## 概況 青島爲山東之門戶亦即膠濟路之基點舟車聯絡海陸運輸頗占形勝迄今爲我

國之有數商港盡人知之矣 商埠街市位於半島內藏水深且闊之膠州灣東北倚嶗山山派東西南三面環海地勢徐紆最宜築港且四時氣候順適有海洋之溫和無大陸之激變誠沿海不可多得之形勝安全地也

西歷千八百九十八年(前清光緒二十四年)德意志之租借膠州灣也謀樹東亞通商貿易之中心本港適當海陸交通之衝要非行開放殊難期發展而著宏圖千八百九十九年(前清光緒二十五年)適逢該國不列門(Bremen)築港告竣世界有名之築港技師格阿爾佛蘭歇斯氏(Georg Franzius)實手成之德政府遂採其計畫着手建築青島大港及各碼頭當東洋艦隊派遣前數月(千八百九十七年)氏即受命來青調查一切擬具計畫於水位水深潮流風力風向地形地質等靡不詳確其於防堤也則利用岩礁所在及小島嶼天然地勢巧爲結合以比較低廉之工費建築長大之防堤蓋該堤一成膠州灣內不惟防止激烈之西北風浪即前此因西南季候風浪湧來之黃海泥土歷爲膠州灣塔埠噴湮塞之患者亦得杜絕其於碼頭也則護岸倉庫鐵道起重機等舉凡將來貿易發展上應有之設施靡不顧慮精詳舉劃周至觀現在之工程則當日調查計畫者之煞費苦心可想而知矣

如上所述計畫之結果以港口外之防波堤與對岸小輪船繫留場相應之故曩日港口急進潮流遂以和緩加之港口角度與各碼頭配置咸宜船舶操縱均感容易迄今無出險之患是雖繫乎船員之技能實則基因於築港設計之技術及思慮之處良足多也

碼頭岸壁之構造上下四米殆成垂直沿岸壁則每間十米設適當角度之防舷木更於每四十米間置繫船鐵碇及應潮浮沉之防險木兩者均於防舷及護岸收良好效果且防險木之構造堅實尤爲吾國各處碼頭所不及

碼頭與鐵路其於貿易關係尤重故二者聯絡計畫更精現碼頭界內之路線自本線起共分三大支線直達各碼頭之極端第一支線通過防波堤達第四碼頭之貯炭場第二支線至第二碼頭再分爲六第三支線更分爲四環繞各重要倉庫前後因是鐵路碼頭及倉庫之交通有如脈絡凡界內貨物上下碼頭出入倉庫均得就地裝卸以之運輸於山東內外各地其便利有如是也

### Physical and Geographic Features.

Being the gate way of the Province of Shantung and terminus of the Kiao-tsi Railway, the port of Tsingtao occupies indeed a unique position. Here the railway makes immediate connection with steamers, thus direct transportation by land and sea is facilitated. Tsingtao is known to the world as one of the few commercial ports China possesses. It is situated on the peninsula which projects into the deep and wide Kiaochow Bay, sheltered on its northeast by the Laoshan Range and surrounded on south, east and west by water. Being so located its suitability for a harbour is unequalled. The climate is favourable all the year around and the temperature through the different seasons is averaged at 55° Fahrenheit. Its healthy atmosphere and scenic views are not to be found elsewhere along the coast of China.

### The Harbour Construction.

Kiaochow was leased in 1898 (24 Year of Kwang Hsu) to Germany who had long sought to have a center for her trade in the Far East. In view of the natural facilities by land and easy access by water which this port possesses, serious consideration was given for its development. It was in 1899 (25th Year of Kwang Hsu) when the construction of the Bremen Harbour in Germany was just completed by the world known harbour engineer Georg Franzus, the German Government adopted his proposal to construct the Great Harbour of Tsingtao and its wharves. Several months before the despatch of German Squadron to the East, (1897) he was sent to Tsingtao to study in detail the water course, depth of water, tidal current, wind directions, topographical and geological aspects. Advantage was taken of the places where reefs and islets were found for the construction of the long break-water, which was accomplished with comparatively small expenses, in spite of the magnitude of the work. This break-water not only protects the harbour from the strong northwest wind which is a regular visitor of the Kiaochow Bay, but also prevents the mud silt from coming into the harbour, which has heretofore flowed from the mouth of the Yellow Sea during the southwest monsoon season and occasioned many afflictions to Kiaochow and Taputou. At the wharves and along the bund are warehouses, railway lines, cranes and all necessary equipments for the future development of trade, all these evince the efficiency of great pains taken by those who studied and planned such momentous work in those days

### Engineering Skill.

As a result of the careful working out of the plan of the above mentioned break-water and also because of the proximity of the Dock Harbour for small steamers on its opposite side, the current which was heretofore swift at the entrance of the harbour, has been made to flow gently. The harbour entrance and the position of wharves has been so arranged at such angles as to make the handling of ships easy. Up to the present, no accident has occurred. Although this may be due to the alert handling by ships' Officers, still a great deal of has to be attributed to the skill and attention of the engineer, who planned for the construction of this harbour.

### Construction of the Wharf Wall and its Equipments.

The wharf wall has been constructed at a measurement of four meters from top to bottom in a perpendicular line. At each spacing of ten meters along ten wall, are placed fenders at proper angles. And also at each spacing of forty meters, in addition to iron mooring posts, floating fenders are provided which serve to protect the ships gunwale and wharf walls. The mooring posts being built of strong material, have been regarded as superior in quality to all others found elsewhere in China.

### Relation of wharf to Railway.

Since the linking up of wharves with railways is essential to trade, the plan of making such connection in Tsingtao was elaborately carried into effect. Now there are three lines leading direct to the wharves. The first line extends over the break-water to the coal storing ground of wharf No. 4. The second line extends to Wharf No. 2 and divides itself into six branch lines. The third line divides itself into four branches which pass by all the important warehouses. Such facilities are most convenient for loading and unloading of goods for transportation to other ports from the Province of Shantung and vice versa.

各碼頭堆棧及界內倉庫純係火磚鉛鐵板及便利瓦等材料造成形如臨時兵營此等建築于光線通風及運搬出入等設備均極完善及第一第二碼頭岸壁同時可繫六千噸級之輪船十二隻其規模宏大如此總計大港及碼頭建築費約三萬馬克於千九百零六年（前清光緒三十二年）全部告成設碼頭局管理之直隸膠州灣總督府但表面雖屬官辦實則碼頭局並非直營碼頭事業惟將繫船岸壁指定各船公司專用碼頭局僅檢查各公司賬簿徵收費用事務甚簡故其組織自局長一下不過德人四員而已

### Cost For Construction of Harbour and Management of Wharves.

Godowns and warehouses at each wharf are built purely with bricks, covered by galvanized iron plates and roofing material, like temporary military barracks, light, ventilation and transportation facilities are well furnished. At Wharf No. 1 and Wharf No. 2 there is room enough for twelve ships of 6,000 tons size at one time. The harbour is deep enough for ships drawing eight meters at the neap-tide. The construction of the Great Harbour and wharves costed 30,000,000 Marks. The whole work was completed in 1906 (32nd. Year of Kwang Hsu). Then, a Wharf Office was established for administrative matters, under the direct control of the Director-General of Kiaochow. The Wharf Office, apart from its duty of assigning berthing space to the various Steamship Companies, did no other direct wharf business, except examining the account books of the companies which paid wharf dues. Under the German Administration, the business being simple, the office personnel consisted of only four Germans.

### Wharves Under Japanese Administration.

In November, 1914 (3rd Year of the Republic of China) Japan availing herself of the opportunity of the European War, took over the Leased Territory of Kiaochow. She made careful studies of the wharf administration. To suit her needs and in view of the different conditions, Japan placed the Wharf Office under the direct control of her Government agents. At the time of her assuming control of Tsingtao, ships could not enter the harbour, due to obstructions at the harbour entrance. The wharves, storing places and warehouses were not available on account of the overstock of military supplies. It was on November 25th. 1914 that Japan began to clear up these places by disposing of the supplies, most of which were shipped to Tientsin, Shanghai and Tokyo. It was not until December 20th, that the clearing work was completed. Eight days after, the harbour was thrown open to accommodate ships and ocean steamers and wharves began to assume their busy role. The Wharf Office was put under the direct control of the Commanding officer of Tsingtao. On September 1st. 1915. (4th Year of the Republic of China) the Customs House of Tsingtao was handed over to China when the joint administration system was abolished. In March of 1917, all the accumulated goods were cleared up. Since then, warehouses were used for storing important goods so as to expedite trade development. On March 15th. warehouse bonds were issued to promote industrial and commercial facilities.

### Change in Wharf Administration.

In May, 1916 a change was made by transferring the Wharf Office to the control of the Military Administration, until October 1917 (6th. Year of the Republic) when the Civil Administration was actually established. The Wharf Office was then put under the control of the Railway Administration of the Civil Department of the Tsingtao Garrison.

### Wharf Office Restored to China Upon Japan's Return of Tsingtao Administration.

As a result of the Washington Conference, January 1922, (11th. Year of the Republic) in the Treaty for the Settlement of Outstanding Questions Relative to Shantung, Article 1 stipulates that Japan shall restore to China the former German Leased Territory of Kiaochow. In November of the same year, the delegates of China and Japan met at Peking and agreed upon the Detailed Arrangements for the Settlement of Outstanding Questions Relative to Shantung. On December 10th. at noon, the Wharf Office was completely handed over to China. Soon after, the Directorate-General for the Port of Kiaochow was established. In March, 1923. (12th. Year of the Republic) the Wharf Office and the Harbour Master's Office were incorporated under the name of Harbour and Wharf Administration placed under the direct control of the Director-General of the port, in order to secure coordinated management. In January, 1924, (13th. Year of the Republic) the Harbour Works Office was by order incorporated with the Harbour and Wharf Administration under the name of the Department of Engineering Affairs. At the same time Department of the Ship Mooring Affairs dissolved and the Ship Mooring Division was therefore put under the Department of Harbour Affairs. Thus with the combination of the three Offices this Administration is now running its business on a large scale, and is therefore the busiest of all Offices in the port of Tsingtao.

### Trade Activities.

The trade of the Tsingtao Harbour is increasing from year to year. In 1913, (2nd. Year of the Republic) the most prosperous period during the German administration, the trade was Hk. Tls. 60,448,000. In 1922, (11th. Year of the Republic) the last period of the Japanese administration, the trade was Hk. Tls. 97,942,000. After a period of ten years, the increase was over 20%. The tonnage of goods imported and exported during the German administration was unknown. But during the Japanese administration, the goods imported and exported, were over 358,000 tons for 1915, (4th. Year of the Republic) as compared with 1,407,000 tons for 1922, an increase of 400%. It is already six years since the taking over of the Wharf Office. As the administration of it started with 1923, (12th. Year of the Republic) the goods exported and imported as compared with 1922 (11th. Year of the Republic) due to the undecided policy and hesitation of the business men, were decreased over 253,400 tons. This is a natural outcome and is not the demerit of the administration. But although the tonnage was decreased, the receipts as compared with 1922, were increased to the amount of over \$90,347.00, which means very good result, or rather a record of progress. Since the spring of 1924, (13th. Year of the Republic) the state of trade has not only been gradually restored to the degree of its former days, but also shows great improvement, as the total amount of goods exported and imported through the wharves is 1,549,249.2 tons which compared with that for 1923, shows an increase of 314,535.9 tons, and of 61,127.9 tons for 1922, the most prosperous period during the Japanese administration. The total tonnage of goods imported and exported through the wharves was 1,550,366.5 tons during 1925, showing a decrease of 43,883.0 tons only as compared with 1924. Trade for 1926 (15th Year of the Republic) has been much effected, owing to the military movements and operations, and lack of cars on the Kiaotsi line. The coal mined from Tzechuan etc. was due to the shortage of cars, held at mines and could not be shipped to Tsingtao, thus showing a decrease of coal exports to the extent of 200,000 tons as compared with the record for the year of 1925. While trade in coal was greatly decreased the other kind of goods were increased, and thus we may observe that trade in this Port taken as a whole continues to prosper. In 1927, (16th. Year of the Republic) the total amount of the exports and imports is 1,632,174.7 tons. Comparing with that record in the thirteenth year of the Republic which was the most prosperous period under Chinese administration, an increase of 35,925.5 tons was made. The increasing rate for the exports was over four and half times that for the imports, and this can be safely said that the productive power in the inland is in a progressing state. During 1928 (17th Year of the Republic) the total tonnage of goods imported and exported amounts to 1,951,480 tons, again showing an increase of 319,323.3 tons as compared with 1927. This is the most prosperous period ever since Tsingtao opened to the world as a commercial port. From this condition we may predict that the future trade in this port will be a very hopeful one and will be going up steadily.

### Kind of Products Imported and Exported.

The principal products of Shantung are those from mines and agriculture. Therefore the amount of trade in this port varies with the season and harbour activities present a lively scene. The busiest time of the year for exports begins with November to the end of May of the next year. The principal exports are coal, cokes, salt, groundnut, groundnut oil, beef, eggs, tobacco leaf, softwood, raw cotton, etc. Most of these products are shipped to the interior of Japan; Shanghai, Hongkong, Dairen, Canton, and Korea stand second. Although the European and American countries do not export from Tsingtao much of the above goods, still the export of groundnuts to Hamburg, Rotterdam, Marseilles, Seattle and Valencia has been increasing from day to day. Imports from the interior of Japan also rank first, of which raw cotton, cotton cloth, cotton yarn, cement, iron, machinery, wood and plank, match material, mats and ropes etc. are the principal ones. Next in rank are cigarettes and tobacco, raw cotton, cotton cloth, cotten yarn, native paper, iron, machinery and bamboo from Shanghai; kaoliang, bean cakes, cement, from Dairen; sugar, iron and gunny bags from Hongkong; wood from Antung and Foochow; rice from Koera, and sugar from Formosa which has also been imported in no small quantities. As for imports from foreign countries, the kerosene oil of San Francisco, New York, and San Pedro stand first.

### Loading and Unloading of Goods.

The loading and unloading of goods usually take place on wharves except when they are overcrowded. Then the loading and unloading are, therefore, to be done in the harbour. In addition to the carne of 150 tons on Wharf No. 4 for loading and unloading heavy articles, the labour of coolies is also used in most cases. They are able to do comparatively more efficient work, as the Shantung labourers are good-natured and most suitable for union work. However, their charge is low and therefore the transportation charges of the Tsingtao Harbour are comparatively lower than those of other harbours.

## LIST OF AIDS TO NAVIGATION IN TSINGTAO HARBOUR AND ITS VICINITIES.

## Introduction.

1. The different kinds of aids to navigation included in this list are eight in number, Lighthouses, Leading Lights, Lighted Beacons, Lighted Buoys, Lighting & Whistling Buoys, (The above mentioned are called Lights) Beacons, Buoys and Fogsignals.
2. Latitude and Longitude are taken from the latest revised sea charts.
3. Illuminate Arc means the arc illuminating on the sea surface, and that part of the colored light is called the Sector.
4. Bearings are determined according to the True Bearings and in degrees from 0° (North) to 359° measured clockwise, and those relating to lights are from seaward. Magnetic Bearings are in parenthesis( ).
5. Distance is determined by Miles or Cables. A nautical mile is one minute of Latitude and a cable length is equal to one tenth of a mile or 100 fathoms, one fathom is equal to 6 feet.
6. Depth of water is measured by fathoms and determined from sea surface of Low Water Spring Tide.
7. Height of Lights, Beacons & Buoys are in feet, if the fractional part of a foot exceeds 0.5 is counted as one foot, if less than 0.5 it is neglected.
8. Elevation of Lights and Beacons are measured from the sea surface of High Water Spring Tide.
9. The given Distance from which the Light should be visible in clear weather are calculated for an observer at a height of 15 feet above High Water Spring Tide.
10. The lights are exhibited from sunset to sunrise, but may be lighted before sunset to after sunrise if electric lamps, etc. are being used or during gloomy weather.
11. The Fogsiren are sounded only during foggy, snowy or gloomy weather.
12. Lighthouses, Tchalientao, Taikungtao and Yuneishan, keepers are maintained and may be communicated with by International Code.

## Illuminating Apparatus.

- Dioptric, or by lenses and prisms.

## Order of Illuminating Apparatus and Power of Light.

The order of the apparatus depends solely on the diameter of the Lenses and larger diameter with larger burner. The Size and Order of the Illuminating Apparatus and the power of lights are as follows:—

<i>Order of Illuminating Apparatus</i>	<i>3rd</i>	<i>3rd</i>	<i>4th</i>	<i>5th</i>	<i>6th</i>	<i>unclassified.</i>
Diameter (Meter) ... ..	1,000	750	500	370	300	390
Height (Meter) ... ..	1,576	1,250	722	541	433	270
<i>( Candle-power of burner )</i>						
Petroleum lamp ... ..	—	—	58	18	18	18
Vepourize petroleum incandescent light	600	—	—	—	—	—
Electric incandescent light ... ..	—	1,000	—	96	64	64
Acetylene gas ... ..	—	—	26	18	18	18

REMARK: Candle-power, a spermaceti candle (contains a small quantity of paraffin and Wax) burning 120 grains an hour.

One Candle-power of the Light is measured at outside of the dioptric apparatus or that which show nearly equal to a candlepower, but the power of light does not necessarily depend upon the order to which they are classified. 1,000 candles are taken as the candle-power unit. The figure 100 means 100,000 candle-power; 1/5 means 200 candle-power.

#### Miscellaneous.

Mariners are warned that: Illuminating Apparatus when out of order cannot be restored immediately, therefore unwatched Light-house must not be implicitly relied upon.

Should mariners detect or suspect that the light is too dim or the buoy has drifted away and changed from its position or fogsignal sounden incoertctly, they must immediately report to the Harbour Master's Office.

Mariners are warned that fogsiren sound under certain atmcspheric and condition can not be relied upon, therefore man on watch should be placed at certain quarter of the ship where fogsiren sound is audible.

It has been also clearly established:—

1. That sometimes the mariners cannot observe the directions and distances from the fogsiren station, owing to the direction of the wind and the tones of the notes.
2. That there are occasionally areas around a fogsiren in which it is wholly inaudible due to the condition of atmosphere.
3. That a fog may exist a short distance from a station and yet not be observable from it.
4. That even if a fog has been observed by the fogsiren keeper, the Apparatus, for sounding the horn cannot be started immediately, though every endeavour will be made to avoid any possible delay.
5. That when sound has to travel against the wind, it may be thrown upward, in such a case, a man aloft can hear the sound but it is inaudible to those on deck.
6. For information in regard to the ordinances of Aids to navigation, it is necessary to refer to the Harbour and Wharf Regulations of the Port of Tsingtao.
