Wikidata Game Help

**Wikidata - The game!**  
Here, you see the rest of games that help to improve Wikidata, one statement at a time.

- Random game**  
A random game from the list below, is selected each time.  
(Click to see variety.)
- Merge items**  
Some pages have duplicate items on Wikidata. Two items with the same label or alias will be suggested to you.  
(Merge identical pages, tag items as different, or edit on their page if you are not sure. Please be very careful!)
- Person**  
Many items about people on Wikidata have no instance of property.  
Decide if one of them is a human, and tag the item if you are not sure.
- Gender**  
Many items about people on Wikidata have no gender property set.  
Set a new gender statement 'male' or 'female', or edit the item if you are not sure.
- Occupation**  
These people have no occupation, but their articles suggest some.
- Alma mater**  
These people have no alma mater, but their articles suggest some.
- Country of citizenship**  
These people have a birth place, but no country of citizenship (P27).
- Disambiguation items**  
These items would represent disambiguation pages, and should be marked as such!
- Date**  
These people have birth and/or death date missing.
- Image**  
These items have no image, but their Wikidata articles do.
- Commons category**  
These items have no Commons category, but are with the usual same name scheme.
- Books without author**  
These items have no author on Wikidata, but their Wikidata articles might.

### Wikidata-centric

- Merge: This script adds a tool for merging items.
- slupInterwiki: Import Interwikis from a Wikimedia project.
- autoEdit: Automatically add labels thanks to existing Interwiki links and descriptions thanks to a list that you can customize.
- FindRedirectsForAliases: Adds a "Find redirects" button in a submenu next to the "Watch" button that, when clicked, displays a list of Wikipedia redirects and allows the user to select some of them to add as aliases.
- labelLister: Show and edit labels, descriptions and aliases from other languages.
- Move: Adds a move tool to the sitelink edit toolbar to move a sitelink to another item.
- Search: Shows a small link right to the search field which provides a search form to find an item directly by its sitelink.
- Preview: Shows a "preview" button next to each linked article to get a preview of the article right next to the table.
- SitelinkCheck: Shows a form to check whether a specific site link is already in use and gives the id of the item if so.
- enumItems: Add navigation arrows to go to the previous or the next Wikidata item.
- RequestDeletion: This script adds a link at the top of each item with a link for quickly requesting a deletion on [Wikidata:Requests for deletions](#).
- Main language first: This Tool highlights the language used at the moment, and shows it on the Top. For second language you can use ([Assistant languages](#).)
- AuthorityControl: Provides a link to various Authority Control tools (VIAR, GND, etc.) for Wikidata elements that have related properties.
- CommonsMedia: Allows to view an Wikimedia Commons image used as statement from Wikidata.
- Descriptions: Show the description of items and properties when hovering them.
- KeyShortcuts: Provides some useful keyboard shortcuts: exactly those specified at [Wikidata talk:Tools#Keyboard shortcuts](#).

# Do you need more tools ?

<https://www.wikidata.org/wiki/Wikidata:Tool>

## Tools

This page is a list of tools you can use to work at Wikidata more quickly and comfortably. If you have written a script just add it and help many other users.

### External tools

External tools are tools that do not run in Wikidata but on another server. Most of them are useful to consume the data provided by Wikidata.

See also [the list of Wikidata tagged tools](#) on labs.

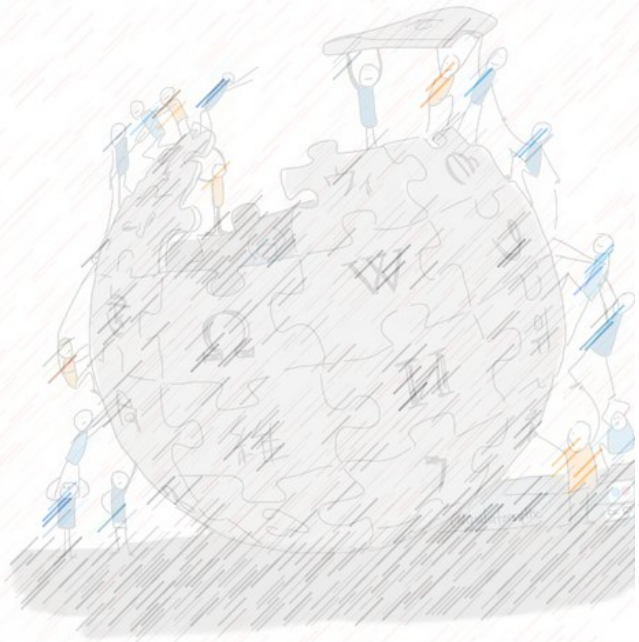

### Gadgets

Gadgets are scripts created by users which can be enabled in the [preferences](#) under the section "Gadgets". They can only be edited by [administrators](#) and are assumed to be stable.

### User scripts

User scripts are also scripts created by users but they do not appear in the preferences. Instead you have to add a line of code into your [common.js](#) file to use the script. User scripts can be created by anyone and might not always be stable.

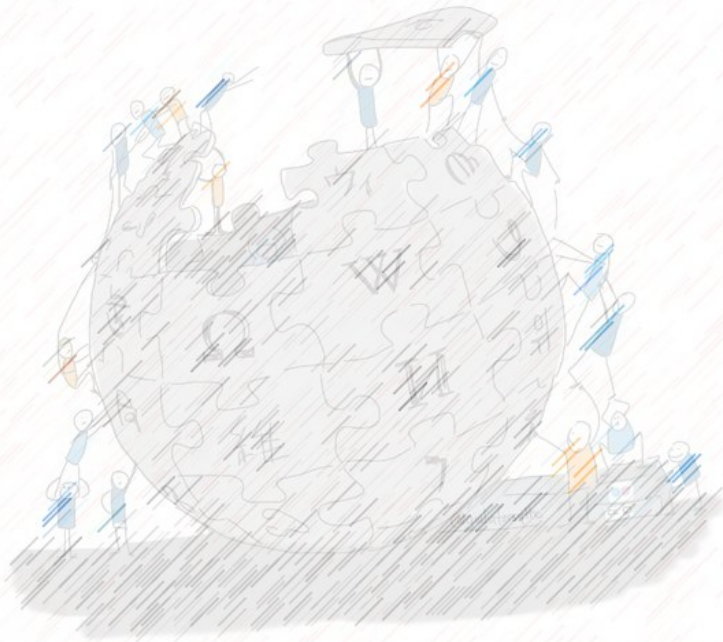

Thanks
