Special trophy (scratch), 100 targets: G. W. Billings 86, A. E. Ranney 84, H. Kahler 84, T. Smith 61, G. F. Pelham 82, J. G. Batterson 75, T. F. Patello 72, J. I. Brandenburg 60, R. L. Spotts 90, F. A. Hodgman 87, G. J. Corbett 78, B. N. Higginson 92, W. B. Ogden

69, Dr. Johnson 66, R. R. Debacher 67, R. O. Muller 65, D. F. McMahon 72.

Billings trophy, handicap, 25 targets, Olympic rules: G. W. Billings (1) 22; A. E. Ranney (2) 17; T. F. Patello (0) 16; J. I. Brandenburg (5) 20; F. A. Hodgman (0) 15; B. M. Higginson (1) 22; W. B. Ogden (3) 16; R. R. Debacher (5) 19; R. O. Muller (5) 21.

Ten pairs of doubles, special trophy, scratch: G. W. Billings 14, A. E. Ranney 9, H. Kahler 7, T. F. Patello 8, F. A. Hodgman 11, W. B. Ogden 8, R. R. Debacher 10, R. O. Muller 8.

Pelham trophy, handicap, 25 targets: G. W. Billings (1) 25; A. E. Ranney (2) 25; H. Kahler (0) 22; T. Smith (5) 23; G. F. Pelham (2) 23; J. G. Batterson (2) 18; T. F. Patello (0) 18; J. I. Brandenburg (5) 25; T. S. Winchell (0) 16; R. L. Spotts (0) 22; F. A. Hodgman (0) 23; G. J. Corbett (2) 21; B. M. Higginson (1) 23; W. B. Ogden (3) 21; Dr. Johnson (3) 21; R. R. Debacher (5) 23; R. O. Muller (5) 21; T. O. Seltzer (6) 14; G. E. Austin (0) 11; D. F. McMahon (3) 22.

Distance handicap (special trophy, 25 targets: G. W. Billings (21) 16; A. E. Ranney (21) 17; H. Kahler (21) 17; T. Smith (21) 16; G. F. Pelham (19) 18; J. G. Batterson (19) 11; T. F. Patello (16) 18; J. I. Brandenburg (16) 18; T. S. Winchell (16) 15; R. L. Spotts (21) 21; F. A. Hodgman (21) 19; G. J. Corbett (19) 20; B. M. Higginson (20) 17; W. B. Ogden (18) 21; Dr. Johnson (18) 13; R. R. Debacher (16) 16; R. O. Muller (16) 19; T. Seltzer (16) 15; G. E. Austin (16) 15.

President's cup, handicap, 25 targets: G. W. Billings (1) 21; A. E. Ranney (2) 24; H. Kahler (0) 21; T. Smith (5) 20; G. F. Pelham (2) 24; J. G. Batterson (2) 21; T. F. Patello (0) 19; J. I. Brandenburg (5) 18; T. S. Winchell (0) 15; R. L. Spotts (0) 22; F. A. Hodgman (0) 21; G. J. Corbett (2) 22; B. M. Higginson (1) 25; W. B. Ogden (3) 21; Dr. Johnson (3) 18; R. R. Debacher (6) 25; R. O. Muller (5) 21; T. O. Seltzer (6) 18; C. E. Austin (0) 12; D. F. McMahon (3) 19.

Larchmont Y. C.

LARCHMONT, N. Y., March 10.—Stuart Scott won four events here to-day, including the 100-target handicap and the 135 scratch match. Sixteen gunners shot in each event. In the first, Scott's total was 94, his handicap being 5, and in the scratch contest his total was 113. The runner-up was G. J. Corbett with 111. Scott also won the 15-target scratch contest and a leg on the monthly cup, breaking 24. R. J. Jones was the second man in the 50-target match for the accumulation cup; he made a full score and won the leg, and after tying with T. J. McCahill and Stuart Scott, with 24 each, in the shoot for the vice-commodore's cup he won. McCahill was the winner of the 10-target scratch contest with a full score, and J. G. Batterson won a leg on the Bemis trophy with a straight 25. Dr. A. E. Ranney got the take-home trophy.

The Choice of Thousands of Amateur Winners at the Trap

Mr. J. R. Graham's winning of the 1911 Combined Amateur Average is emphatic proof of the hard, close shooting qualities which recommend the

Remington-UMC PUMP GUN

to novice and veteran alike.

Mr. George Lyon's handling of this arm in winning the E. C. Cup, emblematic of the World's Championship at targets, gave a revelation of its speed at doubles.

Both winnings were made, of course, with Remington-UMC STEEL LINED SHELLS

Remington-UMC — the perfect shooting combination.

REMINGTON ARMS — UNION METALLIC CARTRIDGE CO. - 299 Broadway, New York, N. Y.

Marine and Field Club.

GRAVESEND BAY, March 10.—Following are the scores made on March 9:

Special prize, presented by Erskine H. Lott, for the two highest scores in the first shoot of the day, at 25 targets, scratch: P. R. Towne 23, E. H. Lott 23, Chas. M. Camp 22, Chas. B. Ludwig 20, J. M. Knox 18, Chas. D. Sayre 18, John H. Emanuel, Jr. 17.

First and second prizes won by President Towne and C. M. Camp respectively. The prizes were two beautiful medals, on which the names of both gentlemen will appear hereafter. Mr. Towne and Mr. Camp were applauded by the spectators, and the finish was a very close one. Mr. Camp missed his 25th bird, which would have tied President Towne.

March cup, 100 targets each Saturday, selecting best 300 targets at end of month:

C B Ludwig.....	4 89	J M Knox.....	16 77
J H Emanuel, Jr..	4 84	C D Sayre.....	4 72
E H Lott.....	0 84	C M Camp.....	4 71
P R Towne.....	0 81		

C. B. Ludwig gained the second leg on the March cup, leading Knox six birds over last Saturday.

Special prize, presented by President Towne, 25 targets, handicap:

C B Ludwig.....	1 24	C D Sayre.....	1 21
J H Emanuel.....	1 23	J M Knox.....	4 19
E H Lott.....	0 21	C M Camp.....	1 19
P R Towne.....	0 22		

Won by Ludwig, who, after some difficulty, managed to beat Emanuel by one target. The wind in this event was frightful, and it was all the gunners could do to stand throughout the 25 targets.

Club sweepstakes, 25 targets, handicap:

J M Knox.....	4 25	J H Emanuel, Jr..	1 22
P R Towne.....	0 24	C B Ludwig.....	1 20
C D Sayre.....	1 23	C M Camp.....	1 19
E H Lott.....	0 23		

Won by Knox, who managed to show that he still has his eagle eye of last Saturday, when he gained the first leg on the March cup. President Towne was the runner-up.

Club sweepstake, 25 targets, handicap:

P R Towne.....	0 23	J H Emanuel, Jr..	1 21
C M Camp.....	1 23	C D Sayre.....	1 19
J M Knox.....	4 22	C B Ludwig.....	1 19
E H Lott.....	0 21		

Tie between Towne and Camp. Conditions, miss-and-out. Won by Towne by 1 bird, Camp missing his first target.

Take-home trophy, 25 targets, handicap:

J H Emanuel.....	1 21	P R Towne.....	0 19
E H Lott.....	0 20	C D Sayre.....	1 17
C M Camp.....	1 20		

Won by Emanuel, being the first prize he has won this season.

Most of our gunners are using the Daly single-barrel shotgun. There are only three gunners using double-barrel guns. E. H. Lott was shooting his new single-barrel gun for the first time on Saturday; he shot very well. Lott is the most accurate shot at the Marine and Field traps. GEO. H. BENDER, Supt.

Northern Kentucky Gun Club.

A FEW members gathered at the grounds on March 10, and for the first time in several weeks there was a little something doing in the way of smashing the clays. The weather in this section has been prohibitive of outdoor sport for two or three weeks. The contestants generally shot up to their average. Woodbury has been hibernating all winter, but came out to-day and started in to prepare for the State championship shoot at Lexington this spring. Hammerschmidt was high gun, missing but 8 targets out of 125, and breaking 96 in the last 100. Capt. Dameron gave a nice race for first honors, breaking 93 out of 100. In the last 50 he shot like old times, losing but 2 targets. Irwin is still experimenting a little, and does not put up the work he has done in the past; he shot nearer to his old form in the last 50 targets, but was still several targets away from his high mark. Gould shoots a few occasionally, but has had no time to keep in practice. He is on for a match with J. B. C. on March 17 at 50 targets. The club officers are preparing a program for a season opening shoot, which they say will be very attractive, and will contain several new features that ought to bring out a crowd. There will be inducements for the experts as well as the 85 per cent. men, and every one is invited to attend.

Targets:	25	25	25	25	Total.
Hammerschmidt	21	25	24	23	117
Irwin	18	21	16	21	96
Dameron	23	22	24	24	93
Gould	17	18	35
Woodbury	17	17	18	19	71
Harry	14	17	12	12	55
J B C.	17	18	16	..	51

Meadow Springs Gun Club.

PHILADELPHIA, Pa., March 9.—Thirty-two gunners entered in the banquet shoot and more than double this number sat down to the festive board in the evening. The shooting conditions called for five 15-target events, with a distance and target added handicap.

Murdock and Renner tied for the high gun honors with 66 out of 75. It required two shoot-offs to decide the winner, Murdock finally winning. Kinckener, Butland and Thompson tied for third, fourth and fifth prizes with 65. On the shoot-off, Kinckener won third prize, Butland fourth and Thompson fifth.

H. H. Sloan made the best actual breakage of the day, smashing 62.

Following the banquet, the yearly point competition prizes were awarded. Class A, Hillpot, No. 1; Hogan, No. 2, and Murdock, No. 3. Keenan was awarded first

prize among the B men, Pierce second trophy and Letford third. The Dr. Harvey prize was won by C. T. Garrett, the W. A. Murdock trophy went to A. M. Isphoiding, the L. H. Fish cup to H. H. Sloan, and the F. C. Laws trophy was captured by A. J. Renner. A. Keenan was handed the Dr. Cotting donation.

Scores:	Distance.	Handicap.	Total.
George	18	4	56
Morris	18	5	61
Charles	18	4	65
Renner	18	5	66
Thompson	18	4	65
Sloan	20	0	62

James	16	0	18
Menamin	16	10	26

Paleface Gun Club.

WELLINGTON, Mass., March 9.—Williams again was the high gun at the Paleface shoot here this afternoon. He broke 94 out of 100 targets. Second went to Frank Hilliard, amateur champion of Massachusetts, with 88. Boyce was third with 87.

The Paleface five shot a return match with Needham Country Polo Club, and was defeated by one bird. The scores of the afternoon were:

Queens C. C.

BAD weather caused the postponement of Chapman cup event on the 10th inst. It will take place on the 11th. There was a special shoot at 100 targets, handicap, with scores as follows: D. K. Morrell (8) 91, P. R. Chapman (12) 87, J. M. Kissam (10) 87, Dr. Cleghorn (10) 87, W. Hyland (4) 74.

Cleveland Gun Club.

CLEVELAND, O., March 3.—The club shoot of the Cleveland Gun Club, held Saturday afternoon, March 2, was somewhat of a live wire, fourteen shooters putting up as much shooting as a little tournament and having everything to themselves. The weather conditions were not ideal for trapshooting, the day being cold and dark, and many a shot went astray because the light was bad; but the light of the day was the guest we had with us, Mr. J. P. Blakeslee, better known as Jack, and Mr. Wm. Ambler, both members, but their first time to the grounds for six months. Jack is the real thing, and when he meets Grant at the firing line there is something doing, and it's fun for the bunch. But Jack went to the wrong side in the first 100, as Grant beat him by 3 targets, breaking 85 out of 100 to Jack's 83. But the race of the afternoon at all the events the president, Mr. Rogers, chased Jack and Grant to the tall timber on the home stretch by breaking 169 out of 200; Jack 167 and Grant 165. This contest was not for \$5,000, but just for the love of Mike, and the next will be when the boys get into condition. The February trophies were won by A. J. Stevens, first, and C. B. Genger, second.

Event No. 1, monthly contest, 50 targets, 16yds.: Grant 43, Blakeslee 42, Ambler 40, Flick 40, Rogers 39, Freeman 39, Brown 38, Stepp 38, Stevens 34, Beaumont 34, Weeden 34, Hopkins 33, Thorp 29, Brainard 29.

Event No. 2, annual contest, 50 targets, 16yd.: Rogers 43, Grant 43, Blakeslee 41, Flick 40, Brower 39, Ambler 39, Stepp 39, Stevens 39, Hopkins 39, Freeman 38, Brainard 36, Thorp 36, Weeden 35, Beaumont 28.

Event No. 3, high gun trophy, 50 targets, 16yds.: Rogers 44, Blakeslee 43, Brown 41, Flick 39, Grant 38, Hopkins 37, Stevens 36, Ambler 35, Stepp 35, Brainard 35.

Event No. 4, club trophy, 50 targets, 16yds.: Brown 44, Rogers 43, Weeden 42, Blakeslee 41, Grant 41, Flick 39, Stevens 36, Ambler 36, Hopkins 35, Thorp 35, Brainard 35, Beaumont 28.

March 10.—The regular weekly club contest of the Cleveland Gun Club, Cleveland, O., was held yesterday afternoon at Shooting Park, Stop 16, Mayfield road, and was somewhat of a shoot, fifteen target-breakers facing the traps, and some good scores were put up. C. E. Doolittle, one of the come-backs, handing in the high card for the day, 91 out of 100. Very good. Come again, Charley. The next to this was A. J. Stevens with 86, who is a comer. Starting the year at 66 per cent. shows what a man can do when he gets down to business and knows what he wants. At this writing, I wish to announce that the application of the Cleveland Gun Club to hold a registered tournament, May 30, has been approved by the Interstate Association, and we ask our brother target-breakers to take notice of the same.

In looking over the sporting papers, I notice that some of our native gun clubs are to hold tournaments the coming summer only a few miles from Cleveland, and they are going to be up and doing something to draw the crowd. This is a splendid idea, and the way to make it a success is to be alive and get out among the other clubs that are holding shoots, and extend your acquaintance with your brother sportsmen. Give them the glad hand and ask them to come and see you. Those who stay at home can't expect others to come to see them. Don't expect something for nothing. If the weather will be kind to us on April 3, the Cleveland Gun Club will hold the Washington's Birthday tournament that was to be held Feb. 22, but was declared off on account of the weather conditions. This shoot is a Simon-pure amateur contest. Everybody gets some of the money and lots of fun, so don't stay away and say you were sick, but come and give us the glad hand, and we will return the same to you when you are in need. Scores:

Monthly trophy event, 50 targets: Doolittle 46, Hansen 44, Brown 44, Stopp 44, Morris 42, Dibble 42, Stevens 41, Genger 39, Freeman 39, Brun 39, Beck 36, Hopkins 35, Steve 32, Rockwell 31, Brainard 30, Thorp 30, Alberts 27, Jones 27, Beckley 27.

Annual trophy, 50 targets: Doolittle 45, Stevens 45, Freeman 41, Hansen 41, Genger 40, Stopp 40, Brainard 38, Brown 38, Rockwell 37, Hopkins 36, Dibble 32, Beckley 30, Steve 25, Thorp 23, Peables 20.

F. H. WALLACE, Mgr.

Chesapeake City Gun Club.

THE Chesapeake City Gun Club held its monthly shoot at Toy's Park, March 2. Despite the high, penetrating winds, some good scores were made. Considering the coldness of the day, only about one-half of the members were on hand. The silver spoon for high gun was won by W. A. Brown, of Cecilton. William Arrants and Timothy Rasner tied for the runner-up. In the shoot-off, William Arrants won the dessert spoon. Scores:

Chicago Gun Club.

CHICAGO, Ill., March 2.—With near zero weather and a freezing wind blowing into their faces the fifteen shooters who came out to the park not only found the flighty targets hard to connect with, but they also found it hard to shoot out a frame without getting benumbed fingers. Stannard topped the field in both the practice and club events. MacLachlan recorded the highest score among the amateurs in the club event, in which he broke 43 out of 50, after which he gave a fine exhibition on doubles, in which he broke 22 out of 12 pairs, a remarkably good score, conditions considered. Dickerman and Young each scored 22 out of 25 for second place in the practice event. In the last event of 25 targets at 21yds., Young broke 19, while Taggart was alone behind him with a score of 18.

*Practice event.

March 3.—For the most part of this morning the prospects were poor for target shooting, as it started to snow and a strong wind from the northeast was blowing, giving every promise of developing into a blizzard, but by noon the sky cleared and the sun warmed up the atmosphere enough to induce eighteen shooters to come out. While it was not quite as cold as yesterday, the marksmen had to contend with the same flighty targets, and with the wind blowing into their faces.

The Riverside squad finished their team race at South Chicago in time to get into the fray at our park, and flushed with victory over there, MacLachlan topped the amateurs in both the club event and at the doubles, breaking 44 out of 50 in the first and 19 out of 12 pairs doubles in the latter.

Shaw topped the list in the practice event by breaking his 15 straight, and finished in second place in the club event with a total of 43. Goode, Seelig and Fetherston each broke 41, while Eck was next in line with 40.

Fred Bills dropped only one in the club event, which gave him the top score of 49. Goode took second place in the double event with a score of 16, and then finished up in the last event by breaking 24 out of 25, Kammerer scoring 22 and Jeff 20.

After the shooting was finished yesterday, Jeff's machine was loaded to its full capacity, and then some of the occupants were whirled to the home of the Fetherstons, where a most pleasant evening was spent at a dinner party. Each of the guests found a card beside his place, the hostess having inscribed the following rhyme on them:

"Here's a used-to-be champion of old English stock, Fate tried, with some whiskers, to make him a 'Doc.' When he makes a hum score, it is joy for the winners. They all start for the corner and Doc buys the dinners."

"Here's a neat little package, our friend 'little Jeff,' A 'tooter,' a shooter, and, Mac says, a chef, When the shooting is over, each weary survivor Doesn't look for a chauffeur, they all want a 'driver.'"

"For fear a single amusement we'll lack, We'll double our joys by considering Mac. 'Dead and dead,' says the scorer, when Mac pulls the trigger: The birds sure are broken, the wind cuts no figure. But back on the handicap, then there's the fun, The boys at the club say that Mac strains his gun."

"When clay birds are flighty and the old gun won't work, Then a certain young man curses just like a Turk; This fellow is always placid, and 'Kam,' He never was heard to utter a d—."

"Here's a nice snappy shooter—comes from the West— Wearing no medals pinned on his chest, Making no boasts; he's just sawing wood, His scores show he's careful; he always is Goode."

"This sorry Benedict, here with the 'boys,' Bearer of burdens, sharer of joys, Would gladly exchange the wife he has won For a really first-class, sure-to-work 'pump' gun."

All those present claim to have made straight scores at the dinner table, and now can you guess who they were?

WINCHESTER

"Tournament" Gun

Specially Designed For
TRAP SHOOTING

List Price
\$42.00

The Winchester "Tournament" gun is made according to specifications which meet the ideas of the most successful trap shots.

It embodies features which count in the making of high scores: such as strong and even shooting qualities, balance and length, drop and shape of stock. The selected walnut stock has a heavy rounding comb, and a well-shaped straight grip. The length of pull is 14 inches, drop at comb 1 3/4 inches, and at heel 1 13-16 inches. The stock was worked out with great care, the intention being to have it, in shape, length and drop, fit the physical requirements of the average shooter. The barrel is 30 inches long and handsomely matted on the top. Almost any dealer can show you one of these guns. It is enthusiastically

Endorsed By Many Expert
Shots

Birmingham Gun Club.

BIRMINGHAM, Ala., March 6.—In spite of the mud and rain, ten shooters faced the traps of the Birmingham Gun Club, and all made good scores. Ira Armstrong shot high for the day and broke 94. Mrs. Garl and J. Broyles shot a fine race and tied on 88. Ed. Cornwell made a phenomenal score for a new shooter, as he has been shooting only since January, as is also the score of P. H. Lallande, who is a recruit. Tom Goodbrod, of Mobile, candidate for State Game and Fish Commissioner, shot with us. Mr. Goodbrod was given the unanimous indorsement of the Birmingham Gun Club for the office he seeks. He is recognized as the most able man for the office by the local men, who are interested in game and fish protection. Scores follow:

Shot at. Broke		Shot at. Broke	
I Armstrong.....	100 94	Wm Dunn	100 84

The Du Pont Gun Club.

WILMINGTON, Del., March 9.—While the weather was disagreeable the early part of the afternoon, it did not deter forty marksmen from attending the regular weekly shoot of the Du Pont Gun Club. W. P. Northcott, of Chicago, broke 25 straight in the first event. H. L. Worthington, of Rising Sun, Md., shot in four events and made excellent scores. There were two challenge matches, one for Class C cup and the other for Class D. In Class C, J. W. Anderson was the holder and Stanley Steele the challenger. Dr. Steele defeated Mr. Anderson, 32 to 30 out of 50.

In Class D, L. I. Jarrell was the holder of the cup, he being challenged by W. M. Francis. The match resulted in Jarrell retaining the trophy, the scores being 42 to 31 out of 50.

The final shoot for the Eugene E. du Pont prize was won by C. H. Lofland. This contest has been running since Feb. 1, 1911.

Eugene E. du Pont has expressed a desire to donate another trophy this year. The conditions will be announced later.

The scores in the Coleman du Pont merchandise events were: Class A—E. E. du Pont, 22 out of 25. Class B—W. G. Wood 23. Class C—P. D. Guest 23. Class D—L. L. Jarrell and H. W. Goodman tied on 19.

The scores, at 25 targets, were: P. D. Guest 23, W. Edmanson 20, J. H. Minnick 21, W. A. Joslyn 21, F. H. Springer 10, W. P. Northcott 25, L. Worthington 24, T. W. Mathewson 19, H. H. Lukens 21, Clyde Leedom 19, T. Martin 17, Victor du Pont 15, W. T. Colfax, Jr., 23, L. C. Lyon 17, J. J. Magahern 15, Dr. S. Steele 16, W. B. Sturgis 9, J. W. Anderson, Jr., 15, J. T. Birch 12, W. M. Francis 16, H. Winchester 18, W. Tomlinson 14, Dr. H. Betts 16, L. L. Jarrell 19, N. K. Smith 20, H. P. Carlon 18, F. A. Wardenburg 14, D. J. Dougherty 21, A. F. Hickman 21, S. G. David 14, T. E. Doremus 19, S. Tughton 18, Dr. Bullock 12, E. E. du Pont 22, Dr. A. Patterson 17, R. P. Choate 15, R. S. Wood 14, H. W. Goodman 19, William Coyne 16, L. Mathewson 15.

Bennett Gun Club.

GLOUCESTER CITY, N. J., March 9.—There were two matches at the Bennett Gun Club grounds to-day and one at the grounds of William Robinson, and the winner of all three events was George Horner, of the South End Gun Club, of Camden. The first event at the Bennett Club was an open shoot for a turkey, and there were thirty participants. Each shot at 10 bluerocks, and at the end of the last round Thomas Gibbons, Lippincott and Horner were tied, each having made a clean score, and in the shoot-off Horner won. In the second event Horner defeated William Husted, of this city, in a match shoot by hitting 22 out of 25, and Husted one less. The shoot at the grounds of William Robinson afforded

much interest, the prizes being poultry. There were twenty-three participants and each shot at 10 bluerocks. There were four tied at the end of the last round, and in the shoot-off Horner beat out Ben Martel.

Speedway Gun Club.

NEWARK, N. J., March 7.—B. M. Shanley, Jr., did some fine gunning yesterday at the weekly shoot of the Speedway Gun Club. There was a big turnout of sportsmen. The scores were:

BAY CHESTER, N. Y., March 10.—First match, 200 birds, for the first seven men in New York Stock Exchange championship tournament of Feb. 17: S. Scott 170, H. Whitney 164, A. Corlies 154, P. Kellogg 139, H. Boulton 135, D. Geddes 135, H. E. Dewing 134.

Second match, 200 birds, for second eight in New York Stock Exchange championship tournament, Feb. 17: C. B. Spears 161, H. H. Benkard 153, L. Crawford 151, A. L. Norris, E. Roesler 125, W. B. Pots 113, J. M. Sidenberg 105, J. C. Miller 100.

Montclair Gun Club.

MONTCLAIR, N. J., March 10.—In the shoot for the club trophy at the Montclair Gun Club grounds this afternoon J. C. Atwater and Edward Winslow tied, and in the shoot-off Winslow won. The scores:

First round: G. W. Boxall (3) 20, J. C. Atwater (4) 25, E. Winslow (6) 23.
 Second round: Boxall (3) 24, Winslow (6) 25.
 Shoot-off: Winslow (6) 24, Atwater (5) 19.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Rifle and Revolver

Intercity High School Rifle League.

THE twelfth contest between the high schools of the United States in the Inter-City High School Rifle Shooting League produced no change in the standing of the leaders. Iowa City and Deering High both won their matches this week, and are still tied for first place.

The unofficial score of 960 out of a possible 1000, made by the Iowa City boys this week surpasses the interscholastic team shooting record, taking from the Baltimore Polytechnic Institute the record which they have held for the last week or two with 958.

There are three ties for high individual honors this week. L. Burns and Fred Boerner, of the Iowa City team, and J. M. Hughey, of the Deering High School team of Portland, Me., all totalling 194. The results for this week are as follows:

Iowa City, 960, defeated Business, Washington, D. C., 830; Deering, Portland, Me., 948, defeated Central, Philadelphia, 873; Salt Lake City, 921, defeated Southern, 915; Baltimore Polytechnic Institute, 909 defeated Ogden by default; Morris, New York city, 909, defeated Brookline, Massachusetts, 856; Portland, Maine, 892, defeated Western, Washington, D. C., 802; Manual Training, Washington, D. C., 869, defeated Central Manual Training, Philadelphia, by default.

The standing on March 9 was as under:

	Won.	Lost.
Iowa City High School	11	1
Deering High School	11	1
Baltimore Polytechnic Institute.....	10	2
Southern High and Manual Training.....	9	3
Morris High School, New York city.....	8	4

ALBERT S. JONES, Sec'y N. R. A. of A.

Du Pont Gun Club, Rifle Dept.

WILMINGTON, Del., March 9.—The pistol scores made on the range of the Du Pont Gun Club were as follows: D. Appleby 87, 90, 90, 94, 84; J. Bancroft, Jr., 71; J. M. Pusey, 59.

The rifle scores were: J. W. Anderson 46; R. R. Hartley 17; J. W. Pierce 77, 77, 80, 77.

At Shell Mound Park.

SAN FRANCISCO, Cal., Feb. 22.—Fourteen of the best rifle shots of the Golden Gate Rifle and Pistol Club came as early as 9 o'clock in the morning to show the world that they could make good scores on the Standard American target. W. G. Hoffman made 890, with a clean miss, which was an accident that happens to all shooters—that is, to pull the trigger before the rifle has been placed upon the target. This is the best score that has ever been made by any marksman here since they have been shooting the 100-shot match. He made the fine 10-shot score of 95. Henry Harris won the annual medal in the Champion Class of the pistol shoot of the Shell Mound Pistol and Rifle Club. W. H. Christie won the First Class medal; J. A. Jones the Second Class and H. Glory, Jr., the Third Class.

On the rifle range, F. P. Poulter won the First Class, W. A. Siebe the Second Class and S. Phillips the Third Class.

Feb. 25.—A rather cold north wind came right in on the shooters and made it quite miserable to hold, but the scores were good at that.

The Norddeutscher Schuetzen Club was the main attraction of the day, and a large crowd kept three targets busy all day. Major Ed. Stehn made the best bullseye in the above club. Capt. O. E. Rosberg, of the Red Men, got the best score of the day—221. Geo. Patberg got the best score in the San Francisco Schuetzen Verein, making 222. A. J. Branagan, with 226, made the best 10-shot score in the Golden Gate Rifle and Pistol Club. J. E. Gorman made 96 in 10 shots on the 50yd. pistol range. Capt. J. E. Klein was the high man in the Veterans with 44 out of 50.

FEB. 15 was Possible Pistol Club day, and five of the members took a day off and with pistol grips in hand strolled to the Shell Mound Park shooting range to shoot some U. S. R. A. model targets. In order to have a good day's sport, it was suggested that a 50-shot match be held under record conditions; as we are all liable to smash a record or two, we wanted to be on the safe side.

Match No. 1: H. A. Harris (0) 456, W. A. Siebe (5) 453, A. M. Poulson (15) 429, Geo. Larson (25) 429; M. Nielson (35) 425.

Match No. 2: A. M. Poulson (30) 461, W. A. Siebe (5) 455, H. A. Harris (0) 444, M. Nielson (60) 447, O. Larson (40) 429.

The winners received solid silver spoons of special design.

THE twenty-third annual opening of the most popular picnic grounds and shooting range in the West was held on March 4, when Ludwig Siebe & Sons, Inc., opened the gates to the many lifelong friends who frequented Shell Mound Park during the past years.

W. G. Hoffman made 94 out of a possible 100 in four shots at 200yds., German ring target. This performance gave him the first prize. A. E. Pape followed him with 93. R. S. Wixson made two 49s, which gave him the first prize in the pistol match. W. H. Christie got the best center in the pistol bullseye shoot.

The Shell Mound Pistol and Revolver Club held the regular monthly medal and bullseye shoot, and the attendance was very large. E. Shierbaum was high man with 213 in the champion class in 10 shots on the German ring target, 200yds. A. Thompson made 204 in the first class and G. R. Hauser with 203 was high man in the second, and O. C. Fetermen was the best in the third class.

Capt. Larsen took a 94 to his credit in the first class pistol, and whatever got into M. Nielsen, when he made a 90 in the second class, is a mystery to everybody.

W. A. SIEBE.

Eastern Inter-Collegiate.

THE tenth week of the matches in the Eastern Inter-collegiate League produces no material change in the standing of the teams. In the final match of next week Massachusetts Agricultural College and Princeton come together, and the result of this match will decide the championship of the League. As Massachusetts is shooting in better form than Princeton, they probably will win the match. The tie for third place remains unbroken, as North Georgia and Harvard both won their matches. A noticeable feature of the shooting is the big improvement being made by all the colleges in their shooting, North Georgia, Harvard, Louisiana State and the United States have made big gains in their scores, especially the latter college.

Again Massachusetts had the honor of putting up high score for the week, with the Surgeons a good second. High individual score was made by B. L. Poole, U. S. College, with 98 standing and 98 prone, a total of 196, with E. R. Lloyd, of the Aggies, runner-up with 96 standing and 99 prone, total 195.

The results of the matches shot this week are as follows: Massachusetts Aggies, 957, defeated Louisiana State, 931; U. S. College, 950, defeated Delaware College, 905; Harvard, 939, defeated University of Pennsylvania, 917; Princeton, 931, defeated Maryland Aggies, 843; Norwich, 854 defeated New Hampshire, 829.

The standing on March 9 was as follows:

	Won.	Lost.
Massachusetts Agricultural College.....	10	..
Princeton University.....	9	1
North Georgia Agricultural College.....	8	2
Harvard University.....	8	2
University of Pennsylvania.....	6	4
Norwich University.....	4	6
West Virginia University.....	4	6
Maryland Agricultural College.....	2	8
U. S. College of Veterinary Surgeons.....	2	8
New Hampshire College.....	1	9
Delaware College.....	1	9

Kynoch Ball Shot for 12-Bores.

UNDER the very appropriate name "Destructor" bullets, Messrs. Kynoch have issued the interesting projectiles here illustrated. They are intended to be used in ordinary smooth-bore shotguns, cylinder or choke, as the case may be. The regular ball and shotgun has its

Its prime purpose is the killing of soft-skinned big game, though it also possesses considerable utility as a shotgun. Its only handicap is its greater weight compared with a shotgun pure and simple. Where, on the other hand, birds are the rule and big game the exception, a shooter would elect to use an ordinary light-weight sporting gun, but, on the chance that something interesting might at any time turn up, he would carry in a convenient pocket half a dozen rounds of ball cartridges. It is only of late years that the loading of such ammunition has received special attention from manufacturers, and even the columns of this paper contain singularly few references to the subject. The new Kynoch bullet possesses several unusual features. It consists of a comparatively thin leaden envelope, gen-

Five preliminary shots at 18yds. (3in. bull) with Kynoch Destructor bullets from true cylinder smooth-bore shotgun. (Half-size reproduction.)

own special field of work, viz., where soft-skinned game is the rule rather than the exception. The extra accuracy due to the rifled muzzle, coupled with the high power of the cartridges used, made it a special weapon.

Seven shots with Destructor bullets at 15yds. from right barrel of double smooth bore without rest, 3in. bull. (Reproduced half size.)

erally of spherical form, into the interior of which are tightly fitted some sixteen smaller bullets running about thirty to the ounce. The total weight of the bullet is as nearly as possible 11-10oz., thus striking a sort of mean between 11-16oz. and 1½oz. Its weight is therefore that of an ordinary sporting charge of shot as used in a gun of medium light build. The novel construction thus gives the bullet a moderate total weight, which compares favorably from a recoil point of view with the 15-16oz. of a solid 12-bore ball. The projecting ribs on either side of its "equator" make a true fit with the walls of the barrel, and impart a power of accommodation to guns tight in the bore and an ability to pass the choke, if such exists, without offering any undue resistance.

The accompanying targets are extremely interesting as showing what a wonderful degree of accuracy can be achieved at a range of 20yds., which fully covers the charging distance of dangerous soft-skinned animals. The construction of the bullet naturally lends itself to

Marlin
REPEATER
Model
1897

The best-made .22 rifle in the world!

Shoots all .22 short, .22 long and .22 long rifle cartridges without change in adjustment; excellent for rabbits, squirrels, hawks, crows, foxes and all small game and target work up to 200 yards.

It's a take-down, convenient to carry and clean. The tool steel working parts cannot wear out. Its Ivory Bead and Rocky Mountain sights are the best set ever furnished on any .22. Has lever action—like a big game rifle; has solid top and side ejection for safety and rapid accurate firing—the real test of a repeater.

Note the beautiful case-hardened finish and the superb build and balance. Examine at your gun store or send three stamps postage for new big catalog of all Marlin repeating rifles and shotguns. Do it now!

Game Laws in Brief

A revised edition for 1912.

It gives all the fish and game laws of the United States and Canada. It is complete and so accurate that the editor can afford to pay a reward for an error found in it.

"If the Brief says so, you may depend upon it."

Sold by all dealers, or by mail by us. Price, twenty-five cents.

Forest and Stream Publishing Co., 127 Franklin St., New York

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He knows it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring**.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. **LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N.Y.**

Established 1863

produce a maximum of damage and shock upon impact. The single bullet formation concentrates the whole weight of the impact on whatever spot is struck, thus overcoming the disadvantages of buckshot charges. The dangers of such have been sufficiently emphasized in

A right and left fired with Kynoch Destructor bullets from the shoulder at 30yds. after missing the entire target, 15in.x18in., when firing with a rest under the fore-end; 3in. bull.
(Reproduced one-quarter of full size.)

recent correspondence, which is to the effect that the sub-division of the load in a plurality of separately striking bullets unduly diminishes the power of skin penetration. A single bullet, containing within itself a capacity of disruption after entry, appears to provide a

Five shots at 20yds. (3in. bull) with Kynoch Destructor bullets fired under the somewhat distracting condition of taking velocity.
(Half size reproduction.)

happy compromise. Buckshot gives the advantage of striking several places simultaneously, and thus increases the chances of finding a vital spot. This argument is to a certain extent answered by the fact that if both barrels of a double gun are loaded with ball, a shooter of good nerve should be able to insure at least

Seven shots with Destructor bullets at 15yds. from left barrel, without rest; 3in. bull.

The Result of Over a Century's Experience

Perfection in powder-making is only achieved by exercising the most scrupulous care in the selection and preparation of raw materials, employing skilled workmen exclusively, and using only the most improved modern mechanical equipment.

This is the Du Pont method and accounts for the unequalled reputation among sportsmen enjoyed by the Du Pont brands of Smokeless Shotgun Powders. One of the most popular of these brands is

A dense powder that is absolutely uniform in velocity and pattern. Waterproof—not affected by extremes of heat or cold. "INFALLIBLE" Smokeless Shotgun Powder will not pit the gun barrels.

UNEQUALED FOR FIELD AND TRAP-SHOOTING See that your shells are loaded with INFALLIBLE

E. I. DU PONT DE NEMOURS POWDER COMPANY

Pioneer Powder Makers of America

ESTABLISHED 1802

Wilmington, Del.

one well-planted shot out of the two barrels. It is somewhat surprising that at the quite considerable distance of 30yds., the size of diagram is such as to represent a thoroughly good hitting chance. Especially is this so when it is remembered that animals when struck have a tendency to pause after the first surprised leap, thus offering an opportunity for a second barrel to be delivered under even more favorable conditions than the first. Three diagrams were made while shooting with a single barrel experimental gun from an ordinary table-rest. They are necessarily reproduced less than the original full size, but the true measurements are as follows:

ACCURACY TESTS OF KYNOCH DESTROYER BULLETS.

18yds., 5 preliminary sighting shots, centers contained in	4.0in.x 3.0in.
20yds., 5 shots while measuring velocity.....	4.3in.x 5.7in.
30yds., 10 shots deliberately fired.....	8.6in.x 12.9in.

The scientific tests consisted of measuring pressure and velocity. The following records were obtained:

PROOF RESULTS OF KYNOCH DESTROYER BULLETS.
Loaded by Messrs. Kynoch Ltd., into Sallinoid gas-

tight waterproof cases. Charge 33.4grs. of K.S.G. powder. Bullet, 480.5grs. (1oz. 43grs.), Destructor pattern. Wadding 1-12 card over powder, 7-16 also, 1/4in. felt; 1-16 card over felt, bullet acting as its own top wad.

Chamber pressure.	Velocity over 20yds.
1. 2.70 tons per sq.in.	6. 1118 f.s.
2. 2.29 " " "	7. 1177 f.s.
3. 2.95 " " "	8. 1172 f.s.
4. 2.50 " " "	9. 1156 f.s.
5. 3.35 " " "	10. 1175 f.s.
Av. 2.76	Av 1170f.s.—1434 ft.lbs.

The great regularity of both sets of results, but more especially of the velocity, is an extremely satisfactory feature of the bullet, arising largely no doubt from the specification of loading which has been adopted. The moderateness of pressure is a distinctly valuable feature in view of the hot climates in which these cartridges will be likely to be used. Altogether the bullet appears to pass in a thoroughly satisfactory manner the variety of tests to which it has been subjected. Some supplementary tests have been conducted to answer an almost certain criticism of sportsmen. They would say, "It is

all very well to get good, groups with a single barrel gun, but what about a double?" The first shot at 30yds. from a double gun with the fore-end lightly resting on a pad was a clean miss of a 15in. by 18in. target. The distance was shortened to 15yds. to find where the shots were going, and as the table rest is a somewhat cumbersome thing to drag about, the shooting was done in the ordinary standing position. A bull was scored, and the series was continued, and regarded as somewhat of a fluke, but when the same fluke was repeated with the left it ceased to look like a fluke.

Gunmakers may be able to say whether barrels laid together with a trueness suitable for shot charges may be expected to behave up to this standard with bullets. Our experience is for the moment confined to one gun.

Ten shots at 30yds. (3in. bull) from same gun with Kynoch Destructor bullets. (Quarter size reproduction.)

As regards sighting, the shot of the top lever screw made a very effective back sight, and the front bead did the rest. Possibly the many rounds that our expert fires per annum when measuring velocity gives him an unusual power of planting charges on a particular spot. Certain it is that sportsmen often complain of the difficulty of taking stationary shots when the same objects would be invariably hit flying. If one round is extended to a series of fourteen, as in the present instance, the effect on the nerves is distinctly trying. Private sportsmen when testing a rifle generally break down at about the fourth shot. These reflections form a suitable introduction to the final right-and-left at 30yds. The last shot was undoubtedly pulled a trifle high.—London Field.

Iowa Wins Rifle Championship.

WASHINGTON, D. C., March 9.—University of Iowa today was declared by the National Rifle Association as winner of the championship of the Western Intercollegiate Rifle Shooting League, having won all nine matches of the series. University of Minnesota, with eight victories and one defeat, takes second place, while Purdue, Michigan Agricultural College and University of California are tied for third place, with six victories and three defeats. Arizona and Nebraska are tied for sixth place, with three victories and six defeats. College of St. Thomas was last, with only one victory out of the nine matches.

The Iowa team will shoot with the winners of the Eastern League for the championship of the United States as soon as the eastern matches finish next week. It is likely Massachusetts Agricultural College will win the eastern championship, standing this week one match ahead of Princeton, with which she will shoot next week.

Western League results this week were: Iowa defeated Michigan, 958 to 855; Purdue defeated St. Thomas, 927 to 796; Minnesota defeated Michigan Aggies, 926 to 886; California defeated Arizona, 922 to 854; Nebraska defeated Kansas, 861 to 0, by default.

Genesee County F. & G. P. Ass'n.

BATAVIA, N. Y., March 9.—At our regular monthly meeting last night we admitted twenty new members and had another rifle contest for a rifle. In the qualifying round the side captained by Mr. Childs scored 2752, by Mr. Farwell 2747, only 5 points difference with 58 shooters. The ten high men then shot for the rifle, which was won by Mr. Wm. Susat. Scores follow, possible 250; Farwell, Watson and Case handicapped 5yds.: Wm. Susat 238, M. Mason 236, N. A. Whitcomb 231, W. H. Squires 229, E. S. Watson 224, W. Tyler 223, J. Osborne 222, F. M. Farwell 215, Arch Case 209, M. E. Barnes 202.

C. W. GARDINER.

FISH PROPAGATION IN WEST VIRGINIA

Continued from page 333.

State, except for artificial propagation, should be prohibited. I know of one case in particular, where nonresidents of this State spent a number of days along one of the finest trout streams, and during this period caught hundreds of trout and shipped them out of the State. This should certainly be prohibited by law.

Third—The question of an open season for catching our game fishes is of special importance. As streams are more easily fished out than lakes, and of the latter we have none, I would recommend that our laws provide a closed season of eight months for brook trout and rainbow trout, viz., from Sept. 1 to April 1, and for small-mouth black bass and large-mouth black bass, a closed season from Nov. 1 to July 1. These periods will well protect these fishes during their spawning seasons, and at the same time allow a reasonable open season.

Fourth—Under the present law it is lawful to take and keep a trout of four inches in length. This provision should, by all means, be changed and the limit in length be increased to six inches.

It will be seen that I have not confined myself very closely to the subject of this paper. I have taken this liberty because I believe the points upon which I have touched are of special importance just at this time.

In conclusion, let me say that I predict a bright future for the sportsmen, and the people of West Virginia in general who are interested in our game animals, birds and fishes. The problems are numerous and difficult, but they will be solved. The interests of the lumberman, the miner and the tanner, and the sportsman will alike be protected by wise legislation on the part of our Legislature.

I look forward to the time, in the not distant future, when it shall be our privilege and pleasure to at times lay aside the busy cares of life, and taking up our rods and reels and proceed along our favorite streams, those pure limpid waters once so characteristic of the streams of West Virginia, and thence return to friends and loved ones with our creels "heaped up, pressed down, and overflowing."

GAME FARMS.

WORKING under an act passed by the Legislature last year, appropriating \$10,000 for the establishment of game farms, the Massachusetts Fish and Game Commission has decided upon the policy of establishing two or more game farms in different sections of the State. Accordingly the first start will be made in the town of Wilbraham. The commission has leased for a term of years 150 acres of land in the southwest section of the town, and work has begun in getting the farm under way. A building is being erected, and before spring opens yards, pens and coops will contain large numbers of pheasants, quail, Hungarian partridges, prairie chickens, wild turkeys and ducks of different species. From time to time as is required additional land will be leased, and it is expected that thousands of birds will be sent out from this farm to different sections of the State.

Wilbraham, which is now noted for its celebrated peaches, will soon have a world-wide reputation as a producer of artificially reared game birds. The section in which this farm is located has always been one of the best sections of the State for wild quail and partridge, and

the commission feel that no better place could be selected for this game farm. The members of the Springfield Fish and Game Association are delighted over the prospect of having a large State game farm in the western part of the State, and much credit is due to their officers in bringing about this result. Doubtless as soon as the spring opens large numbers of people will be interested to observe the different game birds, and hundreds of automobiles will daily pass the farm.

The Springfield Republican says that the commission has leased the farm of John H. Reader, and two adjoining tracts, all of which is ideal land for game propagation. Mr. Reader has been successful as a raiser of chickens and turkeys, and at the present time has a large flock of tame turkeys and one wild Virginia turkey, which he hatched for Robert O. Morris from eggs received from Virginia. This bird is now nearly full grown, and is a handsome specimen of the turkeys that once covered all of Western Massachusetts. This bird is very tame, and will eat out of Mr. Reader's hand, and readily answers to the name of "Wildy." Mr. Reader will be retained by the commission. The building now being erected will be used during the winter as a shop, in which coops, pens and yards can be built, ready to receive the birds as fast as they are shipped from the State game farm at Sutton.

Superintendent Arthur Merrill was in Wilbraham the other day in company with Commissioner George H. Graham to make final arrangements for starting the work. The commission now has about 800 pheasants and 200 quail for breeding stock, besides large numbers of Hungarian partridge, ducks and prairie chickens, all of which will be propagated on the Wilbraham game farm. The full board of commissioners after looking at game farms in Missouri, Illinois, Pennsylvania, New Jersey and New York pronounced the Wilbraham location an ideal one for propagating game birds.

All birds will be hatched and reared in confinement, and when they are at the right age will be shipped to different sections of the State for restocking depleted covers. It is proposed to allow a liberal consignment of birds to be liberated on State reservations and in all sections where shooting is prohibited, so as to give the birds a chance to propagate and overflow into the shooting covers. The Springfield Country Club has applied for a consignment of pheasants, and with the large area that they control it is believed that the birds will increase rapidly.

PROTECTION FOR BIRDS.

THE secretary of the State Game and Fish Commission has made an appeal for the protection of game birds that should receive the attention of every one interested in their preservation. Thus far the winter has been very hard on them and unless some care is taken of them now many of them must perish. The secretary asks that all who can do so make it their business to feed the birds as often as they can and provide shelter of some kind for them.

It is reported that many birds are already starving, and this is no doubt the case. The heavy snows have covered up the natural feeding grounds, so that for some time they will have to depend upon "charity" if they are alive. Sportsmen, both in this State and in New Jersey, ought to interest themselves in doing what they can to tide them over the winter.—Philadelphia Enquirer.

KILLED BY WILD ANIMALS.

THE most recent statistical abstracts for India show that within ten years no fewer than 243,663 persons have been killed by wild animals and snakes in that country. Of this vast number of victims 8,894 were accounted for by tigers, 4,355 by leopards, while 219,249 succumbed to snake-bites. In the same period 968,329 cattle were killed, chiefly by tigers and leopards. In 1909, 190,871 licenses to destroy wild animals came into force under the Indian Arms Act.—Shooting Times.

TURNING HUMOR TO ACCOUNT.

DAVE TROMBLEY several weeks ago shot a white owl in the marsh between Saginaw and Bay City—the arctic or snowy owl, rarely seen so far south. It was merely wing-tipped and soon recovered from its injury, says the Saginaw Courier-Herald, so Dave gave it to "Ted" Brown, at the Bancroft house. The latter soon made friends with the owl, teaching it to take raw liver out of his hand and to let him scratch its head, but it snaps and hisses at any one else who approaches. The bird has the freedom of the billiard room at the hotel, and seems contented with its winter quarters.

"Ted" conceived the idea of forming the "White Owl Club"—which proved an immense success. The initiation fee was fixed at such sum as the candidate cared to pay, which was dropped into one of the Rescue Mission boxes. Then the initiate was taken back to be solemnly introduced to the owl, which never winked an eye, taught the grand hailing sign of the order, and entered as a full-fledged White Owl. The membership grew with great rapidity and when the Rescue Missioners came around to collect they found over \$60 in the treasury, which they bore away with delight.

EXPORTS OF FIREARMS AND GUNPOWDER.

FOR the first ten months of 1911 the value of firearms exported from the United Kingdom was £355,447 (\$1,729,783), as compared with £205,085 (\$998,046) and £177,317 (\$862,913) for the corresponding ten months of the two previous years. Exports of gunpowder show a reduction in value. The total for the first ten months of 1911 was £131,521 (\$640,047) and 53,450 hundredweight (hundredweight = 112 pounds), as compared with £149,345 (\$726,787) and £144,590 (\$703,647) in value and 60,290 hundredweight and 60,316 hundredweight, respectively, for the same months of 1910 and 1909.

Bulldog Breeders' Show.

W. C. BECHTOLD, of Philadelphia, has the honor of owning the best bulldog exhibited at the Fifth Members' Show of Bulldog Breeders of America, held on March 9, at Lyric Hall, New York city. His bow-legged beauty Bosco Baronet, for which he paid \$8,000, took first in open, over 45 pounds, limit over 45 pounds, and the blue ribbon, and deserved every award beyond any shadow of doubt.

Unfortunately Ch. Leone Hazelwin, although exhibited, was not entered, for the consensus of opinion was that Bosco would have taken away his laurels. As it was, Leone's nose was out of joint, figuratively speaking. Princess Merlow, a beautiful bitch, took the blue ribbon and won in her class. The show was eminently successful, for which much thanks is due Secretary A. D. Gillette.

The entry list numbered 196 and the bench 95. The judges were R. R. Littlefield, of Gardner, Me., for the dogs, and W. A. Betts, of Woodside, L. I., for the bitches, A. D. Gillette, secretary of the Bulldog Breeders' Association, acting as referee.

The following is the list of classes and their winners:

Puppies—First, Rockhill Tommy; second, Bully Hayes; third, Broad Stone Trumps.

Junior, Dogs—First, Buttons II.; second, Merely's Son; third, Bill Cerebus.

Novice, Dogs—First, Merely's Son; second, General Gladiator; third, Jacobite Clansman.

American Bred Dogs—First, Elmington Huckfinn; second, Buttons II.; third, Robbinswood Gingarus.

Limit Under 45 Pounds—First, Buttons II.; second, Robbinswood Pindarus; third, Thornbury Magnate.

Open, Under 45 Pounds—First, Robbinswood Pindarus; second, Gotham Lord Beresford; third, Thornbury Magnate.

Limit, Over 45 Pounds—First, Bosco Baronet; second, Elmington Huckfinn; third, Kilmorey.

Open, Over 45 Pounds—First, Bosco Baronet.

Blue Ribbon Class—First, Bosco Baronet; reserve, Robbinswood Scrooge.

In the bitches' class the winners were: Puppies, Gaby; junior bitches, Balmoral Princess; novices, Thornbury Pearl; American bred, Princess Merlow; limit, under 45 pounds, Gotham Queen of Mersey; open, under 40 pounds, Thornbury Pearl; limit, over 45 pounds, Lady Jane; open, over 40 pounds, Princess Merlow; blue ribbon class, Princess Merlow; reserve, Lady Jane.

Keep Wounds Clean.

WOUNDS should be thoroughly washed and cleansed, taking special care to see that no hair is left in the wound, as this is a very common source of trouble. If the wound be serious, it should be stitched—not too close together—and covered with old linen, kept wet with cold water.

In about three days, if the animal is in good health, the stitches should be picked out, and the wound dressed with iodoform powder by sprinkling it over the entire surface and again covering with the wet linen. If the wound is very serious, you should at once call in the services of a veterinarian.

JILL and her progeny by Tesca, fine specimens of the almost extinct breed of Chesapeake Bay retrievers, and shown at the last Westminster show, are for sale at the kennels of Miss Hydon, Bogota, N. J. Jill won second at the Garden two weeks ago. These dogs are owned by James A. Stillman, the New York banker, which is sufficient evidence as to their quality.

WORKING sheep dogs are becoming quite popular in America, so much so that arrangements are being made by a Scotchman, whose home is in America, to take to the far West two teams of working dogs to give public exhibitions in the States of Iowa, Minnesota and South Dakota.

Tackle—the question

We were in the New York Aquarium yesterday, and to our surprise saw a school of six-inch brook trout rising to the frayed end of a piece of string that hung from the wire screen over the tank. They worked hard in their own young way to get that string, but it was a bit too far for them to reach. *They didn't quite know how* to get what they wanted. This reminded us that it was about time to offer the services of our fishing experts to the fishermen of FOREST AND STREAM. Many a man, like the young trout, needs information on the subject of tackle—how to tackle the fishing problem is your proposition. How to tackle for the fishing problem will be answered—ask us about rods, reels, flies and places to buy them. There is just as much in knowing where as in knowing how to buy.

If you know *how* and *where* and *what* to buy, maybe we can tell you the best and most accessible places to use them. These and other points about fishing are free to FOREST AND STREAM readers.

INFORMATION DEPARTMENT
FOREST AND STREAM
127 Franklin Street New York

Spring Fishing Number

Our March 23 issue will sound the opening note of the spring fishing season. It will be a specially attractive number, having a very beautiful front cover, printed in colors—handsome enough to frame.

It will contain articles by the best writers and will be of intense interest and value to everyone interested in fishing, and will be kept for reference for a long time.

The advertising pages will also be examined carefully because of the valuable helps given in the advertisements of fishing tackle, camp equipment, resorts, arms and boats. Forms close March 16.

Fishing Fever.

IF, as the poet says, the young man's fancy turns to thoughts of love in the spring, perhaps it is equally true that those who are not quite so young as they once were begin to think of fishing when the warmth of the sun stirs their blood. They call it fishing fever, and when two anglers meet, they say: "Have you got the fever?" and laugh heartily, knowing as they do that the answer is obvious. Other persons find solace in making verses on the bursting buds and the returning birds, and still others spoil their Sunday clothes wading in swampy places after pussy willows or searching for the odoriferous skunk cabbage which, once found, is left alone.

Combining fishing fever and rhymes is beyond some of us, but not to two veteran anglers, as these extracts from letters attest. John D. Whish, for years secretary of the old Forest, Fish and Game Commission, sent Col. John Wilkin, of Middletown, the following:

"Time is coming when the ice will leave the brooks, and I s'pose you spend your Sundays fixing up your rods and hooks, testing leaders, mending waders and the Lord knows what besides, for a fellow must make ready while the chance with him abides. There are reels that he must oil, there are lines he must uncoil, there's a creel that must be varnished so the wet grass will not spoil. There's a flask to fill with bait—that's a task that will not wait 'til some morning when he oversleeps and fails to meet his mate. But I do not doubt you've done all these things and found them fun, and that you are fit and ready now to whip each foaming run. So I wish you grace to wait, if so hard should be our fate that the coming fishing season should not early be, but late.

"All is well here, but that book, for by neither hook nor crook have I yet secured a copy, and no matter where I look everything seems sewed up tight, and there's nothing yet in sight, but I have my jimmy with me and will use it, so good-night."

And the colonel replied:

"Yours of the 27th came duly to hand, and I'm sorry that book you've failed to land; but keep your 'jimmy' with you and pry with might and main, and no doubt that soon or later success will crown your efforts should you not become insane.

"Yes, you're right; I've hauled my tackle over. Likewise everything in sight, and now I am only waiting for the trout to begin to bite; but don't you know my dear Whish that with 'bait' I rarely fish; I much prefer the fly, so my flask I'll have to fill with good old apple, gin or rye.

"Our camp, 'The Pines,' soon will be open wide. The latch string always out, never pulled inside; so on some fine May or June morning let a 'Big Ben' give you warning to come and with us a week or more abide.

"This is not your first invite which with my pen I did indite. Can think of nothing more to write, so good-night."

TADPOLICE.

I state a fact. In many bogs
To see that there is peace.
Among the lizards and the frogs,
They have a tadpolice!

THE FISHING ROD OF QUALITY

Anglers who purchase THOMAS RODS make no mistake. These rods are made by hand from the very best grade of split bamboo, the fittings are German silver, and hard drawn. Every rod carries the maker's guarantee. Fly or bait rods will be sent on approval, to be returned at makers' expense if not satisfactory. Send for booklet illustrating and describing all sorts of rods for fresh and salt water fishing.
F. E. THOMAS, 117 Exchange St., Bangor, Me.

Make your own Minnow Trap

by attaching to a Mason fruit jar or large bottle, a BRIGGS "LEADIN." Can be carried in your pocket or tackle box. Made of transparent glass, weighs but 3 1/2 oz. Price 50c postpaid. Patent pending.

Keepem Alive
New invention—strongest and safest fish stringer—keeps your game fish alive. Patent hook with safety catch goes through both lips of fish—they don't drown but swim.
Absolutely Weedless—Solid Brass—Rustless.
Each fish on a separate hook. Combined weight comes on shanks of the hooks, not on pins. No crowding, no smothering. Length 44 inches. Do not loosen your stringer to add the fish.
Holds 75 pounds yet folds compactly.
You can carry the Keepem-Alive in your pocket. It makes a good game stringer. Hooks are interchangeable—more can be added.

Zimmy, Fisherman

By FREDERIC ARTHUR DOMINY

BETWEEN shots on the billiard table we were talking of trout fishing, another fellow and I, and I was protesting at the dictum of that old bug-a-bear, duty, who said, "Keep your hand at the wheel, no vacation this spring for you, save a day or so at a time." Who can get any fishing, trout fishing especially, in a two days' excursion unless you are a member, or at least the friend of a member, of one of those fishing clubs where the captains of industry spend their week-ends, consuming high-balls and culinary tid-bits and casting a fly or baited hook for an hour or so into a pond so thickly stocked with trout that you could almost catch them with a dipnet.

The Adirondacks and Maine were both impossible. I could not even afford the time necessary for a little run up into the Catskills, although I did know a stream there where a fellow could get decent fishing, but, as I explained to Jack, what was the use of wasting two days on such a fickle proposition.

"I'll tell you what I'd do," remarked Jack; "if I were as crazy about catching a few fish as you are, I'd pack my grip and take a morning train for Islip, find Zimmy and get him to take me out."

"Zimmy? Who is Zimmy?" I inquired curiously.

"Zimmy is the man who can catch trout where the ordinary fisherman wouldn't find one in a hundred years. I know, because I've seen him do it. He'll fish a brook that you could step across and get fish out of it. Good ones, too. He don't bother with anything under eight inches. If you can get him to guide you, you will come home with fish."

"Where did you say I could find this most remarkable man—I-something-or-other?" I asked.

"Islip. Get off at Islip and ask the first person you see where Zimmy lives. When you find him, just say that Jack Murray sent you down

and that you would like to have him take you fishing. If he takes a fancy to you, he'll go.

ing grounds the greater would be my satisfaction if the fishing proved to be half what Jack said it would, so the following morning, instead of a week or two later, I boarded a train, and after an hour's ride, the brakeman announced, in the voice common to that profession, "Oisip."

When I had alighted a youngster, with sharp eyes for the rod that indicated my intentions, greeted me with, "Goin' fishin', mister?"

Here was a mine of information that could be developed easily, so I speculated to the extent of a dime and learned that Zimmy's full name was J. Zimmerman Brown, a man of parts, the best shot and the slayer of the most quail during the open season, owner of the fastest hounds that ran the most foxes to earth in the winter, caught the most trout in the spring, and the most bluefish in the summer. All this the youthful admirer of Zimmy imparted and much more as he trotted along beside me, on the way to the home of this notable citizen.

We found Mr. Brown, or rather Zimmy, for he insisted after the first half hour's acquaintanceship in my so addressing him, in his back yard with his hounds.

"Here's a man who wants to see you, Mr. Brown," announced my young friend, importantly, raising his voice to a shrill scream, determined to be heard above the deep-throated tonguing of the dogs.

"Jest a minit, mister," Zimmy shouted. "Here Drive! Here Lead! Here Thrash! Get in your boxes, you noisy devils," he commanded sternly, and they obeyed. Then he turned to me. "What can I do for you, mister?"

"You can take me trout fishing," I replied, and introducing

myself, told him of Jack's recommendation. "Jack says you're the best fisherman he ever knew," I added.

LENDING A HAND.

From a photograph by Norman E. Spaulding.

and if he does, you'll most certainly get fish."

On my way home I decided that the sooner I made the acquaintance of Zimmy and his fish-

"Sho," he said deprecatingly; "I've knowed Jack ever since he was a boy—fact is we was boys together—an' he allers was inclined to make out that the other feller was smarter'n the ol' Harry. But, anyhow, seein' that you're a friend of his, I'll 'blige you. When do you want to go?"

"Just as soon as we can," I answered. Then it occurred to me that nothing had been said about paying him for his services. "Pay," he asked. "Didn't you jest tell me you was a friend of Jack Murray's. I ain't in no pressin' need of money as I knows of and—"

"But," I interrupted, "here I am asking you to waste a couple of days' time on me and I think that I ought to pay you for it."

"I ain't fishin' for pay," he replied shortly. "If you want to hire somebody, I'll tell you who to look up, but if you want to go, friendly like, an' willin' to do your share, you can go with me."

"I want to go with you, sure," I said, angry at myself for so unwittingly placing the affair in such an unfavorable light, "and I'm perfectly willing to go on your own terms."

"Now, that's better," he answered. "Jack had oughter told you that I wasn't in the business for money. I've got a little somethin' of my own an' what troutin' I do is for the fun of the thing. An' as you say you ain't got much time to waste, we'll start right off," he added. "Come on in the house an' get out of them store clothes, an' while you're changin' I'll ask the missus to put us up a bite to eat."

A half hour later we were jogging along the road in his two-wheeled cart, and he was giving his views on fly-fishing in reply to a question, for I had been curious to know where he stood on that subject.

"Fly-fishing's all right," he said, "an' as far's I'm concerned, I favor it. There's all the difference in the world catchin' a trout on a fly or a baited hook. It's a good deal like when you're shootin' quail an' make a pretty double, right an' left, slick an' clean like. There's no slobberin' work there. You've took your chance an' made good, an' that's like catchin' trout with a fly. Any fool can watch his float an' when it goes under give a yank an' jerk a fish out of the water, but 'tain't every one can make some feathers hit the water in jest the right spot an' in jest the right way an' fool a trout into thinkin' it's a real, sure enough fly."

Which went to prove that Jimmy appreciated the fine points in the art of fly-fishing, and, as I later discovered, was at any time willing to sacrifice all chances of making a good catch with bait for the satisfaction of deceiving one or two nice fish with a coachman or miller skillfully placed. And as we drove along I began to believe that here was a man who could instruct men, and others I knew, who prided themselves upon being at least theoretical sportsmen, upon the practical side of the game.

Finally we arrived at the little chain of ponds, hardly more in fact than a gradual widening of the brook that fed them, and as we were putting our rods together, I remarked, "Jack said you never took a fish of less than eight inches. It don't look to me as if this pond held any as large as that."

"Don't eh," Jimmy said. "See that ol' stump over there. I'll bet you, two to one, that if

you drop a fly 'bout two feet south of it you'll strike somethin' more'n an' eight-inch fish. There's a hole there that allers has one or two fair sized ones in it an'—but here. What you goin' to do?" he asked, for I had stepped close to the edge of the pond and made one or two preliminary short casts.

"Going to put a fly over in that hole," I answered.

"Let's see what you're fishin' with 'fore you do it," he commanded.

"Hm, what's them things?" he grumbled, as he looked at the flies. "They might catch trout if they was crazy or starvin' to death, but they won't catch the kind of trout that's livin' in this pond."

"Why not?" I demanded. I had on a coachman with a queen of the waters above it.

"'Cause they won't," he replied. "Them store flies does well enough sometimes. I use a few of them myself; but if you want to get fish, let me fix you with a couple of my kind of flies." So saying, he removed the comfortable old felt hat he wore and from inside the band pulled out an assortment of flies, some of which I recognized, and others entirely new to my experience. Selecting two, one a dingy-looking brown and white, and the other a long, thin-bodied fly with small black wings standing out at right angles to the shank of the hook, he replaced my flies with them.

"Made 'em myself," he explained, "an' they'll do the trick. That is, if you want to get big fish. The little ones won't take 'em. That long black one I call a skipper, mebbe you've seen flies somethin' like it slidin' round on top of the water on still days like this, an' the other, I never give it a name, but I've caught some big ones with it, or one jest like it."

"Well, Jimmy," I said, after I had curiously examined the two flies, examples of home industry and ingenuity, "you're directing this expedition. If you say they'll catch fish, all right."

"They'll get 'em," he nodded. "Step over there—that's right. Now you've got plenty of room for your back cast, an' let 'em fall jest where I told you. 'Bout two or three feet south of that big stump. Don't—gosh! What'd I say. That black fly hadn't hardly hit the water 'fore he took it," he exclaimed as my reel shrieked and I gave the butt to the trout that had taken the lure.

Twelve good ounces that first fish weighed, and I no longer had doubts of the killing abilities of Jimmy's flies, particularly after I hooked and landed another, almost as large, not five minutes after, and hardly fifty feet from the scene of the first capture.

We worked our way through the string of ponds, wading with the current. I fishing one side and Jimmy the other, although when it happened that we would come to a particularly good hole or bit of deep still water where the prospects for getting a strike from a big fellow were better than common, if on Jimmy's side of the stream, he would call me over for the privilege of the first cast.

Sometimes I would hook a fish. Then he would stand ready with the landing net, coaching me as the fight progressed, every whit as eager to make the capture as I, and then, when I had gradually gained foot by foot of line and each click of the reel was bringing the still fighting fish nearer, he would step beside

me, waiting for an opportunity to put the net under him and lift him from the water. Try as I would, however, using every bit of skill and judgment that I possessed, and being always favored with all the choice bits of water as we came to them, I could not catch fish with Jimmy. It was something uncanny, how he could entice them to strike upon those flies, facsimiles of the two attached to my leader, and when one struck, no matter how the water and despite snags and overhanging bushes and sudden dashes of the trout endangered line and tip, Jimmy would always land him. He was more than a good fisherman, was Jimmy; he was an artist, and I no more wondered why he was recognized as the peer of all the trout fishermen in the surrounding villages. And later, when we were wading the brook itself, I had further evidence of his skill.

Whenever the surrounding vegetation offered no obstacles for casting, for the brook ran through a swamp with high bushes and oftentimes good sized trees growing close and overhanging the water's edge, and was in places not over twenty feet wide, I would do the fishing, sending my flies here or there by Jimmy's directions. "Jest round that bend," he would say, "you'll see a shoal makin' out from the bank. Land your flies about ten feet down stream of it an' skitter 'em back toward you."

Sure enough, we would come to the bend, there would be the yellow shoal, with the water rippling swiftly over it into the deeper channel that lay beyond. I would make a cast and have a strike. Finally I fully expected to secure a fish from every spot that Jimmy advised me to try, and if I did not, disappointment showed so plainly upon my face that he would chuckle.

It was after he had just succeeded in landing one of the largest fish of the day and was putting it in his creel that Jimmy turned to me and said, "That makes an even twenty I've got, an' you must have fourteen or fifteen. Eighteen, 'd you say? Well, now, that's pretty good. 'Spose we get out of this brook an' try a pond for an hour or so 'fore goin' home. It's nigh sundown an' they'd oughter be bitin' good there." So we struck off in the direction of the pond.

"You won't find 'em so big where we're goin'," he cautioned, "an' you know my ideas 'bout takin' them little fellers. Some says they make the best pan fish, but that's only an excuse for catchin' 'em. There's my measurements. Anything smaller goes back in the water, an' mebbe you feel the same."

He showed me two notches cut in the butt of his rod. "All right," I replied. "You're responsible for the success of this expedition, and if you say nothing under a pound, all right."

The greenest kind of a greenhorn would have known that there were trout in that pond, for the conditions and surroundings were most favorable, and even if I had not seen them breaking constantly I would have needed no assurance of the fact. They call it the Paper-Mill Pond, and although the mill has long since gone and generation after generation has fished its waters, the name still clings and the fish are there. Oftentimes you will hook a big fellow that has been sulking in the shade of the banks near the upper end and then you will find a fight on your hands worth having.

There are just two occasions upon which I envy the Eskimo. One is when I have flushed a large covey of quail, and before I have had sufficient time to work up the single birds, the short fall afternoon is lost in the twilight of the early evening, and the other is when trout are rising, breaking all about me, and taking the fly voraciously, hardly waiting for it to strike the water, and darkness comes, slowly but surely, until your flies are indistinguishable and the fish have ceased rising. Those are the times when I long for the endless days of the Arctic and think of the possibilities in the way of game and fish were one able to take

—to-morrer I'll show you somethin' better."

Which it was, and I was protesting against business cares that would not allow me to go trout fishing. Trout fishing. I did not know the meaning of the words until Jimmy illustrated to me what trout fishing really was.

THE TOP RAIL.

THE papers recently printed the remarkable story of an express messenger who actually bested two train robbers, saved the sleeping passengers' purses, and earned an increase in

sengers of the mid-eighties when they appeared, armed with the then new-fangled small caliber pocket revolvers in holsters strapped up tightly around their waists. "What kin ye do with them there toys?" asked the men who came daily to "see the train come in." And the sawed-off shotguns loaded with buckshot—weapons of frightful possibilities at short range—were subjects of heated arguments, the six-shooter men holding that they were too cumbersome for quick work and likely to be out of reach when needed.

To me one of the funniest things of the old days was the effect of the civilizing influences on

TWO'S COMPANY ON A TROUT STREAM.

From a photograph by T. E. Marr.

advantage of the chances that are lost with the setting sun. I expressed myself in some such manner to Jimmy as we trudged across the fields to where the horse was waiting, but he declared against it.

"Man—man!" he ejaculated; "don't you ever know when you've got enough? You've brook fished an' pond fished an' got 'em both ways, twenty-five or six trout, an' now you're kickin' 'cause it's gittin' dark an' you've got to quit. We're goin' to-morrer, an' I guess you can manage to wait till then."

"But maybe the fishing won't be as good," I protested.

"You jest leave that to me," answered Jimmy, confidently. "I've showed you fishin' to-day, that's what you might call good, but to-morrer

salary—of probably fifty cents a month—from his grateful employer, the express company. Everybody said it was fine. Perhaps it was, but the method employed grates on the sensibilities of those who remember the romance of the old West, when express messengers were walking arsenals.

This messenger was not a two-gun man, nor even a one-gun man; he killed the first robber with a common every-day implement of peace, a wood mallet. Then—luckily for him—he took the dead man's gun and popped the second bandit over. And this occurred in Texas. How has the old West degenerated, to arm men responsible for large sums of money with mallets!

I remember the sneers of derision with which the gun-toting station loafers greeted the mes-

police chiefs and marshals in growing towns that had begun to "put on airs." Some of these men had been lured away from their old-time flannel shirts by fashion, and they perspired in dire discomfort in tight-fitting cutaway coats and white collars. Those fetters marked the passing of "man-size" frontier six-shooters, for a coat argued concealment of artillery, and to try to conceal a huge six-shooter, a belt of cartridges and a holster under a cutaway coat was an absurd impossibility, though the struggle was as long-drawn out as it was ludicrous.

To see these men going into a fight on the double-quick, as though they loved it, with coat-tails flapping and guns jerking about underneath, was a treat, at least to

GRIZZLY KING.

The Fever and Its Treatment

By ROBERT STELL

I WONDER sometimes whence it comes—that strange, indefinable longing for the open places, half-soothing, half-disturbing, which grows and grows in the hearts of fishermen as winter loosens his icy grip on streams and meadow and hastens northward before advancing spring. Is it partly physical—a sort of involuntary rousing of the human system in response to the changing season, somewhat as plants begin to grow and all wild life becomes more active with the advent of balmy days? Or is it purely psychic—a remnant, perhaps, of some inherited instinct which prompted our prehistoric ancestors to issue from their caves when spring had come, hitch up their teams of brontosori, and “go fishin’?”

But whatever may be its cause or character, you know the sensation to which I refer, and how restless it makes you feel until you can get out and poke along the brook, among the alder bushes and past the swampy places where the red and yellow hoods of the skunk cabbage push up through the mud.

It doesn't have to be a big stream to serve this purpose (I've known an ordinary roadside gutter full of March rain water to lure an old fisherman two blocks out of his way just that he might walk along beside it), nor one with a far-reaching reputation for trout. The ideal size is just about that of your favorite brook—the one whose course you can trace mentally any evening as you sit and toast before the open fire in the library. It should be a live stream, one with little rapids and falls perhaps, and deep, still pools that mirror the overhanging trees and the blending colors of the sunset sky. And if it contains trout as well, why, then—

* * * * *

The dry-fly artist sat slumped down in the seat of the swiftly moving train, gazing far across wide leagues of treeless flats toward where the sun was sinking in a haze of wondrous pinks. For long weeks the marshes had lain locked in fetters of snow and ice, but now at last, among the patches of winter-worn cattails and meadow grass beside the track, little points of green thrusting up from the sodden ground told of the annual awakening of growing things. Far to the westward a range of hills showed dimly purple in the failing light, and beyond them the soft calm of the spring evening.

“Why so thoughtful, Master-hand?” I queried, taking the vacant place beside the lonely figure. “Have you, too, got the fever?”

“That's the trouble,” he answered, turning

quickly. “And I've been figuring out whether I can get away for a day to catch a few trout and sort of lower my temperature a little. I suppose it's too early for them to take flies, but I guess paraffin oil and eyed hooks haven't made me forget how to drown worms. As things look now, I'll have that insurance case

“JUST ABOUT THE SIZE OF YOUR FAVORITE BROOK.”

Photograph by F. F. Sornberger.

wound up before the end of the week, and if it is, I'm going to try Taylor's Brook on Saturday. Will you go?”

Of course I promised; how was it possible to do otherwise, especially at that time of year? So there was much digging of flower beds for the next two evenings, and when we started early on the appointed morning we had enough garden hackles to furnish a five-course dinner to all the trout in the State.

I'll not attempt to tell you just where Taylor's Brook is, for the way to it winds in and out among the hills of Southern New York in a really bewildering manner. But if, some sunny morning in late April or early May, you should take the right train and get off at the right station and ask the local liveryman to drive

you to Jake's farm, you'll find a stream that any modest trout fisherman ought to be proud to know.

The Taylor farmhouse stands at the top of a long slope of pasture-land and rye fields, and from it a path leads past the rambling old barns and outbuildings, over a stile whose heavy wooden steps are worn into hollows by many passing feet, and continuing through the rugged orchard of Baldwins, summer boughs and pip-pins, comes at last to the edge of a deep, heavily wooded glen. There it seems to hesitate, turns first to the right and then to the left, and finally, as if it had just been told the way to go, plunges down the slope among the hemlocks and scattered laurel bushes. As you clamber down, watching your footing carefully on the slippery carpet of dead needles, the murmur of the stream below grows louder until, turning a corner around a huge gray boulder, you come upon an old log bridge and Taylor's Brook slipping along beneath it.

When we reached the little bridge the sun was perhaps two hours high, but in that narrow gorge the brook still lay in shadow. A hundred yards down stream the steep banks fell away abruptly and gave a glimpse of rich fields of freshly plowed land, across which, far in the distance, slowly plodded a farmer and his team. But above the bridge the brook became more precipitous, dashing from fall to pool and from pool to rapid through a perfect trout paradise, and thither we turned, for that way lay the best of the fishing.

It was a perfect morning, and as we worked upward along the stream, the air became steadily milder. Crows and jays called from the tops of the hemlocks, nuthatches clambered about on the tree trunks or paused head downward to stare at us curiously, and from a dead hickory at the edge of the glen a flicker “laughed” merrily again and again, as if he wanted to tell everybody how glad he was that winter was over.

Yet despite the ideal conditions, the fish did not seem to be in biting humor. The most promising pools were carefully worked without success, though the dry-fly artist is a past master with bait as well as flies. Indeed, it was not until we had covered a good quarter of a mile of water and reached the upper end of the gorge, that anything of legal size came to our creels.

At that point the brook leaves the woods and enters a little clearing where, years ago, a grist mill stood. The mill is now but a jumble of broken stones and rotted timbers, and the dam which backed up the water for the great wheel has been carried away by the freshets, leaving a magnificent pool at the foot of the old tail-race.

Scarcely a breath of air was stirring as we came in sight of the ruined dam, and the sunlight poured warmly down into the clearing, calling forth myriads of little gnats and flies that danced up and down in the air in regiments and battalions. In the lee of a pile of rocks a bed of hepatica blossoms seemed to catch and hold the blue of the sky; anemones and dog-tooth violets wandered about among the scattered clumps of bushes. But, most welcome sight of all, was a spreading ring of ripples on the surface of the pool below the dam.

Did we go after him with worms? Not by any means. We just got rid of those short bait leaders, put on a couple of six-foot ones with a March brown and coachman on each, and proceeded to enjoy as pretty a bit of April fly-fishing as it has ever been my good fortune to experience. The fish were not large—none that we took measured over nine inches—but they were genuine *fontinalis*, and seemed to be waiting for us in every favorable nook throughout those hundred yards of sunlit water. Several times we took two and three from a pool, and one rocky basin yielded four. My first cast over it had resulted in a double; then the artist tried, and a single fish took the March brown; he cast again, and a nine-incher made the mistake of thinking that the coachman would be good to eat. "And this," remarked the artist, as he slid his net under the latest victim, "is in a part of the State that is supposed to be fished out! I wonder how much longer we would be able to have fun like this if the news of it should get beyond the few of us who are already in the secret. And it's surprising, too, that the brook is not better known, for you remember it's not so very many years since the club which controlled it broke up. Most of the old members were city men, but they never seem to come up here now. Still, their loss is our gain, and

"SUPPOSED TO BE FISHED OUT."

such being the case, let's sprawl out on that flat rock and eat lunch."

Mid-afternoon found us in another meadow, a much more extensive one. A series of little ponds had been built there by the old fishing club to which the dry-fly artist had referred, and even now a few of them still remain. In the deep water thus caused the trout usually run somewhat larger than in other parts of the

brook, but the fisherman's peace of mind may be a little disturbed by a certain old red cow of disagreeable temper, which the present owner of the land pastures there instead of putting up trespass signs.

We knew this cow of old; in fact, she had chased us on several previous occasions, and we had very vivid recollections of hurriedly scaling the boundary fence while the old brute came

"WITH LITTLE RAPIDS AND FALLS."

tearing through the grass about four jumps behind us. So on this particular afternoon we surveyed the ground from a safe vantage point before entering the meadow, and finally located the ancient bovine in a distant corner where she was too engrossed in cropping the fresh grass about a little spring to notice us as we crossed the fence and began to fish.

All went well until we reached the far side of the inclosure, where a barbed-wire fence crosses the brook, sagging almost to the water over the center of a deep pool. The artist had seen a trout rise close to the drooping wire, so he crawled along the bank to a favorable position for casting while I crossed the fence into the adjoining field and was soon busy with another fish. So interested did we both become that we had forgotten all about our old enemy, when something caused me to glance toward the pool by the fence. There crouched the artist absorbed in fishing, and, to my horror, about twenty feet behind him was the red cow, sneaking quietly forward with an ugly expression in her little pig eyes. There was barely time to roar, "Lookout! Cow!" before she lowered her head, switched her tail and "came a-runnin'."

Now, the dry-fly artist is a man of parts, and perhaps the longest and most conspicuous of those parts are his legs. So extensive are they that when he needs a new pair of waders he has to have them built to order, for the ordinary ones don't come much above his knees. He can walk up a flight of stairs five at a time and never turn a hair, while as for jumping—!

When he heard my warning shout he hesitated not as to the manner of his action. He took no backward glance, but simply leaped—blindly, frantically, straight ahead. Those wonderful legs straightened out like a couple of

giant springs, and propelled him forward and upward for all the world like a big kangaroo clearing a clump of brush. I'd hate to say how far that single bound carried him, but it was well over on the safe side of the fence. And as his flight commenced to lower, those triple-extension shanks began wildly sawing the air as if they already felt the solid ground beneath them. Even had there been no protecting fence, I doubt if any cow on earth could have caught the artist after that, for his first foot to touch terra firma sent him ahead about three yards, and he was into his stride and going like a crack quarter-miler before I could stop him.

"Truly," he observed, when he had slowed down and turned back to where I was throwing stones at the cause of the ascension, "it is not all of fishing to fish,' but it seems to me that writers on angling matters have overlooked one important branch of the sport. Some time when I get a few weeks' holiday I'm going to write a treatise on 'The Practical Application of Long Legs to the Art of Fly-Fishing, or A Trout Stream as Seen from Upper Air.' I'm sure it would be a valuable contribution to angling literature."

Of the closing hours of that April day I do not need to tell at length. You all know what they were like; how the air became damper and just a little chilly as the sun dropped below the woods; how the pungent odor of burning leaves and brush drifted down into the valley from the old cornfield where the farmers were making ready for spring planting; the way the shrill music of the peepers in the swamp trembled through the dusk as we walked back along the sandy road to the farmhouse, and how we nearly went to sleep in the smoker during the long ride home.

"Well," I asked the artist, when at last we had

"A DRINK FROM NATURE'S CUP."

left the train and reached the parting of our ways. "Is your fever better?"

He paused to relight his pipe, the yellow flare of the match alternately growing and waning as he puffed. "Yes, it's a whole lot better—it's almost cured for the present. But I don't believe that any amount of fishing will positively stop it for good and all; it takes too strong a hold on you for that."

Little Talks About Fly-Fishing

By THEODORE GORDON

TO me, as a small boy, the very name "trout" carried with it something of wonder and magic, and visions of a rare and extraordinary fish, which could be captured only by the elect, persons of unusual skill and acumen. Any boy who had caught a trout gained dignity at once, and was looked up to with considerable admiration as well as a little envy. The taking of that first pink-spotted beauty was an event of the first importance in a boy's life, and when at last he was successful in twitching the small wriggling captive from beneath the caving bank of the meadow brook, he grew several inches in his own estimation.

We always began with worm bait and advanced through a course of grasshoppers and broken rods to the artificial fly. We knew nothing of playing a strong fish on delicate tackle. It was always a case of pull Dick, pull devil; and when by some happy accident a really large trout was hooked, the results were sometimes more disastrous to the boy than to the trout. To break one's "pole" and lose a big trout was a frightful calamity. It gave a fellow a sense of goneness at the pit of his stomach and the feeling of acute disappointment was apt to dwell with him for many days.

I remember very well the first fly-fishing that I witnessed on the old Le Tort stream. It was on what we called the Meadow, where the water was wide and slow flowing. The angler was beautifully equipped with a first-rate split bamboo rod and fine tackle, and was casting a long line with a single fly at the end of his leader. He had taken twenty-five trout, a prodigious number in my eyes, and very kindly allowed me to tag along beside him. His skillful work was a revelation to me, and he gave me my first artificial fly. It was a popular pattern in Pennsylvania in those days and was known as the Patton, or Dr. Patton. The wings were of guinea fowl, hackle from a brown cock and the body was made of brown silk, ribbed with flat gold tinsel.

Nothing would satisfy me after this experience, until I had patched up a fly-rod from the remains of several old rods, and the first holiday was spent in fly-fishing with the only fly I possessed. I was clever enough to spend my

time upon the shallows where the small trout, of little discretion or experience, dwelt, and I succeeded in catching quite a number of these. Their size was a matter of no consequence, for I had actually taken trout on the artificial fly that were good enough for anybody, and made any boy realize that he was a scientific individual and without doubt a skilled angler. Those were halcyon days that followed, and thousands of men in England and America can remember experiences of much the same sort.

One of the delightful things about angling is that one is always progressing, always learning something new and interesting, and this is particularly true of fly-fishing. I well remember my excitement and pleasure when I stumbled upon F. M. Halford's books on dry fly-fishing, in the autumn of 1890. Englishmen had been using a dry fly upon the chalk streams for many years, but its use was by no means general and we heard but little of it. Old Ogden began about 1860, I believe, and he is said to have been very skillful. The use of the live May fly with a blow line was common at that time, but after seeing him use the artificial May with success, the natural fly was prohibited on some waters. There is no doubt that those first in the game, upon these prolific South of England streams, had a bully time of it. There were lots of good trout in those days, and although they were well fed and very shy, they had not been much fished for in that way; that is, with a dry fly floating upon the surface and usually a fair imitation of the natural fly upon which they were feeding.

There is no doubt that we have learned much from English works on angling, but conditions in this country are rarely the same as those found upon the well preserved slow-flowing rivers of the South of England. We have, indeed, a few streams flowing from great springs in the limestone rock, where somewhat similar conditions may be found, where, for instance, the supply of food is bountiful, insect life abundant, and the water in many parts slow-flowing and of fair depth. Usually, however, we fish the mountain streams, of which there are so many in the United States. These are of all sizes and the conditions differ widely in various

parts of the country. Insect life may be found in great abundance, or there may be very little of it, except possibly for a short time at a particular season. We have several species of trout, native and introduced, but for the most part they may be taken by the same methods and with the same flies. In some mountain brooks the food supply does not appear to be large, and if there is a fair stock of trout, they are usually hungry and may be more easily taken with fly or bait than where the water is well supplied with trout food and where many fishermen are found.

If insects and their larva are plentiful and the trout are accustomed to look to the surface for a fair portion of their daily bread, then the conditions for successful dry fly-fishing should be good, but the wet fly man may do well also. In fact, if you are fond of the dry fly you may be surprised to find that an old hand with wet fly has quite as good a basket as you have. When I find that everyone on the river is fishing the dry fly, I think I will return to the old style, and get the benefit of the drop fly. The action of this artificial insect upon the water, when well handled, is often very effective, as it imitates somewhat crudely the actions of the natural fly in depositing its eggs upon the water and the buzzing and fluttering of some of the caddis flies and land insects which have been blown upon the stream. Trout feed upon the larva and nymphs when they are rising to the surface to hatch or change into the winged fly. You have often found the larva in their throats, on their tongues or in their stomachs.

Dry fly-fishing is extremely fascinating. I have felt this so strongly at times, that I have continued to dry and float one small fly when it was too dark to see the fly or the rise of the trout. But if we rely entirely upon the artificial fly for our sport, we had best practice both methods and thus be enabled to judge when and where to use the dry or the wet fly most successfully.

Of course, if one fishes fly, worms, minnows and other baits, he is not able to become enthused with the dry fly. I remember when a boy fishing an unfortunate stream in Northern New York in this way: First, fly; second, grasshopper; third, worm. This was murderous, but the stream had been fished out and netted to stock a hatchery. I think I will stick to the fly now and fish it as I feel inclined. There is no other sport that takes quite the same grip upon a man. It is a sort of tender passion that grows in strength as long as we live.

OUTLINES OF MR. TODD'S BAITS, ILLUSTRATED IN FIGS. 1-6.

Some Casting Lures

By EDWARD FARNHAM TODD

ABOUT two years ago a correspondent of *FOREST AND STREAM* asked for information and advice as to artificial casting lures for bass, and as no one more competent to answer his query has yet done so, it may be that a brief description of those I have found most successful, and how to make them, may be of interest, especially at this season, when the first touch of spring wakes the fishing fever.

First of all, though, I ought to describe the conditions under which I fish, as I have tried

ing the prospective victim's lunge, a floating lure should be used whenever the fish are in shallow water, as at this season. The situation, therefore, calls for an imitation floating frog, and as the only one I have been able to find on sale is much too light to cast from a free-running reel when there is any wind, as there generally is thus early, and is also too small to attract the "lunkers," I produced the alleged frog shown in Fig. 1, which I confess does not resemble anything on earth or in the waters

under water when reeled in slowly—if reeled quickly it will come to the surface. I have kept the spinners at each end because I believe the ordinary wooden minnow is one of the best baits made and solely so because of the glitter of the spinners in the water. The fault with all of them, though, is that, as sold, they can only be used successfully when armed with triangles, as it is impossible to attach single hooks to the sides by the method provided by the manufacturers so that they will remain in any desired position. I have therefore used my large double hook again, attaching it to the belly by a small screw-eye for the ring of the hook to pass through with a pin a little further along to hold it close to the body out of the way of weeds, etc., until the fish strikes, as shown in Fig. 2.

MR. TODD'S LURES.

to develop my tackle to meet them. They are not unusual, however, as my scene of action is a lake in Northern New Jersey about three and one-half miles long with an extreme depth of sixty feet and a very heavy growth of weeds of various kinds, strength and thickness during the summer—and of course the bass delight most to lurk in the worst tangle of these. This necessitates a fairly stiff rod with lures heavy enough to bring out its action, and after the middle of June, as nearly weedless as possible. We have both large- and small-mouth bass in the proportion of about three to two, according to the census taker, but catch about three of the former to one of the latter by casting, as our small-mouth friend follows the habits of the somnolent cod as summer progresses and can generally be taken only by still-fishing in the depths. He is active enough after being hooked, I admit, but the way of hooking him is too slow for me.

And now one more preliminary before getting down to business. Six years ago I decided to give up live bait of all kinds, and during the five years prior to last I bought—or grafted—and tried out every casting bait put on the market that I saw advertised or in the tackle shops, so I had the ideas of many to choose from in the ones I finally selected or evolved.

The season opens early in New Jersey, and in my unregenerate days I had found a live frog most successful in the spring. Also, as much pleasure is added to bass fishing by see-

ing the prospective victim's lunge, a floating lure should be used whenever the fish are in shallow water, as at this season. The situation, therefore, calls for an imitation floating frog, and as the only one I have been able to find on sale is much too light to cast from a free-running reel when there is any wind, as there generally is thus early, and is also too small to attract the "lunkers," I produced the alleged frog shown in Fig. 1, which I confess does not resemble anything on earth or in the waters

under the earth, but which certainly has caught bass. I used cork for this, which is easier to work than wood, as it can be cut readily with sandpaper. It can, of course, be made any size and weight desired—mine is 3 3-8 inches long and weighs nearly an ounce—and as the weight is attached to the belly, it will always land right side up, an advantage every live frog user will appreciate. After shaping it up, it can be painted green or speckled or any other color on top, but white on the belly, as that is really all that the fish sees, and the hooks attached. I tried this first with a single hook at the crotch, but after missing ten successive strikes and losing one of the few days of the season when all conditions were right and the bass rising freely, I switched to a double hook, as shown. This projects just beyond the legs when the lure is in motion and hangs straight down when at rest and so gets them either way. The hooks I use are so large that a fish seldom gets both barbs at once, and so is not seriously injured if it gets off or you wish to return it after landing. I find this arrangement holds about two-thirds of the strikes, though before I abandoned triple hooks as unsportsmanlike, I rigged with one of them and never lost a strike—which was butchery.

As the water gets warmer and the weeds begin to come up, a surface lure begins to lose its attractiveness, and so one that will swim near the surface is indicated, as the doctors say. My idea here is simply a wooden minnow so formed and weighted as to keep it a few inches

The barbs should project a little on each side, and I find that this arrangement will hook fully three-quarters of the bass that strike for the side of the lure against less than one-tenth with single hooks screwed in the side sockets.

For the body of the minnow in the illustration I used a discarded commercial minnow which happened to be the right shape and weight, but a piece of shade-roller, which is a soft wood cylinder one inch in diameter, can easily be cut to the required dimensions after having been pierced by a long, slim wire nail which, on being withdrawn, leaves a hole for the wire support of the lure to pass through. This should have a slight kink put in it and be pulled through by main strength, so that the lure will not revolve on the wire when drawn through the water and thus twist the line. The bait can now be weighted to taste, spinners put on, the projecting end of the wire twisted back for rings to attach tail hook and line, and there you are.

The water is now warm, the weeds thick and the bass either in water too deep to raise them by casting or in the worst of the weed tangle, and so we must go after them with a weedless lure. This is made by placing a half-egg shaped fender, as shown in Fig. 3, in front of the spinner which deflects the weeds, so that they do not foul the spinner, and it can be drawn through the worst of them and still sparkle merrily in every clear space. I arm this lure with a large fly, which is also made weedless by a wire guard made by bending over the end

of a piece of stiff wire at an acute angle, passing the short end through the eye of the hook and tying it to the shank, so that the long end will project down diagonally from the eye nearly to the point of the hook. In this way the fly, which is attached by a split ring, can be easily changed and the lure varied to suit the capricious taste of the fish. The fender should be painted dark green, which makes it nearly invisible in the water and so decreases the effective length of the lure, otherwise too long for a single hook. I have repeatedly taken bass out of thick weeds with this rig when otherwise it would have been either still-fish or loaf.

Though the days are now hot and the fish sluggish, your temperament or the limit of your vacation may make it absolutely necessary for your peace of mind that you take a few bass; the solution is night fishing. Whether bright moonlight, as most of the articles I have read on the subject advise, or absolute darkness, as the natives at my lake hold, is best, I have nothing to say—I have had good and bad success under both conditions; but even if there are whales jumping all around you, seemingly threatening to leap into your boat, it does not follow you will get them, as they may be only playing and not feeding. However, during the summer, night fishing promises best for success, and best results can be got with the lure sold in the tackle shops under many different names, but commonly called a "white plug."

This does the work well, as far as getting the fish goes, and, indeed, in some lakes can be used as a day as well as a night bait, and is probably the best single bait for Eastern waters.

As sold, however, the head revolves, and after an hour's fishing, the line is hopelessly twisted and backlashes in the dark are not conducive to one's present comfort or welfare in the hereafter. I, therefore, rig mine with a stationary head, as shown in Fig. 4, and let only the spinner revolve, and I find this makes just as much fuss in the water, stirs up the curiosity or pugnacity of just as many fish and does not twist the line. I let my hooks hang free, as I think them more likely to snag the fish that way, but they are liable to get tangled with each other, and if you think it too much trouble to watch out for this, just put a small piece of rubber tubing—that used for camera bulbs is about right—over the eye of the hook, the split ring attaching it to the lure and the ring in the lure through which the split ring passes and you will have your hooks standing out semi-rigidly and tangle-proof. Two pieces of shade roller, some tempered brass wire, a swivel and a spinner, together with some white paint, are all you need to make this monstrosity, and while no one knows what the bass can think it may be, they certainly strike at it.

You, may for some reason, want to fish deep and weedless water, and for this I use the lure shown in Fig. 5, which is the ordinary wooden minnow of commerce with a large double hook on the belly attached as described for No. 2.

You may take a day off at some other lake and not want to be bothered with all the above truck, in which case use a tandem spoon, as shown in Fig. 6. I combine my own by getting pearl, brass, copper and nickel blades, inserting a split ring in the holes there and attaching two large swivels to this ring, thus using three

(Continued on page 387.)

Fishing Lunches

By LADD PLUMLEY

"I ALWAYS eat out of my creel," said a cadaverous, dyspeptic angler, when I asked him what kind of a lunching place he preferred. Of course, he did; I need not have asked him; he looked it. You know his kind, that sit forlornly on a sharp rock in the hot sun. They always look as if they were angling vagrants without friends or homes.

Pretty lunching places are common enough on the banks of most streams. A shady tree should be chosen, with a sloping mossy or grassy bank, a spring not too far away, and driftwood or dead standing timber near, if a fire is contemplated. Rocks, even a nice smooth ledge, can never be compared with moss or grass. This for dry weather; for rain more care must be taken. And it is well to know, and to remember, that in forests when everything is wet a dry seat can be gotten by rolling over a movable log.

All this talk about a proper place is based on your having a fair lunch in your creel. There is little use in hunting a pretty glade if your lunch is of the sort that many boarding-houses hand out to the trustful but unfortunate fisherman. The sandwich of frequent make is a stomachic gymnastic, representing the successful spoiling of good bread and butter. Bread and butter by itself, the housewife not of frugal mind as to butter, is good enough for anybody. Add a piece of cheese and a few cookies and there are times when I would rather have the cowbells on the hillside call me to eat than to be summoned to a king's feast.

The foundation has been stated; good bread and butter. With this a superstructure of any gastronomic height can be erected. If you are ambitious you can have any number of floors and can finish off your skyscraper with a roof of a wedge of imported cheese and exchange your pipe for a cigar and let flags of smoke drift down stream. But in that case you will probably do little fishing until most of the afternoon hours have been consumed with the lunch and drifted away with the cigar.

Uncle Thad Norris had definite ideas about angling lunches. In his "American Angler's Book" he teaches how to have such meals at the waterside as might make the hungry shade of Soyez wish that he could return and go fishing. And the basis is bread and butter.

If I could invite you to take a bite with me on the stream, you would certainly want to know how the magic of the meal was wrought. I will therefore begin where you must if you ever try the pleasing experiment.

Instruct the good woman at the farmhouse to give you a good big chunk of bread. With your pocketknife dig out a hole at one end, saving a piece for a cover. Have this cavern very nearly filled with butter, and push in your lid.

If they have cheese at the house, take some of that and a half-dozen cookies or two or three slices of cake or gingerbread. Also carry with you plenty of salt and pepper and put in your creel an abundance of wrapping paper; any coarse paper will do, even newspaper, but if

the latter must be used, get at least one piece of the other sort or a paper bag. The best quality of paper for stream cookery is the yellow-brown straw paper that years ago was used by all country stores.

I will now suppose that you and your angling companion have had fair luck during the morning hours, that it is noon, and that you have selected a proper lunching place. And so far the labors have been joint; from the selection of the lunching spot co-operation will be the order of the day. One angler will select as many trout as you intend to offer as a sacrifice to the god of appetite. These are to be taken to a convenient rock at the side of the stream, carefully cleaned, prepared, and washed for the sacrificial fire, and well sprinkled with salt and pepper. Leave the heads on, for this dish is to be trout *au naturel*.

While the fish are thus being prepared, the other angler should be gathering wood and building a brisk fire. If he be wise he will select his wood with great care, for a smoky fire is an abomination and not necessary, even in the rain.

Driftwood is good if it is taken from the banks well above the ordinary water line, and standing brittle dead timber the best of all. Break the wood into two-foot lengths and be generous with it. The idea is to get as soon as possible a deep bed of live coals.

When the fish have been attended to, and the fire has well burned down, one of the anglers should soak the wrapping paper, and when it has been held up for a moment to drain, arrange the trout in a neat pile at one end of one sheet. Place a little butter in the middle of the pile. The trout are then wrapped in the wet paper. As the package is built up with successive layers of paper the ends are carefully turned in, and when all is finished, the neat bundle will give protection to the trout at all sides and, more particularly, at the ends.

Take the package to the stream, immerse it for a second, letting the water drain out, taking great care not to tear the paper or break the bundle apart.

While one angler has been at work with the package, the fire builder has been making a hole in the embers with a green bit of sapling. The bundle of fish is then placed in this glowing recess and completely covered with ashes and embers.

Remember that all cookery is a good deal of a fixed science. There should be plenty of embers so as to cover deeply every portion of the package. If any part of the work has been slighted, the lunch will not be up to what it should be.

If the bed of coals is sufficient, thirty to thirty-five minutes will cook the fish, provided they are ordinary small stream trout; for trout of large size allow forty-five minutes to an hour.

While the trout are cooking select three flat stones, two somewhat small for plates, and a larger one for a platter. Do not take them from the bed of the creek, unless you wish a reminder of a Fourth of July celebration, due

to explosions from escaping steam. Stand the stones on edge with the smooth sides near the fire. If it is a rainy day and the anglers want a dry hot seat, brace other flat rocks close to the fire; the comfort of a warm seat on a chilly day during the lunch hour must be experienced to be understood.

While the trout are cooking and the plates warming, indulge in a refreshing wash in the creek. If it is a hot day, souse your head well.

allowance has been correct, they will be more delicious than any fish ever served at metropolitan dinners.

And now the anglers can indulge in sandwiches which to other sandwiches are as *pâté de foie gras* to sandwiches of raw salt pork, that terrible food of a forced march. Using a bit of flattened birch twig—the flavor will be found to be aromatically woody—open a trout and remove the backbone with the head. The

dining, he took the pains to bring certain supplies into the mountains. A fine quality of claret I clearly remember, also potted things that went exceedingly well with the wine and the delicious baked trout. Some sweets and delicate crackers, followed with a jar of Roquefort cheese.

What came after the cheese is doubtful. It must have been a cordial in generous portions. Still later I lay on my back under a tree and

LUNCHEON AT THE BROOKSIDE.
From a photograph by T. E. Marr.

About the time the trout are ready, arrange your grassy table in the shade, with logs or stones for seats. Place the platter in a convenient spot and the bread, cut into slices, with the butter, on clean flat stones.

When all is ready, let the angler who can best stand great responsibility remove the coals and lift the charred package of baked trout. With proper caution and ceremony, as if bearing the roasted peacock to the feast of an emperor, he will bring the fragrant burden to the platter. The aid of two green forked sticks is suggested. The blackened envelope being removed, the trout will be found to be colored as daintily as if just taken from the hook, and if the time

fin, too, with the small bones attached, should be separated from the pink flesh. Then, between two slices of bread, thickly buttered, the trout are imprisoned. Trout cooked that way are very good!

So much for the simple trout dinner. W. C. Prime, in "I Go A-Fishing," suggests that a bottle of light Burgundy goes well with a fishing lunch, and he takes some pains to give the physiological reasons for his preference. I have never but once ventured the entire epicurean tower of streamside indulgence, and of that I have but a drowsy remembrance. I can thank my friend for the whole performance. Having read Uncle Norris' praises of river

smoked a cigar. Then I passed into peaceful slumber, and when I awoke the sun had sunk below the boughs above me and my friend was shouting, "Great Scott, man! where has the afternoon gone?" That night, at our boarding place, we heard that we had lost the chance of the week; the fish had risen at any fly until sundown.

Everything connected with fishing is good, and trout à la Thaddeus is even better than most good angling pleasures. The preparation of the fishing lunch is the kind of trouble that is brother to fun, and if he so desires the angler can enjoy such cookery on his favorite stream as would make the fortune of a city restaurant.

Five Days Trouting in New Brunswick

By CHARLES L. BARKER

ONE day about the first of last June I received a telegram from H. N. Straus, of New York city, asking if I could take care of himself and friend, H. W. Endicott, and give them a few days' fishing. Replying that I could, I met them some days later and we proceeded to the fishing grounds, where luck was with us and we caught all the trout we wanted in a short time. This we could do at any time we felt like casting a fly. However, in the intervals we watched moose feeding in the ponds and the deer around the shores in the early morning and evening.

One day while Mr. Straus and I were paddling up a long deadwater looking for a bear, for there were some around, we heard something splashing in the water ahead of us. We paddled softly around a point and almost ran the canoe on an old cow moose that was feeding in the deadwater. When we rounded the point she was entirely under water, and we were almost as much surprised as she was, when

stood stupidly staring at what she no doubt took to be some strange monster that had suddenly appeared and which she could not quite make out. We determined to surprise her still more, so I gently shoved the canoe still nearer, and Mr. Straus, who was in the bow, leaned forward and fired his heavy rifle as near her ear as he could without actually hitting her. A monster that made such a tremendous noise was too much for her nerves, and she made a wild break for dry land, splashing us with mud and water as she did so. Scrambling out on the bank, she turned, with one ear hanging down, and took a look at us, and seeing that we were still there, she let out a roar of indignation and made for the woods at top speed, looking round just before disappearing in the alders, to see if we were chasing her.

Another day Mr. Straus and I got tired of fishing and visited a nearby salt lick, where we saw eight deer and a caribou. We also saw where a bear had dragged out the carcass of a deer that had gotten fast in the mud and drowned. He had been feeding on the carcass very recently, and no doubt we had scared him away when we approached the lick, for he had dragged the remains for some distance along the game trail that we were traveling on until he came to a thicket and there he was dining at his leisure.

Mr. Endicott and my brother Arthur also put in a lot of time watching the wild animals. They told us how they had watched a family of beaver at play one afternoon. How the old one would dive, giving a slap on the water with her tail as she did so that sounded like the report of a gun, and how the small ones would follow in succession, each seeming to strive to make a louder noise than his predecessor, only to reappear on the surface and go through the same performance again. They also told us how they had watched a big moose feeding in a pond. How he would disappear entirely beneath the water and stay down longer than they thought possible for any land animal to do without air, and finally coming up with his mouth full of weeds from the bottom, which he would eat and then go down again for more.

One day we went over to another lake, where we had great luck with the trout, getting some good ones. On our way home it began to rain hard, and as we had left our coats at the camp, it looked as if we were in for a good wetting, but we each peeled a large sheet of bark from a white birch and cut a round hole in the center, through which we put our heads, letting the bark rest on our shoulders. This kept us perfectly dry, with the exception of our legs and feet, which were bound to get wet anyway in the grass and leaves.

During the five days we were in the woods Mr. Straus and Mr. Endicott caught about 400 trout, some of which weighed three pounds. Needless to say we returned most of them to the water, only keeping what we wanted to eat. Joe, our cook, said that this was too many, as he felt that he had cooked and eaten so many

that he would be ashamed to look a trout in the face again for a year. The day before we left the woods Mr. Endicott caught 135 trout, keeping enough of the best ones so that we could take a few panfuls home with us.

On our way in to camp, we had found that some beavers had built a dam across a small

A RUFFED GROUSE'S NEST.

brook, flooding the wagon road to a depth of about four feet, and we had to dig out a section of the dam and let the water drain off before we could get the wagon through with the contents dry. Knowing that they would rebuild it and not liking the work of digging it out again on our way out, we told the teamster to bring a stick of dynamite when he came back for us. Having only the empty wagon on his return, he waded through the pond. But the next morning on our way out we tied the dynamite to a pole with a suitable length of fuse, which we lit, and then pushed the pole with the dynamite on the end well down under the dam, running to a safe distance to await the results. Soon with a bang a large section of the dam was lifted high in the air, scattering mud and sticks in great shape and letting the water drain off in a short time, so that we got our outfit through dry and reached home safely that afternoon.

Coming.

BY J. G. MILLS.

Fishing time is coming!
Hear the bullfrogs sing!
See! the pussy willow's budding!
Sure sign of spring.

Fishing time is coming!
Fix up your lines and bait;
Have your fish-pole handy;
You won't have long to wait!

Fishing time is coming!
The south wind warms the air;
Brooks and streams are calling—
Calling, everywhere!

COW MOOSE FEEDING IN A DEADWATER.

she suddenly raised her head and shoulders above the surface about six feet in front of the canoe. She surely was a ludicrous-looking old thing as she stood staring at us with her mouth full of weeds from the bottom and the water pouring from her ears and head in streams. She seemed too much surprised to move and

Half a Loaf

By CARITA LEMMON

SEE the robins these days? Hear the crows cawing as they fly over? Yes, there's snow around, but the drifts have sagged and there's a thank-goodness-that-job's-done look about them. There are big bare patches of ground; and the sun is strong enough to keep you warm if you want to loaf, that is, if you have time to, under the lee of the cliffs. The Hudson down there still wears the grimness of winter, but the shore ice is honeycombed and the floes out beyond are waterlogged, ready to crumble. There are not many of them in sight just now, the tide is up and the gulls are wheeling idly, waiting for the ebb. Let's unlimber the glasses and see whether those are young gulls or ducks down there. Gulls. There are ducks here all winter, though, old squaws, I think.

Sun feels good, doesn't it? Look at it shimmer on the water where—by George, there's a canoe! Somebody else has spring fever. Going to fool around the Jersey shore awhile I suppose. He hasn't any too much time, either; the tide will turn soon and the ice that will come with it won't all be rotten. I guess he's thought about that, though; he's probably one of those lucky devils that spend half the summer nosing round Canadian headwaters.

Ah-yah! why does a man have to work! Why not just float along like that ice does, for example, easy and not having to wonder about getting a raise. My, the sun feels good! See the fellow circumnavigate that baby iceberg. You're all right, old man; hold her back a little now—that's right. Guess that block came from way up the river somewhere, Esopus maybe. S-a-y, I must go home and get busy with that five-ounce rod. Got to scrape it, rebind it, and varnish it again before the first.

Fishing Fever.

Symptom one—a lazy feeling
Through the bones and body stealing.
Symptom two—a sort of pity
For yourself penned in the city,
When the good green world's inviting
Out of doors, and fish are biting.

Symptom three—the same old lazy,
Yawny feeling; sets you crazy,
Buried deep in life's distractions—
Ledger, daybook, bills and fractions—
When you know the crick is fine
And you're dreamin' hook and line.

Symptom four—the same thing over;
Stretch a while, then smellin' clover.
Thinkin' catkins, swaying glossy,
And of ferny banks and mossy,

Where the river sings and shimmers
And the warm spring sunshine glimmers.

Symptom five—just like the others;
Oh, it's fishing time, my brothers.
When the fever, all a-sudden,
Makes us think of lilacs buddin'
And the heart turns back to boyhood,
With its honeyed days of joyhood.

Fishing fever comes so funny
That we say: Who cares for money?
Let's put off our cares and sorrow
And our business till to-morrow;
Can't work, nowhow, with this feelin'
Through the heart and spirit stealin'.

That's the fever—sure's you're born;
Walks right in to you at morn;
Makes you want to throw your hat up
And to rip the whole blamed flat up,
Hunting tackle, rod and line;
Can't resist it—ain't it fine?

Don't resist it. Better catch it
Nothin' in the world can match it
For old downright purifyin'.
Are you ready? Let's away,
Back to boyhood land to-day.

—Baltimore Sun.

The Cats that Got Away.

BY E. P. ROBINSON.

I've fished in old Ohio
When a freckled, barefoot boy,
Pulled "cats" from a hole
With a hickory pole,
And carried them home with joy;
But of all the cats, large or small,
I hooked in that bygone day,
The cats I wanted most of all
Were the ones that got away.

UNDER THE LEE OF THE CLIFFS.

THE SHINING RIVER.

Angling in the Cascades

By SAMUEL DIKE HOOPER

CASTING a fly is, for me, a comparatively recent accomplishment. I took it up for much the same reason that I did the study of arithmetic as a school boy, because force of circumstances proved too strong for my powers of resistance. In this case the circumstances were that the river, running within a few feet of our cabin, bid fair to teem with trout, and we were fish hungry.

Thus it happened that early spring found me casting, with ill grace 'tis true, but casting nevertheless. I usually started by making sundry uncomplimentary remarks about "dainty tackle only fit for ladies to fool with," and requests, addressed to no one in particular, to give me a cod line and a good dory off the dear old Maine coast. Then I girded myself with a creel into which, just as a matter of form, I put some nice damp moss, and thus prepared I fished till dark.

This persistence was ultimately rewarded. I caught a fair sized trout and a fingerling which I threw back. How I landed them I do not know, but I have a distinct recollection of an awful tangle at the finish and a triumphant march home with the trout.

By this time I was an enthusiast and fished almost daily throughout the season, with varying success. During the first month a casual observer might have entertained considerable doubt as to whether I was angling for birds or fish. I left at least a dozen professors hung to high

branches along a quarter mile stretch of river bank.

One afternoon early in the season, when the river was still rather too cold to wade, I cautiously pushed aside the brush at the foot of a beautiful riffle just above the cabin. Making a low side cast beneath the large alders I dropped a professor in the lower end of the riffle, allowing it to drift into a small eddy on the further side. Like a flash, a beautiful trout showed his gleaming red sides to the setting sun and vanished. My strike was a fraction of a second too late to hook him. In spite of the theory advanced by old fishermen that no large Blue River trout would strike twice the same afternoon, I ran every bluff I knew on this old gray beard, but he had tasted one iron-lined bug and had food for thought if not for body. I finally left the riffle with considerable respect for the sagacity of redsides in general, and one in particular, and a firm determination that our acquaintance should not end there.

I politely offered this same trout a queen of the water a few days later. He let it drift past his pet eddy, only to hit it hard a second later. He took it as he rose, and I hooked him in good shape. Down he went like a streak, making my reel fairly hum; then turning, he tore against the swift current. This additional strain was too much for him. I felt him weaken a trifle, and slowly began to reel him in. He gave me about three feet of line, but I could not

budge him another inch. The tackle would not stand another ounce. I kept the strain for a few moments. The pull was as steady as though I had hooked bottom, yet I had seen the trout. I slackened the line the least bit, but not a move from the other end. Suddenly I realized that whatever I had originally hooked, there was nothing animate on the other end of the line. Investigation, which involved a soaking to the waist in that mountain torrent, disclosed my hook fast in a fallen cedar.

I haunted that riffle until one morning I hooked that trout at the first cast with a professor. Imagine my disgust to have him zig-zag right in, not putting up near the fight of a ten-inch speckled trout. He measured fifteen inches and was the largest redsides I ever pulled out of Blue River, though much larger ones have been taken.

Many an afternoon I waded the river for two miles without landing anything. As I rounded the bend by the cabin, Budge would run out on the piazza and call down to know the size of my catch. Like the proverbial small boy I was loth to admit defeat, and would often answer the question as he did: "When I catch this one and two more, I'll have three." Then I would try the riffle in front of the cabin, and there I would usually redeem myself. I have crawled out of the river as late as half-past eight in the evening on occasions, tired, wet, hungry, and with nothing to show for the afternoon's work but a ruffled disposition. It would not be so bad to come home to a hotel or camp with an empty creel, but when you and your better half have been eating bacon all winter, it sort of knocks the romance out of "fisherman's luck." "Overland trout" is all right now and then, when a varied menu is available, but it grows monotonous in the spring, when it has been your mainstay since fall. About this time redsides are vastly preferable to "hog sides" to our way of thinking.

At the foot of the falls there is a deep pool in the bed rock about forty by twenty feet. Even in the driest season the water is churned into foam much like the wake of a small steamer. Along the edges, however, there are a few little crevices in the rock where the water is clear and comparatively quiet. It was into one of these quiet places that I had been casting without success when it occurred to me that perhaps the fish had grown too lazy to rise because of the abundance of food coming over the falls and eddying about the pool before their very noses. Accordingly I took the ugliest looking fly I ever saw and baited it. Unsportsmanlike, yes; but I was hungry, remember that.

The vivid red and yellow Maginty with the tempting morsel hooked on behind must have created a sensation as it swept under. I gave it line enough to drift around fishville at random. Suddenly I saw my line begin to cut the foam, and without waiting, I gave a quick, but gentle pull.

My reel began to sing as the fish went down. As luck would have it, I was using a spare set of tackle which had been patched that afternoon, and it did not look like policy to try to stop the runaway, particularly when the bottom was bound to do so soon enough. He did not stop long on bottom, however, but was up like a flash and away to the other end of the pool, then back as quickly, right under the falls. As

yet, I had had no sight of him, but he felt as though he was capable of making the frying-pan smell good. I shifted my position slightly to avoid having my line sawed across the edges of the rocks, and then we had it out. I put all the strain on the tackle it would stand, giving him line for his downward rushes, then recovering it when he rose. At last he made a frantic rush over a shallow bench of rock and I caught sight of his great gray body, and not the expected red stripe, but spots—a Dolly Varden!

The apparition on my end of the line of over six feet of lean man, wearing a hungry expression, was too much for his royal highness. With redoubled exertions he tore up and down that pool, and he had me on the jump. Three times I worked him on to that bench, and each time he regained deep water. The last time I was amazed to see that his mouth was tightly closed while my line appeared to pass under his body. This body hold could not last. It was likely to

tear loose any moment if I did not land him. Again I ran him into shoal water, and this time I was in the water all ready for him. As he came in, temporarily exhausted, I seized him just behind the gills, and slipping my forefinger in one side and my thumb in the other, I swung my prize clear of the water and made up the face of the rock with him. Not until I got him well away from that pool did I stop to examine my hold. My hook had pierced the small fin just back of the left gill, well in toward his body, and there it had held. During his struggles the hook had torn a half-inch slit in the fin, so that with the least bit of slack line he could doubtless have shaken it. Leaving the hook just as it was, I struck out for the cabin.

My trout measured $21\frac{1}{2}$ inches and I should judge weighed fully four pounds. Not at all large for a Dolly Varden, but exceptional for this stream and for the hold by which I landed him.

and wishing that he had hold of my fly rod. Blessings on the makers of that good hook, rod and line. As the fish would set out on a voyage of discovery for the lower end of the pool, I would grudgingly pay out to him the line with which to trace his way back when he was ready to come; when he got ready to explore my end of the pool, I was ready to take in all the line he was willing to accord me. Excited? Well, you all know how it feels.

Below the pool where we were fighting our battle was a wide shallow rapid, and when the fish finally grew weary of trying to gain his freedom in the deep water and set out for the rapid, there was no stopping him; I followed. The water was up to my middle (I am six-four), but I floundered on. The trout shot into the rapid and headed down stream. His rush was resistless; I gave him all the line left. At the moment when I had concluded to brace the rod, tear the hook out and let him go, he turned and came back up stream. As he passed me I saw that he was growing tired, his mouth was wide open, the gills working convulsively. I called to the German to stand by and lend a hand at the landing. A few shorter rushes with quicker returns, a few more feeble leaps and the great handsome fellow gave it up and floated toward the shore. The German waded in behind him, stooped and with both hands scooped him ashore.

We had no scales, so we could not weigh him; we had no camera, but we did have a foot rule, and it told us that the fish was a trifle over 28 inches in length. He was heavy, as I ascertained by lugging him to camp.

Doubtless the reader will feel an interest in knowing how a strictly lake trout found his way up a small stream so far from his usual habitat. In early spring the charr follow the cut-throat trout up the streams to feed off the roe as it is deposited in the sand, returning as the cut-throat return. This one evidently lo-

A Day With the Trout in Idaho

By CHARLES STUART MOODY

IT was growing late in the season. Lightning Creek, one of the famous Idaho trout streams, in the spring a raging torrent, was little more than an overgrown brook. The larger trout, having spawned, had all returned to the lake, leaving only the smaller fry to tease the angler. Professional cares had delayed my annual pilgrimage, but nothing can prevent me from spending at least a few days there every season.

We dropped off the Bingville train at Clarkfork, the little village just above the mouth of the stream in Clark's Fork of the Columbia, mounted our wheels and toiled up the trail to where Lightning Creek cuts its way through the Cabinets. There the trail ends and the angler must fight his way through brush, over fallen logs, and around boulders for several miles before he reaches water that has not been whipped to death by anglers from the city. We spread our single blanket upon the ground beneath a cedar at Katy's Cabin, the court of last resort for those who possess the courage and fortitude to penetrate this mountain fastness.

The next morning we traveled several miles further up the stream, thinking that perhaps as it grew smaller the trout would increase in size. Our hopes were futile, not an old moss-back came to thrill our nerves. The clear water was swarming with little ones, just above the legal limit as to size, and with these we were perforce obliged to content ourselves. As the day wore on we drifted slowly down the stream, gleaming one from a sandy shallow or lifting another from a dark pool beneath the roots of an overhanging cedar.

In view of the size of the fish we had been taking, I had tied on a battery of No. 10 flies as being less calculated to injure the small fish did they prove too diminutive to place in the basket. Standing upon a shelving rock, I threw my fly upon the riffle and allowed it to float down into the still pool below, the while watching the German.

The instinct of the fisherman caused me to glance from time to time at the fly as it floated idly in the still water. I glanced one time and saw an immense head rise out of the water, a capacious mouth open and engulf that tiny fly. I struck. He felt the barb and half turned in the water, disclosing the dark slaty sides and bright lemon spots of a great charr. I have grown gray in angling, but I submit to the angling fraternity that a five-ounce rod and a diminutive hook are poor weapons to fight a big trout that is all fight from the moment he is hooked until you have him dressed with sage

LIGHTNING CREEK.

and in the basting dish. The German had given up his hopeless task, and was making his way toward me over the slippery rocks. His trained eye took in the situation at a glance and he hastened forward, shouting advice couched in a curious medley of German-English and dancing about like a dervish on the rock

cated in the pool where I found him, waiting until the fall rains would raise the water so that he could return with ease. He chose a delightful place to spend the summer and only erred in attaching himself to what he probably thought was only an insect, but which proved to have a string to it.

 S. J. GIBSON, Treasurer.

CORRESPONDENCE.

The **FOREST AND STREAM** is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Terms: \$3.00 a year; \$1.50 for six months. Single copies, 10 cents. Canadian subscriptions, \$4.00 a year; \$2.00 for six months. Foreign subscriptions, \$4.50 a year; \$2.25 for six months. Subscriptions may begin at any time. Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line (\$2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra. Special rates for back cover in two or more colors. Reading notices, 75 cents per count line. A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively. Advertisements should be received by Saturday previous to the issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

WHY REYNARD SMILES.

"THE fisherman's expense is now paid by the hunter, and this is not fair," said an after dinner speaker at a recent meeting of sportsmen, in advocating a fishing license fee in New York State. This is the gist of most of the arguments in support of the proposal to establish a license system for fishing. As a matter of fact the State pays for fish, game and forest protection out of the general treasury. The total sum paid in for shooting licenses, fines for violations and fees of various sorts is not appropriated for fish or game protection.

The liquor dealers pay for licenses, but the fund obtained from the sale of liquor licenses is not set aside and expended in paying salaries of special policemen to protect the dealers' property. There is no direct relation between the shooting license fund and the money appropriated by the Legislature for game and fish protection: in fact, the sum paid out for protection is much smaller than the shooting license fund, although the cost of maintaining the Conservation Commission has increased under Governor Dix's administration. He it was who wiped out several commissions and placed the present one in charge, urging as one excuse for doing so the need of economizing. But economy has been lost sight of in this connection, as is frequently the case in much lauded "reforms."

When depleted waters are restored to their former abundance of fish life and are free to all, then will the angler willingly pay a fee in addition to his other necessary expenses for the

privilege of taking a few trout, and he will not complain that the fund he has helped to pile up is not expended in his interests. At present, however, it would hardly be fair to exact a fee for fishing and then inform license-holders that they may possibly find fish to catch in some other State. Nor is it likely that hotel and camp keepers, guides and boatmen, who depend on the patronage of anglers, will favor the plan to mulct the latter still more. Not that the shooting license carries with it any guarantee of game; it is merely popular, that is all.

When game commissions cannot longer resist the popular demand for information as to what is done with license funds, they purchase and liberate a few European partridges, the press agents spread the good news, and everybody is happy. Even reynard licks his chops with a semblance of a sense of humor. He may not know that Abraham Lincoln once said, in his whimsical way, that it was easy to fool the people at times, but reynard is fond of a full meal now and then, and afterward he can afford to indulge in a foxy smile at the expense of the easy-going people who pay so dearly for his imported food.

PROGRESS IN NEW JERSEY.

THERE is a great tempest in a teapot in New Jersey over the introduction into the Legislature of the Radcliffe bill to stop the sale of game. One representative, in condemning it, said the bill, if passed, would save all the game for men who have time and the inclination to shoot for their own amusement and their own tables. Exactly, and it would put a stop to the shooting of game for market by guides who are paid well to assist their patrons to secure a little game, but it would not prevent these guides from supplying their own tables. In other words, stopping the sale of game removes the commercial stigma from sport, but under an equitable arrangement that will no doubt be agreed to in New Jersey, as in New York State, the market men and hotelkeepers may still be enabled to purchase game that is imported. The sportsmen of New Jersey have taken a long step toward game protection in the establishing of a licensing system, which goes far toward keeping aliens out of their fields. The next step is to stop the sale of game.

An excellent law just passed by the New Jersey Legislature prohibits shooting into squirrel nests. This reprehensible practice has been followed by a great many hunters, and in sections where the trees in the woods are not large and contain few holes in which squirrels can find shelter, many of them live in nests in tree forks. When the leaves fall off the trees these nests may be seen at a long distance, and hunters go from one nest to another, shooting into each one. Even if the game is killed it is not always secured, and if the new law is enforced, it will provide good shooting for men who are fond of squirrels, both as game and food.

LETCORTH PARK at Portage, N. Y., comprises about a thousand acres of land in the valley of the Genesee River. It was given to the State by the late W. P. Letchworth, and is cared for by the American Historic and Scenic Preservation Society. Half of the land is now covered with forest trees, and it is

the intention of Charles M. Dow, its custodian, assisted by Overton W. Price, of the Forest Service, to plant the balance of the tract with native trees and with European conifers and hardwoods, devoting one acre to each species. A deer park and flying cages for native birds will also be established.

A LARGE number of the best-known anglers in England have banded together as an Anglers' Defense Committee, the purpose of which they have outlined as follows:

That the Anglers' Defense Committee will, when possible, and advisable, take such steps as are necessary towards the defense of any angler in the United Kingdom affected by the Act prosecuted under the Protection of Animals Act, 1911—provided he has used generally accepted and sportsmanlike methods of angling.

With rhododendrons and daffodils flowering, the trout season approaching, the railways partially blocked by the great coal strike, and finally the likelihood of arrest for violating the new law mentioned above, the anglers of the tight little island across the sea are not all a happy lot to-day. But then, uncertainty adds spice to angling, as to other forms of amusement.

SEÑOR MARIO UGALDE, of Guatemala City, has made application to the Government of Guatemala for the exclusive right to manufacture gunpowder in the Republic for ten years. Señor Ugalde contemplates utilizing the Arnoudts formula in making the explosive, which he proposes to carry on under the direct surveillance of the Government. Exemption from customs duties on all materials needed for and in the manufacture and sale of the gunpowder, as well as exemption from any national or municipal taxes now existing or that may be imposed during the period covered by the proposed concession, is also requested.

WILLIAM YATES, of Goldenburgh, Canada, in writing to L. O. Armstrong, of Montreal, suggesting the organization of a wolf hunt, says that wolves seem to be quite plentiful north of Clearwater Lake on the Mississaga. "Last winter," writes Mr. Yates, "two of my neighbors killed ten. There is a good road to Clear Lake from Thessalon where Eddy brothers have a lumber camp. The two neighbors referred to have a small camp a day's trip from Clear Lake." Mr. Armstrong will not hunt wolves this winter, although this information has tempted him to do so. He is actively engaged in exploiting Canada's natural resources.

THE season for black bass fishing in New Jersey waters will open on June 15 hereafter, instead of on May 20, Governor Wilson having signed the bill which was passed by the Legislature for that purpose. It is to be assumed that in most, if not all waters in that State, the spawning season will be over in mid-June. The laws of Pennsylvania, New Jersey and New York are now uniform, as regards the opening day for bass fishing; that is mid-June, for the season opens in New York on the 16th.

At the hearings in Washington on the proposition to place migratory game birds under Federal protection, representatives from a majority of the States favored the plan. This is encouraging.

YACHTING

Ticks from the Ship's Clock.

At the meeting of the Yacht Racing Association of Gravesend Bay, held last week, C. A. Kelby and Arthur F. Aldridge, of Crescent A. C., and Louis Tieman, of New York C. C., were appointed a committee to revise the constitution to provide for a national commission to settle questions and disputes that seem out of the jurisdiction of local regatta committees. The consensus of opinion among those present was that such a commission would answer the purpose of a court of last resort. Disputed problems being first referred to the regatta committee, then to the association, to which complainant belongs, and finally to the National Commission. Through this arrangement decisions would be uniform and incontrovertible, while such unfortunate imbroglis as the Joyant matter would be impossible. As evidence that such a proposition is practicable, one has only to cite the National baseball commission and the American Kennel Club, whose decisions are final in matters to which they relate. Personally, I consider the action of the Y. R. A. of Gravesend Bay a great big move toward yacht racing harmony and of inestimable value to the uplift of the sport of yachting.

The Twin City Power Boat Club, which was organized last month, has been admitted to membership in the Western Power Boat Club Association with headquarters in Chicago. A series of races to be given during the coming season on the Illinois River by the Twin City Club will be under the auspices of the Western Association, and its rules will govern.

Hope springs eternal and so on, and if you don't believe it, read this: "The by-laws of the Erie Y. C. do not make ownership in a boat obligatory upon a member. With us, as with all yacht clubs, the veranda yachtsmen are a valued adjunct and we take chances on interesting them later on in the real thing."

We are just in receipt of a telegram from J. P. Brady, of Chicago, which announces the biggest thing ever done by inland yachtsmen. Here is the telegram:

"Representatives from a number of big yacht and power boat clubs of America met in Chicago March 16 and formed Associated Yacht and Power Boat Clubs of America, with William Hale Thompson, Commodore of Chicago Y. C., and one of the most widely known yachtsmen of country, as president. The organization is planned to embrace all clubs of the country. The first big undertaking of the association will be a magnificent naval pageant Aug. 10-17, 1912, at Chicago. At the banquet, following the formation of the association, four hundred yachtsmen, representing fifty big yacht and power boat clubs, attended."

From Motor Boat, published in London, comes the information that three British motor boats will come to this country to race for the British International trophy, won last year by Dixie IV. These are: A 330-horsepower Thornycroft hydroplane, owned by Dan Hanbury, and driven by six Vauxhall engines; Mackay Edgar's new Saunders boat, and a new hydroplane being built for the Marquis of Anglesey. In addition to these challengers, much mystery surrounds the new French 1000-horsepower boat, of which much has been written from some imagination and few facts. The question of engine reliability figures more in this event than does speed, and it is reasonably safe to say that a reliable 40-knotter will come pretty near lifting the trophy.

Defenders probably will be as follows: Rear-

Commodore Blackton's Vita II., built for last year's contest, but never in proper condition, is in process of rebuilding. Albert Smith's Columbia, built at the Elco works and motored by the Standard Motor Construction Company, is a possibility, and Lou, a boat now at Lawley's for E. V. Harkness. This boat was designed by Swasey, Raymond & Page, of Boston. She is to have two motors of 500 horsepower each and weighing only 1,000 pounds each. Commander Pugh, of Chicago, whose Disturber II. figured in last year's contest probably will build a new boat. These four craft are all that are mentioned at present in connection with the coming race.

W. B. Allen's new auxiliary ketch, built from designs by W. H. Hand, Jr., of Boston, will start this week for Florida, where she will be used for fishing. Mr. Allen being an expert angler with a penchant for tarpon fishing, will enjoy several months in Southern waters in his "fishing ketch."

F. D. Lawley has completed plans for a cruising power boat, to be built at Lawley's yard for A. E. Lombard, of Boston. Her dimensions are: Length, 54 feet; beam, 8 feet 9 inches; draft, 3 feet. She will be raised-deck forward, will have a large, light deckhouse aft and will have sleeping accommodations for six. A 60-horsepower Sterling engine will drive her about sixteen miles an hour.

A bill introduced in the House recently calls for the construction of a first-class lightship to be stationed about one mile northerly from the north end of Block Island, R. I., at a cost of \$140,000. Query: How long will she stay there?

In England an association has been formed to regulate and protect the interests of yacht brokers, yacht surveyors and yacht architects under title of Yacht Brokers' Association. Sounds like a trust—yes?

Yacht Sales and Charters.

The following is a list of recent yacht sales and charters:

The 200-foot steam yacht Alvina, owned by Mr. Thomas F. Cole, N. Y. Y. C., chartered to Commodore E. C. Benedict.

The 170-foot express type turbine steam yacht Winchester, sold for Mr. Peter W. Rouss, N. Y. Y. C., to a member of the N. Y. Y. C. The new owner has changed the name of Winchester to Flying Fox, Mr. Rouss having reserved the original name for the new larger and faster Winchester now being built from designs by Messrs. Cox & Stevens.

The 140-foot express type steam yacht Adroit, formerly the first Winchester, has been chartered for the season by Mr. Alfred G. Vanderbilt, N. Y. Y. C., to Mr. R. Livingston Beckman.

The 110-foot power house boat Captiva, chartered for Mr. Payne Whitney, N. Y. Y. C., to Mr. E. Mapes, of Minneapolis.

The 90-foot power houseboat Onawa II., chartered for Mr. Wilbur C. Fish, N. Y. Y. C., to Mr. C. M. Meyer.

The 90-foot auxiliary schooner yacht Whim, chartered for Mr. C. A. Griscom, N. Y. Y. C., to a western yachtsman for a Florida cruise and subsequently chartered to Mr. H. Van Wagenen, Jr., for a portion of the season.

The 90-foot auxiliary ketch Huntress, chartered for Mr. F. W. Chesebrough to a member of the New York Y. C.

The 85-foot cruising power yacht Kaimia, chartered by Mr. H. J. Park, N. Y. Y. C., to Mr. Honore Palmer, of Chicago.

The 85-foot cruising power yacht Milwin, sold for Mr. Simon Weiss, of New Orleans, to Mr. E. R. Connett, N. Y. Y. C.

The 76-foot auxiliary yawl Cacique sold for Mr. W. S. Van Clief, of Port Richmond, S. I., to Mr. E. E. Conway, of Boston.

The 65-foot motor yacht Jean and Virginia, sold for Mr. P. D. Gwaltney, of Smithfield, Virginia, to Mr. R. Bee Leiby, of Charleston, South Carolina.

The 53-foot motor yacht Vixen, sold for Mr. A. L. Kerker, of New York to R. L. Rayner, Atlantic Y. C.

The 53-foot motor yacht Irene, sold for Mr. Chas. Blum, of Rye, New York, to Mr. A. W. Thompson, of Baltimore, Maryland.

The 55-foot motor yacht Unome II., sold for Mr. D. W. Flint, of Providence, R. I., to Mr. C. H. Foster, of Troy, New York.

The 45-foot auxiliary yawl, Friar Tuck, sold for Mr. C. H. Jefferies, of Atlantic City, to Mr. Graham Eckel, of Baltimore, Maryland.

The 40-foot raised-deck cruiser Sayonara, sold for L. B. Warren, of Port Washington, L. I., to Mr. Gardner H. Bell, of Washington, D. C.

The 40-foot gasoline cruiser Hope II., sold for Messrs. A. W. Thompson and D. T. Mallory, of Baltimore, Md., to Mr. W. E. Durant, Jr., of Charleston, S. C.

The Buzzard's Bay Herreshoff 30-footer Wahtawah, sold for J. F. Stillman, to E. J. McCready and Frank J. Muhfeld, New York.

The 56-foot cruising motor yacht Gayety, sold for Thos. F. Chesebrough, Northport, L. I., to A. Diaz, Colon, C. Z.

Y. R. A. of Long Island Sound.

THE annual meeting of the Yacht Racing Association of Long Island Sound will be held at the Hotel Astor, Broadway and Forty-fourth street, New York city, on Wednesday, March 27, 1912, at 8:30 P. M. Officers to serve during the year 1912 will be elected. The nomination committee chosen at the meeting in October last have made the following nominations:

For President, Stuyvesant Wainwright, American Y. C.; for Secretary, James W. Alker, Manhasset Bay Y. C.; for Treasurer, Victor I. Cumnock, Seawanhaka-Corinthian Y. C.; for members of Executive Committee—W. Butler Duncan, Jr., Manhasset Bay Y. C.; George E. Roosevelt, Seawanhaka-Corinthian Y. C.; Horace E. Boucher, Larchmont Y. C.; Frank Bowne Jones, Indian Harbor Y. C.

The following amendments to the racing rules are proposed:

Add to Section 1, Rule 5, the following: The spinnaker sheet of a yacht of the 31-foot class or any smaller regular class, must be carried inside the jibstay.

Amend Section 5, Rule 5, fourth paragraph under sloops, yawls and mainsail yachts, to read: Class P, 31-foot class, six men instead of five.

Challenge for Manhasset Cup.

WHO is the rightful holder of the Manhasset challenge cup? It is at present held by the American Y. C., through disqualification of Joyant and Corinthian after Joyant had won the trophy last season, although the Yacht Racing Association of Long Island Sound, to whom the matter was taken by the Indian Harbor Y. C., submitted an opinion to the effect that the regatta committee in charge of the races exceeded its authority in not accepting certificates of measurers. Seawanhaka Y. C. has just challenged American Y. C. for a race for the Manhasset cup.

The Indian Harbor Y. C. wrote to the American Y. C. last fall, and asked if that club would accept the interpretation of the executive committee and suggested that the trophy be returned to the original donors, the Manhasset Bay Y. C.

Other clubs may now enter yachts to take part in the series of races which will be sailed on the Sound next summer.

Y. R. A. Gravesend Bay Dates.

RACING dates for the season of 1912 were adopted at a meeting of the Yacht Racing Association of Gravesend Bay, held at the Crescent Athletic Club, in Brooklyn, March 14. Races will be held on each Saturday and holiday throughout the season with the exception of July 20 and 27, these being the two Saturdays held open for Larchmont week.

The delegates decided to make no changes in the racing courses this year. Gherardi Davis, of the Atlantic Y. C. donated two cups for competition under different conditions than those that govern the championship races. The organization also decided not to govern the handi-cap class.

On motion of Horace E. Boucher, Atlantic Y. C., the following explanation of Section 7 of Rule 6 was adopted:

"Racing numbers, with class letter or class distinctive mark directly above them, must be displayed on both sides of the mainsail. They shall be painted in clear, black, block type on separate pieces of canvas and securely attached to the sail so that the centre of the number will be midway between peak and upper reef points and on perpendicular line from peak of gaff parallel to the waterline. The size of the numbers and the letter shall not be less than 18 inches and need not be more than three feet in height."

The racing dates adopted are as follows:

- May 25—Atlantic Y. C.
- May 30—National Y. C.
- June 1—Bensonhurst Y. C.
- June 8—Atlantic Y. C.
- June 15—New York C. C. championship.
- June 22—Crescent A. C. championship.
- June 29—Atlantic Y. C. championship.
- July 4—Bensonhurst Y. C.
- July 6—National Y. C. championship (tentative).
- July 13—Atlantic Y. C. championship.
- Aug. 3—Marine and Field Club championship.
- Aug. 10—National Y. C. championship.
- Aug. 17—Atlantic Y. C. championship.
- Aug. 24—Bensonhurst Y. C. championship.
- Aug. 31—Marine and Field Club championship.
- Sept. 2—Atlantic Y. C.
- Sept. 7—Crescent A. C. championship.
- Sept. 14—Atlantic Y. C. championship.

Larchmont's Race July 20.

COMMODORE LEONARD RICHARDS, of the Larchmont Y. C., appointed Horace E. Boucher, Lawrence Dally and Frederick Sperry as Regatta Committee. This committee held its first meeting and announced that Larchmont week will be seven days later than it was last year. The week starts July 20 and ends July 27.

The change was made as the result of several meetings of the regatta committees of the New York, the Larchmont and the Eastern yacht clubs. For several years the dates of these organizations have clashed and many Corinthians who have desired to take part in the fixtures of the three clubs have found it impossible.

Because of weather conditions along the coast of Maine it was not feasible to hold the eastern cruise on an earlier date. The Larchmont fixture, therefore, had to be changed, but to put it later in the year conflicted with the annual cruise of the New York Y. C. The latter organization was willing to advance the date of its cruise to Aug. 8, which would enable the Larchmont Club to hold its race week during the week of July 20.

With the knowledge that it will be possible for the big schooners to race once more at Larchmont, the organization has decided to make the racing in this class the feature of the week. Commodore Richards has offered a cup for Elena, Westward, Enchantress and Irolita.

Vice-Commodore George M. Pyncheon will give the trophy for the next class of schooners, which probably will include Corona, Elmina, Nancy, Endymion, Muriel and Princess. The smallest schooners will race for a cup offered by Rear-Commodore Francis M. Wilson. In the division there probably will start Cygnet,

WESTWARD, WITH EVERYTHING DRAWING.

Eclipse, Miladi, Dervish, Vagrant, Grampus, Katrina, Vision, Winona, Shyessa and another schooner about to be built for an Eastern Y. C. owner. With so many double-stickers starting, the Larchmont race week will be the most important one that the club has given in years.

Has Westward Retired?

A REPORT is current in yacht racing triangles that A. S. Cochran, owner of Westward, will not put his handsome schooner into commission this year. The basis of the report seems to arise from the following conversation in the New York Herald:

"Captain W. S. Dennis, master of the schooner yacht Elena, owned by Morton F. Plant, N. Y. C., has secured the services of Harry Klyfve, the mate of the schooner yacht Westward, for the approaching season. Klyfve has been in charge of Westward since she was laid up at City Island for the winter, and when he told Mr. A. S. Cochran, the owner of Westward, of the offer that he had received from Captain Dennis, he was released and was informed that Westward would not be brought out this year."

If Mr. Cochran is correctly quoted, his decision means a serious set back to the development of this fine big class of racers. Owners of Elena, Irolita and Enchantress have said their boats will be ready for competition this season, and it is sincerely hoped Mr. Cochran will take sufficient interest in the sport to bring Westward from her City Island berth in time for the N. Y. C. cruise and the ocean race of the Eastern Y. C.

Automatically Tripped Life Rings.

THERE is perhaps no means of transportation in which so much is required in the way of safeguarding the lives of those intrusted to it, and which has to be equipped with so many and various appliances for the achievement of this end, as the modern passenger ship. In a bad storm a sailor and even a passenger may be washed overboard, or a passenger or fireman, temporarily deranged, may leap overboard into the sea. To provide for an emergency of this kind, one or more boats are always kept so that they can be launched at a moment's notice, as considerable time would be lost if the tarpaulin coverings had to be removed as with the regular lifeboat. A safety device, which has given excellent satisfaction, is a device for releasing life rings fore and aft, both on the port and starboard side of the vessel. As soon as the news

of "man overboard" reaches the bridge, either by the "wig-wag" or the ship's telephone, the officer on duty gives one turn of a valve and the life rings are automatically released. After they have all reached the water, a red electric light flashes up at the top of the apparatus, showing that the mechanism has performed its duty.—Scientific American.

Lloyd's Harbor Y. C.

THE Lloyd's Harbor Club has been incorporated by Henry Doscher, C. W. Voltz, H. H. Moulton, B. R. Stoddard and C. S. King. The board of trustees is composed of the following: C. A. Marsland, G. P. Granbery, E. H. Tucker, W. R. Berth and W. S. Sullivan. The officers for 1912: C. A. Marsland, Commodore; W. S. Sullivan, Vice-Commodore; W. R. Berth, Treasurer; E. H. Tucker, Secretary. The club is comprised of good fellows, boat owners and members of other clubs.

GRAY MOTORS FOR BOATS

Made in the Largest Plant in the World devoted to manufacturing 2 cycle marine gasoline engines.

3 H.P. with Complete Outfit ready to install

ALSO 3 1/2 TO 36 H.P.

\$55

Guaranteed by a big responsible concern. Write for big catalog—tells and shows you all about these high grade motors and how they are made.

GRAY MOTOR COMPANY, 3352 U. S. Motors Bldg., DETROIT, MICH.

ARCTIC HUNTING

For charter, ship fully equipped, specially built for ice work, for one or more months' cruise in Greenland or Spitzbergen and Franz Josef's Land waters, will accommodate party of 5 to 15. Polar bear, reindeer, fox, seal, walrus, Arctic birds, fishing.

A Good Sign.

THE lively interest which has lately been manifested by members of the E. Y. C. in a one-design class of small sailing craft is a good sign. It means that one's real love of the water and ambition to acquire skill in the handling of small craft can never be fully gratified by the modern motor boat. We concede that a motor boat is a mighty convenient invention and fills its own particular niche in present day history quite as fully as does the sailing yacht or the aeroplane, but motor boats never have made sailors and never will do so.

You may contend if you will (and we will not contradict you) that it is quite as impossible to build two motor boats precisely alike and possessing the same identical speed as it is to build two such sailboats, but, nevertheless, the story is usually ended the first time the two power boats get together, for it is dollars to doughnuts that the craft which wins in the first try-out will do so ever after.

But take two sailboats! Aha!! Here is where brains supersede mechanical force, and from the firing of the preparatory gun, until the contestants cross the line at the finish, skipper vies against skipper, not only in steering his course, but in trimming his canvas, in the proper hoist of his sail, in the manipulation of the center-board, in taking quick advantage of every puff of wind and every veering of the breeze. Why it thrills one just to write it even on this cold February night with the thermometer so far below zero that we fear it won't climb back in time for the fitting out season!

It's a good sign, we repeat, and we know of nothing—absolutely nothing—which will instill more ginger into our club than to see the proposed class adopted and a dozen or more of the "bugs" contracted for.

One word in conclusion—adopt a small inexpensive model at first and when this class creates sufficient interest to induce the adoption and building of a somewhat larger class, why all the better!

This dissertation comes from the Pilot, published by the Erie Y. C., and 'tis good sound philosophy, say we.

Black Duck, a 20-Mile Cruiser.

ALEXANDER SELLERS has just placed a contract with J. Murray Watts, N. A., for the design of a high speed cruiser. This boat is 45 feet long, 9 feet beam and 3 feet 6 inches draft. Two 60-horsepower 6-cylinder high speed motors are installed and with this 120 horsepower a speed of 20 miles is guaranteed and 21 miles is confidently expected.

In spite of this high speed, the accommodations are unusually comfortable. There is a large main saloon 15 feet long, in which are two transom berths and a Pullman berth. There is a good sized toilet room forward and a galley aft, in which there is a large ice-box and the usual plumbing and a shipmate coal range.

The engine room is just aft of amidships and contains, besides the main driving engines and electric light plant, a tool locker, bench and two pipe berths for the crew. Access is had from the engine room through a sliding hatch directly on to the after deck. This after deck is 12 feet long and there is a side deck to starboard 2 feet 9 inches leading to the main companionway door, so that guests can go forward to the saloon without going through the engine room.

No attempt has been made to build a light racing boat, the planking being of cedar, 1 $\frac{3}{8}$ inches in thickness, while the frames are closely spaced and there is a heavy keelson running from end to end of the boat forming a stiff truss. It is expected that when driven at full speed, this boat will raise her bow nearly out of water and practically plane on her long flat run which is what the sea-going destroyers do at top-most speed.

The owner does not expect to win many races this summer on a time allowance basis, but hopes to gather in some of the fast time prizes as the boat is strictly a cruiser according to the A. P. B. A. rules as decided at a meet-

ing in New York a couple of weeks ago. In fact her accommodations are unusually good for a boat of her size, the headroom being 6 feet 2 inches throughout the main cabin.

A Hydroplane Is—

THE American Power Boat Association defines a hydroplane as a racing boat, whose propeller acts in or against the water, which has one or more of the following characteristics: (a) one or more breaks in the longitudinal continuity of the immersed surface, or one or more super-imposed lifting surfaces; (b) an immersed area of transom exceeding 33-per cent. of the immersed midship section, taken at 50 per cent of the load waterline length; (c) a rating under 1912 A. P. B. A. rules exceeding sixteen times the square root of the load waterline length. Immersed areas shall be actual areas, taken with the boat at rest and the crew aboard in their racing positions. If by virtue of any peculiar form of stern it is impossible to measure the immersed area of the transom, the maximum submerged width at any point within 15 per cent. of the over all length from the stern shall be multiplied by the maximum draft at any point within 15 per cent. of the over all length from the stern, and the product shall be taken as the area of the transom.

Hydroplanes, as defined, are to be divided under the 1912 rules into classes according to length as follows: Not over 20 feet, not over 26 feet, not over 32 feet and not over 40 feet, and are to be raced boat for boat without any restrictions as to power; or if desired by the owners, they may be classified by the regatta committee holding a race in accordance with their A. P. B. A. 1912 rating, and race under the resultant handicaps, but in classes separate and distinct from displacement boats.

High Speed Without Steps.

THE new form of hull adopted by Messrs. Cox and King, London, so successfully in the numerous high-speed motor boats designed by them last year has been patented under No. 29,895, 1910, which was accepted on Sept. 7 last. Another interesting patent held by Messrs. Cox and King is for the unusual arrangement of screw propellers, adopted for the first time in Tyreless III., which proved of great advantage for lighter high-speed boats fitted with twin screws. Some particularly interesting little boats which will be seen in the summer built under the former patent will be Baby Mine, No Kid and others, conforming to the restrictions of the British Motor Boat Club 21-foot class. The two boats named have been ordered by J. H. Bell, lately the owner of the 35-foot 25-knotter The Quaker Girl, and Gustavus Pratt, respectively. Another as yet unnamed will be constructed for C. Lance Gamble, a new recruit to marine motoring, who evidently believes in starting out with the latest thing. Messrs. Cox and King are introducing numerous modifications in the application of the design as compared with Cordon Rouge, Grayling, Freak and Angela, last year's examples of 21-footers built under the same patent. The newest model is certainly very attractive and looks remarkably speedy, while there is a wholesome appearance of seaworthiness. At least two of the boats will be fitted with Vauxhall motors, and although these engines are newcomers afloat, with their reputation ashore and Messrs. Cox and King to give them sea legs, a highly satisfactory performance is assured.

Canoeing

Atlantic' Division.

BURLINGTON, N. J., March 17.—*Editor Forest and Stream:* The annual dinner of the Atlantic Division was held at Hotel Windsor, Trenton, N. J., on Saturday evening, Feb. 17. One-half of the dining room was screened off and set apart for our use, the same being profusely decorated with A. C. A. flags and pennants and

large flags of the different clubs represented. The menu consisted of a beefsteak dinner, and was served in the usual good style of the hostelry, and thoroughly enjoyed by everyone present.

The vice-commodore acted as toastmaster, and called upon the following for short speeches: Commodore Kretzmer; Frederick W. Donnelly, Mayor of Trenton; C. B. Vaux, the oldest member of the association present; Rear-Commodore A. D. Berning; Frank T. Wilson, chairman of the Division Meet Committee; Dr. David J. Boon, Commodore of Philadelphia Canoe Club; Benj. A. Sleeper, Commodore of the Lakanoo Boat Club, and chairman of the Rancocas cruise committee; the never-failing Percy Hogan, who responded in his usual entertaining style; B. Frank Cromwell, Jr., Vice-Commodore of the Knickerbocker Canoe Club and chairman of the Labor Day race meet committee; together with several others who added "flavor" to the already mentioned "talent." A stein, with the A. C. A. flag and 1912 painted on it, was given to everyone present as a souvenir of the occasion.

Among those present were the following: Commodore Kretzmer, H. L. Walker, Frank T. Wilson, Louis Wiese, W. G. Sibley, B. A. Sleeper, W. A. Furman, B. F. Cromwell, Jr., M. E. Southard, Fredk. W. Donnelly, Percy Hogan, A. C. Biles, A. D. Berning, S. L. Woodhouse, W. H. Logan, Jr., V. D. Abel, Forrest Altemus, W. C. D. Gauntt, M. D. Wilt, J. W. Broomhead, J. O. Rickey, J. F. Miller, Harry Gault, Harry Keiser, Harry Hager, Larcy Fullum, Otto Stockel, G. G. Richards, J. V. Mulcahy, H. B. Fort, E. D. Baylie, H. H. Baylie, Chas. Parker, Jr., A. Lochner, A. W. Winter, J. B. Probasco, Stanley Schuyler, Alonzo Shinn, H. M. Landes, Alfred VonDohn. D. C. Wells, H. M. Ohlmeyer, H. L. Pollard, R. F. Tims, J. E. Horn, C. B. Vaux, D. S. Hill, Dr. D. J. Boon, A. Ehrlinger, G. M. Cox, G. W. Thomas, H. Bruker, Wm. Steimer, Jos. Schermerhorn, Jos. Fritz, C. M. Hartley, F. N. Thompson, J. C. Hendrickson, H. L. Case, F. L. Muschert, R. R. Anderson, J. Hamilton, J. M. Reeder, E. F. Maloney, E. B. Ayres.

HENRY B. FORT, Vice-Com.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—Lawrence A. Fullman, 602 Chestnut street, Philadelphia, Pa., by G. G. Richards; Davis C. Wells, Jr., Bordentown, N. J., William A. Steimer, Bordentown, N. J., both by M. E. Southard; Edmund vom Steeg, Jr., 10 Camden street, Roselle Park, N. J., and Ludlow Stevenson, 218 Claremont avenue, Jersey City, N. J., both by Cornelius Zabriskie; W. C. Grill, 400 W. 149th street, New York, N. Y., and Herman Heye, 71 Broadway, Jersey City, N. J., both by Louis Reichert.

Central Division.—E. W. S. Key, 409 Elmwood avenue, Buffalo, N. Y., Hugh McLean, P. O. Box 58, Buffalo, N. Y., and Richard L. Wood, 2412 Main street, Buffalo, N. Y., all by F. S. Thorn; M. S. Bostwick, care of Magnus Metal Co., 111 Broadway, New York, N. Y., by W. C. Mullett; Alfred S. Lowe, 100 West avenue, Buffalo, N. Y., by Lyman T. Coppins; G. C. Schierer, 44 E. Utica street, Buffalo, N. Y., Charles R. Hurley, 501 Marine Bank Bldg., Buffalo, N. Y., and Hyatt W. Smith, 247 Lexington avenue, Buffalo, N. Y., by C. A. Spaulding.

Eastern Division.—LeRoy B. Surrey, P. O. Box 196, Plymouth, Mass., by S. B. Burnham.

Western Division.—Arvid L. Greenberg, 915 8th avenue Court, Rockford, Ill., by F. B. Huntington.

MEMBERS ELECTED.

Atlantic Division.—6355, Charles E. Stecher, 452 W. 149th street, New York, N. Y.

Western Division.—6356, Paul R. Sussman, 332 22d street, Toledo, Ohio.

MEMBERS REINSTATED.

Western Division.—5379, J. Bertram Andrews, 226 Paris avenue, Rockford, Ill.

RESIGNATION.

Atlantic Division.—4779, Geo. S. Morrissey, 73 Mercer street, New York, N. Y.

TRAP SHOOTING

If you want your shoot to be announced here send a notice like the following:

Fixtures.

May 1.—Syracuse, N. Y.—Onondaga G. C. G. M. Phillips, Sec'y-Treas., 213 Helen St., Syracuse, N. Y.

REGISTERED TOURNAMENTS.

March 23.—Temple, Pa.—Hercules G. C. A. K. Ludwig, Sec'y.
 April 2-3.—Birmingham (Ala.) G. C. O. L. Gary, Sec'y.
 April 8.—Mt. Airy (Md.) G. C. Ray Watkins, Mgr.
 April 9-10.—Moberly (Mo.) G. C. L. R. Hulen, Sec'y.
 April 9-11.—Perry, Okla.—Oklahoma State tournament, under the auspices of the Perry G. C. Bush H. Bowman, Sec'y.
 April 10.—Gaithersburg (Md.) G. C. R. M. Purdum, Sec'y.
 April 11.—Atglen (Pa.) G. C. L. R. Lewis, Mgr.
 April 13.—Rittersville, Pa.—Lehigh R and G. C. H. F. Koch, Sec'y.
 April 15-17.—New Orleans, La.—City Park G. C. E. F. Leckert, Sec'y.
 April 17-19.—Wichita, Kans.—Kansas State tournament, under the auspices of the Interurban G. C. C. W. Jones, Sec'y, 209 N. Main St., Wichita, Kans.
 April 18.—Columbus (O.) G. C. L. Fisher, Sec'y.
 April 23-24.—Spokane, Wash.—Washington State tournament, under the auspices of the Spokane R. and G. C. T. B. Ware, Pres.
 April 23-25.—Laurel, Miss.—Mississippi State tournament under the auspices of the Laurel G. C. Chas. Green, Pres.
 April 23-25.—Omaha (Neb.) G. C. F. T. Lovering, Sec'y.
 April 27-28.—Chicago (Ill.) G. C. E. B. Shogren, Sec'y.
 May 1.—Crete (Neb.) G. C. R. G. Spadt, Sec'y.
 May 2.—Jewell (Ia.) G. C. W. S. Hoon, Sec'y.
 May 2.—Dublin (O.) G. C. N. J. Dominy, Sec'y.
 May 2-3.—Kankakee (Ill.) G. C. E. F. Radeke, Sec'y.
 May 4.—Bethel, Conn.—Western Connecticut T. S. L. tournament, under the auspices of the Bethel G. C. C. K. Bailey, Sec'y.
 May 7.—Pittsburgh, Pa.—Western Pennsylvania Trapshooters' League tournament, under auspices of the Herron Hill G. C. Thos. D. Bell, Sec'y.

A TEN MAN TOTAL OF 1986

These unparalleled scores were made possible only through the uniform dependable accuracy of

Remington-UMC LESMOK .22s

These scores, together with Mr. Hubalek's tally of 2484 ex 2500 at the Zettler Match in 1911 and Mr. Geo. Armstrong's remarkable 25-shot pistol record of 244 ex 250, present an unbroken series of world's records in proof of the superiority of

Remington-UMC METALLIC AMMUNITION

Remington-UMC — the perfect shooting combination.

REMINGTON ARMS - UNION METALLIC CARTRIDGE CO. - 299 Broadway, New York, N. Y.

 Sept. 10-13.—Denver, Colo.—Rocky Mountain Interstate Sportsmen's Association; \$5,000 added money. Ambrose E. McKenzie, Mgr.

DRIVERS AND TWISTERS.

Correction: Cleveland Gun Club tournament will be held April 10 instead of April 3, as previously announced. This change is made because another local club pre-empted the 3d.

Mr. E. Reed Shaner, Manager, Department of Records, Interstate Association, sends us the following: "Owing to Mr. Elmer E. Shaner's absence from the city, no applications to hold registered tournaments were passed upon this week."

As this issue is our spring fishing number, I have been as brief as possible in the trap department in order to allow the expansion of the editorial fish pond, so that every shooter, while his gun barrels cool between tournaments, will have an opportunity to cast a fly in his mind's eye into the many turbid streams and placid lakes described elsewhere in this paper by real fishermen, who tell how, when and where.

Due to lack of interest, the Havana (Ill.) Gun Club has decided to disband. Only eleven marksmen participated in the shoot this week, and it was voted to call off all future contests. This is one of the oldest gun clubs in central Illinois.

Secretary Young, of Jersey City Gun Club, writes: "On Wednesday afternoon, March 27, the first shoot for the Frank Hall trophy will be held at our club, and from the enthusiasm shown by the shooters in all parts of Jersey, there will be a large attendance, as every one will be anxious to shoot as often as possible, and the one that finally finishes the winner will have a prize that he will appreciate the rest of his life."

Not only the Seventh Regiment, which pays more attention to marksmanship than any other regiment in N. G. S. N. Y., but every other shooting enthusiast in New York, should be proud of the consistent shooting of Lance Corporal J. K. Boles, of the Seventh Regiment. His scores each week are praiseworthy, while his attendance at practice is unusual. Last Saturday he broke the record for the Seventh Regiment range with 48 out of 50.

The third monthly shoot of the East Millstone Gun Club, East Millstone, N. J., will be held on Saturday, March 30, 1912. Shooting begins at 1:30 P. M. sharp. The program consists of six events at 25 targets each, \$1.50 entrance in each event. Money divided Rose system, 5, 3, 2, 1. High amateur guns, \$3, \$2, \$1. Anyone may shoot for targets only. Shells will be on sale at the grounds. We will shoot under canvas if stormy. Automobiles will meet the 12:05 P. M. train from New York via the Pennsylvania Railroad, arriving at New Brunswick at 1:11 P. M.

The reorganization of the Decatur (Ill.) Business Men's Gun Club, effected at a meeting held this week, resulted in the election of the following officers: President, W. H. Cadwalader; Vice-President, George Lancaster; Secretary-Treasurer, Howard Hanthorn; Field Captain, Roy Moore. The new president is recognized as one of the best professional shooters of the West, and is a prominent figure at the national tournaments. The club starts out with thirty members. The club will probably accept the invitation to join the Central Illinois Trapshooters' League.

The shooting of R. L. Spotts, of N. Y. A. C., at Keystone tournament in Philadelphia last week, was of the highest order. He made 145 out of 150, making clean scores in seven of ten events and breaking his last 60 aero-saucers without a miss. While this performance is excellent, it is particularly remarkable in the fact that it shows Mr. Spotts' ability to adapt himself to strange grounds, and calls to mind his consistent shooting throughout the present season. There is no doubt Mr. Spotts should be selected as a member of the Olympic team, for in addition to his ability, he represents the true type of American amateur trapshooter.

Secretary F. T. Lovering, of Omaha Gun Club, writes: "We believe there are a great many lovers of trapshooting within a radius of 500 miles of Omaha who would like to participate in a trapshooting tournament, where the conditions would be such as to permit them to compete on an equitable basis. Firm in the above conviction we are going to try the experiment of holding a tournament for the middle class of shooters, or those who, for some reason or other do not care to attend the regular registered shoots. This idea of holding a tournament for the 'Simon Pure Amateur' shooters originated with R. S. Elliott, of Kansas City, and proved so popular that it has been made an annual affair at the Blue River Shooting Park and draws out an attendance of upward of 100 shooters each year. This tournament will be copied largely after the Kansas City tournaments, except the division of money will be 'Jackrabbit' system, which we believe is better adapted to a tournament of this kind. With the foregoing explanation we are going to hold a registered shoot (old policy), with \$300 added money, barring all shooters who have an average of 88 per cent. or better. It is now up to shooters who believe in a tournament of this kind to assist us in making this tournament a success, not only by their attendance, but by 'boosting' in every possible way. We feel we shall not be disappointed in asking for your support so we can make this style of a tournament an annual affair in Omaha. If this preliminary announcement proves interesting to you, won't you kindly drop us a postal asking for a pro-

gram, which will be ready for mailing about April 10, and also give us the names of anyone you think would be interested. In the past it has been the custom for the wolves to devour the lambs, but it is now up to the lambs to devour each other."

BEECROFT.

Crescent Athletic Club.

BAY RIDGE, L. I., March 11.—The big shoot of the season at the Crescent A. C. was shot here to-day. Team shoot was won by N. Y. A. C. beating the nearest competitor, Bergen Beach Gun Club, by 10 birds.

Pelham cup, 25 targets, handicap: G. J. Corbett (2) 25, D. F. McMahon (3) 25, T. J. McCahill (2) 25, F. A. Hodgman (0) 24, C. W. Billings (1) 24, A. Tilt (2) 23, *J. Skelly (0) 23, W. B. Ogden (1) 22, J. Wellbrock (0) 19, A. M. Dalton (0) 19, A. E. Ranney (1) 19, E. L. Haas (0) 16, R. R. Debacher (5) 15, E. N. Huggins (6) 15. Won by G. J. Corbett on third shoot-off.

Distance handicap, 25 targets: A. Tilt (19yds.) 21, C. W. Billings (20) 20, A. E. Ranney (20) 18, G. J. Corbett (19) 18, F. A. Hodgman (21) 17, T. J. McCahill (19) 16, E. N. Huggins (16) 16, R. R. Debacher (16) 16, W. B. Ogden (20) 15, J. Wellbrock (16) 14, *J. Skelly (21) 14, D. F. McMahon (19) 13, A. M. Dalton (21) 13, E. L. Haas (16) 10.

Billings cup, handicap, Olympic rules, gun below elbow, 25 targets: R. R. Debacher (5) 25, D. F. McMahon (3) 23, T. J. McCahill (2) 23, F. A. Hodgman (0) 21, C. W. Billings (1) 21, J. Wellbrock (0) 20, *J. Skelly (0) 15, A. E. Ranney (1) 13, G. J. Corbett (2) 13, W. B. Ogden (1) 13, A. M. Dalton (0) 13, E. L. Haas (0) 11.

Aggregate trophy, 100 targets, handicap: W. B. Ogden (8) 90, T. J. McCahill (10) 95, *J. Skelly (0) 94, D. F. McMahon (6) 93, G. J. Corbett (8) 93, A. Tilt (9) 90, C. W. Billings (4) 89, F. A. Hodgman (0) 87, A. M. Dalton (0) 82, A. E. Ranney (4) 79, E. N. Huggins (24) 69, J. Wellbrock (0) 68, R. R. Debacher (20) 61, E. L. Haas (0) 55.

High gun trophy, scratch, 100 targets: *J. Skelly 94, W. B. Ogden 91, F. A. Hodgman 87, D. F. McMahon 87, G. J. Corbett 85, C. W. Billings 85, T. J. McCahill 85, A. M. Dalton 82, A. Tilt 81, A. E. Ranney 75, J. Wellbrock 63, E. L. Haas 55, E. N. Huggins 45, R. R. Debacher 41. Won by W. B. Ogden.

*Professional.

Birmingham Gun Club.

BIRMINGHAM, Ala., March 16.—W. R. Crosby was high professional with 96 out of 100; he won the gold souvenir presented by the club. Jas. Hillman, the president of the local club, won the trophy for high amateur with 93, closely pressed by J. K. Warren, who broke 92.

In the double-target event at 15 pair, Guy Ward was high gun with 28. Gentry Hillman was high amateur with 21.

Mrs. O. L. Garl, of the local club, and the best woman shot in the South, shot very well in the first three events, scoring 22 out of each 25, but the wind in the last event caused her to lose a number of targets, and she finished the 100 with the score of 83.

The scores, shooting at 100 targets, follow:

Professionals—W. R. Crosby 96, R. O. Heikes 93, W. Huff 93, H. D. Gibbs 92, J. R. Taylor 91, G. Ward 86, H. Hamilton 80.

Amateurs—Jas. Hillman 93, J. K. Warren 92, Gentry Hillman 90, R. R. Skinner 84, Mrs. O. L. Garl 83, A. Henderson 78, Ed. Cornwell 78, P. Broyles 78, H. McDermott 77, L. Brown 75, J. Munger 75, A. F. Defuniak 74, I. Armstrong 73, Dr. E. E. May 70, P. E. Lalande 70, R. G. Dunn 64, C. W. Hunter 61, R. H. Baugh 41, O. L. Garl 41, J. T. Cooley 41.

Baugh, Garl and Cooley shot at but 50 each.

The scores at 15 pairs doubles were: Ward 28, Heikes 25, Gibbs 22, Taylor 21, G. Hillman 21, Huff 21, H. Hamilton 20, Skinner 19, Crosby 17, Broyles 17, Garl 17, Warren 15, J. Hillman 15, Brown 14, Cornwell 13, Cooley 13, Defuniak 12, Mrs. Garl 12, Hunter 10.

WINCHESTER

“Tournament” Gun

Specially Designed For
TRAP SHOOTING

List Price
\$42.00

The Winchester
 “Tournament” gun is
 made according to speci-
 fications which meet the ideas
 of the most successful trap shots.

It embodies features which count in the making of high scores: such as strong and even shooting qualities, balance and length, drop and shape of stock. The selected walnut stock has a heavy rounding comb, and a well-shaped straight grip. The length of pull is 14 inches, drop at comb 1 3/4 inches, and at heel 1 13-16 inches. The stock was worked out with great care, the intention being to have it, in shape, length and drop, fit the physical requirements of the average shooter. The barrel is 30 inches long and handsomely matted on the top. Almost any dealer can show you one of these guns. It is enthusiastically

Endorsed By Many Expert
Shots

Essex County C. C.

WEST ORANGE, N. J., March 16.—B. M. Shanley won most of the honors of this afternoon. He also won the shoot-off of the tie he and Headley had last week for the Heller cup, taking the match with 22 to 20.

Committee cup, 100 targets, handicap: C. H. Daly (0) 86, J. A. Hart (0) 84, B. M. Shanley, Jr., (0) 97, I. K. Taylor (24) 91, W. C. Shanley (24) 75, Peter Hauck, Jr., (16) 82, George O'Reilly (20) 86, W. R. Delehanty (12) 75, A. O. Headley (16) 88.

Two-man match, 50 targets, handicap: W. C. Stanley (6) 19, Paul Heller (7) 24; total 43. J. A. Hart (0) 19, H. L. Folsom (6) 16; total 35. Daly (0) 21, Austen Colgate (4) 23; total 44. Peter Hauck (4) 27, B. M. Shanley, Jr. (0) 23; total 50. Headley (4) 26, O'Reilly (5) 18; total 44. Delehanty (3) 21, Taylor (6) 10; total 40.

Shanley trophy, 10 pairs doubles: Daly 13, Hart 16, B. Shanley 11, Taylor 14, W. Shanley 4, Hauck 6, O'Reilly 13, Delehanty 10, Headley 10.

Heller trophy, 25 targets, handicap: Daly (0) 22, Hart (0) 22, B. Shanley (0) 23, Taylor (6) 25, W. Shanley (6) 19, Hauck (4) 20, O'Reilly (5) 17, Delehanty (3) 16, Headley (4) 23, Colgate (4) 20, Folsom (3) 20.

March cup, 25 targets, handicap: Daly (0) 21, Hart (0)

22, Shanley (0) 23, Taylor (6) 24, W. Shanley (6) 17, Hauck (4) 18, O'Reilly (5) 23, Delehanty (3) 17, Headley (4) 22, Colgate (4) 21, Heller (7) 25.

Saturday cup, 25 targets, handicap: Daly (0) 24, Taylor (6) 22, Shanley (6) 22, Hauck (4) 20, O'Reilly (5) 23, Delehanty (2) 23, Headley (4) 24.

Early Bird cup, 25 targets, handicap: Daly (0) 21, Hart (0) 17, Taylor (6) 22, Shanley (6) 22, Hauck (4) 20, O'Reilly (5) 23, Delehanty (2) 23, Headley (4) 24.

Shanley won on shoot-off with a flat score of 25.

Jersey City Gun Club.

JERSEY CITY, N. J., March 16.—Ten shooters were out at the Jersey City Gun Club to-day, March 16. Dave Engle was high with an average of 80 per cent., and Geo. Piercy was next with 78 per cent. The scores follow:

Shot at. Broke		Shot at. Broke	
Piercy	200 157	Young	200 136
Engle	125 101	Windisch	100 55
Harvey	200 113	Brady	100 61
Wynne	175 116	Jones	75 32
Hallinger	200 143	Martins	100 60

A GRAND VICTORY

Buffalo Audubon Gun Club.

BUFFALO, N. Y., March 16.—A beautiful day, a good target and an enthusiastic bunch of gunners, made a most enjoyable afternoon's sport at our grounds to-day. Our out-of-town members—Messrs. Wright, Kelsey, Hammond, Tomlinson and Covert—carried off a good share of the honors of the day, and made the home bunch look like a lot of selling platers. A twenty-man team race is being arranged with the Syracuse shooters, and a hot match is anticipated. However, the Audubon Club fellows are cocky enough to think it will take some team to defeat them. We will see later. Probably April 13 will be the day set for the competition. We don't want western New York shooters to forget our annual Decoration Day tournament, which we hope will be larger and better than ever. Scores for to-day:

Targets	20	20	20	20	20

W. C. WOOTTON, Sec'y.

Cleveland Gun Club.

CLEVELAND, O., March 17.—Weekly club shoot of the Cleveland Gun Club, held yesterday afternoon, at Shooting Park, Mayfield Road, seventeen shooters taking part. No record-breaking scores were made. The weather conditions were good for high scores, but the boys didn't have their eyes with them, and the best score that was made was by Dr. Brown, who turned in a card of 89 out of 100, and F. G. Hogen, with 87. Next to this was B. S. Donnelley, of the South Chicago Gun Club, of Chicago, Ill., who was in the city on business, and took the afternoon at the traps. Mr. Donnelley is a fine shot, and after he got agoing, made dust of the bluerocks. In the special event for a silver loving cup,

he was high gun, and took home a little gem with him, and said he would come back when we had something else that we wanted to find a winner for.

In the last issue, March 16, we announced that we would hold a tournament April 3. I wish to say that it will be held April 10, as one of the neighboring clubs has announced that they are to hold a spring shoot on April 5, and we do not wish to butt in. Scores follow:

Monthly trophy event No. 1, 50 targets: Hogen 43, Rogers 43, Brown 43, Stepp 43, Freeman 42, Rockwell 41, Donnelly 40, Stevens 34, Brainard 32, Donner 32, E. Stevens 30, L. J. Thorp 29, Penty 29, Peebles 28, F. Thorp 25, Hukins 23, Isenhauer 12.

Annual trophy, 50 targets: Brown 46, Donnelly 46, Hogen 44, Freeman 43, Rockwell 41, Stepp 39, Rogers 38, Stevens 35, Peebles 34, Hopkins 33, Donner 32, L. Thorp 29, Penny 29, Brainard 28, E. Stevens 26, F. Thorp 26, Isenhauer 18.

Special event No. 3, 50 targets: Donnelly 44, Freeman 42, Brown 42, Stepp 40, Hogen 37, Rogers 35, Stevens 33, Hopkins 30. F. H. WALLACE, Mgr.

Smith Gun Club.

NEWARK, N. J., March 16—More than 3,000 clay birds were thrown from the traps to-day at the Smith Gun Club. Harry Hassinger and George A. Ohl, Jr., shot a match at 25 targets, and young Hassinger's steady shooting won out—20 against 18 by Ohl.

In a special 50-bird match between George Ohl, Jr., and James Wheaton, the former won by the score of 40 to 38. F. Apgar defeated M. Apgar, three out of four. Considerable interest was aroused over three matches between Phil Coffin, William Hassinger and J. Baldwin. Baldwin won the first by breaking 22 out of 25. Coffin broke 21 and Hassinger 20. In the second, Phil Coffin took the honors with 22 breaks. Baldwin broke 21 and Hassinger 20. In the last event Coffin broke 21 against 20 by Baldwin and 19 by Hassinger. Scores:

R Trimpi	11	20	21	19	17

Northern Kentucky Gun Club.

MARCH 17 was the first real sample of spring weather we have had in this section, and there was a good crowd at the grounds, about thirty spectators watching the eleven shooters who took part in the various events.

The feature of the shoot on March 24 will be a match between Hammerschmidt and Dameron, at 100 targets each. On the same day J. B. C and Luverne (Gould) will shoot another match at 50 targets each.

Table with 5 columns: Name, 23, 24, 25, 26, 27. Rows include McHammerschmidt, O'Dameron, McErtel, McArdle, McIrwin, McLennon, O'Clement, McSayers, McWalker, Luverne, Frohlinger.

Match at 50 targets: J. B. C. 38, Luverne 39. Match at 25 targets: Hammerschmidt 23, Irwin 18. Team match, 25 targets per man: Hammerschmidt 24, Irwin 14; total 38. Dameron 23, Luverne 21; total 44.

Meadow Springs Gun Club.

PHILADELPHIA, March 16.—Henry, with 90 out of 100, and winner of Class A. was the winner of the weekly event, decided under the auspices of the Meadow Springs Gun Club at Fifty-seventh and Lancaster avenue to-day.

Thompson won with 23, beating Coyle and Letford by one target, among the Class B men. Scores:

Table with 5 columns: Name, 7, 9, 6, 8, 14, 15, 20. Rows include Class A (George, Hogan, Henry, Williams, Sloan, Stoll, Emmerson) and Class B (Menamin, Thompson, Had, Armstrong, Renner, Coyle, Jones, Keenan, Letford, Ivens) and Visitors (Knoblauch, Hollock, Davis, Hill, Beers, Sousa).

Knowles—Churchill.

MANOA, Pa., March 16.—In a well-contested 50-bird match, Ike Knowles was beaten by a bird by A. Churchill here to-day; score 45 to 44. Both men shot a good race. Scores:

Table with 2 columns: Name, Score. Rows: W Churchill (21), Ike Knowles (24).

Scores of 10-bird event: I. Knowles (28yds.) 10, J. Brewer (32) 10, H. Churchill (30) 10, B. Redmond (28) 9, Jackson (28) 9, F. Muller (29) 9, Mack (30) 8, Bivens (30) 8, Morris (27) 7, Kirk (28) 6, Coyle (28) 6, Paulson (29) 6.

Marine and Field Club.

GRAVESEND BAY, N. Y., March 17.—Following are the scores made yesterday:

Practice shoot, 25 targets, scratch: E. H. Lott 24, P. R. Towne 21, C. B. Ludwig 20, J. H. Emanuel, Jr., 19, J. M. Knox 14, E. D. Church 14, C. D. Sayre 12.

Won by Mr. Lott. The weather conditions during this event were perfect. Towne was the runner up with 21.

At fifteen minutes to three President Towne announced that all of the shooters stand at rest for five minutes, similar to dress drill, and at 3 o'clock to give one loud report of each gun in a memorial tribute to the burial of the Maine, which was done under President Towne's direction.

March cup (third leg), 100 birds, handicap:

E H Lott	0 85	P R Towne.....	0 81
J H Emanuel, Jr..	4 84	C B Ludwig.....	4 74
J M Knox	16 88	C D Sayre.....	4 64
E D Church	20 84		

Won by Knox. This is the second leg he has on this cup, but as we have two more shooting days in this month, it is very hard to tell who are the real contestants, as our shooters are very strange, shooting 75 per cent. one day and about 50 the next; so we cannot rely upon Knox as the winner as yet. But we would like to see him win the cup, as he is the only shooter who has not won a prize this season.

St. Patrick's day trophy, 25 targets, handicap:

J M Knox	4 22	C B Ludwig	1 19
E H Lott.....	0 21	P R Towne.....	0 17
J H Emanuel, Jr..	1 20	C D Sayre.....	1 15
E D Church	5 20		

Won by Knox. Lott was a close second.

Club sweepstake, 25 targets, handicap:

E H Lott.....	0 23	J M Knox.....	4 17
C B Ludwig.....	1 22	C D Sayre	1 15
P R Towne.....	0 19	E D Church.....	5 15
J H Emanuel.....	1 18		

Won by Lott, who during the afternoon had been shooting wonderfully with his new gun, not getting under 20 targets all day.

Club sweepstake, 25 targets, handicap:

J H Emanuel, Jr..	1 22	C D Sayre.....	1 18
E H Lott.....	0 21	J M Knox.....	4 18
C B Ludwig.....	1 20	E D Church.....	5 17
P R Towne.....	0 20		

Won by Emanuel, Lott being a close second.

Take-home trophy, 25 targets, handicap:

J H Emanuel, Jr..	1 19	E H Lott.....	0 17
P R Towne.....	0 15	C D Sayre.....	1 13

Won by Emanuel.

At the beginning of the shooting during the afternoon Mr. Chas. D. Sayre stated that he was offering two prizes for the two best net scores on the day's shooting, totalling everything. Each shooter shot at 175 targets during the day. Following are the scores:

E H Lott	153	J M Knox.....	120
P R Towne.....	138	E D Church.....	103
J H Emanuel, Jr..	135	C D Sayre.....	100
C B Ludwig.....	129		

The two scratch men (Lott and Towne) managed to beat out all the handicap men on even shooting. The first prize was a silver medal, which Lott won, and the second prize, a bronze medal, was won by President Towne. One of our best handicap shooters, Sayre, fell down badly during the day, not taking one event, which is a thing very seldom happens to Mr. Sayre. But we hope that he does not lose courage, and that he will shoot better this coming Saturday.

Our members were shooting at the Crescent Club on Wednesday, but the conditions were very bad. They managed to shoot very well, however, not being used to the trap over land, as we shoot over water.

Geo. H. BENDER, Supt.

Yale—Westchester C. C.

In a closely contested match between the Yale Gun team and a team from the Westchester Country Club, the former was defeated by the narrow margin of 4 birds. The weather conditions were fair, except for a rather strong wind at the shooters' backs. Individual high honors were captured by L. H. Thompson, '13, whose excellent score of 92 far surpassed the best attempts of his competitors, while C. G. Bissel, '15, was able to break but 69 of his 100 targets. It must be mentioned that he was not only unfamiliar with the traps over which the match was shot, but was also, by an unfortunate accident, forced to use a gun to which he was entirely unaccustomed. The scores:

Yale.		Westchester.	
L Thompson, '13..	92	Herrick	87
G E Dimock, '12..	82	McMurtry	85
B H Scott, '13....	82	Scott	85
H R Emmet, '12..	81	Spears	82
M B Schiller, '15..	77	Ayer	76
C G Bissel, '15....	69—483	Corlies	72—487
		G. E. DIMOCK, Capt.	

Colfax, Delaware Champion.

WILMINGTON, Del., March 16.—E. A. W. Everitt went after W. S. Colfax, Jr., holder of the trapshooting championship of the State of Delaware, to-day, and at the finish was still after him. Colfax shot a beautiful match, breaking 99 out of 100 targets, with a run of 92. Everitt made only 83. A dark horse, new at the trap game, broke 98 out of 100, running 67 straight. H. H. Lakens, of Wilmington, broke 95. W. A. Joslyn and Victor du Pont each cracked 92. In defending the Class A challenge cup, Everitt broke 47 out of 50, while the challenger, W. A. Joslyn, smashed 44.

The scores at 25 targets each follow: W. Edmondson 16, P. D. Guest 23, Victor du Pont 14, Clyde Leedom 17, J. W. Anderson, Jr., 21, H. P. Carlon 22, W. L. Smith 10, J. W. Mathews 14, J. R. Bailey 16, H. W.

Goodman 22, N. K. Smith 23, C. T. Martin 16, W. A. Joslyn 22, J. J. Magahern 20, Dr. A. Patterson 16, Dr. S. C. Rumford 16, Dr. H. Betts 19, A. T. Hickman 20, A. J. Curley 15, L. H. Hoopes, Jr., 23, W. S. Colfax 22, H. H. Lukens 17, E. A. W. Everitt 19, T. E. Doremus 15, L. C. Lyons 18, S. G. David 17, H. W. Bush 22, L. L. Jarrell 18, H. M. Dodson 15, W. M. Foord 19, J. H. Keystone League.

PHILADELPHIA, Pa., March 14.—A more representative gathering of amateur expert trapshooters has not been together outside of the G. A. H. than took part in the tournament here yesterday and to-day. R. L. Spotts, of New York, was high gun with 145 out of 150. H. Kirkwood was second with 144. F. Plum, A. B. Richardson, H. H. Stevens and Neaf Apgar divided third honors with 142. The scores:

The first day's scores in ten events at 15 targets each were as follows:

T H Keller, Sr.....	126	E F Sobers	114
H Beattie	110	John Bitterling	110
F Plum	142	John Englert	135
H H Sloan	126	W S James	139
J H Morris	135	H Welles	138
J F Pratt	126	H W Kahler	139
J M Foster	115	H L David "Landis"	139
W H Mathews	130	T Tansy	130
H B Cook	137	F J Henline	117
John Davis	129	E Ford	133
Wm Clegg	112	A L Worthington	120
H Powers	133	R L Spotts	145
R Lamb	128	H H Stevens	142
W Severn	140	Ed Johnson	123
O R Dickey	129	H E Perry	122
H M Foord	134	Walter Firth	105
C H Newcomb	139	J P Sousa	113
A B Richardson	142	Frank Shelly	128
N Apgar	142	A Heil	123
H Kirkwood	144	Hoover	130
C N Miller	114		

Fifty targets in two events of 25 each, distance handicap:

H. T.		H. T.	
T H Keller, Sr.....	16 41	H Welles	20 46
F Plum	19 41	H W Kahler	20 43
H H Sloan	18 42	H L David	20 40
J H Morris	16 33	T Tansy	18 44

Bennett Gun Club.

GLOUCESTER CITY, N. J., March 16.—There were two events at the Bennett Gun Club to-day. The first a match shoot between Thos. Gibbons, of the Linden Gun Club, and William Husted, of the Bennett Club. Each broke 22 out of 25, and the shoot-off will take place March 23. The second event, for a turkey, was won by Gibbons, with 10 straight. Summaries:

First event, match shoot, 25 bluerocks: Gibbons 22, Husted 22.

Second event, club shoot, 10 blue rocks: prize, a turkey: Gibbons 10, S. Prickett 10, S. Price 10, F. Bennett 7, Githens 7, G. Hargheimer 7, Haines 7, Geo. Grotz 7, W. Murray 6, E. Black 5, A. Basch 5, J. McLaughlin 5.

Shoot-off, miss-and-out: Gibbons 1, Pierce 0, Prickett 0.

Larchmont Y. C.

LARCHMONT, March 17.—The breath of spring and the pent-up hankering for the water kept all but nine gunners away from the traps here to-day. Of those who remained, W. J. Elias shone brightly by winning the 15-target with 13, the 100-bird with 88, leg on monthly cup with 24. He also tied W. B. Short in the 50-target event with 42, and the leg on Held trophy after a shoot-off with Tom McCahill. He also was high gun for the day with 102 out of 125. McCahill and A. E. Ranney tied at 24 for the Take-Home trophy, tie to be shot off to-morrow.

The best-made .22 rifle in the world!

Shoots all .22 short, .22 long and .22 long rifle cartridges without change in adjustment; excellent for rabbits, squirrels, hawks, crows, foxes and all small game and target work up to 200 yards.

It's a take-down, convenient to carry and clean. The tool steel working parts cannot wear out. It's Ivory Bead and Rocky Mountain sights are the best set ever furnished on any .22. Has lever action—like a big game rifle; has solid top and side ejection for safety and rapid accurate firing—the real test of a repeater.

Note the beautiful case-hardened finish and the superb build and balance. Examine at your gun store or send three stamps postage for new big catalog of all Marlin repeating rifles and shotguns. Do it now!

The Marlin Firearms Co.

27 Willow Street, New Haven, Conn.

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He knows it—

TWO CLEAN KILLS.

The reason a Lefever kills clean and sure and far is Lefever Taper Boring.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N. Y.

Durston Special 20 Gauge. Price \$28.00

Speedway Gun Club.

NEWARK, N. J., March 14.—Some fine shooting was witnessed at the Speedway traps yesterday, when the first annual tournament held under the auspices of the club took place. While the day was far from ideal for trapshooting, thirty-three gunners took part, and although they shot in a drizzling rain, some good scores were turned in.

B. M. Shanley, Jr., and John Geiger divided the honors. The former won first individual average prize, while the 25-bird handicap was captured by Geiger, who shot from the 19yds. mark. In the merchandise event, Geiger, A. Bruckner and C. W. Billings tied for first place, with "kills" of 23 to their credit. As all the men shot from the 19yds. mark, a draw for the prize was necessary. Geiger won the draw.

An event which created considerable interest was the "gun below the elbow," which was shot in the semi-darkness and captured by Geiger, who broke 45 out of 75. W. Hassinger was second with 41.

In the seven other events, Shanley turned in scores of 20, 23, 24, 23, 23, 22 and 24. William Hassinger took second prize, and A. Bruckner, of the Newton Gun Club, third. In the professional ranks Neaf Apgar was high man, and incidentally won first average prize, while H. S. Welles was second and H. H. Stevens third.

In the evening the club held a smoker at the Speedway Inn, and the committee in charge of the affair arranged a vaudeville program for the benefit of the members. While the crowd was not as big as expected, a goodly number braved the inclement weather and were rewarded. The committee in charge of the smoker were B. M. Shanley, Jr., George Ohl, Jr., William Stengel, Richard McCabe, H. A. Winckhofer and James Wheaton.

The scores of yesterday's events are as follows:

Events:	1	2	3	4	5	6	7
H S Welles	22	24	25	23	24	24	24
A M Dalton	21	19	12	17	17	14	18

Merchandise handicap shoot, 25 birds: John Geiger 23, C. W. Billings 23, A. Brickner 23, T. Sikes 20, J. Glasier 19, E. A. Guenther 19, B. M. Shanley, Jr., 19, E. Vanderveer 19, A. E. Ranney 19, E. von Lengerke 18, John Bey 18, W. Harringer 17, William Hartman 16, J. Peck 16, E. L. Haas 15, James Wheaton 15, A. M. Dalton 13, I. Murphy 11.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., March 2.—Alig, Ford and Moller tied for the spoon, the former winning in the shoot-off. The day was marked by the breakdown of Edmonson—the first since he came to us. The scores:

Shot at.	Brk.	Shot at.	Brk.		
Ford	195	167	Hymer	140	108
Alig	195	150	Lewis	100	77
Barr	165	149	Blessing	100	56
Moller	165	143	Dixon	40	31
Edmonson	165	125			

March 9.—The best of the day's shooting was a run of 44 by Parry, who also led in percentage of targets broken, although he had been divorced from the old gun for two months while enjoying his annual vacation in Florida. Edmonson and Hynner were close up. The scores:

Shot at.	Brk.	Shot at.	Brk.		
Ford	150	121	Britton	60	40
Dixon	80	61	Edmonson	125	105
Barr	125	111	Hymer	125	104
Hoover	100	43	Alig	125	87
Stille	60	38	White	125	99
Parry	125	107	Hymer, Jr.	20	13

March 16.—Parry again led in percentage of targets broken at the Gun Club, to-day. Moller and Barr were the only ones to score straights. In the spoon handicap four were tied with perfect scores, Neighbors winning in the shoot-off. Scores:

Shot at.	Broke	Shot at.	Broke		
Dixon	170	134	Britton	125	97
Alig	150	114	Hymer	125	87
Neighbors	150	108	Blessing	125	81
*Barr	145	130	Lewis	80	56
Parry	145	130	Foland	60	32
Moller	145	128	Hymer, Jr.	40	20
White	125	98

SHOOT TO WIN A

1912 Long Run Trophy

Our 1912 Long Run Trophy is a beautiful solid gold watch fob. It is a handsome, attractive and distinctive emblem of the attainment of expertness at the traps.

To encourage contestants, the conditions imposed are very reasonable.

Acquire the prestige accorded to every winner. Make your gun club conspicuous by being one of the Trophy Winners for the 1912 season.

Be sure your shells contain one of the "old reliable" brands of

Smokeless Shotgun Powder

Send to-day for our descriptive folder, "The Du Pont 1912 Long Run Trophy." Shows you a full sized colored reproduction of Trophy and gives the exact conditions imposed. Remember the trophy is given free and engraved with the winner's name and address and score.

ADDRESS DEPARTMENT 3

Genesee Gun Club.

THE Genesee Gun Club, of Utica, is planning for a lively shooting season during the coming months, and have elected these officers for the year: President, W. E. Corfield, Utica; Vice-President, Jerome Debee, Chadwicks; Secretary-Treasurer, E. J. Loughlin, Utica.

The new organization has become affiliated with the New York State Sportsmen's Association, and Utica will once more be represented at important shooting

gatherings, and with considerable strong amateur material in sight. A team will be selected to compete at the State shoot at Syracuse in June, and an effort again made to "lift" the Dean Richmond trophy, and put it in its proper place—Utica.

The Interstate Manufacturers' Association has approved the club's application for a registered tournament in Utica on June 8, just ahead of the State meeting at Syracuse.

Programs will soon be issued for an all-day affair by way of a spring opener, to be run off in the near future.

Camden Shooting Association.

CAMDEN, N. J., March 16.—The Camden Gun Club, which is a reorganization of the South End Gun Club, with new life and new officers, held its first shoot here to-day, and to say it was eminently successful doesn't overstate the case. William Johnson was high gun with 44 out of 50, with Davie Borden second with one less.

There are few, if any shooting grounds in this vicinity as near ideal as those of Camden Gun Club, and it is expected the new club will shortly rank among the leading clubs in the county in both scores and attendance. Scores:

Table with 3 columns: Name, Score, Name, Score. Includes Johnson 6 44, Borden 3 43, Wakeman 3 42, etc.

U. S. Machinery Gun Club.

BEVERLY, March 16.—United Shoe Machinery Gun Club defeated the Lawrence Fish and Game Protective Gun Club here to-day by a score of 364 to 362. The high guns were Winslow for local team and Burnes for Lawrence. The scores:

United Shoe Machinery G. C.—Winslow 76, Spencer 71, Foster 67, Whidden 75, Hurd 75; total 364.

Lawrence Fish and Game G. C.—Burnes 84, Boynton 77, Hanford 67, Hall 77, Russell 57; total 362.

In a special 100-target shoot, seven members of the Lawrence and local gun clubs took part. The scores: Bradbury 57, Mrs. Alice Winslow 67, Pearson 58, Stillings 58, Edwards 79, Davis 59, Morse 79.

Rifle and Revolver

Zettler Championship.

NEW YORK, March 16.—The last of the indoor rifle championship tourney on the Zettler Rifle Club ranges was marked to-day by good shooting, but Dr. W. G. Hudson, of this city, held the lead to the end with a score of 2478, his tallies for the years 1908, 1909, 1910, 1911, and 1912 of 2478, 2479, 2478, 2482 and 2478 give him a grand average for five years of 2479 out of a possible 2500. His total of 2482 last year was a new record, but was beaten the next day by Arthur Hubalek, of Brooklyn with 2484, still unbeaten. J. Williams, Jr., of Bridgeport, Conn., made the best score of the afternoon, 2468, and a remarkable feature was the total of 2407 made by H. H. Lincius, of Morris High School. This is an exceptionally good score for a schoolboy. The scores:

One hundred-shot championship match:

Table with 2 columns: Name, Score. Includes Dr W G Hudson, L C Buss, Arthur Hubalek, H M Pope, etc.

Table with 2 columns: Name, Score. Includes J J Young, G Schlicht, G L Amouroux, M Dorrlor, etc.

Continuous match: W. G. Hudson 75, 75, 75, 75, 75; L. P. Ittel 75, 75, 75, 75, 75; A. Hubalek 75, 75, 75, 75, 75; W. Keim 75, 75, 75, 74, 74; H. M. Pope 75, 75, 75, 74, 74; L. C. Buss 75, 75, 75; H. M. Thomas 75, 75, 75, J. Williams 75, 75; M. Dorrlor 75, 74; A. F. Laudensack 75, 74; C. Zettler 75; M. Baal 74; J. W. Hessian 74; L. P. Hansen 74; T. Gabriel 73; A. Brower 73; F. L. Smith 73; J. Kaufmann 74; R. M. Ryder 74; W. A. Tewes 74; L. Galina 74; O. Smith 73; F. C. Ross 73; G. Amouroux 73.

Bullseye target, degrees: J. Williams 5 1/2, H. M. Pope 6 1/2, Reynolds 7, L. P. Hansen 7, M. Dorrlor 7, F. C. Ross 7 1/2, F. M. Bund 8 1/2, L. P. Ittel 9, Gus Zimmerman 9, Gross-Lohmann 10, G. Amouroux 10 1/2, A. F. Laudensack 11, T. H. Keller 11, Dr. Leavitt 12, L. C. Buss 12, O. Smith 12, H. M. Thomas 12, C. Oltman 12, Kaufmann 13, Dr. Hudson 13, A. Brower 13 1/2, M. Baal 15 1/2, J. Young 15 1/2.

Most bullseyes: T. H. Keller 80, F. M. Bund 62, Gus Zimmerman 28.

Gus Zimmerman trophy: M. Dorrlor 19 1/2; L. P. Ittel 22; L. C. Buss 25.

At Shell Mound Park.

EMERYVILLE, Cal., March 8.—The regular monthly indoor rifle shoot of the Shell Mound Pistol and Rifle Club was held this evening, and a very good attendance was present. C. M. Kraul was the star performer for the evening, rolling up the good score of 124 out of a possible 125 at 75yds. C. Otten and W. A. Siebe tied for second place with 120 each.

The best five targets of each competitor are: C. M. Kraul, 124, 121, 121, 120, 120; W. A. Siebe, 120, 119, 119, 119, 118; C. Otten, 120, 118, 118, 114, 113; J. Bauman, 117, 113, 111, 110, 109; J. Millin, 115, 113, 112, 111, 110; A. Thompson, 114, 113, 113, 112, 111; J. W. Phillips, 110, 104, 104, 101; H. Cloy, Jr., 110, 103, 105.

The annual events are very interesting, and the special bullseye (which is contested on a re-entry scale at 50yds., .22cal. rifle, 3in. bullseye on a reduced 25-ring target) brings many of the members around to try their luck. J. Bauman secured first place at the start, and he still maintains it, and the boys are right after him hot, all trying to land a center that will put them up near the top.

On March 10 there was a very good attendance, six clubs taking part and peppering away at the targets constantly all day.

Otto Bremer certainly did the trick, when he made the good score of 236 in 10 shots on the German ring target at 200yds. in the re-entry matches of the Golden Gate Rifle and Pistol Club. Mr. Bremer is not a very young man any more, but he can certainly roll up a good score once in a while.

W. G. Hoffmann made the best score in the regular monthly medal shoot of the Germania with a score of 230.

Herman Huber made the best score in the Nord-deutscher Schuetzen Club, 219. W. A. SIEBE.

Resorts for Sportsmen.

SPRING FISHING

Early warm weather has broken the ice so that April 16, when trout season opens, will find the fishing fine here. There will be lots of fish, and, as usual, they will run large. Through trains on New York Central. Guides, boats and perfect fishing accommodations. All comforts of home—all the glory of the wilderness.

Resorts for Sportsmen.

A Chance To Join THE NICATOUS CLUB

In the Heart of Maine's Big Game Country. Splendid Moose and Deer shooting—Lakes abound in Salmon and Trout. Fly Fishing all Summer.

This club was organized in 1893 by fifteen sportsmen. The land was purchased from the famous guide, Jock Darling. Since then, lumber men have prevented all further sales of camp sites, and the region remains in its ORIGINAL WILD STATE. The nine adjacent lakes are without camps of any kind.

Several charter members having died, a few non-assessable paid-up shares are now for the FIRST TIME for sale, \$50 per share, annual dues \$10. The constitution limits the number of shares and the club reserves right to reject any application.

This is a club where men may bring their wives—NO BAR. We are carefully picking men who carefully pick their club.

FOR PARTICULARS ADDRESS 12

R. L. CALKINS, 428 Lexington Avenue, New York City

Eastern Inter-Collegiate.

WASHINGTON, D. C., March 16.—Massachusetts Agricultural College team won the Eastern Intercollegiate Rifle Shooting League championship this week by defeating Princeton. Massachusetts won eleven straight victories. Princeton and North Georgia University tied for second place with nine wins and two defeats each.

The shoot-off for the intercollegiate championship of the United States, between Massachusetts Agricultural College, the Eastern League winners, and University of Iowa, the Western League champions, will take place on March 23. Results this week were:

Massachusetts Aggies defeated Princeton, 958 to 907; Louisiana defeated New Hampshire, 946 to 0 (defaulted); U. S. Veterinary Surgeons defeated Harvard, 951 to 938; North Georgia defeated Norwich, 926 to 860; West Virginia defeated Delaware, 929 to 927; Pennsylvania defeated Maryland Aggies, 927 to 857.

Intercity High School Rifle League.

WASHINGTON, D. C., March 16.—Iowa City High School and Deering High School, Portland, Me., rifle teams, by winning their matches this week continued their tie for first place in the Intercity High School Rifle Shooting League, each having twelve wins and one defeat. Results were:

Deering, Portland, Me., defeated Manual, Philadelphia, 958 to 809; Iowa City defeated Central, Washington, 956 to 0 (defaulted); Baltimore Poly defeated Portland (Me.) High, 937 to 888; Southern, Philadelphia, defeated Manual, Washington, 924 to 885; Salt Lake City defeated Western Washington, 916 to 853; Morris, New York, defeated Business, Washington, 909 to 861; Central High, Philadelphia, defeated De Witt Clinton, New York, 896 to 0 (defaulted); Brookline, Mass., defeated Ogden, 779 to 0 (defaulted).

Rifle Note.

IN the story of the result of the shoot-off for the inter-club rifle shooting championship of the United States, sent out from this office several days ago, the name of C. W. Vanstone was given as the fifth man on the victorious Bridgeport team.

This was an error. The name of John W. Hessian should be substituted, with a score of 48, 50, 50, 50—198.

ALBERT S. JONES, Sec'y N. R. A.

Du Pont Gun Club, Rifle Dept.

THE rifle department of the club made these scores on the 16th inst.:

Pistol scores: D. Appleby 88, 88; L. du Pont 84, 82, 86, 91; L. C. S. Dorsey 80.

Rifle scores: J. T. Birch 65, 73, 57; D. Appleby 85, 86, 81, 84, 86, 84.

Seventh Regiment Rifles.

NEW YORK, March 16.—Lance Corporal J. K. Boles and Private Frank Wennees broke the rapid-fire record of the Seventh Regiment range to-night with a score of 48 out of a possible 50. The old record was 47.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

SOME CASTING LURES.

Continued from page 368.

swivels for the tandem spoon. This can be weighted to suit by fastening a dipsy sinker to the upper ring of the first swivel where it will not interfere at all with the spinning qualities of the lure, and it can be armed with a weedless fly as described in Fig. 3 and so varied at will. It shuts up as it flies through the air in casting, thus offering very little resistance, but opens on striking the water and starts spinning at once.

I have written this not only in the hope that it will help some beginner, but also that it will stir up the old-timers, so that I can get some new ideas for myself. The lures described have been more successful for me than any I ever bought, but I know they are by no means the last word in this line, and bass are constantly getting fewer and the survivors better educated, so that I am constantly on the lookout for something new. Besides, it is lots of fun to make the pesky things and figure out all the fish you are going to get on them, and just how, when the season forbids the actual fishing.

Kennel Department

The Foxhound and Game.

EAST NORTHFIELD, Mass., Feb. 21.—*Editor Forest and Stream and to whom this may concern:* In regard to the scarcity of our small game. The ruffed grouse especially and other small game in this section and the greater part of New England have been growing scarce for the past ten years, while vermin has increased.

In this State during the past ten years foxes have increased tremendously, and even the wildcats are becoming more numerous. Eight wildcats have been shot in this town and vicinity within a year. This is the kind of vermin that is destroying our game, both winter and summer.

Hunters who have been in the woods during the summer months have found broods of partridges, but when the hunting season opens they are not to be found. What has become of them? For the past five or six years I have been in the woods during July and August, and have come upon broods of young partridges without the mother bird. It did not require much effort to catch them, for they were half starved and no doubt died before the hunting season opened. In my opinion the old birds were caught by some of their natural enemies while trying to protect their young.

During the winter months it has been a common thing to find places in the snow where partridges have been killed by foxes. Three years ago I invited Mr. Forbush, the State ornithologist, to visit this town and to see the places in the snow where three different partridges had been killed by foxes. Mr. Forbush could not come at the time, so I had a photograph taken of the spot in the snow where the partridges had been killed and I sent a picture to him. A year ago last May, Mr. Forbush found it convenient to come to this place. He came for the purpose of examining two fox burrows which contained partridge feathers. Some of these feathers came off an August bird—that is, off a young bird.

There is nothing which has brought this trouble about—that is, the increasing of different kinds of vermin which is so destructive to our upland game birds—so much as the deer law has. This law for quite a number of years, in different sections of New England, has been the cause of bringing foxhunting to a standstill. In town after town, and even in townships it is almost impossible to find a trained foxhound anywhere. No one cares to train a dog unless he can use him.

The hound was the only dog which protected our game years ago. These dogs held the wildcat, the lynx and other vermin in check, and they are the only dogs to-day which are able to protect our small game. Hundreds of hunters would have used these noble dogs, and our small game would have been protected, had it not been for the deer laws.

There is not one farmer in fifty who wants the deer on his land, and if there is any one who does, he should put the deer behind a fence, and not have all the small game destroyed by vermin, and thus lose the sport that is to be had with a hunting dog.

No representative should put in the way an

obstacle in the shape of a law to prevent anyone from hunting with a hound during the hunting season, for these dogs have done a great deal in protecting our small game.

ANSON O. HOWARD.

Associated Specialty Shows of New York

THE personnel of the association was made finally complete when the Collie Club "came back" and into the fold last week. This makes six strong specialty clubs who will give six separate shows on May 4, at the Twelfth Regiment Armory at Sixty-second street and Columbus avenue, New York. The six clubs are: The Russian Wolfhound Club, The Collie Club, The Dachshund Club, The Boston Terrier Club of New York, The Airedale Club of Long Island and Bulldog Breeders' Association of America.

The judges chosen so far are: James Mortimer, for wolfhounds; Fred Wendland, of Chicago, for dachshunde; George F. Parker, for Bostons; and W. E. Baker, Jr., of Tanglewood fame, for Airedales. We hope to announce the collie and bulldog judges next week.

Each club is offering unusual and generous classifications with golden increment to incinerate. The Russians are offering ribbons throughout a liberal classification for an entry fee of \$1, but their specials are arranged to provide generous cash prizes to winners of every class: \$2.50 to the winner, \$1 to second, while winners' class will be rewarded with \$5 first and \$2.50 reserve. The collies will pose in thirty-three classes, with prizes of \$10, \$5, \$3 in classes eligible to winners with a \$3 entry fee, and a \$2 entry fee and prizes of \$5, \$3, \$1 for all other classes. The dachshunde will brush the sawdust in forty-one classes, entry fee \$1 and prize money \$3, \$2, \$1 with four winners' classes, two for black and tans, two for reds. Boston terriers will be sent on their way rejoicing through an extended schedule for an entry fee of \$2 and prize money at \$5, \$3, \$2 a throw. The Airedales will tug at the lead in numerous classes at \$3 a class for special cash prizes so arranged that a winner will take home the price of a new dog nearly. There will be team and brace classes for this live breed, the winner to get the entry fee; also an American bred puppy sweepstakes with a \$3 entry fee. Exhibitors may nominate any number of puppies, the winner to receive the total entry money. The Airedale Club of America, of New York, of Long Island and the Western Airedale Club are supporting their breed handsomely. Bulldogs will roll through twenty-nine classes at \$3, \$2, \$1 a class for a \$1 entry fee except in the brace, team, American-bred brace and team and brace bred by exhibitor, whose winners will be rewarded by a generous percentage of the entry fees. As an innovation there will be a maiden class for dogs and bitches who have never won a prize at an A. K. C. show or a show of the breeders, and a consolation class for dogs and bitches who do not win 1, 2, 3, 4 at this show, for which no entry fee will be charged and ribbons be the reward.

The premium lists will be in the mails by April 1 and every club is eagerly awaiting their appearance with a fine toothed comb poised and ready to get the biggest entry of their breeds ever put down.

Premium lists and full information concerning the catalogue may be had from George F. Foley, superintendent, Landsdowne, Pa.

BLACK SHELLS WON HIGH AVERAGE

At the indoor trapshooting tournament held in Madison Square Garden, March 1st to March 9th, Horace C. Kirkwood of Boston, shooting **THE BLACK SHELLS**, won high average by breaking 334 targets out of 350, defeating his nearest competitor by five birds. Mr. Kirkwood also broke the Madison Square Garden record of 240 out of 250 by breaking 242, shooting **THE BLACK SHELLS**. The large field of Nationally known expert trapshooters who fought fiercely for a week for the honor won by H. C. Kirkwood, makes this an important victory for both the shooter and the remarkable reliability, uniform pattern and quick ignition of his ammunition — **THE BLACK SHELLS**.

Williams'

Holder Top Shaving Stick

The newest form of the famous Williams' Shaving Stick. The Stick is fastened firmly in the nickeled cap, which, when not in use, forms the top of the nickeled box in which the stick is carried. When in use, this "Holder Top" makes it possible to grasp the stick firmly until the last fraction is used. And the fingers need never come in contact with the soap.

The "Holder Top" Stick furnishes the same delightfully soothing and refreshing lather that has given Williams' Shaving Stick in the familiar Hinged-Cover, Nickeled Box its world-wide reputation.

Williams' Shaving Powder

The familiar hinged-cover nickeled box

Note the convenient sanitary hinged-cover nickeled box.

For those who prefer their shaving soap in powdered form, it answers every requirement of the most exacting shaver. A little powder shaken on a wet brush produces, with a minimum of time and effort, a rich, thick, creamy lather. In a twinkling your face is ready for the razor. The non-leaking, hinged cover box, opening with a snap of the thumb, closing with the pressure of a finger, is the acme of convenience.

ARE YOU A GUNNER?

Do you love to follow your good dog over the fields in search of quail or chickens, or to struggle through swamp or along thick grown hillside, expecting to hear the roar of the ruffed grouse or the twitter of the fall woodcock? If so, you should have this new book.

AMERICAN GAME BIRD SHOOTING

By **GEORGE BIRD GRINNELL**

(New—Just Published)

This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys.

The first part of the volume is devoted to a description of the various species and their habits—the way in which they live their lives.

The second part of the book is devoted to upland shooting and treats of the methods by which all the upland birds are pursued and taken. The chapter "Aids to Shooting" describes the clothing, guns, and loads and dogs that the gunner may profitably use; while the last section of the book treats of the shooting of the future and the efforts to rear our native quail and grouse in domestication.

The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full page portraits of different game birds and hunting scenes, with a number of cuts in the text.

Cloth. About 575 pages. Price \$3.50, net. Postage 25 cents.

This book is of inestimable value. It contains the genuine hunter-naturalist facts given in the most entertaining and interesting style.

FOREST AND STREAM PUBLISHING CO., 127 Franklin St., NEW YORK CITY

AMERICAN DUCK SHOOTING

By *George Bird Grinnell*

A most complete work, dealing with every phase of the sport of duck shooting, thus forming a complete treatise on American ducks, geese and swans. It gives details of the natural history, habitat, and characteristics of every American species.

Part I contains descriptions with plates of each species.

Part II tells of every method of swan, goose and duck shooting practiced in North America—east and west, on Atlantic and Pacific and in the interior—and gives thrilling accounts of the splendid sport.

Part III deals with the art of duck shooting, including guns and loading, the Chesapeake Bay retrieving dog, decoys, blinds and boats, and finally discusses the causes of the decrease of wildfowl and tells what may be done to increase their numbers.

It is most fully illustrated with 58 portraits of North American swans, geese and ducks, by Edwin Sheppard, with 8 full page plates, and with numerous vignettes in the text by Wilmot Townsend.

Cloth, heavy laid paper, 58 illustrations, eight full-page plates, 627 pages. Postpaid, \$3.50.

Rifle and Revolver

Interscholastic Rifle Shooting.

THE approaching end of the League matches continues to show a great improvement in the scores. The fourteenth match, shot last week, resulted in Deering High School, of Portland, Me., turning in a record score of 968, the best so far made by any school boy rifle team in this country.

The Iowa City team, which is tied for Deering for first place, made the excellent score of 951, while the Baltimore Polys made a score of 950.

The high individual score for the week was made by J. Millard Hughey, of Deering, with a total of 198 out of a possible 200.

Next week will close the League matches for 1912. It looks as if Deering and Iowa City will have to shoot off the tie for the championship.

The results of last week's matches are as follows: Deering High School, 968, defeated Manual Training, of Washington, 886; Iowa City High School, 951, defeated Central High, of Philadelphia, 880; Baltimore Polytechnic Institute, 950, defeated Salt Lake City High School, 924; Morris High, of New York, 924, defeated Central High, of Washington, 0; Southern High and Manual Training, of Philadelphia, 914, defeated Western High, of Washington, 823; Portland (Me.) High, 877, defeated Brookline (Mass.) High, 705; Business High, of Washington, 865, defeated Ogden (Utah) High, 0; Central Manual Training, of Philadelphia, 821, defeated De Witt Clinton High, of New York, 0.

The standing of the League to date is as follows:

	Won.	Lost.
Iowa City High School.....	13	1
Deering High School, Portland, Me.....	13	1
Baltimore Polytechnic Institute, Baltimore.	12	2
Southern High and Manual Training, Phila.	10	4
Morris High, New York.....	10	4
Salt Lake City High, Utah.....	9	5
Central High, Philadelphia.....	8	6
Brookline (Mass.) High	7	7
Central Manual Training, Philadelphia.....	7	7
Portland (Me.) High	7	7
Manual Training, Washington.....	6	8
De Witt Clinton High, New York City.....	5	9
Western High, Washington.....	4	10
Business High, Washington	4	10

West Chester Rifle Association.

WEST CHESTER, Pa., March 22.—The Sharples rifle team beat Rockwell in the final shoot to-night at the range of the West Chester Rifle Association. In this series both teams were helped by the members of the West Chester Rifle Association. Sharples won three out of the five. Scores:

Sharples.	Rockwell.
Woodward, capt..246	Woodcock, capt.. 241
Scott	Hetherington 248
Comfort	Jefferis
Temple	Wynn
Schroth	Mack
Jackson	H Martin
Draper	Barnes
Parker	G Ford
A Taylor	C Martin
Custer	Rambo

Du Pont Gun Club, Rifle Dept.

THE scores made on the rifle range of the Du Pont Gun Club follow. D. Appleby did exceptionally well. His highest scores were 242, 242, 241, 240, 240. He is a remarkably clever shot.

Rifle scores: D. Appleby 233, 240, 242, 241, 240, 235, 240, 242; N. K. Smith 106; E. Robertson 145; J. T. Berch 195, 217; S. D. Chambers 125, 129, 183; C. W. Pierce 240, 226, 232; W. A. Mode 188; T. Martin 142; H. C. Mode 176, 137.

Pistol scores: D. Appleby 82, L. du Pont 85, O. F. Harold 88, 77.

Indoor Rifle League.

PORTLAND, Me., March 23.—The Myles Standish Club, of Portland, won the ten-week contest of the New England Indoor Rifle League, which ended to-day. Bridgeport was second, Manchester, N. H., third, and Deering High School, of Taunton, tied for fourth place. The Portland team won every match of the tournament. Bridgeport won eight matches and lost one.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., March 23.—Dr. Britton came strong in shooting off the tie with Dixon and Parry for the spoon, which he won and beat Parry for the day's high average. The latter was the only one to score a straight. The club will hold a "money-back" tournament April 22 and 23. Scores:

Shot at.	Broke	Shot at.	Broke
Parry	170 148	Hymers	120 93
Edmonson	170 142	Alig	120 86
Dixon	170 138	Foland	100 63
Britton	150 133	Gill	100 48
Neighbors	145 90	White No. 2... 20	13

PLANNING A HOUSEBOAT

Houseboating has come among us to stay, and promises to be even more popular than in England itself. Every one who is interested in houseboats or who contemplates taking up this feature of outdoor life, should read Mr. Albert Bradlee Hunt's practical, and, at the same time, beautiful work on the houseboat and its adaptation to American waters.

Houseboats and Houseboating

Covers the entire range of its title, considers the use and opportunities of the houseboat; their relation to city and suburban life; construction, furnishing, motive power, and all the thousand and one details, the knowledge of which spells the difference between success and failure in houseboat building and houseboat life.

Details, plans, drawings and specifications illuminate the text, while life on houseboats is interestingly described. Some of the more noted English and American houseboats and the life thereon are also described at length, with illustrations. Buckram, heavy paper, sumptuously illustrated.

Postpaid, \$3.34.

THE ANGLER'S WORKSHOP

Rodmaking for Beginners

By PERRY D. FRAZER

Not only Americans, but anglers of Great Britain and nearly every European State, South Africa, Australia, Canada, are making their fishing rods under the simple instructions laid down by the author in this useful little manual. A Japanese, after reading the book, took up rod repairing for his fellow countrymen as a business. An Englishman followed it in making several of the sixty-five rods that he has in his collection. A Russian appreciated the book so much that he suggested a Russian translation. The British sportsmen's papers have quoted from it time and time again. In that country it has helped bring about a great change in rod types, and to attract attention to the excellence of American fishing rods. In fact, "Rodmaking for Beginners" has become the standard manual wherever fishing with rod and reel is practiced.

The reason is obvious. The book is written in plain English, and all the details are set down so simply that a boy can follow them. All of the types of rods used on fresh and salt water are described and specifications given. Separate chapters cover all details, and the one on split cane rodmaking is the only comprehensive treatise on that subject ever published.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid, \$1.

IF IT'S FISHING TACKLE, WE HAVE IT

OUR NEW 208 PAGE CATALOG (ready about March 15), is the most complete and comprehensive that we have ever issued. It is not only a "CATALOG," but an ANGLER'S ENCYCLOPEDIA. In addition to the list of goods and prices usually contained in catalogs, it also includes:

- A NOVEL INDEX—giving lists of outfits necessary for the various kinds of Angling.
- A HUMOROUS ARTICLE ON ANGLING—BY HENRY GUY CARLETON, illustrated by "WALT" McDOUGALL.
- AN ILLUSTRATED ARTICLE ON ANGLER'S KNOTS and HITCHES.
- INSTRUCTIONS FOR FLY CASTING.

This special catalog No. 112 will be sent free of all charges, by prepaid mail, on receipt of 5 cents in stamps to cover postage.

Use The Dry Fly This Season

To be successful and to get the most enjoyment out of this pleasant and scientific method of trout fishing, you must have Cummins' Rods and Tackle, which are of the HIGHEST POSSIBLE GRADE.

The following articles are specially manufactured by W. J. Cummins for dry fly fishing, and strongly recommended:

RODS. The "Turner" dry fly rod in selected greenheart, in 2 joints with 2 tops, cork handle, lockfast joints, very finest finish, 10 feet or 10 1/2 feet, \$10.25; or the "Anglo-American" Split Cane Rod in 3 joints, 2 tops, the very highest class of split cane, 10 feet or 10 1/2 feet, \$20.50.

REEL. Cummins' "Dunelm," 2 3/4 inches, \$4.15.

REEL LINE. 30 yards double tapered "Century" Dry Fly Line, \$2.50.

LEADERS for dry fly fishing, 3 yards long and of special undrawn gut, 30 cents each.

DRY OR FLOATING FLIES on eyed hooks, 60 cents per dozen.

W. J. C. will be glad to send further particulars with regard to these goods to any angler

*Write also for catalogue of High Grade Rods and Tackle.
A magnificent publication of over 300 pages.*

Across the Plains in Early Days

By SAMUEL MANSFIELD STONE

KANSAS CITY had in the late sixties pulled away from the commonplace name of "Westport Landing," and was crowing over and making faces at its former rival, Wyandotte, on the opposite bank of the Kaw, giving one the impression of an awkward, overgrown boy with his first suit of man's clothes. Such a conglomerate lot of straggling houses, business blocks, hotels, shakedown, shanties and tents, put down at random in the hollow, on the hill and half way up the ravine, was never mine to see before or since. But that my enthusiasm was the deeply-rooted growth of years it would have dribbled out the "small end of the horn" on that damp, soggy spring morning when first I trod the sloughs called streets and dodged the onslaughts of legions of razorback hogs. I had arrived the previous midnight over the Missouri Pacific from St. Louis, and gone directly to bed at the "Globe" Hotel on the levee.

"They knowed wot they wus talkin' about w'en they called this 'ere State Misery," consolingly remarked Bill Haley, after we had tired our legs out and slopped our trousers all over with a sticky substance called "sile" in native parlance. Bill was a native Ohioan who had attained to his majority and struck out for himself. I ran across him at a little four-corners' village, at which I had stopped on my way westward in the country that Col. Tallmadge, of Litchfield, Conn., had parceled out to settlers in the early days of the nineteenth century, naming it the Western Reserve, or New Connecticut. Bill was not a man of bulging mentality, but he seemed to possess a modicum of horse sense, and withal a powerful physique. He was suffering from a severe attack of Western fever, but being penniless and not partial to walking, seemed unable to get relief. It struck me that he would make a desirable addition to my party of one, so I proposed that he go along with me, help me with my traps, and do such work as the coming conditions might entail, in return for his board and transportation. He eagerly seized the proposition, which is why he was with me on that dispiriting spring morning. He was really home sick and would have taken the first train eastward if he could have raised the price of a ticket. But I sent him out on an exploring expedition for a lodging place, as I made up my mind to make this headquarters during a series of short excursions into the surrounding country.

We secured a room and furnished it as a temporary rendezvous, then prepared for a shooting trip into Missouri. Having ascertained that

the only game worth while at that season was wild turkey and occasional flocks of geese which stopped to feed in the rivers and ponds, I purchased a single shot rifle, a stock of cartridges and we sallied forth. Failing to find a single goose or turkey on the western border of Missouri, we took train and journeyed till we fetched up on the Mississippi River some distance

A WESTERN BUCK.

below Carondelet. A number of large flocks of geese had just alighted upon a small island or sandbar within easy range of the shore. Their honking was as music after our long quest. Walking slowly along the shore I succeeded in getting four big fellows in exact range. They were standing quietly and I had ample opportunity to take careful aim, resting on a bunch of driftwood. As I fired, the flock floundered laboriously into the air, with the exception of four that lay on their sides on the crest of the bar. Then, for the first time, I remembered that we had no boat or means of securing the birds. I believe I never suffered more chagrin in my life than when I stood impotently watching the result of the most successful shot I had ever made. Later I shot one bird from a flock passing over, but it dropped at the foot of a cliff beyond reach. Then, disgusted at myself for the

useless slaughter of game, I took train for St. Louis, thence returning to Kansas City.

The important task of selecting an outfit for use in the wilds to which I was going absorbed my attention for several days. One night I met Joc Hickox (Wild Bill). I promptly bowed down in spirit to this wonderful man who had killed Indians and "Greasers," doing frank homage to his prowess. I was not in the least degree backward in acquainting him with the fact that I, too, was soon to venture upon that enchanted ground beyond the border. I failed at the time to quite catch the significance of his free conversation with me, but later I realized that he had jollied me most unmercifully.

"Goin' ter hunt Injuns and bufferlos, be ye? That's a right smart good scheme; don't see how any self-respectin' boy kin grow up an' hev t' say, 'I never kilt an Injun,' 'specially when they's so plenty and the nation's expectin' every boy to do his duty. I likes you, young feller, shake. An' may ye hev to charter a freight car to fetch back th' skeps."

I was not so consummately self-conceited but that the sarcasm of this and kindred utterances of the mighty scout was detected, but I was so consumed with admiration of the long, flowing locks, the buckskin clothes, the beaded sombrero and flashing eyes of my hero that it made little impression upon me. One remark hurt me, however, but chiefly because of the laugh it excited among those who overheard it. I had ventured, after enumerating the leading features of my outfit, to ask what more in his opinion I would need in my campaign.

"You haven't mentioned cologne," he replied gravely; "cologne or smelling salts. You'll find them the most needful of anything when you get among the Injuns." Afterward I learned that this was the most practical advice he could have given, though at that time I felt hurt by it. The beef companies had recently located extensive stock yards and abattoirs at Kansas City, and cattle from the great Southwestern ranges were diverted thither. This brought cowboys in large numbers, the typical cowboys of pre-civilization. These fellows were a constant source of delight to me, and I drank in their tales of ranch life and adventure in big-eyed astonishment, though I doubt not they "guyed" me to the limit and enjoyed their "easy mark." But they taught me some things that I greatly appreciated, especially how to shoot. When I saw two tough young specimens, half full of corn whiskey, set their cigars at an obtuse angle to their faces, and at a distance of fifty paces

cut the fire off from each other's smokers at the same instant, I was simply speechless with admiration. What surprised me most was that they worked their pistols with their thumbs, simply drawing back the hammer and letting it fall without using the trigger; in fact, it being the day when self-cocking weapons were unknown, the triggers had been removed to facilitate the operation.

I had a .22 caliber seven-shot revolver, a beautiful thing to look at, ebony stock, silver plate that fully demonstrated the old saying about "a fool and his money" when I bought it in Waterbury, Conn. The weapons of my new-found friends were disreputable looking things, and it was with a thrill of pride that I ventured to show my cowboy acquaintance my swagger looking gun.

"Kind o' heavy, ain't it," he remarked on looking it over and hefting it in his hand.

"Why, no," I replied; "it is unusually light; that's the beauty of it."

"Ye must have a mighty big watch to offset it," he continued, looking at my fob.

For a moment I was mystified, then it dawned upon me with humiliating significance he had taken—or pretended to, which was even worse—my beautiful weapon for a watch charm. In other company I could have wept.

"Well, I've got my opinion of a man that can't tell a gun from a bit of jewelry," I finally retorted.

"What! A gun! An honest Injun shootin' gun? Lemme take it again," and, in big-eyed wonder that could not have been all assumed, he looked the pistol over carefully and then demanded if it was a "sure 'nough" gun to "make it shoot."

Fortunately for me I had practiced a good bit with the revolver, and when he held up his hat at ten paces, I was able to make seven perforations in the stiff brim in tolerably good style. It was easy to see that he and his companions regarded me with greater respect after this performance. Then something occurred that toppled me from the temporary pedestal to which the shooting had elevated me. One of the boys paced off twenty long strides and beckoned me to step over to the spot. Another fellow brought out a glass which he placed on my head and the first mentioned cowboy took the gun with the remark:

"I'm jist goin' to see what I kin do with this lady charmer."

I could feel the hair bristling up under my hat and my first determination to stand for anything they might do oozed away as my nerves asserted their prerogative, and I yelled with earnest accent, "No you don't!" No attempt was made to conceal the sentiments of the boys, and I was advised to "go back East and play with the children," while the fellow with the gun declared to the effect that a reflection such as I had manifested upon his marksmanship could be neutralized in but one way, and he eyed me significantly. I thought I was in for it sure enough, then I determined to try the effect of a little reasoning upon him. I explained that the size of the bore was not equal to that sort of shooting, that while I had not the least doubt of his ability to shoot with anybody, it would be no disparagement of his skill or accuracy of aim if the bullet intended for the glass should drop a few inches at that range

and make a hole in my head. I showed him the size of cartridges used and he seemed astonished. Then taking my hand, he said: "Fellers, I wuz wrong; this youngster did right not to stand for such shootin', and if any cow-racer in this bunch thinks different, let him say so to me." As no one evinced a disposition to disagree with his expressed sentiments, the incident was considered closed.

My friend lost no time in impressing upon me the necessity of getting a gun of greater shooting power, and as a result that same evening saw me in possession of a regulation, four-barreled "Western bulldog." It was battered and there were suspicious cuts, dents and notches on the stock, but it was well oiled, in perfect working order, and would puncture an oak plank at twenty paces. Its barrels were finely rifled and nearly eight inches in length. A nipple in the inside of the hammer revolved automatically and punctured each cartridge, the barrels being fixed. The gun was of .44 caliber and the cowboys said it was first class "weepon."

What surprised me was the frequency with which the name "Bud" occurred among the cowboys, and in fact throughout the whole Southwestern country. It seemed as though about every third man I met was called Bud. With the men of the plains, but one name is usually applied to an individual, unless there should chance to be several men of the same name in the same company, when such qualifying terms as "Long," "Big," "Buckskin," or, expressive of some characteristic, "Fighting," "Cock-eyed," "Humpty" and the like prefix the "Bud," "Bob," "Jim" or what not. Hence it was "Big Bud" who came to my aid when I went out to the stock yards one day in quest of the right sort of a pony to carry me over the plains. And such a lot of horse flesh it was never my lot to come in contact with.

I asked Bud to pick me a pony and he did, selecting, as I thought, the mangiest, toughest looking animal of the lot. Bud said he was a good horse and I took his word, though in my unbiased opinion it was the least likely pony of the whole lot. I took the pony, and Bill and I set to work to bring something like order out of the brute's crude ways and appearance. He was intelligent and learned readily, but the inauguration of his toilet was something over which it is well to draw a veil; suffice to say, we had to call on more than one broncho buster to aid and abet us. I named him "Skeezik," and Skeezik's first grooming was administered to one side only, and that while he was lying down with his legs, neck and tail in chancery, as it were. It was not long, however, before we put him in a narrow box stall and performed his toilet from the top of boxes in adjoining stalls. In a week I was able to saddle him with the assistance of Bill, and the moral support of a stray cowboy or two. The consecutive steps up to mounting were rapid, and it was a proud day when I saddled, bridled and mounted Skeezik unaided.

A month had now elapsed since I first landed in Kansas City, the weather was quite mild (it being the middle of March), and I began to think of the exploration of the great unknown West. I had already made cursory trips to Wyandotte, Independence, Pleasant Hill, Sedalia, Harrisonville and other nearby points in quest of game and fish. It was too early yet, how-

ever, there being only an occasional wild prairie chicken and no fish that were accessible, owing to the high water in the creeks and small rivers. I found that the natives of that country paid little attention to natural sports. Now and then a settler would tell of a "right smart of a cat" taken from the Kaw River, and the farmer boys would manifest a modicum of enthusiasm in telling how many rabbits they had "ketch'd." It was small credit to bag rabbits, even in illimitable numbers, for the country was overrun with them, and they were counted a great nuisance. It is no infringement of veracity to state that I have seen, in the early evening, grouped along the osage hedges which form the boundary fences of adjoining quarter sections, millions of these little animals. The ground would be simply gray with them as far as the eye could reach.

One bright morning I crossed the Kaw and turned my Skeezik's head toward the boundless land beyond the border. I was alone, Bill having succumbed to homesickness and turned back east, taking with him the information he had spent weeks acquiring touching the construction of dug-outs, which were to serve for our shelter when we had passed the habitable zone. The pony was in good spirits, and he loped off the miles with great rapidity. For about ten miles out of Wyandotte my route lay through lanes between fenced and cultivated farms. We lunched at a farmhouse, and soon after noon emerged from the restricted lanes on to the boundless prairie. I never experienced such a sense of freedom and exhilaration. The East and home seemed a dream of some far remote period, and I felt that I had expanded so that I could never again fit the proscribed limits of home life. But not long afterward I would have given ten years of my life for the privilege of re-entering that despised life and laying down my head in that same home.

Several miles square of this country had been mowed over for hay the past season, which left the surface free from obstruction, and the new fresh crop springing up, interspersed with brilliant-hued flowers, produced a most beautiful picture. It was one vast, gently undulating lawn through which I rode for three hours. Then, as I approached the so-called Tonganoxie Bottoms, the scene changed and became as desolate and forbidding as it was formerly attractive. The usual grove of cottonwoods which skirts all Kansas streams had suffered a visitation of fire, sufficiently fierce to kill the timber. The result was a stretch of bare trees, whose naked branches, with strips of bark still clinging, silhouetted against the sunlit horizon, combined to make a weird, uncanny picture. Passing through the timber I forded a small stream, and just at sunset reached a little log hut and had my first experience of squatter life as I rode up to the rail fence inclosing the cabin and was greeted by a half dozen noisy yellow dogs.

As the great brutes swarmed around Skeezik's head, their fangs suggesting unpleasant possibilities, I felt a deep sense of gratitude to my cowboy acquaintances who had cautioned me never to dismount at a settler's cabin until I had made some of the inmates aware of my presence. The significance of this advice was startlingly apparent in the present instance. Any one of the dogs could have made away with a boy of my style with little difficulty. A frowsy-headed woman appeared in the doorway and

hurled a wordy remonstrance at the dogs, which promptly slunk off, their aggressiveness simultaneously subsiding.

"Can you give me a night's shelter and something to eat?" I asked, in response to the woman's look of inquiry.

For reply she made a megaphone of one hand and shouted: "Oh, John" while the yellow dogs howled in unison.

Then out of the gloaming there came a man, followed by a girl of sixteen or eighteen years.

"Want t' git t' put up, huh?" was his salu-

was unaccustomed to the usages of civilization. I found it necessary then and there to instill some new ideas into the pony's cranium, and to teach him the rudiments of stable etiquette. My efforts as a tutor seemed to interest mine host and his family, who watched me with keen appreciation. Even the yellow dogs gave noisy vent to their approval of the exercises which had a tendency to disconcert Skeezik. The presence of the girl of about my own age added much to my embarrassment, especially as I heard something very like a snicker, whose author-

settle down on the prairie when my roving desires were satisfied. Supper, however, cast a blurr upon the roseate picture. The meal consisted of hot, freshly-baked corn cakes with bacon, swimming in grease, and a great pitcher of sorghum molasses. To my horror, my fellow diners poured syrup upon the reeking bacon, sopped their corn dodgers in the compound and ate the stuff. I consoled myself with an ungreased corn cake, assuring my solicitous hostess that I was not hungry, a literally true statement, though I felt half-famished when I reached the

THE WEST IN PIONEER DAYS.

tation. "Mought I ask what fetches ye inter these 'ere parts?"

Once more the advice of my Kansas City friends stood me in good stead. They had told me that to avoid suspicion I should be able to give a valid reason for traveling around the country, hence I had arranged with the publishers of an agricultural paper to send occasional sketches relating to the condition of the farming country, the stock, crop and financial outlook. I was, therefore, able to satisfy my prospective host's curiosity. Inviting me to dismount, he ushered me into the house, while he attempted to lead Skeezik to the corn crib. But the pony had notions of his own which did not quite harmonize with the man's, who soon called to me to help him with that "bundle o' greased lightnin'." Then it occurred to me that Skeezik

ship I could not doubt. After the liveliest half hour of my life it seemed to dawn upon Skeezik what was wanted of him, and he walked to the crib as mild as a kitten.

My entertainer's dwelling was fashioned from logs, hewn on two sides and notched together at the ends, forming the house corners. The roof consisted of bundles of prairie grass laid shingle fashion and held in place by long poles. The chimney, at one end of the house, was built of small logs, laid in mortar and liberally daubed with the same material on the inside. A pile of blazing cottonwood logs in the great fireplace filled the one room with light and cheer. A table, several home-made settees and chairs and two homely beds comprised the principal furniture. To my enthusiastic mind the situation was most charming, and I mentally determined to

house. Had I been told that I would one day come to eat and relish that sort of fare I would have paraphrased an Old Testament worthy's utterance and asked: "Is thy servant a pig that he should eat such stuff?"

My host had moved to Kansas from Indiana several years before in the fond hope of bettering his condition, but drouth, chinch bugs and cyclones had operated to offset whatever advantages he might have gained, until at the time of my visit, he was about discouraged. He was an intelligent, sensible man of about forty, but wrinkled and grizzled by hard work and worry. His wife was a good worker and mother apparently, but as regards intellect was sadly deficient. The girl, blessed with the more or less euphonious name of Sophie Ann, had attended the country schools and was able to read, write and

Fox Hunting at Ticonderoga

By SPORTSMAN

"figger." This, save only as to size, was practically a counterpart of scores of families with whose home life I was more or less conspicuously identified during the weeks to come before I passed beyond the settled parts of the country. I spent quite a pleasant evening, telling the latest news, and in turn acquiring information touching the territory through which I was to travel. The question, however, that would present itself to my mind, was how they would dispose of me for the night. I had not learned the resources of a Kansas cabin then.

At about 10 o'clock my hostess settled the lodging question by pointing to one of the two beds and saying: "Ye kin lay thar; me an' my man lays in t'other bed."

On my manifesting solicitude for the daughter and expressing regret that I should be the occasion of inconvenience, I was told "not t' fret about th' gal; she'd tek keer o' herself." A blanket was then slid out on a wire and I had a corner bedroom all to myself. Being very tired I slept soundly for several hours, when I awakened suddenly to find I had a bedfellow. My first idea was that my host had taken up quarters with me and given the girl his share of the other bed. The smouldering embers in the fireplace gave out a fitful glow, and in the dim light, on raising my head, I made the startling discovery that my companion was none other than the girl herself. On awakening again in the first faint glimmerings of day I saw the girl busying herself with household duties. I subsequently found that such-like innocent freedom was by no means uncommon in the rural districts, where household accommodations were restricted.

After breakfast, which was a counterpart of the evening meal, I intimated to my host that I would like to try for a catfish, he having mentioned during a former conversation that the neighboring branch abounded in that sort of game. He volunteered to pilot me to the haunts of the fish and also furnish hooks and bait as none of my tackle was suitable for such big game. The hooks that he produced were somewhat larger than a bluefish hook, and for bait he cut some half-pickled beef into three-inch chunks. We reached the branch in due time and put out lines. Catfishing in its preliminary stages cannot be rightly termed exciting sport. On throwing our lines into the muddy waters we had but to tie the free ends to convenient bushes and await developments. These seemed tediously slow in materializing. At last my bush showed there was something doing. It was not the jerky agitation that one would look for under the circumstances, but it merely sagged down to the limit of its elasticity and held firm. My companion seized the line, saying: "Give us a hand; we've got a sockdolager." Presently a big, dirty-looking object emerged from the depths, garnished with whiplashes. With a prodigious haul we landed the creature on the muddy bank and I saw it was an enormous bullhead minus horns. My fellow fisher roared with laughter when I put my impressions into words. "I don't know whar ye got that idee," he said, "fer that's a reg'lar simon pure 'cat,' if thar ever wuz one, an' he's a whackin' big un, too."

"Is it good to eat?" I queried, mentally thinking that my appetite could make big inroads on that six-foot fish if such was the case.

(Continued on page 420.)

WHILE the rest of the country is taking its pleasure on wheels, we are still on runners up in this tight little mountain town (Ticonderoga) among the foothills of the Adirondacks. Our men folks have awakened from their winter naps and are now looking over the buckets, fixing up the arches or kettles and tapping the glorious old rock maple trees for which our section is famous.

The nights are bright and frosty and the earth often dons her thin cloak of ermine before day-break, called "sugar snow," from its supposed influence on the flow of maple sap. As the morning sun begins to temper the air, the young hound gets the scent of his enemy, the red fox, and sweet melody soon calls every man from the sugar bush, for fox pelts bring many dollars in these days of the fur craze.

An old dog fox was down by the pine woods in the bush pasture where the game likes to stay at this season. He and Madame Fox are not above a stray meadow mole. In fact, they seem to prefer this rodent at present to grouse meat, which is pretty strong, owing to the bird's fondness for the buds of hemlock.

The wily old poacher glided off along the ridge to the pass between two mountains and crossed the old Military Road between the Vineyards, an old runway to Buck Mountain which all foxdom has used in its treatment of the hound question ever since white men came this way, and perhaps employed the same tactics with the mongrel dogs of the aborigines in pursuit of their fur. Straight up the mountain went reynard, the dog following hotly in his wake. If you had strained your eyes hard or aided them with a glass, you could see that fox up there several hundred feet above the valley leading that ambitious puppy a great race.

He of the brush suddenly decided to return to his morning hunting grounds and find his consort or let her have a run on her own account while he rested. At any rate, back he came, and from the baying of the hound and your own knowledge of the lay of the land, you could guess pretty nearly where he would cross the narrow valley. At first he seemed to be coming down the runway from the Frenchman's spring, following the deep ravine to the east road, then he turned toward the stone bridge, and we knew it would be at the pass or by the old pond hole that we would probably meet.

The sugar force was scattered along this mountain valley for about a mile, well hidden behind evergreens and rocks, for the foxes were moving, and there was promise of fun until nightfall. Back in the pines another hound started the old vixen, and she was heading for the apple tree runway at the turn of the road leading up to the old mine. I had the pass runway, the best of the lot. I found a perfect network of tracks there, leading up and down the old mountain.

The farm arsenal consisted of an old musket, a muzzleloader, and a rather antiquated and somewhat rusty single barrel shotgun whose side snap was likely to fall down at unguarded moments. For this reason I preferred to stick

to my .32 caliber revolver, and believed that I could do more execution with its six-inch barrel, even on foxes. I did not have to wait long. Out from a sheltering pine came that beautiful, graceful creature that I had before seen only in museums and show windows in the city. The fox must have played a trick on the hound, for the latter was silent and apparently far away working up the trail. A sudden spring from the ground on to a rail fence, a leaning tree, or even a friendly stone wall had broken or faulted the scent, and the dog was sorely puzzled. And the fox actually laughed with joy and rolled over and over in mirth to think how he had finally outwitted that smart puppy. Never did he suspect the far greater danger lurking on the other side of that thick juniper bush a few yards down the wind where I lay trying to be steady at the critical moment. He came a little nearer the juniper. The little nitro cartridge gave a short cough and reynard was soon hanging from the city man's shoulder, his black muzzle brushing the fresh snow.

Bang! went the musket up the valley by the apple tree. My host had missed the consort, but the old dog had turned her back from the mountain. She had taken the Pond Hole trail over to Miller Mountain, giving the dogs two hours' work in getting her back to the farm.

It was dinner time, anyway, and as I sat in the old log farm house eating fried chicken and baked peachblow potatoes, for which the section is famous, I listened to Uncle Hiram Cheney's stories compared with which my own experiences of the day seemed rather tame.

"You've all heard tell about the black fellows and how scarce they are. Well, I've seen two or three of them in my life, and I'll tell you how I once got one," said the veteran meditatively. "You see, father was known to be the greatest fox hunter in these parts. He knew all about the foxes around here and their ways and runways."

Here I recalled how, in my own boyhood days, I had often seen this famous man drive his cutter under the old barn shed on that very farm at about 2 o'clock in the afternoon, put his horse in the warm barn and take that wonderful old double barrel gun from beneath the wolf robes, set it against the barn, don the bearpaw snowshoes of Indian manufacture, and go striding off over the five-foot snowfall after his dog. The Harper boys had told him that they saw a big fox down the east road that morning, and he thought he would look him up a little, he would smilingly say to father, who was no hunter, but liked sport of any kind tremendously. Besides, those foxes had thinned down his turkeys and chickens all the fall and they were getting saucy.

The old wolf tails hung over the back of that cutter all the afternoon, and I kept watching them through the tiny panes of the old log house windows, from time to time opening the door to listen to that glorious voice, telling of the chase and echoing from mountain to mountain. My only wish at that time was to be a man and hunt with Uncle Ben out there in the timber.

The snow kept falling very softly, but at nightfall Ben came up, and the fox was hanging from his shoulder. On another occasion it would be two or three foxes, but always at least one.

"Yes," continued the hunter's son, "father always allowed that he would have a black fox some day. You know they are worth four or five hundred dollars, for the Russians always have a standing offer of that price for a fine specimen. Father was trying for one to get mother a new silk dress and some more jewelry from New York.

"Of course, you can never tell by the noise a dog makes what kind of a fox he is after. One day down in the marsh old Rove started a fox. Father was over at Grant's Swamp with the cutter and I ran down toward Lake Champlain near an old farm house. I soon found out that it was a black fellow that Rove was after—just as black as a cat. In fact, at first I thought it was a big Tom from the old barn. The snow was falling very fast and spoiling the trail. The old dog couldn't get his scent half the time and would root about in the snow like a pig up to his long ears, trying to find it, but it was of no use. He couldn't follow any longer. There is where I could beat the dog. I could see the path of the fox in the deep snow, even if the dog couldn't. So, I took after the fox myself and left the hound to his own devices.

"The snow was pretty wet and it stuck to the fox's brush and weighed him down so that I soon got pretty close to him. Then he put for the hills and I after him, but could not get within safe shooting distance; besides, I feared that the caps on the old gun were wet.

"Father was not very long in sizing up the situation. He drove the mare at a hot old clip along the Dibble Hollow road and caught the fox with a load of BB's right out of the old cutter, for we often hunted in that way.

"This fox was a perfect beauty, and his capture sort of made father get over the loss of his first black fox. He had been hunting partridges and gray squirrels all one afternoon one fall and finally decided to go home, as he had as many as he could lug. So he fired his two charges off and sat down to rest himself a minute before starting. Just then, right out of a little bunch of bushes, a splendid black fox stepped and walked up within fifty feet of father. The creature knew that he had the old gentleman foul, for he actually seemed to make fun of him in his own foxy way. He rolled on the leaves, scratched dirt and sat upon his haunches just like a dog for fully five minutes, until father made a motion toward his gun, when the fox was out of sight in a minute.

"That little shooting-iron of yours isn't so slow. It's mighty handy not having to tote a great eight-pound gun over these hills and rough country. I never saw anyone before who could do anything with a revolver hunting, but father used to tell of his brother, John Cheney, out Newcomb way, who once had a pistol. He always took it with him trapping, and he killed panthers and deer with it, too, lots of them. Why, the stock of that old pistol was all marked and scored to tell all the kinds and numbers of animals he had shot with it. Some city man gave him a lot for it, and I guess it is in a museum at Albany.

"Some day next winter, if I live, I am coming down here and have one more good old

hunt. I'll tell you boys where all the runways are and sort of impart to you what I have learned about fox hunting; that is, our sort of fox hunting. My son tells me that they hunt foxes down South on horseback with a pack of hounds running along ahead of them.

"It certainly is fun to start the dogs going

on a fine day when there has been a light fall of snow and hear their music sounding from mountain to mountain. Yes, boys, don't let the good old sport stop when I and the other old fellows are gone. The foxes are here for us all, and I hope that you will be on hand to take those lessons of mine, won't you?"

Helping Game Propagation

By A. J. YOUNG

I AM a farmer. I reside on the sunset slope of the Ozark Hills where a few acres of well-tilled ground, a generous supply of bacon in the smokehouse and an unbroken range for hunting deer and turkey would have supplied every want and satisfied every ambition known to the native Missourian in days past, but unhappily for me, my farming is of a mental nature, the supply of bacon comes from the city and the unbroken range is long since fenced by the man who desires to become rich pasturing cattle where deer and turkey once roamed at will.

However changed these conditions may be, there still lingers in my mind recollections of days long since gone by, and to a greater or less degree I have tried in an artificial way to recoup the ravages of commercialism and rehabilitate the soil with some of its virgin virility.

No one has as yet succeeded in getting a monopoly of the air. The open dome of heaven still furnishes the royal highway for countless thousands of ducks, brant and geese in their pilgrimage from the warm waters of the gulf to the sedges and marshes of the North.

In the early days there were thousands of acres of unbroken prairie interlaced with streams and pools which furnished an ideal resting place for the weary wildfowl, so that every spring and fall these places were literally covered with every sort of duck and shore bird known to the hunter. Now that the cornfield has replaced the prairie and pastures encompass the streams, these resting places are no more visited by the wander-

ing flocks, but their flight has taken a Western trend where conditions are more primitive.

There is scarcely a farm to be found where an artificial pool or lake ranging in size from one acre to ten could not be made. The one I have in mind, and one which I often visit in the hunting season, covers less than ten acres. An embankment of earth twelve feet in height with a stone riprap was thrown across the mouth of a ravine in one corner of a pasture. A row of maple trees and willows were planted around the edge of the lake, and wild rye sown in the shallow water. This lake is stocked with bass and crappie, and is a delightful fishing resort in summer. During the duck season it furnishes all the sport necessary to satisfy the duck hunter. A square-ended scow floats upon its bosom, yet this unpretentious craft is handy when a wounded duck must be retrieved.

Just below this lake is an abandoned field of two or three acres grown up to briars and thickets. Around its edge the owner annually sows a patch of wheat, buckwheat or kaffir corn and leaves the same unharvested to feed his feathered friends during the winter.

While this method of game protection and game propagation can never restore the primitive conditions of fifty years ago, it can and will work wonders. I inclose herewith a photograph showing the lake which I have described, its scow, three beautiful mallards, their captor and his faithful dog which I call "Campbellite" because he is so fond of the water.

POSSIBILITIES OF SPORT ON AN ARTIFICIAL POND.

Progress of the Hunting Season.

THE Secretary of Agriculture has received the following report from the Biological Survey on the condition of game during the past month:

Continued cold weather during February has had a serious effect on game in many sections of the country and has affected the shipment of birds to a marked degree. Importations of quail from Mexico, which were frequent in the early part of the winter, have fallen off, and shipments of wildfowl to market have been delayed until milder weather. In Southern California a prominent ducking club in Orange county has secured the co-operation of most of the clubs in the vicinity in refraining from shooting after Feb. 15. This action, which might well be followed by clubs and sportsmen elsewhere, has had the effect of practically closing the season on wildfowl in one of the most important ducking centers in the State some weeks before the date fixed by law.

The quail disease which was discovered in 1907 has recently reappeared in a shipment of birds from the Southwest and has been reported from Connecticut. This disease is highly infectious and apt to spread rapidly among all birds exposed to it. Sportsmen and others interested in introducing quail should report promptly in case any of the birds they purchase die en route.

The hunting season practically closed on March 1, even in the South. In some States the season nominally remains open a month or two longer, but usually only for migratory birds. In a season like this, when birds are returning north after a hard winter, sportsmen would do well not to take advantage of the privilege of hunting in the spring. March 1 marked the closing of the season for sale of imported game in New York, and for hunting game in the following States: In Alabama, for squirrels, quail and doves; in Arkansas for quail; in California and Colorado for shore birds and waterfowl; in Florida and Georgia, for quail and wild turkeys; in Louisiana, for doves, woodcock, woodducks and black ducks; in Mississippi, for all game except turkeys; in many of the counties of North Carolina, for quail, turkeys, doves, larks and robins; in Oregon, for shore birds, rail, turkeys, doves, larks and robins; in Oregon for shore birds, rail, geese and swans; in South Carolina, for doves, willets and woodducks; in Tennessee, for upland game birds and meadow larks; and in West Virginia, for snipe.

Plans for propagation are now attracting attention. The supply of quail as usual is entirely inadequate to meet the demand, and such birds as are now on the market are usually Mexican birds, ill adapted for Northern covers. Pheasants and partridges are being imported to some extent, but the latter bird is not as popular as it was two or three years ago.

The game commission of Pennsylvania has recently secured some of the large deer from Northern Michigan for liberation. The elk in Jackson Hole have thus far wintered well and comparatively few deaths even among the calves have been reported. Hay in abundance is being fed both by Federal and State authorities. The

department has arranged for the transfer of several small herds of elk to suitable localities in adjoining States with a view to reintroducing elk in several of the Western States where they were formerly abundant. Shipments have already been made to National forests in South Dakota and Utah, and others will follow shortly to National reservations in Oregon, Montana and Oklahoma. The plans for 1912 contemplate the transfer of small herds from Jackson Hole to suitable localities in six of the Western States. One new National bird reservation, comprising a small island near the mouth of Green Bay, Wisconsin, was established by executive order on Feb. 21.

In nine of the Eastern States whose Legislatures are now in session, interest is concentrated on the measures under consideration for securing greater protection to the game. A bill providing a resident license in South Carolina has failed, as has also a measure providing for the establishment of a State game warden or commissioner in Mississippi. The bill removing the robin from the game list in Virginia and giving it protection throughout the year has passed both Houses of the Legislature and was approved on Feb. 29. Game commission bills are attracting considerable attention in Kentucky and Virginia, and the codification bill in New York is perhaps the most important game measure under consideration in that State. Bills providing for the New York system of tagging game have been introduced in Massachusetts and New Jersey.

Crane Lake Preserve Sold.

BLOOMINGTON, Ill., March 23.—*Editor Forest and Stream:* A party of Chicagoans, headed by H. C. Lytton, have purchased from Chauncey Powers and his brothers, Thomas and Frank, the famous Crane Lake game and fishing preserve, located in Mason county. The preserve comprises a tract of 1,515 acres and is located near the Illinois River opposite Beardstown. The Powers brothers purchased the tract in 1899. They erected a comfortable lodge and have employed wardens to look after the property. Trespassing has been frequent and many clashes occurred between the wardens and irresponsible hunters and fishermen who disputed the ownership of the Powers to the marsh and lake. Although the owners have always been successful in various court proceedings in dealing with these trespassers, they finally tired of the warfare.

Crane Lake preserve has long been famed as a duck and goose resort. Corn was cultivated on the preserves, and as it was never harvested, it furnished food for the birds in the fall and spring. The owners discouraged spring shooting and never molested the birds on their Northern flights. In addition, a portion of Crane Lake was reserved, and no shooting permitted upon that section. The birds appeared to recognize the protective order, and what were thought to be the same flocks appeared at the resort each spring and fall for many years. Crane Lake was noted as a feeding ground for wild geese, and at some portions of the season thousands fed there. Possession has been given to the new

owners, and they will make certain alterations and otherwise improve the property. The club house will be enlarged and preparations made for occupancy when the Northern flight of birds commences.

The second round-up arranged by the sportsmen and farmers of Menard county to destroy the wolves, which have infested that locality, took place this week, but like its predecessor was fruitless. A wolf and a fox were sighted, but both escaped after a long run.

All game wardens of Illinois have been instructed to secure the membership of sportsmen of their vicinity in a proposed State game club, the object being to co-operate with the State Game Commission in protecting and propagating game and assist in the prosecution of those who violate the law. It is desired to form a State association and later organize county branches.

Due to the unusual amount of snow in Central Illinois this winter, ski running has become popular, and a large number have participated in the sport.

Does a game warden require a license to hunt? This question has arisen in Central Illinois, charges being filed with the State civil service commission that Joseph Wimmer, of Barry, a deputy game warden, has been hunting without a permit. So far as known, wardens have never been required to take out a license.

Milder weather attracted a few ducks to the feeding grounds of the Illinois River this week. The spring flight this season is the latest in years. Mallards and sprigs are the most numerous.

E. E. PIERSON.

Virginia Game Laws.

RICHMOND, Va., March 23.—*Editor Forest and Stream:* The Virginia Legislature convened on Jan. 9 and adjourned on March 9.

The Virginia Audubon Society's legislative committee, not being satisfied with several measures which provided for the establishment of a State game commissioner with a resident and non-resident hunters' license tax, drafted a bill, following as nearly as possible the Alabama game laws.

Jennings C. Wise, who is an attorney and a well-known sportsman and game protectionist, was put in charge of the measure, and with the assistance of the other officers and members of the Virginia Audubon Society, got the measure through the State Senate and only lacked six votes of having a two-thirds majority in the House. Had the measure been two days earlier in getting to the House before its dying hours and the two-thirds majority rule not needed to dispense with the constitutional reading, it would have passed this session.

Those who fought for the measure with Mr. Wise feel highly encouraged, and never before have Virginia sportsmen had a more striking illustration of the worth of such organizations as the National Association of Audubon Societies and the American Game Protective and Propagation Association, both of which assisted with money and also had their officers come here and present the real need of Virginia game protection to members of the Assembly.

Already a movement has started under the auspices of the Virginia Audubon Society which will be engineered by Mr. Wise, practically assuring the passage of the measure two years hence.

M. D. HART.

The Pheasant Supply.

ALBANY, N. Y., March 21.—*Editor Forest and Stream:* The popularity of the pheasant as a game bird and as a valuable assistant to the farmer in keeping down insect pests, is manifest in the statewide demand for eggs and birds which the Conservation Department is sending out from the State game farm. Despite the fact that the department will more than double the number of pheasants and eggs distributed last year, the supply for the present season will not be sufficient to meet the demands. Sportsmen have found the pheasant to be hardy, prolific and game. Farmers testify that they like to see the beautiful birds in their fields, for pheasants are the active and tireless foe of all kinds of insects and worms that prey on crops.

The applications so far received will exceed the supply fully four times over, but the department will do the best it can in distributing pheasants and eggs this spring and summer. The situation shows the importance of establishing more game farms in various parts of the State where not only a sufficient number of pheasants but of other game birds to restock depleted covers and keep up the supply of feathered game, may be propagated.

The applications show that applicants were often careless in filling out blanks, failing to meet the requirements in answering the department's questions. So far the department has received 4,204 applications, asking for 125,472 eggs and 28,022 birds. Of this number only 2,580 applications fulfilled the requirements of the application blanks, calling for 74,380 eggs and 20,332 birds. The one farm now possessed by the State expects to be able to furnish 30,000 pheasant eggs and 5,000 birds.

The fisheries bureau of the department has reduced the transportation of live fish to a science, as illustrated in the exhibition at the Sportsmen's Show, New York, recently. The bureau collected from the various hatcheries and several lakes a fine lot of fish, including three mascalonge, twenty chain pickerel, twelve banded pickerel, nine yellow perch, two white perch, six black bass, three short-nosed sturgeon, fifty yearling brook trout, eight large rainbow trout, twelve large lake trout, ten large brown trout. These fish were carried to and from the show and were on exhibition nine days, and the loss was confined to four or five fish transported from distant stations. The big mascalonge, over forty-three inches in length, stood the trip well.

CONSERVATION COMMISSION.

Bush Clover for Quail.

NEW YORK CITY, March 23.—*Editor Forest and Stream:* The cover picture of FOREST AND STREAM for March 16, entitled "In the Quail Country," and showing what appears to be an abundance of bush clover (*Lespedeza capitata*), reminds me of a point that I have often wished to suggest, namely, that bush clover should be sown freely for winter food for quail and other birds.

This plant will grow freely on the poorest sandy and gravelly soil. Seeds remain in the involucre during the entire winter, standing two or three feet above the ground, so that birds can get them, even in deep snow.

This clover is not often found in dense stands, probably because the seeds are eaten so greedily

by field mice whenever they are shaken out by the wind and fall to the ground.

In order to insure a good stand it would be best to collect the seeds in quantities in the autumn by whipping the tops over a pan, and these seeds can then be kept in storage until time for sowing in the spring. If they are soaked for a few hours in warm water before sowing, it hastens germination and lessens the time during which they might be devoured by field mice.

The only objection to raising this bush clover in a close stand is the fact that it would soon be displaced by other plants, as it is one of the nitrogen collectors, and makes poor ground rich. If one wishes to maintain a large area seeded to bush clover, it should be scattered rather thinly.

ROBERT T. MORRIS.

New York Legislature.

ALBANY, N. Y., March 25.—*Editor Forest and Stream:* Assemblyman Evans, of Sullivan county, has introduced a bill providing that set lines may be used for eels and bullheads only in Pleasure Lake, Sullivan county, between sunset and sunrise.

Assemblyman Sullivan has introduced a bill appropriating \$25,000 for a fish hatchery in Chautauqua county.

Senator Cobb has introduced a bill in relation to the possession and taking of certain game animals and fish.

Assemblyman Bullion has introduced a bill providing that the gill nets with which frostfish, whitefish and Otsego bass may be taken in the open season in Otsego Lake must have meshes of not less than one and one-quarter inch bar instead of one and three-quarter inch bar.

Assemblyman Wheeler has introduced a bill relating to burning waste in certain counties.

The Assembly has passed Assemblyman McDaniel's bill, in relation to ferrets in Schuyler and Tompkins counties.

The Senate has passed Senator Rose's bill appropriating \$20,000 for the establishment of a fish hatchery in Sullivan county.

Assemblyman Sweet, of Oswego, introduced in the Legislature a bill providing that wild deer or venison may be possessed from Oct. 1 to Nov. 20, both inclusive, instead of from Sept. 16 to Nov. 15; possession from Nov. 21 to Jan. 1, both inclusive, provided he has obtained a license. If possession of a deer is obtained for transportation after Oct. 1 and before midnight of Nov. 6, it may, when accompanied by the owner, remain in possession of a common carrier for the additional time necessary to deliver it to its destination.

The Senate has passed Senator Roosevelt's bill amending the conservation law in relation to lands, forests and public parks.

Senator Roosevelt has introduced a bill in relation to the prevention of forest fires. It has been advanced to third reading by the Senate.

The Senate has passed these bills: Assemblyman Seaker's, appropriating \$20,000 for the establishment of a fish hatchery in St. Lawrence county. Senator Emerson's, appropriating \$20,000 for the establishment of a fish hatchery in Warrensburgh. Senator Hamilton, appropriating \$25,000 for the establishment of a fish hatchery in Chautauqua county.

Senator Thomas, of Madison, has introduced a bill relating to suckers, bullheads, eels and dogfish in Otsego county.

A Successful Bait for Wolves.

THE destruction of wolves and coyotes is a matter of great importance to stockmen and farmers in certain sections of the United States. A circular on this subject was issued in 1908 by the Biological Survey of the Department of Agriculture. Although the fetid scent described in that circular has proved very useful in trapping coyotes and wolves, a much more effective scent, used by some of the most successful wolf trappers in the West, and which has been tested with good results by field naturalists of the Survey, is prepared as follows:

Put into a bottle the urine from a wolf, the gall and anal glands, which are situated under the skin on either side of the vent, and resemble small pieces of bluish fat; or, if these cannot be readily found, the whole anal parts may be used.

In preparing four ounces of the mixture, use one-quarter the amount of glycerine to give it body and prevent too rapid evaporation, and one grain of corrosive sublimate to keep it from spoiling.

Let the mixture stand several days, then shake well and scatter a few drops on weeds or ground six or eight inches back of the place selected for the trap. Carefully conceal the trap, if possible, near a trail which the wolves follow, so they will catch the scent as they pass. The further from the trail the trap is set, the greater will be the quantity of scent needed. A little of the scent should be rubbed on the trapper's gloves and shoe soles to conceal the human odor.

This bait attracts wolves only, but a similar bait, made from the secretions of coyotes, is equally effective to attract these animals. It is highly probable also that wildcats, lynx and mountain lions will be attracted by bait prepared in a similar manner from their secretions.

Self-Hunting Dogs.

SOMERVILLE, Mass., March 14.—*Editor Forest and Stream:* The question of tying up the dogs during the summer months like many other game questions seems to be many-sided. It is worthy of no little consideration and thought and must to some extent appeal to all considerate sportsmen. Such a law properly enforced would no doubt be quite a help along the lines of protection, though it would mean a sacrifice to some sportsmen. The greatest sufferers would be that class of dogs which really do the least damage.

That the dog of almost any breed owned by the farmer or rural resident, taught to drive domestic animal, killers of vermin about the places, many times set upon small harmless creatures just in fun, should acquire a self-hunting habit, I am in no way surprised. Such a dog should be restrained.

But the well-bred and properly handled kennel dog trained to hunt game animals, belonging to the class of dogs known as hounds bred to require and endure a great amount of exercise, must positively suffer from such a law. Owing to the fact that I kept my own dogs out of the woods from the last of February until October last year, I did not have a dog last fall that could stand over a half day's work, and did not succeed in getting them into good trim up to the time the season closed.

Living in the city and keeping my dogs confined, they have not acquired the knack of guard-

ing themselves against the constant traffic of the city street. Most of our parks are posted against dogs. I tried taking them out in the country to exercise them along the public highways, but found no such road exempt from the automobile. It is quite generally understood to what extent most of the drivers of these machines consider the welfare of such an insignificant thing as a dog. Our little party has found this out to our sorrow. Then the constant worriment is anything but pleasant.

Any actual harm done by these properly trained dogs I have never witnessed. My limited experience with such dogs have convinced me that with very few exceptions when taken out they know just what is required of them and they hunt exclusively the animal upon which they have been trained. Such dogs frequently ignore offers of food, and many of the most enthusiastic hunters show no inclination to eat the animal hunted. That they ever bother to rob nests I doubt very much. I am willing to believe that these dogs as well as any others can disturb nesting birds, and if done at night with more or less harmful effect. My impression is that the most of this night running of dogs during the summer is done by the resident country hound, seldom used in actual legitimate hunting, but are allowed to run at large the year round and are as lax in their training as are their owners.

As the conditions to-day call for every possible effort in the interest of game and song birds, it is proper that they should be afforded every advantage and protection during the breeding season. If the running at large of dogs is detrimental to the welfare of these birds, it behooves us as well thinking sportsmen to encourage the restraining of these so-called self-hunting dogs by controlling our own. As no amount of earnest appeal will accomplish this desired effort, let us have a law to regulate it, providing it can be properly enforced where it should be, and not mean the restraint of the least harmful dog by a well-intending owner. Senate bill 175, as published in *FOREST AND STREAM* in a recent issue I considered more than fair to dog owners, and hardly fulfilling the purpose for which it is intended.

CHAS. H. SHAW.

Biltmore Forest School.

ON SHIPBOARD, March 17.—*Editor Forest and Stream:* During the first part of February our field work was conducted in the forests near Darmstadt. On the 12th we found ourselves in the famous Black Forest. We were situated at the Kurhaus Sand, high up in the mountains, with the most wonderful views, surrounded by silent dark forests of fir and spruce. Here is the playground of Germany—the ideal home for the simple life. The beautiful white winding "macadams" piercing the blackness of the sighing solemn forest, the enchanting streams, gurgling and dashing down the mountain sides, the alluring footpaths leading off into the mystery of the woods, and the welcome, comfortable resting places where one can relieve his mind of worldly cares, and be soothed by the lullaby of the forest choir, and drink to content of the good pure mountain air—all these are in striking contrast with the busy outside world.

Our headquarters upon our return will be in the Adirondacks at Tupper Lake.

JAMES W. EGNOR, Class President.

SEA AND RIVER FISHING

Gulf Fishing.

JACKSONVILLE, Fla., March 21.—*Editor Forest and Stream:* Though somewhat early in the season I have made a couple of trips to McGirts Creek to try for black bass, but did not get a strike, either casting or trolling. With a week or two of warm, settled weather, it will be a different story.

Last month many fine strings of speckled perch were caught about the railroad bridge crossing this creek, live minnows being the bait used.

During the first part of the winter I was down in St. Petersburg, on Tampa Bay, for a few weeks, and what spare time I had was spent along the water front. Fishing from the docks is a favorite pastime with a large number of the tourists, many States being represented, and the tackle used was equally varied. Alongside of a man using a rod and reel equal to landing a six-foot shark I noticed another fisherman using a split bamboo fly-rod. When a fifteen-pound kingfish was hooked, there was excitement all along the line, for the kingfish is a game fighter.

Two grizzled old fishermen were standing side by side watching their corks riding the green swells and occasionally reeling in to see if the bait was in good condition. Said one: "Who do you think will be elected mayor of Philadelphia?"

The other, intent on putting on a live shiner, did not reply until he had cast far out from the dock and reeled in the slack. "Haven't taken much interest in the matter," said he at last. "What interests me is whether or not I am going to catch a kingfish this morning."

It was while fishing off the electric dock that I saw my first balloon fish. As the fisherman swung it back over the dock, the fish fell off the hook, grunted two or three times, and with a flip of the tail was on its back. Then it began to inflate, and in a minute it was about the size of a toy balloon. As I was examining this curiosity the man who caught it remarked that he could stand on the fish and not injure it. As he weighed at least 160 pounds, I replied that I imagined it would explode like a torpedo if he attempted it. Placing one foot on the fish and balancing himself with his rod, he raised his other foot and stood erect. A few moments after this exhibition the fish expelled the air. It was then tossed overboard and swam off as though such incidents were all in the day's sport. This fish was not over ten inches long.

The man who caught this fish told me that he once saw a pelican make the mistake of swallowing, or attempting to swallow, one of these fish and died as a result of its greediness. He said the pelican tried all kinds of schemes to eject the fish, but could not do so, and after a short struggle went over on its back, and with feet up drifted out with the tide.

Before leaving St. Petersburg I went over to

Pass-a-Grille, known far and near for its tarpon fishing. There is but a narrow strip of land between the pass and the gulf, and on this is the little town of Pass-a-Grille. To the west is the open gulf with its crescent-shaped bathing beach, across the pass to the east Pine Key, and to the south a number of small islands dot the entrance to Tampa Bay. Among them is Bird Key, a bird reservation under Government supervision.

Going back to Gulfport across Boca Ceiga Bay I witnessed one of the most beautiful sunsets I have seen in years. During the afternoon a storm had been brewing over the gulf, but just before sunset the great bank of clouds began to break up, and behind this ragged curtain the sun shot its brilliant rays over sky and water, and disappeared in the gulf like a big golden ball. From up and down the bay came gulls and pelicans, all headed for Bird Key. I counted up to sixty in one string of pelicans, then lost count. They were strung out in a straight line, one behind the other, and for some distance the whole line would sail along just above the water without wing motion, then the leader would glide upward, flap its wings a few times, coast down the incline and resume the steady sail just above the water, each pelican in turn following its leader's motions. These undulating strings of birds, all headed toward Bird Key, presented a curious sight in the changing twilight colors reflected in the water.

GEO. A. IRWIN.

The Law Upheld.

BLOOMINGTON, Ill., March 22.—*Editor Forest and Stream:* Of deep interest to the fishermen of Illinois was the recent decision of the Illinois Supreme Court in the Booth cases. The section of the fish law was upheld which prohibits the sale of game fish in Illinois, but the court declared unconstitutional that section applying to the transportation or sale of fish caught outside of the State. The court held that a State has no power to wholly exclude a lawful article of commerce produced in another State. While it may regulate the introduction of an article, including a food product so as to regulate its purity, the police power does not extend to its total exclusion. The court holds that sound, wholesome fish constitute a valuable article of food and are property. The owner of such fish, taken in another State or foreign country, has the right to bring them into Illinois for any lawful purpose. He may have them for his own consumption, to give away, or he may store them, although he may not have the possession of them here for purpose of sale. He has the right to receive another's fish for storage. If, being the owner, he desires to ship them to another State, he may do so, or if having them in store for another, the owner orders him to ship them to another State, he may do so. This transportation of commodities from one State to another is interstate commerce, and the Illinois law, where it prohibits such transportation, is unconstitutional and void.

E. E. PIERSON.

Aransas Pass Tarpon Club.

AKRON, Ohio, March 23.—*Editor Forest and Stream:* We are inclosing the awards of prizes as given by the Aransas Pass Tarpon Club, at Port Aransas, Texas, for the season ending 1911:

PRIZES AWARDED.

For longest tarpon of season; silver medal and Chronicle cup: Won by Mark Sarazan, Dallas. Length of fish, 6 feet 4½ inches.

For the most tarpon taken in any one day for three consecutive seasons; silver loving cup: Won by W. C. Boschen, New York, and J. E. Cotter, Port Aransas, with seven each. In this competition fish brought to gaff and released are credited to the angler.

For longest tarpon of season by beginner; silver loving cup: Won by Samuel Shoemaker, Philadelphia, and W. S. Montgomery, Fort Worth. Length of fish, 6 feet 3¾ inches.

For longest tarpon of season by beginner; umbrella: Won by Samuel Shoemaker, Philadelphia, and W. S. Montgomery, Fort Worth. Length of fish, 6 feet 3¾ inches.

For longest tarpon, over 6 feet 2 inches, taken before Sept. 1; bronze flower girl: Won by Mark Sarazan. Length of fish, 6 feet 4½ inches.

For longest tarpon of season, over 6 feet 1 inch, taken by lady angler residing not less than fifty miles from Tarpon, Texas; brooch: Won by Mrs. Will H. Dilg, Chicago. Length of fish, 6 feet 2½ inches.

For longest tarpon of season, over 5 feet 6 inches, taken by lady angler during two consecutive seasons; silver loving cup: Won by Mrs. Will H. Dilg. Length of fish, 6 feet 2½ inches.

For longest gold button tarpon taken by a lady; gold vanity box: Won by Mrs. S. S. Boyd, Chicago. Length of fish, 5 feet 7 inches. Second; umbrella: Won by Samuel Shoemaker, W. S. Montgomery and L. G. Murphy. Length of fish, 6 feet 3¾ inches. Third; tarpon balance, barometer and signet ring: Won by Commander C. W. Trousdale, Royal Navy, London, England. Length of fish, 6 feet 3 inches.

For longest and second longest silver buton tarpon of season; two silver loving cups: Won by Fred H. Reed, Oklahoma City, and W. S. Kinnear, Kansas City. Length of fish, 5 feet 5¾ inches.

For the 100th tarpon of the season; case of Scotch whiskey: Won by A. W. Hooper, Boston. Length of fish, 6 feet 2½ inches.

For last gold button tarpon of season; tarpon rod: Won by J. E. Campbell, Nowata, Okla. Length of fish, 5 feet 7 inches.

For shortest tarpon of season over 32 inches; reel: Won by A. W. Hooper. Length of fish, 35½ inches. Second; tarpon hooks: Won by A. B. Gwathmey, Jr., New York City: G. A. Franklin, San Antonio. Length of fish, 3 feet 1 inch. Prize divided (50 each).

For shortest tarpon of season taken by lady; bottle of extract: Won by Mrs. Will H. Dilg. Length of fish, 4 feet 6 inches.

For longest tarpon taken on July 4, for shortest tarpon taken on July 4; each 25 cigars: Both won by L. L. Lentz, San Antonio. Length of fish, 5 feet 3 inches.

For longest tarpon taken on Labor Day; 25 cigars: Won by G. A. Franklin, San Antonio. Length of fish, 5 feet 10 inches.

For shortest tarpon taken on Labor Day; 25 cigars: Won by T. C. Frost, San Antonio. Length of fish, 3 feet 4 inches.

For longest kingfish of season, over 47 inches; silver loving cup: Won by Duval West, San Antonio. Length of fish, 53¾ inches.

SPECIAL LINE PRIZES.

Nine hundred feet nine-thread line, to each: For longest gold button tarpon of season; Jefferson tarpon line: S. Shoemaker, Philadelphia. Length of fish, 6 feet 3¾ inches. For longest silver button tarpon: W. S. Kinnear, Kansas City. Length of fish, 5 feet 5¾ inches. For tenth gold button tarpon: F. H. Reed, Oklahoma City. Length of fish, 5 feet 5¾ inches. For fifth silver button tarpon: R. M. Waddell, Houston. Length of fish, 5 feet. For longest tarpon taken by beginner: W. S. Montgomery, Fort Worth. Length of fish, 6 feet 3¾ inches. Second: R. C. Patterson, Houston. Length of fish, 6 feet. For longest tarpon of season: Mark Sarazan; second, L. G. Murphy.

Our club has had a very substantial growth from its very beginning and last year we were favored with memberships from many of our American and foreign anglers.

The season of 1912 is now open and many schools of tarpon have arrived in the bays and along the jetties. Fishermen are now contesting for one or more of the many valuable prizes which the club has offered for the season of 1912 under the light tackle rules. Any angler has a just right to feel it a great honor in having landed a tarpon on light tackle, which entitles him to ever after wear the gold badge which is awarded by the club for so doing.

Hotel and boatmen's rates are very reasonable and the climate is ideal. Large additions have been made to our club's headquarters, Tarpon Inn, to take care of the steadily increasing business. To those who are interested in tarpon fishing I will say that if you go to Port Aransas you will surely get all the tarpon you will care to catch. The fish are there in large numbers and they bite. It is simply up to the angler's skill whether he lands one or not.

The United States Government is establishing a large fort at Port Aransas, spending many thousands of dollars on the harbor and improvements generally. This will be a very important port when the Panama canal is opened, as much of the traffic from and to the United States will be passed through this point.

I will be pleased to give any information to any one who has intentions of going to Port Aransas.

J. E. PFLUEGER, Cor-Sec'y.

The Ice Goes Out.

SULLIVAN COUNTY, N. Y., March 22.—*Editor Forest and Stream:* The ice on the Neversink River broke up and went out easily on March 13. This is good news, indeed, as it probably means that all the streams in this part of the country have gotten rid of the ice without injury to either fish or insect life.

As it is said by some of the weather sharps to have been the coldest winter in forty-three years, the ice in all the ponds and streams was extremely heavy and we feared a repetition of the miserable and disgusting break-up in February, 1908. Then the ice went out on top of a flood and there was mischief generally. Now, I hope that the frost will melt out of the ground as quickly as possible, so that some of the late snows and heavy rains of spring will be enabled to soak in and fill up the sources of the springs and tributary brooks. For good fishing in June and the early part of July we need a full supply of water in all the trout rivers.

A rainy summer used to mean good fishing, but it seems a long time since we have seen anything but drouths during warm weather.

THEODORE GORDON.

Indoor Fishing Contests.

THERE was a lively discussion at the monthly dinner and meeting of the directors of the Anglers' Club of New York, on March 12, on dry and wet-fly fishing for trout. Besides the members there were present a number of guests. Walter McGuckin and William C. Metcalfe defended the floating fly and the methods that are adapted to its use in America, while Dr. Held and E. B. Rice spoke of the sunk fly. Each speaker was accorded fifteen minutes' time for his remarks, then general discussion was limited to five minutes' time for each speaker, after which the first speakers replied to comments or criticisms. The evening was thoroughly enjoyed

by everybody, and many humorous incidents and witty remarks were brought out.

At the next meeting of the club members there will be a similar discussion on the respective merits of the black bass, its habits and habitat, and the tackle and lures with which it is fished for. William Arthur Babson will speak of the large-mouth and Robert H. Davis of the small-mouth bass. The members will dine at the usual time and place, the Hotel Navarre, and at 8 o'clock the talk on bass and fishing will begin. Visitors, either to the dinner or the meeting, or both, will be welcomed. Particulars may be had by writing to the club secretary, A. B. Hubbell, 144th street and Southern Boulevard, New York city.

Fishing Rights.

BLOOMINGTON, Ill., March 21.—*Editor Forest and Stream:* William Courey, of Bloomington, district fish warden, was asked to settle a dispute regarding the right of a farmer to build a fence through a stream, and whether or not a fisherman or hunter was privileged to destroy the fence. The controversy followed a recent statement by the warden that the State controlled all rivers and streams.

Warden Courey replied that landowners had the right to build a fence across any stream, not navigable, provided that it did not interfere with the passage of fish, and hunters and fishermen had no right to damage such a barrier. The State controls all streams in so far as the protection of the fish is concerned, and the owner of the land has no more right to catch fish illegally or fish with an illegal device than any other person. The warden also decided that no person had any right to fish in any lake, pond or other artificial depression upon the premises of any other person without the consent of said owner.

E. E. PIERSON.

Long Casts with Sea Rods.

IN an old issue of the Anglers' News is found a report of a casting competition held in Durban, Natal, in October last, in which some great casting was done with sea rods. J. G. Hattingh cast a four-ounce weight 320 feet 7 inches, a six-ounce weight 307½ feet, and an eight-ounce weight 303½ feet.

At the Flood.

(Cockles are fond of leaping at high tide.)

Let us start a game of leap-frog, said the Cackle to the Shrimp,
There's a billow just behind me and the Jellyfish is limp;
This is Leap Year, let me tell you, and the tide has come from France
Just to smooth the ballroom carpet. Will you, won't you, join the dance?

Let us wander to the greenhouse, said the Maiden trim and smart,
For the tide of love is frisking round the cockles of my heart;
This is Leap Year, bashful lover; like a Jellyfish you creep,
But my heart is full of cockles, and I'm bound to take a leap.

As you will, replied the lover like a zephyr from the south,
I am rather fond of cockles, and your heart is in your mouth;
In the spring a young man's fancy is awaking from its sleep,
But the spring is here in coming, so I think I'll join

Native Deer Cross With Sambur.

APALACHICOLA, Fla., March 23.—*Editor Forest and Stream:* I recently shot a buck deer on my St. Vincent Island game preserve that is unmistakably a cross between the Indian sambur and the Virginia whitetail deer. Four years ago the three sambur does were without a buck of their own species. While it was generally supposed that these large deer from India would not cross with the small Florida deer, yet I think it must now be admitted that under favorable conditions they will do so.

The specimen deer shot was apparently about two and a half years old, or not more than three years, judging from its horns. While without any very distinct prongs, its long spikes have several knobs or blunt nodules and are somewhat flat, rather wide and are quite different from either of his two progenitors. In color he was not so dark as an Indian sambur, but was darker than are the Virginia deer. The length of the tail was divided between those of the two species and had a distinct dark stripe down the center of its back.

The deer was much larger than the adult native deer of Florida and its venison proved to be of fine quality.

During the summer following the winter when the sambur does were without a buck of their own species, my gamekeeper often insisted that he had seen some of them being followed by fawns, and in one case he claimed that he had seen two fawns following one of these does. Now that I have killed a deer that is evidently a cross between the two species, I can no longer doubt that he did see fawns following these does, as he reported, and there are no doubt several of the cross species now on this island.

The sambur deer have here the full range of an island of over eleven thousand acres, abounding in lakes, ponds, creeks, marshes, ridges and jungles. They are well protected and are breeding very fast, as are also the native deer. As they are now showing a disposition to produce a new type of deer that promises to be much larger than the small deer common to the Southern States, I am sure this must be regarded as a very valuable discovery.

I therefore hope that others may procure some of the Indian sambur does and introduce them among their Southern deer and I am confident that thereby the deer will be greatly improved in size. Those which I introduced were obtained from William T. Hornaday, director of the New York Zoological Society, of whom I have no doubt others may be able to obtain them, as surplus stock is sold from time to time, they being prolific breeders.

R. V. PIERCE.

Woodcock in Trinity Churchyard.

NEW YORK CITY, March 20.—*Editor Forest and Stream:* I recall a number of occasions when woodcock have been seen in New York during the migration. Many years ago my brother in crossing Union Square flushed one, which flew straight east along Fifteenth street not very far above the pavement, and disappeared in the di-

rection of Stuyvesant Square. A few years ago there was recorded in *FOREST AND STREAM*—if I recollect aright—a case of a woodcock seen in spring in City Hall Park. No doubt there have been many other cases of this kind.

On Monday, March 18, someone looking out of the windows of a broker's office in 71 Broadway, saw a bird walking about under a little bush just south of the path passing close to Trinity Church. He said to someone standing near: "Why, that looks like a quail!" but presently, when the bird walked out into plainer view, it was recognized as a woodcock.

People pass frequently through Trinity church yard, and on one or two occasions, when men walked along the path near which this bird was, it retreated under the bush and hid until the coast was clear again. At last, however, someone frightened it and it flew toward Broadway and in front of Trinity Church and probably alighted on the north side of the church. Not very long after this it was again seen flying in front of the church, and realighted near the place where it had formerly been. The little bird did not get much rest, being startled again and again. What became of it no one knows. It disappeared, or was forgotten, by 1 or 2 o'clock in the afternoon.

It is well known that the little parks and open places in this city are frequently occupied for brief periods by migrating birds. Perhaps it was last spring that a scarlet tanager was seen in a tree either in St. Paul's church yard or Trinity church yard, and owls and hawks alighting on trees in parks, or on signs in the street, draw crowds to look at them, once or twice a year.

There are few people left alive who can remember when wild birds were often seen in what New Yorkers now call "down-town," yet it seems but a few years since the death of Charles H. Haswell, who in his most interesting volume, "Reminiscences of an Octogenarian," told how, when he was a young man, he used to shoot snipe on the Lispenard meadows and woodcock in the swamps of Tompkins Square, Broadway from Forty-sixth street to the North River, Fifth avenue at Thirty-second street, and the low land from Sixteenth to Twenty-third streets, and Sixth to Ninth avenues.

In his day canvasback ducks sold for fifty cents a brace. There was then no "high cost of living," though perhaps people grumbled then nearly as much as they do now.

G.

Robber Crows.

GRANGER, Tex., March 20.—*Editor Forest and Stream:* In *FOREST AND STREAM* of March 16 is an article in regards to crows. I have closely studied the habits of the crow since my boyhood and have come to the conclusion that the crow is the worst enemy that the quail and poultry have. On one or two occasions I have seen the crow stealing the eggs of the wild turkey despite the fact that the turkey hen was on her nest. The way it was done was very interesting. A pair of crows after circling over the nest would alight about twenty feet from the

nest, one on each side, then both would advance to the nest at the same time, and while one would boldly attack the turkey by taking hold of and pulling her feathers, the other would stealthily run up to the turkey, thrust its bill through the egg and carry it off. I have often seen them carry off the young of the common brown bittern. They are also very destructive to young ducks, and I have seen them attack and kill a two-thirds grown duck.

Several years ago while I was examining a crow's nest, the mother bird came in and I caught her with No. 8 shot. I noticed when I fired that she dropped something, and upon examining the place where she fell, I found a quail chick, which probably was not older than two or three days, and under the tree I found the wings and legs of two mourning dove squabs which evidently were taken from their nest.

In the spring the crow destroys vast numbers of young toads found in the vicinity of the ponds that are useful in destroying many harmful insects. The crow is not only a destroyer of game birds, but also of corn and other grain, and therefore should be exterminated. I have always tried to kill the crow at every chance and have destroyed their nests whenever I found them, and I think that every county in this State should place a bounty on crows to help the farmers and sportsmen to get rid of them.

A. C. MUSSLIL.

Starlings with Crows.

HARTFORD, Conn., March 22.—*Editor Forest and Stream:* I have watched with interest for further information concerning crows and starlings flocking together. So far but the one observer seems to have noted it. So I will give my little experience. Three years ago last February while driving with my brother past some fields about half a mile east of Matawan, N. J., we saw large numbers of crows feeding, and with them a large number of what we took to be red-winged blackbirds, although it was early in the season for them, but which proved to be starlings. As we drove past, those nearest the road flew up, many crossing directly in front of us, and alighting a short distance away, resumed their search for food. The crows flew in their usual scattered manner. The starlings in compact flocks of from twenty to perhaps one hundred birds, but on the ground they scattered among the crows and seemed on the most friendly terms with them. I never before saw so many crows feeding together in that vicinity or so many starlings together there. I think there must have been close to 300 crows and nearly as many starlings. Whether their being together at that time was merely accidental or not I do not know.

About a month ago I saw a flock of about 200 starlings just south of Hartford, and despite the severe winter, they were very noisy and lively. A small flock seems to make its headquarters in a church steeple here in the city.

I have had little opportunity to observe the starling in summer, but have heard no evidence of his having done any harm whatever, and it seems to me his faults, if he has any, should be clearly proved before we destroy this beautiful and interesting addition to our bird life. The starling is not as handsome as the red-winged blackbird, but he stays with us all winter.

E. N. REID.

Notes on the Habits of the Starling.

ALBANY, N. Y., March 23.—*Editor Forest and Stream:* Several letters relative to the habits of the starling have come to me since you published my inquiry several weeks ago. One of these is so interesting that I send it to you now. It was written by William F. Hendrickson, of Jamaica, a professional man, who is one of that great army of observers of bird life from whose unprejudiced studies much valuable information has come. He says:

"I first noticed these starlings in Long Island City eighteen or twenty years ago. They first appeared in the Astoria section, where they soon became numerous and spread to other outlying sections. In five or six years they became very numerous and gradually spread over Queens county, and thence easterly. I have seen them as far east as Greenport. They nest in church steeples, cupolas, barns, outbuildings, boxes, hollow trees, etc., and raise two—perhaps three—broods each season. In Long Island City there were formerly a number of truck farms, but today there are probably less than one hundred acres so cultivated. The starlings there frequented the streets, vacant lots, meadows and fields, and of course could do little or no damage in such places.

"In Jamaica, where I now reside, they are very numerous. For the past four or five years a pair has nested in a hollow catalpa tree in front of my house. When they begin to look about for the nesting site, they are very conspicuous. Usually the male bird first appears and inspects the hollow in the tree and the surroundings every day or so, then the female comes with him and both go through the process of inspection, going into and out of the hollow, and in the mean time there is a good deal of 'talk' on the subject, there being much chattering and whistling, and, while this is going on, the birds go all over the tree, inspect surroundings, etc. After they decide they get to work, and it seems to take a very short time to prepare the nest. After the female begins to deposit the eggs, the birds are not so noticeable. They take turns in the nest, the male entering the hole when the female leaves. After the young have been hatched, the male is at first kept constantly busy bringing food; later both do this, and when the young are grown a little, both birds are often absent at once. When either bird returns with food, it carefully inspects all surroundings, and if a person or animal is seen near the tree, the bird will not enter. When the coast is clear, the bird comes quickly to the nearest branch to the hole, looks quickly around and disappears inside like a flash. There is then a great chirruping, and the parent bird comes out, generally with some of the excrement of the young, which is carried in the bill and dropped some distance from the nest.

"I saw some time ago an article from the pen of the Connecticut State ornithologist, in which he said the starlings are dirty in their habits, and that they soon cause the ground under the nest to become filthy. Such is not the case with the birds I have closely observed. There is no excrement or other dirt to be seen under or near the tree, and after two or three broods had been reared in the catalpa tree in question, the only evidence of occupancy by birds were one or two whitish marks on the stub outside of the

entrance to the nest. Where adult birds roost there will of course be droppings, but the starlings do not roost on the tree in which they nest.

"As to feeding habits, we have during the summer possibly several hundred starlings in our vicinity, and during the past winter my family supplied food for a flock of fifteen or twenty, and many sparrows, which came daily for food during the severe cold weather. They would eat bread, seeds, etc., and would sometimes fight the sparrows for it. They would also be very busy picking around in the garden and on the lawn, picking up and swallowing constantly, and evidently feeding on weed seeds. They also fed in the surrounding open country, in weed fields, etc., and must have destroyed enormous numbers of weed seeds. They also frequent the salt marshes in large flocks and feed where the salt hay has been cut.

"In summer the adult birds fly over to the fields and bring back some kind of whitish colored worm or caterpillar about one inch long. Of these worms or caterpillars they bring a great many, going back and forth constantly. I have never seen them carrying anything else.

"In my garden I grow flowers and vegetables of all kinds, peas, beans, corn, spinach, lettuce, tomatoes, celery, etc. Sparrows are quite destructive to young peas and lettuce, and one year they destroyed all of my cauliflower plants (about seventy-five), but I have never known the starlings to do any damage of any kind in the garden.

"While the young are in the nest, the starlings are so quiet and unobtrusive that occasionally one brood is grown and gone before we notice that the old birds are raising another brood, the young being taken away somewhere just as soon as they can fly, and we see no more of them, unlike other birds, which stay around their nesting place for quite a while.

"The foregoing are my personal observations, and while I have heard it asserted that starlings do damage, I have seen no instances of it.

"Judging from my own observation, the birds must be of benefit to the gardener and farmer because of the immense numbers of seeds and insects they destroy."

J. D. W.

New Publications.

THE MAMMALS OF COLORADO, an account of the several species found within the boundaries of the State, together with a record of their habits and their distribution, by Edward Royal Warren, S.B., Director of Museum of Colorado College. Three maps and many illustrations from photographs taken from nature, \$3.50. New York, G. P. Putnam's Sons.

The present volume was begun some years ago by William Lutley Schlater, then director of the museum of Colorado College, but he having discontinued the work, turned it over to Mr. Warren, who has completed it.

Following the introduction, which acknowledges assistance from various well known men, is a brief definition of the life zones established by Dr. Merriam for the Western country, and a more or less brief bibliography. Perhaps it is fair to say that this contains many of the most important books on Western mammals, but on the other hand it contains several more or less unimportant pamphlets.

Each species is taken up, its Latin name given,

with the place where the name was first published; next comes the type, locality, the measurements, description and the distribution. Following this, in larger type and manifestly for the benefit of the casual reader, are remarks, often exceedingly brief, on the habits of the species. In many cases the etymology of the scientific name is given. The orders and the genera are defined.

All naturalists who have any interest in the West and most bird collectors will wish to possess this volume, which is both convenient and useful, though in some respects quite disappointing. The notes on the habits of many of the species are extraordinarily brief, but on the other hand most of the illustrations are of great beauty, and there are many of them. The picture of the little chief hare on page 55 is quite the best representation of this little animal that we recall, and is followed on the next page by a picture of one of the haystacks that these little beasts pile up. One regrets that the accounts of the habits are sometimes so unsatisfactory, but is grateful for the beautiful illustrations.

Starling Habits.

PORTLAND, Conn., March 1.—*Editor Forest and Stream:* Referring to the letter of Ellis L. Dudley in your issue of the 24th, regarding the intermingling of crows and starlings, I want to speak of the habits of these birds as observed in this vicinity.

Last autumn a man here dug a long trench in a lot some distance back of his house into which to throw the refuse from his kitchen, covering up the material from time to time when the earth was soft enough to do so. On account of the recent severe weather it has been impossible to do this, and many crows now congregate each morning about the ditch. These crows are joined by a good sized flock of European starlings, and both species of birds feed upon the offal in perfect harmony. The crows and starlings do not arrive at the spot together, but the starlings always follow the crows.

Starlings are increasing rapidly in this section of the State, breeding in all suitable localities. During the colder months flocks of from fifty to one hundred individuals are frequently seen. They are partial to the vicinity of meadows, while many are contented to live about our village, feeding at times upon food thrown out for hens.

JNO. H. SAGE.

Great Blue Heron on Long Island.

NEW YORK CITY, March 23.—*Editor Forest and Stream:* On March 10 a great blue heron was absolutely identified on the Flushing meadows by a friend of mine, who informed me that the said bird had been seen at intervals during the last three months and was frequently noticed feeding on killies in one of the salt ponds.

In Eaton's "Birds of New York," issued by the New York State Museum, on page 254, it is stated: "This is the hardiest of all our herons and is occasionally seen in midwinter both on the coast and in the interior about the open waters of springs and streams."

It seems remarkable that one of these birds should have remained with us during a winter of such unusual severity, but he probably was misled by the mildness of the month of December, 1911.

CORRESPONDENCE.

The **FOREST AND STREAM** is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Terms: \$3.00 a year; \$1.50 for six months. Single copies, 10 cents. Canadian subscriptions, \$4.00 a year; \$2.00 for six months. Foreign subscriptions, \$4.50 a year; \$2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line (\$2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra. Special rates for back cover in two or more colors. Reading notices, 75 cents per count line.

A discount of 5 per cent. is allowed on an advertisement inserted 13 times in a year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Advertisements should be received by Saturday previous to the issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL
 will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

AN INTERESTING ANNOUNCEMENT.

THE announcement made in another column by R. V. Pierce in relation to deer is an important one. Dr. Pierce long ago established a game preserve in Florida that is in many respects ideal. He purchased St. Vincent Island, which lies in the Gulf near Apalachicola, and not only stopped the shooting there of all sorts of land and water birds, but protected deer and other game, planted suitable grains, and in every way, known to modern practice encouraged the increase of wild life. The results have been gratifying to the owner and have been watched with keen interest by naturalists and game breeders. Now and then our readers have been told of the progress of the doctor's work, and he has freely given the results of his investigations to the public.

Dr. Pierce now comes forward with the announcement that to the best of his belief there are on St. Vincent Island a number of deer, the descendants of native Virginia deer and the sambur deer of India. They are very fine specimens, the meat is excellent, they are larger and handsomer than the native deer, and indications point to rapid breeding among them.

No doubt Dr. Pierce will watch these animals closely in future, and report the result of his investigations. Meanwhile it might be well for breeders to try crossing sambur and Virginia deer, in order to ascertain whether this may be done in other sections of the country, as in the South, and whether the offspring, if any, seem to be valuable.

ORGANIZATION.

AN interesting example of the value of organization was given at the hearing held not long ago in Washington on the question of Federal protection of migratory birds.

John B. Burnham, president of the American Game Protective and Propagation Association, had evidently been in communication with sportsmen's clubs all over the country, and these clubs were enough interested in the question to send representatives to Washington to speak at the hearing. These representatives Mr. Burnham marshaled to speak on various aspects of the subject; they spoke and spoke effectively. The result was a remarkably effective presentation of the case from the sportsman's point of view—a presentation which seemed to greatly impress the legislators before whom it was made.

FOREST AND STREAM has often called attention to the futility of individual effort in the attempt to secure needed legislation on any subject. The successive efforts of a multitude of individuals or small associations carry practically no weight. The united demands of the same number of people and clubs, if exercised together, may carry tremendous weight. It is the difference between the accomplishments of a skirmish line and of a brigade. The first with a great noise deals in multitude of tiny blows, each one of which is practically ineffective. The other breaks down all opposition.

The sportsmen of the United States are gradually coming to realize this difference. When they have wholly done so, and are prepared to act together, they will find legislative bodies entirely ready to respond to their reasonable demands.

GENERAL JOHN W. NOBLE.

A LONG life, full of splendid service to his country, and of deserved honors, ended with the death of General John W. Noble on Friday, March 22.

General Noble's eighty years were brilliantly active. A Yale graduate of 1851, he began the practice of the law a few years later. In 1860 he enlisted in the Union Army, served through the war, and at its close was colonel of cavalry and brevet brigadier general. He was United States District attorney in 1867-70, and later was offered the portfolio of Solicitor General by General Grant, but declined it. He was appointed Secretary of the Interior by President Harrison in 1889 and served through his administration. His work as a cabinet minister was marked by the loftiest patriotism.

Among his many public services, the most important was his establishment of the present system of National forests, which was made possible by the Act of March 3, 1891. General Noble induced President Harrison to sign the bill and himself laid out the first of the National forest reserves—the Yellowstone Park timber reserve, to the east and south of the Yellowstone Park. Later he set aside the great Sierra reserve in California, the Grand Cañon of the Colorado, and a multitude of other reservations, to which later administrations have added, until now the National forests of the United States amount to 200,000,000 acres.

Long before this a number of men had been working hard in behalf of forestry. Robert Underwood Johnson, William Hallet Phillips,

John Muir, Theo. Roosevelt, Arnold Hague, F. H. Newell, E. A. Bowers, B. E. Fernow and others had done each his part to bring about some system which should conserve our rapidly decreasing forest area. But to General Noble fell the great happiness and the great honor of putting in operation an effective system of forest preservation.

Nineteen years ago **FOREST AND STREAM**, in an editorial entitled "Secretary Noble's Monument," spoke at length of his services to forestry, and after referring to the efforts of other men in this direction, said: "All this, however, would have availed little had it not been for the wisdom and far-sightedness of Secretary Noble. His broad mind was able to appreciate the needs of this country, and he had the courage to lead public opinion where others would have been content to wait for the popular cry and then obey it. He has set on foot a work that will live long after he has passed away, and if in his administration he had accomplished nothing besides this work of forest preservation, he would have deserved well of his country."

LEONARD FINLETTER.

THE death of Leonard W. Finletter, which occurred on March 19, brought sorrow to a very large number of sportsmen who knew him well. He was found dead in the library of his home in Merion, a suburb of Philadelphia. On the table beside the chair in which his body was found were fishing rods and reels and tackle, and on the floor was a pistol. Evidently he had passed the previous evening in overhauling his kit in preparation for a fishing trip, and had in some way knocked the pistol off the table, and it was discharged.

Mr. Finletter's age was forty-six years. He was at one time a well known attorney in Philadelphia, but had retired. He was a son of ex-Judge Thomas K. Finletter.

Years ago Leonard Finletter was one of the most skilled trap shots in the country, and was a prominent figure at nearly all of the shoots held by the Riverton and Philadelphia gun clubs. In recent years, however, he turned to quieter forms of recreation, and was very fond of trout fishing. His collection of fishing tackle was a very fine one. Only a month ago he wrote for **FOREST AND STREAM** a paper on "Trout Fishing on the Wutach," in Germany, one of many that he had written for this journal. Prior to his angling excursion to Germany last year he told us that it was his desire to make the acquaintance of German anglers and clubs, as well as to fish, and in this way add to the pleasure of his sojourn there.

Early in the winter Mr. Finletter began to make plans for the improvement of trout waters in which he was interested, and in order to go about the work intelligently, he collected all the information obtainable from books and papers and interviews with fishculturists and was prepared to prosecute work this spring looking toward the food supply as well as the water and the protection of the trout.

NATHAN M. BARRETT, of New Rochelle, N. Y., and Abram DeBonde, of Englewood, N. J., have been appointed by Governor Dix as commissioners of the Palisades Interstate Park.

YACHTING

Ticks from the Ship's Clock.

One hundred motor boat owners organized the Joliet, Ill., Motor Boat Owners' Protective Association. Officers were elected: Commodore, John F. Kelly; Vice-Commodore, Clarence Schmitz; Fleet Captain, E. J. Robinson; Secretary-Treasurer, R. E. Fuller; Directors—Wm. La Fontaine, Harry Hauser and H. R. Goodspeed. The principal object of the organization was to secure if possible, protection from thieves. It is also desired to stimulate interest in motor boating, arrange for regattas and promote the welfare of members.

We herewith, without any financial remuneration, offer Chicago Y. C. as a name for the new cup defender this: Chicidee. And if explanation be necessary, we might say it came from Chicago-Idea. If it should be accepted, we would feel somewhat puffed up and might therefore take unto ourselves the last three letters of Chicago, changing "a" to "e" and suffer henceforth from that disease. Anyhow, in our mind Chicidee is a bird.

New Starting Regulations.

THE starting regulations adopted at the last meeting of the Racing Association of South Jersey Yacht Clubs should be of interest to all yachtsmen. These regulations were formulated by a committee of the Racing Association of South Jersey Yacht Clubs, consisting of A. K. White, chairman of the Regatta Committee of the Seaside Y. C., Chairman; W. D. Snow, former commodore of the Ocean City Motor Boat Club, and Joseph L. Bailey, of the Holly Beach and Wildwood yacht clubs, the new secretary of the association.

The regulations lead off with the requirements that all salutes of visiting or other officers shall cease thirty minutes before the start of the first race and shall not be resumed until the last race has been started.

SURVEYED COURSES.

Each course shall be accurately measured by a competent surveyor, who shall plot same, giving two copies to the home club, who shall forward one copy to the secretary of this association. That the course should be marked by a red ball on a staff (contained in the box of paraphernalia) from a small anchored boat, or on a float anchored in position at each turn. In any event it should be four or five feet elevated from the water, and easily visible where the waters are large and open.

All clubs should insist that complete entries be in and official rating received five hours before the start of the first race, and that all races start with handicaps deducted so that first boat in wins.

The timers should elect the best watch as chief and the other watches be used to check this one. Captains should compare their watches with this chief watch.

SIGNALS FOR CLASSES.

Each class should be designed by a proper signal to be displayed while the class is being run off and replaced by the signal for the next class, and so on, and this signal to be used should be advertised (by the use of the rubber stamps provided) on the instruction cards given the captains participating in the races.

The preparation signal, the signal for start and recall for any class should be the same in all classes.

Boats shall be divided into three divisions, each division representing the general character of boat, as—cruisers, launches, racers—each division divided into two or more classes.

DIVISION NO. 1.

For Cruisers.—Divided into one or two

classes, according to the requirements of the entries, to be known as Class A and Class B.

The signal to be displayed designating that Class A is to be run off would be a white pennant, approximately three feet long with the letter C in color sewed thereto.

Class B would be a pennant half white and half blue, divided vertically, with the letter C on the white part of the field.

DIVISION NO. 3.

For semi-speed boats and family launches:

Class C—A blue pennant three feet long with the letters SS in white sewed thereto.

Class D—Family Launches—A pennant divided horizontally white and blue with the letter

VENONA, HOLDER OF LEG ON NORMAN CUP.

F in color on the white ground, and L in white on the blue ground.

DIVISION NO. 2.

For racing boats:

Class E to be a rectangular white flag with the letter R in color sewed thereto.

Class F—Rectangular flag divided horizontally blue and white with the letter R in white on the blue ground and the figure 2 in color on the white ground.

Class G—Similar rectangular flag divided vertically blue and white, with the letter R and the figure 3.

STARTING SIGNALS.

At five minutes before the start of any race or class, the pennant for that class shall be run up and stay up until all the boats of that class are off. Three minutes before the start of the class a red rectangular flag, measuring approximately three feet square, and attached to an 8-foot staff, held by one of the starters on the judges' boat, should be elevated at an angle of about 45 degrees from the starting line, and a gun or whistle to call the attention of the boats.

This flag should be so held until starting time, when it shall be dropped as near vertical down as permissible and a gun or whistle to call attention. Time shall be taken from the drop of the flag and not from the gun or whistle.

Recall is by waving this flag up and down over the starting line.

When starting boats where their time allowance is computed and they cross the starting line with handicaps deducted, in general the same method will be pursued, that is, five minutes before the time the flag of class being run up, to remain up until all of the boats of the class are off, the first boat will have the red flag raised by the starter, three minutes before their starting time, and the attention gun or whistle. Also the racing number of the boat will be held beside the red flag, so that the boats maneuvering may see it plainly.

At the starting time the red flag drops and the attention gun or whistle is fired. If more than three minutes elapse before the second boat, the red flag will be raised three minutes before starting time, but without the gun or whistle.

The second boat's racing number will be held beside the red flag as before and at the starting time the red flag will drop, and so on for each succeeding boat. There will be no gun after the first boat is off.

In case of a recall for this character of starting, the number of the boat to be recalled shall be held continually turned toward the boat, indicating that she is to come in and make a fresh start.

Eastern Y. C. Schedule.

ACCORDING to the program just issued by the Eastern Y. C., the ocean race for the Clark cup, one leg of which has been won by Morton F. Plant's Elena, will start at Newport instead of New London, finishing at Marblehead. The following Tuesday the annual regatta will be held off Marblehead. The principal interest is in the Puritan trophy at this meet. On July 12 the race for Norman cup will start, finishing at Marblehead. Irolita and Venona each has won a leg on this trophy, so that it promises to be decidedly interesting. The race will end about July 14, giving contestants ample time to get in line for Larchmont and New York Y. C. events.

On Decoration Day the cruise to Bar Harbor commences, during which sufficient time will be allowed for participation in regattas en route.

Associated Y. C. of America.

At the suggestion of William Hale Thompson, commodore of the new organization, power boats were admitted to the Associated Yacht Clubs of America. The title was changed to Associated Yacht and Motor Boat Clubs of America.

Two more officers were elected—Treasurer Nelson N. Lamper, and Secretary E. P. Farley. About \$10,000, including the \$5,000 Wrigley cup, have been contributed toward the big carnival to be held this summer.

Reports from builder Wood at City Island, N. Y., show the new syndicate defender to be progressing rapidly, and the committee, at a meeting at St. Hubert's Grill, decided to enter the new racer in the Manhasset Bay cup races on June 15, after which she will be shipped to Lake Michigan. A name for the new boat will be selected shortly.

Yachts Change Hands.

THE Hollis Burgess Yacht Agency reports the following sales:

Thirty-six foot motor boat Ahmed, owned by A. H. Munsell, of Chestnut Hill, Mass., to J. F. Appleton, of Salem, Mass.

Auxiliary yawl Aspinet, owned by Ernest G. Adams, of Worcester, Mass., to Stephen R. Bartlett, of Boston.

Motor boat Mahdeen III., owned by A. D. Bull, of Quincy, Mass., to a prominent New York yachtsman.

Fifty-foot auxiliary fishing schooner Malicia Enos, owned by Roland C. Nickerson, of Brewster, Mass., to Albert Story, of Gloucester, Mass., and William Hawkey, of Rockport, Mass.

Larchmont Racing Dates.

THE season of the Larchmont Y. C. will open June 15 with the spring regatta for all classes. It will be the first big regatta of the year on Long Island Sound waters. On July 4 the club regatta will be sailed. Race week will be from July 20 to 27. The fall regatta will be held on Labor Day. Races also will be held June 22 and Aug. 31 for its interclub class of boats.

At a special meeting Section 3 of Chapter 13 of the by-laws was changed as follows:

Chapter XIII., Sec. 3.—Change the word "second" at the end of the first line to "third," and the word "third" at the end of the second line to "fourth," so that the section now reads: "A race week commencing on the third Saturday after the Fourth of July and ending on the fourth Saturday after the Fourth of July in each year."

The amendment was made necessary in order that there would be no conflicting dates among the Eastern, the Larchmont and the New York yacht clubs. The change permits the larger boats to sail in the annual race week of the Larchmont Y. C. this year.

Ex-Commodore Wilson Marshall has offered a handsome prize for one of the more important divisions. As Commodore Richards and the other flag officers have offered trophies for the various schooner classes, the Marshall cup will go to the winner of the 65-foot division of sloops.

Istalena was the only 65-footers in commission last year. In addition to the sloop of Vice-Commodore Pynchon, it is known that former Commodore Cornelius Vanderbilt intends to race Aurora and that Winsome will be sailed by her new owner, E. Trowbridge Hall.

New One-Design Class.

FROM plans by John G. Alden, of Boston, Stearns & McKay Co., of Marblehead, are building a number of one-design boats for members of Marblehead Corinthian Y. C. The boats are 24 feet over all, 15 feet waterline, 6 feet beam, 4 feet draft. They will carry 1,000 pounds outside and 200 pounds inside lead. They were built well and strongly, which fact, Mr. Alden says, will probably retard speed

somewhat. All fastenings are copper, cedar-planked, oak frames, and scantings same as those in average 18-foot knockabout. Sails will be made by Cousens & Pratt, Boston, of 5-ounce duck. The price complete will be \$500, and they are a bargain at one-third more than that figure.

Death of Commodore Townen.

WILLIAM CHARLES TOWEN, vice-commodore of the National Y. C., died on March 19 at the Hotel Knickerbocker, New York, after a long illness.

Mr. Townen, who was born in Detroit, Mich., fifty-four years ago, came to New York when he was a boy. He served in the United States navy from 1875 to 1879, on the Vermont and later on the Tennessee. He spent a year traveling around the world for the United States Naval Service in 1894.

Mr. Townen was vice-president and a director of the Frazer Hollow Boat Company and a director of the United States Title Guarantee and Indemnity Company, a member of the United States Army and Navy Veterans, the Knights of Columbus, the Tammany Society and the Michigan Society. His clubs were the Democratic, Atlantic Yacht, Brooklyn Yacht, Columbia Yacht, Bayside Yacht, Shelter Island Yacht, Country and Catholic.

He leaves a widow, and one daughter, Mrs. Vincent S. Lippe, of this city.

NEW ONE-DESIGN CLASS FOR MARBLEHEAD CORINTHIAN YACHT CLUB.

Motor Boating

Another Challenge for International.

THE Sussex Motor Y. C., of Brighton, England, of which the Duke of Westminster is commodore, has issued a challenge for the British International trophy, and it has been accepted by the Motor Boat Club of America. As the Royal Motor Y. C. has full charge of all challenges in England, elimination trials will be held abroad before selection for membership in team of three that will come from Great Britain to try for the trophy. From present indications there will be two entries from France and possibly three, while every day brings rumors of another possible defender, the latest rumble coming from the Great Lakes in the neighborhood of Michigan avenue.

Almost every city on the Atlantic Coast has

DIXIE JUNIOR DOING BETTER THAN THIRTY-FIVE MILES AN HOUR.

put in a bid for the event, the strongest being from New London, Conn. Capt. T. A. Scott, Harbor Master of that port, outlined to the board of governors of the Motor Boat Club of America many excellent reasons for the races being held there, which were rejected because of the distance from New York city, undoubtedly the center of interest. The committee decided last Friday that the "races would be held in waters adjacent to New York," which probably will be Huntington Harbor, provided arrangements can be made to remove oyster stakes and other obstructions.

Throwing the Life Ring.

In a lecture before the Motor Boat School, West Side Y. M. C. A., Principal Leslie Huxtable said:

"Every motor boat owner should practice throwing the life ring. First, get a good life ring—the best on the market—and then not less than a hundred feet of good rope to attach to the ring.

"The life ring is an awkward thing to handle, and it requires practice to drop it in the right place. For the sake of his guests the motor boat owner should know how to throw a ring accurately, for no one knows when a friend may fall into the water and be carried away from the boat by the tide. On such occasions every second counts. So have your ring handy; have the rope properly arranged so that it won't foul, and then know how to throw it.

"A few hours' practice will make most men

proficient, and then keep in practice by throwing the ring every few days."

- May 25.—New Haven, Conn.—Western Connecticut T. S. League tournament, under the auspices of the New Haven G. C. Wm. F. Alcorn, Sec'y.

DRIVERS AND TWISTERS.

The Mississippi State tournament will be held at Laurel, April 22-25. Squier money-back system; \$1000 added money—\$800 added by the club, \$200 by the Interstate Association.

W. H. Tanner, Secretary Sikeston Gun Club, writes: "Account of conflicting dates with Benton, Ill., Mr. Elmer E. Shaner, Secretary Interstate Association, has changed Sikeston, Mo., dates from May 29-30 to May 30-31."

A. Betti, Secretary of Mount Kisco Gun Club is trying to promote the excellent scheme of an organization to be known as Westchester County Trapshooting League. There are many thriving gun clubs among Westchester county shooters, so that such an organization should be welcomed by them. Clubs in the county are invited to communicate with Mr. Betti.

Mr. Fred G. Bills has challenged Mr. Fred Gilbert for the Hazard double target challenge trophy, which was won by Mr. Gilbert on July 10, 1911, at Wilmington, Del., during the week of the sixth Eastern handicap. Mr. Bills has sent me his check as a forfeit, and I am attaching hereto his letter to me on this subject:

J. T. SKELLY.

Chicago, Ill., March 18, 1912.—J. T. Skelly, Manager Sporting Powder Division, Du Pont Company, Wilmington, Del.: Dear Sir—I hereby challenge Mr. Fred Gilbert to shoot for the Hazard double-target championship trophy. The match to be held at some convenient day during the Eastern Handicap at Bradford, Pa., on July

TRAP SHOOTING

If you want your shoot to be announced here send a notice like the following:

Fixtures.

May 1.—Syracuse, N. Y.—Onondaga G. C. G. M. Phillips, Sec'y-Treas., 213 Helen St., Syracuse, N. Y.

REGISTERED TOURNAMENTS.

April 2-3.—Birmingham (Ala.) G. C. O. L. Gary, Sec'y.
April 8.—Mt. Airy (Md.) G. C. Ray Watkins, Mgr.
April 9-10.—Moberly (Mo.) G. C. L. R. Hulen, Sec'y.

April 9-11.—Perry, Okla.—Oklahoma State tournament, under the auspices of the Perry G. C. Bush H. Bowman, Sec'y.

April 10.—Gaithersburg (Md.) G. C. R. M. Purdum, Sec'y.

April 11.—Atglen (Pa.) G. C. L. R. Lewis, Mgr.

April 13.—Rittersville, Pa.—Lehigh R and G. C. H. F. Koch, Sec'y.

April 15-17.—New Orleans, La.—City Park G. C. E. F. Leckert, Sec'y.

April 17-19.—Wichita, Kans.—Kansas State tournament, under the auspices of the Interurban G. C. C. W. Jones, Sec'y, 209 N. Main St., Wichita, Kans.

April 18.—Columbus (O.) G. C. L. Fisher, Sec'y.

9, 10, and 11. I think the conditions are that I am to forward check or draft for fifty (\$50) as a forfeit. Inclosed find personal check. You will have ample time to learn if the check is any good before the match takes place. Please notify the said Mr. Gilbert to be sure and bring along his very best shooting clothes, as I do not intend to give him over one-half dozen dead targets handicap.
F. G. BILLS.

F. R. Wickes, Secretary Orange Gun Club, reports great enthusiasm among members of that club. April shoots are 6th and 20th. Team shoot with Newton Gun Club, at Newton, N. J., April 20. Frank Hall cup shoot will take place on May 18, beginning at 2 o'clock. Traps open for practice at 12 o'clock. Club officers are: Geo. W. Wakeley, President; Roland Hopper, Vice-President; Abram Mosler, Treasurer; F. R. Wickes, Secretary.

Secretary Royal Robinson, of Indianapolis G. C., writes: "Please announce our spring shoot. Five 15-bird events, five 20-bird events, one 25-bird event. Total entrance \$19, and \$1 added for Squier money-back system. Optional sweepstakes, \$14.50. Latter is separate from regular program, and it is optional with contestant whether or not he makes entry for them. The money-back system does not apply to the optional sweepstakes. April 22 and 23. Not registered."

The biggest spring shoot of the year has been scheduled for Friday, April 19, at Freehold, N. J., when eight gun clubs of the New Jersey State Association will meet there to participate in the second contest for the silver loving cup presented by Frank Hall, of Ridgefield, as a 100-bird trophy. Under the rules by which the cup is presented, a shoot is to be held during the year on the grounds of each club, and the individual having the five highest scores captures the trophy. The Freehold Gun Club is the oldest clay-bird shooting club in New Jersey.

At a meeting of the executive committee of the Illinois Trapshooters' League, held recently, in Bloomington, dates for the summer shooting tournaments were decided upon as follows: Jacksonville, June 5-6; Peoria, July 16-17; Springfield, Aug. 7-8; Bloomington, Sept. 18-19. Decatur has been invited to join, the defunct gun club there having been reorganized, and the invitation will likely be accepted. Last year but one day was devoted to the periodical shoots. It was decided to shoot for two days, the change giving general satisfaction. Each match will be registered with the Interstate Association.

To-morrow night, at a meeting of the Illinois Interstate Gun Club Association, in Chicago, the subject of forming all of the gun clubs and various organizations of marksmen in the State into one grand organization, will be discussed. It is proposed to divide the State into districts and hold periodical shoots among the district associations, and annually to hold State competitions. At the present time there is in existence one State association, known as the Illinois Sportsman's, and the new project may not meet with much encouragement.

Last call for seventh annual amateur championship of America is herewith issued. It will take place under auspices of New York Athletic Club at Travers Island, Pelham Manor, N. Y., on April 4, with preliminary shoot all day of 3d. Pelham Manor is reached by New York, New Haven & Hartford R. R., or by trolley from 129th street and Third avenue, or from Grand Central Depot to Pelham, thence by trolley two miles across to gate of club. It is easily reached, and trains are frequent. Those coming from the east may change cars at New Rochelle or go through to Pelham. All expresses stop at New Rochelle, but not at Pelham. First ten men will receive prizes; winner gets a diamond-set medal. The championship calls for 200 targets in strings of 25, entrance \$8, including targets. For further particulars address A. E. Ranney, Secretary, Hudson Automobile Co., 1700 Broadway, New York City.

Birmingham handicap tournament will be held by Birmingham, Ala., Gun Club, April 2 and 3. Program: First day—Events 1 to 5, at 10 targets. Event 6, 10 pairs doubles. Last two events will be for double championship of the South; ten events at 10 targets, two events, handicap, 25 targets; handicaps 16 to 22yds. Last

two events constitute Great Birmingham Handicap. Second day—Ten events at 20 targets, two events, at 25 targets, handicap. Instead of dividing the money in several events Rosc system of 7, 5, 3, 1, or 40, 30, 20 and 10 per cent., thus giving a few shooters with the high scores the great bulk of the purse, we have adopted the plan of dividing into four equal moneys and into five equal moneys, so that any shooter who can break 16 and 17 targets will participate in the division of just as much money as does the shooter who breaks a straight. The handicap events are especially arranged to give the weak shooter the advantage, and in fact every care has been used to make this shoot one which will appeal particularly to the young trapshooter who has heretofore been diffident about entering into competition with the veterans of the game. Club officers are: Jas. H. Hillman, President; O. L. Garl, Secretary; Al. Geohagan, Cashier; Robert R. Skinner, Reporter.

W. G. BEECROFT.

Paleface Gun Club.

WELLINGTON, Mass., March 23.—Many of the Paleface Gun Club members are preparing in the weekly shooting matches here for the championship events in New York April 3 and 4. To-day a team match, a 100-target and a 50-target event constituted the day's program. The scores:
One hundred target match: Kirkwood 87, Osborne 83, Frank 81, Burnes 79, Clarke 77, Sweet 71, Muldown 62, Dominick 37.

Laurel Gun Club.

LAUREL, Miss., March 15.—Our weekly shoot occurred to-day, the following scores being made:

REMINGTON UMC

AUTOLOADING SHOTGUN

Five shots—Three to get the Cripples. Each separate shot under absolute control of the trigger finger. The action is simple, powerful and sure. Part of the recoil, ordinarily absorbed by the shooter's shoulder, is used to operate the mechanism. Not one single ounce of muzzle energy is lost. Handles the heaviest loads with least punishment. Handles all loads with equal ease and safety, and—a solid wall of steel stands between the shooter's face and the firing chamber always. As a repeater it is better balanced—quicker pointing—faster. As a single-loader it is simpler to operate. The simple completeness of the take-down permits ready cleaning of the barrel from the breech. The take-down screw is large and easily handled. Taken down the *Remington-UMC* Autoloading Shotgun measures 32 inches over all. Costs a little more because it is worth a little more.

Remington-UMC—the perfect shooting combination

REMINGTON ARMS — UNION METALLIC CARTRIDGE CO.

Boston A. A.

Boston, March 23.—George B. Clark and T. C. Adams tied in the shoot for the take-home trophy. Clark won on shoot-off at 25 targets with 24½. The conditions were excellent. R. A. Faye was high gun in the shoot for the Barbey trophy, 50 targets. During the afternoon R. A. Faye broke 130 targets straight without a miss. This is the record for our traps at Riverside.

Jersey City Gun Club.

JERSEY CITY, N. J., March 20.—Thirty-two shooters took part in the all-day shoot of the Jersey City Gun Club on March 20, and while the day was good and bright, there was a strong wind from the west that caught the clays pretty soon after leaving the trap and caused a good many of the crack shots to miss a lot of them.

By far the best work of the day was done by Carl von Lengerke, of New York, who led both the professionals and amateurs, and shot consistently all day, finishing with a percentage of 84 for the 200 targets, which was going some, all things considered.

R. Morgan, of the Bergen Beach Gun Club was the high amateur for the day with 82 per cent., but was closely followed by J. E. Englert, of Topton, Pa., and W. J. Simpson, of Roselle Park, N. J., who finished with one less target, and B. M. Shanley, Jr., with two less for the day.

The office was in charge of Hank Stevens, and he was ably assisted by Jack Fanning, Neaf Apgar, Carl von Lengerke and T. Davis. The scores follow:

SECRETARY.

Birmingham Gun Club.

BIRMINGHAM, Ala., March 22.—R. R. Skinner was high gun in the 100-hird match with 93, followed by J. K. Warren, Ed Holt and Geo. Lyons with 92.

The weather was rather disagreeable for good shooting. John Fletcher made the long run of the day and finished in third place with 90. James Hillman, last week's champion, shot away below his average, as he has not shot below 90 this season before. R. R. Skinner, John Warren, Geo. Lyon and Garl each made a perfect score of 20.

Everything is in readiness for the grand Birmingham handicap tournament, April 2 and 3.

The many friends of Geo. Lyon were glad to have him with us, and he promises to come back oftener hereafter. It is with regret that we learn he cannot be with us during our tournament.

Geo. Hillman was in town also after the shoot, and will spend several days here. The local Dupont bunch is too busy to get out to shoot at present; but will look after the smokeless end as soon as the dynamite end is a little more settled. Hank Hamilton, of that bunch, is shooting well again, and his many friends

will be glad to see him on the firing line again. Geo. Lyon did the best shooting at doubles; he is some performer with his pump, when it comes to doubles.

F. H. EACHUS, Sec'y.

Cleveland Gun Club.

THE weekly club shoot of the Cleveland Gun Club, held March 23, at Shooting Park, was fairly well attended, seventeen shooters taking part in the various events. The afternoon was somewhat gloomy, very poor light, which always helps to make poor scores for some. The high man of the bunch was Capt. Geo. Freeman, with a brand new green suit and his hair parted in the middle. When the first two scores were counted up, the monthly and the annual, 100 targets, the Captain had broken 88, which made him high gun for the day.

George says there is nothing like having nerve, and he knows the day is coming when he will break 100 straight. Blakeslee and Hogan were out again, and a shooting match it was, but Jack came out on top. Hogan says there is another day coming, and when it comes it will be Hogan day. The scores:

Shot at. Broke		Shot at. Broke	
Blakeslee..... 150	130	Harris.....	100 77
Doolittle..... 150	130	Rockwell.... 100	75
Freeman..... 150	127	Thorp.....	100 70

Rogers..... 150	127	Cross.....	100 62
Stevens..... 150	113	Wall.....	50 37
Genner..... 150	110	Riley.....	50 33
Stepp..... 150	109	King.....	50 32
Brainard..... 150	104		

F. H. WALLACE, Mgr.

Genesee Gun Club.

UTICA, N. Y., March 23.—The Genesee Gun Club had good sport this afternoon at the Riverside traps. Several recruits were added to the membership list, everybody shot well, and visitors were present from Norwich, Herkimer and Iliion. The scores averaged well, and indicate that Utica, and this section generally, will occupy a prominent place on the clay pigeon shooting map during the season of 1912. The scores made in the regular program follow:

Events:	1	2	3	4	5	6	7	8
Targets:	10	15	10	15	10	15	10	15
Corfield.....	8	13	7	13	9	12	8	14
Gammage.....	8	13	8	12	8	13	9	14
Biddlecome... 5	9	8	10	10	12	8	11	
Bonney..... 8	10	9	12	9	11	7	13

Ye Oak Meadow Gun Club.

IN the weekly shoot at the Ye Oak Meadow Gun Club range, March 23, Dr. Parker scored the highest with 61 out of 75. Other scores were: Zinn 54, Douglas 51, Newman 51, Donahue 49, Krupp 34.

Competition in the Gillespie cup shoot has narrowed down to three contestants. Krupp leads with 206; Douglas is second with 184, and Zinn third with 183. Two shoots remain to finish up this event. In the Dupont trophy shoot, Zinn leads with 136 out of 150. The standing of the members in this event is as follows: Parker 133, Newman 131, Douglas 126, Krupp 119, Donahue 90. This event is over half run, but as yet no marksman has attained such an advantage as to warrant picking a winner. A total of 250 targets will be shot at in this event, 200 to count in the scoring.

New York Athletic Club.

PELHAM MANOR, March 23.—The event to-day was the team shoot with Yale gun team. The home club won by 76 targets. Yale's poor showing was due to the augmenting of their regular shooting strength of five men by three substitutes in order to meet the eight-man team of N. Y. A. C. The three added members shot very badly, particularly Talbot, who broke only 37 out of his 100 clays. Five to five, the score would have been 409 to 419, allowing N. Y. A. C. their five high guns. R. L. Spotts was high gun for N. Y. A. C. with 92, while B. Scott made 86 for Yale G. C.

W. J. Simpson won a leg on March cup. C. W. Billings took a pedestal from under St. Patrick's Day trophy. R. L. Spotts has another claim on President's cup. G. J. Corbett made good on one more support for Pelham trophy, while F. A. Hodgman from 20yds., won distance handicap. The scores:

New York A. C.	Yale Gun Club.
R. L. Spotts..... 92	B. Scott 86
C. W. Billings..... 85	G. Dimock 84
G. J. Corbett..... 82	L. Thompson 81
W. B. Ogden..... 80	H. Emmett 80
G. F. Pelham..... 80	S. Biddle 78
A. L. Ranney..... 77	W. Keeler 68
F. A. Hodgman..... 71	J. Banks 47
F. H. Schaffler.... 70—637	W. Talbot 37—561

March cup, 25 targets, handicap: W. J. Simpson (3) 24, R. L. Spotts 23, B. Scott 22, S. Biddle 22, G. F. Pelham (2) 22, J. I. Brandenburg (5) 22, D. F. McMahon (3) 22, L. Thompson 21, G. M. Thompson (3) 21, J. G. Corbett (1) 21, W. B. Ogden (1) 21, F. A. Hodgman 21, A. E. Ranney (1) 20, W. J. Elias (2) 20, F. H. Schaffler (2) 20, E. N. Huggins (6) 20, G. Dimock 19, R. R. Debacher (4) 19, C. W. Billings (1) 18, E. L. Haas 18, H. Emmett 18, A. P. Walker (6) 16, W. Keeler 16, E. McLenore 16, J. Banks 11, W. Talbot 9.

Crescent Athletic Club.

BAY RIDGE, N. Y., March 23.—Full scores were made in every one of the five matches shot here to-day. The weather was raw and cold. The attendance way above normal. The scores:

Take-home trophy, 100 targets: H. M. Brigham 90, F. S. Hyatt 89, J. H. Vanderveer 85, H. B. Vanderveer 83, F. B. Stephenson 81, C. A. Lockwood 81, A. E. Hendrickson 79, George Felix 77, C. W. Berner 76, Charles Blake 76, J. F. James 75, G. G. Stephenson, Jr., 73, W. W. Pell 72, George Brower 71, J. S. Lawson 69, C. H. Pulis 69, H. T. Spooner 69, J. P. Fairchild 68, W. W. Marshall 66, C. R. James 65.

Stiver trophy, 25 targets, handicap: A. Blake (3) 25, J. F. James (1) 21, H. M. Brigham 21, George Felix (1) 21, C. H. Pulis (3) 21, A. E. Hendrickson (5) 21, F. B. Stephenson 20, C. Blake (1) 20, J. A. Vanderveer (2) 20, G. E. Brower (3) 20, J. P. Fairchild (3) 19, C. R. James (1) 18, G. G. Stephenson, Jr. (3) 18, C. W. Berner (3) 17, W. W. Pell (4) 17, H. T. Spooner (2) 16, C. A. Lockwood (3) 15, W. W. Marshall (7) 15, F. S. Hyatt (1) 14, F. Crampton (5) 13.

Vanderveer trophy, 25 targets, handicap: J. F. James (1) 25, H. B. Vanderveer (2) 24, C. A. Lockwood (2) 23, H. M. Brigham 22, C. Blake (1) 21, George E. Brower (3) 21, W. W. Pell (4) 21, George Felix (1) 20, H. T. Spooner (2) 19, J. P. Fairchild (3) 19, C. R. James (1) 19, C. W. Berner (3) 18, F. S. Hyatt (1) 16, C. H. Pulis (3) 16, A. C. Henry (5) 15, W. W. Marshall (1) 15, F. B. Stephenson 14, F. Crampton (5) 13, G. G. Stephenson, Jr. (3) 12.

Monarch cup, 25 targets, handicap: C. W. Berner (3) 25, H. B. Vanderveer (5) 25, J. F. James (1) 23, J. H. Vanderveer (2) 22, C. Blake (1) 22, C. H. Pulis (3) 22, C. R. James (1) 21, H. Blake (3) 21, H. M. Brigham 20, G. G. Stephenson, Jr. (3) 20, George Felix (1) 18, H. T. Spooner (2) 18, A. G. Henry (5) 18, J. P. Fairchild (3) 18, F. B. Stephenson, 17, F. S. Hyatt (1) 16, C. A. Lockwood (3) 16, W. W. Pell (4) 16, F. Crampton (5) 14, George E. Brower (3) 13, W. W. Marshall (7) 13.

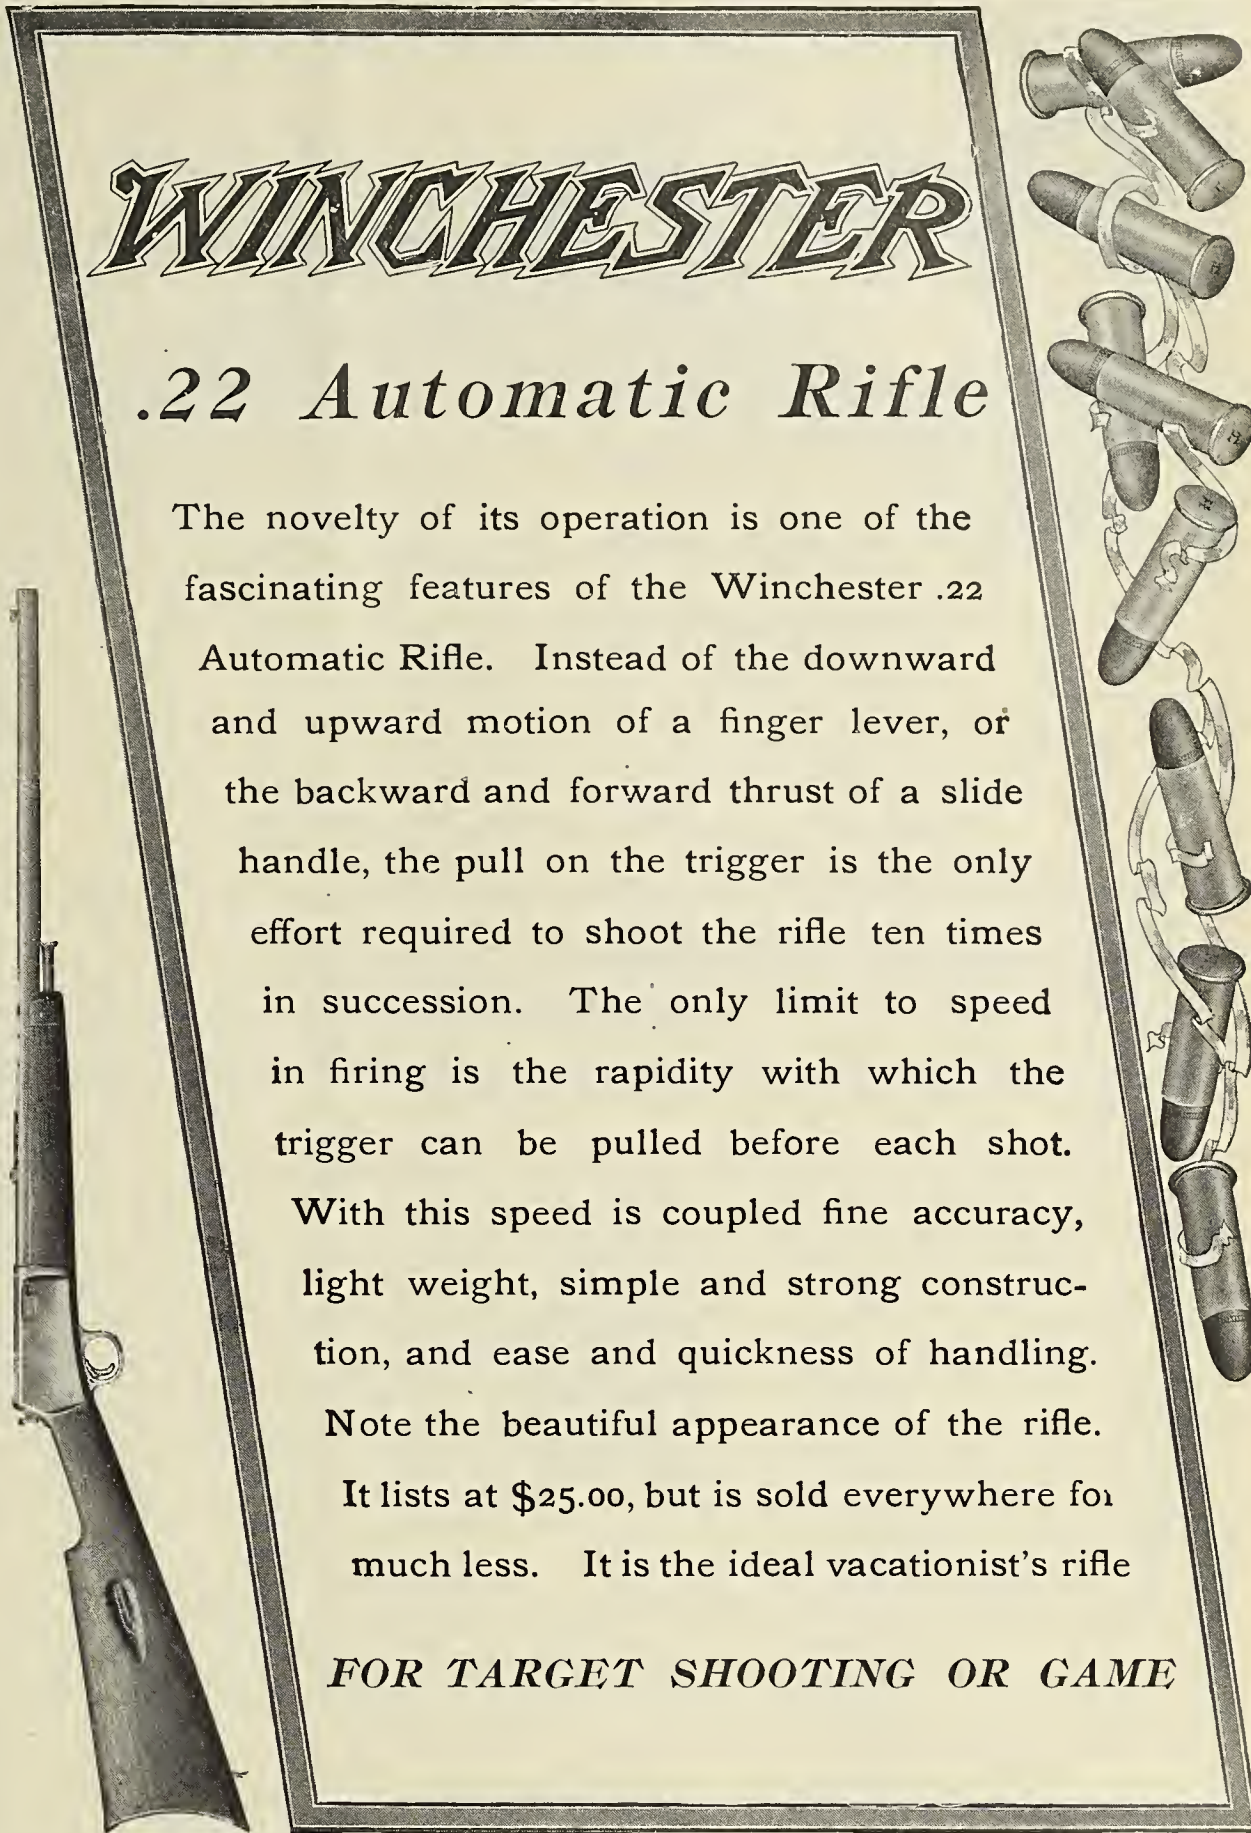

Team shoot, 25 targets, handicap: A. Blake (3) 25,

WINCHESTER

.22 Automatic Rifle

The novelty of its operation is one of the fascinating features of the Winchester .22 Automatic Rifle. Instead of the downward and upward motion of a finger lever, or the backward and forward thrust of a slide handle, the pull on the trigger is the only effort required to shoot the rifle ten times in succession. The only limit to speed in firing is the rapidity with which the trigger can be pulled before each shot. With this speed is coupled fine accuracy, light weight, simple and strong construction, and ease and quickness of handling. Note the beautiful appearance of the rifle. It lists at \$25.00, but is sold everywhere for much less. It is the ideal vacationist's rifle

FOR TARGET SHOOTING OR GAME

C. Blake (1) 20; total 45. C. F. James (1) 24, F. S. Hyatt (1) 14; total 40. F. B. Stephenson 22, C. R. James (1) 17; total 39.

Greenwich C. C.

GREENWICH, Conn., March 23.—Much interest was evinced in the point contest for handicap trophy. Mr. B. Foster scored 99 out of 100 from 20yds., while E. C. Wills made 94 from 28yds. Present standing and day's scores follow:

M. B. Foster (20) 99, E. C. Wills (28) 94, E. T. Hall (28) 90, George M. Peacock (20) 85, N. Webb (24) 85, Baron Von der Ropp (scratch) 76, J. W. Masury (scratch) 74.

Handicap event: Foster 4 points, E. C. Wills 2 points, E. T. Hall 1 point.

Club championship: Foster 4 points, Baron Von der Ropp 2 points, J. W. Masury 1 point.

Montclair Gun Club.

MONTCLAIR, N. J., March 23.—Only one event was shot here to-day, which was for the sixth leg on spring trophy. It was taken by Seymour Crane with 48 out of 50 with 6 handicap. The scores:

First Round—J. C. Atwater (5) 18, I. S. Crane (6) 23, I. S. Crane, Jr., (10) 13, Ed. Winslow (6) 19.

Second Round—Atwater (5) 21, Crane (6) 25, Crane, Jr., (10) 15, Winslow (6) 21.

Hercules Gun Club.

TEMPLE, Pa.—The target shoot held at this place for the inanimate target championship for Berks and adjoining counties, under the auspices of the Hercules Gun Club, was fairly well attended, twenty amateurs shooting the programme, which consisted of five 20-target events, a total of 100 targets. Event No. 2 was a race of 10 pairs of doubles, in which eight of the boys entered.

The weather was excellent up to 3 P. M., when it became cloudy and stormy. The targets had a full regulation 50yd. flight, and all worked to perfection.

Event No. 1, 100-target championship: Prutzman 83, Keller 76, Wilson 73, Roder 78, L. Wertz 84, Reed 71, Weider 75, Mohn 72, Metz 69, Brunner 79, Rahn 72, Ludwig 55, Adams 90, Miller 81, Shupp 74, Behm 77, Bowers 61, Eisenhouer 85, Schmoyer 55, F. Wertz 77.

Event No. 2, 10 pairs doubles: Adams 15, Lee Wertz 12, Prutzman 7, Behm 12, Rahn 11, Miller 11, Reed 10, F. Wertz 14.

A. K. Ludwig.

Mineral Springs Gun Club.

WILLOW GROVE, March 23.—In one of the largest target shoots conducted by the Mineral Springs Gun Club to-day, the program called for nine events, with a total of 125 targets, and an added 25-target event, in which Worthington and Cooper tied with 23. Schwartz, of Lansdale, was high gun with 105, and Noah Clark, of Doyleston, and Ollie Houpt, of the Mineral Springs Club, tied for scratch place with 100 breaks each. The scores:

First event, 10 targets: Clark 6, Kates 7, Schwartz 7, Metz 9, Harding 7, Pierson 8, Houpt 8, Worthington 9.
Second event, 15 targets: Clark 13, Kates 13, Schwartz 9, Metz 10, Harding 11, Pierson 10, Houpt 10, Worthington 10.
Third event, 15 targets: Clark 12, Kates 13, Schwartz 14, Metz 10, Harding 11, Pierson 11, Houpt 13, Worthington 10, Potts 9.
Fourth event, 15 targets: Clark 10, Kates 12, Schwartz 14, Metz 13, Harding 12, Pierson 9, Houpt 10, Worthington 10, Potts 7.
Fifth event, 20 targets: Clark 18, Kates 13, Schwartz 19,

Metz 13, Harding 15, Pierson 15, Houpt 15, Worthington 11, Cooper 12, Brandt 12, Nash 13, Potts 10.

Sixth event, 10 targets: Clark 8, Kates 6, Schwartz 7, Metz 6, Harding 7, Pierson 7, Houpt 9, Worthington 6, Cooper 7, Brandt 8.

Seventh event, 15 targets: Clark 14, Kates 9, Schwartz 14, Metz 10, Harding 13, Houpt 13, Pierson 12, Worthington 11, Cooper 13, Brandt 12.

Eighth event, 10 targets: Clark 7, Kates 8, Schwartz 8, Metz 5, Harding 9, Pierson 8, Houpt 8, Worthington 9, Cooper 8, Brandt 8.

Ninth event, 15 targets: Clark 13, Kates 8, Schwartz 13, Metz 8, Harding 11, Pierson 12, Houpt 12, Worthington 9, Cooper 13, Brandt 9.

Total for the nine events: Clark 100, Kates 87, Schwartz 105, Metz 85, Harding 96, Pierson 92, Houpt 100, Worthington 87, Cooper 53, Brandt 49, Potts 26, Nash 13.

Special event, 25 targets: Clark 20, Harding 19, Worthington 23, Houpt 21, Cooper 23.

Alert—Lehigh Championship.

EASTON, Pa., March 23.—Alert Rod and Gun Club, of Easton, and Lehigh Rod and Gun Club, of Bethlehem, this afternoon decided the championship of the Lehigh Valley. Each team had won a victory. To-day's contest took place in Phillipsburg and was won by Alert. The decision was based on two out of three wins. The scores follow:

Hahn	18	J Taylor	20
E Smith	20	W Raub, Sr..... 17	
H Koch	16	E Markley	21
E Bruch	19	F Raub	21
E Eberts	16	W Stahl	21
C Miller	21	G Hartman	20
E Dorn	18	A Hartman	16
W Schrader	22	H Hausman	20
F Kethcheledge	19	W Raub, Jr..... 16	
Fluck	12-191	G Young	22-194

Edward Markley, of the Alert Club, was high gun at the general shoot that followed the match, breaking 92 out of 100 targets.

Gloucester Gun Club.

GLOUCESTER CITY, N. J., March 23.—There were fourteen entrants in the shoot for a turkey, and at the end of the tenth round there were five ties for the prize, and in the shoot-off Stokes Prickett, shooting for H. Sterling won. The shoot-off between Husted and Gibbons, left over from last week, again was postponed because of absence of Mr. Husted. The scores:
Weekly shoot, prize, a turkey: B. Martel 10, S. Prickett (shooting for Sterling) 10, F. Bennett 10, Prickett 10, T. Gibbons 10, H. Cheesman 7, A. Dasch 7, W. Murray 7, H. Githens 8, E. W. Wilson 6, B. Boyde 6, Gus Hargesheimer 6, E. Black 6, W. Moran 6.
Shoot-off, miss-and-out: S. Prickett (shooting for Sterling), 3, Martel 2, Prickett 1, Bennett 1, Gibbons 0.
Sweepstake, miss-and-out: Gibbons 7, Martel 6, Bennett 6, McLaughlin 5, Dasch 2, Black 2, Hargesheimer 1.

Essex County C. C.

WEST ORANGE, N. J., March 23.—C. E. Daly won four out of five events here to-day, shooting from scratch in each event. Hart won the odd event, early bird trophy. The scores:

Committee cup, 100 targets, handicap: Daly (0) 88, J. A. Hart (0) 81, B. M. Shanley, Jr. (0) 86, I. K. Taylor (24) 80, Peter Hauck, Jr. (16) 77, L. H. Ross (24) 87, A. O. Headley (16) 78.

March cup, 25 targets, handicap: Daly (0) 23, Hart (0) 19, Shanley (0) 21, Taylor (6) 16, Hauck (4) 17, Ross (7) 19, Headley (4) 18.

Heller trophy, 25 targets, handicap: Daly (0) 23, Hart (0) 17, Shanley (0) 24, Taylor (6) 18, Hauck (4) 17, Ross (7) 24, Headley (4) 17, Roland Ross (8) 18.

Shanley cup, 10 pairs doubles: Daly 13, Hart 12, Shanley 11, Taylor 8, Hauck 7, Ross 12, Headley 13, Ross 12. On the shoot-off between Daly and Headley the former won, 12 to 0.

Early bird handicap, 25 targets: Daly (0) 22, Hart (0) 23, Shanley (0) 21, Taylor (6) 24, Hauck (4) 20, Ross (7) 24, Headley (4) 24. Ross won on the shoot-off with a score of 23.

Saturday cup, 25 targets, handicap: Daly (0) 20, Hart (0) 19, Shanley (0) 20, Taylor (6) 20, Hauck (4) 18, Ross (7) 20, Headley (4) 18. Daly won on the shoot-off with a score of 23.

Larchmont Y. C.

LARCHMONT, N. Y., March 24.—The wet weather gunners turned out in their oilers to-day and shot through an interesting program.

L. Antoine won three events and was second in two others. In the 100-bird handicap match, he broke 98; Z. C. Offutt was second with 97. Antoine was also the winner of the leg for the March cup, after a shoot-off with R. L. Spotts, W. B. Short and K. R. Hooker. His third win was the leg for the Bemis trophy, after a shoot-off with Offutt and Hooker.

Ralph L. Spotts was high gun for the day with 116. He also won the 15-target scratch contest with a full score. W. B. Short tied with Offutt and Antoine in the shoot for the Held trophy, and in the shoot-off, Short won. He also won leg for the accumulation cup, breaking 49. Antoine and Offutt tied for second place with 48 each. In the 10-target scratch contest, J. H. Henry was successful, returning a full score, and beating J. H. Henry by 1.

Keystone Y. C. Trophy.

AFTER being tied up with Mooney for the gun offered by Keystone Yacht Gun Club for the special target shoot at Tacony, Sidebotham won in an extra event by smashing 21 of his 25 targets to Mooney's 19.

Sidebotham and Mooney broke 23 of their 25, Marsden finished second with 22, while George and Haigh tied with 21. Scores: Sidebotham 23, Mooney 23, Marsden 22, George 21, Haigh 21, Thompson 20, E. Betson 20, Wimmesberger 19, Paul 11, Harris 12, Foster 14, McKerney 15, Rice 16, C. Betson 17, Ritter 17, Abbott 18.

Marine and Field Club.

GRAVESEND BAY, N. Y., March 24.—Following are the scores for Saturday:

Trial shoot, 25 targets, scratch: E. H. Lott 22, J. M. Knox 19, C. B. Ludwig 17, J. H. Emanuel, Jr. 15, C. M. Camp 14, C. D. Sayre 13, E. D. Church 17. Won by E. H. Lott, who managed to get his last two targets, with Mr. Knox falling down on his last two.

March cup, fourth leg, 100 targets, handicap:

E H Lott.....	0 85	J M Knox.....	16 70
C B Ludwig.....	4 82	C D Sayre.....	4 70
C M Camp.....	4 80	J H Emanuel.....	4 60
E D Church.....	20 76		

Lott gained the fourth leg. He has been shooting wonderfully well with his new gun, and Saturday was a very bad day for shooting, as the wind that blew over Gravesend Bay was something dreadful, and the targets flew high and fast. Ludwig was second and Camp third. Saturday, March 30, will be the last day of shooting for the March cup.

Trophy shoot, 25 targets, handicap:

E H Lott.....	0 24	E D Church.....	5 17
C D Sayre.....	1 22	C M Camp.....	1 17
C B Ludwig.....	1 20	J H Emanuel, Jr....	1 15
J M Knox.....	4 14		

Again Lott managed to take the event, Sayre a close second.

Club sweepstake, 25 targets, handicap:

J M Knox.....	4 23	C B Ludwig.....	1 18
E H Lott.....	0 22	C B Sayre.....	1 18
E D Church.....	5 19	C M Camp.....	1 16

Club sweepstake, 25 targets, handicap. Tie between Lott and Knox shot off at 25 targets to decide the stake, in the next event, being the same conditions:

E H Lott.....	0 22	J H Emanuel.....	1 20
J M Knox.....	4 22	C M Camp.....	1 18
E D Church.....	5 19	C B Ludwig.....	1 16
C D Sayre.....	1 18		

Club sweepstake, 25 targets, handicap:

E H Lott.....	0 24	J H Emanuel.....	1 24
J M Knox.....	4 23	C M Camp.....	1 21
E D Church.....	5 20	C B Ludwig.....	1 23
C D Sayre.....	1 24		

Lott, according to conditions, won from Knox for the previous event, but there being a tie between Sayre, Lott, and Emanuel for the stakes, they shot off at the same condition in the next event.

Club sweepstake, 25 targets, handicap:

C D Sayre.....	1 24	J M Knox.....	4 20
J H Emanuel, Jr....	1 22	E D Church.....	5 19
E H Lott.....	0 21	C B Ludwig.....	1 19
C M Camp.....	1 20		

Won by Sayre, this being the first event of the afternoon that Sayre managed to get.

Match shoot, 25 targets, handicap. Lott giving Sayre and Emanuel, Camp and Church each 5 birds handicap, for sweepstakes:

C D Sayre.....	5 24	C M Camp.....	5 20
J H Emanuel, Jr....	5 22	E D Church.....	5 20
E H Lott.....	0 21		

Lott won two and lost two, breaking even on the shoot.

Same conditions as previous event, 25 targets, handicap, only Sayre and Emanuel shooting against Lott with a deduction of one bird over the last shoot:

E H Lott.....	0 22	C D Sayre.....	4 21
J H Emanuel, Jr....	4 21		

President Towne was out of town, but he telephoned during the morning, stating that he would offer a take-home trophy, which is the custom each Saturday, to the best net score at the close of the day for a 25-bird match. Following are the scores: C. M. Camp 19, E. H. Lott 18, J. H. Emanuel 18, J. M. Knox 18, C. B. Ludwig 18, E. D. Church 17, C. D. Sayre 17.

As it was getting dark, it was very hard to see some of the birds, so the scores were not very high, Camp being high gun with four close seconds.

GEO. H. BENDER, Supt.

Meadow Springs Gun Club.

GIDEON won the spoon offered for the high man in Class B with 25 straight. He also broke straight for the Henry trophy, and was high gun for the day with 92 out of 100. Scores:

Class A:

Stamford Rod and Gun Club.

STAMFORD, Conn., March 23.—Two events comprised the program here to-day. Fifty-bird handicap was won by J. M. Carr with 48 from scratch, excellent shooting under existing weather conditions. E. L. Hatch took the 100-bird handicap with 89 from scratch. The scores:

Fifty-bird handicap: J. M. Carr (0) 48, E. L. Hatch (0) 45, A. S. Pitt (4) 39, R. A. Gillespie (2) 36.

One hundred bird sweepstake: E. L. Hatch (0) 89, J. M. Carr (0) 87, A. S. Pitt (8) 79, R. A. Gillespie (4) 81.

Some Good Reasons Why You Should Shoot

THE PARKER GUN

Be high man at the traps.

Shoot the finest brush gun made.

Mechanical construction perfect.

Meriden, Conn.

NEWFOUNDLAND

A Country of Fish and Game. A Paradise for the Camper and Angler. Ideal Canoe Trips.

The country traversed by the Reid Newfoundland Company's system is exceedingly rich in all kinds of fish and game. All along the route of the Railway are streams famous for their SALMON and TROUT fishing, also Caribou barrens. Americans who have been fishing and hunting in Newfoundland say there is no other country in the world in which so good fishing and hunting can be secured and with such ease as in Newfoundland. Information, together with Illustrated Booklet and Folder, cheerfully forwarded upon application to

J. W. N. JOHNSTONE, General Passenger Agent, Reid Newfoundland Company, St. John's, Newfoundland.

Look at the records of 1911-- they tell the story

Season's Amateur Average—Winner Used DEAD SHOT.

Grand American Handicap—Winner Used DEAD SHOT.

Season's Professional Average—Winner Used DEAD SHOT.

Never before has any one factor of the shooters' equipment won all three.

We know the efficiency; we guarantee the stability of

ST. LOUIS

Hudson Gun Club.

JERSEY CITY, N. J., March 24.—There were only three squads brave enough to face the cold, nasty rain today and come out to the grounds for a little practice at the traps. Bill Hassenger, who came over from Newark, was the main squeeze, being high gun with 90 per cent.; Dave Engle was the runner-up with 85 per cent.

There was a match between Billy O'Brien and Kid Williams, at 100 targets, O'Brien allowing Williams a handicap of 10 birds, but Billy was the man to get the "mit," he losing out by 5 birds.

Kurzell challenged Beyersdoff to shoot at 12 pairs. Scores: Kurzell 5, Ben 12—good shots, yes? Joe Whitley has positively refused to shoot any more matches with Tom Kelly. He had to admit that Kel was a shade too strong for him to attempt to beat; but he says that he will take a chance at 50 birds with Kurzell.

On April 7 we hold our next club shoot; on April 21, our annual merchandise event takes place, open to all amateurs, and on June 2, the sixth contest for the Frank Hall trophy, open to all amateurs of the State of New Jersey, will be shot off on the Hudson Gun Club grounds. So come out next Sunday and get acquainted with us. Everybody is welcome here. Take Turnpike car at Pennsylvania Ferry at Jersey City, or any transfer point in Newark, ride to the Hackensack River bridge, get off on the west side and walk north to the D., L. & W. tracks, where you will always find the Stars and Stripes flying to greet you.

SECRETARY.

Hartford Gun Club.

THE Hartford Gun Club announces Saturday, July 27, as the date of its tournament this summer, particulars of which will appear later. This club is the good old Colt Gun Club, renamed and reorganized, and is now in a flourishing condition, with an active membership of over seventy—"more a-comin'."

The present officers are: President, L. H. Bradley; Vice-President, R. N. Clark; Secretary, R. D. Stevens; Treasurer, L. R. Libby; Field Captain, H. F. Nichols. The executive committee consists of the president (official), S. O. Purinton and W. R. Newsome.

The club suffered an irreparable loss in the untimely death of its late treasurer, John M. Root, who was killed by being thrown from an automobile, and all sportsmen and trapshooters hereabouts share in our sorrow. His manly and genial ways will never be forgotten.

The season's program calls for fortnightly shoots, some special events and the tournament mentioned.

Our latch-string is always out, and visiting shooters are heartily welcome. More anon.

Chicago Gun Club.

CHICAGO, Ill., March 23.—Eleven took part in the meet and several good scores were made, although the day was bad for shooting hard. All events were from the 16yd. line. A. F. MacLachlan, amateur, led in every event to-day. Professional honors were divided by Stannard and Amn. Scores:

Practice event, 25 targets: A. H. Amn 24, A. F. MacLachlan 23, J. H. Jaggart 23, W. D. Stannard 23, W. A. Davis 22, O. P. Goode 21, L. Jeff 20, H. E. Dickerman 20, C. W. May 18, H. L. Deffert 16, E. Malmlier 13.

Event No. 1, 50 targets: W. D. Stannard 48, A. F. MacLachlan 40, J. H. Jaggart 45, L. Jeff 43, O. P. Goode 43, W. A. Davis 43, A. H. Amn 42, C. W. May 41, H. E. Dickerman 38, E. Malmlier 28.

Event No. 2, 25 targets: A. H. Amn 25, A. F. Mac-

Lachlan 23, W. D. Stannard 23, L. Jeff 22, W. A. Davis 22, O. P. Goode 21, H. E. Dickerman 20, H. L. Deffert 18, C. W. May 17.

Event No. 3, 12 pair: W. D. Stannard 21, A. F. MacLachlan 20, W. A. Davis 19, A. H. Amn 19, O. P. Goode 18, L. Jeff 18, H. E. Dickerman 15, J. H. Jaggart 8.

Event No. 4, 12 pair: A. F. MacLachlan 20, W. A. Davis 20, A. H. Amn 20, H. E. Dickerman 19, L. Jeff 18, O. P. Goode 18, J. H. Jaggart 16, H. L. Deffert 16, C. W. May 15.

Don't Let 'Em Get Your Goat.

THERE is a sure enough laugh in the program of Highland Amateur Shooting Association at Edge Hill, Pa. This is it:

Event No. 2—The "John P. Burn Memorial Challenge Trophy" will be shot for as follows: The club will purchase a number of silver medals with a goat represented thereon. Members may purchase medals whenever they desire at the rate of 65 cents a piece. A member may challenge any other member to shoot for his goat (medal). The challenge need not necessarily be accepted. If more than one member challenge one other member, the highest man in event No. 1 may have the privilege of shooting the challenged party. Winning the goat of a man in one's own class entitles the winner to one point; if won from a class above, two points; if from a class below, one-half point. At the end of the season, the member having the most points to receive the trophy. No person to win more than three medals from any one other member.

The entire season's program shows intelligence in its get up. Read this:

"The object of this program is to give all shooters an opportunity to participate in all the club events without the heavy expense necessary in the usual 100-target club events of the past. Our 1912 program will cost about \$2.50, including car fare, ammunition and entrance. A 100-target program of the past has cost from \$4 to \$5."

Pillow Gun Club.

PILLOW, Pa., March 23.—Owing to the high water, the Pillow Gun Club could not participate in their regular weekly shoot on March 16. However, on Saturday, the 23d, the water receded sufficiently to allow a friendly shoot, and all the old members were on hand with what seemed the spring shooting fever in its worst stage. Many visitors were present watching the targets reduced to dust. Scores:

Independent Gun Club.

READING, Pa., March 23.—The Independent Gun Club held a live-bird shoot among its members on the Spring Valley grounds. Nine men participated. Col. Kofroth proved to be master of the game with 9 kills, while Morris was a close second with 8 to his credit. Blind landed third money, while Firing, Bowman and Murtof landed fourth with 6. Shaeffer, on his first attempt, landed but 2 kills. W. B. Lutz furnished the birds at the grounds. Scores:

Ten live birds: Firing 6, Kofroth 9, Stricker 5, Shaeffer 2, Blind 7, Bowman 6, Morris 8, Weidner 5, Murtof 6. A. K. LUDWIG.

Highland Gun Club's New Program.

THERE were present at this shoot twenty-eight shooters. In event No. 1, sterling silver spoon was won by high gun and high visitor.

In the straightaway event, five men received 3 points each; seven men 2 points each, and three men one point each. Under class system these men are distributed through each of the four classes, thus enabling those in each class to have a chance for the trophy.

In the memorial event, Meehan, Sr., defeated Landis, Sr., receiving 2 points; Harkins then defeated Meehan, Sr., receiving 2 points; and Landis, Sr., defeated Griffith, receiving 1 point.

In the class period events two Class A men are tied, one man within 1 target of the leaders and one man within 4 targets of the leaders, leaving ample opportunity for changes in position and assuring close contests right through the entire first period of three months. In Class B, four men are within 5 targets of the leader. Precisely the same can be said in all the classes as in Class A as to opportunities for contests during the entire period. In Class C, nine men are within 5 targets of the leader. In Class D, three men are within 5 targets of the leader. It will be seen that on account of classification, members of all degrees of skill have opportunities to win a trophy and the interest of close contests.

In championship event, fourteen men are within 5 targets of the leader, and of course, being a championship, it is absolutely a question of skill for the entire year, and there are many opportunities for changes in position.

In the club championship there are eleven men within 3 targets of the leader. The same may be said of this double championship, as the individual championship.

In the classes for the double targets for first period in Class A, three men are within 3 targets of the leader. In Class B, four men are within 3 targets of the leader. In Class C, nine men are within 3 targets of the leader. In Class D, three men are within 3 targets of the leader.

In the expert championship, there are ten men within 2 targets of the leaders. This, of course, is a yearly event and gives ample opportunity for changes.

In the expert events for the periods in Class A, there is only one target separating the leader and the last man. In Class B, 1 target separates the leader and the last man. In Class C, 2 targets separates three men and the leader, and in Class D, 1 target separates the leader and the last man. A careful study of this condition indicates the fact that the object of the program will unquestionably be accomplished, that object giving every one opportunity to win trophies and at the same time give them the excitement and interest of contests with men of about their own skill.

In considering these matters it must always be taken into consideration that a man of medium skill occasionally has an extra good day, and frequently one of expert skill has a poor day. There is no method by which such can be considered, and in any event one should be rewarded for his extra effort or result of such effort, and the other penalized for shooting below his form.

On account of the program being such a considerable departure from those usually offered, it may seem somewhat complicated, but any one who has had any experience at all can easily work out just how each event is run. Unfortunately one of the troubles with shooters is that they take everything for granted instead of carefully investigating what is given to them for their amusement.

Registered Tournaments.

The following tournaments have been registered with the Interstate Association during the week ending March 23.

May 3-8.—Walla Walla, Wash.—Sportsmen's Association of the Northwest tournament, under the auspices of the Walla Walla G. C. P. P. Morrow, Pres.

May 27-30.—Salt Lake City, Utah.—Utah State tournament, under the auspices of the Salt Lake G. C. E. J. Miller, Sec'y.

May 29-30.—Greensboro (Ala.) G. C. A. Lawson, Sec'y.

June 3-6.—Haines Landing, Me.—Maine State tournament, under the auspices of the Mooselucmaguntic G. C. R. L. Spotts, Pres.

June 5-6.—Jacksonville (Ill.) G. C. J. A. Groves, Sec'y.

June 6.—Coffeeville, Kans.—Forest Park G. C. Frank L. Ruthrauff, Sec'y.

June 10-11.—New Madrid (Mo.) G. C. D. R. Hunter, Sec'y.

June 10.—Ft. Wayne (Ind.) G. C. W. H. Scherer, Sec'y.

June 15.—Allentown, Pa.—Lehigh Valley S. A. Allen Heil, Sec'y.

June 15.—Beaver Dam, Wis.—Recreation G. C. L. H. Zimmerman, Sec'y.

June 19-20.—Idabel (Okla.) G. C. F. C. Butler, Sec'y.

June 20.—S. Madison, Wis.—Triangle G. C. H. G. Waterman, Sec'y.

June 26-27.—Freehold (N. J.) G. C. M. W. Conover, Sec'y.

July 2-3.—Milan (Mo.) G. C. N. A. Mewmaw, Pres.

July 6-7.—Swansea (Ill.) Country Club. W. C. Butts, Sec'y.

July 11.—Marion (O.) G. C. D. A. Orr, Sec'y.

July 17-18.—Peoria (Ill.) G. C. C. L. Portman, Sec'y.

July 26.—Huntington (W. Va.) G. C. A. C. Martin, Sec'y.

Aug. 7-8.—Springfield, Ill.—Illinois G. C. J. R. Leib, Sec'y.

ELMER E. SHANER, Sec'y-Treas.

Orange Gun Club.

ORANGE, N. J., March 23.—The principal event was a leg on the Unger cup, which was won by Ernest von Lengerke, with 47 out of 50. The other scores in the event were: Thos. Dukes 41, H. von Lengerke 40, Dr. F. W. Lockwood 39, F. R. Wicks 38.

The Result of Over a Century's Experience

Perfection in powder-making is only achieved by exercising the most scrupulous care in the selection and preparation of raw materials, employing skilled workmen exclusively, and using only the most improved modern mechanical equipment.

This is the Du Pont method and accounts for the unequalled reputation among sportsmen enjoyed by the Du Pont brands of Smokeless Shotgun Powders. Two of these brands that are in high favor among shooters are

(Bulk)

A perfect shotgun powder with light recoil. Unlike other powders of light recoil, Schultze gives high velocity and remarkable patterns.

(Bulk)

Hard Grain—Smokeless—Uniform. Requires no special wadding to make it do its best. Loaded just as easily as Black Powder. "The Old Time Favorite."

These powders positively will not pit the gun barrels.

UNEQUALED FOR FIELD AND TRAP-SHOOTING

See that your shells are loaded with either **SCHULTZE** or **E. C.**

Send today for Schultze and E. C. pamphlet No. 3. It contains information of interest to all shooters.

E. I. DU PONT DE NEMOURS POWDER COMPANY

Pioneer Powder Makers of America

ESTABLISHED 1802

Wilmington, Del.

Mr. Dukes won a leg on the secretary's cup at 50 targets, the second 25 with gun below the shoulder. His score was 45 out of 50. Other scores: H. von Lengerke 37, Lockwood 31, Wakeley 34, Mosler 36, E. von Lengerke 37, Wickes 36.

There was considerable interest in the shooting of Phil Wakeley, son of Dr. George W. Wakeley. This ten-year-old lad with a 20-gauge gun broke 3 out of 10 targets. He has the makings of an amateur champion.

The Du Pont Gun Club.

W. S. COLFAX, JR., the amateur State champion, was high man with a total of 97 at the shoot on March 23. A. B. Richardson, of Dover, second with 95. Following the match Richardson challenged Colfax for the State championship title. The match will take place at the Du Pont traps on April 13.

Several other good scores were made. Neaf Appgar, of New York, broke 94 out of 100, tying with J. H. Minnick, of Wilmington. J. T. Skelley made a score of 93, E. A. Everitt 91. There were fifty-three entrants.

In addition to the shooting over the expert traps, there was a double target event, each contestant having 20 targets. In this event H. P. Carlon was high man, breaking 17. The prize was fifty shells.

The scores in the Coleman du Pont merchandise event were: Class A, 24 out of 25—Eugene du Pont; Class B, 24—D. J. Dougherty; Class C, 23—J. H. Minnick; Class D, 22—L. L. Jarrell.

Class A challenge cup match: E. A. Everitt (holder), 49 out of 50; H. Winchester (challenger), 46.

Class B spoon contest tie made previous Saturday: N. K. Smith 20 out of 25, P. J. Guest 19.

The scores, at 25 targets, were: Edmanson 23, Bush 21, E. du Pont 24, Richardson 23, Leedom 15, Guest 19, Crawford 12, Springer 14, Winchester 23, Tomlinson 17, Hoopes, Jr., 20, Curley 16, Anderson, Jr., 18, Morgan 19, Martin 23, Wood 13, Mathewson 19, Simon 12, Jarrell 22, Lyon 20, Lynch 16, Hammond 20, Dr. Bullock 9, Smith 18, Magahern 14, Robertson 23, Skelly 23, Apgar 23, Colfax, Jr., 25, Everitt 24, Davis 17, Dr. Betts 17, N. K. Smith 20, Mode 7, Dougherty 24, Hartlove 13, Carlon 21, Simon 13, Coyne 16, Major Ramsey 19, Dr. Patterson 16, Minnick 23, Goodman 14, Lindsay 12, V. du Pont 18, C. J. Dougherty 16, Lambert 13, Wilson 19, Kenworthy 17, Porter 11, Joslyn 18, Doremus 17, Wood 20.

Mt. Kisco Gun Club.

THE Mount Kisco Gun Club held an invitation shoot for the members of gun clubs in Westchester county. The club gave six prizes. In the first event, first prize went to W. McCormick, a loving cup; second, a Russian leather pocketbook; third, L. C. Remsen, 100 shells. Second event: First, a metal clock, A. Betti; second, fancy vest, L. M. Petry; third, 100 cigars, J. H. Miller.

ACROSS THE PLAINS IN EARLY DAYS.

Continued from page 400.

"Wal, ef anybody likes moss-flavored grease, he mought relish it, but I never hankered fer it," was the response, while I fell to wondering whether moss-flavored grease would be more palatable than bacon flavor. Just at this juncture the fish gave a mighty flop, loosened the hook from its mouth and rolled down the slippery bank into the water. "No gre't loss," observed my host. "Only he'd a made a lot o' ile."

Despite the assurance that there were no fish other than cats in the branch, I had made ready one of my small hooks and was in the act of adjusting one of the crawfish, of which I'd put a number in my haversack, when my friend demanded to know what I thought I was going to do. I replied by making a long cast and proceeding to troll, slowly walking down stream.

"Thet line wouldn't hol' a four-poun' cat," he had just time to say when I had a strike and instantly became aware that something infinitely more gamy than a cat was on my line. I was regarded with open-mouthed astonishment while I pursued pickerel tactics and soon landed a three-pound fish of a variety then unknown to me.

"I'll be gewhizzled!" was the intelligent comment vouchsafed as my friend looked the fish over. "Thet's a sure 'nough white fish," was the final judgment, "'tho' I'd no idee they was any this side o' Injanny." From what I have since learned I am of the opinion that it was a small-mouth bass, though it did somewhat resemble the Lake Erie whitefish.

I had no sooner unhooked my fish than an idea, born of hunger, flashed into my mind and I said: "I'm going to make a camper's meal of that fish."

Dry, seasoned wood was plentiful and we soon had a big fire roaring in a shallow declivity between two mounds of earth. Taking the fish I wrapped it well in wet wire-grass, raked a spot in the glowing embers and covered it up in the coals. Then we sat and talked, catching a small cat in the mean time. Stripping off a broad section of bark from a green cottonwood, I made two platters, and at the expiration of thirty minutes, opened the fire to find the fish done to a turn. The skin and adhering cinders peeled off, the white, fragrant flesh slipped from the bones, and we had as appetizing a meal as ever tickled the palate of hungry man. I had a bag of pilot biscuit, designed for emergency, in my haversack, but no salt. The memory of "Dare Devil Dick" and how he used gun powder for seasoning came to me, and I dismantled a cartridge. The condiment was good and we ate heartily, my appetite surprising my friend.

[TO BE CONTINUED.]

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring**.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. **LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N. Y.**

FIELD TRIALS.

Oct. 28.—Southern Ohio Field Trial Association's second annual field trials. G. R. Harris, Sec'y, 15 West Sixth St., Cincinnati, O.

English Setter Club of America.

YOUR committee on 1912 field day has completed all arrangements for the seventh meet and begs to report as follows:

After numerous trips over various sections, excellent grounds have been secured at Medford, N. J., and although the train service is unfortunately not of the best, we will have to adjust ourselves to this condition in order to obtain what we believe will be the most satisfactory trial this club has ever held from the viewpoint of our first consideration whenever giving these field days—that of giving the dogs every possible advantage to "make good." The country over which we will run offers unlimited possibilities for range and speed and the quantity and quality of cover for the birds and bird work could not possibly be improved upon.

In order to make an early start on the morning of Friday, April 12, the members and their dogs will have to go down to Medford on Thursday evening, the 11th, on a 5:32 train from Market street ferry (Philadelphia side Pennsylvania R. R.).

Hotel accommodations and good accommodations for the dogs will be found in Medford. The committee will direct the members to the hotels upon their arrival. The charges will be found moderate.

Drawings in the derby class will be made at the Indian Chief Hotel during Thursday evening, so that owners or handlers must be present at that time. The all-age drawings will be made on the field during the running of the derby on Friday morning.

The trials will be started about 7 A. M. on Friday, the 12th, with the derby class, and if the entries warrant, the running of this class will be continued all day and the all-age class not run until Saturday morning, the 13th, but should the derby entry be light, the all-age class will follow immediately that same day, so that there is a possibility of finishing the meet on Friday and returning to Philadelphia late the afternoon of the 12th, but we can foretell nothing definite in this respect as we hope you will appreciate, so come down Thursday afternoon on that 5:32 train, prepared to stay one night and one day or just twice that long.

We take pleasure in announcing that Mr. John White, of Hempstead, Long Island, has been secured to judge the trial this year. Mr. White needs no introduction and with a gentleman of his experience and ability placing our dogs, this trial affords our members an unusual opportunity which we hope you will appreciate and "go the limit" with the number of your entries in order to take advantage of same.

Keep well in mind the day and the train you take for Medford. Drawings in the derby class will be made on the night of the 11th, and only by those actually present with their dogs.

Game Laws in Brief

A revised edition for 1912.

It gives all the fish and game laws of the United States and Canada. It is complete and so accurate that the editor can afford to pay a reward for an error found in it.

"If the Brief says so, you may depend upon it."

Sold by all dealers, or by mail by us. Price, twenty-five cents.

1912 DOG SHOW WINNERS

- 1. Splendidus. 2. Lady Betty of Astoria. Owned and imported by Jacob Ruppert, Jr., New York.
- 3. Knoxcroft. Bloodhound, bred and owned by Rookwood Kennels, Lexington, Ky.
- 4. Champion Mistress of Midlothian and Matchless Midlothian. Scottish Deerhounds, owned and bred by Midlothian Kennels, Netherwood, N. J.
- 5. Royal Maklulu. 7. Black Hussar. English Retrievers. Bred by Messrs. Chapman and Walton, Oakland, N. J. Hussar is owned by F. W. White, of New York City.
- 6. Yesdihc Challenge. Gordon Setter, owned and bred by Yesdihc Kennels, Easton, Pa.
- 8. Greystone Patriot. Rough Collie, owned and bred by Samuel Untermyer, New York.
- 9. Parsque. French Bull, owned and bred by Never-Never Kennels (Mary Winthrop Turner), Shelter Island, N. Y.
- 10. Zyclon of Perchina. 11. Postrel of Worozova. Russian Wolfhounds, two of the last three of this type to leave Russia, and the only dark-colored Wolfhounds in America. Owned by Valley Farm Kennels, Simsbury, Conn.

Should no response be made to your name when it is called at the hotel that night, the entry will be considered out of the running absolutely.

There are no trains down to Medford later than the 5:32, and no other means of reaching there except by automobile (17 miles from Camden, Marlton Pike, good stone roads).

Luncheon will be served on the grounds at 50 cents per.

Professional handlers will not be permitted to work members' dogs. Bitches in season will not be permitted to start or to be on the grounds.

There is no entry fee charged. Entries positively close April 6.

The trials will be held rain or shine.

Classifications, as at our former meets, will be made and prizes awarded as follows:

Dogs.—Highest total score 18 months of age or under. First prize, blue ribbon; second prize, red ribbon; third prize, yellow ribbon.

Bitches.—Highest total scores 18 months of age or under. Same prizes.

Dogs.—Highest total scores over 18 months of age. Same prizes.

Bitches.—Highest total scores over 18 months of age. Same prizes.

Highest scores for speed, range and style. Same prizes.

Highest scores for obedience and control. Same prizes.

Highest scores for bird work. Same prizes.

Highest total score, winner's class. Winner's prize, red, white and blue ribbon. Reserve winner's prize, red and white ribbon.

Special prize wins green ribbons.

Rosettes will be given in commemoration of placements in the derby and all-age classes.

First class certificates and bronze club medals will be awarded to all entries making a total score of 250 points or over. Second class certificates will be awarded to all entries making a total score of 200 points up to 250.

French Bulldog Club.

Editor Forest and Stream:

Since the Westminster Kennel Club show, we have received various news clippings of articles in which the inference seems to be that the Never Never Land Kennels is disappointed and somewhat discouraged at the results of said show in so far as the French Bull Dog is concerned. We are disappointed only at seeing such specimens as Nellcote Gamin and Gamin's Riquet overlooked. We wish to correct the untruthful statement that Ch. Charlemagne of Amersham was defeated, since he was shown for exhibition only and did not compete, and the same with regard to Ch. Pourquoi Pas and also to correct the misleading and untruthful statement in the advertisement of Noswal Kennels to the effect that Noswal Nabob had never been defeated. He was defeated by both Riquet and Ch. Charlemagne of Amersham at the Specialty Show of the French Bull Dog Club of America in April of 1911. During a period of about two years, one or another of the dogs of the Never Never Land Kennels has met and defeated all the prominent French bull dogs of the country, including champions and among these champion Nellcote Gamin. We except only Riquet and Enchantress. During this period of about two years, a record of 88 championship points and more blue ribbons and trophies than all the French Bull Dog Kennels in the country combined, leave us no room for discouragement with the result of our efforts to improve and popularize this breed of dog and build up the organization of the French Bull Dog Club of America.

We resent the publication through letter or advertisement of untruths or half truths that are intended to mislead. We may at times criticize the judging, but we shall always accept the judgment without protect. We have and always will, exert our utmost endeavors to expose fraud, abuse or dishonest practice in all matters pertaining to the dog. We shall support the French Bull Dog Club of America and its standard of type and we shall abide by

its constitution and by-laws as is incumbent on all its members.

We consider the Dollar Princess was fairly beaten by Enchantress, as the Dollar Princess both showed badly and was badly shown, but we shall take every opportunity to show her against Enchantress in the future till such time as the judgment is reversed. We consider the placing of Nabob over Riquet and Nellcote Gamin a joke and rather a poor joke at that. It may make the unskillful laugh, but it cannot but make the judicious grieve.

Our purpose in this hobby is to improve and protect the breed of the French bull dog and any breeder or kennel than can breed a champion will have our sincere congratulations and support. We shall use every effort to have honest and impartial judges. We believe that no one should officiate in the ring who is a professional handler of dogs of any breed, and we shall use our best endeavors to bring such a law about. MARY WINTHROP TURNER.

Maryland Kennel Club.

ONE of the biggest and most successful kennel meets of the year, and, with the exception of Westminster, the most successful financially, was that of Maryland Kennel Club, held March 15 and 16 in Baltimore. It is estimated that over 3,000 people paid admission during the two days of the show. Great interest was taken in the exhibit of the animal refuge association. T. Dudley Riggs is the president of the club and Dr. George W. Fisher is the chairman of the dog show committee. Mrs. Edwin J. Farber is the president of the refuge association, and the advisory board is composed of Right Rev. John G. Murray, Major Samuel H. Lyon, W. D. Gill, Richard Leupold and Joseph H. Pentz.

Boston Dog Show.

THERE have been 1,272 entries received for the Eastern Dog Club Show on April 2 in Mechanics' Hall, Boston. There are 868 dogs and 404 bitches. Boston bulls naturally lead the list with 190. Airedales come second on the list with 82, while English setters follow with 68. An interesting entry is that of E. P. McMurtry, who will show his six Norwegian bear hounds for the first time in this country. Four packs of foxhounds will show—two American and two English.

Turnabout is Fair Play

For the past year my department has been turning out studied and thorough answers to thousands of letters from readers of FOREST AND STREAM. I have told hundreds of readers what sportsmen's goods they needed, and where to buy them, and that my advice has been satisfactory is proved by innumerable letters of thanks from my inquirers. I have enjoyed this work immensely, and am at your service every minute of the working year. Now then, I want you to do something for me.

What I want you to do is this: When you order by mail or purchase from a sporting goods house anywhere, mention FOREST AND STREAM. When you order direct from one of our advertisers, tell him you learned about the article you want in FOREST AND STREAM. When you write for catalog, speak of FOREST AND STREAM. In doing this, you fulfill a twofold purpose. You show the dealer what magazine is bringing him returns, thereby enabling him to learn if he is investing his money wisely in advertising, and you also help us because it is to our interest that the dealer should spend his money wisely, since the wisely spent dollar comes to FOREST AND STREAM.

We know that you readers of FOREST AND STREAM are buyers of sporting goods, and our advertisers, some of whom have used these columns for thirty-five years, have proved it—and now come on. Ask me some more questions.

Use The Dry Fly This Season

To be successful and to get the most enjoyment out of this pleasant and scientific method of trout fishing, you must have Cummins' Rods and Tackle, which are of the HIGHEST POSSIBLE GRADE.

¶ The following articles are specially manufactured by W. J. Cummins for dry fly fishing, and strongly recommended:

RODS. The "Turner" dry fly rod in selected greenheart, in 2 joints with 2 tops, cork handle, lockfast joints, very finest finish, 10 feet or 10½ feet, \$10.25; or the "Anglo-American" Split Cane Rod in 3 joints, 2 tops, the very highest class of split cane, 10 feet or 10½ feet, \$20.50.

REEL. Cummins' "Dunelm," 2¾ inches, \$4.15.

REEL LINE. 30 yards double tapered "Century" Dry Fly Line, \$2.50.

LEADERS for dry fly fishing, 3 yards long and of special undrawn gut, 30 cents each.

DRY OR FLOATING FLIES on eyed hooks, 60 cents per dozen.

W. J. C. will be glad to send further particulars with regard to these goods to any angler

Write also for catalogue of High Grade Rods and Tackle.

A magnificent publication of over 300 pages.

W. J. CUMMINS, (Dept. R.) North of England Rod Works
BISHOP AUCKLAND, ENGLAND

THE WONDERFUL "COAXER" TROUT FLY!

ALMOST ALIVE. NEVER LOSES ITS SHAPE. FLOATS ANYWHERE.
"My guide said, 'these trout don't take flies.' I got 24 on the 'Coaxer.'
"Caught a 15-inch brook trout on the 'Coaxer'—that's the record here."
"I got 17 speckled beauties before breakfast that averaged 12 inches."
"I have caught over 400 trout on one little 'Coaxer' fly."
"I found my little boy catching croppies with it to beat the band."
Trout Size, 6 colors, \$1.35; 12, \$2.60. Bass Size, 6 colors, \$1.65; 12, \$3.25.

Send Stamp for Booklet of Bass Baits, etc., in colors. W. J. JAMISON, 736 So. California Av., CHICAGO.

NEW JAMISON TROUT SPOON
Cut shows size 6.

Set of Four Colors, \$1.00. Made on 2, 4 and 6 hooks.

Our Expert Casting Line

Hard Braided of the Highest Grade of Silk. The strongest Line of its size in the World. Used by Mr. Decker in contest with Mr. Jamison. Nuf sed.

Every Line Warranted. 50-Yd. Spools, \$1.00.

THE MILAM "The Frankfort Kentucky Reel"

With a "Milam" Reel on your rod you have a sure, comfortable feeling when you strike the big fish. No danger of a break. You are master of the situation. Get one for this Spring.

B. C. MILAM & SON, Frankfort, Ky.

True Anglers Use

THE WILLIAMS BARBLESS HOOK

Because it is guaranteed to catch and hold better than a barbed hook, and you can remove the fish without injury. Yearlings, spawn, and their killing wastes thousands of eggs. Does this mean anything to you? It means ruin to a glorious sport. The Williams Barbless Hook is a scientific and practical lure, no mechanism, just its ingenious shape. Highest quality standard flies, \$1.60 per dozen, and bait hooks 25 cents. Postpaid.

LACEY Y. WILLIAMS, 46 Water Street, Oak Harbor, Ohio

FOR THE FISHERMAN

All the little fixings and extras are told about in our complete catalog. Special articles tell the angler how to choose each item of his outfit. This splendid 128-page book is more than a catalog; it is a valuable handbook for anglers. Send a postal today for a free copy.

A Fishing Trip to Lake Wenonah

By W. M. KEIL

PROBABLY nowhere in the Adirondacks today is there to be found a more perfect natural sportsmen's preserve than that section embracing Lake Wenonah, in Saratoga county, and the surrounding country. Far enough removed from the noise and hustle of town life, and off the beaten path of the summer boarder, it is still easily accessible by a pleasant drive of eleven miles from Northville, the terminus of the Fonda, Johnstown & Gloversville railway.

To anyone familiar with the Adirondacks from sections like Saranac, Tupper Lake or Big Moose, it is almost unbelievable that here at the very gateway of the North Woods stand properties as primitive and in many ways as virgin as when trodden by our forefathers before the Revolution.

Having occasion to be in that vicinity late last summer, I was invited by J. W. Olmstead to spend a few days at his camp, near Lake Wenonah, and incidentally to have a whack at some of the big speckled trout that lurk in countless numbers in this mountain spring. The drive from Mr. Olmstead's home in the busy little town of Northville took us something like three hours, as my host had several stops to make on the way—one place after apples, another for a jug of maple syrup and still another to leave some little delicacy for a sick friend. The road for the first few miles passes through what once must have been quite a thrifty farming community, but now for the most part abandoned and rapidly growing up with underbrush. At one of these old homesteads along the way live two elderly deaf and dumb ladies, and it seems to be a standing joke among many of the parties traveling up to the Olmstead camp to send the uninitiated in to ask some question, or to leave a message, for the old ladies' methods of communication are indeed wonderful to behold.

The drive I found to be a steady climb all the way, and where we left the main highway and turned into the private road, still a mile or so from camp, the elevation was about 1,800 feet. This is the real beginning of the Adirondacks, and is also the southeast boundary of the Adirondack forest preserve. Mr. Olmstead told me that no timber had been taken from his proper-

ties here for over twenty-two years, and then only the heavy spruce, so that with the hardwoods still standing and the effacement that twenty years' growth has made, it was no wonder that to me it seemed an untrodden wilderness.

Shortly after turning into the preserve, the roadway dips sharply down into a gorge, and here and there through the thick foliage I caught glimpses of Sand Creek, the outlet of Lake Wenonah, as it dashed madly over the boulders on its way to the Sacandaga. The Olmstead pre-

ping at the camp, and to Mrs. Lem, who was busily preparing the evening meal. After a good old fashioned appetizing supper, all hands adjourned to the piazza with their pipes. Mr. Judson I found to be a prince of entertainers with a seemingly inexhaustible fund of anecdotes and tales of Adirondack folk lore. Especially interesting were his stories of how, as a boy, he used to start from his home in Johnstown, carrying only his blanket, rifle, hooks and line and a few handfuls of salt, and stay for months alone in the big woods, traveling hundreds of miles, and depending entirely on his rifle, birch pole, and the wild fruits and berries of the woods for his subsistence.

As keeping late hours is not much of a success in this balsam-laden atmosphere, I was soon climbing the stairway to the second floor of the cabin, which is divided into four sleeping apartments, furnished with rustic furniture and the most comfortable beds imaginable. Scattered over the walls were pieces of birch bark upon which former occupants had scrawled original sayings, mottos, epigrams, etc. One I distinctly remember hung conspicuously near the head of my bed, and read something like this: "Laugh, and the world laughs with you; snore, and you sleep alone" but from remarks passed the next morning at breakfast, it was just possible that someone else should have occupied that room.

Although the morning did not appear favorable for either lake or stream fishing, we decided to try the lake, anyway, with flies first, and if with no success, to try trolling with small trout spoons. Hurriedly gathering our tackle together we took the trail leading to the lake, about 600 yards distant. Never shall I forget the impressive beauty of the scene as I caught my first glimpse of Wenonah Lake glistening through the narrow wooded aisle. In its forest-rimmed setting it lay like a mirror in the morning stillness. Not a ripple distorting the imaged reflection of the surrounding slopes. With the exception of the little boathouse at the outlet of the lake, the hand of man as yet had not marred the natural beauty of the shore line. Here and there old fallen and half submerged forest monarchs, glistening white in their nakedness, relieved the

LAKE WENONAH.

serve controls about two and one-half miles of this ideal trout stream, with its successions of quick foam-flecked rapids and deep, dark, mysterious pools, and it was with great difficulty that my companion restrained me from unpacking my fly-rod when I caught sight of it. The road from there on to the camp clings closely to this stream, and with its seductive voice still calling, we presently came out into a clearing of about twenty acres, containing the log cabin, barn, ice house and garden patch and looking for all the world like pictures I used to see in my history of a colonial homestead. All it lacked was a man with a rifle strapped over his back, plowing.

"Lem," the caretaker of the camp, met us at the stable and helped us lug our duffle over to the cabin, where I was introduced to a Mr. Judson and his guide, "Jerry," who were stop-

solid green of the overhanging bushes along the water's edge, while towering in the background old Camelback Mountain seemed to smile as he caught the glint of the rising sun coloring the jewel at his feet. I could begin to understand now why Mr. Olmstead, rather than detract from this sublime picture, had chosen his campsite so far from the lake, and in my enthusiasm at the enchanting view I stood many minutes in open-mouthed admiration, forgetting that my host was waiting in the boat, and that we were there for the fishing.

Slowly paddling along the shore we cast our flies for more than an hour without a rise. During this time not a fish had broken the surface of the water that we could see. Apparently they were not looking for flies or food on the surface, so taking off our small midges we rigged up with small double-bladed spoons, baiting one with a minnow and weighting them with split shot, tried trolling in the deeper water. Nothing doing. Not a nibble could we get all morning, although we tried every lure in our kits. I had noticed as we rowed along near the shore many runways where the deer came down to drink and nibble at the lily pads, and was told that this section was one of the best of hunting districts, both for deer and the smaller feathered game. And during the afternoon, while rambling through the woods, I saw plenty of evidence that an occasional bear still finds this a favorite abode.

The next day we tried the stream fishing, spending a delightful time clambering over its boulder-strewn course, and while not catching any record breakers, succeeded in tempting many a fair-sized specimen into taking our flies, and in return for their pluckily waged battles, to be liberated unharmed again to the water.

This stream is greatly augmented by the flow from a most remarkable spring that boils out of the mountain just above the camp. Throughout the most protracted dry weather its flow of 300 gallons of water per minute remains unchanged, while its temperature never varies but little from 40 degrees summer or winter. Where the brooklet from this spring enters Sand Creek, the owner has constructed several spawning races, and every fall many of the breeding trout from the larger brook ascend these raceways and deposit their eggs naturally. The spawners are later driven out of these brooders, and the outlet closed against further intrusion, so that each season sees several thousand little fellows hatch out and remain here until of a size sufficient to brave the larger waters of stream or lake.

Several more trials at fishing on the lake proved as unfruitful as the first morning's attempt, and Mr. Olmstead, I am sure, was beginning to think I doubted his statements that the lake really did contain fish. But on the evening preceding the day I was to leave, as we stepped out on the lake shore at the end of the trail, the entire surface of the water seemed alive with rising fish. As we hastily tumbled into the boat and pushed out, several silvery forms leaped clear of the water, falling back with a resounding slap, making our pulses bound, as with trembling fingers we looped on our flies. At my first cast a good sized fish half left the water in an attempt to take the dropper fly, and as he fell short, another took the trailer with a mighty swirl. A quick twist of the wrist, and I had him fast. Down he went into the depths, carry-

ing the tip of the pliant little rod into the water. Up he came again while I reeled furiously to take up the slack. As he leaped into the air I realized that I was fast to no fingerling, and that only careful handling would save this fish on such light tackle. Finally the strain of the rod began to tell on him, his surges grew less frequent, and he rolled on the surface, showing his crimson sides and belly. As I carefully reeled him in toward the boat I noticed several other trout trying to take the dropper fly. Another fish on that leader meant certain disaster, but with a deft dip of the landing net my companion lifted him safely into the boat, and I put down my rod to lovingly lift from the meshes of the net a two-pound speckled trout. The struggles incident to the landing of this fish, instead of frightening away the others seemed to excite their curiosity. Taking off the dropper fly, I cast again. Almost immediately several fish rose, and in their eagerness seemed to push each other out of the way, and I missed. Another cast, a strike, and this time I had him. A repetition of my former battle, and another two-pounder was lifted in, admired, carefully

unhooked and given his freedom. Some trout-ing, that! That evening there was no suspense of waiting for a rising fish, for as fast as we could cast our lines they rose, not only at the fly itself, but at the dropper loop, and the end of the line where it was fastened to the leader. And such trout! averaging over a pound each—plump, though splendidly proportioned; exquisite in their coloring, and carrying none of the earmarks of the incubation trough nor hatchery pool.

After about the twentieth fish had been landed and returned to the water—for we intended to kill none, unless an unusually large specimen—we decided that, as it was rapidly growing dark, it was time to stop, and though I would have liked to carry home with me one of the four or five-pounders that I certainly just missed hooking at different times, I was more than satisfied. And as we walked back to camp through the twilight I realized that such fishing comes but once in an angler's life time, and that probably never again would I be able to strike the trout in exactly the same voracious mood and fighting spirit.

Across the Plains in Early Days

By SAMUEL MANSFIELD STONE

(Continued from last week.)

DURING the afternoon following my fishing experience I galloped over a twenty-mile stretch of the most beautiful prairie I have ever seen. A gently rolling surface, from which the grass of the former year had been mowed or burned, was now covered with a thick carpet of green upon which thousands of the most beautiful floral patterns imaginable were spread by the hand of the master artist. It seemed almost a sacrilege to ride rough-shod over the gorgeous picture whose floral colorings made fragrant protest to the vandalism of my pony's hoofs.

I was never able to acquaint myself with the flora of the prairie as I would like to have done. Later in the season, however, I found that the so-called Michigan rose was indigenous to all of the high prairie country, and the pungent odor of attar of roses made heavy the atmosphere of early June. I also became familiar with that wonderful provision of nature, the compass plant, whose taper leaves always grow on the north and south sides of the stalk. Many a traveler has been guided to his destination by this unerring guide. I learned, too, of the medicinal qualities of other specimens of prairie vegetation. In the latter category may be included belladonna or deadly nightshade. One day, after a river bath, I extemporized an efficient towel of the small, thickly-growing vine which matted the river bank. Three days later I was covered with an eruption from the crown of my head to the soles of my feet, accompanied by an itching torment. I applied the home remedy for mercury and sumac poisoning, sugar of lead and copperas, but to no purpose. By this time I was a spectacle. In this condition I halted one night at a cabin in the Neosha Valley. The woman of the house, a motherly old creature, no sooner saw me than she exclaimed:

"I see I've jest got to get after ye with some

cremanightshade, er ycr friends won't know yer dead corpse when yer sent hum."

The suggestion sent a shiver through me, and I was more than willing to place myself under any treatment that would avert the implied catastrophe.

My self-constituted physician hurried out upon the prairie, quickly returning with an apron full of stocky green plants covered with half-opened yellow flowers. These she macerated in an old mortar, adding a quantity of cream, and giving me the mixture, said:

"Yew git up the ladder, peel off an' eynt yer-self from one end to 'tother, an' then go to bed."

The relief that followed the application of the ointment is beyond the power of words to express. I was able, too, for the first time in several days to go to sleep. On awakening the following morning, to my intense gratification I found that the pustules had disappeared, the irritation was gone and I was, in fact, cured.

Late one afternoon there loomed up against the western horizon a hazy, blue peak, surmounted by a pile of imposing-looking buildings. This proved to be Mt. Oread, and the buildings those of the Kansas University. The institution was at that time located about a mile out of the city of Lawrence. Just at dusk I entered the city, and there occurred to me an incident which, though very startling at the time, proved of very great service to me in my subsequent travels. The Kaw River at what then was the foot of Massachusetts street, was very broad and not over three feet deep. To give my pony a drink and a chance to wash the mud from his legs, I ignored the bridge, riding into the water just above the structure. Skeezik had just put down his head to quench his thirst, when several pedestrians on the bridge set up a shout, which was taken up and reiterated by others who came

running to learn the cause of the outcry. To my astonishment and bewilderment the eyes of the frantic, gesticulating crowd were centered upon me, and I began to look myself over in search of the cause of such a remarkable demonstration. Just then Skeezik raised his head with a snort and began to tremble and to struggle violently without, however, making any headway. My bewilderment was increasing when in the jargon of the shouting multitude I distinguished the word, "quicksand." Then the situation was clear. In my ignorance I had ridden into danger, failing to notice the warning sign posted on the river's brink. I knew that I was in no personal danger, but the thought that my heedlessness had placed the pony in such a dire predicament aroused my keenest sympathies for the poor brute. With help I got the pony out, but it was not till after many futile attempts that I could force the animal into a stream again.

I spent half a day in the city, then learning of a very curious natural feature in the township of Waukarusa, I saddled up Skeezik and galloped southward. The curiosity in question was a pyramidal mound, some three hundred feet in height, and upward of an eighth of a mile in circumference at the base. Standing alone as it did upon a gently undulating prairie, this mound appealed forcibly to my imagination as I rode slowly around it in the dusk of a mild spring evening. I had refrained from questioning those who told me of the mound's existence as to existing theories of its origin, preferring to form my own, unbiased opinion. But on standing face to face with this strange formation I found intelligent theorizing impossible. Determining to inspect the mound in detail on the morrow, I cast about me for shelter for the night. This I soon found in a snug little cabin in a wild plum grove forty rods from the base of the mound. Here lived S. B. Smith, a one-time Connecticut man who had emigrated to Kansas in the early fifties. I sat till a late hour that night listening to experiences with Quantrell, border ruffianism, John Brown raids, etc., through which my host had passed. In the morning on my declaring my intention to make a thorough inspection of Blue Mound, Smith expressed a wish to accompany me, with which I gladly acquiesced. Armed with a bag, a hammer and a spade, the purpose of which I could not divine, my host and guide took me to the western slope of the mound, whence a comparatively easy ascent could be made.

That wonderful pile, which puzzled me the previous night, proved absolutely astounding when viewed in the broad light of day at close range. That the mound was not the result of some natural phenomenon was forcibly apparent. It was no less the work of human hands than the Egyptian pyramids. It was constructed of huge bricks which were evidently made from the contiguous soil. Smith dug through the thick prairie turf and threw out several spadefuls of the clayey loam underneath. He then called my attention to the presence of numberless small shells with which the loam was intermingled. With his hammer he broke off a large fragment from one of the bricks in which the same sort of shells were plainly visible. The inference was conclusive. Smith explained that bricks made from the soil of that region would quickly harden in the sun to a firmness consist-

ent with endurance, and declared that the mound material had no doubt been procured in this manner.

This mound had evidently been originally constructed in pyramidal form, though the action of wind and rain through countless years had worn away the angles, giving the pile a circular appearance. It was built up in regular terraces, each of a width to make driving a pair of horses and a vehicle on their surfaces possible. These terraces were about six feet in height, but the accumulations at their bases made it possible to clamber from one to another, and we soon stood on the summit of the mound, a clear but uneven space sixty feet in width.

"Isn't this worth fighting and suffering for?" said my companion, comprehending the vast ex-

Sitting there, overlooking a fifty-mile expanse of green, flower-embowered prairie, dotted here and there with settlers' cabins, Smith related numerous tales of adventure during the strenuous days before the war. They were intensely interesting to me, but without the setting and the circumstances the pictures would seem tame and commonplace.

Smith's theory of the mound was that it had been built to serve some such purpose as that to which the latter day citizens had put it. Deep excavations had failed to discover aught but solid wall, though in similar mounds in the southern part of the State, large chambers had been found which bore evidence of having been used for burial places, he said. Subsequently I saw these other mounds, about twenty in num-

A WESTERN SCENE TO-DAY—BAND OF DOMESTICATED ELK ON A RANCH.

panse of beautiful landscape, bathed in dew and sparkling in the morning sunlight. "Many a time when heart sick and well-nigh discouraged," he continued, "have I clambered to this spot, viewed the picture which you see spread at our feet, and gained fresh courage and strength."

He called my attention to a stump which stood on the extreme pinnacle and told me it was the remains of a tall signal pole erected during the border ruffian days. A guard was stationed on top of the mound both day and night to warn the neighboring settlers of any suspicious occurrence, such as a body of men or swift-riding horsemen appearing on the Missouriward horizon. For one of the bushwhackers' favorite pastimes was to run over the line, twenty miles away on the Missouri border, swoop down and kill as many settlers as possible and run off their horses and cattle. To warn the people against these raids, the watcher on the mound would display a flag in the day and a lantern at night.

ber, ranged at regular intervals of about a mile on the great plain contiguous to the Indian Nation. The silent monuments to some long-extinct race filled me with a sense of solemnity which I was unable to account for. To think that some other race of men would possibly speculate upon the evidences of our own existence was not altogether a pleasant pastime, yet the thoughts would occur.

I again turned my pony's head westward, being anxious to reach Emporia as soon as possible, having directed most of my traps and accoutrements forwarded to that place. Just as I emerged from the timber which skirted the banks of Waukarusa Creek I was well-nigh overwhelmed by a shower of the most ingeniously worded billingsgate that it was my fate ever to have come in contact with.

Emerging from the thicket I beheld a string of mules, a dozen pairs at least, attached to a breaker plow. Guiding the plow, or trying to, was a typical Western citizen. The mules pur-

sued the even tenor of their furrowed way with wagging heads and switching tails, keeping time to their measured steps. At intervals the man would rip out another edition of billingsgate embellished with now and then an extra tough word on the side. Vainly I looked for some troublesome idiosyncrasy on the part of the mules or something that could in a measure at least afford a pretext for such vigorous maledictions. Finally I concluded that swearing was to this man what whistling or hymn singing was to others. Fetching his team to a standstill as I approached, the plowman scrutinized me closely. "If yer name ain't ——," he finally inquired, "what is it?" Then, half apologetically: "Ye've certainly got a —— face if thar ever wuz one."

A moment's conversation revealed to me that this talented blasphemer was a son of one of my father's brothers, the latter having removed to the West in the early days. Till that time, however, neither of us was aware of the other's existence.

The muleteers were given charge of the team and my newly-found cousin invited me to a snug cabin built into the sheltered side of a big hummock. It took the remainder of the day to satisfy his inquiries concerning the East, which he had never seen and of whose ways and customs he was in ignorance. He had cut loose from home at a very early age and had made his own unaided way in life until at that time he owned a vast tract of excellent prairie land and large flocks and herds. In the course of conversation I ventured to touch, delicately as possible, upon his remarkable attainments as a swearer. He was unfeignedly surprised and declared that he had no use for a profane man. He had traveled for some years, he said, on the Mississippi River boats and often when preoccupied he found himself rehearsing the expletive code of the roustabout foremen. While it was difficult to classify those sulphurous utterances which greeted my arrival with the "dead languages," having no present force or significance, still I fain would do it, since discovering the social status of their declaimer. At all events the language was no part of the individual, for I found my cousin to be one of the mildest mannered men imaginable.

I remained over night and had hard work to tear myself away from his urgent entreaties to remain and "make a visit." But I was anxious to equip myself and get among the soul-stirring elements somewhere beyond. To my cousin's interrogatories I replied that I was on a tour of the ranches in the interests of a Kansas City journal, which was part of the truth. An incident occurred while I was making ready to depart which, though painful, was, I believe, fraught with salutary results to Skeeziik. The animal had from the very first an unpleasant habit of running backward when I attempted to adjust the headstall. The present occasion was no exception, save that his route was for him unfortunately chosen. A lye leach lay in his track, and hitting his heels against its foundation, Skeeziik literally sat down in a puddle of crude lye. The alkali promptly took the hair off and burned into the exposed flesh. With a snort of terror, Skeeziik let his heels fly and the lye leach soared skyward, while concentrated potash was showered around indiscriminately. Skeeziik was either too much frightened or too

(Continued on page 452.)

The Sunk Lands

By WILLIAM PERRY BROWN

TO read many of the current periodicals nowadays, one might think that to reach the wilderness one must go to Canada or Alaska, or somewhere else in that vague north-land stretching from the Pacific to Hudson's Bay, having a southerly beginning somewhere north of Lake Superior, with an easterly shoot into Labrador. There is wilderness there in almost any direction, and climate, too. Climate mostly hovering about freezing point and far below, with snow and ice. But it is equally true to those who know that some of our older States have wilderness enough to satisfy even the crudest nature lover, if one will go where it is. Wilderness also, where ice and snow claim but a minimum of climatic monopoly during the legitimate winter months; where, in fact, reciprocity, if not free trade, rules the general weather market, so as to suit all tastes, if one will either stay there long enough, or go there at a time when one's special brand of weather may be expected to come uppermost.

Yes, sir. There are large areas outside of the Adirondacks where the noise of dogs, the crack of guns, the swish of the angler's line, and the chance of getting lost are more potent than the surveyor's level, the steam whistle, or even the farmer's plow. Areas that are so near to many over-crowded cities, that one wonders why the teeming street crowds are not spilled far more generously into these wilderness oases.

There is still, among other such spots, a large district in Northeast Arkansas and Southeast Missouri, to which the term wilderness can be broadly applied. It is generally known as the sunk lands of the St. Francis, and lays across the Mississippi River from the more famous Reelfoot Lake region. Marsh, swamp land, lake, forest, running stream dominate it, while the St. Francis River, flowing south through a vast lowland region, makes it easily penetrable by boat or canoe.

Memphis is hardly three score miles to the south, while St. Louis to the north is within three or four hours by rail. Sundry railroads tap the borders of this region; Little Rock, Springfield and Cairo, all considerable cities, lie within easy contiguity. To many it will seem hardly credible that deer, bears, turkeys, wildcats, 'coons, ducks in thousands, should permanently abide there, apparently safe from extinction, although thick settled farming and lumbering regions abound upon all sides, and the Mississippi's banks are thickly dotted with towns and villages.

One noted railroad flag station, called Hachie Coon, lies almost in the heart of this district. Here the lowlands and the numerous lakes spread out into great primeval stretches of swamp, woodland and marsh, comprising millions of acres of land and water, where the usual adjuncts of civilization are almost wholly wanting. Solitude is here, and great forests as dense and labyrinthine as the trackless areas in East Africa. If the nature of the game to be had here is more in accord with our native preconceptions of what wild game ought to be, it is just as satisfactory to hunt it in a sportsman-

like way as to join in the tumultuous doings that seem to characterize an African lion and elephant hunt where scores of natives are employed.

This Arkansas and Missouri region includes a belt from twenty-five to fifty miles wide and over a hundred long, where one may travel miles without seeing signs of human occupancy. Unless you are a born woodsman, you may well wish the settlements were closer together if your compass is faulty, the weather foggy, or you have become too much "turned round." At long intervals the hut of some lonely trapper—on the main streams—the batteau of the pearl mussel hunter, or, during the open season, the camp of a hunting party, may gladden your eyes.

Roaming this forest is no child's play, even if one understands woodcraft sufficiently to keep from being lost. The undergrowth is dense over large areas; ferns, vines, briars, all sorts of oak, chinquapin and other scrub, fallen logs, tussocks with the continual intervening of sinuous swamp land strips, often with a lake or pond as the center, together with much bog and marsh along the edges; in fact, the coverts are so ample that game, driven out elsewhere, finds there a natural refuge roaming at will over large areas where it is less disturbed. When too closely pursued by dogs and hunters, the game flees hither, thither, about the watery wilderness where scent is so easily lost and concealment is everywhere at hand.

Too much water at times of the great floods has, in fact, destroyed more game in the sunk lands than all the hunters. Every few years the Mississippi rises higher than usual and goes rioting through this section in a way that completely submerges many of the "islands" where ordinarily the game finds refuge. Not many years ago a great overflow covered the whole St. Francis basin, forming an inland sea fifty miles wide in places. It buried all the ordinarily high places. Hundreds of deer, trying to swim in this beforrested sea, were entangled in drifts or vines and fallen tree-tops. Others, reaching the high railroads along Crowley's Ridge on the west, were slaughtered by negro and other pot-hunters; in fact, by every one but the sportsmen who opposed so far as was possible this wanton and cruel destruction. The following fall but few deer could be found throughout this wide area, though ducks, squirrels, turkeys and even bears were as numerous as ever. Tree climbing and flying game had utilized their natural aids for self preservation. Several years of comparatively dry seasons enabled the deer to multiply rapidly, as they always do, where letting up in slaughter conspires with nature to encourage the growth of wild creatures.

Of late years more stringent game regulations penalizing the shipment of game from the States where it is killed show results that are encouraging. The great bottoms of the St. Francis are becoming more widely known as one of the finest deer, bear and turkey sections in the middle West. Also Uncle Sam has been doing good work, and now a long levee extends more or

Game in New Brunswick.

IN his annual report, James K. Flemming, surveyor-general of New Brunswick, has this to say of the conditions affecting game there:

The past game season was an ideal one for sportsmen. The weather conditions were all that could be desired, especially during the month of October. So far as can be learned from guides and sportsmen returning from the hunt, there was no lack of game and as a result very few returned from the chase unsuccessful, although there are always some who would sooner return empty handed than take a head that did not come up to their idea of size.

There are perhaps more possibilities in the game of our Province than in almost any other of our natural resources, and the Department has been alive in bringing to the notice of non-residents where they may find a sportsman's paradise. The Guides' Association was encouraged by a grant to hold their annual show in Madison Square Garden at New York, and there is no doubt that exhibitions of this kind, where experienced guides can give information at first hand, result in numbers coming to this Province.

No change was made in the game laws with regard to the opening and closing of the season or as to the number and kinds of game to be taken, although representations were made that the season be shortened by fifteen days and that cow moose might be legally killed. At the guides' annual dinner held in Fredericton, which the surveyor-general attended, it was brought out by every game guide in attendance that all kinds of game was more plentiful than ever, and it was the consensus of opinion that this happy result was in a large measure brought about by the efficient protection we are giving to the game of this Province. As an instance I may mention that a few years ago no moose existed in the southern part of New Brunswick, while to-day big heads are found and the game is very abundant. Then again it has been stated that certain localities were being shot out and that if means were not taken to diminish the shooting, the end was in sight as far as game was concerned. It is curious to note, however, that more game was seen in these localities than ever before. One of these districts, it may be mentioned, is Cain's River, and we have the testimony of four sportsmen from Dayton, Ohio, who brought out four moose (one having a spread of sixty-two inches) and seven deer, that they saw upward of fifty moose during their trip, which is certainly conclusive evidence that the game is not on the decrease. During the coming year it will be our ambition to preserve the game in a more efficient manner, if that is possible, than ever before in order that the Province may become more attractive to sportsmen who spend their money freely and which is circulated among a class of people who are instrumental in the building up of our country. While the returns from the game receipts are not equal to last year, it must be borne in mind that some large remittances were not received until after the fiscal year was closed.

In the reports of wardens it is shown that in Northumberland county 456 moose, 218 caribou and 576 deer were killed in season. This is in warden district 1, while in district 2, 1,233 animals were taken out, of which Westmoreland county furnished 355. District 3 shipped 540 moose, nearly half of them from Queens county, and district 4 shipped 309 moose, one-third of them from Victoria county.

Wardens report that four non-residents got four nice heads at Big Forks, Salmon River, Kent county, 48, 59, 54, 56 inches respectively. Tom Lampkey got a head at Salmon River, Kent county, 60 inches; Mrs. S. M. Dunn one of 50 inches. Melvin Dunn got a white deer with black ears.

Frank Jonah got a head on Oct. 2 with a spread of 64 inches, 13 points on each pan. On Nov. 18, Ransford Lirette, of Calhoun's Mills, Westmorland county, shot a deer weighing 360 pounds.

Jos. Muzerall, of Point Sapin, captured a head at Laketon, Kent county, on Nov. 30, with a spread of over sixty-three inches.

J. Darius Rodgers, of Fredericton Road, shot a leopard-spotted deer in November. A number of white (albino) deer have been shot near Harcourt.

Wardens Goodwin and Seaman recommend that all guns be licensed at \$2, as a great many hunters carry smooth-bore guns to avoid paying license and under pretense of partridge shooting carry ball cartridges as well as small shot.

Elk to Oregon.

LAST February a number of elk were brought from Jackson's Hole, Wyo., to St. Anthony, Idaho, and there delivered to W. L. Finley, State game warden of Oregon, and his chief deputy, C. J. Craig, to be turned out in a portion of one of the forest reserves in Oregon.

The elk were transported from Jackson's Hole, Wyo., in crates built on sleds, which were hauled over the snow to St. Anthony. Heavy snows interfered with their transportation across the Teton Pass, and the first twenty-eight miles of the journey occupied four days. Three elk were lost in the pass, but twenty-two came through in good shape. After being allowed to rest for a day, those chosen were started for Oregon in charge of Messrs. Finley and Craig.

From these elk, and a few others previously brought there, Mr. Finley selected fifteen of the best for transportation to his State. These are to be turned out in a fenced pasture and used as a breeding herd from which to secure elk to restock other portions of the State.

Long ago Oregon was full of elk, but like the rest of the country it has been swept bare of the herds that once inhabited it. The people of Oregon are greatly interested in this reintroduction of elk into the State, and public opinion there should be a great force in protecting these animals from the lawless and selfish people of whom some are found in every community, and who for their own selfish pleasure would be likely to slaughter these animals.

less along the west bank of the river, screening the vast bottoms from the more disastrous overflows.

As a game preserve right in our midst these sunk lands rank high, like the Yazoo canebrakes in Mississippi, the great swamps of Florida and along the coast lands of the Carolinas and Virginia. Its bass and other fishing is also of the highest order. The many small lakes and basins are akin to the better known Reelfoot region. From Marked Tree, Ark., to somewhere near New Madrid, Mo., a distance of over a hundred miles, there extends a network of lakes, bayous and small interconnecting streams which form an area that is naturally a freshwater fish supply region.

Many years ago, when I lived in St. Louis, we made trips to this section, and while we found the main rivers, like the St. Francis, not extra good for fishing, the many lakes, ponds and smaller streams afforded such sport that the memory of it is still vivid. Old settlers in this section, as do others across the great river near Reelfoot, tell of a time when their grandparents, then inhabiting a sparsely settled territory, saw the Mississippi flow up stream for quite a distance, owing to a great seismic disturbance that occurred here early in the last century. It resulted not only in making Reelfoot Lake, but in forming these sunk lands, creating innumerable small lakes, lagoons and bayous; a region largely unsuitable for agriculture, but quite the thing in the way of a great natural fish and game preserve.

As the country grows and the towns and cities enlarge, and the farms and plantations around it increase, one cannot but feel grateful that nature has planted right in our populous midst such a region as this. While sportsmen entering or leaving these grounds do so by rail, those who make longer stays usually take to the canoe or the motor boat. Any settler down there can go into the swamps, pick out a likely cypress, juniper or other suitable wood, and with saw, axe, adze, broadaxe and cross-cut saw, fashion a dugout of the size he prefers. It may be suitable for one or two or a dozen men. Once completed, the frequent rains will enable him to skid or float his canoe into suitable water, when—there you are! With a home-made paddle or two, he is equipped to go anywhere within three score miles in almost any direction at an hour's notice. He can hunt, trap, fish, gather ginseng, golden seal or other wild medicinal roots and plants and act as guide to the sportsmen from big towns. He can live like Crusoe, hermit-like and alone; or he can have as much company as he likes. When the outer world calls him he can jump on a train, and almost before he knows it be there. If he is wise he will take along a goodly store of pelts, roots, pearls and the like. Of late large tracts of this area have been secured by non-resident sportsmen. Club houses are erected. While these hunters spend much money here and there, it is of record that in more than a few instances they have run counter to the game laws. It is likely, however, that with the present growth of the public conservation spirit all over the land, each State interested in this sunk land problem will further cinch its hold, and secure to the people at large the public preservation of this great natural preserve so nearly in the center of our great population.

Game Preserves

By HENRY CHASE

IN my former letter I attempted to treat the subject of private game preserves in America as a serious issue. I said they were false institutions in this country, but that, unless sportsmen awake to the necessity of conserving the supply of game we now possess, circumstances may cause the establishment of preserves in large numbers and bring about the European system of protection in which hunting is a privilege reserved almost wholly to the wealthy class and pursued upon private preserves. Now, in this discussion, let it be understood that by private game preserves we do not include land used by game breeders as such, nor deer and other animal farms, nor such bird refuges as the one mentioned in *FOREST AND STREAM* recently, located near Detroit, for all these are of more or less public benefit. What is here referred to are those great tracts of wild land owned by wealthy people and provided for their personal and private enjoyment of hunting to the exclusion of the public—a purely selfish institution, and not conceived with any intent to benefit the public nor to aid the cause of general game preservation.

Herein I desire to direct attention to the legal position of the private preserve in reference to the game found thereon belonging to the State—the birds and quadrupeds from without the preserve which fly or wander into and find refuge in it. We will concede that where a private preserve is completely stocked by its owner with game legally acquired by him by purchase or otherwise, and as long as such game is confined upon his premises, it constitutes private property and the owner has an indefeasible title to it. But even if this game escapes its confines, leaves the preserve and returns to its natural liberty, it becomes the property of the State. And certainly the preserve owner's title to game which wanders back and forth at will from land surrounding the estate cannot be much superior to that of any other citizen. It is true he has what is known at common law as a *profit à prendre* in his land for the purpose of hunting and fishing thereon, and this is a valuable right in its way between individuals, but it does not affect the State's sovereign rights.

This brings up the most important and difficult problem in reference to game which the courts of this country have been called upon to solve, and that is, the exact nature and extent of the title to game possessed by the State and the purpose for which that title is held by it. Suffice it to say, the courts have held conflicting opinions upon the subject, but we are content to pin our faith to the views expressed by Chief Justice White of the United States Supreme Court in the case of *Geer vs. Connecticut*. In that case this great jurist, by one stroke of his pen, did more to advance the cause of game protection in America than all other agencies combined. It is singular that he is seldom mentioned in this role, when the fact is, every true sportsman in the United States should doff his hat to our worthy chief

justice. And when the sportsmen fully appreciate what he did, they will do so.

The justice took up the subject of the ownership of game and fish from the earliest times known to the laws of civilized countries. He traced it through the Grecian, Roman and Salic laws, and gave extracts from the Code Napoleon, which he said summed up an unbroken line of law and precedent, as follows: "There are things which belong to no one, and the use of which is common to all. Police regulations direct the manner in which they may be enjoyed." He showed conclusively that all the property of which game in its wild condition is capable of bearing lies in the State for the benefit of its people in common. This decision gave a new impetus to the States to go forward with a free hand and protect their game.

Let us proceed to analyze the subject upon the theory of the law in this country that the wild game of a State belongs to the people thereof in their collective sovereign capacity, and that the individual can acquire only such a qualified or transient property therein as the State elects to give him, and that this property which the State gives is common to all its citizens alike. There is, and necessarily must be, an equality of opportunity to all during the lawful open season to capture game. In the meantime, let us keep in view the right of landowners in this connection. No one has a right to trespass on private property in the pursuit of game. The landowner, therefore, simply has a superior right to game found upon his premises by virtue of his right to forbid trespassing upon his land. Nevertheless, in the absence of statutes to the contrary, he is subject to the same regulations protecting game as every other citizen. In actual practice, without the privilege of pursuing game, of course, the public's right of hunting becomes nugatory, for, as a matter of fact, if the law were strictly observed, there would be scarcely no ground upon which the public would be free to hunt. Outside of the National forest reserves and a few State parks, almost every foot of game land in the United States is held in private ownership. Ordinarily, then, on most occasions when any of us go for a hunt we commit actionable trespass and are liable for nominal damages. Here, indeed, appears a singular inconsistency and conflict of laws which amounts to this: Whereas, the general ownership of game within a State is in its people, yet as individual property owners may forbid hunting and pursuing game, such ownership is of no practical value to the people, and is merely an empty-sounding word.

We know, however, this is not true in fact, for a great majority of landowners—especially those possessing large tracts of wild land—recognizing the rights of the people, are quite willing that the public should hunt over their property. To sum up, then, the legal status of private game preserves resolves itself into this: Their owners acquire their right of exclusiveness to the game upon their lands principally through their proprietary right to forbid tres-

passing upon their real property. The game is owned in common, but when it finds refuge on a private preserve the public is forbidden to pursue it any further. Yet the preserve owner may do so.

In quite a number of States of late years the public has evidently been considering this palpably unjust state of affairs and figuring upon plans to correct it. The landowner's right of property is admitted and cannot be attacked by direct hostile legislation, for it is safeguarded by the State and Federal constitutions. But the public, seeing that it is being deprived of its rights by indirection and conflict of laws, has discovered that it can protect itself and retaliate by indirect legislation. To this end statutes have been enacted which are aimed solely at the preserve owner and so restrict his hunting privilege as to make it worthless to him as a means of recreation and enjoyment, and he finds himself a marked man in the community.

It remains to be said that the true remedy for guarding the public's right of hunting and preserving game lies in a different method. As the game grows scarcer the incentive for wealthy sportsmen to provide private preserves for their own enjoyment grows stronger. Each new preserve limits and restricts the rights of the public by narrowing the area of public hunting grounds, and attracts the game away from same. So that, although the process may be slow, yet it seems inevitable that in course of time nearly all of the game left will be found upon private preserves and the public excluded from hunting it. Taken in time the remedy for this undesirable condition is neither radical nor difficult. In most of the States the hunter's license is in vogue, and large sums are thus collected from the sportsmen annually. Why not set aside a certain proportion of these funds each year and invest it in State refuges and propagation farms? Land, unfit for agricultural purposes but excellent for game covers, can be purchased very cheaply. And by this process it would be only a matter of time that all waste land in each State would be owned by the public in perpetuity. In the meantime, if the State came into the market as a purchaser and discovered that the preserve owners had got possession of all the most available game land and refused to sell it, by the law of eminent domain and condemnation proceedings, the State can force them to do so for the public good, by making due compensation for their loss. If this plan were pursued it would have a two-fold beneficial effect. First, it would insure the sportsmen their right of hunting on good game ground and increase their interest in protection. Second, the authorities could provide better means of protecting the game on State lands than upon private property, as is now the case.

It can hardly be doubted that unless the sportsmen are soon aroused to the necessity of game protection, the above plan will have to be adopted, or else the right of free hunting in America will be only a memory; all of the game will be found upon private preserves and the European method of game protection will finally establish itself in a land that has long boasted of its free institutions. The plan above is not a new one, nor is it applying the radical principles of State socialism to the game interests.

The Roosevelt Bill.

PORT RICHMOND, Staten Island, N. Y., March 30.—*Editor Forest and Stream:* The inclosed letter from Senator Roosevelt, the chairman in the Senate of forest, fish and game, will be interesting reading to every man in our State who is at all interested in the important question of how best to effect the protection and conservation of our fast diminishing numbers of fish and game:

I beg to acknowledge your letter of March 12 in regard to the open season for hares and rabbits. I fear very much that your association does not understand the new fish and game bill. Under the bill, it is provided for in a simple manner that the Conservation Commission may, on the petition of one person, close or otherwise regulate the open season in any locality in part or in whole.

Under the new bill all that is necessary is for the Richmond County Field Trial Association, or one of its members, to petition the Conservation Commission to restore the season on hares and rabbits in Richmond county to what it was before. I have absolutely no doubt that the Conservation Commission will make the regulation.

You say in your letter that if the general law in force throughout the State allowing the killing of rabbits beginning Oct. 1, becomes effective in Richmond county it will result in the annihilation of practically the only game animal in the county. I wish to assure you that if the general law allowing the killing of rabbits beginning Oct. 1, becomes effective in Richmond county it will be solely the fault of the residents of Richmond county:

As I have said before, there is no wish on the part of the Legislature or of the Conservation Commission to change your present law. We are simply trying to do, by a rule of the Conservation Commission, what formerly was done by an act of the Legislature. There are a good many animals and a good many counties in this State, and to have separate acts of the Legislature year after year for each of these animals and each of these counties, has created an intolerable situation that must be remedied.

Let me call particular attention to that part of Senator Roosevelt's letter which states that "under the bill it is provided for in a simple manner that the Conservation Commission may, on the petition of one person, close or otherwise regulate the open season in any locality in whole or in part."

It is hardly possible that any such provision is constitutional. The Legislature always had power to delegate to local boards the power to make such reasonable police and other regulations as were necessary for the conduct of the affairs of the localities and political subdivisions thus empowered. For instance, boards of supervisors in the matter of fish and game protection could make seasons for game and fish which restricted the seasons fixed by the Legislature, but such boards could never lawfully extend the seasons defined by the Legislature. If Senator Roosevelt has correctly stated the intent of the new bill, it will lie within the power of the Conservation Commission to dictate open and closed seasons in any or all of the counties of the State without regard for the acts of the Legislature. Such exercise of power in that artificial body is against the principles of representation which lie at the root of our Government.

That the Legislature cannot so divide its responsibility of enacting laws seems to be declared by the ease of people versus action reported in forty-eight of Barbour (N. Y.) in the following language of the opinion of Justice Ingraham: "* * * The Legislature cannot confer the power to discharge duties and make regulations and pass laws relating thereto upon

State officers no matter how appointed, whether by the Governor and Senate or by the Legislature; and * * * could not vest officers appointed under authority of the State with the performance of such duties."

So much for the legal aspect of the matters referred to in the Senator's letter. Senator Roosevelt complains that the demands of the separate counties for separate acts of the Legislature to meet the needs of each county creates an "intolerable situation." So far as Richmond is concerned, his complaint is without foundation. For years the open season for rabbits and hares in our county was from Nov. 1 to Dec. 31.

Such a season is reasonable, but for the past five or six years our sportsmen have been waging constant warfare against the attempts of the Legislature to extend our season, and indeed this year we have been defeated in our efforts for game protection in this particular regard, for the Legislature against our repeated petitions to both Senator Bayne and Senator Roosevelt has put us in the general section relating to hares and rabbits, and it will be lawful to shoot that sort of game in this county on Oct. 1.

At that time we have hundreds of young rabbits not able to run before a dog, and perhaps not even separated from the parents. Of course their slaughter is easy. We petitioned also for a restriction against snow hunting, which met with no more recognition than our first request.

Strange as it may seem then, in view of the declared policy of the Conservation Commission to protect and conserve our game, we, in Richmond, have for years been upon the defensive against legislation which could not be more surely aimed at the annihilation of our only remaining game animal.

A uniform law for the State will relieve the legislators from a lot of tiresome work, but that such a law is best for game interests is undoubtedly far from the truth.

Differences in temperature and general conditions of food and shelter induced by climate and environment vary so much between the northern and southern counties of our State that open seasons should be regulated accordingly, and it seems too bad that the only reason alleged against the passage of equitable laws should be that the labor involved is too great.

EDWARD SIDNEY RAWSON.

A New Game Farm.

SAN FRANCISCO, Cal., March 26.—*Editor Forest and Stream:* Fish and Game Commissioner F. M. Newbert, who is now in charge of the new branch office at Sacramento, is greatly interested in the new game farm that is being established at Folsom. In response to an inquiry as to what is being done at the new farm and what the plans are, Mr. Newbert has replied as follows:

"The commission has undertaken a new idea regarding game propagation. We have obtained from the prison directors of the State a lease of twenty-five acres that adjoins the prison walls. It is the most ideal spot for a game farm. One might travel the world over and not find a place its equal, because it is located in the center of California where the sun shines three hundred and twenty-five days in the year, and where flowers are always in bloom.

"The farm will cover some of the round hills

in a district where the lemon trees bear twelve months in the year, and where the earliest oranges are raised. These hills are asleep in sunshine almost the whole year, and they overlook the American River, one of our most beautiful streams.

"No wonder that this spot at the present time is favored with the presence of more than 1,000 of the king of game birds, our blue valley quail. We surely have the right to crown him king, for out of doors there does not live a bird that can make an experienced sportsman look so much like a novice at any time. He is game to the core, and will always find the one chance in a hundred to escape. An expert on bobwhite is a beginner when hunting the blue valley quail in Northern California. I have had the pleasure of experiencing the gameness of this grand little bird. After my dog had retrieved a winged one, and at the command to let go, the bird slipped from my hand, and running with the speed of a man, gained the brush and disappeared down a squirrel hole, lost forever. You count a blue valley quail when he is in the coat, and do not forget to note that his life struggles are over, or the count may be one less when you arrive home, for he is game to the last.

"This is the grand little fellow that the commission is going to try and save for the people of our State. He will remain close to habitations, but at the first crack of the gun he is off, and it takes a keen eye and an experienced dog for a sportsman to return with a few in his coat.

"The Folsom prison affords many advantages besides being the natural home of the bird. There are on the grounds several acres of vineyards, some olive and fig trees, and best of all their home—large rocks with small oaks growing all around. We will also have the advantage of a large reservoir which will irrigate every inch of the twenty-five acres. Two searchlights play over the grounds all night long, and it will be impossible for any predatory animal to come upon the tract. In other words, the farm is absolutely protected from all chances of losses by 'coons or other varmints, or two-legged skunks.

"We believe that placing the farm at Folsom prison is the first step toward prison reform. After teaching this little fellow to eat from his hand, no living man can help but love and admire him, and to improve any character you must first instill a loving spirit and the power of right thinking. If any warden can get a prisoner to think of his home and mother, the battle is half won, and he will begin to think that life is worth living after all. At the prison there are hundreds of men who would consider it an honor to help make our farm a success. Cleanliness is the key to success in poultry raising, and at the prison we will have the help necessary at all times, thereby saving the State many thousands of dollars, and giving the poor devil that misfortunes of life have overtaken and stopped a career that might have been successful, a chance to improve his mind and body.

"Warden W. H. Reilly, who is an ardent sportsman and greatly interested in this movement, with the assistance of our superintendent, will in a short time be able to announce that California is the possessor of one of the greatest propagation farms in the United States."

GOLDEN GATE.

An Efficient Warden.

ST. LOUIS COUNTY, Minn., March 25.—*Editor Forest and Stream:* Perhaps a little news from Northern Minnesota with reference to the wilful slaughter of big game may interest some of your readers, particularly those who count on an outing each year, not merely for the privilege of the kill, but for the manly sport and the benefit derived from the exercise necessary in the shooting and the packing of the game after it has been bagged.

For many years before the last season, the attempt at preventing the needless killing of big game in this district has been a farce. Politics has dominated the appointment of most of the game wardens, and the salaries in the shape of fees or commissions, were not commensurate, for many reasons, one being, if a game warden was about to pull over some big fellow, he would be called off for cause. But at last a game warden has been appointed that is not afraid, and with whom politics does not interfere. He has done more to halt the pot-hunting and hunting for profit in this region than all the game wardens since I have been located in this county, about twenty years.

I love the sport and am pleased to see one warden guarding it without fear or favor. Many are trying to injure him by plotting and scheming to get him out of the way, but he moves right along attending to business, and there is no way that he can be incriminated.

Most of the wardens are long on platitudes and short on performances. If anything is needed in this neck-o'-th'-woods, it is a man that can make good with performances. A square deal is needed for the warden who is trying to preserve the game and fish. Nothing causes so much disregard for the law as weak-kneed enforcement and to know that a law is being violated with impunity by some, but that its violation by others brings upon them the severest punishment.

The greatest danger to the game does not come from without, but from within. Many of the violators are loggers and boarding house keepers; in fact, many lumber camps pay hunters so much per carcass. The loyalty of the wardens to the game and the laws is the only way that those from within will ever be brought into check. We need the confidence of the game wardens, and we should give them ours. Nothing else will protect the big game of this district from the pot-hunter and those who follow hunting for a living. It is not unusual in this country for the game to be killed and left to rot, and this is a condition that we should prevent. Greater respect is due our present warden. In my opinion the State Game and Fish Commission made no mistake in its appointment of George E. Wood game warden at large of this county. He has been maligned and despised because he has punished many of those in high places, most of whom have pleaded guilty without a trial. Since the opening of the last season he has probably had one hundred convictions. Lumber camps and boarding houses have been feeding their patrons and employes on wild meat killed out of season.

Using dynamite in the lakes for fish has been carried on for many years with none to say them nay. Woods has gone after these dynamiters in earnest, as well as after the netters

who have almost ruined the fishing. Hundreds of feet of nets have been taken out of our inland lakes by him.

Notwithstanding the fact that many have lambasted him with mean language and endeavored to have him removed by the commission, his salary has been increased, which is a vindication of the man and his work, and certainly exhibits the commission's appreciation of its appointee. I hope he may be continued in his present capacity until the ruthless destruction of the big game is stopped. NOMLAS.

Ducks Abundant.

BLOOMINGTON, Ill., March 30.—*Editor Forest and Stream:* The Illinois River and contiguous lakes have been thronged with duck hunters this week. The ice has been going out of the bottoms and bayous, and the birds are congregating in the clear waters. Although the season will be brief this spring, due to the cold weather with the resultant delayed flight, the sportsmen are assured of three weeks of shooting while the birds are on their way to the breeding grounds of the north. Natural blinds are missing with the disappearance of the wild rice, smartweed and buck brush. There are numerous theories explaining the disappearance of the swamp growths, and whatever may be the correct one, the fact remains that the cover has disappeared, while the flight of the birds appears as great as ever.

Young Hungarian partridges are being distributed to various sections by J. A. Wheeler, State game commissioner. These birds were hatched on the State game farm at Auburn. The English ring-necked pheasants with which the department has been experimenting for a number of years do not appear to thrive in this State, due to lack of cover.

The supervisors of Stark county have cancelled the bounty on wolf scalps. It was asserted that wolves have been killed in Pcoria and other counties where there is no bounty, and the scalps brought to Stark county to be redeemed. As there was little chance of guarding against this deception, it was decided to suspend payment.

E. E. PIERSON.

New York Legislature.

The Senate passed the bill of Assemblyman Jones, amending the town law relative to preventing and fighting forest fires, so as to make the provisions conform to the conservation law in making certain other changes.

The Senate passed the bill of Senator Bussey, providing that fish may be speared through the ice in Silver Lake, Wyoming county, during January and February, and that bullheads may be speared or taken with set lines during May.

The Assembly passed Mr. Jones' bill, amending the town law relative to the prevention and fighting of forest fires; Assemblyman Penbleton's, providing that suckers, bullheads, etc., may be speared in the Susquehanna River, in Tioga county, from April 1 to Sept. 30; Senator Emerson's, appropriating \$20,000 for establishing a fish hatchery in Warren county.

Vigorous efforts were made to push the water grab bills through, but they were defeated by a small margin.

Big-Game Hunting in East Africa.

THE sportsman planning a hunting trip in East Africa has the choice of five steamer routes from Europe to Mombasa, the port of Protectorate, as follows: The Union Castle Steamship Line, direct; the Peninsular & Oriental Steamship Line, with trans-shipment at Aden to the British India Line; the Messageries Maritimes, direct; the German East Africa Line, and the Italian East Africa Line. First-class return fare from London amounts to about \$350, while the cost from Marseilles and Naples is somewhat lower.

The first-class round-trip fare from Mombasa to Nairobi, the starting point for shooting parties, is \$28.55. Practically everything except clothing is liable to an import duty of 10 per cent., but one camera, one pair of field glasses, and one telescope are admitted duty free. Original invoices should be produced for goods whenever possible.

The licenses required by a traveler may be any one of four, namely, a sportsman's license, costing 750 rupees (\$243), a resident's license, at \$49, a traveler's license, at \$5, or a landholder's license, at \$15. Each of these licenses is good for one year, except the traveler's, which is valid for only one month. If a person holds a sportsman's or a resident's license and desires to kill one elephant, \$49 extra must be paid, and to kill two elephants \$146, but if the second elephant is not obtained a refund of \$97 is made. As lions and leopards are classed vermin no license to kill them is required.

The sportsman may bring his own battery; if not, rifles and guns can generally be hired or purchased in Nairobi. If hired, the expense is \$6 to \$10 per week according to the value of the gun. Heavy and light cordite rifles, both new and used, can be bought, together with ammunition.

Consul Alexander W. Weddell, of Zanzibar, says that practically any time of year will do for shooting in East Africa, but on account of the big rains it is preferable to plan trips for periods between May and February.

A white guide, familiar with the language and customs, can usually be secured, the wages varying from \$195 to \$365 per month, with food, equipment, etc., furnished by the head of the expedition. Ponies or mules are usually taken, and they can be either hired or bought outright. Roughly speaking, a good mule can be obtained for \$80 and a pony for \$160 up.

The expenses in the field, which include the hire of tents, necessary camp furniture, the cost of food, wages, outfit, and rations of the necessary attendants, is reckoned at about \$486 per month for each member of the expedition—that is to say, each sportsman. This sum does not include liquors, and it may easily be exceeded if luxuries are required. The expenses of a safari vary with the nature of the district visited, and if a foodless, waterless, or otherwise difficult territory is chosen, the cost is increased to a considerable extent. The foregoing figures have reference to a safari starting from Nairobi. The average number of porters, per man, on a two months' trip is about 30. Travelers are advised to bring their own personal kit, boots, etc., battery and ammunition, and a good pair of field glasses; everything else can be purchased locally if desired.

SEA AND RIVER FISHING

The Fish of Greenwood Lake.

PATERSON, N. J., March 30.—*Editor Forest and Stream:* A few weeks spent at Greenwood Lake last fall brought me to the conclusion that the question most frequently asked at that popular resort is, "What is the matter with Greenwood Lake?" Fishing at the lake is not as good as it was some years ago, and that the sport of taking the big-mouth bass is in a woeful state of decadence. In point of numbers the small-mouth bass are still doing pretty well, but a notched stick indicating six inches in length is kept convenient by most guides and is frequently made use of to determine the fate of struggling fish.

While the perplexing question above referred to may not be answered definitely, no more perhaps than a farmer can tell why his apple trees should be prolific one year and produce a small crop the succeeding year, yet I presume it is permissible in your columns to offer guesses as to what may perhaps be a proper answer. There is just as much and as good water as there ever was. Pollution does not cut much of a figure; bass are just as prolific in spawning as they ever were, and the increased number of anglers is hardly in proportion to the decrease in the volume of sport. Perhaps the best guess is the exhaustion of the food supply, and I believe it is axiomatic among fishculturists that a sheet of water will produce a number of fish in direct proportion to the amount of the food supply.

While I was at the lake I was informed by a number of the residents there that the number of mussels in the lake had increased until that number has become what our English cousins would call prodigious. From the Bulletin of the Bureau of Fisheries for 1908, page 621, et seq., I copy the following:

"Two well-marked types of glochidia [i. e., mussel seed] occur in the Unionidæ, one provided with stout hooks on the ventral margin of the valves and the other entirely hookless. The former are characteristic parasitic on the fins and other external parts of the fish, the latter on the gills.

"The hookless type is by far the commoner one, and, furthermore, practically all the commercial species of mussels belong to the genera included in this class.

"Hookless glochidia are only rarely found on the external parts of the fish, and although they become attached readily to such places, their grasp is insecure, and the usual consequence is that they all are soon brushed off. Being hookless and quite small, they are admirably adapted to lodgment on the gill filaments, among which they may become attached in great numbers.

"Contact with any part of the fish affords the stimulus which causes the adductor muscle of the glochidium to contract and close the valves. This stimulus is a purely mechanical one, as the same result may be produced by touching with any object. In this way they may be caused to snap shut on a bristle or hair, or on the edge of a piece of paper. Once attached to the fish, however, the glochidium exerts a

stimulus upon the epidermal cells of the host which causes them to undergo a rapid proliferation.

"The fishes when first placed in contact with glochidia give evidence of great irritation and as soon as the gills begin to be infected, they exhibit violent and rapid breathing movements, apparently in the attempt to expel the parasites. After a time, however, they become quiet, and, when removed from the presence of the glochidia, behave normally, except that the more rapid respiratory movements may continue even for days afterward.

"The fishes we have used in our experiments have shown marked differences in their ability

WARDEN WELCH OF CALIFORNIA AND JAPANESE FISH NETS CONFISCATED BY HIM.

to retain the glochidia both on the fins and on the gills, more especially on the latter. They vary even more strikingly with respect to their capacity for withstanding the injurious effects of gill infection, and furthermore some fishes are undoubtedly much more susceptible than others, as the glochidia become attached, especially to the gills, more readily.

"Of the fishes which we have had under observation, the following species have proved to be the most satisfactory: Rock bass, large and small-mouth black bass, green sunfish and red-spotted sunfish. All of these species are very susceptible and readily infected with gill parasites, large numbers of which may be carried without apparent injury to the fish. A single individual of any of the above mentioned fishes, not more than three or four inches in length, will successfully carry at least 1,000 glochidia on its gills at the close of the parasite period, a number that would speedily kill many other species.

"Yellow perch, blue-gilled sunfish and crappie, although quite susceptible, are far less resistant to the injury and quickly succumb to over-infec-

tion. Young bullheads are apparently very difficult to infect, and we have not succeeded in causing glochidia to become attached to either their gills or fins in appreciable numbers."

The food of mussels consists of minute insects and vegetable matter to be found in the water, the food necessary for the support of the lives of the minor forms of fish life on which the higher class of fish depend for food. If in addition to the damage thus done the lives of fish are destroyed by over-infection from glochidia, might it not perhaps be safe to assume that the reduced numbers of fish in Greenwood Lake may be directly traceable to the large numbers of mussels? The fact that the glochidia would find more ready lodgment on the gills of the more slow-moving large-mouth bass than its more agile congener, the small-mouth variety, might account for the reduced number of the large-mouth bass. I know of no economic value of the mussels in Greenwood Lake.

They are permitted to remain and to breed year after year without any interference from human agency. If we assume that the glochidia interfere with the food of the small fish and the existence of the larger, might not an answer be found to the question, "What is the matter with Greenwood Lake?" The mussels may have a commercial value and perhaps some manufacturers of buttons and the like articles might be glad to avail themselves of an opportunity for removing them. At any rate, the experiment of removing large numbers of the mussels would be comparatively inexpensive and might be attained with good results.

Another inhabitant of Greenwood Lake, which may do its share toward the depletion of the fish dear to the heart of the angler, is the bullhead. In an article on this fish, Forbes and Richardson say:

"The food of thirteen specimens examined by us was unusually simple for that of a catfish, consisting chiefly of small bivalve mollusks, larvæ of insects taken upon the bottom, distillery slops and accidental rubbish. One of the specimens had eaten eighteen leeches, leeches

appearing in the food of four others and a few had taken terrestrial insects and univalve mollusks."

Charles Hiester says that catfish appear to live on the larvæ of insects and on flies that fall into the water.

Bashford Dean says:

"The habits of the catfish make it a most objectionable neighbor. The stomach contents show its destructiveness to fish eggs and to young fish. It will eat incessantly day and night, prowling along the bottom with barbels wide-spread."

H. M. Smith says:

"During the spring fishing season many are caught in seines hauled for shad and alewives, especially the night hauls on the flats. The species resort to the shad spawning grounds to feed on the eggs and must be enormously destructive in this way. On April 24, 1899, at Capehart's shad fishery at Avoca, not less than 5,000 white catfish from six to twenty-four inches long were caught at one evening's haul, and these were without exception absolutely gorged with shad spawn, so that their bellies were distended like balloons."

It is well known that catfishes of several varieties abound in Greenwood Lake. Their food is the same as that of the young of the better class of fishes. The United States Manual of Fish Culture, page 153, says of the food of the young bass: "They feed on insects and other minute forms of life found in water." It is thus evident that a great deal of the food which might produce healthy bass goes into the maw of the catfish. The latter's rapacity is seldom disturbed by the angler. When set lines were numerous in Greenwood Lake, there were fewer catfish and more bass, pickerel and perch, but the law prohibits the use of set lines. The removal of catfish presents a more difficult problem than the removal of mussels, yet set lines would accomplish the result, for the flesh of the catfish is by many prized for the table. Might it not be well to permit under certain restrictions the use of set lines? These lines should be anchored to the bottom and nothing but what is known as chunk bait should be permitted to be used. Floats might be required indicating the location of these lines in order that they might be examined by fish wardens, and other regulations might be adopted so that these set lines would take only catfish.

CHARLES A. SHRINER.

Tarpon Fishing.

LONG KEY, Fla., March 24.—*Editor Forest and Stream*: The tarpon season is now in full swing here, fish being brought in nightly by successful anglers. Thomas Stimson, of New York, captured two tarpon in one evening last week, and Frank Stewart duplicated the feat the following night. A beautiful fish weighing over 150 pounds was brought in by the yacht Samoa.

Besides tarpon, kingfish, amberjack, barracouta and other fish are being taken in large numbers. Mr. and Mrs. Stephens, of New York, recently brought in a catch of eleven fish containing five amberjack weighing from sixty-seven to forty-one pounds. Still better tarpon fishing is expected with the coming full moon.

H. HOPTON SMITH.

NATURAL HISTORY

Ten Years' Experience with the Starling

SOUTHPORT, Conn., March 30.—*Editor Forest and Stream*: Ten years ago to-day I saw my first starlings. There were six or seven of them. They were hovering about the spire of a church about two miles from my home. It was a week later that I decided what they were. I now know the birds very well. I wish I did not. It was perhaps a year or two before they settled in our neighborhood. They have increased steadily and now occupy the entire town. Everybody has them. Their favorite nesting place is in some crevice in the eaves of a dwelling house, but if your house is in good repair they proceed to take the best available hole in a tree. If some other bird, even a flicker, has made it for himself that makes no difference, they take it. They have undoubtedly come to stay, and not merely that, but to spread over the whole country.

The misguided person who established this bird in America has, it seems to me, done the country an irreparable injury. The starling is a coarse and unattractive bird, devoid of the refinement of our native birds. It has no song worthy of the name. Its best efforts in that line are rendered disagreeable by a constant chattering or snapping of the bill. It is a ground feeder and disputes possession of your lawn with the robin. It is a voracious eater of cherries and other fruits in summer and in winter it roves the country in flocks and devours the berries on which our winter birds depend.

In summer they come by the score to my birds' drinking and bathing pool, made with much labor and filled each morning with clear water and, when they leave, it is unfit for any decent bird to use. This morning I swept the snow and put out some apples for a robin that is sojourning with us. When I returned from business this evening I was told that "a million" starlings had come and devoured every one and also that a large piece of suet put out for the woodpeckers had gone the same way; in fact, we have practically given up putting out suet on account of the starlings.

In the light of these experiences you can perhaps imagine my feelings when I read expressions of solicitude for the successful establishment of this bird in our country.

If one inherited a garden filled with choice orchids he would not set about to introduce burdocks and thistles into that garden. We have an abundant variety of native birds. Cannot some sane law be enacted to prevent hereafter this foolish introduction of foreign species?

MILTON S. LACEY.

Damage Done by Crows.

WHAT CHEER, Iowa, March 22.—*Editor Forest and Stream*: I read the article in *FOREST AND STREAM* in regard to the crow and want to let you know what some people think of them in this vicinity.

There has been lots of hog cholera here this

year and many farmers think that as crows will eat from a dead carcass and will carry pieces in their claws from one lot to another, they surely cause cholera to spread from one to another. A person is supposed to burn an animal that has died from cholera, but many do not do this, but bury them instead, and some partly burn them and leave the unburned portion where crows can feast on it.

Crows like to eat the soft corn while on the stalk and many times when they break through the husks, the corn rots. In Minnesota, where the cornfields are scarcer and smaller, the crows do much more damage than in Iowa, or it appears so, as it is more noticeable.

I have seen crows in an orchard picking narrow deep holes in apples which will eventually cause them to rot or wither. I have never seen a crow rob a bird's nest, but know they will destroy chicken eggs and young chickens. A crow will catch a small chicken and pull its head off and carry it away.

The only thing I ever saw a crow do that showed any good intention it might have had was when it caught a half grown ground squirrel, bit it, dropped it, but before it could catch it again the squirrel escaped into a hole and the crow stood looking down into the hole for a few seconds, then flew away.

There is a roosting place one and one-half miles north of here where crows roost in winter and many of them in summer also. There are hundreds of them. From 4 o'clock in the afternoon until dark they travel to this grove in bunches of two or three to thirty or forty. They roost in a grove of maples that I do not believe is more than two acres in area.

It is not just one or two individual crows but a flock that destroys apples and corn, as I have seen ten or fifteen together all doing the damage.

The rookery I mentioned is in a grove back of a farm house, and the proprietor will not let anyone shoot on his premises, but I think if he knew how little good they were doing, he would allow shooting.

G. P. B.

Native and Foreign Birds.

MINNEAPOLIS, Minn., March 28.—*Editor Forest and Stream*: I was very much interested in reading the editorial in a recent issue of *FOREST AND STREAM* in relation to the need of some law that would insure the protection of quail and other small game during the winter months. There is no question but that the last severe storm did much to deplete quail and other birds in this vicinity, for recent observations have shown me that the former large beves of quail now have no more than eight or ten in a bunch, and they seem to be badly scattered. They are subsisting upon weed seeds and corn. I have noticed them in the fields moving about and judge that they are able to take care of themselves. One bevy I found in a deserted farmhouse. In the country this side of the Minnesota River there are many large beves, and there seems to be very good shelter.

It has been a hard winter for animals.

Squirrels are in the drifts digging for such acorns as may be hidden away, but there was a light acorn supply last year.

Now that there are sunny days again, the birds have made their appearance. The chickadee is a bright, industrious fellow. Be it ever so cold, he is out with his appetite. The bluejays are not so much in evidence. All the birds stay close to the thick-leaved coverts afforded by black oak, cedar and pine.

Bird lovers all over the country should make it a point to feed birds in the winter. At the country house we have a large space cleared and keep a liberal supply of grain and crumbs, with pieces of suet attached to the limbs of the trees for the benefit of chickadees and woodpeckers that are regular visitors. We should do all in our power to spread the interest in bird study among the people. And in the spring do not forget to put up the bird houses, no matter if it is right in the city. I have seen places where there have been some ten to fifteen houses and every one of them occupied by a pair of birds. Martins and wrens are quick to come, as are also various other small birds.

Farmers are, as a rule, pretty busy in summer, but in the winter they have much time to themselves, and I think that were they duly instructed in protection they would do all they could to help. They never receive much enlightenment upon the subject. Literature should be supplied to representative sportsmen in every State, to be distributed among the farmers.

A year or so ago Mrs. Buffum, of New Mexico, started a bird protection league, and it is good to know that her efforts have borne fruit. There is no limit to what this league could do, and it is pleasing also to note that our women are working with man in endeavoring to protect the birds. Nature study and bird protection should be taught the children in the schools.

L. M. Grider, well known in the West as a game farmer of much experience, says:

"Where among all their new-fangled imported game birds, on which thousands of dollars are being wasted annually, can they show one like our prairie chicken or ruffed grouse, or bobwhite, and last but not least, our grand California quail?"

"Can they show us among these imported birds one that could be turned out on the fields of North Dakota or Manitoba, which would survive a winter there?"

"Can you, or any one else, find any foreign game bird that is equal in sagacity to our ruffed grouse? That can hold his own anywhere as that bird is doing in the New England States to-day?"

"About once or twice a season some one hands out hot air about pheasants; the grand game birds they are; how easily they are propagated, and how money could be made breeding and raising them.

"The fact, however, is, and I write from actual expensive experience, that the pheasants, as a rule, show very little intelligence and have only a small quantity of what we call self-preservation. A small bobwhite or California valley quail can run them any time and anywhere. They will drop their eggs any old place and run and abandon their offspring at the slightest sign of danger.

"To obtain any increase at all from them they

must be hatched under bantam hens and they require constant supervision and attendance. Any bird that has to be nursed that way can certainly not be called a game bird fit to inhabit our depopulated fields and forests. They may do for parks and poultry yards, but when it comes to where you turn them out and it means bird hunt, hide or die, they are lost every time.

"Another and very important point generally not understood at all, or entirely ignored, is that you cannot raise any quail anywhere if there are pheasants about, as they will kill and eat every young quail and other small bird they can get hold of, and they have eaten hundreds of them in my yards until I discovered the male-factors.

"There are millions of quail in Mexico. Let us open the law to have some of them imported

NEST OF A LOON.

and sold for breeding purposes throughout the country, and we will soon have a new supply of birds coming from a source that never produced any before, and cannot, with the laws interpreted as they are at the present time."

ROBERT PAGE LINCOLN.

Loon's Nest.

WORCESTER, Mass., March 27.—*Editor Forest and Stream:* I send you herewith a photograph of a loon's nest taken by me last June while fly-fishing for trout at Lyford Pond, Maine. It was located directly on the shore of the pond and about a foot above the water's surface. It took me some time to find the nest, and I never should have suspected that it was there if it had not been for the peculiar actions of the old birds. They kept very near the canoe—we were anchored—and tried in every way to attract our attention, in hopes, I suppose, that we would chase them and leave the vicinity of the nest.

I made a careful search and finally found the nest, and got the picture.

CHARLES A. ALLEN.

More About the Starling.

RALEIGH, N. C., March 28.—*Editor Forest and Stream:* On the farm in the English midlands where I spent my boyhood, the starling was one of our commonest birds. Among the farm buildings was a massive structure known as the pigeon house or dove house, commonly called the "dove'us" by the farm laborers. (And in parentheses I might remark that the chicken or hen house was always known as the "en'us.")

The pigeon house was a square brick building of one room, with walls about four feet thick at the base and perpendicular on the outside. Inside, however, they gradually fell outward toward the top in a series of narrow steps, each step carrying its own row of nesting holes built in the thickness of the wall.

It was a good place for pigeons, and there were pigeons there, lashings and lashings of them. And starlings, too! And the broken pigeon eggs that were always to be found on the floor were credited—perhaps on too slight evidence—to the starlings. Considering the matter at a distance, I now know that we acted on insufficient evidence in destroying all the eggs and young of the starlings that we could find, though it was commonly accepted in the community that the starlings were pigeon egg destroyers. Every time the house was searched for squabs, we boys made a more thorough search for the starlings' nests, and we would often find and destroy a hundred or more eggs and young in one search.

As an offset to this, starlings were always in evidence on the permanent pastures grazed by sheep, feeding right in among the flock. And it was a common sight to see from one to three or four of these birds perched on the back of a single animal, many of the animals being thus attended. They were given credit for feeding on the ticks with which the sheep were infested. And the explanation is plausible, as the starling with us then was primarily a ground bird, and would not be likely to use the back of a living and moving animal simply as a perch.

My only experience with starlings in America is the sight of a few running around on the grass in Central Park last summer.

H. H. BRIMLEY.

New Publications.

GUIDE TO THE INSECTS OF CONNECTICUT, by W. E. Britton and B. H. Walden. Paper, 192 pages, numerous plates.

This is Bulletin No. 16 of the Connecticut State Geological and Natural History Survey. Part I. relates to habits and haunts of insects, their distribution, characters, growth and metamorphoses, and classification. Part II. relates to the earwigs, grasshoppers and crickets.

SOYER'S PAPER BAG COOKERY, by Nicholas Soyer. Cloth, 12mo., 130 pages, 60 cents net. New York, the Sturgis & Walton Co.

Everybody is interested in paper-bag cookery, in town, and everybody that camps may read this little manual with profit. Full particulars regarding this method are given, followed by numerous recipes, a time table for various foods, and some excellent reasons given by Dr. Charles Reinhardt for improved methods of preparing food.

Published Weekly by the
FOREST AND STREAM PUBLISHING COMPANY,
 127 Franklin Street, New York.
 CHARLES OTIS, President,
 CHARLES B. REYNOLDS, Secretary,
 S. J. GIBSON, Treasurer.

CORRESPONDENCE.

The **FOREST AND STREAM** is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Terms: \$3.00 a year; \$1.50 for six months. Single copies, 10 cents. Canadian subscriptions, \$4.00 a year; \$2.00 for six months. Foreign subscriptions, \$4.50 a year; \$2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line (\$2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra. Special rates for back cover in two or more colors. Reading notices, 75 cents per count line.

A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Advertisements should be received by Saturday previous to the issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

THE MISSISSIPPI IN FLOOD.

WILLIAM PERRY BROWN'S graphic description of the sunk lands of Southeast Missouri, which we print in another column of this issue, is of peculiar interest just at present. The Mississippi River is in flood, the sunk lands are a vast sea, and the Reelfoot Lake region, further south, is for the time being a part of the great waterway.

There is a peculiar fascination about the great river when it is in flood in April. The sun shines warmly through a yellow haze, the river scene changes frequently, the floating debris attracts hordes of black birds, and these are carried along by the rapid current while they search for insects in the driftwood. Crows, too, find a rich harvest alongshore and in the stream, and belated wildfowl enliven quiet coves and backwaters as they rest ere resuming their northward flight.

Muskrats splash about among the willows and seek sloughs and bayous when they are driven from their haunts by the rising waters. Rabbits huddle in groups on every sand ridge and fall easy prey to their winged and other enemies. Robins flit about, intent on their home-making duties, and even the kingfisher finds abundant food in the yellow flood.

To the uninitiated a great flood is a terrible thing, and one to be viewed for the first time with bated breath. "Why do people live in such places?" they ask, just as other impractical ones question the attractiveness of the polar regions to the Eskimo. It is their home; that is all. But if there is weeping and wailing, no outward

signs of emotion will be found. Along shore men and women, surrounded by their goods and chattels, wait patiently for the water to recede, so that they may go back to their water-soaked homes and muddy fields and resume their efforts to make a living. It is, after all, a sort of mild excitement that appeals to them, and they watch the water rise inch by inch, knowing the inevitable result of a flood stretching for miles in every direction. There is no haste, and they remain until the last minute. There is, however, a knowledge born of long experience that guides them, and for this reason there are few fatalities in the great floods. They are inconvenient, but a thing to be expected, and no cause for worry.

GAME REFUGES IN NATIONAL FORESTS

SOONER or later many places in the West, from which big game has been exterminated, will be restocked with indigenous species. An increasing number of strong societies and a number of the Western States are manifesting a constantly growing interest in this subject, which shows an encouraging trend of public sentiment.

Because elk are numerous and showy, efforts are being made by many bodies to reintroduce these animals in regions where once they were abundant, and in a few cases these efforts have taken practical form. Certain societies, and the residents of certain States, have contributed money to pay for the capture and transportation of these animals from the vicinity of the Yellowstone National Park to distant places where they are likely to do well and increase.

An interested and efficient worker is Senator Joseph M. Dixon, who last February introduced in the Senate a bill to set apart two tracts in Montana as refuges and breeding places for game birds and animals. Both these are to be in charge of the Secretary of Agriculture.

It is many years since **FOREST AND STREAM** first urged on Congress the setting aside of areas in the National forests as game refuges. The proposal received warm commendation by those who realized how fast our big game was being destroyed, but politics and the politicians always managed to sidetrack the movement. Now, however, the signs of the times indicate that before long public sentiment will force Congress to act—that Congressmen of certain Western States in which National forests are situated will be obliged to consider this a living issue. Those who are interested in game protection and propagation and the re-establishment of native species in localities where once they were abundant, can afford to wait until public opinion grows to a point where it will insist on Congressional action. When this time comes, the Congressman who attempts to oppose this public opinion will certainly be pushed out of the way.

Every reader interested in this subject, and in the not less important Federal protection of migratory birds, should tell his Senator and his Congressman how he feels about them. Representatives in Congress are usually willing to heed the requests of their constituents, but representatives cannot understand the feeling in their districts except as they are informed of it. Constituents should speak up.

THE New York legislators devoted more or less of their valuable time to the introduction of bills of great importance—to the people of the township of Coalville, in Canal county,

whose peace of mind and future happiness are wrapped up in the propositions to make it legal to take bullheads and suckers with spears or setlines at certain times in certain portions of Pollution Creek. It is conceded that it is the legislator's right to introduce at least one bill each session, hence not even the well known conservation—or is it conversation?—policy of the Governor shakes the determination of the talented lawmakers to regulate the manner of taking the people's natural food supply, those great game fish, the sucker and the bullhead.

THE New Jersey Chamber of Commerce was temporarily organized in Jersey City on March 21. Among its objects will be the conservation of the State's natural resources, and a committee will be appointed to work for the betterment of conditions relating to water pollution and kindred subjects. There is an abundance of material to work on. The Passaic River is an example of the extremes to which communities go in the matter of befouling their surroundings.

FOURTEEN burglary insurance companies and the Burglary Insurance Underwriters' Association sent a protest to the New York Legislature during its closing days against the Sullivan firearms law. It was urged that the law be amended in favor of law-abiding citizens, and the fact pointed out that the alarming increase in hold-ups and burglaries called for preventive measures. No action was taken by the lawmakers.

A PRESS dispatch from Skowhegan, Maine, says that the criminal suit against Dr. Charles D. Brooks, of New Jersey, brought by Mrs. Harold Hight, has been withdrawn. The physician has agreed to pay the claim of \$1,950 and cost of suit. He it was who shot and killed Harold Hight in mistake for a deer last autumn. Mrs. Hight brought the suit on behalf of herself and her son.

STRIPED bass are to be introduced into the Columbia River this year. The eggs will be collected in the Sacramento River in California and sent to the Clackamas hatchery on the Columbia for hatching and distribution. Investigations made on the Sacramento seem to show that salmon and striped bass may safely be put into the same waters.

FOR the first time in a number of years caribou have recently been reported from Northeastern Maine, where a few have been seen by woodsmen. Caribou cannot be shot legally in that State now, and it is possible that freedom from pursuit is luring small numbers back to their former range.

THE Russian Duma has established a closed season on sables in Siberia, which have been pursued so relentlessly during the recent years of high prices on furs that they are threatened with extinction. From February next until October, 1916, there will be no hunting of sables in Siberia.

THE New Jersey Legislature has passed the House bill which prohibits the use in hunting in that State of any shotgun or rifle holding more than two cartridges at one time.

YACHTING

Ticks from the Ship's Clock.

In the trap department will be found designs of moderate priced club houses. Should you be interested in knowing more of these designs, drop a line to Mr. Beecroft, our gun editor, and he will send you full particulars.

At the last meeting of the New York Y. C. twenty-five new members were elected.

Howard Gould left Miami, Fla., last week for a cruise on Majara. He will visit Bahamas, Cuba, Porto Rico, Colon and Panama. Included in his party are Mr. and Mrs. Martin Littleton and Dr. and Mrs. Frank Northrop.

The English auxiliary yacht Xarifa, in charge of Capt. Morse Hawkins, of East Setauket, left Port Washington, L. I., last week for a cruise to the Mediterranean and thence to China. Xarifa will sail direct from here to Gibraltar, where she will be joined by her owner, C. N. Nelson, of New York. She will be gone about eighteen months.

The Quebec Y. C., whose club house was destroyed by fire several years ago, have plans for a handsome new house, to be built this spring in the neighborhood of Custom House Pond. The club is in excellent financial condition, helped considerably by the advent of the motor boat, which is responsible for many new members. There are forty-three boats in the fleet, of which twenty-one are power-pushed. It is safe to say that every man of any prominence, and who loves the salt sea, is a member of the Quebec Y. C. The officers are: Honorary Commodore, Hon. Wm. Priece; Commodore, Dr. S. Gaudreau; Vice-Commodore, F. J. Cockburn; Captain, J. Smith; Secretary-Treasurer, Laurier Auger; Managing Committee, the officers, Lorenzo Auger, Dr. A. Lavoie, Dr. E. G. Gale, C. Fremont; Sailing Committee, T. S. Hetherington, W. A. Home, J. S. Thom, Delphis Mercier, H. B. Polnoka; Club Room Committee, J. B. Matte, E. E. Turgeon, N. Menier; Auditors, A. Lemieux, A. E. Scott.

Sorry to observe that Sir Thomas Lipton has fallen off the water wagon, though it must be true, as a foreign correspondent reports that Sir Thomas has purchased a hydro-aeroplane at Monte Carlo. Possibly, Sir Thomas feels he will get more satisfaction from the Aeroplane Club of America than from the New York Y. C., and besides Herreshoff has not yet taken to designing air displacement yachts. Still more important is the fact that the Hank Haffs and Charley Barrs of the air are mostly in Europe. Perhaps Sir Thomas will yet win an America's cup.

Frederick S. Nock, East Greenwich, R. I., is building from plans by Swasey, Raymond & Page a 40-foot raised-deck cruiser for Frank L. Cross, of Quincy, Mass.

Guy Lowell, of the Eastern Y. C., has challenged for the Quincy cup, now held by the Quincy (Mass.) Y. C. Mr. Lowell is having built at Lawley's, from plans by Bowes & Mower, the new Sonder class challenger. Thus far four challenges have been received for the cup.

Commodore J. Stewart Blackton has named as regatta committee of the Atlantic Y. C. Carlos de Zafra, chairman; A. Nickerson and J. L. Luckenback. Mr. De Zafra was a member of racing board last year.

The Kingston, Ont., Y. C. numbers 270 motor boats in its fleet, several of them very fast. Many new boats are under construction, all of

which augurs well for the coming season. The club officers are: Commodore, W. C. Kent; Vice-Commodore, H. Hora; Rear-Commodore, John McKay; Secretary-Treasurer, Charles S. Kirkpatrick.

The annual meeting of the Chesapeake Bay Yacht Racing Association will be held April 13, when the date will be set for this season's cruise.

Delaware River Y. R. A.

At a meeting of the Delaware River Y. R. A., held March 28 at Wilmington, the regatta committee reported plans for the big Chesapeake Bay cruise, to be held from May 22 to May 28 inclusive. Boats will start from Philadelphia on May 22, and the first day will make Chester. May 23 they will leave Chester for Annapolis, where they will visit the naval academy and take a trip up the Severn.

They will leave Annapolis May 25, arrive at Cambridge, Md., May 26, leaving the same day for Baltimore, which they will reach May 27. Continuing that day to Chesapeake City, which will be reached the next day, ending the cruise on the 28th, with the run back to Philadelphia.

The annual Delaware River cruise will be held June 21 and 22, with a run to Overfalls Light and return. The cruise is open to all boats owned by members of the association and is also open to cruisers. The Keystone Y. C., promoting the race, will announce its schedule later.

Director of Public Safety Porter has promised yachtsmen protection from river pirates, who, during the years past, have robbed yachts of everything portable, in some cases taking boat, cable and mooring.

1912 Long Island Sound Dates.

On March 27, at the Hotel Astor, New York city, the annual meeting of the Yacht Racing Association of Long Island Sound was held. Stuyvesant Wainwright, American Y. C., presided.

The amendment to allow 31-raters to carry six men instead of five was defeated.

Officers elected were: President, Stuyvesant Wainwright, American Y. C.; Treasurer, Victor I. Cumnock, Seawanhaka-Corinthian Y. C.; Executive Committee—W. Butler Dunean, Jr., Manhasset Bay Y. C.; George E. Roosevelt, Seawanhaka-Corinthian Y. C.; Horace E. Boueher, Larchmont Y. C.; Frank Bowne Jones, Indian Harbor Y. C.

The schedule of races for 1912 follows:

May 30—Harlem Y. C. annual and Bridgeport Y. C. spring.

June 1—Knickerbocker Y. C. annual.

June 8—Manhasset Bay Y. C. annual.

June 15—Larchmont Y. C. spring.

June 21—Seawanhaka-Corinthian special.

June 22—Seawanhaka-Corinthian annual and New York Y. C. race to Block Island.

June 25—Indian Harbor Y. C. race to New London.

June 28—Seawanhaka-Corinthian Y. C. race from New London.

June 29—New Rochelle Y. C. annual.

July 3—American Y. C. annual.

July 4—Larchmont Y. C. annual and Hartford Y. C. annual.

July 6—Riverside Y. C. annual.

July 11—Indian Harbor Y. C., all classes.

July 12—Indian Harbor Y. C., all classes.

July 13—Indian Harbor Y. C. annual.

July 20—Larchmont Y. C., start of race week.

July 27—Larchmont Y. C., end of race week.

Aug. 3—Horseshoe Harbor Y. C. annual.

Aug. 10—Huguenot Y. C. annual and Bridgeport Y. C. annual.

Aug. 14—Riverside Y. C. special.
 Aug. 17—Stamford Y. C. annual and Harlem Y. C. Stratford Shoal.
 Aug. 24—New Rochelle Y. C. summer race and Northport Y. C. annual.
 Aug. 30—Seawanhaka-Corinthian special.
 Aug. 31—Seawanhaka-Corinthian special.
 Sept. 2—Larchmont Y. C. fall and Norwalk Y. C. annual and Sachem's Head Y. C. annual.
 Sept. 7—Indian Harbor Y. C. fall.
 Sept. 14—Manhasset Bay Y. C. fall.
 Sept. 21—Indian Harbor Y. C. Corinthian cup.
 With the exception of the races to and from New London, the Seawanhaka Y. C. special races and the Indian Harbor Y. C., class races are championship races.

New England Y. C. Dates.

May 30—South Boston Y. C., M. Y. R. A. and Interclub open.

June 8—Mosquito Fleet Y. C., M. Y. R. A. and Interclub open.

June 17—Boston Y. C., M. Y. R. A. open at Hull.

June 22—Savin Hill Y. C., M. Y. R. A. and Interclub open.

June 22—Corinthian Y. C. ocean race.

June 29—Eastern Y. C. special open race at Marblehead.

July 4—City of Boston open races at City Point.

July 4—Boston Y. C., M. Y. R. A. open at Marblehead, morning.

July 4—Corinthian Y. C. open at Marblehead, afternoon.

July 5—Hingham Y. C., M. Y. R. A. open.

July 6—Squantum Y. C., M. Y. R. A. and Interclub open.

July 13—Columbia Y. C., M. Y. R. A. and Interclub open.

July 20—Winthrop Y. C., M. Y. R. A. and Interclub open.

July 31—Quincy Y. C., M. Y. R. A. open.

Aug. 1-3—Boston Y. C., midsummer series at Hull.

Aug. 3—Wollaston Y. C., Interclub open.

Aug. 4—Lynn Y. C., squadron run, Bass Point to Marblehead.

Aug. 5—Eastern Y. C., special open race to Marblehead.

Aug. 6—Boston Y. C., M. Y. R. A. open race at Marblehead.

Aug. 7—Corinthian Y. C., midsummer series at Marblehead.

Aug. 8—Corinthian Y. C., midsummer series at Marblehead.

Aug. 9—Corinthian Y. C., midsummer series at Marblehead.

Aug. 10—Corinthian Y. C., annual open race at Marblehead.

Aug. 17—Cottage Park Y. C., M. Y. R. A. and Interclub open.

Aug. 24—Lynn Y. C., M. Y. R. A. open.

Aug. 24—Boston Y. C. at Marblehead Club.

Aug. 31—Wollaston Y. C., M. Y. R. A. open.

Sept. 2 (Labor Day)—Quincy Y. C., Bermuda race and Interclub open.

Sept. 8—M. Y. R. A. rendezvous at Hull.

Yachts Change Hands.

THE Hollis Burgess Yacht Agency has sold the following:

The well-known 30-foot waterline sloop yacht Shiyessa, owned by Mrs. Louisa Currell, of Charlestown, Mass., to a prominent yachtsman of Isleboro, Me.

The 60-foot schooner Coronilla, owned by the estate of A. J. Wright, of Boston, to Charles M. Fauci, of Lynn, Mass.

The 27-foot waterline yawl Friendship II., owned by Francis A. Guinivan, of Beverly, Mass., to N. F. Ambursen and W. L. Church, of Boston.

Motor boat Ibex, owned by Dr. William H. Litchfield, of Brookline, Mass., to Albert F. Bigelow, of Cohasset, Mass.

The 21-foot knockabout Micaboo, owned by Norman S. Powell, of Philadelphia, to Edward M. Coffin, of Newburyport, Mass.

British Yachting In 1911.

BY G. E. HOPCROFT.

FROM a sporting point of view, the past yachting season was almost a record one; but from a national point of view many Englishmen were sadly disappointed with the results obtained. In justice to this country, however, I must point out that some of the papers "made mountains of mole-hills," for a number of the successful foreign yachts were designed in Britain. If we look closely at the records of the past season we shall find that many of the so-called "British defeats" were really British victories after all.

Great interest was taken in the opening races of the season, for many new yachts were "out." In the A class the Fife-designed schooner *Waterwitch* was the center of attraction; but I fear that she disappointed her admirers at Cowes, and later on at Ryde. She is a fine yacht, and I fully expected to see her defeat the German schooners with ease. That she failed to do so is remarkable, but no doubt Mr. Fife will improve the yacht during the winter; and it is quite possible that when *Waterwitch* fits out in the spring we may find that we have quite a second Westward after all. It is reported that Mr. Fife intends to give the yacht a much larger sail spread.

The season opened with the Royal Thames match, in which the 19-meter yachts met for the first time—that is to say, three of them started, for *Norada* did not sail in the early regattas. There was a good wind, and after a well-sailed match, slightly marred, perhaps, by a poor start, *Mariquita* won the first prize. In the 15-meter class *Vanity* defeated *Jeano* by no less than eight minutes.

As some of my readers may not have followed the recent developments in yacht building, I should explain that during the winter of 1911 four yachts were built for the new 19-meter class. Two of these yachts were designed by Mr. Fife, one by Mr. Mylne, and one by that clever Gosport designer, Mr. Nicholson. When *Norada* joined the little fleet the class was made up as follows: *Octavia* (Mylne), *Corona* (Fife), *Mariquita* (Fife), *Norada* (Nicholson). After the opening events, the 19-meter craft met again and again at the various regattas round the coast. In the Nore to Dover race the new Gosport flyer, *Norada* came to the front, and *Octavia* had to take second place. The Gosport yacht is from the board of the designer of the speedy but ill-fated *Brynhild*, and she has that beauty of mould which always distinguishes a "Nicholson boat." The yacht is owned by Mr. Milburn. *Octavia* and *Corona* did well during the Clyde fortnight; *Corona* took the King's cup, and *Norada* upheld the honor of the south by winning the Commodore's cup at the Royal Northern Regatta.

Turning for a moment to the A class, I should mention that toward the end of April it became certain that the American schooner *Westward* would not race in British waters during 1911. In May the yacht was fitted with her ocean rig for the trip back to the States. I was lucky enough to see her in dry dock just before she sailed, and was greatly impressed with her underwater body. We were disappointed then, for we knew that *Westward* would not meet the new *Waterwitch*; but now we are half inclined to be thankful that the American clipper did not race in British waters, for it must be admitted that, on last year's form, the former would certainly have lowered the colors of the beautiful Scotch yacht.

At Kiel *Waterwitch* was hardly a match for the German schooners, and at Cowes, and later on at Ryde, she did not seem to be able to hold *Meteor* in light winds. At the same time, I cannot help thinking that the latter is sailing much faster than she did in 1910, when she was so badly beaten by *Westward*. I saw *Meteor* sail at Ryde in that year. I also saw her sail there, under very similar weather conditions last season, and I should say that the yacht is now ten minutes faster over a 50-mile course. It is difficult, therefore, to estimate exactly how *Waterwitch* stands as a "flyer" when compared with *Westward*.

In the 15-meter class the sport has been good, and when the foreign yachts came to swell the fleet, during the Solent weeks, the class was a wonderfully interesting one. *Vanity* seems to have shown good form all through the season, and *Jeano* and *Mariska* have had their share of the prizes. The King of Spain's *Hispania* and the Spanish yacht *Tuiga* (both Fife-designed craft) sailed well during their stay in British waters; and the German yachts, *Sophie Elisabeth* and *Paula*, also met with considerable success in the 15-meter class. In fact, the foreign element was very much to the fore last year, and our yachts have had all the bad luck. Luck still plays its part in yacht racing, and, apart from any consideration of the respective merits of the various yachts, I cannot help thinking that British yachtsmen had more than their share of bad luck.

Vanity won the Royal Thames race in May, and she was also first in the Nore to Dover match. In the International she was third in her class on both days—in fact, the three leading yachts finished in the same order each day: *Hispania*, *Tuiga*, *Vanity*.

Cowes week opened in splendid weather, and the racing was of a very interesting character. Many foreign yachts were in British waters, for the International festival attracted almost every sporting owner in Europe; and it was well understood that Cowes week would simply be a foretaste of the sweets which we were to enjoy during the first European International Yachting Festival.

Cowes week opened, as usual, with the Royal London matches, and these races took place in perfect yachting weather. *Meteor* won the 23-meter—a class race, and *White Heather* managed to save her time and took the second prize. This was one of the most interesting incidents of Cowes week, for after *Meteor* crossed the line it looked for some time as if the British cutter might still win the first prize, as she had 8m. 26s. in hand. *Waterwitch* was at that time slightly ahead of *White Heather*, and as I watched the yachts from near the battery it seemed that even the schooner had a chance of winning if only the wind would "pipe up." Of course, it "piped down," and *White Heather* drew up level with *Waterwitch*. Neither of them could quite manage to save her time, however; but *White Heather* sailed a good race, and her skipper deserves great praise for the way in which he won the second prize. The principal results (Cowes week) were: Royal London, A class race—*Meteor*, 1; *White Heather*, 2. International cup (15 meters), first race—*Sophie Elisabeth*; second race, *Paula*; final, *Paula* (German). Royal Squadron, Emperor's cup, *Germania*, 1; *White Heather*, 2. International challenge cup (19 meters), *Norada*, 1; *Corona*, 2. In the 15-meter and 12-meter classes the King of Spain's *Hispania* and *Rollo* (Norway) sailed wonderfully well.

The great International festival opened on Monday, Aug. 7, and once again the weather was perfect. A little more wind would have given joy to some of our yachtsmen, but one cannot expect perfection in this climate, and the bright sunshine made up for a lack of wind. Spithead was crowded with yachts, excursion steamers, and warships—in fact, it was one of the most wonderful scenes ever witnessed on this famous stretch of water.

I have not space in which to give details of the racing, but I give a table of the chief events:

FIRST DAY.

Class A.....	1, Germania; 2, Meteor
19 meter class.....	1, Norada; 2, Corona
15 meter class.....	1, Hispania; 2, Tuiga
12 meter class.....	1, Rollo; 2, Javotte
10 meter class.....	1, Tonino; 2, Irex

SECOND DAY.

Class A.....	1, Meteor; 2, Germania
19 meter class.....	1, Norada; 2, Octavia
15 meter class.....	1, Hispania; 2, Tuiga
12 meter class.....	1, Rollo; 2, Cintra
10 meter class.....	1, Tonino; 2, Irex

Germania and *Meteor* are German yachts, designed in the Fatherland; *Rollo* was designed and built in Norway; but *Hispania* and *Tuiga* are British-designed yachts sailing under Span-

ish colors. The festival was a great success, although the foreign yachts did better than some people expected. We must comfort ourselves with the reflection that only three really foreign-designed craft proved to be of outstanding merit.

In the smaller classes sport was exceedingly good last summer. The 8-meter class is very popular, and smaller classes are filling up well. The nations of Europe are now building a number of these small craft, and in the future we may expect to see new developments, as the various designers try to take full advantage of the rule under which the whole of Europe now builds.

During the past six months we have heard a great deal about the America's Cup, but as the Americans still insist upon the old rules, no one seems inclined to send a British-built yacht across the Atlantic to meet an American yacht of the old type. To my mind it is strange to find that so many people seem to think that we should have more chance of winning the famous cup under the new American rule, which has been in force for some years, than under the old conditions. It should be remembered that Mr. Herreshoff was able to beat our designers with *Westward*, built to fit our own rule; therefore it is reasonable to suppose that he would be able to do even better under his own rule, to which he has built for several years. It should be remembered, also, that our designers have never—so far as I know—been called upon to design a yacht for the so-called universal rule.

The beautiful *Octavia* proved to be the champion in the 19-meter class last year. The class is a fine one and let us hope that during the coming season we may once again see the four 19-meter yachts fighting their battles and settling—or trying to settle, for they are well matched—which of them is the best all-round boat.—County Gentleman and Land and Water, England.

Yachtsmen's Club of Philadelphia.

THE Yachtsmen's Club of Philadelphia has set July 6 as the date for the long distance race this year. The regatta committee made this announcement at its meeting on March 23. It was decided the course must be over 200 miles in length. The start will be made from one of the Philadelphia clubs on the Delaware River to Hampton Roads, where the Hampton Roads Y. C. will entertain. This race is held to improve the build and construction of cruising yachts, and only those that comply with requirements will be allowed to start. Entries thus far received are: Vice-Commodore Brigham's *Caliph*, Ventnor Y. C.; George Fish's *Lugeo II.*, Ocean City Y. C.; Commodore Cartledge's *Marguerite II.*, Keystone Y. C.; Commodore Dudley's *Haji*, Camden M. B. C.; Commodore Joseph Thompson's *Isabella II.*, Ventnor Y. C., and Commodore James Thompson's *Albatross*, Stone Harbor Y. C. The return race will be to the Baltimore Y. C.

ARCTIC HUNTING

For charter, ship fully equipped, specially built for ice work, for one or more months' cruise in Greenland or Spitzbergen and Franz Josef's Land waters, will accommodate party of 5 to 15. Polar bear, reindeer, fox, seal, walrus, Arctic birds, fishing.

ARCTIC, 1004 Oliver Bldg., Boston, Mass.

London Yachting.

FIVE years ago there was one lone sailboat on the river Thames. To-day there is a fleet of motor and sail boats that numbers twenty-five and is valued at nearly \$30,000 and six others will be launched as early as possible in the spring.

These results, says the Montreal Star, have been brought about largely by the work of an energetic motor boat association which has wrought wonders by getting the river in a navigable shape and demonstrating to people that boating on the Thames is a real pleasure and that there is scenery to be viewed that it is worth a trip to see. More than this, the members have found a little summer resort of their own at "Wonderland," one of the beauty spots on the river and from earliest spring until as late as possible in the fall a colony of business men who own boats and their families spend a delightful outing there.

Every September a regatta is held in which there are dozens of contestants for each event, hundreds of dollars' worth of the choicest prizes are donated by members of the club and by local merchants who have ever been hearty supporters of the motor boat association. The regatta is attended by thousands of citizens who line the banks or hire canoes or rowboats.

The course is a serpentine one extending over three and a half miles through country that is exceptionally beautiful. Except at the city end there is a good depth of water and every year sees larger boats. The club has never lost a member except through removal from the city and many of the members who started with small craft now own the largest and best boats on the river.

Mr. W. J. Thorne is the energetic president of the association, and he has a body of hustlers to help him. Everything the association undertakes goes.

"We were never in better shape than at the present time," said Mr. Thorne. "Our membership is growing steadily and the boats are better every year. It's rather an interesting fact that in proportion to its population London has more than twice as many boats as Toronto or Hamilton, notwithstanding that those cities are situated right on the lake and have natural advantages that are impossible in an inland city.

"Our latest plan is for a big new boat house in which our members can keep their boats and hold social affairs. The only trouble will be to build it big enough to accommodate our rapid growth. This season will easily break all records, but we have done that every year since we started and expect to keep on. While our strip of water is limited it is exceptionally beautiful and all who start boating become enthusiasts."

Mr. W. H. Priestly is vice-president of the association, and Mr. Sim Threapleton secretary.

Crescent A. C. Yachting Dates.

THE yachting committee of the Crescent Athletic Club announces two full regattas for the Gravesend Bay championships this year on June 22 and Sept. 7. Starts, as usual, from off the Atlantic Y. C. dock at Sea Gate. The series of races for the Lipton cup will be sailed during the race week of the Atlantic Y. C. This cup is for yachts of Class S and must be won three times by the same yachtsman before it becomes his permanent property. Legs have been won by Richard Moore's Blue Bill and by Dr. C. L. Atkinson's Cyric.

There will be two motor boat regattas, June 15 and Sept. 14. There will be races for cruising yachts and high speed boats and launches.

Commodore Edgar F. Luckenback, Vice-Commodore Charles Lembcke and Rear-Commodore G. G. McIntosh have been renominated as flag officers of the club. Commodore Luckenback has offered the prizes for one of the lower bay sailing regattas to be sailed for on June 22.

The annual yachting dinner of the club will be held on April 17, when prizes won last year will be distributed.

Motor Boating

Atlantic Coast 20-Footer Championship

THE Cambridge Y. C. will hold a regatta on June 28 and 29 for the Atlantic Coast championship for 20-foot motor boats. Six boats already are entered. This event, it is expected, will eclipse the annual races at Peoria and give to Maryland waters great prestige among motor boatists.

Those entered are A. K. and C. D. White, who will have Sand Burr II.; Peter V. Hoy, who has a new boat to replace the Pee Vee Ho; Commodore Alfred I. du Pont will have a boat with a guaranteed speed of 40 miles an hour; T. Coleman du Pont, whose boat has already made 40 miles an hour, and James Busic's new speed boat. William K. Vanderbilt, at a recent conference with Commodore Du Pont, announced he might have a boat entered.

The five entries already made overshadows the regattas at Peoria, where not more than four 20-footers competed.

A very handsome trophy will be given by Commodore Du Pont. Governor Phillips Lee Goldsborough has offered a trophy, and the club will give a special trophy.

There will be a special race for bugeyes and another for schooners, and there will also be a special race for boats of all classes, power and sail, open to craft flying the flags of the yacht clubs of Baltimore. This race will start from Baltimore early on June 27 and finish at Cambridge.

James Smith, chairman of the racing board, was in Baltimore recently and called upon prominent local yachtsmen and issued invitations to enter.

Probably Not Huntington Harbor.

F. H. MORLEY, secretary of the Motor Boat Club of America, has written boards of trade at Northport and Huntington that the board of governors finds several serious objections to Huntington Bay and are considering other courses near New York.

Some time ago a letter was received from the Motor Boat Club by George B. Johnson, secretary of the Northport Board of Trade, saying the principal objection to Huntington Bay was the large expense connected with the removal and replacing of oyster stakes which dot the course. Considerable expense was incurred by the Motor Boat Club of America last year for this work, and the secretary wrote that it would not stand this expense again. Dexter K. Cole, manager of the Northport division of the Sealshipt Oyster Company, which leases the largest number of oyster beds along the course, agreed before the town trustees that not more than \$25 would be charged for the work this year.

At a meeting of the board of governors last week, however, it appears that other objections to Huntington were raised, among which were the uncertainty as to whether the Chateau des Beaux Arts will be open and the difficulty the general public would have, as they did last year, in reaching the course to view the races.

Suggestions made in the letter received on Monday by Mr. Strawson and Town Clerk Sammis are:

First—The committee think that your board might possibly start arrangements with the Long Island Railroad to see if additional train service could be had during the days of racing.

Second—What arrangements can be made for the transportation of people to and from the Beaux Arts pier, whether the street railway can be induced to extend its line to the pier, so that it would be in service at the time of the races or some other method of transportation be provided. This is a very important point, as a great many people last year did not get nearer the races than the Huntington Station, others at the end of the car line, etc., etc.

Third—Is the Chateau des Beaux Arts to be

open this year? If so, can you give us any idea who is going to have it?

It is known, however, that the wealthy residents of East Neck are opposed to the presence of the throngs of people who come to view the races and are inclined to trespass upon their estates, and it is possible that they have used their influence against the motor boat events.

There has been much comment upon the possibility of the purchase of the Chateau des Beaux Arts by the New York Y. C. It is feared that if the sale is made another objection against the races will be raised, as that would preclude all chance of the public viewing the races from the pier.

Nassau County Yachting Association.

At a meeting of the Long Beach Motor Y. C., held on March 27, at Hotel Nassau, the organization of the Nassau County Yachting Association, which was temporarily organized last summer, was perfected. Commodore Roland H. Mayland, formerly first flag officer of the Hempstead Bay Y. C., was elected President, and A. A. Dal Molin, secretary of the Nassau Y. C., Secretary.

It is planned during the summer in Raynold's Channel and at other places along the shore to hold a series of events which will include races between hydroplanes, high speed contests and probably races between aeroplanes and motor boats.

Among those present were Commodore Baker, of the Nassau Y. C.; Commodore Schiffmacher, and Mr. Smith, of the Keystone Y. C.; A. A. Dal Molin, George Schiffmacher and R. H. Dal Molin, Senator William H. Raynolds and Frank Bailey, of the Title Guarantee and Trust Company, were interested listeners.

Canoeing

Atlantic Division.

BURLINGTON, N. J., March 26.—*Editor Forest and Stream:* Now that the first event of the canoeing season of 1912 has been held, in the shape of a dinner in Trenton, on Feb. 17, we must awaken to the fact that there are other and possibly more interesting events following.

The cruising men can look forward to a delightful cruise down the Ramapo River on May 11 and 12. On the advice of the commodore, we substituted this river for the Hackensack; and while I am not personally familiar with this section, I am informed by those who have been there that it far exceed the Hackensack in beauty of scenery, more exciting in the abundance of quick water, rifts and possible spills, and that it is a more desirable and pleasurable trip in many ways. Rear-Commodore A. D. Berning is chairman of the committee of arrangements for this cruise, and associated with him are R. H. Nash, Charles Spenner and H. N. Wilson. Mr. Wilson has a shack on this river, where he lives a greater part of the summer. All of these men are thoroughly familiar with the trip and they promise it will be the best cruise in many years. Any information the Atlantic Division members may desire (or members of any other division) before the details of same are mailed to them can be had from the committee. As this is the opening paddling event, both the committee and myself would feel greatly pleased to have a big turnout, and I trust everyone who possibly can will arrange to go.

On May 25 and 26 will be held a cruise down the Rancocas Creek, already famed for its beauty of virgin wildness and placid waters. This is an ever-popular trip with the Delaware River canoeists, and always appeals to the man from a distance who once makes it. Above a point eight miles from the Delaware River, the Rancocas is divided into two branches—the north branch being navigable from Hanover Furnace to Delanco, a distance of forty-five miles; the south branch from a little above

Vincentown to the same terminating point, a distance of twenty-five miles. This year's cruise will be on the north branch, as before, starting at Brown's-Mills-in-the-Pines, going through New Lisbon, Pemberton, Birmingham, Smithville and Mt. Holly, at each of which places are dams around which the canoeist portages his canoe and duffle.

Four miles below Mount Holley dam we find the most delightful camping site in many miles, viz., Cedar Spring. Any size camp can be accommodated, and there is to be had an abundance of good spring water. A feature of the cruise will be the campfire on the evening of May 11 at this spring. The "Old Guard" know what these campfires are and consequently are always on hand, so let the younger members take notice of the manifestations of interest in these events by the older members and come along and join us, and help make this cruise a memorable one.

Benjamin A. Sleeper, a young and enthusiastic A. C. A. member, is chairman of this committee, and by addressing him at Burlington, N. J., anyone can receive inside and advance information concerning this cruise.

HENRY B. FORT, Vice-Com.

Interclub Canoe Association.

THE annual meeting and election of officers of the Interclub Canoe Association was held last week in their temporary headquarters, at 1214 F street, northwest.

The election resulted as follows: Commodore, Adrian Sizer; Vice-Commodore, W. A. Rogers; Rear-Commodore, A. P. Hastings; Treasurer, J. Frank Medbury; Secretary, W. F. Summy; Purser, George P. Hutchison; Librarian and Custodian, W. R. Garrett. The Executive Committee is composed of the officers and the following named members at large: Messrs. A. B. Dent, J. J. Lightfoot, A. M. Nevius, and R. Rutherford.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—George E. Esselborn, 2342 Webster avenue, New York, N. Y., by Fred W. Baldwin; Bertram M. Henemier, 125 Manhattan street, New York, N. Y., by Francis C. Buchenberger; Harold B. R. Laing, 225 Marble Hill avenue, Kingsbridge, N. Y., and William J. Marsh, 109 West 225th street, Kingsbridge, N. Y., both by A. D. Berning.

Central Division.—John H. Teach, 88 Pascal, Buffalo, N. Y., by F. S. Thorn.

NEW MEMBERS ELECTED.

Atlantic Division.—6366, Lawrence A. Fullam, 6032 Chestnut street, Philadelphia, Pa.; 6370, Davis C. Wells, Jr., Bordentown, N. J.; 6371, William A. Steimer, Bordentown, N. J.; 6372, Edmund vom Steeg, Jr., 10 Camden street, Roselle Park, N. J.; 6373, Ludlow Stevenson, 218 Claremont avenue, Jersey City, N. J.; 6374, Walter C. Grill, 400 West 149th St., New York, N. Y.; 6375, Herman Heye, 71 Broadway, Jersey City, N. J.

Central Division.—6359, E. W. S. Key, 409 Elmwood avenue, Buffalo, N. Y.; 6360, Hugh McLean, P. O. Box 58, Buffalo, N. Y.; 6361, M. S. Bostwick, care of Magnus Metal Co., 111 Broadway, N. Y.; 6362, Alfred S. Lowe, 100 West avenue, Buffalo, N. Y.; 6364, Richard L. Wood, 2412 Main street, Buffalo, N. Y.; 6365, G. C. Schierer, 44 E. Utica street, Buffalo, N. Y.; 6367, Charles R. Hurley, 501 Marine Bank Bldg., Buffalo, N. Y.; 6368, Hyatt W. Smith, 247 Lexington avenue, Buffalo, N. Y.

Eastern Division.—6363, Le Roy B. Surrey, P. O. Box 106, Plymouth, Mass.

Western Division.—6369, Arvid L. Greenberg, 915 8th avenue, Court Rockford, Ill.

MEMBER RE-INSTATED.

Western Division.—5116, John De Graff Berkey, Spring Lake, N. J.

MEMBERS RESIGNED.

Central Division.—5688, Henry S. Carr, Pittsburgh, Pa.; 5839, Jens Bache-Wiig, Edgewood Park, Pa.

TRAP SHOOTING

If you want your shoot to be announced here send a notice like the following:

Fixtures.

May 1.—Syracuse, N. Y.—Onondaga G. C. G. M. Phillips, Sec'y-Treas., 213 Helen St., Syracuse, N. Y.

REGISTERED TOURNAMENTS.

April 8.—Mt. Airy (Md.) G. C. Ray Watkins, Mgr.
April 9-10.—Moberly (Mo.) G. C. L. R. Hulén, Sec'y.
April 9-11.—Perry, Okla.—Oklahoma State tournament, under the auspices of the Perry G. C. Bush H. Bowman, Sec'y.

April 10.—Gaithersburg (Md.) G. C. R. M. Purdum, Sec'y.
April 11.—Atglen (Pa.) G. C. L. R. Lewis, Mgr.
April 13.—Rittersville, Pa.—Lehigh R and G. C. H. F. Koch, Sec'y.

April 15-17.—New Orleans, La.—City Park G. C. E. F. Leckert, Sec'y.
April 17-19.—Wichita, Kans.—Kansas State tournament, under the auspices of the Interurban G. C. C. W. Jones, Sec'y, 209 N. Main St., Wichita, Kans.

April 18.—Columbus (O.) G. C. L. Fisher, Sec'y.
April 23-24.—Spokane, Wash.—Washington State tournament, under the auspices of the Spokane R. and G. C. T. B. Ware, Pres.

April 23-25.—Laurel, Miss.—Mississippi State tournament under the auspices of the Laurel G. C. Chas. Green, Pres.

April 23-25.—Omaha (Neb.) G. C. F. T. Lovering, Sec'y.
April 27-28.—Chicago (Ill.) G. C. E. B. Shogren, Sec'y.

May 1.—Crete (Neb.) G. C. R. G. Spadt, Sec'y.
May 2.—Jewell (Ia.) G. C. W. S. Hoon, Sec'y.
May 2.—Dublin (O.) G. C. N. J. Dominy, Sec'y.

May 2-3.—Kankakee (Ill.) G. C. E. F. Radeke, Sec'y.
May 4.—Bethel, Conn.—Western Connecticut T. S. L. tournament, under the auspices of the Bethel G. C. C. K. Bailey, Sec'y.

May 7.—Pittsburgh, Pa.—Western Pennsylvania Trapshooters' League tournament, under auspices of the Herron Hill G. C. Thos. D. Bell, Sec'y.

May 7-8.—Vicksburg (Miss.) G. C. J. J. Bradford, Sec'y.
May 7-8.—Des Moines, Ia.—Hyperion G. C. W. E. Moyer, Mgr.

May 7-8.—Columbus (Neb.) G. C. G. A. Schroeder, Sec'y.

May 8-9.—Camden (Ark.) G. C. J. P. Wright, Mgr.
May 8-9.—Columbus (O.) G. C. Lon Fisher, Sec'y.

May 9.—Riverside, Ill.—National G. C. C. W. May, Pres.
May 9.—Vergas (Minn.) R. and G. C. C. Scharf, Sec'y.
May 9-10.—Charlotte, N. C.—Mecklenburg County G. C. E. P. Coles, Sec'y.

May 9-10.—David City (Neb.) G. C. E. D. Taylor, Sec'y.
May 14-15.—Adel, Ia.—Adel G. C. C. F. Clarke, Sec'y.

May 14-16.—Columbus, Ga.—The Interstate Association's seventh Southern Handicap tournament, under the auspices of the Columbus G. C.; \$1,000 added money. The winner of first place in the Southern Handicap is guaranteed \$250 in cash and a trophy. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.

May 15.—Mt. Holly (N. J.) G. C. A. J. Dellette, Sec'y.
May 15.—Spring Valley (Minn.) G. C. J. M. Carey, Sec.

May 15-16.—Fairmont, W. Va.—West Virginia State tournament, under the auspices of the Fairmont G. C. Ed. H. Taylor, Sec'y.

May 15-17.—Peoria, Ill.—Illinois State tournament, under the auspices of the Illinois State S. A. Robert Scholes, Sec'y.

May 16.—Scranton (Pa.) R. & G. C. M. F. Bohn, Sec'y.
May 17.—Nevada (Ia.) G. C. E. W. Scott, Sec'y.
May 17.—Pottsville (Pa.) G. & F. P. A. Elvin I. Elliott, Sec'y.

May 18.—Phillipsburg, N. J. Alert G. C. Edw. F. Markley, Pres.

May 20-21.—Iowa City (Ia.) G. C. C. Bothell, Sec'y.
May 21.—Milton Junction (Wis.) G. C. W. H. Smith Sec'y.

May 21-23.—Waco, Tex.—Texas State tournament, under the auspices of the Waco G. C. E. S. Forsgard, Mgr.

May 21-24.—Sunbury, Pa.—Pennsylvania State tournament, under the auspices of the Sunbury-Selinsgrove G. C. J. W. Schoffstall, Sec'y.

May 22.—Galion (O.) G. C. C. C. Mandeville, Sec'y.
May 23.—Mt. Morris (Ill.) G. C. H. W. Cushing, Sec'y.

May 23.—Portage (Wis.) G. C. J. Raup, Sec'y.
May 23-24.—Waterloo (Ia.) G. C. J. F. Libby, Sec'y.

May 23-24.—Lexington, Ky.—Kentucky State tournament, under the auspices of the Fayette G. C. F. C. Bell Sec'y.

May 23-24.—Delta (Colo.) G. C. R. A. King, Pres.
May 24.—Norwich, N. Y.—Chenango County G. C. E. D. Borden, Act. Sec'y.

May 25.—New Haven, Conn.—Western Connecticut T. S. League tournament, under the auspices of the New Haven G. C. Wm. F. Alcorn, Sec'y.

May 27-30.—Salt Lake City, Utah.—Utah State tournament, under the auspices of the Salt Lake G. C. E. J. Miller, Sec'y.

May 28.—Albia, Ia.—Monroe County F. & G. P. A. T. B. Perry, Jr., Sec'y.

May 28-29.—Benton (Ill.) G. C. W. H. Foulk, Sec'y.
May 28-30.—Omaha, Neb.—Nebraska State tournament, under the auspices of the Omaha G. C. F. T. Lovering, Sec'y.

May 29-30.—Greensboro (Ala.) G. C. A. Lawson, Sec'y.
May 29-30.—Wilmington, Del.—Delaware State tournament, under the auspices of the Du Pont G. C. T. E. Doremus, Sec'y.

May 30.—Cleveland (O.) G. C. F. H. Wallace, Sec'y.
May 30.—Buffalo (N. Y.) Audubon Club. B. V. Covert, Pres.

May 30.—Watertown (Wis.) G. C. B. H. Reick, Sec'y.
May 30-31.—Sikeston (Mo.) G. C. W. H. Tannér, Sec'y.

DRIVERS AND TWISTERS.

The Throckmorton Gun Club, at Throckmorton, Tex., has just been organized, with every prospect of success in the way of funds and membership. H. A. Bachman is Secretary.

H. F. Wilkinson, secretary, writes: "The Roanoke Gun Club will begin its official shooting on April 6, and thereafter shoot each Saturday afternoon at 3 o'clock until the last Saturday in October."

The selection of Walter Winans, by the National Rifle Association, to represent America in sporting rifle events at Olympic games this year is most commendable. Mr. Winans won double rifle championship at the last Olympic meet.

H. J. Henry, Corresponding Secretary Onondaga Gun Club, writes: "On April 13, the Audubon Gun Club, of Buffalo, N. Y., will shoot a twenty-man team race with the Onondaga Gun Club, of Syracuse, at Syracuse. The conditions of the match are 100 targets per man. A return match will be shot in Buffalo some time in May."

On April 13, Orange Gun Club will shoot a match with Newton Gun Club, at Newton, N. J. It will be a gala day, with events for visitors. Rain or shine, snow or blow, shooting will begin on arrival of 10:30 train from New York. Trains leave New York, 8:00, 11:45; Hoboken, 8:15, 12:15; Newark, 7:46, 12:32; Orange, 8:00, arriving at Newton at 10:30, 2:50.

T. H. Kelley, Secretary, writes: "The sixth contest for the Frank Hall trophy will be held on the grounds of the Hudson Gun Club on June 2. To reach the Hudson Gun Club grounds, take Turnpike car at Jersey City ferry of the Pennsylvania Railroad, or at any point in Newark, and ride to the west side of the Hackensack River bridge, then walk north to the D., L. & W. R. R. bridge, where the club house is situated. We start shooting at 9:30 A. M., and everybody is welcome here. So come out and give us a call."

The fifth annual open handicap tournament of the Lawrence Fish and Game Protective Association will be held on Patriots' Day (April 12), on the club grounds, Andover street. Seventy-five dollars in merchandise and trophies. Sweeps optional. Interstate rules, 16yds.; open to amateurs, with targets only for professionals. Five events of 20 targets; two events of 25 targets. Officers: A. B. Sherman, President; R. W. Forster Vice-President; A. C. Gray, Secretary; Wm. J. McDonald, Treasurer; Tournament Committee, Francis G. Rogers, Wm. J. McDonald, A. C. Gray.

The Omaha Gun Club and the Tri-City Revolver and Rifle Club have consolidated and will build a new club house on the grounds, which are being used at the present time by both clubs. It will be in bungalow style, two stories. The front entrance will face north, and the entire front of the house will be surrounded by a large veranda and screened in. The first floor will be fitted up with a kitchen, dining room and two lounging rooms. The second floor will have four rooms. An approach to the new club house will be made from the car line and will be sodded and planted with flowers. The house will occupy the site now being used by the Omaha Gun Club house. The range will be unchanged.

The dates for the Maine State championship trapshoot for 1912 will be June 3, 4, 5 and 6. This early date has been selected because several men who will participate will probably shoot on the American team which competes at the Olympic games in Sweden shortly afterward. R. L. Spotts, of the New York A. C., one of the

members of the Mooselucmeguntic five of Haines Landing, which won the Maine championship last year, and who will shoot again on the team this year, is a member of the American Olympic team, and C. W. Billings, who will probably shoot in the open events at Haines Landing, is captain of the Yankee bunch. Of course, the State shoot will take place at Haines Landing, since Mooselucmeguntic Gun Club won the cup last season, and Walter D. Hinds, of that city, is captain of the team.

W. G. BEECROFT.

New York State Sportsmen's Association.

Editor Forest and Stream:

As noted in your fixtures, the above organization will hold its annual convention and tournament at Syracuse on June 10 to 13. The list of officers and committees follows: President, Hurlburt W. Smith, Syracuse; Secretary-Treasurer, L. H. Schortemeier, 201 Pearl street, New York city; Committee on Organization for the Protection of Game, W. E. Hookway, Chairman, Syracuse; C. L. Franz, Seneca Falls; Dr. L. Welling, Mechanicsville; James Lamphere, Weedsport; J. L. Talcott, Buffalo. Tournament Committee, T. E. Clay, Syracuse; J. L. Talcott, Buffalo; C. L. Franz, Seneca Falls; W. E. Corfield, Utica; C. G. Blandford, Ossining. Handicap Committee, E. A. Wadsworth, Chairman, Wolcott; F. D. Kelsey, East Aurora; Dr. L. Welling, Mechanicsville; E. M. Hurd, Albany; L. H. Schortemeier, New York city.

Apropos the active existence of our Association, the following note may be of interest in this day of awakening game protection and conservation of the State's natural resources, taken from the history of the Association:

"In October, 1859, a few ardent lovers of field sports signed the following call for a convention:

"A State convention of sportsmen will be held in the village of Geneva, on Tuesday, Nov. 15, 1859, for the purpose of discussing and devising means for united action throughout the State for a revision of the present senseless and inefficient game and fish laws. Sportsmen are generally invited to attend."

"At noon, Tuesday, Nov. 15, 1859, the convention was called to order at the Franklin House by M. H. Mandeville, of Geneva, upon whose motion, Charles H. Haswell, of New York city, was chosen President; Charles W. Hutchinson, of Utica, and H. L. Suydam, of Geneva, Vice-Presidents, and Henry Hunter, of Rochester, Secretary."

L. H. SCHORTEMEIER, Sec'y-Treas.

Meadow Springs Gun Club.

PHILADELPHIA, Pa., March 30.—To-day's card called for four practice tests, the club test at 25 birds with handicaps added, and the second shoot for the Henry trophy. In addition to this latter prize, there were also numerous spoons handed out for various feats of gun handling.

No. 5 was the Harvey trophy.

Kelly came over with Coburn, and still can point the old gun right. He is sure one of the boys. Scores: Coburn 138, Webster 137, Dr. Edwards 135, Fisher 130, Squier 126, Moeller 118, Coffman 116, Kelly 74 out of 100, Kilgore 51 out of 60, Shilling 65 out of 75, J. H. Smith 109. All the rest shot the program.

Luther was more than a welcome visitor. Every one is glad to see Luther Squier come on the ground.

The writer, having purchased the well-known Hotel National, or Bulkhead, at the Lewistown Reservoir, or Indian Lake, extends a very cordial invitation to shooters to come and spend their vacation at this popular resort. Everything is being cleaned and refurbished, which will make this hotel one of the best places on the lake. The same good meals will be served, like those served at the club.

The shoot to be held April 2 at this resort is postponed until April 9 on account of the Lake still being frozen. The duck shooting will be much better at this date. The Squier money-back plan will be used. Come and stay over for the ducks. Take the Ohio electric to Stop 27, on the Lima and Springfield Division, or T. & O. C. to Russel's Point. Good guides, with boats, blinds and decoys, can be had at reasonable prices. Ammunition of all kinds on the grounds.

LON FISHER.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., March 30.—Parry and Stoner tied for first place in percentage of targets broken. Moller posted two straights of 20 each; Parry, Barr, Hymer and Denny one each.

R. R.

Columbus Gun Club.

COLUMBUS, O., March 25.—The Jack Rabbit shoot held Thursday, March 21, was O.K. Of course bad weather had to come, but when don't we get bad weather these days. Quite a nice little crowd was out. Coburn took us all in to camp. Webb was one bird behind. Dr. Webb three behind. Harley Kilgore got in in time to shoot four events, and he still knows how. Dad

Club House Plans.

We are able, through the courtesy of E. I. du Pont de Nemours Powder Co., to publish a series of gun club house plans. These buildings range in price from \$100 to \$1,300, complete. They are from designs by architects expert in gun club house building, and have been made up from the best features found in club houses now in existence, with even more modern suggestions from trapshooters who have a thorough knowledge as to what are requisites in club house layouts. Working plans, specifications and detailed cost of construction of any of these houses will be sent free of charge to any club upon application. We shall also be glad to give advice as to what furnishings are essential for each house, and where they may most reasonably be purchased.

Speedway Gun Club.

NEWARK, N. J., March 28.—Members of the Speedway Gun Club scored a victory over the representatives of the Bergen Beach Gun Club in a special match, shot yesterday afternoon over the Speedway traps. The match was close throughout, and the locals won by a score of 216 to 202. Each man shot at 50 targets. In the first string of 25 the locals led by a margin of 6 birds, due to the good shooting of Louis Colquitt and William Hassinger. In the second string the Speedway gunners smashed 110 birds out of the 125 that they fired at, while the visitors missed 23 out of their allotment. J. K. Voorhees, of the Bergen Beach Gun Club, and S. Thompson, of the locals, each turned in a perfect string of 25 kills as their part of the score in the second string.

While yesterday was not exactly a good day for shooting, some good scores were turned in. Louis Colquitt was the individual high gun of the day. William Has-

singer and B. M. Shanley, Jr., also shot well in the events in which they participated. The scores:

Highland Gun Club.

PHILADELPHIA, Pa., March 30.—The spoon winners in the second of the monthly shoots of the Highland Gun Club to-day were Crothers in Class A; Clark in Class B; Perry in Class C; Frank Meehan, Jr., in Class D; Kunkel and Houpt in the protection race, and Eyre among the visiting shooters. High gun honors went into a tie between Crothers and Severn. The points in the first event, which was at 10 targets straightaway, were Perry 3, he breaking straight; "Butch" Landis, Severn, Clark, Griffith and Houpt, 2, getting scores of 9, and Walter Dalton, Tansey, Wentz, Flanagan, 1 each, their breaks totalling 8.

The John B. Burn memorial trophy was at 15 targets, and Crothers was the high man with a straight. The combined scores of the two events counted for the period prizes. Crothers was high in Class A; Clark led in Class B with 21; Perry was the whole thing in Class C with 19; and Thomas Meehan and R. David shared the Class D with 15 each. The same events also count for the club championship.

In the third event, at 5 pairs of doubles, Severn got 8, Joel Davis and Crothers each 7.

A five-target event, expert rules, was a tie between Thomas Meehan, Tansey and Griffith, each breaking straight. In the protection race, Tom Tansey and Thomas Meehan as one team, tied with Kunkel and Houpt with a straight, and in the first shoot-off they again tied, but in the second, Kunkel and Houpt were the victors.

The clock event at 25 targets was won by Tom Tansey with 24, and Houpt with 23.

Getting each other's goat, at 15 targets wound up the day's program, and J. F. Meehan lost one to Perry and another to Clark. Scores:

Garrison-Highland Rod and Gun Club.

WEST POINT, N. Y., March 30.—The Garrison-Highland Rod and Gun Club held their first tournament on March 26. We had a fair turnout and a fine time in general and shot at a total of 4630 targets.

Besides the regular 15-bird events, we had a team shoot between eight members of the Monroe Rod and Gun Club, and a like number from Garrison-Highland Club, and, sad to relate, we got trimmed to the tune of 43 birds; but this being our first offense, we hope to do better next time.

Essex County C. C.

ORANGE, N. J., March 30.—The last shoot of the season of the Essex County Club took place this afternoon. L. H. Ross won the March cup and James A. Hart the Shanley trophy at 10 pairs of doubles. The scores:

March cup, 25 targets, handicap: C. H. Daly (0) 20, Hart (0) 20, B. M. Shanley, Jr., (0) 24, Ross (7) 25, A. O. Headley (4) 22, J. K. Taylor (6) 19, Peter Hauck, Jr. (4) 17, H. S. Brown (6) 25, H. T. Folsom, Jr. (7) 20.

Shanley trophy, 10 pairs doubles: Daly 13, Hart 11, Shanley 15, Ross 12, Headley 4, Taylor 8, Hauck 10, Brown 12, Folsom 12.

Goat medal, 25 targets, handicap, elimination first and second string: Daly (0) 10, 13; Hart (0) 5, 8; Shanley (0) 4, 2; Ross (5) 9, 14; H. T. Folsom (5) 12, 7; Headley (2) 5, 7; Taylor (4) 9, 7; Hauck (2) 5, 4; Brown (4) 7, 10; H. T. Folsom, Jr., (5) 7, 6. Shanley and Ross were the respective winners, and they were scratched

WINCHESTER

.22 Automatic Rifle

The novelty of its operation is one of the fascinating features of the Winchester .22 Automatic Rifle. Instead of the downward and upward motion of a finger lever, or the backward and forward thrust of a slide handle, the pull on the trigger is the only effort required to shoot the rifle ten times in succession. The only limit to speed in firing is the rapidity with which the trigger can be pulled before each shot. With this speed is coupled fine accuracy, light weight, simple and strong construction, and ease and quickness of handling. Note the beautiful appearance of the rifle. It lists at \$25.00, but is sold everywhere for much less. It is the ideal vacationist's rifle

FOR TARGET SHOOTING OR GAME

for the final, Ross winning with a score of 23 on a string of 25 straight.

Team match, 25 targets each man: Shanley (0) 25, Headley (4) 19, 44, Hauck (4) 27, Daly (0) 23; total 50. Folsom (7) 26, Brown (6) 23, Hart (0) 21, Taylor (6) 19; total 40.

Handicap, 25 targets, two shoots: Daly (0) 19, 22; Hart (0) 22, 20; Shanley (0) 23, 24; Ross (7) 22, 20; Headley (4) 14, 14; Taylor (6) 24, 16; Hauck, in one event (4) 19.

New York Athletic Club.

PELHAM MANOR, N. Y., March 30.—Thirty-six gunners turned out here to-day, many attracted in the hope of getting a line on the trap layout before shooting in the National Championship.

D. F. McMahon took high gun cup with 92. C. W. Billings made the St. Patrick's day cup "his for keeps" by taking the tie from seven others. March cup went to G. J. Corbett. President's trophy and Pelham trophy to D. F. McMahon after a shoot-off. R. L. Spotts refused to be left out, so took distance handicap. R. R. Debacher went off with Olympic rules Billings trophy, while McMahon went off with 100-target handicap. The scores:

March cup, 25 targets, handicap: G. J. Corbett (2) 25, E. N. Huggins (7) 25, G. M. Thomson (4) 24, W. J. Simpson (3) 23, F. H. Schaffer (3) 22, G. F. Pelham (3) 22, D. F. McMahon (3) 22, B. M. Higginson (0) 22, A. P. Walker (7) 21, W. B. Ogden (2) 21, R. L. Spotts (0) 21, C. W. Billings (1) 21, A. E. Ranney (2) 21, O. C. Grinnell (2) 20, F. Hall (1) 19, J. G. Batterson (2) 19, F. A. Hodgman (1) 18, J. H. Hendrickson (0) 18, J. Martin (0) 18, J. W. Hessian (0) 15, G. H. Abbott (2) 16, E. McLemore (0) 14, F. Graham (0) 14, H. Allyn (0) 13, A. Dalton (0) 13, R. R. Debacher (5) 13. Shoot-off won by G. J. Corbett.

St. Patrick's day cup, 25 targets, handicap: C. W. Billings (1) 25, A. E. Ranney (2) 25, F. H. Schaffer (3) 25, G. J. Corbett (1) 25, G. F. Pelham (3) 25, D. F. McMahon (3) 25, W. J. Shoot-off: G. Stephenson, Jr., 22; Brigham 21.
Hyatt trophy, gun below elbow, 50 targets: A. E. Henry (5) 46, F. B. Stephenson (0) 38, G. E. Brower (3) 38, G. G. Stephenson, Jr. (3) 37, J. P. Fairchild (3) 36, H. T. Spooner (3) 35, W. W. Pell (5) 27, W. W. Marshall (7) 25.

High average on 200 targets: G. G. Stephenson, Jr., 154, first; F. B. Stephenson, 153, second.
*Guest.

Queens C. C.

QUEENS, L. I., March 30.—Only one event was shot here to-day, a 100-target handicap event. It was won by Fred Rowland with 91 from 5 handicap. Scores:

F. Rowland (5) 91, P. von Boeckman (0) 88, Dr. Cleghorn (5) 85, G. F. Stephenson (0) 85, J. M. Kissam (5) 85, W. L. Hyland (3) 85, P. Hathaway (5) 84, D. K. Morrell (4) 79, Dr. Griffith (0) 79, W. W. Simonson (0) 78, W. Barnes (13) 78, S. Van Allen (0) 75, C. H. Danton (5) 75, C. Chaffe (0) 62, H. Kaller (0) 61, P. M. Lord (0) 57, G. Fairfield (5) 53, M. Magnolia (0) 40.

Bergen Beach Gun Club.

BROOKLYN, N. Y., March 30.—The take-home end of March cup was shot to-day, and was won by Dr. Remson with 81 1/4 per cent., his day's score being 78. Second man was R. Morgan with 79 1/4 per cent.

Sliding distance handicap, 100 targets: D. Remson 78, J. Coornaam 75, J. Gaughan 73, H. B. Suydam 72, W. J. Skidmore 72, D. Jones 62, D. Muller 64, W. Simms 55, D. Duffield 32, W. Brown 60, H. Hewes 52, C. Hess 31, A. Collins 29.

Jersey City Gun Club.

JERSEY CITY, N. J., March 30.—Thirty-two shooters were out on March 27 to attend the Frank Hall trophy shoot at the Jersey City Gun Club, and of that number twenty-three were contestants for the cup, and from the enthusiasm shown by the shooters, it would seem as though the interest in the different shoots for the cup will be on the increase from now on, and will result in a good healthy competition among the shooters of New Jersey, as all residents of the State are eligible.

Al. Ivins, of Red Bank, was the high gun, finishing with 92 per cent.; C. W. Billings, of Glen Ridge, was next with 91 per cent, and W. H. Trowbridge, of Newark third with 89 per cent. The scores follow:

Shot at. Broke		Shot at. Broke	
Ivins	100 92	Tippett	100 77

The next shoot for the cup will be at Freehold on April 19.

SECRETARY.

Paleface Gun Club.

WELLINGTON, Mass., March 30.—In the 100-target added bird handicap match this afternoon, Biddle was high gun.

The five-man team match between the Palefaces and the Beetheads was won by the former with a score of 397 to 393. Scores:

Handicap event, 100 targets:			
Biddle	12 98	Dimick	24 86
Dr Newton	16 96	Williams	0 85
Bartholf	10 95	Sweet	8 85
J Clark	8 94	W F Clarke	8 85
Proctor	16 93	Beers	16 84
Smith	8 93	Lockwood	12 82
Sibley	8 92	Marden	8 81
Osborne	8 92	Edwards	0 78
Wiggs	12 89		

Five-man team match, 100 targets per man:

Palefaces.		Beetheads.	
Williams	85	Biddle	86
Osborne	84	Bartholf	85
Edwards	78	Wiggs	77
Clarke	77	Sweet	75
Marden	73—397	Lockwood	70—393

Lawrence F. & G. P. Ass'n.

LAWRENCE, Mass., March 30.—The Lawrence Fish and Game Protective Association won the second of a series of three shoots being held with the Beverly United Shoe Machinery Athletic Association Gun Club at the local grounds to-day by a score of 384 to 378. Each team has now won a shoot, and the third and final meet will be held at the grounds of the local club, Saturday, April 27, at 2:30 P. M., and the winning team will be presented the five silver cups which are staked on the outcome of the match, one for each member. To-day's scores were as follows:

Lawrence F. & G. P. A.		Beverly U. S. M. A. G. C.	
Burns	82	Hurd	80
Boynton	82	Winslow	80
Hall	80	Whidden	76
Russell	71	Foster	72
Hanford	69—384	Spencer	70—378

Other club members shot as follows: Rogers 80, Bradbury 76, Gray 74, McDonald 70, Archihald 65.

A. C. GRAY, Sec'y.

Mt. Holly Gun Club.

MT. HOLLY, N. J., March 30.—We have organized a gun club at Mt. Holly, N. J., and this is a report of our weekly shoot. We are to hold a registered tournament on May 15.

Hudson Gun Club.

THE merchandise shoot on April 21, at the Hudson Gun Club, promises to be one of the largest shoots of its kind in this vicinity in years. The committee have purchased upward of thirty valuable prizes, including cut-glass, silverware and shooters' utensils.

With the trapshooting season now practically closed; with the large clubs of Greater New York, this shoot affords a fitting climax for the season for the "cracker-jacks," and affords them an opportunity to try their hands at the Hudson Gun Club traps, which are acknowl-

Some Good Reasons Why You Should Shoot

THE PARKER GUN

Be high man at the traps. Shoot the finest brush gun made. Mechanical construction perfect.

Send today for illustrated catalogue.

PARKER BROS.

New York Salesrooms: 32 Warren St.

Meriden, Conn.

edged by all who have shot over them, to be the hardest set of traps for high scores around New York.

A special invitation is herewith extended to members of the New York Athletic Club, Crescent Athletic Club, Larchmont Yacht Club, Queen Gun Club, and Country Club, to come out and try their hand with the "Jersey boys," who will try to make the day a pleasant one for all. Members of the New Jersey State Sportsmen's Association will also have a good opportunity to get a line on the traps for the Hall cup event, to be shot on these grounds June 2.

CARL VON LENGERKE.

The Du Pont Gun Club.

WILMINGTON, Del., March 30.—W. S. Colfax and Lester B. German tied for first place to-day with 74 out of 75. The match between Colfax and German was arranged for 50 targets, but when the last target was broken, each man had a clean score. Both Colfax and German accounted for 24 out of the next 25.

H. P. Carlson won the silver fob trophy for the event at 20 doubles with 17.

Alden B. Richardson won the Coleman du Pont Class A spoon with 25 straight. Richardson lost the Class A challenge cup, which he won on Thursday from E. A. W. Everitt by breaking 50 straight, to H. H. Lukens. The winner yesterday broke 48 out of 50.

W. A. Joslyn, of this city, challenged Lukens for the same cup. Lukens again won, breaking 47 as against 45.

J. H. Minnick won the Class B cup, which was offered in open competition. He also won the Coleman du Pont Class B spoon. The other winners in the merchandise events were: Class C—W. B. Smith, Jr., 23; Class D—D. A. Grier, 22.

There were sixty-eight competitors, and the attendance was the largest of the season. Scores:

Bush 23, Richardson 25, Edmanson 22, Steele 18, Lambert 9, Lynch 15, Curley 10, Hoopes, Jr., 21, Guest 20, Lyon 24, Lukens 23, Minnick 25, Colfax, Jr., 25, Morgan 22, Dr. Bedford 19, W. Mathewson 20, MacMullen 15, Goodman 15, Lamber 15, Victor du Pont 19, Anderson, Jr., 17, Highfield 12, Wood 17, W. L. Smith 18, Springer 19, Davis 13, Capt. Doe 19, Geo. Lyon 23, David 17, Jarrell 15, Skelly 23, Dr. Betts 20, N. K. Smith 19, Carlson 24, Dodson 20, Francis 15, Reed 7, Wood 20, Magahern 23, Porter 17, D. Grier 22, Dr. Patterson 20, W. B. Smith, Jr., 23, Newman 16, Lewin 4, J. B. Grier 18, Crosby 9, Dougherty 22, Coyne 20, Dr. Bullock 19, Birch 9, Ort 15, Keithley 23, McCardle 19, E. E. du Pont 24, Foord 24, Gregg 19, John 15, Shaffer 18, Ewing 15, Jackson 21, Haverbeck 23, Black 17, W. A. Joslyn 21, Doremus 21, L. Mathewson 19, L. German 25, Roberson 20.

Camden Shooting Association.

CAMDEN, N. J., March 30.—The main event of the afternoon was a 50-target match in which there were twenty-two contestants. First prize went to Radcliffe with 46, which with his handicap of 4, gave him a clean score. Morris was second high, also with 46, his handicap of 3 gave him 49. Pedlow with 5, and Anthony with 7, tied for third honors, each having a score of 47. Scores:

Horner	5 45	Eyester	6 45
Morris	3 49	Fleming	3 43
Warren	1 43	Turner	4 33
Judson	0 45	Anthony	7 47
Slear	0 42	Chalmers	3 43
Hand	1 42	Cox	5 45
Fontaine	1 42	Radcliffe	4 50
Platt	0 42	Wicks	4 35
Bates	2 42	Lippincott	3 42
Holloway	7 46	Johnson	3 34
Pedlow	5 47		

Smashing every target, Hine line took first money in a sweepstake at 10 targets. Four with 9 each split the second purse, and five with 8 each divided third money. Scores: Hine line 10, Morris 8, Radcliffe 7, Hand 9, Bates 8, Turner 3, Pedlow 9, Holloway 7, Slear 7, Platt 8, Warren 7, Fontaine 9, Horner 9, Eyester 8, Fleming 8.

FISHERMEN NEED DIXON'S GRAPHITE

It prevents sticking of ferrules, tangling of line and is good for reels. Fishermen need it. Get free sample and booklet P-52.

JOSEPH DIXON CRUCIBLE CO. JERSEY CITY, N. J.

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He knows it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is Lefever Taper Boring.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N. Y.

Durston Special 20 Gauge. Price \$28.00

Boston A. A.

BOSTON, Mass., March 30.—Thirty members and guests gathered at the Riverside grounds to-day to see R. A. Faye break 81 targets straight.

The scores of the take-home and barbary trophies were combined for the Hunter trophy. M. Ballou was high gun for first trophy, and R. A. Faye for the second, and there were four ties for the last one. The scores:

*Guest.

Larchmont Y. C.

LARCHMONT, N. Y., March 31.—The regular season at traps ended here to-day, and the final big event will be pulled to-day in the form of a special invitation shoot. Nine events were finished up to-day.

Twenty gunners shot for the March cup. It resulted in a tie between K. R. Hooker, D. McMahon and Bemis with clean scores. In the shoot-off Hooker won.

The same number took part in the final shoot for the Bemis trophy, and in this R. J. Held won with a full score, but won the trophy outright. He was also the winner of the senior shoot, a special match at 50 targets for a cup. The junior cup was won by K. R. Hooker.

W. B. Short won the Held trophy, a season prize. A leg for this trophy was won yesterday by L. Antoine with a full score after a shoot-off with C. W. Billings.

The 125-target scratch contest was won by R. L. Spotts with a score of 111, and C. Daly won the 10-target match with a full score.

There were seven ties in the 15-target scratch contest, each man having broken 14 targets. K. R. Hooker won in the shoot-off. E. G. Unitt won the leg for the accumulation cup and the cup itself.

W. J. Elias was the winner of the 100-target handicap match with a score of 95 to his credit, and the 100-target special match was won by W. E. Bemis.

The committee cup was won by R. J. Held, and the trustees cup by R. L. Spotts. S. Halstead won both the take-home trophies.

Registered Tournaments.

THE following tournaments have been registered with the Interstate Association during the week ending March 30:

June 13-14.—Indianapolis (Ind.) G. C. J. C. Dixon, Sec'y.

June 25-26.—Du Bois (Pa.) G. C. E. W. Kelly, Sec'y.

June 26.—Worcester (Mass.) Sportsmen's Club. Jay Clark, Jr., Sec'y.

June 29-30.—New Athens, Ill.—Egyptian G. C. Jac. H. Koch, Sec'y.

July 11-12.—Warren (Minn.) G. C. D. Farrell, Pres.

July 17-18.—Seattle (Wash.) T. S. A. A. L. Hall, Sec'y.

July 23-24.—Paragould (Ark.) G. C. C. W. Stedman, Sec'y.

July 24-25.—Mason City, Ia.—Cerro Gordo G. C. H. B. Madsen, Sec'y.

ELMER E. SHANER, Sec'y-Treas.

Greenwich C. C.

GREENWICH, Conn., March 30.—Only seven men turned out to-day. E. C. Wills won February and March cup with 19½ points. The nearest competitor, N. Webb, had 10½. Scores:

with 19½ points. The nearest competitor, N. Webb, (24) 91, G. M. Pyncheon (20) 90, E. T. Hall (28) 90, Baron von der Ropp (0) 89, W. B. Sewell (28) 85.

New Model 27

Marlin Repeating Rifle

The only gun that fills the demand for a trombone ("pump") action repeater in .25-20 and .32-20 calibers.

Shoots high velocity smokeless cartridges, also black and low pressure smokeless. Powerful enough for deer, safe to use in settled districts, excellent for target work, for foxes, geese, woodchucks, etc.

Its exclusive features: the quick, smooth working "pump" action; the wear-resisting Special Smokeless Steel barrel; the modern solid-top and side ejector for rapid, accurate firing, increased safety and convenience. It has take down construction and Ivory Bead front sight; these cost extra on other rifles of these calibers.

Our 136 page catalog describes the full Marlin line. Sent for three stamps postage. Write for it.

The Marlin Firearms Co.
27 WILLOW STREET, NEW HAVEN, CONN.

Northern Kentucky Gun Club.

MARCH 31 was the real thing in spring goods, and the first taste of fine weather brought out an almost old-time crowd for the weekly shoot. There were sixteen men who took their places on the firing line during the afternoon, and they kept the boys busy until nearly dark. We were pleased to greet "Roundy" Chamberlin, of Columbus, once again, and to see that he was still some shooter. In the first two events he failed to let any of the clays escape and went out with 96, which put him at the head of the class. Emil Hammerschmidt was second with 94. Capt. Dameron got a little careless in the last two events, and let some easy birds get away, but he was a close runner-up for second place with 93. Charlie Young (Chief Sparrow), of Springfield, was another welcome visitor. O. J. Holiday, our local expert, has just returned from a long trip in the South. He did not show his best form to-day by a good many targets. George Walker is getting into the target game. In his second event he dropped but one target. We'll soon have him for one of the regulars, and practice will make him a hard one to beat. Hammerschmidt and Dameron shot the first of a series of matches to-day, the former winning by one target. Hack and De Vere did very well for beginners. Ertel and Ford are visitors whom we hope to see often this summer. The latter put up a very nice score, shooting a 92 per cent. gait. Irwin did nice work in his second and fourth events, dropping but two targets out of 50. Luverne (Gould) is coming back, and if he will stick to it, will reach his old-time standard before the snow flies again. His match with J. B. C., scheduled for to-day, was postponed, as the latter was out of the city. Hammerschmidt and Dameron are ready to meet any two-man team composed of shooters resident in the vicinity of Cincinnati. A feature—in fact, the feature—of the club meet on April 14, will be a two-man team match, the opposing teams to be made up from four shooters, Irwin, Johnson, Dameron and Hammerschmidt, the last two to be on opposite sides. There is a rumor that the Cincinnati Gun Club will be able to effect an arrangement this spring which will put that old-time organization on the trapshooting map again, and result in its taking its place once more among the leading clubs of the country.

Match, 100 targets: Hammerschmidt 94, Dameron 93.

Events:	1	2	3	4	5	Total.
Chamberlain	25	25	23	23	..	96
Holiday	24	20	21	20	..	85

Cleveland Gun Club.

CLEVELAND, O., March 30.—Club shoot of the Cleveland Gun Club, held to-day, at Shooting Park, had fine weather conditions, which brought out the summer crowd, which put the bluerocks to the bad. Doolittle, who has shot little, was high gun with 94 out of 100 in the regular events. The next big shoot of the club will be the spring tournament, April 10, and those that are looking for something good, just come and take in this shoot. Scores:

Event No. 1, monthly trophy, 50 targets, 16yds.: Doolittle 46, Blakeslie 46, Hogen 41, Freeman 41, Archer 41, Brown 40, Rockwell 40, Parkhurst 40, Flick 39, Rogers 39, Drake 35, Brainard 34, Stevens 33, Wall 33, Hecker 32, Harding 32, Hogan 31, Thorp 30, Morgan 24.

Event No. 2, annual trophy, 50 targets, 16yds.: Flick 48, Doolittle 48, Rogers 47, Hogen 46, Blakeslie 45, Archer 43, Brown 41, Freeman 41, Parkhurst 42, Brainard 39, Stevens 30, Stepp 36, Rockwell 35, Drake 35, Wall 32, Heikes 31, Thorp 31, Harding 31, Logan 30, Morgan 28.

Special event No. 3, 50 targets, 16yds.: Hogan 45, Flick 44, Doolittle 43, Blakeslie 41, Brown 40, Parkhurst 40, Rogers 38, Wall 38, Grant 38, Logan 33, Harding 31, Thorp 31, Morgan 25. F. H. WALLACE, Mgr.

Marine and Field Club.

BATH BEACH, L. I., March 30.—E. H. Lott was the principal winner at the Bath Beach traps of the Marine and Field Club to-day. He took the March cup with a total of 281, and captured a special prize offered by J. M. Knox with a total of 45 out of 50. The take-home trophy was won by C. M. Camp. J. M. Knox won a trophy shoot. The scores:

March cup, 300 targets, handicap: E. H. Lott (0) 261, J. H. Knox (48) 258, J. H. Emanuel, Jr. (12) 247, C. B. Ludwig (12) 247, P. R. Towne (0) 238, C. M. Camp (12) 231, C. B. Sayre (12) 217.

Knox cup, 50 targets, handicap: E. H. Lott (0) 45, H. B. Vanderveer (0) 44, C. M. Camp (2) 38, J. H. Emanuel, Jr. (2) 38, C. B. Ludwig (2) 37.

Take-home trophy, 25 targets, handicap: C. M. Camp (1) 25, E. H. Lott (0) 23, C. B. Sayre (1) 21, H. B. Vanderveer (0) 20, J. H. Emanuel, Jr. (1) 19, C. B. Ludwig (1) 16, J. M. Knox (4) 15.

Trophy shoot, 25 targets, handicap: J. M. Knox (4) 23, J. H. Emanuel, Jr. (1) 22, H. B. Vanderveer (0) 21, E. H. Lott (0) 21, C. B. Ludwig (1) 20, C. D. Sayre (1) 20, C. M. Camp (1) 20.

Trap at Gloucester City.

GLOUCESTER CITY, N. J., March 30.—There were two shooting matches at bluerocks this afternoon at the old race track. A big crowd was on hand to see the shoot. The main event was for a double-barreled gun. There were thirty participants, and at the end of the tenth round there were eight tied for the prize. In the shoot-off, after Martel, Prickett and Bennett had broken 8 straight, they decided to shoot it off next Saturday.

The second match, for a turkey, was won by Martel, who broke 20 straight. Scores:

First event, shoot for double-barreled gun, at 10 blue-locks: Martel 10, Prickett 10, Bennett 10, Boyd 10, Wedemyer 10, Larney 10, Sterling 10, Monohan 10, Robinson 8, Wilson 8, Black 7, Bobo 7, Martin 6, Smith 6, Johnson 5. The others broke less than 5.

Shoot-off, miss-and-out: Prickett 8, Martel 8, Bennett 8, Boyd 7, Wedemyer 5, Larney 3, Sterling 6, Monohan 2. The first three will shoot off next Saturday.

Second event, sweepstakes, miss-and-out, prize turkey: Martel 20, Prickett 19, Robinson 16, Monohan 14, Berstesser 11, Bowe 9, Callahan 7, Bennett 7.

Westchester Country Club.

BAYCHESTER, N. Y., March 30.—Fifty expert targeters gathered at the Westchester Country Club to-day, the events being the Metropolitan senior and junior championships.

The senior title was won by R. L. Spotts, with a straight 25. C. W. Billings, of the New York A. C., won the junior event, also making a straight.

The Result of Over a Century's Experience

Perfection in powder-making is only achieved by exercising the most scrupulous care in the selection and preparation of raw materials, employing skilled workmen exclusively, and using only the most improved modern mechanical equipment.

This is the Du Pont method and accounts for the unequalled reputation among sportsmen enjoyed by the Du Pont brands of Smokeless Shotgun Powders. One of the most popular of these brands is

A dense powder that is absolutely uniform in velocity and pattern. Waterproof—not affected by extremes of heat or cold. "INFALLIBLE" Smokeless Shotgun Powder will not pit the gun barrels.

Rifle and Revolver

Seventy-First Regiment Rifles.

THE championship of the Seventy-first Regiment was won by Sergt. H. L. Bryan. The match called for twelve strings of 7 shots each on both the 300 and 500yd. ranges, not more than two strings to be shot on any one night. Out of a possible 840, Sergt. Bryan made 816.

By winning the two Class A revolver matches shot last week, Sergt. G. H. Doyle established a record that has never been equalled by a member of the rifle club. He has won every Class A revolver match that has been shot this season.

The Class Cup match, the first leg of which was shot on Feb. 15, was won by Pvt. W. E. Toele in the expert class with 135 out of a possible 140; by Corp. S. Bukley in the sharpshooter class with 132, and by Pvt. A. Dern in the novice class with 128.

Federal Rifle and Revolver Club.

BOSTON, Mass., March 30.—The re-entry rifle match held at the Federal range, which opened on March 1, was finally won by Capt. W. R. Murphy by one point. Scores: Capt. W. R. Murphy 242, F. B. Chapman 241, Jackson Palmer 239, Capt. S. W. Wise 238, Miles Standish 237, H. E. Whitten 237, C. H. Kelley 236, J. B. Dunbar 236, Eugene Carver, Jr., 231, Dr. P. J. Post 229.

Maxim Silencer

ATTACHES EASILY TO ANY RIFLE

Checks the muzzle blast, preventing report, noise and recoil. Wonderful aid to marksmanship. Stops flinching. Makes rifle practice possible anywhere. Attaches immediately—no threading of rifle barrel required. Write make, model and calibre of your rifle (giving dealer's name). We will send interesting Catalog, tell you what Silencer you need, price, etc.

Maxim Silent Firearms Co. 17 Colt's Armory Hartford, Conn.

NYOIL WILLIAM F. NYE is the greatest authority on refined oils in

the world. He was the first bottler; has the largest business, and NYOIL is the best oil he has ever made. It has no equal. Beware of scented mixtures called oil. Use NYOIL on everything where a light oil is required. It prevents rust and gives perfect lubrication. Ladies, try it on your sewing machines. Sportsmen, use it liberally on your firearms. Hardware and sporting goods dealers sell it in large bottles (cheaper to buy) at 25c. and in trial size at 10c. Made by

WM. F. NYE New Bedford, Mass.

Intercity High School Rifle League.

THE last week's matches in the Intercity High School Rifle Shooting League resulted in no change of the leaders. Both Iowa City and Deering High won their matches by default.

A feature of the shooting was the breaking of the interscholastic record by the team of the Baltimore Polytechnic Institute, their score of 970 being 2 points better than the previous record made by the Deering High School boys of Portland, Me. The tie between Portland and Iowa City will be shot off this week.

The 1912 series of matches, the first held between the public high schools, has been a great success, and has been the means of bringing to the attention of other high schools throughout the United States, the popularity of rifle shooting as a school sport, and has resulted in the organization of many new clubs among the schools in different parts of the country.

The results of last week's matches are as follows: Baltimore "Poly," 970, defeated Southern High and Manual Training, 914; Deering High, 959, defeated De Witt Clinton, 0, by default; Iowa City High, 950, defeated Central Manual Training, 0, by default; Salt Lake City, 921, defeated Brookline, 829; Portland, 912, defeated Business, 903; McKinley Manual Training, 880, defeated Western High, 763; Morris High, 940, defeated Central High, of Philadelphia, 0, by default.

Final standing:

	Won.	Lost.
Iowa City High School	14	1
Deering High School	14	1
Baltimore Polytechnic Institute	13	2
Morris High School	11	4
Southern High and Manual Training	10	5
Salt Lake City High School	10	5
Central High School, Philadelphia	8	7
Portland High School	8	7
Brookline High School	7	8
Central Manual Training School	7	8
Manual Training School, Washington	7	8
De Witt Clinton High School	5	10
Western High School, Washington	4	11
Business High School, Washington	4	11

Seventh Regiment Rifles.

CORP. J. K. BOLES ended his season brilliantly by not only keeping the regimental championship another year, but also made a new regiment record of 117 out of a possible 120. Sergt. A. Scholz, Pvt. Wenneis and Pvt. J. D. Thees each scored 115. A new mark for the adjutant's trophy shoot was made by the Company G trio of officers. The summary:

Rapid fire match:

	200yds.	500yds.	Total.
Lance Corp. J. K. Boles, Co. I	23	24	47
Pvt. J. D. Thees, Co. B	23	24	47
Lance Corp. F. Wenneis, Co. E	20	24	44
Corp. L. A. Oliver, Co. K	18	24	42
Corp. R. E. Larendon, Co. G			46

Revolver match: Corp. R. E. Larendon, Co. G, 46; Sergt. A. H. Tiemeyer, Co. C, 45; Pvt. D. S. Steele, Co. 9, 44.

Adjutant's trophy match: Won by Co. G, as follows: Capt. W. J. Underwood 38, Lieut. W. B. Nesbitt 42, Lieut. G. Stratton 44; total 124.

The other scores were: Co. E 89, Co. M 87, Co. B 87. Expert qualification:

	200yds.	500yds.	Total.
Carp L. A. Oliver, Co. K	69	42	111

Sharpshooter qualification:

Ord. Sergt. T. Anderson, N. C. S.	33	34	67
Pvt. H. W. Taylor, Co. C	34	31	65
Pvt. A. R. de Tartas, Co. G	31	34	65

Brookline Challenges Tech.

THE Brookline High School Rifle Club has issued a general challenge to any high school rifle club for a match to be shot some time during April, and the "Tech" team has accepted. The Brookline team has been doing some good shooting, and should stand a good show in any competition in which it enters. Nine more members of the club qualified yesterday as junior marksmen, as follows:

	Standing.	Pron.	Total.
Hastings	38	46	84
Danziger	38	42	80
Caldwell	39	48	87
Chamberlain	43	46	89
Norton	41	44	85
McClench	39	46	85
D. Demond	42	48	90
Johnson	38	44	82
Clampit	38	45	83

Intercollegiate Rifle Tournament.

MASSACHUSETTS AGRICULTURAL COLLEGE, Commandant's Office, Amherst, Mass., April 1.—*Editor Forest and Stream:* A few days ago one of your subscribers called my attention to your issue of Feb. 10, in which, under the picture of the Captain of the Princeton rifle team, you say, "Leading Eastern team in Intercollegiate Rifle Tournament." This subscriber was not at all pleased, and asked me to write you, giving you a few facts.

I am a great admirer of Princeton in all of its work, scholastic as well as along the lines of her great athletic abilities. However, I know Princeton does not care for any honor that is not hers.

The rifle team at this college has just won the Intercollegiate championship of the United States by the remarkable score of 973 for the best five men in ten. Iowa, our competitor, had a score of 971. More than this, the team here has won this championship for the last three years, and each year has broken the intercollegiate record. Again we have won the outdoor championship for the past two years, and each year have broken the outdoor record.

I inclose a report of the last matches of the Eastern

League, in which we met Princeton, winning the match by 51 points. You will note that nine teams shot above 900, and Princeton was No. 9, with a score of 907. I don't consider that Princeton this year had as good a team as either Harvard or North Georgia. In view of the fact that in eleven matches Princeton's highest score did not equal our lowest, you may wish to change the wording of the remark referred to, and call the team here the leading team.

GEO. C. MARTIN.

[The week of Feb. 10, in which issue the photographs referred to appeared, Princeton and Massachusetts Agricultural College teams were tied for first place in Eastern Division of intercollegiate rifle tournament. Princeton won the trophy for college not having a military department.—EDITOR.]

J. H. Barlow.

JOHN HARWOOD BARLOW, inventor of Ideal cartridge reloading tools, died on March 29 in Venice, Italy. He was born in Duckenfield, England, April 26, 1846, and came to this country when two years old. He enlisted in the army during the Civil War, and saw service at Richmond.

Mr. Barlow was a born mechanic of an inventive turn of mind. He worked in the early '70s at Parker's shop in Meriden. Afterward he was employed for ten or twelve years as a contractor at Winchester's.

In 1884 he established the Ideal Manufacturing Co. This business was successfully carried on by Mr. Barlow until two years ago, when he sold out to the Marlin Fire Arms Company, and since then has been away from New Haven the greater part of the time.

Mr. Barlow was married in April, 1874, to Ida E. Hubbard, of Haddam, who died Feb. 28, 1887. He is survived by three daughters, Miss Alpha Winifred, who is still in Italy; Mrs. Joseph A. Derby, of New Haven, and Mrs. Earl Brewster, and two grandchildren, John Barlow Derby and Rachel Derby.

Mr. Barlow was a public-spirited, large-hearted, generous man, beloved by all who knew him. He was interested in the welfare of New Haven. He was a member of the Civic Federation and of the Chamber of Commerce. He was a prominent Democrat, though he never desired to hold office. He was a Mason, a member of Meriden Center Lodge, also an honorary member of the New Haven Blues.

Massachusetts Wins Intercollegiate.

WASHINGTON, D. C., March 27.—Massachusetts Agricultural College, Amherst, Mass., for the second consecutive year, has won the intercollegiate rifle shooting championship of the United States, having defeated all teams in the Eastern League and the State University of Iowa, winner of the Western League championship. The score of the championship match was 973 to 971.

The special prize for the college not having a military department was won by Princeton University. Officials of the National Rifle Association of America, under the auspices of which the intercollegiate matches have been held, declare rifle shooting rapidly is becoming one of the recognized sports in the colleges throughout the country.

Du Pont Gun Club, Rifle Dept.

WILMINGTON, Del., March 30.—The scores made on the rifle range of the Du Pont Gun Club follow: Pistol scores: D. Appleby 88, 87, 91; L. C. S. Dorsey, 88, 85.

Rifle scores: J. T. Birch 230, 223, 206, 228, 230; Walter Conner 175; J. B. Grier 220, 196, 223, 198; D. Appleby 289, 236, 235, 240; W. Wood 150; H. T. Reed 234; L. C. S. Dorsey, 232, 227, 230; J. Magahern 21; C. A. Haverbeck 223, 168.

ACROSS THE PLAINS IN EARLY DAYS.

Continued from page 432.

mad to attempt to run, and he remained on the same ground, while he tried to kick the clouds out of the sky. Fortunately my cousin had a tub of lime water, resultant on mixing some whitewash, and watching his opportunity when Skeezik came down from a rearward ascent, he showered a quantity of this upon the animal's hind quarters. The neutralizing effects of the lime had a pacifying tendency, and a few minutes later Skeezik consented to have his burning flanks thoroughly bathed and seemed to appreciate the treatment. Never a handsome animal, Skeezik's appearance was now positively horrifying. With his body and fore quarters covered with long drab hair, and his hams and flanks as bare as the back of one's hand, he seemed an awful burlesque on some other animal. The most extravagant imagination would scarcely recognize a horse in what I ultimately saddled and rode away. But here he was closely analogous to the proverbial singed cat, for Skeezik was a hundred fold better than he looked. The incident effectually cured him of his habit of backing when bridled.

FIELD TRIALS.

Oct. 28.—Southern Ohio Field Trial Association's second annual field trials. G. R. Harris, Sec'y, 15 West Sixth St., Cincinnati, O.

French Bulldog Club of America.

PROBABLY never before in the history of dog shows have so many valuable prizes been offered at a specialty show for French bull dogs as in the premium list of the annual gathering of the French Bull Dog Club of America, which takes place at the Hotel Astor April 20.

Over 150 special prizes, ranging in value from \$10 gold pieces to the Never Never Land trophies and numerous cups worth \$250 each, the majority of which are open to all and to be won outright, are among the incentives which will probably attract all the champions of the breed.

There are many innovations this year, which include classes for whites and brindles, made especially for recent importations, including the pair owned by Anna Held, and the famous Dollar, the property of Mrs. O. H. P. Belmont. Green classes for dogs never having won a first prize promise to be well patronized, as many pets of this fashionable breed are owned in New York which have never been shown.

Local classes for dogs owned within a radius of twenty miles of the City Hall in which champions are barred is another new feature. Others are ladies' classes, for dogs owned and shown by a lady, and the miniature classes, for dogs under sixteen pounds. In all there will be fifty classes, which promise to call out a record entry.

The judge of the exhibition will be William Lennox, an international authority on the breed. The premium list and all particulars can be obtained from the show secretary, Charles G. Hopton, Gaiety Building, Broadway and Forty-sixth street, New York. The entries will close April 10.

Southern Ohio Field Trials Association

Forty members met at Schuler's on March 25 and enjoyed a dinner. About nine o'clock the meeting was called to order by President Utter, and considerable business was transacted. The report of the treasurer showed the club to be in a prosperous condition. The following applications for membership were reported upon favorably by the Membership Committee, and were duly elected: Dr. C. Behymer, R. H. Kemper, T. J. Widrig, G. W. Schuler, Wm. N. Andrew, C. E. Bultner, H. S. Frulan, Herman J. Groesbeck, C. C. Regan, A. J. Cobbe, R. L. Gregory, H. G. Buckner, Wm. W. Oskamp, Theo. M. Foucar, W. E. Cliver, J. A. Wood, Wm. Cooper Procter and O. R. White. The club now has sixty-five active members, and many applications are still in the hands of the committee.

A suggestion to split the guaranteed purse of \$1,000, giving \$500 for one open stake, and dividing the remaining \$500 between the members' stakes, resulted in considerable discussion. Mr. C. H. Cord, the breeder of Cord's Lad of Jingo, and formerly one of the leaders in the Dayton Pointer Club, opposed this most strenuously. He favored making the members' stakes strictly amateur affairs, with cups and not money prizes, and predicted that if the other plan was adopted the club would last a year and no longer. If it was desired to bring the big dogs here for the trials, all the money should go in the open stakes, and it would be impossible to get the handlers to bring a string of dogs here for one stake. Messrs. Wood, Oliver, Turnipseed, Walker, Williams, Schuler and others spoke in the same strain, and a motion made by Mr. Turnipseed to retain the original plan of two open stakes, with \$1,000 guaranteed, was unanimously carried.

Mr. A. F. Hochwalt was called upon by the president, and gave the club many valuable sug-

If you run a car, ride a horse or swing a driver, you should have suit or breeches made of OLIVAUTO CLOTH.

This pure wool fabric, made by the American Woolen Company, is the best cloth ever woven for motorists' clothing—suit or topcoat. A light but closely woven serge—a handsome olive brown—doesn't show dust or grease spots readily—turns showers. Tailors with splendid style. Retains its style and nicety of appearance even under the stress of hard touring. The name

OLIVAUTO CLOTH

is stamped on the back of the cloth.

If you hunt, fish, tramp woods or climb mountains, you should

know about FORESTRY CLOTH. A beautiful gray-green, blending harmoniously with rocks and foliage. Pure wool—guards the body against chill—closely woven—dust and wind proof.

Stamped on the back of the cloth like this

FORESTRY CLOTH

Different weights, for men and women.

Samples of Forestry Cloth and Olivauto Cloth sent upon request. If you are unable to procure these fabrics from your tailor, we will see that you are supplied upon receipt of price, through regular channels, as we do not sell at retail. When ordering specify fabric and number of yards desired. Forestry Cloth, \$2.75 for medium weight; Olivauto Cloth, \$3.50. (3½ yds. to a man's suit.)

American Woolen Company

Selling Agency: American Woolen Co. of New York
American Woolen Bldg., 18th to 19th St. on 4th Ave.
New York

gestions in regard to running trials, drawn from his wide experience. He said that the professional part of the trials should be cut out entirely, or else that both stakes should be run. The purse, he thought, would prove an attraction to the handlers and would bring them here, provided they could be assured of territory sufficiently large to run their dogs on, and that arrangements would be made for riding during the running. Another inducement would be the assurance that training quarters could be found, so that they could work out their dogs. The membership stakes should be strictly amateur. Members could, of course, enter their dogs in the open stakes if they desired, and it might easily prove that some of them had derbies which would hold their own with the entries of the professional handlers.

The question of changing the date of the trials, on account of an eastern club having

claimed the same date, was discussed. The sentiment of the meeting was against any change, as the Ohio association was the first to claim the date, but in the interests of harmony efforts will be made to come to some agreement so that neither club may suffer from competition.

Mr. Robinson, of Hamersville, stated that a tract of land sufficiently large for the trials could be secured, and that he had no doubt but that arrangements could easily be made to open gaps in the fences wherever necessary. The birds have wintered fairly well, and there should be no difficulty in finding a sufficient number to give all the dogs work on game. The Ground Committee will visit the locality, ascertain the exact conditions, and report at a future meeting. It was decided to fix the fees in the membership stakes at \$2.00 to nominate, and \$3.00 to start, the money to be used in purchasing cups for prizes in each stake.

Resorts for Sportsmen.

TROUT FISHING.

Unexcelled trout and salmon fishing at Belgrade Lake Camps. Fine location. Individual camps with bath. Excellent table. Pure spring water. Season opens about May 10th.

For particulars write

THWING BROS., Belgrade Lakes, Maine

"All Our Folks Are In It!"

LITTLE BANDAR has been looking at Vol. I of the STANDARD LIBRARY OF NATURAL HISTORY. His folks *are* there, sure enough, with the other "kindred of the wild," whose photo portraits—after patient toil and with frequent danger—were gotten everywhere, from neighboring marsh and woodlot, or the far-off rim o' the world. To illustrate the enterprise with which this work was made, we may say that it contained an article (with photographs) on the Okapi (the newly discovered animal) by Sir Harry Johnston, the discoverer, long before the American Museum received a specimen. Pictures are there, too, of domestic creatures, from the most typical individuals obtainable.

STANDARD LIBRARY OF NATURAL HISTORY

By Associated Naturalists

THE finest results of the new nature study—over 2,000 half-tone illustrations from photographs. The accompanying text is by a group of eminent experts of two continents, and is delightfully clear and absorbingly entertaining. This set has well been called "Nature bound in the covers of a book." It is absolutely the most attractive presentment ever made of the animal world, and in its field has no rival.

"American Conservation," the official organ of the National Conservation Association, says of these books: "Their accuracy, thoroughness, and attractiveness do credit to their editors and publishers." "The LIBRARY is astonishing," says FOREST AND STREAM, "for the wealth of illustrations it displays. It is well called 'a portrait gallery of actual life.' The reading matter is interesting—in part because it differs so widely from most natural histories." "I keep it constantly at my elbow," declares Dan Beard.

WRITE for Beautiful Specimen-Pages, Portfolio, Etc.

WE wish to send you our striking Specimen-page Book, containing one full-page and one double-page chromatic plate, sixteen pages of remarkable half-tones, and eight pages of descriptive matter regarding the set, the whole bound in a cover of unique design. With the Specimen-pages we send, without extra charge, a Portfolio of really remarkable "outdoor" pictures, suitable for framing or mounting in passe-partout. We make this liberal offer to bring before you forcibly this truly noteworthy work. Send in your name and address now, and mention this publication:

Park Club (Bridgeport) Indoor Rifle Club Tournament.

(1) EASTERN INTER-CLUB RIFLE LEAGUE CHAMPIONSHIP (2) INDOOR RIFLE TEAM CHAMPIONSHIP OF UNITED STATES

Won by Park Rifle Club, Bridgeport, Conn., using **five STEVENS .22 caliber rifles.**
WORLD'S RECORD, score **996** out of a possible 1000 at 25 yards. $\frac{1}{2}$ inch bull's eye.

Ten men shot with the five rifles, the scores of the five highest being taken for record.

Two men shot the possible score, 200 each. The next two shot 199 each. The fifth shot 198.

Four of the five rifles were STEVENS Ideals and the fifth was equipped with a special Ideal barrel and No. 404 fore-end, making it in effect a STEVENS rifle also.

A Philippine Deer Hunt

By ARTHUR L. GRIFFITHS

REFER to a map of the Philippines, find Vigan on the western coast of northern Luzon, trace the Abra River, which flows into the treacherous China Sea near Vigan, back to its sources and you will find the scene of this story. Deer are plentiful all over the Philippine Archipelago, having increased at will for centuries and seldom being hunted except with spears. Philippine deer are but half the size of the American variety and are prong-horned instead of antlered. They are even more beautiful than our deer, being sleeker, fatter and more graceful. Of all the fauna of the Asiatic Archipelago they are the most charming.

Meat is at a high premium in the provinces of the Philippines, and its only source of supply is from swine and deer, the swine either semi-wild in the villages or fully wild in the forests. Deer hunting, though most arduous in its requirements, is almost a necessity, for the porcine dwellers of the pueblos are anything but discriminating in their diet and all kinds of offal is free of access. No deer hunter in those antipodal islands ever has the crisp days of our autumn in which to pursue his quarry, nor has he our open air-fanned woods, but must pursue his quest in a temperature akin to Tophet and in forests, the impenetrability of which only yields pathway to the briskly-wielded bolo.

Under such difficulties the habitat of the game is reached, but the difficulties of hunting deer in the Philippines are not only those of reaching its habitat. In America deer can be stalked or tracked, there never. In this country a lone hunter may be successful, not so in those islands of the sea. There are no open

woods, penetrable in silence, no snow on which to track, and the deer must be driven from covert to ambushed hunters, not possible for a lone huntsman.

There is one way in which it is possible for two to hunt deer, but not probable after a first

dile-infested lake near the drinking place of our desired quarry. The mosquitoes and broken stone both connived successfully to keep me wide awake, and Pedro, more immune, remained so far a time, but at length fell asleep. Soon I was apprised of the fact by stentorian snores, but he was too far away from me for me to arouse him without the possibility of frightening any possible deer, so I trusted in fortune that his snores would not scare away the game.

Suddenly, in the oppressive silence of the dank forest, there came a tremendous splash in the lake within twenty feet of where we lay. Crocodiles! The noise awoke Pedro and he hoarsely whispered "Cayman!" Our attention was at once diverted from watching for deer to watching our own feet. Another louder and nearer splash came, and we hastily arose and beat a retreat to Bucay, stumbling into and over obstacles only found in the tropics.

Never again did we lie in wait for deer on the shores of that lake.

Another night, which was to be blessed with the full moon's glory, we two proceeded to a rice paddy near Laiyugan to repeat the search for deer. Like deer in our Northern climes, Philippine deer wander in the gloaming of early evening. At the rice paddy by Laiyugan the omnipresent mosquitoes were thicker than at the crocodile-infested lake. After a two-hours' wait, accentuated by silent battle with the blood-thirsty pests, we heard an animal moving in the cogon grass beside the paddy. Our hearts leaped. So did the animal, down into the paddy. Where was he? We could distinctly hear him, but could not see a thing. For half an hour we heard that deer wandering about among the

THE AUTHOR (IN REAR CENTER) AND NATIVE HUNTERS, SOME OF WHOM WERE INSURGENT OFFICERS.

attempt. That is to lie in wait at night near a drinking spot. This is possible when the tropic moon sheds its wonderful lustre over the scene, but mosquitoes and hurtling cockroaches render such a hunt most unendurable.

Some one has said that the mosquitoes have been substituted for carrier pigeons as a means of communication between the various islands of the archipelago, as the former are much larger and better able to endure the fatigues of the journeys. I hardly doubt the feasibility of such a plan after my numerous experiences with the tenacity of life and purpose of those multipeds.

One unfortunate tropic night I attempted a still-hunt for deer. Pedro Gonzales and I lay down on a broken stone trail beside a croco-

rice stalks, but never once could even a portion of its bulk be discerned.

Pedro whispered an anathema, and I replied, "So say I." For hours of torture of skin we waited, long after our invisible quarry had eaten its fill and departed, and then we arose sadder, wiser and hungrier men. Another fruitless Philippine night!

As we wended our wearisome way up through the sandy gullies, Pedro remarked, "Maestro, we will go again and take some beaters and I am sure we will have better fortune." Hard though our previous experiences had been, my need for fresh meat led me to grasp at the new hope with avidity. The expected hour was awaited with impatience.

Weeks later Pedro came to my ant-ridden room. He cheered me by saying, "Maestro, I have arranged for a grand hunt this time. Tinguianes from Abang, up the river, will be our beaters and we will wait at some convenient spot for them to drive the deer past. Nothing will be easier than to shoot them then." I was elated.

On the appointed day we forded the Abra, passed through the leafless trees where the giant bats roosted and saw the ruins of the huts outside Abang, where the headhunters had recently obtained some victims. In Abang the Tinguianes received us hospitably. Around the village we found the triplicate bamboo fence erected to keep out the headhunters.

All was speedily made ready and the beaters gathered with their dogs and deer nets. A long valley extended down to the Abra from the higher mountains beyond. It was grass clothed with an occasional body of trees in which we knew deer could be found.

At the top of a long wooded rise three miles beyond Abang we found a rough, rock-encumbered field. There in a little elevated copse of trees I sat, old-fashioned Filipino rifle in hand. Then the beauties of the scene drew aside my attention. For two hundred yards before me the field rose until its upper lip curled over the sky line. To the left and right the tropical forest met the field.

Then the halloos of the beaters filled the valley at my left, but nothing appeared. My thoughts wandered to America, but were instantly brought back to the islands by a crash in the undergrowth, and out of the woods jumped a doe and fawn and began to cross the field in a succession of leaps. I sat and admired them.

Wake up! I wasn't there for that. I must have the meat. Aiming as carefully as I could, I had the fate to see the dust raised by my bullet several yards in the rear of the fleeing pair, yet my feelings were not injured by that miss.

Another wait, another listening to the distant beaters' shouts. Gazing at a piece of woods forty yards away, my abstraction was hurled from me by beholding a great buck standing in full view and calmly gazing around. My gun was not even reloaded, but I did not realize it, for I was too intent on the scene. There was a buck in his native habitat, a rare scene. Was not he majestic? Buck fever or buck admiration possessed me. Then the buck broke the spell by beginning to leap in my direction. Hastily I pushed in a Filipino-loaded cartridge made for use in the insurrec-

tion. The buck came right to the foot of my little hillock and passed broadside on. When I felt sure of him I pulled the trigger. The primer exploded, the cartridge did not. With bated breath I actually moved the muzzle to follow the deer, hoping the powder would yet

ignite and give me my meat. The deer went around a shoulder of the hill to safety and—the rifle discharged into the earth at my feet as I lowered it.

Hot, weary, downhearted, I went back to Bucay hungry and yet to be so.

Out of the Past

By CHARLES S. MOODY

IT is a long glance backward from the thermos bottle of to-day with its manifold possibilities of heat and cold, to the water bottle of the pre-Columbian period. Not many relics so fragile as a bit of pottery come down to us from the fifteenth century.

As I write there sits before me on the table an ancient water bottle bearing the date Nov.

A NEGRITO SHARER OF THE JUNGLE WITH THE DEER.

13, 1447, with the maker's name. The inscription is in the old English style of penmanship and is still legible through the cracked and battered glazing. It is an odd old piece of ceramic, unlike anything I have ever before seen.

It would be interesting were we able to trace the history down through the centuries since it left the kiln. Alas! that history is lost. One may only reproduce it in imagination. One may picture an English laborer, with the bottle on his arm, wending his way across the moor while yet the day is unborn; see him as he places it beneath a hawthorn and covers it with furze; watch him, when the sun beats hot, pause in his labor, wipe the sweat from his brow and seek the refreshing draught its fat sides hold.

Mayhap it belonged to some lord of the manor whose henchman carried it, filled with ruby wine, when his master rode afield with hawk on wrist. There are many things that might be dreamed of the old relic. One might

picture it hidden away among the household goods of some emigrating family in our early Colonial settlement. Might even suppose it to have touched shoulders with spindle-legged chairs and tall Dutch clocks in the Mayflower, a plebian mixed with aristocracy.

Why not? Enough junk was brought across in that historical catboat to furnish patents of gentility to hundreds of families in this country. Why not some obscure hind, with no thought of founding a family on the strength of a dilapidated chair or an asthmatic settee, at the last moment of making ready, pack this old bottle away among the bedding with the remark to his goodwife, "Beshrew me, Rachel, we will fetch the old water bottle along. Per-adventure I shall need it when I labor afield."

However it happened, it has come down to us from generation to generation, growing yellow and cracked as the years rolled away, gathering the moss of tradition until its history has been concealed. The old bottle is eleven inches in height, nine inches in diameter and two inches thick. It is composed of some sort of hard red clay, glazed brown with light yellow splashes. It is not quite true, being smaller on one side, nor is it exactly round.

The history so far as I have been able to trace it is but slight. It came into the possession of T. J. Campbell nearly forty years ago, being presented to him by a man named Thompson, who said it had been in his family time out of mind. He died a very old man and had known of the bottle for over eighty years.

Time to Go A-Fishin'.

GET out your rod and tackle
And prepare the luring flies,
For it's time to go a-fishin'
In the anglers' paradise;
Drop some oil upon the bearings
Of your last year's patent reel,
And be sure there's nothin' missin'
When you pack the wicker creel.

Test the lines for weakened places,
So the fish can't get away,
For you know how that would vex you
And the things which you would say;
Try the pole before you pack it
And be sure it's good and strong,
For the season soon will open
And you'll want to join the throng.

See what time the trains are leaving
For your fav'rite anglin' haunts,
Have your boots well oiled and ready
Ere you start your summer's jaunts;
Pack some luncheon in the basket
Where you know it can't fall out,
For remember you'll be hungry
After whippin' hours for trout.

—Portland Oregonian.

Across the Plains in Early Days

By SAMUEL MANSFIELD STONE

(Continued from last week.)

ONE night I came to a house which for that region was palatial. It was a two-story frame structure with a verandah, a well-kept lawn, inclosed by a picket fence, the house ornamented with green Venetian blinds, and both the house and fence neatly painted. All the surroundings gave evidence of thrift and good taste. I flattered myself that for one night at least I should have congenial company, for I argued that with such indices as these, the occupants of the premises must be refined, educated and good company.

Soon afterward I realized that one cannot safely judge from appearances. The occupant of the house was all that I had pictured as regards education and culture. He was a former college professor from Boston. He was, as near as I could judge, about forty-five years of age, well dressed, well groomed and good looking. His daughter, a beautiful girl of eighteen, managed his house and the three servants, while an overseer managed the large stock farm. But I never spent a more miserable night in my life. The man was gloomy, sour, morose. His sense of hospitality alone enabled him to observe the common decencies of life.

Next day, shortly before noon, I reached the line of the Leavenworth, Lawrence and Gulf railway, alongside which the trail ran for miles. Skeezik was loping along with head down and a reminiscent look in the eye, which he occasionally cocked around at me, when of a sudden an express train stole up behind us, and when almost opposite, the engine committed one of those hissing indiscretions peculiar to locomotives with overcharged steam-chests. It was Skeezik's first experience with a railway train, and hearing that blood-curdling racket and catching a glimpse of the flying monster at the same time, it proved more than his sensitive nerves could stand. Luckily my feet were securely entrenched in the stirrups of the stout Mexican saddle, or Skeezik and I would have been separated. His first jump was but a sample of a long succession of leaps, jumps and bounds. It seemed as though the animal was in the air all of the time, while he covered an immense stretch of trail. Meantime the train had come alongside, but Skeezik seemed determined that it should not distance us. A head protruded from every window, while shouts, yells and cheers added not a little to Skeezik's terror. I never rode like that before. I have never ridden like that since. I never expect to ride like that again. How long Skeezik's endurance would have lasted I can form no conjecture, but my hat flew off, and turning him finally, I rode back and got my hat, after which we headed for the Neosha Valley once more. Toward evening of the next day I reached Emporia and found my equipments at the express office. Finding that Neosha abounded in fish, I determined to spend a few days there. It may not be uninteresting to give at least a partial inventory of the articles that comprised my now completed outfit. First and foremost was the saddle, a new Mexican with

pockets, gun straps, holsters, blanket grips, lock stirrups and mud guards. The whole foot could rest in the stirrup, thus avoiding tiring the soles after the fashion of the single-bar stirrup. Attached to the stirrup straps were broad flaps made to buckle around the leg to the knee, as a protection against cactus thorns, rattlesnakes and mud. The cantle of the saddle came up to the middle of my back and was comfortably padded, while the pommel rose to the middle button of my waistcoat, surmounted by a broad, padded

DR. MOODY'S OLD WATER BOTTLE.

rest, high enough to rest my chin upon by stooping slightly, a very appreciable convenience as I subsequently found when wearied by long stretches of travel.

I had one change of underclothing which I stowed away in one of the pockets. My camping outfit consisted of two heavy woolen blankets and a large rubber blanket. To this I subsequently added a goodly bundle of mountain ash boughs as a rattlesnake safeguard, something I learned from prairie campers. One of the saddle pockets I filled with jerked beef, Westphalia bologna, and pilot biscuit. To this I added a triangle of very old home made cheese and pemmican. I congratulated myself on my perspicacity in adding a little medicine case, but when afterward I learned that the only drug I really needed, sulphate of quinine, had been omitted, my foresight was by no means flattering. I also rolled a quart bottle of whiskey up in my blankets for possible emergency.

I supplemented my armament by a powder and ball revolver and felt practically invulnerable when I had slung the outfit upon my hip. With

its long, rifled barrel, the weapon would shoot, but what I had set my heart upon was a rifle with which to slaughter Indians and buffalo. I had little faith in the breech-loading affair I bought to shoot geese with. To my notion it carried too big a ball to be effective at long range. I ransacked the one gun store that Emporia boasted, but found nothing to my mind. I met several people willing to part with a rifle for the price of two better ones in St. Louis, but I ignored their kindness. At last there came a young fellow to the hotel one day with a rifle that excited my curiosity, though I had no thought of buying such a one at that time. This gun bore evidence of long and hard service. The appearance of its stock was that of an emergency job with a hatchet and jack-knife. Long and arduous service had failed to obliterate the tool marks. It was not artistic to look upon, but there was no question as to its utility. Several rows of tally notches on one side suggested the result of the weapon's use, but whether these recorded the result of sanguinary or other service was only conjecturable. The barrel was a bar of steel, forged in octagonal form, evidently hand work which had never known a lathe. There was fully a five-eighth-inch thickness of steel around the thirty-two bore. The rifle was equipped with a bridge lock of the finest and most accurate mechanism I ever saw. By a set-lock attachment but a feather's weight was necessary to release the hair trigger, yet the adjustment was so perfect that the gun might be carelessly tossed about, though cocked and set, with impunity. There was no doubt an interesting history connected with that old rifle, but all its owner knew of it was that it was found in the shack of an old Colorado hunter who was found dead in his bunk.

I was inclined to ridicule this ancient gun until I saw it shot. The veriest pinch of powder sufficed for a charge and an oiled patch was laid over the muzzle before pushing the ball down. The young fellow placed a square of paper on a post, in the center of which he blackened a bulls-eye. Counting off a hundred paces, he kneeled, resting on one knee, the barrel being too heavy for him to manage off-hand, and fired. The black spot was perforated in the center. Then I tried my hand. It took me a little time to get the hang of the sights, but afterward I made some good shots. The arrangement of sights was different from anything I had ever seen. At the muzzle was soldered a four-inch steel tube the size of an ordinary lead pencil. Half an inch from the further end of this tube was fixed, exactly in the middle, a bead of the size of a bird shot, suspended by a hair-like shank from the top. A flat strip of steel was raised from the breech, in the middle of which was a perforation the size of a pin-head. To aim, one had but to peep through the rear sight until he brought the muzzle bead in range of the object; this done, it was impossible to miss the mark.

I determined to own that rifle if money would cause its owner to part with it. I would not have hesitated at almost any sum he might have named, so long as it came within the scope of my roll. Meantime he had been looking my breechloading rifle over, the graceful model and nickel trimmings of which seemed to delight his fancy. Great was my astonishment when after he had made a respectable bulls-eye with the weapon he asked what "boot" I would want be-

tween the two guns. I managed to conceal my surprise, however, and replied that I would trade even. It was now his turn to be surprised, for he evidently expected that I would name a sum beyond his ability to raise. The eagerness with which he acceded to my terms showed that he feared I would reconsider the offer on longer consideration.

I practiced with that rifle until I could hit almost anything within the range of my vision. It was too heavy for quick shooting, but with time to bring the sights into use, it would do accurate work. The report sounded like the crack of a whip, and there was not the slightest recoil.

I had heard tales of wild turkeys in the timber along the Neosho, but careful and repeated scouring of the forests in question failed to reveal such game. My sportsman instincts revolted against the slaughter of prairie chickens at this season of year, just as they were mating.

It required the exercise of no inconsiderable ingenuity to distribute my effects upon Skee-zik's back and still leave space for myself. When finally it was accomplished, it looked like an animated corner of my grandfather's garret. Skee-zik stood with his accustomed phlegmatic stoicism, as if in a brown study, during the stowing and strapping process. It was not till I had clambered into the saddle and gotten the stirrup straps and leggings adjusted that he appeared to evince the least degree of interest in sublunary matters. Then something about the aggregation jingled. Skee-zik's ears pricked up, his head turned to one side, and with a snort he straightened his legs and flew upward with a jerk. A hurried inventory, when the pony had resumed a pacific attitude, revealed the ground for yards around strewn with items of a tenderfoot's outfit.

But at last, seated in the midst of my belongings, I turned Skee-zik's head westward and loped out of town. It was not, however, till several hours that the animal was fully restored to confidence and consented to jog along without throwing his head around every minute or two to inspect his awkward trappings.

That night I stopped with a Dutchman burdened with the name Solomon Stradivarius Motzenbocker, and yet he had lived through chicken pox, measles, mumps and whooping cough and arrived at a man's estate.

My first experience with a prairie thunder storm was a revelation to me of the might and stupendous grandeur of nature in commotion. It was on the fourth day out of the Neosho Valley. All the morning the air seemed strangely oppressive, lacking its customary exhilarating qualities. It was not till almost 11 o'clock that any breeze was noticeable, and then it came in hot, spasmodic spurts that seemed to scorch rather than temper the sweltering traveler. Skee-zik was restless and ill-natured. He would toss his head every now and then, sniff the breeze and give a vicious leer. Occasionally a jackrabbit would bound along the trail, and discovering us, leap into the bordering sward. These animals I subsequently learned seldom travel in the open trail unless in an urgent hurry. Presently a reddish haze appeared along the western horizon, which gradually overspread the whole sky, giving it a weird, brassy look. Then, away in the northwest, the outlines of a cloud evolved from the haze, spreading rapidly and

growing blacker. Another cloud appeared further southward, unrolling itself with astonishing rapidity and uniting with the first cloud almost directly overhead. By this time the wind had died away. The clouds assumed a sort of greenish hue which was reflected upon the earth, putting everything into a sickening gloom. My heart throbbed and a sense of nausea seized me. I looked vainly around for a friendly roof, but naught save the wide rolling prairie met my gaze. Just as I had concluded that I would have to make the best of a highly unpleasant situation, Skee-zik stopped short, wheeled, put his feet together and refused to move. It was but the work of a moment to unfasten my great rubber blanket, whose size I welcomed most gladly then, for by puckering it with the throat straps into a cone which I slipped over or above my head, its ample folds completely enveloped me and covered the pony from his shoulders backward. By this time the clouds were rolling and tossing, and there was a roar of coming wind. It was almost dark, and the air stifling. Then of a sudden there was a mighty blaze as electric flame swept from zenith to horizon accompanied, not followed, by a crash of sound that fairly shook the earth. I could feel Skee-zik tremble, but he moved not. Like spent balls from a distant firing squad came a volley of hail stones which stung when they struck, and then the rain. I had heard of rain which came in sheets, but in this case it was as if a flying torrent of unknown depth and width had suddenly been let loose. The pony, swayed by the shock, braced himself more firmly and stood fast. It seemed as though I would be torn from my saddle and borne away by the flood, but I shut my teeth and clung to the pommel. Occasionally, above the crash and roar of thunder, I heard a strange hissing sound as of a million pounds of pent-up steam escaping through a narrow orifice. When the storm had passed and I saw but a few rods distant a wide stretch of prairie swept clean of grass, and in elevated spots of turf, the mystery was partially explained, though I did not then appreciate the horror of the fate which had come so close to me. Two months later, on witnessing the work of a Kansas cyclone, I appreciated the terrors of the monster from which I had been delivered.

I could form some idea of the amount of water that fell during the ten minutes that the storm raged, for a little ravine fifteen feet in depth, over which I had passed dry shod just before halting, was now a muddy torrent. Because of the depth of the mud I quit the trail on resuming my journey, keeping to the high, firm ground. A little beyond where I quitted it, the trail took a turn to the southward, a fact I failed to notice at the time and consequently I lost my way. While the sun remained I was able to hold to a general westward course, but after sunset I rode blindly on. After an hour I reached a grove of timber and had about decided to make my first camp.

"Hold up!"

I started as if a blow had struck me, and Skee-zik snorted and evinced a disposition to run away. Quieting him, I turned back as a man strode out of the shadow and confronted me. In the dim light I could see that he held something in his hand which I needed not to be told was a pistol. Instinctively my own hand sought

the holster of my saddle when the voice again sounded, its owner's arm coming up to a level with the range of my head at the same time.

"Hold up yer hand, quick! Don't yer make another move ef yer wants ter live. Now, who be yer, an' what be yer doin' in these 'ere diggin's 't this time o' night?"

I told him truthfully who I was and demanded to know who he was, and by what right he assumed to be an inquisitor.

This seemed to please the man. "I 'low yo' hasn't 'sociated a right smart in these diggin's," he said, "but I ruther likes yer makeup; it's a goodish bit fur t'any ranch er shack whar yer'd be likely ter git ter stay t'night, an' ef y'ain't perticular on style, yo' kin bunk in with us."

I dismounted without hesitation, gave Skee-zik into the hands of a man who appeared at the call of my companion and accompanied the latter into a comfortable shack which was completely concealed from external view in a dense alder thicket. There were four men in the cabin just sitting down to a meal of broiled meat and corn pone. The odor of the meat assured me it was not bacon, for which I was thankful. A moment later I was regaling myself upon the first elk steak I had ever tasted, and I doubt if there was ever a meal relished with keener zest. After supper I bethought me of the quart bottle of whiskey in my saddle bags. I brought it in and gave all hands a good nip, which put everybody in good humor and established my own footing with the company.

The men told me there had been a great deal of horse and cattle stealing going on in Southern Kansas, and the authorities being unable to suppress it or bring the thieves into custody, they had made up a posse and were then, they believed, on the track of several of the worst desperados. When I awakened next morning it was broad daylight, and to my surprise I found myself the sole occupant of the shack. All the trappings and effects of the party had been removed with the exception of a much-worn blanket which had evidently been thrown over me when the men departed. Though wondering what could have occasioned their hurried departure, I could but feel grateful for their consideration on finding a large slice of venison and a liberal section of pone on the slab table, which they had evidently left for my breakfast. My first thought was of Skee-zik, and not without some apprehension I rushed out to find him not only safe, but contentedly munching the remains of a half dozen ears of corn kindly supplied by the retiring party. I then made a hearty meal and got under way.

As I rode along, pondering upon the events of the night, the thought struck me: "Where did those men get the elk meat?" I had been repeatedly told that no elk existed east of the Osage, and that river, according to the same information, was still at least one hundred miles to the southwest. If, as they had told me, my companions of the night were neighboring ranchmen, how happened it that they should be thus supplied with the product of a territory so far distant? But nothing suggested itself to throw light upon the matter.

I had descended into a dry ravine, skirted by a little grove of scrub oak, when I came upon a party of eight men just saddling up after having camped there for the night. A short, stout man seemed to be the leader of the outfit. I jumped

Game in Alaska

to the conclusion that this was another posse in pursuit of the horse thieves, and with the supreme freshness of the youthful tenderfoot, I saluted them with, "The rest of the gang has gotten ahead of you and probably has the greasers rounded up by this time."

The men crowded around me, and feeling decidedly proud to have excited their interest, I permitted my assinity to purl on: "You are a nice lot of thief takers to let the other fellows go in and bag the game while you were snoring within gun shot of them," and I put on an expression of contempt.

"What in thunder are you trying to say?" said the fat leader. "If yo' know how to talk United States, tell us wot yer drivin' at, an' tell it quick."

There was something in the glint of his eye that told me I'd better not trifle with him, and I related frankly my experience of the night. The look with which he and his companions regarded me, as I concluded my narrative with a repetition of my conviction that the posse had no doubt taken the thieves ere then, caused a light to dawn upon my mind, especially as my cogitations about the elk meat recurred to me.

"Do you think those fellows were frauds?" I ventured to ask.

"Frauds! Why, ye half-baked idiot, them's the very chaps we're after, an' have chased 'em from 'way beyond the Verdegris; that's Doc James' gang, the slickest team 't ever broke out a pack o' bronchos."

The man then showed me his badge, bearing the inscription, "U. S. Deputy Marshal." And I think he was a bit sorry for me when he saw how I took his information to heart. But the others geyed me most unmercifully. He seemed to be metaphorically kicking himself as he reflected on how he and his men had spent the night within such close proximity to the fugitives and still permitted them to escape.

The beauties of the prairie appealed to me in vain that day. I believe I was the most dejected man in all Kansas as I rode without regard to trail or direction. I left Skeezik to himself while I pondered over and over the events of the morning. I was mentally very sore, and my opinion of myself was infinitesimally small. We had to camp that and the succeeding night. Shortly before dusk on the evening of the third day I came to the Osage forest, and soon after leaving the Osage bottoms and their luxuriant vegetation, I struck the old historic Santa Fe trail, for many years the commercial route from the Mississippi Valley to Mexico. At this time it was followed by the drivers of the great "prairie schooners," conveying settlers from the East to new homes in the Southwest. The trail had broadened to a width of several rods by teams taking new tracks to avoid the ruts made by hundreds of previous teams. On the high ridges between the wheel ruts a free surface made fine equestrian paths, along which I galloped gaily. I encountered stockmen's ranches at occasional intervals, then I emerged from the habitable zone upon the Great American Desert of Mitchel's Geography, about which I studied in my early school days. If Mitchel had ever stood on the crest of a certain bluff, 125 miles southwesterly of Council Grove, and permitted his eyes free scope, the desert section of his geography would have been omitted.

[TO BE CONTINUED.]

IN his annual report, Walter E. Clark, the Governor of Alaska, gives the following review of the game law of that Territory:

By careful attention to the various provisions of the law and the regulations thereunder, and by the appointment of additional wardens, the administration of the Alaska game law has been somewhat improved during the last year. Another year's experience under the new law, however, has emphasized the inadaptability of certain provisions and the lack of certain needed provisions of the most obvious nature. Extensive modifications of the law are needed, and the failure to provide a better law renders the enforcement of the act more difficult, because of the fact that public opinion does not wholly support it.

Game is still plentiful in almost all parts of Alaska. This statement applies to both animals and birds. The consensus of opinion among the wardens, licensed guides and residents generally seems to be that moose are increasing in numbers on the Kenai Peninsula, a fact of extraordinary significance when it is considered that this peninsula is the region selected by nearly all the non-resident hunters as their hunting ground. Caribou are increasing, it is believed, in the Alaska Peninsula, and in one or two of the larger islands immediately west of the peninsula.

On the other hand, there has unquestionably been an enormous decrease in the number of deer in Southeastern Alaska, a fact which is due principally to the abnormally heavy snowfall of the last two winters. The prohibition of market selling of venison in 1911 has proven to be a wise measure, and is supported by local public opinion. The prohibition should be extended by regulation to cover 1912.

There has been no large general decrease in the supply of game birds. There has been an increase in many localities, and a decrease in several places in the near vicinity of populous settlements, and where forest and brush fires have swept over the country, killing young ptarmigan and grouse.

Several gross violations of the law by residents have been reported, and wherever possible prosecuted, but in general there has been a fair observance of the provisions of the game protection act throughout the Territory. The people believe in the necessity of a game law, but certain provisions of the act, such as the protection of the troublesome and dangerous brown bear, are universally condemned.

Eight or ten convictions were secured during the year of persons guilty of violating the game law, and unquestionably a very large number of infractions were prevented by the known presence of game wardens in the several regions.

Big-game hunters from the States and from foreign countries visited the Alaska game regions in considerable numbers last year, but during the fall hunting season of 1911 the number has been somewhat smaller. Some of the visiting sportsmen complain of the expensiveness of hunting in Alaska, but the license fee of \$50, which covers the shipment of many trophies, is considered by this office to be moderate, and the provision of the law, which requires hunters to

employ licensed guides on the Kenai Peninsula, cannot be regarded as unjust.

The number of paid game wardens now employed is seven. In addition to these are four wardens who serve as such without compensation, their services being incidental to the performance of their regular duties as officers or employes of the Bureau of Forestry. The increase in the game protection appropriation from \$10,000 to \$15,000 for the current year has already proven beneficial, since it has permitted the employment of more wardens, and has increased the efficiency of all the wardens by permitting them to travel more freely in regions where the expenses of transportation and subsistence are necessarily very high. It is earnestly urged that the appropriation of \$15,000 be renewed for the fiscal year 1913.

There are now twenty-four resident licensed guides on the Kenai Peninsula. No encouragement has been extended to other residents to apply for appointment, for the reason that an effort is being made by this office to create an *esprit de corps* among the guides by encouraging them to make the taking out of hunting parties a regular business. The number already licensed exceeds the demand for guides each year by visiting hunters. A few applications for guide licenses have been refused on the ground that the applicants were not qualified by character or efficiency. Henceforth the policy will be pursued of appointing every person who may apply, provided he is of good character, has not been guilty of violating the game law himself, and is otherwise not notoriously disqualified.

Severe complaints have recently been made by several visiting hunters that the licensed guides are as a class lacking in local knowledge of the country, and that they are generally inefficient. These and other charges will probably not be sustained wholly by the investigation now being carried on by this office.

The provision of the game law which makes a close season for brown bear should be repealed. The least that can be said of the legal protection of brown bear in Alaska is that it is an absurdity. If this protection is continued, the menace to human life will be still more serious, and agriculture and stock raising in some of the most favored regions in the Territory will be discouraged. The superintendent of the Government's experimental stock farm on Kodiak Island makes a strong appeal for the protection of settlers and live stock against the ravages of brown bears, declaring that it has become a question whether we shall have a game preserve or a great agricultural and stock-raising region on Kodiak Island. The existence of the brown bear protective feature of the law, which has nothing whatever to commend it, is so strongly opposed by the residents of the Kenai and Alaska peninsulas that the enforcement of the just provisions of the law is rendered more difficult.

One of the inequalities of the present law is that provision of Section 5, which permits the issuance of only one game-shipping license to any one person in any one year. Among several illustrations which might be given of the unjust consequences of this provision, it may be suf-

(Continued on page 484.)

Success at Last.

BLOOMINGTON, Ill., April 6.—*Editor Forest and Stream:* After devoting several months to chasing the wolves that infest the timber of Menard county, the hunters of that section finally killed the first animal last week.

J. A. Wheeler, State game commissioner, in discussing the movement to secure the appointment of more farmers as game wardens, said: "We have a large list of farmers serving as special game wardens without salary, but with the power to make arrests and protect the game upon their lands. We generally appoint farmers in this way when a request is filed. We feel, however, that the hunters have a right to have some voice in the selection of game wardens as long as they pay the bill. This department is maintained for the benefit of hunters, and they, through their hunting license, pay all of the expenses. It does not cost the taxpayers a cent. The hunters purchase the licenses, and when they violate the law, they pay fines. That is what keeps up the department and supplies the money for salaries. The hunters prefer men to serve as wardens who will devote their time to protecting the game over a wide area, not upon their own land alone. We try to pick first class men for wardens and cannot help but think that those who support the department should have something to say about its operation and the personnel of its officers."

E. E. PIERSON.

Game in Nevada.

TROY, Nevada, April 4.—*Editor Forest and Stream:* The country around here is not very well settled; in fact, it is fifteen miles to my nearest neighbor. There is no hunting done here at all, causing the game to be rather tame and plentiful.

The principal game is bighorn, antelope and a few deer; coyotes, badgers and numerous foxes. The fowl are blue grouse, ducks, doves and a few quail.

I have lived here for ten years and know this country like a book for fifty miles in every direction. The bighorn are most plentiful, ranging in the mountains, which are very rough. I am well acquainted with the sheep. They do not run in large bunches, but three and four bunches are often seen within gun shot of one another. They mostly run in bunches of seven to twelve, which I believe is due to there being so many rams; there are few killed. I have seen as many as six rams in one bunch. They run with the ewes from September until April.

I have seen them go up and down a cliff where a man could not begin to go. In going down a cliff they strike their feet in the sides some six or eight feet, and ease themselves down lightly, and when they run they most always run in single file, an old ewe taking the lead all the time. The ram never leads. They stop occasionally, look back and bunch up, then they wait for the leader to start. I have seen one of the bunch get scared and start off, but the rest refused to follow unless it was the leader. I have seen trees where the rams have knocked all the bark off by bumping it. This they do by backing off eight or ten feet, and then they take a run at it, striking it with their immense horns. They are so thick here in places that it is almost impossible to track a certain bunch.

The antelope are most plentiful on the mesas. They are very gentle at times. When you first jump a bunch, they will run a hundred yards or so, then stop and look back to investigate matters. I have read several articles in your paper regarding the shedding of their horns. This I believe is the fact. I do not know how often they shed them, but I have found horns that I am satisfied were shed horns.

The open season here is September and October, during which time two bucks may be bagged, and they are most plentiful at that time.

Some of the mountains are pretty well timbered. There we find our most delightful bird, the blue grouse, sometimes in large numbers.

In the past three years the farmers that live in and near the hills have had trouble with the cougar.

JOHN W. GARRETT.

The Uniform Fish and Game Law.

HUDSON, N. Y., April 9.—*Editor Forest and Stream:* Perhaps I can enlighten your Port Richmond correspondent, Mr. Rawson, whose complaint about the way in which the new fish and game law was made in the Legislature just adjourned is a timely contribution. That the bill was pushed through by the Conservation Commission without regard to the protests of incorporated clubs, or of anybody competent to pass on the subject, is a fact. I attended several of the hearings given by the committees in charge of the bill and soon saw what was going on. Protests were useless. The committees were packed and the commission had its way with everything but the shellfish sections. The oystermen made a "roar" and threatened to beat the bill if they were not properly treated. They are an organized body and capable of carrying out their threat, and the commission changed the objectionable sections to suit them. None of the committeemen knew anything about the proper seasons for fish or game, and Senator Roosevelt's only argument was that "this is a reform measure. It will take a lot of work off the legislator's hands. The commission says it is all right, and it must be passed."

That nobody asked for such a radical change in the existing satisfactory law made no matter. The Hotel Keepers' Association and the fish trust seemed to have the inside, and the bill shows that they got what they have for years wanted—longer seasons and more chances for the market sportsman. The bill, especially the fishing section, is not even reasonable, let alone being scientific. It is not even uniform because it contains many sections marked "exceptions" or "special." It was passed for political purposes and the fact that the commission did not care about the law, unless it could have the power to make the law delegated to it for future uses, ought to show where the African is located.

This is a law that touches intimately almost everybody in the State, and properly handled could easily be used to influence a local election. The old law was the result of years of hard work and was practical and satisfactory, as is shown by the fact that only a very few unimportant amendments were offered to it during the whole session. Senator Roosevelt's letter, which you printed, is luminous as to the "uniform" law, but as your correspondent intimates, it scarcely recommends him for continuance as a legislator.

T. URLETTE.

Where the Credit Belongs.

SEATTLE, Wash., March 26.—*Editor Forest and Stream:* In the Saturday Evening Post, of March 25, there is an article, "The Last Stand of the Buffalo," by Walter Noble Burns, that has an item wherein he says C. J. "Buffalo" Jones purchased the buffalo and transported them to the Yellowstone National Park at his own expense. Nothing could be further from the truth.

There is a long story connected with this purchase, but I will not tire you with it, except to say that Colonel John Pitcher should have all the credit for the establishment of this buffalo herd in the park. The cows came from the Allard band and the bulls from the Goodnight herd. The Government paid for them. C. J. Jones was sent there with his brother to care for them at a salary of \$1,800 per year, and that was all the interest he had in the buffalo in the Yellowstone National Park.

Every thing is of record at the superintendent's office at Fort Yellowstone. The establishment of the buffalo herd is not the only thing that Col. John Pitcher should have credit for in connection with the park. There should be credit given where it is due, and surely Mr. Burns ought not to give it where it is not due.

T. E. HOFER.

Driving for Foxes.

DRIVES to capture game in quantity or to destroy vermin are of course common enough in the annals of sport. We read of deer drives in Scotland, bear drives in Norway, and when kings and emperors go hunting in the great forests of certain parts of Europe, the game is driven by them and they kill it as it passes. So in the West of the olden times, buffalo were driven over cliffs or into pounds and jack rabbits into corrals by the Indians, while in later days the settlers used to drive the country for wolves in the effort to exterminate the enemies which preyed on their live stock.

A press dispatch from Indiana, however, tells us of fox drives said to have been undertaken recently in Tippecanoe county by the farmers in order to reduce the number of these animals which destroy their poultry and cause losses that, in view of the high cost of living, the farmers feel they can no longer bear. So, according to this dispatch, more than 2,000 farmers in one day recently took part in drives in different parts of this county, and the capture of reynard is the chief topic of conversation around the rustic fireside. Every member of the fox family stands in peril of his life.

The largest single drive so far took place to the north of Lafayette, Ind., and included in the area covered a part of White county. There were no less than twelve hundred men in this mammoth hunt, and the great circle which their extended line formed embraced an area of thirty-five square miles. In Jackson township another immense drive was indulged in by eight hundred men and boys, ending in a round-up on the Miller farm. In addition to these two big ones there have been many minor drives.

Foxes are numerous in both the localities covered by the big drives, and they have been making heavy depredations of late among the farmers' chickens. This is of course the basic reason for the reprisals in the form of organ-

ized hunts. Some of the hunters, however, are doubtless actuated by the hope that a specimen of the rare black fox will fall to their share. One of these animals taken last week in Tippecanoe township brought its fortunate captor \$150.

But what, we ask, were the total results of all this effort by 2,000 men. On this point the dispatch is silent.

Where are the Wardens?

BOHEMIA, Pike Co., Pa., April 6.—*Editor Forest and Stream*: The ice is soft in the lakes and will soon be gone. Ruffed grouse are not numerous, but we saw a number; also heard someone shooting around Big Tink Pond. We saw where he had shot a bird at root of tree and the feathers of the grouse where the pothunter had picked them as he sat on a log.

The shooting continued all week up to date, but we did not see the hunter, although we cut his trail several times.

Porcupines have entered this section within the last three years. The natives never saw them before and did not know what sort of "varmints" had invaded the woods.

SPADES.

New Publications.

PARTRIDGES AND PARTRIDGE MANORS, by Aymer Maxwell. Cloth, 327 pages, 16 illustrations in colors by George Rankin, \$2 net. New York, the Macmillan Company.

In taking issue with those who claim that too much of the land in Great Britain is withheld from the people by the wealthy class who enjoy shooting, Captain Maxwell declares that partridge shooting is a valuable by-product of successful agriculture, to the operation of which it is in no sense inimical. Chapters are devoted to the natural history of birds, the history of partridge shooting, preservation and management, notes, opinions and suggestions, vermin, etc. The colored plates are beautiful.

THE DOG LOVERS' BOOK, by Edwin Noble, R.B.A. Cloth, 304 pages, numerous full page color plates by the author, \$4.50 net. Boston, Dana, Estes & Co.

The book is divided into four main parts, dealing with watch dogs and guardians, sporting dogs, lapdogs and pets, wild dogs and their kinsmen, with a section of general information on training, common ailments, shows and dog law. The whole is beautifully illustrated in colors, with a diagram of the comparative sizes of dogs and smaller illustrations in black and white in addition.

THE LIFE OF A FOXHOUND, by John Mills. Cloth, quarto, illustrated with color plates and marginal sketches by F. A. Shepherd. New York, George H. Doran Company.

Unlike some of the animal stories, in which the animals themselves are supposed to do the talking, this suppositious story by a foxhound of his own life and hunting is neither ridiculous nor improbable, for it furnishes a peg on which to hang some excellent dog and hunting lore which every foxhunter can read with profit.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Dry-Fly Fishing.

SULLIVAN COUNTY, N. Y., April 6.—*Editor Forest and Stream*: Whatever may be our ideas in regard to the English dry-fly purist who refuses to cast his fly, except it be to a trout which he has seen rising at a natural insect, it must be confessed that it is far more interesting to fish the dry-fly when the trout are actually feeding upon surface food.

Before the great freshets in the spring and the long drouths in summer, which have been so common in recent years, there were many places on our well known trout streams where a few fish could always be found "on the rise." It was at one of these spots near the upper end of a large pool that I began my dry-fly fishing twenty years ago. I had the equipment which I believed to be the correct thing in rod and tackle, with the finest gossamer gut and small dry-flies imported from England and tied by an expert.

The trout were rising all right; the trouble was that a strong current flowed between me and the bay or eddy where the trout were, and this grabbed the belly of my line and caused a drag, one of the chief things I had been warned against. However, in the course of an hour or two I got ten rises at my fly and caught one ten-inch trout. The gossamer gut was not necessary, and caused much trouble. You will not find such fine stuff on sale in this country, and I understand that it is no longer popular in England, even on the clearest of chalk streams. It is too easy to break on the strike; the least excess in force and the fly is left in the mouth of the trout. Also, it twists easily with split-winged flies, and soon loses its strength. I confess that it endures a steady strain remarkably well, considering the fact that it is nearly as fine as a lovely woman's hair.

One ridiculous experience is a warning against carelessness in fishing. I had seen a very large trout in a pool and went to fish for him. I had tried everything I could think of to induce this fish to rise without response, although I had caught two smaller trout. My last efforts had been with tiny duns and this gossamer gut, and had given it up, when I noticed, in my box, a very large fly tied on a Pennell hook by myself. Without thought, I tied this fine gut into the large eye of the hook and cast it over the water where the fish usually lay. The big fly cocked and floated beautifully. The trout saw it and was probably enraged at such an apparition on his pool. Anyhow, he leaped upon that fly like a tiger. It was not a rise in the ordinary sense, but a pounce. Of course, the thin gut attached to a big metal eye would not endure such a sudden pull, and I was left lamenting.

Dry-fly fishing comes easily to anyone who has been in the habit of casting up stream with small flies, and the first man who uses a floating fly upon a stream where the trout have never seen an artificial fly fished in that way, has a great advantage. They soon become more wary and one may succeed better by returning to the wet-fly. The first time the floating fly was put

over a certain piece of water, eleven large trout were killed. The next occasion when they were rising freely, seven similar fish were taken, but after that one was doing well if he got three trout with the dry-fly. Some little knowledge of the class of flies most common upon the stream, and their colors, may be of assistance, and typical flies are best when no one fly is strong upon the water. That is, if ephemera in the dun stage are fairly numerous but several sorts and sizes, then a dun of grayish or bluish dun color, possibly a little yellow added to the body, will do best. If a lot of oddlings of the caddis tribe are about, then one of the browner floating flies, what our English brethren call sedges. On a stream where there are plenty of flies the trout sometimes get the color of a particular fly in their mind's eye and will not notice anything else. This affords an opportunity for the dry-fly man to see what he can do, and if he succeeds he will feel pleased with himself.

We used to have many such days in May and June, sometimes later in the summer, but insects are nothing like as plentiful as they were a few years ago. Floods and drouths are, I think, responsible for this decrease. In many parts the bed of the stream has been cut out and carried away. I wish that it was possible to restore the conditions of twenty years ago, but, of course, it is not. I can remember great rises of flies as late as midsummer, and after a short period of heat, the insects became quite numerous again by the 15th of August. Unless one keeps a diary, he is apt to forget many of his observations, but occasional days are marked by some special incident. In fishing with a first-rate angler from Pennsylvania there are two days that stand out clearly in memory, both in July. On the first of these days there was an extraordinary rise of a small yellowish-brown caddis fly, and the trout were taking them freely. I took twenty fish from one large pool. On the second occasion a small blue-gray ephemera was hatching, floating down and rising from the water, and the dimples made by the rising trout were to be seen everywhere. Our two baskets contained seventy trout, of which my companion had thirty-six and myself thirty-four. These fish were taken with wet-flies in less than four hours. In 1892 and 1893 the fishing, I understand, was very poor on several of the well known streams, but in 1894 it was good, as the brown trout began to appear in some numbers and of considerable size.

If we could restore a more regular flow of water and keep the temperature down, there would be no great difficulty in having as many native trout in our streams as they held at any time since the country has been settled, but I doubt if there is the old-time abundant stock of food for them. Minnows are still plentiful, but insects and their larvæ are far less numerous than they were a few years ago. This is particularly true of the larger sorts. However, there are days, or parts of days, when there is a fine show of insect life.

If an angler had the time to travel about and look into conditions on many waters, I have no doubt that he would find many streams that are peculiarly suited to the use of the dry-fly and would enjoy first-rate sport.

A good angler tells me that there is good dry-fly fishing and great abundance of insect life on streams in Wisconsin.

The new game and fish law is now in the hands of the Governor, awaiting his signature. There seems to be no doubt that he will sign it, and that its provisions will go into effect immediately. The opening of the trout season will be fixed for May 1 instead of April 16, as heretofore. The limit as to size of trout to be basketed remains at six inches. An effort was made to have all fish under seven inches returned. A six-inch trout is very small, while an eleven-inch small-mouth black bass is quite a fish. When fishing with flies and trout tackle an eleven-inch bass looks pretty good to you when the sport happens to be poor.

I am afraid there will be disappointment for many in the postponement of the opening day of trout fishing. It is not that the fishing is very good in April on our mountain streams, for the water is usually high and the weather cold and often disagreeable, but after the long winter men are crazy to get out into the country to be in the stream with a fly-rod in hand. The fresh, keen air is so invigorating that almost any sort of grub seems to go to the right spot. I have seen men who had no appetite in the city devour great piles of buckwheat cakes that were just a wee bit sour and cover them with floods of maple syrup. Each cake was about the size of a dinner plate—good substantial stuff that would stay the pangs of hunger for several hours.

The weather frames well, sun and rain alternating to remove all traces of frost and snow and start things growing. THEODORE GORDON.

Coloring Fishes.

FLOWERS can be artificially colored, we know, with more or less success, by chemical agency. Animals generally escape counterfeiting, with few exceptions, although some living things undergo a process of metempsychosis. For instance, it has not been unknown for the cat to become a hare, or a dab a sole, or the horse a bullock when in the meat market. La Fontaine has given us the ass in the lion's skin and the jay with peacock's plumage, but these deceived no one—they betrayed themselves. The latest in counterfeiting is the carp. In Sicily it is said that by introducing into the water chalk, iron and little peat, colors will be imparted to the carp. After treatment in a bath of these concomitants for a fortnight, the fish is given another chemically prepared bath into which is introduced iron and tan. By increasing or diminishing the quantities the color can be either accentuated or diminished. The process is somewhat hazardous, but we learn from a Paris contemporary that in the end an apparently new species of ornamental fish is produced which commands a high price.—London Globc.

All the fish laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

Large Kingfish.

RED BANK, N. J., April 5.—*Editor Forest and Stream:* I am inclosing herewith a photograph of a very large kingfish weighing 32 pounds, 54 inches long, 22½ inches girth, caught by Mrs. William G. Selby, of Marietta, Ohio, at Sarasota, Fla.

Mr. Selby writes me that the fishing has been disappointing this spring on account of the number of southwest gales along the Gulf coast of Florida.

The conditions were the same while I was

MRS. SELBY AND HER KINGFISH.

there during January and February, there being a great amount of rain and high southwest winds, most unusual for that part of the State in winter. Only scattering channel bass and trout between storms. T. H. GRANT.

Trout in North Carolina.

LINVILLE FALLS, N. C., April 3.—*Editor Forest and Stream:* The fishing season on Linville River will open as usual on the first day of May. The prospect this year is the best that it has been during the four years I have been here. The stream has been well stocked, sometimes twice a year. During the past two seasons it has been well protected, a warden employed to patrol the river and prevent illegal fishing.

Local fishing has been restricted to one person from a family once a week. The rights of the visiting angler have thus been cared for. The river has not suffered a bad flood for three years, so the fish have not suffered from the

effects of washing and debris. The limit here is twenty-five fish per day, and none smaller than eight inches—rainbow trout. This spring two new boarding houses will open. Incidentally the rhododendrons give promise of the greatest bloom ever seen here, as they are all bristling with buds. The bloom begins about May 1 and lasts, with the kalmia and various azaleas, through July. F. W. BICKNELL.

Conservation.

BUFFALO, N. Y., April 9.—*Editor Forest and Stream:* That little paragraph on the editorial page of your last issue, about the Legislature and its bills, did me real good, particularly the reference to the Governor's "conservation, or is it conversation policy." The newspaper men down there at the Capitol, who see things from the inside, call it the "Con" commission and sang a song about it at their annual dinner, which I was so fortunate as to be able to attend. Anybody who has read the commission's numerous bulletins or watched its struggles for legislation will appreciate the delicious humor of the rhymes. I send it for the edification of your readers and the good of the cause.

ODE TO CONSERVATION.

(Spell it "Owed")

Air: "Solomon Levi."

We are the Con Commission, and we'd have you understand

You cannot get good water power 'less we condemn the land;

We'll save the fish and game for you, if we may make the law,

The Legislature's out of date—the worst we ever saw.

CHORUS.

O Conservation, what a lovely word,

Hope of the Nation, nobody can afford

To doubt the things we say we'll do if we can have our way

With woods and waters, dams and things, and cash enough to pay.

Whoop up reforestation, for the mills all need the trees,
And pulpwood north is mighty scarce, each lumberman now sees;

Hurrah for water storage, boys, and push our bills along,
Give us the power to hand you things, and listen to our song—

CHORUS.

We are the Con Commission, and we've given you the cue,
To push our little bills along is all we ask of you;
Don't seek for explanations, you can get those later on,
Just put the whole thing up to Us, Commissioners of Con.

CHORUS.
C. R. P.

High Water.

BLOOMINGTON, Ill., April 6.—*Editor Forest and Stream:* Fishing is unusually disappointing this spring, due to high water and ice in the rivers and creeks. The ice has remained in the streams much later than usual and fish are not biting well.

There is mourning in the ranks of Illinois fishermen over the destruction of the picturesque dam in the Kankakee River above Wilmington. This dam went out with an ice gorge recently. The vicinity of the dam was always marked by the best fishing on the river, and was the haunt of thousands of anglers during the past thirty years.

The ever increasing number of garfish in the Kankakee River has decided the fishing organizations along that stream to plan a war of extermination during the coming season.

E. E. PIERSON.

The Hawk and Owl Problem.

WEST HAVEN, Conn., April 6.—*Editor Forest and Stream:* In these days when so much attention is being given to game-bird propagation and poultry farming, and just now when the nesting season of the hawks and owls is in progress, the subject of our attitude toward this class of birds is a timely one. In this matter we must meet extremes of opinion. On some game preserves they try to kill every raptorial bird. On the other side there are people opposed to game preserves because of this attitude toward an interesting class of birds. The only correct judgment is from the standpoint of knowledge and consequent discrimination. Most hawks and owls will at least occasionally destroy a fowl or chicken or a game or insectivorous bird. Some kinds do this habitually; others prefer a different diet and commit depredations more under force of circumstances. While it would not be desirable to have birds of prey really abundant, on the whole they have a useful function to perform, in the keeping down of noxious vermin, and it would be a calamity to have them entirely exterminated.

Take, for instance, the great horned owl, classed as one of the most destructive species. It certainly kills game birds and poultry to some extent. But I have often examined their nests where they bring their prey. In the great majority of cases I have found there rabbits, skunks, woodchucks, squirrels, rats, snakes, but only occasionally birds. In short they feed mainly on vermin which would have destroyed much more game and poultry than the owls. But if there were too many owls there would not be vermin enough to go round, and of course they would invade the poultry yard; in fact, one pair of these owls in a large wooded tract is a pretty good thing to have. Of course, if they become troublesome, as individuals will sometimes do, they can be shot. Yet they are magnificent great creatures, and I love to hear them hooting in the twilight in the rugged hill country and the big timber. Much the same is true of the barrel owl, a slightly smaller species, without the ear-tufts.

Omitting mention of a few rare hawks that do not figure much economically, we have only two kinds that are of serious menace. These are the Cooper's and the sharp-shinned hawks, of medium and small size respectively, with short wings and long tail, which flap their wings rapidly. Their principal diet is of birds and poultry, and it is proper to shoot them at sight. There is no danger that they will be exterminated.

The other hawks and owls, like most people, are neither notable saints nor very great sinners. Some of them, like the so-called hen-hawks—the red-tailed and red-shouldered hawks—sometimes bother the farmer of the game birds, though usually confining their attention mostly to vermin and insects, being rather heavy, sluggish birds, taking what comes easy. When individuals learn the way to the poultry

yard or game farm and become troublesome, they can be suppressed.

Showing how individual "good" birds will fall from grace, last winter I knew of a screech owl killing a Hungarian partridge through the wire of a pen. I have even heard of one killing a large hen. It was winter, and probably these were desperate from hunger. Ordinarily they are splendid mousers and ratters, better than most cats, and I should not dream of shooting them because of rare lapses from our human standards of virtue. The marsh hawk that quarters over the meadows, the retiring broad-winged hawk of forest tracts, the little sparrow hawk with reddish back that hovers over the field for mice and grasshoppers, are birds of this same category. Those who shoot them all indiscriminately only reveal their lack of observation. It would really require vigorous war on their part against the vermin to undo the damage they thus unwittingly do to the game birds in removing the natural check upon the vermin. In the western grain-raising country, the hawks and owls keep down the gophers, the worst pest of the farmer. In some localities where bounties have been offered for hawks and owls it is said that rodents have so increased as to girdle the fruit trees and seriously ravage the crops. Bounties are harmful in causing the destruction of good with the bad.

My plea, in short, is to discriminate. Keep down only the really injurious species. Kill individuals of other kinds that commit depredation. Consider that many of our raptorial birds lead quiet and mostly harmless lives, holding down the flood of vermin that would overwhelm us. Indeed, it gives great pleasure and sense of real achievement to know the wild raptors of the forests.

HERBERT K. JOB,
State Ornithologist.

Winter Migration of the Prairie Chicken.

CHARLES CITY, Iowa, March 27.—*Editor Forest and Stream:* To one passing through portions of Iowa this past winter and the present month of March, he would be often led to believe that the old prairie chicken days were rapidly coming back.

Only yesterday I observed in a small field of unhusked shocked corn a flock of perhaps fifty or more prairie chickens which had come here to feed. A short time before I had also observed in a barren pasture in another place near the central part of the State a flock of chickens perhaps equally large.

At another place in this same general section is a field of standing and shocked unhusked corn. Here can often be seen flocks of many hundreds of prairie chickens feeding. These statements are equally true regarding this winter bird, as it occurs in various other places in Iowa this winter and so far this spring.

It does the heart of every old timer good to again see these birds in such numbers, as it so vividly recalls the past.

Very many of these prairie chickens will soon leave this State for other regions, from which it is conceded they came. It is generally recognized, and has been for years, that many of the large numbers of chickens that winter in Iowa come in from Wisconsin, Minnesota and the Dakotas, as here the winters are often milder and there is generally a better feeding ground.

CLEMENT L. WEBSTER.

Starlings with Other Birds.

DELANSON, N. Y., March 27.—*Editor Forest and Stream:* I noted the letter of Ellis L. Dudley in a recent issue of FOREST AND STREAM in regard to starlings feeding with crows. I have not yet seen the starling, but this or a similar association seems to be an old habit of the bird.

Perhaps the following quotation from White's "Selborne," Letter XI., to the Hon. Daines Barrington, may shed some further light on the subject:

"If I admire when I see how much congenious birds love to congregate, I am the more struck when I see incongruous ones in such strict amity. If we do not much wonder to see a flock of rooks usually attended by a train of daws, yet it is strange that the former should so frequently have a flight of starlings for their satellites. Is it because rooks have a more discerning scent than their attendants, and can lead them to spots more productive of food? Anatomists say that rooks, by reason of two large nerves which run down between the eyes into the upper mandible, have a more delicate feeling in their beaks than other round-billed birds, and can grope for their meat when out of sight. Perhaps then their associates attend them on the motive of interest, as greyhounds wait on the motions of their finders, and as lions are said to do on the yelping of jackals."

WILL W. CHRISTMAN.

A Peevish Hummingbird.

WALKING in a lonely piece of woods I was somewhat startled by a buzzing sound, says Cordelia J. Stanwood in the Maine Ornithological Journal. A hairy woodpecker immediately struck against one side of a tree, and the maker of the noise, a hummingbird, alighted on the other. There the big fellow crouched in abject terror, while the little fellow jabbed at him, first around one side of the tree, then around the other side of the tree. This one-sided battle continued for some time, when the hairy woodpecker sought another tree only to be closely pursued by his tormentor.

Probably the woodpecker was goaded to his duty by necessity—a nest of young waiting for food but a few yards distant. At any rate, in spite of the jabs of his persecutor, he began to bore holes for insects. When he had drilled a hole, the hummingbird descended upon him and drove him away. I did not see that the hummingbird reaped any material benefit from this rough warfare. After a time he left the woodpecker to his work, but still lingered in the neighborhood.

Not long since I saw a hummingbird pestering two black-throated green warblers who were feeding young in the trees.

Published Weekly by the
FOREST AND STREAM PUBLISHING COMPANY,
127 Franklin Street, New York.

CHARLES OTIS, President,
C. B. REYNOLDS, Secretary,
S. J. GIBSON, Treasurer.

CORRESPONDENCE.

FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Terms: \$3.00 a year; \$1.50 for six months. Single copies, 10 cents. Canadian subscriptions, \$4.00 a year; \$2.00 for six months. Foreign subscriptions, \$4.50 a year; \$2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line (\$2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra.

Special rates for back cover in two or more colors. A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Advertisements should be in our hands by the Monday morning previous to date of issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

KENTUCKY STEPS INTO LINE.

As a result of the popular demand for better regulation of game and fish matters, Kentucky now has a new fish and game law, with a commission to administer it. The game and fish protective associations of Kentucky are largely responsible for the change from old conditions which has been brought about by legislative enactment.

The new commissioners will serve without pay, but the executive agent will receive a salary, and wardens are to be appointed, their compensation to be fixed by the commission. Residents will pay \$1 and non-residents \$15 for shooting licenses good for the year in which they are issued.

Kentucky has long neglected her fish and game. Hers is a region of great natural beauty, and one which at one time teemed with game and fish. These have not received much attention in recent years, but if the new plan is properly carried out, great improvement will be the result, and that in a comparatively brief time, since the conditions are unusually favorable. The hilly country, even that which was cut over years ago, furnishes abundant protection for small game and even deer, while the numerous clear, cold streams are ideal game fish waters. A little protection and propagation will go a long way in Kentucky, and men who are past middle age, who recall the good shooting and fishing they had when they were young, may yet see a return to something like the old-time conditions.

WHEN WILL THE SEASON OPEN?

THE game and fish laws of New York contain one important change which is now keeping the anglers on the anxious seat. If the law is signed before next Tuesday, the trout season will not open until May 1. If it is signed on or after April 16, then there will be confusion in the lower tier of counties, in which April 16 is now opening day, while the up-State counties will not be affected either way. It is possible the Governor may delay action on the bill, in order to avoid upsetting the plans of so many persons who have looked forward patiently to the approach of the 16th. The excellent proposal to make the legal length of trout to be retained seven inches, instead of six, as at present, was omitted.

An Albany correspondent writes that, among other items in the supply bill, now before the Governor, one provides \$7,500 for three motor-cars for the Conservation Commission—there are three commissioners—and another appropriates \$15,000 for the three codifiers of the new game law, which is also before the Governor. The appropriation for printing the new law, to a copy of which every sportsman at least is entitled, is \$3,000. Economizing!

THE SULLIVAN LAW.

WHEN two foreigners armed with swords and revolvers were arraigned before a local magistrate, charged with carrying dangerous weapons, the judge released them, on the ground that the unloaded revolvers they carried were not concealed, and that they, therefore, had not violated the Sullivan law. This is still another of the many views held by justices concerning a law that contains numerous loopholes for escape.

Last week in the Supreme Court, Justice Gerard handed down a decision in which he held (1) that the Sullivan law, insofar as it may be applied to the carrying of revolvers, may only be enforced against those who are found to be carrying revolvers concealed on their persons; (2) that it does not apply to firms exhibiting revolvers for sale; and (3) that it "regards weapons used for criminal purposes, such as slungshots and sandbags, and not ordinary weapons employed for legitimate reasons and contemplated by the constitution and the bill of rights."

These decisions extract the few "teeth" remaining in the law. Public opinion has already condemned it as an un-American slap at reputable citizens and a cloak for increased activity on the part of criminals.

NATHANIEL S. SMITH.

NATHANIEL STEVENS SMITH died at his home in West End avenue, New York city, on March 23. By profession he was a lawyer, and for a number of years he had been a referee in New York County Supreme Court cases.

Mr. Smith was a charter member of the Anglers' Club of New York, its president in 1910, and a director at the time of his death. He was also a charter member of the old Pennsylvania preserve club, now known as the Blooming Grove Park Club, and one of its most active workers. He was its secretary for a number of years, then its president, and more recently its treasurer. He was a graduate of Harvard University

in the class of 1869, and member of the Harvard Club of this city. He was very fond of fishing and was one of the regular contestants in all of the fly-casting tournaments held in recent years.

It is said that Germany intends to impose a tax on cats. The fund accruing will be poured into that bottomless pit, the army and navy upkeep. If a tax on cats were to be levied here, and the fund devoted to game, fish and forest protection, there would be fewer cats, more birds and less cause for complaint over the increasing activity of insects. Sentiment is, and probably will always be, divided on the subject of cats and dogs, but the present plan of taxing dogs has been found to work fairly well, and there seems to be no valid reason why it would not work out equally well with cats. Those who are fond of dogs pay the tax and keep their dogs. That is to say, they are supposed to pay the tax; at any rate, the dogs are in evidence, though the total figures in a dog census and those of receipts for dog licenses never balance. Cats subsist partly on birds, the extent of their depredations depending on opportunity, hence it would be only fair that their owners bear a portion of the burden of caring for the birds which are of such great benefit to all of the people.

JOHN H. WALLACE, JR., State game and fish commissioner of Alabama, is the only game commissioner in the United States who is elected by the people. Four years ago Mr. Wallace was elected, and he was re-elected in the Democratic primary on April 1 last, we are advised, by an overwhelming majority. He was opposed by Captain J. C. Cheney, of the Department of Agriculture, and Hon. Thomas O. Goodbrad, a prominent and popular sportsman of Mobile. Both opponents made an active campaign, but despite this fact, Mr. Wallace swept the State and received several thousand more votes than both of his opponents combined.

AN International Sporting and Industrial Exhibition is to be held at Warsaw, under the auspices of the Warsaw Society of Sports, in May and June next, opening on May 7. Exhibits will be admitted into Russia free of duty and carried on the Russian railways at reduced rates.

THE Duke of Connaught will open the Winnipeg Industrial Exposition on July 10. Two features of the big fair will be the exhibits of motor boats and of hunting dogs. The latter will attract large numbers of bird dog owners, for the region about Winnipeg is famous for its good shooting, and good dogs are always in demand.

THE Ministry of Agriculture of Argentina has been authorized to spend about \$750 United States currency for the construction of incubators for hatching trout. They will be placed in the San Miguel River in the Province of Cordoba.

THE British firm that supplied the London police with .32 caliber automatic pistols is now at work on an order for more powerful automatic pistols for the navy of that nation.

YACHTING

Ticks from the Ship's Clock.

The following appointments are announced by J. Stuart Blackton, Commodore of the Atlantic Y. C.: Ernest E. Malcolm, Fleet Captain; Charles E. Gilbert, M.D., Fleet Surgeon; Nehemiah Boynton, D.D., Chaplain; Regatta Committee—Carlos de Zaira, Chairman; Alvah Nickerson, F. Lewis Luckenbach.

The Camden Y. C., of Camden, Me., of which Cyrus H. K. Curtis, of Philadelphia, is commodore, has built a new club house to be ready for occupancy on June 1. It is of wooden construction of attractive design. It has a wide piazza on three sides. The main room is 89 feet by 58 feet, in which is a large stone fireplace. The locker room and the room for skippers is in a separate building 88 feet long by 24 feet wide. The club has arranged to have a water boat this summer which will add to the convenience of visitors.

Yachting on San Francisco Bay.

At the annual meeting of the Corinthian Y. C. the following program was arranged: May 4 and 5, Paradise Cove and return; May 11 and 12, Vallejo and return; May 18, open; May 25 and 26, Petaluma drawbridge and return; June 1 and 2, open; June 8 and 9, McNear's and return; June 15 and 16, open; June 22 and 23, Vallejo and handicap race home; June 29, open; June 30, Hammersmith trophy; July 4, reception at club house; July 6 and 7, Paradise Cove and return; July 13 and 14, open; July 19, 20, 21, Santa Cruz; July 27, Santa Cruz; July 28, return; Aug. 3, Paradise Cove; Aug. 4, small boat races; Aug. 10 and 11, McNear's and return; Aug. 17 and 18th, river trip; Aug. 24 and 25, return from river trip; Aug. 31, Sept. 1 and 2, Alviso trip; Sept. 7 and 8, open; Sept. 9, interclub regatta; Sept. 14, open; Sept. 15, motor boat day, aquatic sports; Sept. 21 and 22, Paradise Cove and return; Sept. 28 and 29, San Rafael and return; Oct. 5, Paradise Cove; Oct. 19, closing day, Oct. 20, cruise in squadron.

The Sausalito Y. C. elected: Commodore, A. Reubold; Vice-Commodore, Walter Marr; Port Captain, W. H. James; Measurer, W. Woodward; President, Otto Rhode; Vice-President, Robert Brandlien; Secretary, T. L. Sutherland; Treasurer, Dr. M. E. Simon; Regatta Committee—Dr. M. E. Simon, Dr. H. L. Lacoste and William Reeves. Captain Woodward is having many changes made in the Folly, Surprise, owned by Vice-Commodore Marr, is being remodeled, and the sloop Comet is being fitted with new decks for her owner, L. F. Secor. The program for the season is: April 20, opening; April 21, cruise in squadron; May 4 and 5, open; May 11 and 12, Vallejo and return; May 18 and 19, Paradise Cove, clambake; May 25 and 26, open; May 30, race for Sorenson cup; June 1, cruise to McNear's; June 2, race home for Reubold cup; June 8 and 9, open; June 15 and 16, open; June 22 and 23, cruise to Vallejo and race home for Secor cup; June 30, river cruise; July 14, return from river cruise; July 21 to 28, Santa Cruz; Aug. 4, Paradise Cove; Aug. 11, race for perpetual trophy; Aug. 17 and 18, Sheep Island; Aug. 24 and 25, open; Aug. 31, Sept. 1 and 2, Redwood City and race home for Marr cup; Sept. 7, 8 and 9, Petaluma and race home for Rhode cup; Sept. 15 and 16, open; Sept. 22, outside cruise; Sept. 28 and 29, McNear's; Oct. 5 and 6, open; Oct. 12 and 13, Paradise Cove; Oct. 19 and 20, ladies' days; Oct. 27, closing day.

San Francisco Y. C. program: April 27, opening dance, dinner and jinks; April 28, cruise in squadron; May 4 and 5, cruise to McNear's and return; May 12, open; May 19, Paradise Cove; May 25 and 26, Vallejo and race home;

May 30, picnic at Marin Islands; June 2, open; June 8, race over motor boat course for Polhemus Low cup, then cruise to Paradise Cove; June 9, clambake at Paradise Cove and return home; June 16, Farallone race; June 22 and 23, Petaluma drawbridge and return; June 30, open; July 4, cruise to Volante; July 6, rendezvous at Vallejo; July 7, race to Sausalito; July 14, annual regatta; July 21, lightship race; July 27 and 28, Paradise Cove and return; Aug. 4, open; Aug. 11, motor boat races and aquatic sports; Aug. 18, cruise to Hunter's Point; Aug. 31, Army Point; Sept. 1 to 9, river cruise; Sept. 15, triangle race; Sept. 21 and 22, Bolinas and return; Sept. 29, fishing trip to Red Rock for non-yacht owners; Oct. 6, motor boat regatta; Oct. 13, cruise to Winehaven; Oct. 26, closing dance, dinner and jinks; Oct. 27, closing cruise in squadron.

Encinal Y. C., of Alameda, officers are: President, S. M. Haslett; Vice-President, Edward M. Shaw; Secretary, Harry H. Shed; Directors—S. M. Haslett, Frank Paul, H. H. Shed, J. A. Landsberger, R. L. Weinmann and J. Evelyn Hall.

The Corinthian Y. C., of San Francisco, has decided to abandon the Seawanhaka-Corinthian rules of measurement, and has adopted the universal rule which has been given a thorough tryout here during the past two seasons. The sloop Corinthian, built by members of this club to challenge for the perpetual cup in 1904, and successful in two contests for the cup, is to be offered for sale. This club has received a suggestion from A. J. Mitchell, of the Sunset Y. C., of Los Angeles, that a race be arranged from San Francisco to San Pedro.

GOLDEN GATE.

Abolish Cup Giving.

At a meeting of the Seawanhaka-Corinthian Y. C., April 3, George E. Roosevelt, Secretary and Chairman of the Regatta Committee, recommended the abolishment of buying prizes for the winners of the yacht races.

He said it is not the value of the prize that attracts the yachtsman, but the record he is able to make with his boat. His idea is that a standard form of medal be adopted as a prize, thus materially reducing the expenses and at the same time pleasing the owners just as well as would an expensive trophy. Those present agreed that the matter should be submitted to the other clubs on the Sound and to the Yacht Racing Association.

It was announced that Cornelius Vanderbilt has offered a cup for the small schooner class now being constructed to race the coming season; also that races for the Jewel S. class will be held off Oyster Bay every Saturday during the season, as well as races for the 15-footers. The first race of the season for the club will be on May 25, when a special race will be held for the New York Y. C. 30-foot class.

Y. R. A. of Jamaica Bay.

The annual meeting of the Yacht Racing Association of Jamaica Bay was held April 2. Officers were elected and courses for racing selected.

The question most important was the adoption of an outside course for the larger type of boats instead of the Beach Channel course, the smaller craft to use the Beach Channel course and the larger boats to sail the triangular course off Manhattan Beach.

Starting from the bell buoy off Sheepshead Bay, the first leg to be a fixed buoy in Ambrose Channel near Romer Shoal light, thence to the bell buoy off Norton's Point, to the starting line. The Beach Channel course will

start from Rockaway Point and the turning mark will be near the Long Island trestle in Broad Channel.

Boat owners will have the option of sailing either of these courses, but must continue in the series in which the first race is sailed.

The following five clubs decided to give up holding open club races and devote the date to handicap racing: Canarsie, Bergen Beach, Jamaica Bay, Bay View and Sheepshead Bay.

The Rockaway Point Y. C. was elected to membership association.

Former Commodore Clarence A. Martin, of the Canarsie Y. C., was re-elected president for the third time. Other officers are: Vice-President, Dr. L. C. Heimer, of the Bay View Y. C.; Treasurer, Fred Cox, of the Old Mill Y. C.; Secretary, William McLaughlin, of the Canarsie Y. C.; Measurer, C. H. Greene, of the Diamond Point Y. C. A meeting will be held on April 30 for the purpose of arranging the racing dates.

Handicap Y. R. Class.

THE annual meeting of the Handicap Yacht Racing Class of Long Island Sound was held on March 29, and the following officers were elected: President, G. P. Granbery; Secretary, Herbert L. Stone; Treasurer, R. B. Budd. The reports of committees showed the class to be in flourishing condition, with about forty boats racing throughout the season, while the class as a whole furnished nearly one-half the starts in the races under the auspices of the Long Island Sound Yacht Racing Association.

Yachts Change Hands.

THE Hollis Burgess Yacht Agency has sold the Herreshoff Buzzard's Bay one-design class 30-foot sloop yacht Arabian, owned by Robert Winsor, of Boston, to Ernest G. Adams, of Worcester, Mass.; also the 52-foot motor boat Totem owned by Richard H. Hammond, of Worcester, Mass., to Fremont Kimball, of Wakefield, Mass.; and the Herreshoff 21-foot raceabout Clitheroe owned by the Estate of Walter L. Dean, of Boston, to Henry P. Benson, of Salem, Mass.

Motor Boating

Reliance V. vs. Dixie, Jr.

RELiance V., owned by J. J. Ryan, and the Dixie, Jr., built from designs by Tams, Lemoine & Crane, have been matched for a race. These two boats are of about the same size, and the race will be interesting because it will demonstrate two different ideas in motor boat designing and engines.

Reliance V. is what is known as a one step, two plane hydroplane, a model credited with having made phenomenal speed in the West. The boat is flat-bottomed and this part ends abruptly at the step. The after part looks as though the end of another boat had been tacked on. These parts do not appear to fit, the bottom of this after end being about four or five inches above the bottom of the forward end. This makes the step. Air is pumped into this step, the idea being to raise the hull and let it plane over the water rather than drive through it. This boat is engined with a six-cylinder, 60-horsepower motor of Van Blerck make, which actually develops more power than the nominal amount. It is a very light motor.

Dixie, Jr., in trials has made 37 miles an hour. It is modeled very much like the famous Dixie IV., but is only 20 feet long and is driven by a 60-horsepower, six-cylinder Sterling motor.

Mr. Ryan announced he was willing to match his new Reliance V. against any boat in the world, for any distance, and with no limit on the stake, and found a ready taker among T. L. & C. enthusiasts, and so the match was made.

Swedish Fishing and Motor Boats.

CONSUL STUART J. FULLER, Gothenburg, reports:

The application of 550,000 crowns (\$147,400) of State funds for loans to fishermen in the territory around Gothenburg for the year 1912 has been announced. This represents 130 individual loans.

The policy, initiated in 1892, is considered very successful and its results valuable to Sweden and to the district immediately concerned. Its object is to encourage the development of fishery and to enable those engaged in it, by the use of money at low interest and on easy terms, to buy boats and motors and improve their equipment and facilities.

It has tended to keep the industry out of the hands of corporations and leave it in the control of individuals and small groups. The open-sea fishing, in the Cattegat and off the Shetland Islands, employs over 200 boats with crews that total 1,700. The mackerel fishery employs some 850 boats and about 5,000 fishermen are engaged in the herring fishery. The total value of the annual catch will run from \$1,000,000 to over \$2,000,000.

In addition to aiding the fishermen to hold their own in the deep-sea fishing and to extend their operations in domestic waters, the expenditure of this money locally has made possible the development at Lysekil and Gothenburg, of a flourishing industry in the manufacture of internal-combustion motors for fishing boats and other rough-service craft. The total annual output of the three largest shops in this district is estimated at 2,100,000 crowns (\$562,800), representing about 2,000 heavy-duty motors.

The engines used in the fishing boats are from 15 to 30 or 35 horsepower and are all kerosene motors, equipped with hot-surface ignition. Electric ignition is considered too expensive and not sufficiently reliable for the service. The engines and fittings are of heavy construction to withstand rough handling, and their actual horsepower is generally considerably above the rated horsepower. The construction is simple. Between 600 and 800 of the fishing boats are so equipped.

The importation of petroleum and gasoline motors into Sweden is rapidly decreasing. Stationary and marine motors are classed together in the statistics, which show the following imports into the entire Kingdom for the past five years (figures for 1910 and 1911 are estimates, final figures not being available for those years): 1907, \$77,476; 1908, \$66,726; 1909, \$54,285; 1910, \$45,000; 1911, \$40,000. The present import in so far as marine motors are concerned represents almost entirely gasoline motors for pleasure craft.

Race From Atlantic to Pacific.

HORACE E. BOUCHER, Henry J. Gielow, Morris M. Whitaker, and Charles Mercer, the Committee on Course, Rules and Regulations for the long distance yacht cruise, from New York to San Diego, Cal., via Panama Canal, to take place in connection with the San Diego Exposition, held their first meeting March 30. Among the matters considered were: Restrictions as to the least size of yachts which could safely be permitted to make the trip, classification of yachts; the course with ports or controls en route; handicapping and prizes.

The necessity of having so many long legs to the complete course was considered as sufficient grounds on which to eliminate all yachts propelled by internal combustion motors of a lesser over all length than 79 feet, while 50 feet was considered as a minimum load waterline length for sail or auxiliary powered yachts and a minimum load waterline length of 130 feet was tentatively decided upon as being the minimum for steam yachts, fuel carrying capacity necessity for the long runs being considered in connection with yachts already built.

The long distances between ports will cause the competing boats other than sail craft to be run at such speed as work economy of fuel, that they may make longer runs without stopping to take on fuel.

Classes decided upon were: Yachts propelled by internal combustion motors, over all measurements 79 to 90 feet, 90 to 100 feet, and more than 100 feet; steam yachts, 130 to 175 feet, and exceeding 175 feet, load waterline measurement; sail and auxiliary class, load waterline measurement, open to schooners and yawls, 50 to 75 feet, 75 to 100 feet, and exceeding 100 feet. Entries of sloops not to be accepted.

The route from New York to Beaufort, N. C., 500 miles; Santiago, Cuba, 950 miles; through the Windward Passage to Colon, 800 miles; from Colon the yachts will proceed through the Panama Canal to Panama.

The first port selected on the northward Pacific journey is Managua, Nicaragua, 800 miles; Tehuantepec, Mexico, 650 miles; Manzanilla, 800 miles, and thence to San Diego, Cal., a distance of 1,200 miles with some stop along the Lower California Peninsula at a port to be selected, where supplies and fuel may be obtained from a ship sent there for that purpose by the San Diego Exposition. The total distance, according to the route selected, is approximately 5,700 miles, the Atlantic section being off shore and the Pacific section being along shore work.

At an average speed of 240 miles a day, or ten miles an hour, the yachts will take twenty-five days to make the trip, exclusive of time allowed by rules later decided upon in which the participants in the contest may spend in the canal zone. No plan of handicapping was decided upon, but the committee will later arrange for as fair a system of allowances as it can devise.

It is planned to offer four prizes, one for each of the divisions as regards power. In addition to these there will be two prizes for each class of each division, one each being for the best time (handicap considered) from New York to Colon and for the best time from Panama to San Diego. In the event of three or more yachts starting in a class and finishing second, prizes will be offered in such classes for both the Atlantic and Pacific legs of the entire distance.

The owner of every yacht that starts will receive a suitable trophy, and every man on every yacht that completes the entire distance will receive a memento.

Entries have already been received from the steam yacht Lydonia, William A. Lydon, Chicago, length 216 feet; yawl Polaris, James C. Heyworth, Chicago, length 70 feet; power yacht Valmore, William Hale Thompson, Chicago, length 82 feet; power yacht Paula, J. Stuart Blackton, New York, length 98 feet, and several others.

Canoeing

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Central Division.—Grover M. Parker, 785 Potomac avenue, Buffalo, N. Y., by Edward A. Phillips.

Eastern Division.—Otto C. Schmidt, 19 Johnson street, West Roxbury, Mass.; Alonzo Quincy Thayer, 21 Hanson street, Boston, Mass.; Robert F. Kelly, 30 Alaric street, West Roxbury, Mass.; Walter B. Buttinger, 74 Weld Hill street, Forest Hills, Mass.; Leo Weise, 6 Germania street, Boston, Mass.; Joseph J. Tegen, 12 Gould street, West Roxbury, Mass.; William Edward Powers, 340 Baker street, West Roxbury, Mass.; Walter M. Whiting, 41 Hamilton street, West Roxbury, Mass.; Emil P. Schmidt, and William G. Schmidt, both of 19 Johnson street, West Roxbury, Mass.; Hugh Donald Macpherson, 20 Newburg street, Roslindale, Mass., and Richard Ro'h, 155 Eustis street, Roxbury, Mass., all by Fred Brodbeck.

Western Division.—Ray Fernbach, 1510 School street, Rockford, Ill., by Joseph W. Barker; Thomas C. Angell, and Harry L. Boynton, both of Dundee, Ill., and both by J. E. Dixon; Albert M. Vilas, Lake and Curtis

streets, Chicago, Ill., by H. F. Norris.

NEW MEMBERS ELECTED.

Eastern Division.—6376, E. S. Walker, 80 West School street, Woonsocket, R. I.

Western Division.—6377, Charles R. Bull, P. O. Box 284, Kenilworth, Ill.; 6378, J. Edward Forsell, 1635 12th avenue, Rockford, Ill.; 6379, W. S. Holly, 1446 Mulberry street, Rockford, Ill.; 6380 William W. Hoyt, M.D., 4314 Lake avenue, Chicago, Ill.; 6381, F. W. McKinney, 5720 Woodlawn avenue; 6382, Maynard H. Riley, Springfield, Ill.

SEA GULLS TAMED.

SEA GULLS have been adopted as the special pets of an attractive young Long Beach (California) woman, says the Long Beach Press. That sea gulls, the wildest and most timid of birds, may be domesticated is being fully demonstrated almost daily by Miss Mignon LeBrun. So familiar have the gulls become with Miss LeBrun that they flock about her as she takes her morning walk along the beach, and, after she has been among them for a short time, some of the birds will even perch on her shoulder and take food from her fingers.

Miss LeBrun has been many weeks in overcoming the fears of the gulls, and her success is the marvel of the hundreds who ramble the sands during the morning hours.

The appearance of the young woman, with her customary handful of table scraps of bread, meat and vegetables, is hailed with a cry of delight by the gulls. Instantly they are in the air, deserting their usual feeding places, and hovering over the head and in front of Miss LeBrun. Then come a few moments of rare delight for the watchers. Poised, ready to dash with lightning-like rapidity, the gulls await the tossing up of choice morsels. They will dart back and forth, catching the food in mid-air, until their natural timidity is overcome. Then they will drop to the sands and feed at the feet of the young woman as complacently as might a flock of pet chickens. Some, bolder than the rest, will take particles of food from her hands.

 Sept. 18-19.—Bloomington Ill.—McLean County G. C. C. A. McDermand, Pres.

DRIVERS AND TWISTERS.

To-day Orange Gun Club goes to Newton, N. J., for a team shoot. Next Saturday Orange goes to Montclair for the second of the series between the two clubs, Montclair having trimmed Orange last week.

On April 21, Hudson Gun Club, of Jersey City, will hold its annual merchandise shoot. Cut-glass and sterling silver will glitter on the prize tables. Write Thos. H. Kelley, Secretary, and tell him which prize you want:

Capt. John Brewer, now seventy-two years old, at one time champion wing shot of the world, was badly hurt by an automobile in Philadelphia, on April 6. He sustained two broken ribs and a broken leg. He is reported as resting comfortably.

On April 22 and 23, the two-day tournament of Cleveland Gun Club will take place. Optional sweeps. Professionals for targets only. There will be eleven events—five at 15 targets each, entrance \$1.40; five at 20 targets each, \$1.90 entrance, and one, No. 11, at 25 targets, \$2.50 entrance. Extra entrance for Squier money-back system, \$1.00.

The second of the series of shoots for the Frank Hall cup will be held on the grounds of the Freehold Gun Club, Freehold, N. J., Friday, April 19, commencing at 10:30. Sweepstakes. Five events, 20 targets each, entrance \$1.50 each event. Money divided 40, 30, 20 and 10 per cent. Commencing at 2 P. M., the Frank Hall trophy shoot, 100 targets in strings of 25, entrance \$3.50. All standard makes of shells for sale on grounds at the right price. Shells shipped care of Frank Muldoon delivered on grounds. Good lunch on grounds. Trains leave Newark for Freehold, 8:33, 11:38; leave New York, 8:30 and 11:30 (Liberty street); leave Trenton, 9:32 and 12:16. Grounds easy to reach from depots. Malthy Conover is Secretary.

Chas. T. Day, Jr., Secretary-Treasurer New Jersey State Sportsmen's Association, writes: "The full list of dates to come of contests for the Frank Hall amateur championship of New Jersey for 1912: Freehold, Friday, April 19; North Caldwell, Saturday, May 4; Orange, Saturday, May 18; Hudson, Sunday, June 2; Newton, Saturday, June 22; Red Bank, Saturday, July 6; Phillipsburg, Saturday, July 27; Mt. Holly, Saturday, Aug. 17; Smith, of Newark, Saturday, Sept. 14."

The much-talked-of organization of a gun club within the New Jersey State Rifle Association became a reality on March 29, the following officers being elected: President, Gen. Bird W. Spencer, Passaic, N. J.; Vice-President, Col. Wm. Libbey, Princeton, N. J.; Treasurer, Col. Chas. A. Reid, Trenton, N. J.; Secretary, Henry G. Aspell, Passaic, N. J.; Field Captain, Chas. F. Silvester, Princeton, N. J. A two-day tournament will be held in July, with an annual trapshoot in September, at the time of the New Jersey State Rifle Association's meeting, Sea Girt, N. J. Application has been made to the Interstate Association for recognition.

History repeats itself in the realm of traps as well as in the field of finer arts. Told the poet of the trap (a one-hoss chaise) that ran a hundred years to the day—and then refused to work any more. Now comes "Luddy," from Temple, Pa., to tell us the shoot for Cypher's cup had to be postponed because the trap ran down, and "Luddy" had to wreck it with Thor's pet implement. No use talking, traps are more or less alike, time and weather will wear 'em out. There will be new traps at the Hercules Gun Club, after which the Cypher's cup again will be tackled. Other tournaments this year will be May 18, June 14, July 4, Aug. 10, and Oct. 12.

An invitation shoot will be held at Manhasset Bay Yacht Club, Port Washington, L. I., the afternoon of April 13. The entry list, as we go to press, indicates an interesting competition. There are so many champions, ex-champions and near-champions in the vicinity of New York at present that the list of crack-crackers will be assorted. The Manhasset Bay gunners, among them Secretary H. L. Hoyt, Jr., have given evidence that they are capable of training among the top three at almost any time. If any of the champs from across the way around Baychester, Pelham Manor and Larchmont want a good afternoon joy-shooting, they will be accommodated April 13. The program calls for 100 targets, at 16yds. rise.

The spring tournament of Springfield (Mass.) Shooting Club will be held at Red House Crossing, on April 19. The program of twelve events calls for 200 targets, \$16 entrance in the sweeps; \$25 added to the purses by the club. Shooting will start promptly at 9:30 o'clock and last all day. To reach the grounds take Indian Orchard or Palmer car. There will be \$50 worth of merchandise prizes to be awarded the high guns shooting the entire program, as follows: 1, automatic reel; 2, hunting coat; 3, Caloris bottle; 4, safety ax; 5, trout rod; 6, pair link buttons; 7, tobacco jar; 8, safety ax; 9, shooting spectacles; 10, pocket knife; 11, compass; 12, reel; 13, drinking cup. Ties to be shot off, miss-and-out. Targets included in all entrances at 2 cents each. Lunch and loaded shells will be for sale on the grounds. Interstate rules will govern all events. Targets will be thrown from expert traps, arranged Sergeant system. Sweeps are optional, anyone may enter any event and shoot for targets only. Professionals will be allowed to shoot for targets only. Purses will be divided Rose system, four moneys; less than ten entries, three moneys. Guns and ammunition shipped prepaid to the Secretary, C. L. Kites, 416 Main street, will be delivered on the grounds free of charge. Shoot will be held rain or shine, shooting stand under cover, if necessary. Programs are now ready, and may be had by addressing the Secretary. W. G. BEECROFT.

Fairmont Gun Club.

THE regular Saturday shoot of the Fairmont Gun Club was held April 6 and had scores as follows: Shot at, Broke W Wiedebusch. 100 89 T H Funk..... 100 94 E H Taylor..... 100 95 W E Johnson.. 50 42 F Helmick 50 37 Arrangements are fast being completed for the coming State shoot. Programs will be out about April 25. Two traps have been installed, and the low trap has been placed on the level with the ground. One of the big features of the shoot will be the merchandise event. This will be worth the trip. ED. H. TAYLOR, Sec'y.

National Amateur Championship.

PELHAM MANOR, N. Y., April 4.—Travers Island was prepared for the arrival of a dark pony to-day, as national amateur champion, but he landed in third place, two targets behind the winner. The almost unexpected was E. A. Randall, of Portland (Me.) Gun Club, who shot so well in the preliminary, winning that event with 92 out of 100, beating last year's champion, Harry Kahler, by two birds. The latter has been off his feed for the past month, but at that he was the only shooter in the preliminary event to run a straight 25. R. L. Spotts took third money on day one.

A glorious poet-making day broke this morning for the big event with 112 shooters on hand to smite the rock. Of these, 101 were amateurs striving for the diamond medal held by Harry Kahler, the then boy shooter of America. There was a tremendous gallery of enthusiasts and curious. The event was at 200 targets from 16yd. mark, and Randall was favorite, though there were many who kept an eye on R. L. Spotts, a very consistent shooter. Randall and the champion of 1905 worked like winners up to the last string, when B. M. Higginson, Jr., of N. Y. A. C., went to the score and broke 23, running his score to 185, passing old 1905 by one and Randall by two. It was an exciting finish, and most enjoyable.

The record made and held by Harry Kahler was 173, so that the new champion is also record holder with 185. Lester German took professional honors and a diamond medal with 188 out of 200.

Preliminary shoot, 100 birds:

Table listing preliminary shoot results with names and scores. Includes names like E A Randall, H W Kahler, R L Spotts, etc.

Opening shoot, 60 birds:

Table listing opening shoot results with names and scores. Includes names like H W Kahler, O C Grinnell, Jr., G J Corbett, etc.

National championship, 200 birds:

Table listing national championship results with names and scores. Includes names like B M Higginson, Jr., J H Hendrickson, E A Randall, etc.

Large table listing various shooters and their scores across multiple events. Includes names like C W Billings, G J Corbett, P E Osborne, etc.

Shoot-off for fifth, sixth, seventh and eight places:

Small table listing shoot-off results for fifth through eighth places.

Professional shoot, 200 targets:

Table listing professional shoot results with names and scores.

Chicago Interclub League Schedule.

THE following is the schedule of shoots: April 21, Chicago Gun Club grounds; May 30, South Shore Country Club grounds; June 30, Hammond Gun Club grounds; July 28, National Gun Club grounds; Aug. 18, Arlington Heights Gun Club grounds; Sept. 15, Long Lake Gun Club grounds; Oct. 13, South Chicago Gun Club grounds; Nov. 3, open.

Conditions: Each member of the clubs in the League will be eligible to compete, but must compete with only one club the entire season.

Team contests, 50 targets per man, distance handicap, shooters under 80 per cent. average, shoot at 16yds.; 80 to 85 per cent., inclusive, 18yds.; 86 to 89 per cent. inclusive, 20yds.; 90 per cent. and over, 22yds. Entrance fee, \$1.50 per man. For practice and other events, targets will be thrown at 1 cent each. Clubs may shoot any number of their men, and the five highest scores of each club to be counted as the club score.

Each member of the winning team in each contest will receive a prize. Each high man of each of the other teams will be given a prize in each contest.

Club grounds will be open at 11 A. M. to provide for practice shooting, and regular contests will begin at 1 P. M. sharp.

Shooters, immediately upon arrival on the grounds, will register their names on bulletin board, placing their names under the handicap distance allotted to them, and giving name of club they are to shoot with. Squads will positively be made up in order as entered on bulletin board only. Distance men to shoot in first squads.

Hudson Gun Club.

JERSEY CITY, N. J., April 7.—Of the twenty-seven shooters that took part in to-day's program at the regular bi-monthly shoot of the Hudson Gun Club, there were only two that could score better than 75 per cent. Dave Engle was high for the day with 79. Doc. Groll was the runner up with 75 per cent., and Dr. O'Brien was a close third with 73, and the rest of the boys fighting to keep the 70 per cent. mark in sight.

The morning was a most ideal one, and brought out a nice crowd of shooters, and things went along fine and smooth for the first few squads, then a gentle breeze started, and in less than half an hour we were having a gale of wind that played havoc with the flight of the targets, and with the shooters also, as it was almost impossible to stand still on the shooting platform; in fact, it was the strongest wind that we have encountered at any of our shoots in our twenty-two years that we have been on this site.

Things looked quite different at the grounds this morning, as the new platform and trap-stands on the west of the club house are about finished and will be in readiness for the merchandise shoot of April 21, on which date we expect to take care of at least seventy-five shooters. On this set of traps we are arranging to have all beginners at the game shoot; they can adjust the springs to suit their speed and the angles to suit their taste, and we will give them all the information that we possess, so as to try and make trapshots out of them.

The Frank Hall trophy shoot, to be held on the Hudson grounds on June 2, will be another big event, open to all amateurs of the State, and if you are thinking about competing for it, here is a chance to get acquainted with our grounds and traps at our merchandise shoot on April 21.

Shells will be for sale at the grounds. We will serve a lunch gratis to all hands present; so come out and see us and bring your gun along with you, and if you don't enjoy yourself, don't blame us, for I assure you that we will do our part to make the visit a pleasant one, and the Turnpike car from the Pennsylvania R. R. Ferry at Jersey City, or at any transfer point in Newark will leave you off at the Hackensack River bridge, so that you can have a refreshing walk along the river bank to the club house.

Orange Gun Club.

ORANGE, N. J., March 30.—The Montclair Gun Club defeated the Orange Gun Club in a team match to-day, 301 to 272. Some of the best shooters among the Orange men did not live up to expectations, Mosler, Lockwood and Wickes all being below 40. Only one man on the Montclair side, Crane, shot less than 40. Colquitt was the high man all afternoon, and in the team match missed only one in his string of 50. The best on the Orange side were Baldwin and von Lengerke, who had 43 each. The individual scoring of the match was as follows:

Montclair.	Orange.		
Colquitt	49	Mosler	27
Boxall	40	Baldwin	43
Winslow	43	Lockwood	38
Crane	39	Von Lengerke	43
Fraze	44	Gedney	41
Brush	46	Wicker	38
Atwater	40-301	Wakeley	42-272

Louis Colquitt was high gun for the day, with 190 out of 200. Von Lengerke, of the Orange team, finished second with 116 out of 125. The men next in order were Fraze 157 out of 175; Wickes 156 out of 175; Brush, 113 out of 125, Baldwin, 158 out of 200, Winslow 62 out of 75.

In two merchandise events, E. von Lengerke was the first in one of them, with F. W. Lockwood second and L. W. Colquitt third. The other event was won by Baldwin, with Wickes second and Beyer third.

The Class B cup was won by Dr. F. B. Lane, with 43 out of 50, defeating Gedney by one target. Altogether there were 2,400 targets trapped, and some of the best shooting of the year done.

ORANGE, N. J., April 6.—Ernest von Lengerke and Thomas Dukes divided honors to-day at the Orange Gun Club, each making an average of 94 per cent. Von Lengerke won a leg on the Dupont trophy and tied with Dukes for the Unger cup, the first event at 25 targets, and the second at 50. His scores were 24 and 47 respectively. Dukes tied for first place in a leg on the secretary's cup, in which 25 of the 50 targets are shot for with gun below elbow. The other high man was Dr. F. W. Lockwood. Von Lengerke also made a clean string of 25 straight in a practice event.

The scores in the Dupont match were: Lockwood 23, F. R. Wickes 22, A. Mosler 15, Haff 21, E. Rockwell 19, Dukes 22, Dr. G. W. Wakeley 20, Von Lengerke 24.

For the secretary's cup the scores were: Lockwood 42, Wickes 35, Mosler 29, Rockwell 34, Dukes 42, Wakeley 41, Von Lengerke 41.

Unger cup: Lockwood 36, Wickes 42, Mosler 40, Dukes 47, Wakeley 35, Von Lengerke 47, Merrick R. Baldwin 39. F. R. Wickes, Sec'y.

Holland Gun Club.

BATAVIA, N. Y., April 6.—We began our season to-day with twelve shooters. Sim Glover made us a visit, and in spite of having had a severe cold for two weeks, scored 95 out of 100. Tomlinson made a nice run, getting 15 and 10 straight in the second and third events and 19 out of 20 in the fourth. He broke 46 out of 50 in the trophy events, but Childs came along with a liberal handicap and won out for the trophy on corrected score. We are giving a cut-glass or silver spoon at each monthly shoot, added target handicap. We also will give a nice cut-glass trophy for high average for the season, handicap to count, 350 of the 400 targets required to qualify, and no shooting up. Our coming shoots will be May 11, June 8, July 13, Aug. 14. Tenth annual all-day tournament, Sept. 26, Oct. 12, Nov. 28. The regular monthly shoots will begin at 3 P. M., except the Thanksgiving Day shoot, which will begin at 9 A. M. Scores follow:

Targets:	10	15	10	20	20	25
*Glover	9	13	9	20	20	24
Tomlinson	8	15	10	19	17	20

AMATEUR CLEAN UP

B. M. Higginson, Jr., 185 ex 200, J. H. Hendrickson, 184 ex 200 and E. A. Randall, 183 ex 200, win first, second and third place medals emblematic of the

AMATEUR CHAMPIONSHIP OF AMERICA

SHOOTING NITRO CLUB STEEL LINED SHELLS.

E. A. Randall wins the Preliminary, 92 ex 100, and hangs up a high amateur average of 91.6% by making 275 ex 300. Six out of the ten prize winners shot

Remington-UMC ARROW AND NITRO CLUB SHELLS

THE FAMOUS STEEL LINED HANDICAP WINNERS.

The high averages made in this shoot bear testimony to the hard, close shooting qualities of

Remington-UMC — the perfect shooting combination.

REMINGTON ARMS - UNION METALLIC CARTRIDGE CO. - 299 Broadway, New York, N. Y.

Shoot at Mt. Healthy, Ohio.

THE shooting game is flourishing at Mt. Healthy evidently, as thirty-eight shooters took part in the second weekly meet of the new Royal Gun Club. The club has on its membership list many new shooters, which accounts for the fact that the scores are not phenomenal just now, but some of the members promise to climb quite a little before next winter. There are also several who can now hold their own, although they have had few opportunities for practice. Ed. Bittner, is one of the leaders, shooting better than 86 per cent., and his brother Lewis was close up with over 84 per cent. These two will shoot a match at 100 targets per man against Harry Hessler and Charles Clark, two old-timers, on April 13, and the latter team will not find it easy money. The shooting of F. E. Woods, Jr., was a feature of the meet. He is a boy of ten years, and his manner of handling a gun gives promise that he will develop into one of the best shots in this section. His score was 15 out of 25. There were a number of visitors at this shoot, among them being Messrs. Breinig and Terris, of the Hamilton Gun Club; Chas. Clark, of the N. C. R. Gun Club, Dayton; George Rink, of Glendale Gun Club, and C. E. and A. Woods, of the Georgetown Gun Club. Eight individual and team matches have been arranged and will be pulled off in the near future. The regular shoots of the club are held on Saturday and Sunday afternoons of each week, and so far the attendance has exceeded that at any of the local clubs. The officers are working hard for the success of the club, and their efforts have been well supported so far by the members.

Table with columns for Events (1-8) and Total. Lists names of shooters and their scores for each event and total score.

Northern Kentucky Gun Club.

THE Northern Kentucky Gun Club will start its usual summer series of one-day tournaments on April 21, and will hold them on the third Sunday of each month until fall. In previous years the club has been using a modified form of the Squier money-back system, and while this proved quite popular, it was decided to try something new this season. After consideration, the system originated by the N. C. R. Gun Club, of Dayton, O., was selected, as promising the best results in the way of attendance and satisfied contestants. This system was used at a recent shoot of the N. C. R. club, and attracted the largest number of shooters which has attended a tournament in this section for a long time. The system is flexible and can be used for a program of any number of targets that the shooters' "shoulders and purses" will stand. The program which will probably be used, will be 100 targets, in four events of 15 and two of 20 targets each. Entrance \$5, and \$1 only deducted for targets. Of the balance (\$4), 40 cents is set aside for high average money, to be divided class shooting, percentage system, 40, 30, 20 and 10 per cent. The remaining \$3.60 is divided into four moneys in each event, class shooting, percentage system, 40, 30, 20 and 10 per cent. All ties divided. Shooters must shoot entire program to be eligible for high average money. Late shooters can enter for unfinished events only, no "shooting up" being allowed. No shooter can enter for one event only, unless he arrives too late for any but the last event. If a majority of shooters should prefer putting in more money for entrance fee, so as to provide larger high average moneys, and purse in each event, the entrance could be made \$10, deduct \$1 (never more) for target money, 60 cents for the four average moneys, and the balance, \$8.40 divided as above. This plan worked out well at Dayton, and seems to have pleased the shooters more than any yet tried. Suppose there are thirty entries with \$5 entrance, a total of \$150, deducting \$1 for target money for each shooter, leaves \$120 to be divided. Of this, 40 cents per shooter, a total of \$12, is set aside for high average money. This leaves a balance of \$108 for prize money in the events, or \$18 in each event, \$7.20 to first, \$5.40 to second, \$3.60 to third, and \$1.80 to fourth. The above is the program that will be presented to the shooters for their approval, and the club hopes that a big crowd will be on hand to try it out.

A few shooters attended the weekly shoot on April 7. The day was cold and a strong wind blowing across the traps made the targets very erratic in their flight, and kept the scores rather lower than usual.

On April 6, there were three or four shooters at the grounds. Johnson was high man with 76 on this date, defeating Irwin by one target, although the latter had 5 targets the best of it in the last 50. Hack is a new shooter, who has been here only once or twice, but he proposes to stick to it, and will be making a better showing before the season is over. Supt. Taggart is improving a little, and might give some of the boys a run, if he would practice every week.

Irwin and Frohlinger defeated Johnson and West in a match at 100 targets per man, by 4 targets. Johnson's team had a lead of 2 targets at the end of the second round, but Irwin and his partner cancelled this in the third round, finishing the 120 targets tied on 88. In the fourth round Irwin got a lead of 3 targets, and added one more in the last string.

On April 14, Luverne and J. B. C. will shoot their match at 50 targets, and Dameron and Irwin will try conclusions with Hamerschnidt and Johnson at 100 targets per man.

Table with columns for Events (1-4) and Broke. Lists names of shooters and their scores for each event and total number of targets broken.

Team match, 100 targets per man: Irwin 85 Johnson 81 Frohlinger 71-156 West 71-152

Cleveland Gun Club.

CLEVELAND, O., April 6.—In spite of the high wind, which made aim uncertain, some excellently good scores were hung up this afternoon at Shooting Park, Mayfield road. C. E. Doolittle was high gun with 90 targets out of 100. He was hard pressed by Archer and Dr. Brown, who broke 89. The first event in the April trophy competition was won by Archer with 45 out of 50. Budd, Brown, Hogen, Blakeslee were tied for second with 44. In the March trophy contest the places were won as follows: First, silver loving cup, won by Dr. N. D. Stepp; second, half dozen sterling silver spoons, by Capt. Geo. D. Freeman.

Event No. 1, monthly trophy, 50 targets: Miller 45, Hogen 44, Blakeslee 44, Budd 44, Brown 44, Doolittle 43, Rogers 41, Wallace 40, Stevens 39, Parkhurst 38, Stepp 35, Hall 35, Freeman 34, Harding 34, Thorp 34, Rock-29, F. Thorp 29, Peebles 22.

Event No. 2, annual trophy, 50 targets: Doolittle 47, Brown 45, Rogers 44, Archer 44, Blakeslee 43, Hogen 42, Parkhurst 42, Freeman 40, Wallace 39, Budd 37, Harding 37, Stevens 35, Hull 35, Burns 35, Stepp 34, F. Thorp 29, L. Thorp 28, Peebles 25.

Event No. 3, Du Pont fob contest: Doolittle 23, Rogers 22, Hogen 21, Hull 21, Brown 20, Stevens 18, Stepp 17, Peebles 15, *Doolittle 23, *Hull 23, *Stepp 20, *Rogers 18, *Hogen 17.

*Re-entries. April 8.—Annual meeting of the stockholders of the Cleveland Gun Club Company, held Saturday evening in the private banquet room of the Cleveland Athletic club, the following officers were elected for the ensuing year: President, A. J. Stevens; Vice-President, Dr. M. D. Stepp; Secretary, H. C. Rockwell; Treasurer, Wm. Ambler; Financial Secretary and Manager, F. H. Wallace; Directors: F. G. Hogen, E. S. Rogers, J. R. Blakeslee, C. E. Doolittle; Field Captain, Geo. D. Freeman, first; L. J. Thorp second.

The report of the treasurer and financial secretary showed the club to be in a most flourishing condition. All bills paid and a comfortable balance in the bank were some of the points brought out in the reports.

It was regretted very much to have E. S. Rogers retire from the office of president. This office he has held for the last three years, and during that time the club has been a live wire, and it was the wish of all that he stay at the post, but business was such that he could not give the time to the club it needed; but he will stay on the board and give a helping hand when he can, and to show the appreciation that some of the members have for him and his good work, before retiring he was presented with a beautiful silver loving cup, that may keep the Cleveland Gun Club fresh in his mind. Mr. A. J. Stevens, who was elected president is not a new member. He has been the club secretary for the last three years, and is up to date, a business man and will take hold just where Mr. Rogers leaves off, and he will have the backing of all.

F. H. WALLACE, Mgr.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., April 6.—Shooting to-day in a gale of wind resulted in the lowest general average ever made on the grounds of the Indianapolis Gun Club. Edmonson showed best with the only straight and high average, while Dixon, long referred to as "still without a trophy," was high gun in the 100-target race for spoons, and beat out Edmonson, who tied him under terms of the handicap:

Table comparing scores of Edmonson and Dixon against other shooters (Banta, Lewis, Bennett, Alig, Britton, Neighbors, Folland, Hawn, Golden) for Shot at and Broke.

Record on the J. B. Hunter trophy, 50 targets, handicap:

Table listing names of shooters and their scores for the J. B. Hunter trophy.

*Guest. C. B. TUCKER, Capt.

Cincinnati Gun Club.

THE Cincinnati Gun Club is preparing for a lively season this year. As a first step in this direction, the club has secured the services of Mr. Arthur Gambell for superintendent. This desirable arrangement was made possible by the efforts of Mr. Luther J. Squier, of Pittsburgh, who came on for that purpose, and Mr. R. Davies, former secretary of the club. Their diplomatic handling of the situation smoothed out all difficulties, and brought about the consummation of a long-cherished hope. Mr. Gambell was for many years in charge of the grounds at St. Bernard, and during his incumbency the club was one of, if not the largest organization of its kind in the country. On its grounds have been held some of the largest club tournaments in the history of the sport, and it is hoped and expected that Mr. Gambell will place the club in the front ranks again. If any one can revive the interest, he is the man. Personally known, and liked by a large majority of the shooters of the Middle West, he is also known by reputation to most of the trapshooters of the United States, and has a practical knowledge of all that relates to trapshooting, being a master of all the details of arranging and conducting a club shoot or a big tournament. He will take charge of the grounds on April 15, and will at once begin to get things in shape for a big shoot on Decoration Day, of which due notice will be given. The club will hold its annual meeting for the election of officers on the second Friday in May.

Speedway Gun Club.

NEWARK, N. J., April 2.—While the day was anything but pleasant for trapshooting, eleven gunners participated in the regular weekly shoot of the Speedway Gun Club to-day. B. M. Shanley, Jr., and E. L. Haas were the only men who shot in all twenty-three squads on the card. Individual honors of the day were carried off by the former, who broke 508 targets out of the 567 that he fired at.

Among the late gunners who appeared at the grounds and shot in good form was Louis Colquitt, who faced the firing line seven times. On his first two visits he shot fairly well, but in his last five trips he turned in scores of 22, 23, 24, 23, and 23. Not a man succeeded in turning in a perfect score of 25 kills during the afternoon. The scores:

B. M. Shanley, Jr., 21, 23, 20, 19, 20, 21, 19, 23, 24, 23, 22, 23, 19, 22, 24, 20, 22, 20; E. L. Haas 21, 20, 17, 20, 18, 16, 17, 16, 20, 21, 17, 16, 19, 20, 17, 19, 18; Wm. Hassinger 21, 22, 21, 18, 18, 18; H. Hassinger 15, 14, 22, 16, 15, 17; Wm. Trowbridge 17, 20, 21, 23, 24, 22, 23; H. C. de Raisnes 12, 10, 12, 5, 5; N. Appar 14, 15, 17, 15, 13, 15; F. Appar 14, 10, 13, 10, 9, 15, 11; F. H. Lawrence 19, 20, 19, 17, 22, 19; L. Colquitt 18, 17, 22, 23, 24, 23, 23; O. Lueddeke 17.

Registered Tournaments.

THE following tournaments have been registered with the Interstate Association during the week ending April 6: June 23-24.—St. Louis, Mo.—Blue Wing G. C. H. F. Grundman, Sec'y. July 4-5.—Marshall (Mo.) G. C. E. W. Brown, Sec'y. July 21-22.—Bellingham (Wash.) G. C. O. H. Joy, Sec. Sept. 9-10.—Evansville, Ind.—Indiana State tournament, under the auspices of the Recreation G. C. Geo. A. Beard, Cor. Sec'y. Sept. 17-20.—Atlantic City, N.J.—Westy Hogans of America tournament. Bernard Elssner, Sec'y. ELMER E. SHANER, Sec'y-Treas.

Greater Birmingham Tournament.

THE tournament of the Birmingham (Ala.) Gun Club on April 1, 2 and 3, was a success in every sense of the word, and every shooter, local, visiting, or professional, went home loud in their praise of the shoot.

The club grounds are located at the State Fair grounds with the traps just across from the grand stand within the mile track, and an almost perfectly level field, giving a fine skyline any many conveniences by having this location.

Three traps in perfect working order, throwing blue-rock targets the regulation distance, pleased the shooters, and but for the high wind, which at times came sweeping up the valley, the scores would have been much better, but this seemed to add zest to the sport, as the traps were set in the arc of a circle and the wind from the west gave a different phase to each of the traps and in consequence the shooting was diversified enough to please any who might heretofore have claimed that target shooting was mechanical.

Secretary-Manager Garl had everything in readiness for the shoot, and not a hitch in any detail was noted during the entire three days.

President Jas. Hillman was everywhere looking after the comfort and pleasure of the visitors, and was ably assisted by Directors Baugh and Warren, as well as by all members of the club.

An excellent lunch was served on the grounds each day by the ladies of the Catholic church, and this feature added much to the comfort and pleasure of the occasion.

Practice day, Monday, April 1, was also Election day throughout the State, and this kept many shooters away, but many of those came in during the night, and considerable good-natured chaffing was indulged in by those who stayed from the polls to shoot at the traps.

The feature of the shoot was the Greater Birmingham Handicap, an event composed of the last two events of each of the regular days, a total of 100 targets, and which was won by Gentry Hillman, of Birmingham, with the excellent score of 84, shooting from the 18yd. line.

The double-target championship of the South, an event of 25 pairs, was won by C. D. Hunt, of Columbus, Ga., after tying with J. C. Broyles, of Birmingham, on the good score of 42, and it required two extra events of 10 pairs to decide the trophy winner, Hunt finally defeating Broyles by one bird.

The high professional honors were won by H. D. Freeman, of Atlanta, Ga., of the Peters Cartridge Co., with 385 out of 400. John R. Taylor, of the Winchester Co., was second with 384, while Pop Heikes, of the Remington-U. M. C., was only one bird behind Taylor.

High amateur was E. R. Alexander, of Tuskegee, Ala., with 389 out of 400. W. T. Laslie, of the same city, and twice winner of the Alabama State championship, and winner of the Southern Handicap at Charlotte last year, second high amateur with 370. John Livingston, of Springville, Ala., was third with 369 miles, while L. F. Lalande, of New Orleans, and John Lambeth, of Birmingham, tied for fourth place on 361, these five men taking the club prizes for five high amateurs of the tournament.

That a tournament so early in the season was so largely attended can be attributed to several reasons, not the least of which is the reputation the Birmingham boys have of giving a first-class shoot, mixed with the right kind of Southern hospitality.

Another excellent reason was the division of the moneys in the several events, this being as follows: One-half of the events scheduled for each day called for four equal moneys, percentage system, the other half of the events being divided into five equal moneys, same system, and that this was a wise departure from the old way was clearly evidenced by the expressions heard from the many shooters present and participating.

The encouragement afforded a young shooter by participating in the division of just as much money by breaking 17 targets out of 20 as does the high class shooter who breaks 20 straight, makes him feel that he has a chance to break even, and which was not possible under the old system of high percentages, say 40, 30, 20 and 10. It is safe to say that many of the gun clubs in the South will adopt the system of four and five equal moneys hereafter.

Practice Day.

Practice day, Monday, dawned bright, and but for a stiff wind, all would have been merry; but even as it was, the wind made it just as hard "for the other fellow," so everybody shot some, won some, and went to the hotels in anticipation of duplicating or beating the score of Chas. Dunlop, of Eutaw, Ala., who was high amateur with 95 out of 100, or that of the redoubtable "T. Bill" Crosby, who broke 98.

Scores of practice day, Monday, April 1: 100 single targets, and 25 pairs doubles:

WINCHESTER

.22 Automatic Rifle

The novelty of its operation is one of the fascinating features of the Winchester .22 Automatic Rifle. Instead of the downward and upward motion of a finger lever, or the backward and forward thrust of a slide handle, the pull on the trigger is the only effort required to shoot the rifle ten times in succession. The only limit to speed in firing is the rapidity with which the trigger can be pulled before each shot. With this speed is coupled fine accuracy, light weight, simple and strong construction, and ease and quickness of handling. Note the beautiful appearance of the rifle. It lists at \$25.00, but is sold everywhere for much less. It is the ideal vacationist's rifle

FOR TARGET SHOOTING OR GAME

First Day.

Beautiful warm, sunny Southern skies greeted the shooters on this day, despite the stiff breeze, which came up the valley and which fulfilled its promise of playing havoc with somebody's scores. The program called for ten events of 20 targets each and two events of 25 targets, distance handicap:

In the regular program of 200, H. D. Freeman "went crazy," and lost but four targets, going out with 196, and having a long run of 136 straight—phenomenal shooting under the conditions.

Of the amateurs, "Tidd" Alexander had a runaway race of it, losing only 9 out of the 200, and taking such a lead that he was never headed in the two days.

In the handicap events, two events of 25 targets each being the first half of the race, the same number of events to be shot on Wednesday, some surprises were sprung. Gentry Hillman, C. D. Hunt, J. E. Lowe and L. F. Lalande each going out with 47 out of the first 50, Laslie breaking 48 from 20yds., and was high, several others were out with 44s and 45s, and it looked as if it might be anybody's race.

Of the professionals in the handicaps, Heikes and Goodrich each broke 48, Goodrich shooting from 20yds. and Heikes from 21. Scores for the day:

Second Day.

Wednesday was another pretty day, both overhead and underfoot, but the wind was stiff enough to keep the boys guessing until about noon, when it died down, and then they went to smashing them in earnest.

It was seen early that there would be a battle royal for the high professional honors, Freeman having missed a few in the forenoon, while Johnnie Taylor and Pop Heikes were grinding them out with wonderful precision, and it actually was not decided until the last target was shot at, Freeman winning by one bird from Taylor, who was in turn just one bird ahead of Heikes, who finished third.

None of the amateurs could overcome the lead Alexander had taken on the first day, but there was a fight on for place in the first five high guns, and that was fought out to the last target in the last event, with the result as noted elsewhere.

In the handicap events, Gentry Hillman justified the faith put in him by the local contingent by duplicating his performance of the previous day by breaking 47 again, and finishing winner of the handicap with the good score of 94, Hunt betting 46 on this day, finishing second with 93, while a number of others who were down several from the first day, showed up strong. President Jas. Hillman, of the local club, broke 48 out of his 50 this day, he being the only one to go straight in one event, and which paid him \$25.50, Hunt getting the only 24 in the same event, paying him the same amount.

After the last event was finished the prizes were awarded by one of the members of the club, and happy responses were made by several of the winners, and within thirty minutes the last man had been paid off and left the grounds—surely some record-breaking work on the part of the cashier, Al. Gohegan, who was assisted by Geo. Hillman and Wm. Fex. Scores:

Hercules Gun Club.

TEMPLE, Pa., April 5.—The special shoots held by the Hercules Gun Club, at this place, had an attendance of twenty-two amateurs and one professional. The weather was ideal. The trap caused trouble all afternoon. Three rubbers were worn out at 4 P. M. While squad No. 4 was firing at their ninth target the trap completely broke down. At this point the shooters were disappointed, three men having broken 54 out of their first 60 for the Cypher's cup; so Secretary Ludwig settled the question of future troubles by smashing the whole trap with a heavy sledge-hammer into scrap-iron in front of the shooters, and the shooting event was postponed.

A requisition has been sent to Elmer E. Shaner, secretary-treasurer, to change our date of registered shoot from May 4, to Aug. 10. We have to get a lot of concrete work done at our trap house, and find it impossible to be ready by May 4 through this mishap. We shall spare no pains to make this an ideal shooting grounds.

This was Mr. Joslyn's first appearance on our grounds, and was tickled to his heart. Boys, we welcome you to our next tournament, when we have our grounds in proper shape, and we will show you something doing. Josh says, "going some, by gosh."

LUDDY.

Queens C. C.

QUEENS, L. I., April 6.—J. F. Simonson and D. K. Morrell tied for high gun here to-day, each getting 85, the former shooting from scratch, while Mr. Morrell was allowed 4 birds. Sam Van Allen was third with 83 from scratch. Scores:
J. F. Simonson (0) 85, D. K. Morrell (4) 85, S. M. Van Allen (0) 83, W. Barnes (3) 82, Carl Voegel (4) 81, H. Homan (0) 81, P. von Boeckman (0) 81, J. M. Kissam (5) 80, B. Hathaway (4) 80, C. R. Chapman (4) 79, W. Hyland (3) 75, H. Keller (0) 73, Dr. Cleghorn (5) 72, H. Ramapos (0) 71, F. Rowland (4) 69, F. A. Fairfield (6) 61, E. Craddock (0) 49.

Interclub Championship.

LARCHMONT, N. Y., April 6.—The club trapshooting season climaxed to-day with the most interesting and largely attended event ever held in these parts among clubs not shooting under guidance of Interstate Association. Sixteen clubs, represented by fifty-three gunners shot for the honor of Interclub Champion. R. L. Spotts, whose entire season's work has been high and consistent, won the title with a margin of 3 birds, his total being 183 out of 200, only 2 birds less than the score that won National Amateur Championship. Second man was J. H. Vanderveer, of Crescent A. C., with 180, while third fell to C. H. Newcomb, of Philadelphia with 178. Much of the Olympic timber shot away off form, making less than 160.

George Lyon was honor professional with 186, followed by Lester German, whose score tied Mr. Spotts'.

East Millstone Gun Club.

EAST MILLSTONE, N. J., April 4.—The East Millstone Gun Club held one of its most successful shoots on March 30. In all, twenty-four shooters faced the traps in the different events. Three professionals were present to show us the way—Messrs. Stevens, Fanning and Apgar. Stevens was high professional with 139 out of 150. Thomas Howard, of Peapack, was high amateur with 130. C. E. Welsh, of the home club, was second, 122, closely followed by H. H. Miller, of Peapack, 120. The weather was ideal for shooting, and those present voted the shoot one of the best ever.

On April 27 the East Millstone Gun Club will hold another afternoon shoot, program for which will be out in a few days, and extends an invitation to all shooters. The scores follow:

A New Gun Club.

A gun club has been organized in connection with the New Jersey State Rifle Association, at Sea Girt, and two clay target traps will be installed. The officers elected were General Bird W. Spencer, Passaic, N. J., President; Lieut-Col. W. Libbey, Princeton, N. J., Vice-President; Col. Chas. A. Reid, Trenton, N. J., Treasurer; Capt. C. A. Sylvester, Princeton, N. J., Field Captain; H. G. Aspell, Passaic, N. J., Secretary. The club has applied for membership in the New Jersey State Sportsmen's Association, and the sanction for an Interstate tournament has been asked for. If granted, tournament will be held at Sea Girt, July 17 and 18.

In addition to the regular Interstate program, there will be a match each day at 25 targets, and handicap, prizes for the Sea Girt championship, for which three valuable gold trophies will be offered.

The club has upward of two hundred members, many of whom are noted trapshooters, and it should be one of the most active clubs in the State of New Jersey.

HUNTSMEN NEED DIXON'S GRAPHITE

Keep barrels and lock mechanism in perfect condition by using Dixon's Graphite. Booklet 52-P and sample sent free. JOSEPH DIXON/CRUCIBLE CO. JERSEY CITY, N. J.

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He knows it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is Lefever Taper Boring.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N. Y.

Durston Special 20 Gauge. Price \$28.00

NYOIL

Nyoil Absolutely Prevents Rust

Use it on your gun, revolver, bicycle, talking machine, reel—in fact, for any purpose for which a fine, pure, lubricating oil is desired. It never chills or hardens, "gums" or smells bad. Ask sporting goods or hardware dealer. Large bottle, cheaper to buy, 25c.; trial size, 10c. WM. F. NYE New Bedford, Mass.

Buffalo Audubon Club.

BUFFALO, N. Y., April 7.—The semi-monthly shoot of the Buffalo Audubon Club was held yesterday afternoon, with twenty-two shooters in attendance. The weather was ideal, and some good scores were made. Messrs. Kelsey and Hammond tied for high guns with 89 per cent. In the badge event, Class A was won by W. H. Smith; Class B by J. Reed and Class C by Dr. J. M. Burke. The spoons were won by B. V. Covert, J. Reed and J. Ebberts, while the Lambert trophies were annexed by Covert, Mesinger and Ebberts.

The Audubon gunners, twenty strong, will invade Syracuse next Saturday, to shoot a match with the members of the Onondaga Gun Club, of that city. The party will leave the Exchange street depot via the New York Central at 7:30 A. M. All members of the club are cordially invited to accompany the team.

The scores follow, No. 2 was the badge event; No. 4 was for spoons; No. 5 for Lambert trophies:

Events:	1	2	3	4	5
Targets:	20	20	20	20	20

Palefaces Win Invitation Shoot.

DEDHAM, Mass., April 6.—The Dedham Country and Polo Club held a shoot to-day, inviting the Harvard Gun Club, United Shoe Machinery, Palefaces and B. A. A. teams to compete for special prizes in a round robin tournament. There was a morning as well as an afternoon competition, and in spite of adverse conditions, the scores were remarkably high. The low level of the Dedham shooting box bothered the visitors, and considering this and the ever-changing light, the showing in the unknown target match was very satisfactory.

In the morning there was a team match. Paleface won. The Beetlehead team, which comprised several Harvard men and visitors, finished in second place.

F. O. Osborne was high gun with 89 out of 100. F. O. Williams shot on the Beetlehead team, and his 20 at the finish gave Beetlehead the place over Dedham. Boston A. A. did not take part. Scores:

Palefaces.	Dedham Country Clug.
Clarke	Baxter
Osborne	Nickerson
Purnes	Rice
Sweet	Royce
Hilliard	Crane
	United Shoe Machinery.
Wigglesworth	Winslow
Lockwood	Hurd
Biddle	Foster
Williams	Eaton
Smith	Morse

Fourth Louisiana State Shoot.

ON April 15, 16 and 17, under auspices of City Park Gun Club, New Orleans, La., will be held the fourth Louisiana State shoot and second annual tournament of City Park Gun Club. It promises to be a tremendous affair; \$400 added money, and State medals are offered. Interstate rules to govern. Two McCrea traps and white flier targets will be used.

Preliminary Day, April 15, 9 A. M. sharp.—Five 20-target events, \$2 entrance and \$8 added to each. Money divided Rose system, 5, 3, 2, 1. Events 6 and 7 at 25 targets each, entrance \$2.50, and \$15 added in each event; percentage system, five moneys—20, 20, 20, and 20. Event 8 at 50 targets, entrance \$5, and \$30 added. This event percentage system, five moneys, 30, 25, 20, 15 and 10 per cent. Shooters to be eligible for prizes on this day must shoot through the above program.

Second Day, Tuesday, April 16, 9 A. M. sharp.—Ten 15-target events, \$1.40 entrance and \$10 added in each. Extra entrance for Squier money-back system, \$1. Money divided Rose system, 5, 3, 2, 1. Special or club (event No. 11) will be the individual State championship and State medal, at 50 targets, \$50 added, all 16yds.; entrance \$5.

Third day, Wednesday, April 17, 9 A. M. sharp.—Same as second day. Event No. 11 on this day is special or club event for team championship and team medal, at 50 targets, \$50 added, all 16yds.; entrance \$5 per team.

Robin Hood Gun Club.

STATEN ISLAND, N. Y., April 2.—The Robin Hood Gun Club held their regular shoot on Saturday, March 30. The weather was perfect for trapshooting. G. F. Hutchings held the field of seven shooters with ease by winning a leg on the 1912 cup, and the mounted woodcock, event No. 1, 100 birds.

1912 cup: Hutchings 92, Schofield 87, Curry 87, Howard 79, Rowley 75, Beyersdoft 89, Conelley 79.

Event No. 2, 50 birds, prize mounted woodcock: Hutchings 50, Schofield 43, Curry 44, Howard 40, Rowley 34, Beyersdoft 44, Conelley 39.

New Model 27 Marlin Repeating Rifle

The only gun that fills the demand for a trombone ("pump") action repeater in .25-20 and .32-20 calibers.

Shoots high velocity smokeless cartridges, also black and low pressure smokeless. Powerful enough for deer, safe to use in settled districts, excellent for target work, for foxes, geese, woodchucks, etc.

Its exclusive features: the quick, smooth working "pump" action; the wear-resisting *Special Smokeless Steel* barrel; the modern *solid-top* and *side ejector* for rapid, accurate firing, increased safety and convenience. It has *take down* construction and *Ivory Bead* front sight; these cost extra on other rifles of these calibers.

Our 136 page catalog describes the full *Marlin* line. Sent for three stamps postage. Write for it.

Nine Grades

Philadelphia Trapshooters' League.

THE White Gun Club wound up the Trapshooters' League season April 6 by defeating the Haddonfield Gun Club at the latter place. They finished two points ahead of their nearest competitors, and they also smashed the most number of targets, totaling 3,083 for the seven shoots.

The fight for second place, between Meadow Springs and South End, was settled, Meadow Springs winning, and in addition made one of the highest team scores of the season, totaling 464 for their ten high men. This is the second highest team total of the campaign, the Whites holding the record with 468.

The defeat of South End with victories by Highland over Clearview and Du Pont's triumph over Lansdale tied third place between the Camden gunners, Edge Hill men and Du Pont. Lansdale's defeat dropped them to fourth place, while Clearview succeeded in beating out Haddonfield for fifth.

The highest individual score was 48, and many shooters handed in cards for this number. McCarty, of Highland; H. Anthony, of South End; Ziegler and Mace, of Meadow Springs, Colfax, of Du Pont, and C. Swartz, of Lansdale, were the gunners who only dropped two of their 50 birds.

	Points.	Targets.
Whites	14	3083
Meadow Springs	12	3056
Du Pont	11	3060
Highland	11	2923
South End	11	2887
Lansdale	10	2870
Clearview	8	2838
Haddonfield	7	2611

S. S. White—Haddonfield.

The S. S. White Gun Club defeated Haddonfields at the latter place on April 6 by a score of 404 to 377. Five of the champion Whites made 42 or better. Severn and Hamlin were high with 45 apiece. Only three Haddonfield men reached 40.

Team race, ten men to a team:

Whites.		Haddonfield.	
Hamlin	45	Holloway	43
Severn	45	Dungan	43
Griffith	43	Lawrence	42
Cantrell	42	Peacock	39
Fontaine	42	Bennett	39
Sidebotham	39	Stafford	38
Abbott	38	Webster	36
Murray	37	Lord	33
Watson	36	Tedlow	31
Overbaugh	37-404	Bergen	33-377

Meadow Springs—South End.

Meadow Springs broke the tie for second place on April 6, by defeating South End over the new Camden traps by the score of 464 to 451. Not less than twenty-one shooters from Meadow Springs made a score below 40. Ziegler and Mace, each with 48, tied for high gun, both with a straight in their second string. H. Anthony, for South End, also got a 48.

Team race, ten men on a team:

Meadow Springs.		South End.	
Ziegler	48	H Anthony	48
Mace	48	Springer	47
Platt	47	Chalmers	46
Henry	47	Slear	45
Christman	47	Fleming	45
Warren	46	Lippincott	45
Hall	46	Horne	44
Morris	45	Hineline	44
Charles	45	Firth	44
Wiley	45-464	J Anthony	43-451

Du Pont—Lansdale.

The Du Pont Gun Club added another victory in the last of the Philadelphia Trapshooters' League matches on April 6, at Lansdale, when the local team defeated the Lansdale Club representatives by 11 targets. Although the shooting was close, every Wilmington man either tied or defeated a Lansdale man.

Colfax was high Du Pont gun; he grassed 48 of his 50 targets, as did Swartz, of Lansdale. Roberson was second man with 47. The scores:

Du Pont.		Lansdale	
Colfax	48	Swartz	48
Roberson	47	Metz	46
Hammond	46	Bender	45
Martin	45	Rodgers	44
Leedom	44	Nice	43
Carlton	43	Kauflie	43
Edmundson	43	Clarke	42
McHugh	43	Hoffman	41
Bush	42	Rough	40
Springer	41-442	Emery	38-432

Clearview—Highland.

Highland had but seventeen at the traps, while Clearviews had only fifteen. Of this number twenty-one made scores of 40 or better. McCarthy smashed 48, missing one in each of his quarters, and Landis totaled 47, losing three on his first round and finishing up with a straight. Oliver led Clearview with 47. He started with 23 out of 25, and bettered this by 24 out of his final quarter. Bockius, Krischner and Gideon tied for second honors among the Clearview men with 44 apiece. Scores:

Team match, ten men to a team, 16yds. rise:

Highland.		Clearview.	
McCarty	48	Oliver	47
Landis	47	Bockius	44
Tansey	45	Krischner	44
Pflegar	45	Gideon	44
F Meehan	45	Elwell	43

Analostan Gun Club

WASHINGTON, D. C., April 7.—The officers elected for the ensuing year follow: President, C. S. Wilson; Vice-President, Dr. W. D. Monroe; Treasurer, Dr. A. B. Stine; Secretary, Miles Taylor; Captain, S. A. Luttrell; Trustees, M. D. Hogan, R. P. Hawes, Dr. B. L. Taylor. The club emerged from its chrysalis state on the 6th and held the opening shoot. Twenty-five members were present. O. B. George, one of our old-time members reported and was enrolled for the season. E. W. Ford joined the club, and scored 89 out of his 100, and feels that he can do better with his pump. Frank Huseman, another new member, who has had no experience at target work, also made a creditable record for a beginner. The old-timers were on the firing line, and

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

E. C. Cup Championship.

WILMINGTON, Del., April 6.—Mr. Geo. L. Lyon, of Durham, N. C., has at last been able to set a date for his match with Lester S. German, of Aberdeen, Md., for the E. C. cup, emblematic of the championship of the world at inanimate targets. That date is May 4 next, and the place is the grounds of the Du Pont Gun Club, in this city.

It will be remembered that Mr. Lyon won the cup and title that goes with it at Atlantic City, N. J., Sept. 23, 1911, the last day of the memorable Westy Hogan tournament. The race was shot under severe weather conditions, an erratic, but strong, wind making the targets hard to locate. The conditions were the same as for challenge matches, viz., 100 targets, unknown angles—50 targets expert rules, one man up, and 25 pairs. There were fifteen contestants, and Messrs. Lyon and German, when the smoke cleared away at the end of the contest, were found to be a tie with the following scores:

	Unknown Angles.	Expert Rules.	25 Pairs.	Total.
G L Lyon	98	35	46	179
L S German	98	39	42	179

This tie necessitated a shoot-off, which was at 25 unknown angles, 25 expert rules and 10 pairs. The result was:

	Unknown Angles.	Expert Rules.	10 pairs.	Total.
G L Lyon	25	19	19	63
L S German	25	21	16	62

After the match was over, Mr. German at once challenged Mr. Lyon, and it was originally decided that the match would be shot on the grounds of the Du Pont Gun Club early in December of last year. A postponement, however, was unavoidable, Mr. Lyon meeting with the sad loss of his father, who died suddenly in Baltimore two days before the date set for the match.

Bad weather then made it impossible to bring off the match for some time, and it was finally decided that it should be shot on the date above mentioned, Saturday, May 4.

This match will be the eighteenth that has been shot for the historic E. C. cup—four open contests and thirteen challenge contests having been decided since the cup was first put up for competition in 1896. The previous winners have been: W. R. Crosby, of O'Fallon, Ill., six times; Fred Gilbert, of Spirit Lake, Ia., five times; R. O. Heikes, of Dayton, O., four times, and J. A. R. Elliott, of Brooklyn, N. Y., and G. L. Lyon, of Durham, N. C., once each.

So many shooters from points far distant from Wilmington, Del., have expressed their intention of visiting the Du Pont Gun Club's grounds on May 4 to witness the match, that the club has decided to hold an all-day shoot with a regular program of events, the match of course to be the main feature of the day's menu. No program has as yet been agreed upon, but in all probability it will be a 100-target race (five events of 20 targets each), with an optional sweep on each 20 targets and a trophy for each ten entries in the 100-target race; forty entries, four trophies; fifty entries, five trophies, and so on. Due notice will be given in these columns as soon as all particulars in regard to the day's program have been decided.

BLUE HEN.

Smith Gun Club.

NEWARK, N. J., April 6.—Scores and attendance were markedly improved here to-day. Chas. T. Day, Jr., ex-State champion, took high gun after drawing lots with William Trowbridge; each broke 45 out of 50. Third place slipped over to Henry Koegel with 44. Louis Colquitt and William Trowbridge each made a straight 25. During May, a handsome double gun will be shot for. Contestants must shoot in each of the four weekly events. High average for the month takes the gun.

The following scores were made to-day: E. Sager 18, 16, 14, 16, 39; W. Hassinger 20, 22, 16, 20, 24, 24, 39; H. Koegel 22, 20, 21, 18, 44; B. M. Shanley, Jr., 24, 18, 16, 18, 36; H. Higgs 21, 20, 19, 21, 39; J. Baldwin 16, 17, 19, 23, 22, 40; N. Kussmaul 18, 19, 18, 20, 37; H. S. Sindle 23, 22, 23, 21, 43; S. G. Francisco 22, 22, 19, 20, 36; J. H. Francisco 19, 18, 14, 21; G. Edgar 19, 21, 21, 16, 34; F. Apgar 16, 15, 16, 15, 22; M. Apgar 13, 19, 20, 16, 35; R. Bercaugh 23, 20, 21, 20, 41; L. Colquitt 22, 21, 23, 25, 43; C. T. Day, Jr., 20, 23, 21, 45; S. Thompson 21, 22, 21, 19, 40; E. Bellingroth 23, 21, 23, 22, 43; John Erb 21, 20, 19, 22, 35; W. Trowbridge 21, 24, 23, 25, 45; L. Trowbridge 19, 21, 20, 19, 41; S. Thornton 20, 21, 19, 20, 33; G. Hatfield 21, 20, 18, 18, 20, 22, 38; C. Hatton 19, 17, 17, 15, 35.

The Du Pont Gun Club.

WILMINGTON, Del., April 8.—The midweek shoot brought out eighteen trappers. J. B. McHugh broke 93 out of 100 for the day's high gun. The scores:

	Shot at. Broke		Shot at. Broke
J B McHugh	100 93	J H Minnick	100 90
V du Pont	100 87	H H Lukens	100 91

W B Smith, Jr.	50 38	A F du Pont	50 39

Stamford Rod and Gun Club.

STAMFORD, Conn., April 5.—It was a day of ties here this afternoon. In the 100-bird handicap, Ralph Keeler and R. J. Sanderson each getting 94 from handicap, which event was won by Keeler in shoot-off. In 50-bird handicap the ties in the 100-bird event tied up with William Elder, each dusting the meadows with the fragments of 49. Sanborn took the shoot-off. The

handicaps were considerably too big to allow scratch men a glance in. The scores:

One hundred bird handicap: Ralph Keeler (16) 94, R. J. Sanderson (20) 94, Dr. J. H. Staub (0) 89, Wm. Elder (12) 89, E. L. Hatch (0) 88, M. B. Foster (16) 84, W. W. Herrick (0) 83, R. A. Gillespie (0) 81, A. S. Pitt (8) 75, V. S. Allien (8) 75.

Fifty-bird handicap: Wm. Elder (6) 49, R. Keeler (8) 49, R. J. Sanderson (10) 49, M. B. Foster (8) 47, E. L. Hatch (0) 47, Dr. J. H. Staub (0) 47, R. A. Gillespie (0) 44, W. W. Herrick (0) 43, A. S. Pitt (4) 40, V. S. Allien (4) 40.

Jersey City Gun Club.

JERSEY CITY, N. J., April 6.—Twelve shooters were out to-day at the Jersey City Gun Club, and as the day was a real spring one, all enjoyed a fine afternoon's sport. Shannon was back again after a month spent in Florida fishing for tarpon, looking as brown as a Madison Square Garden Indian. Scores:

	Shot at. Broke		Shot at. Broke
Matthies	200 136	Davis	150 102
McLemore	150 111	Piercy	150 128
Huggins	150 67	Shannon	150 124
Engle	125 109	Young	100 66
Lawton	125 68	Brady	100 67
Harvey	150 86	Jones	75 31

SECRETARY.

Seventy-First Regiment Beats Tenth.

Co. I, Tenth Infantry, from Flushing, L. I., was beaten last Saturday by Co. H, Seventy-first Regiment, N. G., S. N. Y., at the Seventy-first Regiment armory. The summary:

	Company H, Seventy-first Infantry.	200yds. 500yds.	Total.

Pvt C Marten	39	48	87—547

Company I, Tenth Infantry.

Capt Dooley	43	50	93
Lieut Clark	44	45	89
Sergt Livingston	41	44	85
Corp Doncourt	44	46	90
Pvt Lamb	43	46	89
Pvt Brown	42	46	88—534

Hopkins State Champion.

PINEHURST, N. C., March 30.—L. C. Hopkins, of New York, gained the State championship pistol title in the annual U. S. R. A. shoot, which rounded out the week, leading the field with a total of 414. In second place N. D. Clark, of Woodbridge, Conn., scored 346.

GAME IN ALASKA.

Continued from page 465.

sufficient to cite the fact that while a non-resident of Alaska may procure a hunting license which permits him to ship eighteen trophies from the Territory for \$50, a resident of Alaska desiring to ship a single trophy of moose killed north of latitude 62 degrees must pay \$40. The whole scale of shipping licenses should be revised, especially with a view of placing the resident of Alaska at least on an equality with the non-resident.

In the fiscal year 1911 the number of non-resident hunters obtaining hunting licenses was twenty-five, of whom twenty were citizens of the United States and five were residents of foreign countries. In the fiscal year 1910 the number of non-resident hunters taking out hunting licenses was twenty-three, of whom twelve were citizens of the United States and eleven were residents of foreign countries. Residents of Alaska are not required to obtain hunting licenses, even in the Kenai Peninsula.

The number of general game shipping licenses issued by this office in the last fiscal year was thirty-one, and the number of special moose shipping licenses (for moose killed south of latitude 62 degrees only) issued during the same period was nineteen, to twelve different persons, of whom seven were citizens of the United States and five were residents of foreign countries. In the fiscal year 1910 there were twenty-three general game shipping licenses and eighteen special moose shipping licenses issued by this office.

The total receipts of this office from the administration of the game law, consisting of fees for hunting licenses and shipping licenses, in the fiscal year ended June 30, 1911, was \$4,590. Of this amount, \$3,090 was paid in during the first quarter of the fiscal year, which is the principal hunting season for big game. In the first quarter of the current fiscal year the receipts for hunting and shipping licenses have amounted to \$1,305.

The foregoing statements in regard to the issuance of shipping licenses do not indicate of course the number of game animals which were actually killed. Persons holding hunting licenses did not ship, it is presumed, trophies of all animals killed by them. Nor do these statements take into account the large number of game animals killed for food, very few trophies of which are shipped out of Alaska. No record is given of the number of shore birds and waterfowl killed by sportsmen and hunters.

Rifle and Revolver

U. S. R. A. Indoor Matches.

THE following are the unofficial scores made at St. Louis, in United States Revolver Association's indoor national championship matches; 60ft. range, Standard American target:

Match A—Revolver championship, slow fire, 50 shots in 10-shot strings, possible 500:

W C Ayer, .38cal.	91 85 94 94 89—453
Ed Kronld, .38	88 88 88 87 89—440
Dr M R Moore, .44	93 82 90 83 85—433
C C Crossman, .38	83 93 82 83 89—430
I S Martin, .38	92 81 77 88 87—425
Dr A E Everett, .44	83 76 89 91 84—423
Paul Frese, .38	89 77 87 81 80—414
R J Russell, .38	80 82 86 71 77—396

This match was won in 1911 by C. C. Crossman, of St. Louis, score 455.

Match B—Pistol championship, slow fire, 50 shots in 10-shot strings, possible 500:

W C Ayer, .22	94 82 86 89 95—446
C C Crossman, .22	87 84 84 92 87—434
Dr M R Moore, .44	84 83 80 90 90—427
G C Olcott, .22	85 83 82 83 77—420
W L Schrader, .22	84 78 85 81 88—416
Ed Kronld, .22	77 83 90 89 77—416
R J Russell, .44	76 76 84 75 83—394
T E Sunding, .22	81 78 83 72 73—387

This match was won in 1911 by George Armstrong, Spokane, with a record score of 473.

Match F—Pocket revolver championship, rapid-fire, 25 shots in 5-shot strings, possible 250:

C C Crossman, .32	39 41 40 36 39—195
W C Ayer, .32	34 40 30 39 39—182
G C Olcott, .38	34 37 33 33 36—173
Dr M R Moore, .38	27 34 31 35 35—162
Ed Kronld, .38	33 31 31 35 32—162
R J Russell, .32	25 29 36 31 29—150

This match was won in 1911 by Col. W. H. Whigam, of Chicago, score 195.

SECRETARY.

Porter Poly Champion.

ROBERT LEE PORTER won the rifle championship of the Marksmen's Club of Baltimore Polytechnic Institute on April 6 with a total of 1064. McCabe took second; Weant third. The winner will receive a bronze medal and the next three men pennants. The scores out of a possible 1100 are:

	Standing.	Prone.	Total.
Porter	519	545	1064
McCabe	501	539	1040
Weant	494	530	1024
Fulton	497	516	1013
Price	447	520	967
Rice	462	495	957
Wilhelm	456	467	923

The following members of the Polytechnic team will be awarded honorary letters: Taylor, Weant, Goldberg, Price, Stewart, Klawans, McCabe and Wilhelm. Capt. Fulton will receive a letter and two stars in recognition of his three years on the team. Lee Porter will be awarded a letter and one star. He has been on the team two years. Duck and Rowland will get second team letters.

Du Pont Gun Club, Rifle Dept.

THE scores made by the Du Pont Rifle Club on Saturday, April 6, were as follows: D. Appleby, 235, 236, 233, 234; T. T. Reed, 215, 231; W. J. Converse, 190; L. S. C. Dorsey, 223, 233; P. F. Harold, 214, 225; J. T. Buch, 229, 232, 214, 230. Pistol scores—D. Appleby, 84, 84; P. F. Harold 82, 79, 80.

Dogs and Pictures.

It is not so long ago that a man carrying a painting of a dog had it practically destroyed by a passing dog flying at it, and tearing it in a most determined manner. One of my own dogs (says a writer in the Scotsman) became quite pugnacious when seeing the picture of a chow-chow, but when the picture was hung on the dining-room wall, the dog paid no more attention to it. A friend of mine has only to take a picture of two fox terrier heads from his study wall and bring it on a level with his terrier to set that animal's scruff standing erect, and to cause him to tingle in every nerve.

These three authentic cases of dogs recognizing their kind on canvas have all taken place when the pictures were on their own level, but that this qualification is not always necessary the following incident will show. A fox terrier in my own neighborhood is made a great pet of by his master and mistress, and while they were seated at dinner one evening, and the dog sleeping on the hearthrug, it suddenly got up on its legs and began to whine piteously. It stared ahead as if mesmerized, and quietening words had no effect. Following the dog's gaze, the lady and gentleman were astonished to see that it was the full-length portrait of the farmer hanging on the wall that was causing the animal its uneasiness. The dog went up to where the picture hung, as if it would fain bring it down and solve the mystery, and it took a lot of comforting by its mistress before the animal was quieted, and realized that its owner was beside it and not on the wall.

Odd Mixup at Dog Show.

BOSTON, Mass., April 5.—A peculiar situation developed to-day at the Eastern Dog Show, which led to the officials announcing a change in the award of one of the most coveted trophies, the \$100 silver cup for the best bird dog, pointers and setters, under conditions that the dog must have been shot over two seasons in the United States or Canada, must have at least twenty-two birds to its credit, and that an attested certificate to that effect must be filed.

All sections of New England were represented by the eight dogs which competed for this trophy, and the judges gave the prize to Dr. James E. Hair, an amateur of Bridgeport, Conn., for the fine performance of his English setter, Albert's Pride. Then Benjamin Lewis, a professional, rushed into the ring and said that the English setter, Gleams Count White-stone, which is owned by Joseph Lemon, of Canada, was eligible and that the entry, duly attested, was in the office. It had been overlooked, but was found and so there seemed nothing to do but judge over again.

Dr. Hair had left the building, and so his dog was not brought out and the Canadian dog was declared the winner. This morning it was dis-

covered that, while the required certificate was made out properly, and bore two signatures, the paper was not properly attested, and so the prize was reawarded to Dr. Hair.

Much interest was shown in to-night's judging for the best dog in the show prize, and some forty competitors were in the ring for this event, which was awarded to Champion Sabine Rarebit, a smooth-coated fox terrier, three years old, owned by the Sabine Kennels of Orange, Texas. The dog was exhibited by George H. Thomas, of Hamilton, Mass., where he has been since he was seven months old.—New York Sun.

A New Style in Breeds.

It looks as though the hall mark of King George was going to put on a new breed, thereby setting a new style in dogs in England. Six Tibetan mastiffs have just arrived at Zoological Gardens, London, from King George's Indian collection.

In appearance the newcomers are something like what one would expect the progeny of a mastiff and collie cross to be. They are sturdy animals, with black and tan coats, and they carry their tails, which are very bushy, well over the back. Their heads are broad and of the mastiff build, with pendant ears, hanging lips and eyes that are wolflike. In their native country they are trained to give notice of all strangers and to guard the sheep from wolves.

Evidently the lot that has arrived in London are not to be trusted, for they are penned behind iron bars, and they do not regard friendly overtures from visitors with favor. The head of the family, which includes sire, dam and four puppies, appears to be the worst of the lot in this respect, and even regards his keeper as an enemy, except at meal times, when he evinces so much interest in his food that he forgets all about the grudges he imagines he owes the attendant.

Dog Races in Alaska.

THE big sporting event of Alaska is the dog team race held each year. The course is from Nome to Candle and return, distance 412 miles, and the standard purse \$5,000. The record for the course is 74 hours 14 minutes and 14 seconds. Last year's race was won by A. A. (Scotty) Allan in 81 hours 40 minutes. There are four teams taking part this year. A team owned by Mrs. C. E. Darling, Berkley, Cal., driven by Allen; Fox Ramsey's team, driven by Chas. Johnson; John Johnson's team, driven by Alex. Holmsen, and A. G. Oliver's team, driven by Blatchford. In the first 85 miles Scotty Allan drove his team to a new record of nine hours for the distance.

Allan won the sweepstakes, finishing at 1:32 A. M., Monday last, his time for the 472 miles being 87 hours 32 minutes, being 5 hours 52 minutes more than his time last year. Holmsen was second, one hour behind Allan, and Fox Ramsey's team, driven by Chas. Johnson, came in third, a half hour after Holmsen.

Dog Dyspepsia.

So many readers of this department have written, "What ails my dog?" when the trouble is simply indigestion, that it is worth while giving an effective and immediate remedy for the trouble. The symptoms are so pronounced that any amateur can readily diagnose the case. An irregular action of bowels, liver or kidney, staring coat, depraved appetite, foul breath and "please-let-me-alone" attitude may be taken as pretty positive evidence of indigestion.

Pepsin 1 drachm.

Powdered animal charcoal 2 drachms.

Bicarbonate of soda 3 drachms.

Powder and mix thoroughly and separate into twelve doses. Old dogs, those with bad teeth and pets fed table scraps and sweets generally need a dyspepsia treatment now and then, and the above dose won't hurt even a toy pom., even if you diagnose the case incorrectly—which you cannot well do.

Zoo Kennel Club.

CINCINNATI will have a summer show this year given by the above club at the Zoological Garden. The officers elected at the annual meeting are: President, J. V. D. Scarborough; First, Second and Third Vice-Presidents, Horace Schmidlap, Irwin Krohns and Peter Martin, respectively; Secretary, Lawrence Bishop; Treasurer, Ed. Howard. A meeting of the club was held on April 5, and it was decided to claim June 20 as the date for the show, and the A. K. C. was duly notified to that effect, with a request that the date be granted. The Bench Show Committee consists of the following: Sol Stephan, Chairman; Louis Davis, Oscar Klayer, Enno Meyer, W. J. Sullivan, Henry Martin and Bruce Graydon. Mr. Sol Stephan will act as superintendent of the show. The premium lists will be ready for mailing very soon.

Kennel.

Spratt's Patent Fibo

W. E. BARDEN, Chetek, Wis.

WHY SPEND YOUR SUMMER VACATION WITH ME?

Because twenty years camping experience in the Rockies, Canada, India and Africa, has taught me how to make you happy and comfortable under a canvas roof.

Write for booklet describing NE Ranch, Yellowstone Park Trips, Fishing and Hunting Parties. Best American and European references.

NOVA E. BROWN - - NE Ranch, Cody, Wyo.

Young Stormer Wins.

Two of the best St. Bernard dogs in the United States, Col. Jacob Ruppert's imported \$2,500 Young Stormer and Tom L. Kemp's Altadori, the latter the largest St. Bernard in the world, weighing 235 pounds, met in competition at the opening of the all-breed show of the Eastern Dog Club at Mechanics Building, Boston, on April 2, and Stormer was awarded the victory. It was a contest between English bred dogs, and there was much interest in the event. Altadori defeated Stormer in New York, but the older dog, which is only three years of age, turned the tables on him. Mrs. Kemp showed the Boston animal, and Stormer was exhibited by the professional handler from the Ruppert kennels.

Dinner to August Belmont.

At the annual meeting of the American Kennel Club it was decided to tender a subscription dinner to Mr. August Belmont, in commemoration of his twenty-five years' service as president of the club. The dinner will be held on May 25, 1912, at the Waldorf-Astoria Hotel, New York city. The subscription price is \$5.00 per person, which must be sent with reservation before May 15. Subscribers have the privilege of inviting guests.

DR. J. E. DEMUND, MR. CHAS. D. BERNHEIMER, MR. A. P. VREDENBURGH, The Committee.

Field Trial Dates.

LETOHATCHIE, Ala., April 1.—All the great events in American field trials during the season of 1912-13 will be held on the Letohatchie range. These include the American and United States field trials, which are set for the weeks of Jan. 2 and Jan. 11, respectively. Dogs, which carry off the prizes in these events, will be entered for the national championship award.

The usual Southern field trials will be held the week of Dec. 8, and the Kentucky field trials the following week.

MAGPIES IN NORWAY.

How at home the magpie is in Italy—North Italy at any rate—in France, too, and in Norway! In Norway the bird in many districts is almost a domesticated animal. There is a monotony of magpies along Norwegian roads, and (says the "Field") they nest in a most confidential way within reach of any boy who cares to climb easily up a bush or low tree. In France the magpie is perhaps as much in his element as in Norway even. Magpie nests are to be seen regularly along the roads. One of the Norwegian valleys where I have noticed that the magpies abound along the roadside is the Hallingdal, and they are, or were, equally plentiful along the Fille Field route between Honefos and Laerdalsoren. Then, too, the grey or Royston crow is quite tame, building close to the roadside and feeding within a few yards of passers-by.

NATIVE BIRDS.

PHEASANTS have demonstrated almost priceless usefulness to the farmer in the protection of his crops. But, it will be asked, why should this beneficent work be confined to the pheasant; why should not the native birds be preserved as well? The answer to this is that the introduction of the pheasant and the success that has attended his propagation has greatly encouraged and stimulated the entire movement for the conservation of American birds. There is a growing sentiment and a growing taste in this direction, and it would not be difficult to show how this movement, no matter how much of sentiment may be at its base, seems certain to resolve itself eventually into an immensely valuable asset for the countries that are destined to enjoy its benefits.—Craftsman.

Resorts for Sportsmen.

CAMP PHOENIX

On Sourdnhunk Lake and Sourdnhunk River, offers best fishing in Maine. Rate, \$2.00 per day. No charge for canoes or boats. We want the man who wants "to be shown." Write for references from your neighbors, and for further information to

C. A. DAISEY, Proprietor

NORCROSS - - - - - MAINE

Who Killed Poor Cock Robin?

That's about the only question that has not been asked this department during the past thirty years — nevertheless, we have been asked some riddles almost as hard as the one about Cock Robin.

The original intention of this department was to confine its answers to the "inferior fraction" in the family, but so many sportswomen have taken an interest in the department that we have extended our work so that any woman who wants to know about things outdoors is invited to consult us. The same fishing tackle, gun, fishing clothes, common to Mr. Outdoors, are not suitable for Mrs. or Miss Outdoors. If you are perplexed, and hesitate about trusting to a sporting goods dealer to advise you, drop us a line, and if our nearly half century of experience cannot unfile the information you want, we will inquire of women who know, whose services are at our disposal. Do not hesitate; we promise not to tell how you happen to be the best equipped sportswoman in your community.

We also know of many fishing places to which a woman may go without the aid of mere man. Want to know?

THE NOON HOUR

From a photograph by Harry B. Zabriskie.

PLANNING A HOUSEBOAT

Houseboating has come among us to stay, and promises to be even more popular than in England itself. Every one who is interested in houseboats or who contemplates taking up this feature of outdoor life, should read Mr. Albert Bradlee Hunt's practical, and, at the same time, beautiful work on the houseboat and its adaptation to American waters.

Houseboats and Houseboating

Covers the entire range of its title, considers the use and opportunities of the houseboat; their relation to city and suburban life; construction, furnishing, motive power, and all the thousand and one details, the knowledge of which spells the difference between success and failure in houseboat building and houseboat life.

Details, plans, drawings and specifications illuminate the text, while life on houseboats is interestingly described. Some of the more noted English and American houseboats and the life thereon are also described at length, with illustrations. Buckram, heavy paper, sumptuously illustrated.

Postpaid, \$3.34.

FOREST AND STREAM PUBLISHING CO., 127 Franklin St., NEW YORK

THE ANGLER'S WORKSHOP

Rodmaking for Beginners

By **PERRY D. FRAZER**

Not only Americans, but anglers of Great Britain and nearly every European State, South Africa, Australia, Canada, are making their fishing rods under the simple instructions laid down by the author in this useful little manual. A Japanese, after reading the book took up rod repairing for his fellow countrymen as a business. An Englishman followed it in making several of the sixty-five rods that he has in his collection. A Russian appreciated the book so much that he suggested a Russian translation. The British sportsmen's papers have quoted from it time and time again. In that country it has helped bring about a great change in rod types, and to attract attention to the excellence of American fishing rods. In fact "Rodmaking for Beginners" has become the standard manual wherever fishing with rod and reel is practiced.

The reason is obvious. The book is written in plain English, and all the details are set down so simply that a boy can follow them. All of the types of rods used on fresh and salt water are described and specifications given. Separate chapters cover all details, and the one on split cane rodmaking is the only comprehensive treatise on that subject ever published.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid, \$1.00.

FOREST AND STREAM PUBLISHING CO., 127 Franklin St., NEW YORK

New!

Williams' PATENTED Holder Top Shaving Stick

Williams' Holder Top Shaving Stick comes pretty near perfection. It not only has the quality that has made Williams' Shaving Stick in the Hinged-cover Box so popular, but the added convenience of the Holder Top. Your fingers do not touch the Soap. By the nicked cap in which the stick is fastened, you can hold it as firmly when used down to the last fraction of an inch, as at first.

That peculiar creaminess of lather, the softening, soothing effect upon the face, found only in Williams' Shaving Soaps, have made them always the first choice of discriminating men.

Williams' Quick & Easy Shaving Powder

For those who prefer their shaving soap in powdered form, it answers every requirement. A little powder shaken on a wet brush produces, with a minimum of time and effort, a rich, thick, creamy lather. The non-leaking, hinged-cover box, opening with a snap of the thumb, closing with the pressure of a finger, is the acme of convenience.

A trial sample of either sent for 4 cents in stamps

True Anglers Use

THE WILLIAMS BARBLESS HOOK

Because it is guaranteed to catch and hold better than a barbed hook, and you can remove the fish without injury. Yearlings, spawn, and their killing wastes thousands of eggs. Does this mean anything to you? It means ruin to a glorious sport. The Williams Barbleless Hook is a scientific and practical lure, no mechanism, just its ingenious shape. Highest quality standard flies, \$1.60 per dozen, and bait hooks 25 cents. Postpaid.

California Fishing

By WILLIAM FITZMUGGINS

In a letter last fall I stated that I would tell of California fauna, etc., as noted in my travels, during the inclement weather of winter. My excuse for not having "made good" is that there has practically been no such weather this winter in Northeastern California. Pioneers say that it has been the coldest and driest winter of the past fifty years. There was a week of snow and rain last Christmas and New Years, but it cleared up, and Jupiter neglected to put the sprinkling cart into action until March 1, and the precipitation for a week was so niggardly that a serious drouth faces the Sierra Nevada region. The Sierra Buttes and other high eminences are snow-clad, as usual, but the nivous mantle is thin, and summery April weather prevails. As a result, fishing will be good right from the start, when the season opens for the upper Yuba and Feather River districts, the reason assigned being that with the water low and the days hot, the trout will begin biting earlier. In many seasons good trout fishing was not reported until in June, following winters when the snow was plentiful and the melting slow, the rivers continuing high and the water cold. Under the latter conditions the trout would be very backward in rising to either bait or fly. But the anglers are jubilant, are overhauling rods and tackle, and an early migration will be inaugurated toward the favorite fishing grounds in Plumas, Sierra and Nevada counties.

Excellent sport is promised in the high altitude lakes of the two last named counties. As they are remote from the railroads, it means that the fisherman must make a long trip with team or pack and riding animals, carrying camp equipment, but the California patrons of the art piscatorial do not, as a rule, mind the expense of either time or money that such expeditions most generally involve, and there are those who have to travel as much as 100 miles from their homes to their favorite ang-

ling spot in the high sierras. It is not always necessary, however, to go fully outfitted for camping in the high lake regions, for at some of the lakes, which are utilized as reservoirs, the caretakers

but the best rule to follow is to carry your own blankets and a light set of cooking utensils and make your own camp, which generally, in the region described, can be pitched where timber is plentiful for a lean-to and fuel.

There are a large number of lakes in the eastern portion of the counties named, in chains, which would form a route for an extended fishing trip, that for interest, awards and length, can hardly be duplicated anywhere else in the United States, unless in Minnesota or Michigan. With a horse to ride, and another to pack the camp outfit and fishing and hunting paraphernalia, the recreation seeker could start, say at Emigrant Gap on the Southern Pacific railway and move leisurely northward, making a new camp each night at new fishing grounds, crossing Nevada and Sierra counties, and going into Plumas county to Quincy on the Western Pacific railway. Or, reverse the order of the itinerary. It is a good bear and deer country, but small game is scarce unless woodchucks and porcupines are counted as such. Many sheep are grazed along the chain of lakes in the summer, and fresh mutton is generally obtainable when one tires of trout and the deer and bear persist in keeping out of sight.

North Bloomfield, where I now am, is situated sixteen miles northeast of Nevada City and is the remnant of a once very prosperous hydraulic mining camp, the aggregate produce of the gravels in the deposit in the ancient channels for the four miles here, according to the records, being all of \$20,000,000 in gold dust. But since the inhibi-

tion of that form of mining the giant monitors have been silent, the reservoirs have become the breeding place of a small-sized loud-mouthed frog, while the pits of the "diggins" have turned into ponds where a "bull-cat" thrives. These seem to be abundant and at a length of seven inches are highly esteemed as a food and form a pre-

A ROCKY CORNER.

lude for the fisherman's trout feasts that are to come later on.

There is a good deer country all around here, and only last year a big grizzly bear wandered into the very outskirts of the village. The ranchmen round about do some trapping and two years ago a number of consignments were made to Eastern fur buyers of a variety of furs. They included black fishers, martens, lynx, wildcat, mountain lion, coyotes, raccoon, but this season there has not been a single shipment because of the non-propitious conditions for trapping. Polecats abound in isolated localities, but the ranchmen have disdained to save the skins, when caught, much to their chagrin, now that skunk skins have advanced to values making it worth while to catch mephitis for other reasons than getting the varmint out of the way of the poultry.

The mountain quail are migrating from the foothills to their mountain breeding grounds, but their numbers seem to be pitifully small this season. Many were smothered by the belated thick blanket of snow of the winter before last, and their numbers were further reduced last summer by the influx of predatory animals from the North. The latter were mostly of a solitary habit, but scattered over such a large territory in their immigration, that they virtually constituted a horde. They included several varieties of wolves whose rapacity was not to be questioned, besides coyotes and swifts.

The Sierra Nevada, at least its western slope, was a perfect magazine of game before the white man flocked to the region seeking gold on Marshall's discovery of the precious metal on Sutter Creek in 1848. The deer roamed through the forests of abietinæ as in a park, bears were monarchs whenever they chose to be, and antelope fairly swarmed in the Sacramento valley. Grouse peopled the tamarack groves and doves those of the oak-clad foothills. But the market hunter of the early days sometimes kept whole mining camps in fresh meat with venison and birds, and many of the haunts are now desolate of the once abundant fauna, and aside from the bears, and some deer, and the wild pigeons of the foothills, there is not much of game to be seen. The doughty and intrepid little mountain quail—"plumed knights of the sierra forest"—persist in maintaining their migratory runs, but as I stated above, their ranks are fast being decimated.

The Sierra Nevadas need to be restocked with game, and now should be the time to undertake it, or rather prepare the way for restocking. That, however, calls for another story, to be told anon.

Before I close, Mr. Editor, allow me to compliment you on the excellence of the "Fishing Number" of FOREST AND STREAM of March 23. My copy of that issue is going to be one of the attributes in my literal illustration of that verse in Omar Khayam's Rubaiyat that speaks of the scene under the bough on the banks or the brook with "thou," the "jug," the "loaf" and the "book," the fishing number of the gentleman sportsmen's organ of America to be the "book."

"Dost like the picture?" I do. And I'm going to have the trout "à la Thaddeus." That account of Ladd Plumley's of "Fishing Lunches" puts me in mind of old Doc. Bothwell's trout breakfast at his cabin at the base

of Hotchkiss peak, at the lower end of Lake San Christobal in the San Juan region of South-western Colorado. "Doc" was one of those bachelor miners who were seeking a pot of gold at the foot of a rainbow, but managed to live in spite of the idiosyncracies of Dame Fortuna. Lake San Christobal, where he lived, was one of those liquid emerald beauty spots, surrounded by high mountain peaks, and which had thoughtfully—by such men as Bothwell—been stocked with rainbow, Dolly Varden, mountain and Eastern brook trout. The resultant hybrids, or mongrels, if you will, often obtained large size in a few short years, and the kills were of a kind that the Denver newspapers refused to give credence to, though I saw many that "Billy" Laughton caught ranging in weight from seven to fifteen pounds, and of the kaleidoscopic beauty of the dying dolphin.

Bothwell seldom caught any of that size, but he had great luck in filling his basket of an evening with a mess averaging half a pound

each. These were dressed and the inside sprinkled with fine salt and pepper and hung up on nails, by the gills—each fish separately—to dry in the cool night air. In the morning they were given a "bath" in a batter of beaten egg, and rolled in cornmeal, or beaten cracker, or a combination of both, and then fried in deep fat.

I am not going to prolong the agony to your readers, by expatiating upon the merits of trout done up in that style, except that by way of variation they were sometimes served up with an old-fashioned tartare sauce, or a sauce of melted butter incorporated with minced parsley, or a Spanish sauce of onions, green peppers and tomatoes. In the absence of such materials for such sauces, the fish were accompanied with boiled wild greens and slices of lemon or cucumber pickles. Of course bread and potatoes went along. It is fifteen years or more since I enjoyed those breakfasts, but they are of joyful memory still.

Across the Plains in Early Days

By SAMUEL MANSFIELD STONE

(Continued from last week.)

ON fording the wide shallow North Fork I entered a wide territory upon which the grass of the former season was still standing. In New England this growth would have been called rushes. The stalks were as large as one's finger and so tall that from my seat on Skeezik's back I could barely reach the bushy tops. Late in the afternoon of a sudden up went the pony's head, his ears cocked forward while he sniffed significantly to windward. Then with a snort he wheeled about and I had all that I could do to prevent him from running away. Looking westward, I detected a faint, reddish haze. Almost simultaneously I noticed that the tall grass was swarming with coyotes and rabbits, their natural enmity apparently forgotten in the face of some common danger. Then I detected a faint odor of smoke, and on looking westward again, could plainly see clouds of yellowish smoke rolling upward almost to the zenith.

Something seemed to grip my heart and I felt sick. Then as a realization of my predicament dawned upon me, my first impulse was to turn backward and ride for dear life in the hope of reaching North Fork ahead of the flames. Second thought, however, revealed the futility of such a course. Pulling a bit of paper from my saddle bag, I lighted it and tossed it into the grass beside the trail. The flames caught instantly, the grass being as dry as tinder, and soon there was a roaring column of fire close alongside. There was but little wind stirring when I first lighted the fire, but the flames seemed to create a draft of their own, and sooner than I can tell it, my own conflagration was racing down the lea, jumping and roaring like a million-tongued demon. Within ten minutes it was a mile away and I was enabled to ride safely upon the smoothly-swept surface, the fierce wind having whisked up the embers, hurling them along with the on-leaping flames.

By this time the very air was quivering in fierce heat, and a great cloud of blazing cinders

filled the overhead air. The air became so stifling that I feared I would be suffocated, but the further I rode on to the burned-over space, the clearer the air became, and in a few moments the fire had swept by and I was safe.

On resuming my journey I found the trail strewn with evidences of the fire's fierce work. Dead rabbits, coyotes, birds and gophers were found singly and huddled in groups, while every now and then a writhing, hissing rattler, his skin scorched and shriveled, would strike impotently at the pony's hoofs. The effect of all this was depressing, and I became very homesick as I loped along in the gathering twilight. I did not relish the thought of making camp amid this grewsome holocaust, consequently I kept traveling. At last, shortly before 10 o'clock, I reached a small creek with its fringe of timber, and here I spent the night.

That was a night to be remembered. It seemed as though a majority of the coyotes left alive after the fire had congregated in that timber, and each coyote deemed it incumbent upon him to out-howl his neighbor. To one who has never heard the cry of a prairie wolf, it would be useless to try to give him any adequate conception of what it is like. I had been told that the coyote is an arrant coward and that he would never attack a man, even though backed by thousands in the summer season when rabbits and prairie hens were available. Previous to that night I had placed full reliance upon that information, but when every now and then a full chorus of yells would break out almost in my very ear, I greatly feared lest a coyote precedent was about to be established.

One day I lost the trail and finally abandoned the search and struck westward across the unbroken plain. I discovered not long afterward that this was not only a mistaken move, but one of the most foolish imaginable, which none but a tenderfoot would have undertaken. But with the supreme carelessness of inexperience I kept

on my chosen route, confident that I would fetch up somewhere. There was little to break the monotony of the following few days. Being unable to sleep soundly at night on the prairie, I would fold my arms on the pommel, rest my head upon them and get an hour's sleep. Skee-zik was not backward, however, in "getting on" to my practice, and once familiarized therewith, he turned the knowledge to account. I would awaken to find the pony standing still, his feet grouped together as he was wont to place them, his head hanging down till his nose almost touched the ground, also sound asleep. My rations from the stock farm becoming exhausted, I was reduced to bologna, jerked beef and biscuit. Till this time the prairie had afforded ample sustenance for my horse, but as the days passed, I noted with alarm that grass was confined to occasional patches with stretches of sand between. Also the water courses seemed to be getting further apart, and the meager supply was often of such vile quality that I would suffer a raging thirst rather than imbibe.

Finally there came a day when we failed to find any even of the vile stuff that Skee-zik would drink so gingerly. The poor beast suffered terribly, and when at noon we halted to rest, his eyes seemed almost human as he stood dejectedly looking at me, his dry, parched tongue lolling from his mouth. About the middle of the afternoon I espied a grove of timber and hastened but like the others, the creek was dry. It seemed as though I must give up the fight and collapse, when a snort from Skee-zik caused me to look for its cause. To my surprise I found the source of his agitation to be a group of Indians, men and squaws, seated on the ground and evidently making a dinner.

As I rode up to the group I made what I meant for an eloquent sign of thirst.

"Thirsty, huh? Plenty water in run," pointing toward the creek bed.

I do not know whether I was more surprised at his use of English or his statement regarding water in the dry creek, but I hastened to assure him that the creek had utterly dried up, that I had followed it for half a mile, and that I and my horse were dying from thirst.

Again pointing toward the creek he assured me that I would "find water plenty," and I hastened in the direction indicated. To my indescribable delight I found a hole scooped out of the bed of the creek, and which was two-thirds full of water.

To throw myself from the saddle and dip up a cupful of the precious fluid was the act of an instant, but quick though I was, Skee-zik was no whit behind. Thrusting his nose half way to his eyes into the grateful liquid he drained the pool. It was impossible to pull him away. Firmly squared against all onslaughts and overtures he stood like a rock licking the moist sand and even eating mouthfuls of it.

After our thirst had been slaked I staked the pony at the edge of the timber where he could nibble the tufts of herbage and ventured back to the aborigine banquet. The words of my own language spoken by the Indian whom I first met had so reassured me that I felt no fear. The bucks having finished their repast were stretched about on the ground, some smoking, some conversing in the guttural jargon peculiar to their kind and others taking a snooze, while the squaws were trying to appease their appetites with what

their liege lords had left. A savory odor greeted my nostrils, whetted my appetite and suggested the character of the banquet, the remains of which were contained in a large iron kettle. Although the amount was limited, one of the squaws generously fished out a tin dish half full, using her hand for a ladle, and tendered it to me. Then my eyes rested upon the contents of the dish, and though appetite was persistently clamoring for satisfaction, my stomach rebelled. Just as I found myself wondering how I could decline the squaw's hospitality without giving offence, a man walked up, leading a horse, the latter even more numerously equipped than Skee-zik. He walked straight up to the squaw and kicked the dish out of her hand.

Extending his hand in a friendly greeting, the newcomer inquired: "What fetches you into this benighted region?"

Reading in his face that I could trust him, I confided my story to him. He seemed surprised and would hardly believe that I had made the journey alone across what he said, next to Death Valley, was the most dangerous country to travel through in the whole United States.

It seems that I was about 150 miles off the Santa Fe trail, and but a short distance from the Arkansas Valley. My friend was an Indian agent, employed with several others, in escorting a large band of Indians to the Government reservation. He and those with him were acting as advance guard for the main force, which was several miles behind. It was their duty to select camping places where water and grass could be procured. Then he showed where the Indians' ponies were staked out further up the timber where the buffalo grass was more abundant. I questioned him about the buffalo and he said I had already crossed their trail, but that they had all gone to their summer feeding grounds several hundred miles up country. This was a keen disappointment to me, especially as he said they would not return till about the first of November, and if the weather was mild, probably not until December.

That night the main body of the expedition came up and several hundred Indians, squaws, papooses and dogs swarmed over everything. Fires were lighted, tents set up for the agents, the Indians preferring to sleep under the open canopy of heaven to the work of setting up shelter. Rations of cornmeal and salt beef were served, while the agents had their own mess and a greater variety of eatables. I accepted an invitation to sup with the latter and enjoyed a good meal of smoked fish, jerked buffalo tongue, army biscuit and "slumgullion," as Mark Twain was wont to call the muddy coffee of the plains.

When pipes were lighted after supper, I had a long talk with the agents and learned quite a good deal about the natural features of the country. For one thing, the dry water courses which I had supposed were the beds of dried-up rivers were, I was told, merely ravines formed by the action of surface water, which they served to carry off in seasons of much rain. I was also told what the Indians had already taught me, that by digging in the bottom of almost any one of these ravines I would find water in abundance, and the purest water that could be found in that country, its percolation through the sand acting as a filter. The vast herds of buffalo which roamed that country but a few years before were fast becoming extinct by the zeal of

hunters who slaughtered them just for the sake of killing big game, then leaving them to be the food of coyotes. Several hunting parties of Englishmen, they said, were even then on their way to the North country, making their boasts that they would beat the record for numbers of buffalo killed.

"At this rate the whole species will be extinct in a few years," declared one of the agents. The correctness of his prophecy was long ago demonstrated.

The following morning after breakfast my rifle, with its homemade stock, came in for close inspection by both agents and bucks. An old brave who handled it very critically seemed much impressed. He called some of his companions, pointed out a group of curiously wrought notches which I had often wondered about on the stock, and then all became excited and gibbered vociferously. From what I could glean they had seen the gun before and recognized the markings. But they refused to elucidate, and I remained in ignorance of possible history.

It would have jibed in with my inclinations to continue with the party to the end of their route, not only because of the greater ease of traveling, but for the sake of company. I had come to have a sort of horror of being alone in that trackless wilderness, but to have remained meant the abandonment of one of my cherished schemes. Consequently, after replenishing my stock of rations, I laid an acute angle to the line of their route and galloped off to the southwest. For hours afterward, on ascending one of the rolling bluffs which characterized the face of the country, I was able to make out the caravan, stretched out on the plain like an enormous snake, slowly pursuing its sinuous way. At last, when I could no longer make out any signs of life against the purple horizon, the utter loneliness of the situation crowded upon me with almost overwhelming force. My first impulse was to turn Skee-zik's head in the direction of the vanishing point of my late friends and ride under a forced draught of whip and spur until I should find some of my own kind once more. Then something akin to pride came to my assistance. I ate a biscuit and sent the pony along.

That afternoon I sought to beguile the monotony of the situation by shooting at birds which flew overhead. I had forgotten that Skee-zik was a novice in experience with firearms at close quarters. On the first shot from my revolver the brute stopped as though the bullet had found lodgment in his brain. His head flew up with an ominous snort; he whirled and looked up wind, then back again with a remarkable exhibition of side stepping which brought all of my sticking facilities into instant play. This, however, did not seem to clear up the mystery to Skee-zik's satisfaction, and he proceeded to manifest his disapprobation of the whole proceeding by bucking. When finally he was sufficiently under control to enable me to pull the gun again, I fired another charge, determined to have it out with Skee-zik then and there. To my surprise when the shot rang out he came down to a standstill, looked around at me as though the situation had just dawned upon him, and he would apologize for not having understood it before, and went to nipping at the tufts of buffalo grass round about. Subsequent shots produced no more effect upon him than the yelp of a coyote. [TO BE CONTINUED.]

Bass Fishing in a Pond

By FRED E. MARTIN

THE fishing number of FOREST AND STREAM, dated March 23, impressed me very strongly. In spite of the strenuous fight I made against it, every thought went to long neglected fishing places.

Most of that issue was as Greek to me, as the Sucker State affords no trout fishing to my knowledge; at least no stream or pond has ever engulfed a trout that took any of the numerous kinds of bait I may have unskillfully offered. But we have a few lakes and small ponds, and a few streams, where the large-mouth black bass abounds, and to my out-of-door nature they furnish as much sport as the universally known trout. However, no argument on my part will ensue in preference to the fighting bass over the trout, as I long since decided that I only need the opportunity to become a devotee to this particular kind of fishing.

After reading that fishing number, my fever rose to about 102 and incidentally aroused a slumbering remembrance of the only really successful day I ever had with game fish, but a casual glance through an outside window at a nine-inch snow served to lower that temperature to its normal stage.

A half mile distant from the enterprising village where I live there is a sort of a pleasure resort known as Hudson's Park, in which there is a small but deep artificial lake, which affords excellent boating, fishing and bathing. Short growths of willow and cattails border the edges of the crystal-like water, and on a hot summer day, a common double spinner cast in among these rushes in the proper manner, will often find itself imbedded in some part of a scrappy bass weighing from one-half to five pounds. And again you can try all the baits and lures—that are famed for their killing qualities—known to mankind and the bass will be blind to them all.

One bright June morning, as I was engrossed in my business affairs, my telephone bell called me, and the following brief conversation burst forth:

"Hello, who is this, and what do you want?" I half angrily asked, as business needed my undivided attention.

"Oh, I'm talkin', and I want to find you at the park in the morning, with your rod and all the live minnows you can get some thriving boy to catch. Good-bye," came back as the answer, followed by the sharp click as the speaker hung up the receiver.

I recognized the voice of a fishing acquaintance, who from a short previous experience knew how the mere mention of the word "fishing" always drew my thoughts toward the lake at Hudson's Park, and his hasty actions told me he was taking it for granted I would be there.

Early morning found me standing on the wide dam, surveying the surroundings for some sign of the party I half expected to find, but I found I was first.

A very short time was consumed in getting my tackle ready, and after a wide over-hand cast, the spinner touched the water beside a

patch of willows. I repeated this several times with the spinner without results, then tried an artificial minnow. Then in despair I attached a live minnow to the line. A few minutes that seemed hours elapsed before it coaxed a half-pounder in my direction. Little bassie finally won, though, but he forgot to consider the possibility of meeting such painful resistance when he started his fight for freedom. Fight all he would, that mysterious sharp thing held fast,

CASTING FOR BASS.

and I was just in the act of rehearsing an act that I hoped would happen frequently throughout the day, when the screech of an automobile horn told me of the arrival of a party of four, including my friend of the telephone. After introductions, all hands got out, and reels began clicking from five different parts of the lake.

Nine o'clock and the scarcity of anticipated strikes began to turn the thoughts of my friend toward a new field.

"Tried it over at the little railroad pond recently?" he asked as he reeled in after an enviable cast—he was much more skillful than any of the rest of us.

"No, I haven't tried lately, but the small boys report good fishing there. They say they will strike at anything."

"I have something that beats this," he called to the others, as he stepped ashore from the little fishing boat.

The comparatively new car soon whizzed us to our new field where the scene that met our anxious gaze was anything but encouraging. The surface of the water was covered with a dense moss, which made it next to impossible to fish with anything but live bait or a weedless fly that we chanced to have with us. We all agreed to try the fly first, and lucky for us we did.

The thick moss forbade the use of a boat, but there was none and we were compelled to cast from shore. Luckily the mossy surface was perforated with a few openings from three to six inches in diameter, and when the fly would cross these, we were almost certain to strike something. The fish seemed viciously hungry and struck hard, and when hooked they gave us all we wanted to disentangle them from their mossy home.

The shadows were shortening and pointed north as we made a halt for a lunch, but the tired feeling of a hard morning's work soon left us with the few puffs of tobacco, and at 1:30 we were at it again.

We had failed to catch anything of any size, and we all set out to make some unusual catch. One end of a small arm of the pond, I noticed, was minus the moss, so I gradually worked that way. The shallow water seemed greatly disturbed, and on taking a second look, was surprised to see what looked to me like an eight-pounder. I backed out of sight for fear I might scare him, but my fly tipped the water five feet beyond him the first time and he never noticed it. But on second trial he could not resist the temptation and made one mighty rush and at the same instant I gently but firmly struck. He would not give up so easily, and it was as though I had struck a submerged stump, so stubborn was his resistance. For a full half minute he held firm, then he started a mad rush for deeper water. My reel fairly sang until the line tightened and I pulled him in a little. "Bring the net quick, I've snagged a whale," I called, and in a few seconds my friend was here. I was half afraid to trust my limited skill with such a prize and half intended passing the rod to Bill, but I wanted the honor of landing the bass myself, and for the next few minutes I had my hands full. Finally I succeeded in bringing him back to shallow water, but still had a fight on my hands. Bill waded out with the net and at the first opening slipped it under him.

As far as I was personally concerned, I was ready to get back to the neglected desk I had vacated the previous afternoon, but stayed a while to watch the others in their efforts to land a mate to my prize.

The sun was rapidly sinking, so we again made tracks in the direction of the car with a good string of the inhabitants of the little pool, the king of them tipping the beam at four pounds and eight ounces.

After that day I made a resolution that when some stunning business problem confronted me I would take my rod and go out to the park, and I have found, after a few hours with the bass, problems are always easy.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Protection of Migratory Birds.

IN view of the interest in this subject, and the fact that the regulated manner of bringing about Federal protection is not clearly understood by the general public, we print below a portion of the testimony and arguments heard recently before the Congressional Committee on Forest Reservations and the Protection of Game:

[H. R. 36, Sixty-second Congress, first session.]

A Bill to Protect Migratory Game Birds of the United States.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That all wild geese, wild swans, brant, wild ducks, snipe, plover, woodcock, rail, wild pigeons, and all other migratory game birds which in their Northern and Southern migrations, pass through or do not remain permanently the entire year within the borders of any State or Territory, shall hereafter be deemed to be within the custody and protection of the Government of the United States, and shall not be destroyed or taken contrary to regulations hereinafter provided for.

Sec. 2. That the Department of Agriculture is hereby authorized to adopt suitable regulations to give effect to the previous section by prescribing and fixing closed seasons, having due regard to the zones of temperature, breeding habits, and times, and line of migratory flight, thereby enabling the department to select and designate suitable districts for different portions of the country within which said closed seasons it shall not be lawful to shoot or by any device kill or seize and capture migratory birds within the protection of this law, and by declaring penalties by fine or imprisonment, or both, for violations of such regulations.

Sec. 3. That the Department of Agriculture, after the preparation of said regulations, shall cause the same to be made public, and shall allow a period of three months in which said regulations may be examined and considered before final adoption, permitting, when deemed proper, public hearings thereon, and after final adoption to cause same to be engrossed and submitted to the President of the United States for approval: Provided, however, That nothing herein contained shall be deemed to affect or interfere with the local laws of the States and Territories for the protection of game localized within their borders, nor to prevent the States and Territories from enacting laws and regulations to promote and render efficient the regulations of the Department of Agriculture provided under this statute.

[H. R. 4428, Sixty-second Congress, first session.]

A Bill to Protect migratory wildfowl in the United States.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That it shall be unlawful for any person to kill or capture any wild goose, wild swan, wild pelican, wild crane, wild duck, snipe, plover, woodcock, or rail from Jan. 10th to Aug. 15th, inclusive, of each year.

Sec. 2. That this act shall also be deemed to apply to all migratory wildfowl and other migratory game birds whose habitat is not fixed but is of a migratory or interstate character, which in their Northern and Southern migrations pass through and do not remain the entire year within the borders of any State or Territory; and such birds shall hereafter be deemed to be within the custody of the Government of the United States as well as of the various States; Provided, That nothing in this act shall be construed in conflict with the laws of any State which already has upon its statute books laws providing for the adequate protection of migratory wildfowl during their springtime migration from the South to the North.

Sec. 3. That any person violating the provisions of this act shall, upon conviction thereof, be subject to a fine of not less than one hundred dollars and not more than one thousand dollars, and upon second conviction to imprisonment for not less than thirty days and not more than six months.

[S. 2367, Sixty-second Congress, first session.]

A Bill to Protect migratory wildfowl in the United States.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That it shall be unlawful for any person to kill or capture any wild goose, wild swan, wild pelican, wild crane, wild duck, snipe, plover, woodcock, or rail from Jan. 10th to Aug. 15th, inclusive, of each year.

Sec. 2. That this act shall also be deemed to apply to all migratory wildfowl and other migratory game birds whose habitat is not fixed, but is of a migratory or interstate character, which in their Northern and Southern migrations pass through and do not remain the entire year within the borders of any State or Territory; and such birds shall hereafter be deemed to be within the custody of the Government as well as of the various States; Provided, That nothing in this act shall be construed in conflict with the laws of any State which already has upon its statute books laws providing for the adequate protection of migratory wildfowl during their springtime migration from the South to the North.

Sec. 3. That any person violating the provisions of

this act shall, upon conviction thereof, be subject to a fine of not less than one hundred dollars and not more than one thousand dollars, and upon second conviction to imprisonment for not less than thirty days and not more than six months.

[S. J. Res. 39, Sixty-second Congress, first session.]

Joint Resolution Proposing An Amendment to the Constitution Providing That Congress Shall Have the Power to Protect Migratory Birds.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following be proposed as an amendment to the Constitution, which shall be valid to all intents and purposes as part of the Constitution when ratified by the Legislatures of three-fourths of the States:

"Article XVII.

"Section 1. Congress shall have power to protect migratory birds and prohibit and regulate the killing thereof.

"Sec. 2. Congress shall have the power to enforce this article by appropriate legislation."

STATEMENT OF MARSHALL MCLEAN, OF NEW YORK CITY, MEMBER OF THE CAMP FIRE CLUB.

Mr. McLean: We are strongly in favor of the principle of Federal control of migratory birds, as evidenced in either the Weeks bill or the Anthony bill. In some quarters there has been doubt expressed whether Congress, by giving to a department the power to fix seasons, is delegating its legislative powers.

The Chairman: Have you any fixed ideas on that as to its constitutionality?

Mr. McLean: I think it is constitutional.

The Chairman: The serious trouble in passing the bill through Congress would probably be in regard to the question of its constitutionality.

Mr. McLean: Of course we believe the fundamental question involved here is the protection of the birds. It is the consensus of opinion that the wild migratory life, along with other wild life in this country, can not stand the strain and pressure that is being placed upon it by the hunting, the modern inventions in the way of firearms and all of the dangers to which it is exposed from the most northerly to the most southerly points on the coast, and we believe that it should be under Federal control for the reason that the local condition is often such that the people in a locality can not themselves appreciate the need of protection.

I have here a letter from the chairman of the board of commissioners of the State of Louisiana, which will clearly illustrate this point, and with your permission I will read it.

Mr. McLean read the letter, as follows:

State of Louisiana, Board of Commissioners for Protection of Birds, Game and Fish.

NEW ORLEANS, January 9, 1912.

Mr. Ottomar H. Van Norden, President Long Island Game Protective Association, New York:

Dear Sir—Replying to your inquiry of the 3d instant.

While the question of the prohibition of the spring shooting of wildfowl is all right in theory, yet, nevertheless, it does not work out well in our State, for the reason that practically all the ducks of the United States are crowded within our borders from early in the fall until late in the spring. In consequence of this, our sportsmen cannot understand the scarcity of the ducks and geese existing in other parts of the country. Then, again, our best spring shooting comes in the month of March on the Northern migration of the blue-winged teal ducks, which are with us all during that month.

Nearly all ducks leaving our State in the spring are mated, and I believe that most of the females have fertile eggs. Under these circumstances I would like to see our season close down much earlier than it does, but hitherto the conditions noted above have operated against any change in the present law, a copy of which I send you herewith.

Yours very truly,

FRANK M. MILLER, President.

Of course the second reason is a selfish one, but the first reason is right there. Through the geographical conditions of the country the presence of food in the marshes and swamps of Louisiana and Florida, as the commissioner says, practically all the birds congregate there during the winter and you can not convince the people of Louisiana that there is any scarcity of ducks and geese. You can not blame them, for they look at it from a local stand-

point, and they can not appreciate that throughout other parts of the country all the birds are being depleted, and that those left are congregating in those places referred to.

For that reason I believe that all migratory birds, and particularly the wildfowl, should be susceptible of Federal control, and the Camp Fire Club stands squarely for that principle.

The Chairman: Have you made any estimates of the percentages of decrease in the numbers of these birds?

Mr. McLean: I have not. There are a number of birds that have become extinct in our own time, among them the great auk, the passenger pigeon; the parroquet has become nearly extinct except in the extreme southern part of the United States.

Senator Perkins: On the Pacific Coast they say game birds are increasing.

Mr. McLean: Here is a letter from the Virginia association. The writer says, "Ducks are notably decreasing each year in our waters, from present indications." We have a great many letters showing that a decrease has been noted. But, of course, the percentage of decrease is very hard to calculate.

Senator Lodge: There is a great decrease along the Atlantic Coast from North Carolina to Chesapeake Bay, and that has been going on for years.

Mr. McLean: Yes. I personally do most of my shooting on Long Island, and in the fifteen years I have been shooting there, there has been a decrease until the last two or three years birds are holding their own better. We have stopped spring shooting there.

Senator Poindexter: Is that a decrease in the number of birds or a change of their habitat?

Mr. McLean: I think, sir, we are perfectly safe in saying it is a decrease in the number of birds. The habitat does not change. The wildfowl will go where there is food. That is the experience, I think, of all men who have followed them.

Senator Perkins: We have a game law in California prohibiting spring shooting, and the birds are increasing there.

Mr. McLean: Yes. We have felt that in New York since we have prevented this spring shooting, we have more birds. We can not tell yet whether it is because there are more birds than are bred there coming back or whether it is because the birds are undisturbed in the spring and feed there then and find the food good and come back in the fall.

STATEMENT OF WILLIAM S. HASKELL, OF NEW YORK CITY, COUNSEL OF THE AMERICAN GAME PROTECTIVE AND PROPAGATION ASSOCIATION.

Mr. Haskell: Mr. Chairman and gentlemen of the committee, I represent an association recently organized to assist in the protection of game on the continent of North America. The officers of this association within the last few weeks have interviewed or written game officials, game protective associations, and individuals in all of the States of the United States, and have asked for an expression of opinion on the propriety and necessity of the legislation proposed by these bills now under consideration.

Practically every State has been heard from and in every instance the principle of Federal protection of migratory birds has been approved and the hope expressed that the bills under consideration will be passed by Congress.

The following resolution was passed by the Legislature of the State of New York on March 4, 1912, without a dissenting vote:

State of New York—In Senate.

Whereas three bills (Nos. H. R. 36, H. R. 4428, S. 2367) to afford Federal protection to migratory game birds, have been introduced in Congress, and

Whereas there is a general sentiment in this State in favor of such protection and an urgent request for the enactment of such a law has been made, as appears by numerous petitions received: Now, therefore,

Resolved (if the Assembly concurs), That Congress be, and hereby is, requested to enact a law giving ample protection to migratory game birds.

Resolved, That the Legislatures of all other States of the United States now in session or when next convened, be, and hereby are, respectfully requested to join in this request by the adoption of this or an equivalent resolution.

Resolved further, That the Secretary of State be, and hereby is, directed to transmit copies of this resolution to the Senate and House of Representatives of the United States and to the several members of said bodies representing this State therein, also to transmit copies hereof to the Legislature of all other States of the United States.

A copy of this resolution has been sent to the game commissioners of every State, with the request that the Legislature of each State be urged to pass a similar resolution.

Under the Roman law wild animals were considered to belong in common to all of the citizens of the State. In the feudal as well as in the ancient law of the continent of Europe, in all countries, the right to acquire animals *feræ naturæ* by possession was recognized as being subject to governmental authority and under its power, not only as a matter of regulation, but also of absolute control.

The common law based property in wild game upon the principle of common ownership and therefore treated it as subject to governmental authority.

This common property was deemed to belong generally to the people.

The United States Supreme Court in *Geer vs. Connecticut* (161 U. S., 519) held that the fundamental principles upon which the common property in game rests have undergone no change; that because of this common ownership, under the development of free institutions, the power or control over such game lodged in the State as a trust for the benefit of all the people of the State, not as a prerogative for the advantage of the Government as distinct from the people or for the benefit of private individuals as distinguished from the public good.

While this decision sustained the power of the State to regulate the taking of the game within its borders, yet it was clearly pointed out that the State acted merely as trustee for its people and that the ownership of the game was in the people in their united sovereignty.

The doctrine expressed by the court in this case may be fairly applied to the question of the ownership of migratory game birds.

These birds do not remain for any length of time within the boundary of any State. They fly from South to North and from North to South, and in their flight pass over some of the States without alighting. Even when they do alight they remain a very short time within the boundaries of the various States, as the entire time consumed in their flight from the Southern to the Northern part of our country is less than two months.

Therefore it can fairly be said that they belong to the people of the United States and not to the people of any individual State.

The question of the title to migratory game birds has never, as far as I can ascertain, been adjudicated, and if it were adjudicated it seems fair to assume that the decision of the Supreme Court, which I have cited, would be extended so as to hold that under the peculiar conditions relating to migratory wild game birds, the people of the United States would be deemed the owner of such game, and by reason of that fact the United States as the representative of all of its people would have the power to regulate the taking of such game.

Senator Overman: Under what clause of the Constitution?

Mr. Haskell: The Constitution provides that Congress shall have power to make all needful rules and regulations respecting the territory or other property belonging to the United States. I contend that title to the migratory game birds is in the people of the United States, that the United States has title as a trustee for its people to such game, and therefore has a special right of property in it to the extent that it may protect it.

Senator Overman: I would think that the State would have the right to make such a law as to its own territory, but the question is, "Is that the property of the United States?" That is what I want to get at.

Mr. Haskell: In the case of game birds which remain within the boundary of a State during all seasons of the year, the State has control over them, but in the case of the migratory game birds which pass rapidly through the

various States, the power or control over them, I contend, is in the United States.

Senator Overman: What about the laws of North Carolina? We have game laws there. What right have we to interfere with United States property, then, in birds, if your theory is correct?

Mr. Haskell: There is such a thing as concurrent jurisdiction. There are instances where Congress has not seen fit to pass laws regulating pilotage, and the States have passed such laws. The power of the States to do so has been upheld, because the courts say that where Congress has failed to exercise its power the States may make laws regulating matters over which Congress has jurisdiction. It seems to me that is our case here. If Congress fails to protect the migratory birds and the States choose to do so, they have a right to exercise that power; but that does not exclude the Federal Government from protecting them.

There is a proviso in the Weeks bill:

That nothing herein contained shall be deemed to affect or interfere with the local laws of the States and Territories for the protection of game localized within their borders, nor to prevent the States and Territories from enacting laws and regulations to promote and render efficient the regulations of the Department of Agriculture provided under this statute.

Before the board of arbitration in the Bering Sea fur seal controversy the United States contended that the fur seals were its property because they spent their time chiefly within the territory of the United States, going out of our jurisdiction only to obtain food. The arbitrators decided, however, that the United States had no right of property in these seals when they were found outside of our territorial waters. In other words, that the United States did not have an exclusive property right in the seals. Applying this principle to the matter under consideration, the people of the various States over which the birds pass have no exclusive property right in the migratory game birds.

Mr. Haskell: Such a law as this would be passed in the exercise of police power. It has been decided that the United States has incidental police power. It has power over its property analogous to the police power of the several States and the right to make rules and regulations with reference thereto.

The Government of the United States has the power to legislate for the protection of its property even where that property is situated within the limits of a State, and though such legislation may involve the exercise of police power. This was decided in *Camfield vs. United States* (167 U. S., 518).

Senator Lodge: Right there, is it not true, as a matter of fact, that the States which have good game laws—and there are many of them, of course—are very desirous that there should be some National law, because their own laws are insufficient? Of course, they can not control migratory birds beyond their borders.

Mr. Haskell: That is the difficulty; that is just it exactly.

Senator Lodge: I know that is the desire in my own State.

Mr. Haskell: And in connection with that, I would like to read this telegram which we received a few days ago from the Game, Fish and Oyster Commissioner of Texas, where there is no law, I understand, to regulate hunting wild-fowl.

American Game Protective and Propagation Association,
111 Broadway, New York city:

Impossible to be present at hearings on protective bills before Congressional committees. Migratory birds belong to no State, and no State has right to slaughter them at cost of other States. It is purely Federal question, and Congress, under most strict construction of the Constitution by Democrats like myself cannot avoid conclusion that interstate birds are as interstate commerce. An open season for wild ducks all the year in Texas and a closed season for them in States lying north is an absurdity. We kill them as they leave and kill them as they come from Mexico on their way to their nests.

W. G. STERETT,

Game, Fish and Oyster Commissioner of Texas.

Senator Overman: He seems to put it under the interstate-commerce clause of the Constitution.

Senator Lodge: He makes a parallel with that, and I think that is a proper one.

Mr. Haskell: I call the attention of the committee to the fact that this question of the power of Congress to control the taking of migratory game birds has never been adjudicated by the courts. I have made a careful search and find no decisions which hold that Congress does not have the power to pass these bills. The subject of migratory game birds has never, so far as I can ascertain, been considered. If there were precedents which held that the proposed legislation was unconstitutional it would be absurd for me to be here urging that this committee act favorably on this measure. But there are none.

The Chairman: On page 2 of the Weeks bill there is a proviso which you have referred to, "That nothing herein contained shall be deemed to affect or interfere with the local laws of the States and Territories for the protection of the game localized within their borders." What do you consider is meant by the word "localized"?

Mr. Haskell: I think that means the game which does not leave the State, which resides within the State during the entire year. There are certain classes of game—

Senator Poindexter: Such as quail, partridges, rabbits—

The Chairman: That are not migratory—

Mr. Haskell: Yes.

The Chairman: That ought to be a little clearer, perhaps.

Mr. Haskell: Perhaps it ought to be.

The Chairman: I think Mr. Shiras eight or ten years ago prepared a rather elaborate presentation of this question.

Mr. Haskell: Yes, sir.

The Chairman: And he put it, as I remember it, on the ground that it was an exercise of one of the police powers of the Congress.

Mr. Haskell: Yes; incidental police power, I think. I have his brief here, and I would like to make it a part of the record.

Senator Overman: You admit that we have no police power except incidental?

Mr. Haskell: Yes.

The Chairman: It is a difference in point of view.

Mr. Haskell: But I wish to be clearly understood. I deem this the property of the people; that the Government has the title as trustee for the people, and it has the right, therefore, under its incidental police power, to protect this property. That is my argument.

Senator Overman: That it is the property of the Government?

Mr. Haskell: Whether it is or not—is not that a question of fact and not of law?

Senator Overman: Yes.

Mr. Haskell: It seems so to me.

Senator Overman: I have never looked into the question of property in wildfowl.

Mr. Haskell: I have read that in the early forties Congress passed an act that the proceeds of the sales of public lands should be distributed among the several States, and many people thought that the act was unconstitutional. They thought that Congress had no right after the Government had sold its public lands, to provide that the money should be distributed among the different States. But it was done. There is scarcely any proposed legislation of any importance which is not objected to by some one on the ground that it is unconstitutional, and such an objection frightens many people. I do not think that in this particular case there is any cause for alarm. I would like to quote from the decision of the Debs case. The Federal Government took control in the Pullman strike in 1894 and suppressed the disorder in the State of Illinois.

Senator Overman: What was the reason of that? They put it on the ground that it was interfering with the United States mails.

Mr. Haskell: They put it on the ground that it was interfering with the United States mails and with commerce between the States. The court said in its decision: "We hold that the Government of the United States
(Continued on page 514.)"

New York Fish and Game Law.

ALBANY, N. Y., April 15.—*Editor Forest and Stream:* Governor Dix to-day signed the new fish and game law, prepared by a commission named by the State Conservation Commission. It creates "uniform" seasons throughout the State and indirectly transfers from the Legislature to the commission the power to make any changes that may be desired in the law in the future. It was stated during the hearings on the bill that the uniform seasons were secured by averaging the various seasons prevailing in the sixty-one counties of the State, and so far as the fishing seasons are concerned, this has been done without any regard for the temperature of the water or the spawning habits of the fish. Vigorous objections were made to the bill on the ground that it opened to commercial fishing the smaller inland lakes of the State, commonly known as "summer resort lakes."

The new law provides that any citizen who is dissatisfied with its provisions may file with the commission a petition requesting that additional protection be given to any species of fish or game. Within twenty days thereafter the commission must give a public hearing in the locality or county affected, and due notice of this must be given in a newspaper published in the county at least ten days before the hearing and a copy mailed to the petitioner. This notice must give the name and address of the petitioner and a brief statement of the grounds on which the application is made. If, after such hearing, the commission decides that the additional protection is needed, it may prohibit or regulate during the open season therefore the taking of such species of fish or game, either throughout the state or in a particular part or district. At least thirty days before such regulation takes effect, copies of the order must be filed in the office of the clerk issuing hunting or trapping licenses for the district to which it applies, who shall issue a copy to each person having such a license, and post a copy in a conspicuous place in his office. The commission must also publish the order in a newspaper in the county to which it applies at least thirty days before it shall take effect. Violators of such an order are liable to a fine of \$100 or thirty days' imprisonment, or both, for each offense, in addition to the penalties provided for violating the close season regulations.

Open seasons and regulations for fishing and hunting are as follows, each date being inclusive:

FISHING.

Bait minnows for personal use may be taken without a license, but must not be taken from trout waters.

Black bass (including Oswego bass)—June 16 to Nov. 30. Legal length, 10 inches; catch limit, 15 a day to one person, or not more than 25 to two or more persons angling from the same boat.

Trout (including speckled, brown, rainbow, red throat and brook trout)—May 1 to Aug. 31. Legal length, 6 inches; catch limit, 10 pounds a day to one person. Exception: Long Island waters, where the open season is April 1 to Aug. 31 for brook trout, and April 16 to Sept. 30 for rainbow trout.

Lake trout (including landlocked salmon or ouananiche) and whitefish—April 1 to Sept. 30. Legal length, trout, 15 inches, whitefish, 12 inches; Otsego whitefish (known as Otsego bass) Jan. 1 to Oct. 31; catch limit, lake trout, ten a day to one person, fifteen to two or more persons angling from the boat. There is no limit as to the number or quantity of whitefish that may be taken. Both species may be sold, and in lakes Erie and Ontario they may

be taken in any number or quantity and bought or sold.

Frogs (including bull, green and spring frogs)—June 1 to March 31. May be taken in any manner and quantity and bought and sold.

Regulations—Fishing through the ice in trout waters is forbidden. In angling from a boat, but two lines can be used by each person. Private hatcheries may sell trout all the year round under a permit issued by the commission. Licenses may also be issued to breed for market purposes elk, deer, pheasants and ducks under certain restrictions as to killing and sale. Importers may bring in at any time unplucked pheasants of all species, Scotch grouse, European black game, European black plover, European red-legged partridge, Egyptian quail and the carcasses of European red deer, fallow deer and roebuck, under restrictions imposed by the commission.

HUNTING, OPEN SEASON, DATES BOTH INCLUSIVE.

The hunting license is retained and a trapping license added for non-residents at \$10.50 a season.

Deer (wild deer having horns not less than three inches long)—Oct. 1 to Nov. 1, in Clinton, Essex, Franklin, Fulton, Hamilton, Herkimer, Jefferson, Lewis, Oneida, Oswego, Saratoga, St. Lawrence, Warren and Washington counties. Exception: All that part of Oneida, Lewis and Jefferson counties lying west of the Utica and Black River railroad from Utica to Ogdensburg. Only two may be taken in a season and one transported by the actual owner. Further exceptions: Ulster county, Sullivan county (towns of Neversink, Cocheton, Tusten, Highland, Lumberland, Forestburg and Bethel, and all that section of the towns of Namakating and Thompson lying south of the Newburgh and

Cochecton turnpike), Orange county (town of Dierpike)—Nov. 1 to Nov. 15.

Wild moose, elk, caribou—No open season.

Squirrels (black and gray)—Sept. 16 to Oct. 31. Exception: Long Island, Nov. 1 to Dec. 31. Bag limit, five a day. Must not be killed in cities or villages.

Hares and rabbits—Varying hares, Nov. 1 to Jan. 31; cottontails, Oct. 1 to Dec. 31; bag limit, six a day. They may be bought and sold. Ferrets must not be used except where the animals are injuring property.

Beaver—No open season.*

Mink, raccoon, sable—Nov. 1 to March 1. May be taken in any manner.

Skunk—Nov. 1 to Jan. 31. May be taken in any manner except by digging out, and at other times if injuring property. A license to propagate for sale may be issued by the commission.

Muskrat—Nov. 10 to April 1. May be taken in any manner.

*Sec. 158 authorizes the Commission, in case any species of bird or quadruped, at any time or in any locality, becomes destructive of private or public property, to give a four months' permit to any citizen or protector to take and dispose of the same as the Commission may direct.

"IF HE'S GOING FISHING I WANT TO GO ALONG."

Photograph by Miss Carita Lemmon.

be taken in any number or quantity at any time.

Pike perch (including wall-eyed pike, called also pike and yellow pike)—May 1 to March 1. Legal length, 12 inches; no limit as to number or quantity, and they may be bought and sold.

Pickerel and pike (including great Northern pike, called also pickerel, pond, chain, grass and banded pickerel)—May 1 to March 1. No legal length specified; may be taken in any number and quantity and bought and sold. Exception: St. Lawrence River; legal length, 20 inches; only twelve to be taken in a day.

Sturgeon (including short-nosed, lake and sea)—July 1 to April 30. Legal length, short-nosed, 20 inches; lake, 30 inches; sea, 4 feet; may be taken in any number and quantity and bought and sold.

Mascalonge—June 16 to Dec. 31. Legal length, 24 inches; may be taken in any number and quantity and bought and sold. Fishing through the ice prohibited.

Striped bass—Legal length, 12 inches. May be taken at any time in any quantity with line or net and bought and sold.

Smelt (ice fish)—Legal length, 6 inches. May

Turtles (land, box and wood turtles and tortoises)—No open season.

BIRDS—OPEN SEASON.

Waterfowl, wild and domestic (including geese, brant, swans, river and sea ducks)—Sept. 16 to Jan. 10. Bag limit, twenty-five a day; forty to two or more persons using same boat, battery or blind. Exceptions: Long Island waters, Oct. 1 to Jan. 10. Floating devices, other than power and sail boats, may be used in Long Island Sound, Shinnecock, Gardiner and Peconic bays in the open season, and except from Oct. 1 to Oct. 19 in Great South Bay, west of Smith's Point and east of the Nassau-Suffolk county line.

Woodduck and swan—No open season.

Rails, American coots, mudhens, gallinules—Sept. 16 to Dec. 31. Bag limit, fifteen a day; twenty to two or more using the same boat or blind.

Upland game (including wild turkeys, grouse, prairie chicken, pheasant, partridge, quail)—Quail, Oct. 1 to Nov. 15; bag limit, six a day; thirty-six a season. Grouse, Oct. 1 to Nov. 30; bag limit, four a day; twenty a season. Wild pheasants, Thursdays in October; only males to be taken; bag limit, three a season. Males only to be taken.

Partridge—No open season for Hungarian or European gray-legged partridge. Exception: Long Island, pheasants and grouse, Nov. 1 to Dec. 31; bag limit, six male pheasants a day; thirty-six a season. Shore birds (woodcock, snipe, plover, surfbirds, sandpipers, tatlars, curlews)—Woodcock, Oct. 15 to Nov. 30; all the others mentioned, Aug. 1 to Nov. 30.

Protection is accorded to all wild birds except the English sparrow, starling, crow, hawk, crow blackbird, snow owl, great horned owl and kingfisher. Antwerp or homing pigeons properly marked must not be molested. J. D. W.

Against the Sale of Game.

THE following appeal has been sent to the Massachusetts Legislature by George H. Graham, secretary of the Springfield Fish and Game Association, and also a member of the State Commission:

"We wish to call to your attention Senate bill No. 400, which prohibits the sale of all wild game killed in this State, and at the same time encourages the artificial propagation of game birds and animals, also the bill to establish a bag limit on the different species of game. These bills have been carefully considered by our association, and at a meeting of 330 members it was voted unanimously to approve them.

"The Springfield Fish and Game Association is the largest body of sportsmen in New England, having a membership of over 900, and we feel that we fairly represent not only the sportsmen in Western Massachusetts, but the 45,000 gunners throughout the Commonwealth. We are confident that the most effective way to preserve our game is to have a bag limit and stop the sale of all native wild game.

"The passage of these bills will mean the greatest step forward that has ever been made in Massachusetts in the protection of our game birds and quadrupeds, and we hope and believe that you are enough interested in this cause not only to support these bills, but ask others to do the same."

Grouse Snaring.

THE Watertown News recently printed a history of the old-time grouse snaring in Northern New York, and the efforts made by the Game Commission to break up the practice. Game Protector A. P. Williams is the author of the paper, which follows:

This section including the adjoining counties of Lewis and Oneida comprising the south woods is one of the most natural breeding grounds for partridge to be found in this or any other State. Thousands of grouse were snared here for many years. Dozens of men and boys depended each fall upon this illegal work for their winter supplies. The whole population, almost to a man, was banded together to resist the protectors' efforts to stop this illegal traffic. The department made desultory efforts to check the traffic, but with little or no success. Representatives of the New York commission houses visited this section every fall in advance of the season and contracted the game before taken, for it was necessary to have a market established in advance of taking, as the "stock" was perishable and must be disposed of at once. Matters drifted along in this way until about the latter part of 1905 or early part of 1906 when Commissioner Whipple determined that it must be suppressed at all cost. After a long conference between Commissioner Whipple, Mr. McCollom and the writer, I was assigned the task as special work, and instructed that we must suppress this traffic. I entered upon the work by first trying to catch the snarer at work. I have laid for as much as five whole days on one case in the woods with a partridge hanging in a snare nearby and not get my man. They were so banded together that it was impossible to show my head anywhere, but the word would be passed along to "Look out, Williams is coming."

For many months I made little or no progress and finally began a critical study of the case from all viewpoints. Having learned some of their ways of covering their tracks, and "blind" methods of shipments, I came to the conclusion that the most feasible plan was to catch the purchasers, and thus shut off the market. For this purpose I trailed many a rig at night, followed one clue after another, until I finally began to get tangible matter to work from. I made many trips to New York city, and finally got what seemed to be at least one gilt-edged case. This we tried in the supreme court and won. From there the case went upon appeal, clear to the court of appeals. The State finally winning out, other violators rapidly settled until we had a good start on this traffic. Other shipments were traced and occasionally a local man would be caught and so the warfare was kept up during 1908 and into 1909, when the final outlet to New York was effectually stopped.

We then set to work to close up the smaller semi-local outlets of Watertown, Syracuse and other nearby points. In all, over \$6,000 in fines was collected for the State before this illegal traffic was wiped out completely. The past two years not a single complaint of snaring has reached me from this territory, nor has a close inspection each fall revealed any. Grouse are multiplying rapidly in that section and are overflowing into the surrounding country in goodly numbers, and it will not be long, if this illegal traffic is held in abeyance, before grouse shoot-

ing in this vicinity will be restored to its former condition when any good shot could get the limit with little trouble. I am wondering if the true sportsmen appreciate the effort of Commissioner Whipple in their behalf? An interesting volume could be written from the history of this work alone. Some of the secret methods employed to conceal shipments would have done credit to the imaginative brain of Conan Doyle and other writers of detective fiction.

Doctor Clemens' Body Found.

IN January last three men put out from Bay-shore, Long Island, in a motor boat, en route to one of the islands for a few days' duck shooting. They were Dr. Carl Clemens and Edward Bailey, of New York city, and Thomas Veltman, of Bay Shore. That day the most severe storm of the winter came on, and for several days thereafter the cold was intense. Fears for the safety of the men prompted the good people of the village to search for them, difficult and dangerous though the task proved to be. The motor boat was found in the ice, but its tender, the three men and their paraphernalia were missing.

Every effort was put forth to find the men or some trace of them, but without success, and it was not until last Sunday that the body of Dr. Clemens was found on Short Beach Island by Capt. George Van Nostrand, of the Life Saving Service. It is possible the other bodies may be found, as search for them is being made. Dr. Clemens left a widow. Young Veltman's parents live in Bay Shore. Mr. Bailey had been married only a month before his death.

Graves on Forest Problems.

THE first session of the forest conference held in connection with the Nashville meeting of the Southern Commercial Congress was opened on the afternoon of April 8. The presiding officer was Henry S. Graves, Chief Forester of the United States Department of Agriculture. In opening the conference Mr. Graves spoke in part as follows:

"Forest fires are primarily responsible for the damage resulting from erosion and disturbance of stream flow in the mountains. Unless there is a correction of the existing conditions the supply of forest products will not be maintained, local industries will decline or vanish, land values will be permanently reduced, and the benefits arising from the mere existence of well managed forests will be lost, with unfortunate results.

"There is no region except the far Northwest where forestry is so simple and the results so sure as in the South. The desired end can not be accomplished at once. Our efforts must be organized. We must with all our forces, National, State and private, endeavor to overcome the fire menace. The public must aid in the matter of a uniform, consistent, and sane system of taxation, while private owners must accept their responsibilities and handle their property in a way which will build up and not injure the interests of the State."

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Game in the Province of Alberta.

MOOSE, elk, deer and caribou appeared to be as plentiful as in former years in Alberta, in 1910, according to the annual report of Chief Warden Benjamin Lawton.

Mountain sheep and goat are apparently increasing in numbers, due no doubt to the protection given them in the Rocky Mountain Park, and a more stringent enforcement of the provisions of the game act in the Pincher Creek district tributary to the mountains, in which district a salaried game guardian devotes his entire time to enforcing the provisions of the act.

Antelope, however, are undoubtedly decreasing, not owing entirely to shooting, but principally to the fact that their range is being gradually reduced by settlement. It is conceded that unless a section of country is held as a range for these beautiful animals, they must, like the buffalo, become extinct, or almost so, or be found in parks and game preserves only.

Ducks were not so plentiful as during previous seasons. This may be owing to the fact that the past summer was one of the driest which has been known for some years, the result being that the water in many of the smaller sloughs and lakes dried up, thus driving the birds to large lakes; in fact, in the months of September and October during the early morning and late evening, the birds in some localities frequented the stubble and grain fields in thousands in order, it is claimed, to obtain food.

Prairie Chicken (Sharp-tailed Grouse)—It is a number of years since these birds have been so plentiful as they were in many sections during the past season. It is to be regretted, however, that there was more illegal shooting than has occurred for many years, owing, no doubt, to the fact that the birds were more plentiful than usual, and also owing to a newspaper outside the province giving an incorrect digest of the game laws of the province. The error was in connection with prairie chicken, and stated that the season therefor opened on the 15th day of September. Immediately on this being brought to my attention, notices were forwarded to the press of the province advising that the season did not open until the first day of October. If this had not been attended to, there is no telling how many persons would have commenced shooting prairie chickens contrary to the act.

Partridges were reported as being unusually plentiful, the result being that a very large number were taken by farmers and sportsmen.

Hungarian partridges are reported as doing nicely and spreading over new territory. The sportsmen who interested themselves in introducing these birds are doing everything possible to prevent shooting on the land where the birds were placed.

The amendments passed at the last session of the Legislature should result in the better protection of game, as the hands of the game guardian have been materially strengthened by giving him the power to arrest any person found committing any offense against the provisions of the act. The section requiring residents of cities, towns and villages to obtain licenses before hunting game birds will no doubt add materially to the duties of game guardians, but with the anticipated increase in revenue, it will be possible to place more guardians on salary.

That portion of the open season of 1910, ex-

tending from Nov. 1 to Dec. 15, was like that of 1909, very favorable for the big-game hunter who wished to obtain moose, deer or caribou, there being sufficient snow for tracking throughout the period referred to.

The number of big-game animals secured by sportsmen, is in excess of any previous year. The returns show that the following big game has been killed by residents of the province:

Deer, 540; antelope, 126; moose, 184; caribou, 8; mountain sheep, 54; mountain goat, 46; elk, 7.

AN ALBERTA MOUNTAIN GOAT.

This of course does not show the total game killed, as in the northern half of the province residents did not require a license to hunt. I am pleased, however, that the amendments of the last session now provide that every person must have a license before hunting or shooting any big game.

Licenses and permits were issued as follows: Resident's big game licenses, 1,997; general game licenses, 24; bird game licenses, 3; trappers' licenses, 10; guides' licenses, 8; camp helpers' licenses, 4; game dealers' licenses, 30; permits to export, 35; permits to collect, 23.

New Publications.

THE SPORT OF SHOOTING, by Owen Jones. Cloth, 380 pages, illustrated, \$3 net. New York, Longmans, Green & Co.

It is of the shooting in England that Mr. Jones tells in this volume, and besides being as authentic as his earlier work, "Ten Years of

Gamekeeping," it is enlivened with the same pleasant humor as that book.

THE COMPLEAT ANGLER, by Izaak Walton. Large quarto in green and gilt, 167 pages, illustrated in colors by James Thorpe. New York, Hodder & Stoughton.

Of the many reprints of Walton's first book, none is handsomer than this one. The print is large and the pictures, from watercolors, are pasted on inserted pages of dark green, with the inscriptions printed on the fly leaves. The introduction is by R. B. Marston. It is a very handsome volume.

THE GREAT LAKES, by Clifton Johnson. Decorated cloth, 328 pages, illustrated, \$2 net. New York, The Macmillan Company.

This one of the series of American Highways and Byways relates to a region rich in tradition, romance and history, and it has been treated by Mr. Johnson with rare skill. It is of the people, homely stories of their doings and ways that he writes, and of places he has visited.

THE PEOPLE OF THE WILD, by F. St. Mars. Decorated cloth, 261 pages, illustrated, \$1.25 net. New York, The Outing Company.

This is a series of stories of animals and birds, illustrated by C. L. Bull, Neal Truslow and A. E. Cedarquist.

John's Lament.

[Written by a camp cook after his trip with a hunting party.—WM. H. HOLDEN.]

On las' November I go to cook
In camp for hunt de deer,
I tole you dis—I don't go dere
For cook anoder year,
For dose men dey eat like hurricane,
Bimeby dey eat some more,
An' de camp he's up, clean out of grub
On Eescanaba's shore.

In de morning very early
I go in, put on wood,
An' every man say, "Mornin', John,"
As quickly as he could;
An' den dey dress for breakfus,
An' when de cakes, he's hot,
Den every man is w'at you call
De Johnny on de spot.

Now reever man, an' lumber jack
Can eat de pork and bean,
But Mist' MaCauley, she de best
Was ever yet been seen;
De major, she de boss of de camp,
He hole hees end up too,
W'en he start in on venison
I don't know w'at to do.

Den Mist' Blake, he was so seek,
Could hardly use his fork,
He—w'at you call it—dieted
On tea and fat salt pork;
I ope' de door and say "toot, toot,"
De judge he grab hees spoon,
He hit de bench immediament
An' holler for de prune.

An' Mister Boyer wit' de jug,
Dey call him "Curio,"
De t'ings he pile up on hees plate
I don't know w'ere dey go;
I cook me everyt'ing in camp,
Also de shoepack pie,
Of cooking for dose men I got
My plenty satisfy.

For dose men dey eat like hurricane,
Bimeby dey eat some more,
An' de camp, he's up, clean out of grub
On Eescanaba shore

Trout in Pennsylvania Waters.

WELLSBORO, Pa., April 12.—*Editor Forest and Stream:* Fish Commissioner Cox, who resides here, made a tour of the mountain trout streams in this vicinity some weeks ago to ascertain the condition of the waters. He found that there was abundance in them all. That the spring water did not freeze solid, but on account of its purity, rapid movement and abundance had prevented any such trouble in the small streams, but in big streams like Pine Creek, in places only, solidity prevailed.

He believes that as far as small streams are concerned the winter was favorable for trout. The continued ice coating prevented kingfishers, minks, otters and 'coons from plying their craft, and trout will be as abundant as ever.

He has differed with the head of the commission in regard to the planting of such small fry. He makes a stand for sizeable trout, at least fingerlings, those able to run, hide and defend themselves from their carnivorous brethren. The former chief commissioner planted trout in the spring which had not shed their sacs, but this Commissioner Cox holds is wasted energy. He also believes in fall planting after the season closes. The ice protects the trout from marauders, they grow, become acclimated and by another year are of legal size.

He is against planting them too large, because he holds that after they are accustomed to coming to the surface, like a flock of chickens, to get the liver fed by the hatcheries, that they lose their native shyness and instead of running and hiding on sight of humans, follow along greedily, taking bait, fly, or any clumsy contrivance in a most lubberly and untrout-like fashion and are soon caught out.

The fish laws of Pennsylvania are enforced as never before, almost to the degree of asperity. With the disappearing of the lumber industry are going the saw mills, the tanneries and acid factories, all of which have done so much to deplete fishing. There has been very vigorous planting every year, but despite of all of these, the trout fishing has not increased as it should. And of course there is a reason.

Some allege that it is because such small trout have been planted at the wrong time of year. Unable to care for themselves, they are gulped down by the hundreds; or high waters in the spring carry them down stream to their fate.

For several years, Leonard Harrison of this place has maintained a private trout hatchery at Four-Mile Run near here, propagating both brook trout and Californias. The latter he has planted in the big streams because it is a well known fact that they can stand warmer water than the native brook trout and the others in the small brooks or runs. He is expert on trout hatching and raising, and his theories of course are entitled to great weight. He believes that brook trout should be planted at the very heads of streams, if possible in the springs which supply them just as soon as they shed their sacs; that they thrive where conditions are right.

He holds that hatchery fed trout never recover from their civilization and are caught out easily. That after the habit is once established, they lose the very qualities with which nature has endowed them for their protection, and greedily take anything that bears the least resemblance to food.

He has planted hundreds of thousands of trout annually in streams of this vicinity gratuitously, just to improve the fishing, but he is going to abandon his hatchery, for no matter how vigorous the planting, it is barren of results. This he ascribes to the depletion of the timber which lets the sun into the water, warming it to a temperature that trout cannot possibly survive.

Tests of Four-Mile Run, on which the hatcheries are located, and before the removal of the timber one of the most ideal streams in the country, during the extreme warm weather last year during low water, showed it to be 73 degrees, while 70 degrees is deemed fatal to trout.* Until these lands, recently stripped of their heritage of timber, now passed fortunately into the hands of the State Forestry Commission, are reforested by nature and science so they will grow shade sufficient to protect the water from the sun's rays as of yore, and prevent its high temperature, Mr. Harrison is convinced that further planting will be futile and will probably indulge no more in it.

WILLIAM LINCOLN SHEARER.

*Much depends on the character of the water. Trout will live in water whose temperature is 75 to 80 degrees, provided it is well aerated.—EDITOR.

Kansas City Bait- and Fly-Casting Club.

KANSAS CITY, Mo., April 8.—*Editor Forest and Stream:* At our recent annual meeting, N. F. Noland was elected President; U. H. Hosterman, Vice-President; C. H. Cheney, Captain; Messrs. F. B. Robinson, W. L. Rock and E. M. Meier, Directors for 1912.

Mr. Bramhall brought up the subject of a challenge trophy, and we decided to offer a solid silver cup open to challenge by any member of the N. A. S. A. C. A committee is drawing up rules, etc., which I will outline to you in due time. Our club is in a most flourishing condition, every member a caster and an angler. The Park Board has promised us a couple more platforms and a shelter house, and before the season is over we hope to see Spring Valley Lake an ideal casting pool.

GEO. L. ROBIRDS, Secretary.

An Insect Repellent.

WORCESTER, Mass., March 29.—*Editor Forest and Stream:* I have just returned from a two months' trip in the South, one month of which I spent fishing in Florida. On my return home I spent the first few evenings in reading the back numbers of FOREST AND STREAM which had accumulated during my absence.

In your issue of Dec. 30 a correspondent asks for information as to insect pests, etc. Personally I have never been greatly troubled by

any bugs, insects or flying things except mosquitoes and redbugs. To protect myself from the mosquitoes I use a repellent that is the best of any I have ever seen. I have used it for black flies and mosquitoes in Maine and Canada and find it works equally well in Florida. Here is the formula: Vaseline, 3 ounces; camphor gum, ¼ ounce; oil pennyroyal, 2 drams; oil lavender, 1 dram; carbolic acid, 10 drops.

As to the redbugs I doubt if there is any way to keep them off, but if one is bitten by them, most any oil or grease will give relief. My guides use kerosene oil and it works well. One of my sons was in Panama for two years and he and his companions used wheel grease, but the suriest way to kill the bug (which buries under the skin) is to use ether. I carry a small bottle in my kit and an application of ether on absorbent cotton is an infallible remedy.

CHARLES A. ALLEN.

Anglers' Club of New York.

THE first step toward the accomplishment of one of the original intentions of the charter members of the Anglers' Club of New York has been taken. This is the securing of a home for the club. A comfortable room has been secured at 50 West Seventy-seventh street, which is used as headquarters, and where members can store their casting outfits if they so desire. It is but a short distance from the club platform on the large lake in Central Park near the Seventy-seventh street entrance, and as there is a restaurant on the premises, the arrangement is convenient for members.

The club recently purchased a four-ounce, a five-ounce, a nine-ounce and a salmon fly-rod; a bait-casting rod, with lines, reels and all necessary equipment for the rods. These are kept at headquarters and may be taken to the lake for practice by any member, provided he returns them at the end of his practice.

As a member may permit his friends to practice with these rods, and as they are accessible to all, the plan is working well, for it encourages those who do not own rods of certain types to practice with them and in this way obtain all-round practice. Practice with surf rods is not permitted on the club platform because of its proximity to walks and seats in the park.

A Casting Tournament Proposed.

A MOVEMENT is on foot in Washington to arrange for a fly- and bait-casting tournament to be held there in the near future. We have made the suggestion to the promoters—the W. F. Roberts Company, 1413 New York avenue—that a club be organized and affiliation with the National Association arranged for. If anglers residing in Washington will communicate with William P. Bowie of that firm, no doubt the matter can be arranged. There are many anglers in that city who doubtless would be glad to join such a club, not only for the practice, but to become acquainted with other anglers.

Casting Club of France.

IN the tournament held on March 28-31 in Paris, strong winds prevented the making of any records in fly-casting. With the 70 gramme weight M. Decantelle cast 98½ metres, and M. Weissmann cast 62½ metres with the 15 gramme weight.

NATURAL HISTORY

March Bird Notes.

By the first of March the oblong, flattened buds on the dooryard elm were perceptibly swollen. The tops of the poplars on high, rocky banks glistened in the increasing light, the buds on the most forward trees displaying their little sheaves of silvery down. The south slopes were partly bare and the creek hummed and pulsated under the ice. Early in the morning there was a diffuse, rosy light on the drifted snow along the western hill, although the source of it was not yet visible. I heard the legato piping of nuthatches and the downy woodpecker marking excellent time on his

in song at rare intervals in May or early June high in air, balancing on vibrant wings and finally falling like an arrow to the field. While the latter bird is evidently the prairie horned lark that sometimes nests as far east as the valley of the Hudson, I have wondered if the lark of our March uplands in the northern shore lark, for good authorities have not credited it with a song here in the States.

On the 17th of the month, with one of the boys, I went to the woods to get two or three woodpeckers' nests to replace those about the house that the downy woodpecker had maliciously scuttled during the winter. The creek was once more musical but not free from

from the wood-pile with his simple, cheerful strain.

The bluebirds and robins, it appeared, were wiser than the blackbirds and song sparrows, for on the 21st a cold northeast snowstorm, followed by another on the 24th, obliterated most signs of spring. On the morning of the 26th the thermometer registered zero, probably the lowest temperature ever recorded in this locality so late in March. Snow buntings were seen again in the fields. Tree sparrows, redpolls and purple finches were more numerous about the house than ever. Many song sparrows and juncos, and a solitary and distinguished-looking fox-sparrow joined the flock.

Warmer days came at last. The March snow melted rapidly and aided not a little in disintegrating the foundation of firmer snow and ice on which it rested. The creek, smothered and shrunken since the storm of the 21st, again found voice. The ice did not break up and pile

THE CREEK IN SPRING.

Photographs by Mrs. Christman.

drum. All signs indicated the prompt advent of spring and the punctual return of birds.

But a covering of snow and sleet again sealed the fields. The tree sparrows reappeared with the recurring cold, the lonely redpoll found a few friends afield and brought them in, and the pair of purple finches increased to a flock of five or six. The tropic color of the male redpolls and finches seen in the snowy garden redeemed the blustering days.

I heard the first shy warbling of the shore or horned larks on March 4, a week after their first appearance. These birds are common along our upland roads, while the fields are yet covered with snow, running and flying up again and again ahead of passing teams, and tiring of this at last wheeling out into the fields, uttering a single sorrowful note. Sometimes on mild or sunny days one will alight on the roadside wall, or, if the road is unfenced, on some bare stone or clod a rod or two away, warbling meanwhile like the grasshopper sparrow, a fine, furtive strain. They usually disappear in early April.

This lark, while similarly marked, seems lighter colored than the one that I have heard

ice, and the water ran smoothly over the polished surface. It was winter under the evergreens still and everywhere on north slopes, but the snow had disappeared among the oaks and poplars on the south side of Bill Williams' hill, and the dry leaves rustling under our feet sent forth a faint but memorable fragrance. The chipmunk was out, and the woodchuck, too, had felt the change, opened his door, scraped the winter's debris from the threshold and sharpened his teeth and claws on the nearest sapling. We heard the whispered chirp of tree sparrows skulking in the edge of the woods, and the strong voice of the crow proclaiming, or so we thought, a new era, from his lookout on one of the old pines. Then far away the call of a red-winged blackbird as he journeyed up the little branch to the swamp. From the top of the dead ash beyond the railroad, where he at last descended, was a sorry outlook, for thick, submerged ice still covered his domain of bog and flag. Nor was this the only spring bird we heard that day. Later, while we made ready the nests for the bluebirds, now a week or more overdue, and for the highholes, the first song sparrow of the season greeted us

along the alternate levels as in previous years, but gradually wore away. By the last of the month the creek ran free. Every brook and rill contributed its mite to the inspiring commotion. Every nook of the wild valley was filled with the sound, awakening all dormant things to renewed life and vigor. The clay banks, the dark cliffs of slate and gray walls of stratified rock dripped and poured the released fluid. The very smell of the roiled flood refreshed and sharpened the senses. The first freshet of spring, the sap of the earth streaming down the unhealed wounds gouged by the old glaciers.

A number of meadow larks had been seen as early as the 19th, and a bluebird and robin reported in nearby places. As yet we had heard only the blackbird and song sparrow, but when I went out of the house on the morning that the fox-sparrow departed, a bluebird descended, as it were, out of the sky and alighted in the top of the dooryard elm, where its mate had already preceded it, and a robin in the butternut ushered in the belated spring with livelier joy and fresher hope than ever.

WILL W. CHRISTMAN.

S. J. GIBSON, Treasurer.

CORRESPONDENCE.

FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but are not responsible for the views of correspondents. Anonymous communications will not be regarded.

SUBSCRIPTIONS.

Terms: \$3.00 a year; \$1.50 for six months. Single copies, 10 cents. Canadian subscriptions, \$4.00 a year; \$2.00 for six months. Foreign subscriptions, \$4.50 a year; \$2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line (\$2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra.

Special rates for back cover in two or more colors.

A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Advertisements should be in our hands by the Monday morning previous to date of issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

THE NEW YORK CONSERVATION LAW.

ON Monday last, on the eve of opening day for trout fishing in the southern counties of New York State, Governor Dix signed the new conservation law, which went into effect at once. The trout season was the subject of greatest moment everywhere, for April 16 was the opening date until the time was postponed to May 1 by the Governor's pen, thereby overturning the plans of many anglers who were waiting, hand baggage in hand, so to speak, for the coming of the 16th and a little vacation after a long and trying winter.

It was unfortunate that less than one day's notice of the change was given protectors and anglers, and it is probable that scores of persons who would not voluntarily violate the law were fishing for trout on Tuesday in places where news spreads slowly. Indeed, there was a persistent rumor in the Catskills that the new law would not go into effect until next year. On the other hand, it is believed that May 1 is early enough for trout fishing throughout the State, particularly in years like the present one, which has been cold, so that only the destructive bait fishing is likely to prove successful until such time, as the water warms and the trout begin to look to the surface for their food. The minimum length limit for trout remains as before, six inches. It should be seven, as proposed. No fishing license is required and wild bass and trout cannot be sold.

The protector force is increased to 125, which

is a very important change for the better, as it gives thirty additional protectors. Deer shooting is limited to two bucks only for each person in the open season, and as these bucks must have horns at least three inches in length, it is believed that a little more care than has heretofore been employed will govern the actions of greenhorns in the woods.

The same regulations as were incorporated in the Bayne law apply to the sale of foreign game, and to the sale of domestic game raised for the market. There will be no spring shooting, but the bag limit of twenty-five waterfowl for each person or forty for two or more persons shooting in company is still too large.

Heretofore great dissatisfaction has existed among sportsmen who go to other States for the deer shooting, over the restrictions against passing them through New York city. For example, men who shoot two bucks in Maine, and who bring them, properly tagged, out of that State in the open season there with the intention of taking them to their homes in New Jersey or elsewhere, have only been permitted to pass them through New York city by courtesy of the protectors, who have declined to take advantage of their lawful right to seize game that has been bought and paid for in another State, and which the owner must have a moral, if not a legal right, to take with him to his home, even though the season is closed in this State. Under the new law he can do this until New Year's day.

THE CASE OF THE STARLING.

THE Harrisburg correspondent of the Philadelphia Press says:

The game wardens in Pennsylvania have been instructed to keep a sharp watch for flocks of English starlings, and to kill them on sight, in order to prevent the predacious British bird from becoming a pest like its cousin, the sparrow. Starlings, thus far, have appeared only in Bucks and other eastern border counties, not far from New Jersey, and the numbers have not been great.

If this is true, perhaps Secretary Kalbfus will enlighten us as to the grounds for the commission's snap action. The preponderance of testimony on the starling is favorable so far, hence it is a trifle early to establish a dead line around Pennsylvania. The crow we have always had with us, but to-day we are still asking each other for opinions as to the good and evil done by the crow. How, then, can any man or small group of men pass judgment on the starling when its habits here in America are not generally known, and when those few persons who have had opportunities to study it assert stoutly that, if it has some bad habits, it also has good ones.

The brown trout of Europe—the trout of Izaak Walton—has become a fixture in America, but in many places it is still held responsible for real and fancied scarcity of native trout. While there is no denying that every angler prefers brook to brown trout, not a few of them shut their eyes to the fact that there is good fishing for brown trout in streams that have been so much abused that the native trout cannot exist in them. In short, with *farlo* we have trout fishing; without this species there would be none at all in many waters.

We hold no brief for the starling or the brown trout, but we do believe that a conviction should follow, not precede, a fair trial. In the case of trout it is not conclusive to assume that, in waters where both brown and brook trout are planted, and the brown trout thrive

while the brook trout disappear, that the brown trout have eaten the natives. Better evidence is needed, and yet few efforts are made to keep a record of water temperatures in waters in which *fontinalis* do not thrive. It is generally known that the brook trout is to a certain extent cannibalistic, and evidence is given at times to prove that *farlo* has similar depraved tastes. One is condemned because it is an alien, while the sins of the other are forgiven because it is a native. That is human nature, but it is not good logic. The better way is to give alien birds and fishes a trial. And yet, there are the carp and the English sparrow. Because there has been no help for it they have been tried and found wanting, but they seem to thrive on persecution, and will probably remain a thorn in the nation's flesh.

Meanwhile, the starling is increasing so rapidly that it is to be doubted whether it would be possible to exterminate it now.

In another part of this issue is printed a portion of the testimony and arguments presented at the recent hearing in Washington before the Congressional Committee on Forest Reservations and the Protection of Game on the subject of migratory birds. To the proposition the objection most often heard is that it would be unconstitutional, but the scores of endorsements of the plan that are a part of the record of the hearing, but which lack of space forbids quoting at this time, show that men of all walks in life have agreed that, as States have failed properly to protect our migrants, it is only a question of time before the Federal Government must supervise or regulate the shooting of wildfowl.

THE Virginia Audubon Society has started a campaign of education to insure the enactment of a game law in 1914, for a State Game Commission and a hunting license. It is proposed to copy the Alabama game law closely. To this end the treasurer of the society, M. D. Hart, Box 107, Richmond, Va., invites sportsmen, practical farmers, bird lovers and all other persons interested, to send him expressions of opinion for or against the plan. Such letters, Mr. Hart believes, will have great weight with Virginians who do not favor the desired reforms, or who are as yet undecided. Circular letters in which these expressions of opinion will be embodied will be sent broadcast over Virginia.

LAST week we recorded the fact that the New York Legislature had appropriated a sum of money to reimburse the three codifiers of the new fish and game law for the work they performed for the Conservation Commission. Two of the members of that committee are attorneys, and no doubt entitled to compensation for their time and work. The third, John B. Burnham, president of the American Game Protective and Propagation Association, offered his services gratuitously and will not accept one-third of the sum appropriated. We are glad to be able to make this correction of a wrong impression, and to do so voluntarily.

GOVERNOR WILSON has signed the bill recently passed by the New Jersey Legislature, prohibiting the carrying and use in the woods or on the waters of that State of any gun or rifle capable of being fired more than twice without reloading.

YACHTING

Ticks from the Ship's Clock.

The directors of the Lakewood Y. C., of Cleveland, accepted the resignation of Carl Hershing, chairman of the regatta committee, and appointed in his place Oscar Peterson, last year skipper of the syndicate R. boat Lakewood. He has selected four active racing men to serve on committee with him. George Monahan, of the cruisers; Dick Herig, of the 18-footers; Henry Wood, of class R, and Howard Smith, of the catboat division.

Two official association measurers of racing yachts have been elected by the Narragansett Bay Yacht Racing Association. Ernest L. Arnold is the newly chosen association measurer of sail yachts, and Herbert M. C. Skinner is the new association measurer of power boats.

The schooner Karina, owned by Robert E. Todd, which captured the Brenton's Reef cup from the Atlantic, Wilson Marshall, owner, last summer at Newport, is to try against time across the Atlantic this spring and with new sails and good spars and an excellent overhauling it is probable that she will bore holes in the records of the Atlantic, Westward and other craft that ranged across the Atlantic in times past.

Uniform Racing Numbers.

At the last meeting of the Yacht Racing Association of Long Island Sound an amendment to the existing rule was adopted, more clearly defining how numbers and distinguishing marks on racing yachts shall be carried. The present rule, which is that put in force at the Atlantic Coast conference and ratified by all the clubs in that conference, allows an owner to carry his number almost anywhere but on the keel.

The amendment to this rule was suggested by Horace E. Boucher, of the Larchmont Y. C., supported by members of regatta committees who have experienced difficulty in distinguishing the yachts. The rule amends paragraph 7 of rule 5, as follows:

"Racing numbers with class letter or class distinction mark directly above them must be displayed on both sides of the mainsail. They must be painted in dark color and clean cut block type on rectangular pieces of canvas and securely attached to the sail, so that the bottom of the number will be on a horizontal line with the throat of the sail and midway between luff and leach and parallel to the waterline.

"The size of the numbers, letters or distinction marks shall be not less than 15 inches each in height for yachts of 30 feet and under waterline, and not less than 18 inches in height for yachts over 30 feet waterline."

Eight clubs were represented, among those present being President Stuyvesant Wainwright, Secretary James W. Alker, Frank Bowne Jones and Horace E. Boucher.

Narragansett Bay Y. R. A. Schedule.

THERE will be seventeen regattas open to power and sail yachts of all classes. The season opens with the usual Memorial Day race given by the Fall River Y. C.

The first race Saturday, Aug. 17, at the East Greenwich Y. C. The following Monday the yachts will race at the Rhode Island Y. C., Tuesday they will compete at the Edgewood Y. C., Wednesday at the Bristol Y. C., Thursday at the Fall River Y. C., Friday at the Conanicut Y. C. and Saturday at the Newport Y. C.

The season's schedule follows, the races counting for championships:

May 30—Memorial Day, open regatta off Fall River, Mass., Fall River Y. C.

June 1—Open regatta in East Greenwich Bay, East Greenwich Y. C.

June 8—Ladies' day, open regatta, off Edgewood, Edgewood Y. C.

June 15—Ladies' day, open regatta, off Pawtuxet, Rhode Island Y. C.

June 22—Open regatta, off Fall River, Mass., King Philip Boat Club.

June 29—Open regatta, off Bristol, Bristol Y. C.

July 13—Open regatta, off Edgewood, Edgewood Y. C.

July 20—Open regatta, off Washington Park, Washington Park Y. C.

Aug. 3—Open regatta, off Jamestown, Conanicut Y. C.

Race week:

Aug. 17—Open regatta in East Greenwich Bay, East Greenwich Y. C.

Aug. 19—Open regatta, off Pawtuxet, Rhode Island Y. C.

Aug. 20—Open regatta, off Edgewood, Edgewood Y. C.

Aug. 21—Open regatta, off Bristol, Bristol Y. C.

Aug. 22—Open regatta, off Fall River, Mass., Fall River Y. C.

Aug. 23—Open regatta, off Jamestown, Conanicut Y. C.

Aug. 24—Open regatta, off Newport, Newport Y. C.

Sept. 7—Open regatta, off Edgewood, Edgewood Y. C.

A Rubber Non-Sinkable Boat.

THE cuts printed herewith show skeleton hull of two models of a non-sinkable boat. The unusual feature of this craft is that it is built of rubber, hard rubber being used for frames. This is covered with sheets of rubber cloth in such a way as to form independent air compartments, which can be inflated or deflated, according to buoyancy required.

The inventor, Mr. J. Pastorel, of Asbury Park, N. J., claims that the rubber construction will withstand rough usage better than metal or wood because it will act like a hard rubber ball under pressure or shock, instead of splintering or denting. It also is claimed that the boat will be lighter than a craft the same size constructed of other material.

The deck of the boat is indicated at 6, and it is shown as having an opening or cockpit 8 surrounded by a coaming 7. The rudder is shown at 9 at the stern, and it is controlled by means of a tiller 10. A motor 11 having a propeller shaft 12, is used to supply the power to run the boat, but it is obvious that I may use sails or oars if desired.

The framework of the hull is covered inside with sections of rubber cloth 13, which are secured to the keel, the gunwale and the ribs.

These sections are made waterproof and airtight; and the adjacent edges of the sections are cemented together to avoid the possibility of leakage. The outside of the boat, on the other hand, from the lower edge of the gunwales down to the keel 1, is covered with sheets of rubber or other elastic material, shown at 14, and these sheets 14 must be both waterproof and airtight and capable of stretching to a certain extent when the boat is in use. These sheets 13 and 14 form a number of longitudinal air compartments between the ribs 5; and when these air compartments are filled with air, the rubber sheets 14 are forced outward, as shown in Fig. 2, thus greatly increasing the buoyancy of the boat.

Along the gunwales 4 are arranged compartmental tubes 15, also made of sheet rubber or some other material having the same properties; and 16 are valves which are employed to admit air to inflate the compartments formed by the sheets 13 and 14, and the compartments of the tubes 15 as well.

The seats are shown at 17, arranged along the sides of the cockpit 8; and 18 is a floor. The seats 17 may also be in the form of pneumatic cushions inflated by air the same as the air chambers at the sides of the hull.

Figs. 4 and 6 illustrate a boat having a hull made of a somewhat different shape. In this form a keel 19 is connected by means of ribs 21 to longitudinal brace 22 on each side, into which the keel merges at its opposite ends. These longitudinal braces 22 are connected by an upper series of longitudinal ribs 20 to the gunwales 4. The inside of the framework or hull is covered by means of sheets of rubber cloth 23, the same as the sheets of rubber cloth 13 on the other views. These sheets extend from the gunwale down to the keel; and the outside of the boat is covered with sheets of rubber cloth 25, which extend from the keel up to the longitudinal braces 22 on each side. From these braces 22 up to the gunwales 4 extend pieces of sheet rubber or other elastic material 24, the inside and outside sheets forming two series of longitudinal air chambers, one series being arranged above the other on each side of the boat, as plainly appears from Figs. 4 and 6. The sections of sheet rubber 24 and the sections of rubber cloth 23 and 25, are, of course, cemented together along adjacent edges to make the air compartments perfectly airtight; and whenever it is desired to increase the buoyancy of the boat the air is pumped into the upper series of compartments on each side of the boat through valves 25. This will stretch the sections of sheet rubber shown at 24, forcing them out into the dotted-line position shown in Fig. 6, and thus greatly increasing the amount of water displaced and the buoyancy of the boat.

Yachts Change Hands.

THE Hollis Burgess Yacht Agency has sold the 40-foot motor boat Hessian, owned by Commodore James A. Boyd, of the Savin Hill Y. C., to George B. Morrill, of Portland, Me.

The fast Sonder boat Eel, owned by Com-

modore E. W. Clark, of the Philadelphia Corinthian Y. C., to Ernest W. Dutton, of Brookline, Mass.

Motor Boating

Unique Handicapping Devised.

ANOTHER novel system for handicapping motor boats has been suggested in all seriousness, and if the racers were handled honestly the system should result in some good racing and dead heats would be frequent. The boats under this system are to race to a mark and return. They will line up as usual for the start, which is one gun, and naturally on the way out the fastest boat will at once take the lead if everything is working properly. A timer is to be stationed on the turning mark, and when the leader makes the turn he will fire a bomb which will make sufficient noise to be heard at the starting line and throw a puff of smoke into the air which can be seen a long distance. As soon as this gun is fired, every boat in the race will turn and speed back to the finish. The first boat at the turn is to get one prize and the first boat back another. The run out will establish the relative speed of the racers and make the handicap as perfect as possible and, should the race be true, the whole fleet should finish a dead heat.

Whether this system will be tried, remains to be seen. It has its merits, but it also opens the gate to jugglery. An unscrupulous owner could easily slow his engine down on the run out so that he would get more than his proper handicap for the run home. This, however, might be prevented by penalizing those boats that exceed their speed on the home run more than a small percentage or by disqualifying a boat that increases its speed after the turn has been made.

The handicap and time allowance question is causing much worry among those who are interested in motor boat racing. All sorts of schemes have been discussed to figure out a rule that will rate the racing craft equally and not allow some smart designer and builder to take an unfair advantage of the rule, but up to now no fair formula has been devised.

The executive committee of the American Power Boat Association has been busy since the return of President Koerner and the irregular work done at the last meeting is to be straightened out as soon as possible. There will be a meeting of the executive committee on April 23, when amendments to the by-laws and racing rules will be considered. After these have been accepted by the executive committee, a call will be issued for a meeting of the delegates and the proposed amendments will be sent to each delegate with the call. This was not done for the last meeting, although no amendment can be legally made unless a copy of the amendment has been sent to each delegate.

The hydroplane question, the measurement rule, time allowance question and probably the definition of an amateur will then be settled, for the coming season at least.—Sun.

Southern Motor Boat Regatta.

THE three-day regatta of the Jacksonville Power Boat Club was eminently successful, and a number of prominent yachtsmen along the North Atlantic Coast were entrants.

The first day, weather conditions were very bad. Nevertheless, although starting a little late, the program was carried out as originally scheduled. The first race was a 20-mile event for 24-footers. This was won by Vita, Jr., owned and steered by Commodore J. Stuart Blackton, of the Atlantic Y. C. His only competitors, Bug and Carolina II., were put out of the running through accident before the finish, Bug having broken a blade of her propeller, while Caroline II. got a pretty serious dent

through collision with a log or some other floating obstacle.

The second event—the 20-mile handicap for boats under a record of 25 miles or under—found as starters Impudence, Spray, Ruth K., Adelaide, Seminole, Vita, Diana and Jane S. This resulted in a tie between Vita and Jane S., with Ruth K. a close third. This event was run off the next day, resulting in a victory for Vita by a very small margin.

On the second day, the 20-mile "free-for-all" boats under 40 feet was won by Diana, owned by D. H. McMillan. Vita and Vita, Jr., won the next event, the 13 1-3 mile relay race. In the double-header for boats of the 26- and 46-foot classes, Vita, Jr., beat Thelma after a hard race, near the finish of which Thelma broke down.

On the third day, the first race was the 20-foot handicap for boats of the 22-mile class. Jane S. won this event, Vita second and Diana third. The next race was an event for Florida-built boats only; distance ten miles. Diana was very much superior to the other entries in this event, Seminole finishing second and Spray third. The special hydroplane race came next and was won by Vita with little effort. The last event of the day and the regatta was the open event for all classes. W. H. Snyder's Seminole won the event, with Diana second and Jane S. third. After the races, a banquet was given by the Jacksonville Power Boat Club, at which the prizes were presented.

The three days' races went off without a hitch, showing excellent management on the part of the regatta committee—L. A. Mitchell, Myron Howard, Charles A. Clarke and George E. Sheppard; handicapper and starter, A. T. Stevens; scorer, J. F. Lane, and last, but not least, the energetic and progressive secretary of the club, Francis P. L'Engle.

Canoeing

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Western Division.—S. F. Durga, De Kalb, Ill., by F. B. Huntington; Elmer D. Becker, 1439 Winona avenue, Chicago, Ill., by Norman G. Stockdale; Harold G. Sperling, 1325 Winnetac avenue, Chicago, Ill., by A. W. Friese.

NEW MEMBERS ELECTED.

Atlantic Division.—6383, George E. Esselborn, 2342 Webster avenue, New York, N. Y.; 6384, Bertram M. H. Enemier, 125 Manhattan street, New York, N. Y.; 6386, Harold B. R. Laing, 225 Marble Hill avenue, Kingsbridge, N. Y.; 6387, William J. Marsh, 109 West 225th street, Kingsbridge, N. Y.

Central Division.—6385, John H. Teach, 88 Pascal, Buffalo, N. Y.

FISHING IN AUSTRALIA.

SOME fair-sized fish have been caught in the Goodrodigbee River, at Brindabella. recently. Mr. Henderson, of Sydney, says a Sydney paper, captured a very fine 4-pound fish at Bramina Creek, a couple of miles below the homestead, and on another occasion caught two weighing three pounds each in the dam. His average during the trip is about twenty per day. Dr. A. J. Brady and Dr. Marshall have been catching a lot of trout, and enjoying excellent sport. The river is in first-rate condition, and the favorite flies just now are the Coch-y-bondhu and coachman.

In spite of very unfavorable conditions, southerly weather and a lot of wind, very fair sport was enjoyed by Mr. H. K. Anderson at a part of the Queanbeyan River, situated about eighteen miles from Captain's Flat, and about five miles from Gingerra, where he joined W. Lomas, and A. Mayoh, on Dec. 23, and remained until Dec. 26, in a camp prepared for them by Mr. W. Bollard, himself a very keen

angler. On Dec. 22, snow fell. Christmas Day was the best fishing day of the trip, and some very nice trout, largest 5¼ pounds, were caught by Messrs. Bollard and Anderson, the Zulu being the most successful fly tried.

The river is simply alive with natural food—Crayfish, shrimps, caddis, frogs, tadpoles, etc.—and every fish opened was found to contain earthworms, which can be found anywhere in the river bed on turning over the stones. The river is very low at this point. Snags are so plentiful and water lilies and other weeds so thick that the odds are nearly 50 to 1 on a fish over five or six pounds, as it is, of course, impossible to hold him with orthodox fly fisherman's gear, which is, we are pleased to say, now employed by the majority of the local anglers, many of whom are becoming adepts in the use of the fly-rod. In describing the great size to which the fish in the Queanbeyan River grow, Mr. Bollard states that during last winter, in the Sherlock and Ballinafad, two small gravelly creeks running into the river, he saw trout of such dimensions as to be positively astounding—reaching well over 30 inches in length, with proportionate depth, in some cases working their way over the shallows, with nearly half their body out of the water, making up to some well-known spawning bed. Mr. Bollard's largest trout from the Queanbeyan River weighed over 8¼ pounds, but he assured the visitors that he has never caught a trout going anywhere near the size of the great rainbows which he saw last winter.

In every shallow, and in the creeks running into the river, traces of last season's "redds" are still to be seen, and the number of small trout which take refuge in every sheltered nook is really surprising—there are great shoals of this year's fry, darting about in search of food, and but for the cannibalistic propensities of *Salmo irideus* the Queanbeyan River would very soon be overstocked. A local angler fishing with a worm close above the crossing of the Michelago-road, recently, caught eight splendid trout between four pounds and six pounds in about an hour—he uses a sapling for a rod, for convenience in throwing out the line, but as a fish is hooked he "yanks" him out hand over hand. Fortunately sporting methods are rapidly gaining popularity, and this primitive style is now held up to ridicule by those who have become converts to the rod and fly. These, too, are the best water-bailiffs—they are keenly alive to the damage done by poachers, and are down on illegal fishing for trout, like a hawk on her prey.

Kennebec

CANVAS COVERED CANOES

Prepare now for hot weather days. Spend your summer outings and vacation canoeing. Send for illustrated catalog showing paddling, sailing and motor canoes. Investigate our special type of spousons (air chambers). Kennebec Canoes are unequalled in design, finish, lightness and strength. Prices reasonable.

KENNEBEC CANOE CO. - 16 R. R. Square, Waterville, Maine

ARCTIC HUNTING

For charter, ship fully equipped, specially built for ice work, for one or more months' cruise in Greenland or Spitzbergen and Franz Josef's Land waters, will accommodate party of 5 to 15. Polar bear, reindeer, fox, seal, walrus, Arctic birds, fishing.

ARCTIC, 1004 Oliver Bldg., Boston, Mass.

 Sept. 18-19.—Bloomington, Ill.—McLean County G. C. C. A. McDermand, Pres.

DRIVERS AND TWISTERS.

The annual championship shoot for members of New York Athletic Club will be held at Travers Island, Saturday, April 27.

Ohio State shoot is scheduled for June 4 to 7 inclusive, under auspices of N. C. R. Gun Club, Toledo. Program will be ready in a few days.

During the summer the sliding handicap shoots at Bergen Beach Gun Club will be discontinued, and instead, practice shoots will be held every Saturday afternoon.

Says Secretary H. F. Wilkinson: "The Roanoke Gun Club will hold an all-day shoot on July 4, which, however, will not be registered with the Interstate Association."

North Caldwell (N. J.) Gun Club will hold a shoot to-day, beginning at 1 P. M., and on May 4, the third shoot for Frank Hall trophy will be banded here. William Kussman is Secretary of the club, and will gladly give any information desired.

A ten-man team match will be shot to-day between Montclair Gun Club and Somerville Country Club, at Somerville. Montclair has among its stars, C. W. Billings, also of N. Y. A. C.; Geo. Batten, Louis Colquit, Geo. W. Boxall, Stanley Severel, J. C. Atwater, Frank Barnes, Edward Winslow, C. L. Bush and I. Seymour Crane.

The prediction has been made that there will be more shooting around Cincinnati this season than for a number of years, and the club officers are planning to do their share toward the fulfillment of this prophecy.

Things look encouraging for trapshooting in Terre Haute, Ind. The new house of the Terre Haute Rod and Gun Club will be formally opened with a tournament, date of which has not yet been set.

Teddy Doremus, Secretary, Du Pont Gun Club, has sent out a very nifty invitation, in which appears the following information: "You and your friends are cordially invited to witness the race for the E. C. cup, which represents the inanimate target championship of the world, between Geo. L. Lyon, of Durham, N. C., holder, and Lester S. German, of Aberdeen, Md., challenger, on the grounds of the Du Pont Gun Club, Wilmington, Del., May 4, and also to take part in a 100-target race.

Northern Kentucky Gun Club.

THINGS looked very lively and old-time-like at the grounds on April 14, sixteen shooters taking their places on the firing line during the afternoon and keeping the trap boys busy until nearly dark.

The weather was delightful, a trifle unseasonably warm, but shooters and spectators enjoyed being able to sit out of doors again, and made no complaint of the heat. The wind was variable, and at times got the boys guessing on the targets, but this only made the contests more interesting, and the good scores were all the more creditable.

The much-advertised team match between Hammerschmidt and Johnson, and Dameron and Irwin, proved an easy victory for the latter team, which finished with 22 targets to the good. The teams will shoot a return match on the Cincinnati Gun Club's grounds in the near future, and the result will not be quite so one-sided, for neither Hammerschmidt nor Johnson were in their usual form to-day.

There was a close race between the professionals, German and Le Compte going up against Squier and Young. The latter lost the match by 4 targets. After the first round, the former team went to the front and kept there to the end.

There was a three-cornered match between Medico, Luverne (Gould) and Walker, at 25 targets, handicap of added targets, for a colored picture of the famous setter Count Gladstone. The match resulted in a tie, as follows: Medico (3) 25, Luverne (5) 25, Walker (6) 25. In the shoot-off, no handicap, Medico won with a straight score; Luverne 23, and Walker 19.

The friendly rivalry between Irwin and Johnson resulted in a match at 25 targets, which was won by the latter on a score of 23 to 20. They will try conclusions at the next shoot.

Luverne and J. B. C. also settled a friendly dispute in a match at 50 targets, the former getting the best of it on a score of 42 to 36.

The afternoon's sport was brought to an end with a couple of events at doubles. Out of 24 pairs, German scored 37, which was high; Le Compte and Squier each

scored 31; Hammerschmidt 33. Irwin shot at 10 pairs and scored 9.

The club will give the first of its monthly shoots on April 21, using the N. C. R. Gun Club system, which has given good satisfaction in Dayton and attracted a large number of shooters. It is hoped that the attendance here will prove the wisdom of the step. The club wants to please the shooters first, last and all the time, and the officers are working to that end to the best of their ability.

Table with columns: Events, Targets, L Gerinan, C A Young, L J Squier, C O Le Compte, Ike, Turner, Hack, Williams, Walker, Hammerschmidt, Dameron, Johnson, Irwin, J B C, Medico, Luverne. Includes Match, 100 targets and Team match, 100 targets.

Boston A. A.

BOSTON, Mass., April 13.—The conditions were excellent at the regular shoot of the Boston A. A. R. A. Faye won leg on Barbey trophy with 49; F. H. Richards won take-home trophy with a straight score with the aid of an allowance of 10; The J. B. Hunter trophy was tied for by F. H. Richards, S. A. Ellis and J. E. Lynch on full scores of 100. Scores:

Record on the Barbey trophy: R A Faye, S A Ellis, J L Snow, J E Lynch, *R Burns, *E A Staples, C B Tucker, *C F Marden, W B Farmer, F H Richards, O R Dickey, *P E Osborne, C B Clark, *W F Clarke. Includes Take-home trophy and Record on J. B. Hunter trophy.

Atglen Gun Club.

ATGLEN, Pa., April 11.—The day was perfect, except a stiff breeze. Some excellent shooting was done. The attendance was most excellent, and the shoot was one of the nicest ever pulled off in this "neck of the woods."

Table with columns: Shot at, Broke, B Hull, J Stevens, H Johnstone, V Williams, W Benner, J Englert, C O Williams, M Rose, G Cleveland, C Newcomb, M F Morris, E Stockton, Professionals: H Worthington, L R Lewis, N Apgar, E Holloway, J F Anthony, F P Jebb, H H Sloan, J Martin, F Coleman, H Minker, R Pyle, E M Lensering, W Fiels, J Conner, J Witmer, H H Stevens, W Joslyn.

The Du Pont Gun Club.

WILMINGTON, Del., April 14.—Breaking 97 out of his 100 targets, in the match for the State championship, W. S. Colfax successfully defended the title and won from A. B. Richardson, of Dover, 97 to 93. Despite the unfavorable weather conditions, Colfax and Richardson shot in championship form. The men shot by rounds as follows:

Table with columns: Colfax, Richardson. Scores: 23 25 24 24-97, 23 23 23 24-93.

In the double-target events Victor du Pont and H. H. Lukens were high with 25 targets. The competitors shot in five squads. Victor du Pont broke 92 of his 100, and J. G. Kelly, 93.

Class A was won by D. J. Dougherty, 24 out of 25. Class B by N. K. Smith, 23. Class C by William Coyne, 24, and Class D by R. S. Robinson, 19.

R. S. Wood won the Class D challenge cup from D. A. Grier, by a score of 31 out of 50. Grier, the holder, broke 25.

The scores were: T. E. Doremus 17, W. A. Joslyn 21, L. Mathewson 15, A. B. Richardson 23, W. Edmanson 21, E. du Pont 22, L. Moore 12, J. G. Highfield 22, E. A. W. Everett 22, J. A. McKelvey 16, J. S. Hossinger 15, J. B. Grier 9, C. Lednum 16, J. W. Matthews 17, W. S. Colfax, Jr., 23, A. F. Hickman 21, H. H. Lukens 19, W. F. Jensen 10, L. H. Hoopes, Jr., 14, N. K. Smith 22, T. Martin 19, A. Bird 19, W. M. Hammond 20, T. W. Mathewson 14, W. J. Highfield 13, L. L. Jarrel 15, W. G. Wood 19, W. Coyne 24, R. S. Wood 18, G. Shaffer 18, P. D. Guest 19, J. W. Anderson, Jr., 20, R. S. Robinson 19, W. A. Casey 16, L. C. Lyon 22, Victor du Pont 19, H. P. Carlton 22, E. E. du Pont 20, E. A. Dodds 12, A. Barker 3, S. G. David 18, N. Jackson 19, J. T. Skelly 23, G. H. South 19, C. H. Simon 13, Dr. Patterson 19, Dr. H. Betts 14, H. D. Black 8, L. Beatson 15, W. G. Porter 9, Z. H. Lofland 14, D. J. Dougherty 24, J. Spring 12, W. Winchester 21, W. Tomlinson 21, A. F. du Pont 18.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., April 13.—Conditions to-day were of the "made-to-order" sort, and the contestants were in such good form that 50yd. targets were made to look easy to the bystander. Noteworthy scores were those of Parry (96) and Moller (95) in the special race for spoons. Each posted two straights, Edmanson one.

Shooting for the cup in strings of 20 was under a fixed distance handicap the first time up, and thereafter one's score in any event will indicate his distance in the next, except that 16yds. will be the minimum.

Practice: Shot at, Broke, Parry, Moller, Edmanson, Dixon, *Hymer, Britton. Includes Shot at, Broke, Neighbors, Folland, Golden, Lewis, Blessing.

Scores in the cup and spoon matches were as follows: No. 1 was the cup match, 40 targets; No. 2, the spoon event, 100 targets:

Events: 1 2, Parry, Moller, Edmanson, Dixon, *Hymer, Britton. Includes Events: 1 2, Neighbors, Folland, Golden, Lewis, Blessing.

Registered Tournaments.

THE following tournaments have been registered with the Interstate Association during the week ending April 13:

- May 24.—Stratford, Can.—Pastime G. C. Wm. Boles, Sec.
June 28.—Toledo, O.—West Toledo G. C. Geo. Volk, Sec'y.
July 17-18.—Wilmington, N. C.—North Carolina State tournament, under auspices of New Hanover G. C. J. H. Dreher, Sec'y.
July 17-18.—Sea Girt, N. J.—New Jersey State R. A. G. C. H. G. Aspell, Sec'y.
July 20.—N. Lancaster, Mass.—Clinton G. C. W. J. Tedford, Sec'y.
July 30.—Spooner (Minn.) G. C. M. D. Weeks, Sec'y.
July 31.—Marion (Ia.) G. C. A. C. Maxwell, Sec'y.
Aug. 6.—Durant (Ia.) G. C. Hugo Boldt, Sec'y.
Aug. 7.—Madrid (N. Y.) G. C. J. E. Thompson, Pres.
Aug. 8.—Livermore (Ia.) G. C. J. H. Zigrang, Sec'y.
Aug. 12-13.—Fayette, Mo.—Afro-American Trapshooters' League Grand Afro-American Handicap. T. H. Cohron, Sec'y.

ELMER E. SHANER, Sec'y-Treas.

Chesapeake Gun Club.

THE members of the Chesapeake City Gun Club held their monthly shoot at Toy's Park, April 6. H. Everett won the silver tablespoon, breaking 23 out of 25, which, with his handicap of 9, gave him 32, while "Cliff" Hoover, of baseball fame, broke 25 straight, his handicap of 5 making 30. Cliff won the silver dessert spoon.

Table with columns: G N Bennett, W Stevens, H Everett, C Ellison, H Kibler, Chas Stevens, T Rasner, M Toy, C Hoover. Includes Wm Arrants, N Bouchelle, W A Brown, H Howard, J Bouchelle, J Harris, R H Rees, G Bakeoven, V Buckworth.

J. LUPFER, Sec'y.

New York Athletic Club.

TRAVERS ISLAND, N. Y. April 13.—C. W. Billings offered decided encouragement to-day in the possibilities of the American trap team at Olympic games. In the gun-below-elbow style he broke, cleanly, 93 out of 100 targets. High gun trophy in the regular program went to D. F. McMahon with 84 breaks.

April cup, handicap, 25 targets: A. E. Ranney (2) 24; G. F. Pelham (3) 24; D. F. McMahon (2) 22; R. R. Debacher (5) 22; T. Lenane (5) 22; C. W. Billings (1) 20; W. B. Ogden, (1) 19; J. Meyer (0) 18; A. P. Walker (7) 16.

Shoot-off of tie: A. E. Ranney (2) 24; G. F. Pelham (3) 21.

Spring cup, handicap, 25 targets: J. I. Brandenburg (6) 25; G. M. Thomson (3) 25; T. Lenane (5) 25; D. F. McMahon (2) 24; W. B. Ogden (1) 24; A. E. Ranney (1) 23; G. F. Pelham (3) 21; R. R. Debacher (5) 20; C. W. Billings (1) 9; A. P. Walker (6) 16; J. Meyer (0) 8.

Shoot-off of tie: J. I. Brandenburg (5) 25; G. M. Thomson (3) 24; T. Lenane (5) 24.

President's cup, handicap, 25 targets: J. I. Brandenburg (5) 25; D. F. McMahon (2) 25; G. M. Thomson (3) 24; T. Lenane (5) 24; C. W. Billings (1) 22; G. F. Pelham (3) 22; A. E. Ranney (1) 21; W. B. Ogden (1) 21; R. R. Debacher (5) 16; A. P. Walker (6) 15.

Shoot-off of tie: J. I. Brandenburg (5) 22; D. F. McMahon (2) 21.

Brandenburg cup, handicap, 25 targets: G. F. Pelham (3) 23; T. Lenane (5) 22; W. B. Ogden (1) 22; J. I. Brandenburg (4) 21; G. M. Thomson (3) 21; D. F. McMahon (2) 21; C. W. Billings (1) 20; A. E. Ranney (1) 20; A. P. Walker (6) 20; R. R. Debacher (5) 15.

Billings cup, handicap, 25 targets (Olympic rules, gun below the elbow and two shots): C. W. Billings (1) 23; R. R. Debacher (5) 22; A. E. Ranney (1) 22; G. M. Thomson (3) 21; J. I. Brandenburg (4) 20; D. F. McMahon (2) 7.

Won by R. R. Debacher; C. W. Billings not a competitor. Shoot-off of tie: R. R. Debacher (5) 21; A. E. Ranney (1) 20.

Take home cup, handicap, 25 targets: T. Lenane (5) 24; D. F. McMahon (2) 24; A. P. Walker (6) 24; C. W. Billings (1) 23; R. R. Debacher (5) 23; G. F. Pelham (2) 23; G. M. Thomson (3) 23; W. R. Ogden (1) 22; W. R. Ogden (1) 22; J. I. Brandenburg (4) 21; A. E. Ranney (1) 17.

Shoot-off of tie: T. Lenane (5) 25; D. F. McMahon (2) 23; A. P. Walker (6) 23.

High gun trophy, scratch, 100 targets: D. F. McMahon 84, A. E. Ranney 83, W. B. Ogden 82, C. W. Billings 77, T. Lenane 76, G. F. Pelham 78, R. R. Debacher 53, A. P. Walker 39.

Crescent Gun Club.

WHITE HOUSE, N. J., April 13.—The Crescent Gun Club pulled off a most successful shoot here to-day. Twenty shooters from Somerset and Hunterdon counties were on hand to win the championship of these two counties, and 3,500 targets were thrown during the afternoon, and considering the day, several creditable scores were made. Besides the sweeps, the special features were the individual and double championship, open to shooters of Hunterdon and Somerset county. Such a hard fight for shooting honors has never taken place on these grounds. Up to the last event at least seven gunners had a chance to win the individual honors. R. C. Stryker, of the local club, pulled out ahead with 90. Ed. Wyckoff, of East Millstone, was right at his heels, followed by Harry Gano, of Pattenburg, and Thos. Howard of Peapack.

In the championship at doubles, ten pairs, Markley Holjos, of Pattenburg; E. Tingley, of North Plainfield; E. Gardner, of Bernardsville, and R. C. Stryker, of White House, were the contenders. Holjos and Tingley slipped up in the last half, and Stryker tied Gardner with 14. In the Shoot-off Stryker broke 14 to Gardner's 13.

The two cups will be put up for open competition within forty days.

The scores:

Reg. Dbls.	Reg. Dbls.
E Fingley 94	H Stockton 90
R Stryker 111	F Hill 28
E Gardner 88	J Wermeta 88
E Wilson 88	E Gary 95
T Howard 95	F Jackson 69
M Holjies 54	E Wyckoff 100
H Gano 97	G Cramer 54
Harley Gano .. 67	D Landon 69
H Miller 73	M Appgar 16
B Lindsley 94	J. Crammer, Jr. 66

Shoot-off, ten pairs:
Stryker 14 Gardner 12
R. C. STRYKER.

Fairmont Gun Club.

FAIRMONT, W. Va., April 13.—The regular shoot of the Fairmont Gun Club was held at Westchester, W. Va., to-day.

Arrangements have been made to call in the E. C. cup and shoot it in open competition before the West Virginia State shoot. This will take place on May 14. The competition is open to all, both amateurs and professionals, and we hope to have an entry of at least 25. Out of town shooters had better write to the Fairmont Gun Club and secure rooms for the State shoot.

Programs of the shoot will be mailed about April 30, showing \$500 added money.

Targets:	50 25p	Targets:	50 25p
W Wiedebusch....	41 44	G M Lilley.....	32
E H Taylor.....	48 40	W E Johnson....	34
J W Hawkins.....	40 34	J M Rapp.....	20
		Ed. H. TAYLOR, Sec'y.	

Official Averages for 1912.

THE following has been issued by the Interstate Association:
The yearly averages for amateurs will be computed as follows:

First—The original contest will be based on 1200 or more single targets shot from the 16yd. mark at registered tournaments held prior to Oct. 1, 1912, and apply to all amateurs who have made an average of not less than 88 per cent. at said number of targets.

Second—All amateurs who qualify in the original contest must further contest at 800 single targets shot from the 16yd. mark at the Post-Season tournament.

Third—All amateurs who contest at the Post-Season tournament will start on an equal footing in the yearly averages, regardless of the percentages made by them in the original qualifying contest.

The yearly averages for professionals will be computed as follows:

Not less than 2000 single targets must be shot from the 16yd. mark, and this only at the Southern Handicap, Grand American Handicap, Eastern Handicap, Western Handicap, Pacific Coast Handicap, and Post-Season tour-

naments given by the Interstate Association.

The Post-Season tournament will be given on Oct. 15-18. All amateurs who have on Oct. 1 made an average of not less than 88 per cent. on 1,200 or more single targets shot from the 16yd. mark at registered tournaments held in 1912, will be eligible to take part in the Post-Season tournament.

Hyde Park Gun Club.

HYDE PARK, April 13.—West was high gun here to-day with 64 out of 75. Leever followed with 48 out of 50. The scores:

Events:	1	2	3	4	Total
Targets:	15	15	20	25	64

Frohliger	21	21

**REMINGTON
UMC**

AUTOLOADING SHOTGUN

Five shots—Three to get the Cripples. Each separate shot under absolute control of the trigger finger. The action is simple, powerful and sure. Part of the recoil, ordinarily absorbed by the shooter's shoulder, is used to operate the mechanism. Not one single ounce of muzzle energy is lost. Handles the heaviest loads with least punishment. Handles all loads with equal ease and safety, and—a solid wall of steel stands between the shooter's face and the firing chamber always. As a repeater it is better balanced—quicker pointing—faster. As a single-loader it is simpler to operate. The simple completeness of the take-down permits ready cleaning of the barrel from the breech. The take-down screw is large and easily handled. Taken down the *Remington-UMC* Autoloading Shotgun measures 32 inches over all. Costs a little more because it is worth a little more.

Remington-UMC—the perfect shooting combination

L. R. HULEN, Sec'y.

Manhasset Bay Y. C.

PORT WASHINGTON, L. I., April 13.—The invitation shoot here to-day was one of the most successful in the club's history. The attendance was large, with New York Athletic, Larchmont and Westchester Country Club conspicuous by their absence. Every other important club within easy traveling radius had representation. N. M. Graham, of Oakland Golf Club, and R. B. Pell, of Manhasset Bay Y. C., tied for winners, each with a full score. Mr. Graham shot from a 25-bird handicap, while Mr. Pell had a start of 20. In actual breaks, H. M. Brigham, of Crescent A. C., was high with 92, followed by H. L. Hoyt, Jr., and W. S. Silkworth, each with 90. The day was good for target shooting with very little wind.

Invitation shoot, handicap, 100 targets: N. M. Graham (25) 100; R. B. Pell (20) 100; D. V. Smith (25) 97; H. L. Hoyt, Jr., (6) 96; W. L. Silkworth (6) 96; J. P. Fairchild (16) 95; J. W. Alker (16) 95; H. M. Brigham (4) 96; O. Kepler (16) 94; C. M. Gould (20) 93; J. H. Vanderveer (4) 93; A. Pierce (25) 93; H. T. Lee (6) 92; J. F. James (8) 92; Clinton R. James (8) 91; C. W. Berner (16) 91; G. E. Brower (20) 90; S. Isaacs (10) 90; J. W. Ellison (20) 90; F. S. Hyatt (12) 90; J. H. Hendrickson (4) 90; I. O. O'Rourke (22) 88; D. Provost (18) 88; C. H. Foster (6) 88; P. Von Boeckman (6) 87; C. S. Gunther (6) 86; F. Long (6) 86; A. V. Suydam (8) 86; B. D. Loomis (16) 86; E. C. Bell (12) 86; J. C. Meyer (15) 85; John Martin (4) 85; H. O. Allyn (8) 84; R. Howland (25) 84; G. A. Fairfield (25) 83; W. Simonson (6) 83; H. Funk (20) 82; S. O. Richards (25) 78; H. F. Fessenden (25) 77; B. F. Parsons, Jr., (20) 75; Dr. Cleghorn (20) 75.

Professional shoot, 100 targets, scratch: H. Welles 93; Captain Doe 80, C. Von Lengerke 69, T. A. Davis 69, and H. F. Langhorn 63.

Mt. Airy Gun Club.

MT. AIRY, Md., April 8.—Tournament was shot under difficult conditions. The weather was fair, with a gale from the north. Scores follow:

Shot at. Broke		Shot at. Broke	
Ridgley	150 99	Crobert	150 107
Brown	150 92	Wood	150 81

WINCHESTER

Loaded Shotgun Shells "LEADER"

You can't buy a safer, faster, harder, a more even shooting or a better keeping load than Winchester "Leader" smokeless powder shotgun shells. For field, fowl or trap shooting, they are in a class by themselves, and give entire satisfaction in any make of shotgun. The results they give are due to their patented construction and the careful and exact manner in which they are loaded. The patented Corrugated Head used on Winchester shells is an invaluable feature. It absorbs the shock of the powder explosion and takes the strain from the paper tube instead of localizing it, as the old English method of metal lining does. That's why "Leader" shells are stronger and less apt to cut off at the mouth of the cup than shells made according to English ideas of long ago.

The Red Shell With the Patented Corrugated Head

Cleveland Gun Club.

CLEVELAND, O., April 12.—The Cleveland Gun Club tournament, held Wednesday April 10, was one of the nicest little shoots ever held on the club grounds, twenty-seven shooters taking part in the same, and some record-breaking scores being made by both professionals and amateurs. The weather conditions were just right for the sport. The shoot was the Washington's Birthday tournament, which was to be held Feb. 22, but was postponed owing to the severe weather conditions.

J. E. Doolittle was the amateur daddy of the day with the fine score of 179 out of 190, but was pushed hard by R. W. Ewalt, of Youngstown, who was just 3 birds out of the way with a score of 176, and Hogen with 174. All three were high gun winners. J. R. Taylor looked after the professional end of the game, and made a score of 186 out of 190. Mr. Clancy was not high gun, but he did some great shooting in the last end of the tournament, going better than 100 straight. Pop Heikes was also going some, dropping only 7 birds in 190.

The out-of-town shooters were Ewalt, Sloat, Witmer, Hansen, Knapp, Mowry, Barr and Harris, and each one of them left an order for dinner for the tournament on May 30, which will be 100 strong on that day.

Mr. Krupp, the manager of the Sandusky Gun Club, was with us, but not just up to his old time record, owing to duck shooting, which he has been doing. He says ducks and bluerocks don't look alike over a man's gun, and then again the trap houses of the Cleveland Club are not as high as the trap houses of the Sandusky Club. But Ira will get on to it after he finds the spot. Scores:

Shot at. Broke		Shot at. Broke	
Doolittle	190 179	Hansen	190 144
Ewalt	190 176	Krupp	190 134
Hogen	190 174	Mowry	150 126
Archer	190 169	Ban	150 126

Roanoke Gun Club.

ROANOKE, Va., April 14.—The regular weekly shoot of the Roanoke Gun Club was held Saturday afternoon on the club grounds, with a large and enthusiastic attendance. A high wind, with occasional showers of rain, made shooting somewhat difficult, the shooters' scores suffering accordingly. It was the pleasure of the club to have with us E. H. Storr, who we trust will take occasion to visit us often during the season. The club is always glad to welcome the representatives of the different powder and shell companies, and we hope a number of them will visit us during the year.

The weekly prizes were won by the following:
Scratch Class—First, P. T. Jamison; second a tie between A. M. Shepherd and S. S. Scholl.
Class A—First, H. C. Elliott; second, J. B. Cumbie.
Class B—First, C. E. Armstrong; second, B. J. Fishburne.
Class C—First, C. C. Blankenship.

The following scores were made, all shooting at 50 targets, except Storr, who shot at 100: Jamison 49, Shepherd 45, Scholl 45, Howard 44, Watson 44, *Storr 87, Hunt 43, Bloxton 43, Armstrong 41, M. S. Battle 41, Elliott 40, Walters 38, J. B. Cumbie 38, Wilkinson 38, Fishburne 38, E. W. Poindexter 37, Blankenship 37, Price 37, Jones 36, Hooper 36, J. W. Poindexter 36, Bringman 35, L. G. Richards 34, Quinn 34, Moore 32, Boyd 32, Mahoney 31, Dyer 31, Dalby 30, Reamer 30, MacFerrin 30, D. W. Richards 28, Fisher 28, Lightner 19, Jennings 16.

Bushong, official referee. H. F. WILKINSON, Sec'y.
*Professional.

The Southern Handicap.

THE Interstate Association's seventh Southern Handicap tournament will be held at Columbus, Ga., May 14, 15 and 16, under the auspices of the Columbus Gun Club.

Columbus has for many years been known as the “Lowell of the South,” and the great cotton mills in the city now operate over a quarter of a million spindles in the manufacture of the staple. Its industries, however, are not confined to the manufacture of cotton, but include about ten large fertilizer plants, some of the largest iron works in the South, and many other important manufacturing enterprises.

Situated as it is at the head of navigation of the Chattahoochee River, it enjoys uninterrupted steamboat communication with the Gulf of Mexico over a route full of scenic beauty. North of and within the limits of the city are the falls of the Chattahoochee, and these provide the power which operates, through electrical development, nearly all of the factories of the city, besides furnishing the power necessary to operate the street car service, domestic and city lighting, etc.

Seven lines of railroads radiate from the city of Columbus, thus furnishing ample facilities for freight and passenger traffic and insuring low rates of freight on the commodities used locally.

In the city proper and within two miles of the center of the city, there are over 40,000 souls, all reached by the first-class electric car lines. There are many points

of interest in and around the city, and these, with the many large manufacturing plants, will afford the sight-seer a pleasant time in their inspection.

Columbus combines with its great industries and commercial activities, an innate love of clean, healthful sports. It had the pleasure of holding the fifth Southern Handicap in 1910, and enjoyed the distinction of having the largest entry list in that event of any of the Southern handicaps yet held. Its record of that year bids fair to be considerably eclipsed in the present year.

The Columbus Gun Club, under whose auspices the 1912 Southern Handicap will be held, is one of the oldest and liveliest of the Southern gun clubs. Its membership is composed of the best business and professional men of the city, and the members are enthusiasts in the trapshooting world, and numbers of them participate in similar events in different parts of the country.

The grounds of the Columbus Gun Club are situated at the foot of the main street of the city, and are reached by the cars from the center of the same in four or five minutes. They are equipped with every convenience, and with the knowledge acquired during the 1910 Handicap, the coming event promises to be as near perfection as a great tournament can be. Street cars pass all of the leading hotels at short intervals, affording rapid transfer to the grounds of the club.

The Columbus Gun Club extends to its friends and to sportsmen generally a most cordial invitation to attend the Southern Handicap of 1912, at Columbus, on May 14-16, and promises a pleasant time while in the city.

Mulberry Grove Gun Club.

THE Mulberry Grove Gun Club entertained two former members, Mr. and Mrs. J. W. Ingram, on April 10, and while they have not kept in practice, yet went away with the best score. Mrs. Ingram was greatly handicapped with a strange and larger gauge gun, but made a creditable score, getting 12 out of 25.

Weather conditions were ideal for the first time in the history of the club. But the disagreeable weather has so far failed to have any effect on the attendance of the members, a majority of them shooting each week, and sometimes wading snowdrifts from one to three feet deep in order to get to the grounds.

Weekly shoots for the handsome Du Pont trophy have been regularly carried on throughout the winter, a complete account of which will appear in a later issue of FOREST AND STREAM.

To-day's scores at 25 targets each, were: Mrs. J. W. Ingram 12, J. W. Ingram 17, F. E. Martin 16, Dr. Poindexter 13, O. T. Davis 12, Ed. Hartley 12.

F. E. MARTIN.

Queens C. C.

QUEENS, L. I., April 13.—Two interesting stake events and many practice shoots were decided over the traps to-day at Queens, L. I. The most important event was a shoot for the Chapman cup at 50 targets. The event was won by B. H. Nathaway with a total of 43. The Daley trophy was won by J. M. Kissam.

Analostan Gun Club.

WASHINGTON, D. C., April 14.—The members of the Analostan Gun Club had a very bad afternoon to shoot yesterday. The day was dark and cold and a strong cross-wind made the shooting extremely difficult. Mr. J. A. Anderson was a visitor, and did some good shooting. Scores:

	Shot at.	Broke.	Doubles.	Shot at.	Broke.
Huseman	135	87	24	11	
Ford	125	109	
Green	110	70	
Anderson	100	89	22	17	
Peck	100	86	22	13	
Monroe	100	83	48	30	
Parsons	85	68	36	25	
Barber	85	52	38	23	
Kirkpatrick	80	59	44	26	
George	80	58	
Lattrell	80	53	44	25	
Bohnke	50	41	
C. S. Wilson	50	39	
M. Taylor	50	38	
Barnes	50	32	
Perkins	50	31	
Woodworth	50	27	
Wenner	50	20	

MYLES TAYLOR, Sec'y.

Ye Oak Meadow Gun Club.

SANDUSKY, O., April 14.—Some more of those “ducking targets,” but a thing of that sort never stops Bert Taylor for a minute. His shooting yesterday was phenomenal.

For the championship pin, at 75 targets, the scores were: Taylor 63, Krupp 49, Zinn 45, Dr. Parker 44, Kuebler 41, Donahue 38, Dr. Graefe 30 out of 50.

Scores made in the match for J. F. Donahue loving cup, at 25 targets: Taylor 25, Krupp 18, Parker 16, Zinn 14, Graefe 14, Kuebler 13, Donahue 12.

Sikeston Gun Club.

SIKESTON, Mo., April 12.—Out of 50 clay pigeons the following scores were made to-day: H. B. Pottinger 46, C. Marshall 40, W. H. Tanner 40, W. Leslie 39, J. E. Dover 37, E. C. Matthews 35, T. M. Miller 34, Dr. D. E. Sawyer 33, C. H. Yanson 26.

The Sikeston Gun Club holds practice contests every Friday at 1 P. M. Visiting friends cordially invited.

WM. H. TANNER, Sec'y.

Marine and Field Club.

BATH BEACH, L. I., April 13.—Four shoots were decided over the Bath Beach traps of the Marine and Field Club to-day. E. H. Lott again was the big winner of the day, taking a leg on the April cup, and winning two club trophy shoots. J. H. Emanuel, Jr., was the other winner.

Jersey City Gun Club.

JERSEY CITY, N. J., April 13.—Fifteen shooters were out at the Saturday afternoon shoot of the Jersey City Gun Club to-day and shot at over two thousand targets, but owing to the very strong wind, the scores were all very low. G. H. Piercy landed on top for the day, finishing with 81 per cent. H. H. Harvey was next with 80 per cent. Dave Engle played third fiddle to the tune of 77 per cent., which is very unusual for Dave, who is most always up on top or near it. Probably the most remarkable score was made by Dannefelter, Jr., who has shot at targets only once before to-day, and notwithstanding the unfavorable conditions, turned in some scores that compared very favorably with some more of us that have been shooting the clays ever since they were first made.

On April 20, we are going to have a special treat in the shape of a match between G. H. Piercy and E. E. Hallinger at 100 targets, and as the details have finally been completed after several weeks of negotiations, and as both shooters are now in the pink of condition, all the members are looking forward to a battle royal between the two stars of our club.

The scores follow:

Shot at.		Broke		Shot at.		Broke	
Piercy	175	143		Dr Groll	175	108	
Mattle	150	87		Dannefelter, Jr.	100	46	
Engle	125	97		Harvey	100	80	
Hallinger	175	126		Clay	100	64	
Dixon	100	66		Timp	75	34	
M C Lemore	125	93		Jones	100	51	
Huggins	125	55		Bird	100	62	
Shannon	175	133					

SECRETARY.

Bergen Beach Gun Club.

BROOKLYN, N. Y., April 9.—From the 18yds. mark J. F. Simonson made high gun at Bergen Beach to-day. His score was 46 out of 50. H. H. Shannon, of Jersey City Gun Club, was one behind. The scores:

Distance handicap, 50 targets:

J F Shannon, 18.....	46	W L Skidmore, 16 ...	37
H H Shannon, 18.....	45	C A Brown, 16	36
H Montanus, 16	43	J Voorhees, 18	36
D Sauer, 18	43	O Baker, 16	35
A V Suydam, 18.....	43	R Metz, 16	35
Dr Wellzmler, 18	41	T Davis, 18	35
C R James, 18	41	R Schneider, 16	35
P Von Boechman, 19..	40	W L Groll, 17	34
A E Gunther, 18	40	G Remsen, 19	33
C Medler, 18	40	B Hamilton, 16	32
H Welles, 19	39	Dr Word, 16	32
C Ferguson, 16	39	Dr Duffield, 16	32
J Fanning, 19	39	R Randolph, 16	31
J F James, 18	38	H W Dryere, 18	31
R Morgan, 18	38	T Short, 16	30
J S Thompson, 17	38	P Moeller, 16	30
W J Simpson, 18	38	T Dannefelter, 16	26
T Goughan, 17	37	H T Freeman, 16	20
H D Bergen, 18	37	K Wood, 16	17

Gaithersberg Gun Club.

GAITHERSBERG, Md., April 10.—The attendance at our tournament to-day was small, only sixteen gunners taking part. Scores:

Shot at. Broke		Shot at. Broke	
Etchisen	150 107	Griffith	150 117
Chrabat	150 125	Purdum	150 121
Viers	150 116	Watkins	150 80
Cummings	150 112	Stubner	150 131
Godfrey	150 98	Hershey	75 51
Eyler	150 127		

Professionals:

Hawkins	150 138	Stoor	150 136
Lewis	150 111	Stevens	150 135

Smith Gun Club.

NEWARK, April 13.—The most interesting event to-day was a 25-bird match between O. E. Bedford and J. E. Leslie. Both men tied, each breaking 10 out of the 25. In the shoot-off to decide the final winner, Leslie came out on top by breaking 15 against 13 by Bedford. In addition to the match, some interesting sweepstakes were shot off. In this style of shooting Harry Higgs, E. Townley, William Hassinger, B. M. Shanley, Jr., and others put up good scores. The only clean scores of the afternoon were made by Harry Higgs and E. Townley, each breaking 25 straight.

Montclair Gun Club.

MONTCLAIR, N. J., April 13.—In the shoot for the club trophy at the Montclair Gun Club to-day, I. Seymour Crane was the winner after a tie with C. L. Bush and Edward Winslow. The scores in the first round were:

Bush	2 25	Crane	5 25
Winslow	5 25		

In the shoot-off the result which gave Crane the leg was as follows:

Crane	2 25	Winslow	6 23
Bush	5 24		

Stamford—Greenwich.

GREENWICH, Conn., April 13.—We had a team shoot here to-day with the crack bunch from Stamford Rod and Gun Club, and they treated us without any feeling whatever. They beat us by 25 targets and didn't seem to be worried at any stage of the game as to what the result would be. It was only a question of how many. The final total was 460 to 485.

Some Good Reasons Why You Should Shoot

THE PARKER GUN

Be high man at the traps. Shoot the finest brush gun made. Mechanical construction perfect.

Rifle and Revolver

U. S. R. A. Indoor Matches.

THE ties between the cities in the Indoor League contest of the United States Revolver Association have been shot off, and the final classification made. Clubs finishing in a class lower than that in which they were listed last year are not eligible to prizes. This hard luck befalls Boston, St. Louis, Shell Mound, Providence, Seattle, Youngstown and Chicago. The final standing of the clubs is as follows:

- Class A—1. Portland; 2. Springfield; 3. Manhattan; 4. Golden Gate (San Francisco, Cal.).
- Class B—1. National Capital; 2. Spokane; 3. Federal (Boston); 4. Philadelphia.
- Class C—1. Columbus; 2. Los Angeles; 3. Boston; 4. Pittsburgh.
- Class D—1. St. Louis; 2. Providence; 3. Myles Standish (Portland, Me.); 4. Shell Mound (Emeryville, Cal.).
- Class E—1. Oakland; 2. Chicago; 3. Baltimore; 4. Osborn (Sault Ste. Marie, Mich.).
- Class F—1. Seattle; 2. Youngstown; 3. Belleville; 4. Citizens (Rochester, N. Y.).

J. B. CRABTREE, Sec'y-Treas.

Du Pont Gun Club, Rifle Dept.

WILMINGTON, Del., April 14.—At yesterday's meeting of the Rifle Department of the Du Pont Gun Club the scores were: D. Appleby 234; J. T. Buch 216, 229, 235, 218; C. T. Martin 170; N. K. Smith 123; H. S. Hammond 239, 231, 216, 225, 233. The pistol scores were: D. Appleby 83, 85; L. C. S. Dorsey 78, 83.

Rifle Note.

"The Pittsburgh Revolver and Rifle Club were so pleased with the showing made in the indoor matches the past winter," writes B. M. Bray, its secretary, "that a meeting was held on April 5 and Mr. George J. Knight was elected President; Dr. D. A. Atkinson, Range Master; Bert M. Brae, Secretary-Treasurer. We have since rented ground in West View, and the work of erecting a house at the firing point, digging a pit at a 200yd. rifle range, is under way. We will have 20, 30, 50 and 75yd. revolver ranges also, and invite all the shooters in western Pennsylvania to visit, shoot and join. The annual dues are \$3. Visitors may shoot as well as members."

MY FRIEND THE PARTRIDGE

S. T. Hammond. A delightful reminder of crisp autumnal days in the covers. It tells of sport with the noblest of game birds, the habits and habitat of the ruffed grouse, with just the right touch of reminiscence and personal experience. Cloth. Illustrated. 150 pages. Postpaid, \$1.00.

FOREST AND STREAM PUBLISHING CO.

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He knows it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is Lefever Taper Boring.

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the \$28 gun the peer of any \$50 gun on the market. Upwards to \$1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N. Y.

Durston Special 20 Gauge. Price \$28.00

NYOIL WILLIAM F. NYE is the greatest authority on refined oils in the world. He was the first bottler; has the largest business, and NYOIL is the best oil he has ever made. It has no equal. Beware of scented mixtures called oil. Use NYOIL on everything where a light oil is required. It prevents rust and gives perfect lubrication. Ladies, try it on your sewing machines. Sportsmen, use it liberally on your firearms. Hardware and sporting goods dealers sell it in large bottles (cheaper to buy) at 25c. and in trial size at 10c. Made by WM. F. NYE New Bedford, Mass.

PROTECTION OF MIGRATORY BIRDS.

is one having jurisdiction over every foot of soil within its territory and acting directly upon each citizen; that while it is a Government of enumerated powers, it has, within the limits of those powers, all the attributes of sovereignty."

Senator Overman: That was for the purpose of protecting the mails?

Mr. Haskell: Ostensibly that was the purpose.

Senator Hitchcock: Suppose you are correct in your theory, and the Congress can pass an act to regulate the hunting of migratory game; how would you provide in any bill that such legislation should apply at one season in one State and another season in another State, and not equally throughout the country.

Mr. Haskell: That is the reason that Mr. Weeks, in his bill, has left the matter to the Department of Agriculture to fix the seasons and make those regulations conform to the zones of temperature, the breeding habits, the times, and line of migratory flight.

Senator Overman: That is a delegation of power?

Senator Poindexter: Let me ask you this other question relating to that. A great many of these States have laws protecting migratory birds—that is, ducks and geese?

Mr. Haskell: Yes, sir.

Senator Overman: Your proposition is that the Government shall fix the closed season for those same birds. There readily might arise a conflict between the State law and the Federal law. How would you adjust that?

Mr. Haskell: I have already referred to that in calling attention to the clause in the Weeks bill that nothing in the proposed law shall be deemed to affect or interfere with the local laws of the States.

Senator Overman: Would not that be equivalent to leaving the local laws in effect?

Mr. Haskell: It would where they protect.

Senator Overman: But suppose you think they do not protect and you make another law different from the State law, which one would prevail?

Mr. Haskell: I think the Federal law should prevail, in the case of migratory game birds.

Senator Overman: Your proviso, however, says it shall not interfere with the State law.

Mr. Haskell: Where the game is localized within the borders of the State I think the Agricultural Department, in making the rules and regulations, will have to take that into consideration. They have full data in regard to the birds, and in regard to the State laws.

Senator Overman: Do you think the Congress has the power to delegate to the Department of Agriculture any power?

Mr. Haskell: My answer to that is that it has been done, and I have yet to hear of its being declared improper.

Senator Overman: What has it delegated?

Mr. Haskell: I am informed that in many instances it is left to the Department of Agriculture to make rules and regulations in forestry matters.

Senator Overman: To delegate authority to designate what seasons you can kill birds would be, in effect, delegating the department to make the law.

Mr. Haskell: While I can not cite you to any special law or authority, I have been informed that that has been done repeatedly, and it has not been questioned.

Senator Overman: I am in sympathy with the bill if we can do it, but I would like to have some authority shown me.

Senator Hitchcock: Your idea would be, Mr. Haskell, if the closed season ended, say, on the 15th of a month, according to a State law, and the Federal act provided it should not end until the 30th of the month, it would be illegal to kill birds up to the 30th?

Mr. Haskell: That is my idea, if they were migratory.

Senator Hitchcock: And suppose it was reversed; that the Federal law made it illegal to shoot after the 15th, and the State law allowed

The Marlin Model 20 REPEATING RIFLE

The 136 page Marlin catalog will help you decide what rifle best suits your individual desires. Send 3 stamps for it today.

You can buy no better gun for target work and all small game up to 200 yards. Without change of mechanism it handles .22 short, long or long-rifle cartridges, perfectly. The deep Ballard rifling develops maximum power and accuracy and adds years to the life of rifles.

The solid top is protection from defective cartridges—prevents powder and gases from being blown back. The side ejection never lets ejected shells spoil your bead and allows quick, accurate repeat shots. With simple take-down construction, removable action parts—least parts of any .22—it is the quickest and easiest to clean. A great vacation rifle. Ask any gun dealer.

shooting until the 30th; what then?

Mr. Haskell: I think that in case of the migratory birds, the Federal law would control. There are numerous decisions in connection with admiralty matters where if there is conflict between a State and a Federal law the Federal law has been held to control.

Senator Hitchcock: Then you nullify a State law by the Federal act?

Mr. Haskell: If it relates to migratory birds; yes, sir.

Senator Poindexter: Under that construction of it, if the State authorities arrest a man for shooting birds out of season, it would result in a conflict between the State courts and Federal courts. He might be put in jail by the State courts and sued out on a writ of habeas corpus by the Federal courts.

Senator Overman: Let me give you a case as to shad. South Carolina has put some wire nets in the Great Peedee River to prevent the shad from going up into my State. Do you think the Federal Government could compel the State of South Carolina to take out the nets so as to let the fish go up that river into North Carolina?

Mr. Haskell: It seems to me that it could, if it is navigable water.

Senator Overman: It has been held that they could not.

Mr. Haskell: Was that decided in the State courts?

Senator Overman: Yes.

Mr. Haskell: Has it been decided in the Federal courts?

Senator Overman: It has not been, because there is no Federal law on the subject.

Mr. Haskell: I want to call attention to this rather curious situation which has often arisen in the courts. We had it in my State last year. A judge held a State law unconstitutional. In the next court above, consisting of five judges, it was held constitutional by three of them, and the other two dissented. The case then went to the highest court of the State, and the seven judges sitting there held the act unconstitutional, agreeing with the judge who had first acted. That often happens.

Senator Hitchcock: They will submit that to a vote of the people hereafter.

Senator Poindexter: Does not the fact that there is such a difference of opinion among the judges make an argument in favor of such a thing?

Mr. Haskell: In the last analysis, whose decision counts? It is that of a court of last resort. In this case the Supreme Court of the United States.

Senator Poindexter: Is it not true that in Illinois ducks would be mating and have eggs and be nesting, probably, in April?

Mr. Haskell: Yes; that would probably be just about the time that they would be killing them. That is what we want to prevent. Of course, it is very obvious that in the mating season you destroy not only one bird, but also the young, if you allow killing. That is the evil of the situation. And one State says, "I won't protect these migratory birds, unless you in the next State will do the same thing." They are selfish about it; just as selfish as that gun club from which we have heard. That is the reason, it seems to me, why it is necessary for you gentlemen to provide by Federal law for some protection for these birds.

Senator Overman: The mating season in one State would not be the mating season in another State?

Mr. Haskell: No.

The Chairman: Do they not mate before they start North in the spring?

Mr. Haskell: Many of them do; yes. I think a great majority of them do; but they go rapidly over the States—I have been amazed in studying the matter to learn how fast they travel. They pass across the United States in a month or two. That is true as to most of the birds; others do not travel as fast.

HORSES FROM THE GOBI DESERT.

THOSE interested in the evolution of the horse will soon have an opportunity of seeing mounted and in life-like form two rare and new specimens of wild horses captured on the Gobi desert on the boundary of Mongolia and Siberia and presented as a gift to the American Museum of Natural History by the Duke of Bedford of England, who is a patron of zoology and keeps a fine menagerie himself.

Some time ago the Duke was informed of the discovery of a species of wild horses roaming in the wilds of Asia, and through his efforts an expedition was despatched to secure specimens for his park in England. The expedition proved successful and returned with a number of fine specimens. The wild horses were

allowed to roam and graze on English soil and become objects of great interest to the scientific world.

According to Dr. W. D. Matthew, one of the curators of the Natural History Museum, the domestic horse often runs wild and is found in this and other countries, and for a number of years the existence of the true wild horse was reported, but only recently has it been proved that this is the real wild horse and not the domestic run wild. The specimens received by the museum are from the Duke of Bedford's estate in England, where true wild horses of the same family now thrive.

It is the intention of Prof. Henry Fairfield Osborn of the museum to have the Duke of Bedford specimens mounted and placed on exhibition with other examples illustrating the evolution of the horse.—The Sun.

KING GEORGE'S BIGGEST SALMON.

"It scaled over forty pounds, and it was caught in the Aaro, a river which flows into the Sogndalsfjord, in Norway," says the Scotsman. "The region has at one time or another seen many a royal personage, but the natives speak with special enthusiasm of the visit of the British King and of his angling skill.

"So when a squadron of the British fleet cast anchor at Finreite, at the very spot where the fateful battle between Mangus and Sverre had been fought, the whole region gave it a hearty welcome. The Prince of Wales, as King George then was, was in command, and he was on his way to visit Colonel Percy Hargreaves, the tenant of the salmon fishings of the Aaro, which is famous for its unusually large, strong fish, and for the exciting sport it gives.

"The Aaro comes down from the Justedals glacier, and has a very varied course, now broad, now narrow; sometimes slow and placid, anon dashing over precipices and rushing in wild cascades to the sea. On the river are two famous waterfalls—the Futesprang and Hell's Fos, a name that needs no commentary. This fos is little more than a mile from the fjord, and as the salmon cannot get further up than the waterfall, the fishing is confined to that short stretch. But what the river loses in length it gains in the size and quantity and quality of the fish and in the interesting and exciting, but at the same time also exhausting, sport which the huge fish give in the foaming, rushing, rocky river. The angler must be equipped with the very best of tackle, and be a strong and expert fisher, if he is to hook and land the royal fish; and even with the best of gear and luck, one must be satisfied if he safely brings to bank one in three of the salmon he hooks.

"The river is in great demand; and it is a great privilege to receive an invitation for a day's sport on it. In 1895 Wilfrid Kennedy landed a 68-pounder, the record salmon for Norway, although it is said that larger fish still have been caught, but the weights have not been verified. Sir Henry Seton Karr, who has made his name in every department of sport in Norway, has also shown his prowess among the salmon of the Aaro elv.

"Prince George, as he then was, steamed in his pinnace up to the end of the fjord, and landed at the mouth of the river, receiving a hearty and respectful greeting from the assembled peasants and a loyal welcome from his host. After a fisher's breakfast, the royal guest inspected the walls of the old stabur with its pictures of the big fish caught in the adjacent river, the 68-pounder and other smaller fry, none being considered worthy of the place that did not scale at least 50 pounds. The Prince expressed his pleasure at being permitted to try his luck in a river with denizens like these, and he hoped that fortune might favor him that day.

"Every angler knows that the salmon is a capricious gentleman, and that wind and weather exercise a great influence on the sport. It was a fine summer day; but neither the weather conditions nor the water were specially favorable. Indeed, to the regret of the host, and of the local experts, the prospect was far from bright. Johan, the ghillie, who is particularly proud of the river, was specially annoyed that the Prince of Wales was likely to have a blank day. It was with quiet, but not quite concealed, anxiety that Johan watched the Prince's first cast. More than once he had discovered that a man's social rank and his angling skill may stand in inverse proportion to each other. But his face quickly cleared, for he perceived that His Royal Highness was no novice with the rod. With the local expert's experience he pointed out to the Prince the special spots in each pool where the salmon were wont to lie. For a long time not a fish was inclined to move. At length one salmon made a lazy leap, and that was encouraging; then another rose to the surface and gaped at the Prince's fly, yet without showing any disposition to make a nearer acquaintance with it. But the royal angler kept at it, and warmed to his work, and Johan kept encouraging him,

for he had made up his mind that the Prince must land a fish before he left the river.

"But lunch time came without a single catch. The Prince, however, was in capital humor, and related some of his hunting and fishing experiences in India, Scotland and elsewhere; but he acknowledged that he had never landed a fish to compare with those the Aaro produced. Shortly after lunch business was resumed. Suddenly the Prince's rod became an arch, the reel sang, and the salmon—it was a fish at last—set off for the rapids. That was the beginning of the exciting game which the salmon fisher knows so well, and which to the genuine sportsman is so often the subject even of his dreams.

"It was no stolid, quiet fish which the Prince had on his hook, and it left him little time for meditation. It was a stiff and exhausting struggle, but His Royal Highness played his fish perfectly. It was manifest to all the spectators that this was not the first salmon he had hooked; and they followed the fight with admiring interest. It is by no means easy to play a fish properly in a strange river, least of all in a river like the Aaro, but Prince George was never at fault. And gradually the fish became manageable. It made some few last mad rushes out into the foaming current, then in it came slowly, there was a flash of the gaff, and then in an instant the beautiful, silvery fish was stretched on the river bank.

"It was a regular Aaro salmon, over forty pounds in weight, the largest the Prince had ever caught. That he was satisfied with his prize was quite apparent; and not less satisfied was Johan, who had good reason, too, indeed a golden reason, for his satisfaction.

"In the evening the Prince returned to his vessel with his fine fish, well pleased with his day's angling, and he assured Colonel Hargreaves that he would never forget the events of that interesting and exciting day. And not less pleased were the peasants of the district, who to this day speak enthusiastically of the frank and friendly gentleman who spent that day among them, and who now so worthily occupies the British throne."

EXHIBITION OF GAME AND FISH.

Up on the north side of the fourth floor of the Capitol, near the Department of the Forest, Fish and Game Department of the State Conservation Commission, is an exhibit that receives little attention these days but which in 1904 was adjudged to be of such merit and value that it was awarded a ribbon and medal at the Louisiana Purchase Exposition, says the Albany correspondent of the Troy Times. In its time it excited great interest and was one of the display features of the Capitol. It is now in an out-of-the-way place, in a part of the building seldom sought by visitors.

It has fallen from its former high state to the level of a side issue that attracts attention only when attention is attracted to it. The only business transacted in the vicinity of its location is that done by the State Architect, Board of Claims and the Forest, Fish and Game Commission, to which it belongs. It consists of a large number of specimens of fish and birds that should be very attractive to sportsmen, lovers of life in the open, naturalists and others of their ilk. The specimens are handsomely and naturally mounted and contained in large cases equipped with shelves. The exhibit is of considerable magnitude and evidently in its entirety the result of an expenditure of much time, money, care and skillful arrangement. Every bird and fish has attached to it a card giving its name in both English and Latin.

The exhibit is in an excellent state of preservation and would form a nucleus for a fine collection if placed in the hands of an expert clothed with the power and means to make it complete and arrange and display it as such things should be arranged and displayed.

The piscatorial specimens range from the small spadefish, bullhead or horned pout, sand pike, perch, pumpkin seed, rock bass and many of the smaller species familiar to the fishermen of this section to the huge St. Lawrence River muscallonge, big-mouthed bass, red snapper,

channel bass and other varieties of the larger growths. There are sea fish, also many specimens of curious and grotesque formation with heads like gargoyles.

The birds range in size from Least and Acadian flycatchers and the diminutive humming bird to the heron, cormorant and great ducks and wild geese, with intermediate specimens of the starling, sparrow, thrush, loon, whippoorwill, bluejay, bobolink, blackbird, gold finch, warbler, pheasant, grouse, curlew, plover and others almost innumerable. In one of the cases is exhibited the official award ribbon given the New York State Forest, Fish and Game Commission by the Louisiana Purchase Exposition for the best exhibition of mounted specimens of food and game fish. The ribbon bears the signature of David R. Francis, president of the exposition, and that of the secretary.

In close proximity to the fish and bird exhibits stands another interesting feature of the past that at one time was regarded as a remarkably ingenious piece of work. It is the big model of the great Adirondack region of New York State that was on exhibition at the Pan-American Exposition at Buffalo. It was designed by Edwin E. Howell and will be recalled by those who saw it as a panorama in miniature of the North Woods showing with wonderful realism the mountains, hills, lakes, ponds, valleys, famous resorts, streams and even the roads and trails, besides every inhabited place, large and small. It is a landscape in relief worked in a material as hard as stone and tinted in accordance with nature. Where there is a mountain there is an elevation proportionate to the scale of the model, and the same realism pervades the entire work. The horizontal scale is one inch to the mile and the vertical two inches to the mile. The model is about ten by fifteen feet in dimensions and is inclosed in a wire framework. People who have not seen these attractions of other days will find it worth their while to view them the next time they visit the Capitol.

HUNTERS SHOULD HELP.

A LITTLE food for birds scattered in places where they can feed costs but little and may save many lives in the snowy time. Quail surely can find but poor food underneath the frozen snow and are likely to be nearly exterminated unless considerate farmers and likewise considerate hunters, give them occasional help. The birds are apt to hunt barnyards at such times. Hunters certainly should co-operate with the farmers over whose land they hunt and not leave it all for these men who allow them shooting by courtesy. Through all this section there are many farmers who would be very willing and ready to scatter the food if the men from out of town come out and shoot the birds will supply the food.—Taunton Gazette.

FISH AFFECTED BY MOON'S PHASES.

CERTAIN Scotch fishing authorities believe the various phases of the moon have a direct connection with the willingness of fish to be netted. To test this theory, statistics were obtained of the catch of herrings from 1860 to 1900, with the result that the biggest catches were found to have coincided with the new moon and the smallest with the full moon. The report suggested that a full moon enabled the nets to be seen much more easily than at the times of new moon or the crescent phase or that the tides which vary with the lunar phases were possible factors in the matter.—Westminster Gazette.

PROOF OF HIS STORY.

A 10-pound bass, 21 inches long, lost its way during a flood at Pittsburgh last week and wandered away from the river on to one of the flooded streets of the city. It was caught by John Ranche, assistant superintendent of the Men's Industrial Department of the Pittsburgh Association for the Improvement of the Poor, who put it in a tub of water and exhibited it to all who doubted the truth of the story.—Boston Globe.

Prize Dogs Sold.

MRS. PETER COOPER HEWITT has purchased the Scottish deer hounds Matchless of Midlothian and Mistress of Midlothian. Edmund L. Mackenzie received the largest price ever paid for a pair of sporting dogs in this country. Mr. Mackenzie, who is the president of the Scottish Deer Hound Club, had won nearly two hundred firsts and championships with this pair, including the cup for the best of all champions, at five different shows. Some of the important shows where they were returned winners were Madison Square Garden, Mineola, Plainfield, Long Branch and Red Bank.

Pointer Club of New England.

BOSTON, Mass., April 2.—*Editor Forest and Stream:* The annual meeting of the Pointer Club of New England was held on the occasion of the annual dog show of the Eastern Dog Club, Tuesday, April 2, at 7:30 p. m. President George F. Richards in the chair.

The records of the last two meetings were read and approved.

The treasurer's report for the twelve months ending March 31, 1912, was read.

Voted, that the treasurer's report be accepted and placed on file.

Mr. Robert Leslie reported having collected, by private subscriptions, \$37.00 for prizes for the Boston show.

Voted, that a vote of thanks be extended to Mr. Leslie for his interest and attention given the matter of collecting funds, thus relieving Treasurer Miller, who, for reasons beyond his control, could not give this matter his personal attention.

The following names were proposed for membership: Mr. Charles J. Davol, of Providence, R. I., proposed by Mr. Robert Leslie; Dr. Burton C. Russell, of Keene, N. H., proposed by Mr. M. T. Mason.

Voted, to proceed to ballot on the proposed applicants for membership, both of which were unanimously declared elected.

Voted, that a nominating committee of three be appointed by the chair to retire and present a list of names for officers of the club for the ensuing year.

The chair appointed Messrs. Lenoir, Pette and Miller, who subsequently reported as follows:

For President, Robert Leslie, of Swampscott; Vice-President, George F. Richards, of Lynn; Secretary and Treasurer, Vinton W. Mason, of Cambridge; Directors—Messrs. Lincoln E. Pette, M. T. Mason, F. J. Lenoir, L. A. Penney, F. H. Miller and Thomas P. Lindsay.

Voted, that the secretary cast one ballot for the names as presented by the nominating committee.

The secretary having attended to that duty, the election was declared unanimous.

Voted, that the same committee retire and present a list of names for judges for the ensuing year.

Subsequently the committee reported the following: Robert Leslie, Dr. J. S. Howe, Frederick J. Lenoir, R. C. McQuillen, E. K. Dyer, Lincoln E. Pette, M. T. Mason and Joe Armstrong.

Voted, that the names selected by the nominating committee be accepted.

Voted, that Mr. Joe Armstrong be endorsed by this club a judge at the Ladies' Kennel Club show in June.

Adjourned at 10 P. M.

SECRETARY.

Dollar Princess Champion of Record.

DOLLAR PRINCESS, French bulldog, owned and bred by Mary Winthrop Turner, of the Never Never Land Kennels, becomes a champion of record by her coming through the

winner at Chicago dog show just held. Mrs. Turner has done much to keep pure the strain and high the standard of the breed, and her win is a deserved testimonial to her success. Dollar Princess was bred by Mrs. Turner from her own stud Ch. Pourquoi Pas out of Tinker Bell.

Washington Dog Show.

THE big canine event of the capital will be the dog show to be held April 24 at the Arcade. The entry list includes some of the Westminster Kennel show winners. Clarence Moore, of Washington, just back from England, purchased while abroad fifty brace of English fox hounds. They will be used with the London Hunt Club, of which Mr. Moore has been made master.

WHALES NOT ANIMALS.

THREE judges in a Divisional Court decided that stranded whales are not "animals in captivity and close confinement." Last summer some bottle-nosed whales were stranded off Penzance. A man named Rogers, who wounded one, was summoned before the local magistrates and accused of cruelty, but the bench dismissed the summons. That decision was now upheld by the Divisional Court. Justice Pickford said he regretted that the appeal must be dismissed, because the people who injured the whales richly deserved punishment.—Anglers' News, London.

POSSESSION.

Two pike less than six inches long were drawn up from the Mississippi River by a switching engine taking water at Winona, Minn., and were found later in the tank by the engineer, Falls Wood. While Wood was showing the fish to a crowd on the station platform, S. P. Richtmann, a deputy game warden, confiscated them and threatened to arrest the engineer and fireman for having pike less than six inches long in their possession. Wood and his fireman had considerable difficulty convincing the warden that the fish had been found in the water tank.—Boston Globe.

Property for Sale.

Fishing & Shooting Preserve

A remarkable property value suitable for gentleman's estate, fishing and shooting preserve or small sportsmen's club.

Within easy distance of New York and other Eastern cities. Trout stream on the property.

Located in Vermont, eight miles from railroad. Buildings in perfect repair.

Deer, Bear and Partridge in abundance.

1300 acres, a great part in fine timber and balance under cultivation.

This property is offered at bargain price. Address

C. P., care of Forest and Stream Information Department, 127 Franklin Street.

Wants and Exchanges.

"KOILA"

Partner wanted. Will sell half interest in this fine property. I will reinvest on joint account up to \$7,000, to pay for half dozen cottages, for which there is already demand, more power boats for the Chain Lake, also additional rowboats, to complete the hotel building, and to get a new passenger car. Prefer a young or middle-aged man, acquainted with the fraternity, to take either outside or inside management. This is not a gold mine, just a safe and profitable investment. About \$5,000 required. Principals only. References exchanged. W. E. BARDEN, Chetek, Wis.

I WANT TO BUY OR RENT

A camp or cottage on a lake near a good trout stream. Lower Adirondacks or Catskills preferred. Within five hours of New York City. Write full particulars to

S. H. L., care of Forest and Stream Information Department, 127 Franklin Street

WANTED.

Position as game warden or in charge of club preserves; highest references; four years salaried county officer; 34 years of age. Address E. M. Chadwick, Colchester, Ct.

Where?

Some one of the sportsmen's resorts advertised in FOREST AND STREAM can probably offer you just what you want for your fishing trip. We are in touch with all of them, and if you will explain your needs to us, we will tell you where we think you would be best satisfied and tell you why we think so.

Maybe none of the resorts advertising with us will just suit your individual wants. In that case we don't hesitate to recommend a resort which doesn't advertise with us.

A two-cent stamp or a postal card will command our best services. The fuller explanation you give us, the more explicit we can make our advice.

Write us to-day.

FISHING TACKLE

ENLARGED DEPARTMENT—QUALITY IMPROVED

For our several departments we now occupy two entire buildings—14 floors in all—at 15 and 17 Warren Street, one door from Broadway. We have greatly enlarged and improved our stock of fishermen's supplies.

THE BEST \$5.00 FLY ROD

Many an angler tells us that "I am only going for a short trip and don't know when I can go again, so I don't want to put too much in a rod, but I want a good reliable rod—say something around \$5.00." We have built our "Congress" to fill the demand and believe that for the price asked it has no superior. These rods are made from six strips of "African Steel Vine," which is the same nature as bamboo, but more elastic. They are made round in place of hexagon, as the stock is so strong that it will stand the rounding without weakening it. It is all rod from tip to butt and will give the greatest satisfaction. Made with three joints and extra tip and put up in a velvet covered form.

"Congress" Rod, Fly or Bait Pattern, express prepaid, \$5.00.

May we send you our complete Sporting Goods Catalogue, No. 530.

THE ANGLER'S WORKSHOP**Rodmaking for Beginners**

By PERRY D. FRAZER

Not only Americans, but anglers of Great Britain and nearly every European State, South Africa, Australia, Canada, are making their fishing rods under the simple instructions laid down by the author in this useful little manual. A Japanese, after reading the book took up rod repairing for his fellow countrymen as a business. An Englishman followed it in making several of the sixty-five rods that he has in his collection. A Russian appreciated the book so much that he suggested a Russian translation. The British sportsmen's papers have quoted from it time and time again. In that country it has helped bring about a great change in rod types, and to attract attention to the excellence of American fishing rods. In fact "Rodmaking for Beginners" has become the standard manual wherever fishing with rod and reel is practiced.

The reason is obvious. The book is written in plain English, and all the details are set down so simply that a boy can follow them. All of the types of rods used on fresh and salt water are described and specifications given. Separate chapters cover all details, and the one on split cane rodmaking is the only comprehensive treatise on that subject ever published.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid, \$1.00.

FOREST AND STREAM PUBLISHING CO., 127 Franklin St., NEW YORK

OLD-TIME FALLACIES.

THERE is one gun now you seldom see. I refer to the single-barrel. Years back, singles were commoner than, or at all events as common as, doubles, and as a boy I can well remember a prejudice against the double gun—only, of course, on the part of those who did not understand the double. I remember my father once going into the garden with his double under his arm. When he had gone away our old gardner remarked that he greatly wondered at the master having one of those double-barrel guns. I asked why, and was told the double-barrel was very dangerous, the heat from the discharge of one barrel very often sending the other barrel off! The village barber—a bit of a shot in his way and more than a bit of a poacher—said all double-barreled guns were dangerous, as when loading you were very apt to put both charges in the one barrel. A retired policeman who lived at the other end of the village said if you used a double gun and fired the right barrel you should not attempt to reload it until the left one had also been discharged. His reason for this was that in reloading the discharged barrel the ramming home of the wadding—often brown paper—created so much jar as to frequently explode the loaded barrel. Finally, loading the discharged barrel (with the other one loaded) necessitated the working of your hand, or at least fingers over the loaded barrel, with your head itself not far away, no matter at what angle you held the gun, and this last peril was enough to condemn the double barrel, in the opinion of the village parson! So it was, anyway, in our village, where the only double guns were those owned by my father, the local solicitor, and the lord of the manor, who, strange to say, himself perished as the result of a gunshot wound in the chest brought about by his gun going off while getting through a hedge. All this may sound strange to our modern Nimrods, many of whom possibly never had a muzzle-loader in their hands. But shooters of, or just over, fifty who commenced to shoot at about fifteen will fully grasp my argument.—Shooting Times.

WOMEN AND THE BIRD.

WHILE many American women either from choice or because of the law, are not wearing the plumage of birds, it is only recently that the German women have considered the matter. The bird protection laws of Europe are so much better than the laws of this country that it has been thought necessary to cease wearing feathers to protect the birds. Princess Victoria has also joined with Princess Eitel and other German ladies in deciding not to wear the plumage of birds, Prof. Johannes Schillings having made the request.—Natchez Democrat.

THE BATHING HOUR AT SEA BREEZE

HEAVY LOAD ON A HOT DAY

NO PLAYTIME FOR HER

IN NEED OF FRESH AIR

A HAPPY LITTLE MOTHER

WHO SAID WE ARE AFRAID?

HOW THE WAVES TICKLE MY FEET

FROM STIFLING TENEMENT TO SEASHORE AND COUNTRY

Do you know that the New Yorker living below Fourteenth Street has an average of only 18 square feet of breathing space? Can you imagine anyone more in need of fresh air outings than these dwellers in sultry homes, hemmed in by scorching pavements?

Neither opportunity nor money is theirs with which to seek pure air. For them fresh breezes and outdoor freedom are made impossible by congestion. Every penny of their small earnings goes to satisfy pressing needs.

Mothers, children and babies, broken with toil, ill-nurtured, or frail, appeal through us to you for a bit of sunshine and relief from care in the country, or at Sea Breeze, our seashore Home at Coney Island.

Would you not enjoy your vacation more if you knew that you were enabling or helping

- A convalescent mother to regain lost health?
- A worn-out widow and her children to be care-free for a week or two?
- An aged and friendless woman to gain new life and cheer?
- A weary shop girl to enjoy a glorious week of freedom?
- An under-nourished baby to get fresh air and pure milk?
- An anæmic school boy or girl to win a new start for the next year?

Won't you help them? The trouble of sending a contribution is nothing compared to the joy that it will bring to some of these stifling homes.

NEW YORK ASSOCIATION FOR IMPROVING THE CONDITION OF THE POOR

R. FULTON CUTTING, PRESIDENT

“Ring Around a Rosy” with a Grizzly

By E. E. BOWLES

BETTER get out one of them guns. I don't like the actions of that off mule," said Lick-i-ty-cut Pete. "He keeps a-cockin' forward his ears an' throwin' up his head like a houn' dawg tryin' to ketch a scent. See that! See how he squats an' quivers every time the win' restles the bresh?"

"Oh, that ain't no sign of nothin' but low-browed mule," said Paystreak Johnson. "He's only lookin' fer some chanst to do somethin' ornery."

"Nothin' of the kind; that there mule's got sense. He smells somethin' that he's afeard is bear. If there's anything that'll skeer a mule worse'n a bear, it's two bears. Not the little black or brown hog-rootin' kind, but sure-enough bear like grizzly or cinnamon. Them's the boys that'll make a mule throw up his paint bresh tail fer a fare-ye-well an' send him over the nex' range like he was makin' up time."

We were high in the California Sierra Nevadas, Johnson, Pete and his fifteen-year-old stepson, Bud Larkin, and myself. Johnson and I had been rocking some of the bars on the Feather, between Injun Joe's and Spanish Fork, with such success that the weight of gold dust and nuggets in our buckskin pouch prompted us to winter in a little park of second growth yellow and sugar pine, well sheltered by high peaks and about a mile back from the river. We knew that a snowfall of fifteen feet on the level was not unusual in that locality and built our cabin of pine logs accordingly. We had figured on ham, bacon and dried beef for our winter's supply of meat, but Paystreak had created a longing in our minds

or stomachs by suggesting that some smoked or jerked venison and bear meat would be good to vary the monotony, so he wrote to Pete, who had often boasted to us of the good hunting in his neighborhood.

Pete had made a clean-up of a pocket on the Middle Fork of the American several years before—enough to permit the purchase of a hay ranch up Mohawk way—married the Widow Larkin, who kept the boarding house at Yankee Jim's, famous for her yeast biscuit and frijoles, and had settled down. Tall, lean, loose-jointed, easy-gaited, good-natured Pete—when one let him have his head—but try curb bit or spur and he was hard rubber over steel springs. For instance, one night a gang of disappointed rustlers tried to raid our—but that has nothing to do with this.

We often speculated on how the widow would house-break Pete after his having roamed desert and mountains, wild and free, for so many years, but our first visit showed that she had succeeded. She first tamed him with her "woman's cookin'" and then held him to the work of the ranch by sheer force of her personality—but you don't know the widow and can't understand. Occasionally, however, Pete would feel the call of the wild and write us to ask him to take us hunting or for his assistance on the claim. The widow knew that to refuse his granting our request would create an impression in his mind that we might think he was tied to her apron strings. When he wanted to wander off alone for weeks at a time, that was a different situation and easier to control. At first she would go with him and

he soon tired of that. A woman is not much assistance in trailing a wounded buck or bear over chaparral-covered mountains, and women do not enjoy standing up to their hips in muddy ice cold water all day shoveling pay gravel into a sluice box.

In a year or two the widow's son was old enough to take trips with Pete, and on the quiet he would suggest to the boy that it was time for trout to rise, that deer would be in prime condition about such a time or that he believed a certain mountain had never been prospected for gold properly. The boy did the rest. They always left home with such misgivings and fears on the part of the mother, however, that such trips were not frequent.

"She just idolizes that there boy," said Pete, "but, as fer as that goes, his own daddy couldn't have thought more of him than I do. But he's got to take a man's place in the world an' he's got to have a man's trainin'; things a woman can't teach. She c'n train his morals an' we c'n send him to school for the learnin' me an' his mother lacks, but there's some things that all the books in the world can't teach, jest as we know a feller has to live 'em. He's goin' to learn to stan' on both feet an' look every man square between the eyes, know when to give in an' when to turn his thumb knuckle in an' hit straight an' hard. He's got to ride, throw a rope, shoot, swim an' do every thing that comes into a man's life in the open. How the wild things live an' grow an' how they perfect themselves. I'm teachin' him them things an' he's a-learnin' fast. My idy is that if the right sort

of a grown man makes a chum of his boy, that boy ain't a goin' fur wrong when it comes his time to take the man's place."

The next westbound train after Paystreak sent his letter brought a card from Pete's ranch fifty miles up the cañon: "Come tomorer," he wrote. "Don't bring anything but your guns and pipes; I've got every thing else." So there we were the second day after in a two-seated mountain wagon drawn by a pair of stout mules.

We crossed Grey Eagle Creek, left Old Mohawk on the right, took the Johnsville road for a short distance, then turned and started more directly up the mountain, a gradual slope of open, primeval forest covered with immense yellow and sugar pines, many of them six and seven feet through, generally free from underbrush, and save for winding about among the trees, we had no difficulty in ascending an easy grade of about 2,000 feet in the eight miles.

"It's a-goin' to be a hard winter," said Pete. "Bear an' deer an' mountain lion are comin' down earlier than usual. I lost a colt by a lion in my back pasture three nights ago an' here 'tis only the middle of October. Deer feed up as the snow melts in the spring an' the lion an' bear foller them."

"I saw some bear tracks in the wet sand in Grey Eagle Creek yesterday," said Bud. "My, but they were big ones! Nearly a foot long."

"Did you foller 'em?" asked Pete.

"No siree, not me; I took the back track. I was hunting quail. Somebody must have been after it, though, for there was a dog track alongside. Dog must have been pretty near as big as the bear, for the track was bigger than any dog track I ever saw. Looked like a man had pushed his fist down in the wet sand."

"Huh, that wasn't no dog track; 'twas a mountain lion's. Remember, son, a mountain lion or any other kind of a cat always sheathes its claws when it's travelin'. A dog don't, an' you c'n always see the marks of a dog's toe nails in anything soft like snow, or mud, or wet sand. I reckon 'twas a bear with cubs followed by a lion who was watchin' fur a chanst to grab one of the young. There's a mortal feud between bears an' mountain lions, an' a grizzly will move a good-sized hill to get at a lion's cubs."

On a steep bit of the slope we three men got out to lighten the load, leaving Bud on the front seat to drive. We were walking fifteen or twenty yards behind listening to Pete as he told how he enjoyed having a home, when there came a crash and a "whoof" from a thicket of laurel on our left, and out of a deep ravine charged a huge grizzly. The mules gave one whistling snort to tell how scared they were, and then started on a run with Bud tugging at the reins and yelling. The bear's charge had placed him between us and the wagon containing our guns, and they were getting further away every second. I remember just before I treed that the mules, finding it heavy going up-hill, had swung about and started back with Bud still on the seat. In the first instant Pete had tried a "run around" to get at the wagon, but the team turning in an opposite direction had left him further away and probably thirty or forty yards from Johnson and I.

No bear can climb a tree that he cannot get his paws around, and owing to his great weight, a full-grown grizzly cannot climb. Near me was a dead sapling leaning against the limb of a big

tree, and up that sapling I shinned for twenty feet and was soon astraddle of the branch. Johnson climbed a little pine that thrust its top among the lower branches of a big cedar and was safe. Pete was near the edge of the ravine from which the bear charged, and there was no tree handy that he could climb. A big, sloping outcrop of rock that either he or the bear could have run up, and the size of a cottage, stood at the rim of the ravine, and at the down-hill edge grew a tall sugar pine without a limb for seventy-five feet. To climb that was out of the question. The bear for a moment was evidently puzzled as to its next move, its foes having disappeared so quickly. The wagon was far down the hill, two men had gone into trees, and the other he could not see, as he was on the opposite side of the outcrop.

"Run for the wagon, Pete," shouted Johnson, "and we'll make a racket and keep him guessin'." Pete caught the idea, but had barely started when the clumsy brute either heard or saw him and charged in his direction:

"Look out," yelled Johnson; "dodge 'round the rock on the downhill side." Pete obeyed with greater speed than I thought was possible. Then followed the funniest and strangest "ring around a rosy" I ever saw. On level ground or up or down hill, for all its size and ungainly appearance, a grizzly bear can hurry a good horse for 100 or 200 yards, but his wind is not good for a long run at top speed. Along a steep hillside, unless the ground is soft enough to afford him a foothold, his weight pulls him down.

On the downhill side the slope was steep, probably forty-five degrees, rock and covered with detritus from the outcrop above. Round and round they went; up or down and on the up hill side the bear gained, but along the shelly slope, a distance of seventy-five or eighty feet, Pete made up what he lost and gained a lead while the bear was slipping and sliding, unable to gain a toe hold where Pete's hob-nailed boots held firmly.

Honest, it was funny; I just had to laugh, although the situation was critical—for Pete. I knew his wind was good, and that he could keep ahead of the bear in that game, possibly until it retired, which it was quite apt to do in the course of a few hours; but in the meantime a mis-step, a fall, and the big brute would be on him. But Johnson—one might have heard him laugh and yell a mile away—

"Round and round the liberty pole
The monkey chased the weasel"

he would chant and then yell and yell.

"Consarn ye," shouted Pete in one of the occasional pauses that the bear took to get its bearings and look in the direction of the strange sounds, "if I ever lay my han's on a gun, the bear won't be the first thing I take a shot at."

Suddenly Johnson changed his tune and shouted excitedly: "Yander comes Bud a-runnin' with the guns. Hi, there, Bud, stay back."

"Tell him to get behind that dead yeller pine an' wait," shouted Pete as he and the bear came around on another lap.

"Shan't I try a shot?" called Bud from behind the pine a hundred yards away.

"No; take the guns out of the cases, chamber a ca'tridge in each an' wait," yelled his step-father.

"He might get a bead on you an' shoot as you come around, Pete, an' at the rate you're a-goin', the bear will be there when the bullet hits," suggested Johnson. "Why don't you run? You ain't half tryin'. If I was in that game I'd speed up and overtake him an' ride awhile. 'Roun' an' 'roun' the liber—ya-ee-e."

There came the crack of a breaking bough and a swish of brush as Paystreak dropped through the cedar twigs and top of the sapling, a fall of about fifteen feet, but he landed unhurt on the cushiony cedar spines that had been dropping for a century or more. Active as a cat, he was hardly down before he was shinning up the sapling again. The noise attracted the bear's attention, and on seeing Johnson, charged for him, red-mouthed.

The instant Pete saw that, he humped his shoulders forward, let out a few links, and I never saw one hundred yards covered in so short a time. He reached Bud and the guns in time to see Paystreak swinging head down to some cedar twigs he had grasped, and trying to hook the limb above him in the crotch of his knees, while ten feet below him on his haunches, open-mouthed and paws spread, the grizzly waited for him to drop.

"Rock-a-by baby in the tree top,
When the wind blows the cradle will rock,
When the bough breaks, the cradle will fall,
And down—"

chanted Pete in great glee as he examined the magazine of the rifle.

"Shoot, man, shoot! If you don't shoot the bear, shoot me, for my hold's a slippin'," pleaded Paystreak, his voice coming nearer to showing fright than I had ever heard from him.

Pete ran forward about fifty yards with Bud, carrying another rifle, stepping in his tracks. Pete threw up his rifle, fired at the butt of the grizzly's ear, and as the monster swayed, there came another report from under Pete's arm. Bud had dropped to one knee and fired for the spot behind the left fore shoulder.

A moment or two later and we were around the bear speculating on its weight. It was fat as a hog, which had been a great handicap in its chase after Pete.

Pete had no word of censure for Bud's temerity in following him and taking a shot at the bear. On the contrary, he treated Bud as he would a man under similar circumstances, not even giving him a word of praise, but taking it as a matter of course. However, in dressing the huge beast he called Bud's attention to the bullet wound in the fore shoulder:

"Don't do that, son, when shootin' at a grizzly. Owin' to its coat and big shoulder bone, its heart is the hardest place to hit unless you got exactly the right angle. The best spot is the butt of the ear or the eye. If he's r'ared an' comin' toward you open-mouthed, shoot up an' into the back of his mouth. Otherwise he'll take your hull magazine of ca'tridges an' keep on a comin'. But you helped, anyway; we'll tan the hide an' you c'n have it fer a rug alongside your bed. Where's the mules?"

"Nearly a mile down the hill. They run between two big trees and wedged the wagon so they can't get out."

Later Pete chuckled as he said to us on the side: "Ain't he the nery little feller? Knowed jest what to do, an' was right alongside his dad with a rifle when the finish come."

Across the Plains in Early Days

By SAMUEL MANSFIELD STONE

(Continued from last week.)

DAY followed day in the same dreary routine, and I began to wonder why the timber of the Arkansas Valley did not loom up on the horizon. I was positive that I must have traversed double the 200 miles that the Indian agents assured me intervened between the course of our route and the river. I felt certain that I

of water save that the quality was uniformly vile. Daily, and sometimes two or three times in a day, I encountered creeks and rivers with an abundance of liquid, which, for want of anything better, had to do service for water. Whenever the banks were sufficiently sloping to admit of it, I would dig a miniature well a few feet

forced upon me. Encouraged by that lucky shot I made numerous attempts to duplicate it, but from that day to this I have never been fortunate enough to do so. Hence I have come to believe that the circumstances which rendered possible the killing of that one unfortunate animal were such as are unlikely to occur more than once in a man's life time.* I have since read statements of English hunters to the effect that they bagged certain jacks with other game on their hunting expeditions, but I have never conversed with a man who had the temerity to say that he had shot one, though he might tell of such shooting by others.

AN OLD-TIME WESTERN SCENE.

had maintained a southwest course, as directed, and concluded that my information had been mistaken as to the distance. Former experience with natives of the plain taught me that opinions regarding the length of a mile varied as widely as individual characteristics.

"How far to Paola?" I one day asked a settler.

"Jest four mile an' a half, by Guv'ment survey," was the reply, in positive tones. After riding an hour and covering at the least calculation four miles, I hurled the question at another native.

"Wal, it's a right smart stretch over five mile, 'cordin' to the fellers 't laid out th' quarter-sections," was the equally positive assurance, and I rode at least five miles further before reaching my objective point.

I experienced no further suffering through lack

from the natural brink which would quickly fill with a much clearer fluid than the sluggish, muddy stream afforded. Though its taste did not differ materially from the other, I could swallow it without gagging.

Having acquired facility with my revolver I often supplemented my store of hard biscuit and jerked beef with bird meat. Fuel was abundant. The ground was thickly strewn with buffalo chips which burned freely with very little flame and prodigious smoke, but gave out sufficient heat for broiling by holding the bird close to the fire.

I had been led to believe that it was a practical impossibility to get within rifle range of a jack rabbit. In the first flush of success after killing my first specimen, I was inclined to lay the inability to the clumsiness of the hunter, but subsequently the truth of the information was

The good book declares that it is not good for man to be alone. The first appreciable effect of the continued solitude of the plains upon me was an almost overwhelming sense of the magnitude of space and the infinitesimal insignificance of myself. Riding along under the vast

*This is an excellent illustration of the fallacy of basing a belief on the experience of one observer. We ourselves have shot scores of jackrabbits with the rifle not many miles southwest of the region referred to by Mr. Stone; and one now and then with the heavy six-shooters of the early '80s. It was then common to see jackrabbits sitting up, offering easy marks, at distances of thirty to one hundred yards. A cowboy, accounted a fair shot, killed two in our presence one day, both snap shots, with a .45 Colt, and both under fifteen yards. But there was abundant food for coyotes, wolves and foxes there, and the jackrabbits were not wild—a condition that probably did not apply to the region described by Mr. Stone.—EDITOR.

blue canopy with the plain stretching to the limit of vision in every direction, I seemed as the veriest atom swallowed up in immensity. At such times my memory would play tricks and I would find myself wondering what I was and how I came to be mixed up with such surroundings. Then again I would make a confidant of my pony, telling him my hopes and fears and converse with him on terms of equality, though the thought would force itself upon me that he was the more sensible of the two. I am confident that he sympathized with me, for when we halted and he was staked out to nibble the scant herbage, he would come every minute or two and rub his nose affectionately against me and try to tell me how lonesome he was.

One day when we had surmounted a hummock considerably higher than its fellows, away to the westward I espied the outlines of a man on horseback, silhouetted against the horizon. I experienced a complete revulsion of feeling and a great wave of joy rolled over my soul as I reflected that I was not really the last of my species, wandering aimlessly over a barren wilderness. Then an irresistible desire to hear the sound of a human voice took possession of me and I waved my hat in the hope of attracting the attention of the solitary horseman. To my unspeakable joy he halted, rose in his stirrups, and began swinging his hat in an answering salute. I think it no reflection upon my manliness to state that I wept for sheer happiness when, after swinging his hat for a minute, he turned his horse's head and began to ride in my direction.

I galloped to meet the man. Had I known for a certainty that he was one of the most desperate outlaws I would have hastened none the less. Of one thing I was certain: he was a man, and I had no wish to entertain problematic opinions as to his character. After another half hour I was rejoiced to hear a human voice for the first time in what seemed to me an age. Coming over the summit of a sharp ridge, the horseman let go a loud shout. "Hallo-o-o" came ricocheting over the hummocks, the sweetest sound that ever greeted my ears. "Hallo, hallo, hallo-o-o-o." I responded, standing in my stirrups and swinging my hat. Three minutes later two men might have been seen to throw themselves from their saddles, grasp each other's hands, look into each other's eyes, and then cry like babies. The poor wretch had suffered as much as I had. He was a few years older than myself, but this was his first experience in crossing the plains alone. He was en route from his father's ranch in Western Kansas to Arkansas City. It was about a week since he crossed the Santa Fe trail where he had camped with a trading party. Since then he had seen no human face and was feeling the influence of solitude nearly as keenly as myself. He, too, had lost track of the day of the month, but he said it was within two days of July 1. This showed me that I had wandered for about three weeks.

My new-found friend was well equipped with shooting utensils, but was lacking in provisions. He was not loth to accept my invitation to camp with me, and though my jack rabbit was exhausted, we made a comfortable supper on the dried meats and biscuit which my saddle bag larder afforded. In fact, the hitherto unappetizing food assumed a degree of palatableness in the presence of a companion who seemed to

relish it. Having made camp at an early hour, we had two or three hours of daylight after supper which we improved by scouring the timber, scrubby oak and wild plum, adjoining the water course near the camp. Several rabbits of the common kind rewarded our quest, and my friend proved himself an excellent marksman by tumbling one over with his revolver. I succeeded in bringing down a large hawk. We dressed the rabbit and rolled up in our blankets for the night. It must have been well along toward morning when we finally quit talking and went to sleep.

Breakfast over, and just as we had comfortably ensconced ourselves for a good smoke, my pony gave a snort and stood with head and ears elevated looking intently across the plain. Following with our eyes the direction indicated, we saw away down on the horizon the outlines of a drove of animals. My first thought was, "They are buffalo," and my heart gave a great leap in anticipation of my first chase and shot at the royal game. But on intimating my belief to my companion, he seemed to regard me with pity as he smiled at my fallacious young ideas. "There are no buffalo within 500 miles of here," he said, adding: "Those are either the cattle on a ranchman's range or, what is more likely, a bunch that has stampeded from a drive; there isn't grass enough on these plains for a man to risk a drove of that size."

After regarding the cattle for a few moments he suggested that we ride out and inspect them at closer range. I readily assented, and we saddled up, leaving our effects in the edge of the scrub. My friend took the precaution to climb one of the taller scrub oaks and tie his handkerchief to the topmost twig to insure our locating the place again. I had noticed with chagrin that my companion had several times regarded Skee-zik in a manner that told me plainly what was his opinion of my mount. Added to this, just as we mounted, he slipped his rein to the lower curb and I understood the action. I was thoroughly nettled and had difficulty in keeping back what trembled on my tongue's end.

My friend had a five-year-old chestnut gelding of good parts, a handsome animal, and the contrast between it and Skee-zik made the latter appear even more shabby and insignificant than his wont. But I knew something of what lay beneath that ragged buckskin exterior.

"We'd better push on a trifle faster, or we won't get back to-day," remarked my companion after we had loped along for perhaps an hour, and the cattle seemed but little nearer than when we first started, and we could see that they were also moving with considerable rapidity at an obtuse angle to the course we were following.

I understood his purpose. "All right," I said; "my pony can stand a faster pace." I touched him with the spur and he shot ahead, passing the other horse, whose rider gave him a liberal dose of both whip and spur. I had the lead and determined to keep it. Skee-zik was now going at a good, round gallop, while his pony was doing just about all he knew how. I also remarked, by the hard wheezing of my pursuer, that his wind was greatly inferior to that of my mount. I could hardly repress a chuckle as I gave Skee-zik his head and a rake with both spurs at the same time.

The pony gave a bound and buckled down to a wild run that quickly left the puffing brute of

my friend away to the rear. I gained rapidly upon the herd of cattle, which numbered several hundreds and were now running at top speed to escape their pursuers. They were mostly three and four-year-olds of the long-horned Texas species, and with their tails standing straight above their backs, they thundered on at a terrific rate, fairly causing the ground to tremble. I was too deeply absorbed in the chase to notice what had become of my companion. Skee-zik had the bit in his teeth, his blood was up and he was utterly beyond my power of control. As we neared the herd he never swerved an atom, but kept right ahead and was soon in the thick of the crazy drove. Finally a three-year-old bull attempted to cross diagonally in front of us and Skee-zik's breast struck the animal squarely on the side. With a wild bleat of fear the animal went rolling over and over along the plain, while Skee-zik turned an almost complete somersault and struck heavily on his side. As he went over I threw my feet from the stirrups, and as he came down, I jumped to his head and held him fast. Fortunately, he was not injured, nor was a strap broken. The unlucky bull was dragging himself painfully away on three legs.

I now espied my friend galloping toward me and a half mile away. Coming up, he looked Skee-zik over critically before saying a word. The homely brute was placidly nibbling the scanty herbage, giving no sign by his breathing that he had made a long, fierce run. "That's the greatest horse I ever saw," was my friend's final verdict, comparing the animal with his own, which seemed almost on the verge of collapse.

Though my friend knew but little more of the topography of the country than I did, yet he was able to give me sufficient information to convince me that instead of approaching the Arkansas River, I had been for days riding almost parallel to its course. The river crosses the State diagonally in a southeasterly course. It seems that instead of traveling a due westerly course as I intended, I had borne gradually to the northwest. I also found that I was about one-fourth "turned around" in respect to the points of the compass; a fact, I learned afterward, common to prairie travelers during the summer months when the sun is far to the northward.

The experience of the past few weeks had thoroughly disenchanted me of the free pleasure of solitary traveling, and when the suggestion was made that we resolve ourselves into a caravan of two, I acquiesced readily and heartily. My friend, who said his name was John LeValliee, was in no hurry to reach his destination, as he said he had intended to take quite a vacation before buckling into work, so we arranged to strike for the timber lands of the Arkansas bottoms and enjoy a good hunt together. Despite what I learned in the strangers' camp near the Osage, I had no misgivings as to my friend being other than he represented himself. At all events he was a human being and as such was infinitely more desirable than the loneliness which haunted me like a nightmare. He was a good talker, with a vein of caustic humor, verging upon sarcasm, in his make-up. He possessed another quality which I appreciated, though it was negative. He lacked what so many of my own sort of folks possess almost abnormally, namely, curiosity; or, if he had it, he was careful not to manifest it through personal interrogatories, hence I told

him no more about myself than common courtesy demanded that I should. I gave him to understand that I was employed by an agricultural journal, also that I was combining pleasure with business. As I told him this he gave his mouth a comical pucker as he responded: "I thought you were having fun when I first saw you." As a picture of my lugubrious countenance, reflected by his own on the occasion of our meeting came before my mental vision, its humor affected my risibles and I yielded to boisterous mirth in which he joined heartily. Then we shook hands and were good friends.

That afternoon we made a little trip of exploration along the creek, John pointing out to me the stalks of the edible tubers which lent bulk to our morning repast. Presently we came to a little branch, the water of which came from a spring under the gnarled roots of a clump of dwarf oaks as clear as crystal. Having no cups with us, we lay flat on our stomachs and each took a hearty draft. It was refreshingly cool and we congratulated ourselves on our lucky find. I had no sooner risen to my feet, however, than I remarked a peculiar metallic taste in my mouth, and on speaking of it to John, he said he noticed the same thing. We thought no more about it till we had returned to camp. We were beginning preparations for dinner when John grabbed his stomach and howled with pain, declaring he had cramps. I had just gone to my saddle bags for a bottle of "pain-killer" when I, too, was suddenly doubled up with cramps.

"It's that blasted water," said John, rolling on the ground in torment. "I've been told there was arsenic in the water of these plains, and that's what made that coppery taste in our mouths."

"What can we take to help us?" I asked, thoroughly alarmed.

"I saw a couple of bird's eggs in a nest down in the scrub," said he, "and if they're fresh they'll counteract the blame poison if we can get 'em in time," and we made all speed possible in reaching the nest. As we approached a bird flew off, and instead of the two eggs that John said he saw there on our former visit, there were now three. Without questioning whether they belonged to buzzard or pigeon, we each downed an egg with all possible alacrity and sat down to nurse our stomachs.

It is probable that the water was but slightly impregnated with poison, if indeed that was the source of our trouble, for the intense pain soon abated, and with the exception of a slight nausea which remained for several hours, we were as well as ever. Mentioning the circumstance to an old stager several months afterward, he said the symptoms were those of arsenical poisoning, but he was not aware that arsenic existed in the streams of that locality. In some parts of Arizona, he said, the arsenic could be seen in the bottoms of the streams, the waters of which were so highly impregnated that a single mouthful might prove fatal. Travelers in that locality had a test for water and he explained it to me, but I have forgotten it now.

As John and I had used the water of the main stream with impunity, taking it at a point several rods further down, we were satisfied that the amount of poison was very small, or that the stream purified itself. We took the precaution, however, to get our subsequent supply from

a point still further down stream, and we suffered no ill results from its use.

The day being far spent when we finished dinner, we decided to camp there another night and make an early start the next morning, employing the daylight in overhauling our accoutrements and making some necessary repairs. John was a wonderfully handy fellow and seemed to enjoy puttering over the traps, hence I was willing to contribute to his enjoyment by permitting him to do a trifle of mending for me.

We talked ourselves to sleep again that night as we had done on the previous day, with the exception that we had an additional fund of topics based upon current happenings. John was an entertaining story teller, and what is equally important, a good listener. I wish I could reproduce some of his tales, though without his inimitable intonation and humor I have no doubt they would seem flat.

A Plain Talk About the Dry Fly

By THEODORE GORDON

I AM asked so many questions in regard to dry-fly fishing nowadays that I think it will be best to answer them and condense my experience in the form of a short article or letter. One of the most common queries is, "Do you think it necessary to grease the line?" I know

A NICE CREEL OF BROWN TROUT.

several good anglers of much experience who always "fat" their lines when fishing with a dry fly, but personally I do not like it, and rarely use mutton or red deer fat or tallow. The leader is apt to receive a share of the grease and floats upon the surface in a way that to me is most disagreeable. I prefer to have the gut-casting line just under the surface, while the fly is floating quite dry and cocked. There may be nothing in it, but I think the connection of the line with the fly is much better disguised when the leader is below the surface. It certainly looks much more attractive to the angler, and I think that shy trout can scarcely fail to notice that straight line of gut right up to the floating fly.

"What flies are best for dry fly work?" This is a large and interesting subject, but the fact is that many of our well known patterns will kill well if dressed dry fly fashion with plenty of hackle (legs). Cahills, Wickhams, alders and many others have been used successfully. The quill-bodied flies absorb but little moisture, are easier to dry, and need not be so full in the

hackle. But if you use the "oil tip," as it used to be called, even a wool-bodied fly can be floated without much labor. Kerosene is good enough for practical purposes, vaseline will answer, and there are a number of special preparations made expressly to anoint the flies. There are others which are used for the line. If you oil your fly too generously, it will sink, but the surplus oil will soon wash off and then the fly floats well.

As to the rod, one with plenty of backbone is desirable, but one may fish dry with any good stream fishing rod. When I first became enthused with the floating fly many years ago, I had what we would now call a black bass fly-rod, made to order. It was excessively stiff and very hard to fish with. My arm would ache so at night after a day's casting that I could not sleep, and I have had rheumatism in that arm many times since. In our stream fishing, long casting is the exception, not the rule. Still, I must admit that I prefer a fairly powerful rod, and many rods are sold at moderate prices that are quite stiff enough, yet are easy to cast with. The stiffer the rod, the heavier the line required to bring out its action.

A man who has fished up stream in a low water with worm or fly has learned where the trout lie, and if no fish are rising he will know where to float his fly. There may be no insects upon the water, but the trout may be in position ready to feed, and will rise at any passing insect. I began with the idea that I must see the rise of a trout before casting my fly, as I had been reading books upon chalk stream angling in England.

I received much help from R. B. Marston and F. M. Halford. They assisted me greatly in selecting patterns, and I had read Mr. Halford's books. He was so kind as to send me a large number of floating flies in order that I might be able to make a selection of those most suitable and killing upon American waters.

Good anglers always help one another. For several years I always carried a box containing about fifteen dozen of the best English tied flies to try whenever I saw decent trout rising. One afternoon I had a little experience that was helpful. I had been fishing the rapids up stream with two flies when I came upon a fine reach of smooth, gliding waters, and sat down at the tail end to smoke a pipe and rest. While sitting there I spotted three good trout rising at the

lower end of the pool, and taking off the stretcher fly, replaced it with a small floater. I did not bother to remove the dropper, which happened to be a favorite fly of my own tying. Changing the tail fly occupied a few minutes and in approaching the fish I naturally kept the flies in the air by a series of false casts. These dried the dropper so much that it floated quite as well as the orthodox dry fly, and the result was that all three trout rose at it and were killed one after another. It seemed that they moved out of position to get it, and passed by the tail fly. This was an eye opener. It showed that a good wet fly pattern, if properly dressed with sufficient hackle, was also a good dry fly pattern, and that my own flies could be made to float well. This gave me a great start and added interest to the floating fly. It is an interesting, indeed, fascinating method of fishing, and many good fishermen practice it. But do not forget your old lessons and the experience you have had in wet-fly fishing. If you have fished up stream on a low,

clear water with a single fly, or even two, you will have practically put in practice about all you will require in dry-fly fishing, except guarding against the drag. You have not dried and floated your fly, otherwise the difference in method is not extraordinary. No great revolution in fishing. Even the man who fishes worm up stream in low water has to keep out of sight, present his bait skillfully, and use all his knowledge of the habits of the trout. Stalking trout is not confined to dry-fly fishing.

The most interesting conditions for the floating fly are present when there is a good birth of natural insects—ephemeridæ or caddis flies, for instance, when the attention of the better class of trout has been attracted to the surface and they are rising freely. Then all your skill will be required in selecting your fly, and in presenting it dry, floating and cocked, to each good trout in such a way that he will accept it in perfect confidence, instead of one of the naturals at which he has risen but a moment before.

We retraced our way for several miles, but found nothing but my shooting coat and the tent poles, and one of them was broken. My friend Burgess once lived in that country and knew every Indian by name, and so we told them about it, and they very kindly loaned us a frying-pan and we figured that we could make my big wagon sheet do for a tent if it came to the worst (and it did). Jim Black Fox loaned us a skillet.

About dark we arrived at our camping ground, a deep ravine with clear, tumbling spring water murmuring down it, which quietly sank into the gravelly bed and disappeared altogether within 300 yards. There is a peculiar thing about those streams over there, and this trick of the water sinking into the gravelly beds of the many hollows causes it. During rains, no matter how heavy, almost all the water sinks into the earth and follows this bed of gravel, coming out into the stream in the form of springs, and as it takes about three days for it to reach the streams, they rise very quickly when the surface water reaches them and as quickly run down. After about three days they begin to get this water that has soaked into the earth and begin to rise again, and they always get much higher on this second rise than they do on the first and stay up longer, and the water is as clear as crystal, and that is why it is so dangerous to try to drive across it unless you are acquainted with the stream.

We slept under the stars that first night, and with those ancient forest trees and hills keeping guard over us, our sleep was peaceful and sweet indeed after our trying day. At five o'clock we were up and away to the hills for turkeys. We heard a hen turkey yelping over across a deep ravine, but some hounds running a deer scared her bunch, and we did not get a shot. Further on up in the hills we saw one, but he saw us at the same time and flew. They rise very fast and usually fly at once upon seeing a hunter.

We did some scouting for squirrels that afternoon until about four o'clock, then put up the wagon sheet and made it into a snug tent with an old quilt across one end, and none too soon either, for it commenced raining as soon as we got everything in and our bed of leaves made up. We had a great heap of logs burning, and though the rain poured in torrents, the fire burned as though nothing was happening. All we could do was to lie in the tent and smoke, and this we did until our tongues were raw. All the rest of the day, all that night and all next day it poured, but we were out of horse feed and had to get somewhere, and the only way we could go was further out on to the high ground, so we hiked that way. The man I was to see lived about two miles from our camp, and he had been down and invited us up to stay with him, so we went there. We were fortunate in having to go so far because if we had been ten or fifteen miles back on the road, we would have had to stay with some of the full bloods and eaten wild onions for a few days. As it was, we were royally entertained and among friends.

We were two days on the road home and one of our horses came near dying of the colic. The mud was worse than on the trip out, but we finally got in. We made a joke of all our troubles and now laugh heartily about the trip.

On our way back we ran across a bunch of full bloods at a country store, and among them was Jim Blackfox, and he told us he had gotten

A Difficult Journey

By ROY E. NABERS

A RECENT business trip took me thirty-five miles east of Pryor, Okla., over into the hills on the head of Little Saline.

We got away on a Tuesday morning at 8 o'clock, and though our rig was small, we managed to get our stuff into and on it. We had food for only three days, as that was all the time they would allow my companion out of the store; one day to go, one day to hunt and fish and one day to return. The bale of hay almost filled up the rear end of the rig and did with the grub box. We tied our bedding on top, laid overcoats and a small tent, my shooting coat and a frying-pan on top of all this. It was my duty to watch these several articles. However, they did not need much attention, so most of my time was given to keeping my seat, as we would dip down into a deep mud hole on one side and then on the other, or one of the horses would drop down half out of sight and the other would almost crawl on top of him before he could regain his feet.

About two miles out we were struggling through the worst section of road encountered thus far when our double tree snapped, almost jerking the driver out on his head in that deep mud. Fortunately the horses stopped at the word and two trusty turkey hunters crawled or slid out into the mud. We knew a good farmer friend hard by who had a well equipped blacksmith shop, so we hiked over and he very kindly came to our aid with a big heavy double tree and not only loaned it to us, but put it on and hitched up our team, he and his son. They had on rubber boots, so the mud made no difference with them. Well, we lost an hour there.

The next mile I walked to lighten the load. The team had to be rested every few hundred yards, so deep and heavy was the mud, and at times we had to take an axe and chop it off the wheels and from between the spokes so the wheels could revolve. About 12 o'clock we ar-

rived at the ferry on the river, eight miles from town. Here our troubles, so far as bad roads were concerned, ended. Those roads on the other side of the Grand River are fine. The first crossing on the Saline is about two and a half miles from Salina. The water came nearly up to the bed of our rig and was just right for casting, but I did not have time to try it. It is a pretty stream, but is too clear for bait casting, I am afraid. A fish can see you before you get within a quarter of a mile of the stream. It is just like looking out of the window into the street. The bass are there, however; small-mouth. After we had eaten our lunch we walked up stream and looked at this beautiful bit of water. It was on a two-foot rise then, but almost perfectly clear. This almost caused a tragedy a few days later. On our return we looked at it and it was up then so we did not attempt to cross it, but went down the river ten miles and crossed the Chouteau bridge. After we left it (coming home) we met some railway men and they asked us how about it, and we told them to stay out of it, that we had measured it, and that it was at least ten feet deep right in the ford, but those men promptly drove right into it when they got there, and it just as promptly drowned their team, and almost got them, had not a fellow there at the time come to their help.

Well, to get back to the trip out. We swam through our last mud hole about a quarter of a mile from Saline, and from there on had pretty good roads. Perhaps it was for this very seductive reason that I forgot to watch the loose coats and tent on the rear of our rig, but anyhow I forgot them, and they, seeing this, quietly slipped off one at a time so as not to attract attention, and we were many miles away before we noticed our loss. I was all eyes for the beautiful scenery and the beautiful stream, but the loss of these various articles brought me to earth with a jar.

Bird Preservation

By MINNIE MOORE WILSON

all our things together and would bring them to Pryor the first time he was in. He had put out the word that if anyone found them that they were ours, and those Indians brought them all in to him. He told us to keep his skillet and use it until we got home and he would use ours.

One day while we were sitting in camp between rains I was cleaning my rifle and a big old buck came up to about thirty yards of camp and watched me for several minutes. Charles wanted me to kill him, but I said no. We were in Delaware county and the season was closed. Of course he had forgotten.

One Result of Protection.

WORCESTER, Mass., April 13.—*Editor Forest and Stream:* While on a fishing trip to Fort Myers, Florida and vicinity last winter, I saw a

IT is a bright and glorious morning. The scene is in a Florida yard. Mockingbirds are singing with all the abandon of happiness; redbirds of the most scarlet hue feed contentedly along with the dove, breakfasting on the seeds of the now dying grass. Jaybirds in numbers herald their presence as they beg for crumbs. Central in the scene are two large white birds, the great white heron or American egret—all happy and contented because man with his gun is not in pursuit.

These egrets, among the shyest of wild birds, are found in domestication to be as gentle as chickens. The more one studies these creatures,

of the world is almost too sad to dwell upon, and yet to illustrate truths we must see the picture. What the guillotine was to the French nobles during the bloody revolution, the millinery trade is to the birds of to-day. Slaughter, starving nestlings and blood-stained aigrettes belong to the tragic picture. The parental instinct of the birds is so strong that they will not leave their young, no matter what the danger, a great convenience to the hunter, for it permits him to shoot almost every bird in the colony, and yet this tragic epoch of the nation's history must be laid at the door of woman. Woman, tender, true and a heroine in time of distress and disaster, who is ever in the front ranks for the prevention of cruelty to children and animals, and whose love for humanity has made civilized America the great nation that it is. No chain is stronger than its weakest link. To what then must we ascribe the barbarous slaughter of the exquisite bird life of the world? Woman's weak point must be vanity. Rich women of the world set the fashion and poor women foolishly follow. Unfortunately, it is something that is expensive and hard to acquire that the wealthy seek after. To their credit be it said that many leaders of fashion would like to be something better than parasites and idlers if they could, and why not help protect the birds?

If all the well-to-do women in America would absolutely stop wearing feathers in their hats to-morrow, if they would realize the cruel, brutal fashion of tearing the wings from living birds for the purpose of putting on to hats to stick up into the air like a foolish looking Valkyrie, they certainly could not be happy at the thought that the wings on their hats may mean that half a dozen young birds starved to death in their nests. Another thought: These dust and germ-collecting feathers on the heads of women are far from a standard of refined cleanliness.

What fashionable leader will start the idea of hats without feathers? Aside from the humanity and the fact that the earth suffers because the birds are killed off by millions, it rests with leaders of fashion to bring fame to themselves and glory to their country and to make the world kinder and life sacred to our feathered kin. Just as human life would be impossible without earth, air and water, so it would be impossible without birds. These fitting beautiful creatures are the patrols of the earth, air and water, and unlike the policeman on his beat they never lag and are on duty day and night.

Fighting for the preservation of the gentle, beautiful and helpless feathered creatures is the work of the great Audubon Societies, and equally is the National Government doing all in its power to arrest the extermination of the valuable plumage birds of America. The feminine devotee of fashion has for years been demanding the delicate aigrette from the snowy heron. The milliner has supplied it, and man has broken the law, but at last a stronger power has come that will save the lives of the beautiful egrets in the future, and this is the terrible calumny, "Out of style," and for this reason:

When the New York milliners were compelled

WILDFOWL IN FLORIDA WATERS.

pretty good illustration of what protection will do. On the Caloosahatchee and Orange rivers, where I did most of my fishing, were large numbers of wild ducks, mostly bluebills or scaups, with an occasional black duck and a sprinkling of coots. These birds are all protected by law within a radius of two miles of the town of Fort Myers. As a consequence large numbers of the ducks are always on the river opposite the town, and they have become very tame, and it is one of the events of the day for the guests at the hotels to go down to the piers and feed the ducks with corn, etc. All it is necessary to do is to stand on the piers, whistle and make motions as though throwing food on the water, and the birds immediately begin to come in.

The accompanying picture may be of some interest, as it shows a flock of bluebills I had just called in. Some of the birds were under water when the picture was taken.

CHARLES A. ALLEN.

less God-like than ourselves, the more one feels an indulgent care and kindly sympathy for them. If the American women could know the wild bird, its native confidence in man and how quickly it responds to kindness, saying nothing of its economic value, surely the wearing of feathers and wings would soon be relegated to the past, and for this reason a brief pen picture of these egrets is given.

The birds were the gift of Billy Bowlegs, a Seminole Indian, and soon became tame, eating beef from the hand, loving companionship, standing at the dining room door during meal hours, beautiful enough, with their long silken plumes, to be the envy of any nature lover. With the instinct of nature they gather small sticks, and carrying them about, chatter and fuss over them with an affection existing between them that would be a lesson to many a cottage home or brownstone front.

As we picture these beautiful birds watching over their nestlings with as much gentleness as the human parents, who shall say God will not call to account every plume hunter and every woman who wears the aigrette and wings of the wild bird? The slaughter of the wild bird life

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

to close out every single egret feather, because of the New York law prohibiting their sale or possession, then it was that the shop girls and chambermaids were able to purchase for a song what they had been envying my lady of Fifth avenue so many years, until now the well dressed woman or the fashion dealer would scorn the one-time \$30 to \$50 egret plumes because Mary, the chambermaid, may be seen on a Sunday afternoon flaunting her enormous egret plumes, which she no doubt bought for a song, and my lady who rides in her liveried Victoria much prefers a feather plucked from the crowing chanticleer of the farmer's back yard.

Fashion has a strong hold on us all. Having watched the waving aigrettes on the cheap hats of New York maids all summer, on reaching Florida the first hat observed was at a fashionable hotel and worn by a well-gowned woman, but it looked passé; enough aigrettes were heaped on it to represent the lives of half a dozen beautiful birds, bought, no doubt, at a marked-down sale. Fashion follows a decree very quickly, and before spring the death warrant of the beautiful Florida heron will be stayed, for the fashionable woman will not wear bargain counter goods, and as each woman follows the other blindly, like sheep jumping one after the other into the field where the wolves are, the day of the aigrette is over, but this will apply only to the silken plume of the heron. Wings and birds on hats will continue until fashion puts her ban on them; that fashion must be declared by woman strong in financial and social circles.

Florida with her sunny winter climate invites the millions of migrating birds, and it is the strongest duty of our State and the Audubon Societies to protect these little plumage visitors.

Birds of economic and agricultural value are each year getting better known, and this through our Audubon and Government experts. When we reflect that the annual loss through insect and rodent ravages is now estimated to be \$800,000,000 in the United States alone, and this loss is because of the extinction of bird life, is it not time that the women of America should step in and assist the authorities in stopping one of the most serious forms of agricultural waste and also one of the worst barbarities.

At present a strong movement is uppermost to preserve those effectual little farm hands, robin redbreast and the turtle doves. They ask no wages and do much toward saving the Southern crops. Especially is their value untold to the cotton belt. These wild birds, flying South each fall to escape the cold, have been killed by countless thousands by negroes and other hunters. The wild dove, which lives largely upon seeds, destroys more weeds than the quickest human paid worker the farmer can employ, and if the wholesale slaughter is not stopped, this bird, like the wild pigeon, will become extinct and the loss to the South will be beyond computation. Florida with her statute books rich in decrees still permits the senseless slaughter of these valuable birds. When will a Florida campaign be inaugurated that will enforce laws, and not only protect our own bird life, but feel it a bounden duty to give protection to the visitors from Northern States?

All the game laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

GAME BAG AND GUN

The Conservation Law.

ALBANY, N. Y., April 20.—*Editor Forest and Stream:* An important conservation measure became a law when Governor Dix signed the Roosevelt bill to codify the laws relating to lands and forests, entitled, "An Act to Amend the Conservation Law Generally and in Relation to Lands and Forests." The bill was prepared by the Conservation Commission.

The act is a codification and consolidation of all existing laws relating to the lands, forests and public parks now within jurisdiction of the Conservation Commission.

The old laws had been repeatedly amended until they had reached a condition requiring a complete revision in the interests of simplification and effectiveness. The more progressive changes noted are:

Section 89, providing for taxation relief when waste land is reforested by private owners. Section 88, giving the Conservation Commission power to examine any private forest or woodland for the purpose of inspection, looking to the practice of the proper and most profitable methods of forestry, "to the end that the water supply of the State may be conserved, the forests protected, and the public interests safeguarded." Sections 102 and 103, providing for a statewide inspection of railroad locomotives and fire patrol in forest sections. Section 105, permitting inspectors to reject from service engines without adequate fire protective devices. Section 106, providing that all portable or stationary engines used in forest sections shall be provided with suitable spark arresting devices. The fire protection precautionary measures are made to apply to railroads in the State which are not common carriers, and are intended to enforce fire protective rules in connection with the operation of logging railroads.

Among other noteworthy features are these:

Permitting the setting of fires any time of the year for the clearing of lands for the purpose of disposing of useless combustible material (the cause of 30 per cent. of our forest fires), and for agricultural purposes, provided a permit has first been obtained from the fire patrolman. The old law attempted to legislate weather by endeavoring to assign the wet season to fixed calendar periods.

The creation of the position of a forest pathologist is a very important innovation in the State's forestry law. The need of a specialist on tree diseases has been brought home to our people by the destructive raids on the chestnut forests of neighboring States.

The law empowers the commission to operate nurseries, grow trees, reforest State lands, sell trees to private landowners at actual cost, give trees to State institutions, purchase land for forest preserve purposes subject to the approval of the Governor, and for the protection of the important watersheds in the State forest preserves.

Among the additional duties imposed upon the commission are: The care, control and supervision of the State forest preserves; to administer

all laws relating to forest tree culture and reforestation; publish pamphlets of instruction relative to the care, use, protection and management of forests and woodlands; issue licenses to guides and other persons engaged in business in the public parks of the State on such terms and conditions as it may impose; cause to be made investigation as to the methods of reforestation, prevention of forest fires, growth studies, yield tables; make rules for the prevention of forest fires. The new law authorizes the commission "to accept in the name of the people of the State by gift or devise the fee or other estate therein of land for forest preserve or forestry purposes."

Under this act the commission may go into the midst of a large tract of land and acquire what is known as the "protective mountain top areas," an important prerequisite to the preservation of important watersheds without appropriating the whole or any part of the tract, except the "protective area."

The mandatory provisions of the top-logging law regulating lumbering operations have been retained in the present law, but its application has been restricted to the so-called "fire towns."

The Conservation Commission looks upon the State forest preserves as the great playground and health resort of the people, for the use of all and abuse by none. The policy is to enlarge these recreation areas and make them more accessible for the enjoyment of all the people. The effects of the forest upon the habitability of the State, upon agriculture, upon stream flow, upon water supplies, for municipalities are well understood, and the popular demand is for an extension of the forest areas to secure an enlargement of these beneficent influences. The value of the forests as the source of wood products is also well appreciated, adding to the popular sentiment in favor of reforestation and forest protection. But perhaps most important of all is the function of our woodland areas as a place for the recreation of a hard-working, brain-weary people. The aim is to give more fishing and hunting, more fish and game, and the foundation of that high conservation purpose is the forest.

CONSERVATION COMMISSION.

Ducks and Decency.

SYRACUSE, N. Y., April 12.—*Editor Forest and Stream:* Inclosed find clipping of the arrest of prominent members of the Anglers' Association and Hunters' Club of Onondaga. Also an editorial in connection with same, which appeared in the Syracuse Herald of April 7.

The editorial, in part, follows:

Each outdoor man who rode last Sunday on one of the trains on the Auburn branch of the New York Central went home to oil his idle shotgun wistfully, telling his wife the while about a fellow he'd seen in the smoker with a bunch of two dozen fat canvasbacks lying on the seat beside him. When she asked why he himself didn't take a day off and go gunning—do him good, been working too hard, all run down after the grippe, etc., etc., he explained manfully that a wise and good law of this State forbids spring duck shooting, and that the fellow on the train had been violating that law, some hundreds of dollars' worth, if only an honest constable had caught him.

In these days of the spring breakup, with the ice of a cruel winter going out of the lakes and leaving feeding grounds and resting places uncovered for the waterfowl whose northward migration is now in full swing, every fair-sized body of water in the State has become a tantalizing spectacle for a shotgun man. Those who have dared ride to Baldwinville over the inundated Lake-shore trolley this week have seen great parti-colored flocks of ducks—canvasbacks, whistlers, redheads, mallards, scaup and their kin—twinkling over the ice in low flight through the sunshine, or bobbing on the swollen waters. It would, we trust, be impossible to violate the game laws so near the city without punishment. But there are lakes and ponds within a day's journey which the eye of the law cannot always see, and a man whose notion of decency would let him, could undoubtedly drive or motor thither, take the toll of the quacking migrants and bring his victims back to town undetected.

Should some fortunate miracle induce Congress to pass the Federal game law, both Louisiana butchery and local illegalities will come under Federal jurisdiction. Meanwhile we need to sharpen the moral sense of the hunters in every community, that they may spare the ducks so plentiful with us now, whether or not there is a warden within earshot to help them resist temptation.

The other item referred to:

As the result of a John Doe proceeding, conducted before Justice of the Peace E. L. Fellows, of South Onondaga, on April 5, Henry E. Mills, a prominent Syracuse sportsman, appeared before Police Justice William Ryan Saturday and confessed judgment to the amount of \$75 for the unlawful slaying of ducks in a swamp near South Onondaga, March 25. Three other men who were implicated with Mr. Mills—Grant A. Wilcox, Seth A. Hull and Charles J. Vinal, all of South Onondaga—have each confessed judgment to the amount of \$25.

The editorial is a strong one on the subject of spring shooting, and has caused much comment in sporting circles here, and should have more prominence, such as your paper could give it.

R. D. KNAPP.

Favorable Conditions.

GALESBURG, N. D., April 19.—*Editor Forest and Stream*: There are more geese about this spring than for many years. I saw one flock this morning of at least 500. The hunters have killed some, though why they should want them at this time of the year is beyond me. I tried a piece of one lately and did not fancy it. It was dark and coarse. I reckon I have too many other good things to eat to hanker after game in the spring; at least, until I have been starved awhile.

Prairie chickens wintered well, although the weather was very cold, about the longest and coldest ever recorded. We had no storms and that fact and the numerous big cornfields brought the brown birds through in good shape. If we have a favorable spring for nesting, I believe the birds will be very numerous next fall. We had a heavy rain a week ago and the sloughs are well filled with water, therefore we can expect some ducks and geese to remain here and breed this summer. North Dakota should be good hunting ground next fall.

J. P. WHITEMORE.

Utica Fish and Game Protective Ass'n.

UTICA, N. Y., April 18.—*Editor Forest and Stream*: The annual meeting of this association was held on the evening of April 10. The matter of game refuges, stocking covers with pheasants, restocking streams with trout, game law legislation, the enforcement of the game laws and various other topics were discussed.

Secretary W. S. French reported that 10,000 trout fingerlings were distributed in the Oriskany, Sauquoit and Skenandoa creeks last year. Rather hard luck was experienced with pheasant eggs last year, but the association put out twenty-

four pheasants in Oneida county in good shape last fall. Application has been made for 400 pheasant eggs and sixty pheasants this year.

The association decided to place the pheasant eggs secured this year in the hands of farmers to hatch and pay them \$1 for each bird four months old which is raised. A resolution was adopted to ask the Conservation Commission to close Oneida county to pheasant shooting for a period of three years.

A committee was appointed to see about securing permanent quarters for the association, and it was decided to hold the annual banquet on the evening of April 26. The following directors were elected: Dr. J. G. Kilbourn, George L. Bradford, Tom W. Johnson, Harry Lancaster, W. E. Wolcott, Major H. J. Cookinham, W. S. French, C. W. Keeler, Dr. C. E. Alliaume.

W. E. WOLCOTT.

Fishing in California.

SAN FRANCISCO, Cal., April 15.—*Editor Forest and Stream*: The season for trout fishing has commenced, and from practically every stream has come news of exceptional catches. The rainfall has been very light and the water is low in most streams. Even in the high sierras there is but little snow on the ground, and this is fast disappearing. Last season the early fishing was very poor, as streams were high until mid-summer, but this year the best fishing will be early. In district No. 3 the season opens the 1st of May. This district comprises Plumas, Butte, Sierra, Yuba, Sutter, Nevada, Placer, El Dorado, Sacramento, Amador, Alpine, Calaveras, Tuolumne, Mono and Mariposa counties and covers such streams as the Stanislaus, Tuolumne, American and Feather rivers, Lake Tahoe and vicinity.

A number of anglers have already gone into the Klamath River country and splendid sport is reported, fishing being about three weeks earlier than usual. The spring run of rainbow trout on this stream is heavy, and on Shovel Creek, a prominent tributary, trout are plentiful and many baskets averaged two pounds to the fish. Steelhead fishing above tide water is open and large catches have been made. On the Russian River unusually large fish are being taken, a number weighing from twelve to eighteen pounds. Net fishermen have not been allowed to operate at the mouth of the stream this season.

A big run of salmon is now on in the Bay of Monterey. Almost 2,000 salmon were taken in one day and some weighed as much as fifty pounds. The members of the Monterey Bay and San Francisco Light Tackle Club have been enjoying the sport in competition for some of the prizes offered by the club. This organization has just elected officers as follows: President, Paul M. Nippert; Vice-President, W. W. Richards; Secretary-Treasurer, E. A. Mocker; Directors, Chas. F. Breidenstein, Louis Gotthelf, W. W. Richards, Chas. H. Kewell, W. D. Burlingame and J. E. O'Connor.

Deputy Fish Commissioner Bert H. Nidever in the launch Quinntat of the Fish and Game Com-

Fined for Killing Deer.

SAN FRANCISCO, Cal., April 15.—*Editor Forest and Stream*: Four men were fined an aggregate of \$225 at Placerville recently. These were Ralph Kyburz, of Riverton; Emil Pierroz, of Placerville, and Louis White and Joseph Wells, trappers. They were apprehended through the work of Deputies Gray, Green and Scroggs and confessed to having killed four deer.

GOLDEN GATE.

Fox Hunting.

BLOOMINGTON, Ill., April 20.—*Editor Forest and Stream*: Frank Lafollette, of Heyworth, since Nov. 1, has killed fifteen foxes, all of the red species. Others of the same vicinity have disposed of ten more.

E. E. PIERSON.

mission, recently apprehended nine Italian fishermen on San Francisco Bay operating without a license. They were released upon taking out papers at a cost of \$10 each and on April 1 they were called upon to take out licenses for the new season, \$10 more.

GOLDEN GATE.

North Shore Casting Club.

CHICAGO, Ill., April 15.—*Editor Forest and Stream*: The last meeting of the club was the largest and best we have ever held, and members thoroughly enjoyed it. The committee on grounds and privileges has made splendid progress in all parts of the work that was assigned to it. The program for the season follows:

May 4.—Half-ounce accuracy bait, half-ounce distance bait, accuracy fly, distance fly, salmon fly.

May 18.—Quarter-ounce accuracy bait, quarter-ounce distance bait, light tackle dry fly accuracy, light tackle distance fly.

June 8.—Half-ounce accuracy bait, half-ounce distance bait, accuracy fly, distance fly, salmon fly.

June 22.—Quarter-ounce accuracy bait, quarter-ounce distance bait, light tackle dry fly accuracy, light tackle distance fly.

July 13.—Half-ounce accuracy bait, half-ounce distance bait, accuracy fly, distance fly, salmon fly.

July 27.—Quarter-ounce accuracy bait, quarter-ounce distance bait, light tackle dry fly accuracy, light tackle distance fly.

Aug. 10.—Half-ounce accuracy bait, half-ounce distance bait, accuracy fly, distance fly, salmon fly.

Aug. 24.—Quarter-ounce accuracy bait, quarter-ounce distance bait, light tackle dry fly accuracy, light tackle distance fly.

Sept. 7, 14 and 21.—Re-entry days.

Events not completed on date scheduled will be held on the following Sunday.

Regular practice events will be held on each Saturday where events are not scheduled.

Special practice on Decoration day and Fourth of July.

C. O. DORCHESTER, Sec'y-Treas.

San Francisco Fly-Casting Club.

SAN FRANCISCO, Cal., April 14.—*Editor Forest and Stream:* The initial contest of members for the season was held yesterday and to-day on Stow Lake. The weather on both days was fair with variable winds.

The season's program calls for five events as follows: Long distance fly, accuracy and delicacy fly combined, accuracy fly, accuracy and long distance lure.

There are four classes in each event (except in long distance lure, which is for record only): Championship, first class, second class and novice class.

The following average scores are necessary for the different classes:

FLY CASTING.

Accuracy.	
Championship.....	98 2/3 per cent. or over
First Class.....	97 2/3 per cent. or over
Second Class.....	96 2/3 per cent. or over
Novice Class.....	Under 96 2/3 per cent.

Delicacy.	
Championship.....	99 per cent. or over
First Class.....	98 per cent. or over
Second Class.....	95 per cent. or over
Novice Class.....	Under 95 per cent.
Long Distance.	
Championship.....	115 feet or over
Or who in any contest has cast.....	130 feet or over
First Class.....	100 feet or over
Second Class.....	85 feet or over
Novice Class.....	Under 85 feet

LURE CASTING.

Accuracy.	
Championship.....	98 per cent. or over
First Class.....	96 per cent. or over
Second Class.....	94 per cent. or over
Novice Class.....	Under 94 per cent.
Long Distance.	
Longest average cast for season.	
Second longest average cast for season.	
Longest single cast in tournament.	

Lure Casting, ¼-ounce. Accuracy and long distance, for record only.

The winner in Saturday contests must cast off with the winners of the corresponding class in Sunday contests.

E. O. RITTER, Clerk.

Garfish.

BLOOMINGTON, Ill., April 20.—*Editor Forest and Stream:* Illinois fish commissioners have called a conference of the fish commissioners of Iowa, Missouri and Indiana, with representatives of the Federal Bureau of fisheries to take action on the garfish and carry on an effective crusade for better game fish conditions in the Western rivers. The Illinois commissioners are R. H. Meents, of Askum; E. E. Caldwell, of Havana, and S. P. Bartlett, of Quincy. E. T. Lincoln represented the Iowa commissioners, E. C. Grether, the Missouri commissioners; B. C. Merrill, of Hinsdale, the Illinois Fish Conservation Association, and J. H. Johnson, the United States commission. The garfish is extremely destructive to the game fish, and it is desired to exterminate it if possible. The Illinois fish laws require fishermen to kill these fish whenever hooked or taken in nets, but it is thought that the situation requires additional steps.

Ideal fishing weather through Central Illinois attracted hundreds of anglers during the past week. The water subsided considerably. The bass have been biting in the Du Page River, and several fine strings were secured.

E. E. PIERSON.

Record Fish.

ACCORDING to the Anglers' News the best salmon taken in Great Britain during the past year weighed forty-five pounds and was fifty-one and one-eighth inches in length. It was killed in the River Wye, by F. Morgan, in February. The record trout, weighing fourteen pounds eight ounces, was killed in five minutes' time in Lough Corrib, by G. S. Tapham. In all thirteen salmon weighing forty pounds and upward, and six trout of ten pounds and over, were taken during the season.

The record trout for the islands follow:

Loch Stennis, twenty-nine pounds; Lough Ennel, twenty-six pounds two ounces; Loch Rannoch, twenty-one pounds (caught by Miss K. Kirby); New River (London), eighteen pounds; seventeen and one-quarter pounds (Killarney); and sixteen pounds fifteen ounces (Thames). This latter splendid trout—the largest authenticated specimen taken from the Thames—was presented to Queen Victoria at Windsor Castle, and a cast was made by Frank Buckland and is now in Reading Museum. The eighteen-pound New River trout, it is worthy of mention, was

caught within four miles of the Bank of England, and is London's champion trout.

Seasoned Rods.

A LARGE British rod-making firm has sent to its customers asking them if they could forward their orders for special split cane rods at least six months before the same are required for delivery. It appears, according to these expert rod builders, that after a split cane rod is finished, it should be kept in an even temperature for at least three to six months before using, to allow the cemented joints to become thoroughly hard. If split cane rods are used too early, they are apt to twist or not stand straight. The longer the rod is allowed to stand before using, the longer will be its life. Greenheart and other wood rods on the other hand can be used at once, as these are not cemented, but split cane never should be.

New Publications.

MODERN DEVELOPMENT OF THE DRY FLY, by Fred-eric M. Halford. Cloth, 219 pages, illustrated with photogravures and colored plates, \$5 net. New York, E. P. Dutton & Co.

In the introductory the origin of the work and the development of the idea are discussed, followed by information and instructions as to the preparation of the materials used in dressing the patterns, manipulation of their dressing, illustrated by practical cuts or diagrams, and a series of articles descriptive of the author's experience of the use of the various flies.

Then follows a series of nine colored plates, figuring the thirty-three patterns of artificial flies comprised in the series. The greatest care has been paid to the accurate nature coloration of these plates; eighteen colored lithographic reproductions, selected by the author from M. Dauthey's Répertoire de Couleurs pour aider à la détermination des Couleurs des Fleurs, des Feuillages et des Fruits, published by the Société Française des Chrysanthémistes (René Oberthür), printed (with the permission of the proprietors and of The Royal Horticultural Society) by the French printers of the original work. These plates standardize the color shades and their names; a series of sixteen photogravures, from the author's negatives, of fishing scenes, specimen fish, etc.; numerous text cuts and diagrams of a practical nature, either from drawings made under the author's supervision by H. L. Shindler, or from photographs; thirty-three actual new Halford dry-fly patterns, correctly dressed on eyed hooks.

FREDERICK M. HALFORD'S publishers have just issued a new book on dry-fly fishing by the veteran author. It is entitled "The Dry-Fly Man's Handbook," and is a complete manual on the subject and on entomology and fishing management.

BOOKS RECEIVED: "Onawago," by W. C. Ludlow; Antiquarian Pub. Co. "The Foresters Manual," by E. T. Seton; Doubleday, Page & Co. "Saddle and Camp," by Dillon Wallace; Outing. "In Northern Labrador," by W. B. Cabot; Badger. "The Hunting Year," by W. S. Dixon; Ham-Smith. "Logging and Lumbering," by C. A. Schenck; Schenck. "The Mystery of Golf," by Arnold Haultain; Macmillan.

A Day Afield.

BRANCHPORT, N. Y., April 7.—*Editor Forest and Stream:* The morning of March 31 was fair and warm with song sparrows singing from every bush, the crows cawing and a large flock of black ducks resting in the channel. This is the only open water at the head of beautiful Keuka, as the lake still lay covered with over twenty-four inches of solid ice and our trout fishermen are a gloomy crowd, as the season opens shortly and they have had no weather fit to paint their boats.

The recent rains and warm weather have cleared the inlet from ice, and a walk along its banks through the fields and bush showed us many interesting things. At the very beginning

through the brush. Tree sparrows were singing in the hedgerows and a marsh hawk coursing the meadows.

Further up the creek we put up a pair of black ducks, then a pair of mallards and soon three more blacks and startled a rabbit from the bushes, and it went bounding away in the open faster and faster each jump until it disappeared in a hedgerow.

As we came back to the marsh and fringe of trees and bushes at the head of the lake we ran across a flock of goldfinches twittering merrily, and a hermit thrush threw us an inquiring look over his shoulder as he sat on a low branch, where we could see his olive back and rufous tail. Our earliest record for hermit heretofore was April 6.

with their going. I have known the scarlet tanager to die of starvation in the early spring in Northern Michigan, and the bluebirds often freeze to death in New England when they appear too soon.

It happened that the lower end of the mast which supported our martin house had decayed to such an extent that one day a tempestuous wind blew it down, and made a pretty general average of the whole outfit. Fortunately, the birds had left, but in order to be prepared for their return, I got some store boxes and built them a new house. I have often wondered that people who admire the birds should not go to the trouble of putting up something which might serve them for a home, and where they might be seen at any time. It costs but little to do this, and the birds seem to appreciate the attention, but the thing may easily be overdone.

When the house was erected, my helper told me that he once knew a wealthy man who built a very elaborate and expensive three-story house for the birds, and they came and looked

ALONG THE INLET.

HOODED MERGANSERS.

From photographs by Verdi Burtch.

of our walk we flushed seventeen pheasants all in a bunch and only one cock bird among them. The hunters about cleaned them out last October, but we probably have enough left for seed.

Three killedeers followed by a Wilson's snipe got up from a wet place in the field, and as we came to the creek, three hooded mergansers arose and flew off toward the lake, a meadow-lark went over, and the first phoebe of the season sat on a low branch of a poplar, jerking its tail.

It was a good day for migrants, as we soon saw our first kingfisher, two of them flying down the creek, sounding their rattles as they went, and a great blue heron arose from a marshy pasture and slowly flapped his way over the woods up stream. By the way, I should call the great blue heron mentioned by Mr. Lawrence in the March 30 *FOREST AND STREAM* an early migrant instead of a winter resident. They sometimes arrive here as early as March 17, and should arrive on Long Island much earlier than they do with us.

As we approached a bunch of tag alders we heard a pheasant crow and glanced up just in time to see the flap of his wings after the finish, and as we moved, he saw us and sneaked off

At the mouth of the creek was a flock of twenty-three American goldeneyes and a large flock of black ducks, and up around the bend a handsome hooded merganser drake was leading two ducks up and down the creek. From our point of concealment in the cattails we could see the crest rise and fall as he strutted along.

VERDI BURTCH.

Attracting the Birds.

TARPON SPRINGS, Fla., April 4.—*Editor Forest and Stream:* A woman whose summer home is in St. Albans, Vermont, and who is known among her friends as the "Bird Woman," told me the other day that she had just seen a Baltimore oriole in this vicinity.

I have never seen one here, and this must have been a migrant. In the winter, robins are sometimes seen here in flocks, when, if they can find a camphor tree, they eat the berries greedily—not, as one would think, a very desirable food. I have known them in the mountains of Eastern Tennessee to devour the berries of the holly, and it is said that they at times will eat the cedar buds in some parts of Pennsylvania.

When it is time to migrate, the birds seem to allow no question of sustenance to interfere

it over, but "not the derved one of 'em would ever live in it at all."

I was at some inconvenience to paint the bird house and have it ready for occupation on the first of February, as I thought that it would be wanted about that time. Accordingly, on the morning of the second, my wife heard the familiar note of a martin, and on looking at their house, we saw three of them.

They always have a good deal of talking and planning before they are quite ready for business, but about the middle of March they had mated, and were beginning to accumulate house-keeping material. They seem to be doing quite well.

KELPIE.

Eagles Ridding Island of Varmints.

SAN FRANCISCO, Cal., April 15.—*Editor Forest and Stream:* From Santa Rosa Island, which has been transformed into a great stock range, comes the news that American eagles are rapidly exterminating wild animals on the Channel Islands, and that foxes and wild boars are becoming scarce. While sheep are occasionally killed, the presence of the eagles is welcomed. The eagles pick out the young for destruction.

CORRESPONDENCE.

FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but are not responsible for the views of correspondents. Anonymous communications will not be regarded.

SUBSCRIPTIONS.

Terms: \$3.00 a year; \$1.50 for six months. Single copies, 10 cents. Canadian subscriptions, \$4.00 a year; \$2.00 for six months. Foreign subscriptions, \$4.50 a year; \$2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line (\$2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra.

Special rates for back cover in two or more colors.

A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Advertisements should be in our hands by the Monday morning previous to date of issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

THE TITANIC DISASTER.

IN these days, when the horror of the Titanic disaster still lies like a heavy hand on the heart of every person—when the conviction is growing that the people who went down in the icy North Atlantic were sacrificed on the altar of commercialism—there is still one thought that brings comfort to those who lost near and dear ones and to others as well who knew no one aboard the great ship. This is the heroism of the men and women who calmly faced certain death in one of its most trying forms, and whose last energies were directed toward succoring the pitifully small number that rowed away in the small boats. For them all avenues of escape were closed, and they knew it. Still they faced the inevitable with fortitude and cheerfulness. Among them were a great many who were strong physically and mentally through their love of the outdoors and their practice of favorite healthful sports. The self-reliance that they had attained in this way was of material assistance to them in their hour of need, and carried them as far as it is possible for human beings to go. Beyond that point there was no hope.

SEVERAL communications received recently are withheld from publication for the reason that they were sent in by persons who did not sign their names. Will these correspondents kindly supply the necessary endorsements? We do not print anonymous contributions.
