The Wheel

a D O
CYCLING TRADE REVIEW

VOL. XVIII.—No. 1.]

NEW YORK AND CHICAGO, AUGUST 21, 1896.

[WHOLE NUMBER, 443.]

Original Gazetteous Paid
Golden Age Lib. Wash'n DC

LIBRARY,
AUG 21 1896
U. S. PATENT OFFICE

From Referee

THE GOLD BRICK AGAIN.

"What's the matter, Tom? Had a breakdown, eh?"
"Yes; but the worst part of it is that the sheriff has closed up the factory, and now I can't have the thing replaced under the finely-worded guarantee. It's a regular gold-brick investment!"
"Ah! Now do you see the sense of my advice to you when you were looking for a bicycle? Then you said this wheel was 'just as good' as a Rambler, a wheel which is the result of 17 years' experience in bicycle building, and which is backed by a solid concern open every business day in the year, and every year, too. My Rambler doesn't need a guarantee, but is covered by a good one."
"Well, don't rub it in. When I get rid of this crock I won't ask for further advice. The Rambler is all right."

THE GALES...

HIGHEST GRADE.

Improved Model A, 1896, \$85.00.

Model B, Reduced from \$75.00 to \$65.00.

SUNDRIES.

We carry the largest stock of Bicycle Sundries of every description at **lowest prices.**

TUBING.

We only import this to order and have had the following left on our hands. We will close out the lot at 60 and 10 per cent. from our list.

1,000 feet, 1 1/8 by 20
1,275 feet, 3/8 by 20

962 feet, 1 1/8 by 17
600 feet, 1 by 20

540 feet, 3/4 by 18
2,168 feet, 7/8 by 18

SCHOVERLING, DALY & GALES, 302 Broadway, New York.

Kindly mention The Wheel when writing.

A. D. Meiselbach Company,

MANUFACTURERS OF

BICYCLES

Milwaukee,    Wisconsin.

Kindly mention The Wheel.

ADVERTISERS.—CLASSIFIED AS TO PRODUCT.

Asphalt Pavements.

Barber Asphalt Paving Co., The, 1 Broadway, N. Y.

Automatic Cycle Whistle.

Automatic Cycle Whistle Co., Indianapolis, Ind.

Badges and Medals.

Beegan, John, 226 S. Halsted St., Chicago, Ill.
Duryea Co., 66 Cortlandt St., N. Y.
H'rrriott, John, 3 Winter St., Boston, Mass.

Bells.

Bevin Bros. Mfg. Co., East Hampton, Conn.
Chapman Mfg. Co., Meriden, Conn.
Hill, N. N., Brass Co., East Hampton, Conn.
Leng's, John S., Son & Co., 4 Fletcher St., N. Y.
New Departure Bell Co., Bristol, Conn.

Bi-Gear.

Brown-Lipe Gear Co., Syracuse, N. Y.

Bicycles.

Adams & Westlake Co., The, Chicago, Ill.
America Mfg. Co., Chicago, Ill.
American Sewing Machine Co., Philadelphia, Pa.
Arnold, Schwinn & Co., Peoria & Lake Sts., Chicago.
Barnes Cycle Co., The, Syracuse, N. Y.
Bellis Cycle Co., Indianapolis, Ind.
Blake, G. H., & Co., Boston, Mass.
Boite Cycle Mfg. Co., Milwaukee, Wis.
Buffalo Wheel Co., Buffalo, N. Y.
Crawford Mfg. Co., Hagerstown, Md.
Davidson Cycle Co., Chicago, Ill.
Defiance Bicycle Co., Defiance, O.
Elgin Sewing Machine & Bicycle Co., Elgin, Ill.
Everett Cycle Mfg. Co., Everett, Mass.
Fay Mfg. Co., Elyria, O.
Featherstone, A., & Co., Chicago, Ill.
Powler Cycle Mfg. Co., Chicago, Ill.
Gendron Wheel Co., Toledo, O.
Gilbert & Chester Co., Elizabeth, N. J.
Gormully & Jeffery Mfg. Co., Chicago, Ill.
Grand Rapids Cycle Co., Grand Rapids, Mich.
Hamilton-Kenwood Cycle Co., Grand Rapids, Mich.
Hardy Cycle Co., 49-47 W. 69th St., New York.
Henley Bicycle Works, Richmond, Ind.
Howard Chainless Bicycle Co., Newark, N. J.
Humber & Co., Westboro, Mass.
Hunter Arms Co., Fulton, N. Y.
Indiana Bicycle Co., Indianapolis, Ind.
Iyer Johnson Cycle and Arms Co., Fitchburg, Mass.
James Cycle Mfg. Co., White Cloud, Mich.
Lovell, John P., Arms Co., Boston, Mass.
Lozier, H. A., & Co., Cleveland, O.
Lynch & Co., Peoria, Ill.
McIntosh-Huntington Co., Cleveland, O.
Meisbach, A. D., Milwaukee, Wis.
Meteor Cycle Co., Chicago, Ill.
Miami Cycle & Mfg. Co., Middletown, O.
Monarch Cycle Mfg. Co., Chicago, Ill.
Olympic Cycle Mfg. Co., 35 Liberty St., New York.
Peoria Rubber & Mfg. Co., Peoria, Ill.
Phillips Mfg. Co., 207 W. Broadway, New York.
Pope Mfg. Co., Hartford, Conn.
Richmond Bicycle Co., Richmond, Ind.
Rouse, Hazard & Co., Peoria, Ill.
Schuster, H., Cycle Mfg. Co., Cincinnati, O.
Schoverling, Daly & Gales, New York.
Shattuck, H. B., & Son, 210 Columbus Ave., Boston.
Sleg & Walpole Mfg. Co., Kenosha, Wis.
Syracuse Cycle Co., Syracuse, N. Y.
Waltham Mfg. Co., 240 Broadway, New York.

Bicycle Balances.

Bicycle Chain Lightning Co., 209-33 W. 42d St., N. Y.

Bicycle Crates.

Saginaw Basket Co., Saginaw, W. S., Mich.

Brakes.

Bevin Bros., East Hampton, Conn.
Spencer Brake Co., 140 Chambers St., New York.

Bone.

Fitch Fertilizer Works, Bay City, Mich.

Brazing Stands.

Buffalo Dental Mfg. Co., Buffalo, N. Y.

Chains.

Anglo-American Cycle Fittings Co., New York.
Baldwin Adjustable Cycle Chain Co., Worcester, Mass.
Chantrell Pool Co., The, Reading, Pa.
Hall-Moore Mfg. Co., Cincinnati, O.
Indianapolis Chain and Stamping Co., Indianapolis.
Lefevre Arms Co., Syracuse, N. Y.
Moore, A. L., Co., The, Cleveland, O.
Morse Mfg. Co., Trumansburg, N. Y.
Myers Cycle Chain Co., Bridgeport, Conn.
Whitney Mfg. Co., Hartford, Conn.
Whitney W. W., Cycle Mfg. Co., Providence, R. I.

Chewing Gum.

White, W. J., Cleveland, O.

Cyclometers.

Bridgeport Gun Implement Co., 315 Broadway, N. Y.
Waltham Meter Co., Boston, Mass.

Cycle Clothing.

Call, S. B., Springfield, Mass.

Cycle Fittings.

Ames Sword Co., Chicopee, Mass.
Independent Electric Co., 133 Lake St., Chicago, Ill.
Indian Orchard Screw Co., Indian Orchard, Mass.
Toledo Cycle Supply Co., The, 22 Erie St., Toledo, O.
Worcester Ferrule and Mfg. Co., Worcester, Mass.

Cycle Stands.

Bradley & Hechinger, 167-169 Randolph St., Chicago.
Bridgeport Gun Implement Co., New York.
Esmond, E. R., 57 Park Place, New York.
Hampton Mfg. Co., Bay City, Mich.
Lefevre Mfg. Co., Arbuttle Bldg., Brooklyn, N. Y.
Porter, H. K., 66 Beverly St., Boston, Mass.
Rochester Bi. Comb. Holder Co., Rochester, N. Y.
Safety Mfg. Co., 63 S. Canal St., Chicago, Ill.

Cycle Watch and Carrier.

Waterbury Clock Co., 10 Cortlandt St., New York.

Electrotypes.

Raisbeck Electrotype Co., 24 Vandewater St., N. Y.

Emery Wheels.

Northampton Em. Wheel Co., 20 S. Canal St., Chicago.
Sterling Em. Wheel Mfg. Co., 59 S. Canal St., Chicago.

Enamels.

American Enamel Co., Providence, R. I.
Gerstendorfer Brothers, New York and Chicago.
Olympia Japanning Works, 390 Canal St., N. Y.
Pitts, J. R., & Co., 136 Mechanic St., Newark, N. J.

Felt.

Tingue, House & Co., 56 Reade St., New York.

Forgings.

Bowen Mfg. Co., Auburn, N. Y.
Buffalo Drop Forging Co., Buffalo, N. Y.
Fay & Bowen, Auburn, N. Y.
Huenekens Cycle Co., Milwaukee, Wis.
Seward, M. & Son, Co., New Haven, Conn.
Whitney W. W., Cycle Mfg. Co., Providence, R. I.

General Supplies.

Leng's, John S., Son & Co., 4 Fletcher St., N. Y.

Grinding and Polishing Machinery.

Builders' Iron Foundry, Providence, R. I.

Grips.

Fiber-Bucksin Mfg. Co., Malden, Mass.
Jones, L. M. Co., The, West Winsted, Conn.
Lund Pneumatic Grip Co., Rochester, N. Y.

Handle-Bars.

Avery & Co., 24 Superior St. Viaduct, Cleveland, O.
Bostedo Co., New York, Chicago.
Greencastle Mfg. Co., Greencastle, Ind.
Leng's, J. S., Son & Co., 4 Fletcher St., New York.

Home Trainer.

Sturgis, S. A., St. Johns, Mich.

Hotel.

Lexington Hotel, Chicago.

Hubs.

Boite Cycle Mfg. Co., Milwaukee, Wis.
Huenekens Cycle Co., Milwaukee, Wis.
Indian Orchard Screw Co., Indian Orchard, Mass.
McLish & Co., Chicago, Ill.
New Britain Hardware Mfg. Co., New Britain, Conn.
Weston, I. A., & Co., Syracuse, N. Y.

Illustrations.

Engraving Department The Wheel.

Lamps.

Atwood Mfg. Co., Ameshbury, Mass.
Bridgeport Gun Implement Co., N. Y.
Place & Terry Mfg. Co., The, 247 Centre St., N. Y.
Schoverling, Daly & Gales, 302 Broadway, N. Y.

Lamp Brackets.

Bridgeport Gun Implement Co., 315 Broadway, N. Y.

Locks.

Deitz Cycle Lock Co., Albany, N. Y.
Safety Mfg. Co., Chicago, Ill.

Looking Holder.

Safety Mfg. Co., Chicago, Ill.

Luggage Carriers.

Bay State Mfg. Co., So. Framingham, Mass.
Rochester Bi. Comb. Holder Co., Rochester, N. Y.

Machinery.

Barnes, W. F. & J., Rockford, Ill.

Hartford Single-Tube Tires.

(THE STANDARD SINGLE TUBES.)

The Hartford Rubber Works Company first made Single-Tube Tires six years ago. At first other makers laughed; then they saw their mistake and now they are learning to make Single-Tube Tires. We make the original Hartford. We are six years ahead.

DON'T BUY AN IMITATION.

The genuine Hartford Single Tube is the right kind.

IF IT'S A HARTFORD TIRE IT'S RIGHT.

Made by

THE HARTFORD RUBBER WORKS CO.,

HARTFORD, CONN.

Factory, AU SABLE, MICH.
General Sales Office, DETROIT, MICH.

THE HERCULES RIM consists of two layers of wood, between which is a strip of chemically prepared fibre of **great strength**; the three strips are so joined as to be **absolutely undetachable**; the different joints are each located in a different part of the rim. The main features accomplished in the rim are, that while it weighs slightly less than an all-wood rim, it is very much stronger; it is very elastic, and the special fibre strip is an absolute preventative of splitting. The disposition of the average rider to follow the racing custom of blowing his tire to the maximum seems likely to result in an unheard of quantity of split rims the coming season. As already stated,

THE HERCULES RIM WILL NOT SPLIT.

The color of fibre is either red or dark, as preferred, and is a positive addition to the beauty of the rim.

DUST AND CHAIN GUARDS,

In Bird's-Eye, and Plain Maple or Elm.

OUR GUARDS ARE NOT MOULDED OR WARPED, but worked out from blanks $\frac{1}{2}$ x 2 in., giving them all the strength and stiffness required with the least amount of weight. Our workmanship on these cannot be excelled. Samples upon application.

THE HERCULES WOOD RIM CO., DETROIT, MICH.

THE MYERS Detachable Cycle Chain

Great Scott! The Missing Link Has Been Found.

The Myers Cycle Chain

can be taken apart or put together without the use of tools; hence, should any of its parts wear out or break, the same can at once be renewed. The centre blocks and also the studs or rivets are hardened; therefore the wear is reduced to a minimum. It is the easiest running chain, and will fit the standard one-inch sprocket.

Use the Myers Chain and You Will Never Again Use Any Other.

A FABLE. THE OWL AND THE GOOSE.

"I see," said the Goose to the Owl, "You are re-tiring. Why not select a patent non-puncturable, non-cutable, self healing, ever-lasting, yellow, crimson, blue, chromatic, perfection tire, that can be used generation after generation, instead of that thing? Why, bless your heart, that's made of rubber."

"To whit!" replied the owl, "you remind me of the poet who said:

'A rubber tire on the rim—
A simple tire was to him,
And nothing more!'

Why bless your pate de fois gras, if

'MADE OF RUBBER'

IT'S A
HODGMAN SINGLE TUBE TIRE

The easiest going, fastest, most durable tire in the world."

But the goose, true to his traditions, bought an everlasting tire every month, and finally gave up cycling because he did not find the promises of the manufacturers puncture proof.

Moral: Don't be a goose. HODGMAN'S being the BEST is good enough.

"Plugine"
TRADE MARK
\$100

Tony Gavin, the record-breaking "copper" of the Buffalo police force, who lowered the record between Buffalo and New York a few days ago, said yesterday:

"Plugine"
TRADE MARK
\$100

"If I hadn't put 'Plugine,' the liquid tire mender, in my tires before starting, I am positive I never could have reached New York in the time I did. Several times I was compelled to ride over broken glass, and the only thing I noticed was a slight escape of air, and the puncture was instantly mended by 'Plugine.' No," said Mr. Gavin in conclusion, "I was not hired by the Plugine Company to use their tire compound. It was recommended to me by a friend just before starting, and I am now glad I used it."
—Daily American Wheelman, July 24, 1896.

AND
A
YOUNG TRADE REVIEW

Copyright 1896, by F. P. PRIAL.

VOL. XVIII., No. 1,

NEW YORK AND CHICAGO, AUGUST 21, 1896.

WHOLE No. 443.

WAITING FOR THE TIDE TO TURN.

**The Indiana Company Lay On Their Oars—
Considered a Wise Move by a
Shrewd Man.**

A dispatch from Indianapolis announces the closing down of the works of the Indiana Bicycle Co., throwing out of employment 1,500 men. The following explanation is given for the closing: "The uncertainty of the future is one sufficient cause. We have half a million dollars out now, and we want to know what we are to realize on that before we put more money at present value into stock. It is ordinary business sense, and not politics, that causes us to suspend work until we know what the result of the election will be. We cannot risk in further manufacturing until our monetary contest is settled. If it is determined to maintain the soundness of the present value of our money at the polls those who are hoarding it will let it go again into trade."

Chicago, Aug. 18.—The Waverley factory in Indianapolis has been closed, and will probably remain idle until after the November election. The fact was published in a Chicago paper on Sunday, and was embellished in such a manner as to create something of a stir.

President Smith was made to say that unless McKinley triumphed over Bryan the plant would never be opened or never again be operated. The Altgeld interview is too silly to bear the impress of truth. Dull times, an overstock and the money stringency were undoubtedly the causes of the temporary shutdown.

"I regard it as a good business move," said C. W. Dickerson, president of the Sterling cycle works, in talking of the matter to-day. "The average man or woman who walks the streets does not nor cannot appreciate the tightness of the money market. The banks are positively refusing to take paper. Why, when we desired to make a loan the bank in which we usually had a good balance and in which we had always taken up our notes before maturity refused to accept our paper.

"Do you know what the president told me?" asked Mr. Dickerson. "The WHEEL man confessed that he did not. 'Why,' continued the Sterling man, 'he said: 'Turn the key in your factory until the election is over.' We had money, however, and our factory is still in operation. Although, naturally, not in full blast."

Mr. Dickerson said that this year 10,000 Sterlings were produced, and none were carried over. For next year they are figuring on but 5,000, although, if necessary, 15,000 can be built. He believes that every sound business man will pursue much caution. Conservatism, he says, is the watchword of the hour in business circles.

There is no doubt but that Mr. Dickerson reflects the sentiment of many in the trade. The election has virtually brought business to a standstill. If Bryan by any chance should win and the words of not a few prominent Western cycle men go for aught there are even darker days ahead.

THAT ENGLISH G. & J. VERDICT.

Chicago, Aug. 18.—THE WHEEL'S scoop on the result of the North British-Gormully & Jeffery tire suit is still a matter of comment. Gormully & Jeffery have received nothing but a repetition of THE WHEEL'S cable announcing their defeat.

Frank L. Douglas, the firm's tire man, has been in London for two months watching the case, and inside facts will not be known until his return. The effect of the verdict, Mr. Jeffery said to-day, will be to stop the manufacture of G. & J. tires in England. It would have no bearing or influence on the infringement suits which the North British Rubber Company have pending against Gormully & Jeffery in this country.

"The English laws are peculiar," said Mr. Jeffery. "The court defines what constitutes the invention, and may even broaden the contentions of the plaintiffs. In America the claims filed with the patent govern the rulings of the courts. I invented the tire before Bartlett's tire was patented in England, but did not apply for a patent there until Bartlett had forestalled me. In this country, however, my patent antedates his, and as I certainly am the inventor I have no fears of the outcome of any suits that may be brought or may be pending."

SUNSHINE OF PROSPERITY.

Chicago, Aug. 18.—A ray of light in the generally strained situation of trade is the very strong probability of the Jenkins Cycle Co., of this city, resuming operations. It may be said unofficially that the matter is practically settled. The concern will be conducted under the same management and ownership as heretofore. Offers will be made creditors, which will be accepted, allowing 25 per cent cash balance in partial payments, all within one year. This happy result will be greatly due to the universal confidence in the ability of Manager Charles E. Jenkins to properly manage the company.

GOLD FROM EL DORADO.

The Boulevard Cycle Company, of Chicago, seeks damages to the extent of \$15,000 from the El Dorado Cycle Company. The litigation arises out of an attachment suit begun in the Circuit Court by the defendant against the Boulevard Cycle Company for \$800. The plaintiffs say that the attachment was sued out wrongfully, as the account upon which it was based was not due. For this reason damages are asked.

BETWIXT CUP AND LIP.

**Somewhere Between These a Ship Occurred,
Otherwise a Trade Sensation Would
Have Been Sprung.**

It is expected the announcement will shortly be made that one of the largest, if not the largest of American manufacturers has, during his recent trip abroad, taken advantage of the Englishman's desire to invest in the stock of cycle companies, to dispose of his vast interests to a British syndicate at a figure which will put in the shade all the stock transactions in the wheel trade, with the sole exception, of course, of the Dunlop deal. The whole thing was virtually settled, and, barring the unforeseen, would when announced, have come like a thunder-clap from a clear sky to those who had grown used to looking up to the concern in question as the chief mainstay of the American trade.

The prospectuses of the company's business had been freely circulated among those foreign financiers who make a specialty of "floating" cycle companies. At the last moment, however, some hitch seems to have occurred, the prospectuses were called in, and the American representatives prepared to return home.

Whether the affair is entirely off or only postponed until after the forthcoming election is over is a question difficult for the outsider to answer. At any rate, the attempt was made, and one of the greatest coups of the cycle trade was within the very closest of being pulled off.

FOULS COST \$50 EACH.

Philadelphia, Aug. 19.—Foul riding may have its advantages, and then again it may not. When two such notables as Bald and Cooper take to the practice so openly as they did on the last day of the Louisville meet it behoves the powers that be to put a damper on the game. Sterling Elliott was refereed at the time, and he promptly reported the case to Chairman Gideon. It was at first reported here that the two cracks would suffer suspension, but it is learned to-night that the Chairman will mulct each of the riders \$50. The fine should have a wholesome effect.

SADDLE SUING.

Papers have been filed in the United States Court in an interesting suit against Humber & Co. (America) limited, by Mesinger Bros., the owners of the patents on the Mesinger saddle. They seek to recover damages for using a saddle on the Humber wheel this year which is an infringement, so Mesinger Bros. claim, of their patent. A large number of jobbers and manufacturers have used this same saddle, and they will probably watch this suit with interest.

TIT FOR TAT.

Bicycles Injured Jewelry, Now Jewelry Cripples
Bicycles—Myers' Failure and the
Results Thereof.

Milwaukee, Aug. 14.—Bicycles, it is claimed, have crippled the jewelry business to a greater or less extent. But, paradoxical as it may seem, the failure of the jewelry house of S. F. Myers & Co., New York, caused the Telegram Cycle Manufacturing Company of this city to shut up shop to-day.

The Telegram Company manufactured a special make of wheels for the Myers Company and in consequence was the holder of a large amount of the New York company's paper. The total amount is in the neighborhood of \$20,000. Most of this was placed with the First National Bank of this city as collateral to secure loans made to the Telegram Company. A portion of the Myers Company's paper fell due Wednesday, but Monday the company telegraphed and asked for an extension. This the First National Bank refused to allow, and the paper went to protest in the New-York Clearing House Wednesday afternoon. Yesterday afternoon the company passed into the hands of a receiver, the amount involved being estimated at \$500,000.

The First National Bank's claims are secured by two judgments, one for \$6,339 70 and the other for \$41,032.20. Although the extent of the failure cannot be ascertained, it is stated that the assets of the company are more than sufficient to meet all the obligations. The stock on hand is very large and valuable, and includes a great deal of manufactured material that was ready for shipment. The future of the company has not been determined, but there is little doubt that the business will be continued, unless the First National Bank refuses to grant extensions.

The Telegram Cycle Company was the outgrowth of the old Sercombe-Bolte Company, which went into the hands of a receiver in the fall of 1893. For the last two years it has been doing a very large business and was rapidly making its way to the front in the ranks of the big cycling concerns of the West. The business of the company this year was large and of a prosperous kind until the collections began to fall off. The plant as it stands is a very valuable one, but if the business is closed out its value will be greatly depreciated. The entire equipment of machinery was recently changed and all of the modern appliances used in cycle making secured.

The officers of the Telegram Company are President, W. H. Wolf; vice-president, John S. George, and secretary and treasurer, Frank R. Pingree.

CLAIMS AND COUNTER CLAIMS.

The Sager Manufacturing Company, of Rochester, N. Y., has begun an action against the Elbridge Cycle Company, of Syracuse, to recover \$450 on saddles and bicycle sundries. The plaintiff claims that goods to the amount specified were sold and delivered to the defendant, and that no part of the amount has been paid. The defendant claims that the goods were not high grade and the best in the market and that they could not be disposed of, and they present a counter-claim in the sum of \$300.

TWO CHATTEL MORTGAGES.

Two chattel mortgages have been filed by the Mortimer Bicycle Co., of Utica, N. Y. One is given to Thomas Mortimer to cover a claim of \$500 and the other to the Hunter Arms Co., of Fulton, on bicycles and tools, to cover a debt of \$2,800.

TROUBLE IN THE CAMP.

E. D. Sniffen, secretary of the Wheelmen's Protective Association, Chicago, was arrested last week, charged with embezzling \$12,000. He was released on bail, and the hearing set for August 21. Glenwood Preble, the vice-president of the company, immediately took action in regard to the arrest and issued the following statement to their agents:

"Upon the 20th day of July it became necessary, on account of reprehensible conduct coming to the notice of the officers of this association, to discharge E. C. Knowles, bookkeeper of the association, who went away threatening vengeance on the association. His method of showing his malice toward the association caused a warrant to be sworn out, charging the treasurer with the embezzlement of the sum of \$12,000, and he succeeded in having it published in several of the papers, thinking that he could thereby injure the association by causing the public to believe that its funds had been misappropriated.

"We beg to advise you that this charge has been fully investigated by a committee of the Board of Directors appointed at a called meeting, and the following is a copy of their report made at the regular monthly meeting of the Board of Directors:

"Chicago, August 10, 1896.
"The committee of the Board of Directors elected at a special meeting called and held July 31, at 10 o'clock a. m., make report that they have investigated the charge preferred by Director P. H. Barker that the secretary and treasurer of the association had misappropriated the funds of the association for his own personal use, and the committee report that said charge is absolutely untrue and without foundation. The committee further report that they have examined the books and papers and affairs of the association, and have found the affairs of the association in good and solvent condition. Signed John O. Blake, Glenwood Preble.

"We would further say that the treasurer, against whom the warrant was sworn out, continues in office, enjoying the confidence of the officers, the association is in the same prosperous condition that it has always been, will pay all losses promptly, and its ability is in no way crippled by the villainous attempt made to injure its credit by this discharged employe."

FRISBIE QUILTS.

New Haven, Aug. 15.—General depression in the cycle business is announced as the cause for the failure of the Frisbie Cycle Co. to-day.

The assignment was made by Attorney W. A. Wright and in the writ it is stated that the assignment is made by "Mary E. Frisbie, wife of William M. Frisbie, doing business under the name of the Frisbie Cycle Company." Bernard B. Savage was named for trustee and a hearing will be held upon the appointment on Wednesday, August 19.

Mr. Frisbie invented a cart which is attachable to any bicycle and which is known as the Nutmeg Cycle cart. He put considerable money into this scheme and the vehicle did not sell as well as was expected. This and the depression of business led up to the failure. The assignment was precipitated, however, by an attachment which was put on the store the other day by one of the heavy creditors.

It is said that the claims against the company, or rather Mrs. Mary E. Frisbie, will approximate \$6,000 and the assets are estimated at \$3,000.

In addition to manufacturing the Nutmeg cart, the company conducted a large retail store and repair shop.

Riding on the beach may be pleasant, but the result to the wheel is never so.

THE GLOBE CEASES TO REVOLVE.

Because the Power of Money Is No Longer
Applied to Its Machinery—Buffalo's
Latest Failure.

Buffalo, Aug. 15.—Following closely after the other failures in the cycle trade in this city comes the announcement to-day of the assignment of the Globe Cycle Company. W. H. Penseyres and Charles Haberer composed the firm. They made the assignment to Homer E. Dudley, for the benefit of their creditors.

After providing for the payment of all legal expenses first and after them the salaries and wages of the employes, the following preferred creditors are named:

Union Bank of Buffalo, \$1,500, on a note payable August 24, 1896, for borrowed money.

Union Bank of Buffalo, \$1,069 77, on a note for the payment of overdrafts.

Henry F. Allen, for legal services, \$150.

Ferdinand J. Kersten, Buffalo, \$570 64, for enamelling work done for the assignors.

Hoddick Brothers, \$141 66, for rent of the building at 616 Main street.

A. J. McKaig, of Buffalo, \$120 02, on a note made July 3, and payable two months after that date, for merchandise.

Attorney Henry F. Allen, who is the firm's attorney, stated that the assignment was caused by the inability of the firm to make collections as fast as required, coupled with the fact that the creditors were pushing them a little too hard. Mr. Allen thinks that if the creditors would give the firm a little more time the stock could be disposed of in a way by which the creditors would not lose a cent.

The Globe company was started about six years ago, and since that time has built up one of the largest businesses of the kind in Buffalo. Last year the firm made 8,000 wheels, and for 1897 they expected to make still more.

DOWN AMONG THE DIAMONDS.

Maiden Lane was in a panic on Thursday of last week. S. F. Myers & Co., the largest jewellers in Maiden Lane (which, by-the-by, is the centre of the jewelry trade), were embarrassed. S. F. Myers & Co. are stockholders in the Olympic Bicycle Company of New York, and they wish it to be known that they were only minority stockholders. The Olympic Bicycle Company's stockholders are a coterie of men who are specially strong financially, and they state that the embarrassment of S. F. Myers & Co. will not in any way affect the interests or the business of the Olympic Bicycle Company.

When a WHEEL man called on S. F. Myers & Co. in search of information regarding their failure, he was unable to gain entrance to the establishment, but was referred to their lawyers. They informed him that the S. F. Myers Co., the Olympic Cycle Co. and the Self-Healing Tire Co. were three separate and distinct organizations and that the Olympic Co. was not affected financially by the failure of S. F. Myers & Co., as the only connection between them was that Mr. Myers held stock in the Olympic Co.

Mr. Hollingsworth, manager of the Olympic Cycle Co., when interviewed, said that the company was entirely solvent, that their assets were several times larger than their liabilities, and that their business was in no way affected by the failure of the Myers Co. This is said to be also true of the Self-Healing Tire Co., of which S. F. Myers & Co. were only distributing agents, according to the lawyers' statement.

It is reported that the Myers Company owe the Telegram Company \$26,000, and Meiselbach, of Milwaukee, \$56,000.

THIS IS A REAL FAILURE.

John R. Hardin was appointed permanent receiver for the Liberty Cycle Company by Vice-Chancellor Emery, of Newark, on Tuesday. He will conduct the business of the corporation in turning out bicycles, under the direction of the Chancery Court, and has given bonds in the sum of \$200,000 to guarantee the faithful performance of his trust.

On July 31 the first application for a receiver was made by W. F. Wilson, treasurer and secretary of the company, who alleged that the corporation was insolvent. At that time Vice-Chancellor Emery named Mr. Hardin as temporary receiver, and granted an order to show cause why the receiver should not take charge permanently. The order was made returnable Tuesday. Mr. Hardin testified that the open accounts with creditors amounted to \$47,786.62, while there were bills payable outstanding amounting to \$131,108.85, making the total indebtedness \$178,895.47. To meet this, the receiver testified, there were bills receivable amounting to but \$60,608.13, and the two plants. Both factories contain valuable machinery, which, however, would be greatly depreciated if removed or disposed of under a forced sale. Estimates fix the value of the Rockaway plant at \$40,000, while the Bridgeport plant is set down as being worth \$30,000. There is considerable unfinished material on hand, which when turned out as completed machines would net probably \$30,000 more.

GREYHOUND STILL IN THE LEASH.

A voluntary petition of insolvency was registered on August 11 by the Greyhound Bicycle Mfg. Co., of Brookfield, Mass. This action on the part of the company is a result of the creditors' meeting at Worcester July 28, when a committee of five was appointed to make an investigation of the affairs of the company and report at a meeting of the creditors to be called. Since that time no meeting has been held, and the company decided to go into insolvency voluntarily. The company was petitioned into insolvency by the Hunt Mfg. Co., of Westboro, a creditor, on July 18, this petition being returnable on Tuesday, September 1. The petitioner is a creditor of the company for \$109.60 for saddles furnished it, and in its petition alleges that the company made a fraudulent transfer of its property on July 17 to William A. Moody, of Brookline, as assignee for the benefit of certain creditors. There are also about fifteen attachments on the property of the company. Now that voluntary proceedings have been begun, the involuntary petition will probably be dismissed when the case comes up on September 1, and assignees will be appointed at the first meeting of the creditors on that date. A schedule of liabilities and assets will be filed by the company before that time.

GROWN TIRED STRUGGLING.

The business of W. G. & F. G. Shack, the Buffalo dealers, has not been interfered with by the several executions against them, in the hands of the Sheriff. They hope to be able to pay off the claims and avert the sale.

The first executions are in favor of the American Dunlop Tire Company for \$262.92, and another in favor of the Hartford Cycle Company, for \$71.89.

Since these were filed with the Sheriff others have been added to the list. They are as follows:

Lewis N. Lukens, \$90.04; Charles A. Forbush, \$37.45; the Sager Manufacturing Company, \$212.04; Joseph Cushman, \$34.50.

FOR CREDITORS' BENEFIT.

W. D. Hodger, a cycle dealer at 1,024 Connecticut avenue, Washington, D. C., assigned last week to Rudolph W. Bishop for the benefit of his creditors. The assets are about \$3,600, liabilities \$3,300. He handled the Liberty and Gladiator cycles.

ON THE OUTSIDE AT LOUISVILLE.

Within the meet there were three meetings, all of moment and full of public interest.

The first, that of the L. A. W. Membership Committee, considered the case of Tinsdale—E. J. Tinsdale, who, it is generally believed, played the wolf in sheep's clothing and attempted to betray the New York Division into the hands of its then enemies, the railroads. The full committee was present. Tinsdale was not. Instead, he sent a peevish, hair-splitting letter in answer to the notice of the trial with which he had been served. It was meant to be brilliant, but the brilliancy was that of a tallow dip. He wrote that while the notice stated that the meeting would be held in the Galt House, it did not state in what part of the house, and he therefore was at a disadvantage. Such farfetchedness as this filled the long letter. The committee read it, and after listening to the testimony of Will R. Pitman and A. G. Batchelder, voted to recommend that the National Assembly expel Tinsdale from membership in the L. A. W. No other witnesses were heard. W. W. Watts acted as the New York Division's lawyer.

At the second meeting, that on Thursday evening, August 13—it may be well to record the date—the "war" was fought over again. It was a veterans' meeting—L. A. W. veterans, be it understood—and an idea of Secretary Bassett. They met over the tables in the ordinary of the Galt House, Mr. Bassett presiding as toastmaster. There were gray hairs, of course, but as a rule the men were all fresh-faced and hearty, some of them, Fred Jenkins, Ed Croninger, G. M. Allison and J. F. Ives among the others, being still so youthful in appearance as to stagger belief that they have been riding bicycles for "nigh onto twenty years." Henry Goodman and Henry Robinson, Orville Lawson and L. M. Wainwright, hold their years well, but the hairs on their patés are thinning or graying, and there are crow's feet at the corners of their eyes. Pitman, too, insists that he is still young, but his silvery shock contrasts strangely with his jet black mustache. Twenty-eight veterans sat down to the repast. Every one had served his ten years in the L. A. W., and though many of their names are now known to few, they had served the League and borne the brunt of ridicule and turned the arrows of prejudice when the cause was young—very young. Of the twenty-eight it is interesting to note that eleven are more than less prominent in the trade to-day. There was a deal of good-fellowship, a general calling up of the past, a few speeches, and finally the perfection of an organization. The L. A. W. Pioneers it was finally christened, after some little argument, the point that twenty years hence many of those who may be on the roll will not in any sense be pioneers within the meaning of the word being swept aside. James R. Dunn, Massillon, Ohio, once president of the L. A. W. and L. A. W. No. 33, was chosen president of the Pioneers; Fred Jenkins, No. 21, and long years the League's secretary, was made vice-president; George D. Gideon, No. 127, whose present is livelier even than his past, was elected treasurer, and Burley E. Ayres, Chicago, No. 149, and another name that brings dead memories to life, was chosen secretary. The Pioneers will meet annually. To be eligible to membership one must have been a member of the L. A. W. for at least ten years and escape three adverse votes.

The third meeting, that of the Racing Board, occurred on Friday. It was momentous only because of the decision to raise the permanent suspension of L. D. Cabanne, the St. Louis crack, who, with C. M. Murphy and F. J. Titus, were accused and convicted of crooked riding. Murphy is already in good order, and Cabanne will be after September 1, when the ban will

be lifted. He was at Louisville and desired to appear before the Board, but the Board had heard the story so often that they deemed further explanation unnecessary. Cabanne states that reinstatement is not all he wants. He wants vindication, and will not rest easy till he gets it. He vehemently reasserts his innocence of the charge on which he was punished. Mr. Gideon advised him to appeal to the National Assembly, as Murphy had done.

The Racing Board also considered the case of the New York Herald vs. Bald, Cooper and Sanger—that of failing to appear at the Herald race meet after signing a contract. The Board decided that there was no cause for action on their part. Ten days before the event the three men had notified the Herald of their intention not to appear, and as this was what the L. A. W. rules require, the Board's course was plain. Mr. Gideon said that the apparent breach of contract might serve as the basis of a civil suit, but with that the League was not concerned.

NO MORE BONUSES.

Chairman Gideon has issued the following special bulletin directed to race promoters:

The practice of paying certain professional riders a bonus for their appearance at race meets is believed to be a distinct detriment to the sport and calculated to ruin the business both of the men and of the promoters. Race promoters, therefore, are required to enter into an agreement that they will pay nothing whatever, except in prizes, for the appearance of any rider. Failure to live up to this rule will result in prompt withdrawal of sanction, and demands for money for appearance by riders themselves will be treated under Rule 17, track rules.

GOOD FOR TRUMAN.

Late advices from Toledo state that it is quite probable that the Truman Bicycle Co. will pull through its financial troubles. The expert reports that the total liabilities outside of the mortgage given the Northern National Bank amount to \$13,000, which, added to the mortgage held by the bank, makes the total liabilities a fraction less than \$50,000.

President Knisely of the Northern Bank says that the inventory had not been quite finished, but he believed the assets would show up close to \$60,000.

TASTER WAS TOSSED.

The fifteen-mile Koster road race at Erie, Penn., August 18, brought out eighty-one starters. There were six scratch men, the greatest handicap being six minutes. William Kaiser, of Erie, won first place in 42:11½. J. Hoskinson, of Conneaut, Ohio, was second, and A. D. Beckman third. A. P. Taster was seriously injured in a collision.

Proper guidance of a wheel is a tripartite affair. Steering should be divided between employment of the hands, the weight of the body and the correct use of the pedals.

Old clothes and an old wheel are a wiser combination than new apparel and a machine fresh from the crate.

Manhattan Beach was talked of at Louisville as a possible place for the '97 meet.

FIRE FINISHED THEM.

Worcester, Mass., Aug. 18.—Fire occurred last night in the building occupied by the Decker Cycle Company, which was to have been sold to-day at mortgagee's sale. The upper floors, occupied by this plant, were ruined, involving a loss of between \$80,000 and \$100,000, the total loss being estimated at \$27,000. Another occupant of the building who will suffer heavily by water, is the Bay State Cycle Company.

BICYCLES BUILT FOR BUSINESS

CLIPPER BICYCLES

Have proven themselves the equal of any make yet produced. There are three grades of these wheels, all made by the same firm and under the same nameplate. Each grade is guaranteed to be just as represented, and **worth the price** asked. The Clipper Light Roadster has and does command a higher **net** price than two of the three best advertised bicycles made. It is a well-known fact that this wheel is one of the very best bicycles built. Clipper Roadster is a strictly high-grade wheel, but sold at a lower price, owing to the cheaper finish. Business Clipper is a medium-grade sold at the lowest possible price at which a thoroughly reliable bicycle can be made and sold at a profit. If you buy Clipper Bicycles and expect less than we claim, you'll be disappointed. We give you the worth of your money. We cannot do more in justice and fairness to ourselves, nor can any other maker. Remember that.

THE CASE EXACTLY AS IT IS.

BEREFT of the glasses of prejudice the eyes of the unbiased student of the situation cannot but see that the trade outlook is not in the least discouraging. True, people are not spending money freely, but they are still ready to buy good wheels at anything near what they consider the true value of the wheels to be, and, on the whole, there is no reason to expect a reduced demand for wheels to occur.

Politics have a more or less disturbing effect on all trades, that of cycle selling least of any, however. This is always the case. Business men in all branches of trade seldom make new ventures in times of political turmoil and hurrah. They wait until the excitement has ceased, and then act according to the judgment at the time.

But politics will not cause one cycle less to be ridden in '97 than was ridden in '96. The veriest pessimist will not gainsay this. In fact, a man should not be called optimistic if he declared that the usual increase in the number of cycles sold next year would be in keeping with what its average increase has been during the last five years. We do not say the outlook for '97 promises to be as much of a boom year as '96 did in the beginning, but we do say that the present outlook for next season is one which is far more likely to be carried out to a finality than was the over-roseate one of '96.

The wheel trade has gone through the worst of its "bad time," the "boom" element has been eliminated at some expense and much discomfort to the trade and those interested in its success and welfare. To-day we are on the solid rock bottom, safe in that and sure to depart therefrom only by the sure and slow

methods of conservative business methods.

The barnacles and leeches have been removed by the certain scraper of trade depression. The result means plain sailing for the year to come. Where business has been conducted on businesslike methods the cycle trade to-day stands head and shoulders over any other line of manufacturing interests; where it was not so planned and followed the assignees are now winding up their labors.

The way to look at the present condition of affairs is this: The mere fact that a concern has been doing a living business through the last year is proof of its strength. The weak or incompetent concerns have been or soon will be shaken out. Those who have weathered the gale will be stronger than before—unless they lose courage on the very threshold of better times and neglect to clinch their hard-won advantage. Now, of all times, is the opportunity to make vigilance and patience and tact pay large dividends.

All that is needed is courage, confidence and judgment. Dull times are not so very hard upon manufacturers of real strength, because they have fewer competitors than in flush times. Lack of competition helps out the old concerns, and gives them a chance to rise above the reach of future rivals. Hence the maker who is doing only a fair business now should feel satisfied—encouraged. It would be utter folly to sit down and let things drift until times pick up. When the better times come they will bring a flood of new enterprises to divide trade. Now is the golden opportunity for existing manufacturers to strengthen their positions and be on the crest of the coming wave. It does not so much matter when the wave arrives. The vital thing is to be awake and ready for it when it does come, as it surely will.

Once more we declare the outlook for '97 should not be regarded other than favorable to those concerns who have made and sold bicycles according to the laws of trade, which laws govern the cycle trade no less surely than they do other industries.

TIME FOR A CHANGE.

THE last perspiring racer has crossed the tape; the dregs of hurrah, hicough and alleged hilarity have been drained; the final handshake and goodbye have been given and accepted. The League meet of '96 has ceased to exist, and been buried with its illustrious forefathers and those of its forebears which were not illustrious. Of the dead naught but good should be spoken; of the yet unborn either good or bad may be prophesied with none to say the prophet nay. It is of the unborn we would speak.

While yet the wearisome wrangle of who shall get the meet plum of '97 has not become a burning question, we would again urge upon those who control our Leagual destinies the wisdom of abandoning such gatherings altogether, or else the conducting of them upon different and more sensible lines.

The League has grown to be a vast and un-

wieldy assemblage of individuals bound together by the thinnest of sentimental and dollar-per-annum cords. To ask of a membership so weakly held together an annual pilgrimage to places far from the members' homes is to put upon the already over-weak cord a tension it is not wise to subject it to. No matter what else the result may be it cannot be a success, and failing of such makes it eligible to abandonment or radical change.

Knowing, while the former course is the wiser one and the one ultimately to be adopted, that the time is not yet ripe for abandonment, we pass to the second alternative, that of a change in the form of the annual gathering of the League, and urge that it in future be a sectional affair. Let the country be divided into, say, Eastern, Western and Southern divisions; let each of these sections hold its annual meet when and where the majority of its League officers may elect, and the result will be to the advantage of all concerned. This is what should be done, and done now, though we have small hope of its being brought about until a continuation of the present faulty system makes change an absolute necessity.

AGENTS MUST ACT.

IT IS safe to say that the prime cause of each and every failure recorded in this issue can be attributed to the withdrawing of loans and the refusal of banks to take time paper that in other times would be solicited. It is well known that these reasons are now making trouble for almost every concern in the country. The exigencies of this political campaign are very great, though after the storm is over there is sure to be better sailing. A good many staunch firms have done a long list of favors for the retailers and agents who handle their wheels.

They have refrained from pushing for the money that has been overdue, they have extended paper, and given privileges that have been sometimes of vital importance to the retailer. Probably not one-tenth of the retailers are not under some moral obligation of this sort to the manufacturers whose wheels they handle.

This is the time to show their solid appreciation of this kind of treatment. The manufacturers have to look to their goods this fall to pay the running expenses of their factories for the next six months. The banks and money lenders are drawing in their money as fast as possible. The manufacturer who can borrow now is hardly in need of borrowing. This class of men is small, however. The greater part of the manufacturers are constant borrowers. Cut off from this source of help now they must look to the retailers to pay up promptly their accounts.

On their part retailers and agents should press their collections with greater vigor than ever before. Prompt collections on their part will enable many a good concern to pull through and will save not only the makers but the retail cycle trade from demoralization.

HERE IS THE SCARECROW.

THE Jabberwock is a fearsome beast, particularly so when he hails from Japan. That the timid voter may be duly impressed by all of this, it is now stated that a cycling Jabberwock is on his way to this country, and that he is composed of a full hundred bicycles, which are expected to knock the bottom clean out of the American cycle trade. This is what the political drumbeaters are crying, so, of course, it must be true.

While the Japanese Consul, Kyujiro Miyagawa, declared to the WHEEL that the only bicycles made in Japan sold readily there for \$54 each, and from their crudeness would not bring one-fifth that sum in this country; while United States Minister Dunn, after 20 years' residence in Japan, has said no Japanese-made bicycle could be sold in this country at any price, and the WHEEL'S correspondent in Tokio has borne this statement out, politics demands the appearance of a Japanese bicycle just at this time, to be used as a Jabberwock to frighten credulous voters and cycle manufacturers who had been slow to respond to the fat-fryer, and so we have this mythical American order for a hundred Japanese bicycles heralded throughout the columns of the daily papers.

It is useless to argue with a politician or a partisan, and the former is invariably one of the latter, so to point out again the absurdity of this Japanese canard would be a sheer waste of time and space. As Jabberwocks go this is a pretty fair specimen, yet the politician pays a poor compliment to the intelligence of the voter if he expects him to believe this ludicrous scarecrow is a living, breathing issue and worthy of influencing his vote in any manner whatsoever.

Our friends the collegians are again growing restive under the restraining hand of the L. A. W. From the quiet of academic shades they view the outside world with a feeling akin to contempt. They see a thousand things which in their great wisdom they think need correcting and improving. The League and its methods of controlling racing are some of these. Nothing if he is not self-assurant, our collegian again sets himself to the (to him) easy task of overturning the League; he will have none of it in his racing, not he; he will run his own races as he pleases and how he pleases. The task is somewhat larger than the collegian thinks; this he will discover if he proceeds to carry out his threats. College men come and go, but the League, brooklike, goes on forever. Stronger interests than colleges have attacked the League and failed to either kill or conquer it. The League is not perfect; neither is the collegian; but the League has age and experience, both of which the collegian lacks, and in a fight to a finish these qualities will land the cycle organization winner.

Leaving aside all questions of the editorial's soundness or its correctness, we must decline to support President Elliott when, acting as Editor Elliott, he devotes any portion of the League's offi-

cial organ to politics. It was never the intention of the League that its official organ should be used to disseminate the political opinion of its editor any more than his religious or ethical beliefs. Such matters are entirely foreign to the intent which caused the establishment of "The Bulletin," and Editor Elliott's intrusion of politics into the League is an unwarranted impertinence deserving of the strongest kind of protest from every member of the League of American Wheelmen. We want our sport and our politics each by themselves, and no good can come to either when any attempt to mix them is made. Editor Elliott has made a serious mistake which President Elliott should have prevented.

Of the seventeen League meets ten have been held in the East. The first meet favored Newport, R. I., the attendance being computed at 400. At the Boston meet in 1886 the first bicycle show was held at the Mechanics' Building. It was called the "Cycleries" (the name being brought from England), and was made successful through the efforts of the Boston Bicycle Club and particularly through the energy of J. S. Dean. The meets have always been most successful when held in small towns. A League meet can make no impression in a big city, but a small town practically gives itself up to a thing of that kind. All the inhabitants keep within doors during the festification, and the police are turned out to grass.

It is rumored that not a few of the recent transatlantic trade travellers spent much of their time in studying the English stock market, rather than the foreign bicycle market. It is, in fact, breathed about that some American companies have been unloaded on the British public. If such is the case, we must congratulate our countrymen on their enterprise and cleverness. The English public has shown an octopus appetite for cycle companies, and a few American corporations more or less will not make any difference to their present capacious maw.

Stories are travelling back across the Atlantic to the effect that certain Americans are loitering over on the nether brink of the ocean in a sadly dilapidated condition, that is, financially speaking. The phrase "dead broke" is connected with their names. They are hovering about the docks, looking for good Americans to pay their passage home. Among them are some of the adventurers of the bicycle trade—men who make it a point to go "dead broke" at regular periods. It is their profession.

The wheel has come into the life of civilization as a means of locomotion and a source of recreation and pleasure, and it must be recognized as one of the institutions of the time. It may be superseded by something else, but it is difficult to conceive of anything that can take its place, and it is certain that nothing will for some years to come.

Study closely and you will be surprised to see the extent to which the personality of the head of a cycle establishment really figures in the establishment's success or failure. John Stuart Mill, the great political economist, appreciated this when he said: "Hardly any two dealers in the same trade, even if their commodities are equally good and equally cheap, carry on their business at the same expense, or turn over their capital in the same time."

Unless because it harmonizes with the black enamelled frame of the bicycle, how or why black leather came to be generally adopted for cycle saddles is difficult to understand. The stain is, for want of a better term, highly transferable, and is satisfactory only to the comparative few who wear dark clothing, or who are interested in scouring establishments. It is time the trade realized the fact. The russet saddle should be the standard, as in the old days.

The mahogany-tinted manufacturers in Yokohama make bicycles for nothing and sell them for less than that. They are going to land a few of these wheels in the United States. If any of these dark-tinted merchants would spend about a day in New-York they would keep their bicycles at home. By putting them on the American market at this time they are simply favoring the collection agencies.

After all, the League meet contests are the filters of the American speed world. It's contests are a kind of litmus paper. Distinguishing without a peradventure the alkali of success, or the acid of failure. Its decisions are without appeal.

Even the mercury in the thermometer has got the century making craze; it has been scoring hundreds right along for the past week.

The new dollar bill is pretty enough, but to be really up to date Columbia should have been teaching her young son to ride the bicycle.

There are several unpardonable business sins, and unnecessary price cutting is one of them.

She who is not a lady when on a wheel is not one when in the drawing-room or in the church.

It is the man without a bicycle who is most certain cycling is a failure.

The cycle parade has completely supplanted the century run.

The strength of a wheel is the strength of its weakest part.

A wheel that is not altogether good is altogether bad.

AFTER THE BATTLE.

"Howdy!" said Cooper, showing in his form of greeting his recent association with majors and colonels of the South. "Back at the old stand again, you see. Been a little bit longer getting here this year than I was last, but what's the difference, so long as you finally get on top, eh? I'm just going to settle myself comfortably up here and watch those fellows down below there try to do me out of the place. I ain't going to sleep though; pleasant as this top rung is, it is a mighty poor place to sleep on; it isn't very big, and you are liable to fall off and land clean down there among the 'also rans' before you wake up. Say, wasn't it a red-hot dust up all of us fellows had at Louisville? Seems to me I never saw them come harder and faster in my life. Ride? Why, say, you had to fly if you wanted to get one, two three in those finishes. Every blessed one of them was a ride for your life, and no mistake, I tell you. Why, crackerjacks of last year, bless you, couldn't even win the privilege of starting in a final, much less that of winning one. Are the men riding as fast as they did last year? Sure! A blamed sight faster, too, but the game's harder, the gait speedier, and the fields larger; that's why a '95 crackerjack is a '96 'also ran.' Climbing this blamed old ladder was tiresome enough last year, but it wasn't a marker to what you have got to do this year, even to hold down one of the bottom rungs on it."

Having delivered himself of this opinion, which, by-the-by, is not an exaggerated one, the monarch of ladderdom cast a satisfied eye over the gentlemen beneath him, sighed softly to himself, and assumed the contented look of a man who had moved into old quarters for a protracted stay therein.

"I'm too tired to talk," Gardiner said, when he saw the Ladderman, and his notebook. "This racing is a good thing, an awful good thing, sometimes, but when you get it day in and day out, on good tracks and bad, in pleasant weather and the reverse, you almost wish, sometimes, that you had never learned to ride a wheel a little bit faster than some other fellow can ride one. Don't think I'm sore because I ain't squatting up there where Cooper is; he didn't get there without riding for it, you can bet on that. I haven't any kick coming, nor am I going to let up trying to get right back where I came from. What chances do I think I have, eh? Well, I have better ones than some others who have got to win more before they can get up there on top, and the best of the others has at least got to beat two before he can expect to land on top. But what's the good of talking? A fellow's only wasting wind doing that, and in this game you can't do much of that, I tell you."

And Gardiner showed that what he said was true. A racing man's life, bright as it seems to the comfortable onlooker in the grandstand, is one that only few can live through and hope to attain any sort of prominence. Ladder-climbing is no sinecure, nothing for weaklings or faint hearts to tackle with the expectation of easily and luxuriously attaining fame and fortune.

"It is harder work winning stakes than it is cutting steaks. I've tried both, and I ought to know," declared Bald when asked to speak his little piece. "Say, I never rode harder in my life than I did at Louisville; never tried to get up a rung or two higher than during the last week, and yet the best I could do was to get six points and a decision. Oh, yes; this is a dead easy game, I don't think! Sort of a nice lawn tennis-croquet sort of a snap, maybe. Let me see, thirty-three from forty-three—that leaves ten, don't it? Ten points—that's

three firsts and a second to land on top, ain't it? Well, that's a good many at this stage of the game, particularly when you have got to count on the fellow up top not doing a thing while you're winning. Am I going to try for them? Sure! Why not? Come around next week, and I'll tell you what luck I have."

Then the king of '95 seemed to lapse into a series of calculations which, while they called for frequent looks upward, did not seem to demand any further conversation with the Ladderman, who passed on to where Lawyer-of-the-Future Ziegler, in meditation most profound, was perched upon rung No. 4.

"Haven't you got anything else to do but to come around here asking me questions?" was the opening for the defence. "Seems to me you want to be both judge and jury of this racing game, expecting all of us fellows to tell you every blamed thing we know. Why didn't I do something last week? Well, I'll tell you a secret. I didn't try; I was chasing myself around that Fountain Ferry track to shake my liver up a little, that's all. Wasn't I trying to win? Of course not; just exercising, same as all the other fellows who didn't win anything were. Dear me! You don't think I was trying to win, do you? Yes! Well, what a soft mark you are!"

Then it dawned upon the Ladderman that the Californian was indulging in sarcasm at the writer's expense, and he left to call upon the great Zim's namesake, McFarland, who, fallen from his former high estate, gazed gloomily at the near approach of danger only a few rungs below.

"What do you want to bother me for?" he said. "I've got troubles enough without having you tagging after me all the time trying to get me to say something for you to put into print. Go talk to Sanger; ask him about that 'touch' he got in Louisville, and you'll hear something."

"Touched?" said the big fellow. "Oh, you mean that purloining of a beggarly few hundred dollars? Really, I had forgotten that, don't you know? Yes, some poor devil was hard up, needed money pretty badly, and all that sort of thing, and he did borrow—let me see, \$250, I think it was—from me in Louisville, forgetting to ask me if I was willing. If that is what you call being 'touched' I was 'touched.' But why give such little things as that so much publicity, I'd like to know? Want to congratulate me on my placing my wooden shoes on the rungs, eh? You're very kind, I'm sure; and now that I have started climbing I don't mind telling you that, wooden shoes or no wooden shoes, I'm not going to stay down here in all this smoke and confusion. I think I'd like it better if I was a bit higher up."

In the news columns of this issue appears in detail the story of the ladder-climbers' successes and failures in a fashion mere figures and a ladder cannot hope to compete with. It is a story replete with descriptions of the greatest struggle between the greatest riders America has ever seen, and the Ladderman confides the reader to the mercies of the man who saw it.

Points are based upon the racer's wins on the National Circuit only. A win counts three points, a second two points, and a third one point. The present ladder shows the men as they have climbed up to and including the National meet at Louisville on August 13, 14 and 15.

A Parisian paper figures it out this way: There are 10,000,000 cyclists in the entire world. Each Sunday at least half of them ride on an average 20 kilometres. The grand total is then 100,000,000 kilometres, or 2,500 times around the world.

ALSO RANS.

The following are the men on the National Circuit whose wins have been sufficient to score for them ten points and over: Stevens, 27; Coulter, 27; Parker, 17; Clark, 16; J. Coburn, 15; Tom Butler, 15; W. Coburn, 13; Baker, 11; Mertens, 11; Becker, 10; Kimbel, 10.

SUCCESSFUL SEVENTEENTH.

THE SOUTH SHOWED THE LEAGUE SHE WAS AS HOSPITABLE AS HAD BEEN CLAIMED FOR HER.

Never Before Had the L. A. W. PUNCH by the Bathtubful—For a Full Week the Entertainment Was Unflagging—Racing, Watermelons, Button Chasing, Excursions, Hob-Nobbing Banqueting, Lobbying, and a Hundred Other Diversions All Combine to Make the Affair Successful.

Louisville, Aug. 14.—Everything indicated that this League meet would be done a thorough brown, and it was.

The men were a bedraggled lot. Men in

shirt sleeves were common; men devoid of neckties, and with the top bottom of their negligee shirts unfastened were almost as numerous; some were stretching decency in their efforts to keep cool. This evening in the dining-room of the Galt House, I sat opposite two of them. They were in cycling garb, and coatless. They wore red jerseys unlaced half-way down the front. If they wore undershirts they were of the invisible sort. The exposure of muscular but sweltering flesh made the ice-cream melt.

The women were in striking contrast. Of course, none of them would dream of unlacing—that is to say, they are cool-appearing-to-day and refreshing. The streets are full of them. Nearly all affect light colors and light textures. Heat seems to torture not. They hold their heads high, walk proudly, and if they boil, they boil within.

One of the peculiarly striking things about Louisville, and it results from its Southern location and qualities, is its restfulness. As a man from Toledo put it: "All this is really rest for me. It's atrociously hot, to be sure, but how slow, restful, life-enjoying the people are. After the bustle and ding-dong of the Middle and Northern cities it's a relief to the senses to observe the slowly moving people on the streets, each and every man evidently realizing the fact that this is the best world he ever lived in, and he intends to get a little something besides work out of it." There's a deal of philosophy in this, and to any man whose business habitually brings him where the candle is burned at both ends all of the time, Louisville, heat and all, is a vacation for mind and body.

And the black folks! What would a Southern city be without its quota of the thoughtless, happy folk that are content whether the next meal be an assured fact or a mere hope, so long as the last one was square and fulsome. It is a revelation to the untrammelled Northerner to visit the river wharves and view the small army of glistening blacks lounging and lying in easy attitudes in every shady spot.

I came down with a party of which Stillman Whittaker, wit-at-large, was a prominent member. Every one knows "Whit," and every one also knows that he is as appreciative of a joke, whether on himself or the other fellow, as the next man. Outside the depot he was accosted by the usual number of colored porters, hotel-runners and baggage-men. Whittaker must have looked the financier of the party, for he was the man in de-

mand. The most aggressive chap of the lot, a lineal descendant of some ex-African king probably, for he seemed a leader of his mates, suggested the party stop at some little hotel near by, mentioning, as a special inducement, that there would be music each day of the races.

"What races?" inquired Whit.

"What races! Why, golly, boss, the bicycle races, of course."

"The bicycle races! Why, Mose, we don't want any of your bicycle races. We ain't here for fun. We're here to boom free silver. We're going to give you people free coinage at sixteen to one."

Quick as a flash came the answer: "Sixteen to one! I know what that means, boss. Dat means sixteen dollars for the white man and one for the nigger!"

And the mule! He's here, of course. Wherever the negro is plentiful there will the mule be found. It's a queer sight to strange eyes to see street cars drawn by the patient, plodding, long-eared beasts.

The Louisville hotels are good, both as to meals and appointment, that is to say, all but the water—that used for bathing pur-

poses. It comes from the Ohio River, and is as muddy almost as a hog wallow.

Sterling Elliott, the president of the League, is here. He looks sweet and clean as he saunters around the corridor in crash clothes, but he confided to me that he wanted a bath.

"I looked at that water," he said, "and couldn't go it. I used a towel, but I'm going to bribe a haliboy into bringing me some clear water or lose my fortune in the attempt."

If the heat will but moderate, signs are not wanting that this, the seventeenth annual meet, will do its promoters proud. It is the first time that an effort has been made to carry a programme from one week's end to another.

This glad hand was extended in hearty fashion at "headquarters."

Ordinarily, headquarters is—whisper it lowly—a young ladies' seminary. It is rather the worse for wear, but to-day its flaking paint is well hidden by huge streamers and festoons of bright-hued bunting and by signs breathing welcome. Stairs lead from the sidewalk to either end of the porch. At the foot of one flight an officer of the law—a policeman—is on duty. When I approached this afternoon he was busy, very busy. He was seated in a chair, his coat unbuttoned, his legs crossed, his face buried deep in a newspaper. He was rudely disturbed by a call from indoors. An Omaha jag was slopping over and required attention.

The officer is a fair type of the Louisville policeman. They all saunter along in lackadaisical fashion, coats open and with a languid air that impresses the visitor from the East most unfavorably.

Within "headquarters" the hospitality is of a nature that might shock the supposedly demure young ladies who imbibe knowledge therein. There is a profusion of bunting and flags and ferns, and the visitors who are in temporary possession imbibe, but something more tangible than knowledge—good old Kentucky punch. And it is good and as seductive as it is good. The first glass begets a desire for a second and the second for a third and well, it steals so softly o'er one that the wonder is there were not more jags than that enveloped by Omahajan. And it is served here with hospitality that is more than princely and from a receptacle that is distinctly original.

When Louisville was fighting for the privilege of holding this meet the moth-eaten connection of Kentucky and corn juice of course arose and was the peg for many an alleged witticism.

"Come to Louisville," said one of the Ken-

[Advertisement.]

GOOD THINGS ABOUT COLUMBIAS.

A Few Extracts Taken from Letters to the
Poep Manufacturing Com-
pany.

"While in Paris last summer during a visit to one of their celebrated riding schools I asked to see what they considered the finest of their wheels. They showed me a number of different designs, all specimens of the highest class of workmanship, but when I had finished admiring them they brought forth a Columbia, and with an enthusiasm not born of politeness, said: 'But this is the best of all. There is no bicycle equal to the American Columbia.'"—George Cayvan.

Increase in Popularity.

"Unless I am greatly mistaken the growth of bicycling will be very great in Japan during the coming year. This means, of course, a marked increase in the popularity of the Columbia which we all delight to hail."—John A. Cockerill, Yokohama, Japan.

Columbia Leads.

"Those who ride my wheel say that it rides easier than any wheel in town. Two or three want to buy it. The Columbia leads."—Rev. B. P. Capshaw, Gouldsboro, Me.

It's All Right.

"The Model 40 is the finest wheel in our city. As soon as I planted myself in the saddle I remarked: 'It's all right because it's a Columbia,' for it fits me as no other machine ever did, and runs so easily that I almost seem to fly."—Jesse Barker, Humboldt, Kans.

Easiest Running.

"I am very much pleased with the Columbia wheel, which I think is the most solid and easy running wheel around this city."—F. Walkley, Montreal, Canada.

Best in the World.

"Rode 110 miles Sunday over a terrible road with my Model 40, and can say that it is the best wheel in the world for a hill climber."—W. S. Ford, Ontenagan, Mich.

Superior Qualities.

"I must take occasion to congratulate you on the superior qualities of your Model 40 over other makes of bicycles. The Columbia is the wheel for me."—L. C. Wahl, Denver, Col.

Strength and Durability.

"It gives me great pleasure to testify to the strength and durability of your racing wheel, Model 40, ridden by me in the road race here yesterday. I can't say too much for the wheel."—E. Tyler Smith, Denver Athletic Club.

Columbia.

"I used to think that the phenomenal success of the Columbia bicycle was due largely to the name, but if it is the name that keeps my Columbia in perfect condition where other wheels are constantly being repaired, I have no objection."—L. C. Brown, M. D., Tioga, Pa.

Is Always a Winner.

"I would not put my Columbia aside for any other wheel on earth. It's always a winner."—G. E. Countzler, Sebree, Ky.

They Are Columbias.

"There are only three other Columbias in my family, and they have given satisfaction, which is about the same thing as saying: 'They are Columbias.'"—Thomas C. Dunn, Findlay, Ohio.

Envyed by Others.

"I have not yet found a weak thing in your machines. No wonder they are envyed by other manufacturers."—A. E. Davenport, North Adams, Mass.

Get a Columbia.

"If you want the best wheel made get a Columbia."—E. J. Stillson, Los Angeles, Cal.

Pleased With His Columbia.

"To say that I am pleased with my Colum-

bia would be drawing it rather mild."—Edson Borsrey, Pittsfield, Mass.

Accept No Substitute.

"Get a Columbia—accept no substitutes. Take nothing 'just as good,' but get a Model 40 Columbia. The frame and working parts used in a Columbia are incredibly strong for the low weight of the machine. My advice is: 'Get a Columbia.'"—W. P. Boyle, St. Andrews, N. B.

Older the Better.

"On the 21st day of April, 1895, it being my sixty-sixth birthday, I bought me a second-hand bicycle. It was the first time I ever got on a wheel, and in less than four weeks I took twenty mile trips often. After riding two months I bought a Columbia. It fairly ran away with me, and I now regret not having commenced sooner. Never too old to learn. The older you are the more need you have of a wheel."—John H. Brown, Waltham, Mass.

RECENT COLUMBIA VICTORIES.

At Rome, July 5 and 6, Von Gammon won the one-mile championship and one-half-mile open. Gus Johnson won the one-half-mile novice. West and Von Gammon won the one-mile tandem—all on Columbias.

At Providence, R. I., August 1, Messrs. Devlin and Hanson broke the world's one-quarter mile record on a Columbia tandem. Time, 26 1-5 seconds.

At Danielsville, Conn., August 1, F. A. Blanchard won the one-mile open on a Columbia.

At Providence, R. I., August 6, Fred Devlin made two State records—unpaced flying start, one-quarter-mile; time, 29 3-5 seconds; one-mile flying start, unpaced, 2:20 1-5, on a Columbia.

At Wood River, August 8, W. H. Roland won the one-half mile handicap and one-mile open on a Columbia.

STANDARD OF THE WORLD

Seventeen Branch Houses and Stock Companies
under our direct control are located as follows:

BRANCH HOUSES

200 Boylston Street, Boston, Mass.	19 Grand River Avenue, Detroit, Mich.
12 Warren Street, New York	124 Mathewson Street, Providence, R. I.
291 Wabash Avenue, Chicago	452 Pennsylvania Ave., N. W., Washington
609 Main Street, Buffalo, N. Y.	817 Pine Street, St. Louis, Mo.
32 East Avenue, Rochester, N. Y.	1757-59 St. Charles Avenue, New Orleans
420 Fifth Avenue, Pittsburg, Pa.	344 Post Street, San Francisco

STOCK COMPANIES

Metropolitan Cycling Co., Boulevard and 60th Street, New York
Brooklyn Cycle Co., 555 Fulton Street and 1239-41 Fulton Street, Brooklyn, N. Y.
Hart Cycle Co., 816 Arch Street, Philadelphia, Pa.
Eisenbrandt Cycle Co., 311 East Baltimore Street, Baltimore, Md.
Gano Cycle Co., Denver, Col.

At each of the above addresses a complete repair shop is maintained, in charge of men trained in scientific bicycle repairing, and thus agents and riders can have quick attention for needed repairs, except nickelling—free if under our guarantee, at reasonable prices otherwise; prompt, satisfactory service either way.

No accounts can be opened for repairs. Send enough cash to cover the probable cost; if too much, the surplus will be promptly returned. Or estimates will be cheerfully given.

POPE MANUFACTURING CO.,
HARTFORD, CONN.

Stephens & Hickok, Los Angeles, Cal.; Habighorst & Co., Portland, Ore.; and McDonald & Wilson, Toronto, Ont.; are also equipped for general repair work and authorized to protect our guarantee.

tuckians in retort, "and we'll let you bathe in it."

They have endeavored to keep their word. The punch is being dipped from a full-length bath tub, and to heighten the effect the sign "Soap and Towels Free" stares one in the optics.

For the plebeian there is beer; for the temperate, lemonade. They are not served from bath tubs.

In the vicinity of the tub are the men who are making the meet—Watts, Maxwell, Neuhaus, Bacon, Johnson.

Watts is usually upstairs. Beside him when he is seated at his desk a typewriter clicks merrily. He does not keep his chair very warm, however. He is wanted at the telephone; he is wanted in the next room; his name is wanted on a check. He is kept moving. But his full, smooth-shaven face fairly radiates good humor and his hand clasp real good-fellowship.

Maxwell, too, is a character. He, too, has a full face, likewise a fullness of paunch. In his cycling clothes and shirt sleeves, his knickerbockers held up by galluses and his face fairly shedding perspiration and a desire to give every one the gladdest sort of a glad hand, he's a whole meet to himself. Bacon and Neuhaus and the others are all right, but Maxwell—he seems born to it, and if he doesn't develop into the king bee of the week I miss my guess.

MEETOGRAPHS.

"Button!"

"Button, mister!"

"Say, mister, gimme er button!"

Gimme er button! Gimme er button!
Button! Button! Button! Button!

Louisville is miles away, but its echoes—the echoes of the seventeenth annual meet of the L. A. W.—still threaten the stone and timber in the "halls of time."

They are pleasant echoes—most of them. There are many, so many that some are jumbled and indistinct, but while they live that echo, "Button, mister! Mister, gimme er button," must blend with each and every one.

It is at once a day dream and a nightmare. "Button, mister! Mister, gimme er button!"

By day and by night we heard it—aye! saw it. We could not leave it if we would. The man in cycling garb or one wearing a badge or button had to show himself at the hotel window, and instantly "Button, mister! Mister, gimme er button!" assailed him. If he left the house it followed him. He could not dodge it. It lay in wait for him. If he turned to the right it was popped out instant; if he turned to the left, there, too, it popped. If, in desperation, he mounted his wheel and sought to shake it off it ran out and met him. If he boarded a car it pursued him. At every crossing it was "Button, mister! Gimme er button!" It pelted him like a shower of hail—like a rattle of small arms. It smote the car until the drum quivered. It burst into the brain until the brain ached.

"Button, mister! Gimme er button!"
If the heads of those who attended the meet should be opened, on every brain would those words be found branded. There can be no doubt about it. One heard the cry until almost frantic—until his dreams gave shape to it.

I have not overdone the subject.

Every one under the age of twelve, and many above it, knew nothing else during the week. On Monday it was a mere piping; by Tuesday it had gathered strength; by Wednesday it was vociferous; by Thursday it was epidemic. Black and white were alike affected. Groups hovered until midnight around the hotels waiting for a victim, and followed

him as a pack of hounds would follow their prey; they posted themselves along the routes most frequented by wheelmen; they lurked in every shadow and at every corner; little tots scarce past the lisping age stood at their home gates and, with chubby hand extended, voiced the cry. There was never anything like it. No cycle show bawl can compare with it. The Louisville children were crazy—button crazy. Throw them one of the trifles, and ye gods! such a scramble. They pushed and pulled and piled over one another and fought for the bauble as though it were the richest prize ever placed in their way. Happy, light-hearted youngsters!

To the man "who has been there" several times, the glamour, the glitter of a League meet loses its bezadzelement. He attends not so much to partake of the entertainment and hospitality the hosts may provide—he seldom follows the programme—but rather comes to

"see the town"; to meet new people; to renew old acquaintances; to seek new experiences, and to have "a good time generally," which is, after all, the real intent of these functions.

As this was the first occasion on which a meet had been held in the South it was bustling with such interest to such men. They had heard that the Kentucky women and Kentucky whiskey were the finest in the world—the one always interesting to healthy mankind, the other supposed to be so. It is a matter of individual fancy regarding both. There are fine women, pretty women everywhere. Every country, every clime, every town has its quota. The types differ, that is all. Here in Kentucky, and, indeed, throughout the entire South, the women are the more winsome, perhaps. The heels of their shoes are higher, and even on the streets they move with that air, that grace, that proudness of carriage that such heels, accentuated by high breeding, typify the ballroom. Their complexion is more olive than peaches and cream. The blush of the rose, that is, the full red rose, is not prevalent, and it is seldom affected. Paint and powder are not much used. Dark hair, dark eyes, long lashes—all blendings of the olive skin—are their markings. Natural blondes are rare; those chemically prepared are few. The Southern woman, too, holds herself as high as she carries herself. She is coy, but not flirtatious. I heard several real good-looking lady-killing visitors remark the fact. One glance, perhaps, but that is all. Seldom is there a smile or a head-turning. She has sorely tried the conceit of the "irresistible young man," and, incidentally, a few fairly old ones. I could name some of them. Let it stand to the glory of "Old Kaintuck!"

The whiskey? It is too widely known to require notice, but as brewed into the punch—the punch which filled the now famous bathtub at "headquarters"—ah, me! It seemed a concoction of nectar, a sigh and a few dreams, lullabies and dreamy waltz music. It tickled the palate, lulled the senses and left a moreishness in the mouth that was only satisfied by more. Never was drink more

seductive. Its effect recalled that tuneful verse concerning love, sung in "The Little Tycoon":

Love comes like a summer sigh,
Softly o'er you stealing;
Love comes and you wonder why—
One may guess the rest.

Coming from the hurly-burly of a big city, Louisville is a restful place. The residents move about. They do not rush and elbow each other. The almighty dollar does not seem forever reflecting itself in their eyes. The streets, as a rule, are clean and well paved, a plentitude of asphalt and vitrified brick, the latter affording exceptionally fine riding. It is twice as "lively" as asphalt. There are no cloud-rendering, neck-twisting buildings, and the homes are homes. Few are palatial. All are inviting and attractive. Few there are which have not roomy front porches and tree-shaded lawns. There are trolley-cars, of course, likewise mule-drawn

cars. These latter, and, indeed, the mules, generally look inexplicably queer to Eastern eyes. The long-eared, slow-moving, patient beasts are usually diminutive specimens of their kind, and the sight of them drawing streetcars is funny to the smiling point. The Louisville police are likewise an easy-going lot. Physically, they are dwarfed by the New-York and Chicago and Eastern and Western "cops" generally, and they dawdle along or lounge about as if life really was one "grand, sweet song." Most of them go about with helmet worn askew, and coats unbuttoned and flapping in the breeze, when there is one. It is letting them down easy to say that they must have a hard task in inspiring terror in any breast. An infusion of Roosevelt tonic would improve them immensely. The first whom I saw was on duty at meet "headquarters." He was seated on a chair, helmet off, legs crossed and head buried in a newspaper.

The street pumps, too, are picturesque relics, but sadly out of place in a city of Louisville's size and importance. They are the superannuated wooden, long-handled affairs that have been cast out by almost every go-ahead Eastern town of 1,000 inhabitants. They, however, give fine water, clear, cold and lime-impregnated—quite different from the fluid in which the Louisvillians bathe, and which has been the amazement of the average visitor. On his arrival one of the latter turned on the water in the hotel tub. He rubbed his eyes and allowed the water to drain off. He turned it on again and again drained it off. After this had been repeated three times he touched the call button. The negro hall boy responded promptly. "What's the matter with the water?" asked the visitor.

"Nuthin', sah."

"Nothing? What are you talking about! Can't you see it's as dirty as it can be?"

"No, sah, 'tain't. Dat's its nat'ral color."

"You don't mean to tell me people bathe in that stuff?"

"Yas, dey do, sah. Its all right. Won't do yo' no ha'm, sah!"

"Well, I'll be —"

READY FOR 1897

Booking orders now—have been since August 1.
We offer the best line at correct figures.

A Superb Line of High-Grades.

A Superior Line of Medium-Grades.

A Complete Line of Juveniles.

Two New Models Tandems.

We number among our customers the biggest, shrewdest houses in America. They are with us for life. We have room for a few solid jobbers. We are one of the few factories that run twelve months each year at full blast. Capacity, 40,000 bicycles.

**TWENTY NEW MODELS NOW ON EXHIBITION AT OUR
QUARTERS IN THE WELLINGTON HOTEL, CHICAGO.**

Address all mail to general offices and factories—Kenosha, Wis.

Kindly mention The Wheel

The water comes from the Ohio River, and is almost of the color and consistency of that in a hog wallow. Sterling Elliott was among those who bribed the hall boy into stealing a tub of drinking water for bathing purposes.

Every one agrees that there was never a League meet—certainly not within recent years—where a better programme or more gratuitous entertainment was provided by the hosts. If the visitor did not have a good time he has himself to blame. There was variety and enough of it to keep any one who desired it "on the jump."

Louisville should be proud of the handful of men who did so well that this may be written to the city's credit, for, if the truth be told, it was a mere handful. Mention the names of Watts, Johnson, Neuhaus, Bacon, Fleck, Prince, Wells, Maxwell, Brigman, Craig and two or three others and there will be few, if any, omissions.

When the idea of stretching the meet from one week's end to the other was first made public it was looked upon as a clever scheme to benefit the hotels, but the stretching was well done and that is enough to say. For the first two days, with nothing but runs and smokers to attract, it was thought that hardly a corporal's guard would be in evidence, yet, notwithstanding, nearly seven hundred names were registered at headquarters, of which more than half were those of out-of-towners. Each day, of course, added to the number, until, perhaps, 3,000 cycling strangers were within Louisville's gates. The East was not particularly well represented, and most of the men from that section were drawn from the ranks of the trade or of League "royalty." The West was here in great numbers, equal almost, if not quite, to the Southern representation.

Omaha was here in white duck clothes and an awful combination of red, yellow and green ribbons, putting in its best licks for the '98 meet. They were not particularly demonstrative; en passant, this meet has been remarkably free from drunkenness and roydism. Chicago ran to white flannel and pronounced shirt fronts, F. J. Wagner easily leading his townsmen. He changed three times a day, each front being more pronounced than the other, and all of the patterns calculated to induce strabismus. C. G. Percival, of Boston, vied with Wagner, but in another direction. His ambition ran to golf hose, although he did set a new fashion for afternoon dress by appearing on the track in white duck trousers, Prince Albert coat and a drab-colored slouch hat. About every one else affected crash. If the new arrival had not a suit of that material he usually purchased one within twenty-four hours. The demand became so brisk that the local stores shot up the price from \$4 to \$5.

When the Louisvillians were making the effort at Baltimore that won them the League meet, it will be remembered, the famous punch was brewed and bottles of cobwebbed Kentucky whiskey were presented to the National Assembly delegates. The punch brought from one of them a smack, a sigh and a remark. A Kentuckian seized the opportunity to win a vote.

"Come to Louisville," he said, "and we will let you bathe in it."

When the meet was voted to the Southern city, a mental memorandum was made of the promise.

When the meet was inaugurated on Monday of last week, the promise was made good.

In one of the parlors at headquarters was a bathtub—a full sized porcelain tub. It rested on a raised platform. Over it were suspended two horseshoes. On a towel rack

near it were soap, towels and a sign stating that both were free. And within it was that punch, enough, yes, more than enough of it, to provide a bath. The tub was filled almost to the brim. It gave out no fragrance, but no product of the poppy ever lulled the senses and wooed the elves and pelleted the imps as did that amber brew.

Steward Maxwell—R. F., of his name—presided over the tub. Big, dark, round-faced, and with an aldermanic paunch, he performed the duty well. He beamed over with cheeriness. Too bad that he should have known it so well and been so modest as to afterward advertise the fact in print. Maxwell is in the bicycle business, and used his space in the local papers to toot his personal horn so loudly that those who met the whole-hearted fellow of the day before could scarce believe their eyes.

Watts, too, was at headquarters, and in demand at a dozen different places at the same time. W. W., his ministerial face beaded with perspiration, was still the affable, kindly voiced Watts of old, and what is more, to all alike. Geo. E. Johnson, short, slight, quiet, but nervous-looking and seeming not to have aged one year in ten, moved in and out. Neuhaus, tall, slender, clean cut, impassive; Fleck, short, stout, swarthy,

and with hair black as night; Lawson, short, nearly as stout, hair dark only as twilight; and Bacon, of medium height, and full, fine features and brimming with vitality, were others who played star parts.

"Headquarters," which ordinarily is a young ladies' seminary, is a typical Southern structure. Half spiral stairways lead from the sidewalk to either end of the high-columned porch, and to the wide hallway, which divides the house. It is of a type now seldom built. It shows the tattering of time, but most of the wear was well hid by folds and loops and festoons of bunting and of flags, and signs of welcome, while indoors palms and potted plants adorned the whole.

Considering the runs and smokers of Monday and Tuesday as mere nominalities—pleasant nominalities for those who participated—the events of the meet really began with the parade Wednesday afternoon.

Originally the intention was to make the turnout a high grade, eye-pleasing function. To that end a number of prizes were offered to induce the entries of uniformed clubs. But the clubs failed to enter. On Monday, when but two had enrolled themselves, and it was seen that the effort had proven abortive, the original idea was abandoned. The parade was thrown open to all. The "all"

responded nobly, some three thousand strong. No need to describe them. With few exceptions the gathering was such as may be seen on any pleasant Sunday or other afternoon on the Boulevard in New York or on the cycle path to Coney Island. The paraders were as variously clothed, as variously mounted, as various in deportment, and as thoroughly various in every other respect. And they kept almost as perfect alignment. The mastodonic Vim tricycle and Twentieth Century lamps interested and amused the throng of onlookers and caused a few timid horses to rear on their haunches.

The cycle corps of the Louisville Legion, without arms and keeping poor order, gave a dash of color and a blare of bugles to the parade, and the Rambler Meet Club—which extracted a deal of fun out of the meet—satirized the bloomerized young woman by parading in balloon-sleeved shirt waists. A few individuals also affected the grotesque. Call this a parade and you have the picture in your mind's eye.

The route led through Third street, a wide, handsome residential street lined for three miles by well-kept, wide-porched Kentucky homes—which make understandable the sad longing of the melody so dear to Kentucky hearts.

On the edging of the outskirts of the town, on the grassy surface of Southern Heights Woodland, the paraders halted and extended themselves. The "watermelon feast" was next on the list, and this was the place of its occurrence.

Wherever there is a mule and a watermelon, there you will find a nigger.

This is an epigram peculiarly Southern, and historically true. But spell it "n-i-g-g-e-r" or the effect will be lost. Loadstone is not more attractive than is a watermelon to a darkey. The watermelon may be for "white folks" only, but somewhere in a woodpile, somewhere in the grass, "a black face and shiny eye" is surely lurking, and with teeth gleaming and on edge.

There was no color line drawn at the watermelon feast on Wednesday. Perhaps President Watts and his colleagues realized the utter hopelessness of keeping it taut. But whether or no, the "black face and shiny eye"—an expression borrowed from the rhymes of Southern childhood—were there, and in great numbers. The mule, too, was not lacking. Two of them drew the cart conveying the melons. The darkeys did not lurk that afternoon. They came out boldly and when the fruit was distributed were well to the fore. The "distribution" consisted of tossing the melons one at a time into the great crowd which surrounded the wagon. With each tossing there was a rush and a scramble, a mixing of white skins and black such as no football field has ever witnessed. The securing of a prize was an event. The joy of the negro who captured one, the grins of his fellows who surrounded him, the sight of the dozens of ebony faces buried deep in the luscious red, was a series of living kaleidoscopic pictures worthy of a kinetoscope. It was as interesting an event as the entertainment which followed—a genuinely negro show. No burnt cork faces and forced dulcet there. It was the real thing. A crude platform had been erected under the trees, and around this the crowd gathered. A troupe of barnstorming darkeys had been engaged, and here they exhibited themselves. They were of all sizes, all shapes, all colors, of both sexes. They danced, they sang, they rattled the bones and "picked the old banjo." A half-dozen pickaninnies had an apple-eating contest. They were ranged in line under a gibbet, from which cords dangled; the youngsters' hands were tied behind their

This trade mark is recognized in all parts of the world as the emblem of perfect cycle construction.

There are now made in America, cycles of
CHEAP,
MEDIUM,
HIGH-GRADE
 AND
HUMBER QUALITY.

Within the walls of every cycle factory in the world, HUMBERS are admittedly the best product in cycle construction which inventive genius, precise methods, skilled mechanism, and unlimited facilities have produced. ❁ ❁ ❁ ❁ ❁ ❁ ❁ ❁

Applications for HUMBER Agencies for the season of 1897 will be received at our Westboro office until Sept. 15, 1896. Though we have largely increased our facilities of manufacture during the past season, the volume of our product is limited, and it is necessary our plans for the distribution of our 1897 product be completed by the 15th of September, in order that we may supply agents promptly with cycles they will require during the season of 1897.

A Humber Agency

❁ Means Reputation, Satisfaction, Profit. ❁

Once appointed, the HUMBER agent can always feel assured of steady business, for so long as he is conducting the business on satisfactory lines the agency will remain with him. It is the policy of HUMBER Companies to select agents whose character is on a plane with the reputation for integrity and quality earned by HUMBER Companies during the past twenty-nine years. We seek those only to represent us who appreciate the merits of honest goods and who realize the value of and will aid us in supporting a truthful, honorable business policy. In every manner possible we seek to prevent any cutting of prices, that all buyers may be treated uniformly alike. We, therefore, require every agent to furnish a guarantee bond that he will not under any circumstances sell HUMBERS at less than our catalogue price, nor give or allow any rebate or commission.

HUMBER & CO., America, Limited,

ELLIOTT BURRIS, Managing Director,
 WESTBORO, MASS.

Kindly mention The Wheel.

backs. Close the eyes and fancy a "lynching bee." It looked for all the world like one. Open them and find that at the end of each cord there dangles an apple—a green, choleric apple. Hear the announcement that the boy who is first to entirely eat his apple will secure a prize of \$5. Witness six faces break into huge grins, six pairs of eyes blink joyously, six woolly heads go bobbing up, down, now this way, now that; six mouths spread wide open, twelve eyes popping half out of their sockets—then one face bulging out on the sides and moving furiously, and yet showing the joy of triumph. One string is minus the apple. One pickaninny in Louisville is rich in his own right. Then there is a cake walk. The tall, high-cheeked, rawboned negro in a high hat and long-tailed coat who has held aloof from the others, and whose face but a few moments before was buried in a melon, is now in his element. He is leading the walk. The crowd is melting away. What remains is howling in delight.

While the apple-eating contest is being arranged and the young negroes are standing beneath the dangling strings, the lynching aspect is heightened. The crowd has surged upon the platform. It will not be forced back. The dismounted Louisville Legion is pressed into service, is marched on the platform. The soldiers form a cordon around it. The view of the spectators is obscured. They resent it. They groan and hiss, and shout threats of fight. The managers realize their mistake and call off the militia. The crowd cheers, but again intrudes on the platform. Suddenly a dark-complexioned, black-mustached man of medium height, in cycling garb, and with one hand bandaged, makes his way to the front. He speaks a few kindly words to the crowd. He suggests that they keep six feet away from the platform. They cheer and fall back as if touched by magic. The little word in kindness spoken had availed where the show of force was futile. The man who spoke the word was Archie C. Willison, of Maryland, once president of the L. A. W. But few of those present knew it. The scene was quite dramatic while it lasted.

It is questionable whether the watermelon feast or the steamboat excursions on the Ohio River, the latter on Friday night, was the greater function. It matters little, however, as both were enjoyable. Ladies in considerable numbers attended the excursion; the lady-killing cyclists were in their wake. So large was the crowd that instead of one boat two were brought into service. Aboard each a band made music, and the excursionists danced while the boats floated. There was no merriment or devilment, except such as individuals made for themselves. The moon did not show itself, but the dark shadows of the shores, peppered by yellow lights, made the pictures. Abbot Bassett was aboard, and, despite his rotundity and the gray patch of close-cropped whiskers on his chin, he made himself popular with the ladies, and easily, as is his wont.

THE RACING.

Within the last ten years I have attended race meetings enough to top the century mark.

Taking a hasty, bird's eye view of them all, I can recall none that, as a whole, was so intensely interesting, that was characterized by such fiercely fought events, such a multitude of hair-raising finishes, as marked the meetings at Louisville. During the entire three days, there was not one race that was won by two open lengths. From an American standpoint, at least, the racing itself was the pinnacle of perfection. The interest

heightened each day. Each day was better than the day before. The climax, the five-mile National championship, was magnificent. It was like a display of fireworks. The elements themselves were sputtering. Huge angry clouds had suddenly overcast a blue sky. The thunder was rumbling sullenly. Great gashes of brightest silver were being stabbed into the clouds. The wind was capering like a maddened dog. Dust and loose paper was filling the air. The flags were snapping viciously. Eighteen bare-legged, bare-armed, well-browned young athletes were being hurriedly lined up at the tape. The crowd was on its feet, apprehensive but interested, and prepared for a rush the moment the storm should break. All was excitement; everyone was on pins and needles.

Referee Elliott, plainly nervous, announced that if rain should fall during the race it would be the signal for a stop, and a postponement. The pistol cracked. The eighteen men got off safely. They rushed for the triplet ten yards away. Callahan caught it, but the three-seater was so slow in getting under way that many of the men ran ahead of it and bunched there. As the big machine gathered force, they slid behind it. Suddenly Cooper shot ahead, lay next the pole and, as Callahan came abreast, forced him off and tacked on. Then began the greatest series of plays for the pacemaker ever seen on an American track. Man after man repeated Cooper's tactics; strings of five and six went up, dropped back, and one after another tried to oust the Detroitier from the favored berth. It looked like the field against Cooper. But he fought them all off with the adroitness of a general, and in a fashion that was soul-rousing. Finally, the blue-clad Gardiner, attended by a convoy of team mates, went up and attacked. The assault was successful. Cooper fell back and Gardiner occupied the vantage ground. Coming around the next time, Cooper was crowded off the track and unto the grass next the pole. Who did the crowding I cannot say. Crowding and elbowing was so general, however, that had full justice been done, hardly a man would have been left in the race after the referee's decision. Cooper lifted his wheel back on the cement just as Bald came by. The White Flyer seemed rather loath to give Cooper room. The latter made it. He reached over with his right and shoved Bald. A moment later Bald gave his rival a left-handed shove or punch in the ribs. When they passed the next time the excited grand stand hissed and bellowed foul. Cooper paid no attention to it. He was full of fight. He wanted the triplet. He went up, dropped back, and at the first attack Gardiner, usually faint-hearted, succumbed. Then followed more onslaughts on Cooper. He was game as a cock that ever walked, and repelled them all. When

half-way around on the last lap, the triplet slowed preparatory to quitting; the crowd had bunched and Cooper was in a hole. On the last turn they broke and spread all over the track. Cooper, game to the last, saw an opening, and shooting diagonally across the track, came through like a whirlwind, with his teeth set and riding wide and like a fiend possessed, he passed a dozen men on the last twenty yards, and won all out by half a length. It was the most inspiring exhibition on a race track I have ever witnessed. Such pluck, such dogged determination, such a cyclonic sprint, such a resolute face as Cooper displayed have not been paralleled in my experience. If ever man won an uphill fight, if ever man won on his merits, Cooper did. He was afterward disqualified for fouling Bald, but no decision of a referee can rob him of the glory. Tom Cooper is not only the leggiest, but the headiest man on the track to-day. Like a born general who does not waste his army and his powder in needless skirmishes, Cooper set his heart, his soul, on the championships. His every energy was directed that way; he entered no other races, and his plan of action triumphed. On League meet form, when all are supposed to be cherry ripe, he deserves the title of "champion," an honor fairly and gloriously won.

Louis Callahan, who finished third in the five-mile championship, was also disqualified. His elbowing tactics were flagrant and frequent. With these decisions of the referee, the race went to a "rank outsider," W. E. Becker, of Chicago; E. S. Acker, of Philadelphia, was moved up into second place, and Nat Butler, of Boston, into third. Time—12:18 2-5.

Five minutes after this race the storm broke. It proved a black squall of short duration, but it resulted in the abandonment of the last race, the mile open, unpaced, in which, however, none of the first fighters were entered.

Next in point of interest and sensationalism—and some differed with me and placed it ahead of the championship—was Sanger's win in the two-mile handicap, also on the last day. The big fellow seemed in a hopeless pocket a quarter-mile from home, but he dropped back, and coming on the outside with a terrific burst, landed a clean cut victory by three-quarters of a length. It was a wonderful bit of work, and showed clearly who was the popular idol. The crowd rose to feet and for the first time gave vent to full-lunged enthusiasm. They gave Sanger an ovation, which was redoubled when the racing men and trainers on the track lifted him on their shoulders and carried him in triumph to the dressing-room. It was a proud moment for the once most unpopular man on the American path, and, indeed, the change in the appearance of the man is marvellous. A year

ago he looked a fat, flabby, sneering, surly hulk of Teutonic humanity. His lip forever wore a curl that bespoke either contempt or an offensive breath. His wiry hair, brushed pompadour style, bristled like the rays of a setting sun and heightened his sneering appearance. To-day his hair is brushed slightly down on his forehead, he looks clean cut and handsome, his eyes are bright, his face is passive, and when it breaks into smiles it is a pleasing, agreeable—a really fetching smile.

Sanger still pursues his old tactics. He trails along near the end of the line until the last quarter, then pulls up, starts the sprint, sets the crowd in full cry, and when his fire is needed most, in the last fifty yards, the flue refuses to draw. He slides back beaten. This is the story of almost if not every race in which he started.

The mile open on the last day also furnished a surprise. Will Coburn, of the Dayton team, and Fred H. Allen, a Frontenac, two good men but little fancied, ran one, two against such men as Sanger, Tom Butler and Gardiner. It was the old story; Sanger came from the rear, Butler, Bald, and Gardiner tacked on and were pulled up, but when Sanger's fire burned low and the other pulled out, it was too late. Coburn won by three-quarters of a length; inches between second and third. It was the second richest purse of the week, \$125, and the joy of Pat Hussey, the willow sponsor of the Dayton team (he is 6 feet 3 inches tall, and weighs 150 pounds) was a sight to behold. His smile reached from ear to ear, and illuminated the track for yards around. It was a smile such as one reads about.

The fattest purse, \$150, was captured by Arthur Gardiner, who, at the same time, placed the single paced mile competition record to his credit, 2:01—the only record of the week. It was on the second day, Friday, the 14th, in the mile open, paced by John S. Johnson and J. W. Parsons, the Kangaroo champion. Callahan caught the pacer and held it until, as usual, Sanger started the sprint and for a wonder held it until the last ten yards, when Gardiner jumped him and won by half a length. Tom Butler was at Sanger's elbow.

The Butlers rendered a good account of themselves. They came here at loggerheads with Stearns & Co. and at their own expense. The Syracuse firm desired them to confine their efforts to Boston territory. The Butlers are ambitious and would not have it. They came here to measure strides with the flower of the country, and both Tom and Nat proved themselves quite some blossoms indeed, Tom, the boyish bunch of spring steel, taking the two championships for which Cooper failed to account. His face betokens the cunning of a fox, but the youngster nevertheless has not much of a head. He has a phenomenal last-fifty-yards sprint and appears to depend entirely on luck and some one else pulling him out of the ruck and tight pockets.

And Bald! Speak the name sadly. Poor Bald! Bald, the once unconquerable! Not one first did he place to his credit, and his appearance begets sympathy. Cooper looks too finely drawn—as if the high tension must soon break—but to one who has not seen him in months Bald's face and riding inspires both amazement and pity. His features are figured and drawn, his cheeks show the shadow of hollowness—his whole face is bordering on the hatchety—not only this, but there is a look of blankness—a look of blank despair and worry in his eyes. He still smiles, but it is not the same old smile. It is rather a sad sort of parting of the lips. He seems to have lost both head and legs. On the first day he rode as if doped. With

plenty of opportunity to clear himself he allowed himself to be tied up in a pocket. With the choice position behind the pacer in another event he remained glued there until the field had swept by him. Then it was too late. He is not the Bald of old. He has lost his fire. He has gone back on a gallop. It is almost inexplicable. Howard Tuttle says it is due to the absence of Asa Windle.

"Last year," remarked Tuttle, "Eddie had not a care in the world. Asa did all his thinking and planning. This year he is worried; he has too much to think of, and he isn't equal to it."

Asa Windle himself says the trouble lies in Bald's position—that he does not set his wheel properly to get the best results. "And Asa comes pretty near knowing," added one who heard the remark.

John S. Johnson was the only notable absentee in the championships. He was present, but says he is too fat to ride. Nevertheless, he did an exhibition half behind a triplet in 53 seconds, and seemingly without trouble. Johnson's reappearance was noteworthy because of his introduction of the very Frenchest creations in racing shirts. One day he wore a white Jersey on the back

Tom Butler.

of which was worked a fiery red lobster, full size. The next day he brought out a pinkish shirt with an American flag embossed between the shoulders. It is quite the thing in France, ye know, to affect such emblems in such places.

There is small need to go into details of the various races. As already stated never were they so hard fought, never so close. Tom Cooper won four of the championships by small but decisive margins and it was a rare race that was won by more than the length of a bicycle, while the fights for places in almost every instance spread the men all over the track and kept the small army of judges guessing.

The amateur events were likewise well contested, but many were State championships, and for that reason of little more than neighborhood interest. Asa Windle, Columbia missionary at large, found and pushed off a good man in Ingraham, of Dixon, Ill., who caused the Columbia balloon to soar upward several times. St. Louis also sent down a warm lot of pures. But the summaries best tell the story.

THURSDAY, AUGUST 13.

One-mile handicap, professional—Final heat—1, Nat Butler (30 yards); 2, A. D. Kennedy (15); 3, E. S. Acker (60); 4, Conn Baker (50); 5, E. C. Johnson (80). Time—2:06. J. P. Bliss, C. Hofer, J. F. Starbuck, R. P. Rice, J. E. Bowler, Bob Walthour, W. F. Selby, O. L. Stevens, Jay Eaton, J. A. Newhouse and J. Coburn also rode.

One-mile novice—1, Charles R. McCarthy, St. Louis; 2, D. A. Dougher, St. Louis; 3, E. Groeschel, Louisville; 4, H. S. Parsons, Louisville. Time—2:37 2-5. J. Luchtinger, C. T. Byers, C. E. Drabelle, C. Rittenauer, G. Speard and R. R. Reidner also rode.

Quarter-mile, State championship—Final heat—1, Karl Thome, Louisville; 2, H. W. Middendorf, Louisville; 3, P. J. Bornwasser, Louisville. Time—0:36 3-5. V. E. Dupre and W. H. Seaton also rode.

One-mile professional, 2:15 class—Final heat—1, J. A. Newhouse; 2, E. C. Johnson; 3, W. De Cardy, Chicago. Time—2:13 2-5. O. L. Stevens, O. P. Bernhard, W. T. Hanse, S. C. Cox, A. French, Jesse Curry and J. F. Staver also rode.

Two-mile handicap, amateur—Final heat—1, C. C. Ingraham, Dixon, Ill., (60 yards); 2, V. E. Dupre, Louisville, (50); 3, W. E. Lum, Montgomery, (60); 4, E. W. Peabody, Chicago (80); 5, C. Hammond, St. Louis, (50). Time—4:54 3-4. P. J. Bornwasser, H. A. Caufield, E. Groeschel, F. L. Eberhardt, J. J. Howard, J. Lindley, L. McCabe, P. Berry, L. Coburn, W. H. Seaton, J. L. App and E. L. Thompson also rode.

One-mile open, professional—Final heat—1 Tom Butler; 2, W. C. Sanger; 3, Nat Butler. Time—2:38. McDonald, Jesse Curry, W. Coburn, J. Coburn, Ziegler, Bald, Kimble, Callahan and Schrein also rode.

Half-mile open, amateur—Final heat—1, C. C. Ingraham, Dixon, Ill.; 2, E. D. McKeen, Greenville, Ohio; 3, J. Coburn, St. Louis; 4, P. J. Bornwasser, Louisville; 5, Karl Thome, Louisville. Time—1:15. Clarence Hammond, E. Fitchner, W. E. Lum, J. J. Howard, F. R. Hattorsley, F. L. Eberhardt, R. Samberg, V. E. Dupre, E. W. Peabody and L. H. Smith also rode.

Half-mile amateur, State championship—1, Karl Thome, Louisville; 2, W. H. Seaton, Louisville; 3, P. J. Bornwasser, Louisville. Time—1:25 2-5. Stuart Leathers, C. O. Uplikte, T. Litzler, E. J. Daubert, H. W. Middendorf, J. C. Mitchell, E. D. Fitchner, A. J. Nowlin, V. E. Dupre and H. F. Cohen also rode.

TWO-MILE NATIONAL CHAMPIONSHIP.
Final heat—1, Cooper; 2, Bald; 3, Bliss. Time—4:25 3-5. Nat Butler, Allen, McDonald, Gardiner, Ziegler, Aker, Eaton and Kimble also rode.

FRIDAY, AUGUST 14.

ONE-THIRD MILE, NATIONAL CHAMPIONSHIP.

First heat—1, Cooper; 2, Kimble; 3, Allen; 4, Becker. Time—0:41 1-5. Schrein disqualified for foul riding. Second heat—1, Bald; 2, Kennedy; 3, Curry; 4, Willie Coburn. Time—0:44. Third heat—1, Tom Butler; 2, Gardiner; 3, Callahan; 4, Coulter. Time—0:44 2-5.
Final heat—1, Cooper; 2, Owen Kimble; 3, Bald. Time—0:43 3-5.

One mile, State championship—1, Edward Fichtner, Louisville; 2, Carl Thome, Louisville; 3, H. W. Middendorf, Louisville. Time—2:25.

ONE-QUARTER MILE, NATIONAL CHAMPIONSHIP.

First heat—1, Schrein; 2, Oldfield; 3, Allen; 4, Callahan. Time—0:32 3-5. Second heat—1, Cooper; 2, Kennedy; 3, Bofer. Time—0:32. Third heat—1, Ziegler; 2, Gardiner. Time—0:31 3-5. Fourth heat—1, E. C. Johnson; 2, Baker. Time—0:31 3-5.
Final—1, Cooper; 2, Louis Callahan, Buffalo; 3, A. D. Kennedy, Chicago. Time—0:32.

Two-mile open—Final—1, E. W. Peabody, Chicago; 2, W. H. Seaton, Louisville; 3, Karl Thome, Louisville; 4, F. L. Eberhardt, Salina, Kan.; 5, E. D. McKeen, Greenville, Ohio. Time—1:25 1-4.

One-mile tandem, professional—First heat—1, Clark, Bowler; 2, Schrein, Bernhard. Time—2:13 2-5. Second heat—1, Nat and Tom Butler; 2, L. C. Johnson, McDonald; 3, Staver, Winesett. Time—2:10.

Final—1, Nat and Tom Butler; 2, McDonald, Johnson; 3, Bernhard, Schrein. Time—2:14 3-5. Clark, Bowler and Staver, Winesett also rode.

Two-thirds mile, open—Final—1, Edward Fichtner; 2, Karl Thome; 3, C. C. Ingraham; 4, Ralph Stamberg; 5, E. W. Peabody. Time—1:35 1-4.

ONE MILE, NATIONAL CHAMPIONSHIP.

First heat—1, Akers; 2, Bald; 3, Calahan; 4, Schrein. Time—2:27 4-5. Second heat—1, Tom Butler; 2, Ziegler; 3, Kimble; 4, Kennedy. Time—2:28 1-5. Third heat—1, Cooper; 2, W. Coburn; 3, Gardiner; 4, Stevens. Time—2:32 4-5.

Final—1, Tom Butler, Boston; 2, Willie Coburn; 3, Louis Callahan. Time—2:32 3-5. Bald, Ziegler, Gardiner, Cooper, Kimble, Kennedy and Schrein also rode.

One-mile open, professional—First heat—1, Becker; 2, Bald; 3, Kennedy. Time—2:27 2-5. Second heat—1, Sanger; 2, McFarland; 3, Rigby. Time—2:23 3-5. Third heat—1, Zeigler; 2, Gardiner; 3, Tom Butler; 4, Aker. Time—2:23 3-5. Fourth heat—1, Callahan; 2, Eaton; 3, Wells. Time—2:44 3-5.

Final—1, Gardiner; 2, Sanger; 3, Tom Butler. Time—2:01. Zeigler, W. E. Becker, Bald, Eaton, McFarland, Kennedy, Rigby, Wells and Aker also rode.

THIRD DAY, SATURDAY, AUGUST 15.

One-mile, open, professional—First heat: 1, E. C. Bald; 2, F. B. Rigby, Toledo; 3, R. H. McCleary, St. Paul; 4, F. C. Schrein, Toledo. Time—2:34 4-5. C. R. Coulter, A. C. Van Nest, Barney Oldfield, Owen Kimble and F. A. McFarland also rode.

Second heat: 1, F. H. Allen, Syracuse; 2, W. Coburn, St. Louis; 3, E. S. Acker, Philadelphia; 4, H. C. Clark, Denver. Time—2:27 2-5. J. Coburn, Arthur French, C. Hofer, J. P. Bliss, J. F. Starbuck, C. S. Wells, O. L. Stevens and Clarence Woodard also rode.

Third heat: 1, Tom Butler; 2, Fred Loughead; 3, Arthur Gardiner. Time—2:31. B. F. Staver, E. C. Mertens, W. De Cardy, E. C. Johnson, Otto Ziegler, Bob Walthour, Nat Butler, R. P. Rice and Conn Baker also rode.

Fourth heat: 1, F. A. McFarland, San Jose; 2, W. C. Sanger; 3, A. D. Kennedy, Chicago. Time—2:23 3-5. Louis Callahan, W. E. Becker, H. P. Mosher, Jay Eaton, Ray McDonald, L. C. Johnson and J. A. Newhouse also rode.

Final: 1, Coburn; 2, Allen; 3, Bald; 4, Gardiner; 5, Kennedy. Time—2:19 2-5. Tom Butler, F. A. McFarland, Fred Loughead, F. B. Rigby, W. C. Sanger, E. S. Acker and F. C. Schrein also rode.

HALF-MILE NATIONAL CHAMPIONSHIP.

First heat: 1, Tom Cooper; 2, E. C. Bald; 3, C. R. Coulter; 4, Conn Baker. Time—1:08 1-5. Owen Kimble, F. C. Schrein, Barney Oldfield, W. E. Becker, R. H. McCleary and H. H. Wright also ran. Second heat, 1, W. Coburn; 2, A. D. Kennedy; 3, F. H. Allen; 4, J. F. Starbuck. Time—1:09 4-5. J. P. Bliss, F. B. Rigby, A. C. Mertens, C. Hofer, F. A. McFarland and W. E. Leconte also rode. Third heat: 1, Tom Butler; 2, Arthur Gardiner; 3, Ray Macdonald; 4, Otto Ziegler. Time—1:13 3-5. C. S. Wells also rode. Louis Callahan allowed to start in the final. First semi-final: 1, Cooper; 2, Gardiner. Time—1:12 2-5. Coulter, Starbuck and Coburn also rode. Second semi-final: 1, Bald; 2, Tom Butler; 3, Allen, Syracuse. Time—1:08. Macdonald, Kennedy, Callahan and Baker also rode.

Final: 1, Tom Butler, Boston; 2, Bald; 3, Gardiner; 4, Cooper; 5, Allen. Time—1:11 1-5.

Two-mile handicap, professional—First heat: 1, C. Hofer, St. Paul (50 yards); 2, Jay Eaton, Elizabeth (40); 3, R. H. McCleary, St. Paul (30); 4, W. C. Sanger (scratch); 5, A. D. Kennedy (20); 6, F. C. Schrein, Toledo (100). Time—4:23 4-5. O. L. Stevens, J. P. Bliss, F. A. McFarland, A. C. Van Nest, R. P. Rice, Clarence Woodard, J. P. Bowler and J. F. Staver also rode. Second heat: 1, J. A. Newhouse, Buffalo (60); L. A. Callahan, Buffalo (30); 3, Barney Oldfield, Toledo (50); 4, H. Van Herik, Chicago (200); 5, Dr. Brown, Toledo (170); 6, L. C. Johnson, Cleveland (140). Time—4:17. Nat Butler, Conn Baker, A. C. Mertens, C. S. Wells, Eli Winesett, J. Coburn, W. T. Hulse and W. F. Selby also rode. Third heat: 1, H. P. Mosher, Storm King (40); 2, H. C. Clark, Denver (300); 3, Fred Allen (80); 4, W. E. Becker, Chicago (150); 5, S. C. Cox, New York (60); 6, Bob Walthour, Nashville (250). Time—4:23 3-5. Fred Loughead, R. H. McCleary, J. F. Starbuck, Owen Kimble, F. G. Rigby, E. C. Johnson, P. O. Bernhardt, W. De Cardy and Arthur French also rode.

Final: 1, Sanger (scratch); 2, Kennedy, Chicago (20); 3, Callahan (30); 4, Eaton (40); 5, Mosher, Storm King (140). Time—4:25 2-5. F. C. Schrein, C. Hofer, R. H. McCleary, J. A. Newhouse, L. C. Johnson, Barney Oldfield, Dr. Brown, Toledo; H. Van Herik, Fred Allen, H. C. Clark, W. E. Becker, S. C. Cox and B. Walthour also rode.

FIVE-MILE NATIONAL CHAMPIONSHIP.

1, W. E. Becker, St. Paul; 2, E. S. Acker, Philadelphia; 3, Nat Butler, Boston. Time—12:18 2-5. Arthur Gardiner, Bald, McFarland, J. Coburn, Baker, Stevens, Starbuck, McCleary,

Walthour and Hanse also rode. Cooper, winner, and Callahan, third, disqualified for foul riding.

One-mile open, final—1, C. C. Ingraham, Dixon, Ill.; 2, R. Sambers, Port Huron, Mich.; 3, J. J. Howard, St. Louis; 4, P. J. Bornwasser, Louisville; 5, E. W. Peabody, Chicago. Time—2:24. H. W. Middendorff, E. D. McKeon, Karl Thome, F. R. Hattersley, H. D. Fitchner, W. E. Leconte and W. H. Seaton also rode.

One mile, 2:30 class, final—1, C. R. McCarthy, St. Louis; 2, Lou Coburn, St. Louis; 3, Stuart

Tom Cooper.

Leathers, Louisville; 4, H. W. Middendorff, Louisville; 5, V. E. Dupre, Louisville. Time—2:15. H. A. Canfield, D. A. Daugherty, L. S. Smith, E. W. Peabody and W. Cummins also rode.

One-mile handicap, final—1, J. J. Howard, St. Louis, 20 yards; 2, C. C. Ingraham, Dixon, scratch; 3, W. E. Lum, Montgomery, 155; 4, P. J.,

Arthur Gardiner

Bornwasser, Louisville, scratch; 5, F. R. Hattersley, St. Louis, 30. Time—2:14 2-5. H. A. Canfield, Clarence Hammond, Karl Thome, E. Groeschel, E. D. Fitchner, V. E. Dupre, C. R. McCarthy, Lou Coburn, W. H. Seaton, W. Cummins, E. D. McKeon and H. W. Middendorff also rode.

Two-mile State championship—1, W. H. Seaton, Louisville; 2, F. D. Fitcher, Louisville; 3, V. E. Dupre, Louisville. Time—5:01 3-5. Karl Thome, P. J. Bornwasser, Stuart Leathers and H. W. Middendorff also rode.

When the list of track officials were first announced a well-posted man, after glancing over the names of the judges, remarked in my hearing:

"Puts me in mind of a list of honorary pallbearers."

The remark came forcibly to mind during the meet. The judges were in each other's way, they were so many. The Louisville men apparently labored under the impression that about every man who had attained prominence in the League should be honored by an appointment as judge. There were eight or nine of them on duty each day, and what some of them don't know about judging cycle races will never cause their hair to fall out. With so many remarkably close finishes the wonder is how they contrived to do so well. There was some long wrangles at times.

On the first day Ed H. Croninger served as referee. Croninger is an old-timer, but scarce looks it. "He has been racing nearly twenty years and yet looks not nineteen," is the way some one described him. It was aptly put. Croninger was extremely generous in his decisions. One odd and amusing case arose on the day of his reign. The big Vim tricycle reached the outside of the track just as a race got under way. It is fitted with a big gong not unlike that in use at Fountain Ferry. As the racers went around, the gong ringer on the tricycle on the other side of the fence sounded a few taps. Instantly one of the racing men sat up and came slowly up to the tape. He had mistaken the bell for a call back. He was permitted to ride in the final. Two men who were crowded off the track and into the grass next the rail were also allowed in finals.

On the second day Sterling Elliott refereed, and on the third also, although for the latter day George D. Gideon was catalogued and was present with four other members of the Racing Board, Messrs. Robinson, Croninger, Gerlach and Robert. Gid is nearly a head taller than Gerlach, who tops the other three. They are of the small, wiry, nervous type. When the storm was threatening on the last day Referee Elliott, after the rather novel announcement that in case of rain the race should stop, was in a terrible state of mind. He was fearful that the men might slip on a wet track, and seemed to think their blood would be on his head. Root, of Chicago, handled the pistol; Howard Tuttle, the megaphone, and F. J. Wagner did duty as clerk of course and made a little "jolly" speech to the men before he blew his whistle each time.

Toward the end of the week, trade arrivals flocked in until the hotels had the appearance of cycle show time. L. M. Richardson, of the Monarch Cycle Company; C. W. Dickerson, of the Sterling; Tom Hay, of Hay & Willetts; L. M. Wainwright and L. J. Keck, of the Central Cycle Manufacturing Company; Harry Hearsey, George L. Sullivan, he of Vim tires; G. H. E. Hawkins, of E. C. Stearns & Co.; Kirk Brown, Frank White and James S. Holmes, Jr., were among the late arrivals. Stillman G. Whittaker, booming the Baldwin chain, "the chain that Bald rides," and the Stillwells, father and son, Straus tire advance agents, were also there. "Pop" Stillwell made himself one of the most popular men at the meet.

The attendance at the races was hardly up to expectations. An average of 4,500 each day would be liberal. Pickpockets were about. While in the grandstand with his wife Walter Sanger was relieved of \$505.

PALMER

TIRES

The Value of Speed.

A bicycle rider has so much muscle energy to expend. If he is a racing man or a scorcher, he aims to go the greatest distance in the shortest time with the least expenditure of energy. If he be a lazy rider—and who does not enjoy a lazy jog along a picturesque country road?—the smallest expenditure of energy becomes a burden.

Palmer Tires are great energy savers. They help the racing man to husband the strength which he must put into locomotion; thus he annihilates distance, and wins races.

If the idler wishes to view his surroundings, the bicycle fitted with Palmer Tires runs so easily that no distractions are offered because of lifeless tires, as would be the case with most other pneumatics. It is no wonder Palmer Tires sell for twice as much as other tires.

The Butler Brothers.

Tom and Nat Butler, or, as they are more familiarly known, the Butler brothers, have this season created a most favorable impression by their magnificent riding. True, they have not been following the National Circuit, but opportunity has been afforded them to meet such men as Cooper, Bald, Sanger and Ray McDonald (a better man than Johnny Johnson), and Tom Butler has defeated all of them. "Tom Butler," says State Handicapper Batchelder, "is a youngster of a very likely sort, and the manner in which he knuckles down to his work is always attractive to a crowd. The trim looking rider in yellow is becoming a familiar and popular figure on the tracks." Nat Butler has been a prominent rider in New England for years, and has held the amateur two-mile, flying start, paced record (4.072-5) since July, 1894. He also defeated both Cooper and Sanger in the two-mile handicap at Cambridge, June 17th.

The Butler brothers have always ridden Palmer Tires, their mounts this year being Stearns wheels. Our illustration shows Tom Butler on the upper left and Nat Butler on the lower right of the panel.

PROMPT ESTIMATES.

THE WHEEL PRESS, 72 Warren St., New York.

The name of the "HARDY" wheel. A superior bicycle will cause all scorchers, racers and other hare-brained individuals to grin ironically, but it will invite every intelligent observer and student, as well as every rider of experience and wisdom, to investigate our claims and apply for our illustrated catalogue on the merits of a wheel built like a spring carriage for COMFORT. '97 MODEL now ready. HARDY CYCLE COMPANY, 45-47 West 67th St., New York City.

TRAINING, NEW AND OLD STYLE.

"A great many riders do too much work while training," said Tom Cooper to a "News" reporter in Buffalo recently. "It used to be the fashion to get up every morning and pound away for ten or twelve miles at a breakneck experience that a little work regularly done is productive of better results. One would think to watch a great many men in training that they were preparing for a prize fight instead of a race, for they don't seem to be satisfied until they have great bunches of muscle standing out all over their bodies. The result is they get muscle-bound, and though they will have plenty of endurance and perhaps more or less speed some fellow who has trained in a more scientific way and kept his muscles soft and pliable will follow them around and sprint by them on the stretch.

"A great many people think that the same work should be done in training for a race as is gone through with in putting a man in shape to fight, but the impression is an erroneous one. A man in a fight uses every muscle in his body, and consequently has to prepare himself on all sorts of manoeuvres, but in racing only one set of muscles is used. So the secret of success is to keep those muscles in good shape and to keep one's general health good. Snap and activity are needed more than anything else, but above all one must have a clear head and ability to think and act quickly.

"I am regular in my habits, not altogether from choice, but because I have to be. I usually take nine hours' sleep, and never take any exercise before breakfast. I don't believe in this notion of stinting one's self in the matter of diet. I eat whatever I want, and all I want. Yes, tea and coffee, too, but of course no liquors save an occasional bottle of Bass's ale after a hard race.

"An hour after breakfast I go to the track, and if it's early in the season I ride three or four miles at a leisurely clip. Usually three of us train together, and in this morning exercise we take turns in pacing, each taking a third of a mile.

"After dinner we get out on the track again, and after warming up do a little sprinting, say for an eighth of a mile or so. As the season advances we warm things up."

A Russian racer has died of blood poisoning resulting from the chafing produced by an ill-fitting saddle.

The New Zealand Wheelmen declares that a century is "a lady's distance."

FELL, FLOUNDERED AND FINISHED.

About the first open-air meet held on Manhattan Island since the Manhattan Field track was abandoned by the local clubs took place at Olympia Park, One Hundred and Thirty-fifth street and Lenox avenue, on Saturday last. The track is six laps to the mile. The turns are sharp, and the banking insufficient. As a consequence spills were numerous, but, as usual, the riders cut all sorts of gymnastic figures without serious injury. Liebold, of the Riverside Wheelmen, had the turns down to a fine point, and established a track record for a half, unpaced, by riding the distance in 1:16 2-5. Mockridge, paced, negotiated the distance in 1:14. The match race between two nine-year-old boys was declared off by the referee on account of their youth. About 2,000 spectators attended. Summary:

One Mile, Novice—1, George Rudolph, Morris Heights; 2, William Hamilton, W. C.; 3, Henry Hoffman, P. V. Time—2:40.

Two-Mile, Handicap—Final heat—1, W. G. Gallagher, G. W. (120 yards); 2, T. D. Richardson, New York (130 yards); 3, J. P. Williams, R. W. (120 yards). Time—2:25.

Half-Mile, Scratch—First heat—1, L. V. Mockridge, H. W.; 2, W. H. Owen, K. A. C.; 3, B. T. Allen, L. W. Time—1:10. Second heat—1, J. H. Lake, H. W.; 2, H. Y. Bedell, R. W.; 3, W. A. Brown, K. A. C. Time—1:18 4-5. Final heat—1, Bedell; 2, Allen; 3, Owens. Time—1:19.

Two-Mile, Handicap—Final heat—1, J. W. Eaton, Oyster Bay, L. I. (200 yards); 2, Morris Glasel, G. W. (180 yards); 3, S. R. Hall, H. W. (110 yards). Time—5:09.

IN THE LEHIGH VALLEY.

Allentown, Pa., Aug. 15.—The most satisfactory and successful bicycle meet ever held in the Lehigh Valley was that at the Manhattan track, Rittersville, midway between Allentown and Bethlehem, under the auspices of the Mercury Wheelmen, of this city. The attendance was large, and the contests were, in the main, close and exciting. Ripley won the half-mile open, after a desperate finish with Dawson and Corser. Summaries:

One-mile novice—1, John Noll, Allentown; 2, E. A. Dorne, Bethlehem; 3, A. S. Deem, Reading. Time—2:29 1/2.

Three-mile handicap—1, E. S. Youz, Reading; 2, C. G. Kidd, Bethlehem; 3, N. E. Danner, Allentown. Time—7:09 1-5.

One mile, 2:40 class—1, C. G. Kidd, Bethlehem; 2, E. B. Gilbert, Allentown; 3, Morris M. Hunter, Philadelphia. Time—2:38 4-5.

Mile open—1, J. B. Corser, Allentown; 2, R. W. Crouse, Allentown; 3, Bert Ripley, Newark. Time—2:13 3-5.

Half-mile open—1, Bert Ripley, Newark; 2, Ray Dawson, Boonton, N. J.; 3, J. B. Corser, Allentown. Time—1:05.

R. W. Crouse, Allentown, paced by Williams brothers on a tandem, and a triplet, made two miles in 4:38, lowering the State record by 9 1-5 seconds.

UNDER THE ARCS.

Electric light racing made a decided hit at Harrisburg, Penn., August 11. Nearly 4,000 enthusiastic spectators occupied the grand stand. In the final of the two-mile handicap a bad spill resulted in W. A. Weazel, of Philadelphia, having his collar-bone broken in two places. C. Bowers, of Riverton, was knocked unconscious, but revived after a physician's aid. Summary:

Two-mile handicap, professional—Final—1, H. Maddox; 2, W. A. Rulon; 3, Ed. Brighthurst. Time—5:29 2-5.

One-mile open—Final—1, Craig Stewart; 2, W. A. Lantz; 3, A. Bateman. Time—2:40.

One-mile open, professional—First heat—1, H. E. Bartholomew; 2, J. L. Ives; 3, E. S. Acker. Time—2:49 2-5. Second heat—1, H. H. Maddox; 2, W. A. Rulon; 3, W. R. Landis. Time—2:37 4-5. Final—1, H. E. Bartholomew; 2, E. S. Acker; 3, H. H. Maddox. Time—2:24.

Two-mile handicap—1, Craig Stewart; 2, W. A. Lantz; 3, George W. Kehl. Time—2:24.

Five-mile handicap—1, W. A. Rulon; 2, Carrol Jack; 3, Edward Brighthurst; 4, A. C. Meixell. Time—10:04.

POT-HUNTERS' COTERIE.

Quite a coterie of pot-hunters visited Cox-sackie, N. Y., August 12, and battled for the prizes offered by the Cox-sackie C. C. The attendance was good, and the track fast. In the mile open Decker, of Ashley Falls, had his collar-bone broken. Summary:

Quarter-mile open—1, E. W. Murray, Syracuse; 2, W. S. Barbeau, New York; 3, G. H. Knight, Housatonic, Mass. Time—3:03 3-5.

Mile, 2:40 class—1, Goldie Meacham, Syracuse; 2, Jack Jasper, Bayonne; 3, W. S. Barbeau. Time—2:35 1-5.

Mile handicap—1, E. A. Oakes, Housatonic; 2, Goldie Meacham, Syracuse; 3, G. B. Smith, Freeport, L. I. Time—2:15.

Half-mile open—1, G. H. Knight, Housatonic; 2, E. W. Murray; 3, G. B. Smith. Time—1:12.

Two-mile open—1, E. B. Murray; 2, W. S. Barbeau; 3, Frederick W. Richt. Time—6:27.

ONLY 300 ONLOOKERS.

Night races at Portsmouth, N. H., August 7, attracted only 300 spectators. S. P. Dodge, of Manchester, attempted to wrest the State championship cup from A. E. Windley, who holds it with a record of 2:25 2-5, but Dodge made only 2:29.

Quarter-mile—1, Ira Newick, Portsmouth; 2, C. M. Hayes, Sanford; 3, E. W. Hutchins, Exeter. Time—0:35 2-5.

Half-mile open—1, T. A. Regan, Waltham; 2, George R. Newick, Portsmouth; 3, J. Fred Simpson, Newfields. Time—1:15 2-5.

Two-mile handicap—1, J. Fred Simpson; 2, Thomas A. Regan; 3, C. H. Newick; 4, Fred Kent, Rowley. Time—5:12 4-5.

Half-mile handicap—1, J. Fred Simpson; 2, A. R. Winkley, Barrington; 3, S. P. Dodge, Manchester. Time—1:05 3-5.

KRICK CONTINUES CAPTURING.

Berwick, Pa., Aug. 15.—The third race meet of the Berwick Bicycle Club, held here this afternoon, was the most interesting and successful yet held. The track was in prime condition. Krick, of Reading, captured the mile open. The principal events resulted as follows:

Half-mile, open—1, Charles Coleman, Scranton; 2, C. W. Krick, Reading; 3, Will McMichael, Berwick. Time—1:09 1/2.

Mile, open—1, C. W. Krick; 2, Charles Coleman; 3, E. F. Kellar, Scranton. Time—2:43.

Two-mile lap race—1, C. W. Krick; 2, Craig Stewart, Harrisburg; 3, R. A. Gregory, Scranton.

Three-mile handicap—1, B. F. Kellar (100 yards); 2, W. E. Dickerson, Palmyra, N. J. (150 yards); 3, Will McMichael (200 yards).

EVERYTHING PERFECT.

Altoona, Pa., Aug. 15.—Perfect weather and a splendid track were the two auspicious circumstances which marked to-day's meet held at the Driving Park. About 1,500 enthusiastic spectators saw the events. Summary:

One-mile novice—1, S. H. Kennedy, Spruce Creek; 2, H. E. Evans, Altoona. Time—2:48 1/2.

One-mile open—1, W. P. McClay, Huntingdon; 2, F. H. Smith, Altoona; 3, Roy Rung, Huntingdon. Time—2:45 1/2.

One-mile handicap—1, C. V. Reel, Johnstown; 2, E. L. Geer, Johnstown; 3, F. H. Smith, Altoona. Time—2:31.

Two miles—1, D. P. Feterman, Johnstown. F. H. Smith, Altoona; T. Hudson, Phillipsburg, and R. L. Rose, Tyrone, tied for second place. A half was run to decide the winner, which Rose won. Time—6:11 1/2.

The gladness of the many who go spinning down the roads on wheels and who think nature's blunder was in not making wheels a part of man's anatomy seems to bring sadness to the few whose wares are no longer in such demand as before the invention of pneumatic tires and ball bearings.

POPULAR SORT OF A PRIZE.

"Brassards" are booming. The original "Brassard" was a race which paid the winner of it a daily income of \$4 so long as he was able to defend it from all challengers. So successful was this form of prize that there is now to be another one—a Brassard No. 2 for stayers. The holder of this has an income of 20 francs a day, but is obliged to take up any challenges on the distance of 50 kilometres, 50 miles, or 100 kilometres, which may be thrown down, on condition that these challenges are backed up by a deposit of \$200, to be the property of the winner of the match.

No wonder this makes the track people rub their hands, smile and feel happy; for instead of having to hang up a prize of from \$200 to \$400 every Sunday, they have a match (which the public like better than a race) practically every week, for the cost of two Brassards—\$8 a day.

TRIALS IN THE MORNING.

In anticipation of a large entry list, the promoters of the National circuit meet at Meriden, Conn., August 29, have arranged to run the trial heats in the morning, in order to permit the visiting riders to make good connections with the railroads. The circuit-chasers have always been well treated at the Meriden meets, and the appearance of about all the cracks is assured. Henry Goodman will referee the meet.

KEEP YOUR HAWK EYE ON THIS.

Cash prizes to the amount of \$350 in the professional events, and a similar amount in prizes for amateurs, are offered by the Hawkeye Cycle Exhibition Co. for their meet at Dubuque, Ia., September 5 and 7. Six races will be run each day. Entry blanks can be secured by addressing F. L. Egelhof, manager, Dubuque, Ia.

PAYS TO BE A CRACK.

The reports that there is no more money to be made out of racing in France seems hardly borne out by Jacquelin's winnings, which amount to \$10,128 since January 1. Inferior riders naturally win inferior prizes, but Jacquelin's success shows that good men can still get good money in France if they ride fast enough.

SPRINTS AND SPURTS.

The great Interstate Fair which annually takes place at Trenton, N. J., is to have a wheelmen's day this year. The date is Monday, September 28. Five amateur and two professional events are on the card. John Guild Muirhead, secretary, Box 105, Trenton, N. J., will send blanks and information upon application.

The half-mile cycle track at Flushing, L. I., will be the scene of the Mercury Wheel Club's fourth annual meet on August 29. Five open events are on the card. The feature of the meet will be the mile championship of Long Island.

E. Mattheil and C. F. Hasbrouck divided honors at the Castle Point Cyclers races, Hoboken, N. J., August 15. The former won the half and mile scratch, and the latter the two handicaps from scratch.

The fractional times of Platt-Betts standing start paced records are: One-quarter, 0:30 3-5; one-half, 0:55 4-5; three-quarters, 1:21 1-5; one mile, 1:48.

The racer is often a man who could not earn \$10 per week at any other profession than speed making.

A French paper refers to a scratch race as "course des scratches."

FOWLER SUCCESS

- - IN '96 - -

is becoming a matter of history. It is the sensation of the cycling world; the fitting culmination of our honest endeavor to build a good wheel and treat our agents right. A policy that upheld our prices and sold our entire output.

"The Fowler"

in '97 will be all it is in '96—the acme of high-grade cycle construction. Built with that necessary and distinctive feature of a strictly high-grade wheel—

The Fowler Truss Frame.

It's not too early to begin to string your wires for '97 if you want to be in with us. We're not ready to talk to you yet; merely want to give you a straight tip.

FOWLER AGENTS ARE TREATED WHITE.

ASK THEM AND SEE US LATER.

Pneumatic saddles were used more than twenty years ago.

The girl who wears a duck riding costume is often a little goose.

What you tell some people about cycling goes in at one ear and out at the mouth.

It is the destiny of the bicycle to revolutionize the carrying agents of the world.

San Francisco has a clergyman who preaches his sermons while clad in cycling costume.

A strong solution of soda in hot water will be found excellent as a speedy cleansing agent for lamps.

Verily the pedal-maker has done much to keep the different classes of cycling on the same footing.

Why don't somebody say he'd rather ride fifty years on a trolley in Europe than one on a bicycle in Cathay?

A cloth saddle-cover will prevent the wheelwoman's costume from becoming shiny through saddle wear.

Now cycling is hailed as a certain cure for hay fever. Will the bicycle ever let up in its warfare upon the poor farmer?

Brazil has a cyclo-hippo club to which no one is eligible for membership who does not own and ride both horse and cycle.

Brunswick, Ga., has a colored wheelwoman's club. White women are ineligible to membership in this exclusive organization.

Women are too often induced to purchase a poor wheel through the color of its enamelling and the brightness of its nickel.

Cleopatra must have been a wheelwoman, for did not Anthony advise her: "Of Caesar seek your honor, with your safety"?

It is painful to see a man trying to edit the cycle column on a daily paper with a head that nature intended for a pin cushion.

Cook's tourists will in the future be mounted on bicycles when the tourists prefer that method of locomotion in his foreign trips.

Talking of bimetalism, bicycling and wheelwomen, there is certainly something very attractive in the figure of sweet sixteen to one.

Oil and graphite, well mixed and plentifully applied to nuts and bolts, will prevent them rusting and becoming difficult of loosening.

When you see the wheeling army of to-day you are very much inclined to ask; What did all these people do before bicycles were invented?

A philosopher observes: "Six things are requisite to create a happy home. One of these is a good bicycle, and the other five are money."

Governor Flower is a great advocate of bloomers, and says he dearly loves the bloomer girl. The more she blooms the better he likes her.

Even pedalling produces easy steering; varying the pedal pressure has a corresponding influence on the straight running of the steering wheel.

The New York Street Cleaning Department has just purchased forty bicycles, for use by foremen and inspectors, at a cost of \$52.50 for each wheel.

Somehow the dollars that you get for your old wheel when you sell it never seem nearly so valuable as the ones you have to fork over for a new machine.

If you think a road is perfect, travel over it on a bicycle. At the end of your journey you will no longer have any doubt on the question—you will know.

The wheel, because of its great carrying power, seems to have partly overcome gravitation, in that the weight seems lessened, with no apparent reason for its decrease.

It has already been practically and conclusively demonstrated that in proportion to its weight and strength the bicycle can carry more weight than any other vehicle invented by man.

The table of rates of the Midland Railway of England shows a graded scale of charges, by which it is shown that to carry a bicycle 500 miles would cost a man \$3 if he assumed all risks, and \$3.74 if the risk was borne by the railway company.

When a machine is left standing for a long period—say for several weeks or months—it is wise to turn the wheels occasionally, so that the weight may not always be borne by the same part of the tire. It tends to injure the tires if the machine rests too long on one part.

Spanish cyclists do not seem to lose time; on July 4 a new club, the Pena Cyclists, was formed, which owns already a two hundred metres cement track, connected with a clubhouse with all desirable facilities, including even a repair shop.

After long negotiations the Massachusetts Bicycle Club has purchased a fine lot of land a few feet from Boston's Parkway. A Colonial brick building, four stories high, with marble trimmings, will be erected there, at a cost of about \$20,000, and the interior will be arranged according to the modern designs for cycle clubs.

Of all modes of locomotion, from the crib to the hobbyhorse, from the horse ridden to the hounds by the huntress down to the bicycle, the latter has done the most for the female sex, in health, in sociability and in morality, but that, like the poor, woman is always expected to have with her on or off the steel steed or any other.

A wheelwoman has brought suit for \$1,000 against the City of Rochester. She states that the city's contractor was engaged in constructing a sewer in the street, and that the obstructions were not properly guarded with lights, in consequence of which she and the wheel she rode were damaged by riding into the unguarded excavation.

The bicycle takes men and women into the open air and the beautiful country. It gives them exhilarating exercise. It conduces to temperance and weans from the empty idleness which is the handmaid of Satan; in short, it tones up mind and body and this is the first step to the toning up of the moral nature. It leads no one to sin who is not prone to find it.

The costume for cycling is perhaps the most urgent question of the hour. Of course the world takes a certain degree of interest in the Cretans and the Sublime Porte, and without doubt Americans grow more or less excited over the political issues in this country, but such little matters must retreat in as good order as they can before the overwhelming importance of the bicycle and the proper costume therefor.

The impression is now almost universal that the wheel is the greatest reform propagandist extant, and that whatever it demands will be accorded sooner or later. It is our modern despot, but on the whole a very benign one. So far as women are concerned, it is a sort of emancipation proclamation, and the revolution in dress which is in progress will ultimately result in as much good to the human race as electricity or steam.

One of Pittsburg's Common Councilmen has a scheme to introduce the bicycle into another department of city affairs. He wants it utilized in the fire service, and claims it will save the city money. At the next meeting of the Council he will present an ordinance establishing a cycle department at every engine-house. His scheme is to have a tandem placed at the houses equipped with one or two Babcock fire extinguishers to be placed under the handle-bars.

 CHICAGO

A sensation is being caused at the "shoot the chutes" slide at St. Louis, by a cyclist who rides down the steep wooden incline on a Syracuse wheel. The chute is 400 feet long, which the rider comes down in 3½ seconds.

The exigencies of the political battle is what will easiest explain the reported American order for a hundred bicycles from a Japanese cycle factory. The machines, if they are ever seen, will be used as a bugaboo to frighten cycle makers and employes into the protective tariff camp.

Few persons realize the carrying power of the fragile, cobweb-like construction which is to-day so common upon the streets in the shape of the various forms of cycles, and statistics indicate most conclusively that a new era in carrying and locomotive power has already dawned.

Eleanor Kirk says: "No sane person can possibly dispute the truth that women have just as much right to leg freedom as men." This statement is made in a dissertation on the benefits which the bicycle has conferred on suffering humanity, and Eleanor is very near right in the claim she makes.

WORLD'S MILE COMPETITION RECORD BROKEN

TWICE IN ONE WEEK BY

MR. JAY EATON,

THE INDOOR KING,

on a

WORLD RACER.

MILE INDOOR RECORD COMPETITION, 2.10, on an eight-lap track.

Eaton also won Four Firsts at Nashville, Tenn.

AT THE COLISEUM, CHICAGO,

Eaton again First in every race, and lowers the MILE RECORD to 2.07—

Unpaced Standing.

Mr. J. W. PARSONS, Australian Champion,

on a "World Racer," lowers the World's Record Flying to 2.01, and $\frac{3}{4}$ -Mile to 1.29, indoors.

A SKETCH IN BLACK AND WHITE.

To the Northerner the negro, that is, the genuine Southern negro, unspoiled by attempted aping of his betters, is a thing of infinite surprises and queer conceits. To the Southerner, who better knows and understands the negro's characteristics and humor, the man of color is known to possess an unlimited fund of quaint expression and a boundless capacity for belief in the personal care which he feels a kind Providence has for him and his affairs.

Perhaps all this is better illustrated in the following story, told in a Pullman car loaded with Northern visitors returning from Louisville. Said the historian: "It was a number of years ago, and I, naturally, was younger than I am now, consequently the love of adventure exceeded my love of ease, and I was exploring the sandy, stony and crooked roads of Southern Georgia, mounted on an old ordinary. I had concluded that such exploration was not worth the energy and risk attending it, and finally landed at a dilapidated little hole-in-the-ground railroad station.

"My enthusiasm for such touring had been alternately shaken, sweated and starved out of me, and I had concluded that I had enough. Railroads, even Southern railroads, were good enough travelling for me just at that time, and so I had ridden and walked to that tumble down apology for a station. Leaving my wheel up against the weather-stained building, I sat down on the platform, and disgusted and dejected, gazed upon the surrounding scene, while half-heartedly I fought off the cloud of gnats and mosquitoes which had assembled to speed and sample the parting guest. Shiftlessness, doubtfulness and their attendant poverty were everywhere visible.

"Across the narrow thing of ruts and dust which did duty for a road was a cabin so dilapidated that I wondered how it held together. A little negro child, certainly not over six years of age, whose head was a network of plaited tufts of kinky hair, each tuft wrapped with string and bound to its mate with twine, came slowly across the road to where I sat listlessly awaiting her arrival.

"Clothed in but a single garment, frightened by the stranger it addressed, the child burst into tears, but before it ran back to where it had come from it had asked me if I would go over to the cabin. I went. An ancient and venerable Uncle Tomish sort of negro and his wife sat beside a rough bed, upon the variegated counterpane of which lay the wasted frame of a boy, who, it was plain to see, was in the final stages of that curse of Southern life—consumption. Those who gazed upon him and wept were his parents.

"Brought face to face with this solemn scene, I turned to the old man and asked him why I had been summoned. Before the answer could be given the dying boy feebly motioned me to him and said:

"White boy, I'ze got ter die. I nebber done seen but one bysickle in all my bo'n days, an' I wanted to jist ride one mighty bad, but I'ze got ter go. I wuz jest hangin' on all last y'ar, but no bysickle ebber dun com' dis yer way till you did, and' now it am too late."

"The dying boy's eyes glistened, his lips, parched with fever, were tight-drawn against his glistening teeth as he labored and fought for the breath that was fast leaving him.

"In that lonely Georgia cabin the end was coming to that poor ignorant boy, as in time it must come to all, but his whole life for a year or more had been wrapped up in what was to him the unattainable—the possession of a bicycle and the ability to ride it. Now,

as he was passing away, this love of an ignorant mind focussed upon the wheel and became, from constant thought, the only subject that fast-fading brain could comprehend. Moved at the sight, I asked the boy what I could do for him.

"I wanted to ax you if dar was any bysickles up in hebben. If dar's golden streets an' harps an' folkses why ain't dar bysickles, too?"

"There may be, I answered upon receiving a prompting nod from the old woman.

"Will dey sell 'em same as dey do down hyar?"

"I should think not, I answered, determined to carry out the deception to the end. 'If they are there at all you'll get one without cost.

"The boy's breath came fast and sharp; a fleck of blood stained his thin blue lips; he closed his eyes as though to look upon so pleasant a picture, and then, with a faint smile and an effort to raise himself up from his wretched bed, he cried:

"Glory! glory! Hit's all right now! I'ze mighty willin' to be taken any minnit. Good-by, mammy! Lawd bress you, white boy! Call in de folkses, mammy, an' let me tell 'em goodby, for befo' de sun done set dis evenin' I'll be in de promise' land an' hab one of dem bicycles!"

"As usual in the South the train was late, and before it came that little six-year-old bit of ebony had come over to where I sat and informed me 'dat he done gone to git dat bysickle.' The unnamed he referred to being presumed to be the dying boy."

The story finished, silence fell upon the listeners, and none sought to make light of the abounding faith of that poor negro lad's soul, which caused him to pass over the border certain of his future reward and happiness.

MAKING THEM PAY.

The Board of Directors of the Wheelway League has decided to adopt a toll system, charging all but members and friends accompanying them for the privilege of using the famous Indianapolis cycle path. This has been done for the reason that subscriptions are not sufficient to make the contemplated extensions to the path and to keep it in repair.

Single tickets will sell for 5 cents, but a coupon ticket book will be issued containing eight tickets, and the price of these books will be 25 cents. Ladies unaccompanied by a gentleman will be charged 5 cents unless holding a League button. The \$1 buttons entitle the holder to ride for the rest of this year on the path, and to take one lady with him.

In a short time new buttons will be issued to members holding \$5 shares; holders thereof have life membership, and are so entitled to ride on the path and to take their families with them at any time.

The directors have adopted a resolution prohibiting the erection of booths or other structures along the cycle path except with the permission of the League, and in case such structures are erected the Committee on Construction is directed to take steps to have them removed or to destroy their purpose by building high board fences along the path to cut them off from the view of wheelmen who pass.

Few men who ride brakeless wheels, tandems particularly, conceive how great is the energy they consume in back-pedaling. As a saver of strength on a long ride, a brake is worth several times its weight in silver. Its mission is not wholly to prevent accidents.

Show windows do not always contain desirable shows where cycles are the objects shown.

CYCLING AND CIGAR SMOKING.

Says "Tobacco": While the bicycle may have had some effect on the tobacco dealer and the consumption of the fumigatory wares which he sells, it certainly has had no greater effect than ball playing, lawn tennis or any other athletic outdoor sport, all of which have greatly increased in volume during the last few years, without any such hysterical nonsense being called forth.

Coming to the consumption question, a well-known rider, in speaking on this matter, estimated that the average rider, on a Sunday, covered about twenty miles, and that this occupied his time from two to three hours. This much space is undoubtedly closed to tobacco consumption, but no smoker smokes uninterruptedly from getting up to going to bed, and the first thing the average bicyclist appears to do on dismounting from his wheel is to light up.

Let any student of this matter visit any of the hundred-and-one roadhouses, etc., in the vicinity of any great city, note the great influx of bicycle riders, the way they lay off, smoking almost all the time, until returning calls them to the wheel. Further than this the figures of production do not point to any such decrease as a million cigars a day, but, on the contrary, the production of cigars for the fiscal year of 1895-6, closing June 30, 1896, shows a gain over the record of the previous year of 73,783,504; cigarettes increased 722,356,543; manufactured tobacco, 5,397,500 pounds; and snuff, 1,117,125 pounds; while the increase in each department for the fiscal year of 1894-5 was nearly as great over the record of 1893-4.

This should surely be sufficient to settle this absurd story of how cycling is directly responsible for a direct decrease in the sale of 1,000,000 cigars daily to any mind capable of grasping facts and deducting reason therefrom; for it must be remembered that if the bicycle has caused any decrease in consumption, there is not only the fair increases in production shown above to be accounted for, but the decrease claimed must first be made up before any such increase is possible. And in this one feature would appear to be the nub of the entire matter to practical minds.

PNEUMATICS FIFTY YEARS AGO.

If some one was to come to you and tell you that the pneumatic tire was in practical use in 1847, and on the wheels of cabs at that, you would probably laugh at the statement, would you not? Yet in the Scientific American, May 8, 1847, appears the following:

"A number of cabs with newly invented wheels have just been put on the pave here. Their novelty consists in the entire absence of springs. A hollow tube of India rubber about a foot in diameter, inflated with air, encircles each wheel in the manner of a tire, and with the addition of this simple but novel appendage the vehicle glides noiselessly along, affording the greatest possible amount of cab comfort to the passengers."

Verily, it does seem as though there was nothing new under the sun.

WHAT CYCLE MASHERS ARE.

"I have remarked one thing," said the observing young woman who was telling of her annoyance by the cycle masher, "and that is that very few athletic, well-built fellows annoy women in this way.

"It is only the measley, spavined, pimply complexioned, sore-eyed cads, the lightweight, feather-headed creatures, the roller-skating-rink breed, as a rule, who insult and affront wheelwomen in this loose fashion."

There are business as well as physical hypo-chondriacs. The cycle trade proves this.

LOUISVILLE

was the last meet of any consequence and that meant more conquests for that wheel of wheels—

The
Truss
Frame...

AMERICA

of which it has been truly said that the **First Cost** is the **Last Cost**.

A wheel that is built on true scientific principles (both inside and out) of the best material, by the best of skilled mechanics, by a company whose guarantee is "**as good as the Government Seal**"—is it any wonder that when other "so-called" high-grades are selling at \$40.00 or more or less, the "America" brings \$100.00?

WHY RETAILERS FAIL.

L. F. Korns, of Minneapolis, is as familiar with the evolutions of the retail trade since the days of the high wheel, as any man in the Northwest. In reply to a question bearing on the cause of the recent failures, he speaks in a manner which will be approved by many a retail dealer. "About two hundred houses sold wheels here this year," says Mr. Korns. "They contracted for wheels which they could not get fast enough in the early spring. Deceived by this state of trade they urged the makers for wheels. Suddenly the rabid buyer began to talk about waiting until next year to make his purchase. The dealer finds himself with a year's lease on his hands for a ninety days' business. Customers offer him less than his wheels cost, and, on remonstrance, lecture him on the cost of his bicycles. They rarely do this on any class of goods except bicycles. Nearly every purchaser has a speech of this kind for the cycle dealer. With such conditions confronting him, and such are the conditions in this city to-day, the cycle dealer has an easy road to failure.

"Take, for instance, the renting of wheels, and some sharp lessons are to be learned, or failure is the result. Stores are besieged by people who want to rent a wheel during the cream of the season for a sum less than the depreciation of value to the machine. They will have only a new wheel, and refuse to pay over \$5 a month. Now, a wheel cannot be rented over five months. This would make \$25. These same people refuse to pay you over \$25 for the best second-hand wheel in your store. Now, if your renting wheel cost you a cent over \$50, you would have absolutely nothing for your business, and then there is a bill for repairs which has not been counted. These people do not go to livery stables and ask for sleighs at July rates for January use, but somehow they drop in to see us. Some cycle dealers accede to their wishes.

"Another answer to the question: 'Why are so many cycle dealers failing?'

"Why, a man got mad the other day because he could not rent a tandem for 75 cents a day. A boat costs \$12, does not change style in twenty years, is exposed to little danger of accident, and rents for 25 cents per hour, and this man wanted a \$150 tandem for 75 cents per day, and would not rent a last year's machine.

"The cycle dealer who does not fail is one who maintains a scale of prices that pays for goods and expenses, and when the public refuses to pay these prices, has neither wheels nor lease on his hands."

ACCURACY'S LIMIT REACHED.

It is really wonderful to what degree of accuracy the manufacture of steel balls has reached. The Excelsior Machine Co., Buffalo, N. Y., are turning out steel balls which they guarantee do not vary one-fourth-thousandths of an inch. A WHEELMAN last week was shown fifty balls picked out at random that by actual micrometer measurement did not show a difference of one-sixth-thousandth. This means such an infinitesimal quantity that the usual micrometer would not measure, and a special apparatus is necessary. The demand for this company's output has increased so materially that it necessitated enlarging their plant to double its present size and they will soon be in a position to turn out 15,000,000 balls a month.

INCORPORATED NOW.

The firm of Butler & Ward, Newark, N. J., manufacturers of bicycle saddles and leather goods, was incorporated August 1, under the name of the Butler & Ward Company. The business will be continued as heretofore. The officers are Eugene Ward, president; John S. Mitchell, vice-president and treasurer; George F. Anderson, secretary.

SPOKE STRINGING AND REPAIRING.

Stringing wheels is an art acquired only by long experience in the shops where the wheels are made. The repairer of bicycles, however, has often to replace broken spokes in wheels, and after a while becomes familiar with the work. The success depends very much upon getting started right. In adjusting a spoke in the type of wheel hub shown in Fig. 1, care should be taken to get the spoke in line with the centre. A good way is to get the correct line of the centre first with a line reaching across the middle of the hub at B and extending to the rim. The spoke should harmonize with the line at C, and not be out of true as marked A. Neither should the spoke slant sideways, as indicated in D in the sectional view.

The trouble with the setting of spoke E is that the hole is cut slanting. The only remedy for this is to bend the spoke to corre-

spond with the irregularity. Spokes sometimes break off close to the hub, as shown at F. Instead of trying to cut out the butt, run in a small drill, G, making a hole in the stub in which to drive a pin. With the plyers this pin may be turned and the stub removed. When spokes of the style shown in Fig. 2 are handed, perfect alignment is also essential.

If a spoke is inserted and the end laid over as marked A, the elasticity of the wire is not so manifest as when the end is laid over as in C. If the spoke itself is out of line with the centre, like B, its firmness is affected, and if many of the spokes are like it the wheel will break down. In putting in these kinds of spokes, there will be a general looseness to the whole work if several spokes are laid in like D in the sectional view; if like E, the wear will come upon the edges of the inner bend and result in wearing off the wire. Lay in all these spokes, even like F, and they will go all right

A good many wheels are strung with the type of spoke setting shown in Fig. 3. In fixing in new spokes in this kind, avoid getting the pairs untrue with the common centre of the hub, as represented by A. Get them true by lining up from the middle of the wheel, bearing to the middle of the connection of the pair of spokes as indicated by B. A rattly wheel all riders dislike, and a wheel will rattle if the spokes of this type are headed up loosely, as exemplified by D in the sectional drawing, in which there is too much space between the bend in the wire and the head.

Often wheelmen come into our shop with wires broken out because some one in heading up the ends continued to pound after the wire had tightened in the flange, resulting in starting the head as marked in E. This is the other extreme to the case D. Simply make a good, even, fairly loose setting as in F, and the wire will neither rattle nor the head break off. Recently a wheelman got his wheel caught between the footboard of a car and a team in such a way that the flange on one side of a wheel hub was snapped off, as marked A in Fig. 1. This was fixed by riveting on the patch of sheet brass as shown at B, resulting in a job which answered all purposes. Several of the spokes had to be taken out and lengthened, as the patch added to the width of the flange. The spokes were laid in both flange and patch, as represented by C.

G. D. RICE.

WILL MAKE EVERYTHING.

Bicycles will be added to the products of Harrisburg, Pa., next year. The W. O. Hickock Manufacturing Company, with a paid-in capital of \$200,000, manufacturers of bookbinders' outfits, is the firm that contemplates the departure. The company has established an enviable reputation for excellent machinery not alone throughout the United States, but in many foreign countries where its machines are well known. The company has deemed it advisable to take up the manufacture of bicycles, because, first, it has buildings which are available for this class of work without interfering with its regular line of manufactures; second, because in its other or heretofore established lines it has required very many special machines and special tools which can now be readily and with slight expense turned to the manufacture of bicycles.

A foreman has been secured with experience gained by years of actual working in cycle factories and superintending like establishments, who will be placed in charge of this department. "One can readily see," the company writes, "that with the many facilities and the great saving in running expenses which may be accomplished in the combining of the two departments, those of bicycle building and machinery construction, the chances of success are most excellent, and the prospective purchaser of the wheels made by us may feel sure of a thoroughly desirable article, since we cannot afford to offer a poor article at the expense of our general reputation. Such an act would be almost suicidal, and realizing this fact it is our purpose to maintain the high standard which has been the basis of all operations."

Mr. Hickock established the business in 1846.

BENJAMIN AND BARNES.

C. A. Benjamin, who is abroad in the interest of the Barnes Cycle Co., is meeting with success in Paris, where he has closed several deals for '97 business. He will also introduce the Barnes in London, Berlin and other large cities. The Barnes company has representatives abroad and anticipates a large export trade for next season.

A four-page little paper has been issued by the Barnes Cycle Co., styled "White Flyer Tips." It is attractive in its literary appearance, and beautified by excellent half-tone illustrations.

AN IDEAL PLANT, SUITABLE FOR BICYCLE MANUFACTURERS,

AT... LANCASTER, PA.

THE ENTIRE PLANT OF THE
SLAYMAKER-BARRY CO.

CONSISTING OF

**Buildings, Foundry, Grounds,
 Boilers, Engines, etc.**

Lancaster City has a population of about 40,000 inhabitants, is a growing town, surrounded by the best agricultural district in America. It is on the main line of the Pennsylvania Railroad, and on a branch of the Philadelphia and Reading Railroad. Rents and provisions are cheap, labor plenty, and there is no better locality in the State for a manufacturing plant. This property will be sold on easy terms, and possession can be given any time after November 1st.

HOW FRENCHMEN RACE.

Anything to Beat the American the Only Rule Strictly Carried Out There, Says Weinig.

A. E. Weinig, of Buffalo, who went abroad with the Eck combination, arrived in New York on Thursday of last week, and immediately departed for his home. He states that his trip was a pecuniary gain, and that he is willing to go back at any time. He is in the best of health, and looks almost as brawny as Sanger.

In conversation with a local reporter, Weinig scores the unfair tactics of the foreign riders very severely.

"It would be a big surprise to some of our crack American riders should they go abroad to compete," said Weinig. "They would find that bicycle racing in America and in Europe are as different as boxing and fencing. There is a great gulf between the modes of the crackjacks of the two continents. I sincerely hope that our boys will never get to ride as they ride in France. There it is 'all for France,' even at the expense of an American rider's neck. And the French riders, if they cannot themselves win, will do all in their power to help an Englishman, or a Belgian, or an Italian to defeat the Yankee.

"Time and time again, when one of the American string would start his jump in the stretch, he would find himself crowded steadily and maliciously up the bank by some rider who had no desire to win, but who had been coached to jockey the American, in order to leave the prize to one of their own people. On several occasions, turning into the stretch and starting to sprint, one of the foreigners has run alongside me and crowded me into the fence, or ripped out my spokes with his pedal. It's all in the game over there, but it's a bad game.

"Dirty work of this style does not meet with the disapproval that it would in this country. When an American is jockeyed the crowd laughs. Should the Yankee, as a matter of self-protection, elbow a foreigner ever so little, a storm of whistles would arise. The French do not hiss, to show their dislike; they whistle. Jacquelin is their idol, and it is a question whether he or Jaap Eden, the Belgian, is the best racer in Europe. Jacquelin is at his best now, but it is his last season, for in November he must enter the French Army, a conscript. They are certainly fast men, but there is no telling but that many of the boys in America could lower their colors if fair play were not at a premium on every big track abroad."

"What show would men like Bald, Cooper and Butler have abroad?"

"It would be the allied cycling forces of Europe against them," replied Weinig with a smile. "They would have to compete on queer tracks with men on queer wheels and with queer methods."

"And suppose the Europeans should come to the United States to race?"

"That would be different," said Al. "The foreigners would find themselves like fish out of water. The fairness of American racers would stun them. Deprived of their jockeying schemes, they would only get a fleeting glimpse of Eddie Bald and the rest. A mile race in Europe is not like a mile race here. Across the water the men loaf until the straight, and then make their jump. In races of more than a mile it is all pacemaking. Each man has two or three sets of pacemakers, generally triplets or quads, around the track, and each pacemaker catches its man at a certain point. It is a question of hanging onto the pacemakers. Good time is made, but this takes the individuality out of the contests. Because of this pacemaking, a race

in France and England presents a peculiar spectacle. There will be three or more quads for every man in the race.

"Most of the foreigners had accustomed themselves to high gears, from 80 to 100, and it would surprise you to see the way they are able to sprint with them. A cyclist with a machine geared high gains momentum, of course, and that is one point in their favor. And because pacemaking is so much in vogue, it is easier to push a high gear.

"At first it was hard for our string to ride on the tracks abroad, they are built so peculiarly. The bank turning into the straight is almost a perpendicular wall, and it is impossible to ride it except at a fast clip. Unless you are speedy your pedal will strike the cement. Many of the foreigners ride short cranks to save themselves from this danger.

"I had many a fall abroad, and I am covered with scars from shoulder to wrist and waist to toe. I had a terrible fall at the Catford track, England, and for a long time rode swathed in bandages."

WHY THEY ARE FASTER.

There is no question that the speed of a machine does not increase in proportion to the number of riders for which it is seated; but the question is, why should it increase at all, unless there is a saving of power? Just in proportion as the number of legs working on the pedals is increased, so the number of riders who have to be propelled is increased; and the only reason a multicycle is faster than a single is because a slight economy is effected in various ways. For example, there are fewer bearings to be revolved in proportion to the number of riders, fewer tires to pass over the surface of the ground, and less windage.

LIVING GUIDE-BOARDS.

A company, in which a number of large capitalists are interested has been incorporated under the title of the "United States Guide and Information Company." Its object is to furnish trained guides for public service in this city and vicinity. A portion of these guides, both male and female, will be expert cycle riders, and prepared to take charge of individuals or parties desiring to explore on a wheel the city and its environs.

Cycling undoubtedly is a hobby with some, but it is not such with the majority of those who use the wheel. It has become a necessity and necessities are not to be put aside according to whim.

BUTTON SWAPPING.

How It Is Conducted on a Scientific Basis to the Satisfaction of All Concerned.

The colored citizen of this glorious Republic is an imitative individual; he copies the fads and foibles of his whiter brother, so his wild scramble after bicycle advertising buttons at Louisville was not to be wondered at. Verily, he has had a strong enough example set him by the white man in this direction.

Who would ever have thought that the craze for this questionable form of personal adornment would bring about the establishment of a Button Exchange? Yet such is an accomplished fact.

There is a curious little shop in La Salle street in Chicago given over to the barter of buttons, and is the outcome of the craze for lapel buttons of every sort. The man who runs it used to be in the second-hand book business, but when bicycles took possession of everything people stopped buying even second-hand books. Bicycle buttons then came into active demand, and he saw an opportunity to make a living. He buys, sells and exchanges lapel buttons of every kind. He claims to have 400 kinds of bicycle buttons, no two alike, and he will sell a collector the lot, one of each, for \$12. His prices are 5 cents a button, 50 cents a dozen and \$4 a hundred. In front of this little store hang long felt strings of buttons, around which youthful collectors group themselves. From little books they compare notes with the strings, and when they find a new button they jot it down. Or else they bring their felt strips along with them and "tell" them off in comparison with the buttons in the window.

The store is crowded nearly all the time with boys to buy, sell or exchange. They are the most enthusiastic chaps imaginable, and the lore of buttons is at their fingers' ends. They come in, throw a handful of buttons on the counter and offer to trade "two for one." And they are good traders, too.

SCORCHERS SAFE.

"Lots o' people are dying from sunstroke now."

"Yes; but it'll never trouble you scorchers."

"Why, I thought we'd be the very ones it would tackle."

"No, it's a brain affection; that lets scorchers out."

MORGAN & WRIGHT TIRES ARE GOOD TIRES.

YOU WILL FIND MORE OF THE WHEELS BUILT IN 1896 FITTED WITH

MORGAN & WRIGHT QUICK-REPAIR TIRES

THAN ARE FITTED WITH ALL OTHER MAKES OF TIRES COMBINED.

What They Say.

A. W. BELL, Blenheim, Ont., Canada: "I have escaped without a puncture so far. However, reports from local wheelmen are enthusiastic in favor of your tires."

J. D. BURK, Amherstburg, Ont., Canada: "Morgan & Wright's quick-repair tires are the favorites here. This is also my humble opinion, 'Morgan & Wright Tires are good tires.'"

HOWE BROS., La Porte, Ind.: "Haven't used any other tires this season; quick-repair giving good satisfaction and popular with local riders so far as we have observed."

"HAAS & HUEBSCH, Le Mars, Ia.: "In every case where the Morgan & Wright Tires have been punctured the quick-repair has worked successfully. Out of 80 wheels sold this season 70 had M. & W. Tires on."

Advice.

DON'T stick tool into tire before you pump up—harder the better.

DON'T stick tool into the same hole after injecting cement.

DON'T use any but M. & W. quick-repair cement, made for the purpose, and don't fear to ask the dealer questions. The quick-repair is illustrated in our catalogue. It is so simple that nobody should have the least trouble in making a quick, easy and permanent repair, on the road, without taking tire from rim.

Remember our liberal guarantee. Send defective tires to us, not to the maker of your wheel.

SOME OF THE WINNERS :

- Will Hughes, on a Napoleon, with M. & W. Tires, won the four-mile "Constitution" race, at Atlanta, Ga
- H. D. Cleveland, on a Spalding, with M. & W. Tires, won the mile open and the two-mile handicap, at Rutland, Vt., Aug. 8
- Howard A. French, on a Barnes, with M. & W. Tires, won the two-mile handicap, at Baltimore, Md., Aug. 8.
- J. L. Ives, on a Richmond, with M. & W. Tires, beat the trotter "Dukes," best two in three, at Arlington, Md., Aug. 6—1:09 and 1:07 3/5.
- Herman Anderson, on a Monarch, with M. & W. Tires, won first time in the 1 1/2-mile road race, at Moline, Ill., Aug. 8.
- W. B. Lupe, on M. & W. Tires, won three firsts at New Smyrna, Fla., Aug. 7.
- Harry Crutcher, on a Columbus, with M. & W. Tires, won first place and second time, five-mile road race, Dallas, Tex., Aug. 6
- Fred Taylor, on a Sylph, with M. & W. Tires, won first time in the five-mile road race, Dallas, Tex., Aug. 6.
- F. Yancy, on a Norwood, with M. & W. Tires, won first time in ten-mile road race, at Henderson, Ky., Aug. 6.

W F McMichael, on a Stearns, with M & W. Tires, won the mile handicap, at Scranton, Pa., Aug. 8.

Burt Morrow, on a Relay, with M & W. Tires, won first in the half-mile, and first in the mile, at Omaha, Neb., Aug. 8

H C. White, on M. & W. Tires, won first in the half-mile and first in the mile, at Osage, Ia., Aug. 7.

J. Holmes Hall, on a Dayton, with M & W. Tires, won first place in nine-mile road race, at Sedalia, Mo., Aug 8

C. Reinke, on an Andrae, with M. & W. Tires, won the mile open, amateur, at Neenah, Wis., Aug. 6.

C. Pierce, on a Frazier, with M. & W. Tires, won the two-mile Twin City Handicap, at Neenah, Wis., Aug. 7.

E McDonnell, on an Adlake, with M. & W. Tires, won the mile open, at New Decatur, Ala., Aug. 6.

J. Sawyer, on a Sterling, with M. & W. Tires, won the five-mile handicap, at Cassopolis, Mich., Aug. 11.

A. B. Cooling, on a Napoleon, with M. & W. Tires, won the three-mile open, at Wilton Junction, Ia., Aug. 6.

Fred Ulp, on a Stearns, with M. & W. Tires, won the mile handicap, at Wheeling, W. Va., Aug. 1.

Lloyd Fowle, on a Columbia, with M. & W. Tires, won the two-mile handicap, at Mason City, Ia., Aug. 5.

M. Ledequist, on a Gendron Special, with M. & W. Tires, won second time in the five-mile road race, at East Boston, Mass., Aug. 8.

C. S. Porter, on a Stearns, with M. & W. Tires, won the two-mile handicap, at Vassar, Mich., Aug. 12.

E. M. Swett, on an Orient, with M. & W. Tires, won the mile handicap, at Norway, Me., Aug. 14.

W. A. Trueblood, on a Thistle, with M. & W. Tires, won the mile open, at Eldora, Ia., Aug. 5.

E. S. Baier, on a Viking, with M. & W. Tires, established a state record for the one-third mile, in competition, Neenah, Wis., Aug. 7.

R. S. Ricker, on a Barnes, with M. & W. Tires, won the three-mile handicap, at Bloomsburg, Pa., Aug. 5.

ARE GOOD TIRES

SINGLES SLID, TANDEMS TRIED.

The Lazy Man's Game of Coasting Given a Thoroughly Scientific Trial by the
M. A. C. C.

Whether a Cooper, a Bald, or a man with the fame of Zimmerman occupied the saddle of the winning machines in this contest, it mattered little. It was the wheel that scored. The individuality of the rider went for naught. Probably never before was there a contest promoted in which the manufacturers secured the sole interest of the spectators over the riders as they did in the Metropolitan Association of Cycling Clubs' hill-coasting contest at Cedar Grove, N. J., on Saturday last. "Who won?" was the cry when it was all over.

"Why, a Humber first, Columbia second, Victor third, while the Stearns took the tandem," would be the reply.

The riders—why, they were mere figure-heads. And so, if you figure on gaining fame as a coaster in future contests, give up the

considerable speed, and then it's up hill again. It is this last upgrade which prevented the coaster from riding half a mile further, and at which point the 6,000 and odd feet tapes were stretched for the measurers.

That great interest was taken in the contest can be perceived from the fact that for a week prior to the race several firms had men camped out along the hill, who daily tested the road and endeavored to ascertain the secret of going the farthest without pedalling. A day prior to the meet, the riders barely

was practically accurate, the first two men falling off between the first and second tapes. Measurers with long tape measures speedily took the distance from the nearest tape at which the contestants stopped and the spectators crowded about to gain a glance at the name plate of the machine.

In the first trial Fred Royce, the ex-New Jersey crack racing man, took the bun with 6,258.2 feet, a distance which was not equalled until the third trial, when it was tied by big Hugh Janeway, the ex-Princeton football player, who weighs 226 pounds. The wind freshened after this and the distance was not equalled.

The twelve men who coasted the greatest distance in the first trial then returned to the summit and started again. The six winners in this trial were then restarted, ending finally with a sifting down to three men—a trial that was conclusive and emphatic.

Heavy-weight Janeway was the favorite. His immense weight and massive proportions gave every one the impression that he would prove the winner, and he did hold more than

idea. It will be the name of your wheel and not yourself that will float from ear to ear as the winner.

Coasting contests have been few and far between in the metropolitan district of late. They were held semi-occasionally when the high wheel, the Springfield Roadster and the Eagle reigned supreme, but never before was a contest of the hill-sliding variety promoted on such an extensive scale as the Metropolitan Association's.

To begin with, the hill selected was ideal. It started on the second ridge of the Orange Mountains. The range known as the Orange Mountains, by-the-way, would not be called a mountain by a Coloradoan, or by a Swiss chamois-chaser; it would be, as the English say, a small pimple, but in the Jerseyman's nomenclature they go as mountains. The road descends the mountain at an acute angle. It is macadamized, smooth, and at the summit a pleasing birdseye view of charming woodland is at command. At the bottom the road dips under a railroad bridge, and then the coaster ascends a short ascent. There is another very perceptible dip, sufficient for a rider to gain

reached the railroad bridge, but rain on Friday night cleared the course of dust and obstacles and the coasters cleared the hill at the bridge with ease and never stopped until they half-way surmounted the next grade.

There was a good crowd of spectators present on Saturday. They bothered the starters at the summit, got in the way along the hill and fairly swarmed around the officials and measurers at the tapes. The contestants made a motley crowd. There were heavy men, little men, men in regulation racing costumes, and in touring form. Some had their legs bare and their arms covered, others their arms bare and their legs covered.

It wasn't a particularly exciting contest for the on-lookers, but they held their ground from 1:30 p. m. until 6 o'clock. The excitement all lay with the contestants. They fairly flew down the declivity and covered the distance, over a mile, in what appeared to them to be about a minute, but in reality over two minutes.

It was after 2:30 before the men were started. Of the 50 entered on singles all but four started. They were sent off with a gentle push, singly and by twos. The momentum gained was terrific. No one was exactly sure where the riders would stop, but the guess

his own until the last heat, when he covered the least distance of any of his coasts. He claimed he had to cut from side to side of the road to avoid vehicles.

The trial for tandems was run in two heats and a final. The two-seated machines went down the hill like an express train, but on the up grade, despite their great momentum at the foot, they travelled on the average of only 100 feet further than the singles, and in some instances the singles beat the tandems.

The winner of the final for singles rode a regular road Humber. He wore a racing Jersey sweater and full tights. His wheel was stripped of all paraphernalia except coasters, and tires were pumped to a fair degree of hardness, but were not inflated to their fullest extent. The second man, W. M. Aikman, had a brake on his Columbia, but no coasters, placing his feet on the lower frame. His tires were well inflated. His costume covered his legs and arms. Janeway was attired in full racing attire. His Victor was fitted with foot rests, and he leaned well forward and held his front wheel as steady as a vicelike clasp of the handle-bars could

make it. The winning tandem team rode one of the Stearns stanch-looking yellow fellows, with tires inflated to rock hardness. The crew were well pleased with their victory, but said the strain of coasting the hill three times at such a terrific speed, with the hill lined with spectators and vehicles, was too much for comfort.

As a matter of fact there was a certain degree of risk in the coast, but only one accident occurred. The unfortunate was C. C. Whitaker, of Montclair, who while descending collided with a rider walking up the hill, while attempting to dodge a carriage. He was knocked fifty feet to the side of the road, and was badly cut and bruised.

What constitutes the speed qualities in coasting is somewhat of an open question, but apart from smooth running bearings and a well lubricated chain, the consensus of opinion among the contestants was that it depended in keeping in a straight line along the smoothest part of the road, avoiding turns and swerving. Weight appeared to exert a powerful influence in the case of Janeway,

still in the final he failed to equal the distance covered by much lighter men.

The interest manifested in this, the first open contest of the kind in this vicinity, should have a tendency to lead the way for greater things in the future. Much interesting information and data can be secured by a study of the table attached, which tells the struggle of the speedy non-pedallers in a nutshell.

WHAT A WHEEL DOES FOR HER.

The buying of a wheel by a girl from her own resources and savings is a practical lesson in economy. It has made new and extended social circles; it has decreased the idle hours which all girls have even in the best regulated families; it has made her more sociable; she finds an agreeable companionship in her girl friends, with whom the wheel is a bond of union, and, in fact, all round she is a more active healthful and restful girl when the time comes for rest than she was before cycling was in vogue.

AN OLD-TIMER'S SYMPOSIUM.

The eleventh day of September in the year 1879 was big with portent. On that memorable day the first "Wheel about the Hub" was begun. The world looked on and wondered at the bravery of those adventurous pioneers of cycling who actually intended to ride alone a whole hundred miles on bicycles. Quidnuncs and wise men wagged their hoary heads, and predicted disaster and what not, but the perilous deed was safely done, and great was the glory of those who passed through the ordeal unharmed.

That this doughty deed of the good old times and the better old timers should not be lost, the Boston Bicycle Club, America's oldest cycling organization, has made the famous trip an annual affair, copying in every way possible the original journey of '79. This year the affair takes place on September 11-13, and those honored with an invitation to partake of this old-timers' symposium—and the number so honored is limited—are proudly making envious all their less lucky friends by exhibiting their invitation headed by the five-pointed emblem of the famous Boston club.

RACING BOARD'S BULLETIN.

SUSPENDED PENDING INVESTIGATION.

George Bovee, El Paso, Texas.
Burt Gibson, Rockdale, N. Y.
H. J. Parker, Rockwell's Mills, N. Y.
Howard Armstrong, New Berlin, N. Y.
Walter Price, Stamford, Conn.
W. C. McCready, Boston, Mass.
George L. Bates, Springfield, Mass.
W. A. Conlin, C. A. Keating, Ayer, Mass.
C. A. Londgren, Milford, Mass.
Victor Eckberg, Worcester, Mass.
L. N. Gowell, Weston, Mass.
Samuel Thompson, Pendleton, Oregon.
Robin Fletcher, Pendleton, Oregon.

SANCTIONS GRANTED.

September 2, Ashland Fair Company, Ashland, Ohio.
September 2, Women's Industrial and Educational Union, Youngstown, Ohio.
August 17, Pittsburg Wheelmen, Pittsburg, Kan.
August 17, W. W. W., Lawrence, Kan.
October 12 to 24, Dallas Cycle Park Company, Dallas, Texas.
August 17, Taylor Bicycle Club, Taylor, Texas.
August 24, Emporia Cyclers, Emporia, Kan.
September 11, Orwigsburg Agricultural Society, Orwigsburg, Pa.
August 26, Straub & Grube, Lancaster, Pa.
September 5, 7, Virginia Wheel Club, Roanoke, Va.
September 19, Homestead Cyclers, Homestead, Pa.

PROFESSIONALIZED.

Robert H. Gill, Shreveport, La., Clause (d).
Gus Gocke, York, Neb., Clause (a).
Glen P. Thayer, Carson City, Mich., Clause (d).
Nick Mershon, Philadelphia, Penn., Clause (b).
George Owens, Philadelphia, Penn., Clause (b).

R. L. Proudft, Niagara Falls, N. Y., own request.
A. J. Barrett, George Starke, O. F. Kehr, Charles G. Weinbrenner, Charles Craig, W. Pfeiffer, Joseph Burger, William Van Doeren, J. Siegel, D. S. Borton, E. A. Brenner, J. B. Holloway, Guy Erb, Jerry Cronin, W. P. Houghton, Charles C. Kiswetter, F. Kaiser, J. W. Lyons, Joseph Laux, George Dieltmeier, Berry Russell, R. S. Armstrong, Ed Rother, Walter Klouberg, all of St. Louis, Mo., Clause (e).
J. M. Hollister, Denver, Col., own request.
Sain Vest, George Green, W. Jones, George Bowden, all of Pueblo, Col., Clause (b).
George N. Whitsell, Colorado Springs, Col., Clause (b).

SUSPENDED.

For false entry—Charles Prest, Cohoes, N. Y., 60 days from July 29.
For false entry—W. T. Bonfield, Indianapolis, Ind., 60 days from August 10.
For competing in unsanctioned Sunday races—M. C. Lawrence, — Korndoeffer, New-Orleans, La., for one year from August 10.
For competing in unsanctioned Sunday races very under suspension—W. M. Guyol, R. J. Godbery and Sutton Titus, New Orleans, La., are placed upon the permanent suspension list.
For competing in unsanctioned races Amos Carrine, Burt Rowland, Milton, Ia.; Fred Meyers, Bloomfield, Ia.; Clarence Stevens, Central, Ia., are suspended for 90 days from August 11.
For false entry C. A. A. Stegmuller, South Norwalk, Conn., for 30 days from August 10.
For competing in unsanctioned races after warning, A. Swenson, Fred Dinan, J. Vosallia, William Nolan, Robert Cahill and Buck Cahill, Stamford, Conn., are suspended for 60 days from August 11.
For competing in unsanctioned Sunday races the following are placed upon the outlawed list

of the League and permanently barred from all track racing under L. A. W. auspices: Charles G. Weinbrenner, J. Siegel, Guy Erb, Jerry Cronin, George Dieltmeier, William Van Doeren, Berry Russell, R. S. Armstrong, E. A. Brenner, Ed Rother, J. B. Holloway, Walter Klouberg, D. S. Borton, A. J. Barrett, M. J. Flavin, O. F. Kehr, George Stark, W. P. Houghton, Charles C. Keiswetter, Charles Craig, F. Kaiser, W. Pfeiffer, J. W. Lyons, all of St. Louis, Mo.

For competing in unsanctioned races William Lempke, Frank Longley, Grant's Pass, Ore.; Alfred Clark, Glendale, Ore.; John Hurth and Miles Brayton, Oregon City, Ore., are suspended for 30 days from August 1.

For competing in unsanctioned races Charles Holmes, Pueblo, Col.; Ben Green, Denver, Col.; J. Henry, A. Jenkins, F. King, Colorado Springs, Col., are suspended for 60 days from August 4.

SHOD FOR WINNING.

As the measurement is taken from the farthest point reached with the foot, the above is what we may expect to see at the next coasting contest

CLAIMING CENTURIES.

Chairman Krietenstein, of the Century Road Club's Road Records Committee, announces that the organization in the future will recognize a club century survivors' record, and will issue a record certificate to the club having the largest number of survivors (within fourteen hours) on any given century. All clubs must adhere strictly to the rules adopted in competing for this record, as follows:

First—Any club is eligible to compete for this record, and enter a claim whether or not any of its members are also members of the C. R. C.

Second—All centuries claimed must have been ridden within the time limit (fourteen hours), and in accordance with the C. R. C. rules.

Third—The signature of each participant must accompany claim, the same to be a bona fide dues paying member of at least one month's standing in competing club.

Fourth—Said claim to be approved by the president and secretary of competing club, and sworn to before a notary.

Fifth—The Road Records Committee reserving the right to investigate all claims and take whatever steps it may deem proper to secure evidence relating to the authenticity of the same.

STILL COASTING.

Shortly after the coasting contest at Buffalo a few weeks ago the winners, the manufacturers of the Orient, were challenged by the makers of the Bison wheels. The contest took place on Saturday, and the trophy formerly at the Waltham Mfg. Co. store now adorns the shop window of Seyfang & Prentiss. It has to be won twice out of three contests to become exclusive property. Four riders were started singly on each make of machine. The result was a decided victory for the Bison people, the standing of the four leaders being as follows:

Rider.	Wheel.	Weight.	Time.	Rider's Wheel's
Gibson T. Williams.....	Bison	160	22½	70
A. B. Goehler.....	Bison	155	23½	76
W. O. Stark.....	Orient	150	24½	76
W. E. De Temple.....	Orient	134	22½	73½

HADFIELD HAD ENOUGH.

Charles Hadfield, of Irvington-Millburn fame, rode as a professional at Baltimore on Saturday last, under protest. He claimed Chairman Gideon had raised his suspension. The local men, however, shut him out of the finals entirely. Summary:

Half-mile, scratch—1, R. T. Norris; 2, R. L. French. Time, 1:12 4-5.

One-mile handicap, professional—1, H. A. French (60 yards); 2, J. M. White (20 yards); 3, C. J. Spencer (35 yards). Time, 2:17 1-5.

Five-mile amateur, handicap—1, C. B. Barker (80 yards); 2, A. M. Kramer (125 yards); 3, R. T. Norris (115 yards). Time, 2:22.

Two-mile handicap, professional—1, W. W. Phelps (90 yards); 2, J. M. White (30 yards). Time, 7:21 3-5.

THIRTY SIGNED THIS.

About thirty colleges will sign a suggested amendment to the constitution and bylaws of the Intercollegiate Association, which calls for the holding of cycle rolls on a separate day each year. The specified changes are: That the date be the second Saturday in June; that the number of races be one-quarter, one-half, one-third, two-thirds, one, two and five mile single, one and two mile tandem; that the number of men from any one college to be entered in any one race shall not exceed four; that the alliance with the L. A. W. shall be continued; that the referee have the power to place a time limit on races.

ON RECORD BENT.

James McCulla's attempt to break the Chicago-New York record last week came to an abrupt end a day after the start, owing to rain. Nothing daunted, however, he started again at 3 a. m. on Tuesday of this week. He is after Letter-Carrier Smith's record, and will have to reach New York at an early hour on Sunday to get within the time. He is riding a Wolf-American wheel with New York tires.

A race for District Messenger boys has been added to the programme of the New-York Division's fall meet at Manhattan Beach, September 5, in addition to the police championship event. The quarter and two mile State championships will also be run.

The use of the bicycle must be reaching very nearly the limit. The Philadelphia Quakeresses are riding wheels in the public streets, clad in the traditional costume of their class.

John S. Johnson's entrance has been secured for the Penn Wheelmen's race meet at Philadelphia to-morrow. It is expected that Parsons, the Australian, will also ride.

GOING ABROAD FOR NEWS.

Denmark Anxious for American-Made Wheels—
Tide of Cycle Speculating Now Ebbing
in England.

London, Aug. 4.—I have been enjoying a brief holiday on the Continent, or, to be more precise, in Denmark, and while the statement will partly explain the absence of this letter of late, it will also be my vindication for any opinions I may here voice. Though not on business bent, I naturally turned into the accustomed channel and endeavored to find which lines were and which were not popular. I found Columbus, Spaldings and Clevelands in surprising profusion, besides a great many American-made machines which I think have not yet found a market in England. I found that if anything the American high-grade machine was more popular than the English-built machine, because it is lighter and cheaper; and I also found that the cheaper lines from your side have had an eager welcome because of the entire inability of the English factories to turn out cheap grades. In this dilemma Danish dealers have had to turn to Germany for supplies, but then Germany and German goods are disliked in Denmark, and apart from the fact that American-built machines are lighter and better than German machines, the Danes would always give them the preference against German competition. Thanks to the English makers being unable to supply their home markets, Danish dealers have been very scantily supplied this season, while prices have been all most prohibitive. Columbus sell at from \$20 to \$25 less than Beeston Humbers, so it is not surprising that I found such a run on American machines throughout Denmark and the south of Sweden. American makers have had a splendid opportunity of securing a good opening in the Continental markets, and it is their own fault if they do not profit by it. In my own opinion cheaper grades will have a better sale than the higher-priced article, because money is dearer on the Continent than with us, and lines to sell retail at from \$50 to \$75 will be rapidly absorbed wherever offered.

When I came back from Copenhagen I found that Humber's Coventry factory had been burned out. The fire did not appreciably affect matters, as inside of a week a wing of the premises, recently bought by the Horseless Carriage Company, was in possession of Humber & Co., and at present machines are being delivered from their works as though nothing serious had happened.

In the trade the flood of flotations seems slackening. I believe that the new Premier flotation only just scraped through; the Roulette and Hearl and Fouks failed to go to allotment, and the warning is too plain to go unheeded. The New Howe Co., once well known on your side, has succeeded in attracting as many applications for shares as enabled the directors to go to allotment, while the Royal Enfield and Bayliss, Thomas & Co. went through without a hitch. The French-Dunlop Co. is used on the boards, and to judge by the preliminary booming it is in good hands. It comes out next week, and is said to be in combination with the Gallus Michelin and French Clincher tire. A combination of the leading French cycle makers is also on the tapis, and everything points to France being the next theatre for cycle flotations. The Simpson chain people are said to be in this combination, and on the strength of an offer the shares have gone up considerably. Much grumbling is being heard on account of the huge sums unduly bound up in the Dunlop settlement, which seems as far off as ever. Partly in consequence of this the

cycle share market is in a declining condition, brokers fearing to encourage further speculation until the present accounts are cleared off.

The North Road professional twenty-four hours' race was a comparative failure, while the Cuca Cup race, ridden on the same day, was almost as great a financial success as ever. Moreover, the amateur (sic!) beat the professional in point of distance covered, but it must be pointed out that, despite the heavy cost of the North Road race, the gate was insured at Lloyd's for £600—it was a one-horse show all through. It was a pity that the horse was French, for of all the afflictions which have come our way a French crack professional is the worst; as giddy, as thoughtless, as wilful and unreasonable as a woman in his whims, he simply pleases himself and lets consequences follow as they will. Huret did all sorts of silly things when he had the North Road race at his mercy, and quite disgusted the public, so that it is highly probably that no professional race over fifty miles will be ridden in England for some time to come.

The Bank Holiday racing on Saturday and Monday formed the occasion of the debut of the Australian racing cyclists, and merely served to show that they are yet green. In a set of test matches on Saturday between Wegson, Lewis and Payne, representing Australia, and J. Green, A. C. Edwards and T. Gibbons-Brooks, representing England, the Cornstalks were badly beaten, but had frightful luck, all three coming down, Lewis being very badly hurt at Catford. On Monday they fared no better at the hands of Barden, Parby and Brooks at Wood Green. They are all right, and merely want time. The flight of Parsons to America with J. S. Johnson is unfavorably regarded here, and it is said was caused by funk. Tom Eck, Weinig and Anton Johnson are still at Catford, the latter pair and a rider named Peters mounted on a triplet being easily beaten by Green and Edwards on a tandem on Monday. Platt Betts has put up a new record for the mile, 1:48, which some people cast doubts upon, and Chase has beaten Stocks in a ten-mile paced race ridden in 9:35.

NO BRAZING; NO WELDING.

W. A. Penfield, of Meriden, Conn., has applied for a patent on an ingenious arrangement whereby a bicycle frame is not brazed, or welded, but locked together. By Mr. Penfield's arrangement any part of the frame that gets broken can be fixed in five minutes by substituting a new piece and locking both ends.

Mr. Penfield believes that second growth of hickory is the coming frame material, and his patent permits the locking together of the frame whether it be of wood or steel.

NEXT YEAR'S DEMAND.

In all the current discussions regarding the bicycle situation, says "Stoves and Hardware," it must be remembered that there have been more wheels sold this year than last, and that there is not the slightest prospect that the demand will be less next year. Because there is an effort to clear out old stocks in order to get things in better shape for next year does not augur that temporary conditions as to prices, etc., will be carried over.

Ten years ago the cycling world of to-day, could it have been pictured, would have been thought a fantastic dream. What will we see in the twentieth century?

Revise your dictionaries by adding somnolentist—one who, while asleep, rides a bicycle.

LITTLE OF EVERYTHING.

Gimm Ran Into a Rain Storm and Stopped
at Fifty Miles. Trade News
and Items.

Cleveland, Ohio, Aug. 17.—Louis Gimm, the long-distance champion, made an attempt to lower the fifty-mile amateur record at C. A. C. Park Saturday afternoon, and, though he did not succeed in so doing, he made the distance in 2:11:17, which was a very creditable performance, considering the track. Local papers claim that he lowered the time by beating Harding's record of 2:12:45 3-5, made at St. Louis in 1894, but such is not the case, as the record is 2:04:00, and is held by Uibrech, of San Francisco. It was Gimm's intention to go for the 100-mile record, but rain put a stop to the performance after two and one-half miles had been covered, and by the time the track was again in shape it was too late to ride a century. The plucky rider had plenty of ginger left at the finish, doing the last five miles at a 2:22 clip and the finishing mile in 2:18 1-5. The riding was tandem-paced throughout, five teams alternating. Another trial for the 100-mile record will probably be made the present week. Gimm rode a Pirate, the product of the Duquesne Cycle Mfg. Co., of Pittsburg, Pa.

After a wait of over a month, word was received Saturday that Referee Boyle, of the Cleveland-Pittsburg road race contest, would not sustain the protest of Walters, the second man in, and that Gimm had been awarded the first prize. For the second time, therefore, the prize cup will adorn the parlors of the Cleveland Wheel Club, and, besides, Gimm wins a \$500 piano.

George Myers and C. F. Storey, of the C. W. C., will give two race meets at C. A. C. Park, the first on Saturday, August 29, and the second on the following Saturday.

W. A. Neff has severed his connection with the Lockwood-Taylor Co., and is now located in the New England Block as a manufacturers' agent. The Vindex, the product of the Reading Mfg. Co., of Reading, Pa., will be his leader.

The Wheelmen's Supply Co., at the corner of Superior and Erie streets, have hung the following notice upon the outer wall: "This concern has closed for the season." The concern consisted of Folsom, Booth and Saltonstall. First Booth drew out, followed by Folsom, and now the store is empty.

James Joseph, of the Tinkham Cycle Co., New York City, formerly with the Peerless Mfg. Co., of this city, is spending his vacation among relatives and friends in Cleveland.

PUTTING GAS IN IT.

The gas-inflated bicycle, after doing duty as marvel for full ten years or more, is once more on its rounds through the dailies. Under a Westfield (N. J.) headline, the old standing space-filler looms up in this shape: Morse has been experimenting with inflating tires with different gasses. He finds that with hydrogen he can decrease the weight of the wheels eight pounds, and that with compound oxygen gas he can do even better.

He says that an aluminum wheel with gas-inflated tires can be put on the track at a weight of less than ten pounds.

If the experiments are kept up wheelmen will some day be able to ride through the air on wheels properly balanced so that the riders may maintain their equilibrium. Fans could be attached to the wheels to propel them through the air.

Cycling's silly season is never over—in the daily papers. No matter how wild and weird a yarn may be regarding cycling, it will always find plenty of newspapers anxious to print it. The foregoing is an evidence of this.

AMERICA'S CHANCES ABROAD.

"Wheeling" thus honestly faces the question of the American invasion of the British market:

"One point which has largely handicapped American machines in England this year has been the cemented-on tire and wood rim, which, being the rage across the Atlantic, American makers naturally conceived would be acceptable here. This has not proved a drawback on the Continent for some reason, and apparently Continental cyclists are quite content to ride cemented-on tires and wood rims, if two or three pounds in weight is saved and a similar sum in price.

"It seems to us that American machines are fast becoming more popular on the Continent than the English-built article. We do not say this with any sense of satisfaction or comfort. It is a confession wrung from us by the evidences of our eyes and ears, and if English makers are to regain their European trade they will have to make similar deviations in pattern to those which American makers are finding necessary to secure a permanent English trade.

"The question of price is also one to be faced. American-made bicycles undersell English machines on the Continent, partly because the latter have so many more fittings than the American, and partly because the American bicycle primarily costs less to produce."

NEWSPAPERS AND FAKE SALES.

The conclusion of a member of the staff of "The Business Journal" after he had spent \$25 worth of time and \$75 worth of temper was that the New York daily papers are reaping a harvest in bicycle "fake bargain advertisements." Drygoods stores, drug stores, clothing stores, jewelry stores, carriage repositories, and heaven knows how many other kinds of stores are frantically offering "genuine high-grade \$100 bicycles reduced to \$39, \$49, \$59," etc.

But when the bicycles are carefully examined and the dealers pinned down, it becomes evident that these wheels never sold for \$100, except possibly during the early spring months, when people could not find the standard \$100 wheels in the market, and would not wait to get them.

Another year things will undoubtedly be different, and while there may be concessions in some of the high-grade wheels, the public, having been better educated, will be in a condition to understand that the leading dealers who have spent thousands of dollars in building up a first-class wheel have reputations to maintain, and will be in a position to give purchasers value received for their money.

WHERE THE TROUBLE WAS.

"The Hardware Trade" says the following is the cause of all the recent trouble in the cycle trade: "So certain were the manufacturers and dealers in bicycles that the demand for wheels this season would be far beyond the supply, that little care was taken in incurring expense for the large sale of wheels. Moreover, too little care was exercised as to the credits that were given on wheels. The desire for wheels was as great as any one expected, but the capacity to fill the desire and pay for the filling was too limited. Had the prosperity of the country been at an 1892 pitch, all the bicycles that could be made would have been sold. As it is, there will be wrecks of retailers, wholesalers and manufacturers at the end of this season. But the wise and conservative way of handling wheels will be a source of profit next year and the next, and as long as men wish to save time and money by using a wheel.

PRESSURE-AVOIDING SADDLE.

"The G. & K. Health Cycle Saddle" is the title of a neat pamphlet issued by the Graton & Knight Manufacturing Company, Worcester, Mass., describing their line of bicycle saddles. This concern was established in 1850, as manufacturers of oak-tanned leather, and their experience in this direction alone should put them in the front rank in the saddle business. Many new forms are shown, of which the Perry and the Murdock contain the most novel features, the former having a longitudinally divided top of unique design, while the latter's chief point is a deep groove or channel along its pommel, which, they claim, avoids any pressure upon the perineum in riding. Other styles are illustrated, making a very complete variety, and the book should prove useful to any manufacturers in the market for the company's product.

AN OLD IDEA REVIVED.

Here is the latest English adaptation of the famous American Broncho, a wheel which was expected to play hob with cycling in general, but compromised in the end by doing so

with the bank accounts of its backers. Maybe the English will succeed with the machine which Americans could only attain a failure, then again maybe they, too, will fail.

BOTH FEET OFF THE GROUND.

Certainly no one in our present year of grace sees anything wonderful in self-propulsion on two wheels with both feet off the ground; yet when the matter is considered attentively it forces the admission that the man who first conceived and carried into practice so bold an action must have been both a wonderful and a daring man.

A Scotch blacksmith named McMillan, in 1840, appeared before the astonished eyes of Glasgow on a "velocipede," formed on two wheels in line, two pedals and two handles, having ridden the seventy miles from Keir, Dumfriesshire. As in the case of many another innovator, the authorities treated McMillan as a dangerous lunatic. He was locked up in jail and released only on the promise that "he would not do so any more."

The McMillan of to-day, seeking to move with both feet off the ground, is the flying-machine man. Fifty years may do for him what they have done in the case of the cycle.

SHE OF THE CRESCENT.

R. L. Coleman having safely arrived "on the other side," it is to be expected that such items as the following would appear in the English papers:

"All the principal boardings in and around London contain at present a tremendous poster advertising American Crescent cycles. The graceful figure of a young girl holding aloft a Crescent machine catches the eye of the passer-by, and is becoming as familiar as "To-Day's" yellow girl. It is a splendid advertisement, and bound to have the desired effect of familiarizing the public with the name of the Crescent."

Quench a customer's wrath by courteous treatment, and he will live to praise thee.

FIXED AT HOME AND ABROAD.

Chautauqua Lake is a beautiful place, and Chautauqua as a seat of learning has gained a world-wide reputation. Directly at the foot of the lake is Jamestown, the home of the Fenton Metallic Company, and here, surrounded by the greenest of hills and close by one of nature's most delightful little inland seas, the Fenton bicycle is made. The company is making active preparations for the '97 trade, much new machinery has been added to their already extensive plant and the coming year will see them in better shape than ever to meet their increasing demands. They were among the pioneers in seeking European trade and have an establishment in Paris that has been the means of making the name "Fenton" very well known on the other side, and with the advantages of a good beginning an active campaign in foreign trade is being contemplated in the near future which will undoubtedly bring good results.

CYCLE-HOLDING FURNITURE.

A piece of furniture is now made to keep bicycles in. It is of handsomely carved wood and intended to stand in a hall. It comes in two parts. The lower, which is made a little higher than the wheels, opens with two broad doors, while the upper is much narrower, being intended to accommodate the handles and saddles. A shelf is provided to hold any extras one may have, as hats or gloves.

Covers to fit over wheels are also made of handsome cretonne or plain materials, outlined with some appropriate design. The seams should be bound with bright-colored braid. These covers are very attractive and serve the double purpose of protecting the bicycle and one's clothing where the machine has to be kept in small rooms or halls in summer cottages.

A cover made of rubber or water-proof cloth is of advantage at the seashore or where the bicycles are kept in wire-enclosed piazzas.

ONE THOUSAND AT \$5 EACH.

One of the most imposing and gorgeous structures in New York is nearing completion. It is to be occupied by a drygoods concern, an up-to-date drygoods concern. Besides tape and thimbles its capacious roof will cover a horse market and a Russian bath. The stock will consist of anything between a needle and a Western steer. The proprietors expect that New York will stand aghast as soon as their store is in full swing. It is announced that during the first half-hour after the opening of this store a thousand bicycles will be sold at \$5. An ambulance service will be on tap. The wheels are said to have been already purchased from one of the companies which have lately gotten into financial difficulties.

DO YOU WANT FOREIGN TRADE?

In these days, when so many of our prominent manufacturers are either going to Europe themselves or sending their representatives, with the object of establishing European agencies, it is unusual to have a first-class English firm come here in search of wheels. The Hadley Cycle Company, Limited, No. 21 Grove Terrace, Highgate Road, London, N. W., England, backed by first-class references and having an established connection among buyers all over Europe (as they have been cycle manufacturers for the last twenty years and importers of American wheels for a year), are open to receive consignments of wheels or accessories, and will on mutually advantageous terms introduce, sell and conduct the business of a first-class American firm wanting to secure a sound European trade.

STRONG AS ITS NAMESAKE.

Work on the plant of the Hercules Seamless Drawn Tube Co. at Garwood, N. J., has progressed rapidly during the past month, and next month operations will begin. The main building is about 200 feet long and 100 feet wide, free from posts, the roof being supported by trusses. Adjoining this is a spacious brick and iron building, which will be devoted entirely to hot treatment of the metal. Next to this is the boiler-house, in which three Bigelow horizontal tubular boilers are being installed, with room for additions. The heavy pumping engines, which furnish power to the hydraulic drawing machinery, are located with other parts of the power plant at the east end of the main structure.

In a separate brick and iron building is installed the gas plant, to furnish fuel for the annealing processes. The methods adopted by the company are prepared to make tubes of special high temper (or "carbon"), which will withstand the most severe vibratory tests, and excel in tensile and torsional strength, without undue sacrifice of ductility. The company states that it has secured the finest and purest quality of Swedish Martin steel, that has never been used for the purpose, and that the business of making seamless tubes will be developed and continued strictly on basis of quality. Tubes of high or low temper (or "carbon") will be made according to customers' desire and requirements.

The superintendent, Henry J. White, brings into the business a long and valuable experience in the steel making and tube business, acquired in prominent positions with Thomas Turton & Sons, Sheffield, England; Smith Brothers & Co., Pittsburg, Penn., and others. To this is added Mr. Buell's experience in the steel business, and careful study and practice in the cold rolling, cold drawing and special annealing and treatment of soft and high temper steels during the past several years. For cycle makers two brands are offered, Hercules and Hercules special, and either quality will be in rounds, squares, "D" shape or hexagon. A handsome price list is being prepared, and will be furnished upon application. A New York office has been opened at Room 54, Astor House.

CHANCE TO GET A GOOD FACTORY.

The Slaymaker-Barry Co., Lancaster, Pa., who have been such a factor in the '96 sundry trade, through the medium of their well-known line of bicycle locks, have found that their business in the hardware line necessitated increased facilities, and in the near future Connelleville, Pa., will be their post-office address. This throws upon the market their elegant plant at Lancaster, which in many ways would be an ideal one for the manufacture of bicycles. Descriptive circulars can be had upon application.

TIMELY TIP TO TIRE-TONICERS.

Compounders of "tire tonics" or anti-leak injections had better beware. There are signs of trouble ahead. One of the signs is in the possession of C. W. Robison, of Peoria, Ill.—a patent which he states was issued to him as long ago as December, 1891. It covers all forms of liquid preparations intended to heal or prevent punctures. Mr. Robison states that he is biding his time, but hints broadly that he will assume the aggressive when that time arrives. At present he is marketing a self-healing "tonic" of his own. "Cactus Gum" he calls it.

The Ellwood Weldless Tube Company, of Ellwood City, Penn., proposes bidding for English trade, and to that end has opened an office on the Viaduct, in London.

AUTOMATIC AND PRACTICAL.

No one but the initiated can conceive of the patience, time and study required to perfect a new device for a particular line of work. Simple or complicated, continued experiments are necessary to reach the goal of success. As an example the burnishing machine shown herewith required several years of devotion and study, and a large expenditure of money by the manufacturers, the Drapery Fixture Company, Worcester, Mass., before perfection was gained. The machine is adapted to finishing or polishing both metals and wood, and is particularly intended for

finishing bicycle frames after they have been brazed. It is automatic in operation to the largest degree practical and is still under complete control, enabling the operator to control the abrasive force at any desired point, as well as producing a fine, uniform finish, such as has heretofore been obtained by slow and expensive methods. Every Universal Burnisher is thoroughly tested and guaranteed. Certain of the principal parts are interchangeable and duplicates may be obtained by referring to the proper letters and numbers.

HERE IS AN IMPROVED HUB.

The features of the hub shown herewith, which its manufacturers, Messrs. Marrett & Morrison, of Chicago, claim will make it a success, are put forth as being these: The barrel is turned from a solid bar of Bessemer steel and accurately finished. The cups are of crucible steel, hardened and ground, screwing into the shell. The cup is backed up by a nut which not only acts as a lock, but strengthens the cup in the weak point of

all cups, that is, the bottom, and also contains a recess which holds in place a thin felt washer, the washer, together with the very small opening into the shell to admit the axle and cone, makes the hub nearly dust proof. Adjustment is gained by screwing one of the cones in or out on the axle. The hub's design admits of the cones being made very strong, leaving no feather edges to chip off. The axle is large and made of mild steel.

Charley Wells, Syracuse, N. Y., formerly with E. C. Stearns & Co., of that city, is interested in a wood-frame bicycle patent, and a large brick building has been rented on South West street for the manufacture of the new wheel.

OUT IN THE WOODS.

It seems almost a paradox that one of the largest and best equipped wood rim manufacturers should be located in the very heart of our great oil country, surrounded on all sides by towering derricks and reeking tanks, yet such is a fact. The Bradford Hardwood Company, who recently absorbed the Fairbanks Company at Tonawanda, N. Y., have in course of construction at Bradford, Penn., what promises to be the most extensive plant for the making of wood rims in the United States. Surrounded on all sides by immense forests of just the desired timbers, the natural advantage of which cannot be overestimated, the logs are cut from the stumps only a short distance away, hauled to the factory, and an interested spectator literally sees the logs enter one end of the factory and rims rolling out at the other. As to the quality of the products, it is sufficient to say the Fairbanks standard will be retained, and that means the best.

KEYED TO ANY NOTE.

Novelties in the sundry market are numerous and diversified, and show man's ingenuity in every conceivable manner. One of the latest devices is a whistle, styled Aeolian Automatic Bicycle Whistle, operated on the principle of the Sturtevant fan. It can be operated without removing the hand from the bar, is easily adjusted, and is entirely automatic. The whistle can be keyed to any desired note, and will emit a sound that can be heard half a mile. As shown in the cut elsewhere, it is attached to the front fork, and is operated by the pressure of the finger on the trigger at handlebar, which is connected to the whistle by a cord. The device weighs five ounces. The Field Mfg. Co., No. 21 Quincy street, Chicago, are the distributing agents.

SAMPLE, IF YOU WANT IT.

Two very neat designs in crank brackets are being turned out by the Worcester Ferrule and Manufacturing Co., Worcester, Mass., samples of either of which will be sent on application. One has a tread of 3½ inches and the other of 2½ to 3¼ inches, with variations for the size of balls in the hub cases. The company recently doubled the capacity of their plant, and now have unequalled facilities for supplying the trade with the best cold rolled sheet steel fittings. Their line consists of ball-bearing cases, head shells, head cones, fork crowns, rear fork ends, frame connections, seat and post ferrules, handlebar tees, crank hangers, chain screws, etc.

WHERE YOU WANT NO VIBRATION.

In no place has the want of an anti-vibratory device been so apparent as on the handle-bar. It has often been remarked that after a long ride not only the hands, but the arms, have experienced a numb feeling that was due entirely to the jolting and jarring that those members were subjected to while partly supporting the weight of the body. The pneumatic grip made by the Lund Pneumatic Grip Company, Aqueduct Building, Rochester, N. Y., should offset this to a considerable degree, and to those looking for comfort should prove an invaluable addition to the wheel.

It has recently been decided by the custom authorities in Italy that all "wooden hoops" (rims) for velocipede wheels imported into that country are to be entered as utensils and manufactures of wood, under which the duty is at the rate of 18 lire per quintal.

NATIONAL CYCLE SHOWS

Under the auspices of the National Board of Trade of Cycle Manufacturers, National Shoe and Leather Bank Building, 27 Broadway, New York.

January 23—Chicago, Coliseum.

February 6 13—New York, Grand Central Palace.

TRADE CHANGES.

CALIFORNIA.

Santa Ana—Wright & Hill; Hill gives mortgage, \$2,000.

COLORADO.

Pueblo—Pueblo Hardware Company sued, \$287.56.

CONNECTICUT.

Greenwich—H. W. Waring, Jr., & Co., assigned.

Wallford—Hall Manufacturing Company incorporated, to manufacture sundries; capital stock, \$10,000; president, F. J. Hall; secretary and treasurer, Zina E. Dowd.

DISTRICT OF COLUMBIA.

Washington—Fowler Cycle Company sued, \$520.

Washington—W. D. Hadger assigned.

ILLINOIS.

Chicago—J. D. Prouty Manufacturing Company incorporated by J. D. Prouty, M. Prouty and C. A. Tice, to manufacture bicycles; and capital stock, \$2,500.

Chicago—Fowler Cycle Company have closed down their works for at least two months, throwing out of employment over 300 men. The company's action is due to the polishers having struck because of a cut in their wages.

INDIANA.

Crawfordsville—A. C. Thiney, new bicycle repair shop.

Evansville—Cy. Robinson & George Clark, Jr., bicycle repair shop at 307 Upper Seventh street.

Indianapolis—The Davis Manufacturing Company incorporated, to manufacture bicycle brakes.

Indianapolis—Harry McNaught and J. B. McCloskey, new bicycle dealers and agents for Jewett & Lanham's "Old Reliable" tire puncture remedy.

Lafayette—Lindsay Bicycle and Manufacturing Company asking ninety days' extension.

Terre Haute—Miller & Dinkie, bicycle dealers, North Ninth street, dissolved; Mr. Miller will continue the business.

Warsaw—The bicycle emporium at Winona Park damaged by storm; loss, \$1,000.

KENTUCKY.

Louisville—Griffith & Semple succeeded by A. L. Semple & Co.

LOUISIANA.

New Orleans—The Crescent has consolidated with the Jackson Cycling Company.

MAINE.

South Portland—The Lovell Bicycle Company's factory is rapidly being pushed to completion, and will be ready for occupancy next month.

MASSACHUSETTS.

East Brookfield—The Greyhound Bicycle Company filed voluntary petition in insolvency. Returnable September 1. Creditors' petition now pending.

MICHIGAN.

Coldwater—Shugers Brothers erecting new bicycle factory in Chicago street, two doors east of the Free Public Library.

Detroit—F. Baulch, bicycle dealer at 594 Jefferson avenue, gave chattel mortgage for \$1,500 to William A. Ayres.

Grand Rapids—Hamilton-Kenwood Cycle Company incorporated by C. L. Thayer, Charles R. Sligh, F. Baars, J. D. Case, to manufacture bicycles and sundries; capital \$200,000.

Manistiquet—Guinan & McLeod, bicycle repair shop.

Saginaw—H. G. Krogman; chattel mortgage, \$500.

St. Charles—O. R. Hintermeister; trust chattel mortgage, \$2,475.

Springport—A. Panches, bicycle repairer; business purchased by Wiseloge & Doak, who have largely extended it.

MINNESOTA.

Minneapolis—The L. G. Fenton Company, bicycles, reported closing out.

Minneapolis—Davidson & Sons' Store attached for \$200.

Minneapolis—The S. F. Heath Cycle Company, recently assigned, has filed schedule showing assets to be \$6,878.74; liabilities, \$15,386.99.

Minneapolis—Smith & Zimmer assigned.

Minneapolis—H. J. Pyle, hardware and sporting goods dealer at 36 Washington avenue, South, damaged by fire; loss, \$5,000.

Redwood Falls—C. C. Morgan has invented a bicycle, and a local company has been formed to manufacture and market it.

St. Cloud—Tenvoorde & White, bicycles, insolvent. Stock of bicycles placed on sale in the McClure Block, under the charge of H. J. West.

MONTANA.

Butte—Butte Cycle Company; F. H. Talbot confesses judgment for \$2,091.

Great Falls—Powell Brothers, jewellers, have moved to larger quarters at 215 Central avenue, where they will handle Lovell Diamond bicycles in addition to their jewelry business.

NEW HAMPSHIRE.

Nashua—Corson Cycle Company incorporated. with a capital stock of \$30,000.

NEW JERSEY.

Elizabeth—The Gilbert & Chester Company. Five chattel mortgages, aggregating \$7,500. Asking eight and ten months' extension. The company was incorporated January, 1895, with a capital of \$10,000.

Plainfield—New Jersey Wheel Company. William R. Coddington appointed receiver. Assets, \$10,000; liabilities, \$12,000.

G. & J. Rambler Meet Club Badge.

NEW MEXICO.

Las Vegas—John James, Jr., bicycle repair shop.

NEW YORK.

Buffalo—Carroll & Weber gone out of business. Buffalo—William G. & Fred G. Shack. Executions aggregating \$708.84 issued by the Dunlop Tire Company and the Hartford Cycle Company; in hands of Sheriff.

Elbridge—Elbridge Cycle Company sued, \$450. New York—Eclipse Electric Lamp Company. Judgment in favor of Electric Lamp Company, \$3,456.77.

New York—S. F. Myers & Co., agents for Olympic Cycle Manufacturing Company. Louis F. Clarke, Jr., appointed receiver. Nominal assets, \$819,000; liabilities, \$517,000; attached, \$70,408. S. F. Myers transfers real estate, \$355,936, subject to mortgage of \$275,000.

New York—Porter & Gilmour. Judgments for Mary Gilmour, \$1,447; G. S. Dufford, \$203.24.

Niagara Falls—The Lucien & Charles O. Barnes Manufacturing Company will probably erect a bicycle factory which will employ 300 men.

Syracuse—The Tourist Cycle Company will rebuild their bicycle factory, which was recently burned, at a loss of \$30,000.

Syracuse—H. M. Scoville burned out; loss, \$1,500; insurance, \$1,000.

OHIO.

Akron—H. H. Crowther. Judgment, \$160.15. Sued \$100.

Cleveland—The wood rim factory of the Kuntz Bending Works is rapidly nearing completion, and machinery is being placed in position.

Columbus—Charles H. Bell, bicycle repair shop at 81 East Spring street, made an assignment. Estimated assets, \$2,200; liabilities, \$1,500.

Columbus—Herr Bicycle Company. Assignee reports receipts for sales and rentals, \$656.50; expenditures, \$134.11; cash on hand, \$522.39; stock on hand valued at \$1,400.

Dayton—Gun City Cycle Company succeeded by Smith & Co.

PENNSYLVANIA.

Collinsville—The Hullor collar factory, J. Hullor, proprietor, has commenced to manufacture leather bicycle tires.

Kittanning—L. L. Green, formerly of New Kensington, will open a bicycle factory and repair shop here.

Pittsburg—Pittsburg Tapering Tube Company incorporated by George M. Cote, treasurer. Capital stock, \$1,000.

Pittsburg—Campbell & Bro., of Beaver Falls, have been awarded contract to build stone and iron building 400x50, two stories high, in this city, to be occupied by the McCool Tube Company.

RHODE ISLAND.

Newport—Francis S. Clark. Chattel mortgage, \$1,500.

WISCONSIN.

Fond du Lac—Fidelity Cycle Company. Chattel mortgage, \$1,000.

Milwaukee—Telegram Cycle Manufacturing Company closed by Sheriff.

KECK'S GOING ACROSS, TOO.

But not on business. Keck represents the Central Cycle Manufacturing Co., who are not overloaded, and have no need to go abroad. They make the Ben Hur. Keck has been known to the trade for ten years back, in connection with the business of Harry Hearsay. In fact, no two men are better known throughout the city of Indianapolis and at League meets and shows, and both of them have percolated even outside the borders of their own State. Keck goes abroad for a pure and simple vacation after a ten years stretch of uninterrupted hard work.

GOOD THING IN GOOD HANDS.

President W. E. Miller of the Shelby (Ohio) Steel Tube Company, Shelby, was in New York during the last week. He opened a branch house at 144 Chambers street, from where all business for New England, Eastern New York, Pennsylvania, New Jersey and Maryland will be handled. L. B. Thornburgh, who has been with the company for the last three years, will manage the Eastern department.

TOURING ALL ON.

A husband and wife on bicycles coupled together by steel rods, from which was suspended a seat for their seven-year-old child, rode through Augusta, Me., on a tour of New England the other day. A tent and luggage, which brought the weight of the whole outfit up to 400 pounds, were carried, and they travelled about twenty miles a day, they said.

WHERE GAS IS CHEAP.

A semi-combine is likely to be made between the Worcester Cycle Company and the Middletown Cycle Company, whereby frames for the machines of both concerns will be made in Worcester, and the fittings in Middletown. The cheapness of gas in Worcester is the reason given for the proposed union.

TO MAKE VEHICLES.

The Graff Manufacturing Company, of New York, has been incorporated to manufacture bicycles and vehicles, with a capital of \$100,000. The directors are Andrew Graff, M. J. Fenton, George H. Carpenter, George H. Kietz and Henri Lemaire.

SIMPLICITY MAKES SUCCESS.

Extreme simplicity of construction is the point that the bicycle manufacturer is ever striving for. And simplicity is one of the strong features of the hub made by the Cullman Tubular Hub Co., of Syracuse, N. Y. Being made from short pieces of tubing, no spoke flanges are required, thus doing away with the vast quantity of machine work so necessary in the regulation pattern. The spokes are merely hooked into the hubs, the

end of the spoke being bent at an angle, making repair in case of accident a very easy matter. The Cullman hub was used by a number of manufacturers in the season just passed, and the fact that they will continue its use in the future augurs well for its efficiency. The company is now ready to quote shop rights to manufacturers, and would be pleased to hear from interested parties.

Even in a chair, one's weight is not so well divided, hygienically considered, as it is on a bicycle.

OFFERS MUCH THAT IS GOOD.

The detachable lamp bracket made by the Forsythe Manufacturing Company, of Buffalo, N. Y., is too well known to merit any further description, but for the '97 trade they are offering a varied line of parts that will undoubtedly help sustain their already established reputation. For the manufacturers of wooden dress and mud guards they can furnish a complete set of metal connections necessary to clamp the guards to the frame. In the brake line they have a most thoroughly detachable hand brake that can be disconnected from the wheel in a moment. They also make bearing cases of a good design, fitted with retaining washers that prevent the falling out of balls when the axle is removed. This seems to be the popular style of bearing for the coming year, and is by all odds the most sensible.

NEW METAL LIKE GOLD.

A new metal for cycle materials that promises to be an attractive feature in future cycle manufacture is being made into a full line of cycle fittings—weldless tubing, spokes, chains, pedals, etc.—by the Pendleton Manufacturing Company, Carbondale, Pa. It is claimed for the Carbondale metal that it is absolutely rustless, considerably stronger than steel, and will not lose its beautiful color even under the most unfavorable circumstances. It is made in either gold or silver color. Samples can be obtained from the sole agents, United States Cycle Fittings Co., 20 Warren street, New York.

W. C. Marion, of the Indiana Bicycle Company, is booked for Europe this week.

NON-RATTING TIME-TELLER.

A watch specially constructed to stand without injury the constant jarring and extra strain a timepiece undergoes when attached to the handle-bar of a cycle is the Yankee Bicycle Watch, made by Robert Ingersoll & Bros., 65 and 67 Cortlandt st. They are covered by a broad guarantee to keep accurate time. They have holders which clamp the watch safely to the bar and permit instant attachment and detachment. They are light, small, strong and handsomely finished in

nickel. The accompanying cut shows construction of the holder, which prevents rattling of ring and crown and holds the watch in the clamp at the same time. Perhaps the best feature of the Yankee watch is its cheapness.

The increasing demand for Vim tires has compelled the Boston Woven Hose and Rubber Company to remove their New York headquarters from No. 63 Reade street to Nos. 89 and 11 Reade street. Here the firm have much more room and will be able to carry a much larger stock.

REINFORCED THE ENTIRE LENGTH.

Get a sample to test and be convinced it is all we claim for it before deciding what tubing you will use. Note that the metal comes tight together at the seam. No spelter filling to run out when reheated. Cut to exact lengths as required. Gauges, 16 to 24. Diameters, 3/4, 1, 1 1/4 and 1 1/2 inches up to 28 inches in length.

THE RAY CYCLE SEAT

is the only Bicycle Saddle which affords an unchangeable support to the muscular parts, and a yielding support to the rigid pelvic bones, thus reciprocating nature and furnishing a perfectly ideal bicycle seat.

It is ridden by over one hundred of the best-known physicians of Greater New York, who unite in declaring that physical injury from it is impossible, and who will ride no other.

Satisfaction Guaranteed. Price, \$5.00 Each.

Bicycle brakes are the articles mentioned to be manufactured by the Davis Mfg. Co., a firm that was incorporated at Indianapolis last week.

RECENT PATENTS.

565,573. TIRE GATE VALVE. GEORGE B. SUTHERLAND, New York, N. Y. Filed June 18, 1895. Serial No. 551,231. (No model.)

Claim.—In a tire and like article, a body having an external screw-thread, an annular groove below said thread and a bead beyond said groove and adapted to pass within a tire, and a nut screwing on said body at the outside of the tire, in combination with a flange consisting of a separate piece connected to said body by a screw-thread connection projecting within and adapted to engage the inner face of a tire.

565,783. BICYCLE-FRAME. AUGUST J. OBERG AND ANDREW W. GUSTAFSON, Waterloo, Neb., assignors to J. A. Cummings, same place. Filed June 15, 1895. Serial No. 523,939. (No model.)

Claim.—In a bicycle frame, the combination with a bamboo head-tube, of sleeves arranged at the top and bottom thereof and open at both ends and also formed in their adjacent ends with angular rabbets in which the ends of the head-tube are inserted, and metal stay-irrigated anteriorly and extending longitudinally of the head-tube and said sleeves permanently attached to said sleeves, the said stays being located upon opposite sides of the head-tube, whereby the latter is connected between said sleeves and a strong brace for the fork-stem, substantially as described.

568,537. BICYCLE-LOCK. GUSTAV H. GUNDERSON, Chicago, Ill. Filed April 25, 1896. Serial No. 589,087. (No model.)

Claim.—A bicycle-lock consisting of a rack-bar having a brake-shoe secured at its lower end, slidingly held to the head of the bicycle, and combined with a pinion-head, pivoted between extensions of a frame fastened to the frame of the bicycle, and having an integral arm or handle, means for locking the said handle, the teeth of the rack-bar and pinion adapted to mesh, substantially as above and described.

565,451. BICYCLE-TIRE. ROBERT E. GILBERT, Greenburgh, N. Y. Filed Dec. 6, 1895. Serial No. 571,248. (No model.)

Claim.—The combination with a pneumatic tire of an inner elastic hollow forcing-ring formed from a blank having transverse integral ridges formed at regular intervals on the inner face and rectangular integral shoulders projecting therefrom at right angles to the

565,611. VEHICLE-WHEEL. HENRY D. DEAN, Perrine, Cal. Filed June 17, 1895. Serial No. 575,451. (No model.)

Claim.—A vehicle-wheel tire consisting of a body composed of cork circumferentially grooved, a tire line seated in said groove whereby the cork is held to the rim, an independent cushion circumferentially directed and seated in said groove and a covering over said cushion and body

565,782. LOCK FOR BICYCLES. ALBERT W. NUTZ, Wallace, Kan. Filed Oct. 18, 1895. Serial No. 566,098. (No model.)

Claim.—The combination with a casing having transversely-slanted openings and having an opening in its edge of a bolt movable through the transversely-slanted openings and having a projection thereon, a plurality of tumblers mounted on a common axis, the axis being parallel with the bolt, the tumblers each having a notch formed in their free portions, said notches being capable of alignment to permit the projection on the bolt to pass, and springs for pressing the bolt and tumblers, the opening in the edge of the casing being adapted to permit the insertion of a key whereby the key may engage the edges of the tumblers to actuate the same, substantially as described.

565,425. VISE. FRANK R. BOYD, THOMAS A. DONLEY, and JAMES K. CORRELL, Milwaukee, Wis., assignors to the Bole Cycle Manufacturing Company, same place. Filed Nov. 18, 1895. Serial No. 560,309. (No model.)

Claim.—The combination of a frame comprising separate standard-arms each of which has a forwardly-extending flange abutting those of the other, head extensions of the standards constituting a sectional lock, a cam-notched lever in pivotal connection with said head extensions, a lever-catch also in connection with the forward head extensions, a treadle in link-rod connection with the lever, and a vise having a ball end adjustable in the socket.

565,825. CAP FOR BICYCLE VALVE. DAVID BASCH, New York, N. Y. Filed May 11, 1896. Serial No. 591,046. (No model.)

Claim.—A motion-cap for bicycle valves, constructed of rubber and comprising a tubular body closed at one end, and a cap formed at the open end of the body, the covered face of the cap being the outer face, so as for the purpose specified.

565,718. STEERING-GEAR FOR BICYCLES. ALFONSO F. BOARDMAN, Brooklyn, N. Y. Filed Dec. 30, 1895. Serial No. 573,237. (No model.)

Claim.—In a bicycle or similar vehicle, the horizontal plate G adjustably secured to the handle-bar and having a notch G' in its rearwardly-projecting edge, in combination with the removable casing C and its attaching means C' for allowing its adjustment forward or rearward upon the frame, the spring S within the casing, the adjusting-screw D' having its head D' exposed and arranged for easily increasing or diminishing the tension of said spring, the dog D subject to the force of the spring and projecting forward from said casing to engage against the edge of the plate and engage the notch therein when the latter is presented thereon and hold the handle-bar with a slight force against turning in either direction, all substantially as herein specified.

565,556. BICYCLE. CHARLES C. MURRAY, Northborough, Mass. Filed Oct. 20, 1895. Serial No. 567,432. (No model.)

Claim.—In a bicycle-driving mechanism, the combination with a spring-hub wheel and sprocket-wheel connected rigidly with said machine-wheel, of a tread-roller shaft mounted in said steering-head, a forwardly-extending bracket adjustably connected with said steering-head, and a pair of ribbed rollers later or earlier fulcrumed upon said bracket and having a link-and-rod connection with said tread-roller shaft, which in turn carries a sprocket-wheel from which motion is communicated to the machine-wheel by a suitable drive-chain, substantially as and for the purpose specified.

565,854. PROCESS OF MANUFACTURING TIRES. ROBERT COWEN, Cambridge, Mass., assignor to the Boston Woven Hose and Rubber Company, Boston, Mass. Filed Jan. 13, 1896. Serial No. 575,307. (No specimens.)

Claim.—The herein-described method of manufacturing pneumatic tires, which consists in building up an endless tube of or consisting of unvulcanized rubber, temporarily covering the tread-surface of the inflated unvulcanized tube with the fabric adapted to make fine indentations therein, covering the said tread-covering fabric temporarily in position pressing upon the said tube, vulcanizing the tube while so covered, and then removing the temporary covering to leave the completed vulcanized tube ready for use, substantially as described.

565,563. LEADERS-CARRIER. HENRY C. PHILLIPS, Rochester, N. Y., assignor to the Rochester Bicycle Combination Mfg. Co., same place. Filed Jan. 20, 1896. Serial No. 578,231. (No model.)

Claim.—In a luggage-carrier, the combination with a support, of a carrier for the leaders of the arms pivoted at their outer ends, and flexible connections between the latter, substantially as described.

565,819. UNMOUNTABLE-SPEED MECHANISM. HENRY D. WOOD, Syracuse, N. Y., assignor to Francis W. Gridley, same place. Filed Oct. 8, 1895. Serial No. 565,087. (No model.)

Claim.—In a bicycle or similar vehicle, the horizontal plate G adjustably secured to the handle-bar and having a notch G' in its rearwardly-projecting edge, in combination with the removable casing C and its attaching means C' for allowing its adjustment forward or rearward upon the frame, the spring S within the casing, the adjusting-screw D' having its head D' exposed and arranged for easily increasing or diminishing the tension of said spring, the dog D subject to the force of the spring and projecting forward from said casing to engage against the edge of the plate and engage the notch therein when the latter is presented thereon and hold the handle-bar with a slight force against turning in either direction, all substantially as herein specified.

565,572. VALVE. GEORGE B. SUTHERLAND, New York, N. Y. Filed June 18, 1895. Serial No. 551,231. (No model.)

Claim.—In a valve, a tubular member having a valve chamber at one end, a spring-chamber at the other end, an intermediate rigid annular flange separating said chambers, a conical passage through said flange, a valve-head in said valve-chamber, a stem for said head projecting at rear thereof into said passage and through said flange into said spring-chamber, and a spring in the latter actuated on said stem, said valve-chamber and spring-chamber each open at their remote ends and their respective entry of said valve-head and spring to them respectively, and closed at their adjacent ends by said flange against entry from one to the other of said parts, whereby either of said parts can be removed without freeing the other.

565,443. COUPLING FOR BICYCLES. ULYSSES S. ELLIS, Edgewater, N. J. Filed July 23, 1895. Serial No. 556,883. (No model.)

Claim.—In a coupler for bicycles, arranged side by side, longitudinally-extending bars each adapted to be attached at the ends to one of the frames at points at the front and rear, and joined by a transverse pivot adapted to allow the said bars to tilt vertically relative to each other, substantially as above and specified.

SOLID THROUGH TRAINS.

No Change of Cars of Any Class.

Entire trains consisting of baggage cars, buffet sleeping cars and elegant day coaches, lighted by gas, heated by steam and with all the modern improvements, are run between *New York* and *Chicago* every day in the year via West Shore and Nickel Plate roads. Superb dining cars west of Buffalo and coaches in charge of uniformed colored porters.

For lowest rates via this popular route apply to your nearest ticket agent, or address F. J. Moore, General Agent, Nickel Plate Road, Buffalo, N. Y. No. 16. **

Kelly Adjustable Handle-Bar.

Kelly Bars fit any bicycle, are furnished in either plain or ram's horn shape, are as firm as a solid bar when locked in any of its twenty-five different positions. Can be adjusted while riding. No change in pitch of "Grips." Any width, height or position secured. Grips move forward in the low drop position. Removing the locking screw and reversing the handles gives a Ladies' or an extremely high or low upturned bar.

Ask your dealer for the Kelly Bar. If he will not furnish it, send us Express or P. O. Order for Five Dollars and we will express bar at once.

GUARANTEE—Any bar manufactured by the Kelly Handle-Bar Co. proving defective, will be replaced at once, if expressed (prepaid) to the manufacturers.

Be particular to give size of Stem.

Mention The Wheel.

Some seek for pearls, and some do bubbles choose;
Some seek to worry folks, others to amuse.
Some live to help themselves, some their friends abuse;
Others seek in ever-act kindness to infuse.

Best through all walks of life good to extend,
Ever be in readiness to assist a friend;
Spread through life's weary way joy every day—
Kindness bestow to all—it will surely pay.

If in your daily toil you need a friend
To cure dyspepsia's curse, five cents expend.
Into some drug store go buy of the clerk
White's famous Yucatan, it will do the work.

NOTICE! CAUTION!! TO JOBBERS AND WHEEL COMPANIES:

Any wheel stand with a loop or side supports, rising approximately perpendicular from a base provided with a stop on either or both sides of the centre of the wheel, not purchased from or manufactured under our license, is an infringement upon our stands. Also, any rigid stand having upright side rods or braces extending beyond the centre of the wheel, the base of the stand being provided with lateral extending feet, by which the stand is self-supporting upon the floor. A word to the wise is sufficient.

Case-Hardening Bone.

Especially prepared from Pure Raw Bone, containing at least twenty-five per cent. more value for the use, and producing a superior color to the steel to any other stock on the market. In proof of this statement, read the testimonial letter below, influenced as it is by one year's use of our goods.

"BAY CITY, MICH., June 6, 1896.

"FITCH FERTILIZER WORKS, BAY CITY, MICH.
"Gentlemen—Replying to your inquiry of recent date, are pleased to say that the bone-dust we have been purchasing of you and using for case-hardening purposes, is giving perfect satisfaction. We appreciate the superiority of your bone-dust on account of its not having been through the refining process, which, we believe, deteriorates the value of the dust at least 25 per cent. for tempering purposes. Yours truly,
"HENRY B. SMITH, Pres't."

ADJUSTABLE

WOOD

HANDLE-BARS

Fitted with **THAT FERRULE**,
so that they **CANNOT SPLIT**.

THE ferrule is made of seamless steel bicycle tubing, 1 1/4 inches long, fitted over the wood bar at point where the handle-bar tee fastens. It therefore protects the wood from being worn by adjusting the bar. As it is compressed on the bar, it compresses and holds together the fibres of the wood so they cannot separate; consequently wood bar cannot split.

The Ferrule cannot work or wear loose, as it is also fastened by three rivets.

Our Wood Bars are made in **Oak, Hickory or Elm—YOUR CHOICE.**

PATENT APPLIED FOR.

PRICE, \$2.50.

All Handle-bars
fully guaranteed.

PATENT APPLIED FOR.

It's a Puzzle.

Have you tried it?

The Rastetter '97 Wood Rim Joint holds without glue. Glue or cement is superfluous. It is hard to find, but harder to open. Get a sample and try it.

Wood Rims.

Wood Mud and Chain Guards,

White Maple, Quartered Oak, Rock Elm, finished natural wood or stained representing mahogany, walnut, etc., or any stain; also enameled any color or to match frame of bicycle if necessary. Plain or eyeleted. Any length or width. All finished in that famous **Piano Polish**.

F. H. CAMPBELL, 72 Warren St., New York.

The "STAR BICYCLE ENAMEL" is air-drying, and produces a finish equal to Baked Enamel. As it dries dust free in very short time, it enables the rider to thoroughly and easily renovate his wheel without inconvenience or delay. Can be had in all the shades in which bicycles are decorated. Send for color card and prices.

The "CYCLE RIM PRESERVER" renovates and preserves the rims of bicycles by spreading a film over the rim, thus preventing water from entering the pores and keeping the nuts of the spokes from rusting out, and the rim from cracking. No wheelman can afford to be without it, as it prevents costly repairs.

"STAR BAKING ENAMELS" in black and colors; combining greatest elasticity with most intense lustre. Send for sample tins and prices.

TEACH YOUR CUSTOMER TO RIDE

... ON THE ...

STURGIS HOME TRAINER.

The most startling thing of its kind ever invented. You simply put your own wheel on, mount, and ride straight ahead, just as you would on path or track. No fastening or support of any kind. Very little noise. Rollers are connected, and power is transmitted by chain; steel bearings; rollers are adjustable to resistance.

What Chief Consul Steel Has to say of the STURGIS HOME TRAINER.

MICHIGAN DIVISION
LEAGUE OF AMERICAN WHEELMEN.

OFFICE OF CHIEF CONSUL.
ROBT. G. STEEL, CHIEF CONSUL.

ST. JOHNS, MICH., May 15th, 1896.

Mr. S. A. STURGIS,
St. Johns, Mich.

DEAR SIR: The Sturgis Home Trainer, which I have had the pleasure of using, is the best article of the kind I have met with in my fifteen years of cycling experience. It entirely obviates the erroneous idea of having the bicycle held in position by a standard, and is the only trainer which gives the rider the movements of actual riding, he having to balance the wheel in the same manner as if riding on the road. This feature also commends the machine as a teacher of bicycle riding, requiring as it does the same manipulations necessary in actual road work. I cannot speak too highly of your Home Trainer, and its merits should cause it to have a very large sale. Its distinctive features should be seen to be appreciated, and render it without question the best Home Trainer on the market. Wishing you the fullest measure of success, I am

Very truly yours,

ROBT. G. STEEL, Chief Consul,

THE STANLEY,

Like the great explorer, leads the way. High grade in every detail. Bearings made of Jessop tool steel, fitted with improved crank box and many other points which will interest you. We also sell the Standard Bicycle Lock and Support, and the B. & H. Trousler Guard. On **The Stanley** we control New England; on the other lines the whole country.

OF THE

CYCLING TRADE REVIEW

Copyright 1896, by F. P. FRIAL.

VOL. XVIII., No 2,

NEW YORK AND CHICAGO, AUGUST 28, 1896.

WHOLE NO. 444.

THESE HAVE GROWN WEARY.

Their Burdens Too Much to Bear and Their Carrying Placed on Other Shoulders.

Bad debts and slow collections forced the W. W. Whitten Cycle Mfg. Co., of Providence, R. I., to make an assignment late last week, in order to ward off threatening attachments. The assignee is S. T. Douglas, a Providence attorney. The indebtedness of the company is about \$50,000, and, while the nominal assets are more than that amount, it is believed they will shrink in liquidation. The concern was recently incorporated with an authorized capitalization of \$50,000; \$25,000, which represented the stock already subscribed, was the actual capital at the time of assignment. The officers of the company are: W. W. Whitten, president and treasurer; Charles H. Weld, secretary, and these officers, with Howard L. Perkins, constituted the directors. President Whitten states that they hope to effect a satisfactory settlement with all their creditors and continue business.

The Whitten Cycle Company inform their creditors that in a few days a report of their affairs will be submitted. They expect to make so good a showing that their principal creditors will permit the resuming of their business.

NOTES OF THE KNICKERBOCKERS.

A deputy sheriff is in charge of the Knickerbocker Cycle Manufacturing Company's salesroom and factory in this city, under an execution obtained by David H. De Boer, of Boston, for \$7,582 on four notes. The partners in the concern, which is not incorporated, are Mrs. Annie Levy and Mrs. Julia Miller. The firm was formed in October, 1894. Goldsmith & Doherty, who represent Mr. De Boer, said that they did not think the liabilities would exceed \$12,000, and the assets would probably be \$20,000.

DOLLAR FOR DOLLAR.

The W. B. Holton Manufacturing Company of Indianapolis, Ind., dealers in bicycles and farm implements, have assigned. The failure was brought about by the failure of an Eastern firm with which it did a large business. The assets greatly exceed the liabilities, but no figures are given. The firm says it will pay dollar for dollar.

FOR A HOTEL BOARD BILL.

An attachment has been levied on the property of the Hotel Cycle Company at Naragansett Pier. The concern rented a large rink at that place for \$1,500 for the season, and instructed the summer guests in the art of pedalling a bicycle and rented wheels.

HUSEBY TO HUGO.

Milwaukee, Wis., Aug. 24.—The Husby Cycle Company has assigned to Hugo Casper. The assets are \$5,000 and the liabilities are not known. The concern was established in this city last spring to engage in the manufacture of wooden-frame bicycles.

ONTARIO IS OUT.

Oswego, N. Y., Aug. 24.—The Oswego Tool Company made an assignment to-day. The capital stock of the company is \$25,000. Besides tools, they manufactured the Ontario bicycle. The assets are said to exceed the liabilities by many thousand dollars.

NOT PLEASANT FOR CREDITORS.

The receiver, John R. Hardin, in charge of the Liberty Cycle Company's affairs, has filed the following statement: Liabilities, \$178,895.47; assets, \$130,608.13. The assets include the Rockaway plant, \$40,000; Bridgeport plant, \$30,000.

JUST A LITTLE ONE.

Schedules in the insolvency of Julius C. Joyal, a Minneapolis dealer, show assets \$12,865.31, of which \$3,021.50 is in stock, and liabilities of \$16,128.89, of which the Andrae Cycle Company is creditor to the of \$5,783.73.

WARRANT OF INSOLVENCY.

The application made by the Quincy Cycle Company, Quincy, Mass., for a warrant of insolvency, will be heard at Dedham, Mass., on October 7.

TEMPORARY EMBARRASSMENT.

A temporary receiver has been appointed for the Lindstrom Cycle Company of Middletown, Conn. Operations will be resumed.

WITH BROWNSTONE TRIMMINGS.

A contract for the erection of the new plant of the Lozier Company at Westfield, Mass., has been given to a local contractor, and work will be begun at once. Four buildings will be put up, one four stories high, 400 feet by 50; another one story high, 226 by 60; and two others one story high, 202 by 50. They will all be of brick with brownstone trimmings.

FIGURES THAT LIED.

The A. D. Meiselbach Co., Milwaukee, state that there is no truth in the announcement made in connection with the failure of S. F. Myers & Co. last week, that the latter concern owed them \$56,000. The Myers Co. were debtors to the Meiselbach Co. to the extent of \$4,169.

UNCLE SAM AND SNELL.

The Former Says the Latter Went Abroad After Some People He Wanted.

Toledo, Aug. 17.—Action for debt was filed to-day against the Snell Cycle Fittings Company, by United States, through District-Attorney, Samuel D. Dodge, to collect a penalty of \$1,000 for violation of the alien contract labor law.

The petition sets forth that on or about September 20, 1895, defendant, through George F. Brown, its agent in England, entered into an agreement and contract in England, with one Henry W. Green, not a citizen of the United States, that Green was to work for defendant for twelve months from October 7, 1895, at the rate of £7 of English money per month. It is further set forth that defendant prepaid Green's transportation, and otherwise assisted him to come to the United States, under contract and agreement for service here, made previous to his importation, Green not being engaged as a skilled workman in a new industry not established in the United States, and not being otherwise exempt under the alien contract labor law.

Declaration is made in the petition that Green arrived on October 4, 1895, and worked twenty weeks for the defendant, under contract made in England.

ONCE MORE IN THE GAME.

Chicago, Aug. 22.—THE WHEEL of last week exclusively announced the probable continuance of the Jenkins Cycle Company under its old management, meaning, of course, a satisfactory settlement with its creditors.

On Wednesday last an important meeting of the creditors of the company was held, at which the Jenkins Company made the creditors a proposition which seemed acceptable to all present, and which in all likelihood will be satisfactory to those creditors not present. It is thus merely a matter of a few days until the signatures of all creditors to the proposition of the company are received, and then the concern will immediately resume.

The proposition is briefly as follows: A six months' note for 25 per cent. of the indebtedness, which note is personally guaranteed by Shea Smith, the wealthy stationer of Chicago, and one of the Jenkins Company stockholders; 10 per cent. of the indebtedness to be paid in nine months; 10 per cent. in eleven months, and 55 per cent. in thirteen months; these three latter payments, however, not being personally guaranteed by Mr. Smith. All the payments are to bear interest at 6 per cent.

Charles Murphy returned from Europe on Tuesday, and will begin preparing for Springfield at once. Murphy is enthusiastic over the way racing is conducted abroad.

REVOLUTIONARY.

THE POPE COMPANY SAID TO BE READY TO ABANDON THE CHAIN.

What Gearing Has Done, Can Do and May Do Toward Ridding the Bicycle of Its Unsatisfactory Propulsion by Means of the Chain.

What the Pope Company is "going to do" has always been a matter of interest to the trade. They have not always been right; no company ever is; but its general policy, its ordinary style and custom have usually been in the right direction. That direction has been distinctly forward, becoming more positive, more forcible and more far-reaching from day to day.

At this particular time more than ordinary interest attaches to the policy which that company will pursue in 1897. This interest is born of the fact that most firms are compulsorily standing still, waiting on the times, political and otherwise, and in some cases waiting on each other. Signs are being watched which will indicate the trend of things.

Now, here is a great, big wisp of straw floating on the stream. The wisp is a rumor. The rumor states that the Pope policy will be broad, vital and progressive. The rumor has not been specifically denied. THE WHEEL believes that there is considerable truth in it.

Rumor deals with three important points as regards their 1897 policy. First, that they will bring out a brand new bicycle, a bevel gear bicycle—in common parlance, a chainless bicycle. This wheel will be listed at \$100, and will be their "Columbia" leader. And outside of this radical departure they will improve their "Hartford" bicycle, still calling it the "Hartford," up to the present "Columbia" standard, but probably not at a higher price than the "Hartford" commands at present.

The rumor also includes the interesting statement that the Pope Company will practically start their motor-vehicle business. The chainless bicycle is not unknown; it is, in fact, old. It is stated that there are no ground patents on bevel gears. It is probable that the Pope company have a patented improvement, to prevent wear on the gears. Considerable light is thrown upon chainless "Safeties" in the attached article.

Any good mechanic knows that a chain and sprocket gear is far from being the most desirable form of mechanism for the transmission of power, and most riders of experience, though not versed in mechanics, may be, have had enough trouble with their chains stretching after a comparatively short usage, or rusting from dampness, to have reached the same conclusion—that the chain is the part which gives most trouble in a bicycle.

The mechanic and the rider alike, the first on account of his knowledge and the other through his experience and disagreeable sensations when the chain "rides the sprocket," as it is commonly termed, have often racked their brains with the problem of easy and effective transmission of power in a bicycle and have tried to find a suitable solution which would bring both fortune and fame to its author.

As a result of this race in the inventive field many patents have been applied for and obtained, experiments of all sorts have been made, some of them very funny and imprac-

ticable, but showing a good deal of thought on the part of the inventors. Of all the different devices tried to attain the desired result, only two have given comparative satisfaction and promise of a satisfactory solution of the problem. These are the lever-and-clutch device and the bevel-gear system.

Of the first device we have but little to say, as different applications, such as the old "Star" ordinary was equipped with, are well known to our readers, who will remember the hill-climbing matches, in which this system showed

Fig. 1.

its superiority. No progress seems to have been made in that direction, and if the lever power is to supplant all others some day, its mode of application will have to be greatly improved.

In our opinion, the most promising device developed up to the present time is the bevel gear, and, while the same may be comparatively unknown yet to most riders, those who purchased chainless mounts from the League Cycle Company, of Hartford, when the wheel was first introduced in this country in 1894, can testify to its great advantage over the

Fig. 2.

usual chain-and-sprocket gears of the common "safety."

We shall not enter into a minute and technical description of the bevel gear; neither do we intend to give in this short article a review or history of the different modes of application which an inspection of the state of the art in the Patent Office discloses. This would be very dry reading, indeed, interesting only to master mechanics and civil engineers, who are more conversant with these questions than the writer, and study carefully all patented improvements in this field as soon as published.

Fig. 3.

Our object is to give our readers a general idea of the construction of bevel gears and their merits (if well constructed).

Our illustration (Cut 1) shows that it is very neat in appearance and a decided improvement on the unsightly chain and its more unsightly chainguard, which is an absolute necessity on wheels built for ladies' use.

Next to looks comes the question of weight. We can safely say for the bevel gear that it need not weigh more than the chain-and-sprocket connection, and when our experts in

the resistance of metals give the bevel gear the attention it deserves, we can even hope to see the weight of the wheel lessened by its adoption.

One point will appeal to all riders, but more especially to ladies; it is its claim for cleanliness, for though the gears, both front and rear, can be constantly immersed in oil, insuring perfect lubrication, the mechanism is entirely inclosed, and no dirt can accumulate on the parts, or can the hands and clothing be soiled.

These three important points, i. e., appearance, weight and cleanliness being settled, we will now give a general description of the workings and construction of bevel gears and refer our readers to Cuts Nos. 1 and 2 in the illustration. Cut No. 1 shows any ordinary bevel gear applied to bicycle locomotion. Cut No. 2 shows an improved form of application, with proper devices for the necessary adjustment of gears.

A glance at either cut will show that the gearing is simple and direct. The usual crank shaft carries, instead of the ordinary large sprocket, a bevelled gear of suitable size, meshing with which is a smaller gear, the shaft of which passes either through or over the right rear fork; the rear end of this shaft carries another small gear which meshes into a corresponding gear on the rear hub, instead of the usual rear sprocket. At each end this shaft is carried on ball bearings which are arranged in such a way that wear can be taken up without affecting the meshing of the gears. The bearings for the hub and crank are of the usual form.

Once adjusted, there is seldom occasion to change, and when necessary it can be done as readily as with any simple bearing.

The chain, on the other hand, requires frequent adjustment to compensate for the stretching, which brings in its train a change of pitch and its attendant evils, roughness in running, increased friction, etc.

There is no back lash as in the chain, owing to the fact that the gear fits, whereas in the chain gear there is never a true fit between the chain and sprocket wheels. Further, the twisting strain on the rear part of the frame is entirely removed, thus admitting of light frame construction.

Being inclosed in dust-proof cases, the gears are protected from dirt, which insures long life to the wearing parts. The cases are also waterproof, so that even after exposure to a rainstorm the gears and bearings will run as freely as before. The chain, on the contrary, will leave the lubricant washed off and the rivets coated with rust, it will stick and grind, and the chain will jerk and climb the sprockets, straining the frame severely, sometimes even to the point of breaking.

To its advantages as to durability and rigidity the bevel gear adds one that can be placed ahead of all we have named for it, and that is lightness of running. With bevel gears properly cut, the friction is much less than with chains, as there is no sliding friction between the teeth of the gears, while the chain, when improperly lubricated, will grate, crackle and waste power, in order to reduce which constant attention is necessary. The bevel gear, owing to its accuracy of form, will run together with perfect ease under the

heaviest pressure, even when dry, and will insure quiet and smooth action.

In a word, the bevel gear will prove a boon to the rider and all those who do not claim to know it all and who do not think that they are either making or riding "the only wheel." They will hail its coming with joy. For it is coming, sure. Already a large concern in France makes chainless wheels exclusively and successfully. A firm in New Jersey has recently completed arrangements to resuscitate the chainless made by the Hartford concern, and on top of it all comes the rumor that the Pope Manufacturing Company will place a chainless bicycle on the market next year. HARDY.

QUEER THINGS THEY DO.

British aristocracy and "sasslety" have taken very kindly to the bicycle of late, but, of course, in doing so it would be too much to expect them to be satisfied with the sport obtained from the wheel by plebeians, consequently the following has been evolved to afford an afternoon's amusement for the aristocrats:

Ladies nominate a gentleman member of the club. He has to ride the lady's bicycle around the track, dismount, put the lady on the wheel and start her off to finish the race once more around the track.

Rider goes once around the track, dismounts and has to pick up with the mouth an apple floating in a basin of water, then continue the race once more around. Apple must not be touched by the hands, and must be kept inside the mouth until passing the judge.

Rider after going once around the track must dismount and write a letter, having no less than ten words in the body of it, inclose it in an envelope, address it to the judge, ride again around the track and deliver it. The neatness and correctness of the letter will count in awarding the prize.

Rider after going once around the track must dismount and break a pipe held in an Aunt Sally face by throwing sticks at it in the usual manner; after this continue the race once more around.

Rider armed with a single stick must go once around the track and cut right and left at Turks' heads mounted on posts. The one who succeeds in cutting off all the heads and riding first, wins.

Two Turks' heads will be placed on the track fifty yards apart, and midway between a ring will be swung. Each competitor will be provided with a lance, when he will have to cut off one head, pass the lance through the ring, carrying it with him, and cut off the other head. The most successful competitor in three chances wins.

Competitors must ride around the track, dismount at a table and trim a hat—trimmings, hat, etc., being supplied, then mount and carry the trimmed hat around the track with him. No competitor must stay longer than ten minutes at the table. Neatness counts.

Each competitor will wear a coat with two side pockets and will ride around the track, dismount at a table and sew up each of the two pockets. The test of a well-sewn pocket will be that the judge will be unable to pass a shilling into it.

INVESTIGATING A FIRE.

The fire in the building occupied by the Decker Cycle Company is being investigated by a deputy fire marshal, owing to the peculiar features which surround it. It is stated that there are good grounds to believe that the fire was of an incendiary nature. The damage to the machinery and stock on the two floors occupied by the Decker Cycle Company will be not less than \$6,000. The value of the plant has been estimated variously, some figures being \$10,000, and on this stock and machinery there was an insurance of \$9,000.

FALSE COMPARISONS.

There is no more reason for a dealer to sell a bicycle on the installment plan than a stove or a lawn mower.—(Stoves and Hardware Reporter.)

Certainly there isn't—provided stoves and lawn mowers cost those who purchase them from \$75 to \$100 each, otherwise the comparison is not a fair one.

CATCH-JAW PRINCIPLE.

On the mechanical theory that a shaft with a hole running through the centre is stronger than when the shaft is solid, the Waterbury (Conn.) Wrench Company are making a line of wrenches which should become popular. They are made on the catch-jaw principle, requiring no thumb screws, affording quick adjustment, and a firm grip. The material is the toughest and best steel obtainable,

with a coat of hard steel on the outside, secured by case-hardening the whole wrench in rawbone dust. The wrenches are so light and compact that they can be easily carried in a vest pocket. Two models are manufactured, A and B. The latter is fitted with a thumb screw for fine adjustment. The wrenches are made in two sizes, $4\frac{1}{2}$ and 5 inches. The World Mfg. Co., 80-82 Reade street, New York, are general agents.

ON BOARD THE ARROW.

A delightful entertainment will be furnished the representatives of the bicycling press after the Springfield meet is over by Messrs. Oliver, Straus & Co., of Park Row, New York. Their yacht, the Arrow, has become familiar to most of their friends as a spacious, handsome and comfortable boat, not the least of its good points being the perennial and translucent hospitality, ever flowing, ever sparkling—or, at least, sparkling a good part of the time. All of this will be placed at the disposal of the representatives of the bicycling press after the Springfield meet, the programme being a three days' trip on Long Island Sound. Ned Oliver will be on hand with a full stock of suavity, while Mr. Straus will hold the attention of the party with his unfailing good nature, frequently alternated with sensibility and anecdote.

NO CHAINS HERE.

THE WHEEL'S English correspondent has this to say regarding the possibilities of the chainless wheel:

I believe that I am right in saying that the next big boom here will be the formation of a company to manufacture the chainless rear-driven bicycle, on which Rivierre won the Bol d'Or, twenty hours, and virtually won the Bordeaux-Paris race. I give herewith a diagram of the gear, which is almost self-explanatory.

A is the ordinary crank bracket cogwheel, bevel-toothed to engage with the bevel cog B. C is the hallow shaft leading between the cogs B and D. The shaft works on ball bearings fitted to the ordinary backstay. I have at present a machine so fitted on trial, and will in my next letter give my opinion of it. Such performances at Rivierre's could not have been done on a poor machine, so I am prepared to find it a good thing.

ROTARY VERSUS RECIPROCAL MOTION.

All the trouble between the world and cycling was that up to a few years ago, the new method of locomotion was looked upon as a joke, a passing fad and a nuisance, whereas any one with sufficient intelligence should have seen that it was not going to be a mere passing amusement like croquet or lawn tennis or any of the countless games which grandmothers remember, or remember to have heard their grandmothers tell about, but it was a new power given to the human machine which, once acquired, can never be surrendered.

Any one who knows anything of machinery knows that whenever rotary motion is substituted for reciprocating motion a permanent improvement has been achieved from which there is no going back. In the early printing presses, for instance, the power was in all the motions applied direct. Rotary motion first took the place of reciprocating motion when the ink pad gave way to the ink roller. Next, the paper, instead of being laid flat upon the type, was carried over it on the surface of a cylinder, making possible the use of steam power in printing, a tremendous step in advance. The last revolutionary change in printing machinery was the placing of the type also on a cylinder. The paper is now also folded by rotary action.

A man's legs are a very good method of motion, but the time has never been when the suggestion of motion by wheel has not been in the human mind, and some see the rudiments of that suggestion in man's walking apparatus. The time when man would move by wheel has long been looked forward to. It is not the generation which invents any apparatus that gets the greatest good from it. A generation which should grow up without being able to walk would never make much of a success at walking. So it will be only the generation which grows up on the wheel which will begin to know its possibilities as a mode of locomotion.

THEY MEANT WELL.

Printers sometimes play queer pranks with their editors write. In a recent article in a daily paper treating of a cycle tea at Newport, and, of course, paying especial attention to the wheelwomen's costumes, the following examples of compositors' perversity were in evidence:

"Mrs. B. wore nothing in the nature of a wheel dress that was peculiar," was transformed into "Mrs. B. wore nothing in the nature of a wheel dress. That was peculiar."

"To be effective the skirt should be displayed," ran the line further down the column, but the "k" in skirt got transformed to "h," making it "shirt," and thus greatly altered the sense.

AUSTRIA AGAINST THE SCORCHER.

Austria has joined the rapidly increasing throng of protesters against the brainless rider and his brakeless wheel. An Austrian magistrate in fining a scorcher defined what constitutes reckless riding. He declared that "the cyclist must always keep his machine under control, and possess so much skill and such mechanical appliances that in a moment of danger he can instantly bring the machine to a standstill or dismount."

In the second case a magistrate announced that in future any rider who, in passing through the streets of Vienna, should lift both hands from the handle-bar, would ipso facto commit an offence.

If the scorcher believes in appropriate costuming for his deadly work, surely a blazer should find a prominent place in his wardrobe.

MAKERS
OF **B**USINESS
ICYCLES
GRAND RAPIDS CYCLE CO.
MICH.

Kindly mention The Wheel.

MR. DEALER,

You might be interested in New Clippers if you knew our prices and methods of doing business. Clippers are sold at honest profits to the **trade only**. No better wheels are made in any factory at any price. When you buy and sell Clippers, you are sure of getting the worth of your money. You may be sure that the price quoted you is as low as the class of goods we make can be made and sold for. You may be sure that our Spring quotations are right and will remain the same until the season is closed. New Clippers are made right, sold right, and our business methods are as near right as years of experience and "horse sense" can make them.

We want **responsible** dealers where we're not represented.

GRAND RAPIDS, MICH.

BALDWIN CHAIN ON TOP

AT LOUISVILLE.

There Are Good Judges of a Smooth-Running Chain.

COOPER wins—

One-Quarter Mile National Championship.
One Third Mile National Championship.
Two-Mile National Championship.
Five-Mile National Championship.

BALD wins—

(With a record at Buffalo in One-Mile Open, 2.01 4-5).

TOM BUTLER wins—

One-Half Mile Championship.
One-Mile Championship.
One-Mile Open.

Phil J. Bornwasser, Championship of Louisville; Nat Butler, W. C. Sanger, John S. Johnson, McDonald, J. W. Parsons, Australian Champion; Kennedy, J. Eaton, Otto Ziegler, L. Callahan, P. Bliss, C. Baker, and Janney.

If you want to be in good company ride the BALDWIN. It is the smoothest running and most correct chain made. Superior in quality of material; new in design. Send for circulars and samples.

BALDWIN ADJUSTABLE CYCLE CHAIN CO.,

Kindly mention The Wheel.

WORCESTER, MASS., U. S. A.

Copyright, 1896, by F. P. Priol.

PUBLISHED EVERY FRIDAY.

Notice to Advertisers.

WHEEL ADVERTISERS are notified that change of advertisements is not guaranteed, unless copy is received by Saturday morning.

IT COVERS THE FIELD.

THE WHEEL is anxious to open up other than home markets for the American bicycle trade. With that object in view, we are able to announce that THE WHEEL now has a permanent circulation in

ALL FOREIGN COUNTRIES.

This is in line with the policy inaugurated at the foundation of THE WHEEL AND CYCLING TRADE REVIEW, and which has been rigidly adhered to ever since. The spirit of that policy is that the publisher of a business paper cannot do *too much* for his advertisers. THE WHEEL is now reaching the responsible American bicycle exporters in the city of New York. Also a selected number of foreign buyers resident in the principal cities throughout Europe. Also the leading bicycle manufacturers of Great Britain and throughout Europe. Also the leading bicycle agencies in the following countries:

England,	Italy,	France,
Switzerland,	Germany,	Austria,
Denmark,	Hungary,	Norway,
Roumania,	Sweden,	Turkey,
Holland,	Greece,	Belgium,
Russia,	Spain,	Servia,
Portugal,	Poland,	Finland,
New S. Wales,	Jamaica,	Victoria,
Bahama Islands,	New Zealand,	Cuba,
Queensland,	British Guiana,	Tasmania,
India,	S. Australia,	Burma,
W. Australia,	Cape Colony,	Ceylon,
Straits Settlements,	Natal,	Java,

Griguland, West, Japan, China,
Transvaal, Barbados, Egypt,
Trinidad, Algiers, Antigua,
Mexico.

THE WHEEL intends to familiarize the cycling trade of all countries with American product, whether in the raw state or manufactured. It is certain that the newspapers in the various countries will not *exert* themselves to eulogize American goods. THE WHEEL believes that the merchants in those countries are more than anxious to negotiate for American product, and that they will, either personally or by means of interpretation, familiarize themselves and get posted on Yankee "stuff" and Yankee "notions."

PASSING OF THE CHAIN.

IS it here? Has the long-expected break in the "safety" line arrived? Is the ten years' reign of the rear-driven bicycle to be overturned? Rumor says that it is.

Rumor says that a company which has always been allotted a foremost—if not the foremost—place in the trade will produce a bevel-gear bicycle, or, in common parlance, a chainless bicycle, as its leading wheel for the season of 1897. Rumor further adds that this wheel is to be listed and sold at the standard price of \$100.

The growth of cycling has been one of marvellous interest. It has been a revelation in the world of mechanics. First, there was the old hobby-horse of 1820, pushed along the ground by sheer limb motion. Then, after forty years, a Frenchman enabled us to fly by affixing pedals, and we had the "bone-shaker." Then, ten years later, an Englishman produced a "safety" bicycle, then called, in the vernacular, "the goat." But the "goat" did not oust the graceful "ordinary," which had been the evolved type of the "bone-shaker," or tall nose-breaker bicycle. The poor "goat" lay dormant for ten years, when it came out at an English cycling show, in a commercial way, and attracted universal attention. This was in the early '80's. Its influence grew slowly but surely, and the "ordinary" died the death. When the air tire was added, it was all over; the "Safety" was King, and the light, racing types are the acme of mechanical strength, skill and delicacy.

But the point of perfection is the jumping-off place. And the point was reached when the ceaseless mechanical mind at once began its search for new worlds to conquer. The impression of the general public was, and is, that after the "Safety" there was nothing left but the airship, and the aerial navigator has been watched with expectant intensity. Progress in the line of air navigation is, however, as slow as the problem is difficult and as the achievement will be wonderful. Hence, we are compelled to grope along a few more steps before some wonder-mind will spurn the earth and master space. So, to repeat, rumor says we have come to a new departure in the way

of earth-travelling and cyclolution. The chainless "safety" is not new, but rather some years old. It has not made way because of some imperfections. No device was found to obviate the wear of the bevel gear. Chainless wheels were found birdlike when first put to use, but after the wear-and-tear process set in they were worse than worthless.

It is stated that the device of the chainless "safety" is a wide-open patent. It must also be presumed that the company whom it is rumored will make the new chainless "safety" must have patented, or bought patents, which obviate the wearing process. The opinion of all mechanical men is that the chainless "Safety" is the logical evolution of the "Safety" bicycle. The chain is a sad power-waster, and a perfect bevel gear would drive it out of the market. At the same time, there is no definite ground for believing that the chain "Safety" is, so to speak, drawing its last breath.

One of our important firms took up the elliptical sprocket wheel, which was a wide-heralded, world-beating device—in fact, it set our trade by the ears for a period of at least two weeks. And all because a rider had negotiated a mile in 1:53—something on a wheel so equipped. The truth of the matter was that the rider was, for the first time in cycling history, properly paced. We have since seen what wonders have come from proper pace-making. Again, an influential firm was temporarily demented on the Boudard gear. We know not the Boudard now.

However, away with brain-wearying speculation and fruitless cogitation. The great man will arrive home on Friday, and we shall then know more—or less.

RAILROADS WANT MORE LAW.

WE are told, in a proverb, that there are many ways of killing a cat; in the case we intend to bring up to illustrate the truth of this "old saw" the cat is the touring cyclist, and the executioner is this, that or the other railroad.

Some railroads handle wheelmen with politeness and dispatch; they are careful, accommodating and altogether decent, and their baggage-masters do not glare and their baggage-smashers do not swear. The New York Central Railroad is very nice in this respect; so is the Pennsylvania. We suspect that a number of the Pennsylvania baggagemen are bicycle riders, and that is, without doubt, responsible for their care in handling wheels and for their politeness in handling cyclist-passengers.

We have our baggage bill on the statute book of New York State, and it is a very good bill in most respects; but, like many other things, there are exceptions in which it works harm. That, however, is not now the question. THE WHEEL wants to bring prominently and pointedly to the attention of the proper people—that is, the League authorities of New York State, of New Jersey, and perhaps of many other States in which the lesson will be found applicable—the outrageous manner in

which cyclists and cycles are handled by many railroads.

Two beautiful examples of highly developed railway annoyance are furnished by the Long Island Railroad and the Erie Railroad. On the Long Island Railroad, after much signature and red tape, your wheel is placed in the car. Suppose, say after a bright, brief holiday, you are coming back to Long Island City, perhaps on a crowded Sunday night train. When you arrive at the depot you are not permitted to handle or to obtain your bicycle until all the people have left the train, after which the baggage-car is drawn out into the shed, and, after a delay which sometimes extends to over an hour, and after much perplexity and perspiration, and perhaps oath-taking, you are, by the gracious permission of the Baggage Agent, permitted to depart, not in peace, but in disgust.

The Erie Railway Company, because it is without the jurisdiction of the New York State Baggage law, have, with much forethought and ingenuity, perfected a system which commands admiration. Suppose you are leaving Port Jervis on your way to New York. At Port Jervis you may check your wheel to New York. The baggagemen take charge of it for you. At the ferryhouse you will see the baggagemen bundle your wheel on to a truck. It is laid flat, and upon it are piled, perhaps, a score of other bicycles. Cyclometers and lamps are not considered; rat-traps rub shoulders with tires; lanterns are pushed against spokes, and there is a general air of destructivity to the whole pile. After this truck is jolted on to the ferryboat and jolted about at the New York end, you will, after much trouble and difficulty, be permitted to resume your role as a cyclist. The men handle the wheels apparently with malice. It seems as though they were instructed to be as careless as possible; an observer could draw no other conclusion. But you can avoid all this on a trip from Port Jervis to New York by the payment of a forty-five cent fee. At Port Jervis you can check your wheel to Jersey City, paying one-half cent a mile for it. You may then look after your wheel, handle it, fondle it, be with it and take care of it, and at Jersey City you can quickly depart without any provocation for unseemly but justifiable expletive and explosion.

The handling of bicycles is not now a transparent problem. The railroads can handle wheels easily and well if they would only half try. The handling of a wheel as compared with the management of a trunk is a mere fraction, from the standpoints of room and of labor. The wheelman is only too anxious to be on hand at the proper point to take care of his property. He should be allowed to assist the railroad in the discharge of its duties, because he does no harm, but, rather, much good.

The abuse, use and annoyance which are noted on the Long Island Railroad and on the Erie Railroad are also found in connection with many other lines. THE WHEEL hopes that the authorities of the New York State Division will take this matter up and secure to League

members, and to cyclists in general, sensible and decent treatment. The authorities of New Jersey, who were the first to promote a system of good country roads, will surely not be behind their fellow-workers in the Empire State in diminishing railroad discomfort.

EDUCATION MUCH NEEDED.

If a manufacturer ventures to express the opinion that the triumph of silver in November will close his factory he is accused of uttering a threat to intimidate such voters as he employs into voting to support the policy that he favors. Those whose shibboleth is ever and anon "Sixteen to one," look upon the mere utterances of manufacturers as actual attempts at bulldozing, and talk of passion and prejudice and intolerance as though these are the besetting sins of manufacturers who believe in maintaining the existing standard.

We believe that if a thorough investigation could be made it would be found that cycle manufacturers are, as a class, singularly free from the disposition to politically oppress those whom they employ. Exceptions may be found, but they are not known to us. Manufacturers have too many other troubles to overcome to risk the development of serious misunderstandings with their workmen by interfering with their political tendencies or prejudices.

Despite all of this, we believe for the best interests of both the manufacturer and the man he gives employment and wages to, that every factory at this time should become an educational institute, to instruct every workman as to what he may expect if free coinage wins, so he may intelligently vote for his own welfare, which, despite all demagogues to the contrary, is invariably for the best interests of his employer. No loophole should be left in this campaign for any man to say after it is over that he would have voted differently had he thoroughly understood what he was voting for or against.

CONSIDERED AS A LUXURY.

Many of those who have argued that the bicycle is a luxury, and its purchase, in consequence, a positive injury to the legitimate industries of the country, do not know that in advancing such a theory they are only really telling what a benefit the great increase of bicycles has been to the country at large.

Political economists have declared that nine-tenths of the industry of a civilized country is employed in creating not the necessities but the luxuries of life. A community, which should be content with being merely fed, clothed, warmed and sheltered, would have use only for the simplest and least skilled forms of labor. The agriculturist would supply it with food, the handloom weaver could make its clothing, the woodcutter or the miner could furnish it with fuel, and very rude carpentry and mason work could build its dwellings.

To some fantastic theorists this is an ideal-

ly perfect state of society, and semi-civilized Mexico, where the laborer has no clothing but a blanket, sleeps on the ground in the open air, and lives upon corncakes and beans, has been held up by some silverite fanatics as enjoying an enviable prosperity, and they are the theorists who look upon the cycle as an interloper in the family of trade, and the bicycle as a luxury.

Some one has come forward to prove that the bicycle is an aid to crime. It enables the criminal to escape with speed and leaves no track behind. This is one of the disadvantages of the progress of civilization. But for the knife there would be no cutting affrays, and but for the revolver not as many shootings. And as it takes a thief to catch a thief, so it takes an officer on a bicycle to catch the criminal wheelman. And maybe the machine will be more useful to justice than to crime.

If there were less wheels there would be less people travelling far from home. If there were no railroads wheelmen would wheel "out and back" not "out" and back by train. Wheelmen are feeders to railroads. They are a new class of business. When will all the roads grasp that fact and compete for "cycling business" by pursuing a policy of fair and decent treatment?

The wheel took a holiday to join in the sport and recreation of men, but the yoke of business is upon it and it cannot escape the bondage. It took the race untold ages to capture the magic circle and harness it to human need, and it is too precious for man to give it a long tether.

"Push and principle are good paving stones for the pathway of prosperity," remarks a contemporary. They are intelligent ones. They will push the cycle trade traveller, once started on them, along at a constantly increasing momentum.

The general restriction of credits by manufacturers and all other credit-giving establishments should be a timely warning to the retailer and agent to pursue the same tactics with their customers.

Perverted vitality becomes hysteria. The woman who rides a wheel judiciously employs her vitality in such a manner as to avoid all hysterical danger.

In dull times there is nothing like going ahead. There is nothing like confidence; nothing like enterprise. One is doubly paid for them.

Self-reliance, self-restraint and self-control are all requisite before a rider can claim perfect control of the machine ridden.

The easiest thing in racing is not to become a speedy amateur.

Experience is the shroud of cycling's illusions.

We are all sound wheel men.

THE LADDER CLIMBERS.

After the storm the calm; after Louisville comes the let down preparatory to the crucial and final tests of speedmaking at Springfield. The ladder shows this in the present week, changes among the ladderites are merely nominal, the climbers reserving their final efforts for Springfield, where many of them are already quartered doing preparatory work.

Points are based upon the racer's wins on the National Circuit only. A win counts three points, a second two points, and a third one point. The present ladder shows the men as they have climbed up to and including the meet at Rochester, N. Y., on August 22.

HIS BLUFF FAILED.

There was a rather exciting scene in the office of Chairman Gideon of the Racing Board one day last week. Charles Hadfield, who, as newspaper readers are aware, leaped into publicity by not winning the last Irvington-Millbura race after finishing first, walked into the office and began arguing over the way he was being treated by the Racing Board. Instead of answering the questions which had been put to him by the chairman, he became abusive and finally threatened violence. It is stated that he was only restrained from striking the ruler of the racing fraternity by the interference of a friend who was present. Gideon was tempted to teach the excitable one a thing or two in the manly art, being for five or six years the champion amateur boxer of a Philadelphia athletic club, but restrained himself, and threatened to send for a policeman. Hadfield, however, calmed down and withdrew.

The next day O. P. Bunnell, the race promoter, interceded for Hadfield. The latter was willing to apologize, and the chairman was willing to accept it. Satisfactory explanations followed, and Hadfield was given permission to ride as a pro.

ONCE MORE THE DUKE.

It has leaked out that F. D. Cabanne, whose suspension is to be raised on August 31, will jump right into harness and race at the Springfield meet on September 1. This is pretty rapid work, and those on the inside are already speculating how the swarthy St. Louis speed merchant will fare among his erstwhile competitors, to say nothing of the many promising newcomers in the game. A season's absence from the game means much to one who studies the tactics and manners of the other men. On the other hand, the long rest must prove beneficial, and a big advantage over those who have endured the wear and tear of a hard campaign.

ROBERT STANDS FIRM.

From St. Louis comes the news that the local Cycle Board of Trade passed a set of resolutions asking Douglas W. Robert, member of the Racing Board, to resign his office. The cause of the action is said to be that crackjacks refused to enter for the diamond tournament to-morrow because Robert was in charge of the tournament. Robert's friends deny this, and say the cracks demanded from \$50 to \$100 for their appearance, which the Associated Cycling Clubs refused to pay. Robert, it is stated, will neither resign nor pay any attention to the resolutions.

HUNDREDS ALLOWED.

The following records have been allowed by the Century Road Club of America:

S. M. Warns, Frederick, Baltimore, 47.27 miles, 3:23, June 21.

R. E. Osborne, Colorado Springs, Denver, round trip, 150 miles, 12:55, June 28.

P. Carlton Wright, 100 miles, 5:22:30, August 9, Colorado record.

ALSO RANS.

The following are the men on the National Circuit whose wins have been sufficient to score for them ten points and over: Coulter 27; McFarland, 20; Tom Butler, 19; Parker, 17; Clark, 16; Becker, 13; W. Coburn, 13; Ailen, 11; Mertens, 11; Baker, 11; Kimbel, 10.

EVERYTHING TO BE FREE.

Admission to the races at the Pennsylvania Division's meet, at Pittsburg, is to be entirely free. The events will be contested on the third day of the meet—September 12—on the half-mile track at Schenley Park. There are seats at the track for over 25,000 people. It is expected that from forty thousand to fifty thousand spectators will be present. Governor Hastings and other executive officers have promised to attend.

The first day's programme is in the hands of the Allegheny cyclers, and will include short runs to points of interest in the morning, a lunch at the Cyclers' clubhouse at noon, the annual twenty-five-mile road race of the Cyclers in the afternoon, and a big lantern parade in the evening. The second day's programme will be in charge of the Pittsburg clubs, and will include several short runs, a lunch at the Keystone Club house, and theatre parties in the evening. A steamboat excursion and dance, after the races, will complete the third day's programme.

JUSTICE WHERE JUSTICE IS DUE.

The circulation of a story among racing men that it was peculiar that no check had been forthcoming from the Palmer Tire Co. for the benefit of the widow of Joseph Griebler, the racing man who was killed at Lima, Ohio, who rode Palmer tires, has brought out the following statement from the company: "The Palmer Tire Company sent Mrs. Griebler a check for \$100 the day following the sad accident, but we had too much respect for Joe and his family to parade our gift before the public. Besides, it was purely a personal matter between Mrs. Griebler and ourselves, and we see no reason why the public should bother about it. Griebler, however, was not in our employ at the time, his contract having been abrogated some days previous in order to give the Davis Sewing Machine Company, whose wheel he rode, full control of him."

HATCHED, THEN KILLED.

A story was hatched in Philadelphia last last week to the effect that a number of manufacturers had combined to take the control of racing from the L. A. W. A. G. Spalding & Bros. were mentioned as one of the firms interested in the movement, but they deny all connection with any such body and approve the present management under Chairman Gideon.

JOHNSON'S GOOD KNIGHT.

It is reported from Philadelphia that John S. Johnson was quietly married in Louisville last week. The bride was Miss Knight, of that city. Johnson is in Philadelphia, where he rode on Wednesday night, and will again appear at Tioga to-morrow. His wife is with him. Parsons, the Australian, is also in the Quaker City.

GREAT RACING TEAM.

It is currently reported that next year the Pope Manufacturing Company will again take up racing and put out the fastest professional team that money can secure. It is also stated that the Butler brothers have been offered liberal terms to join the team.

E. E. Anderson was booked to make another attempt to ride a mile a minute paced by a locomotive on Sunday last. The attempt, however, was postponed until September 6.

Jack Prince has sold his stock in the Nashville, Tenn., Coliseum, and is to manage a Southern racing circuit.

SOME NEW ENGLISH FIGURES.

The Bath Road Club's 100-mile race for the Kops Cup on the Catford track, London, August 8, resulted practically in a match between Frost and Palmer. Eleven men started, but they were quickly left far behind. Frost got the lead, and at one time gained a lap on Palmer. This was recovered, and at 93 miles Palmer broke away and won easily. All English records were cut from 10 miles, and the world's figures, held by Huret, the French professional, were lowered from 58 to 100 miles. Palmer's time for the 100 was 3:37:57 4-5. The hour distances were: One hour, 29 miles 120 yards; two hours, 57 miles 375 yards; three hours, 83 miles, 245 yards. The new figures are:

Miles.	H.M.S.	Leader.
20.....	0:41:09 1-5.....	Frost
25.....	0:51:33 4-5.....	Frost

GOLD-PLATED MESSAGE.

"The Great Journal-Examiner Transcontinental Bicycle Relay Race," from San Francisco to New-York, started on Tuesday. The riders will carry a message from General Graham to General Nelson A. Miles and a letter from the postmaster of San Francisco to the postmaster of New-York. The messages will be enclosed in a leathern pouch of soft pliable material, ten inches in length and four in width. On either side will be placed wide bands, which will be passed over the riders' hands in order that it may be carried in plain sight. The gold-plated war message and the letter to Postmaster Dayton will be encased in waterproof material and placed in a sealed compartment, while in another will be a record of signatures of postmasters and notables en route. Among the latter it has been arranged that William J. Bryan and William McKinley attest to the passage of the packet. In most of the States the Governors will attest the work of the riders, and in the larger cities the Mayors will perform a like duty. The route arranged covers 3,385 miles.

BUNNY TO BE IN CHARGE.

The Union Traction Company, of Philadelphia, has built a new third-mile track at Willow Grove, near that city. It has been built and banked according to scientific principles, and is expected to prove as fast as any in the country. It will be opened for speed trials on September 4.

A chain of arc lights will surround the course, and, with the unusual facilities at hand, a flood of light can be had, and the electrician at the Grove is authority for the statement that objects will be as clearly discernible as at daylight.

On Labor Day, September 7, a second series of trials will be run at 3 p. m., and, if necessary, finals will be decided in the evening. On both these days admission to the grandstand will be free. O. S. Bunnell will have charge of the events.

STRUCK A SNAG.

J. McCulla was forced to abandon his second attempt to cut the Chicago-New-York record at Silver Creek, near Buffalo, where he sustained a severe fall. He left Chicago at 3 a. m. on Tuesday of last week and had covered 568 miles in sixty-four hours up to the time he stopped.

IN THE HOME OF THE SNOW SHOES.

Simcoe, Can., Aug. 24.—Two Canadian championships were decided last week—the twenty-five-mile professional and twenty-five-mile amateur. The former event was run off at Chatham, and Harley Davidson, of the Brantford team, had no trouble in winning in 1:01:26, at the same time annexing a new record for the distance. With better pacing the time would have been at least five minutes faster.

The amateur championship was held at Simcoe, and Ralph Axton, the eighteen-year-old wonder, from the little town of Paris, Ont., won out in a driving finish from R. O'Blayne and John Davidson. It was an exciting contest all the way through, and at the twelve miles they were within three seconds of the record, but the pacing failed for a couple of miles, and they fell away

Fred W. Loughhead, the Canadian Crack.

about fifty seconds. A great deal of this was made up, but the time—1:06:02 1-5—was seventeen seconds slower than the record held by John Wills. Frank Moore, who was looked upon as a probable winner, fell in the third mile and was out of it. Davidson, Axton and McEachren also had bad falls, but continued in the race and pluckily held on until they caught the bunch.

O'Blayne and Axton, who have been riding one and two and two and one all season, are matched for a mile race in heats, best two in three, at Brantford this week.

T. B. McCarthy won the ten-mile professional championship in 28:08 3-5 at London. McCarthy is a peculiar rider. He never rounds into form until the season is nearly over, then he goes out and beats all of them. This year it was the same, and he has been winning right and left ever since.

At Simcoe he and McLeod hitched up on a tandem, and went out and won the two-mile event, beating the two crack Gendron teams, who have won numerous races this season.

The two Macs will likely leave this week to join the American circuit-chasers, when they will ride singly and as a tandem team.

Harley Davidson has gone stale, and will take his brother John, the amateur, up to Muskoka, where the two will enjoy a rest. John will come back refreshed for the last championship race of the season.

After September 1 various cracks will make an onslaught on the time records. O'Blayne will likely go after the amateur times on the Simcoe track.

The Canadian Wheelmen's Association has a membership of 8,400, nearly three thousand better than last year's list.

C. W. A. mile boards are being put up throughout the country on all the principal roads.

Dr. Doolittle, ex-president of the C. W. A., is in England trying to dispose of a patent bicycle brake which he invented.

The Evans & Dodge wheel, with its patent bearing, has made a name for itself this year and the firm is now preparing for next year's business. Their output will be 3,000 wheels, and the price \$100. This year the wheels sold for \$115. The bicycle is manufactured in Windsor by the Canadian Typograph Company, which also make typesetting machines.

FOR HAYSEED'S AMUSEMENT.

Farmers' Day at Woodbury, N. J., August 20, attracted about 5,000 excursionists to the town, about all of whom attended the cycle races in the afternoon. The track was in poor condition, but the close finishes worked the grangers up to a high pitch of excitement. James McGrath won the novice in 2:57 1/2 and the Gloucester County championship in 2:50. The Camden County championship went to George Van Hest in 2:54, while G. B. Baynes became champion of Salem County, by riding a mile in 2:55. He also won the tri-county championship in 2:53 and the two-mile handicap from 20 yards in 6:00.

"REDDY" DID A THIRD.

At the Kansas Division's meet at Salina August 22, Vesper, Bren and Hunt, the Kansas City triplet team, lowered the one-third mile track record from 39 seconds to 37 2-5 seconds. "Reddy" Maxwell did a one-third mile in 38 3-5 seconds, lowering the record from 39 4-5 seconds. John Lawson, of Chicago, rode a mile, flying start, in two minutes flat.

OUT IN THE ORCHARD.

A series of races were run at Orchard Park, N. Y., August 22, on the road. J. Schwartz, 3 minutes, won the twelve miles handicap in 34:52 1/2; A. Pilkey, Buffalo, 2 minutes, the six miles handicap in 17:00, and the three miles handicap in 8:32 from the 130 mark. The half-mile handicap went to M. Cornwall, Buffalo, 20 yards.

Jay Eaton, of Elizabeth, N. J., defeated A. L. Parsons, the Australian crack rider, in a match race at Nashville on Saturday for a purse of \$150, mile heats, best two in three. Eaton won in straight heats in 2:14 3-5 and 2:16 4-5.

The Martin Junior ten-miles road race for boys, run at Buffalo on August 22, brought out forty starters and 1,000 spectators. N. Daul, 3/4 minutes, won the race in 26:55. The time prize went to E. C. Haynes, scratch, 26:15.

GOOD THINGS ABOUT COLUMBIAS.

A Few Extracts from Letters Received by the
Pope Manufacturing Company—Ten
Years on a Columbia.

"I have cycled twenty years, ten on a Columbia, and most satisfactorily. I ride a Columbia now." R. L. Arrington, Washington, D. C.

Exceeded Expectations.
"The Columbia Model 41, bought from you last winter, through the Rev. E. F. Frease, of Baroda, has exceeded all my highest expectations. I have ridden various English wheels during the last twelve years, but have never had anything that can compare with my Columbia." G. W. Park, M. E. Mission, Ahmedabad, India.

Columbia Ahead.
"From every post and station, East, West, North and South, comes the information that the Columbia is ahead." Otto Mueck, Governor's Island, N. Y.

Only One Make For Him.
"I don't see how any person after seeing the Columbia bicycle, and then seeing any other make of bicycle, can buy any other but a Columbia." Jas. A. Speed, Newfields, N. F.

In Her Element.
"On our Texas roads a Columbia is in her element." M. Hargrave, Brownwood, Texas.

The Finest Wheel.
"Please accept my thanks for so promptly sending the ladies' Columbia to Long Branch. It is quite the finest wheel in this section, which is overrun with thousands of all kinds." Arthur E. Hearne, New York City.

Broadword Contest Successfully Fought.
"Three cheers for the Columbia; the only wheel on which a broadword contest can be successfully fought." Col. N. P. Hartmann, Brooklyn, N. Y.

The Best Made.
"No one need fear to purchase a Columbia if he wants the best wheel made, and wants the wheel backed by the best company in existence." Allen C. Sanders, Minneapolis, Minn.

King of Kings.
"I have been royally treated by your company and your wheel, which I have ridden many thousand miles. The Columbia is King of Kings." F. E. Maine, M. D., Auburn, N. Y.

To Bicycle Manufacturers.
Hartford, Conn., Aug. 20, 1896.
UNITED STATES PATENT OFFICE.
Pope Manufacturing Company, of Hartford, Conn.

TRADEMARK FOR BICYCLES AND
THEIR PARTS.
Statement and declaration of trademark,
No. 27,192, registered Nov. 5, 1895. Ap-
plication filed Aug. 16, 1895.

STATEMENT.
To All Whom It May Concern:
Be it known that the Pope Manufacturing Company, a corporate body duly organized under the laws of the State of Maine, and located and having a place of business at Hartford, in the county of Hartford, and the State of Connecticut, has adopted for its use a trademark for bicycles and parts thereof, of which the following is a full, clear and exact specification:

The trademark of said company consists of the arbitrary symbol comprising the representation of a substantially circular band or frame having a central open portion crossed by a band, said symbol being displayed on a background of contrasting color or tint. The several words, letters and numbers which may appear on the figure form no material part of the mark, but may be varied at will, and the figure itself may be displayed

in any color or colors on which the words and phrases may appear in contrasting colors.

The class of merchandise to which this trademark is appropriated is vehicles and

parts thereof, and the particular description of goods comprised in such class on which it is used by said company is bicycles and component parts entering into the construction of said vehicles.

The mark has also been used by printing in advertisements, in circulars, and in catalogues a pictorial representation of the mark in use, and its use is further contemplated as a watermark on letter paper, billheads, and the like, and displayed on various articles of manufacture as an advertisement.

Essential feature: A symbol comprising a representation of a substantially circular band or frame having a central portion crossed by a band, said symbol being displayed on a background of contrasting color or tint. Used since November 1, 1894.

POPE MANUFACTURING COMPANY.

By Arthur E. Pattison, Secretary.

Manufacturers in preparing their name-plates for 1897 will please be governed accordingly.

POPE MANUFACTURING COMPANY.

STANDARD OF THE WORLD

Seventeen Branch Houses and Stock Companies
under our direct control are located as follows:

BRANCH HOUSES

200 Boylston Street, Boston, Mass.	19 Grand River Avenue, Detroit, Mich.
12 Warren Street, New York	124 Mathewson Street, Providence, R. I.
291 Wabash Avenue, Chicago	452 Pennsylvania Ave., N. W., Washington
609 Main Street, Buffalo, N. Y.	817 Pine Street, St. Louis, Mo.
32 East Avenue, Rochester, N. Y.	1757-59 St. Charles Avenue, New Orleans
420 Fifth Avenue, Pittsburg, Pa.	344 Post Street, San Francisco

STOCK COMPANIES

Metropolitan Bicycling Co., Boulevard and 60th Street, New York
Brooklyn Cycle Co., 555 Fulton Street and 1239-41 Fulton Street, Brooklyn, N. Y.
Hart Cycle Co., 816 Arch Street, Philadelphia, Pa.
Eisenbrandt Cycle Co., 311 East Baltimore Street, Baltimore, Md.
Gano Cycle Co., Denver, Col.

At each of the above addresses a complete repair shop is maintained, in charge of men trained in scientific bicycle repairing, and thus agents and riders can have quick attention for needed repairs, except nickelling—free if under our guarantee, at reasonable prices otherwise; prompt, satisfactory service either way.

No accounts can be opened for repairs. Send enough cash to cover the probable cost; if too much, the surplus will be promptly returned. Or estimates will be cheerfully given.

POPE MANUFACTURING CO.,
HARTFORD, CONN.

Stephens & Hickok, Los Angeles, Cal.; Habighorst & Co., Portland, Ore.; and McDonald & Wilson, Toronto, Ont.; are also equipped for general repair work and authorized to protect our guarantee.

OWED TO JERSEY.

Good Roads, Their Extension and Preservation—Hudson County Boulevard as a Sample.

The red-roaded State of New Jersey, although it has been the subject of much humor among travelling comedians, especially when they "show" in New York, is much treasured by the cyclist. It was New Jersey which first gave America a decent system of country roads, and many other States have since fol-

lowed her example. For more than a decade past Orange has been the paradise of metropolitan wheelmen. In fact, in the early days the only ridable road systems were to be found in and about Boston and in the Orange riding district, and these two centres—the one a great commercial metropolis and the other a section of quiet and stately homes—may be regarded as the kindergarten of cycle riding. It was Orange which first taught the Jerseyman the advantage of good roads, so that today a wheelman may tour in comfort through almost any part of the State. There are few touring cyclists who are not acquainted with

the mountainous and picturesque northern part of the State, with the well-roaded central part and with that series of roads which skirts the river and ocean and which extends from Matawan away down below Asbury. The Boulevard was opened on Thanksgiving Day last, since which time it has much increased in popularity. Immediately after leaving the Guttenberg district it leads through Hoboken, Jersey City Heights, Greenville, Bayonne and down to Bergen Point. The upper section of the Boulevard passes through a country which has always been distinctively German, and the German suburbane may be studied there in all his simplicity. The entire Boulevard furnishes ample

lowed her example. For more than a decade past Orange has been the paradise of metropolitan wheelmen. In fact, in the early days the only ridable road systems were to be found in and about Boston and in the Orange riding district, and these two centres—the one a great commercial metropolis and the other a section of quiet and stately homes—may be regarded as the kindergarten of cycle riding. It was Orange which first taught the Jerseyman the advantage of good roads, so that today a wheelman may tour in comfort through almost any part of the State. There are few touring cyclists who are not acquainted with

The latest contribution of this State toward the comfort of the rider was the construction of the Hudson County Boulevard, a twelve-mile stretch of undulating macadam road, starting at Guttenberg, on the west bank of the Hudson River, and terminating at the Kill von Kull. The map shows the exact location of this popular stretch. The Boulevard is reached by New York riders over the Fort Lee ferry, over the West Shore ferry, landing at Weehawken. The Boulevard is but a few blocks back from the river. It may also be reached by Brooklyn and "downtown" New York riders over the Cortlandt street ferry. But that way is a four-mile stretch of much cobble and more vexation, and is attended with more discomf than pleasure.

accommodation for hungry and thirsty wheelmen. Perhaps the two most notable places are Salter's Inn at Forty-ninth street, and the Shore House, at the terminus of the road. The Salters place is a fine, modern hotel, handsomely decorated and conveniently constructed, surrounded by a pleasure grove. This grove runs down to Newark Bay, and rowing, bathing, swinging and the like are to be indulged in there. On Sunday afternoons it is the resort of the Salvation Army, who

the student of nature, either human or otherwise. There are no lofty hills, no thick forests, nor is there any cosmopolitanism or metropolitanism. There is no high life, no swell life. The pleasure vehicles which are

erected a palatial mansion, and near him some other prosperous people have erected houses somewhat in keeping with the "big"

On Newark Bay—Foot of Thirty-first Street.

home. At two points only is there any particular beauty to the student of nature. One is the brief glimpse of the Morris and Essex Canal, and the road is so generally dull that when this spot is reached the rider turns to it with pleasure and relief. Again, the groves near Bayonne, through which are shown the sparkling waters of the bay, make a handsome and graceful picture, while, as stated above, the Shore House at the end of the road makes an agreeable terminal. At several points where the road is highest the great stretch of marshy meadow, ending seven miles beyond in gradually rising hills, looks not unlike some huge basin.

add not a little to the excitement and picturesqueness of the place. The Shore House, situated on the Kill von Kull, must be visited to be appreciated. It is built out over the water, the service is excellent, and no pleasanter lounging place can be imagined.

The Boulevard is a plainish sort of road. There is not much on it or lining it to attract

driven over it are of the most modest kind, and are entirely devoid of swagger. The horses are good sound, honest animals, but not stylish; that is, if we except a few natty animals who are the special pets of sporting men with whom horseflesh is a habit. The houses mostly are wooden structures, except at one point, where a prosperous banker has

The Boulevard is now much used by cyclists en route for Staten Island. Immediately below the Shore House the ferry affords a five-minute transport across to the Staten Island shore, to Port Richmond, from which place Tottenville or New Dorp can be reached. Two favorite routes of New York wheelmen

are as follows: Boulevard to Bergen Point, across to Port Richmond and directly across Staten Island to New Dorp, by the shore road to St. George's, and across by ferry back to New York. This road across Staten Island is of macadam, brand new, and passes through agreeable country. The other road is along the Kill von Kull and down to Tottenville. This is a new road that has not yet been much favored by wheelmen. There is about a mile of it yet to be completed, otherwise it is of the finest macadam.

The Boulevard is bound to grow in favor. The expense of building it is as yet too freshly born to allow of further expenditure. Later on, however, it will be beautified, and when its trees obtain their proper growth a finer stretch will not be found near Gotham.

WILL PAINT THINGS CRIMSON.

Farwell, Osmun, Kirk & Co., of St. Paul, Minn., Northwestern distributing agents for the Syracuse Cycle Company, are making great preparations for the big State Fair to be held August 31 to September 5 inclusive. The annual encampment of the G. A. R. will be held at this time also.

The bicycle entertainment for the "Carnival" week, as it will be known, is under the management of James Wirtensohn, manager of the Syracuse Cycle Company's Minneapolis agency.

Tuesday evening, September 1, has been set aside especially for the bicycle parade. The central part of the city will be reserved exclusively for cyclists that evening. A race-course on Nicollet avenue is roped off and a big detail of police will see that the crowd does not trespass on the space allotted to the riders.

The first event of the evening will be a parade of lady cyclists. It will be a masked affair. Three minutes after the ladies' procession has passed it will be followed by a second; the riders, however, will be men. The flower parade will follow, all wheels participating being decorated with Nature's ornaments.

The parade of floats on bicycles will be one of the big features of the evening. The Syracuse quad, quintet and sextet respectively are on their way to St. Paul, where they will be used in connection with this parade and the week's events.

ONE CLASS ONLY.

A Pittsburg student of the racing question has relieved his feelings by saying that as long as there were amateur and professional riders there would be trouble between the L. A. W. and the manufacturers. In this gentleman's opinion, the only thing to harmonize bicycle racing was to have classes, the same as in horse races, and put the topnotchers in the fast class and have different limits down to the amateur that's just beginning to ride. He said this would eventually come. He thought it may be a year or two, but it's the only solution of the question.

GOOD THING FOR EVERYBODY.

The bicycle has offered to the great majority of citizens a means of athletic exercise and open-air enjoyment, for which they need not be especially equipped by nature. Man and woman, weak and strong, dwarf and 300-pounder—all sorts and conditions of men—can and do learn to ride, and with comparatively small perseverance become proficient for all practical purposes as the most endowed athlete of them all. This is the true secret of the bicycle's firm hold on the public, and here is its greatest value.

A London dispatch announces that on August 22, at Woodgreen, Halsey rode 151 miles 70 yards in six hours, establishing a new record.

RIDING TO THE PEOPLE.

At the Republican headquarters in Washington the suggestion has been made and favorably received that a corps of men be employed to go through the States of Michigan, Indiana, Illinois, Iowa, Nebraska and Kansas on wheels, ostensibly on tours of pleasure, but really for the purpose of getting close to the people on the silver question.

The suggestion is made that 500 or 1,000 men could in this way get at an average of ten voters each day, ascertain just what the people are thinking about, and what arguments are necessary to convince them of the ruinous effect of free silver. These wheelmen would, of course, be men who can talk sound money with all they meet, and they could be supplied with literature to distribute as they went along. They would stop over night at farm-houses, and thus have an opportunity to talk on familiar terms with their heads.

HE GOT INFLATED.

"Phwativer is wrong wid yer goat, Mrs. Dooley? Yisterday he wor th' thinnest goat on th' hill, an' to-day he looks loike a balloon riddy t' floy, so he does."

"Och, the poor thing. He bruk inter a boy-sickle shebang forminst, and chewed up a lot of thim circulars—filled as they wor wid advertisements of roomatic tires and pumps for thim. Ye see th' effect! Pat do be after sayin' he'll never git well again till he do be poonctured, phwativer that may be; I dunno."

There are real amateurs yet. Italy proves this in the person of one Tariolato, who, while he races for money, turns the amount of his winnings over to charity. So far this year Tariolato has thus given away \$2,000.

In comparison to their total output of tires, Morgan & Wright state that their free repair department at the Chicago factory has a small proportion of work.

It is said that one of the causes of Linton's untimely death was that he was in the habit of taking arsenic to sustain him in his long races.

ELECTRICITY AND THE PACERS' CINCH.

Weinig says the electric pacing machine, which is now finding favor on French racing tracks, is an ordinary tandem-rigged with an electric motor and compact storage battery. The motor weighs about twenty pounds and generates two-horse power. The motor turns at a speed of 3,000 revolutions a minute, but the problem of gearing it down in its attachment to the axle has been successfully accomplished. The motor is able to drive the machine without aid from the riders, but pedals are provided as in regular tandem, for the wheel is found to run much more steadily with them.

The front rider steers, as in ordinary tandem-riding, while the rear one regulates the speed and acts as engineer. The storage battery at present in use is able to carry the machine at a speed of over forty miles an hour for about an hour and a half without a change.

The inventors devised the machine expressly to pace contestants in time contests and long road races. In France the cost of hiring pacers in the professional races is very considerable, and twenty-four-hour contests became so extremely expensive to the management as to threaten the abandonment of this form of racing. The electric tandem is estimated to cut down the expense about half.

This pacing machine has been so successful that French cycle manufacturers are looking forward to the construction of a storage motor in the near future that may be fastened to an ordinary single, and will give effective help in climbing hills.

WHEELMEN USED TO TUMBLES.

A curious legal decision has been given by the Civil Court at Algiers. A wheelman while riding slowly was upset and injured through a dog rushing at him. He thereupon brought suit against the owner of the animal, demanding 50 francs compensation for damage incurred by himself and his bicycle. The court's decision runs as follows: "Seeing that dogs are admittedly animated by hatred toward cyclists, and naturally delight in pursuing them; that, at a time when cycling is so much in vogue, it is nevertheless necessary that these animals should, like everybody else, accustom themselves to that method of locomotion; that cyclists are indeed included among the passengers protected against dogs by the Penal Code; that, on the other hand, those who cycle are naturally accustomed to accidents, and that the sum claimed as indemnity on this head by the plaintiff is exaggerated. For these reasons the court orders the defendant to pay the plaintiff the sum of 25 francs for damage to the machine, and the sum of one franc as compensation to the plaintiff for the inconvenience caused him by his fall."

SHIFTED THE BANKING.

Hard-luck stories are interesting only when they contain some new allegations. Judged by this standard here is one telling why Johnson did not win abroad which certainly is the most charming innovation of the season.

It is said that the Frenchman had some of the tracks fixed in such a way as to be able to raise and lower the banking at will, and then when their own countrymen went around the turn they left the banking where it should be, and when Johnson sought to make the turn they raised it until, instead of slanting outward, the banking really slanted inward, so steep did these wily foreigners make it.

There is no longer any wonder at Johnson's not winning under these conditions; the wonder is that he is alive to tell why he failed.

NOW THE ICEMAN.

He Goes in for Racing and Beats the Game—An Off Day for Cracker-Jacks.

Rochester, N. Y., Aug. 22.—This city has been the scene of any number of big meets in the past, but in none of them have surprises ruled so completely as to-day. All the favorites, the stars of the circuit, were completely turned down, and for once local men secured the big purses. The meet, promoted by the Lakewood Wheelmen, attracted all the circuit chasers excepting Bald, Ziegler and Sanger, but none of them, barring Gardiner, got near the finish.

The attendance was about 3,000, the day grand for racing, the track in miserable shape, but the sport was of the finest order. The mile open went to Williamson, a Niagara Falls iceman, who stepped into the professional ranks at Erie.

Williamson is a game rider. At Erie he took a handicap, at Medina another handicap and a close second to MacDonald, and to-day's mile open places another feather in his cap. Williamson was hard pushed by little Pye Bliss, the veteran Chicago man, and big Randall, a local man of ability, was a good third, the three defeating Tom Butler, who ran fourth. It was big Randall who won the quarter-mile rather easily in a game ride outside the bunch, defeating such men as Tom Butler, Cooper and Gardiner. Helfert, another new man on the circuit, took the handicap. Thus the three races of the day went to men who have not been circuit chasers, and who did not go through the hot week at Louisville.

In the mile open race final Kennedy, Randall, Butler, Bliss, Mayo, Helfert, Williamson, Newhouse, Rigby, Gardiner, Davis and Bowler faced the starter in order named from the pole. William Hamilton, the mile record holder, paced the contest. Williamson, Bliss, Randall and Gardiner caught positions in the order named. Tom Butler was fifth in line. Although the field bunched at the quarter, the finish was in the order with which the pacemaker had been followed. Pye Bliss pushed Williamson to within a foot at the tape and big Randall, a length behind, was yet an open length ahead of Tom Butler, the Boston boy, who so recently played ducks and drakes with Bald, Cooper, Sanger and all the stars. The time was 2:11 2-5, splendid time for the track in its condition.

The quarter-mile had easily the best field of the day, with MacDonald, Randall, Cooper, Tom Butler, Kennedy, Jenny, Stevens, Gardiner, Mosher and Newhouse up. Gardiner jumped at the outset, gaining the lead and leading down the stretch, with MacDonald on his rear. Randall went around outside, being slow to get away, and down the stretch gained the pole around the head of the bunch, coming in a winner by a length over MacDonald, who was a foot ahead of Gardiner, with an open length between Gardiner and Tom Butler. Cooper was sixth in the bunch. Twenty-five men swept down the stretch in the two-mile handicap at times twelve abreast. In the confusion of the finish Helfert, Allen, Kennedy and Wells were placed in order, but many gave Wells the third position; Zimbrich, a local amateur, almost as large as Randall, was hard pushed in the amateur ranks by Fisher and Trappe, but bore away the honors of the day. In the amateur two-mile handicap W. O'Leary fell and broke his collarbone. The summaries:

Mile novice—1, M. J. Dewitt, Rochester; 2, Fred Breu; 3, D. H. Tiffany, Rochester. Time, 2:34 4-5.
Mile open, amateur—1, A. M. Zimbrich, Rochester; 2, F. L. Trippie, Syracuse; 3, F. W. Fisher, Syracuse. Time, 2:39 4-5. Tandem pace.
Quarter-mile, open, professional—1, Randall; 2,

MacDonald; 3, Gardiner; 4, Tom Butler. Time, 32 4-5 seconds.

Two-mile handicap, amateur—1, A. B. Gochler (scratch); 2, H. B. Stevens (25 yards); 3, M. J. Dewitt (50 yards). Time, 4:46 3-5.

One-mile open, professional—1, Williamson, Niagara Falls; 2, Bliss, Chicago; 3, Randall, Rochester; 4, Tom Butler, Boston. Time, 2:11 4-5. Single pace.

Quarter-mile, open, amateur—1, Zimbrich; 2, Fisher; 3, H. L. Conolly. Time, 32 seconds.

Two-mile handicap, professional—1, W. J. Helfert (50 yards); 2, F. H. Allen (40 yards); 3, A. D. Kennedy (20 yards); 4, C. S. Wells (100 yards). Time, 4:38 3-5.

One-mile, Monroe County championship—1, Zimbrich; 2, J. Rice. Time, 2:10.

BUTLER OUTGENERALS BALD.

Erie, Penn., Aug. 18.—Good generalship resulted in Butler again showing Bald the way across the tape in the mile open at the National Circuit meet to-day. Butler gained the lead of the bunch in the next to the last lap on the small five-lap track and held his position gamely, winning out by half a length. Bald fought hard, but could not take down that half length lead. The track was slow, rain falling during the running of the heats of the mile open. The crowd filled the grandstands and crowded over the track. Good racing was seen, but the time was slow, the track being heavy and dangerous. Butler was scratch man in the handicap mile, and caught his field handily, but failed to go round the field in time to get the front on the last lap. Summaries:

Mile open, professional—Final heat—1, Tom Butler; 2, Bald; 3, Rigby. Time—2:24 2-5.

Mile open—1, J. F. Higgins, Buffalo; 2, Julius Hampel, Erie; 3, Harry B. Wood, Cleveland. Time—2:33.

Mile handicap, professional—1, Becker, Minneapolis, (50 yards); 2, Foell, Buffalo, (200); 3, Wells, San Francisco, (50). Time—2:31 1-5.

One-mile lap race, professional—1, Tom Butler, 4 points; 2, Kennedy, 9 points; 3, Starbuck, 5 points. Time—2:32 1-5.

One-mile handicap—1, J. F. Higgins (50 yards); 2, J. J. Dukelow (90); 3, C. H. Whitley (110); 4, B. C. Irons (100). Time—2:38 4-5.

KENNEDY OUTPRINTS BUTLER.

Saratoga, N. Y., Aug. 25.—Tom Butler was taken into camp by A. D. Kennedy, the Chicagoan, at the National circuit meet at Woodlawn Oval to-day. His victory was in the half-mile open. A representative field started with Butler at the pole, followed by Rigby, Mertens, Kennedy, Callahan, Maya, Bliss, Mosher, Hoyt and Wells. Hamilton paced.

Butler caught the position back of pacemaker, but was forced back again and again by the riders jumping past the pacemaker and falling back. Kennedy had his rear wheel as he started round the bunch at the head of the homestretch, and Rigby caught the line and followed. Down the stretch Kennedy began the sprint and Butler accepted the challenge. As they crossed the tape an open length separated Butler and Rigby, who had beaten Kennedy in the finishing twenty yards. The mile open went to Becker, who won by a foot from MacFarland, of California. Stevens won the third of a mile from MacDonald by inches only, the New York rider finishing wide of the bunch. Zeigler failed to qualify in either race, and Gardiner failed by one place in the half mile, and was eched out of his place by poor judging in his heat of the mile.

Two miles, handicap, professional—1, Becker, (140 yards); 2, Macfarland (180); 3, James Bowler (200). Time—4:30. Gardiner (scratch), time, 4:30.

Mile, open, professional—1, Tom Butler; 2, Rigby; 3, Kennedy. Time—2:13.

Half-mile, open, professional—1, Kennedy, Chicago; 2, Tom Butler; 3, Orland Stevens. Time—1:42 1-5.

Mile, open, amateur—1, O. H. Munro; 2, O. C. Tuttle; 3, A. M. Zimbrich. Time—2:10 2-5.

Half-mile, open, amateur—1, A. M. Zimbrich; 2, O. H. Munro; 3, A. J. Latham. Time—1:35 1-5.
Two miles, handicap, amateur—1, O. H. Munro (15 yards); 2, A. M. Zimbrich (scratch); 3, A. O. Lee (80). Time—4:56 2-5.

BOVEE WAS GREAT.

He Astonished Them at the Island—Ziegler Shows His Old Form—Williamson Disqualified.

Binghamton, N. Y., Aug. 24.—The formal dedication of the new Island track at Binghamton took place this afternoon, with the professional and amateur meet given by the Binghamton Athletic Association. The meet was a success in point of attendance, and the racing that was put up was of the highest order. One world's record went by the board—the amateur two-thirds mile—which was ridden by Earl Bovee, a Binghamton youngster, in 1:25, breaking MacFarland's amateur record of 1:25 1-5, and tying Cooper's professional record of 1:25. Bovee rode his race from seventh position back of the pacing tandem, and came to the tape in a game finish with G. E. Tunncliffe, of Richfield Springs, beating him half a wheel length. The city championship also went to Bovee, with two lengths to spare. At the conclusion of the programme, and just after a particularly hard mile handicap, he rode an exhibition half in 1 minute, with indifferent pacing. The amateur mile handicap went to Tunncliffe, who was pushed to the tape by G. L. Wilson and H. B. Ketchum, and who won from the 40-yard mark in 2:14 1-5.

In the professional events Ziegler and A. D. Kennedy, Jr., carried off the honors in two good races—the mile open and the two-mile handicap. Ziegler's win in the mile was a creditable performance, the Californian getting the worst of his start, and rounding into the stretch just as MacDonald all but had the game in his own hands. Ziegler trailed MacFarland at the rear of the bunch until half a lap after the bell, but the last sixth was a fine bit of whirlwind sprinting. He nipped MacDonald ten yards from the tape and won by half a length. Rigby had MacDonald's wheel in, with Allen trailing him, but the judges gave their decision to Mertens, who was clearly two places out of the money. Hamilton paced, single, in 2:11 2-5.

In the handicap Kennedy won his heat from the 20-yard mark, and took the final by inches only from Otto Maya. Kennedy led into the stretch, and had a sure thing for first when Williamson came up at his right and crowded him off the track and into the grass. The Chicagoan got back in time to head off Maya, winning in 4:38 2-5. Rigby again took third and Williamson fourth. The latter was disqualified for foul riding without protest, and Callahan given his place, with Helfert taking fifth money. Jenney fell in the fifth lap, and Gardiner and Ziegler, who had both qualified from scratch, dropped out in the fourth. Summary:

Two-thirds mile—First heat—1, Earl Bovee, Binghamton; 2, G. E. Tunncliffe, Richfield Springs; 3, A. P. Diffenderfer, Binghamton; 4, George W. Thorne, Binghamton. Time, 1:31 4-5.
Second heat—1, J. G. S. Scoville, Binghamton; 2, Brownell Bulky, Cortland; 3, F. W. Fisher, Syracuse; 4, Isaac Van Etten, Oneonta. Time, 1:33.
Final—1, Bovee; 2, Tunncliffe; 3, Thorne; 4, Diffenderfer. Time, 1:25 (amateur world's record). Paced by Jackson and Hume, tandem.

Mile, open, professional—First heat—1, Allen; 2, Ziegler; 3, Mertens. Time, 2:23 4-5.
Second heat—1, MacFarland. Time, 2:30.
Third heat—1, MacDonald. Time, 2:26 4-5.
Fourth heat—Rigby. Time, 2:41.
Mile handicap—1, Kennedy; 2, MacDonald; 3, Rigby; 4, Allen. Time, 2:31 2-5. Paced by Hamilton, single. Also finished, Mertens and MacFarland.

Two-mile handicap, professional—Final heat—1, Kennedy (20 yards); 2, Maya, (100 yards); 3, Rigby (50 yards); 4, Callahan (50 yards); 5, Helfert (50 yards). Time, 4:38 2-5. Also finished, in order named: Kimble, Mertens, Baker, Farland and Mosher. Williamson took fourth, but was disqualified for foul riding. Jenney fell. Gardiner and Ziegler, scratch men, quit.

Mile handicap, amateur—First heat—Tunncliffe, F. S. Trappe, Syracuse; Bulky; Ketchum and G. L. Wilson, Erie. Also qualified in 2:30 4-5. Second heat—W. J. Jones, Binghamton; M. E. Kinne, Richfield Springs; Bovee, C. H. Cory, Binghamton; and Ziegler, Ithaca, qualified in 2:15. Final—1, Tunncliffe (40 yards); 2, Wilson (50 yards); 3, Ketchum (110 yards); 4, King (100 yards). Time, 2:14 1-5.

HIDE-AND-SEEK RACING.

Racing by lamplight and the aid of the moon was inaugurated in New-York on Wednesday evening last, at Olympia Park. The promoting body known as the Metropolitan Racing Association, it is stated, is a nom de plume, so to speak, for several New-York newspaper men and League officials who are behind the scenes of the enterprise. Tickets were distributed freely, as a bait for future events, and a good crowd of spectators watched the local cracks flash by the spluttering gasolene lights. It was a semi-weld and sensational event. The men rode like demons at times, but were discernible from the grandstand only when within the radius of a light. Then they would disappear as though by magic and flash into view again at the next light. On the backstretch they were wrapped in misty gloom. Peanuts and circus lemonade were hawked among the spectators, and when a negro won a race which the judges gave to a contestant on the Caucasian race they set up a howl that awoke every policeman within seven blocks.

Although the officials needed flashlights and dark lanterns to pick out the winners, the grandstand crowd were of keener discernment, and nothing could convince them that the colored rider had not been robbed, but he was just as pleased with the second prize as the first. In the mile open Ripley, Rooome and Henshaw went down in a spill, but they all remounted and finished. The races are to be continued weekly while the moon lasts.

Summary:

Half-mile novice—Final heat: 1, Ralph B. Behrman, M. W.; 2, James McDonough, city; 3, James Maney, city. Time, 1:17 4-5. Joseph Blauqui finished third, but he was disqualified.

Half-mile handicap—Final heat: 1, William Pirung, Y. W. (60 yards); 2, William H. Turner (60 yards); 3, Charles J. Leibold, K. A. C. (20 yards). Time, 1:12 3-5.

One-mile open—Final heat: 1, Walter C. Rooome, N. J. A. C.; 2, Bert Ripley, T. C. C.; 3, C. S. Henshaw, R. W. Time, 2:51 1-5.

One-mile handicap—Final heat: 1, Walter C. Rooome (scratch); 2, W. B. Sibley, S. B. W. (70 yards); 3, G. J. Leibold (30 yards). Time, 2:34 1-5.

GOTHAMITES GOT THERE.

Albany, N. Y., Aug. 22.—Another entirely successful meet was run at the Ridgefield grounds to-day, this time under the management of the Albany Bicycle Club. A strong wind prevented fast time. An unsuccessful attempt was made to lower the half-mile track record of 58 seconds by Walter Piccaver, by E. J. Clark, of Flushing. A number of New York and Long Island riders scooped in several of the prizes. A high wheel race was a feature that attracted a deal of interest. Summaries:

Mile, Novice—1, Charles Weyrich, Albany; 2, Albert S. Raven, Yonkers. Time—2:42 2-5.

Half-Mile, Open—1, O. H. Munroe, Cohoes; 2, W. A. Barbeau, New York. Time—1:17.

Six Counties Championship, One Mile—1, A. J. Latham, Albany; 2, O. H. Munroe, Cohoes. Time—2:13.

Mile, 2:50 Class—1, Robert J. McMahon, Long Island City; 2, F. H. Judd, Jr., Flushing. Time—2:20 3-5.

Mile, Open—1, W. A. Barbeau, New York; 2, E. J. Clarke, Flushing. Time—2:17 3-5.

Two-thirds Mile, State Championship—1, O. C. Tuttle, Rome; 2, A. J. Latham, Albany. Time—1:32 4-5.

Mile, Open, Ordinary (High Wheel)—1, R. H. Robe, Albany; 2, M. J. Higgins, Albany. Time—2:45.

Mile, Handicap, Open—1, R. J. McMahon; 2, C. B. McCorkle, Troy. Time—2:16 3-5.

Mile, Tandem, Open—1, W. A. Barbeau and C. S. Henshaw, Riverside W.; 2, George Wilson and George E. Stoddard, Utica. Time—2:12.

PURELY LOCAL, BUT DREW.

Although the meet of the Penn Wheelmen, at Tioga, Philadelphia, on Saturday, was purely local and the weather threatening, fully 2,000 spectators were in attendance. The track was in poor condition and spills were numerous. In the Fairhill Wheelmen's two-mile handicap about thirty riders started. At the mile, when the men were well bunched, one of the leaders fell and all but a half dozen of the contestants piled over him. Most of them remounted and continued the race. Hadfield again rode as a professional and won the mile handicap from 75 yards. He sprinted the entire last lap and won by yards. The professional events were well divided, Carroll Jack taking the mile scratch and J. M. Baldwin the five-mile handicap. Paced by a tandem, E. T. Walters cut the track record for a third to 39 seconds.

Summary:

Mile, Novice—1, A. Remer; 2, Van Sam. Time—2:50 4-5.

Mile, Open—1, C. H. Krick; 2, C. H. Henzel; 3, P. S. Davis; 4, J. E. Lindley. Time—2:21 4-5.

Mile, Open, Professional—1, C. B. Jack; 2, C. C. Bowers; 3, W. R. Landis; 4, J. M. Baldwin. Time—2:19 4-5.

Mile, Handicap—1, S. E. Stulzman (110 yards); 2, J. A. Veriner (50 yards); 3, J. A. Shomo (70 yards); 4, B. E. Stevens (scratch). Time—2:14 1-5.

Mile, Handicap, Professional—1, Charley Hadfield (75 yards); 2, W. A. Rulon (45 yards); 3, Charles Turville (80 yards). Time—2:09 4-5.

Five Mile, Handicap, Professional—1, J. M. Baldwin (100 yards); 2, Charles Turville (250 yards); 3, W. A. Rulon (150 yards); 4, C. Bowers. Time—12:37.

WHILE THE MOON LOOKED ON.

Another successful night meet was run at Wilmington, August 20. Nearly 2,000 spectators were present. The professional events were the feature of the evening. Church was the favorite, and he had a good hold on the five-mile event, when he punctured his tire and had to drop out. E. C. Goodley and J. H. Minnick had an easy time in the five-mile amateur event. They had such a big handicap, caught the other riders on the tenth trip around, and won by a lap. Summary:

One-mile novice—1, Morris Thompson, Wilmington; 2, Robert Palmer, Wilmington; 3, J. A. Knight, Wilmington. Time—2:44 2-5.

Half-mile handicap—1, W. E. Dickerson, Palmyra, N. J., 15 yards; 2, E. C. Goodley, Wilmington, 30; 3, Frank Turner, Wilmington. Time—1:07 3-5.

Five-mile handicap, professional—1, Charles A. Church, Chester, Pa., scratch; 2, Clarence Bowers, Riverton, N. J., 50 yards; 3, C. B. Jack, Philadelphia, 40; 4, W. R. Landis, Philadelphia, 45. Time—2:29 3-5.

One-mile open—1, W. R. Goodley, Wilmington; 2, Frank Turner, Wilmington; 3, Robert Weir, Wilmington. Time—2:52 2-5.

Five-mile handicap, professional—1, Clarence Bowers, Riverton, N. J., 225 yards; 2, W. R. Landis, Philadelphia, 200; 3, John L. Clark, Wilmington, 325; 4, H. E. Barthelme, Lewsburg, Pa., 200. Time—12:41 2-5.

Five-mile handicap, amateur—1, E. C. Goodley, Wilmington, 200 yards; 2, J. H. Minnick, Wilmington, 200; 3, W. E. Dickerson, Palmyra, N. J., 75; 4, Joshua Lindley, Philadelphia, scratch. Time—12:45.

RAIN HAD NO EFFECT.

Providence, Aug. 22.—Crescent Park was the scene of the Rhode Island Division's annual field day to-day. It rained in the morning, but the sun broke out at noon, and fully 5,000 spectators, the largest crowd of the season, witnessed the sport.

In the mile State championship, Horace B. Hills, who has held the championship for the last four years, went down in a bad spill, and Frederick Devlin, of Pawtucket, won the coveted honor in a close finish with Joseph Bowden, of Providence.

C. R. Newton, the Connecticut champion; A. S. Fuller and E. A. McDuffee, could not ride, as notice had been received of their transfer to the professional ranks.

Frederick Devlin reduced the State one-half mile paced record to 56 2-5 seconds. The previous record was 57 4-5 seconds. The summary:

Mile, 3:00 Class—1, William Sullivan, Providence; 2, W. H. Murray, Providence; 3, G. Cruickshank, Providence. Time, 3:09 1-5.

Mile, State Championship—1, Fred Devlin, Pawtucket; 2, Joseph Bowden, Providence. Time, 2:23.

Mile, Tandem—1, G. Plintiff and J. B. Fowler, Waltham; 2, H. D. Merritt and Hans Hanson, Pawtucket. Time, 2:19 2-5.

Mile, Open—1, John S. Johnson, Worcester; 2, D. M. Marston, Boston; 3, D. Dooley, Taunton. Time, 2:19 1-5.

Mile, Handicap—1, G. Plintiff; 2, D. M. Marston, Boston; 3, William Sullivan, Pawtucket. Time, 2:18 1-5.

HERO OF THE INTERCOLLEGIATE AGAIN.

Washington, D. C., Aug. 22.—Fred Schade, the crack intercollegiate rider, took the honors in the amateur events at the Arlington Wheelmen's meet to-day. Besides winning the mile open, he finished second in the mile handicap from scratch, and rode an exhibition mile, poorly paced, in 2:08. Harry Maddox and E. F. Miller divided honors in the professional events. The weather was threatening, but the attendance was large. Summary:

One-mile novice—1, H. R. Thompson; 2, W. H. Hickey; 3, C. W. Burnham. Time—2:46.

One-mile tandem—1, Harry C. Greer and George E. Smith; 2, H. Wright and W. G. Le Compte. Time—2:23.

One-mile open—1, Fred Schade; 2, W. F. Sims; 3, W. G. Le Compte. Time—2:22.

One-mile open (professional)—1, Edwin Miller, Philadelphia; 2, William Phelps, Baltimore; 3, Harry Maddox, Asbury Park. Time—2:41 2-5.

One-mile handicap—1, Lewis R. Smith (60 yards); 2, Fred Schade (scratch); 3, George E. Smith (85 yards). Time—2:18.

One-mile club team championship of the District of Columbia—Arlington Wheelmen, 12 points, won; Washington Road Club, 9 points, second. Time—3:16.

Two-mile handicap (professional)—1, Harry Maddox (15 yards); 2, Edwin Miller (75 yards); 3, J. F. Starbuck (0 yards); 4, Jack White (135 yards); 5, Charles Church (scratch). Time—4:52.

FLOCKED IN THE RAIN.

Exeter, N. H., Aug. 22.—To-day was what is known as Wheelmen's Day. Thousands of visitors flocked to the town, but rain marred the parade and coasting contest that were to have been held in the morning.

In the ten-mile road race this afternoon Heber Brown, of Raymond, finished first in 28:55, with 4 minutes handicap.

F. A. Sawyer, of Haverhill, won the first time prize in 27:47.

The following are the results of the track events:

One-Mile, Local—1, G. W. Harvey; 2, A. S. Harvey. Time—2:44 3-5.

Mile, Open—1, C. M. Donahue; 2, C. W. Eastman; 3, L. B. Dudley. Time—3:06 2-5.

Two-Mile, Handicap—1, B. J. Wilson (80 yards); 2, L. B. Dudley (10 yards). Time—5:22 2-5. R. Urquhart (scratch) finished last on account of a punctured tire.

A barber and a farmer in Kansas have bet five gallons of buttermilk and a hair cut on a road race which is shortly to take place between them. It is this gambling that is ruining racing.

It is easier for a racer to find his own name in a paper, when it is there, than it is for him to locate a double-leaded article with a scare head, if the article relates to some one else.

RACING BOARD'S BULLETIN.

PROFESSIONALIZED.

Declared professionals, by vote of Racing Board, under Act IV, Section 7, by-laws.
 Ralph Sanberg, Port Huron, Mich.
 Charles R. Newton, Stafford Springs, Conn.
 L. N. Walleston, 910 Harrison avenue, Boston, Mass.

Alvan T. Fuller, 76 Cross street, Malden, Mass.
 J. S. Morse, Cambridgeport, Mass.
 J. C. Wettergreen, Ferry street, Malden, Mass.
 E. A. McDuffie, 47 Woodville street, West Everett, Mass.

A. R. Ives, Meriden, Conn.
 W. R. Munro, Woodward avenue, New Haven, Conn.

W. A. Gunther, 28 Hoyt street, South Norwalk, Conn.

W. J. Danbenspeck, Allentown, Pa.
 Under Clause F, amateur rule:
 R. W. Course, Allentown, Pa.
 Louis B. Rothwell, 26 York street, Camden, N. J.

A. A. McLain, Aurora, Ill.
 L. B. Arnold, Woonsocket, R. I.
 Carl J. Swenson, 67 Trask street, Providence, R. I.

Herman H. Leopold, Bridgeport, Conn.
 W. G. H. Knight, Housatonic, Mass.

Declared professionals, by vote of Board, act-
 ing under Art IV, Section 7, by-laws;
 A. J. Hammond, Lynn, Mass.
 Joseph Nadeau, Washington street, Keene, N. H.

W. E. Shaw, Meriden, Conn.
 John L. Decker, Ashley Falls, Mass.
 Jack Conklin, Arlington, N. J.
 W. P. Neville, Newark, N. J.
 John McAmbly, 7 Jefferson street, Bradford, Pa.

Gus Larson, Des Moines, Ia.
 George W. Buck, jr., Hamline, Minn.
 F. W. Palmer, Rome, N. Y., under Clause A.
 F. H. Jacobs, Grand Rapids, Mich., Clause F.

Vote of Racing Board.
 Glen P. Thayer, Grand Rapids, Mich., clause
 I. Vote of Board.

W. C. Stevens, Rockford, Ill., Clause D. Vote
 of Board.

Frank Love, Selma, Alabama, Clause F.
 Everett S. Whittemore, Jacksonville, Fla. B.
 Louis Coburn, St. Louis, Mo., Clause I.

C. K. Denman, Omaha, Neb., Clause B.
 H. S. Muentefering, Omaha, Neb., Clause B.
 W. E. Buchanan, Lincoln, Ill., own request.

Bert Maloy, Lincoln, Ill., own request.
 J. G. Morrow, Marshall, Mo., own request.
 George Bove, El Paso, Tex., Clause D.
 George L. Bates, Springfield, Mass., own re-
 quest.

C. A. Longren, Milford, Mass., Clause A.
 Arthur Schaefer, Weatherly, Pa., Clause D.
 H. Rouse, Weatherly, Pa., Clause D.

C. Steigerwalt, Weatherly, Pa., Clause D.
 T. J. Trumbore, Weatherly, Pa., Clause D.
 R. O. Sendel, Weatherly, Pa., Clause D.

Presser, Weatherly, Pa., Clause D.
 Metzgar, Weatherly, Pa., Clause D.
 William S. Ray, Chester, Pa., own request.

John M. Guminski, Philadelphia, Pa., own re-
 quest.
 John S. Shrewsbury, Germantown, Philadel-
 phia, own request.

W. H. Senter, Jr., Brockton, Mass., Clause C.
 Daniel S. Johnston, Jr., College Point, N. Y.,
 Clause D.

L. J. Godberry, New Orleans, La., Clause I.
 Geo. N. Adams, Jacksonville, Fla., Clause F.
 Vote of Board.

Frank A. Butler, Cambridge, Mass., own re-
 quest.
 W. H. Tarbell, Manchester, Mass., Clause B.
 Albert Haight, North Chilli, N. Y., Clause D.
 Chas. Hadfield, Newark, N. J., Clause D.

SUSPENDED PENDING INVESTIGATION.
 C. J. Lewis, Northampton, Mass.
 Fred H. Palmer, Foxcroft, Me.

SUSPENSIONS REMOVED.

T. Q. Hall, Los Angeles, Cal.
 Thos. McAlear, Los Angeles, Cal.
 Percy F. Megarez, Bloomsburg, Pa.
 W. J. Driscoll, Andover, Mass.

C. S. Bolting, Providence, R. I.
 David Turner, Taunton, Mass.
 Samuel Young, New Orleans, La.

L. H. Tucker, Syracuse, N. Y.
 Albert Haight, North Chilli, N. Y.
 Chas. Hadfield, Newark, N. J.
 Suspension placed upon Verdo Westgate,
 Taunton, Mass., has been reduced to expire Sep-
 tember 30.

Suspensions placed upon the riders at races of
 St. George's Athletic Club, N. Y., July 25, have
 been removed. Also riders at Bloomsburg, Pa.,
 races August 5.

SUSPENDED.

For riding in professional races, while under
 temporary suspension, F. W. Palmer, Rome,
 N. Y., for 60 days from August 19.

For competing in amateur races after becom-
 ing a professional, George Boyce, El Paso,
 Texas, for 90 days from August 15.

For competing while under suspension pend-
 ing investigation, 60 days from August 19.

For riding in unsanctioned races, E. Hagad-
 done, Ed. Marshall, P. Sorenson, Devere Bal-
 lard, Will Shea, Frank French, Frank Ford,
 Jake Yderstad, O. M. Lee, F. Lange, Fred.
 Olson, — Burns, M. J. Torrison, Walter Noo-
 land, Henry Cooper, Ashland, Wis.; — Wach-
 smith, Bayfield, Wis.; L. E. Holton, H. C.
 Gadke, Jack Cully, R. T. White, G. A. Holton,
 Omaha, Neb., for 30 days from August 20.

For riding in a race to which he was not en-
 titled, W. H. Senter, Jr., Brockton, Mass., for
 30 days from August 20.

For false entry and riding as an amateur after
 having become a professional, — one year
 from August 20.

For double entry, Harry W. St. John, Jersey
 City, N. J., and H. M. Stivers, New Rochelle,
 N. Y., for 60 days from August 12.

For competing in unsanctioned races, William
 Lynch, Manchester, N. H., and Walter Hart,
 Nashua, N. H., for 30 days from August 12.

For competing in unsanctioned races, after
 warning, William Ellis, Clarence Stringer, Wil-
 liam Wuestenfeld, Elgin, Ill., for 90 days from
 August 19.

For competing in unsanctioned races under an
 assumed name, Fred Seymour, Elgin, Ill., for
 one year from August 19.

For competing in unsanctioned races, W. Mof-
 fet, H. Ballman, William Sangstracke, Edward
 M. Burne, Edward Roenicke, W. G. Gundars-
 dorf, F. W. Traeger, F. Matthew, H. Vorrath,
 William Bremer, Guttenberg, N. J., for 30 days
 from August 20.

By vote of the Board Mr. E. B. Smith is ap-
 pointed official handicapper for Minnesota, vice
 B. A. Blomquist.

H. C. Fourton, 19 Carondelet street, New Or-
 leans, La., is appointed official handicapper for
 Louisiana.

Suspension placed on L. D. Cabanne, St.
 Louis, Mo., has been reduced to expire Sep-
 tember 1, 1896.

Tandem records made at Louisville, Ky., July
 4, 1896, by Davisworth and Mitchell have been
 accepted as follows:

Flying start, unpaced, against time, one-third
 mile, 35 seconds; one-half mile, 56 seconds; two-
 thirds mile, 1:17.

A fine of \$50 has been placed on Thomas Cooper
 and E. C. Bald for misconduct on the track at
 Louisville, riders to stand suspended until
 paid.

SANCTIONS GRANTED.

September 5—I. M. Bridges, Chicago, Ill.
 September 7—Muscatine Trade and Labor As-
 sembly, Muscatine, Iowa.

September 8—Davenport Fair and Exposition,
 Davenport, Iowa.

September 17, 18, 19—Inter-Ocean Wheel Club,
 Sloux City, Iowa.

September 3 and 10—Rock Rapids Cycling Club,
 Rock Rapids, Iowa.

September 7—Y. M. C. A., Bay City, Mich.

September 3—National Cycle Exhibition Com-
 pany, Chicago, Ill.

September 3—Chemung Ath. Co. Ag. Soc., Elm-
 mira, N. Y.

September 4—Gouverneur Athletic Club, Gouver-
 neur, N. Y.

September 7—St. Mary's Church, Auburn, N. Y.

September 7—Holley Athletic Association, Hol-
 ley, N. Y.

September 7—Marshalltown Cycle Club, Mar-
 shalltown, Iowa.

September 7—Schenectady County Wheelmen,
 Schenectady, N. Y.

September 3—Grand Junction Wheelmen Club,
 Grand Junction, Col.

August 28—Hornellville Farmers, Hornellville,
 N. Y.

September 9—J. E. Rider, Portsmouth, N. H.
 September 17—Battenkill Valley Ind. Sec.,
 Manchester County, Vt.

September 7—Rovers' Wheel Club, New Haven,
 Conn.

September 17—Floyd County Agricultural and
 Mechanical Association, Charles City, Iowa.

September 1—A. C. Burdgroff, Carlville, Ill.

RATHER MIXED UP.

Aftermath of the British Trade Boom—
That G. & J. Verdict—Americans
Abroad.

London, Aug. 12.—After many days—something like 250—Mr. Justice North came into court this morning with a neatly typewritten judgment in the Clincher-Gormully & Jeffery case. It only took some twenty minutes to read, and was not a very high-class literary effort in itself, but its effect must be something enormous, as it effectually establishes the validity of the clincher patent in all cases of clinched-on tires. Messrs Gormully & Jeffery have been adjudged to have infringed Bartlett's clincher patent, and unless an appeal is lodged within a fortnight after November 15, costs and damages accruing in the suit will have to be paid by Gormully & Jeffery.

The decision strengthens the hands of the Dunlop Company, which, of course, now controls the clincher patent in the United Kingdom; but for all that the shares of the company are in a declining state. This, it is said, is owing to the attitude of the directors toward a Stock Exchange settlement, which has not yet been applied for, although the formation of the company took place three months ago. This policy is explained by two contradictory statements. First, that the allotment of the deferred stock was not made so carefully as to prevent an overallotment to the tune of 70,000 shares, which the directors will have to buy in before scrip can be issued, and until this has been done no Stock Exchange settlement can be obtained. The second is that the public did not apply fully for the ordinary issue, and in consequence the directors had to take up such a large quantity that they are not able to give a settlement until they have unloaded sufficient deferred shares to pay the calls on the ordinary issue. I am not going to offer any comment on these rumors; the fact remains that for some reason a settlement has not been applied for, and brokers discourage dealings because so involved have their accounts become that a failure of a big broker over the Dunlop settlement might bring on a collapse of dozens of others.

Despite this disinclination, the French Dunlop Company has been launched on the public this week, but so far as I can judge, has not been received with anything like enthusiasm. The capital is fixed at £650,000, not £750,000, as I recently surmised it would be. The £100,000 difference has been caused by the refusal of the Gallus tire people, the leading French tire makers, to come in on the deal. The rumored inclusion of the French clincher also turns out to be a fizzle, and I am told that a separate company will be floated shortly to work that tire in conjunction with the Gallus.

It is said that a very advantageous offer has been made for the Continental Simpson Lever Chain Company, but since the deposit on the £100,000 offer only apparently amounts to £500, I am inclined to call it a ruse to hoist the price of shares.

Our racing season is rapidly drawing to a close, and in another month will be over. On Saturday last the Bath Road hundred miles—one of our classic path contests for amateurs—was run off at Catford, in the presence of a very small crowd, and in a pouring rain. Notwithstanding the latter circumstance, a grand race was witnessed, and after the fifty-eighth mile world's records; amateur and professional, went by the board. The battle from the first lay between R. Palmer, a Dunlop tire rider, and F. D. Frost, a Palmer tire and Sampson chain exponent. Frost had a good deal the best of the argument right up to

ninety-two miles, at which point he managed to break away, and going in magnificent style to the finish, won by over half a mile. Time—3:37:57 4-5.

Just as I close I hear that another big cycle factory fire occurred in Leicester, where the Mutual Cycle Manufacturing Company, later the Leicester Cycle Company, makers of the Peregrine bicycle, have been practically burned out. These fires are really blessings in disguise, as the premises burned are usually well insured, and the rebuilt factories are well equipped with the latest American machinery with the insurance money.

The influx of American makers or their representatives still continues. I have had the pleasure of meeting this week Mr. Coleman, of the Crescent Wheel Works and president of the Board of Trade; Mr. Benjamin, of the Barnes Company, and Mr. Potter, of Pierce Brothers. I just only missed seeing Mr. Howard Raymond, who has gone across to Copenhagen to represent the L. A. W. there at the International Cyclists' Association Council. Most of the makers have been able to secure some satisfactory representatives, but late comers will find this a very vital question, as the best wheel in the world is lost here unless intelligently handled.

TOO HEAVY A LOAD.

"And won't Jack Cracker really race?" inquired a fair spectator in the grand stand at Louisville as the man with the big trumpet announced that one of the big guns would not compete in an event.

"No, madam, his trainer says he's all broken up," replied the man with the duck trousers.

"Poor fellow, no wonder," said she compassionately. "I see by the papers that he carries three racing wheels, a big trainer and a valet around with him wherever he goes. That's enough to break down the strongest man in the world. Isn't it, now?"

WHAT HE SAYS DON'T GO.

"Here is a man who goes to prove in a long article that there are six ways of telling whether the machine an agent is selling you is worth the money he asks for it."

"The first, of course, is whether he tells you so."

"No; that has nothing whatever to do with it."

BIG MACHINE AND GOOD.

After two months' work the Bolte Cycle Mfg. Co., of Milwaukee, have finished a sextuplet, of which the firm is justly proud. The big machine was completed in the rough two

weeks ago, but before receiving the finishing touches, it was put under the most crucial tests on both the road and track.

The machine is geared to 110, and by a new principle in construction the strain of the

HOW REAL SOLDIERS CYCLE.

In the tests now being given the bicycle in a trip from Fort Missouri, Mont., to the Yellowstone by a company of cycle-mounted United States soldiers, a special system of packing has been devised by which the soldier-wheelman carries strapped to the head of his wheel his knapsack and blanket roll, containing clothing, blanket and shelter tent, the tent straps fitting under the handlebars. An extra supply of provisions is carried by every second man in a canvas-covered box, fitted into the diamond frame of the machine.

Those who carry rifles do not carry these provision boxes. It is said that five days' rations can be carried in this way, and that by crowding the amount can be increased to eight days' supply. In the drill scheme arranged for the bicycle corps cavalry tactics are followed, although the evolutions are by twos instead of fours. Among other movements is an interesting one by which the command dismounts and gets over fences quickly and in an orderly manner.

Lieutenant Moss, who is in charge of the detachment, has fixed to his handlebars a tablet, on which he can make a hasty but useful map of the route traversed while in motion. An ingenious device makes it possible for the paper to be rolled forward as used without breaking the sheet. Across the front of the tablet is a scale of degrees, and a parallel marker is also provided. With the additional help of a cyclometer and a compass it is expected that an excellent idea of the route can be given.

CAT STORY.

Score again! Danville, Ky., claims to have a black cat which has become a confirmed cyclomaniac. The cat does not, to be sure, sit upon the saddle and do the pedalling, but it rides upon the shoulders of the boys in the neighborhood. In the evening, when the boys start out, one of them will place the cat upon his shoulder, and there Tom will sit through the entire journey if permitted to do so. The cat never falls from its perch. Sometimes it is partially dislodged by the boys in mounting or by a sudden turn or bump in the road, but its claws are ever ready to catch a new hold, a fact which makes the catbearder rather chary about doing anything to make Tom grab for a new hold.

The Welsh name for cycle is "ceffell hialarn," which, being literally translated, means "the iron horse."

chains is evenly divided so that the danger of breakage is reduced to far below that encountered in the ordinary bicycle. The machine is also a very light one considering the demands that are made upon it, for it weighs only 124 pounds. Thus far the machine has

been equipped with riders from the company's works, but it is the intention of getting a number of the fast men astride the giant and sending her against time on a mile track.

WHEN, WHERE AND HOW.

The Board of Trade Makes Plain to Cycle Show Exhibitors What They Must Do.

The Board of Trade has issued from its Eastern offices details, plans, specifications and rules of the 1897 Eastern Show. The function, as is well known, will be held at Grand Central Palace, Forty-third street and Lexington avenue, New York, from February 6 to 13. The diagrams give an idea of the general arrangement of the building.

The applications for space will be opened on September 19, when spaces will be allotted on some fair, impartial and satisfactory plan, to be decided upon later.

The first floor will be devoted to machinery and sundries, total eighty-one spaces. The main floor, 160 spaces, will be devoted exclusively to cycle exhibits. The third floor, 218 spaces, will be for bicycle overflow and sundries. The average charge for spaces has been reduced, as compared with last year, 50 per cent, while the average size of show spaces is increased. A suitable portion of the profits will be rebated to the exhibitors. The average rental paid for space at last year's show was \$130; this year \$63. The total number of spaces is 459, with 300 applications up to date. The latest date for applications is September 19.

The principal rules governing the 1897 Eastern Show are appended. Other particulars, blanks, etc., may be obtained from the Board of Trade, 270 Broadway, New York City.

Division of Spaces Not Allowed—No exhibitor shall be allowed to sublet the whole or any part of his allotted space, nor to exhibit or permit to be exhibited therein articles other than those manufactured or sold by him.

Character of Exhibits—The Board shall at all times retain the right to prohibit any exhibit or exhibitor, and generally to regulate the matter exhibited and the conduct of the exhibitor. This reservation is understood to include all persons and their conduct, and all matters and things whatsoever which either form a part of or are in any way connected or associated with any exhibit which may, in any manner, affect the reputation and character of the exhibition as a whole, or the rights and privileges of individual exhibitors.

The decision of the Board or its duly authorized agent in such matters shall be final, and the person or subject matter objected to must be at once removed or suppressed by the exhibitor.

Each exhibitor hereby appoints and constitutes the Board its agent to remove or cause to be removed the person or thing objected to, at the expense of the exhibitor.

Every exhibitor shall, upon demand, submit to the Board all proposed matter or conduct for the Board's approval, and shall not be permitted to exhibit any such article or person disapproved or refused to be submitted for approval.

Exhibitors shall distribute catalogues, price lists, souvenirs, etc., only from their respectively allotted spaces.

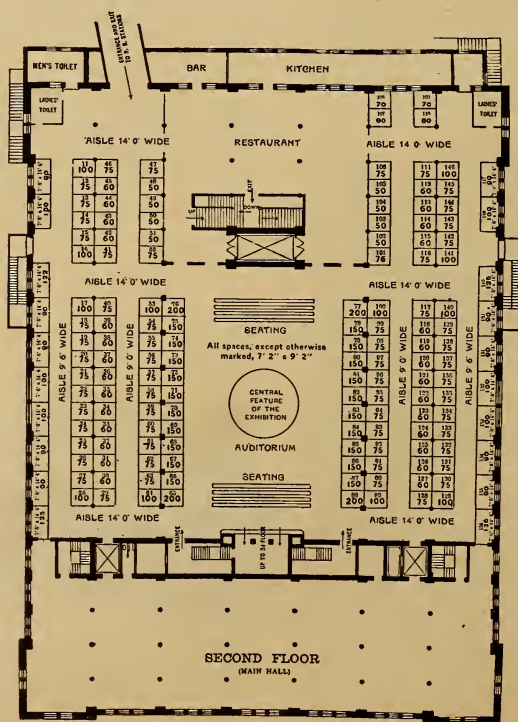

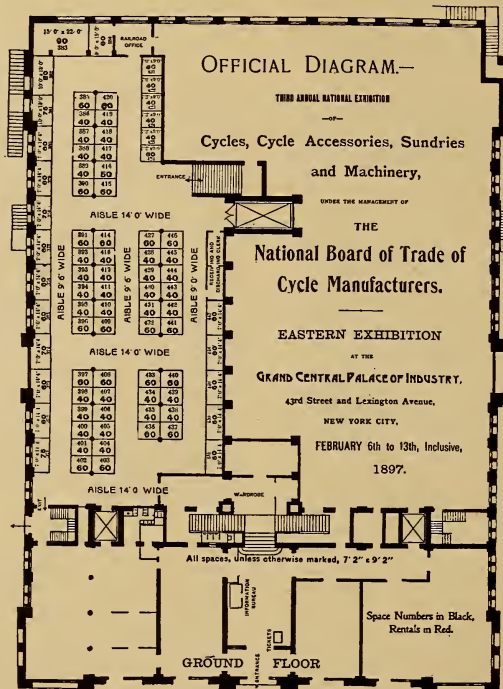

Applications for special privileges may be made to the Board prior to February 3, 1897.

Allotment of Spaces—Applicants are requested to make all of their selections in their first or original application, and to number their selections in the order of their preferences—first, second, third, etc.

The applications for spaces will be opened by a special committee on September 19, 1896, which will report to the Board the total number of spaces applied for, and allotment of spaces based upon such report will be made as soon thereafter as possible.

If more spaces are applied for than provided in the diagram, applicants for spaces in excess of three shall have their applications rebated pro rata.

Payment for Space—Upon notification of allotment of space the exhibitor shall sign a contract therefor, and pay to the Board 25 per

centum of the rental, and the balance on or before February 8, 1897.

All contracts for space are subject to the terms of the lease under which the Board occupies the above premises, and every exhibitor shall be deemed to have had notice of such lease and the terms thereof.

Receipt of Goods—All goods must be plainly marked with the name of the exhibitor and the number of his space, addressed to the Grand Central Palace of Industry, Forty-third street and Lexington avenue, New York City. Such goods will be received and delivered only at the Forty-third street entrance of the Building, on and after February 4, 1897, where there will be on duty a receiving clerk, who will, immediately upon their arrival, send a printed notice to the space for which the goods are marked, but under no circumstances will goods be received on which there are charges of any kind. All crates and cases shall be unpacked as quickly as possible, and the empty crates and cases shall be immediately stored by the exhibitor in the space provided for that purpose. The Board will not be responsible for any loss or damage to goods consigned to its care.

Care of Exhibits—Exhibitors must have their stands and exhibits cleaned and otherwise put in proper shape before 10 a. m. of each day. At no other time will any cleaning or arranging of exhibits be permitted.

Removal of Goods—Exhibits must be removed from the Exhibition by 5 p. m. on Monday, February 15, 1897. In case of default, the Board shall have the right to cause such removal, at the expense and risk of the exhibitor.

Signs, Railings, Decorations, Etc.—Upon all exhibition spaces will be a platform six inches above the floor, and provided with suitable railings, substantially built, two feet seven inches high, for front and sides, and a partition four feet high at the back, whenever necessary for the purpose of dividing spaces. There will also be erected an iron framework for the holding of signs, the bottom railing of which will be seven and one-half feet and the upper railing nine and one-half feet, respectively, above the floor, leaving twenty-four inches for signs, which shall not be deeper than three feet. Signs may protrude above the upper railing to the height of one foot, and shall not extend below the lower railing. No obstruction whatever will be permitted between the lower edge of signs and the upper edge of the partition. Cycles may be raised until their hubs are four inches above the front and side railings. At spaces numbered 1 to 10 inclusive and 147 to 156 inclusive, the iron framework for the holding of signs will be placed on the aisle front. The object of this rule is to secure uniformity of space from four feet above the platform to the lower railing of the framework, so that an unobstructed view may be had from side to side and end to end of the Exhibition floors.

Arrangements of Exhibits—It is expected that all exhibitors will arrange their stands on Friday and Saturday, February 5 and 6, and must have their exhibits ready for the public by 6 p. m. on Saturday, February 6, 1897. Each exhibitor shall provide, at his own expense and risk, for the carriage, expressage, unpacking and exhibiting of his goods. In case of default of the exhibitor in any of these particulars, the Board reserves the right to do the work and charge the exhibitor with the expense. No carpentry or other noisy work of any sort will be allowed after 6 p. m., February 6, 1897.

Storage Space—Space will be assigned for each exhibitor for the storage of goods, cases, paraphernalia and other material connected with their exhibits.

Smoking—No smoking shall be allowed where goods are unpacked or stored, and no smoking anywhere after 6 p. m.

Removal of Goods During Show—Exhibits may be removed only after 11 p. m. on Saturday, February 13, 1897, and the person in charge of the removal, or the customer to whom the goods may have been sold, will be required, if unknown to the doorkeeper, to present a written order from the exhibitor for the removal of the goods.

Opening—The Exhibition will open on Saturday, February 6, 1897, at 8 p. m., and on each day thereafter (Sunday excepted) until and including Saturday, February 13, 1897, at 2 p. m. The Exhibition shall close at 11 p. m. each day.

Special Admission for the Trade—Any regularly qualified bicycle agent, manufacturer, exhibitor or employe of any of them will be admitted to the Exhibition free of charge from 9 a. m. to 1 p. m., by giving a card with his name, address and occupation at the Bureau of Information when entering.

Admission—Admission to the Exhibition will be fifty cents. No extra charge for seats. No return checks.

Special Rate of Admission—The following discounts will be allowed exhibitors on admission tickets: Twenty per cent on lots of 100; 30 per cent on lots of 200; 40 per cent on lots of 300, and 50 per cent on lots of 500 and upward.

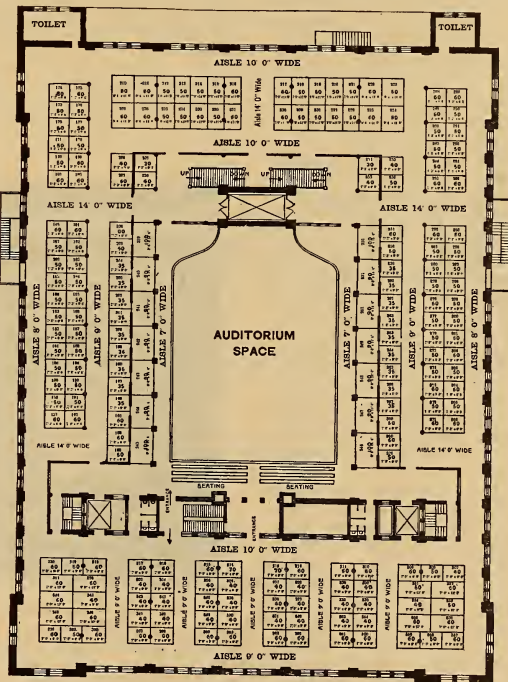

Division of Profits—All exhibitors not in default will participate, pro rata, according to the rental paid by them, in such share of the profits of the Exhibition as shall be hereafter determined by the Board.

Penalties—Any exhibitor failing, without special permission by the Board, to properly occupy his space for twenty-four hours after the open-

YOU CAN'T BEAT THEM.

A clever American finding the steamship companies demanded \$5 to carry his wheel to Europe, took the machine apart and placed it in his trunk. When he landed on the other side he opened his trunk, reassembled his wheel, stored his trunk with the steamship company to await his return home, and gayly rode off laughing at the discomfited steamship people.

When he came to return he ordered his trunk sent to a neighboring hotel, intending to repack his wheel therein and once more get ahead of the steamer's people. He got his trunk, and with it a bill for \$5 for one bicycle carried to Europe, and an intimation that the same amount would be demanded for returning the machine to America, whether packed in a trunk or elsewhere. That trunk carried no bicycle on its return trip.

THIRD FLOOR (SCALE)

ing of the Exhibition, or violating any of these rules and regulations, shall render himself liable to the forfeiture of the space and the cancellation of his contract and tickets of admission. In such case the exhibitor shall have no claim against the Board for damages or loss of any character, nor, in any case, for delay in opening the Exhibition. Forfeited spaces may be assigned to other exhibitors, and the rental received retained by the Board, without liability to the exhibitor therefor, who under all circumstances shall remain obligated to pay the original rent provided for, this sum being agreed upon as liquidated damages to the Board for the exhibitor's default.

James R. Dunn, he who was twice president of the L. A. W., is now in charge of the Literary Bureau of the Wheelmen's Department at the headquarters of the Republican National Committee in Chicago.

Charlotte Smith, who says bicycling is degrading to women, weighs about 200 pounds and is, therefore, about half right.

LOOKING AFTER THEIR OWN.

Chief Conlin detailed two New York roundsmen to do duty on bicycles in plain dress. This is a new departure. The Central Office roundsmen have the right to go into any precinct to look for delinquent policemen, and the Chief believes that the men on bicycles in plain dress will be able to do much toward enforcing discipline among patrolmen.

POPULAR VERDICT.

A Missouri debating society wrestled with the question, "Which is the more valuable to man, the ox or the horse?" The arguments on both sides were so able that the judges could not decide, until one of them induced the remainder to render a decision in favor of the bicycle, a verdict every one was pleased with.

A coasting contest is being promoted in Boston, to be run on September 17, open only to manufacturers and agents.

MACHINE VS. HAND WORK.

Advantages and Lack of Same When Machine Supplants Man in Mechanics.

America is the home of the machine tool. The demand for firearms in quantity during the Civil War did much to start in New England a system of mechanical working which has proven of vast benefit. It is not far from the truth to say that firearms were the first mechanical devices made on the interchangeable or duplicate plan, and when we figure up the losses and costs of the war we ought to put on the other side the advances in mechanical arts brought about by the same war.

Following the making of firearms came the introduction of sewing machines built in the same factories in several instances and by the same men and methods as were the firearms. Here was a machine fairly simple in construction, without precedent as to style, size or weight, a machine whose only requirement was that it should do its work. Its increased speed rendered it economical, and the article sold, even at a very high price, so manufacturers had but to secure good designs and build in large quantities to reap a reward. The design did not of necessity change, because for the sewing machine there was no such thing as season or later patterns. This permitted the manufacturer to expend money for special tools, and when once equipped with special tools for doing the work he found that the cost of building the sewing machine became almost nominal—so cheap, in fact, were machines built that first-class ones were put on board the cars, crated, at less than \$8 apiece.

The successful methods of working established in the sewing machine factory began at once to extend to other classes of work made in quantity, and when the safety bicycle reached a fairly permanent shape and was made in large quantity, tool and machine makers began to supply special tools for building its parts.

It happens, therefore, to-day that nearly every bicycle factory in the land is equipped with special machinery, more or less automatic, adapted to do the various kinds of work required in the building of the cycle with an accuracy and a speed not to be found in the old methods of producing the work by skilled mechanics on a common lathe. It is true, however, that every rose has its thorn, and the new process is not without objection.

The old process required a skilled man and took considerable time. Both of these features give reason for a high cost. Moreover, the product was more or less nearly correct according as the man was more or less skillful and careful. By the new process the machine automatically does much of the work required by the man, and, in some cases, all of it. This saves, to a large extent, the cost of the man's services and removes to a large extent the uncertainty dependent upon the man's skillfulness or carefulness.

At first thought it would seem that the new method was, without exception, better than the old, but this is not necessarily true. The machine is but a tool. It is the servant of its builder, and it cannot be superior to its builder, but if it is well made it can approximate closely to the class of work which its builder could produce.

In practice it is found that the machine will produce automatically work so nearly perfect that at the decreased price it is advisable to use the automatically made work.

Take, for instance, the cones and cups of the bicycle. In most factories these are made on machines designed for that purpose, which

machines are operated by a man usually of at least average skill. If his machine be accurately made, and if he is careful to keep it in its accurate condition by repairing it or adjusting it when needed, it will be capable of turning out fairly accurate work. He must, of course, use diligence in keeping his tools sharp and to shape, and reasonable care in such operations of the machine as he is called upon to make, and all things considered, he will secure much better results with the aid of the automatic machine built especially for that purpose than he would secure on the common lathe. The saving of time will be very much in favor of the special tool. In the screw machine the stock is held in the chuck and revolved while being worked. In the lathe the chuck may be used or the work may be mounted on centres or placed on the mandril, which in turn is on centres, and while it is possible to adjust the lathe perfectly and possible to have a true mandril and secure perfect work thereon, there is just as much danger of the mandril being out of true or the chuck failing to be properly centred and thus secure untrue work on the lathe. A possible exception is in axles, which can be turned on their own centres and screw-threaded on the same if screw threads are desired. To secure ac-

curate work, however, requires an accurate workman, and, as before stated, the special machine is simply a tool; but it is an added help in the shop, and if the manufacturer is willing to expend the same care in producing his parts by the use of the automatic machines that he would be compelled to do by the lathe process, he can secure just as good and probably better work at a less cost on the automatic machine.

To continue the illustration by means of bearings: It is an admitted fact that perfect work can be secured by grinding after tempering only. No matter how perfectly the article was turned, whether on the lathe or in the automatic machine, it is liable, and, in fact, almost certain, to warp when heated and tempered, and the only way to correct this error is to grind it after tempering, so that the process of turning does not enter largely if the future process of grinding is ample. It would, therefore, seem advisable under most circumstances to avail one's self of all the possible mechanical helps, so as to save in the cost of the article, and, if a superior article is desired, to spend the effort in the finishing processes rather than in the earlier forming processes.

CHARLES E. DURYE.

ASSUMING A THANKLESS TASK.

Michigan Looking for a Moses to Lead It Out of the Wilderness of Apathy.

Detroit, Aug. 24.—Detroit is to be in the field with a promising candidate for Chief Consul of the Michigan Division, L. A. W., the nominee chosen to represent the League being President Hines, of the Detroit Wheelmen. Mr. Hines is well qualified for the position of the division's chief executive, his redoubtable efforts toward the good interests of cyclists in general and his untiring zeal in raising the Detroit Wheelmen to its present high standard from comparatively an unimportant club being well known.

For the large number of wheelmen within Michigan's boundaries the division is woefully behind in point of membership. This fact may be justly attributed to the seeming inability of the present League workers to properly set forth to the large number of unattached the good benefits to be derived from being a member of this strong organization. The fact that League members are exempt from paying duty on their wheels upon entering Canada should prove a strong plea for recruiting purposes, as the League's members in Michigan are directly benefited thereby.

It is true that the division has been practically dead for a long time, and nothing has disturbed the slow-going monotony except the celebrated quarrel among the officials upon the surrender of the League's books several years ago. This uprising necessitated the presence of Secretary Basset and others to act in the role of peacemakers for the warring factions, and the result was that an entirely new organization, the "Knights of the Wheel," was formed, whose main purpose was to act in opposition to the L. A. W. The Knights, however, became disheartened at their task, and after a short and uneventful career disbanded. After this incident nothing of importance has been heard from the division's officials except at the election period and in the spring, when circulars were received requesting the payment of dues, none of the members knew for what, and in this latter particular it is safe to say that not over two-thirds of the members in Michigan are aware who the Chief Consul is or whether the State laid claim to any.

Mr. Hines, as vice-consul under the present administration, is undoubtedly aware of the chief's duties, and by declaring for good roads, outlining a vigorous campaign against the transportation companies who charge excess baggage rates for bicycles, and by promising at some future time to compile a road book, can secure the necessary votes for choice, and at the same time the hearty good-will and co-operation of Michigan Division members whose present text is, "What do I get for my dollar?"

IMPROVED PEDAL FOR 1897.

The Cycle Improvement Co., of Westboro, Mass., make their announcement with regard to the 1897 "Janney" pedal. It is improved, and they claim for it perfection, from three several standpoints.

CUT-THROAT TACTICS.

There is a lively war among the Alameda, Cal., dealers who rent wheels. One firm reduced the renting price from 25 cents to 15 cents per hour, or two hours for 25 cents. The other cycleries quickly fell to the cut-rate, and one man has gone them one better by renting his wheels for 10 cents an hour. There is so much competition that one or two cycleries have announced their intention of quitting the business before winter.

THE OUTLOOK AS IT IS.

An Observant Trade Student Puts a New Aspect Upon This Important Question.

Probably there is no more travelled or experienced man in the parts end of the bicycle business than George Brandenburg, president of the Iven-Brandenburg-Burgess Company.

Mr. Brandenburg has been rounding up the trade all over the country, but particularly in the West, recently, and his impressions of the outlook for '97 business are necessarily of much value just as this time.

THE WHEEL man who conversed with Mr. Brandenburg was agreeably surprised at his views, which, in comparison with those of many of the principal men in the business, are optimistic.

Dealing with the overstock in the trade and its disposition, Mr. Brandenburg said:

"Thorough acquaintance with the position of nearly every manufacturer in the country convinces me that there are not in the entire country to-day, both in made-up wheels and in loose stock, over 100,000 wheels to be carried over. The disposition of these goods is easy to foresee; they will undoubtedly be marketed as '97 seconds. In fact, I do not know of but one factory in the country to-day, whatever its policy in the past may have been, that will not next year have a second model. The effect or lack of effect that this class of goods, name-plated with the title of concerns which in the past have made exclusively high-priced bicycles, will have on the output of medium-grade factories is a subject of speculation.

"As to the 'buying season,'" said Mr. Brandenburg, "it seems to me that the effect upon it of the political situation has been extremely exaggerated. Naturally a Presidential year retards business; equally there is something of a feeling that the election of Mr. Bryan will unsettle business generally, and make values so uncertain as to cause hand-to-hand buying and cash settlements, but, as I have said, the newspapers' conception of this feeling is exaggerated. The manufacturers this year will buy their material, all in all, considerably later than last season, but that is a natural outcome of the '96 season. That fully as many machines will be made in '97 as were made in '96 is pretty generally admitted by every sensible man.

"The reason why manufacturers are not buying extensively now is that they realize that it is not so necessary to secure in advance their material as it was last year. This is a fact there is no gainsaying; and yet, in the realization of it lies a danger which is not ordinarily apprehended. What I mean is that the man who defers ordering his material until November or December forgets that he is but one of a good many others intending to do the same thing, and that when he and the other fellows do want their goods they will want them in a big hurry and all at once. The logical result will be that the parts-makers will be crowded to their utmost, not only on such late orders, but on previous contracts, and somebody will suffer. I think it is a mistake for the manufacturer to assume that the parts trade will be in a position to supply him with his material all offhand. I can answer for our own concern at least when I say that we certainly shall not make preparation to supply that quantity of goods in December, January and February; that we would, if we had a greater number of guaranteed contracts. That's merely business.

"Personally, I believe, to put it in figures, that possibly 25 or 35 per cent of the manufacturing trade of the country are ordering now such goods as they must have of a certain factory. I think that within the next

thirty days perhaps 35 or 40 per cent of the entire cycle material orders will be placed. The balance will follow more or less slowly. Every day that passes makes the political situation less influential with the average manufacturer. He knows there will be a large demand for bicycles. He knows he has got to have stuff to make them with; he knows that if he delays ordering too long he may suffer materially on deliveries, and he knows, whichever way the election goes, there will at least be some basis of values. Every day I come across a man who has decided to go ahead without reference to the political situation and its possibilities, and the number of such men will rapidly increase in the very near future, if I am any judge of the trade and its plans, and I believe I am in a much better position to be a judge thereof than many of those who are now proclaiming from the housetops what their opinion of the trade's outlook for '97 is."

STAMPED PERFECT.

As the season advances each day brings forth some new and cleverly constructed device in sheet-steel stampings. Bottom brackets, head connections, fork crowns, etc., are shown, the mechanical construction of which is almost beyond the layman's belief.

To take a piece of flat sheet steel and fashion out the finished product ready to place together without so much as touching it with a file shows a wonderful ingenuity in metal-working that has only been arrived at by constant experimenting and by a thorough knowledge of the subject.

The illustration shows a new rear fork end that has just been put on the market by the H. A. Matthews Manufacturing Company, Seymour, Conn., and while the drawing seemingly belies it, yet it is made from a single piece of flat metal. Economy of construction is followed out to the last degree, as can be seen in the straplike depression under the word "for," which can easily be threaded to take the set screw. Another point that is claimed is for the cut-out tube lugs; by this device the spelter in a given quantity can be packed in and made to hold, and yet on the application of heat it is in such a position that insures a perfectly free flow. Many other stampings are shown by the Matthews Company, and all of undoubted merit.

ENCOURAGING MILE-MAKERS.

As a bit of encouragement to those riders who like to pile up mileage, Morgan & Wright make the following offers: For the greatest mileage made during '96 on one set of M. & W. tires, rider to make his own repairs, first, \$100 trophy; second, \$45 overcoat; third, one set of tires. Full information concerning these and other valuable prizes can be found in the M. & W. catalogue.

CYCLOMETER VARIATIONS.

Why the Figures on the Dial Exceed Those Claimed by the Mapmaker.

There are few cranks like those who have chosen the bicycle for their crank love. No matter how mild a crank a man or a woman may have been in other directions, once they transfer their enthusiastic affections to cycling, and their former crankisms are mild almost to nothing by comparison.

Not long since one of these ultra-enthusiasts drifted in and began narrating his cyclometric woes. He said that he had bought cyclometers of various makes, tested them on a lathe, found them accurate, and yet when he used them on a road and compared their registering with the mileage shown by accurate maps, the cyclometer invariably registered a greater number of miles between points than the map said existed.

To such persons as the above an explanation of the variance between the miles shown by an accurate cyclometer and the one claimed by an equally accurate map may be found along the following lines:

It is obvious that any deflection of the pneumatic tire of the steering wheel will increase the number of revolutions in the mile, and thus disturb the record of the cyclometer. A 28-inch wheel is twenty-eight inches only when blown as tight as a drum, and not pressed by any weight. How great the deflection is must depend on the tightness of the tire; and as some cyclists ride with a softer tire on the steering wheel than others, no cyclometer can ever be adapted for all riders. Few, if any pneumatics are ever ridden much within half an inch of nominal circumference. The writer has found, by measurement, that the tire on the steering wheel of his own bicycle (a 28-inch wheel) is just 27½ inches when being ridden. One fifty-sixth of a mile is about 31¼ yards; so that the cyclometer will register 1,701¼ yards per mile, and fifty-seven miles for fifty-six ridden.

But there is a further consideration. A mile measured on a road is a mile in a dead straight line along the centre of the road, and any deviation from the straight line adds to the distance ridden. The deviations of an ordinary rider are greater than at first sight would be expected. In a road ten yards in width, a crossing and recrossing in thirty-five yards will add about two yards. Of course the amount of deviation must vary from mile to mile; but taking into consideration the passing and meeting of vehicles, taking the best piece of the road, zig-zagging up hill, and avoiding stones and other obstacles, the cyclist on an average road will add about twenty yards to each mile he traverses. In a town or thickly populated district the deviations will be greater. Add these to the thirty-one and a half yards, and you have a total of fifty-one and a half yards per mile—or practically 1 in 34.

To make the cyclometers more accurately show the distance traversed, no better suggestion for securing accuracy can be made to obviate over-registering of cyclometers from causes like the foregoing than that they should be made as if for wheels half an inch lower than those they are to be used on. The other matter may be left alone. If the cyclometer is correct in showing the actual distance traversed, that is all that is wanted. If the foregoing is right as to the average deviation, a cyclist will have ridden 100 miles by cyclometer on a road which only measures ninety-nine by milestones; but he will have ridden a full hundred all the same, and there is no reason why he should not have the credit of it.

HARD TIMES

are reported to exist in bicycle circles, and particularly with dealers. It may be strange, but is nevertheless true, that we receive no such complaints from our agents, which state of affairs furnishes food for reflection. It is a fact, that

AMERICA

agents do not find it necessary to carry over from season to season, a stock of wheels, which is accounted for by the always existing demand for **the** "truss frame" wheel. This is explained by the workmanship and material we put into our goods, "than which there is none better" and few equal.

THE STORY OF A SUCCESS.

How Syracuse Became Famous in the Trade Through the Progressiveness of One Concern.

Mention Stearns, and the mind at once couples the name with Syracuse; it has spread the fame of Syracuse the world over, and were the average schoolboy asked for its geographical location the chances are that the answer would be, "Where the Stearns bicycle is made."

In 1892 the makers of "The Yellow Fellow" were newcomers in the trade, and at the show held in Philadelphia that year exhibited a few wheels that for beauty of design and elegance of finish attracted universal attention. Since then their progress has been rapid. Broad, persistent and liberal advertis-

ing, strict attention to the many details of business and a keen foresight into the future soon brought the erstwhile infant to the very front rank of cycle manufacture.

E. C. Stearns and H. E. Maslin were the master hands, and they guided their craft with subtle skill. They were among the very first to enamel their product a bright hue, and this was turned to an excellent account; the novel title of "The Yellow Fellow" soon became a byword wherever the bicycle was used.

As in all else there had to be a beginning, and it was small. E. C. Stearns & Co. were well known fixtures in the hardware trade, and it was in a corner of their hardware establishment that the original "Stearns" bicycle first saw the light of day. Like the "little peach" of the song, the factory grew and grew, so that to-day, on the banks of the Onondaga, almost in the very heart of Syracuse, they can point with pride to one of the most complete bicycle plants in the country. With the possible exception of tires and handlebar grips, everything that goes into the composition of the modern bicycle is made right on the premises, and the visitor is at once impressed with the care with which everything is inspected and the absolute accuracy observed in the smallest details. The arrangement of the various departments is superb. There is no unnecessary shifting of the work, every one in the vast establishment seems to work in unison and as perfectly as the huge automatic machinery that has made American mechanics the wonder of the world.

Standing as it does some little distance from the street, the size of the plant is hardly apparent, but crossing a little wooden footbridge that spans the Onondaga Creek, the long line of towering wall gives an excellent idea of the space within. The approach is picturesque, a clean-cut building on one hand and a row of trees bordering the path on the left; even on the outside the same orderly system is carried out that makes the interior arrangement such a model one.

Under the guidance of A. W. Perry, the as-

sistant superintendent, and the gentleman who is to be entrusted with the management of the new factory at Paris, THE WHEEL man made a tour of the Stearns plant, and the visit proved not only interesting, but instructive. The handsome offices, where over half a hundred clerks are always busy, were first inspected; two green balze-covered doors lead into the private offices of Mr. Stearns and Mr. Maslin, each furnished in a manner that will become the successful man in business.

On the same floor the purchasing agents and superintendent, with their respective clerical forces, are quartered behind glass partitions; near by the designing-room with its corps of skilled mechanics and draughtsmen, who labor six days in the week endeavoring, if possible, to make the Stearns bicycle as near perfect as human ingenuity and mechanical education will allow.

Down another set of stairs and the inspection-room is reached. There each piece is carefully examined and the least defect is cause for its consignment to the scrap heap, but by far the greater space on this floor is taken up by the manufacture of handlebars, front forks, seat posts, etc.

On the fourth floor is the saddle and pedal-making department, and in a separate wing the working of metals is dropped for a few moments to inspect the wood rim plant. It seems odd to step from the greasy floors of the machine-room directly into sawdust ankle-deep, but E. C. Stearns & Co. were among the pioneers in the wood-rim business, and in the early days offered their surplus stock to the open market.

A birdseye view of the third floor is interesting. It is filled in with immense automatic machines, whirring shafting, clattering tools and a horde of the busy workmen giving an air of industry that must be seen to be appreciated. Much of the machinery used is of special design, and the manner in which it performs its tasks makes it appear almost of human intelligence.

The floor below is the shipping-room, while the basement is devoted to the storing of surplus stock; here are also located two ponderous presses of immense power, which punch out at one blow sprocket wheels from stock a half-inch thick.

An elevator carries one to the top floor, where can be seen the dressing up of the black frames and forks in the yellow color that has given the wheel its nickname; a most complete chain-making plant occupies a corner of the immense floor, and as in the other departments the utmost care is exercised to gain the most perfect accuracy in every link.

A tour of the grounds was also made. En route their system of making gas was explained. The entire plant is protected from fire by Grinnell automatic sprinklers, and in addition their entire force of workmen has been organized into smaller fire departments, and at regular intervals drilled in the work necessary in case of fire.

E. C. Stearns & Co. have another factory in Toronto from which they supply the Canadian trade, and now active preparations are being made to carry the work further into the enemy's camp by establishing still

Floor number seven is devoted to the nickelling department, and a short flight of stairs reveals an animated scene, 250 men being engaged in assembling the wheels and in the brazing-room; the brazing is done entirely by means of naphtha gas made on the grounds.

another plant in Paris. That it will not be a success no one thinks for a moment; good American pluck accomplishes wonders, and no doubt ere long "The Yellow Fellow" will be as well known to the European market as it is on this side.

TRADE CHANGES.

CONNECTICUT.

Fair Haven—N. D. Coe, of No. 208 Blatchley avenue, has invented a combination rim and tire for bicycles, made of wood five-sixth of an inch in thickness and one inch wide. Instead of being concaved it is flat. The whole rim is covered with aluminum bronze which will not rust, and the tire consists of a series of steel springs fastened to the rim at equal distances.

Hartford—The plant of the Holt Manufacturing Company is to be started up at its old locality at Colt's Armory, under the superintendence of William C. Brown, as soon as the requisite tools can be made.

ILLINOIS.

Chicago—The Napoleon Cycle Company, recently closed down owing to its inability to make settlements with creditors, will resume operations.

Elgin—The Elgin Sewing Machine and Bicycle Company has closed on account of lack of funds to pay employes.

INDIANA.

Hobart—O. P. Nelson is contemplating the establishment of a factory here for the manufacture of bicycles.

Jefferson—Work is progressing rapidly on the new bicycle factory in Louisville, of which Messrs. Eaken and Weber, of this city are directors, and the wheels will soon be placed on the market.

Lafayette—The Lindsay Bicycle and Manufacturing Company held its annual meeting and elected the following officers: President, George C. Lyon, of Providence, R. I.; vice-president, F. B. Shepard; treasurer, T. A. Warner; secretary and manager, T. J. Lindsay. The directors are George C. Lyon, F. B. Shepard, T. A. Warner, T. J. Lindsay and John Allen.

KENTUCKY.

Louisville—The Albion Company has sued the Hamilton Cycle Company for \$10,000 for breach of contract.

MICHIGAN.

Bay City—The National Cycle Manufacturing Company are building a large addition to their cycle factory.

FIXED FOR BREAKDOWNS.

Speedway is a believer in the motor vehicle as the conveyance of the future, but in the present, that he may always feel safe from having to walk home, he has his motor car equipped in above fashion.

MISSOURI.

Liberty—A. P. Wymore, bicycles, reported to have given real estate mortgage for \$350.

St. Louis—Shepherd Manufacturing Company, bicycles, reported sued for \$110.

NEW YORK.

Brooklyn—The Zimmerman Cycle Company has been incorporated with the following directors: J. F. C. Zimmerman, Richard Perry, of Brooklyn, and Kenneth H. Grieve, of New York City. To deal in bicycles and tricycles. Capital stock, \$10,000.

Buffalo—W. & P. Armored Tire Company, manufacturers, reported to have given judgments for \$135, \$87, 125 and \$78.

Buffalo—The Queen City Cycle Works, at Idlewood, seized by Sheriff on an attachment for \$4,000 issued by J. Walter Thompson, of New York.

OHIO.

Canton—The Berger Manufacturing Company is pushing to completion a new building 20x60 feet in size, in which will be manufactured the Gerber patent lock joint steel tubing for bicycles.

Toledo—The trouble at Snell's bicycle works between Mr. Snell and his employes has been settled and it is expected that the works will start up again in a short time.

OREGON.

Portland—The Portland Cycle Company has been incorporated by F. K. Masters, H. E. Woods and W. D. Latimer to deal in bicycles in Oregon, Washington and Idaho. Capital stock, \$3,000.

PENNSYLVANIA.

Greenville—The Greenville Tubing Company, a new company, will be located here shortly.

Hamburg—Motes & Raubenholt have contracted to erect an addition to the Wilhelm Bicycle Works.

Philadelphia—The Cashmore-Greenhalgh Cycle Company, bicycles, reported to have given judgment for \$375.

WEST VIRGINIA.

Wheeling—The Brilliant Pipe and Tube Works Company have made an assignment.

WISCONSIN.

Milwaukee—Gimbel Bros. have purchased the entire stock of the bankrupt Moore Cycle Company.

Rice Lake—Patrow & Britzman, formerly of Phillips, have opened a bicycle store in the Boddington Building.

CYCLE IMPROVEMENT COMPANY,

WESTBORO, MASS., U. S. A.

WHERE ART AND ABILITY ARE ALLIED.

Very few manufacturers can boast of so trim a plant as the Spalding & Pepper Company, Chicopee Falls, Mass. The exterior is very pretty from an architectural standpoint, while the interior finishing in hard woods show the taste of some one with an eye for beauty, as well as utility. On every hand are evidences of thorough system, while a general air of cleanliness pervades the whole establishment, which can leave nothing but a good impression on the chance visitor.

Of course the Spalding & Pepper Company make rubber tires, and on a recent call from THE WHEEL man they expressed themselves as being more than pleased with the record made by their tires in the Manhattan Bicycle Club's coasting contest on August 15, when they took two places out of the first four wheels that decided the winners.

Four distinct types of tires are made by them—a single tube of great resiliency and wearing qualities being their leader; then their puncture-preventing tire, one of the best of its class, is highly satisfactory in certain sections, while those who prefer the detachable variety have a choice in either the F. C. Smith or the G. & J., which they manufacture under a license.

The Spalding & Pepper Company have just issued a neat little brochure describing their product at length, which should prove invaluable to those interested, and which can be had for the asking. To quote from this little book, "Our purpose is to make only high-grade tires, and as we have skilled help in every department, with a competent superintendent of large experience, and use only the best materials, both fabric and rubber, we believe the production of our factory will be first-class in every respect."

HAVE THE RIGHT IDEA.

One of the Milwaukee concerns which felt the heavy hand of trouble has recovered, and in reorganized shape means to prove a considerable factor in the business next year. The Moore Cycle Company has been succeeded by the Moore Standard Bicycle Company. They are in possession of all the left-over stock of the old concern, which they say they are closing out at sacrifice prices. In '97 the new concern will have the Moore bicycle on the market, and state it is their purpose to maintain the grade and to sell at popular prices. Regarding the future they say:

"We have confidence in the future of this business, believing that manufacturers with capital and experience will succeed. The failures and collapses are due to lack of capital and injudicious advertising with expensive racing teams, as well as general depravity in credits. We think there is cause for congratulation that the present demoralization in the market came early and with emphasis, because it makes a clear sky after the storm."

GETS A GRIP ON THE NUT.

From a very small beginning the Springfield Drop Forge Company, Springfield, Mass., has grown to proportions that entitle them to a place among the leaders in their line. This concern's steady progress has been a silent tribute to the excellence of the work produced. They are putting on the market a bicycle wrench which has much to recommend it, being light in weight, yet without of exceeding strength, and with jaws thin enough to grasp a bolt or nut in a very narrow space. Crosby & Mayer, of Buffalo, are general sales agents, and the Springfield company's output should prove a valuable addition to this already complete line.

AIMED HIGH AND SCORED.

Four years ago, in Aurora, which is little more than a suburb of Chicago, the Aurora Automatic Machinery Company was established. The concern was small, but it aimed high; that is, at the production of only the very highest class of goods. They found a ready market for their wares, with the result that last year a large and fully equipped factory replaced the smaller affair. The building is fitted throughout with automatic and special machinery necessary for the making of their several specialties. Each depart-

President Alex Levedahl.

ment is distinct in itself, the product of each being given the most careful inspection possible.

Of their several specialties the "Thor" Hub is decidedly the best known. It became widely known last season, and will be in even greater demand during 1897. In addition to the hub a great variety of oil cups, bearing parts and spoke ties were manufactured. For the latter article the Aurora people have designed a special machine for their attachment to the spoke, which, they say, is a great labor-saving device, and which before long they expect to place in all the larger factories.

Secretary-Treasurer C. E. Erickson.

Among their '97 models is a two-piece crank and axle, which, in connection with an attachable sprocket, they believe will prove one of the greatest improvements of the coming season.

The mechanical end of the concern is in charge of Mr. Levedahl, a particularly bright man in his field. The proper construction of the bicycle has been a pet hobby, and aiming at its improvement has long been uppermost in his mind. The Aurora specialties are the result. The business management is in charge of Secretary-Treasurer Erickson, who devotes his entire time to the management of the details.

RAINBOW-HUED ENAMELS.

Anything black, for bicycle purposes, at least, seems to be at a discount in Syracuse, for while thousands of wheels are annually made there, with scarcely an exception they are all enamelled in some fancy color, and so thoroughly has each particular shade become identified with the various makes that this feature is as distinctive a mark, and in many cases more so than the individual nameplate. The manufacturers seem to have fostered the idea, and to-day Syracuse streets and roads, with their many-hued machines skimming about, form a decidedly kaleidoscopic picture.

First came the Stearns with a few yellow framed wheels. It was an experiment which seemed to strike the popular fancy, so much so that it is now their stock color and their phrase "The Yellow Fellow" was made possible.

The fad spread, and when the Syracuse was launched it was arrayed in a covering so crimson that even Stephen Crane in his boldest inspirations could conceive nothing more vivid.

Then came the Barnes with white, a nice, pure white, a color that has brought both fame and profit to its inceptors, and made the name of "White Flyer" a catchy and appropriate phrase.

The Frontenac was next, and many wondered what its complexion would be; a pretty russet brown it proved; a good summer color, you'll say; and it was soon nicknamed "The Russet Wheel."

The Empire was the next product of Syracuse skill, and some wag had it that in catering to the Hibernian taste it was made green. However, it looks very pretty and the Irish national color still holds its own.

Having red wheels and white wheels, it was absolutely necessary to have one in blue, so the Tourist was built, and the supremacy of good Old Glory upheld, while the Dodge added its mite by coming out in olive, a trifle modest, yet pleasing to the eye. What will the next born be? is the question. The primary colors are exhausted, so for a suggestion: Let it be purple—the color of kings.

CORRECTIONS AND EXPLANATIONS.

In relation to the coasting contests table published in THE WHEEL last week, the Overman Wheel Company writes: that they have positive information that all Victor wheels in the contest were fitted with Victor tires instead of New York tires, as published. The table was compiled from the replies given to the various inquiries by each contestant.

The company also state that one of their riders, H. L. Howard, was not allowed to qualify in a second heat, although he easily qualified. In reference to this, the officials of the contest state that Mr. Howard's name was sent to the clerk of course as having qualified, but that he did not respond to his name when the second heat was started.

FOR LEATHER TIRES.

The Graf Manufacturing Company is reported as incorporated in New York City to manufacture bicycles, tires, etc., with a capital of \$100,000. The directors are Andrew Graf, Brooklyn, and Michael J. Fenton, George H. Carpenter, George Pretz and Henry J. Lemaire, New York. Mr. Graf is the inventor of a leather tire, which the company will manufacture.

CLOSED DOWN.

Elgin, Ill., Aug. 19.—Because of inability to borrow money to pay employes, the Elgin Sewing Machine Company's bicycle factory has closed indefinitely, throwing 150 men out of employment.

John Dixwell, Boston, Mass. Filed July 13, 1896. Serial No. 559,055. Terms of patent fourteen years.

RECENT PATENTS.

566,029. LOCKING BICYCLE SUPPORT. AUGUSTUS C. SEXTON, Bethel, Conn., assignor to two-thirds to George A. Kinner, same place, and William E. Temple, Danbury, Conn. Filed December 6, 1895. Serial No. 571,264. No model.

Claim.—In combination, the bicycle wheels 9, the bicycle frame 1, the table 4, the hollow and sliding rod 5, the extensible fingers 7 hinged to said sliding rod, the extensible fingers 8 hinged to said sliding rod, and the spring 10, all substantially as described and for the purposes set forth.

Claim.—In a cushion tire for wheels, the combination of the rim 4, the rim 7, the bolts 8, of the said helical spring 9, means for adjusting the tension of said springs, and a telescopic core for each spring, substantially as described and for the purposes set forth.

Claim.—The with-described method of producing cast-iron paracentric tubes, consisting in forming and maintaining up an atmosphere around an endow, means tubular structure composed of rubber and fabric opening each structure to a limited extent and causing the material to part from the same by way of each limited opening, introducing a tubular ether layer through said limited opening and causing the same thereof to so form an endow, another tubular ether layer within the said tubular structure, causing the outer side of the tubular ether to the inner side of the tubular structure where it has been arranged, and compressing together the cemented sides by inflation.

Claim.—In a bicycle, the combination with the handle-bar, a pivot crank-axle, a compound level-gear having teeth in two different circles, keyed so as to rotate with the hub having adjustment longitudinally upon said crank-axle, an adjustable cable connecting the hub of the compound gear with the crank axle for holding the compound gear against longitudinal movement upon the axle, a transmitting shaft extending from the crank-axle to the driving wheel, a handle-bar having teeth adapted to mesh with the teeth of either of the compound gears and keyed so as to rotate with the hub having adjustment longitudinally upon said transmitting-shaft, and an adjustable cable connecting the hub of this with the transmitting-shaft for holding the gear against longitudinal movement upon said transmitting-shaft, substantially as specified.

Claim.—In a safety-bicycle, the combination with the main-frame and with one of the ground wheels having an open rim, of a friction driving-wheel journaled in the main-frame and operating against the inner face of said open rim, means for driving said friction-wheel, and a supplemental telescopic frame having a sliding connection with the main frame, arranged within said open rim, and also provided at its angles with guiding rollers or wheels, substantially as and for the purpose set forth.

566,247. BICYCLE TIRE. CHARLES T. THOMPSON, Philadelphia, Pa. Filed Dec. 17, 1895. Serial No. 572,288. (No model.)

Claim.—The combination with a pneumatic tire, of an internal lining of feathers, substantially as set forth.

Claim.—In a bicycle, the combination of the head portion of the main supporting-frame, a clamp secured to the head portion and extension of the said frame, a tubular socket having a protuberance capable of a movement in the direction of the length of the main supporting-frame and adjustably connected therewith, which is located in the tubular socket and adjustable in the direction of its length, and a foot-peg supported by the clamp.

Claim.—In a bicycle, the combination of the head portion of the main supporting-frame, a clamp secured to the head portion and extension of the said frame, a tubular socket having a protuberance capable of a movement in the direction of the length of the main supporting-frame and adjustably connected therewith, which is located in the tubular socket and adjustable in the direction of its length, and a foot-peg supported by the clamp.

Claim.—In a bicycle, the combination with the endow chain and sprocket-wheel, of a receptacle to contain fluid lubricant carried by said wheel, an absorbent pad on said wheel between two adjacent teeth thereof so as to apply lubricant to the back of the chain by the pressure of the link on said pad, and a tube having one end extending into said receptacle to reach to the bottom and the other end adjacent said pad.

Claim.—In a bicycle, the combination with the main-frame and with one of the ground wheels having an open rim, of a friction driving-wheel journaled in the main-frame and operating against the inner face of said open rim, means for driving said friction-wheel, and a supplemental telescopic frame having a sliding connection with the main frame, arranged within said open rim, and also provided at its angles with guiding rollers or wheels, substantially as and for the purpose set forth.

566,860. BICYCLE. SYLVESTER E. CLEVELAND, HARRISON, ILL. Filed Dec. 17, 1895. Serial No. 572,288. (No model.)

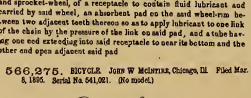

Claim.—In a bicycle, the combination of the head portion of the main supporting-frame, a clamp secured to the head portion and extension of the said frame, a tubular socket having a protuberance capable of a movement in the direction of the length of the main supporting-frame and adjustably connected therewith, which is located in the tubular socket and adjustable in the direction of its length, and a foot-peg supported by the clamp.

Claim.—In a bicycle, the combination with the endow chain and sprocket-wheel, of a receptacle to contain fluid lubricant carried by said wheel, an absorbent pad on said wheel between two adjacent teeth thereof so as to apply lubricant to the back of the chain by the pressure of the link on said pad, and a tube having one end extending into said receptacle to reach to the bottom and the other end adjacent said pad.

Claim.—In a bicycle, the combination with the endow chain and sprocket-wheel, of a receptacle to contain fluid lubricant carried by said wheel, an absorbent pad on said wheel between two adjacent teeth thereof so as to apply lubricant to the back of the chain by the pressure of the link on said pad, and a tube having one end extending into said receptacle to reach to the bottom and the other end adjacent said pad.

Claim.—In a bicycle, the combination with the main-frame and with one of the ground wheels having an open rim, of a friction driving-wheel journaled in the main-frame and operating against the inner face of said open rim, means for driving said friction-wheel, and a supplemental telescopic frame having a sliding connection with the main frame, arranged within said open rim, and also provided at its angles with guiding rollers or wheels, substantially as and for the purpose set forth.

Claim.—In a bicycle, the combination with the main-frame and with one of the ground wheels having an open rim, of a friction driving-wheel journaled in the main-frame and operating against the inner face of said open rim, means for driving said friction-wheel, and a supplemental telescopic frame having a sliding connection with the main frame, arranged within said open rim, and also provided at its angles with guiding rollers or wheels, substantially as and for the purpose set forth.

566,249. TUBE MASS SHOCK-STOP. FRANK ALBERT HUBERT, BETHEL, CONN. Filed Dec. 17, 1895. Serial No. 572,288. (No model.)

Claim.—A tube mass of sections each one of which is hollow and which are dovetailed the one into the next, and each section being brought together forming internal strengthening walls, substantially as described.

Claim.—A bicycle-pump combined in one structure the following instrumentalities combined substantially as described, to wit: a main supporting-frame, a clamp secured to the head portion and extension of the said frame, a tubular socket having a protuberance capable of a movement in the direction of the length of the main supporting-frame and adjustably connected therewith, which is located in the tubular socket and adjustable in the direction of its length, and a foot-peg supported by the clamp.

Claim.—In a bicycle, the combination with the endow chain and sprocket-wheel, of a receptacle to contain fluid lubricant carried by said wheel, an absorbent pad on said wheel between two adjacent teeth thereof so as to apply lubricant to the back of the chain by the pressure of the link on said pad, and a tube having one end extending into said receptacle to reach to the bottom and the other end adjacent said pad.

Claim.—In a bicycle, the combination with the main-frame and with one of the ground wheels having an open rim, of a friction driving-wheel journaled in the main-frame and operating against the inner face of said open rim, means for driving said friction-wheel, and a supplemental telescopic frame having a sliding connection with the main frame, arranged within said open rim, and also provided at its angles with guiding rollers or wheels, substantially as and for the purpose set forth.

Claim.—In a bicycle, the combination with the main-frame and with one of the ground wheels having an open rim, of a friction driving-wheel journaled in the main-frame and operating against the inner face of said open rim, means for driving said friction-wheel, and a supplemental telescopic frame having a sliding connection with the main frame, arranged within said open rim, and also provided at its angles with guiding rollers or wheels, substantially as and for the purpose set forth.

An Important Decision of the L. A. W.

It is always the subject of much interest. Every week Mr. Gideon's bulletin is scanned anxiously by thousands of cyclists; yet it is much easier for the cycling public to discern a good reliable wheel—one that outshines all competitors—than to solve the difficult amateur question.

CRIMSON RIMS have winning ways; moreover, they breed champions. Careful construction has earned its reward, and no diversity of opinion on this point exists.

Be wise! Ride a **SYRACUSE** and see how it seems to be in the lead.

There is but one Crimson Rim---It is the Syracuse.

CHILLS NO JOINTS.

"The only gravity brazer on the market."

This is what the Enterprise Machine Works, of Richmond, Va., claim for their Enterprise brazer, illustrated herewith.

It is a furnace of the high compression type, and may be operated by one person and with any size of foot pump, no air tank being neces-

sary. It can braze any class of work in any position; the automatic burners can be placed at any angle. Chilling of the joints is said to be out of the question. The furnace is especially adapted for shops where the gas supply is weak, and can be attached to one-quarter-inch gas connection. The flames are regulated to any size by automatic stopcocks, and are arranged to do any class of soft or silver soldering, and it is also constructed so as to be used for forging and tool dressing, and for tempering and case hardening.

It is built very substantially of steel and wrought iron; no cast iron is used in any portion of it. The price of the brazer complete, as shown in cut, without pump, is \$25, from which there is a good discount to the trade. The brazer is in use in several of the leading bicycle factories; in one shop it was used last month for ten hours each day, and consumed but \$3.36 worth of gas.

THE THORNY PATH OF LAW.

Washington, D. C., Aug. 18.—In the equity case of the George L. Thompson Manufacturing Company, of Chicago, against Joseph A. and Charles E. Thorn, the complainants today filed an amended bill of complaint. The first-named defendant, it is charged, was, until recently engaged in the bicycle business under the firm name of the Thorn Manufacturing Company, and recently made an assignment, naming the second-named defendant, his brother, as assignee. The company claims that Joseph Thorn is indebted to it in the sum of \$1,014 40, and that he has absconded from the District to evade service and his creditors. The appointment of a receiver is asked, and the removal of Charles Thorn as assignee.

SAME CITY, DIFFERENT CONCERNS.

The Omaha Cycle Company, whose name inadvertently became mixed with that of the Ar-Sar-Den Company of the same city, is not the concern against whom suit was recently reported to have been brought for \$279. The Ar-Sar-Den being the company reported to have been sued.

BALL GRINDING CASE.

Among the many improvements which are being shown cycle manufacturers is the '97 pattern ball case grinder illustrated herewith.

This machine was put on the market some years since, at the time when the attention of manufacturers was being turned toward the subject of grinding their bearings. Since that time some changes have been made in the details of the machine, but no such radical departures as are shown in this pattern.

In the old machine the cups and cones were held in a three-jawed chuck, which was slow to operate. The drawback chuck on the new machine is arranged to hold split collets of various sizes within its capacity, and these are fitted at the factory to cups and cones furnished by the bicycle-maker. One movement of a lever serves to tighten or loosen the chuck as desired.

The revolving head shown in the centre of the bed has a taper hole, into which fits a specially designed chuck so arranged that hubs may be held by the barrel or by the flange. If but one emery wheel is used, the head is swivelled half way round when one bearing is ground, in order to grind the bearing at the other end of the hub. Sometimes two emery wheels are used, one at each end of the hub, in which case it is not necessary to revolve the head. This revolving head was formerly driven by a belt, but it is now propelled by a friction wheel shown in the rear, and which is caused to engage with the head by a lever shown in front, which actuates a cam wheel on the back of the machine.

The emery wheel slide rest was formerly made so that the spindle moved back and forth by means of a lever. This exposed some

bearing surfaces to the action of emery dust. The present device of causing the whole rest to move on protected slides by means of a rack and pinion movement gives very much better results.

The revolving head and the emery wheel spindle are both equipped with ball bearings accurately ground. This permits a very high speed to the emery wheel without heating, and gives a better chance to protect the bearings from the entrance of emery dust.

The above description will be sufficient to enable any one interested to understand by means of an examination of the drawing the method of operating the machine. The makers state that they have sold nearly 200 of these machines to cycle manufacturers in the United States, France, England and Germany. This machine, together with a complete line of grinding and polishing machinery, is made by the Diamond Machine Company, of Providence, R. I.

The Welivar Manufacturing Company, of Phillipsburg, Penn., which recently embarked in the manufacture of bicycles, have placed with the Davis & Egan Machine Tool Company their order for an entire equipment of tools, including hub machines, engine lathes, milling machines, drill presses, shapers, etc.

The most uncomfortable man in the world to get along with is he who will not acknowledge that you know more about a wheel than he does.

WANTED BY AGENTS AND REPAIRERS.

A steam vulcanizer is the latest production of the Gormully & Jeffery Mfg. Co., a number of which are being operated at the various branches of the firm, with good results. The machine is designed to affect a saving to agents and repairers. By its use any break in the tire, no matter how serious, may be re-

paired easily, making the tire almost as good as new, at little or no expense. Some of the features of the vulcanizer are compactness, light weight, and the fact that the heat which is applied to the rubber is a steam heat, which can be readily applied and regulated. The vulcanizer is adapted to both single and double tube tires, and sells for \$12.50.

CHANCE FOR CHINESE TRADE.

The Peking (China) University, an educational institution conducted under the auspices of the American Methodist Mission, has recently opened in one of its buildings a museum which it is proposed to devote largely to the exhibition of foreign machinery and mechanical appliances. This museum is visited daily by increasing numbers of people of the better classes, and the authorities would be glad to receive and exhibit working models, photographs or drawings of machinery and inventions, or specimens thereof, such as bicycles and tires. Each exhibit which may be presented to them will be marked in Chinese, with the name and address of the maker, together with the description and price if desired, and a capable translator will explain their use to inquirers.

Correspondence on this subject and articles for exhibition may be sent to the Peking University, Peking, China, or to Charles H. Taft, treasurer of the Peking University, No. 78 William street, New York City, and under an arrangement with the I. M. customs will be imported to China free of duty.

A new hub machine that, it is claimed, will form, drill and cut off 100 rear hubs in ten hours is being marketed by the Davis & Egan Tool Company, Cincinnati, Ohio, who say they now have orders on their books for this machine from England, France, Denmark, Sweden, Canada and quite a number in the United States. They report an exceptionally good foreign business in cycle machinery.

With the installation of their new Corliss engines the Shelby Steel Tube Company, Shelby, Ohio, will have power and plant sufficient to turn out not less than 2,000,000 feet of tubing each month.

Notice to Advertisers.

WHEEL ADVERTISERS are notified that change of advertisements is not guaranteed, unless copy is received by Saturday morning.

TO FOREIGN INFORMATION SEEKERS.

Owing to the number of inquiries received from abroad in regard to the status of American firms, THE WHEEL announces that it will give to all such inquiries the most careful attention, and all foreign merchants desiring advice or information regarding American trade are invited to correspond with THE WHEEL.

THE CHAINLESS CHANCES.

THE item published exclusively in THE WHEEL of August 28, to the effect that the Pope Company intended to make a chainless "safety" for 1897, has caused considerable interest among the trade. This interest has been increased by the statement of the Pope Company's representatives that the story was, in the main, correct. It is true that this company will place on the market a bevel-gear "safety," but it will not, as a matter of fact, be their leader. The "Columbia" will be their leader. The Pope Company do not believe it advisable to turn from that which has been tried and not found wanting to a wheel built on lines radically different from the ordinary type of "safety." Their judgment is, of course, sound. No other policy, in fact, could have been pursued by them.

The trouble has been in the past to get proper machinery to make bevel gearing. The machinery for making the gears is now being designed for the Pope Company, and they will carry a chainless "safety" in their 1897 line.

It is the opinion, as THE WHEEL has before stated, that the chainless "safety" is

the next logical step in bicycle construction, and there is no doubt that the Pope Company think their new model will, in time, and because of its merit, become their leader.

GOLD THAT GLITTERS.

THE large influx of foreign gold from Europe, England in particular, is going to be of twofold benefit to the American cycle-maker. Its first and most direct effect will be the restoration of confidence, and succeeding this a much-needed easing up of the tightness in the money market, with a consequent renewal of mutually profitable relations between the banks as lenders and the trade as borrowers. In this particular gold importations will have a direct and favoring influence upon the entire trade of this country, in which the cycle portion thereof will be equal sharers with all the rest.

Another and, perhaps, little understood benefit will be that experienced by that portion of the trade—now an extremely large one, by-the-by—which has established foreign connections, or is contemplating doing so.

In Great Britain there has been going on for two or three years a gigantic speculation and inflation based upon a bank rate of 2 per cent and a discount rate in the open market of less than 1 per cent. Now, with the certainty that thirty or forty millions of gold must be shipped to this country in the next two or three months, and with the possibility of a great deal more following upon Mr. McKinley's election, it looks very much as if the end of the prolonged period of cheap money were in sight. What effect this will have on some of the flimsy booms that have taken place in floating British cycle companies at enormous figures is easy to foresee.

The bubble will be pricked; paper capitalization will come down to a solid-money and much-decreased basis, and the consequent flood of English machines made and sold at any price will at once receive a decided check. This will give the Americans the chance they seek and will enable them to meet the British maker on his own ground with equal chance of winning.

Your British maker is a cautious individual, when the stakes in the game of finance must come from his own pocket. Entirely different is he from the plunging gentleman who has been playing table stakes with the millions of the British public which have lately been showered upon him with such a lavish hand.

Always used to fighting for success with the sinews of war taken from his own treasure chest, the American manufacturer will be in a position to make the war he has carried into Africa an exceedingly lively affair, with the British makers playing the unpleasant role of Africans.

To the maker with suitable wares to sell and a determination to dispose of them abroad, wherever a satisfactory market for them can be found, a profitable market for his goods can be found in the transatlantic markets. For the trade buccaneer, he who

sails under the black flag bearing the motto, "Anything to get the money," only failure more pronounced than he has experienced at home awaits him abroad. The laws of trade are in every way more strictly drawn and adhered to in foreign markets than they are in our domestic ones, and the buccaneer will be wise unto his generation and kind if he appreciates these facts and refrains from attempting raids upon the cash boxes of the foreign trade.

OUR GUARDIANS ON WHEELS.

WE WERE among the first to urge the organizing of a cycle squad among the members of the Metropolitan police, declaring then, as we do now, that the changed conditions of city traffic due to the popularity of the wheel, and the many advantages of the machine itself for police use, demanded that cognizance of it should be taken by police authorities.

We have no fault to find with the idea of cycle policemen to-day; they are a distinct advance over the pedestrian brand of blue-coat; they are abreast of the times and a part thereof; they are a power for good and should be increased in numbers and improved by discipline. It is of the latter we would speak. Mistaken kindness is fast making of the cycle policeman something neither his friends nor originators would have him be. His cranial development is exceeding the caput covering capacity of his cap; he is afflicted with an acute attack of elephantiasis of the brain box; in plain English, he is sorely stricken with an aggravated dose of big head. In a laudable desire to encourage the cycle policeman, the press and his official superiors have praised and humored him until he has grown to look upon himself as a sort of cycling Jove on wheels. From an ordinary every-day member of the police, he has become a swaggering masher, a boaster, a challenger, a seeker after cheap notoriety, an officious, meddling maker of mischief.

When this gentleman finds no violator of the law handy for his advertising-seeking purposes an innocent rider is as liable to arrest as a guilty one. We know of a number of such cases, but one will be sufficient for an example. A rider who had punctured his tire was perforce slowly riding to a repair shop. The policeman rode past him, waited at a corner in advance of the rider and arrested him, charging he was riding at eighteen miles an hour, a charge the judge sustained and fined the rider for being guilty of. The policeman had not seen his name in print for two whole days, and some one had to suffer therefor. The rider in question filled the bill and paid the cost thereof.

Women are in many cases made to suffer from the obnoxious attentions of the pedaling policemen. Thinly veiled under the license their position and uniform afford them these gentlemen of the force too frequently take occasion to address and annoy such women as are without the protection of their escorts. Naturally these annoyances are not

made public, since no refined woman cares to have her name connected in the public prints with such men or their methods, but the evil exists and is constantly growing worse.

With all due admiration for the cycle policeman, his usefulness and the public's rights both demand that a sterner hand be at once employed in controlling him. Policemen are not and should not be racers; they should not be mollicoddled by their superiors, nor have their importance unduly magnified in the daily papers. So long as they do their duty, and do it thoroughly, they are deserving only of such praise as is given to any man who, well paid, gives a fair return to his employers for the money he is paid. Only this and nothing more.

There are some natures on which the bestowal of too much praise or the elevation to any unusual prominence acts as a cause for instant deterioration. The cycle policeman is evidently one of this very numerous class. He has swollen out of all semblance to his former humble self, and the time has come when his inflated importance demands instant puncture if his friends and supporters would prevent an ultimate explosion and collapse. Will the Police Commissioners look into the case of the cycle policeman and prescribe a remedy, or will both of these be left for the public and the press to attend to?

THE OLD ORDER CHANGETH.

MANY wheelmen refer regretfully to the "good old days," when every fellow bowed to every other fellow and when cyclists loved their bicycles. In the good old days no wheelman was afraid to confess that he frequently carried his full-nickelled "ordinary" up to his sleeping apartment. This great care of and desire for proximity to the "steel steed" was due partly to love and partly to fear. The poet of those days best described the feelings of the pioneers of pedalling when he said:

Genteel,
On my wheel,
I sit.
The vulgar mob may flit
Below;
They go
Unheeded by,
And, as they fly,
I,
Mounted high,
Sit,
Turning with toe or heel
My wheel.

Under the old order, a young man who took to bicycle-riding was mourned as past redemption. One of the first things he did, in order to enjoy his Sunday ride, was to give up church-going. This procured for him the hall-mark of Satan. In many families there is no doubt that many a fine and able-bodied wheel was foully dealt with over night by members of the bedevilled one's family.

Outside of that, there is no doubt that the "tall" wheel did inspire a certain species of affection in the heart of its owner. The tall wheel had lines of life which the "safety" has not. The sailing vessel and the boat have life; most easy chairs have life, whereas the wooden settee has none. It is the art-

ist-designer who puts into inanimate things that quality of human-beingness which draws us to them. It is lack of art that produces things which are plain and characterless. They have no vitality. The "safety" bicycle is a machine, pure and simple, though a certain class of oversentimental people do retain a sort of love for the bicycle which supplanted the "ordinary;" but it requires a pretty good wheel and a very soft heart to produce the state referred to. The "safety" is mechanical. It suggests power, not grace. But if it does not imbue in its rider the affection of those other days of cycling, it makes up for its non-sentimentality in a thousand-and-one practical and valuable ways.

NEEDED REFEREE REFORMS.

Now that the League membership promises to top-notch the 100,000 high-water mark, with cycling broad and deep everywhere, it seems time that the present primitive way of refereeing a meet should be abandoned. It seems time that the referee should not be something lower and meaner than a baseball umpire. Despite the present status of racing, the referee's life has been made more miserable this year than ever. The thanks for this are largely due to the Racing Board. A racing man of any talent whatever practically laughs in his sleeves at the Racing Board. They reinstate old offenders, and permit new offenders to pass unrebuked. The referee has no redress. There is nothing behind him; he stands alone. Having no certain penalty, he has no certain power.

Perhaps the referee's life might be made less miserable if, instead of one, there would be three referees appointed at a meet—three stewards, so-called, whose decisions would be absolute, except as provided for in the racing rules for the usual appeal; but whose decisions in all matters respecting eye-judgment and the actual facts connected with the race should be final, and who would have power to impose an immediate and un-reversible sentence. Decisions would then carry more weight. It would not be the opinion of one man, but of an official body of men, and the "ballyragging" which is now bestowed on one would be divided among the three.

Reform in this direction is inspired by the fact that one member of the Racing Board—a Western member—refuses to referee any race meet. An additional reason is afforded through the fact that during the last season referees of respectability and firmness and calibre, who will not sway with every passing breeze and wilt with every calamitous howl, have thrown up their positions and refused to even finish off a single day's race meet.

The Racing Board should stop playing marbles, and should make music with the spheres. The music should sing a song which means certain punishment for all who break rules, and for all who are guilty of loaferish conduct within the racing inclosure.

There seems to be a well-defined attempt on the part of certain people to force the St. Louis member of the League Racing Board to resign. Without going into the petty details of a somewhat discreditable affair, it seems Mr. Robert is charged with the high crime and misdemeanor of too strictly enforcing the rules of the Board of which he is a member. We cannot see the justice of punishing a League official for his zeal in enforcing the very rules he was appointed to enforce. If nothing more serious than this can be alleged against Mr. Robert, we sincerely commend his determination not to be driven out of his office by any clique or cabal who may not like the rules of the League, rules, by the by, Mr. Robert is in no wise any more responsible for than are the other members of his Board and those of the National Assembly.

It is stated that not a few American makers have endeavored to stock their companies in London. One or two among the best of them have had offers from stock jobbers and promoting syndicates. But, on the other hand, not a few of them have received the "cold shower." The cycle stock quotation bubble appears to have burst. All the money of the uninitiated seems to have been absorbed so that there is very little chance of floating foreign corporations.

Among the cleverest of foreign stock promoters are numbered two men whose names have figured prominently in the biggest of the late flotation schemes. It was their idea to make a combination of the four biggest American companies and to work up a gigantic stock corporation; but for this reason, and that reason, and the other reason, the combination could not be made.

Colonel Pope's idea is that the horseless vehicle shall eventually be the pleasure and the freight-carrying vehicle of the future. The motor, however, must be of the right kind. In Paris they are a familiar sight. The motor vehicle can carry four times as much as the average American express wagon, and it is economical and effective.

This is a time for seed sowing on the part of the manufacturer, and he should not be discouraged even if the trade crops are not quite as spontaneous as he has grown used to having them be.

There is a sneaking opinion that there is no element in the Racing Board which inspires in racing men that peculiar respect and fear which Raymond inspired for himself when he was the Pilot.

A man can be two kinds of a referee. He can be firm, and be cursed, or be shilly-shally, unsuspecting, unobserving, indecisive, spongy and smiling—and be a regular good fellow.

LADDER TALK.

"Speaking of ladder climbing, top rungs, ups and downs and all those sort of things, how's this?" said Gardiner, as he once more sat himself upon the rung of honor, a position he has held longer than any other climber this season. "Thought I might just as well get a little leeway, you know, before the Springfield scramble, because it's liable to come in right handy around the time you make up the next ladder. Guess you'll hardly know this ladder after the climbers on it get credited and debited with their Springfield wins and losses."

"Just resting," said Cooper, settling himself comfortably on the second rung. "What's the use of tiring yourself all out this week with the work we've got out for us at Springfield? Don't you think I don't know what I'm about! I'm an old hand at this ladder game, and let me tell you it's just the same with climbing as it is with racing—the final sprint, if it is well timed, is the one that lands you a winner at the finish. I'm not sprinting yet; do you see the point?"

"Just did him, eh?" chortled Ziegler, as he squeezed past Bald and climbed on to rung No. 3. "I thought I'd catch him just about here, so I put on a bit of steam and did him. Say, don't you think, though, that I am all out; I've got a bit up my sleeve yet, a bit I expect to use at Hampden Park in a way which may even make those two up there wish I had concluded to abandon racing this season instead of next. Do I expect to pass them? Go on, you're badgering the witness and the court won't allow it."

"I wasn't trying a little bit, that's the reason he got past me," said Bald, looking at Ziegler. "What's the good of his crowing? He's only one point better than me, and what is a point at this stage of the game, I'd like to know? You've got to have more of a lead on your man than that before you are safe in saying anything. You watch your humble servant at Springfield. Maybe you'll see something in the way of ladder work which may astonish you."

"Suppose I ought to introduce myself. My name is Butler, Tom Butler. May be you have heard the name before, though this is my first appearance as a ladderite." Thus spoke the newcomer on Rung 5. "They all seemed to be so anxious about this ladder climbing that they got me interested in it, too, so I got a move on me, managed to secure fourteen points last week, and get away from the 'also ran' division. How do I like it? Really you're asking me too much; haven't been at it long enough yet to know. If I am here next week, and I expect I will be, ask me then, and maybe I'll be able to pass an intelligent opinion by that time."

"Close call!" gasped Stevens, as he saw Sanger slip from the ladder to the head of the "also rans." "I thought I was a goner sure, but that one point I scored just saved me, and left me safe for another week at any rate. But, between you and me, this hanging on here by your eyelids, as it were, isn't pleasant, I can tell you. I don't know but what I'd just about as soon be over and done with it now as any other time, and land down there with 'Wooden Shoes.' He's out of his misery at any rate, while I'm still worrying."

Points are based upon the racer's wins on the National Circuit only. A win counts three points, a second two points, and a third one point. The present ladder shows the men as they have climbed up to and including the meet at Meriden, Conn., on August 29.

ALSO RANS.

The following are the men on the National Circuit whose wins have been sufficient to score for them ten points and over: Sanger, 28; Coulter, 27; McFarland, 22; Kimbel, 19; Parker, 17; Kennedy, 16; Clark, 16; Becker, 16; Coburn, 13; Allen, 11; Mertens, 11; Baker, 11; McDonald, 10.

WANTS THE '97 MEET.

Columbus, O., is after the '97 League meet. It has many inducements to offer, is eager to entertain, and an organization known as the Business Men's League is at the helm of the movement. Columbus, the president of the club states, has 10,000 cyclists, 160 miles of paved streets, 15 lines of railroads, an unsurpassed race track and better hotel facilities than any other city of its population. The wheelmen of the city have fought for their rights and won the Mayor, city officials, Board of Trade and Business Men's League, and they all unite in the invitation. The latter organization represents in its membership every branch of business in the city. The invitation extended to the League concludes by saying:

"Our wide, well paved, well shaded streets and our splendid country roads will please the wheelmen of the nation. Our parks and public places will interest them, and best of all, that warmth of welcome we can give, the liberty, the freedom which makes each guest feel himself at home, will lead the swift riders of the world to congratulate themselves upon the judgment that fixed the meet of '97 at Columbus."

'TAIN'T BARGAIN TAINTED.

"A bicycle that is free from the odor of the bargain counter" is the manner in which the Manhattan Bicycle Club describes the truss framed Fowler that is offered for the fastest ascent of Eagle Rock hill on the occasion of the club's open contest on that famous grade on Monday next. The event will occur during the forenoon at 11 o'clock, and should prove not only of interest, but of value in the comparisons of cranks and gears that it will afford. Eagle Rock itself is but a pleasant forenoon's ride from New York. It is in the heart of the Oranges; near its base is Liwellyn Park; it is skirted in every direction by splendid roads and picturesque land and waterscapes are to be had at nearly every turn, that from the summit of the Rock being sufficiently glorious to more than repay any one for the stiff climb. It must be seen to be fully appreciated. To those who desire a most delightful ride, tinged with a bit of wholesome excitement, the hill-climbing contest will appeal strongly. The entry list of the affair closes this evening.

OPPOSED TO SIDE SHOWS.

The National Board of Trade of Cycle Manufacturers have decided that they will not grant sanctions for exhibitions of bicycles to be held in connection with any fair. During the last week they have received communications from the American Institute, which is to hold a fair at Madison Square Garden on September 28 and 29; also from St. Louis, Mo., and Milwaukee, Wis., all of which have been refused.

Their action is prompted by the general depression of business, and they feel that the best interests of the trade are conserved by not granting sanction to the various fairs throughout the country.

The only shows thus far sanctioned are the National Cycle Exhibition, to be held at the Grand Central Palace of Industry, New York City, and the one to be held at the Coliseum in Chicago.

HAD PLENTY OF GRIT.

L. D. Hotchkiss, a young man who lived in Cheyenne County, Kan., wanted to go to Oberlin, 125 miles away, to stand an admission to the bar. Having no money to pay his railroad fare, he rode the distance on a bicycle, passed a successful examination and peddled back home again.

THE MEN WHO MAKE.

How the Advance Guard of the Trade Appeared at Springfield This Week.

Springfield, Sept. 1.—Up to the present the trade has constituted a very small percentage of those present at the Springfield meet, trial heats alone offering but little inducement to the many who always find it a source of profit and information. But promises are plenty that to-morrow and Thursday will see the usual quota that usually come to Springfield to see the races, to renew old friendships, and to talk over the hundred and one things that are ever present in the trade. Among the first to appear on the scene were Kirkpatrick and Holroyd, of the Dunlop Tire Co. Of course they come to boom the Dunlop, and the city is flooded with their ads. A big electrical sign on the side of Cooley's Hotel blazing the legend "Dunlop Tires" is the largest thing here, and attracts nightly attraction. Incidentally they have subsidized the Judges' stand at the racetrack, and Dunlop legends stare the spectators in the face wherever they look on the track.

Advertising Manager Sullivan, of the Boston Woven Hose and Tire Co., is on the spot. Affable and enterprising, he leaves no chance to go unnoticed to boom Vim tires; in fact, makes his booms heard when they shoot from a mortar a bomb, which, exploding high in the air, unfolds a long tubular streamer bearing "Won on Vim Tires," telling in forcible language what tires the lucky rider rode.

C. J. Iven and J. J. Brandenburg are here in the interest of the new Iven, Brandenburg-Burgess Co., and incidentally to talk their line, which includes Sager saddles, Lefevre chains and Brandenburg pedals. Iven, "Charley," as he is called, is an old racing man himself, and mainly through his personal acquaintanceship with the fast men on the track, that many are using Sager saddles and are finding out the good qualities of the Lefevre chain. As is well-known, this chain is made from special stock, and its wearing qualities, its smoothness of running and strength can be attested by the number of them now on racing wheels.

In one of the tents out at the track, Jake Bretz is holding a little show all by himself, having on exhibition a few Wolf-American wheels. As they have no racing man on the track, they have adopted this method of showing the many good points of this most excellent wheel, and judging from the number of people that are attracted to their tent the scheme is meeting with success. The genial "Jake" has as assistants Messrs. Chas. Newman, J. H. Toole and big Jim Murphy, while General Manager J. Solomon is also present. Preparations for '07 are already under way by this live New York concern, and the cycling public are promised something fine for the coming season.

F. Howard Tuttle has been kept busy seeing that Stearns bicycle advertisements are properly placed, and the entrance to Hampden Park has assumed the yellow hue that is now so closely identified with the Stearns output. The inside of the rail of the track fronting the grandstand is covered with advice to "Ride Stearns Bicycles," and variously worded placards are placed everywhere that they are likely to be seen.

Arthur Sidwell and Walter Measure journeyed down from Boston to show to a select few the new Record pedal. Those who have seen it are loud in its praises, and while harping all the good points that have made

its name in the past, something entirely new in addition is promised that will more than ever make the name "Record" a ball mark of all that is good and perfect.

The Persons Mfg. Co. was represented by Mr. C. A. Persons in person, and while this may be a poor attempt at a joke, Mr. Persons started in hard earnest to introduce their new saddle, and with the result that many of the men used them on their machines with evident satisfaction.

C. T. Dundore, of the Reading Cycle Mfg. Co., Reading, Pa., was an interested spectator of the races, and speaks enthusiastically of his native town as a bicycle centre. Although doing business in a quiet, unobtrusive way, the Reading manufacturers have built up a wonderful trade and an enviable reputation. Mr. Dundore thinks the outlook for '07 most excellent, and the company with which he is identified is making preparations for a big year.

Davy Post, fresh from Europe, was always the centre of a jolly crowd listening to the many stories and anecdotes of his trip. To the WHEEL man he expressed himself as feeling satisfied that Europe would prove a good market for honestly made American goods; but after a careful insight into across-the-water methods the best and only, the very best would sell, in cheap lines, he said, the Germans can beat the world, and it was only by putting our best foot forward that we could hope for a good share of European trade.

Among the visitors at Springfield on Thursday was M. Clement, the great French manufacturer. M. Clement came to this country some two years ago to purchase a lot of American machinery for the purpose of facilitating his business. This year he is over again for the same purpose. He will also purchase special automatic machinery to build auto-mobile carriages, motor vehicles and electric and compressed air motors. He is accompanied by his chief engineer, W. C. Capitaine, who served for fifteen years with the French artillery in their gun manufacturing department.

M. Clement will be in New York on Friday and Saturday, at the Hotel Marten, Tenth street, and University Place. He expects to sail for Europe early next week.

WHEEL WOES IN AFRICA.

A correspondent of the WHEEL, writing from Johannesburg, South Africa, says:

"Probably few American riders appreciate the fact that in Africa we cycle for twelve months in the year, and under conditions different from those in any part of America.

"A Johannesburg winter is rainless, snowless, streets are dry and dusty, and what water is put on them dries quickly under the hot sun; so that, fanned by the continual wind's steady blowing, we have dust storms lasting for hours several days each week.

"A ride that ordinarily requires thirty minutes, when against these winds takes from fifty to sixty minutes to accomplish.

"A short ride of this sort taken a few days ago was among my experiences. To avoid the dust blowing in my face I had my chin down to my handlebars, but so thick was the dust cloud that I was unable to see the road under my wheel for fully a quarter of the ride.

"Our macadam roads consist of the coarse native rock rolled, with clay well rolled in on top, and when they are well made they are better than nothing. But with rock from the mines, it seems strange they do not metal the top and thus make a perfect road.

MIDDLE OF WINTER.

Australia Snowbound, but Still Racing—Outlook and Plans for Next Season.

East Melbourne, Victoria, Australia, July 31.—We are just now in the depth of winter, and a very dirty one it has been. Although not particularly cold—haven't seen the slightest bit of ice—the rain in light showers has been almost incessant, rendering the road very sticky, so that not the same amount of riding has been done.

The first of the Interclub road premiership was run off last Saturday, July 25, a distance of twenty-five miles, over a very hard stretch of roadway. About fifty competitors—a team of four from each club—started from scratch.

The winner turned up in Middleton, who won the Austral of '04. He covered the distance in 1:16:30. The next contest takes place a month hence, over fifty miles, which is much more like a road race. The shorter distance is a dangerous scramble. The public seemed extraordinarily enthusiastic over the event, and turned up in thousands, so that a passage for the finishing competitors was difficult to preserve. The start was made five miles out of town, and it is suggested, in order to give the man a better chance, to start the fifty-mile five miles further out—at the ten miles. They will then travel twenty-five miles out and home.

On September 12 is a hundred-mile open road race from Bendigo, north of Melbourne, to the city. At the end of September is the hundred-mile open championship of Victoria, while at the beginning of October is the second annual road race—the Scott-Morton—from Warrnambool, southwest of Melbourne, 165 miles. These contests are something worthy of the capabilities of the wonderful cycle. Distances of ten, fifteen, twenty and twenty-five or so are mere mockeries of road races.

Turning from the road to the racing path, the first thing of interest is that the Austral wheel race prize will be \$1,500 for first, \$200 for second and \$50 for third. There is a big discrepancy between first and second money. The entrance and acceptance fees are \$5 each. It's a veritable sweepstake.

This is one big prize, but I have no doubt that others will follow as the season develops. No doubt these rich plums will draw a large foreign contingent, and it is already rumored that John S. Johnson will be here, in company with Parsons. The English and French flyers, too, will without a doubt be well represented, as the Austral meeting is being advertised in those countries and entries taken and then cabled to Australia.

Your countryman, "Plugger" Billy Martin, is doing very well in the northern colonies, and by this time should have a tidy bank account. He has ridden a Beeston Humber throughout.

But with all our fine prizes and otherwise, we haven't a decent up-to-date track. There has been any amount of rumors that so and so were going to build one, but they have not eventuated. Next season promises to be the "boomiest" (d'ye understand?) time cycling ever had in the world—at least that's the idea of some of us—both sport and pastime. The trade, of course, must prosper if it is so.

GEORGE R. BROADBENT.

The match-making which results in matrimony seems to put an effectual quietus upon the match-making which results in racing. Michael, since his marriage, seems to have dropped out of the racing game altogether.

Next year's world's championships will be held in Scotland.

[Advertisement.]

GOOD THINGS ABOUT COLUMBIAS.

**A Few Extracts from Letters to the
Poep Manufacturing Company.**

Won the Championship.

"We had a ten and one-half mile (seventeen kilometers) race here in honor of the American colony. It was for the State championship and was witnessed by 20,000 people. I am glad to say that Columbia came to the front. I won the championship by a margin of six minutes."—T. J. Pomeroy, Guadalajara, Mexico.

Praised by All.

"I have given the Columbia Model 40 a thorough trial, both on the level and in the hills. It is easier to keep in order, and takes less power to drive than the best English machines here. It has won great praise from all."—Van Leer Polk, Consul-General, Calcutta.

A Columbia.

"Goodby to the blues when you buy a Columbia."—R. E. S. Williams, Oakland, Cal.

None So Good.

"There is no other exercise as beneficial to a broken-down person as riding a wheel."—P. A. Wade, Business Manager American Monitor of Health.

Columbia Forever.

"I have always ridden a Columbia. It shall have my strongest indorsement and fullest reference."—Addis Albro, New York City.

Nearest Perfection.

"This year's Columbias are certainly as near perfection as wheels can be made."—A. T. Brightwell & Son, Maxeys, Ga.

Safer on a Columbia.

"I have ridden a Model 44 racer over all sorts of country roads and city pavements without a cent's worth of repairs. I weigh nearly 200 pounds and have ridden Columbia exclusively for fifteen years, and feel safer on any wheel of that make anywhere, without a guarantee than I would on any other with the best guarantee the maker could devise. My experience is my Columbia guarantee."—John S. Briggs, Rochester, N. Y.

Far the Best.

"My Columbia more than fulfils all expectations and every one acknowledges it by far the best."—R. M. Warren.

Loyal to Columbia.

"I write to correct any wrong impression that my presumptuous friends may have given, and to assure you that I am still loyal to my first love—Columbia."—G. G. Wittfeld, Philadelphia, Penn.

Columbias Almost Fly.

"To say that I am well pleased by no means expresses my delight. I understand now why the Columbia people place wings around their advertisements."—C. N. Wyant, Gambier, Ohio.

Great Hill Climber.

"The Columbia is the greatest hill climber I ever saw."—R. Park White, Warsaw, Ind.

Recommended to All.

"I shall recommend the Columbia bicycle to all my friends. I have had no trouble with the wheel, and assure you that it is more than satisfactory."—J. E. Walbridge, Milwaukee, Wis.

Has No Equal.

"For neatness, perfection of shape and construction, for all-around easy running qualities and for a wheel that can be relied upon, where is the equal of the Columbia?"—Norman Wright, Poughkeepsie, N. Y.

Can't Wear It Out.

"Have had your Century No. 12,666 '92, and as I cannot wear it out, will sell it and get a lighter wheel."—J. W. Bemis, Sulphur Station, Texas.

Columbias.

"The old Jacksonian phrase does not apply correctly to the wheel world. In it is to a Columbia belongs the spoils."—Leon Schwarz, Tuscaloosa, Ala.

Stood Well.

"I have ridden 2,200 miles so far this season, and this includes five centuries, and the wheel has stood well."—W. E. Smith, New York Athletic Club.

THE COLUMBIA BICYCLE.

Dear, lovely woman! with delight I view
The charming witcheries of thy roseate face,

As borne on wheel with rare consummate skill
Thy limbs symmetric glide with perfect grace;
Ne'er in this world is loveliness so fair
As when the bicycle thy form doth bear;
Perched on Columbia nothing may compete
With such fair object in the crowded street.
Those sweet girls smile as fast as they glitter by,
And lovers watch them with enchanted eye.

What wondrous sense of beauty they behold,
As fast they circle past the forests green,
As fast they wheel by orchards rich with fruit,
Past flowery gardens smiling and serene;
Past domes palatial soaring to the skies;
Past village spires that o'er the woods arise;
By the bright river that through meadows sweeps,

By the white sands that gird the ocean deeps;
Past gilded carriages with tolling steed
Striving in vain to rival us in speed;
Past trolley-cars that scarce in race may vie
With our Columbia, wheeling by.

—Isaac McLehlan.

EVERYTHING ON WHEELS.

Boston Does the Cycle Parade Up in Fine Shape—Record in the Show Line.

Good old Bunker Hill, out Charlestown way, was deserted, the patriotic shaft that graces its crest, wrapt in pathetic loneliness, and while the afternoon's sun glistened on the Capitol's gilded dome, it was for more seeing eyes, even Nantasket, the Hub's Coney Island, was for the nonce neglected—and all for a bicycle parade.

Last Saturday afternoon a local paper treated the Bostonians to what they termed "the greatest outpouring of wheelmen ever seen in America," intending it, metaphorically speaking, to be the last flourish of trumpets, celebrating the finish of a "popular bicycle" voting contest, one of those delicate little games of bunco which have already been so profitably worked by newspapers all over the country.

clad in cycling costumes, but contained in itself representations from every possible source, and proved as nothing else could the far-reaching influence of the bicycle. Every conceivable style of machine was on view, and antiquarians had choice morsels in Abbott Bassett's old sociable tricycle, which was resurrected for the occasion, and the first tricycle ever ridden by a lady in this country, with the identical lady herself propelling it, a perspiring martyr to the name of history.

The military display was very highly commendable, indeed, over five hundred turned out, and the effect was martial to a high degree, headed by a band of music also a wheel. They rolled along with the true precision of soldiers, their rifles slung across their backs, easily showing the possibilities of the wheel in times of war.

The firemen and letter-carriers also showed up very well, and as there were prizes for the best appearance in each division, they made a creditable display. A large squad of tele-

ny, and the crowd that lined each side of the streets had a chance to laugh until their sides ached; everything imaginable was caricatured, and many of the novel ideas were strikingly original. It would take pages to half describe the many features, but Indians, tramps, an elephant, that, by the way, took first prize; immense birds, horrible examples of the effects of free silver by the score, kept the lines of humanity in good humor all along the route. It must have proved a hard thing for the judges to settle the question to whom the prizes belonged, but the elephant that got premier honors was certainly artistically gotten up. The second prize went to a Malden man, who burlesqued Trilby with a black face. The dummy feet were the size of 14-pound hams, and how he managed to pedal the machine is a mystery. A loud dress and a tattered umbrella completed an outfit that would invoke a smile anywhere. Two Roxbury wheelmen dressed as fiery Hotentots sat side by side on Abbott Bassett's old so-

Clever advertising had wrought the public interest to a high pitch, day after day the papers teemed with accounts of the many wonders in store, with the final consequences that long before the allotted time for starting, the streets along which the parade was to pass were thronged with a surging mass of humanity. They had come from all points of the compass, on foot, in cars, with teams, and riding wheels. Beautiful Commonwealth avenue, with the pretty dividing parks down its centre, presented an animated and picturesque scene. The number of wheels passing and repassing on either side was bewildering, the varied costumes and displays forming a composite picture that set many an attentive swain's thoughts bicycle-ward, while the maiden at his side carefully polished her glasses and daintily adjusted them to her dear intellectual nose so that nothing should escape her vision.

The parade, beyond a doubt, was the most complete and varied ever held. It did not consist merely of a long string of civilians,

graph boys caused lots of amusement, and apparently the parade did not move fast enough to suit their exuberant feelings, for they were continually running into those directly in front; surely the bicycle has done much to reform the habit of this particular class, whose leisure ways have been the theme of many a joke.

The club division was not nearly so well filled as it usually is in parades of this sort, probably because their ranks had been recruited from to supply material for the other features. Of the clubs that did turn out, the Press Club, of Boston, with fifty-nine men, easily captured the prize for both best appearance and largest numbers. Of course the ladies, both club and otherwise, were scattered about the parade in goodly numbers, but with very few exceptions the costumes were little out of the ordinary, the bloomer pattern a very rare article, the short skirt seemingly being the accepted style.

In every sense of the word the seventh division, with Lon Peck at its head, was fun-

claid tricycle (shades of the past!) and caused lots of amusement by their appearance and antics. They got the third prize, but had there been fifty they could have been meritoriously awarded.

Near the end came the trades display, and many of the offerings were beautiful. A mounted band led the division, followed by the Warwick, who had the right of line, and who had an exquisite creation of crimson and white in the form of a pagoda. This was mounted on a double tandem, and made an elegant appearance. An army of riders of crimson Warwick wheels added to the effect, and it proved a prize-winner.

The Boston Woven Hose and Rubber Co. also captured a prize with their mammoth tricycle, that has already made a reputation for itself all through the country. It certainly is a great piece of mechanism, and an advertiser of Vim tires par excellence.

The Overman Wheel Co. had an elegant display, that plainly showed the fine Italian hand of Mr. W. E. Miles, manager of the Bos-

BICYCLES

ton Branch. They also had a float, built on two tandems, of which the Overman winged monogram was the central feature, and on the platform was the figure of Mercury, holding aloft a full nicked Victor. White was the predominating color, and the display made a decided hit. Much surprise was expressed afterward that it only gained fourth prize.

The Chase Tough Tread Tire Co. made a very large exhibit, and an expensive one. Mounted on a tandem float was an immense wood rim and tire, easily ten feet in diameter. Fastened inside the rim was a small bicycle seating a pretty little girl in fancy costume. Maroon was the leading color, and the effect was heightened by having nearly half a hundred red-coated and white-breeched riders following. The sign read "A Modern Chase," and the idea was cleverly followed out in costuming the men as they did.

The Orient Co. had sixty men in white suits who rode along serpentine fashion, and got first prize for doing it, while the Transient Co. fastened two tandems and a "quint" together

CHICAGO CYCLE SHOW.

Under the direct management of the Board of Trade the Chicago show will prove as different from previous efforts as will the New York function.

The diagram shows the general floor plan of the spaces, but instead of the microscopic affairs of last year the spaces will be 50 per cent larger, that is, 10 by 12 feet; the rental will be reduced 40 per cent and the profits of the show to be pro-rated among the exhibitors. There are in all 416 spaces—and all are of uniform size—for which more than 300 applications are already in hand.

No plan of allotment has yet been decided on, but as soon as the applications are opened on September 21 President Coleman will act upon an equitable basis. All applications for both shows must be filed two days before the date set for their opening.

The exhibition will open in the Coliseum on Saturday, January 23, possession of the building being taken on January 20, on which date exhibitions can be delivered. Exhibits must be removed by 5 p. m. on Wednesday,

NEW TUBE PLANT.

Peoria, Ill., Aug. 31.—Messrs. J. Trader, of Cincinnati, and George M. Roberts, of Marion, Ind., are in the city with a view of establishing a steel tubing factory to supply the bicycle and kindred trades. They have a new patent for the manufacture of steel tubing. The projectors desire to organize a stock company, with a capital stock of \$100,000, and would like to sell some stock in Peoria. They would employ at least a hundred men at the start.

SNELLS STRIKE IS OFF.

The strike in the Snell Cycle Fittings Company's works, Toledo, Ohio, which occurred last May because the firm refused to dismiss their assistant superintendent, has been declared off. The men on Friday last agreed to return to work unconditionally, and the factory resumed operations this week. The Snell Company have a number of new specialties for '97, including a patent wooden handle-bar barrel pedals, a new barrel hub and a new yoke design.

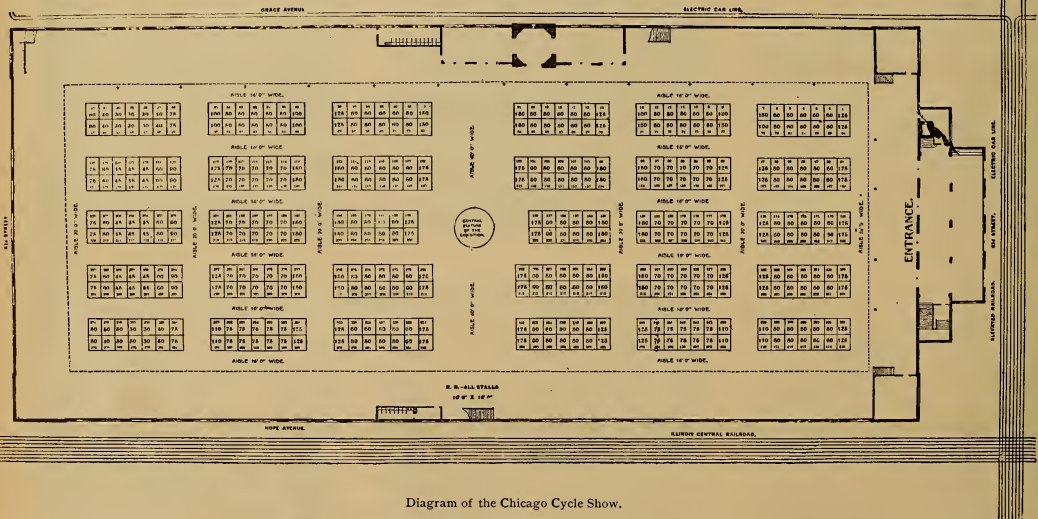

Diagram of the Chicago Cycle Show.

and made a machine for nine riders, and caused quite a bit of applause.

The Newton Rubber Works had an army of riders, the name Newton on their crimson jerseys telling what they were there for. The Ivers-Johnson, the Hartford Rubber Works, Cyco, the Hall Megaphone Co., the Wolff-American Co., the L. A. W. cleaning compound, and a number of smaller concerns wound up a division, on which probably more money had been spent than on any other in the parade.

Ten thousand is claimed, but two-thirds that number will come closer to the actual count of those that turned out, and in all it was an elegant and creditable effort. The only thing that marred its success was the execrable management, although the pompous grand marshal for weeks had been admiring himself and a staff that in size would do credit to the standing army of Germany. Yet the succession of breaks in the line were continuous, and many people never saw the trades division at all simply because it was a full half-hour behind its predecessor, and when finally it did appear, its course was deserted and the roads choked up with carriages.

February 3, but as a majority of the exhibitors at Chicago will likewise exhibit at New York they will have to get their exhibits out of the Coliseum at the very earliest possible moment.

ATTACHED INSURANCE.

Another development in the affairs of the defunct Decker Cycle Company has cropped up. Since the incendiary fire, which is still being investigated, M. J. Whittall, the assignee, has trusted the insurance, amounting to \$9,000. No further move will be made until the plaintiff, named in the bill of equity, brings the case to the attention of the Court. The loss by the fire is placed at \$3,000.

GOING AFTER THEIR OWN.

The Weatherly Bicycle Company, of Elizabeth, N. J., has seized fifty wheels which it sold to customers on the instalment plan last spring. The terms were \$5 a month and a small deposit. The company sold 200 wheels. The company's lawyer on Tuesday employed half a dozen constables to gather in the wheels.

ATTACHED 306.

Chicago, Ill., Aug. 31.—The Lincoln Bicycle Co. filed a bill in the United States Circuit Court this morning for an attachment on 306 bicycles belonging to the Chicago Tip and Tire Co., a Maine corporation with a branch office in Chicago. It contracted with the Lincoln Bicycle Co. for the assembling of 306 bicycles for a consideration of \$3,014 10, furnishing the material. The machines have been completed, but have not been taken by the defendant. It was stated to a WHEEL man that the Lincoln Co. wanted the Tip and Tire Co. to furnish money for them to work on, which they refused to do after furnishing the material.

ON HIS NATIVE HEATH.

Minneapolis, Minn., Aug. 31.—S. D. Heath has associated with himself in a new company for the manufacture of the Heath line of bicycle pumps E. C. Quimby and L. S. Hoyt. New machinery and tools of the latest design will be purchased. The new company will be known as the Heath Manufacturing Company, with offices at 418 Guaranty Loan Building.

This trade mark is recognized in all parts of the world as the emblem of perfect cycle construction.

There are now made in America, cycles of

CHEAP,
MEDIUM,
HIGH-GRADE
AND
HUMBER QUALITY.

Within the walls of every cycle factory in the world, HUMBERS are admittedly the best product in cycle construction which inventive genius, precise methods, skilled mechanism, and unlimited facilities have produced. ❁ ❁ ❁ ❁ ❁ ❁ ❁ ❁

Applications for HUMBER Agencies for the season of 1897 will be received at our Westboro office until Sept. 15, 1896. Though we have largely increased our facilities of manufacture during the past season, the volume of our product is limited, and it is necessary our plans for the distribution of our 1897 product be completed by the 15th of September, in order that we may supply agents promptly with cycles they will require during the season of 1897.

A Humber Agency

❁ Means Reputation, Satisfaction, Profit. ❁

Once appointed, the HUMBER agent can always feel assured of steady business, for so long as he is conducting the business on satisfactory lines the agency will remain with him. It is the policy of HUMBER Companies to select agents whose character is on a plane with the reputation for integrity and quality earned by HUMBER Companies during the past twenty-nine years. We seek those only to represent us who appreciate the merits of honest goods and who realize the value of and will aid us in supporting a truthful, honorable business policy. In every manner possible we seek to prevent any cutting of prices, that all buyers may be treated uniformly alike. We, therefore, require every agent to furnish a guarantee bond that he will not under any circumstances sell HUMBERS at less than our catalogue price, nor give or allow any rebate or commission.

HUMBER & CO., America, Limited,

ELLIOTT BURRIS, Managing Director,

WESTBORO, MASS.

BIG GUNS WERE ABSENT.

Good Racing, However, Was the Rule, Even Though Few Onlookers Enjoyed It.

Bridgeport, Ct., Aug. 28.—Although most of the stars of the National Circuit were absent at the Bridgeport Wheel Club's circuit meet to-day, the sport was interesting. But a handful of spectators were present. The mile open, professional, went to Gardiner. MacDonald had the pole, Reynolds, Gardiner, Kimble, Clark, Rigby, Stevens and Ziegler following in the order named. Hamilton paced and the gun started the men too quick, the order finally giving Rigby the position back of pace-maker and Gardiner the rear of the line of Clark's wheel. At the bell Gardiner started up past the bunch and Rigby followed him to the lead, the latter jumping past the pace-maker, and gained the rear of Gardiner's wheel. Down the stretch Rigby came to Gardiner's side, and the race was close to the tape, the two finishing inches apart, with Kimble a close third.

In the third of a mile MacDonald gained the rear of the line, and stayed there to the backstretch, when he started a sneak around the bunch, gaining a good lead. Kimble rode after him, and on the stretch was at his side, the two going over the tape in almost a dead heat. The judges caught MacDonald as the winner. Ziegler was an equally close third.

Kimble won the one-mile handicap against a field of twenty-three starters in a very close finish with the entire field, with the exception of Gardiner and Kennedy, the scratch men, right up in the hunt. Newton, Monte Scott and MacFarland gained the second, third and fourth positions, and inches only separated them all around. Ray Dawson, of Boonton, carried away the honors in the amateur class. Summary:

Mile professional—1, Gardiner; 2, Rigby; 3, Kimble. Time—2:09.

Third-of-a-mile professional—1, MacDonald; 2, Kimble; 3, Ziegler. Time—0:41-5.

Mile handicap, professional—1, Kimble; 40 yards; 2, Newton, 40 yards; 3, Monte Scott, 80 yards; 4, MacFarland, 80 yards. Time—2:04-5.

Mile, 2:40 class—1, John C. Nelson; 2, E. S. Collet; 3, George B. Cobb. Time—2:24.

One-mile handicap—1, W. F. Soule, 70 yards; 2, W. E. Tenseler, 30 yards; 3, E. S. Collet, 70 yards. Time—2:09-1-5.

Mile open—1, Ray Dawson, Boonton; 2, W. E. Tenseler; 3, W. A. Barbeau. Time—2:14-5.

Two-mile handicap—1, Ray Dawson, scratch; 2, E. C. Hausman, 40 yards; 3, W. F. Soule, 150 yards. Time—4:28.

Gardiner rode a mile, pace and pace about, single machines, in 1:57 2-5, single paced record time.

A LITTLE MORE LIGHT.

A good gate and large fields of contestants characterized the night race meet at Harlem on August 27. While additional light improved the meet from the spectators' point of view, over the previous affairs, the illumination was still inadequate. Local men only completed. Summary:

Quarter-mile—Final—1, C. J. Liebold; 2, W. A. Brown. Time, 37 3-5 seconds.

Half-mile handicap—Final—1, C. H. Tomlinson (40 yards). Time, 1:12 3-5.

One-mile handicap—Final—1, J. J. Hughes (100 yards); 2, W. A. Barbeau (scratch). Time, 2:29 2-5.

One-mile, lap—Final—1, W. C. Roome; 2, Sam Brock. Time, 2:37 1-5.

DAVIDSON DOES IT.

The Canadian 25 miles record was cut to 1h. 1m. 40s. by Harley Davidson at Chatham, Ont., last week. Five men entered in the race, which was paced by tandems.

STARS FAILED TO TWINKLE.

Philadelphia, Aug. 29.—J. W. Parsons, the Australian, now holds the State record for a mile. At the Quaker City Wheelmen's meet to-day at Tioga, he rode the distance paced in 1:52, clipping four seconds off of Ziegler's record made at Wilkesbarre. John S. Johnson rode a half-mile paced in 54 seconds, cutting the previous best State record four and a half seconds. Tom Eck engineered the pacing, and the pick-ups were perfect. Triplet and tandem teams exchanged the pace.

Johnson and Parsons rode in the five-mile handicap, which was won by Starbuck. The former rode until he had caught the field and led, then dropping out of the race. In the mile scratch professional there was a mild strike among the men on account of the time-limit, 2:25.

In the first heat the time made was 2:27 1-5, and it was declared no race, with no run-over, Parsons and Starbuck being among those ruled out. The second heat was made in 2:25 1-5, and was allowed to stand, Church, Bowers, Jack and Eckhardt qualifying. In the third heat Landis and Johnson and McCurdy were the first men across the tape, but the time being 2:28, they were ruled out. Then it was seen that what was hoped to be the race of the day was to be robbed of the "star" competitors, and it was announced that the first three men in each heat would be allowed to ride in the final. The men in the second heat very properly refused to ride, and the decision was reversed, and only the four men who qualified in the second heat were allowed to compete, Jack winning from Church. Summary:

One-mile novice (final heat)—1, L. Krauss; 2, Joe McDowell; 3, A. B. Reynolds, jr. Time, 2:45 1-5.

One-mile handicap, professional (final heat)—1, C. C. Bowers, 45 yards; 2, C. B. Jack, 40 yards; 3, Charles Edfield, 55 yards. Time, 2:12.

One-third mile handicap (final heat)—1, J. B. Clift, 20 yards; 2, E. T. Walters, jr., 10 yards; 3, A. Bateman, 30 yards. Time, 41 4-5 seconds.

Mile open, professional—First heat, 1, J. W. Parsons; 2, B. C. Betner; 3, J. F. Starbuck. Time, 2:21 1-5. No race. Second heat, 1, C. A. Church; 2, C. C. Bowers; 3, C. E. Jack; 4, H. W. Eckhardt. Time, 2:15 1-5. Third heat, 1, W. R. Landis; 2, R. P. McCurdy; 3, John S. Johnson. Time, 2:28. No race. Final heat, 1, C. B. Jack; 2, C. A. Church; 3, C. C. Bowers. Time, 2:14 5.

One-mile open, amateur—Final heat, 1, P. S. Davis; 2, W. M. Trott; 3, C. W. Krick. Time, 2:40.

One-mile, handicap—Final heat, 1, A. Bateman, 115 yards; 2, C. W. Krick, scratch; 3, J. A. Vernier, 45 yards. Time, 2:19.

Five-mile handicap, professional—1, J. F. Starbuck; 50 yards; 2, W. E. Dickerson, 130 yards; 3, W. A. Rulon, 115 yards. Time, 12:5 4-5.

REMARKABLY SMALL ATTENDANCE.

Cleveland, O., Aug. 30.—The first meet of the Associated Wheelmen occurred on Saturday at C. A. C. Park. It brought out a remarkably small attendance. Summary:

One Mile Novice—1, J. J. Callon, Collinwood; 2, Harry Wood; 3, Ed. Calta. Time, 2:56 2-5.

Half Mile Open—1, Earl Torrer, Dayton; 2, Jas. A. Crawford; 3, T. R. Blackmore. Time, 1:36 2-5.

One Mile, City Championship—1, Jas. A. Crawford; 2, J. R. Fitzsimmons; 3, F. R. Blackmore. Time, 2:24 2-5.

Two Mile Handicap—1, Albert Calkins, 150 yards; 2, F. A. Robshaw, 150 yards; 3, W. C. Emerick, 130 yards. Time, 4:45 2-5.

One Mile, 2:35 Class—1, H. B. Wood, Oberlin; 2, J. R. Corrigan; 3, F. R. Blackmore. Time, 2:23.

Five Mile Open—1, H. B. Wood; 2, W. C. Emerick; 3, Geo. Comstock. Time, 11:43.

THIRTEEN PURES FELL.

But Impures Went Right on Racing—Tom Butler Keeps Up His Winning Streak.

Meriden, Conn., Aug. 29.—Tom Butler won most of the purses put up by the Meriden Wheel Club at their circuit meet to-day. He took the half-mile and mile open, and made the best time in the mile invitation race, 1:55 4-5. The attendance was very good, 3,000 spectators being on the grounds.

The mile open, tandem pacing, was put in by the management under permit, but the men protested. The time, 2:09, was not as fast as most of the time made this season with single pacing. Tom Butler caught the pacemaker, but Gardiner, rushing around, dropped back and gained several lengths. Gardiner lost the race by several lengths to the Boston rider, and Newton, the ex-amateur from Stafford Springs, was a close third.

The half-mile open final had as starters from the pole out the following: Rigby, Butler, Gardiner, Kimble, MacFarland, Ziegler, Maya and Crooks. No pacemaker was allowed and the men made good going, finishing in 1:00 1-5, one of the fastest unpaced halves of the year. At the outset Ziegler worked to the front and Gardiner caught his rear, Rigby and Kimble following Gardiner. Crooks from the rear pulled Tom Butler to the head of the field, and that rider started after that first, gaining it with his usual easy running. Ziegler gained the second place a length ahead of Gardiner. Crooks quit after helping Butler.

The mile handicap, amateur, was disastrous inasmuch as thirteen of the fourteen starters fell. One was injured, but not seriously. Two men were disqualified for the day for foul riding. Alexander, of Hartford, was the only man remaining on his wheel. Birdie Munger's brother mounted and gained second prize, the second finisher, Edwards, of Southington, being disqualified.

The mile handicap, professional, had Stevens, at 20 yards, as the virtual scratch man, and Bowler, at 110 yards, the limit man. The finish was close and Kimble, Hoyt, Crooks and Mertens divided the money in an inch-close finish.

Mile mile, 2:50 class—1, F. J. Cadwell, Elmwood; 2, E. C. Hausman, New Haven; 3, J. P. Fleming. Time—2:24.

Half mile, professional—1, Tom Butler; 2, Ziegler; 3, Gardiner. Time—1:05 1-5, unpaced.

Mile handicap—1, R. M. Alexander, Hartford (50 yards); 2, Leon Munger, Middletown (100 yards); 3, A. M. Curtis, Meriden (50 yards). Time—2:19 3-5.

Mile handicap, professional—1, Kimble (40 yards); 2, Hoyt (50 yards); 3, Crooks (60 yards). Time—2:10 4-5.

Half-mile open—1, Ray Dawson, Boonton; 2, Leon Munger; 3, Joe Harrison. Time—1:03 4-5.

Mile open, professional—1, Tom Butler; 2, Gardiner; 3, C. R. Newton. Time—2:09.

Mile invitation race, each man paced against time. Citizens' purse. A time limit of 2:00 on each rider, to beat this or have no share in the purse. Purse divided between first two in time or all to one man if under two minutes—1, Tom Butler; time, 1:55 4-5; paced by Maddox and Scott and Berlo and Crooks, 2, Gardiner; time, 1:57 4-5; paced by the triplet, O'Connor, Bainbridge and Stevens.

Mile amateur, same conditions, time limit, 2:08—None reached.

FOUR AT PHOENIXVILLE.

Four cycling events were given by the Phoenixville, Penn., Agricultural and Driving Park Association in that city on Saturday. William Armstrong won the half-mile novice in 1:16. Fred Airhart won the mile handicap in 2:37 1/2, the three-mile handicap in 8:36 and in company with J. L. Brewer the two-mile tandem race in 5:33.

POSTPONED, BUT POPULAR.

When it comes down to genuine up-to-date police service in connection with cycle racing, there is no one who can eclipse Detective Gregory, of Newark, N. J. He has had charge of the Irvington-Millburn race during the past few years, where he preserved order out of chaos, and he again demonstrated his ability on Wednesday's last week at the Atalanta Wheelmen's postponed meet at Waverly Park. Although postponed events are usually unsuccessful, there was a large crowd at the meet, particularly of the class that delight in getting on the track, but wonderful to relate not a soul was within the fence except the wearers of official badges. The track is wide, and the fences low, and it is usually next to impossible to keep the course clear. Even the spectator who got over-enthused and thrust his head over the track was a target for the police.

The first race was not called until 3:30 p. m. in order to insure the attendance of competitors, officials and the spectators. As a consequence it was dusk before the finish.

The meet attracted a large entry list, and two specialties, a triplet race and a contest between Newark letter-carriers, policemen and firemen, excited local enthusiasm. W. H. Ross rode a half-mile paced by a triplet in 56 1-5 seconds, and Bert Ripley followed the same machine around for a mile in 2 minutes 1 second.

The absence of Ray Dawson made the mile open rather an easy thing for Harrison, the Asbury Park crack, Ripley and Roome being the only ones present to worry him. The track was in excellent shape, causing many blanket finishes. Summary:

One-mile novice; four heats; final-1, M. C. Tatten; 2, T. Firth; 3, H. C. Hedeman. Time, 2:32 4-5.

One-mile open; three heats; final-1, Joe Harrison; 2, Ripley; 3, W. C. Roome. Time, 2:16 4-5.

One and one-half mile tandem; two heats; final-1, Harrison and Ripley; 2, Roome and Jasper; 3, Junkind and Crumm. Time, 3:55.

One-mile, 2:25 class; three heats; final-1, W. C. Roome; 2, B. T. Allen; 3, J. Jasper. Time, 2:36 2-5.

Special invitation team race; two miles; heats and a final-Won by John C. Letzelder, police. Letter carriers first, 20 points; police second, 17 points; firemen, 8 points. Time 5:36 2-5.

Triplet race; one mile-1, Vim Bicycle Club; 2, Riverside Wheelmen; 3, Harlem Wheelmen. Time, 2:02 2-5.

Half-mile handicap; four heats; final-1, W. B. Bennett (60 yards); 2, M. C. Tatten (70 yards); 3, W. H. Cane, jr., (70 yards). Time 1:03 1-5.

Two-mile handicap; three heats; final-1, J. J. Gregory; 2, J. A. Forney (150 yards); 3, C. J. Bird (80 yards). Time 4:46 4-5.

JOHNSON STARRED, STARTED AND STOPPED.

John S. Johnson starred at Bunnell's night meet at Tioga, Philadelphia, on Wednesday evening last. His appearance was well advertised, and 4,000 spectators were present expecting to see him win everything. His performance consisted of finishing second in the first heat of the mile open and being totally outclassed in the final, such men as Church, Starbuck, Jack and McCurdy showing him the way over the tape. Parsons, the Australian, also rode. Although unfortunate, he rode pluckily, and was made to feel that he was among friends. He fell in the final of the mile open, but rode pluckily in his heat in the handicap from scratch, and qualified, making the mile in 2:11. He was unplaced in the final. He also rode unsuccessfully in the five-mile handicap. The entry list was large, the crowd enthusiastic, and the management perfect.

One-mile novice-Final heat-1, J. Greul; 2, A. Heilson; 3, A. Melghan. Time-2:45 1-5.

One-mile open, professional-Final heat-1, Carroll B. Jack; 2, John S. Johnson; 3, J. F. Star-

buck; 4, Robert P. McCurdy. Time-2:20 2-5. Second heat-1, Charles Church; 2, J. W. Parsons, Australia; 3, J. M. Baldwin; 4, H. E. Bartholomew. Time-2:18. Final heat-1, Charles Church; 2, Carroll B. Jack; 3, J. F. Starbuck; 4, R. P. McCurdy. Time-2:20 1-5.

One-mile open-Final heat-1, P. S. Davis; 2, Joshua Lindley; 3, Walter Troth; 4, C. H. Hensel. Time-2:13 1-5.

One-mile handicap, professional-First heat-1, B. C. Betner (90 yards); 2, W. W. Ruion (60); 3, E. P. Thompson; 4, J. W. Parsons (scratch). Time-2:10 4-5. Time of scratch man-2:11. Thompson was subsequently disqualified for looking backward. Second heat-1, S. L. Cassidy (75 yards); 2, C. B. Jack (40); 3, W. E. Dickinson (100); 4, C. C. Bowers (50). Time-2:14. Third heat-1, Edward Bringham (145); 2, A. Boone (145); 3, R. P. McCurdy (35); 4, C. A. Church (scratch). Time-2:11 4-5. Final heat-1, B. C. Betner; 2, Edward Bringham; 3, W. E. Dickerson; 4, A. Boone. Time-2:06 4-5. Parsons, who finished unplaced, rode the mile in 2:16.

One-mile handicap-Final heat-1, W. B. West (30 yards); 2, Samuel Moore (100); 3, Clement Turville (115); 4, H. Sheek (50). Time-2:23.

Five-mile handicap, professional-1, W. A. Ruion (200 yards); 2, J. F. Starbuck (100); 3, C. C. Brown (handicap not announced); 4, C. B. Jack (200); 5, H. E. Bartholomew (200). Time-12:48 2-5.

EASY ROE TO HOE.

H. K. Roe is the champion rider of Long Island. At least, he holds that title by winning the mile championship of Long Island race at the Mercury Wheel Club's meet at Flushing on Saturday last. H. K. Roe and his brother Nat have a private track near their home in Patchogue, and they were both in fine fettle for the Flushing meet. Nine men started in the event, which was paced by a triplet. Henshaw got the rear wheel of the pacing machine, with Brock, Owen, Roe and Allen in that order. Coming in the homestretch Roe made the jump and was never headed, beating Henshaw by three lengths. Roe was carried to his dressing quarters on the shoulders of his clubmates. F. D. White, of Freeport, was also in excellent shape, and won the mile open and five-mile handicap. In the mile he caught the triplet and won by a long sprint from the three-quarter pole, beating out Barbeau and Roe. The attendance was about 2,000. Summary:

One mile (novice)-1, H. B. Cashell, Brooklyn; 2, G. Juch, Flushing; 3, E. L. Nichols, Flushing. Time-2:27 1-5.

Two miles (handicap)-Final heat-1, Nat Roe, P. W. (80 yards); 2, C. O'Connor, K. A. C. (130 yards); 3, E. Krumm, New York (100 yards). Time-4:35.

One mile (open)-First heat-1, F. W. Richt, Brooklyn; 2, E. J. Clark, M. W. C.; 3, E. Krumm, New York. Time-2:25 2-5. Second heat-1, B. F. Allen, L. W.; 2, W. A. Barbeau, R. W.; 3, David Simmons, Brooklyn. Time-2:25. Third heat-1, C. T. Earl, K. C. W.; 2, H. K. Roe, P. W.; 3, F. D. White, F. B. C. Time-2:23. Final heat-1, F. D. White, F. B. C.; 2, W. A. Barbeau, R. W.; 3, H. K. Roe, P. W. Time-2:08 4-5.

Two miles (tandem)-1, C. H. and Walter Apple, E. A. C.; 2, Barbeau and Henshaw, R. W.; 3, Hovey and Gressell, H. W. Time-4:20 2-5.

One mile-Final heat-1, H. K. Roe, P. W.; 2, C. S. Henshaw, Brooklyn; 3, David Simmons, Brooklyn. Time-2:21 2-5.

Five miles (handicap)-1, F. D. White, F. B. C. (75 yards); 2, C. O'Connor, K. A. C. (275 yards); 3, W. H. Brown, K. A. C. (150 yards); 4, David Simmons, Brooklyn (400 yards). Time-11:54 4-5.

LOAFED AND GOT LEFT.

A case of sulks was handled in a most conclusive manner at the Fresh Air Mission electric light races at Buffalo on Wednesday evening of last week. In the final of the mile open Goehler, Cleland, Higgins, De Temple, Horan and Finn refused to follow the pace-maker. He set a good pace at the start, but

the men rode along leisurely. The pacer waited for them and again endeavored to draw them along, but they refused to wake up. At the end of the first lap the referee ordered them to dismount and suspended them from the track for the evening. They were hissed by the spectators as they retired to the dressing-room.

In the three-mile police race Tony Gavin, who recently rode from Buffalo to New-York to compete in The Herald's Inter-city Police race, was beaten by three other "coppers." The meet was held for charity and was in every way successful. Summary:

One-mile novice-1, E. M. Beck; 2, D. L. Johnson; 3, R. E. Gardiner. Time, 2:25 1/2.

One-mile open-Final: 1, A. E. Goehler, R. C.; 2, C. B. Horan, P. C.; 3, W. D. Temple, P. C.; Time, 2:37. Time limit, 2:50. Ordered run over by referee. Run over declared and riders suspended from the track for the night.

Half-mile handicap-1, C. A. Sliker; 2, E. E. Denniston; 3, J. C. Penseyres. Time, 1:03 3-5.

One-mile handicap-1, C. A. Sliker (30); 2, J. C. Penseyres (35); 3, J. R. Jones (50). Time, 2:18.

HAD A PICNIC.

Dawson and Slavin, the speedy New Jersey amateurs, visited Middletown, N. Y., on Wednesday of last week and finished one, two, in all the events in which they were eligible. The meet was promoted by the Barnes Wheelmen and was well attended. Summary:

Mile novice-1, A. G. Relyea, K. C. W.; 2, John H. Cummings, Middletown; 3, Robert Terhune, Middletown. Time-2:44.

Mile tandem (State championship, paced by Kings County Quad)-1, Owen and O'Connor, K. C. W.; 2, Henshaw and Barbeau, Riverside Wheelmen. Time-2:19.

Half-mile open-1, Ray Dawson, N. Y. A. C.; 2, W. H. Owens, K. A. C.; 3, William Slavin, Suffern. Time-1:04 1/2.

Half-mile (county championship)-1, O. E. Murphy, Tuxedo; 2, J. S. Donahue, Newburg; 3, W. J. Oakley. Time-1:13 1/2.

Mile tandem-1, Black and White; 2, Henshaw and Barbeau; 3, Case brothers. Time-2:20.

Mile open-1, Ray Dawson; 2, W. S. Slavin; 3, W. A. Barbeau. Time-2:16 1/2.

Mile (county championship)-1, J. F. Donahue, Newburg; 2, W. S. Weeks, Middletown; 3, W. J. Oakley, Newburgh. Time-2:20.

Five-mile handicap-1, Ray Dawson (scratch); 2, W. S. Slavin (80 yards); 3, W. A. Barbeau (scratch); 4, A. G. Relyea, Brooklyn (240 yards). Time-14:11 1/4.

ROE-D A WINNING GAIT.

Patchogue, Long Island, had its third race meet of the season at Roe's track on Wednesday of last week. The local favorite, H. K. Roe, took the mile open and the best race of the day, the five-mile handicap from scratch. Twenty-seven men started. At three miles Roe caught the bunch, and won in an exciting finish on the sprint. Earl won the one-mile invitation, beating out Frank White, Roe, Ruland, Fisher, Bennett, Smith and Frank Munz. Summary:

One-mile novice-Final heat-1, H. C. Robinson; 2, Harry F. Zoble, Brooklyn; 3, W. H. Furlong, Patchogue. Time-2:46 1-5.

One-mile scratch-Final heat-1, H. K. Roe, P. W.; 2, F. D. White; 3, Nat Rowe. Time-2:14 2-5.

One-mile handicap-Final heat-1, J. Robert Bailey, P. W. (120 yards); 2, S. C. Hubbard (110 yards); 3, C. A. Carlson, G. W. (120 yards). Time-2:15 2-5.

One-half-mile handicap-Final heat-1, W. A. Schwab (70 yards); 2, J. J. Hughes, P. W. (60 yards); 3, Fred B. Eggelhoff. Time-1:04.

Five-mile handicap-1, H. K. Roe (scratch); 2, F. Fisher (scratch); 3, E. D. White (scratch). Time-13:55 4-5.

One-mile invitation scratch-1, C. T. Earl, K. C. W.; 2, C. W. Ruland, jr., P. W.; 3, F. D. White, F. B. C. Time-2:36.

KRICK'S A CRACKER.

Lancaster, Pa., Aug. 26.—C. W. Krick stood head and shoulders over all the riders at the meet at McCagn's Park to-day, winning the three events in which he started. All the local cracks of this vicinity were in attendance. Summary:

One-mile novice—1, M. C. Good, Allentown; 2, C. S. Clippinger, Harrisburg; 3, F. A. Huber. Time—2:39.45.

One-mile handicap—1, E. S. Youse, Reading (95 yards); 2, W. A. Lantz, Harrisburg (100 yards); 3, Jonas Reist, Harrisburg (115 yards); 4, J. B. Corser, Allentown (55 yards). Time—2:16.15.

One-half-mile open—1, C. W. Krick, Sinking Spring; 2, B. B. Stevens, Philadelphia; 3, J. B. Corser, Allentown. Time—1:10.

One-mile open—1, C. W. Krick; 2, B. B. Stevens, Philadelphia; 3, E. S. Youse, Reading. Time—2:31.45.

Two-mile handicap—1, C. W. Krick, Sinking Springs (scratch); 2, J. B. Corser, Allentown (20 yards); 3, J. C. Henderson, Lewistown (110 yards); 4, W. A. Lantz, Harrisburg (180 yards). Time—4:56.

One-mile tandem—1, James Hires and E. Simons, Lancaster; 2, E. C. Diferenderfer, Salunga and C. Long, Landisville. Time—2:25.

JUST UNDER THE MINUTE.

Milwaukee, Aug. 27.—An exhibition half-mile was negotiated in 59½ seconds by the Andrae quad at the meet of the Associated Cycling Clubs to-day, and the new League sextuplet was also exhibited. Anton Stoltz took the honors in the amateur events. The attendance was small. Summary:

One-mile, 2:40 class—Final heat—1, Charles Muss; 2, Albert Mueller; 3, P. H. Cambier. Time, 2:47½.

Quarter-mile open—1, Anton Stoltz; 2, H. W. Crane, Racine; 3, Nat McDougall. Time, 33½ seconds.

Five-mile handicap—1, Anton Stoltz (scratch); 2, Albert Mueller (50 yards); 3, John F. Reitzner (scratch). Time, 12:56.

One mile, professional—1, H. L. Becker, Chicago; 2, W. F. Sanger; 3, W. A. Zerbel. Time, 2:28½.

One-mile open—1, Albert Mueller; 2, Anton Stoltz; 3, Con Reinke. Time, 2:24.

Two-mile handicap, professional—1, Henry Kanaska (85 yards); 2, Arthur J. Welley (90 yards); 3, John Muss (235 yards). Time, 4:23.

Half-mile open—1, Reinke; 2, Anton Stoltz; 3, A. V. Jackson, Chicago. Time, 1:02.

WASHINGTONS WALLOP ORIOLES.

Baltimore, Md., Aug. 29.—The Maryland Division's meet to-day was the best of the season, the track being fast and the finishes close. In the intercity races, the Washington team won, for the second time. Another victory will give them the series and the cup. Summaries:

One-mile, novice—1, C. E. Eckert; 2, G. L. Hicks; 3, H. W. Chun, Washington.

One-mile, intercity team race—1, William Sims, Washington; 2, Clarence Knight, Baltimore; 3, M. Mudd, Washington; 4, F. L. Meyers, Baltimore; 5, George Ball, Washington; 6, Robert French, Baltimore. Score—Washington, 12; Baltimore, 9. Time, 2:45.

Two-mile, handicap, professional—1, J. L. Ives (scratch); 2, W. W. Phelps (scratch); 3, M. F. Carter (scratch). Time, 4:52.45.

Half-mile—1, W. F. Sims; 2, W. G. LeCompte; 3, H. Pritchard. Time, 1:08.15.

One-mile, professional, lap race—1, M. F. Carter, six points; 2, J. M. White, five points; 3, W. O. Woodward, and W. W. Phelps, tied for third place with three points. Time, 2:21.25.

TRACK POOR, SPILLS MANY.

In connection with the Woonsocket (R. I.) Agricultural Fair, cycle races were held both afternoon and evening on August 27. The track was poor and spills frequent. Summary:

Afternoon: Half-mile (handicap)—1, F. B. Watson, Westboro (40 yards); 2, W. St. George, Woonsocket (40 yards); 3, C. F. Wright, Woonsocket (40 yards). Time—1:08½.

One mile (open)—1, Bert R. Livermore, Worcester; 2, Phil Sylvestre, Woonsocket; 3, F. W. Stockbridge, Westboro. Time—2:58½.

One mile (handicap)—1, C. Doubleday, Somerville (80 yards); 2, Phil Sylvestre, Woonsocket (120 yards); 3, George Ewen, Woonsocket (110 yards). Time—2:24.

Evening: One mile (open)—1, Phil Sylvestre; 2, William Pettigrew, Lynn; 3, Joseph Bowden, Providence. Time—2:32.

Two miles (handicap)—1, Phil Sylvestre (120 yards); 2, C. Doubleday (80 yards). Time—5:02.

McDUFFEE'S DEBUT.

Providence, Aug. 29.—E. A. McDuffee made his first appearance as a professional at the Rhode Island Wheelmen's meet to-day. He rode an exhibition unpaced mile and cut the State record from 2:19 to 2:15 3-5.

In the mile open a close finish between Devlin and Hills brought out a storm of hisses against the judges. William Sullivan a local favorite, made an excellent showing in the mile 2:40 class, which he won with ease. Summary:

Mile, 2:40 Class—1, William Sullivan, Pawtucket; 2, Joe Collins, Marlboro; 3, B. T. Ross, Arlington Heights. Time, 2:34.25.

Mile Open—1, Fred Devlin, Pawtucket; 2, Horace B. Hills, Jr., Providence; 3, N. T. Freyburg, Worcester, third. Time, 2:18.15.

Half Mile Open—1, Horace B. Hills, Jr.; 2, William Sullivan; 3, Fred Devlin. Time, 1:20.25.

THE INS AND OUTS OF PRESIDENCY.

Here is President Sterling Elliott at rest, and there is ex-President Willison at ease. There is a lesson in the picture.

These two men fought at high pressure at Baltimore for hours of the day and night. They and their henchmen burned both money and brain tissue to secure the much-coveted office of L. A. W. president. The fate of nations seemed to depend upon it. It seemed that the defeated man would glide into an obscurity which would be as protracted as it would be dark. And here they are, hobnobbing at the Louisville meet, both of them apparently happy; in fact, of the two Willison seems to be the happier.

Willison is a Maryland man; angular, bony, sinewy, practical, businesslike, genial and congenial.

Elliott is a Massachusetts man; high-voiced, nasal-toned, perceptive, humorous, practical, theoretical, visionary, initiative, eccentric, unexpected, kindly, and a whole lot of other things.

SLOW TOWN, FAST TIME.

The English triplet record for one hour, 26 miles 402 yards, was smashed by the Century Wheelmen's triplet team, Pierie, O'Neil, Gracey, at the Point Breeze track, Philadelphia, on Friday last. The team covered 26 miles 1,373 1-3 yards in the ride. The average time per mile was 2:12, the slowest mile being ridden 2:17 2-5. O. S. Bunnell refereed and Louis Hill and C. F. Lancaster timed.

DEAD-HEATED, THEN TOSSED UP.

Buffalo's crack riders rode at Williamsville, N. Y., on Saturday and carried everything before them. Goehler and Longnecker rode a dead heat in the mile open, which the latter won in the toss up. Summary:

One Mile Novice—1, William Mehl; 2, E. D. Shister; 3, J. W. Furnes. Time, 2:37.

Half Mile Open—1, A. B. Goehler; 2, W. D. Cleveland; 3, A. A. Kaliska. Time, 1:45.25.

One Mile Open—1, A. E. Longnecker; 2, Goehler; 3, E. D. Stevens. Time, 2:17.45.

Five Miles Handicap—1, C. A. Sliker, 25 yards; 2, A. B. Goehler, scratch; 3, E. D. Stevens. Time, 12:19.25.

PACKED TO THE GATES.

Standing-room was at a premium at the meet at Sharon, Penn., August 27. The best riders in Western Pennsylvania and Ohio took part in the events. P. J. McIntyre won the mile open in 2:24, and the two miles lap race in 4:53. C. C. Aughenbaugh took the half-mile open in 1:14, Scott and Aughenbaugh the tandem in 2:43, and H. B. Scott the five miles handicap in 12:38.

SOCIETY SEES A TWENTY RIDDEN.

Society at Narragansett Pier was enlivened by a 20-mile road race on Saturday last. The course extended over fine macadam roads, and contestants were numerous. C. S. Bolting won the event from scratch in 50:03, winning both time and place prizes. Philip Engle-drum, 2:30, took second prize, in 52:52. Second time prize went to A. H. Sayers, 3:00, who finished in 51:30.

TONY TACKLED TOO MUCH.

Tony Gavin, the Buffalo "bicycle cop," attempted to lower the twenty-four-hours record on the cement track at the Buffalo Athletic Field last week. He quit at twenty hours on account of rain, with 313 miles to his credit. Had he continued to the end he could not have made more than 375 miles. The American record is 452 miles, by Gimm.

BELL-RINGING RACES.

A new freak cycle contest took place on the fair grounds at Norway, Me., recently. A board track, 100 feet long and 8 inches wide, with twenty-one electric buttons on irregular lines, was arranged. Each contestant rode a bicycle on the narrow track, passing over as many electric bell-ringing buttons as he could. The first prize winner struck eleven bells.

CHAINS AND CIRCUIT CHASERS.

Nearly all of the first fliers are now using Baldwin chains, Cooper, Bald and the Butlers among the number. At the Louisville meet every national championship was won by the Baldwin "chain gang," a record that speaks more forcibly than words.

FOR \$100 A SIDE.

At the Tioga, Philadelphia, track to-morrow, McCurdy and Starbuck will ride a match race for a purse and a side bet of \$100. Each man will have his own pace-makers as is the custom abroad.

FISTER TO BE FASTER.

John J. Fister, of Washington, has gone into training preparatory to making an onslaught on the 24-hour road record. He will make the attempt about the middle of the month. Fister held the record in 1893.

1500

MERELY A CURTAIN-RAISER.

Springfield's Prologue and the Flood of Recollections It Brings—Tuning Up the Orchestra of Speed.

Springfield, Mass., Sept. 1.—Could a stranger—one of the "new element," for instance—look into a kaleidoscope and see therein the long succession of stirring events, the once famous faces that are now mere memories, and the part they played in cycling history, he would be surprised at the cycling halo which has ever hovered over the name "Springfield," and which serves to make the Springfield tournament of whatever year an evergreen that may wither, but that can never die.

The views would carry him back some thirteen years, for in 1883 it was that the famous function was inaugurated. Each year the splendor of its halo was heightened, only once was dimmed.

What we are pleased to term the "old guard" must have the pictures in their mind's eye—"old guard," mind you, not because we are old in years, but because cycling is young, comparatively, at least. And nearly all of the pictures are pleasing. We are glad that they adorn the halls of memory. Picture the city of Springfield tenderly rocking the infant Cycle Sport in its cradle. Picture the rapid growth of the child, the vigorous extension of its arms, the momentous moments through which it passed; then a decline of both infant and parent; then a recovery and such a renewal of strength

and health in both that it seems can know no harm—picture this, and you have one view, not stirring, perhaps, but historical.

The parent, Springfield, had relatives—three of them—but call the family roll and you will hear them not.

Roseville—product of New Jersey? Dead, almost, surely beyond resurrection.

Lynn—home of "Billy" Rowe! What of Lynn?

Gone.

And Hartford?

Tenacious, but likewise no more.

The three played the parts—played them well—but the strain was too great, and they—well, simply dropped into obscurity, and three of the four once glorified names became mere shadows, which cast but dim outlines, and those far, far to the rear. Springfield alone remains to cast its shadows before.

Turn the kaleidoscope!

There's George Hendee—"Billy" Rowe—Fred Ives—George Webber—Gene Crist—Phil Brown—Quilla Rich—Huntington and Burnham! And that hefty lot? They're English—a corps of invading Britons—Sandy Sellers—Percy Furnival—"Bobby" Cripps—Dick Howell.

Don't know them—eh?

Ah, me! But they are names which were once as magic. Hendee! Handsome, rosy-checked, sturdy youngster. Idol of Springfield. Pride of America—and once champion. How men raved and women wept when the invader Sellers, trailed his unloved colors in the dust, and in the sight of 15,000 home people! Hendee, who stirred Springfield as

no man has stirred it since. Hendee—Hendee, the demi-god, forgotten!

And Rowe! The man who completed the shattering of the Hendee idol. Rowe! For years unconquerable, for years the man who startled the world with records so marvelous and so oft repeated as to stagger belief, who once carried the hearts of all America into the camp of the English enemy! And George Webber—God rest his soul in the land of the liel—Webber, the uncut diamond, the peerless pusher of the lever-driven Star—big-hearted, stout-hearted fellow, cut down in his prime. Crist, dashing, clean-cut, who brought thousands to their feet and roused fine frenzies of excitement—Phil Brown, Burnham—all, all are unknown. And all these were once as fierce fagots in the flame that illumined Springfield in the skies.

Yes, yes. Fame is fleeting, and the tents on its eternal camping-ground weak guyed.

Another turn.

A blot and then a blank. Springfield is undone. Cycle Sport is given a body blow, and below the belt. A series of match races between two of our greatest men. A dishonest arrangement. A "double cross." The conspirators fall out. The stench reaches heaven. Springfield is nauseated. Its track is closed for years. The sport sickens and all but dies.

No need to mention names. Most of the debauchers have repented and lived down their folly. Let the cloak of charity hide their past. But one of them was in evidence to-day. I sat near him in the press box. I wondered at the thoughts within him. If they were of the past—of the capping of a countrywide trail of dishonest racing capped by the wrecking part

RESULTS OF TRIAL HEATS.

TRIAL HEATS FOR WEDNESDAY'S EVENTS.

First Heat, Seven Starters— Second Heat, Eight Starters—	1, J. T. Kelleher. 1, T. J. Grady.	2, R. F. Ludwig. 2, F. I. Elmer.	3, C. M. Bly. 3, M. E. Tenzler.	4, J. Vincilette. 4, E. C. Ferree.	Time, 2:44 1-5. Time, 2:43.
First Heat, Thirteen Starters— Second Heat, Twelve Starters— Third Heat, Thirteen Starters—	1, H. D. Hutchins. 1, W. S. Reynolds. 1, W. J. Helfert.	2, J. C. Wettergreen. 2, A. W. Porter. 2, Chas. Hadfield.	3, F. J. Jenney. 3, C. J. Lewis. 3, A. T. Crooks.	4, O. L. Stevens. 4, F. B. Rigby. 4, P. J. Berio.	Time, 1:10 2-5. Time, 1:11 4-5. Time, 1:13 1-5.
First Heat, Eleven Starters— Second Heat, Twelve Starters— Third Heat, Thirteen Starters—	1, Ray Dawson. 1, E. M. Blake. 1, R. F. Ludwig.	2, Jos. Harrison. 2, J. J. Casey. 2, H. E. Caldwell.	3, A. M. Curtis. 3, A. R. Freeman. 3, F. A. Gately.	4, N. M. Pettigrew. 4, C. C. Roome. 4, H. K. Bird.	Time, 1:12 2-5. Time, 1:12 3-5. Time, 1:12 1-5.
First Heat, Thirteen Starters— Second Heat, Twelve Starters— Third Heat, Thirteen Starters—	1, W. M. Randall. 1, Tom Cooper. 1, Otto Ziegler.	2, E. C. Bald. 2, Tom Botler. 2, Owen Kimble.	3, C. R. Newton. 3, L. A. Callahan. 3, Ray McDonald.	4, Arthur Gardiner. 4, F. H. Allen. 4, W. C. Sanger.	Time, 1:07 2-5. Time, 1:12 2-5. Time, 1:13 3-5.
First Heat, Thirteen Starters— Second Heat, Fourteen Starters— Third Heat, Twelve Starters—	1, E. C. Bates, 100. 1, T. G. Perry, 70. 1, F. A. Gately, 70.	2, O. H. Munro, 30. 2, Ray Dawson, scr. 2, J. B. Fowler, 50.	3, H. B. Hills, 50. 3, A. R. Freeman, 60. 3, W. C. Roome, 30.	4, H. E. Caldwell, 80. 4, J. H. Vincilette, 80. 4, R. M. Alexander, 40.	Time, 2:17. Time, 2:14 1-5. Time, 2:15 2-5.
First Heat, Twelve Starters— Second Heat, Ten Starters— Third Heat, Eleven Starters— Fourth Heat, Seventeen Starters—	1, George L. Bates, 250. 1, J. B. Bowler, 100. 1, H. D. Hutchins, 90. 1, L. P. Callahan, 240.	2, C. J. Lewis, 20. 2, L. A. Callahan, 50. 2, A. T. Crooks, 100. 2, A. B. Rich, 180.	3, W. C. Sanger, scratch. 3, A. D. Kennedy, scratch. 3, Fred Schrein, 70. 3, P. J. Berio, 100.	4, Con Baker, 60. 4, F. C. Hoyt, 70. 4, F. H. Allen, 40. 4, W. J. Helfert, 60.	Time, 4:44 2-5. Time, 4:57 2-5. Time, 5:03 1-5. Time, 4:57.

TRIAL HEATS FOR THURSDAY'S EVENTS.

First Heat, Eleven Starters— Second Heat, Eleven Starters— Third Heat, Eleven Starters—	1, A. M. Curtis. 1, C. C. Ingraham. 1, O. H. Munro.	2, T. J. Grady. 2, F. A. Gately. 2, H. E. Caldwell.	3, Joe Harrison. 3, C. M. Bly. 3, J. T. Kelleher.	4, J. B. Fowler. 4, R. F. Ludwig. 4, W. E. Tenzler.	Time, 1:13. Time, 1:11 3-5. Time, 1:14.		
First Heat, Fourteen Starters— Second Heat, Fourteen Starters— Third Heat, Fourteen Starters— Fourth Heat, Eight Starters—	1, Geo. L. Bates, 65. 1, P. J. Berio, 25. 1, Fred Schrein, 20. 1, C. R. Newton, 15.	2, Monte Scott, 30. 2, W. C. Sanger, scr. 2, W. M. Randall, 10. 2, W. F. Saunders, 50.	3, P. C. Hoyt, 20. 3, F. H. Allen, 10. 3, A. Gardiner, scr. 3, A. T. Crooks, 25.	4, Otto Maya, 30. 4, Con Baker, 20. 4, O. J. Kimble, 10. 4, J. T. Walsh, 25.	5, A. H. Barnett, 70. 5, J. P. Bliss, 20. 5, H. H. Maddox, 30. 5, A. B. Rich.	Time, 1:08. Time, 1:09 3-5. First Heat, Twelve Starters— Second Heat, Fourteen Starters— Third Heat, Nine Starters— Fourth Heat, Fourteen Starters—	1, C. J. Lewis, 150. 1, G. T. Bates, 130. 1, F. J. Jenney, 60. 1, H. D. Hutchins, 50.	2, J. B. Bowles, 120. 2, A. R. Ives, 140. 2, H. R. Steenson, 100. 2, Fred Schrein, 50.	3, Fred Longhead, 15. 3, Watson Coleman, 50. 3, E. Acker, 30. 3, L. A. Callahan, 30.	4, Chas. Hadfield, 80. 4, Monte Scott, 60. 4, W. T. Saunders, 110. 4, F. H. Allen, 30.	5, C. R. Newton, 30. 5, P. J. Berio, 60. 5, P. C. Hoyt, 40. 5, L. D. Cabanne, scratch.	6, H. H. Maddox, 70. 6, T. A. Fish, 30. 6, A. H. Barnett, 150. 6, Otto Maya, 70.	Time, 2:12 3-5. Time, 2:11 2-5. Time, 2:10 2-5. Time, 2:13.

he played in the Springfield scene—his crafty face showed it not. And as I thought I marvelled that, after defaming America and American sport, he should now screech rabid Americanism and pose as a preacher of all that is pure and holy, the while traducing men whose shoes he is unfit to lace. He once pleaded in print for charity. He received it. But he forgets it now.

Still another turn, and behold! there is Springfield rejuvenated, refreshed and the stronger, possibly, for the lapse. The figures of Windle, Zimmerman, Tyler, Johnson, Sanger, Bald, Cooper, flit before the fancy. In quick succession they have pitched their tents on the camping ground of Fame. The tents are yet there—some frayed and frittering away, but still in such shape as to be recognized by even short-memoried man.

The Springfield tournaments of late years may be likened to a book. They consist of two chapters and a preface. The prefaces seldom differ. They are necessary, and are reviewable and barely interesting—that is all. But, as a whole, the book is always of good texture and print, and of gilt edge.

In "sporty" language, the preface is the "weeding-out process"—the running of the preliminary heats. To-day forty-one of them were decided. An entire day was devoted to the operation.

Some way or other, and though may be fought with brilliant stubbornly and be of the dashing and eye-lash finish, a preliminary heat inspires but lukewarm interest and frosty enthusiasm. So it was to-day. During the morning and afternoon some 2,000 people looked on. They viewed a number of close and spirited finishes, but not once did they uncork their feelings. Springfield now has no idol of its own to worship hysterically. Perhaps that is the reason. At any rate, there were few sounds of enthusiasm and comparatively little craning of necks or rising from one's seat. Twice a mere gurgle arose when Sanger adroitly pulled himself out of tight pockets and placed himself by splendid sprinting. It seemed to argue that the big fellow is to be here, as at Louisville, the popular favorite. The reason is hard to fathom, but none will say Sanger nay. He has had hard knocks aplenty in the past. Again, or rather on three, several times, in the one and two mile professional handicaps, when the limit men ran away from the backstarters and in each instance won with not less than 100 yards to spare, the crowd was sufficiently tickled to make a firecrackerlike handclapping audible. The day was clear but raw and November. Only Will R. Pitman had the hardihood to affect a white flannel suit. A fresh breeze which swept down the backstretch helped the men home. The track is reported heavy from recent rains, but from the press stand it does not look it. It seems as marblelike as ever.

But for a bad spill in the forenoon, the racing would have been well nigh featureless. The fall occurred on the last lap of the last heat of the two-mile handicap. The blame is laid on Berlo. He was in front and on the outside. In endeavoring to take the pole he cut across too soon and then slowed. There was a crash and several dull thuds. Nat Butler, Newton, Bliss and Rigby were among the fallen. Butler's collarbone was broken,

and he will race no more for several weeks. Newton's cheek was cut open, but after it had been stitched he resumed racing in the afternoon. Newton is the little fellow who last year ran away with nearly all of the Class A events here. To-day marked his debut as a pro. He displayed splendid speed and judgment, and gave a good account of himself. Monte Scott, F. C. Hoyt and H. D.

Hutchins also joined the "professors," and did well.

Cooper is confining himself entirely to scratch events and qualified for all, riding in the same determined fashion that characterized his work at Louisville. Tom Butler also did as well, getting in one event by a scant inch. Sanger qualified in one race by what all agree was the grace of the judges. Cabanne clearly beat him out for fourth place, but the judges said otherwise. "Charl" Murphy, one of the returned Argonauts, or perhaps Argonauts, would be a better term, rode in the mile record race and looked like a winner, until fifty yards from home, when he slid back, but by squirming like a caterpillar, managed to squeeze into fourth place. Ray Macdonald, another of the returned "tourists," has changed to a Columbia and won a heat in dashing style. Al Weing, still another, and wearing a very Frenchy suit, also placed himself for the morrow. Tom Eck acted as his pusher-off.

Bald shows no improvement on his Louisville form. He qualified for but one race.

Ray Dawson, W. C. Roome, Joe Harrison and the other metropolitan cranks seem the top-notchers in the amateur class. C. C. Ingraham, the Illinois man, who so nearly swept the deck at the National meet, has more than met his match in the Eastern contingent.

The tournament proper will not begin until to-morrow.

The farical "mile international" race is again programmed. One entry from Canada and three from New Jersey is its nearest approach to its name.

H. W. Robinson, the Boston member of the Racing Board, was referee, and those timers who are indelibly connected with all Springfield tournaments, O. N. Whipple, C. T. Shean and W. H. Jordan held the watches, as usual. A. D. Peck was starter, F. L. Buckbee clerk of course, and Charles G. Adams announcer. There was an air of business about the trio, and an agreeable absence of that horseplay which characterizes the work of so many misguided young men who fill those places.

Manufacturers should see their wheels as those who ride them do.

COME WELL PREPARED.

In the line of farm machinery, that bearing the brand of the tiger and made by the Stod-

dard Manufacturing Company, Dayton, Ohio, has long been famous. It is the intention of the Stoddard Company to enlarge their present extensive plant and to produce a bicycle that shall be as famous among its kind as

WORDS THAT COST.

Words and their numbers are not always arguments; sometimes, however, they must be accepted as such. For example, during the six days of the recent L. A. W. meet in Louisville, an average of 150,000 words were sent by telegraph to the various papers 150 correspondents were at Louisville to represent.

The grand total of 900,000 represented an expenditure of nearly \$45,000 on the part of the papers for telegraph tolls alone, to say nothing of other expenses, which would bring the cost of recording the wheelmen's doings well up to the \$100,000 mark. Does any one think these "words" and their expensiveness prove nothing.

They prove this, and conclusively, too, that the newspapers recognize that, next to politics, there are more people interested in pedals than in any other one thing, and they acted accordingly in giving the fullest possible account thereof.

CHANGING QUIET STREETS.

A great change has been wrought by the bicycle in what used to be known as the quiet streets of every town and city in the land. On the well-paved back streets are nightly seen parties of young and old taking their first lessons in bicycle riding. Some of the residents do not relish the combination of feminine screams, male objurgations and "dull thuds" as the mysteries of balancing are explored, but as most of them are cyclists themselves they make no protest and rather sympathize with the students when they recall their own wobbly days.

LIBERTY OR DEBT.

Receiver Hardin's first report of the affairs of the Liberty Cycle Company of Rockaway, N. J., and Bridgeport, Conn., submitted in the Chancery Court at Newark, on Tuesday shows fictitious values of \$46,480 67 placed on assets claimed as \$106,480 97, and liabilities amounting to \$183,563 03.

Literally, the Japanese for cycling means "living machine."

the company's machines have always been in farming implements.

That this intention on the part of the Stoddard Company will be carried out, the

first Tiger and Tigress wheels completed by the company bear ample evidences. The Tigers' lair—otherwise their home and birthplace—is shown in the cut herewith of the Stoddard Company's plant.

MORGAN & WRIGHT TIRES ARE GOOD TIRES.

THE REASON WHY _____

MORGAN & WRIGHT QUICK-REPAIR TIRES

Are to be found on most of the wheels built
in 1896, is that they give the least trouble
and the most comfort to the most people.

WHAT THEY SAY.

C. R. & W. J. Sutherland, Albany, N. Y.: "We have had no trouble with M. & W. Tires, and like them best because they can always be repaired. One of our customers had a _____ tire, which he sent back to the factory three times in three weeks, and the last time it came back leaking. He was disgusted, you can bet."

Joseph Berkowitz, Albany, N. Y.: "Out of 80 wheels sold, 72 had M. & W. Tires. Give less trouble than any others."

T. T. Higinbotham, St. Georges, Bermuda: "I repaired my quick-repair tire a short while ago. It took just two minutes to make a permanent repair. It is truly wonderful, and you deserve great credit for placing upon the market such an excellent invention."

ADVICE.

Don't stick tool into tire before you pump up—harder the better.

Don't stick tool into the same hole after injecting cement.

Don't use any but M. & W. quick-repair cement, made for this purpose, and don't fear to ask the dealer questions. The quick-repair is illustrated in our catalogue. It is so simple that nobody should have the least trouble in making a quick, easy and permanent repair, on the road, without taking tire from the rim.

Remember our liberal guarantee. Send defective tires to us, not to the maker of your wheel.

SOME OF THE WINNERS:

- J. Dolister, on a Warner Special, with Morgan & Wright Tires, won the mile Racine County Championship, at Racine, Wis., Aug. 22.
- J. Curry, on a Racyle, with M. & W. Tires, won the mile professional, at Marshall, Ills., Aug. 27.
- R. McDonald, on a World, with M. & W. Tires, won the one-third mile open, professional, at Bridgeport, Ct., Aug. 28.
- Owen Kimble, on an Outing, with M. & W. Tires, won the mile handicap, professional, at Bridgeport, Ct., Aug. 28.
- L. E. Lange, on a Fowler, with M. & W. Tires, won two first time prizes in one day—five-mile and ten-mile road races, Chicago, Aug. 22.
- A. J. Banta, on a Napoleon, with M. & W. Tires, won the mile open, at Marshall, Ills., Aug. 23.
- O. A. Repass, on Morgan & Wright Tires, won the County Championship, at Perry, Ia., Aug. 22.
- Tom Davis, on a Fowler, with M. & W. Tires, won the mile open, at Emporia, Kan., Aug. 24.

J. E. Morrow, on a Cleveland, with M. & W. Tires, won the two-mile handicap, professional, at Emporia, Kan., Aug. 24.

J. Converse, on a Remington, with M. & W. Tires, won the mile handicap, at St. Louis, Mo., Aug. 22.

A. D. Kennedy, on a World, with M. & W. Tires, won the two-mile handicap, professional, at Binghamton, N. Y., Aug. 28.

R. W. Crouse, on Morgan & Wright Tires, won the two-mile event, at Allentown, Pa., Aug. 16, in 4:16—State record.

J. Lawson, on a Fowler, with M. & W. Tires, made two State records, at Wichita, Kan., Aug. 25—quarter-mile in 27 2-5; half-mile in 1:00 2-5.

F. Rigby, on a Frontenac, with M. & W. Tires, won the mile open, professional, at Saratoga, N. Y., Aug. 25.

A. V. Jackson, on a Fowler, with M. & W. Tires, won the half-mile open, amateur, at Milwaukee, Wis., Aug. 28.

W. E. Kenyon, on an Adlake, with M. & W. Tires, won the mile open, professional, at Milwaukee, Wis., Aug. 28.

W. L. Becker, on an Adlake, with M. & W. Tires, won the mile handicap, at Milwaukee, Wis., Aug. 26.

Otto Ziegler, on a Barnes, with M. & W. Tires, won the mile open, professional, at Binghamton, N. Y., Aug. 28.

H. A. Coussirat, on a Cleveland, with M. & W. Tires, won the Provincial Championship, at Montreal, Can., Aug. 15.

E. Davis, Jr., on a Zimmy, with M. & W. Tires, won the half-mile professional, at Westport, Wash., Aug. 16.

A. F. Clark, on a Thistle, with M. & W. Tires, won first time in ten-mile road race, at Bennington, Vt., Aug. 15.

F. H. Roberts, on a Dayton, with M. & W. Tires, won the mile open, half-mile open, and five-mile handicap, at Keosauqua, Ia., Aug. 15.

Karl Mull, on a Stearns, with M. & W. Tires, won the half-mile open, amateur, at Mason City, Ills., Aug. 21.

J. W. Jones, on Morgan & Wright Tires, won the two-mile open, at Grand Ledge, Mich., Aug. 19.

G. P. Thayer, on an America, with M. & W. Tires, won the two-mile open, professional, at Toledo, O., Aug. 21.

E. C. Haynes, on a Columbia, with M. & W. Tires, won first time in ten-mile road race, at Buffalo, N. Y., Aug. 22.

L. P. Swett, on an Orient, with M. & W. Tires, won the mile open, at Old Orchard, Me., Aug. 24.

C. Reinke, on a Telegram, with M. & W. Tires, won the two-mile handicap, at Milwaukee, Wis., Aug. 28.

A STRING OF MEETS

- Emporia, Kan., 10 out of 17 places.
- Missouri Valley, Ia., 12 out of 19 places.
- Waco, Tex., 14 out of 23 places.
- Milwaukee, Wis., 10 out of 18 places.
- Hannibal, Mo., 12 out of 19 places.
- Council Bluffs, Ia., 14 out of 22 places.
- Carthage, O., 12 out of 21 places.
- Salina, Kan., 22 out of 38 places.
- Racine, Wis., 10 out of 22 places.
- Marshall, Ills., 12 out of 18 places.
- Beaver Dam, Wis., 8 out of 13 places.

Total, 136 out of 230 places won on Morgan & Wright Tires—far more than won on all other tires combined.

WORLD'S RECORDS.

Arthur Gardiner, on a Thistle, with Morgan & Wright Tires, at Bridgeport, Ct., August 28, set a new world's mark for the single paced, exhibition mile—1.57 2-5.

Earl Bovee, on a Stearns, with Morgan & Wright Tires, established a world's record for the two-thirds mile, in competition, at Binghamton, N. Y., August 24. Time, 1.25 flat.

NATIONAL CIRCUIT WINNINGS.

Beginning with San Antonio, Tex., June 5, and including Saratoga, N. Y., August 25, Morgan & Wright Tires have won 372 out of 706 places. Far more than won on all other tires combined.

INTERNATIONAL CHAMPIONSHIPS.

Everybody in Copenhagen Went to See Them, and England at Last Gets a Look In.

Copenhagen, Aug. 18.—It is over! A thing of the past and of history!! "It" refers to the International meet of the current year, and it has hung over this city for the past three days much to the enjoyment of the cycle racing portion of the public. This portion is large, and was augmented by hundreds of visiting wheelmen. The race meet, was, however, not the only thing which hung over the city, for rain clouds were there in abundance and much to the consternation of the aforementioned crowds persisted in frequent unpleasant demonstrations of their nearness. Aside from the numerous showers on the three days, the meet must be described as entirely successful, and the manner in which the events were run off showed that the officials were men of experience in bringing off race meets satisfactorily. Possibly the programme could have been improved, but as it was the races with one or two exceptions were hard fought, exceedingly interesting and long to be remembered.

All of the races were run without the aid of pace-makers, with the two exceptions of the 100-kil. professional and the event for amateurs for the same distance. In these races the competitors were allowed the privilege of providing themselves with as much assistance in this direction as they wished, and this was fully taken advantage of.

The total attendance of the three days was estimated as exceeding 25,000. These members of the royal family, King Christian and Queen of Denmark, Crown Prince and Crown Princess, Prince Christian, and the two younger princesses, together with Prince Valdamar and Princess Marie, lent their presence on the opening day.

Newspaper men and trades people were on hand in large numbers. Charles Sumner, the European traveller for the Pope Company, alone represented American trade interests and the cycling enthusiasm of your country.

On the opening day the first event was the mile amateur international championship run in seven heats and three semi-finals. They resulted as follows: 1, Guillaumet, France; 2, Peterson, Denmark; 3, Diakoff, Russia; 4, Leclarcq, Belgium; 5, Schrader, Denmark; 6, Alexander, Scotland; 7, Reynolds, Ireland. First semi-final, Guillaumet; 2, Schrader; 3, Reynolds.

The final caused intense interest. It was a play for position until the last eighth, when Reynolds took the pole and jumped for the rope. Guillaumet was at his rear wheel, but despite his best endeavors, Reynolds won by half a length, Schrader two lengths in the rear of Guillaumet.

The second race of the day was the 100 kilometres (sixty-three miles, or 300 laps), and brought out four riders—J. W. Stocks, England; A. A. Chase, England; F. Gerger, Germany, and H. Lyton, Belgium. The men had their pace-makers, which included quads and triplets galore.

Seventy kilometres from the finish a chain on the quad pacing Stocks "rode off," and he lost half a lap in connecting with his reserved machine. Pace-makers were then changed more frequently, as the men were endeavoring to either make up what was lost or increase what was gained, and at the end of another ten kilometres the separating distance was a half lap in favor of Chase, rider of the leverchain. Endeavors and the odds against him told severely on Stocks, so that at the completion of fifty miles Chase lapped his man. From this point on Stocks rode

as one in a comatose state, and frequent drafts of liquid, coaxing and encouragement on the part of his pace-makers were necessary to keep him up with them. Chase, on the other hand, continued to move strong and showed no apparent weakening, and finished in a hard drive seven laps ahead of Stocks and thirty-nine ahead of Gerger.

The time, 2:14:11.5, was 2:16 2-5 slower than the world's record for the distance. No intermediate records were touched.

On the second day the mile international professional brought together all the great riders of the Continent, Jacquelin, France, took the first heat, and Bourillons, France, the second. Jaap Eden did not start. At the bell in the final, both Barden and Bourillons jumped, the former taking the pole from Jacquelin. Coming into the homestretch Jacquelin tried to squeeze through on the pole, but was unable to do so, and Bourillons by a magnificent sprint passed Barden and crossed the tape first with the Englander half a wheel back and Jacquelin a length to the rear. Jacquelin claimed that "elbow works" shut him off from coming through, but his argument did not change the decision, and the result was Bourillon, Barden and Jacquelin.

TOO MUCH TALKING.

"Talking it over with Gideon?" Yes, that's just the trouble. On the racetrack there is always too much "talking over" with somebody. Men who are known to be perpetual "fakirs," after the most glaring violations of the rules of the Racing Board—frequently accompanying the same with violations of the laws of common decency—will, either personally or through their trainers or through

some friend or "heeler," make the most stupid, nonsensical and empty defences. Sometimes they are most ingenious, and are fraught with a large vocabulary, so that the referee's life is made miserable.

He, a man who holds a difficult position, entirely without payment and always without reward except the doubtful glory of a fleeting afternoon, is surrounded by a mob who listen open-mouthed to the pros and cons in the game of argument.

The team race between Denmark and Belgium riders was run in four heats, the Danes winning the greater number of points. The third day opened with a special mile race between Reynolds, Ireland, and Bourillon, France, the winners of the amateur and professional championships. Reynolds set the pace. He pulled the Frenchman around at a merry clip until the homestretch, when the freerooper romped home as he pleased. The 100 kilometres amateur championship brought out an even dozen starters. Ponscarne, France, caught the quad, with Diakoff, Russia, second. At 20 miles the Russian gained a lap over the Frenchman, at 29 miles the latter made up the first lap and took

the lead. At 37 miles he had three laps to the good, and at 56 miles was nine laps ahead of his nearest competitor, Diakoff. Fresh pacemakers aided the Russian to gain three laps, the result being a victory for Ponscarne by five laps, Diakoff ten laps ahead of Hansen, Denmark. Summary:

Mile amateur, world's championship—1, Reynolds; Ireland; 2, Schrader, Denmark; 3, Guillaumet, France. Time, 3:51.

One hundred kilometres, professional championship—1, Chase, England; 2, Stocks, England; 3, Gerger, Germany. Time, 2:14:01 2-5.

Mile professional, world's championship—1, Bourillon, France; 2, Barden, England; 3, Jacquillon, France.

One hundred kilometres, amateur world's championship—1, Ponscarne, France; 2, Diakoff, Russia; 3, Hansen, Denmark. Time, 2:31:13 2-5.

One kilometre, professional handicap—1, Pariby, England, 10 metres; 2, Huret, Belgium, 25 metres; 3, Collier, England, 90 metres; 4, Jacquelin, scratch.

WHOOPIED UP ON HUDSON.

Cyclists monopolized the Hudson County Boulevard on Saturday last. They trooped to the new thoroughfare by pairs and in squads until nearly 2,000 riders were gathered, and they were formed in line and paraded over the Bayonne end. The parade was held to celebrate the completion of the great highway. Many of the houses along the line of march were decorated. The sidewalkers were thronged with enthusiastic onlookers. About all the clubs in New-Jersey were represented in the parade, but unattached riders predominated.

The grandstand was in front of the business men's cycling quarters, near the intersection of Duncan-ave. The judges were Mayor Wanser, of Jersey City; Mayor Fagan, of Hoboken; Mayor Seymour, of Bayonne; Sheriff John J. Toffey, the Rev. J. Lester Wells, Aaron S. Baldwin, Frank S. Petter, Alexander Dusenberry, Chief Consul Gentle, of New-Jersey; John G. Fisher, Captain Harry H. Brinckerhoff, Horace H. Farrier and Chief Consul I. B. Potter, of New-York.

The prize awards were as follows: The club having the most members in line, Hudson County Wheelmen; the organization making the best appearance, Clio Wheelmen; captain of the best-appearing club, John J. Corley; most graceful man rider, G. Frederick Ripp; best decorated man, J. C. Arrowsmith; neatest lady, Miss Elsie Lang; neatest man, Alderman Vernilly; best fantastic costume, H. Dewey (sea-serpent); neatest girl, Miss Florence Cahill; oldest wheel, William Whitney; smallest wheel, Miss Hattie Madden; graceful boy, Daniel Row; graceful girl, Miss Harriet Vreeland; fat man, G. M. Parr.

WEATHER AND ROAD CHARACTER COUNT.

Morgan & Wright offer a prize, cost value \$50, for the most meritorious ride in 1896; distance, weather, and character of the road to count; second prize, cost value, \$25; third prize, set of tires. They also offer for the best time in road race, distance ten miles, a prize to cost \$25, and a prize of the same value for the best time in a 25-mile road race. For the fastest mile in competition, they offer a prize to cost \$50.

NOT TO EXCEED SIX.

The Washington (D. C.) authorities have decreed that wheelmen must pass all street crossings at a pace not exceeding six miles per hour. Between intersecting streets they may ride twelve miles per hour. The law forbidding the carrying of babies on bicycles has been rescinded.

RACING BOARD'S BULLETIN.

Suspended During Investigation.

E. N. Ward, Winfield, Kan.; A. E. Irons, Chicago, Ill., and Meadville, Penn.; A. B. Goehler, W. D. Cleland, C. V. Horan, J. F. Higgins, W. E. De Temple, J. T. Finn, all of Buffalo, N. Y.

October 3 has been assigned to Vim Bicycle Club, Newark, N. J., as a National Circuit date. Tandem professional records made at San Jose, Cal., May, 1896, by William Evans and William Matton, have been accepted, as follows: Unpaced, flying start against time, three-quarters mile, 1:23 3/4; one mile, 1:54 2/5; two miles, 4:04 2/5; three miles, 5:17 1/5; four miles, 5:26; five miles, 10:53 3/5; ten miles, 22:17.

Suspended.

For competing in unsanctioned races George W. Drury, Winchendon, Mass., thirty days from August 24.

For competing in unsanctioned races—James Boyd, Wiley Harris, George Murray, Elmer Kelly, Lou Boyd, Peter Sarald, Daniel Coyne, Frank Acker, Minneapolis, Minn.; Fred Ward

Smith, F. Smith, Dan Armstedt, St. Paul, Minn.; William Lawson, Cambridge, Ill.; Frank W. Smith, Sharon, Ill., are suspended for ninety days from August 26.

For competing in unsanctioned races, William Paulson, Alta, Iowa, suspended for sixty days from August 28.

For competing in unsanctioned races, George Sanborn, Jr., and John Bridges, Fonda, Iowa., are suspended for thirty days from August 23.

For competing in unsanctioned races, — Terry, Lemonte, Mo., and John Derham and Will H. Reynolds, Sedalia, Mo., are suspended for thirty days from August 22.

For false entry, Alvah L. Mowry and Alton E. Stevens, Providence, R. I., and William Knott, Pawtucket, R. I., are suspended for thirty days from August 25.

For competing in unsanctioned Sunday races after warning, following are permanently suspended from all track racing: W. Knehen, William Obermueller, O. J. O'Brien, Marion Stevens, M. J. Williams, Mike Cullinane, M. McDonough, T. J. Lenke, J. M. Sheehan, E. C. Graham, H. A. Mengels, J. M. J. Thornton, Fred Eichman, H. C. Jones, Thomas Murphy, M. Falvey, C. F. Stevens, all of St. Louis, Mo.

For competing in unsanctioned races, Wilbur Townsend, Ernst Giddings, Richmond Hoyt, — Berry, — Small, Danbury, Conn., are suspended for thirty days from August 23.

For competing in unsanctioned races after warning, Charles Tallman, A. K. Wheeler, Harry Wheeler, George M. McKay, Dr. James Mills, H. D. Murdock, William Mason, Janesville, Wis.; Fred Burgess, Fred Knobel, B. Ackley, Evansville, Wis., are suspended for sixty days from August 23.

For competing in unsanctioned races, Henry Motel, Claymont, Wis., is suspended for thirty days from August 29.

For false entry, Guy R. Lee, Deperre, Wis., suspended for thirty days from August 29.
For entering a race in which he was not entitled, Earl Bovee, Binghamton, N. Y., suspended for sixty days from August 29.

Suspensions Removed.

Victor Eckberg, Worcester, Mass.
M. A. Conlin, Milford, Mass.
L. N. Gowell, Weston, Mass.
Charles H. Drury, Winchendon, Mass.
George H. Drury, Winchendon, Mass.
Charles H. Brown, Allston, Mass.
Herbert L. Snell, Brockton, Mass.
W. C. McCready, Boston, Mass.
L. E. Jolton, Omaha, Neb.
H. C. Gadke, Omaha, Neb.
Jack Cully, Omaha, Neb.
R. T. White, Omaha, Neb.
G. A. Holton, Omaha, Neb.
Isaac Charlton, Philadelphia, Pa.
C. J. Lewis, Northampton, Mass.

Suspensions Reduced.

Robert M. Rath, Dodge City, Kan., to expire September 1.

L. R. Jefferson, Ocean Grove, N. J., to expire September 5.

Sportsman's Park and Club, St. Louis, Mo., has been placed upon the list of those to whom the sanction privilege is denied.

Sanctions Granted.

September 23, 24—Barry Co. Agri. Society, Hastings, Mich.

September 11—Hillsboro Co. Fair and Driv. P. Ass'n, Hillsboro, Ill.

September 3, 4—Morrison Fair Ass'n, Morrison, Ill.

September 3—Howard City Driv. P. and Agri. Society, Howard City, Mich.

September 2—Dwight Cycling Club, Dwight, Ill.

September 7—Soo Falls Wheelmen, Sioux Falls, S. Dak.

September 14, 15, 16—Goodhue Co. Agri. Society, Zumbrota, Minn.

September 16—Merchants' Club, Alton, Ill.

September 7—Capital City Cycling Club, Lincoln, Neb.

September 26—Omaha Wheel Club, Omaha, Neb.

September 15—Graphic Pub. Co., Pine Bluff, Ark.

September 1—Ark. Travellers' Club, Little Rock, Ark.

September 15—Modern Woodmen, Parsons, Mo.

PACER VERSUS PEDAL PUSHER.

The match race between W. W. Hamilton and the horse Joe Patchen is to take place at Rochester, N. Y., on September 19. The purse is \$2,000. Hamilton will have the pole, and the track, which is a very fast mile course, will be especially prepared for this event. The original intention was to run this race at Chicago, but owing to trouble in getting Washington Park track and putting it in condition the Rochester course was substituted. Besides the race between the famous pacer and Hamilton, a programme of cycle races will be given.

Maine has a "cycling authority." It is called "The Inkeytaker," and is the L. A. W. division's official paper, the fathers of the sheet being the Portland Wheel Club, Portland Me. The sheet is bright, fresh and interesting.

"Wheel Talk," Morgan & Wright's monthly magazine, now has a circulation of 29,000 copies. It is sent free to dealers and repairmen.

THE GORGE ROAD

THE ROAD TO DEATH.

Where the Grim Destroyer Awaits Ignorant, Brakeless and Foolhardy Riders.

To those New Yorkers who frequent the Boulevard, taking their daily rides to Riverside Drive and Grant's Tomb, real cycling is unknown. Its pleasures and its dangers are a closed book to them. Content each day with a repetition of the scenes of the previous day's ride, and pedalling smoothly over asphalted tracks and avoiding trucks, they have no idea of the glories which unfold to the eye of the cyclist who rides out into the country, nor, in fact, of the difficulties and dangers of such riding.

Convenient to New York, and full of the luring charm of good roads, pure air and pleasant scenery, is the country around Fort Lee, across the Hudson River from New York.

AT THE TOP OF THE GORGE ROAD

Here the rider wheels through quiet woods, past pretty homes and open, rolling country. But, as every pleasure has some drawbacks, so has this beautiful country several pitfalls for the unwary rider.

In wheeling over unfamiliar roads constant care should be exercised, but that riders do not observe this caution is shown by the red history of one road in Bergen County—the Gorge Road—a road that once traveled a wheel, at once and forever settles the so-called "brake question" in the minds of all but the most bigoted or conceited fools.

The road is really a blemish on the beautiful Palisades. It leads down the Palisades to the Hudson River from the main road between Fort Lee and Guttenberg. In this part of the highlands across the Hudson the roads are lined with woods, in the deep shadow of which rich ferns and mosses grow, and many brooks wind in and out. The trees cast pleasant shadows on the level road, and as the cyclist wheels along he is lulled to a feeling of dreamy, unthinking content. In these leafy shadows the Gorge Road begins, and it seems, in its smooth macadam surface and border of trees, to be but a continuation of the main road running south along the brow of the hill.

After the first 150 yards the road becomes steep and rough, a condition which cannot be seen from the top of the hill. A rough dirt road, uneven and covered with stones and rocks, succeeds the smooth macadam. On

the right rise steep rocks; on the left, the hill falls away in a deep gully, filled with rocks, small trees and underbrush. A few stones thrown together in the form of an irregular stone wall, about two feet high, with here and there a jagged opening, are all that edge the road on this, its dangerous side. Unwary riders wheel and often coast gayly along the first 500 feet of the road, about to the second lamppost, at which point they almost invariably lose control of their wheels and pitch headlong into the gorge.

The road presents a very seductive appearance at the top of the hill, where it is as flat as the main road itself, and, furthermore, has been lavishly treated for a distance of about 600 feet with a dressing of fine macadam.

The fact of the matter is the main road swings at right angles westward at this point over a bit of most unpromising looking road-bed, a prospect which urges many into the dangers of the Gorge Road.

Well knowing the numbers who have been killed and injured here, and attributing their mishaps to poor riding or lack of nerve, they deliberately start down the fatal incline, full of the conceit that they can do what others have failed in doing. About a fortnight ago two riders started to wheel down the Gorge Road. One of them, having no brake, lost control of his wheel at the bad place in the road. Realizing his danger he made an effort to catch hold of the lamppost on the edge of the gorge, but failed, and he and his wheel pitched into the gully. Luckily his companion was a physician, and the unfortunate cyclist was rescued and patched up on the spot.

Those who will persist in riding down this road would do well to emulate the example of this last aspirant for glory, who had the forethought to take a physician with him. The road is not much travelled, and the chances are that lone riders injured here would lie in the gully unaided until perhaps beyond medical aid.

A PORTION OF THE ROAD

Those familiar with the road are not surprised at the number of accidents which occur on it. The only cause for wonder is that there are not more casualties, or more fatal ones, among those which do occur. Riders are more or less dangerously injured here daily, and two fatal accidents have occurred so far this season, despite the fact that there is a great black, red and white danger sign near the top of the road, warning cyclists not to coast the hill. In some respects this sign is misleading. It should, moreover, be placed nearer the head of the road. Many do not see it until it is too late to turn back, and as many more, having their attention fixed upon the management of their erratic wheels, do not see it at all. Then, too, there should be at least one other sign on the river side of the road, warning wheelmen against riding down the road at all, since in going down the rider's attention is naturally turned toward the river to catch a glimpse of the beautiful view presented by the towering buildings of New York. A good many, seeing the sign and judging the qualities of the road from that at its beginning, conclude that they can take it in perfect safety by back-peddaling where coasting might prove dangerous. Many riders, too, who are doubtless well aware of the dangers of this road, are led by vanity to do what caution should prevent.

The Gorge Road leads down to the Old Bull's Ferry, from which boats run to Forty-second street, New York, at long intervals.

Why any one should wish to take so unpromising a route to the city when the fine road to Nungesser's and thence on the Hudson County Boulevard stretches out so invitingly before him is beyond comprehension. Notwithstanding it is a little further to the

SPOT WHERE TWO HAVE BEEN KILLED AND A NUMBER BADLY INJURED.

Weehawken Ferry by way of the Boulevard, yet the longest way round is the shortest way home sometimes, and it might do to add in this instance it is the safest and surest. The safest course is to steer clear of the treacherous Gorge Road altogether and then none of the rare charms of that entrancing country need be ruthlessly destroyed by a fall.

BICYCLES FOR EXPORT

HALL & DOWING,

Manufacturers' Agents,

WEST BROADWAY AND WARREN STREET, NEW YORK.

SOME REASONS

Why Travelers Patronize the Nickel Plate Road.

- 1st—Because its rates are always the Lowest.
 - 2d—Because it gives unexcelled service, including through Wagner Palace Sleeping Cars between Boston and Chicago via the Fitchburg and West Shore Railroads, and Solid Through Trains between New York and Chicago via the West Shore and Nickel Plate Roads. Its day coaches are lighted by gas, heated by steam in winter, and are in charge of uniformed colored attendants whose services are free to all passengers. Its dining car and buffet service is unsurpassed, and its meal stations serve the best of meals at the lowest rates.
 - 3d—Because it will give you stop-over privileges without extra charge at Chautauque Lake and Niagara Falls on all tourist and excursion tickets.
 - 4th—Because it runs along the shores of beautiful Lake Erie, with its cooling breezes, and delightful scenery; passing through the famous "Grape Belt" of New York, Pennsylvania and Ohio, and the "Gas Belt" of Indiana; the beautiful cities of Erie, Cleveland, Fostoria and Port Wayne; the Summer Resort of Green Springs, and many other noted places.
 - 5th—Because the Nickel Plate Road is ever at the front in adopting every improvement tending to the Safety, Comfort, Convenience and Pleasure of its patrons, and its smoothly running rack powered locomotives, elegant and luxurious cars and lowest rates, designate it as the POPULAR ROUTE.
- For all information, call on the nearest agent, or address E. J. MOORE, General Agent, 23 Exchange Street, Buffalo, N. Y. No. 23.

CHANCE TO GET FOREIGN TRADE.

Salesman, thoroughly versed in the cycle trade, who is going abroad September 1, and who has already travelled the ground, desires to represent a bicycle and a tire concern; will also be in position to place meritorious cycle sundries. Salary or commission; will establish office in London. Address RESULTS, care THE WHEEL. **

Hard Times Come Again No More.

Times are most critical, raging political; People get radical, speak most emphatical; Some get erratical, not embellishing; Even piratical in the extreme.

What is the cause of it, so many flaws in it? Back has his paw in it, big money draws in it; Don't care if war's in it, glad of applause in it; Even the law's in it, so it doth seem.

Troubles enumerate, people oft stay out late; Highburn which all doth both will the form inflate; Now then to compensate, five cents is not too great; Try it at any rate, YUCATAN GUM.

It is the intention of Humber & Co., America, Limited, to establish during the fall of 1896 a branch retail depot in every prominent city of the United States. Applications for the position of manager for each city will be received until Sept. 15. Salary and percentage on sales will be given desirable men. Applicants must state general business experience (experience in the cycle business not a necessary requisite). Satisfactory references as to character, reputation, business and social connections, capabilities and business diligence, together with bonds, will be required of each manager. **

WENT TWENTY MILES FOR A WHEEL.

B. L. Cook, a 4:30 man, won the 20-mile road race at Woodlawn, near Buffalo, on Saturday last. He covered the course in 54:32 and won a \$100 wheel. Roy Duer took the time prize in 54:17. Over half a hundred contestants started.

MEN AND FIRMS.

F. W. Settle is the name of the gentleman who represents Hermann Boker & Co., of New York, in the West, with headquarters at Chicago.

Settle is a model of gentility and good manners. He does more thinking than talking.

His long suit, personally, is a queer habit of half closing his eyes while his entire face indulges in a smile. This smile has so complete an individuality that it can fairly be termed the Settle smile. It is of a sort that makes you think Settle has been chief dignitary at ice cream and cake festivals all his life. It envelops, swallows, cheers and hypnotizes you.

Mr. Settle is at his best with good men who buy goods on their merits, and who are broad and logical, and depend, to a degree, for the truth of what a salesman says about his wares on the character of the man himself. Among such Settle has a wide clientele.

Mr. Settle's house handles good goods, and he is at home in disposing of them. He should never tackle any other grade—he looks honest and is honest, and is not adapted to fakism or buncoing.

President L. M. Wainwright, of the Central Cycle Manufacturing Company, is one of the "good fellows" of the trade, in the sense that he is a likeable, agreeable, unaffected man. Despite his comparatively high position in the trade, he is willing and glad to include among his acquaintances men who have but a foothold on the ladder of prominence. This broadness of acquaintanceship is the seed of popularity. At a function of the Louisville sort, if one has friends he is sure to be joked with, and even perhaps a bit maltreated in the interest of general good-fellowship.

Wainwright was slated for a gibe at Louisville, although it fell short in that a knowledge of the same did not, for some reason or other, get to the intended victim's ears.

All Wainwright's familiars know L. M.'s pet scheme, hobby, ambition all in one. It is with him from the first chill wind of dawn till the coming of that regular and childlike emission from the lungs which announces that he has left behind the cares and worries of business life and is in that land of dreams where the list price is high and is never cut. It was upon this hobby of Wainwright's that the little joke was based. The hobby, put briefly, is that Wainwright lives principally for the day when the glittering phrase "Capital, one million dollars" appears after the title of his company, and the words "L. M. Wainwright, President," are traced on its gold-encircled stationery.

But to the joke: A paper went around among the good fellows for their signatures, addressed to Wainwright and praying him to immediately make a million-dollar company of the Central, and stating that each signer of the paper would gladly embrace the opportunity of subscribing for stock to the amount set opposite his name.

The last I heard of it, I believe there was subscribed just \$750,000, and the names of nine-tenths of the signers were those of chaps whose net salary balance at the end of the year would hardly suffice to buy a colored shirt!

Here's to you, Mr. President! May you and all other good fellows ever wear suspenders upon which are embroidered the prettiest of flowers! May your underwear be of silk, and may garters of gold encircle the fulness of your calf!

It is history that among the desirable things which make character, as heart, intellect, judgment, etc., the thing which fewest men have is nerve. When you meet it in the cycle

business, mark it well, for its possessor—at least just now—it not of the temper of his fellows.

J. F. Vogel, one of the corps of men who control the destinies of the Gendron Wheel Company, has it to a degree. It is refreshing to hear his views on the '97 of cycle-making. They go something like this: "Ninety-seven? The best year we ever had. Over-production? Not a bit of it. Rather the other way.

"Every one knows that the principle of sound money will triumph in November. That means intensely better times than those of the year we have passed through, and yet see what a slew of wheels this past season—hard times and all—has been taken care of.

"All the makers are waiting for the election to become a part of the past before turning the wheels of their factories. And that means, compared with the '96 season, just about three months less of manufacturing—just about one-third of the usual making season cut off. This alone will tend to the production of 25 or 30 per cent less bicycles than last year.

"Then, through the crush that will eventually at the parts factories because of late ordering, some firms will not get all the material they'll want. That will be another element in a decreased production.

"Besides, have you ever figured out the number of factories that made wheels, and lots of them, this year that will not be in the arena for '97—factories that have either failed or gone out of business, or will do so? It will be in the proportion of about one out of four.

"Add to the above the unmistakable fact that the passing season has taught our makers the lesson of conservatism, and that they have learned it thoroughly enough to fall on the side of under rather than over production, and the only logical deduction any sensible man is capable of is that the number of wheels made in '97 will be from 35 to 45 per cent less than in '96."

To be fashionable in Toledo just now you have to amalgamate with somebody.

The Kirk-Young Manufacturing Company, makers of the Yale bicycle, are recent converts to the double state, having purchased the plant, business and good will of the Toledo Manufacturing Company, which was organized a couple of years ago by Samuel Snell.

By the purchase the Kirk-Young Company obtain a very handsome factory and much greater capacity. The combined machinery of the two companies renders them capable of producing 8,000 to 10,000 wheels annually.

The policy and character of production of

the company will be as always, except that its patrons' interests will be better conserved by the increase of facilities. E. E. Kirk, secretary and treasurer, and H. J. Young, vice-president, will continue as managers of their respective departments.

Another Toledo amalgamation brings more prominently to the front than ever W. F. Dewey, of the Yost Manufacturing Company, and the Tally-Ho Tandem Company.

The latter company has been making tandems exclusively, and Mr. Dewey has been its manager, at the same time being more or less active in Falcon affairs.

And now the Tally-Ho Company and the Maume Cycle Company come together. The Maume Company has made a jobbing wheel, and will continue to do so, also continuing the Tally-Ho tandem line.

The Maume name will be retained for the amalgamated companies, and Mr. Dewey has been elected president and manager.

EDITOR DANA ON BRAKES.

It is seldom that a lay writer lands so near the mark in cycling matters as the Editor of the "New-York Sun" has succeeded in doing in the following editorial:

"The record of bicycle accidents for the last six months shows that a large percentage of the fatalities have been caused directly by the inability of the riders to stop their wheels quickly at the critical moment. Back pedaling has proved to be a dangerous and insecure substitute for the hand brake. The presence of the brake on every one of next year's wheels would be a surer guarantee of safety to the wheeling and non-wheeling community alike than either careful or skillful riding, or even the strict enforcement of the law.

"Last February, when the resolution requiring brakes on bicycles was before the Aldermen, it was defeated apparently on the testimony of a few well-known wheelmen conspicuous for their lack of wisdom and of experience in cycling. But at that time the experiment of abandoning the brake was comparatively new. While many riders had tried it, the majority had not. The members of both classes, however, must have learned since then, by observation, if not by personal mishap, that no bicycle is safe or complete unless provided with a readily applied brake.

"The fact that any wheel may be supplied with a brake at the rider's pleasure is not enough. Manufacturers should encourage its use by exhibiting and recommending machines which are neatly equipped with brakes, not wheels which are brakeless and remain brakeless unless they receive this necessary attachment after the purchase. If wood is found to be a desirable factor in the new wheels, well and good; and if handle-bars are to be shorter, that change will doubtless be welcome; but, in the rush for improvements, let the manufacturers do their part by making the brake at least as acceptable and convenient to wheelmen as any other part of the machine."

A FEW FOOT NOTES.

After a long ride, or while on an extended tour, when the feet are very tired, it is a good plan to bathe them in water in which charcoal has been boiled; or friction with gin and water is most useful. Another remedy under the same conditions is to put a handful of common salt into a footbath of hot water. The foot often becomes very tender in riders whose feet do not perspire but are apt to become very hot and irritable. In these cases a salve is very comforting, and the following will be found most useful: Zinc ointment, cold cream and spermaceti in equal parts.

WORLD'S MILE COMPETITION RECORD BROKEN

TWICE IN ONE WEEK BY

MR. JAY EATON,

THE INDOOR KING,

on a

WORLD RACER.

MILE INDOOR RECORD COMPETITION, 2.10, on an eight-lap track.

Eaton also won Four Firsts at Nashville, Tenn.

AT THE COLISEUM, CHICAGO,

Eaton again First in every race, and lowers the MILE RECORD to 2.07—

Unpaced Standing.

Mr. J. W. PARSONS, Australian Champion,

on a "World Racer," lowers the World's Record Flying to 2.01, and 3/4-Mile to 1.29, indoors.

BEVEL GEARS.

What They Are and What They Can Be Made to Accomplish on a Bicycle.

The rumor that the Pope Company will put a bevel-gear machine on the market next year is awakening people to the fact that the public does not know it all. It is not realized by the public at large that a good thing may exist and yet be unable to secure recognition, but such is the fact. The public are not mechanical experts. They are very ordinary people, whose judgment in the line with which they are familiar will probably be found fairly reliable, but outside of that line they will be found erratic and full of prejudices.

I dare to predict that if any prominent company does risk the attempt of marketing a bevel-gear machine in '97 they will find a good sale for same and little or no cause to regret their action. But it is also safe to say that if any small concern should attempt the same thing they will find it uphill work, if not a total failure. Many will doubt this, but it is the truth nevertheless. The merit of an article counts less than the way in which it is pushed. Many a bad article takes because it is properly pushed. People hear so much about it that they assume it to be the proper thing, and use it even at a sacrifice of comfort and even health. On the other hand, many a good thing dies simply and solely because it failed to take. This condition of affairs applies to other things than cycles. It is said that our great poets are not appreciated till after they are dead.

There is no reason why it applies to cycles. This may be found in the fact that some of the better forms of gear applications have been patented. The persons owning said patents may not be in position to push same, and so a patent acts as a bar to popularity. For example, Garford, the man who has made his saddles so prominent, took out a patent on a gear-driven cycle several years ago, but it has not been pushed, so far as the writer knows. There is little or no doubt that if he had pushed it with the same vim used in pushing his saddles we would not be discussing the probability of a gear-driven cycle for next year.

That patents have prohibited the making of gear-driven machines is not likely, however, for the application of gears to this work is very old, and no doubt several forms are public property by this time. The most probable reason is that the public did not find room in its think-box for such devices. The public rides what its neighbor rides, and so we get ahead of fads. The gear fad has not yet arrived. When it does we will use gears. It will not matter whether they are better than chains or worse. When they are said by "the bon-ton," whose brains are measured by their pocketbooks, to be "the proper thing," then we will ride them, and the man or woman who does not throw away the old chain-driven device and get a gear-driven simply will be out of style.

The word "style" means much to the maker and dealer. It is not that this year's hat is better than last year's hat, but it is that I may distinguish myself from the common herd that I throw away the hat that is still good and buy me one of later style. So far the process is all right. It has a reason for its being; but, like the ass that I am, I proceed to knock that reason out of existence by buying a hat which is "popular" and "the style," and so do not distinguish myself. So much for the senselessness of "style," and we pride ourselves on "our high civilization!"

But to return to bevel gears. The bevel gear

is one of many means of getting power from the crank-shaft to the driving-wheel. The axes of the two are parallel. Generally speaking, it is preferable to transmit that power by the simplest and easiest method. A belt or chain is this. A belt would need large pulleys and wide faces. The chain has been used as being the proper thing. The fact that it once was best is not proof that it yet remains the best. Circumstances may change, and in this case have done so. The demand for better things has caused much ingenuity to be expended on the chain. There is a limit. Fifty joints and bearings cannot be made so cheaply as a less number. It may be that we have reached a point where we find it better and cheaper to make perfect gears than perfect chains. The bevel-gear system requires an extra shaft and bearings. These may be of ball construction which is not applicable to the chain, because of the cost and

make a better looking machine. There may be some torsion in the shaft that connects the sets. But with the high-grade tubing now on the market, it ought to be possible to secure a shaft of light weight and yet practically free from torsion under ordinary cycle work. Certain it is that many people will find a gear-driven machine more satisfactory to them than a chain-driven one, if they will but exercise enough independence of judgment to ride one regardless of whether it is the fad or not. The writer believes in personal judgment. It is one thing that our voters stand in need of this fall very seriously. When we reach the age in which every one attempts to be his own judge in personal matters, regardless of Mrs. Grundy, we will be a Nation of Solomons and civilization will have taken to cycling. Let us hope that the bevel-gear rumor may prove to have had a foundation
CHARLES E. DURYEA.

ROPES COULD NOT HOLD HIM.

At a recent exhibition of military cycling at Crystal Palace, London, one of the performances consisted in the supposed capture of a dispatch messenger. After securely tying his feet together and his hands also, the captured

messenger was placed upon his back and his captors departed. Without freeing either his hands or his feet, the messenger mounted his wheel and made his escape amid the plaudits of the onlookers. The artist shows how he accomplished this.

size. The remaining question then would be that of the gears themselves.

In a bevel gear each part of each tooth is of different size from any other part of the same tooth. For this reason the application of the common gear cutter to the introduction of bevel gears does not produce perfect work. This, however, is the common way of producing them. For this reason it is common to say that bevel gears destroy power. Sometimes as much as 25 per cent of the power is lost in passing through a set of bevel gears. With such a loss it is quite evident that two sets would destroy an amount of power that would not be permissible.

Perfect gears may be produced, however, by planing each tooth. And such gears, if properly hardened and lubricated and run on ball-bearing shafts, ought to transmit power with as little loss as any other method. They are more easily boxed than a chain, and should be less liable to dirt friction. They will

HORSELESS AND HANDSOME.

The new Pope motor vehicle, which is now undergoing the finals of its exhaustive road trials, preparatory to being put on the market, is of a graceful, low-body phaeton form, handsomely upholstered. The front wheels are about 24 inches in diameter, and the driving wheels about 32 inches. The carriage is of a handsome design, and presents a luxurious appearance. The wheels have large pneumatic tires, their size making riding in the carriage exceptionally agreeable. The storage system of electricity is used, and the battery is placed beneath the seat. The power is applied to the axle of the rear wheels, speed being developed by a gearing system of cogs.

The power is controlled by a lever, and there is a handle-bar to direct the course of the vehicle by turning the front wheels from side to side. A very pretty effect is produced by the carriage at night, there being quite a large reflector in front of the dashboard and lamps on each side, which are lighted by the electric fluid which runs the carriage.

The new carriage has seats for two persons, and, while it has not as yet been given a thorough speed test, it moves over the ground smoothly and rapidly, convincing the onlooker that when pushed for speed purposes it might fill pacemaking requirements very satisfactorily.

HAVE TUBING FOR DELIVERY.

The importation of English seamless tubing has assumed the proportion of an immense industry; in fact, as those in the trade have long been aware, each season there has invariably been a famine of this very necessary factor in bicycle building.

The Garratt-Ford Company, 274-276 Franklin street, Boston, Mass., have this year taken time to furnish four of the best grades of English tube at very short notice, and on the ordinary sizes can ship on receipt of order. This is an unusual chance for manufacturers to obtain their supply early at a price much below what the market will rule when the rush begins.

The Garratt-Ford Company are also jobbers of the well-known Erwin Bicycle, the product of the Erwin Manufacturing Company, Greenbush, N. Y., and are prepared to quote discounts that make it an advantage to order now.

TWO TO BOAST OF

Minneapolis expects to boast of a high-grade wheel in the course of a month or two. The Moore Carving Machine Company has added an extension to its factory to be used exclusively for bicycle construction. Two types of machines will be made—the Yarnell and the Konnark.

AGAIN....

must we call your attention to the finest machine on the market in the way of a Tandem. WE realized fully the advantages to be derived from the "truss frame" construction, and you will notice the superiority of the

America

TRUSS
FRAME...

Tandem

at a glance. The truss braces the long wheel base in the most superb manner. Then again, notice where we run our forward chain. The principle of a forward chain on either side is open to argument, but when we run it **in the centre** we think you'll agree with us that it is just about right. **We can deliver at \$150.00**, and it's money well spent.

A LESSON IN REFORM.

Of all the blessed fruits of a reform government none has stood the test of time like the Commissioner of Street Cleaning, Colonel George E. Waring, jr. He has given New-York clean streets as no other predecessor of his had ever thought possible. In doing this and in riding a bicycle himself Colonel Waring stands foremost in the good graces of New-York's thousands of wheelmen. As an evidence of the Commissioner's willingness to do all in his power to aid in making the streets safe for bicycling, the following is interesting:

A festive junkman, in one of his gentile and playful moments, amused himself by throwing an empty bottle at a passing member of his coterie. The bottle unfortunately missed the object it was aimed at and fell to the street broken in a thousand pieces. Mr. Hardy, who was passing, called upon a police officer to arrest the offending junkman, but the officer declined to do so. Angered at the officer's failure to do his duty, Mr. Hardy wrote a letter to Street Commissioner Waring stating the circumstances and asking for his aid. Back by return mail promptly came the following letter:

Dear Sir: In the absence of the Commissioner I take the liberty of acknowledging the receipt of your letter of the 25th inst. relative to a junkman deliberately throwing a bottle at a passer-by.

As the matter now stands, this Department is unable to take any steps in the case, as you did not take the number of the cart.

You did exactly right when you called the attention of the policeman to this driver's action, and he should have arrested the man right then and there, as there is a law covering such offence, a copy of which I have had struck off for your information and future action should the occasion arise.

Just such gentlemen as yourself would aid the bicycle public as well as the Street Cleaning Department, if they were to cause to be arrested such wilful violators of the law as the driver no doubt was.

We regret very much that we cannot do anything in this affair, but your letter shall be forwarded to the Police Department, with the recommendation that this officer be properly and duly informed as to the existence of this chapter of the laws of 1894. Yours truly,

JOHN P. YATES,

Private Secretary.

If more wheelmen would follow the example of Mr. Hardy, and make a point to see that violators of the street ordinances were punished, Commissioner Waring's duties would be much lightened and the cycling public's safety and comfort greatly increased. The clause under which such violators of street ordinances are punishable is numbered 1,936 in the Consolidated act of 1894, and reads as follows:

No person or persons shall throw, cast or lay, or direct, suffer or permit, any servant, agent or employe to throw, cast or lay any ashes, offal, vegetables, garbage, dross, cinders, shells, straw, shavings, paper, dirt, filth or rubbish of any kind whatever, in any gutter, street, lane or alley, or in any public place in the city. The wilful violation of any of the foregoing provisions of this section shall be and is hereby declared to be a misdemeanor, and shall be punished by a fine of not less than \$1 nor more than \$10, or by imprisonment for a term of not less than one nor more than five days.

A method of nickeling wood which may eventually prove useful in finishing wooden handle-bars and rims has been devised by the German chemist Langbein, the wood being covered by a thin coating of metal by either a dry or wet process.

According to an English paper, the Czar of Russia is riding an American bicycle, a Dayton.

LOOKS LIKE A CHICKEN COOP.

The steamer St. Louis, which arrived on Friday last, turned out a fine-looking lot of people. The marks of having "done" Europe, the ruddy tan and self-sufficiency of the returning traveller, were everywhere apparent. One of the features on the pier was the num-

ber of bicycles brought over. It has developed that the latest fad in the cycling world is the wickerwork crate. The crate is made of light wickerwork, the bicycle is set in, pinned down and securely fastened, as shown in the accompanying illustration. This is one of the things which takes the minute you see it.

BALANCES ITSELF.

For ease in riding, turning around and balancing, the Fox Company, the machine shown in the illustration, is said to be far ahead of the tandem by the manufacturers, the Fox Machine, of Grand Rapids, Mich. The wheel balances itself, immaterial as to the weights

of the riders, no adjustment being required to equalize the difference in weight. It has a short wheel base, 43 inches, which makes steering easy. The Fox Company have also several other novelties in double-seated machines.

IF PROVIDENCE FAVORS HIM.

"I sold 2,285 bicycles in 1895," said he the other day, "and shall sell 3,000 in 1896 if the Lord is on my side," is the way W. G. Alexander, the Barnes agent at Toledo, Ohio, puts it. Mr. Alexander, by-the-way, asserts that he built a velocipede thirty-seven years ago, and has been a wheelman ever since.

CLEVELAND'S NEW IDEAS.

Cleveland, Aug. 31.—The Hoffman Bicycle Company, with a capitalization of \$50,000, was incorporated last week. The incorporators are L. M. Sigler, G. Sigler, U. R. Sigler, Frank Dellenbaugh and A. H. West. The two last are members of a leading firm of attorneys, and the Siglers are well-known manufacturing jewelers.

The Winton Bicycle Company are about to embark in the manufacture of motor carriages, and expect to have them ready for the market in less than three months. Alexander Winton, the mechanical expert of the company, has been experimenting for the past two years, and claims to have brought out a motor that will fill the bill to perfection. It is light, noiseless, odorless, compact and powerful, and a long list of claims have been awarded at the patent office. It is the intention of the company to be the pioneers in the business, and further particulars are promised soon.

BEWARE OF IMITATIONS.

An imitation of the Perry chain has recently been put on the market, which is offered as the Perry pattern. They are sold at a low price, and many have been deluded in the belief that they are the real article. As exclusive manufacturers of the Perry pen steel bushed chain in this country, and as sole agents for the Perry chain manufactured in England, the Anglo-American Cycle Fittings Company have issued an infringing notice. The side plate on the Perry chain has been patented, and warning is given the trade against making, using or selling any chain having the infringing side-plate on it. The genuine Perry chains have the name "Perry" stamped on every side-plate, so that the chains can be readily distinguished from imitations.

INVESTIGATING PLUGINE.

Arthur W. Burwell, a prominent rubber expert, of Cleveland, Ohio, writes the Plugine Co., of that city, as follows: "I have made a careful examination of the contents of a can of your 'Plugine' which was purchased by me in the open market. I find that neither the mixture nor any of the various substances contained have or can have any action whatever on either vulcanized or unvulcanized rubber. This is especially true of the excellent grades of gum used for making bicycle tires."

STANDARDS ON TOP.

The Standard Bicycle Mfg. Co. announce that they have purchased the plant of the Standard Cycle Works Co., at 67-75 West Jackson street, Chicago, who recently failed. They announce that toolmakers are already at work on tools for the '97 model, the name of which will be the "Standard." The wheel will list at \$75 and tandems at \$125.

INFORMATION WANTED.

THE WHEEL would be pleased to publish some information about the Allwood Cycle Co., of Canarsie, Long Island, a firm which is advertising heavily, but whose works cannot be located.

WHO MAKES IT?

A correspondent of THE WHEEL desires to know the name of the maker of the Victor saddle. Will some reader kindly send information?

The Worcester Cycle Company of Middletown, Conn., has shut down indefinitely, and discharged all hands.

THE ITEM OF COST.

The manufacturer is more likely to stumble over the item of cost than the rider. The old saw, "the best is the cheapest," has as great force for the wheel maker, however, as it has for the rider.

Palmer Tires are the most expensive tires—about twice as costly. But they are so easy riding that a wheel fitted with them will run easier and last longer than if fitted with other tires. Thus, the manufacturer who encourages the use of Palmer Tires gains reputation, and reputation begets sales.

The rider gets more satisfaction from Palmer Tires than other tires. He pedals with less fatigue, coasts further, and goes up hill with less exertion. He mends his punctures quicker and with less trouble, and he NEVER walks home.

Palmer Tires are hand-made; the same fabric in all; a little more rubber on the roadster, a little less on the racer.

JAY EATON DEFEATS PARSONS.

Eaton Rode Palmer Tires---Parsons Didn't.

The first match was two best in three, one mile, Eaton winning in two straight heats. The second match, two best of three, five miles, Eaton again winning in straight heats. Parsons is the Australian champion, and has defeated Zimmerman. Both riders rode World wheels. Where conditions are at all equal, the Palmer rider always wins.

The Palmer Pneumatic Tire Co., 133-135 S. Clinton St., Chicago.

For prices address: SELLING AGENTS, THE COLUMBIA RUBBER WORKS CO., 66 Reade St., New York, and 159 Lake St., Chicago.

Kindly mention The Wheel when writing.

BRITISH CYCLE SHOWS.

London, August 20.—Rumor has it that Humbers, the Rudge-Whitworth, the Coventry Machinists' Co., Simpson Chain, Dunlop and Clincher Tire companies have already decided to throw in their lot with the Stanley show this year. This is undoubtedly a good slice of luck for the latter exhibition, and if, as I think is likely, quite a majority of the American firms decide to patronize the Agricultural hall show, the public interest in the Stanley will enable it to prove a very serious trade rival to the National exhibition.

I am told that, thanks to the busy season now almost past and some of its developments, all is not quite settled in the camp of the Cycle Manufacturers' Trade Protective Association, under which lumbering title a section of the English cycle-makers propose settling the policy of the entire trade with regard to shows and such varieties.

Some mention has been made of an attempt to coalesce the American firms on this side in a distinctive policy on the matter of exhibiting, and also on the evergreen net versus discount system, but I can authoritatively say that no such attempt has been or will likely be made. Every firm will have to cut out its own policy and form its own judgment on these matters. Trade combinations are a weariness to the flesh, and only one man in a thousand could make such a movement an appreciable success.

My own opinion is that those American makers who propose exhibiting would find that they would have a better chance at the Stanley Club's show. True, the presence of Humbers and the other firms I have mentioned would give them a formidable opposition, but nothing to that which they can expect at the National show, where, moreover, they would be under the control and disposition of a bund, whose duty it is to conserve the interests of the English cycle trade. It is open to argument that these interests do not clash with those of American exhibitors, but scarcely open to reason, as matters now stand. It is certain that the Stanley will be a fine show this year, while I am told that so far from being well looked after is the National that the Crystal Palace is not yet booked for it.

There is the deuce to pay here at present over the Dunlop Company. It seems that through some bungling the liquidation of the old Dunlop Company was not started in a manner required by the Board of Trade regulations, and consequently so much time has been lost that the old shareholders have not yet got their money out of the old concern and very likely will not have it for some weeks yet. As on the strength of this cash they had mostly applied for the new issues up to the hilt, the calls on the latter have not in a great many instances been paid yet, and if a special Stock Exchange settlement intervenes between, much trouble is feared. The shares have fallen greatly on the rumor that this will be the case, and matters have become so mixed that the London Stock Exchange has moved in the matter.

ROCK-RIBBED AND DYED IN THE WOOL.

A large hosiery mill in New Brunswick, N. J., has closed down all of its departments owing to hard times, with the sole exception of the one devoted to "ribbed goods," and that continues to run overtime. Sweaters and golf stockings are "ribbed goods." See the good effect of cycling's universalism?

The wheelwoman should remember that recklessness is not courage, and that discretion is the better part of valor.

BOTCH REPAIR WORK.

If there is any department of machine repair work which can be botched readily, it is in the bicycle repair line. It is not only the inexperienced workman that sometimes makes a bad job when repairing, but old hands get careless; or, when in a hurry, put things together quite shiftlessly.

Take the adjustment of a valve, for example. A glance at a shop full of wheels in process of undergoing repairs will show that the valve in some of the tires is caused to stand untrue, as indicated in Fig. 1, owing to the line of the hole in the rim not being in harmony with that of the valve. The result is that the rubber of the tire is bent at A and B, and, although not noticeable from the outside, the effect is hurtful, and in time will create leakage.

Another little point cycle repair folk sometimes overlook is the inserting of a spoke too deeply into the rim, so that the end projects against the tube, as shown in Fig. 2 at C. This in a few weeks will cut an aperture in

the tire. Not long ago a cycle repair company got itself into trouble through the carelessness or incompetency of one of its workmen. A rider stopped at the shop to have his handle-bar adjusted. A clamp like the one presented in Fig. 3 was on the machine. The bungling repair hand put in a washer, D, as shown.

The washer, of course, prevented the clamp from closing up as tightly on the upright bar as it should. Consequently, when the rider was going down grade the clamp slipped, allowing the handle-bars to loosen, and the front wheel turned sideways abruptly, throwing the rider and injuring him. The company had to pay damages.

Another case in which botch repair work figured is exemplified in Fig. 4, in which a too-short pedal-bar stud was used, as indicated at E. The nut only reached a couple of threads, and these gave way under the pressure of the rider's foot, and at such a time that an accident resulted.

Speaking of accidents from shiftless repair work of this sort calls to mind the re-

cent case in which a workman, supposed to be a mechanic, attempted to repair a broken handle-bar according to his own ideas, with the result that the firm for which he worked also has a damage suit on hand. The wheel he experimented on was damaged by one of the handle-bars being broken short off. The aforementioned mechanic conceived the idea that he could effect a quick and neat repair by cutting a thread on the end of the break and another thread in the union. He did so, and the job when completed looked like that in Fig. 5, in which the repair is shown at F. Perhaps a superior job would be all right, even if only cut threads were the agency for holding the bar in place. But this did not succeed. The handle pulled out, the cyclist struck a wall, was hurt, and brought suit.

It is well for cycle repair people to bear in mind that all parts of a wheel frame are subjected to unusual strains at times. The man who fixed a wheel-frame according to the plan shown in Figure 6 evidently did not realize this. The tube broke off at G, and instead of inserting a pin or welding, he laboriously riveted on wrought-iron clamps and caused the broken tube to stay in place by attaching a connection between the clamps to a solid tube in the manner shown. A good-enough job for temporary purposes, or for a light rider. But the rider of this wheel was a heavy man, and the work soon gave out, and the repairs had to be made over in the right way. A sample of botch-lacing of the rim-side of outer tubing is shown. Such work will not last. Better lace regularly, as shown in Figure 8.

G. D. RICE.

AMERICANS IN ENGLISH TRADE.

Sydney Lee, in his "Cycle Trade Journal," has this to say anent the American bicycle in Great Britain:

"Agents, more particularly those in the South of England, are doing well with American cycles, and many are actually pushing them in preference to those of British manufacture, for the simple reason that the unfortunate dearth of English machines during the spring and early summer, and the consequent forced purchase of American machines by many of the upper classes, has, in a measure, set a fashion for such machines, so that the fashionable visitors to the more classy watering-places are asking for American cycles.

"A well-known south coast agent who has several depots in various towns told us the other day that he was doing a large trade in a very well-known American machine, while he could not dispose of scarcely any of an English firm of equal standing. Price, he said, had something to do with the matter, for the American machine was considerably the cheaper.

"People would not give something like £3 more for the English wheel when they saw it beside an apparently equally well-finished, though perhaps far less durable, American machine. And further, he maintained, that when new the Yankee wheel ran quite as well.

"We do not propose to enter into a minute criticism of the machines, but it is quite plain to us that American cycles are quite good enough to be serious rivals to the first-grade British machines, at any rate, among the class of people who give their cycles comparatively little wear, and it must be remembered that it is this very class of buyers who pay the best prices and give the agent the least trouble."

A renegade is a man who deserts cycling for equestrianism. A convert is a horseman who ceases to be such to become a wheelman.

CHICAGO.

NEW YORK, BOSTON, WASHINGTON, PROVIDENCE.
LONDON, ENGLAND.

NATIONAL CYCLE SHOWS.

Under the auspices of the National Board of Trade of Cycle Manufacturers, National Shoe and Leather Bank Building, 271 Broadway, New York.

January 23-30—Chicago, Coliseum.

February 6-13—New York, Grand Central Palace.

TRADE CHANGES.

CALIFORNIA.

Riverside—W. P. Jansen has opened a repair shop on East Eighth street.

CONNECTICUT.

Winsted—Henry G. Kelly, bicycles, Sheriff reported in possession.

DELAWARE.

Wilmington—Elliott Brothers, bicycles, reported to have given judgment for \$2,000.

DISTRICT OF COLUMBIA.

Washington—William D. Hedger, proprietor of the bicycle establishment at 1,024 Connecticut avenue, has made assignment to Rudolph W. Bishop for the benefit of creditors. Assets are placed at \$3,673.98, and the liabilities \$3,394.04.

IOWA.

Des Moines—The Lathrop-Rhoads Cycle Company incorporated by George R. Lathrop and Clayton C. Rhoads to buy, sell and manufacture bicycles. Capital stock, \$10,000.

ILLINOIS.

Chicago—The Chicago Bicycle Supply Company has been incorporated by M. D. Owen, C. A. Tuttle and W. M. Butterworth. Capital stock, \$3,500.

INDIANA.

Anderson—A company has been organized by R. K. Kirkpatrick, J. A. Williams and W. A. Zimmerman, for the purpose of making and repairing bicycles. The company has leased Room No. 38, North Meridian street.

Fort Wayne—A. T. Weissell has started a bicycle and general repair shop at 135 Broadway. Winchester—J. P. Carpenter established a bicycle store at this place.

LOUISIANA.

New Orleans—E. C. Fenner, dealer in bicycles and carriages on Gravier street; meeting of creditors held.

MARYLAND.

Baltimore—Sol Schneisner & Co., Baltimore and Light streets, have gone into the hands of a receiver.

MINNESOTA.

Paynesville—F. O. Phipps has retired from the firm of Phipps & Son, and will devote his time to his large bicycle business.

Elpestone—George Combs has opened a bicycle repair shop at this place.

St. Paul—James T. Cuddy, bicycles, reported to have recorded chattel mortgage for \$700.

St. Paul—William A. Hall and William N. Couch, doing business as the Twin City Cycle Company, made an assignment for the benefit of creditors to John W. Lane.

OHIO.

Cleveland—Likely & Pohl, wholesale and retail bicycles, reported to have recorded chattel mortgage for \$7,200.

OREGON.

Portland—Owen Robinson, bicycles, reported to have given bill of sale for \$385.

BETWEEN CHATTER AND QUIVER.

Hess & Cottle, 349 Dearborn street, Chicago, have recently brought out and are supplying to the trade something new in handle-bars, on which they have applied for letters patent. It is a wood bar, reinforced its entire length by a metal tube, making, they claim, a bar more durable than any other by a large percentage, and giving a result between the chatter of a steel bar and the quiver of the

ordinary wood bar. They have a new adjustable stem that is absolute in grip and cannot let go except by use of a wrench. The whole bar makes a useful as well as very ornamental article for '97. Hess & Cottle is a new firm, composed of Mr. W. S. Hess, formerly of the Joliet Furniture Company, and Mr. Cottle, formerly of the Pond-Cottle Company.

GOOD FOR HURDLE RIDING.

As a means of absorbing vibration, a saddle-post has been placed on the market by the Brooks Spring Seat Post Company, Chicago, on the coil spring principle, as shown in the illustration. It is claimed that by this post one can ride over ridges, crosswalks,

cobblestone pavements, cartracks, etc., with as much ease as a perfectly level ground. In shape, size, weight and general appearance it is identical with the ordinary solid seat-post. It can be used on any saddle and wheel, and the spring is guaranteed not to break.

Patented August 25, 1896.

PATENTS GRANTED.

566,344. Bicycle Saddle.—James H. Sager, Rochester, N. Y. Filed September 9, 1895. Serial No. 561,972. No model.

566,352. Umbrella or Sunshade Holder for Cycles.—Max Strohhach, Magdeburg, Germany. Filed April 30, 1895. Serial No. 547,550. No model.

566,359. Bicycle Skirt.—Florence D. Ahern, New York, N. Y., assignor to the Spalding-Bidwell Company, same place. Filed January 31, 1896. Serial No. 577,556. No model.

566,477. Bicycle Saddle.—Benjamin S. Seaman, Canton, Ohio, assignor to the Gilliam Manufacturing Company, same place. Filed July 23, 1895. Serial No. 556,836. No model.

566,478. Bicycle Saddle.—Benjamin S. Seaman, Canton, Ohio, assignor to the Gilliam Manufacturing Company, same place. Filed August 7, 1895. Serial No. 558,453. No model.

566,517. Clamp for Bicycle Saddles.—David S. Hitchcock, Cleveland, Ohio, assignor to the White Sewing Company, same place. Filed November 5, 1895. Serial No. 567,993. No model.

566,535. Bicycle Tender.—James E. Power, Brooklyn, N. Y. Filed December 2, 1895. Serial No. 570,730. No model.

566,563. Bicycle.—Carl B. Fields, Merced, Cal. Filed November 29, 1895. Serial No. 570,465. No model.

566,581. Handle-bar for Bicycles.—David S. Hitchcock, Cleveland, Ohio, assignor to the White Sewing Machine Company, same place. Filed November 5, 1895. Serial No. 568,070. No model.

566,603. Pneumatic Tire.—Alexander F. Munro, Boston, and George O. Hitchings, Saugus, Mass., assignors by direct and mesne assignments, to the M. & H. Manufacturing Company, of Mexico. Filed December 27, 1896. Serial No. 573,423. No model.

566,660. Acetylene Generator and Bicycle Lamp. Henry B. Clark, Chicago, Ill. Filed May 11, 1896. Serial No. 591,022. No model.

566,669. Bicycle Saddle.—Frederic F. Drury, Gouverneur, N. Y. Filed January 30, 1896. Serial No. 577,372. No model.

TRADE-MARKS.

28,330. Bicycle Saddle.—A. G. Spalding & Bro., Chicago, Ill., and New York, N. Y. Filed July 30, 1895. Essential feature—A representation of the bones of the pelvis upon a saddle.

28,831. Cycles and Accessories Therefor.—John Griffiths Cycle Corporation, Limited, Dublin, Ireland, and Coventry, England. Filed June 26, 1896. Essential feature—The word "Dunlop," representations of two snakes, a wheel and the name and address "Dunlop Cycle Co., Coventry."

28,832. Bicycles.—Gendron Wheel Company, Toledo, Ohio. Filed August 1, 1896. Essential feature—The word "Signal."

CLINCHER VERSUS G. & J.

Last November the North British Rubber Company, proprietors of the Bartlett or "Clincher" patents for pneumatic tires, brought an action in the British courts for infringement of patent against Gormully & Jeffery for selling their well-known tires in the United Kingdom. Judgment, after a ten days' trial, was reserved, and two weeks ago Mr. Justice North gave it, saying:

The plaintiffs sought to restrain the infringement by the defendants of one of the very numerous patents granted within the last few years in connection with bicycles. The letters patent were issued to William Erskine Bartlett, and bore date 21st October, 1890. In April, 1893, the letters patent were assigned to the plaintiffs. The tyres or rims of cycles seemed to have passed through a rapid process of improvement. At first solid india-rubber tires were adopted. The next step seemed to have been to make the tires hollow, and these were known as cushion tires. One of these many forms was the subject of Bartlett's first patent, and he also had a second patent for an improved tire. Another very important step soon followed, namely, the introduction of pneumatic tires.

These became extremely popular, but their disadvantage was that the elastic tire filled with compressed air was liable in use to be easily cut or punctured, rendering the machine useless until its repair. Another step in advance was made by combining an inner tube with an outer and hardened case. This again was a decided improvement, but though it lessened the chances of such accidents it did not prevent them, and when they occurred the machine was disabled. The desideratum was to find an outer case which could be fixed on so firmly as to be capable of resisting blows and being ridden at high speed, and also any twisting action caused by the roughness of the road, tending to tear the tire out of its place, and which should be so detachable as to enable the rider to take off the outer case and get access to the inner tube and repair it on the spot with material capable of being carried on the machine, and then fix the outer case as firmly as before.

Among the inventions having this object in view was that covered by the letters patent in this action. It consisted of the introduction of an inner pneumatic tube, made of cloth and india-rubber, with an outer case round it in the form of an arch resting upon and within the metal rim, and having its edges compressed by the inflation of the inner tube tightly against the dove-tailed sides of the metal rim, so as to hold the outer case in its place, but which was detachable by letting the compressed air escape. Thereupon the case was loosened, and could be lifted off and the repairs done and the case refixed. The process was so simple that any rider could readily do it for himself on the road, and the assistance of a skilled workman was wholly unnecessary. He quite agreed with the construction placed by Mr. Justice Romer on the present patent in the action against Mackintosh. The defendants' 1893 tire was substantially identical with that which Mr. Justice Romer held to be an infringement of the plaintiffs' patent in the case against Mackintosh. If there was any difference, he did not think it was material. The defendants met the plaintiffs' case by denying the validity of the plaintiffs' patent, and also by denying infringement.

The defendants alleged that the forces operating to keep their tires on were different. As to the forces in the plaintiffs' case, there was no difference between the parties. The sides of the cover were held on by the pressure of the inner tube holding firmly against the inner inclined sides of the metal rim, and the inflated tube between them operated as a strut, and held them in place. In the defendants' tires it was said three forces were at work to keep the cover on the flanges. The first was pressure on the flanges of the cover by the hooks; the second, the contractile force due to the cloth being cut on the bias; the third, the force of contraction arising from pressure upon the flanges upon the metal rim in the 1893 tire and upon one another, and the metal rim in the tire of 1895.

He understood the contractile action to mean the contraction of the cloth by reason of its being cut on the bias, which it was said was sufficient to hold the tire on by force of its own, independent of everything else. But that was not the result in the case of a severed tube, and there could be no contractile force in the present case, unless the sides of the outer tube were held firmly in place by one or both of the other two forces referred to. The next force relied on by the defendants was friction. That some such frictional force existed for a time was not disputed. It was said by the defendants that this force was in itself sufficient to keep the tire on firmly for practical use, and near the end of the case one of their witnesses produced a tire with the hooks cut off, which he said he had ridden for several miles satisfactorily, and the tire did not come off.

Other evidence was given of similar experiments which had not been successful, and the witness admitted he had never known a bicycle sold in the condition of the one he produced. The importance of that was that the hook or dovetail was absent. Of the use of such a tire the plaintiffs made no complaint. It was open to any one to risk it if he liked without in-

NEW WOMAN'S WHEEL.

London, August 20.—A new type of lady's safety herewith illustrated is about to be placed in the Continental market.

The idea is by no means original, and seems merely a deviation of the machine built by the Times Manufacturing Company of Seymour, Indiana, so far as the steering is concerned, while the design is merely the fore

portion of the Coventry Humber tandem with open front that I illustrated in this column some months ago. I cannot say that I can see in the machine the germs of a great success, though as part of a tandem intended to carry a lady on the front seat I was very much taken with the machine at the last National Show at which Humber's exhibited.

fringing the plaintiffs' patent. It was only of the pressure on the flanges of the cover by the hooks that the plaintiffs were now complaining. The defendant's experts admitted the importance of this force, and the result of the evidence was that of the defendants' three forces this force was very largely in excess of the other two forces united, and was independent, while the other two were inadequate to keep the tire on so as to make it a practical rideable tire.

In the plaintiffs' tire the resistance was mainly caused by dovetail action, the tire being held against the dovetail by means of the compressed air inside the tube. In the defendants' tire the flaps and flanges were arranged so as to lie in the space in the wheel and on the internal edges and hooks, and to be held in that position by the inflation of the inner tube, and while that tube was inflated the larger part of the outer cover not retained by pressure within the hooks was unable to pass through the narrow opening at the ends of the rim. It might be that what alterations the defendants had made were improvements. Indeed, his Lordship thought the increased holding power certainly was an improvement, as the defendants could now use a pure rubber inner tube instead of one in which cloth was used. But that improvement did not justify the defendants in taking the substance of the plaintiffs' invention.

The question of infringement was also an important one. Among the anticipations relied upon were Thomas's British patent of 1888 and his American patent of 1889; Bartlett's patent of 1889, in which the tire was solid and had no inflation; Dunlop's patent of 1888, in which there was a pneumatic tube cemented by canvas to the rim,

and the second patent of Dunlop of 1889, which consisted of a pneumatic tube surrounded by another tube and cemented to the rim. None of those patents, in his Lordship's opinion, came anywhere near the plaintiffs'. Then the defendants relied on the publication of a paragraph in the "Scottish Cyclist" some six days before the patent was applied for by Bartlett. In that paragraph the "Clincher Tire people" were mentioned, but it had not been proved before him what the thing mentioned in that paragraph was. Whatever the subject mentioned was, the passage in question did not refer to a pneumatic tire at all, and with regard to the contention set up by the defendants, he could not help saying it was easy to be wise after the event. With regard to Capwell and Harrison's specifications, which were also relied upon as anticipations, it appeared that that invention never "caught on," and had been allowed to lapse.

The prominent feature of Bartlett's invention was a really detachable tire, and he came to the conclusion, therefore, that the plaintiffs' patent was valid and had been infringed. An injunction would, therefore, go, restraining the defendants during the continuance of Bartlett's Letters Patent of 1890 from manufacturing, selling, supplying or letting on hire tires for bicycles or other vehicles manufactured according to the method of Bartlett's patent, and the defendants must pay the costs of the action. Further, there must be an inquiry as to damages. Mr. Swinfin Esq. applied for a stay pending the consideration of an appeal, and his Lordship saw no objection.

CONVICT-MADE CYCLES CONTINUE.

Judge Person has filed an opinion in the Michigan Circuit Court in a case sustaining the demurrer of Warden Chamberlain in the case brought by the National Metal Polishers' Union to compel the abrogation of the contract entered into in 1894 by the State with the Derby Cycle Company for the services of seventy-five convicts for a period of four years.

The suit was commenced at the relation of the Attorney General, who asked to have the contract declared illegal on the ground that the Prison Board had no right to contract the services of convicts where they would enter into competition with free labor, holding that it was the intent of the Legislature that such contracts should not be made. Neither of the parties to the contract asked for the intervention of the Attorney General, whose appearance in the case was solely upon the grounds stated above.

In sustaining the demurrer filed to the Attorney General's bill, Judge Person declares that the contract is working no injury to the public, although the Court strongly intimates that the contract is void because it fixes a time limit. Judge Person is of the opinion that the Board has power to make contracts for the services of convicts, but that it has no power to contract for the future. This question, however, is not squarely passed upon for the reason that the Attorney General did not make it a portion of his case.

WILL COMMAND CONFIDENCE.

Mr. E. H. Corson, Nashua, N. H., one of the oldest men in the cycling trade, has turned his business into the Corson Cycle Manufacturing Company. This company, on August 11, 1896, purchased the entire cycling business of E. H. Corson, the maker of the "Corson" and the "Nashua" bicycles. The capital and stock is \$30,000, which represents a hard-pan basis, and the company, with its increased facilities and capital, will make a larger break at the market next year. Mr. Corson is a man of considerable ability, and has stamina and conscience, and his product must partake of some or all of these characteristics.

The pump stock of the S. F. Heath Cycle Company, Minneapolis, was sold at auction August 22. It was invoiced at \$1,500 and brought \$1,450.

“FLUSH”

On a young girl's face often means “Modesty.”

“FLUSH”

Financially is pretty sure to mean
“A pocketful of rocks.”

“FLUSH”

For cycle construction means simply
“Even with the surface.”

THE BARNES FLUSH

Joint with internal reinforcement has been copied by the leading
 bicycle makers in their '97 models.

Ours has been tested; others may be an experiment.

THE BARNES CYCLE COMPANY,
 SYRACUSE, N. Y.

 Agents for New York, Brooklyn and Long Island.

THE DARRAH CYCLE CO., No. 933 ARCH STREET, PHILADELPHIA, PA.,
 Agents for Philadelphia.

Kindly mention The Wheel.

WEARS AS WELL AS IT LOOKS.

Enamel which looks and enamel which wears well are, unfortunately, often two very different things, as many a purchaser of a bicycle has found out when it was too late to be of any advantage to him. The United States Gutta Percha and Paint Company, Providence, R. I., have solved the problem of combining appearance with durability in their cycle enamels, and are prepared to demonstrate this to the satisfaction of any doubting Thomas who will favor them with an inquiry.

COLORED, BUT INGENIOUS.

A Chicago colored man, W. A. Martin by name, has invented and patented an electrical lock for bicycle holders. As soon as a wheel is placed in the rack the holder locks it. To release it it is only necessary to touch a button. Technically, the key is held in by a spring clasp, which is held by a latch armature. By turning a light current through a magnet in the back of the lock, the armature is released and the lock opened.

WHERE GOOD PARTS WILL BE MADE.

When you combine improved appliances, superlative material and workmanship with long experience and the determination to produce nothing but the best goods, the result cannot but be satisfactory to those who produce and those who buy. The Kilborn & Bishop Company, New-Haven, Conn., intend turning out cycle forgings along this line, making the price thereof as low as possible when the class of work is considered, and manufacturers may find it to their advantage to communicate with the Kilborn & Bishop Company before finally deciding upon the next year's contracts for parts and fittings.

HOW MUCH DO THEY WANT?

It is rumored that an offer has been made for the French rights of the Simpson Chain (Foreign) Company, and that the proposed capital of the French Company is to be \$1,250,000. The offer has, however, been refused by the parent concern, so that perhaps higher terms may be obtained.

BRAKES FOR SENSIBLE PEOPLE.

Emerson Davis, of the Davis Manufacturing Company, Indianapolis, is in New York in the interests of the Davis rubber roller brake. He has visited nearly all of the large dealers and makers on the route and finds the "brake question" fast reaching the only sensible settlement. The Davis people have greatly improved their brake since it was first produced, and it now has every appearance of a thoroughly reliable article, designed for business and for long service. It is made in three patterns, one to be operated by the foot, another of the plunger type applied, of course, by hand, and a third for tandems operated by a lever.

TUBE ORDERS IN PLENTY.

A number of large orders for '97 tubing have already been placed with the Manesman Cycle Tube Company, notwithstanding the fact that the Manesman people are not just yet prepared to state when their new works at Zylonite, Mass., will begin turning out tubing. Among other orders the company has for the famous spiral tubing, is one for 400,000 feet from the Warwick Cycle Company of Springfield.

RECENT PATENTS.

666,487. CLAMP. WILLIAM B. THOMAS, Fishers, N. Y. Filed Oct. 23, 1896. Serial No. 571,954. (No model.)

Claim.—1. In combination, a split socket-piece, a post adapted to slide within the socket piece and provided with a series of transverse notches, a clamping screw carried by the socket-piece for clamping the post to the socket-piece, an eccentric on the screw for locking to be engaged with one of the notches on the post for further locking the post against longitudinal or lateral movement and means for positioning the screw to the socket-piece, substantially as set forth.

666,330. IMPELLER OR SODASHA BARRIER FOR CYCLES. M. L. STAMM, Rockledge, Fla. Filed Apr. 30, 1896. Serial No. 547,540. (No model.)

Claim.—1. This umbrella holder herein described consisting of a cylindrical clamp of a horizontal bar, provided with an upwardly-projecting end flanged pivot, a hub mounted to turn on the pivot and a clamping screw on the pivot, a spring on the hub, a flanged pivot, projecting from opposite sides of the hub, a, at right angles to the pivot, a holder having bifurcated ends pivoted on the pivot, a, and clamping screw on the pivot's against said bifurcated ends.

666,004. IMPELLER MECHANISM FOR BICYCLES OR ROLLER SKATES. THOMAS KEENE, St. Paul, Minn., assignor to Rudolph P. Bernau, same place. Filed Sept. 27, 1895. Serial No. 563,172. (No model.)

Claim.—1. In a combination toggle-joint and piston movement for the purpose described, the combination with the frame, the driving wheel, and the crank upon said wheel of the reciprocating piston connected to said crank, the single link for supporting the end of the piston upon said frame, the toggle link having one end connected to said piston and to the crank, and the other end connected to said frame, and having its other end pivotally connected to said frame.

666,788. PEDAL FOR BICYCLES. CHARLES ORT, New York, N. Y. Filed July 31, 1896. Serial No. 518,188. (No model.)

Claim.—1. The combination, with a pedal, of a strap or an axle lever, engaging substantially in line with the axis of the pedal, and spring at the opposite side normally projecting above the pedal, and spring at the opposite side normally projecting above the pedal, substantially as set forth.

666,517. CLAMP FOR BICYCLE SADDLES. DAVID S. BRIDGES, Cincinnati, Ohio, assignor to The White Spring Machine Company, same place. Filed Nov. 5, 1895. Serial No. 567,963. (No model.)

Claim.—1. In a clamp for bicycle-saddles, the combination with a tabular saddle-post having a recess at its upper end adapted to receive two jaws of a clamp, said jaws being independent of the saddle post, of a screw passing through the clamping-jaw and engaging with a nut located in the interior of the saddle-post whereby the jaws of the clamp are biased or tightened on the spring of the saddle, substantially as above and so described.

666,568. BICYCLE. CASI E. FILLIS, Merced, Cal. Filed Nov. 28, 1895. Serial No. 570,465. (No model.)

Claim.—In a bicycle, the combination with the horizontal tubing A' and head I, of the machine, to which is mounted the general steering mechanism as described, of the upright tubing, supporting the rear end of said tubing, A, its lower end extending below the frame proper, of two vertical parallel rods connected together at their lower curved ends and supported, on the lower forwardly-curved end of the said upright tubing, of the trailing collar L, working on said rods.

666,659. DRIVING-CHAIN FOR CYCLES. GEORGE W. ARO, Chicago, Ill. Filed Jan. 20, 1896. Serial No. 578,213. (No model.)

Claim.—1. In a driving-gear for cycles, the combination of a pair of working axles, a driving wheel, friction or clutch mechanism between the said axles and said wheel, and a reversing mechanism connecting the axle together and adapted to cause the same to have movement in opposite directions, one of the axles being made in section and connected together by a yoke that spans the reversing mechanism, substantially as set forth.

666,053. BICYCLE. ANDREW BRONN, Chicago, Ill., assignor to the Chicago Sporting Company, same place. Filed Nov. 13, 1895. Serial No. 543,241. (No model.)

Claim.—1. The combination with the portion of frame, of a horizontal fitting by which they are secured together, said fitting having a pair of hollow ears each of which has an outside wall, top, bottom and rear wall, and an inside wall closing the space included by the top, bottom and rear walls, the outside and inside walls being perforated, substantially as set forth.

666,581. HANDLE-BAR FOR BICYCLES. DAVID S. BRIDGES, Cincinnati, Ohio, assignor to The White Spring Machine Company, same place. Filed Nov. 5, 1895. Serial No. 566,074. (No model.)

Claim.—In a steering device for bicycles, the combination with the socket of a handle-bar having reversible bearings adapted to engage the upper end of the steering-post, of a bearing-pivot fixed with a projection or journal adapted to engage the sockets of the handle-bar at either side of the said journal or bearing-pivot axis which is fixed to the steering-post.

666,473. BICYCLE-SADDLE. BENJAMIN S. SHAW, Ontario, Ohio, assignor to the Gilliam Manufacturing Company, same place. Filed Aug. 7, 1895. Serial No. 558,653. (No model.)

Claim.—A bicycle-saddle frame constructed from a single piece of sheet metal and comprising the cantile frame having the marginal-rod extending perforated portion of tube B from which project a support B' similar or duplicated in a cross-section for a portion of its length and circular in cross-section for the remaining portion of its length and provided with the notches in the combination with a strengthening-plate semicircular in cross-section for a portion of its length and having one of its ends flattened, the said semicircular portion of the strengthening-plate being arranged within and secured to the semicircular portion of the support and the flattened portion of the plate being permanently secured to the body of the frame, a saddle-leather attached to the depending perforated portion with one end, a post-and-frame attached to the front end of the saddle-leather and supporting the support B and provided with an underlying cross-bar B' to sustain the weight when the saddle-leather is depressed, one end of a bar, one end of which projects into the support B, and a screw P, one end of which projects into the support B and the other end of which has a swivel connection with the pump and substantially as set forth.

666,058. PNEUMATIC TIRE. PAUL M. BOWMAN and EDWARD J. BROWAN, Stafford, Conn., assignors of one-third to Charles L. Johnson, same place. Filed Mar. 27, 1896. Serial No. 585,184. (No model.)

Claim.—1. As a new article of manufacture, a pneumatic tire of any suitable material, provided with a non-punctureable shield substantially as herein shown and consisting of two thin sheet-metal strips, one within the other, each provided with suitable radial perforations, those of one strip being arranged alternately with those of the other.

666,979. PUNCTURE-PROOF TIRE. ARNOLD S. BURR, Brooklyn, N. Y., assignor by mesne assignments to the Lang, Island Rubber and Cycle Company. Filed Nov. 11, 1895. Serial No. 588,588. (No model.)

Claim.—1. A puncture-proof strip for pneumatic tires, consisting of a backbone in combination with rising projecting laminae from each edge, the ribs being hinged to the backbone, substantially as described.

666,597. VEHICLE-TIRE. JAMES A. MALCOLM, Washington, D. C. Filed June 20, 1896. Serial No. 586,282. (No model.)

Claim.—1. A filling or tire composed of glue, a mastic resinous substance, and a light compressed vegetable material insoluble in either the glue or mastic resinous substance, substantially as specified.

666,438. ICE OR SNOW VEHICLE. FREDERICK A. ANDERSON and THOMAS BRANT, Arcadia, Wis. Filed Nov. 7, 1895. Serial No. 568,100. (No model.)

Claim.—1. An ice and snow vehicle, comprising a sled or runner, a frame upon which a person may sit, mounted upon said sled or runner, a crank-shaft journaled in said frame, push-bar pivotally connected at their upper ends to said crank-shaft, sleeves pivoted to one of the runners in rear of the crank-shaft, rods pivotally connected to the push-bars and extending sideward through said sleeves, transverse-ropes inserted upon said rods between said push-bars and said sleeves, and means to cause the crank-shaft, substantially as set forth.

666,658. BICYCLE-LOCK. JOSE M. ALLEN, Cleveland, Ohio. Filed Mar. 18, 1896. Serial No. 588,001. (No model.)

Claim.—1. A lock for bicycle comprising in its construction a barrel or casing provided with means for attaching it to the frame of a bicycle and a hollow plunger consisting, a retracting spring, one end of which is fastened to the barrel or casing, and the other to the plunger, said plunger being also provided with a spring-loaded notch which engages with a pinion whereby the plunger is projected, and a pawl or equivalent device for locking said plunger as it is projected, substantially as set forth for the purpose set forth.

666,998. JOURNAL-BEARING. HENRY HERRICK, Chicago, Ill., assignor to the Chicago Sporting Company, same place. Filed Dec. 27, 1895. Serial No. 573,000. (No model.)

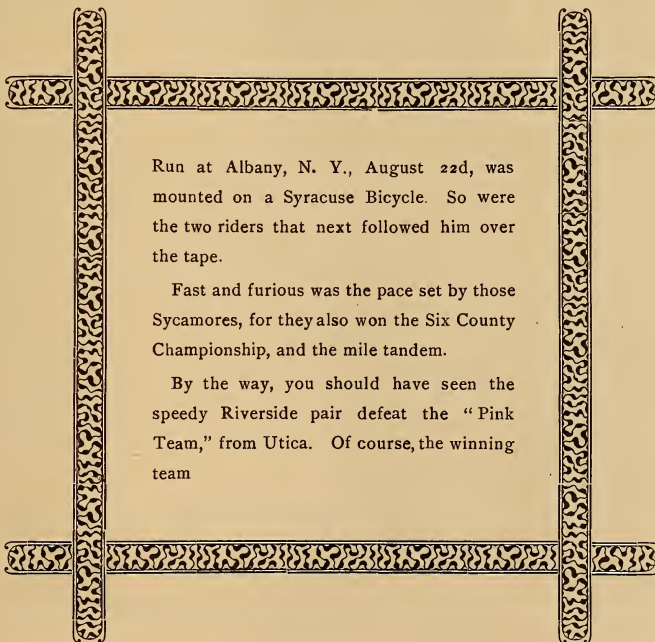

Claim.—1. The combination with a journal and a journal box having a lubricating-opening, of a ring through which the journal passes and a spring-rod, integral therewith, projecting therefrom in a circumferential direction, and having a heart-like shape on the lubricating-opening, substantially as set forth.

THE WINNER

OF THE

New York State 2-3 Mile Championship,

Run at Albany, N. Y., August 22d, was mounted on a Syracuse Bicycle. So were the two riders that next followed him over the tape.

Fast and furious was the pace set by those Sycamores, for they also won the Six County Championship, and the mile tandem.

By the way, you should have seen the speedy Riverside pair defeat the "Pink Team," from Utica. Of course, the winning team

FOR SOUTH AMERICAN TRADE.

Gustavo Niederlein, the consul of Costa Rica at Philadelphia, requests American manufacturers to send two copies of their illustrated catalogues to his office at 233 South Fourth street, Philadelphia, with detailed information as to prices, terms of credit and practice observed in packing and shipping, to the end of increasing trade relations between the United States and Costa Rica.

If catalogues are printed in Spanish, so much the better. Mr. Niederlein kindly offers to give special data on goods desired or products offered in Costa Rica, or any other information. He will forward, if desired, special inquiries to exporters and importers in Costa Rica, or he will bring the American manufacturer or importer in direct communication with the Costa Rica consumer or producer.

In these days, when the American cycle maker is seeking for new worlds to conquer, such offers as those made by Mr. Niederlein should not be allowed to pass unaccepted. In another direction the action of the progressive Costa Rican representative should not be lost upon the American manufacturer. The three great commercial languages, aside from English, of the world, are in the order given, Spanish, French and German, and no maker who seeks or desires foreign trade should be unprovided with a complete set of literature in each of the above languages.

GERMANS TO ADVANCE PRICES.

At a general meeting of the German Cycle Makers' Association, it was decided to advance prices for next season, owing to the advance in the cost of raw materials. The question how to stop the importation of cycles into Germany was also discussed at length. It was reported that such machines had, during the present season, been introduced principally from America, and had done much harm, both to the public and the German makers. Although the association has petitioned the German Government to raise the duty on cycles, no steps have been taken by the authorities, and it was decided to send a deputation to the Minister of Commerce.

From Chicago northward to Duluth, Superior, Minneapolis or St. Paul, the Chicago and Northwestern Railroad offers the most delightful route, through the most highly cultivated portion of Northern Illinois and Southern Wisconsin, into the region of charming lakes and summer resorts, with ruggedly beautiful scenery, through Madison, Winona and Eau Claire, and the superiority of the facilities afforded the travelling public by this handsomely equipped road is appreciated by travellers. No more luxurious environment could be desired than that afforded on their "Northwestern Limited," a train of superbly finished Wagners, drawn by a 100-ton engine of the most modern and perfect type, every car new and constructed expressly for this train, and embodying every device conducive to the highest degree of comfort. The private compartment sleeping cars offer a most desirable exclusiveness; the dining-car service is unapproachable for elegance of appointment and excellence of menu, and the buffet, smoking and library cars are handsomely furnished with easy chairs, writing desks, bookcases, containing a choice selection of books and papers. The clubman finds himself perfectly at home in these surroundings, and the standard of enjoyment and comfort established here is carried out to the minutest detail throughout the entire train.

A folder that is a work of art has recently been issued by the Northwestern, illustrating the route taken by the "Limited." A picture of the handsome vestibuled train is given, as well as a diagram showing plan of cars, sections of sleepers, etc. This handsome folder and time-table contains much that is interesting about the train and its route, and can be obtained from the General Passenger Agent at Chicago, W. B. Kniskern, or T. W. Teasdale, G. P. A. at St. Paul. *

SATISFACTORY SADDLE CLAMP.

A representation of a new device of the Gilliam Manufacturing Company, of Canton, Ohio, in the line of saddle clamps is shown in the cut herewith. It will be used exclusively in their saddles next season. This clamp achieves the purpose of placing the rider directly over the saddle post. It brings the

coil under the post, which is proper; from its angles it is easy to get at, for adjustment, with a wrench. This clamp is one of several novel features in the Gilliam line for '97.

REFORM AND WEEDING OUT.

After going over the present and probable future of the cycle trade, "Hardware Trade" sums up in this way: "But this lowering of prices and the weeding out of the mushroom factories will have a good effect both on the market next year and on the demand for wheels. Doubtless if the general business condition of the country is fairly well settled next year there will be a very large buying of wheels. There will also be a reform in the unlimited credits that were extended this season. This has been a curse to the trade and the cause of many failures."

MORE INSURANCE

The Wheelmen's Guaranty Company has been incorporated in Chicago with a capital stock of \$2,500, to register bicycles. The incorporators are W. B. Perkins, Leo A. Caro, J. H. McKelvey, F. W. Hine, H. P. Snyder and Jollie Allen.

Charles D. Cramp, of Philadelphia, Penn., is at the head of a company of capitalists of that city to erect a large plant at Norristown, Penn., for the manufacture of steel cycle tubing.

AMERICANS HIT THE BULL'S-EYE.

There is no denying, says the "Scottish Cyclist," that the Americans are making an impression in London. One sees American machines and tires everywhere, and more particularly in the West End, where they are extensively used both by ladies and gentlemen. Leaving to others to decide the vexed question of superiority—if there be a question of superiority in it—I think that the visitors are an easy first in the art of drawing the public. To begin with, they secure first-class depots, furnish them in good, not to say lavish, style, and, what is of vital importance, keep them always bright and attractive. There's a good deal in that, more than some of the home managers are inclined to admit. With regard to advertising, the Americans are unapproachable. They hit the bull's-eye almost every time, and the reader soon becomes a buyer, if buying be his object; if not, his interest is at least aroused, and the impression will ere long be productive.

FOR PUNCTURED ECONOMISTS.

Classifying cyclists as economists, the Cycle Compound Company of Glens Falls, N. Y., want all riders to save time and money by making their own "Punctureine" for repairing punctures, which is guaranteed to stop leaks instantly and without the rider dismounting. It is claimed for Punctureine that it does not dry, freeze or harden, and that it conduces to the vitality of the tire. The Compound Company furnishes riders and repairmen with the formula, sample and injector at a very moderate sum.

FRACTIOUS FABRICANTS.

The small cycle makers of Paris have formed a syndicate under the style of Union des Fabricants du Cycle. The chief object of the association is to do away with middlemen, and the promoters state that by combination the small makers can save 40 per cent in the prices of parts and accessories. Paris is said to have from 700 to 800 small manufacturers.

Five hundred francs is offered by a Paris journal for the lightest, strongest and cheapest lamp.

NOTICE! CAUTION!! TO JOBBERS AND WHEEL COMPANIES:

Any wheelstand with a loop or side supports, rising approximately perpendicular from a base provided with a stop on either or both sides of the centre of the wheel, not purchased from or manufactured under our license, is an infringement upon our stands. Also, any rigid stand having upright side rods or braces extending beyond the centre of the wheel, the base of the stand being provided with lateral extending feet, by which the stand is self-supporting upon the floor. A word to the wise is sufficient.

AMONG THE BRITONS.

Room Yet For Good American Wheels—How The English Manufacturer Will Exhibit.

London, Aug. 26.—Despite the rapid closing in of our trade season American makers have no reason to complain of matters as they stand. In view of the obvious popularity of American machines with a section of the public, all the leading retailers throughout the United Kingdom are making strenuous efforts to receive the agency of at least one good American line of wheels, and makers are now on the spot and getting rapidly fixed up. The better known firms have even taken provisional orders for next season's delivery, but there is a distinct feeling that at present we have not had all the good firms exhausted, while several that have sent their advance guards do not approach business in a way calculated to give people the idea that there is solid money behind. As a consequence it is possible that a good deal of business will be done at the shows, though of course delays are dangerous.

I have just had a glance over the official circular announcing the date and duration of the National Show for 1896. It will open at the Crystal Palace on December 4, and close on Saturday, December 12. The circular asserts that a discount of 25 per cent will be allowed on this year's dues to last year's exhibitors of cycles. The prices charged are:

Safeties (single).....	10s. 6d. each
Tandem safeties.....	5s. "
Triplet safeties.....	20s. "
Quadruplet safeties.....	25s. "
Quintuplet safeties.....	30s. "
Sextuplet safeties.....	30s. "
Tricycles (single).....	15s. "
Tandem tricycles.....	20s. "
Corner tricycles.....	20s. "

Stalls are charged for at 5 shillings per foot frontage, or 1s. 6d. per foot area.

The spaces will be balloted for in two sections. The front will be devoted to the members of the Cycle Manufacturers' Trade Protection Association, which runs the show, and the second to outsiders. In consequence the participants in the second ballot will only have what the members chose to allow them, or such space as has not been disposed of. Firms joining the association prior to September 30 will participate in the first ballot, which date also closes the entry for the second ballot.

The prohibitory proviso regarding exhibiting directly or indirectly at any other show is repeated. Signs must be of black, on which all lettering must be in gold. Exhibits can be received at the Palace on November 30,

and must be in position by 10 o'clock on the opening day. A good proviso which I notice for the first time is "No machine shall be labelled with its weight unless that weight has been certified as correct by the secretary." Every machine must be labelled with its retail price, at which it can be obtained, unless already sold.

WHY THIS MODESTY?

When a man or a collection of men have an idea so excellent as to warrant the employment of extensive and expensive advertisements to tell the public thereof, it seems strange that the plant producing the thing advertised should be invisible to the eye of the seeker after its whereabouts. Have you ever been to Canarsie and sought for the cycle factory which is advertised as existing there? The clams, the fishing, boating, bathing and saline breezes are all beautiful and beautiful at Canarsie, but while you enjoy them your pleasure will not be broken in upon by the clang of busy industry from the cycle factory said to be hidden there. And yet there is such a factory in Canarsie, so it is said.

SHERIFF IN CHARGE.

Syracuse, N. Y., Sept. 5.—The Ludge Cycle Company has failed. Last Friday there was filed a chattel mortgage upon the company's property for \$29,522.50, in favor of F. W. Gridley, who is teller in the Salt Springs Bank. Sheriff Austin took charge of the factory, which is located at Nos. 501 and 507 South West street. Total liabilities of the company will amount to about \$30,000.

It is expected that the company will be reorganized and continue the manufacture of wheels. The embarrassment is caused by the temporary financial stringency.

The company was formed a year ago with Frederick Dodge, I. A. Dodge and H. M. Dodge as partners.

AMOUNT OF THE EXECUTIONS.

The property of the Elbridge, N. Y., Bicycle Company was sold at auction last week to W. B. Fuller, an attorney for an unknown party. The purchase price was \$1,403 58; just enough to cover the executions against the company.

The Elbridge Cycle Company began the manufacture of bicycles in February with a capital stock of \$100,000, of which \$20,000 was paid in. The company manufactured the Etna wheel. Its officers are: President, George W. Higgins; secretary, E. E. Hubbell; treasurer, R. T. Sweet.

ATTACHED AN ATTACHMENT.

The factory of the Jakobson Three Wheel Tandem Attachment Company, at No. 314 East Seventy-fifth street, this city, has been seized by the Sheriff, on an attachment for \$1,450, in favor of Julia Dietz. The company was incorporated about six months ago with a capital stock of \$10,000.

THESE ARE THE FACTS.

Disposing of Rumors Regarding Alleged Exhibitors at the Garden Cycle Side Show.

At the Eastern Cycle Show the trade will exhibit a bold front. There has been no break in the line. True it is that A. Kennedy Child has been engaged by the Madison Square Garden Company to nurse, handle and manage their enterprise. Regarding the appointment, Child himself has not openly stated that he has been employed by the Garden company to represent them, but that he is their representative there is no doubt, and his hesitancy to announce the fact is incomprehensible.

One of the chief arguments used by Representative Child is that the Pope Manufacturing Company will exhibit at the Sanger show. "But," saith his listeners, "the Pope company has signed to exhibit only at the Board of Trade Show at the Grand Central Palace." In reply to which, Mr. Child states, with that wonderful shrug and smile, that the Pope company will be at the Sanger show; that they will not consent to stand by and see others exhibit, and they, the Pope company, out of it. Child also makes the same statement regarding the Spalding and other leading firms. Such is the bait that is being dangled before the members of the trade.

As a matter of fact, the Pope company has signed and will exhibit at the Board of Trade show at the Grand Central Palace, and they have notified Mr. Child not to make use of their name in the future. The trade is presenting a solid front and the Garden company's show will be lacking in the best names in the bicycle trade.

The Madison Square Garden side show is slated to open on January 11th.

DECIDING CREDITORS' CLAIMS.

New Haven, Sept. 8.—All the parties interested in the failure of the Frisbee Cycle Co., recently insolvent, met in the Probate Court last week. Judge Cleaveland, after the hearing, appointed George R. Cooley and Alfred M. Wheeler, both disinterested parties, as commissioners to receive and decide upon all claims of the creditors. The commissioners will meet at the office of George R. Cooley, at New Haven, on November 26, at 10 a. m., for the purpose of attending to the business connected with their appointment.

PLANT AT AUCTION.

The plant and other effects of the Revere Wheel Company, No. 438 Harrison avenue, Boston, will be sold under the hammer on Monday next. The stock includes a deal of machinery, a polishing and nickelling plant and a lot of tubing, forgings, hubs and the like.

TO CYCLE WITH IN CATHAY.

Aways quick to seize an opportunity, those Syracuse boomers, the Syracuse Cycle Compar", were not slow to make the most of Li Hung Chang's visit to America. While the distinguished Chinese was in Washington W. D. Hawley called on his personal representative, Mr. Drew, and made known that he wished to present to Li a Crimson rim Syracuse bicycle. The fact was wired all over the country. One account says: "Mr. Drew rather hesitatingly conveyed the message to Li Hung Chang, feeling confident that the great man would be too much occupied with weightier affairs to receive a bicycle agent. But no sooner did Earl Li learn the object of the visit than he ordered the agent to be at once admitted.

"The man and the bicycle were taken to the earl's apartment by the private elevator and China's greatest statesman was soon earnestly discussing the intricacies of the machine.

"Nothing would do but that the agent must show how the thing worked and he was required to get on the wheel and ride it round and round the apartment, much to the amusement of Li and all of his attendants.

"After he had seen the bicycle in operation the Viceroy insisted upon having all the details of the machine explained to him. He wanted to know what this and that was for; what each part cost and a thousand other things, and the agent was kept busy answering questions for fully a half hour. The idea of his riding a bicycle seemed to tickle him immensely. According to his attendants, he was more pleased with his bicycle gift than with anything he has received during his tour around the world."

BANKER IN BUSINESS.

A. C. Banker, the well-known, old-time racing man, has gone into business on his own account. He has opened an office at room 630 225 Dearborn-st., Chicago, Ill., and is manufacturers' agent for Graton & Knight Manufacturing Company, saddle-makers, and for the Kilborn & Bishop Company, drop-forged makers. In addition to this, he will be the agent for a line of saddles, pedals, spokes, tubing, stampings, handle-bars, in fact, all the component parts of a bicycle.

NO TIPS TO BREAK OFF.

A handle grip in one piece is a specialty being marketed by Rosenberg Bros. & Co., 215 East One-Hundred-and-Eighteenth-st., this city. The grips are covered with chamois leather, and, having no tips to break off, are expected to prove rapid sellers. They list at \$2.50 per dozen pairs.

SERIOUS ACCIDENT.

Boonton, N. J., Sept. 7.—Two Newark wheelmen, William Sweeney and Chrystal Underline, were seriously injured near this place to-day. They were riding down the Washington hill, when the spokes of the front wheel of their tandem appeared to have broken.

Both riders were thrown forward with great force. A spoke entered one of Sweeney's eyes and destroyed the sight. His right arm was broken, and he was cut about the head. His companion sustained cuts about the face, lost a piece of one ear and was injured about the legs.

Both were unconscious almost two hours. Dr. Carpenter, who attended them, says it is doubtful if Sweeney will live. They were sent to the Paterson Hospital by train.

SEVEN SONS IN THIS CONCERN.

Milwaukee, Sept. 3.—The Huennekens Cycle Company, one of the leading wholesale concerns here, has been reorganized. In the future it will be known as the F. W. Huennekens & Sons Co. The stockholders include F. W. Huennekens and his seven sons. The capital stock of the new company is \$20,000; prospects are reported bright. They also carry a complete line of sundries. F. W. Huennekens is president and treasurer; Fred J. Huennekens is secretary. The new firm are selling agents for the Washburn wood rims, chain guards and wooden handlebars, and for P. L. Jacobson's barrel hub.

THE NEGRO RIDER.

The number of negro riders one sees pass up and down the Boulevard is an interesting study in the aptness of the negro to follow the fads and foibles of his white brother. These negroes are really expert riders, too, with the peculiarity of their race in any athletic sport, except a cakewalk, and that is the total lack of anything approaching ease or repose. A negro rides a wheel to make speed, to beat some one else, and he could see no enjoyment at all in mounting one for a spin by himself on a country road. He wants company, and that of a lively, rollicking sort all of the time.

BARON DUNLOP, MAYBE.

It is rumored that the elder and head Dunlop is booked for a baronetcy. The head of the Dunlop family has two elegant mansions in Ireland, and has purchased palatial residences for his sons at Birmingham, Coventry, etc. He has also purchased a beautiful estate in England. He is worth, so it is figured, from \$10,000,000 to \$20,000,000, which is very rich for England, and there is no reason why he should not puncture the aristocratic circle and shine in it.

NO PREMATURE SHOWS.

There will be no sanctioned cycle shows previous to the National functions in Chicago and New York. President Coleman, of the Board of Trade, having so decided, is resolutely turning a deaf ear to the various promoters, fair managers and the like who have besieged him for sanctions. The Dallas (Tex.) cycle show announced for October 12 to 24, is among the number refused official approval.

FOR SMITHITES' EDIFICATION.

The Congress of Sanitary Institutes, which has been in session at Newcastle, England, strongly indorsed cycling as a means of doing away with a vast number of female derangements. The conviction was expressed that the standard of health among women cyclists has been appreciably raised.

WHEELMAN AS A TAXPAYER.

A bill has been approved by the Highway Committee of Philadelphia's City Council which provides that every bicycle shall be registered and numbered, the owner paying a fee of \$1 into the city treasury, for the use of a street improvement fund.

This ordinance is one of a number now being considered in many towns, the object being not so much to regulate bicycle riding as to raise a road or street fund by the taxing of bicycles. The wheelman does not wear out the streets, and naturally objects to a tax upon bicycles when no tax is collected from carriages and other vehicles which do wear out the streets.

Moreover, the wheelman everywhere pays his share of road taxes along with other people. It is only when he is mounted that he joins the class of wheelmen. He does not separate himself from the community by doing so. His rent, which pays his landlord's taxes, or his taxes go on while his wheel is rolling around.

If he is a minor or a boarder and does not pay taxes or rent, somebody pays road taxes for him. Clearly, it will not do to tax bicycles in order to maintain roads to which bicycles do no injury whatever.

WHEELMEN AND WOMAN SUFFRAGE.

The wheelmen of San Francisco have pledged themselves to vote for woman suffrage. At first sight this promise seems peculiar, but the cause for it is found in this: There are 3,000 wheelwomen in San Francisco, all of whom earnestly desire good, smooth streets. These ladies have, of course, no votes, so all they can do is to lend their moral influence to the campaign for better roadways. Their moral influence is great, but truth compels the admission that votes are more effective than moral influence, when politics is being done.

So the wheelmen will vote for woman suffrage in order that their female colleagues may join them by-and-by by putting into office candidates who are pledged to good roads and can be relied upon in keeping their pledges and in keeping out of office candidates who will not commit themselves to a proper course and who cannot be depended upon for other reasons. The bicycle has already given women dress reform, and now, it seems, it is to give her ballot reform besides.

CHICAGO'S CURIOSITY.

Chicago is an enthusiastic investigator of the occult. For example, a leading Chicago daily, thoroughly in touch with its readers, remarks: "What the Chicago people want to know is, what would be the effect if all the bloomers in Chicago were placed together into one gigantic pair of bloomers, to be nailed on the front of the Auditorium Hotel?" While this is exceedingly interesting, perhaps Chicago might also be interested in what would be the effect if all the limbs clothed with all the bloomers were consolidated into one pair, and this gigantic pair were to assume the position of a pair of clock hands when the hands betoken the arrival of half-past 6 o'clock.

STATISTICAL CYCLING.

Captain Louis M. Chasteau of the Philadelphia Park Guard makes an interesting report of the number of cyclists who entered Fairmount Park during last month. According to the records kept by the captain, the entire number of bicycles entering the Park in 1895 was 243,612, while during the month just passed the number reached 138,645, in July 136,553 and in June 118,405.

SHADES OF GREENWOOD!

His Hill-Climbing Performances of Eagle Rock Knocked Galley West by the New Generation.

Eagle Rock hill, an excrescence of New-Jersey earth, once famous in the annals of cycling, had some of its glory renewed on Labor Day.

The Manhattan Bicycle Club had selected it as the scene of the first hill-climbing contest that has occurred herabouts in nearly a decade. The result was a general smashing of one of the few time-honored records that remain and the development of striking proof of the wonders wrought by the improvements in wheels and tires.

The hill, located in the Orange Mountains and commanding a magnificent view of the country for thirty miles around, is nine-tenths of a mile long; the grade varies from one foot in seventeen to one foot in seven. The surface for the most part is hard but stone studded. On Monday two or three short stretches had been softened by the heavy rain of the night previous.

In former years to surmount the grade at all was to excite comment; to climb it in ten minutes or thereabouts was a remarkable performance worthy of print, and when Hal W. Greenwood came from St. Louis and went up in seven minutes thirty-seven seconds he set a mark that profoundly amazed all cyclists and left a halo around the doughty little Westerner. No one had ever come within ninety seconds of Greenwood's time, which stood on record for seven years.

In the Manhattan's contest on Monday twenty men started, and all but one reached the top, all breaking Greenwood's once marvelous figures by well over one minute, while the winner bettered it nearly three minutes.

The men were started singly, at intervals of thirty or forty seconds. Wm. Adams, of the Keystone B. C., Paterson, was first away. He went up steadily and might have been returned the winner had he not at the last curve turned left instead of right. Before he recovered himself he had lost valuable time and possibly the Fowler bicycle, the principal prize at stake. At the foot of the hill a crowd of several hundred had gathered; in the woods along the course were groups who kept up a running fire of encouragement to the toiling riders, while near the stone quarry, almost in sight of the tape and on the steepest part of the hill, a great crowd had gathered to view the men when their toil was hardest. From this point to the finish the spectators formed a yard-wide lane of craning humanity. Most of the men mounted the Rock in splendid style and finished remarkably strong. As a whole their riding was a worthy lesson for nose-grinding, body-squirreling, face-distorted weaklings to whom hill-climbing is such fearful labor.

The contest was devoid of special incident. Every man who entered started, and as stated all but one, R. G. Betts, Manhattan

B. C., earned bronze medals by reaching the top. Betts, who had easily climbed the hill earlier in the day, was within seventy-five yards of the summit, when his chain climbed the sprocket and wedged in the hub, throwing him out of the race.

The winner turned up in A. Michael, Iroquois Wheelmen, Jersey City, whose riding was a revelation. He climbed easily and steadily, hardly shifting his position in the saddle, even at the steepest pitch in the road. He gained thirty-eight seconds on the man in front of him. The times of most of the men were unexpectedly fast; that of Michael, 4:53, was a distinct surprise. The time of the second man, Thomas Dunn, Yonkers B. C.,

A. Michael.

was fifteen seconds to the bad. Michael rode a Straus-tired Lyndhurst, geared to sixty-three. The three men who rode Ides used the Ide elliptic cranks, while H. A. Meyers, a rosy-cheeked, rosy-haired young fellow from Brooklyn, tried exaggeratedly large sprockets and Bourne extension cranks which lengthened from 7 to 8 1/4 inches.

Michael, the winner, is of the "hill-climber build," not unlike the once great Greenwood—short and rather stocky. He is twenty-two years old, five feet five and one-half inches tall, and weighs 145 pounds. He has raced on the track, winning several novice heats, but failing to score in the final.

The table shows the order of the finish, according to times. The gears and lengths of crank used are interesting and not without value.

P. Anthony Brook, president of the Metro-

politan Association of Cycling Clubs, refereed the event. Harry Wheeler was one of the timers and C. H. Budd, starter.

HE KNEW IT ALL.

They occupied adjoining seats in the suburban smoker. The one next to the window was deeply immersed in a cycle maker's catalogue, while his neighbor was at the bursting point in his desire to impart the information he seemed to think he was possessed of.

"Ahem! Going in for a bicycle, eh?" said the knowing one. "Great thing, I tell you. Got one of them myself."

"Yes?" queried the catalogue reader, seemingly not as much impressed as he might be by the information which had been thrust upon him.

"And if you are a married man," continued the talkative man, unabashed by the directness of the snub he had received, "when you buy a wheel purchase one for your wife at the same time. It keeps her from laughing at you, and also keeps peace in the family. It may sound ungallant, but let your wife do her own riding. Don't reach over your wheel and undertake to help her on hers. The wheel will resent this. If you both come down together, do the swearing for both. The recording angel is supposed to be looking the other way when people are learning to ride a wheel. If he isn't he ought to be."

"Thanks, very much for your interest in my welfare, but really, you are wasting your valuable information on me," drawled the catalogue reader, as he prepared to leave, "but you see, I've been selling bicycles for ten years and riding them for fifteen; am married, and my wife and four children all ride, but, still, I'm thankful just the same. Goodby."

"Well, I'll be blowed!" gasped the knowing one, as his seatmate vanished down the car aisle.

BLEW HIS FRIEND OFF.

Queer things happen in Oregon. If you doubt this, then read the following and be convinced: An Oregonian rejoicing in the name of James, whether with the prefix of 'Truthful or not deponent sayeth not, was stealing a ride on the sidewalks of Portland. Some one, evidently to frighten him, called "Get off the sidewalk!" Mr. James thought a policeman was after him, and began to sprint for all he was worth. There was another wheelman in advance of him, who was manifestly a novice. Mr. James called to him to get out of the way. As Mr. James passed him his (James's) rear tire exploded with a report like a gun. The other rider was blown off the sidewalk into the gutter.

Mr. James dashed on until he thought he was safe. He then looked back, but could not see the policeman, nor anything of the other man who went off the sidewalk.

About an hour after the occurrence a boy reported to an officer that while he was riding he was ordered to stop and throw up his hands by a dark-whiskered man on a wheel. He said he pulled out, but the man overtook him and shot at him as he wheeled by, but the bullet punctured his tire, and he fell off the sidewalk. He was greatly excited.

DO NOT BE A LEVITE.

A clergyman in the course of a sermon to wheelmen the other day said: "Like the Good Samaritan, cyclists should give assistance to a brother in distress on the road, when a tire is punctured or a little kindly help required, and not pass by unheeding, as the Levite did. Laws have to be obeyed. Many of them are disagreeable, and to one I draw special attention—the lighting of lamps after sunset." One theory he omitted—Was the man who passed by on the other side a scorcher?

NAMEPLATE VALUES.

The value placed upon nameplates, by the buyer, is illustrated by the following extract from a letter over the signature of a prominent auctioneer:

"Wheels so'd in this market **without** nameplates went from \$17.50 up to \$27.50; with plates, from \$30.00 to \$50.00." Mr. Dealer, here is a pointer for you to ponder over. Buyers are not blind, if some of them do look silly. They can see well enough and reason well enough to decide the difference in value to them between a reputable wheel and an illegitimate one. They want to know if the maker is in existence, and if so, they want to know if he is proud or ashamed of his product.

Handle bicycles made by a firm with a standing reputation, a firm that has weathered the storms of adversity. Buy New Clippers, and get what you can depend upon.

Notice to Advertisers.

WHEEL ADVERTISERS are notified that change of advertisements is not guaranteed, unless copy is received by Saturday morning.

TO FOREIGN INFORMATION SEEKERS.

Owing to the number of inquiries received from abroad in regard to the status of American firms, THE WHEEL announces that it will give to all such inquiries the most careful attention, and all foreign merchants desiring advice or information regarding American trade are invited to correspond with THE WHEEL.

WHAT THE CAUSE OF IT ALL IS.

THE more time one has to study the present flat condition of the bicycle trade, the more keenly one realizes that the business has been carried on on an unsound basis. THE WHEEL is not lining up with the "I-told-you-so's." THE WHEEL, ever since its foundation, has at the risk of losing friends, always preached at the trade, always talked business morals. That THE WHEEL'S policy has accomplished much good there is no doubt. There is no man who will not take a pointer, or who will not reason from, or who is not affected by some particular fact which is clearly brought to his mind.

These are dull, dreary times. The general soreness caused by this year's congestion has been increased a hundredfold by a threatened change in currency, a threatened disturbance and rearrangement of values. So that financial centres, which, in times like these, are relied upon to tide trades over the bad spots, have put their gold in their cellars and double-locked their doors, leaving the borrower high and dry, and that no matter what his collateral.

But it is just such times as these, when there is no work to do, which afford men profitable thinking periods. The most profitable thought that the cycle merchant can dwell upon in these times is that the bicycle business has been unbusinesslike, not ordinarily unbusinesslike, but unbusinesslike in an extreme degree. The chief fault of the whole trade is lack of substantiality, a lack of investigativity, a lack of examination of reputation. Beyond one or two firms—and those firms are now rich—very, very few houses in the bicycle trade have paid any attention to proper credits. It has not been an unusual thing to record failures in which a bicycle-making firm has lost, through a medium-sized territorial agent, sums between \$20,000 and \$30,000, a line of credit which would be laughed at in older businesses. It has been a case of "taking chances" almost all the way through.

A man has only to put up a pretence of financial soundness and he can place an order for almost any thing, almost any where. The trade has, especially during the last three or four years, been honeycombed with unbusinesslike men, men who "jumped" into the business, men who never were really directive and successful merchants, and who came equipped only with hope and nerve. Occasionally they got their footing through being backed by some individual capitalist who kept in the background; but, as a rule, the individual capitalist who keeps in the background very rapidly tires of the backing process and leaves the nervy and hopeful person in a bad state and the nervy and hopeful person's creditors in a worse state.

As an example of how easily and badly people are bitten, let THE WHEEL point out that there has lately been organized a tire company with \$100,000 capital; yet THE WHEEL carries on its books an amount of \$10 due it by the president of this company. This is a specific example of the solidity of some of these highly capitalized organizations, many of which have not enough cash on hand to pay for the printing of their first prospectuses. Yet this \$100,000 company will no doubt be able to obtain considerable credit before it goes under, for go under it must, because it has no capital, the article it intends to market is unmarketable; and, outside of these two considerations, the head of this company is entirely inexperienced, uncommercial, and has had no education in business life. Thus failure is inevitable.

Perhaps the points which the bicycle trade should most bear in mind in the future are cautiousness and proportion. The statement of every man is not to be taken at its face value, but, judging from the past and the present, it is to be taken at much less than its face value. He must prove his title before he is worthy of being entertained as a customer. By the sense of proportion is meant a proper sizing up of those who sell you, and of those to whom you sell, particularly those to whom you sell. There has been a deal of over-personality in the bicycle trade; but complacency and geniality do not pay bills; in

fact, the over-complacent and ever-smiling party should always be an object of special care, for that is the type which is the most easily led away from and is the most often absent from its particular business, so that the business runs itself and in time becomes wabbling, and there is nothing left but chattel mortgages and preferred claims. This sense of proportion should ever be kept in view. A man should be catalogued, so far as credit is concerned, on a rock-bottom basis, and such steel-chain measurement should not be departed from.

The bicycle trade is sound. The sound people are still in it. Its deflated condition is due to the fact that much of the wind has been taken out of it. The bubble has burst because competition has driven incompetency and incapacity out of the trade. We do not say that all the firms who have met disaster this year were entirely without merit. We do say that the trade is in much better shape because of the departure of most of them.

NO TIME FOR TRAITORS.

WAR and business are in many things akin. Each is a struggle in which in the end trained forces and the skillful handling thereof must conquer, even when confronted by larger bodies less disciplined and improperly officered.

To stand shoulder to shoulder, to present an unbroken front to the enemy, to have perfect faith in those in command and to obey their instructions are all essential to the ultimate winning of a battle. With these essentials lacking disaster more often than victory will result.

The trade, or at least the best and most important part of it, is to-day enlisted under the banners of the Board of Trade. It has by means of the organization and discipline of the board been able to fight and win its battles in such a manner as to merit the confidence of all. With the sinews of all war plentiful in its coffers, with system, training, officials and experience all perfect the present seems hardly the time one would look for desertions, yet rumor declares that these are contemplated, and on the eve of battle, too.

In the fight which the Board of Trade is making for the rights of its members to control, direct and govern its own affairs, it needs now, if ever, the united support of these members for whom it fights. In the board's determination to control absolutely such affairs as cycle shows, making of them affairs solely of, for and by the trade, without any outside intervention by any one, the board deserves the support and hearty co-operation of every member of the rank and file in cycling's army.

No matter how specious are the promises the rival showman makes; no matter how he may spread before the eyes of those inclined to waver the elusive and delusive "net"; no matter what inducements on paper may be made, loyalty, sound business judgment and the common good of all demand that the

trade remain true to its own best interests and its own organization, and refuse to treat, except with contempt, the offers of desertion made by the enemy.

It is common talk in places where men congregate that a concern whose importance none may question, and the head of which once held high office in the Board of Trade, has promised, or at least not refused, to desert to the enemy and become the rallying point for those who are expected to form the stock in trade of the rival showman's opposition show. This is but a showman's adaptation of an old ruse in war; he hopes by whispering to the rank and file that their officers are bent upon deserting to induce them to do the same thing.

That none may be thus misled THE WHEEL is in position to declare that neither the concern in question nor any other prominent concern which is a member of the board has the slightest idea of deserting to the showman's catchpenny camp. The concern whose name has been freely whispered around by emissaries of the enemy has placed itself upon record as being free from all idea of exhibiting at any other shows than those controlled by the Board of Trade. This should silence these rumors, which, by-the-by, hardly need refutation, when the record of the concern since the beginning of American cycle making is taken into consideration.

Business rivalries, the desire to advertise and to sell should not be allowed to intrude at this time, when the trade more than at any time in its history needs mutual upholding of its common interests and a united front to its common enemies. Let no concern and no single member of the trade be deluded by the fallacious idea that in desertion exists a quick and easily travelled road to success. Deserters, even when successful, are not a class of men the world ever admires or afterward trusts. The laws of trade and precedent cannot be violated in the present case. Under the Board of Trade success and solidity can alone come to the trade. Argument to the contrary, no matter how specious, is a fallacy. Loyalty has ever paid surer dividends than desertion, and the present case will be found no exception to the rule.

Stand by the Board of Trade.

It is but a question of time when we breathe by grace of a syndicate, as we now freeze, feed, clothe and warm ourselves through the unsought permission of the ice, food, wool and coal barons. Racing in and around New York seems to have succumbed to this syndicate idea, and has, in consequence, passed into the hands of a rather close corporation, which with one hand pens the press notices while the digits of the other grasps the gate receipts. Maybe this is an excellent thing for racing, then maybe it is something not so excellent. Time and the methods of the syndicate alone will tell.

If it be a fine art to ride your new wheel unconsciously, it is a still finer art to ride your old wheel as though it were your new one.

The choicest pastures are not always those where feed the largest flocks, yet men, like sheep, blindly follow their leaders in pasture-seeking as in other things. America seeks for new trade pastures, and to Europe flock our cycle-makers, fairly falling over each other in their anxiety to pre-empt each his share of the pasturage already fairly well filled by its native flock. In such times the communication of the Costa Rican Consul, in another column, becomes timely reading, since it points out a pasture yet uncrowded and nearer home than Europe. There be many other such quiet trade pastures, did our manufacturers but cast around for them.

It is said that "brains will tell." Sometimes they will and sometimes they will not. Sometimes the more brains a man has the less he tells. It doesn't always answer in cycling for brains to tell.

Some there are in the trade who are very much like thunder. They make considerable noise, but accomplish nothing. It is the quiet lightning that does the business.

According to the qualities of the waters of trade upon which we cast our bread, it returns waterlogged and uneatable, or spread with butter and jam.

Those who make the mistake in cycling of biting off more than they can chew usually make the greater mistake of keeping on chewing.

The pale mauve quality of the sporting instincts of some of the leading professionals makes the judicious admirer of true racing grieve.

You have got to pick the best fruit on the tree of trade. It will not drop into your hands, no matter how long you hold them out.

All wheelwomen are not angels; but, judging from the reckless way some of them ride, they will be angels pretty soon.

If men could have everything just the way they wanted it on a wheel, the probability is they wouldn't want it.

When a man asks you to be candid about his wheel, he will probably be satisfied if you are complimentary.

The racer who tries to win by unfair means is doing his duty as he doesn't understand it.

All dogs who dislike wheelmen are, unfortunately, neither dead nor yet "in a manger."

The wheel we ride is a revelation not only of our tastes, but of our bank account.

A man likes to feel he looks well on a wheel; a woman likes to be told so.

No small number of racers make their best time on the wrong track.

Record is the soul of speed in blossom.

COSTA RICA AS A MARKET.

In the last issue of THE WHEEL appeared an article upon the possibilities of Costa Rica as affording a possible market for American-made cycles. Mr. Gustavo Niederlein, Costa Rican representative at Philadelphia, has sent the following communication in regard to the matter:

Consulado de la Republica de Costa Rica, Philadelphia, Penn., Sept. 5, 1896.

To the Editor of THE WHEEL:

Dear Sir: I have read with great interest your excellent paper, though I confess to have ignored many things of the rich contents of your paper. I am, indeed, astonished at the great variety of articles and goods offered in the advertisements.

The cycle trade has undoubtedly an immense future the world over. All highly civilized nations have already made good use of the bicycle. Cycling, besides its many and other important benefits, will give a powerful and much-needed impulse for better communications in countries like Costa Rica, where an immense territory is sparsely populated. I am convinced that I can render a great service to the country which I represent when I do my best in making cycling popular among its citizens. I repeat, therefore, my wish to the manufacturers of bicycles to send me their catalogues in duplicate and with corresponding data on prices, terms of credit, discounts, manner of packing and shipping, freight rates, etc.

Costa Rica has a railroad which connects the capital, San José, with Port Limon, on the Atlantic Ocean. It has two smaller railroads on the Pacific side. The other means of communications are general roads for wagons and other roads for men on horseback. The latter, however, can hardly be used for cycling. General roads for wagons are numerous, but during the rainy season would hardly do for cycling. The bicycle will actually only be used in cities and towns, and there even during the rainy season only with difficulty.

Notwithstanding these drawbacks, Costa Rica will be a good bicycle market, since the population is the most advanced in Central and South America, and ready to accept every improvement and every step forward in civilization.

But the American manufacturer must remember that Costa Rica is in the first place a coffee country. Countries like this of necessity must receive long credits, since only once a year is its crop paid for. These circumstances have been generally ignored by the American manufacturer, with the result that Americans could not do business in those countries, giving their great opportunities and advantages for highly profitable business to England, Germany, France and other European countries who know better how to adapt themselves to circumstances. Very respectfully yours,

GUSTAVO NIEDERLEIN, Consul.

All goods for Costa Rica should be accompanied by a corresponding consular invoice. The customs duties are calculated on gross weight, which average 20 to 25 per cent of the cost of imports and are payable half down and half within three months' time. This trade once established cannot fail to prove profitable. Manufacturers would do well to communicate with Mr. Niederlein, who is ready and willing to furnish all the information that may be desired. Mr. Niederlein is well equipped for the duties of his position, as he possesses both ability and experience. He, with Professor Dr. W. P. Wilson, was the founder of the Philadelphia Commercial Museum, and is actually the chief of its scientific department. Six months ago he was the Commissioner-General of the Argentine Government at the Atlanta Exposition. Consul Niederlein was also Government Commissioner at the World's Fair and the Paris Exposition.

SOMEWHAT SARCASTIC.

The French cycle papers are in high dudgeon over the '97 international meet being awarded to Scotland. The Frenchmen have bid unsuccessfully for the meet for two years. "Le Velo" advises Timbuctoo and Honolulu to prepare their tracks for future meets.

AS THEY CLIMB.

Relatively, the position of the ladderites was not changed as much by the results at Springfield as both the men and their admirers had expected. Safely perched upon the top rung still remains Gardiner, while close to his heels continues Cooper. Bald squeezes by Ziegler, securing third honors in consequence, while Butler's winning rush carries him but one rung behind the Buffalo boy, leaving Ziegler one point less, and in fifth place. Sanger gets a dead heat for last place, graduating from the head of the also ran division to the lower rungs of the ladder brigade. A better bunching of the prominent men than is seen on the ladder this week has never been seen, and it clearly shows how close the finish among the first flight is going to be.

Points are based upon the racer's wins on the National Circuit only. A win counts three points, a second two points, and a third one point. The present ladder shows the men as they have climbed up to and including the meet at Boston, Mass., on September 7.

MAX FELL AND LOST.

Denver, Col., Sept. 7.—The record for twenty-five miles on the road was broken in the Denver Labor Day road race. The judges have not yet decided whether they will give the time prize to Joe E. Marshall or E. Tyler Smith, nor has the time been definitely decided, although it will be about 1:02:20. The time prize would have been won by Max Kreutz had he not fallen within a few yards of the finish, causing so much confusion that the judges became muddled. Nat M. Gilman, with nine minutes' handicap, won the race, his time being 1:06:41.

LITTLE MAN, GREAT RIDER.

James Michael, the famous Little Welsh rider, who arrived in New York last week from England, has been matched for a twenty-five-mile race with C. M. Murphy. The race is to be run at the Quill Club's meet, Manhattan Beach, September 19. Michael will also ride in the hour race, Victor and Henri Jallu, two of the three brothers of a triplet pacing team, have arrived in New York, and the other will follow. They will be used for pacing purposes at this meet.

AMATEURS THE FASTER.

Providence, Sept. 7.—A scratch race between the Stearns and Syracuse sextet was booked as a feature of the Rhode Island State Fair to-day. The race did not take place, however, owing to the Stearns machine being mounted by a professional crew, while the Syracuse riders were amateurs. The Stearns crew rode an exhibition mile in 2:02. The Syracuse machine was ridden the same distance in 1:58.

FIRST-FLIGHTER IN '97.

Manager Pelot, of the Morgan & Wright team, believes that in "Jimmie" Bowler, one of M. & W.'s racing "kindergarten," he has one of the first-flighters of '97. Bowler, it will be recalled, displayed splendid form at Springfield.

At the international meet at Vienna September 8 Huret and Buechner, on a tandem, lowered the 500-metres record to 30 2-5 seconds. Jacquelin won the championship of Europe event.

Australia's great event, the Austral wheel race, will take place on November 28. The total value of the prizes have been raised to \$1,750, the first prize being \$1,500.

SWARMED AT WILLOW GROVE.

Philadelphia's new track at Willow Grove was opened on Monday night. The event attracted the largest crowd that ever attended a meet in the Quaker City. Over 10,000 people crowded into the grand stand and bounded the track. It was an enthusiastic crowd, and every deserving victory was applauded. The track, being new, was consequently rather soft, and the times were consequently slow, although a triplet negotiated the half in 58 2-5 seconds. Numerous electric lights illuminated all parts of the track and grounds. The feature of the meet was the struggle between Starbuck and Carrol Jack in the five-mile handicap, the latter winning by inches. A mile race between newspaper men was a novelty that excited much interest. The track, it is thought, will prove the most popular and fastest in Philadelphia.

Summary:
One-mile newspaper handicap—1, J. B. Clift, scratch; 2, G. Diddlebock, 150 yards; 3, A. Mann, 75 yards. Time, 2:31.

One-mile novice—Final, 1, Theodore Weyman; 2, R. Boone; 3, J. Inskip. Time, 2:44-5.

One-mile open, professional—Final, 1, J. F. Starbuck; 2, C. B. Jack; 3, C. C. Bowers; 4, A. C. Meixell. Time, 2:25 4-5.

One-mile open—Final heat—1, P. S. Davis; 2, B. B. Stevens; 3, J. A. Vernier; 4, W. L. Austin. Time, 2:23 3-5.

One-mile handicap, professional—1, A. C. Meixell; 2, S. L. Cassidy; 3, A. Boone; 4, C. Turville. Time—2:15 2-5.

One-mile handicap—Final heat—1, A. L. Worthington; 2, C. Turville; 3, W. B. West; 4, J. B. Clift. Time, 2:27 4-5.

Five-mile handicap—1, C. B. Jack, 200 yards; 2, J. F. Starbuck, scratch; 3, C. C. Bowers, 150 yards; 4, Charles Turville, 150 yards; 5, George Zimmerman, 425 yards. Time, 12:55 4-5.

MADDOX WAS THE MAN.

Providence, R. I., Sept. 8.—Meets have been held at the Crescent Park track almost weekly since its opening early in the season, but none were more interesting than to-day's events. Nearly 3,000 spectators were present. C. S. Bolting, the star road rider of the State, made his first appearance on the track, and won second in the novice. Harry Maddox and McDuffee had it hot in the mile professional, but the Asbury Park man made a brilliant jump at the finish and won. Summary:

One-mile novice—1, C. L. Woodard, Pawtucket; 2, C. S. Bolling, East Providence; 3, Walter Tibbits, Providence. Time—2:32.

One-mile open—1, Fred Devlin, Pawtucket; 2, Horace B. Hills, Providence; 3, Joseph Bowden, Providence. Time—2:23 1-5.

One-mile open, professional—1, Harry H. Maddox, Asbury Park; 2, E. A. McDuffee, Everett; 3, Hollis A. Adams, Worcester. Time—2:15 3-5.

One-mile handicap—1, Joseph Bowden, Providence (10 yards); 2, H. B. Hills, Providence (scratch); 3, William Sullivan, Pawtucket (scratch). Time—2:16 4-5.

One-mile handicap, professional—1, E. A. McDuffee (15 yards); 2, H. H. Maddox (15 yards); 3, H. A. Adams (40 yards); 4, A. H. Barnett, Lynn (80 yards). Time—2:13.

PIKE PROSPERED.

At Rockland, Me., on Sept. 7, C. E. Pike, of Norway, won the mile open in 3:17 1/2, the half-mile State championship in 1:12 1/2, and the half-mile open in 1:12, and finished second in the mile State championship. Edward Ricker won the latter event in 2:23.

TWO ON LABOR DAY.

As customary, the New-Jersey Athletic Club ran two cycle events at their Labor Day games. C. Sandford, jr., 110 yards, won the mile handicap in 2:25, and E. Anderson, 180 yards, the two-mile handicap. Sandford was second.

ALSO RANS.

The following are the men on the National Circuit, whose wins have been sufficient to score for them ten points and over: McFarland, 28; Coulter, 27; Kimble, 19; Parker, 17; Kennedy, 16; Clark, 16; Becker, 16; Coburn, 13; Allen, 11; Mertens, 11; Baker, 11; McDonald, 10.

VARIETY OF CHAMPIONS.

Messenger Boys, Policemen and Amateurs all Championized at the State Division Racing Fest.

The proudest of Brooklyn clubs in these days is the South Brooklyn Wheelmen, a not particularly widely known organization. However, at one bound, and without any pacemaking, they jumped into fame with their New York State Division championship meeting, held under their auspices at Manhattan Beach on Labor Day. From the Brooklyn Bridge to the Manhattan Beach track there was, immediately after the luncheon hour, nothing but a stream of wheelmen and wheelwomen, and not a few wheel boys. The day was brilliant—in fact, after the two days of downpour, startlingly brilliant, and as the riders streamed along the Cycle Path they made a beautiful and animated picture. It is impossible to even hint at the many ludicrous scenes, accidents and incidents which happened on the journey down and on the journey up. One man had the good luck to have a tandem pass over his chest, after having been pushed off his own wheel. He quickly straightened himself up, brushed off his clothes and went his way. Two scorchers, who terrorized half the people on the path, met at the point where you turn off to the Manhattan Beach track. There was a pond of mud and water, and one of them took a header into it. He was a "sight."

It is impossible to say how many people were at the track, but it was a "bumper house," as the theatrical writers would say. Popular prices—50 cents for the grandstand and 25 cents for the bleachers—won the day. The bleachers were invisible, so densely packed was the humanity on them, and the grandstand was filled to most gratifying proportions.

The meet was a sort of midsummer night's dream—a sort of delicate, hazy matinee. The track and the inclosure were as spick and span as a bridegroom. No prettier inclosure could possibly be imagined. In the centre, at which point a pond of rainwater had congregated, a covey of plovers spent the entire afternoon, darting in myriad cycles here, there and everywhere.

There was nothing sensational about the meet. There was considerable loafing, which brought out some not undesired hisses. Three or four men "tumbled," but they "tumbled" lightly. There was only one protest lodged during the day, and that was merely to cover a technical point. It seems that Fuller, the winner of the novice race, had won a club event, and the referee allowed him to ride under protest, believing that a club event should not count in an open race. The referee, on logical and sensible grounds, appears to be right. The meet was perfectly run and was finished at 6:15. There was nothing especially exciting—simply a series of good finishes, without any fast time, and without any occasion for marked enthusiasm. The audience applauded all of the events throughout the entire afternoon. They were in holiday mood, and ready to be pleased at anything, and they had a fair menu of sport served up to them, without any highly spiced dishes.

As far as the racing goes, Wallace H. Owen, of the South Brooklyn Wheelmen—"Wallie" Owen—loomed up with particular prominence, winning the quarter-mile State championship and figuring prominently in many other events. Young Barbeau is deserving of particular mention. This slender youth trailed the triplet a half-mile, flying start, in 55:1-5 seconds, which, considering the breezy character of the day, was a marvellously fine performance. He also rode in many other

events, and scampered off with the two-mile State championship. Fuller, the novice winner, showed that he was a sterling rider, as he won the third heat in the quarter-mile championship, but did not start in the final, because it was discovered that he resided in Jersey City, and not within the lines of the New-York State Division.

The messenger boys' race was a disappointment and was not particularly interesting. An assorted number of boys turned out, some little, some big. One would have won the chewing-gum championship easily had there been such an event on the programme. A Syracuse lad won in such fine style that his pedigree was questioned, and it was whispered about that he was a professional.

The "coppers'" championship was devoid of brilliancy. The talent risked their opinion on Schussler, the New-York crack, a man of splendid build and of hard, determined features. That head, however, is not packed with diplomacy and stands merely for strength, for he was in the wrong position at all times throughout the race, managed himself badly, and allowed Von Rodeck to scamper away from him on the last lap, after the lurid-haired McKay had endeavored to make a runaway race of it on the last lap. Schussler was recently declared a professional, but his entry was nevertheless accepted, and when his fellow-police, while on the mark, were informed of the endangering of their amateur status they declared that they cared not a darn, only they didn't say darn. Van Rodeck, a hefty Teuton, threw kisses to the grandstand when they applauded, and then rode an extra lap and went through a series of antics to show that his handle-bars had worked loose. He is merely a special officer in the employ of a dry-goods store, and is not a regular "cop." There was talk of a protest, but none was filed.

Throughout the day the time limits were badly shattered. They ran from 2:30 to 2:40, and should easily have been beaten. The referee permitted all the heats to be run over when the time limits were exceeded, the result being that the riders, knowing they would have opportunities of trying again, developed a sort of "loafy" feeling, which permeated the proceedings throughout the day. Isaac B. Potter refereed in the most satisfactory fashion.

One-mile novice—Final heat—1, B. C. Fuller, Liberty W.; 2, R. B. Harris, N. W.; 3, J. H. Rogers, Y. M. C. A., E. D., Brooklyn; 4, Otto F. Peterson, South Brooklyn W. Time—2:23 1-5. Fuller won his heat in 2:20.

Quarter-mile State championship—First heat—Walter H. Owen S. Brooklyn W.; 0:31 2-5. Second heat—F. A. Nagel, Riverside W.; 0:31 4-5. Third heat—B. C. Fuller, L. W.; 0:32 2-5. Fourth heat—H. K. Bird, N. Y. A. C.; 0:32 3-5. Final heat—1, Owen; 2, Bird; 3, F. D. White, Lynbrook. Time—0:32.

One-mile messenger boys' race, championship—First heat—Chris Snyder, time—2:48. Second heat—J. O. Pennock, Syracuse, time—2:49. Final heat—1, Penneck; 2, Albert Green, New York; 3, E. C. Wentling, Syracuse. Time—2:48 3-5.

One-half mile, flying start, paced by Elitz, Nagle and Judge, the Riverside triplets—W. A. Barbeau. Time—0:55 1-5.

One-mile scratch—Final heat—1, J. H. Lake, Harlem W.; 2, W. A. Brown, Riverside W.; 3, H. K. Roe, Patchogue W. Time—2:14.

One-mile police, State championship—1, Hugo von Rodeck, Brooklyn; 2, George McKay, New York City; 3, Harry M. Neggesmith, New York City; 4, John Schussler, New York City. Time—2:38 4-5. McKay is red-headed and strong. Schussler is strong and doughheaded. Some one said he was a "pro," but he said he didn't care a—well, you know. Von Rodeck is said to be a special officer, a good racing man, just sworn in as a special policeman for the day. Andrews said he would investigate. The Commissioner did not like to see his man Schussler knocked down.

Two-mile State championship—First heat—1, H. K. Bird, N. Y. A. C.; 2, W. A. Barbeau, Riverside W. Time—5:20. Second heat—1, H. K. Roe, Patchogue W.; 2, B. T. Allen, Liberty W. Time—5:19 3/4. Final heat—1, Barbeau; 2, Owen; 3, Bird. Time—4:43 3/4. Paced by Judge and Nagle, the Riverside twins.

Two-mile tandem handicap—1, Barbeau and W. A. Brown (scratch), Riverside W.; 2, E. G. Crum and A. S. Jungkind, Riverside W. (110 yards); 3, W. H. Owen and Maud Sibley (70). Time—4:54. The two W. A. B.'s flew about the path, plover-fashion, caught their limit man at two-thirds of a mile, and then sauntered home.

Master Le Roy See gave an exhibition of fancy riding, which pleased the crowd immensely. He is a bright, capable and graceful youth, and should, in time, be among the best of our fancy riders. He performed some new tricks, and particularly pleased "Popper" See and the other young Sees.

Samuel D. See started well. George Stebbins, Brooklyn Bicycle Club, assistant starter, was in effective evidence throughout the day. J. F. Borland, Brooklyn Bicycle Club, clerked the course in his usual good style.

The Racing Meet Committee, who were worthy of much praise, were N. R. Macdonald, chairman; John W. Turner, E. P. Liesegang, Robert L. Smith, George H. Greenia and George E. Stackhouse.

INEXPERIENCE PRODUCES LOAFING.

Lebanon, Pa., Sept. 3.—Inexperienced officials caused the first meet of the Delta Wheelmen to be a long drawnout affair. There was a delay in starting and long waits between the event. Loafing predominated in all the races until the sprint. An exhibition mile was ridden by C. W. Krick in 2:13. Attendance fair. Summary:

One mile, open—1, Andrew Henry, Annville; 2, E. Huber, Lebanon; 3, William Peiffer, Lebanon. Time—2:32.

One-half mile, open—1, Walter Henry, Lebanon; 2, Harry Blecker, Lebanon; 3, John Martin, Myerstown. Time—1:17.

One mile, handicap—1, Miller Hottenstein, Lebanon (35 yards); 2, Walter Henry, Lebanon (55); 3, Eugene Myers, Annville (5). Time—2:37. One-fourth mile—1, Ross Morgan, Lebanon; 2, Anson Behney, Lebanon; 3, B. P. Wynings, Lebanon. Time—0:37 2-5.

Three-mile handicap—1, Miller Hottenstein (80 yards); 2, J. H. Copenhaven (60); 3, Henry Strohm (180). Time—8:37 4-5.

One mile, tandem—1, Wynings and Huber; 2, Pott and Behney. Time—2:37.

COOPER COMES A CROPPER.

Providence, Sept. 5.—Tom Cooper met with a disastrous spill at the Crescent Park meet to-day. As a result he is going around with his face covered with bandages. The spill took place in the final of the mile open. His pedal struck the machine of a contestant and he went over the bank, striking on his face. He was rendered unconscious and was badly cut. With Cooper out McDuffee won the race. Summary:

One mile, open, professional—1, E. A. McDuffee, Everett, Mass.; 2, Fred Loughead, Canada; 3, H. H. Maddox, Asbury Park. Time—2:15.

One mile, handicap, professional—1, J. C. Wetberg (55 yards); 2, Fred Loughead (scratch); 3, Louis B. Arnold (55); 4, Burns Pierce (75). Time—2:39 1-5.

One mile, open—1, Fred Devlin, R. I. W.; 2, E. Livermore, Worcester; 3, Theo. Ehrlich. Time—2:25 3-5.

One mile, handicap—1, D. Daley, Taunton (100 yards); 2, F. Devlin (30); 3, Frank Fish (scratch). Time—2:36 3-5.

HAD WALKED SOME.

Stage Manager—Have you ever had any experience as walking gentleman?

Tripper—Have I? Well, I guess yes. I've been riding a pneumatic for two years past both a tack factory and the glass works.

GOOD THINGS ABOUT COLUMBIAS.

A Few Extracts from Letters Received by the Pope Manufacturing Company.

The Best Wheel Ever Made.

"Inclosed please find check in payment for the best wheel ever made—Columbia."—Charles H. Hynes, New York City.

Nearest Perfection.

"This year's Columbias are certainly as near perfection as wheels can be made."—A. T. Brightwell, Maxeys, Ga.

The Columbia.

"The Columbia shall have my strongest endorsement and fullest reference."—The Rev. Addis Aibro, LL B., D. D., New York City.

Has No Equal.

"I am convinced there is no wheel that can equal the Columbia."—Lyman L. Zarbough, Holgate, Ohio.

Lead All Others.

"Columbia bicycles lead all others."—L. G. Livingston, Whitehall, Mich.

Model 40.

"Model 40 is by far the smoothest wheel ever introduced in this country."—G. T. Cottingham, Dayton, Minn.

More Than Pleased.

"I am more than pleased with the Columbia wheel."—J. E. Carpenter, Olathe, Kan.

Worthy of V. H. C.

"My Columbia is worthy of V. H. C. at least, and I can testify to its absolute excellence."—Irving Cox, New York City.

The Easiest Running.

"The Model 40 is certainly the easiest running wheel I have ever seen."—W. H. Lord, Brighton Mills, N. Y.

Better Time on the Columbia.

"I have ridden many makes of wheels, but find I can make better time on the Columbia than on any other."—F. T. Letherstrom, Chicago, Ill.

Worth the Investment.

"I have ridden the Columbia, and find freedom from care through the absence of breakdowns worth every cent of the investment."—A. H. Saunders, Minneapolis, Minn.

Model 44.

"I am extremely pleased with my Model 44."—Edward F. Smith, Trenton, N. J.

The Greatest Hill-Climber.

"Never rode a wheel that can compare with my Model 40 Columbia—the greatest hill-climber I ever saw."—H. J. Young, Dundee, N. Y.

Built Upon Honor.

"I can say nothing better for the Columbia than that it is built upon honor. To ride a Columbia is to ride the world's greatest wheel."—R. W. Massey, Columbus, Ga.

Standard of Excellence.

"Amid the clamor of conflicting claims one can surely not go astray in selecting for his mount the acknowledged standard of excellence—a Columbia."—E. Markell, Baltimore, Md.

Perfect Satisfaction.

"My Columbia has given perfect satisfaction and cost but 35 cents for repairs in two years."—J. F. Martin, Blairsville, Penn.

Absolute Preference for the Columbia.

"I have been a constant wheelman for over ten years, and have ridden many different makes, but must confess my absolute preference for the Columbia bicycle."—B. Ashley Leavell, Washington, D. C.

The Best Wheel.

"I consider the Columbia the best wheel on the market."—A. T. Reade, Philadelphia, Penn.

Poems in Steel.

"Yes, of course I ride a Columbia this year; the new models are simply poems in steel."—F. H. J. Ruel, St. John, N. B.

Marvel of Mechanical Beauty.

"The Columbia is a marvel of mechanical beauty. It only lacks wings."—Mark Meredith, Philadelphia, Penn.

As Good as New.

"Have ridden one of your wheels for the past three years without a cent's expense, and it is now as good as when first bought."—J. S. Moore, West Stockbridge, Mass.

No Question About That.

"The best wheel? Why, the Columbia, to be sure!"—F. J. Moore, Pittsburg, Penn.

Columbia bicycles during 1895 were fitted with the most scientifically constructed saddles ever put on a wheel, and the universal satisfaction derived therefrom by Columbia riders has led to their continuance, with improvements that will make them even more popular.

The many newly patterned saddle devices that have made their appearance have developed nothing superior to these light, firm-seated and properly shaped saddles. They are not untried experiments, but have proved themselves to be the best adapted to the rider's wants.

RECENT VICTORIES.

July 18, at Raleigh, Neb., Harry Spencer won the one-quarter mile open on a Columbia.

August 5, at Aiken, S. C., two-end-a-half-mile handicap won by C. J. Hill.

August 5, at Aiken, S. C., five-eighths-mile won by F. A. Beal; one-and-one-quarter won by A. E. Hill; one-and-one-quarter interstate won by F. A. Beal; five-eighths, Aiken County championship, won by A. E. Hill; five-mile handicap won by J. Abercrombia—all on Columbias.

August 22, at Providence, R. I., one-mile, three-minute class, won by William Sullivan; one-mile State championship won by Fred Devlin; time, 2:23—both on Columbias.

Midsummer meet, Newark, N. J., two-mile special won by J. C. Letzelder on a Columbia.

August 25, at Calais, N. B., Dr. Moore took two firsts in the coasting contest on a Model 44.

Columbias

Columbias are absolutely uniform in their quality, finish, and pleasure-giving—secured by selling at a fair, fixed price—

\$ 100 TO ALL ALIKE.

Hartfords (\$45 to \$70) are better than most bicycles of the ordinary sort.

The Columbia Catalogue is admittedly the handsomest art production of the year. It tells fully of the details of Columbias and Hartfords, and should be read and preserved by every cyclist. Free by calling on the Columbia agent, or by mail for two 2-cent stamps.

Branch Stores and Agencies in almost every city and town. If Columbias are not properly represented in your vicinity, let us know.

POPE MFG. CO.,
HARTFORD, CONN.

EACH TOM HAS HIS DAY.

Tom Butler "Stars" on Wednesday—Tom Cooper on Thursday—Bald and Cooper Have Another Rumpus and Cooper Is Disqualified and Fined—Springfield's Halo No Longer Bedazzling.

Springfield isn't like it used to be.

Tom Eck remarked the fact.

"I like the Springfield boys," said the silver-haired Thomas, "they always used me well, but there's something lacking, an absence of that 'How are you?' which was the custom in the old days."

There must be something in what Eck stated. Others said substantially the same thing. Charles Measure, A. Kennedy-Child, who used to referee the Springfield tournaments in the "good old days," and a dozen others seemed to agree on the point.

There are many reasons to account for the lacking, whatever it may be. Cycleodom is now a fairly large world. A man in knickerbockers no longer nods to every other man similarly attired. If he did he would soon have his neck swathed in bandages. If he said, "Hello!" or "How are you?" he would scarce have time between breaths. It is no longer to be expected. Then, too, the promotion of meets, like the promotion of parades, century runs and the like has become more and more a strictly business pursuit—a mere matter of dollars and cents. Perhaps it is just as well that it is so. The management was well again flawless and the press people were served with cigars and claret lemonade as of old, but for all that, there is no denying that the Springfield tournament is no longer as sharply outlined against the sky as in years past. The press box this year showed this fairly well. But one of the New-York dailies sent on its "cycle editor," and the Boston papers were not so numerously represented as usual; some of them turned up for the last day's racing only. There were seats to spare.

The fact is there are now other footprints in the sand, other meets as well managed, as well advertised, as liberal in prizes and attended by as many of the stars. There are other tracks as fast, other tracks calculated to beget soul-stirring finishes.

Coming from Louisville to Springfield, the superiority from a spectator's standpoint, at least, of the three-lap track over the half-mile circuit was easily apparent. The same men raced at both places. On the big track they are lost. They are too far away to be recognized; they do not pass often enough, and when they rush for home they almost invariably spread out all over the path. There were few of the handkerchief finishes that marked the sport at Louisville. In all of the big races the men seemed to place themselves at the last turn and won by decisive margins;

they finished in Indian file.

The Springfielders probably recognize the altered condition of things as clearly as any one. One of them told me that this year they had concentrated their efforts more than ever before. They did not reach out so far, but rather endeavored to interest and attract the people in and around Springfield. They succeeded, too. Certainly not less than 30,000 spectators were present during the three days, two thousand or three thousand of whom were interested enough to pay to witness the heats that formed a sort of preface to the meet proper, and which were reported in detail in last week's WHEEL.

At the close of Wednesday's racing Tom Butler was easily the cock of the walk. The 120-pound youngster had administered decisive trouncings to Cooper, Bald, Gardiner and the whole outfit, and New England was puffed with pride, for Thomas is a product of New England. And Butler's riding was cause for pride anywhere and in any people.

In both races, the so-called mile international and in the half-mile, his tactics were the same. He got under way like lightning, and tacked on to the pacemakers. In both events, Bald, from a rear position out-Sanger Sanger, and started the sprints. In the half-mile he swung into the straight with a clear lead, but once clear of the pacemaker, Butler came like a streak and seemed to cover two yards to Bald's one. Bald fought like a fiend; he stuck to his work with a doggedness and dash that reflected the Bald of '95, but he was no match for the Boston stripling. The two were clear of the ruck. It was a free field and no favor. The fight was short and sharp, but never in doubt. Butler simply romped away from Bald, opening an amazingly wide gap of daylight in the last thirty yards. Cooper, too, gained on Bald, but could not pass him. He finished in third place. Time, 1:01 4-5.

In the mile the battle was between Butler and Cooper. Again they pulled clear of the rabble. Butler was this time in front at the turn. Cooper was at his heels. He could get no further, but not one inch could Butler gain. They fought it out this way all the way home. They rode stride for stride. Never did men seem so evenly matched. Two yards back of Cooper was Gardiner; three yards further back Bald was leading the bunch. Sanger created a diversion by coming around on the extreme outside and gave promise of making a brilliant play for a

place, but the fire left his feet, and he fell back like a ship in distress. The time—2:05 2-5—was allowed to stand. The limit was 2:05. Late in the evening the disqualification of Cooper was announced. Bald had protested him, and another fagot had been heaped upon the fierce fire of hatred that is consuming the two. Bald claimed that Cooper had reached out and pushed him. Cooper claimed that he simply elbowed or leaned to save himself from a similar play by Bald. Referee Robinson called every one in the race before him, and, after hearing the evidence, not only disqualified Cooper, but fined him \$50, as well.

Afterward I heard Cooper's trainer relate such a story of the occurrence that I wondered how any referee could disqualify the Detroit. According to Trainer Webb, Cooper got into such close quarters that he had touched Bald in attempting merely to save himself from falling with young Newton, who was forced against the rail. In falling Newton, like a drowning man, had put out his hand and clutched; in doing so he had pinched Ziegler's arm. Webb averred that the latter's arm still bore the mark of Newton's fingers.

When I saw Cooper he told an entirely different tale. He denied reaching out at all, and said that Bald was the aggressor, having "leaned" against him and he had "leaned" in turn, "just as any other man would do."

Webb had also repeated some of the language that Bald was said to have applied to Cooper in the dressing-room. It would not look well in print. Among other things, Bald had termed his rival a vermin-infested canine, using the barroom words to describe the animal. In this Cooper bore out what Webb had said. Bald, however, denies it qualifiedly. He admits calling Cooper a canine, but not the insect-ridden sort—an unclean canine is what he termed him.

Cooper says Bald is anxious to draw him into a knockdown argument, and has said as much. But Cooper says he has no desire to be suspended for thirty or sixty days, and will not be embroiled, at least not in a dressing-room or on a track. Elsewhere it might be different.

Asked what led up to the estrangement and present bitter unfriendliness, Cooper, after a little palaver, said:

"I think I know what the cause of it is. I could tell a great deal, but it might get several of us into trouble, even myself, perhaps."

Naturally, he went no further. He said, however, that during all of last year Bald made a practice when racing of forcing him

WEDNESDAY, SEPTEMBER 2.

ONE-MILE LOCAL.

Eight Starters— 1, F. I. Elmer. 2, W. E. Tenzler. 3, E. C. Ferree. 4, J. T. Kelleher. 5, R. F. Ludwig. 6, C. M. Bly. Time, 2:24 2-5.

HALF-MILE PROFESSIONAL.

First Heat, Eleven Starters— 1, W. C. Sanger. 2, W. M. Randall. 3, C. R. Newton. 4, A. E. Wienig. 5, Arthur Gardiner. Time, 1:08.
Second Heat, Nine Starters— 1, Tom Cooper. 2, A. D. Kennedy, Jr. 3, L. D. Cabanne. 4, A. R. Ives. 5, Otto Ziegler. Time, 1:06 1-5.
Third Heat, Ten Starters— 1, E. C. Bald. 2, F. C. Hoyt. 3, Owen Kimble. 4, Ray McDonald. 5, A. B. Rich. Time, 1:04 3-5.
Fourth Heat, Eight Starters— 1, Tom Butler. 2, F. C. Schrein. 3, C. M. Murphy. 4, Fred Loughhead. 5, C. S. Wells. Time, 1:02 2-5.

HALF-MILE OPEN.

Thirteen Starters— 1, J. E. M. Blake. 2, Joe Harrison. 3, R. F. Ludwig. 4, Ray Dawson. 5, W. G. Douglas. Time, 1:05 4-5.

ONE-MILE PROFESSIONAL—2:10 CLASS.

Eleven Starters— 1, A. W. Porter. 2, W. J. Helfert. 3, Frank J. Jenny. 4, Chas. Hadfield. 5, P. J. Berlo. 6, H. D. Hutchins. 7, F. B. Rigby. Time, 2:04 4-5

HALF-MILE PROFESSIONAL.

Final Heat— 1, Butler. 2, Bald. 3, Cooper. 4, Kennedy. 5, Murphy. 6, Randall. 7, Kimble. 8, Sanger. Time, 1:01 4-5.

ONE-MILE OPEN.

First Heat, Ten Starters— 1, C. C. Ingraham. 2, F. A. Gately. 3, A. M. Curtis. 4, E. M. Blake. 5, J. S. Johnson. Time, 2:37 2-5.
Second Heat, Eleven Starters— 1, Ray Dawson. 2, R. M. Alexander. 3, C. S. Henshaw. 4, F. A. Fish and F. I. Elmer (tie). Time, 2:25 3-5.
Third Heat, Eleven Starters— 1, R. F. Ludwig. 2, Joe Harrison. 3, Fred Devlin. 4, H. E. Caldwell. 5, Oscar Hedstrom. Time, 2:33.
Final Heat—1, R. F. Ludwig.* 2, C. C. Ingraham. 3, Ray Dawson. 4, Joe Harrison. 5, H. E. Caldwell. 6, R. M. Alexander. Time, 2:07. *Disqualified.

ONE-MILE INTERNATIONAL, PROFESSIONAL.

Thirteen Starters—1, Tom Butler. 2, Tom Cooper.* 3, Arthur Gardiner. 4, E. C. Bald. 5, L. A. Callahan. 6, Otto Ziegler. 7, L. D. Cabanne. Time, 2:05 3-5. *Disqualified.

TWO-MILE HANDICAP, PROFESSIONAL.

Sixteen Starters—1, Lewis, 270. 2, Bates, 250. 3, Bowler, 190. 4, Rich, 180. 5, L. P. Callahan, 240. 6, A. D. Kennedy, Jr., scratch. 7, Baker, 80. 8, Hoyt, 70. Time, 4:20 3-5.

ONE-MILE HANDICAP.

Fifteen Starters— 1, A. M. Curtis, 40. 2, F. A. Gately, 70. 3, R. M. Alexander, 40. 4, H. E. Caldwell, 40. 5, I. G. Perry, 70. 6, Fred Devlin, 50. Time, 2:09 3-5.

The Crime of '73

DOES NOT AFFECT US.

Our '97 line is ready, and we now offer the public

A Superb Line of High-Grades,

A Superior Line of Medium-Grades,

A Complete Line of Juveniles,

Two New Models Tandems,

FOR GOLD OR SILVER.

We number among our customers the biggest, shrewdest houses in America. They are with us for life. We have room for a few solid jobbers. We are one of the few factories that run twelve months each year at full blast. Capacity, 40,000 bicycles.

TWENTY NEW MODELS NOW ON EXHIBITION AT OUR
QUARTERS IN THE WELLINGTON HOTEL, CHICAGO.

Siege and Walpole Mfg Co
KENOSHA WIS

Branch House, 285 Wabash Avenue, Chicago.

Address all mail to general offices and factories—Kenosha, Wis.

Kindly mention The Wheel.

to sit up. This season Cooper has his nerve with him and has refused to be disconcerted.

Of the other events of Wednesday the mile, 2:10 class, was easily the most exciting. It was paced by A. R. Ives and A. H. Barnett on singles. When the pacers dropped Arthur Porter came away and opened five yards of daylight. Jenney and Helfert were after him like flashes. The struggle down the stretch was magnificent. The other two came fast and gained surely on Porter, who "dug" in his usual painfully desperate fashion. He almost tied himself into a knot, and rode as unsteadily as a drunken sailor. But he managed to hold his own. The three were abreast at the tape; it took the judges to place them. Five yards further and Porter would have been third.

The two-mile handicap was a runaway for the five limit men. The back-markers lunched early and then slowed. Berlo was in front of the crowd and seemed to be holding it back with purpose aforethought. On the last lap Sanger, scratch, came from the rear of the bunch, and riding like the wind almost closed on the limit men. Sanger was the popular idol, and the spectators rose from their seats and were cheering lustily when Sanger stopped as suddenly as he started. There was never such an aggravatingly uncertain rider as this Sanger. He has the sympathy of the crowd, but scarce deserves it. Lewis, Bates and Bowler had a red-hot fight right up to the tape. Bowler came very fast in the last twenty yards, and squeezing through on the inside appeared to make a dead heat of it. But appearances were deceitful.

On Thursday, the last day, it was expected that Tom Butler would succeed in putting the finishing touches to the clouds and background he had the day before half painted for Cooper, Bald et al. But Butler's finishing brush had lost a few bristles. He failed to complete the picture; in fact, Cooper rather blurred the heroic portrait of Butler which had almost filled the frame the day previous and wholly effaced the clouds.

The mile record race was the event in which Butler was to do his work. The fattest purse of the meet, \$175, contributed by the Overman Wheel Company, was the prize at stake. Purses of \$100, \$65 and \$35 made the places worth fighting for. The race was rather peculiar in itself. Twelve men started. Bald had failed to qualify. Cooper had the pole. Harry Maddox was pushed off thirty

feet away to pace the first half. W. W. Hamilton was to pace the last half, and contrary to custom he started from the tape with the racers themselves. In the rush for Maddox's wheel Ray McDonald was successful. Cooper was in second place, trailed by Hoyt. Hamilton fell into sixth place. Sanger was glued to his rear wheel. When Maddox slowed Hamilton pulled out and rushed to the front. Sanger had been instructed to watch this very move. He did so. When Hamilton went up Sanger, as faithful as a shadow, went with him, those behind shadowing Sanger as faithfully. This formed two parallel columns. When pacer Hamilton

J. W. Parsons, the Australian Champion.

swung in to take the pole there was a kaleidoscopic change. It was over so quickly that one could scarce realize what was occurring. When the shuffle had ceased McDonald had lost the favored berth and Sanger, who should have supplanted him, had also been beaten off. Cooper had tacked on to Hamilton and Hoyt was still clinging to Cooper. Sanger was next. The others were spread out behind. Butler was in an inside position, and was almost lost sight of. There was no change until the last quarter, when Sanger started like a frightened deer and the crowd rose to its feet in expectancy. But

Cooper was too quick for him. He stalled him off in splendid fashion, and coming like a ball from a rifle never left the finish in doubt. He won with more than a length to spare, dragging Hoyt, who made a practice of sticking like a leech to Butler or Bald in every race, into second place. When the field spread out at the last turn Butler was able to free himself, and taking the centre of the track rode gallantly but to small purpose. He finished fourth. Time, 2:05 1-5. Butler was almost heartbroken over the result of the race and spoke of it with tears in his throat. After the meet Sanger also attracted a crowd by reciting the story of "Why I Didn't Win."

Cooper repeated the dose in the half-mile, for which Butler failed to qualify, losing his place in the heat to Cabanne by an inch or two. "Quilla" Rich, now clean-shaven and looking almost as young as a youth of twenty and little like a man who has raced at every Springfield tournament since its inauguration thirteen years ago, paced the final. Randall tacked on to "Quilla," Bald on to Randall and Cooper on to Bald. Sanger, as usual, was away back in the line. Bald started the sprint. It wasn't fast enough. Cooper jumped him half way down the straight, and despite his bitter enemy's game and superb effort, Cooper gave him a full view of his red, white and purple-striped back.

The half-mile and mile handicaps were run-aways for the limit men. Sanger might have won third money in the former, but he eased too soon and his fellow-scratchman, Gardiner, nipped him on the tape.

Of the amateurs C. C. Ingraham, the Illinois man, was the top notcher. With Louisville glory still fresh upon him, his performances in the heats on Tuesday seemed disappointing, and caused many to consider him overrated. In the finals, however, he showed his true form, and was the factor in nearly every event. He is taller than Cooper, but is of the same lithe build and pleasant face. His ankle action is particularly clean and powerful and his sprint as steady as it is strong. R. F. Ludwig, of Chicago, showed symptoms of disputing Ingraham's supremacy, and did beat him in a close finish in the mile open on Wednesday in the fast time of 2:07, causing M. L. Goss, of the Keating staff, to exultantly direct the pressmen's attention to the curve in Ludwig's wheel. Later Mr. Goss's face fell. Ludwig was disqualified for fouling. He is a remarkably unsteady rider, squirming his body and affecting the painful contortions peculiar to Arthur Porter.

THURSDAY, SEPTEMBER 3.

HALF-MILE OPEN.

Twelve Starters— 1, C. C. Ingraham. 2, A. M. Curtis. 3, Joe Harrison. 4, T J Grady. Time, 1:08

HALF-MILE HANDICAP, PROFESSIONAL.

Eleven Starters— 1, W. F. Saunders, 50. 2, G. L. Bates, 65. 3, Gardiner, scratch. 4, Sanger, scratch. 5, Randall, 10. Time, 1:01 3-5. Gardiner's time, 1:02 3-5.

ONE-MILE RECORD, AMATEUR.

First Heat, Eight Starters— 1, R. F. Ludwig. 2, H. F. Caldwell. 3, F. A. Gately. 4, F. I. Elmer. 5, Joe Harrison. Time, 2:30.
Second Heat, Ten Starters— 1, L. H. Munger. 2, O. H. Munro. 3, A. M. Curtis. 4, O. Hedstrom. 5, Ray Dawson. Time, 2:31 1-5.
Third Heat, Nine Starters— 1, C. C. Ingraham. 2, T. J. Kelleher. 3, W. C. Roome. 4, G. Plautife. 5, R. M. Alexander. Time, 2:30 4-5.
Final Heat (Single Paced)— 1, A. M. Curtis. 2, Ingraham. 3, Ludwig. 4, Roome. 5, Hedstrom. 6, Caldwell. Time, 2:08 1-5.

ONE-MILE RECORD, PROFESSIONAL.

Twelve Starters— 1, Cooper. 2, Hoyt. 3, Sanger. 4, Butler. 5, Loughhead. 6, Gardiner. 7, Cabanne. 8, Kennedy. 9, McDonald. 10, Murphy. Time, 2:05 1-5.

ONE-MILE PROFESSIONAL—(2-2) CLASS.

Ten Starters— 1, Hutchins. 2, Coleman. 3, Wienig. 4, Monte Scott. 5, Helfert. 6, Maya. Time, 2:07 2-5.

HALF-MILE HANDICAP, AMATEUR.

Thirteen Starters— 1, Blake, 15. 2, W. L. Curtis, 45. 3, Ingraham, scratch. 4, Kelleher, 15. 5, A. M. Curtis, 20. 6, Ray Dawson, scratch. Time, 1:03 1-5. Ingraham's time, 1:01.

HALF-MILE OPEN, PROFESSIONAL.

First Heat, Nine Starters— 1, Bald. 2, Cabanne. 3, Butler. 4, Stevens. 5, Loughhead. Time, 1:05 2-5.
Second Heat, Seven Starters— 1, Cooper. 2, Ziegler. 3, Callahan. 4, A. C. Merton. 5, Rich. Time, 1:06 1-5.
Third Heat, Six Starters— 1, Kimble. 2, Sanger. 3, Jenny. 4, Maddox. 5, Werrick. 6, Bowler. Time, 1:09 3-5.
Fourth Heat, Eight Starters— 1, Randall. 2, Allen. 3, Gardiner. 4, Schrein. 5, Wells. 6, Kennedy. Time, 1:04 2-5.
Final Heat (Single Paced)— 1, Cooper. 2, Bald. 3, Ziegler. 4, Cabanne. 5, Kimble. 6, Randall. 7, Sanger. 8, Allen. Time, 1:00 1-5.

ONE-MILE HANDICAP, AMATEUR.

Thirteen Starters— 1, Gately, 25. 2, W. L. Curtis, 65. 3, U. H. Minnie, 45. 4, Ludwig, scratch. 5, Fish, 15. Time, 2:15 2-5.

ONE-MILE HANDICAP, PROFESSIONAL.

Fifteen Starters— 1, Saunders, 95. 2, Bowler, 105. 3, Lewis, 135. 4, Ives, 125. 5, Callahan, 15. 6, Hadfield, 65. 7, Loughhead, scratch. Time, 2:06.

"You seem ill," she said, solicitously, when he had joined her in the grand-stand after finishing unplaced in his heat.
 "I am not feeling well," the young racer replied. "The fact is I'm troubled with heart failure."
 "Oh, how terrible!" she murmured, sympathetically.
 "Yes; I started four times in my heat to win and every time my heart failed me."
 She sympathized no more.

1, View from the press-stand. 2, F. C. Hoyt. 3, A. M. Curtis. 4, The Timers—Oscar and Chas. Whipple and C. T. Shean and W. Jordan, who have timed every Springfield meet since 1886. 5, A snap from the Judges' stand. 6, After a start. 7, Starter Peck. 8, Geo. H. Van Norman, for six years the Official Photographer. 9, A. B. Rich. 10, Getting ready. 11, Triplet. 12, Start 2.10 Class, Professional. 13, Handicapper Goodman. 14, J. S. Johnson's French sweater. 15, C. S. Henshaw. 16, Shoving them off. 17, Into the homestretch. 18, Ray Dawson. 19, His brother and Birdie Munger.

His wabbling caused one bad spill and unseated him in the local race, but he was able to remount and finish in the bunch. There was another ugly tumble in the mile handicap on Thursday, in which all of the scratch men, save Ludwig, went down. A. M. Curtis, a mite of a man from Meriden, Conn., also made things warm for Ingraham, beating him decisively by two lengths in the mile record race in 2:08 1-5. L. H. Munger, a muscular, kinky-haired brother of the only "Birdie," rode so well in the heats that he became a scratchman; in the finals he was smothered. The same is true of Ray Dawson, the metropolitan crack.

Trials against time closed the sport on both days. On Wednesday the Stearns sextet went a mile in 1:52 2-5, the K. C. W. quad a half in 0:55 2-5. H. K. Bird, N. Y. A. C., paced by thequad, did a flying quarter in 0:26 3-5. On Thursday the trials were more numerous and the pacing the most ridiculously wretched ever seen on a track. There was not a perfect pick up during the evening. All were bungles. About the most meritorious was a half-mile in 0:53 2-5 on a Dayton triplet manned by a semi-scrub team composed of C. J. Iven, Joseph Brandenburg and Oscar Hedstrom, and a triplet-paced half in 0:51 2-5 by Parsons, the Australian. W. W. Hamilton tried for the flying start record of 1:39 2-5, his own, and did 1:55. He rode behind a three-seater all the way. A tandem was to have picked him up at the half, but bungled and did not do so. Charles Hadfield, who was announced to ride a half-mile behind the Stearns sextet and finish the mile alone, went all the way behind the big machine, doing the half in 0:54 and the mile in 1:52 2-5. C. S. Henshaw tried for the two-mile amateur record, and covered the distance in 4:23 2-5, fifteen seconds to the bad. His tire softened and his pacing ragged.

"Springfield luck" was the exclamation of nearly every one soon after the grounds were cleared on Thursday. All day the sun and clouds had battled, first one and then the other retreating and then advancing and then retreating again. Half an hour after the gates had closed the clouds were in complete possession and lashed the elements into a fury. Lightning flashed, thunder roared and rain came down in Niagara-like torrents. But the Springfield tournament of '96 was history, and only the counting of the big profits remained to be done.

In point of earnings Cooper heads the list with \$270, which does not include the \$80 lost because of his disqualification in the "mile international." Butler won \$230, Saunders \$175, Bald \$140, C. J. Lewis \$140, G. L. Bates, \$110, Gardiner \$105, Bowler \$105, Hoyt \$100. All the other winners received \$65 or less, Sanger getting \$60 and Ziegler \$25.

THE TRADE SIDE OF IT.

Toward the end of the week Springfield saw more of the trade, and while little actual business was done, rumors of important deals were not lacking; however, the one big authenticated transaction was an order for 10,000 pairs of Vim tires given by Walter Measure of the Union Cycle Company. Charley Weaver was correspondingly happy. The fact that a conservative and as far-seeing man as Measure is known to be, would close a deal of such proportions just now, shows that, in his mind at least, the trade is in far better condition than the croakers would lead us to believe.

The Newton Rubber Works Company delegation, consisting of Manager W. J. Kelly,

R. H. Costello and F. M. Rowan, arrived Wednesday morning. Mr. Kelly is a newcomer in the trade, and came to the races merely to make himself known and to get the views of those manufacturers with whom he came in contact.

W. M. Shirley, who is so closely identified with the Palmer tire interests, came on from Chicago, and while he laughingly said that he was simply on to enjoy the races, before twelve hours had passed it was an open secret that the Palmer Company were to have a racing team on the circuit. Later on this was substantiated, and Tom Butler, Earl Kiser and Charley Murphy were the lucky men.

Directly back of the press box the Pope contingent held forth, the Colonel himself looking well and hearty, while on either side were seated Messrs. Leinhardt, Bancroft and Colonel George Pope. Naturally, on their arrival at Springfield, they were asked many questions regarding their new chainless bicycle, that was first made public through the great scoop of THE WHEEL the week previous; in fact, this subject seemed to form the leading topic wherever any of the trade got together.

M. T. Faulkner, of the Barnes Company, made a hit when he distributed a number of white canvas caps, trimmed with lavender ribbon, and a button the size of a silver dollar with a portrait of Bald on his White Flyer. Nearly all of the officials wore the cap, and, of course, many others, so that wherever one would look a white cap was sure to greet the eye.

Messrs. Gates, Whittaker and Caldwell, of the Baldwin Chain Company, were in evidence, and had the satisfaction of seeing their chain almost universally adopted by the racing men present.

A. O. and Fred Very took this occasion to entertain the many Warwick agents, who had journeyed to Springfield, while a little sign at the Massasoit House proclaimed the fact that W. W. Stall was ready and eager to talk of the good qualities of laminated rims.

W. H. Wells and Charles Candee represented A. G. Spalding & Bros., and to a very favored few distributed a pretty match-safe, made from a piece of tubing, sand-blast finished. It was ornamented with a Spalding name-plate, red background and all, so that the contrast made a handsome effect. It was a valuable souvenir and much sought after.

Messrs. Hoagland and Ingram, of John H. Graham & Co., and Mr. Mills, of the Bridgeport Brass Company, also spent a few days viewing the races and incidentally renewing old acquaintances, while many others equally prominent in the trade were present, but almost totally lost in the crowd.

WHERE GARDINER SUFFERED.

Manchester, N. H., Sept. 8.—Canada's champion, Fred Loughead, won the mile open at the National Circuit meet at Varrick Park today. Tom Butler's wheel went wrong when victory was within his grasp. Butler took the half-mile open, however, after a game race. In this event Ziegler had the pole, Butler, Kiser, Kimble, Loughead, Hutchins, Coleman and Gardiner following. Caldwell paced and Ziegler caught the pacemaker, Kimble forcing his way ahead of Butler. Gardiner brought up the rear of the line. Into the stretch Ziegler led, with Kimble struggling hard. Butler rounded wide, but came like a whirlwind, and at the tape nipped Kimble by two inches, the latter having taken Ziegler into camp by the same distance. Kiser was fourth.

In the final heat of the mile open race, Gardiner had the rear of the line, and Kiser in front of him struck the rear wheel of Coleman and fell down. Gardiner fell on top and Kiser was rescued, though stunned, from under the two wheels. Hoyt caught the pacemaker, Reynolds, Ziegler, Loughead and Fuller following. At the bell Loughead started up on the outside and sprinted past the bunch, winning by three lengths. Kimble was beaten back and Hoyt defeated Ziegler a foot for second position.

Harry Clark, who has just recovered from his accident at Meriden, rode a good race in the two-mile handicap event, beating Wells, the Californian. Loughead, who started scratch, being set back twenty yards, was forced to quit. Summary:

Half-mile, open, professional—1, Butler; 2, Kimble; 3, Ziegler. Time—1:04 3-5. Single paced. Mile open, professional—1, Loughead; 2, Hoyt; 3, Ziegler. Time—2:29 4-5. Single paced.

One-fourth mile, open—1, E. M. Blake, Keene; 2, F. A. Gately, Boston; 3, L. H. Munger, Middletown. Time—0:31 1-5.

Mile, open, amateur—1, E. M. Blake; 2, H. E. Dahlberg; 3, F. L. Fish, Keene. Time—2:20; single paced.

Mile, handicap—1, E. M. Blake (scratch); 2, J. P. Clark, Boston (20 yards); 3, C. A. Keating, Ayer (60). Time—2:24 4-5.

Two mile, handicap, professional—1, Harry Clark (30 yards); 2, C. S. Wells (00); 3, J. B. Bowler (50); 4, Barnes Pierce (20). Time—4:31 1-5.

Butler rode an exhibition half-mile, paced by a tandem, in 56 seconds.

BUTLER WON FOR THE CROWD.

Worcester, Mass., Sept. 4.—Springfield's meet served to furnish the events at the Massachusetts State Fair with a bright array of cracks. Over twenty of the stars of the path were present, and over 10,000 spectators saw them ride. Tom Butler was again much in evidence. He took the two miles handicap from scratch and the mile open despite the miserable condition of the track. The heats in the mile open were run in brilliant style. Gardiner won the first, with Kimble second and Fuller third. In 2:57 3-5; Butler, Kennedy and Hoyt qualified in the second in the good time of 2:22, and MacDonald, Ziegler and Coleman took the third heat in 2:29 2-5, all excellent for the track. Adams paced the final and the men made good running. Tom Butler had the pacemaker and Hoyt had his rear wheel. On the stretch Butler had gained the lead, to the delight of the crowd, and Hoyt was trailing him closely. Kennedy came around the turn, and, taking the pole, shot his bolt straight up and, taking the pole, passed Hoyt and captured second place. Summary:

Half-mile handicap, professional—1, Kennedy (scratch); 2, MacDonald (scratch); 3, Mertens, Minneapolis (25 yards). Time—1:06 1-5.

Two-mile handicap, professional—1, Tom Butler (scratch); 2, F. H. Pratt (100 yards); 3, L. B. Arnold (100); 4, F. J. Jenny (110). Time—4:48 3-5.

Mile open, professional—1, Tom Butler; 2, Kennedy; 3, Fred Hoyt; 4, Otto Ziegler. Time—2:14 4-5; single paced.

Half-mile handicap—1, Hermann Taylor (100 yards); 2, S. C. Williams (55); 3, L. Urquhart (15). Time—1:06.

Amateur team race, five miles—Worcester cycle team won. Time—14:42.

Mile handicap—1, J. Bowden (50 yards); 2, A. H. Sawyer (100); 3, C. H. Drury (scratch). Time—2:16 1-5.

Mile tandem race—1, Krafve and Casey, Worcester; 2, Urquhart Brothers; 3, Copeland and Wilson. Time—2:18.

WON THEM ALL.

Samburg, of Port Huron, won all the professional events at Bay City, Mich., September 7, Hicks, Bay City, running second. The mile was won in 2:19 1-5 and the half in 1:05 4-5.

“In hoc signo vinces,”

Which, translated into the cycling vernacular, means “Ride a Monarch and keep in front.” Mounted on this “King of Bicycles,” Tom Monarch Cooper’s victorious dash around the circuit is like the brilliant flash of a meteor across a cloudless sky—he overshadows them all. The scalps of all the pretender-champions are dangling at his belt. His almost unbroken string of victories proclaims him “the man of the year.” His clean-cut and decisive defeat of the speediest field of riders that ever gathered at a race meet at Louisville, where he won four of the six National Championships; and, lastly, his brilliant record at Springfield—all stamp him “Champion of America.” The Monarch breeds champions. If you would be a Cooper, if you would keep in front, see that the above distinctive nameplate is on your mount.

“In hoc signo vinces”

Ride a Monarch and keep in front.

MONARCH CYCLE MFG. COMPANY,

Chicago,

New York,

San Francisco,

Toronto.

Kindly mention The Wheel.

THEY ROOTED HARD,

But Their Talent Was Alleged to Be Imported—Raced Like Tourists Loaf Along.

Harlem Wheelmen "rooters" have made themselves very conspicuous at metropolitan race meets this season. When they are not shouting themselves hoarse over the victory of one of their color-bearers imported from New-Jersey, they gey anything and anybody. These "rooters" were in their merriest mood at the Tourist Cycle Club's meet in Paterson, on Labor Day. There is a keen rivalry between the two clubs over the merits of their respective riders, and every time a man bearing the Harlem colors defeated a Tourist representative, the "rooters" went into very windy hysterics. Finally, they began guying the officials, and then tantalized the Tourist representative by singing praises of their own representatives to such a degree that the local men became exasperated.

"Who are the Harlems? Who are the Harlems?" shouted one zealous Harlemite, "You can't beat them!"

And then a witty Tourist on the infield replied, in a voice audible throughout the grandstand: "Yes, but you have to come to Jersey to get your riders."

After this sally, which created a general laugh, there was less noise from the Upper New Yorkers. Every one understood the fact that all the Harlem club's cracks reside in New Jersey.

The sport, as a whole, was of high order, but the attendance was disappointing. Rain caused the track to be soggy at the turns, causing several spills during the novice heats. In these events loafing was carried on with such brazen persistency that the final was declared off; 2:40 was the limit, and 3:13 the time of the winner. Time limits thereafter put more action in the men. The brilliant finish of the day was the two-mile tandem handicap, when those twinlike riders, Harrison and Lefferson, snatched victory at the tape from scratch. Harrison had several exciting arguments with Ripley and Roome, and lost a first to Ripley in the third-mile open. The five-mile State championship, postponed from a previous meet on account of a fluke, went to Roome. The handicap-ping was of the highest order. Summary:

One-mile novice—1, A. W. Freudenthal, Paterson; 2, C. E. Fuller, N. Y. A. C.; 3, James Thomas, East Orange. Time, 3:13 2-5. Time limit, 2:50. No race.

One-mile open (final)—1, Joe Harrison, Asbury Park; 2, Bert Ripley, Newark; 3, W. C. Roome, Jersey City. Time, 2:34 1-5.

One-mile (handicap)—1, H. C. de Raismes, Elizabeth (120 yards); 2, W. H. Cane, Jr., Hackensack (150 yards); 3, H. F. Varley, Newark (150 yards). Time, 2:16 1-5.

Two-mile tandem (handicap)—1, Lefferson and Harrison (scratch); 2, M. A. Shannon and J. H. G. Giles (60 yards); 3, P. H. Johnson and Charles Fehon (80 yards). Time, 4:24 4-5.

One-third mile (open)—1, Bert Ripley; 2, Joe Harrison; 3, L. R. Lefferson. Time, 0:50.

Five-mile (State championship)—1, W. C. Roome, Jersey City; 2, M. R. Brown, Paterson; 3, Walter Babb, Paterson. Time, 12:51 2-5. Paced four miles by Harlem triplet.

Two-thirds mile (handicap)—1, H. F. Varley, Newark (100 yards); 2, John Beckett, Jr., Paterson (90 yards); 3, H. C. de Raismes, Elizabeth (80 yards). Time, 1:33 2-5.

Two-mile (handicap)—1, H. C. de Raismes, Elizabeth (180 yards); 2, C. A. Carlson, Brooklyn (90 yards); 3, W. C. Slavin, Suffern, N. Y., (30 yards). Time, 5:09 2-5.

One-mile tandem—1, Joe Harrison and L. R. Lefferson, Asbury Park; 2, W. H. Cane, Jr., and J. H. Wills, Hackensack; 3, P. H. Johnson and C. H. Fehon, East Orange. Time, 2:26 3-5.

JOHNSON ACTUALLY WON A RACE.

Buffalo, Sept. 7.—Michael, the celebrated Welsh rider, made his debut on an American track at the Ramblers' meet at Athletic Field to-day. He was not entered in any of the events, but rode an exhibition mile.

While Michael looks like a sixteen-year-old schoolboy, he rides a 112-gear wheel, and seemingly rides without effort, with his head well up. His pacers were Johnson, Parsons and Weinig. He reeled off the mile in 1:52 4-5. Johnson afterward rode a half in 54 seconds.

For the first time in many months Johnson distinguished himself by winning the race of the day, the mile open. Johnson, Parsons, Werick, Allen, Kennedy and Mertons qualified for the final. It was a see-saw game from the start, with a punishing finish, in which Johnson barely managed to come out best, while Parsons was beaten for second by inches by Werick.

In the mile handicap Johnson started from scratch, but was unable to catch the leaders, and gave it up after the third lap. "Clint" Davis, of Buffalo, from the 95-yard mark, won the race. Parsons did not start in this race. In the two-mile handicap Parsons and Callahan started from scratch. They set pace for each other alternately and succeeded in catching the field, but in the final sprint for the tape they were beaten out.

The finishes in the amateur contests were close and exciting. The attendance was about 3,000. Summary:

One-mile novice—1, J. W. Schouts; 2, E. W. Ellis; 3, G. I. Hingston. Time—2:36 2-5.

One-mile professional—Final heat—1, John S. Johnson, Minneapolis; 2, C. H. Werick, Buffalo; 3, J. W. Parsons, Australia. Time—2:38 4-5.

One-mile open—1, H. G. Winters; 2, C. J. Miller; 3, W. E. D. Temple. Time—2:06 4-5.

One-mile handicap—1, Kay Duer (45 yards); 2, W. A. Lutz (50); 3, H. G. Winters (30). Time—2:13 4.

One-mile handicap, professional—1, C. W. Davis, Buffalo (95 yards); 2, F. A. McFarland, Buffalo (80); 3, C. H. Callahan, Buffalo (30). Time—2:10 4-5.

Two-mile professional, handicap—1, F. W. Young (70 yards); 2, F. A. McFarland (140); 3, Barney Odfield (85). Time—4:37 2-5.

EASY FOR MUNRO.

Newburg, N. Y., Sept. 7.—O. H. Munro, of Cohoes, found things rather easy at the meet held at the Orange County Fair Grounds to-day, taking three firsts and a second. Rain made the track a trifle heavy, but the times are fair. Donoghue, the ex-champion skater, rode a mile paced by a quad in 2:17 1-5, and took the two-mile county championship, paced by a tandem, in 5:14 1-5. Five thousand people attended the meet. Summary:

Half-mile, open—1, John F. Beam, New-York; 2, O. H. Munro, Cohoes; 3, A. G. Relyea, Brooklyn. Time—1:7 2-5.

One-mile, handicap—1, O. H. Munro (scratch); 2, John T. Beam, New-York city (25 yards); 3, O. R. Conkling, Matteawan (80 yards). Time—2:26.

One-mile, open—1, O. H. Munro; 2, John T. Beam; 3, A. G. Relyea; 4, C. W. Young. Time—2:25 2-5.

Two-mile, handicap—1, O. H. Munro (scratch); 2, Edward Thomas, Newburg (90 yards); 3, Walter Weibs, Jr., Middletown (60 yards); 4, E. B. Horton, Craigville (50 yards). Time—5:39 1-5.

STRICT INTERPRETATION.

"Did you read that story about the German rider who had trained his dog to help pull his wheel up grades?"

"Yes. But did you know the dog's owner got expelled from the Temperance Union in consequence?"

"No. For what?"

"Working the growler."

AN AWFUL JAM

Was the Feature of Boston's Circuit Meet—Butler in His Home Proves a Winner.

Boston, Sept. 7.—Undoubtedly the largest attendance at a National circuit meet was that at the Press C. C.'s function at the Charles River track to-day. Five grand stands could not accommodate the crowd, so the infield and all surrounding space was filled with humanity and many were turned away at the gate. It is estimated that about 16,000 people were in the grounds.

About all the big guns of the path were present. The weather was superb and seldom has there been better sport.

In the mile open Tom Butler scored a very decided win. In the third mile he was defeated by Warren Reynolds, last year's crack amateur; Kiser, who made his first appearance in this country for the present year to-day, and Schrein, of Toledo. Bald was unplaced in both races, as was Sanger. Cooper was present, but unable to ride, owing to the frightful injuries received about the head, face and arms at the meet in Providence last Saturday. With his head swathed in bandages he was compelled to come before the thousands of people and bow acknowledgments to enthusiastic cheers.

In the mile open, Kiser, who was given second, was disqualified on a protest by Sanger, and Coleman was given second and Sanger third. Bald defeated Sanger, being third in the original finish, but unplaced after the judges had straightened out their muddle. Kiser was back of Bald and Sanger. Butler held the two pacemakers in the mile, Coleman, Kiser, Bald, Murphy, Gardiner, Loughead, Sanger, Kimble and Ziegler following in order. Kimble started the sprint when he went to the front with Ziegler trailing him, Gardiner coming out at the same time. Butler had made his jump in front and was travelling fast, Coleman and Bald, who had come round to the front, fighting hard for the second place. Sanger, Kiser and Murphy back of them. Butler won by a length. Coleman and Bald were but few inches apart and the other three equally close.

In their third mile Schrein caught the pacemaker, with Reynolds on his rear wheel. Butler was third in the line; Kimble, Bald, Kiser, Coleman, Ziegler and Sanger followed. In the jump Reynolds went away and won, and Kiser passed Schrein and took second. Coleman beat Bald for fifth place, and Sanger and Ziegler ran last, Kimble trailing in. Sanger rode scratch in the mile handicap, and Kiser had fifteen yards. Porter, paced by a quintuplet, did 1:48 1-5. Summary:

One-third mile, professional—1, Warren Reynolds, Hyde Park; 2, Earl Kiser, Dayton; 3, Fred Schrein, Toledo. Time—0:41 2-5.

One-mile, open, professional—1, Tom Butler; 2, Watson Coleman, Boston; 3, W. C. Sanger; 4, E. C. Bald. Time—2:05 2-5.

Mile, handicap, professional—1, Schrein (50 yards); 2, Harvey Hutchins (40 yards); 3, Crooks (60 yards); 4, Sanger (scratch). Time—2:12 3-5.

Mile, tandem, handicap, professional—1, Walsh and L. F. Callahan (50 yards); 2, Berle and Coleman (60 yards); 3, Crooks and Hutchins (70 yards). Time—1:55 1-5.

Mile, open, amateur—1, E. M. Blake, Keene; 2, F. A. Gately, Boston; 3, J. P. Clark, Dorchester. Time—2:09 3-5.

Mile, handicap—1, G. H. Howland (10 yards); 2, L. J. Greeley (90 yards); 3, N. W. Fry (150 yards). Time—2:05 4-5.

One-mile, tandem, handicap—1, Wisner and Marsten (70 yards), Boston; 2, McKenzie and Luften (50 yards), Boston. Time, 2:00 2-5.

Half-mile, Massachusetts division, championship—1, J. P. Clark; 2, L. E. Lithfield. Time—1:06 3-5.

SUCCESSFUL EVERY WAY.

Elmira, Sept. 7.—It was a model day for racing, and the meet of the Kanawoola Cycle Club was a big success. The track record for a mile of 2:06 3-5 was broken by Trappe, of Syracuse, who made it in 2:04 2-5, and then Zimbrick, of Rochester, lowered it to 2:02. Summaries:

One-mile novice—1, Budett Brady, Woodhull; 2, E. G. Sarvey, Elmira. Time—2:28 1/2.

One-mile open—1, Frank S. Trappe, Syracuse; 2, Frederick N. Fulton, Elmira; 3, J. B. Corser, Allentown. Time—2:16 1/4.

Half-mile open—4, J. B. Corser; 2, H. N. Forbes, Elmira; 3, A. A. Doffenderfer. Time—1:04 3-5.

Half-mile handicap—1, F. H. Fulton; 2, A. M. Zimbrick; 3, G. W. Thorne, Binghamton. No time.

One-mile handicap—1, G. W. Thorne, Binghamton; 2, F. P. Trappe, Syracuse; 3, H. K. Forbes. Time—2:14 2-5.

Two-mile handicap—1, B. C. Hollister, Cortland; 2, L. H. Tucker, Cortland; 3, A. E. Doffenderfer. Time—4:52.

ALL HAD A CHANCE.

Red Bank, N. J., Sept. 7.—Honors were distributed evenly at the Red Bank Wheelmen's meet at Stoutwood Park. The attendance was large. Summary:

One-mile, novice—1, Thomas Van Liew, Point Pleasant; 2, Arthur Irons, Lakewood; 3, John Ferrari, Newark. Time—2:49 1/4.

One-mile, handicap—1, F. B. Egelhof, Brooklyn (60 yards); 2, C. M. Robbins, Red Bank W. (20 yards); 3, J. A. Forney, Asbury Park (30 yards). Time—2:23 1/2.

Half-mile, scratch—1, C. F. Swartz, Knickerbocker W., New-York city; 2, F. B. Egelhof, Brooklyn; 3, W. J. Mooney, Rahway. Time—1:11 1/4.

Two-mile, handicap—1, C. V. Babcock, Greenwich W., New-York city (120 yards); 2, J. J. Hughes, Brooklyn (120 yards); 3, William Price, Lakewood (160 yards). Time—4:41.

Two-mile tandem, handicap—1, M. F. Haviland and Albert Chambers, Red Bank W. (80 yards); 2, S. C. Crane and L. Cummings (60 yards); 3, Frederick Shafts and Reginald Bennett (scratch). Time—4:34 1/2.

ANOTHER JOHN S.

Fitchburg, Mass., Sept. 7.—Three thousand people attended the Rollstone C. C.'s meet to-day. The principal events resulted as follows:

One-mile tandem—1, F. A. Bliss and G. L. Nash, Fitchburg; 2, F. C. Copeland and James Wilson. Time—2:29 2-5.

One mile, open—1, C. H. Drury, Winchendon; 2, John S. Johnson; 3, T. B. Matthews. Time—2:32 4-5.

Half-mile open—1, J. S. Johnson, Worcester; 2, C. H. Drury; 3, F. A. Fish. Time—1:03 3-5.

One mile handicap—1, J. Rutherford, Winchendon (70 yards); 2, H. B. Hind (95); 3, T. B. Matthews (40). Time—2:19.

Two mile, handicap—1, C. H. Drury (45 yards); 2, F. A. Fish (scratch); 3, J. Rutherford (130). Time—4:52 2-5.

One mile exhibition, paced to lower track record of 2:09 2-5—John S. Johnson, Worcester. 2:07 2-5.

ALEXANDER CONQUERS NEW WORLDS.

Bridgeport, Conn., Sept. 7.—R. M. Alexander, who won the last Irvington-Millburn race, took the honors at the Rambling Wheel Club's meet at the Pleasure Beach track to-day. His string included the mile handicap, two-thirds open and the two miles handicap. In the mile open he was beaten by Tensler. Summary:

One-mile, novice—1, Lafayette Peer, Bridgeport; 2, M. J. Homer, Hartford. Time—2:25 1-5.

One-mile, open—1, W. E. Tensler, Broad Brook; 2, R. M. Alexander, Hartford; 3, F. W. Richt. Time—2:20 2-5.

One-mile, handicap—1, R. M. Alexander (30 yards); 2, W. E. Tensler; 3, William Patnode, Bridgeport. Time—2:11 3-5.

Two-thirds mile—1, Alexander; 2, A. M. Curtis, Meriden; 3, W. E. Tensler. Time—1:29.

Two-mile, handicap—1, Alexander; 2, A. M. Curtis; 3, W. A. Rutz, New-Haven. Time—4:40 1-5.

FOUR THOUSAND LOOKED ON.

Poughkeepsie, N. Y., Sept. 7.—A. P. Lee, New-York, won the two-mile open and the five-mile handicap at the Poughkeepsie Bicycle Club's meet at the Driving Park. Four thousand spectators were present. Summaries:

One-mile novice—1, R. Graham, Poughkeepsie; 2, W. C. Fries, Poughkeepsie. Time—3:03 2-5.

One-mile open—1, W. H. Manney, Poughkeepsie; 2, R. J. McMahon; 3, W. B. Ackerman, Matteawan, N. Y. Time—2:42.

Two-mile open—1, Arthur S. Lee, New-York; 2, Charles T. Earl, Brooklyn; 3, W. A. Ladue, Cold Spring. Time—5:23.

One mile, 1/250 class—1, Robert Graham; 2, William C. Fries, Poughkeepsie; 3, Charles E. Conkling, Matteawan. Time—2:44.

Five-mile handicap—1, A. S. Lee, New-York; 2, W. A. Ladue, Cold Spring; 3, C. T. Earl, Brooklyn. Time—13:30 1-5.

SCHADE STARRED.

Washington, D. C., Sept. 7.—Fred Schade, the Southern champion, won every race in which he started at the meet of the International Athletic Park Association to-day. Over 4,000 people were present.

The intercity race between Baltimore and Washington teams was won by the latter amid great enthusiasm.

Summary:

One-mile open—Final heat—1, Fred Schade, Virginia; 2, William F. Sims, Washington; 3, Claude Leatherbury, Baltimore. Time—2:25 1/2.

Special one-mile match race—1, Fred Schade; 2, William F. Sims. Time—2:12 1-5.

Five-mile handicap—1, William J. Clum (400 yards); 2, A. L. Duval (425 yards); 3, E. F. Burton (500 yards). Time—12:22 3-5.

One-mile intercity race (Baltimore against Washington)—Won by Washington team. Time—3:01.

KRICK AND STEWART SHARED HONORS.

York, Penn., Sept. 7.—At the York County Fair Grounds 3,000 people assembled to witness the York Wheeling Club's races. Krick and Stewart divided the honors. Summary:

One-mile open—1, C. W. Krick; 2, Craig G. Stewart; 3, J. C. Henderson. Time—2:43 1/2.

One-mile handicap—1, Craig S. Stewart; 2, William A. Lantz; 3, C. W. Krick. Time—2:15.

One-half mile, flying start—1, William A. Lantz; 2, Craig Stewart; 3, J. C. Henderson. Time—1:10.

Two-mile handicap—1, C. W. Krick; 2, Craig S. Stewart; 3, J. C. Henderson; 4, E. N. Simmons. Time—4:50.

One-fourth mile—1, Craig S. Stewart; 2, C. W. Krick; 3, William A. Lantz. Time—0:32.

Five-mile handicap—1, C. W. Krick; 2, Craig S. Stewart; 3, E. N. Simmons; 4, George P. Reidenback. Time—12:32.

DOWN VINELAND WAY.

Vineland, Sept. 7.—A broken collar-bone was sustained by J. C. Howell, of Vineland, in the novice race during the Cycle Path Association's meet. About 3,000 spectators were present. Summaries:

One-mile novice—1, J. P. Eastlake; 2, Frank Buck. Time—2:37 1/2.

One-mile open, final—1, Harry Garton; 2, A. Bateman; 3, Harry Walls. Time—2:22.

One-mile handicap, final—1, A. Bateman (110 yards); 2, Harry Walls (90 yards); 3, E. C. Goodley (50 yards). Time—2:17 1/2.

Five-mile tandem, handicap—1, Hill and Gardner (30 yards); 2, Burroughs and Williams (30 yards); 3, Walls and Garton (120 yards). Time—14:30 1/2.

Five-mile handicap—1, H. W. Hackett (150 yards); 2, Harry Burroughs (160 yards); 3, E. C. Goodley (110 yards). Time—12:54.

PARSONS' CUT RECORD.

Buffalo, Sept. 8.—Electric light racing last night again attracted a large crowd. Parsons, the Australian, cut the track record for a quarter to 26 seconds. In the mile open he was defeated by John S. and E. C. Johnson. Summary:

Half-mile handicap—1, W. D. Clelland; 2, W. E. De Temple; 3, F. W. Julier. Time—1:32 1-5.

Mile open, professional—1, John S. Johnson, Minneapolis; 2, E. C. Johnson, Cleveland; 3, J. W. Parsons, Australia. Time—2:09.

Mile open—1, C. J. Miller; 2, Ray Duer; 3, Harry Short. Time—2:25 2-5.

Mile handicap, professional—1, A. C. Mertens, Minneapolis (30 yards); 2, F. A. McFarland, San Jose, Cal. (80); 3, L. A. Callahan (scratch), Buffalo. Time—2:15 4-5.

SPLIT EVEN.

Ithaca, N. Y., Sept. 7.—Central New York riders were out in full force at the Ithaca C. C.'s meet to-day. Doffenderfer and Zimbrick were the speediest men present. They split even in an open event. Summary:

One-mile novice—1, C. H. Knowland, Syracuse; 2, C. H. Jewell, Ithaca; 3, M. E. Lafferty, Ithaca. Time—2:35.

One mile, open—Final—1, A. F. Doffenderfer, Binghamton; 2, A. M. Zimbrick, Rochester; 3, B. Bulker, Cortland. Time—2:28 4-5.

Half-mile open—Final heat—1, H. F. Doffenderfer; 2, A. M. Zimbrick; 3, J. S. Butler, Schenectady. Time—0:13 3-5.

One-mile handicap—1, R. C. Lecht, Clyde (70 yards); 2, C. H. Jewell, Ithaca (140); 3, F. W. Ectady. Time—1:13 3-5.

WAS NOT RAY'S DAY.

Ray Dawson failed to strike his customary winning gait at the Boonton, N. J., A. C.'s meet. As a rule he takes everything in sight when racing at his home, but the two miles handicap was his only victory on Labor Day. Summary:

One-mile novice—J. L. Mills. Time, 3:00.

One-mile, 2:40 class—1, James Gregory; 2, Sutphen; 3, Collins. Time, 2:30.

Two-mile handicap—1, Ray Dawson; 2, Tom Lison; 3, F. Harrison. Time, 4:53 1/2.

One-mile, 3:00 class—1, Green; 2, Madison; 3, Jasper. Time, 2:33.

Three-mile handicap—1, Sutphen (230 yards); 2, Harrison; 3, Dawson. Time, 7:20.

POOR ROADS, GOOD TIME.

Cincinnati, O., Sept. 7.—The Lexington-Covington road race, ninety-eight miles, was run to-day. The roads were bad, but the record was lowered fifty minutes. The record was 6:57:10, held by Cliff Naudad, of Covington. Naudad entered to-day's race with the determination to lower it to 6:15:00, and he did it.

The limit men left Lexington at 9 a. m. Naudad finished at 3:31:56, Jones second, seven minutes later, and Updike third. Twenty thousand people witnessed the finish in Covington. Eight men started.

DEFEATED FORTY.

At Three Rivers, Mich., September 7, J. Wilder, Battle Creek, won the half-mile open in 1:05, and the mile in 2:11 1/4, and he finished second, too, in handicap from scratch in a field of forty. J. A. Moross, Detroit, 30 yards, won in 2:15. A 350-yard man, C. L. Ellis, won the five miles handicap in 12:20.

BAKER IN RECORD LINE.

Columbus, Ohio, Sept. 7.—State records went by the board at the Orient Wheel Club's meet to-day. The mile record was reduced by Con Baker from 1:58 to 1:57 1-5, and John Hedges cut the half to 0:57 3-5. Baker won the mile match with A. N. French in 2:00 1-5 and took the mile open in 2:17 4-5.

RACING BOARD'S BULLETIN.

Blacklisted.

Lamonte Driving Association, Lamonte, Mo., has been placed upon the list of those to whom the sanction privilege is denied.

Suspended Pending Investigation.

Chas. Miller, Marion, Ohio.
Hanson Willison, Cumberland, Md.
E. L. De Camp, Elkhart, Ind., or Pen Yan, N. Y.

Wm. J. Daubenspeck, Allentown, Pa.

Oscar Flayell, Bridgeton, N. J.

Chester Paulin, Bridgeton, N. J.

A. Hume, Syracuse, N. Y.

D. A. Jackson, Syracuse, N. Y.

Suspensions Removed.

C. A. Keating, Ayer, Mass.

E. J. McCall, Donaldsonville, La.

C. L. Timmerman, Cairo, N. Y.

C. A. Keating, Springfield, Mass.

James F. Sullivan, Seneca Falls, N. Y.

Will H. Reynolds, Sedalia, Mo.

John Durham, Sedalia, Mo.

Suspension placed upon Fred W. Palmer, Rome, N. Y., has been reduced to expire September 19.

October 5 has been assigned to Washington, D. C., as a national circuit date instead of October 17.

Records Accepted.

Tandem amateur made at Paterson, N. J., July 4, 1896, by C. S. Henshaw and Oscar Hedstrom, unpaced, standing start, competition, 1 mile, 2:35; 2 miles, 4:13.

Tandem amateur made at Riverside, N. J., August 1, 1896, by Fred E. Devlin and Hans Hanson, unpaced, flying start, against time, one-quarter mile, 0:26 1-5.

Suspended.

Sixty days from August 31, unsanctioned races—Fred Lund, Sabula, Iowa, or Morrison, Ill.; O. W. Hicks, Mount Carroll, Ill.; E. A. Emmert, C. G. Bussey, Lanark, Ill.; R. W. Taylor, Morrison, Ill.; William Whitmore, Shannon, Ill.

Ninety days from August 31, for false entry—J. W. Hodges, Monroe, Wis.

Thirty days from August 31, for false entry—John F. Steele, Lisbon, Ohio.

Ninety days from August 31, unsanctioned races and false entry—Frank Paterson, Argyle, Wis.

Thirty days from August 31, unsanctioned races—Fred Davidson, Stanwood, Iowa; Doc Barkhurst, Springdale, Iowa; Will Audrich and Will Knott, Tipton, Iowa.

Sixty days from August 31 (or until entry fees are paid), for misconduct and refusal to pay entry fees—Roy Hensell, Lansing, Mich.

Sixty days from September 1, unsanctioned races—John Kaufman, John Phillips, John Watkins, George E. Copper, Baltimore, Md., and Milton Glen, Rock Hill, Md.

Thirty days from August 31, for competing in unsanctioned races—A. A. Orr, Robert J. West, Brownsville, Penn.; — Matthews, Monongahela, Penn.

Arthur Ruth, Reading, Penn., from all track racing until prize is returned which was erroneously given July 4.

For entering races and refusing to pay entry fees—Fred Olsen and Calvin Stedman, Berlin, Wis., until said fees are paid.

Sixty days from this date, unsanctioned races with women competitors—Morry Krauss, Buffalo, N. Y.

The railroad bridge in front of the track entrance, as it appeared during the Springfield Tournament.

Sanctions Granted.

September 19—W. W. Burch, Rochester, N. Y.
September 23—Alton Driving Park Association, Alton, N. Y.

October 2—Silver Lake Agricultural and Mechanical Association, Perry, N. Y.
September 18, 19—Sibley Agricultural Society, Sibley, Kan.

November 26—Pine Bluff Cycle Racing Association, Pine Bluff, Ark.
September 3, 10, 17, 24—Leavenworth County Wheelmen, Leavenworth, Kan.

September 5, 14, 21—Bay City Wheelmen Bay City, Mich.
September 16, 17—Hudson Free State Fair, Hudson, Mich.

September 14—Sheboygan Cycle Club, Sheboygan, Wis.
September 17—L. A. W. Cycle Club, Nevada, Ia.

September 24—Wayne Cycle Club, Wayne, Neb.
September 18—Jefferson County and Rock Valley A. S., Jefferson, Wis.

September 27—J. R. Jones, Jr., Racine, Wis.
September 17—Morris Wheeling Club, Morris, Ill.

September 23—Branch County Fair, Coldwater, Mich.

October 1, 2—Eaton County Agricultural Society, Charlotte, Mich.

September 23, 25—O. S. Westervelt, Fairbury, Ill.
September 16, 17, 18—Mechanicsville Fair Association, Mechanicsville, Iowa.

September 21, 22—Oconto Wheelmen, Oconto, Wis.

October 8—Firemen's Band and Bicycle Tournament, Laporte, Ind.

September 24—Jacob Zimbro, Henderson, Ky.
September 23, 24, 25—Union County Fair, Marysville, Ohio.

September 16—Warren County Fair, Lebanon, Ohio.

September 23—The Montrose Wheelmen, Montrose, Col.

September 12—S. B. Leonard, Denver, Col.
September 24—McKeesport Cyclers, McKeesport, Penn.

September 26—Elizabeth Athletic Association, Elizabeth, Penn.

September 15—C. V. A. Society, Westfield, Penn.
September 24—Straub & Grube, Lancaster, Penn.

September 10—Virginia Live Stock and Fair Association, Staunton, Va.

September 23—Wyoming Agricultural Society, Pittston, Penn.

September 12—Charles S. Newman, Kenosha, Wis.

October 8—Kutztown Fair Company, Kutztown, Penn.

ROCHESTER SCORED.

Rochester riders scored heavily at the Holley, N. Y. A. A.'s meet September 7. They won every race, barring the mile open, which went to J. T. Finn, Buffalo, in 2:15 1-5. A. E. Odell took the novice and the one and two miles handicaps; A. W. Hughes the half-mile open, and C. A. Glenn the five-mile handicap from 475 yards in 12:25.

RAIN ON, RACES OFF.

Rain being falling after two events had been run at the Norristown, Penn., Wheelmen's meet on Saturday last, and all the remaining events were declared off. S. A. Will won the novice in 2:45, and W. M. Trott the half-mile open in 1:27.

NINETY IN TEN.

Ninety riders started in the ten-mile road race of the Roslindale C. C., Roxbury, Mass., Sept. 7. J. L. Turner took the time prize, finishing from 45 seconds in first position. His time was 26:57. O. W. Smith, 15 seconds, won second time prize in 27:03.

SUCH A LAW SHOULD EXIST.

Efforts are being made to have the Western Boulevard above Fifty-ninth street rendered safe for the use of cyclists by restricting heavy traffic. Alderman Robinson introduced a resolution at the meeting of the New York Board of Aldermen on Tuesday, providing that after October 1 the Boulevard shall be restricted except for the space of one block, to the use of bicycles and light wagons. Drivers of vans, trucks and business vehicles shall be excluded under penalty of \$5 for each offence.

OKLAHOMA, PLEASE NOTE.

This is only one of the many pictures of what the future undoubtedly has in store. Every Justice of the Peace will feel that he must attend a riding school or throw up the matrimonial end of his job, and in the mad rush for business Oklahoma and South Dakota will naturally put their divorce courts on wheels. It will then be possible to break all marriage, divorce and cycle records in the course of a single century run.

GET YOUR MONEY BACK.

A wheelman arrested for sidewalk riding at Summit, N. J., has caused the wise men of that New Jersey village no end of trouble. When the case was tried it was proved that the law was invalid in Summit, because it was not signed by certain town officers, and thus every fine previously collected from wheelmen for sidewalk riding must be returned on demand.

RELAYED FROM SAN FRANCISCO.

At 3:29 p. m. on Monday the San Francisco-New York relay race came to an end at the Journal office this city. Thousands of people assembled at City Hall Park to see the finish, necessitating an extra force of police to keep traffic open. F. J. Titus rode the last relay from Kingsbridge and was greeted with cheering when he reached Park Row. The run was made in 13 days 29 minutes 4 1-5 seconds. The number of miles covered by the couriers was 3,385.

On Tuesday the messages were delivered to General Miles at Governor's Island by means of two water cycles. The ride was completed a day behind the schedule time, owing to the delays encountered by the riders in the Far West, through storms, bad roads and accidents.

The longest relay and probably the most spectacular performance of the race was the fifty-three miles over the Sierras, which was ridden almost entirely through the snowsheds of the Southern Pacific Railroad. T. R. Lillie, the transcontinental rider, covered the distance entirely in the night.

The weather was unfavorable during the greater part of the race. A cloudburst in the Rockies rendered it impossible for the riders to make fast time. There were also heavy rains in Nebraska and through New York, leaving the roads heavy and sticky. With a few exceptions the relays have been covered by local riders.

Lesna, the French crack, who was barred out of the international races at Copenhagen, has challenged Chase, the winner of the 100-kilometre race, to a match race for a similar distance.

GIDEON HAS ENOUGH.

Chairman Gideon has announced, through the Philadelphia Ledger, his decision to retire from office after his present administration. "The requirements of the office," he states, "are constantly becoming more exacting, and even when one has become familiar with the duties involved the questions which constantly arise require the almost undivided attention of the chairman. The office would be an easier one to fill were it possible to divide the work with an assistant, but this is impossible. I think I have given as much time to the office as can be reasonably asked, and at the end of my term of office I shall be glad to lay aside the work although I shall still be very much interested as a common, every-day member of the League.

"The great growth of the sport, particularly of professionalism, has made it almost impossible for any one engaged in a regular business to properly fill the duties of the office, and I think that hereafter it should be filled by a man to whom a good stated salary should be paid, and who could therefore give up his entire time to the work."

WHERE BETTING IS ENCOURAGED.

At all race meetings in Denmark a Paris mutual betting machine has a prominent place. Any one can bet on the racer he favors. Even the racing man himself is not debarred from this blessed privilege; only, if he is detected in betting upon any one except himself to win an event in which he rides, he is at once suspended from all racing. Of the total amount bet the management take 10 per cent and the Government 5 per cent, the remainder going to the bettors holding winning tickets.

PAYS HIS COMPLIMENTS TO JOHNSON.

Porcheron, who holds the responsible position of secretary to the French Riders' Syndicate, is not pleased with some of Johnson's alleged criticisms of French racing. Not being pleased, M. Porcheron temporarily abandons his handle-bar for his pen, with this result:

"The 5,000 francs (\$1,000) supposed (?) to have been placed with M. Baduel for matches with Morin and Jacquelin were never put down. Whenever he likes he can race them without money, if necessary. Johnson preferred racing against the watch, because—well, he could only fail, without a beating. Why did he not ride in the Grand Prix de Paris, Copenhagen championships, etc., as he was in such fine shape? Funk!

"As for his pacemakers—well, he bound them down (by contract) at a ridiculous price, made by Tom Eck. Johnson, own that your statements are 'blague,' admit that the French riders have vastly improved, while you have remained stationary, and alter your bad humor (I do not state falsehoods) against a country which is well-known for its hospitality. Ask Zim. Wheeler, Kiser, Murphy, Jaap Eden, and Banker whether we look on foreigners as enemies."

QUITE A TRICKSTER.

Jacquelin is not only a crack racer, but a trick rider of no mean merit besides. At Copenhagen, during the international championships, he astonished the Danes by taking hold of the front wheel while riding, stopping the machine, and somersaulting from the saddle over the handle-bar.

UP, UP, UP

Went the

Ridden by...

A. MICHAEL,

And it landed

On Top

Of Eagle Rock Hill in

The Fastest Time Ever Recorded

IN THE HISTORY OF THE FAMOUS ELEVATION.

This happened in the Manhattan Bicycle Club's hill-climbing contest, on Labor Day, and is simply additional proof that the Lyndhurst is a tip-topper in whatever field it may be used—the sort of wheel that attracts the thinking agent.

FISH OF ONE, FLESH OF ANOTHER.

Professionalizing Butler and Anderson, the college riders, for accepting training and travelling expenses, while seventeen other collegians equally guilty escaped with a suspension, has again stirred up the Intercollegiate Athletic Association against the Racing Board. An explanation will be demanded. The old story about managing their own meets in the future is once more being flouted.

VARIETY OF PRIZE MERCHANDISE.

The annual ten-mile road race of the Brooklyn Citizen will be run over the Coney Island Boulevard course on Wednesday, September 30. The prize list is long and valuable, and contains merchandise of almost every variety. W. H. Roberts, No. 397 Fulton-st., Brooklyn, is manager of the race.

AN AMATEUR SEXTETTE RACE.

Six \$35 diamonds are offered by the Rhode Island State Fair Association for an amateur sextette race on the opening day of the Providence Exposition, September 7. The Syracuse Cycle Co. have entered their six-seated machine in the race.

SOME REASONS

Why Travelers Patronize the Nickel Plate Road.

- 1st—Because its rates are always the lowest.
 - 2d—Because it gives unexcelled service, including through Wagner Palace Sleeping Cars between Boston and Chicago via the Fitchburg and West Shore Railroads, and Solid Through Trains between New York and Chicago via the West Shore and Nickel Plate Roads. Its day coaches are lighted by gas, heated by steam in winter, and are in charge of uniformed colored attendants whose services are free to all passengers. Its dining car and buffet service is unsurpassed, and its meal stations serve the best of meals at the lowest rates.
 - 3d—Because it will give you stop-over privileges without extra charge at Chautauque Lake and Niagara Falls on all tourist and excursion tickets.
 - 4th—Because it runs along the shores of beautiful Lake Erie, with its cooling breezes, and delightful scenery, passing through the famous "Grape Belt" of New York, Pennsylvania and Ohio, and the "Gas Belt" of Indiana; the beautiful cities of Erie, Cleveland, Fostoria and Fort Wayne; the Summer Resort of Green Springs, and many other noted places.
 - 5th—Because the Nickel Plate Road is ever at the front in adopting every improvement tending to the safety, comfort, convenience and pleasure of its patrons, and its smoothly running track, powerful locomotives, elegant and luxurious cars and lowest rates, designate it as the **POPULAR ROUTE**.
- For all information, call on the nearest agent, or address F. J. MOORE, General Agent, 23 Exchange Street, Buffalo, N. Y. No. 23.

CHANCE TO GET FOREIGN TRADE.

Salesman, thoroughly versed in the cycle trade, who is going abroad September 1, and who has already travelled the ground, desires to represent a bicycle and a tire concern; will also be in position to place meritorious cycle sundries. Salary or commission; will establish office in London. Address RESULTS, care THE WHEEL. **

THIS IS SO.

Man fain would live and happy be
And joyful onward roll,
But the condition of his stomach
Very oft affects his soul.

And it makes him dull and stupid
And hateful of all he sees.
He gets tired of all around him
And nothing with him agrees.

There's a remedy that's near at hand
To kill such dismal spell;
It's an article called Yucatan—
Just chew it and get well.

White's Yucatan Gum is 5 cents a package. For sale at all drug stores and confectioneries. Buy only that sealed with a yellow band.

HAVE YOU OCCASION TO GO WEST?

The solid through train run daily via the West Shore Railroad through the State of New York, stopping at principal stations, to Erie, Cleveland and Chicago over the West Shore and New York, Chicago and St. Louis Railroad (Nickel Plate), is proving itself a great attraction to the traveling public. Passengers leaving New York on this train—station foot of West Forty-second street, at 6:00 p. m.—arrive in Chicago the next evening. No annoyance of changing cars or baggage, as the entire train runs through to Chicago without any change. Buffet and dining cars are attached, and it is no wonder that with the excellent time, easy roadbed, picturesque scenery of the route, this line is so profitable to its promoters. In going West you should try the West Shore and Nickel Plate Route. **

AGAIN....

must we call your attention to the finest machine on the market in the way of a Tandem. WE realized fully the advantages to be derived from the "truss frame" construction, and you will notice the superiority of the

America

TRUSS
FRAME...

Tandem

at a glance. The truss braces the long wheel base in the most superb manner. Then again, notice where we run our forward chain. The principle of a forward chain on either side is open to argument, but when we run it **in the centre** we think you'll agree with us that it is just about right. **We can deliver at \$150.00, and it's money well spent.**

AMERICA CYCLE MFG. CO.

CHICAGO.

Kindly mention The Wheel.

VERDICT OF THE VOTERS.

Some one has defined a "popular voting contest" as a "species of genteel bunco operated by penny papers." Be that as it may, there was never such a contest, so far as cycling is concerned, as that promoted by the "Boston Herald," which came to an end last week and with the Warwick bicycle at the head of the list. The voting had been in progress for months. Several New England concerns interested themselves, and for a time the keenest rivalry was displayed. The casting of millions of "ballots" resulted. The Very Cycle Company, Warwick agents in Boston, were among those interested. They set their hearts on having the Warwick declared "the most popular bicycle." To that end they conducted something of a campaign. Letters and circulars were sent to every Warwick agent, and letters furnished them to be sent to their customers. In this way every Warwick rider was stirred with enthusiasm, and rallied to the support of the vermilion wheel. Thousands and tens of thousands of votes were piled up daily. Two or three competitors of the Warwick endeavored to pass that wheel, but each time the Warwick people responded with a perfect avalanche of votes. There was no stemming the tide, and when the contest closed the Warwick had 671,589 votes to its credit, nearly 200,000 more than its nearest competitor, the Iver Johnson. It was a remarkable affair.

The "Springfield Union" also promoted a similar contest, in which the Warwick again landed on top by a decisive margin of 13,809 votes, its total being 76,408.

Naturally the Warwick people are in high feather.

POPULAR, AND SHOULD BE SUCCESSFUL.

Another old-timer to enter the ranks of the selling agents is William A. Neff, of Cleveland, with whom the trade is thoroughly acquainted from his long connection with the Peerless Manufacturing Company, and latterly as bicycle manager of Lockwood, Taylor & Co., large hardware jobbers.

Mr. Neff is general sales agent for the Vindex wheel, manufactured by the Reading Cycle Manufacturing Company, of Reading, Penn., and also represents a line of tubing, also seamless stamped crank brackets, hubs, bearings, sprockets, etc.

As to the wheel which he represents, Mr. Neff seems to be in a particularly good position to cater to particular people. The Vindex will be supplied in three heights of frames, and choice of handle-bars will be given, also an unlimited choice as to finish, which is an unusual thing, when the bicycle in consideration is a jobbing wheel.

Mr. Neff has located his permanent offices in the New England Building, Cleveland. With his acquaintanceship, knowledge and experience, he should quickly occupy a foremost position in that branch of the business which he has elected his field.

GERMANS ARE KICKING.

The cycle manufacturers of Germany are alarmed at the progress American wheels have made there in the last few months. An American manufacturer established an agency in Berlin early this year. His wheels were a revelation to people who have been accustomed to the ponderous German machines. Princess Hohenlohe and all the smart court set in Berlin bought American machines, which soon began to be seen on all sides of Germany, hence the alarm.

No man ever has a fair knowledge of how steep a hill is until he attempts to ride up it on a bicycle.

SHOP WRINKLES FOR REPAIRERS.

When the head of a set-screw gets so badly worn that the wrench will not take hold, it is considerable bother to make alterations in the adjustment. A new head is square, like A in Fig. 1, and the wrench B takes hold readily. When worn, the wrench slips around, as indicated by C in Fig. 2. The worn edges D cannot be fixed, but the head of the screw can be reshaped by first outlining it as represented by E in Fig. 3, then grinding off the ragged edges, leaving the head square, as in Fig. 4. The grinding can be done on either stone or emery wheel.

Wheels are frequently brought in to the repairer with the thread on the axle partly destroyed at the points A and B, as marked in Fig. 5. Riders have often to turn off the cones so as to clean the balls and related parts. If the thread is broken or worn between the cones and the end of the axles, the cones turn only with difficulty, and sometimes a hammer or other tool is used in a vain attempt to help the matter along.

FIG 1

FIG 2

FIG 3

FIG 4

FIG 5

FIG 6

FIG 7

FIG 8

FIG 9

The result is axle threads are broken more or less. To remedy and not interfere with the setting and fitting of the axle, simply clean out the threads with a die set same gauge as the threads. If the cones stick, clean out the threads before removing them. If the top collar bearing on the fork gets broken, as indicated by C in Fig. 6, the same can be fixed for further use by turning down the upper part to a shoulder and springing on a ring.

The process is explained in Fig. 7, in which D is the collar, E the break and F the wrought iron ring. A few rivets will tend to make the ring stay firmer in place. After the ring is placed the roughness may be removed in the usual way, and brazing will finish off the job so that it will appear neat.

Forks are always a source of trouble when once sprung. When the defect is prominent it is easily located and fixed. But when the untruthness is hardly perceptible, or situated in the bearings at about A, as in Fig. 8, the work of truing is delicate, and calls for something more than a straight eye. A view of a new type of home-made affair for aiding in this work is given in Fig. 9. It is unpatented. First, procure the foundation plank B, to which bolt the uprights C. These are wood. Then make long-set bolts F F, four of them, and set them in the positions shown. These support the fork. There must be bearings at the end of each of the bolts so that the fork shaft may fit in them. The other ends of the bolts will be fitted with the lock-nuts, as shown in the drawing. These supporting bolts will be centred so as to bring the fork in the centre of the device. Next we want the pointers J, J, I, I, and H. These are steel arrows, set true and firmly in the frame.

The rod E is put into the fork for a support. Now comes the truing. It is done with the regulating bolts F F, which are so made as to permit of screwing inward against the sides of the fork from either direction, and with such force as to bend the same slightly, thus removing any light irregularity in trueness. The framework of the device is strengthened with crossrods. A thin plate, G, extends across the top to support the pointer H. Any untruthness of the fork will show itself by the relative positions of the parts and the pointers.

GEORGE D. RICE.

SOME "RAD WELT" RANTS.

The American manufacturers who were heavy advertisers in all the German papers were astonished to receive notice last week that henceforth their advertisements could not be received. It developed that the German manufacturers had agreed to withdraw their advertisements from any paper accepting advertisements from American firms.

The "Rad Welt," an important cycling paper in Germany, appeals to Germans not to buy American wheels. It shrieks:

"Readers! Loyalty, self-reliance and national pride! As long as Americans will not ride German wheels, no German should ride an American wheel. Every German owes it to his Fatherland to assist a new struggling industry, which already employs 100,000 hands. This can only be done by an active, aggressive stand against American goods and methods!"

HAVE FAITH IN THE FUTURE.

Goormully & Jeffery have added another to their circuit of branch stores—at Cincinnati this time—a move in which doleful times stands for a great deal. The Cincinnati branch is located at No. 516 Main street, in a handsome stone building opposite the Post-office, and occupies the entire large first floor and furnished basement. Well-equipped sales-room, riding academy, store rooms and repair shop make this the most complete bicycle establishment in Cincinnati, where the Rambler already enjoys enviable popularity.

HENDEE GONE ACROSS.

Geo. M. Hendee's name appeared on the passenger list of the Teutonic when she sailed on Wednesday last. The Wheel man only caught a glimpse of him on Tuesday in New-York, and, as he was too busy arranging for the trip, very little could be learned as to the real object of the voyage. Of course, improvements in Silver Kings are promised, and the '97 pedal shown augers well for the good things in store for this popular Springfield wheel.

SPRINGFIELD!

Tom Butler Wins the Mile International.

One of the largest fields of the year entered in the Mile International, including Cooper, Bald, Sanger and Gardiner, and the Boston Boy ran away from them.

Tom Butler Rides Palmer Tires on his Stearns Wheel.

Other Winnings on Palmer Tires.

		F. A. Grady, fourth.

Butler, Lewis, Bates and Gately ride Stearns wheels; Elmer, Roome and Miner ride Spaldings; Grady, Rich and Caldwell ride Warwicks; Dawson rides a Humber.

Everybody Acknowledges that Palmer Tires are the Fastest Tires in the World.

All styles are made with the same fabric—Palmer Fabric—the only difference being a little more rubber on the roadster than on the racer. Palmer Tires are expensive—more so than other tires—but they make the bicycle run easily.

The Palmer Pneumatic Tire Co., 133-135 S. Clinton St., Chicago.

For prices address: SELLING AGENTS, THE COLUMBIA RUBBER WORKS CO., 66 Reade St., New York, and 159 Lake St., Chicago.

Kindly mention The Wheel when writing.

FRAME TESTING RESULTS.

Very many of those who three years ago knew all about it have now but a befogged remembrance of the "steel vs. aluminum controversy." Most of those who have come into the game since that time know nothing whatsoever of the affair. To again refer to it is much like thumbing the pages of a dusty volume. Those whose memory serves them best will, however, recall the warmth and length to which the controversy was waged.

Ten thousand and seventeen yards of type-writer ribbon and 501 reams of paper were used by the principals in the dispute, while the matter as it appeared in print in column lengths would reach from Kalamazoo to Kankakee, and the battered type, if melted and chained, would serve to anchor an Atlantic steamer.

The principals were E. C. Stearns & Co. and the St. Louis Refrigerator and Wooden Gutty Company. Stearns & Co. espoused the cause of steel; the St. Louis concern, makers of the Luminum bicycle, naturally had the other end of the argument. It all arose over this challenge, which appeared in the Luminum catalogue of 1893:

To show that we mean what we claim, we issue the following challenge to any maker of first-class bicycles in the world. The manufacturer of the machine wishing to contest with the Luminum shall select two judges, we to select two, and the four judges to select one more. They are to put the machines to all the various tests necessary to show their strength. If the judges do not testify that the Luminum is by far the strongest frame we will contribute \$500 to any charitable institution the manufacturer of such bicycle contesting may name. If it is proved and the judges so testify that the Luminum is twice as strong as the steel tubing frames contesting, the manufacturers of such bicycle shall contribute \$500 to any charitable institution that we may name. If, further, the contest shows that the Luminum is three times stronger than the steel-frame bicycles contesting, the manufacturer of such bicycle shall contribute \$750 to such charitable institution as we may name.

Tests were made upon twelve regular and standard frames of each of the respective makes, weighing within three ounces of 54 pounds, this weight being the average weight of the regular '96 models supplied to the trade by the contestants during the present season. The various tests decided upon by the judges for determining the merits of the twenty-four steel and aluminum frames were selected after a careful consideration of the mechanical principles involved in actual bicycle practice and completely cover all the tests for strength necessary for a perfect bicycle frame. The tests are divided into two classes: static or stationary, and impact or live loads, and are as follows:

STATIC TESTS.

- A. Frame loaded at seat posts.
- B. Frame loaded at both pedals.
- C. Frame loaded on one side at centre of pedal.
- D. Frame loaded at sprocket for chain draft.

IMPACT TESTS.

- E. Vertical impact on seat post.
- F. Vertical impact on pedals.
- G. Pendulum impact on front forks loaded with 100 pounds on seat post and 50 pounds on front head or handle-bars.

In August of the same year Stearns & Co. knocked the chip off the other fellow's shoulder. It created a sensation.

Then followed a bombardment of the press such as has been seldom seen or heard. Differences arose at every turn. They were aired in the newspapers. No actor or pugilist could have done it better. For a while the subject made good reading, but as the notices increased in volume and frequency the idea got abroad that the whole controversy was simply a clever means of "working the press." It

became a test of patience, at any rate, and was finally ended by the refusals of the papers to accord the matter additional space. In the interim, however, the forfeit money had been deposited and judges agreed on.

After this the test dropped almost completely out of sight, and but for an occasional sputter would have been wholly forgotten. When it was given out a few weeks since that the test was at last to occur, the news attracted but passing notice. Such reports had been heard before. But this time it really did take place, at the Pittsburg (Penn.) Testing Laboratory. The judges' decision has just been made public. Stearns and steel are declared the victors.

These tests were arranged so as to obtain results which correspond as nearly as possible

CHEAP FOR CASH.

"Spot Cash," A. U. Betts & Co., of Toledo, Ohio, have dubbed their vulcanizer, and the price is so amazingly low that the wonder is how any one would care to purchase it on other terms. Five dollars is the figure at which it is listed. There are no discounts and expressage is prepaid only when cash accompanies the order.

The machine works automatically and appears to embody features that will make it a ready seller. Betts & Co. claim that it can be operated by a novice, requires no watching and will not burn or distort a tire. The tire is merely clamped in the vulcanizer, and the heat turned on. When the repair is completed, the heat ceases and the tire may be removed whenever one wills.

to those obtained in actual service, and as this is the first and only scientific test of bicycle frames on record, the result is of interest and value.

The judges were Professor J. H. Barr, chairman of Cornell University, Ithaca, N. Y., and a member of the American Society of Mechanical Engineers; Edward Flad, M. E., a prominent consulting engineer of St. Louis, Mo.; Professor J. D. Johnson, C. E., of Washington University, St. Louis, Mo.; J. W. Sugget, of Cortland, N. Y., one of the leading patent attorneys in the United States, and W. R. Valentine, M. E., a mechanical expert, of Ithaca, N. Y.

After notifying both contestants of their decision in favor of E. C. Stearns & Co., the judges' report goes on to say:

"That this decision and award substantially concludes the business of the board; that each and every alleged charge of fraud or deception made by, or any party in behalf of the challenger have been and the same are hereby dismissed; that pursuant to the resolution of this board the Wheelman Company, of Boston, Mass., has been directed to pay the

\$500 deposited by the challenger to any charitable institution named by E. C. Stearns & Co.; that the deposits made by the last-named company with the said Wheelman Company and the chairman be returned to said E. C. Stearns & Co.; that the expenses of the board and expenses and compensation of the chairman be charged to the challenger; that the bills of the chairman and the board have been duly audited, and that the board has adjourned to meet on the call of the chairman at his office, Sibley College, Ithaca, N. Y., to transact any further and other business which by accident or mistake it has omitted to consider."

WHAT ONE EDITOR DON'T KNOW.

After spending several sleepless nights over the subject, the "New York World" declares this to be the coming bicycle:

"The discussion of the bicycle of the future is in a fair way to assume a new phase. It has been taken for granted that improvement in the wheel now in use must come through some device which will utilize electricity as a motor, but it seems possible that the bicycle may be practically perfected without this.

"It is proposed to find some mechanical device by which the lifting pull of the arms on the handles when the machine is going uphill can be made to drive the front wheel with a stroke corresponding to that given the rear wheel by the down push of the feet.

"As it is natural to pull on the handle-bar in going uphill, any mechanical device which would utilize this pull would give a form of exercise similar to swimming, and would almost double the motor power behind the machine without proportionately increasing the strain necessary to drive it.

"It is thought that the difficulties of giving the arms proper 'purchase' in driving the front wheel on up grades are purely mechanical, and that they can be easily overcome by a few years' experimenting.

"If they are—if the bicycle of the future can be driven uphill by both legs and arms—it may be as far superior to the wheel of the present as the new safety is to the old velocipede."

PNEUMATICS VERSUS PEANUTS.

Who would ever thought that the onward roll of the pneumatic would result in the downfall of the peanut? This has come to pass, however, at the Queens County Fair, on Long Island. Heretofore the peanut privilege at the fair has always brought the highest price, but in the new order of things the bicycle privilege takes first place this year, \$50 more being paid for it than for the permission to peddle peanuts on the grounds.

ALL THE COMFORTS OF HOME.

A Parisian lawyer has ordered of one of the makers of horseless vehicles a conveyance to contain a dining-room, two bedrooms, dressing-room and kitchen. The cost is over \$500, and the owner's intention is to make excursions through all the most picturesque parts of France.

NEEDS NO BELL.

A man rides every fine day on the Boulevard with a pet parrot perched on his handle-bar. Whenever the bird's owner gets into a crowd the parrot begins to scream, "Look out! Look out!" Of course, he readily secures right of way, and his success in this direction promises to boom the parrot trade.

DANGER TO POPULARITY

Knowledge of a wheel is an excellent thing, but if you want to retain popularity with a woman never let her discover through your knowledge that what she thinks she knows about her wheel is not a fact.

ANNUAL NATIONAL CYCLE EXHIBITIONS

AT CHICAGO

January 23—30, 1897,
At the Coliseum, Jackson Park.

AT NEW YORK

February 6—13, 1897,
Grand Central Palace of Industry,
Lexington Avenue and 43d Street.

SPECIAL FEATURES—IMMENSE FLOORS—LOW RENTALS—DIVISION OF PROFITS.

Exhibitors at unsanctioned exhibitions, fairs, institutes, etc., will not be allotted space at the National Exhibitions, the only sanctioned exhibitions prior to February 20, 1897.

Rules, regulations, diagrams, applications for space and all information will be furnished on application. Applications for space must be filed by September 19, 1896.

DON'T BE DECEIVED! These are the only official cycle shows given; all others claiming official sanction are frauds.

NATIONAL CYCLE SHOWS.

Under the auspices of the National Board of Trade of Cycle Manufacturers, National Shoe and Leather Bank Building, 27 Broadway, New York.

January 23-30—Chicago, Coliseum.

February 6-13—New York, Grand Central Palace.

Dec. 4-12—London, National Show, Crystal Palace.

TRADE CHANGES.

COLORADO.

Denver.—Troxel Brothers & Clark, bicycles, 1,756 Stout street, selling out new stock to remove to new quarters.

Denver.—Columbine Cycle Co., incorporated.

CONNECTICUT.

Bridgeport.—The Premier Cycle Mfg. Co. reported applied for a receiver.

Middletown.—Worcester Cycle Co. shut down indefinitely; no reason given.

ILLINOIS.

Chicago.—King B Cycle Co. (Edw. D. and Mattie H. Sniffen, proprietors), sued \$5,000.

Chicago.—The Elgin Sewing Machine and Bicycle Co. made an assignment. Assets placed at \$150,000; liabilities, \$100,000.

Chicago.—R. F. Beardsley & Co. (incorporated) sued for \$5,000 damages by the Chicago Tip and Tire Co.

Chicago.—Chicago Tip and Tire Co., "attachment in aid" sued by R. F. Beardsley & Co. (incorporated), who also garnished account due from Fowler Cycle Mfg. Co. and bicycles in possession Lincoln Bicycle Co. Defendants furnish bond and sue Beardsley & Co.

Chicago.—Chicago Cycle Works (W. E. Davis), sued \$2,500.

Chicago.—Davidson & Sons. Court ordered assignee to sell certain bicycles; also to produce books.

Chicago.—Fulton Machine Works. Bank releases attachment and shop opened by assignee. Sale arranged for September 17.

Chicago.—E. D. Davis. Chattel mortgage \$700 on bicycles.

IOWA.

Blairstown.—F. Kleinschmidt, assigned to O. W. Allen.

Dubuque.—Joseph T. Kelly, confessed judgment; sheriff in possession.

MAINE.

Portland.—Boston Bicycle Mfg. Co., organized to manufacture bicycles, etc. Capital, \$35,000. Frank W. Brigham, president, Waltham, Mass.; Charles E. Rowe, treasurer, Chelsea, Mass.

MARYLAND.

Baltimore.—The Sundry Mfg. Co., incorporated by Joseph C. Whitney, Charles A. Layfield, William P. Turner, Arthur D. Stebbins and Daniel H. Hayne; to manufacture bicycle novelties and attachments. Capital, \$1,000.

MASSACHUSETTS.

Chicopee Falls.—The Overman Wheel Co., shop closed until further notice.

Haverhill.—J. W. Elliott, chattel mortgage \$350.

MICHIGAN.

Hudson.—George Pomeroy is refitting bicycle factory to accommodate 100 hands.

MINNESOTA.

Langher.—O. A. Bakken has added bicycle repair shop to his business.

Minneapolis.—The Heath-Quimby Co., incorporated by S. F. Heath and E. C. Quimby, to manufacture bicycle supplies. Capital stock, \$10,000.

Minneapolis.—Heath Mfg. Co. (S. F. Heath and E. C. Adams), incorporated to manufacture bicycle pumps.

St. Paul.—The Cuddy Cycle Co. has filed schedule of assets and liabilities. Assets, \$1,394; liabilities, \$2,757.85.

NEW YORK.

Brooklyn.—A. M. Franklin, bicycles, reported recorded chattel mortgage for \$1,200.

Brooklyn.—Behrmann Cycle Company, reported closed by Sheriff.

Buffalo.—Queen City Cycle Company. Attachment in favor of J. Walter Thompson, \$4,000; vacated.

Clyde.—Haight & Stevens dissolved. J. E. Haight continues.

Elbridge.—Elbridge Cycle Company. Stock sold under execution to W. B. Fuller, attorney, for \$1,403.58.

New York.—Simon Blumauer. Judgment, \$482.68.

New York.—Liberty Cycle Company. Receiver files report, showing nominal assets, \$204,626.81; actual assets about \$60,000. Liabilities, \$183,563.93. Judgment in favor Sager Manufacturing Company, Rochester, N. Y., \$1,676.66.

New York.—Knickerbocker Cycle Manufacturing Company. Judgment in favor of David H. De Boer, \$7,582; vacated.

New York.—F. A. Nagle, chattel mortgage, \$150.

New York.—Glasel Brothers, bicycles, reported to have given judgment for \$216.

Oswego.—The Oswego Tool Company, manufacturers of the Ontario Bicycle, tools, etc., have made an assignment to C. C. Place, for the benefit of creditors. The capital stock is \$25,000. Application has been made to permit the assignee, Mr. Place, to continue the business.

Sherburne.—Albert C. Buchanan. Burned out.

Syracuse.—Dodge Cycle Company. Chattel mortgage for \$29,500 to F. V. Gridley.

Utica.—The Weston-Mott Company, of Jamesville, will erect a main bicycle factory, 41x150 feet, two stories high, in this city.

OHIO.

Cincinnati.—F. B. Hewitt, bicycles, No. 718 Race street, to Edward W. Frey. Estimated assets, \$1,400; liabilities, \$1,200.

OKLAHOMA TERRITORY.

Guthrie.—Joe Reed's bicycle store destroyed by fire; partially insured.

PENNSYLVANIA.

Meadville.—L. L. Richmond Manufacturing Company. Judgment filed vs. L. L. Richmond, \$350; also sued, \$300.

Philadelphia.—H. C. Rightmire, bicycles, etc., reported to have given judgments for \$4,562.

Wilkesbarre.—S. Blau & Co., bicycles. Reported sold out.

TENNESSEE.

Nashville.—Sims Brothers & Green, bicycle dealers, No. 243 North Cherry street, assigned to George S. Combs. Liabilities placed at \$1,915.15.

VIRGINIA.

Norfolk.—A. A. O'Neill & Brother. C. W. O'Neill transfers real estate, \$1,000.

VERMONT.

Rutland.—C. A. Townsend. Insolvent.

WISCONSIN.

Milwaukee.—Telegram Cycle Manufacturing Company. Stock sold to First National Bank. F. F. Pingree, secretary of company, appointed custodian. Later: O. C. Fuller appointed receiver on application of creditors.

IMPORTANT TRADE-MARK DECISION.

The United States Circuit Court of Appeals at Chicago handed down a decision last month which is of interest to all manufacturers who market their goods under trademarks.

The word "Imperial" was the distinctive feature in the case in point, and the Court held that such a word could not become the exclusive property of any one for the reason that it and other words of the same class, such as "Royal," for instance, cannot become the exclusive property of any one for the reason that they indicate quality and not origin.

In concluding the decision the Court said: "The word in question may be close to the border line between terms that signify quality and those that do not. It is safer, however, in the interest of freedom of trade to protect the use of those terms, and those terms only, which clearly do not refer to grade or quality. The monopoly of use granted by the law of trademarks should not be extended to embrace terms of doubtful signification.

Tests are being made in Indianapolis to determine whether the creosote in wooden pavements is injurious to the tires of bicycles brought in contact therewith.

TO BICYCLE MANUFACTURERS!

Fine Jet or Fancy Colors

HIGH GRADE BICYCLE ENAMELS

Superior in Quality to the Finest English or American Enamels, and Guaranteed.

PRACTICAL advice, lay out of Bicycle Enameling Plants, and all needed information upon latest and best methods, furnished to customers adopting our Enamels. *Enamels* and *Enameling* have been our sole business, study and practice for thirty years, and we know it in every part, and our Special Bicycle Enamels sell upon their real merits, and stand unequalled to-day. We refer to all bicycle manufacturers, and solicit your correspondence and orders.

DIPPING OR BRUSHING ENAMELS.

AMERICAN ENAMEL COMPANY,

PROVIDENCE, R. I., U. S. A.

(Incorporated 1866.)

AUGUSTUS S. MILLER, Pres. CHAS. A. GAMWELL, Treas. and Sec'y.

Enamel Experts, Practical Enamellers, and Manufacturers of Superior Enamels.

QUEER THINGS ABOUT GHOSTS.

How They Affect the Building and Riding of Bicycles — Cure for the Complaint.

The average man shows that he does not believe in ghosts. He likes to pride himself on his bravery and his freedom from childish and primitive things. If you question him on this point he does not admit such things—not he—but if, by conversation on certain subjects, you cause him to commit himself knowingly, you will find that he does believe in ghosts. You will find that his mind, supposedly broad (as he believes, very broad and liberal), is actually hemmed and hampered on many sides by scarecrows and bugaboos which cramp his thoughts, hamper his actions, and are as real bogies as any we were told about in our younger days.

The cattle-herder, or for that matter the herder of any kind of live stock, knows how easily the herd may be stampeded by an imaginary ghost. The crack of a twig or a snort from some animal will on many occasions cause a stampede, and the further the cattle run the more scared they become, until sheer exhaustion compels them to stop.

Masses of people are little better. They get scared on the tariff question, on the coin question, or some other problem which may or may not be of importance, and when scared refuse to do business. Their ordinary acuteness in business seems to be paralyzed, and they are no more like their ordinary selves than are the stampeded cattle. The writer has often seen a herd of cattle leave food and water in abundance because of this stampede action, and the nervousness exhibited by the public to-day reminds him very much of the cattle.

During the several years of bad business in many lines which have been passing over us, one line and its connections, namely the bicycle business, have been good. Do any suppose that it is not so good as it would have been had other lines of business been good, but it is possible and quite probable that the stagnation in other lines helped in some ways the cycle business. Closed shoe factories threw men out of employment, which could be secured at lower rates by bicycle makers. Closed drygoods stores gave clerks more leisure for cycle riding. It is a matter of fact that there is a tendency this way. Proof of this can be seen by watching the outgoing ocean steamers, which have carried this year perhaps more summer tourists than ever, simply because the travellers have little or no work compelling them to stay at home. It is more than likely that if, instead of getting scared at the surrounding conditions, each one would resolve that he will stick to his work and withstand the current of panic, he would find himself more successful this year than in ordinary years. It is quite likely that he would need to change his methods from those of ordinary years, but it is almost certain that if he possessed true adaptability he would find great success.

This is not, however, intended as a discussion of the financial or political situation. Things of less importance and of greater interest, perhaps, to the cycle rider were intended when the writer began. In the early days of the cycle the only ghost that seemed to be in everybody's mind was that of falling, and the constant question was: "Ain't you afraid of falling off? How do you keep your balance on two wheels?" The everyday examples of the past fifteen years have laid this ghost forever.

Another ghost used to be "hard work." It seems impossible for the average mind to grasp

the fact that the cycle rider has loaded himself on a wheelbarrow and was actually wheeling himself, which any one ought to know is easier than carrying himself, and even school-teachers and college professors thought it must be more work to ride "one of them things" than to walk, "because you are carrying fifty pounds of iron and rubber with you." This bogie died hard, and the earlier riders wasted many a minute explaining that one could ride three or four times as far and as fast as one could walk. Even to-day it sticks up its ghostly head and people inquire why one does not walk, but not so often as formerly.

A prominent ghost of later years was the tire puncture, but other things than tires go wrong occasionally, so one is justified in calling the puncture a ghost. Many cyclists ride the whole year without any puncture whatever, and I think it is borne out by experience that tires do not give more trouble than other parts of the cycle.

Another ghost of to-day is brake effects. The average man imagines that a brake on his

HE SHOULD RE-SIGN.

The above sign ornaments the roadside at the foot of Eagle Rock Hill, in New Jersey. The gentleman responsible for it owns the bar toward which the finger is pointing, and it seems strange that he should go to the trouble and expense of advising the L. A. W. to retreat therefrom.

wheel, if applied to the tire, would wear out the tire in less than a week, and for this reason he cannot contemplate for a minute the application of such a device, and yet he will put the toe of his shoe back of the fork of his machine and coast down a mountain side with supreme satisfaction, regardless of the fact that his shoe soles have one or more nails which are likely to do more damage in a minute than a brake would do in a year. He often goes further than this. Only a couple of weeks ago the writer saw a party of seven walking down a hill of quite easy grade, simply because it was easier to walk down the same than to back pedal, and their machines were not equipped with brakes. Such action borders on the foolish. If the brake is given sufficiently broad surface, there is little or no danger of its damaging the tire, and it is one of the most

valuable additions to the machine. Its weight is not a matter of serious objection, because many light forms either can be had or could be if called for. A foot brake, while not so good as a hand brake, because the hand brake permits the wheel to be retarded by both hands and feet, is much better by far than no brake. If it is desired that the brake should not apply to the tire, some form of band or disk brake applied to the hub can be had. There are several forms of brake applied to the crankshaft, sprocket wheel or chain, but these are objectionable because their power must be transmitted through the chain, and in case of the chain breaking or jumping off the sprockets the wheel is left wholly without control. The many accidents caused by collisions with bicycle riders have made it necessary to legislate on bicycle equipments, but it seems to the writer that the legislation has taken the least valuable safeguards first. It is far more important that the rider be able to control his machine absolutely than it is to warn the other fellow to get out of the road, and for this reason one effective brake is worth half a dozen bells or lamps. The bicycle moves so swiftly that in many cases the warning of the lamp or bell does not give the pedestrian time to get out of the way, but simply makes him jump, and oftentimes in a direction contrary to that in which he should have jumped for safety. In this case the accident occurs, and the rider, being without a brake, finds himself powerless to prevent it.

CHARLES E. DURYEA.

CURES BOTH FAT AND LEAN.

Most of the ailments which are commonly called "bilious" are caused by too much food of a rich nature, and too much drink of a sweet or alcoholic character, combined with far too little exercise in the open air. The liver attempts to get rid of the superfluous materials thrown into the circulation, and, being overworked, rebels, and gout, rheumatism, gravel, dyspepsia, headache and constipation are the outward and visible signs of its inaction in those who live too well, a secondary life.

The prescription of a bicycle and the recommendation to use it wisely and well works like a charm in such cases, and in all the symptomatic ailments which arise from too much "acid" in the system. It is interesting to note that cycling sometimes has the effect of thinning the obese and fattening the thin, and this may partly be explained by Murchison's observations that excessive leanness, as well as excessive corpulence, is often caused by inaction of the liver, and the stimulus of regular exercise, setting the functions of that organ right, causes the disappearance of what was only a symptom.

EVEN THE NOVELISTS.

Evidently a certain set of novelists find that it "pays" to bring their stories up to date, says an English critic. I picked up a novel at a bookstall at haphazard and glanced at the opening lines: "Yes, remarked the earl, seating himself gracefully on the shining safety." I picked up another: "So saying the viscount flung himself savagely from his wheel and proceeded to"—. Feeling curious, I opened a third: "Lady Helen Hubb truly reveled in her bicycle. If only her polished mount had"—. In desperation I sought a fourth: "They all rode bicycles, these girls," were the first words that met my eye.

MADE FROM MUD.

"Paw, what is a weather prophet?"
"The profit on mud-guards and gear-cases, my son."

Lots of Room at the Top.

That is the reason why the Barnes White Flyer remains the most popular wheel on the market to-day, selling at its original price when other so-called **high-grade** wheels have been driven to sell at a price that has proved the ruin of their manufacturers.

THE BARNES IS THERE.

It gained that eminence by its own merit, and sheer merit is all that is relied upon to keep it in popular favor.

BEAUTY OF OUTLINE, EXCELLENCE OF CONSTRUCTION,

Are what the makers of the Barnes claim for the wheel. It is not only as good as the best, but according to the popular verdict, just a little better. That is what the people want and are bound to have. They can get it in the Barnes,

AND THEY KNOW IT.

NOT ALL RACING.

Roads Around Springfield Where the Tourist Finds Enjoyment and Pleasant Riding.

Springfield's tournaments and Springfield's bicycle industry are of national renown, but to the city's good suburban roads and the scenery which they afford, is due Springfield's army of cyclists. The man in Springfield who does not ride a wheel will generally apologetically volunteer the information that he intends to begin next season.

The most popular run from Springfield until recently has been over the River Road to Holyoke. The advent of the electric, together with the rebuilding of roads which had hitherto been a bane to cycling, diminished the pre-eminence of the Holyoke run. Had not these causes been in operation, congestion of

world, that it has little time for anything else, least of all for good roads. Its street department, like its other departments, is run on a political basis, and the results are evident. However, a few years ago the city invested in half-a-mile of block asphalt for its principal street, and this stretch of paving is conceded by experts to be unsurpassed in the country. A \$1,000,000 dam is being built across the Connecticut at Holyoke and Prospect Park by the river, from whence the work is best seen, affording a fine view of the rugged features of Mt. Tom.

Holyoke, Northampton and Springfield wheelmen are considering a project to build a cinder path from Holyoke to Northampton, a distance of nine or ten miles, but the realization of the plan is probably a year distant.

Taken all in all, the ten miles of road from Springfield to Westfield form as fine a highway as there is in the State. Crossing the

prominent inscription on a small bridge, is not an embargo to prevent one's return, but an ambiguous way of indicating that the ravages of the Westfield River have not been repaired.

The seventeen-mile run about Springfield, known as the "circuit," is justly popular with wheelmen. The route is out Allen to Cooley street, thence to Sixteen Acres, returning to Springfield by the Wilbroham road. The roads are among the best in the State, notwithstanding that they traverse a sparsely populated district, where oftentimes there is no habitation in sight. Until lately these roads were dusty and muddy in turn, full of ruts and but little removed from barbarism. The superintendent of streets set himself to work to improve matters. A sand foundation was secured and on top was placed six or eight inches of red sandstone gravel secured by the roadside. The drainage is excellent, and as a result these roads are always hard and smooth. It should be added that since the roads were improved they have been placed under a system of repair.

Sixteen Acres is one of the most picturesque spots in the Connecticut Valley. It seems unnatural to associate any activity with this locality, but not so very many years ago the placid pond furnished power for the largest mill in the county, and hundreds of cattle and hogs were fattened where a few cows now browse.

The run to Hartford and return is about

travel would have deprived the River Road of its popularity. This route is peculiarly adapted to novices in that from the North End Bridge at Springfield to Holyoke, a distance of eight miles, there is but one hill, and that not at all formidable. The return trip is equally easy. A considerable part of the route is beneath shade trees, and except as repairs are being made, there is not a foot of soft road. A popular place in harvest time is the old cider mill in West Springfield, on the brow of the little hill which one ascends soon after crossing the North End Bridge. The proprietor is, or at least was, one of the selectmen of the town, but his official dignity doesn't interfere with his business. A few rods further along is a watering trough, and nearby runs the path to Holy Smoke Spring, which has probably allayed the thirst of more wheelmen than any other of Nature's drinking places in New England. Its waters are as clear as crystal and as cool as ice. The Keating Wheel Company never hit upon a better advertising device than when it built the spring-house which protects the Holy Smoke pool. The run to Holyoke affords several enchanting views of the Connecticut.

Holyoke, the wheelman will find, is so engrossed in its paper trade, the largest in the

North End Bridge one wheels through West Springfield up Tatham Hill, which is a long incline and rather steep, and out upon Westfield street to the Westfield road. Here the highway runs parallel with the Boston and Albany Railroad, then it goes through cool woods, and again it skirts the Westfield River, which in the spring is a raging torrent and in midsummer scarcely affords sufficient water to cover the huge flat rocks in its bed.

At Westfield the county is building a bridge to take the place of one swept away by a springtime freak of the Westfield River. There is a foot-bridge with a small boy at the other end who exacts five cents of each traveler. Between the bridge and the centre of the town are the fields from which has just been harvested the finest crop of tobacco ever grown in the Connecticut Valley.

"No crossing this bridge to Springfield," a

fifty-five miles. If the trip is made on the Springfield side of the Connecticut, numerous hills make the ride hard except to expert riders. By crossing the Connecticut at the South End bridge at Springfield, all but two or three of the hills are avoided. The road is practically straight to Hartford. If the cyclist bears in mind the fact that he should keep on the road nearest the river, no other directions regarding roads are necessary. From Windsor the trolley-cars are an infallible guide. There is a fine specimen of State road on the hill at Windsor, which on the return trip makes one of the most exhilarating of coastings; in fact, there is apt to be a little more exhilaration than most riders care to experience. The bridge across the Farmington River is one of the worst in Connecticut. Forest Park, in the southerly part of Springfield, is one of the most delightful spots in the East. It comprises several hundred acres, its contour being broken by hill and dale. Artifice has supplemented nature, with a result that is very nearly ideal. The lotus plants, the bears, the deer and other attractions are visited daily by hundreds of cyclists.

UNTIL THE GEAR ARRIVES.

Some Practical Points on Chains, Their Care, Keep, Faults and Possible Improvement.

It is in the air that next year is to bring a revival—or perhaps a fair trial—of the bevel gear. As to this I have only to say at present that I have always disliked the chain as an unmechanical makeshift, used in machinery only where the resistance is great and the power must be transmitted without slip, but I have never been able to think of a workable substitute. Yet perhaps somebody else can; we will see.

Meanwhile, something needs to be done for this many-jointed trouble. Great stress is laid on bearings, and the maker whose catalogue omitted to dilate on his cups and cones turned in tool steel out of the solid, and tempered (not case-hardened) and then ground true to shape, would feel that he had made a break; the bearing must also be "dust-proof," and felt packing was used to make it so until use had shown the futility of that. But the chain! The average chain has 100 pins; counting both ends of the 50 blocks and both sides of the sprocket teeth, we have 250 wearing surfaces, all exposed. When mud is thrown upon it the chain "srips," the filling up of the tooth spaces thus temporarily tightening it by disturbing its pitch; and at all times these wearing surfaces are lubricated with powdered stone. Not to overstate, it is true that not more than a dozen joints are bending at any one instant, yet they all take their turn. Some riders, I have found, while easily seeing the motion on the pins, are deceived by the apparently easy way in which the blocks sink upon and rise from the teeth, and do not realize any friction there; yet it is very real. Chains get loose and seem to have "stretched," but stretch is not possible; what happens is that the block and its pin wear each other on their quarter-inch plain bearing, and the block ends and the sprocket teeth wear, too, so that the spaces between the blocks and those between the teeth lengthen a little, making the fit looser. The links holding the pins immovably by their ends has nothing to do but stay there, and that part is not subject to wear.

Roller-bearing chains have been attempted. The most promising one I have seen tries to substitute the knife edge for the pin bearing, but that, at best, meets only half the problem, and I do not believe it is possible, under the conditions, to substitute rolling for sliding friction in the chain.

Shall we try the gear case? That is almost a necessity in a country of damp mud like England. But the narrow slip used here several years ago serves only to catch the mud thrown up by the wheel; it is useful against mud and the track of the sloop-wagon, but not more. I once saw a completely inclosed tin case, ingeniously constructed by the owner, whose trade was to work in that material, and the Singer wheel has set us an example in the use of celluloid. If the case is to accomplish anything, it must be more than a dress guard for a feminine wheel; it must inclose so completely as to be substantially dust-proof; it must be of light weight, and it must be very easily removable without liability to loosen, or it will lead, as the dress guard does, to neglect of care. The close case of a bevel gear might be so close as to allow the gear to run in oil, but an oil bath for a chain would be a nuisance, on the whole. These requirements are not quite easy, and a somewhat wider tread than the present would also be necessary, but the narrow-tread fad is now joining the fad of very light weight in the limbo of the outgrown.

Meanwhile, the chain could be bettered by having care instead of neglect. The average rider runs his wheel contentedly and untroubled until it begins to drag or otherwise calls his attention unpleasantly; a chain not quite slack enough to mount the sprocket and not tight enough to bind will run almost indefinitely without making a felt complaint, and I am not sure that the rider who shoves his wheel along while it will go does not get more fun out of it than he who is always watching for symptoms. Nevertheless, the average rider may be glad of some tips about the care of a chain from one of the mechanical cranks.

A few may condemn oil, and another few may condemn graphite, but the understood thing is that both go on the chain. The easy rider, grooming for the start, drizzles a stream from the oil can along his chain, spinning the wheel the while, then holds his graphite stick on the inner surface and rubs off a thick layer. That is the lazy way—whether it is the easy way depends on one's understanding of and care about consequences. The first result is to catch dust and cover sprocket and chain with a smeary mixture. On the contrary, the first rule I lay

never took that time, but it is well spent. A chain thus cared for, regularly wiped off before use, though touched up only according to amount of use, will run with the minimum of noise and frictional resistance; it will work "sweetly," and the wear on both sprocket teeth and blocks, not to mention the pins, will be slow. To clean regularly, and oil and graphite very lightly but often is the treatment for abating as far as possible the chain nuisance. On the other hand, to put it through, sick or well, and dose heavily with oil and graphite sometimes, is the sure way to wear "flats" on the blocks and cut the teeth down to points, besides always having a dirty, messy chain.

JULIUS WILCOX.

FOR MOUTH-CLOSING PURPOSES.

The clam has become famous through his ability to keep his mouth shut. Few wheelmen are able to successfully imitate the clam in this respect, so forth steps Mr. Oscar McCullen, of Richmond, Va., who has patented a mouth shield. Regarding this invention and its use, McCullen says:

"The great majority of riders find it extremely difficult to keep the mouth closed while riding, owing to the exertion in pedalling; consequently, in cold weather, suffer seriously from sore throats, coughs, and eventually more serious results follow."

The mouth shield, which is made of German silver spring wire, formed midway into a coiled spring holding into position the embossed leather mouth flap, which covers the spring and prevents it from touching the face, presenting a neat appearance, and fitting comfortably to the face, effectually prevents the wind and dust from entering the throat while riding with the mouth open.

LIZZIE'S PA IS SORRY NOW.

Lizzie Dietz, of Cedar Rapids, Iowa, had cycling aspirations. Lizzie's pa was a rabid cyclophobist. Lizzie defied her parent and rode the wheel. Pa procured a log chain, fastened it with a lock to her ankle, and then said he'd like to see her ride "that tarnel thing." Lizzie dragged the chain and herself to court, told her story, and now pa is in jail charged with cruelty to his child. As love is said to laugh at locksmiths, so does cycling chirp at chainmakers.

CASH FOR NOTORIETY.

To Miss Charlotte Smith—Free list has been entirely suspended. If you want to advertise yourself by attacking the bicycle, regular rates must be paid. These will be furnished you on application. In future, unless cash accompanies your order, your name and your anti-wheelwomen diatribes will receive no further notice in the columns of this paper. Sabe?

FOR TIRE-TACKERS' ATTENTION.

The Kneipp cure consists in walking barefooted in the grass morning and evening. It is to be hoped for the future of the Kneipp cure in this country that the tack-throwers who have of late been so pointed in their attentions to wheelmen will not get after the Kneippists, too.

GONGS ON THE REAR FRAME.

Gongs attached to the rear frame of the machine, to tandems, particularly, are multiplying daily, in this vicinity at least; indeed, the demand has become sufficient for the G. R. Johnson Co., No. 107 Chambers-st., this city, to market a gong for the purpose.

down is that the chain should always be dry—that is, that there should be no moisture on it, either of water or of oil.

The pin friction should be treated with oil, largely because graphite cannot well be worked in; the block friction should have graphite. When dirty enough—that is, occasionally, depending on amount of use and exposure to mud—the chain should be removed and put to bath in that great solvent and cleaner, kerosene; between those times, wipe it with kerosene. The surfaces all being clean, including teeth and the spaces between the blocks, begin at the fastening screw and give each pin a drop of oil, going around in order; spin wheel a few minutes, then wipe off carefully all visible oil, thus leaving a dry chain, since oil is wanted in the chain, not on it. Then take a knife blade and lay a little graphite on the back face of each tooth in the small sprocket, and a forward face of each tooth in the large one; spin the wheel again and wipe off any excess, observing that only a thin coating, not a dab or a chunk, is wanted on each tooth. The oil is now inside, where it belongs, and the graphite will distribute itself. The wearing surfaces are now lubricated, no matter how "dry" the chain may look; and the dust which falls on it will not mix with the graphite.

This takes time, certainly; one may easily occupy perhaps half an hour at it, though I

WHY HE WAS WORRIED.

He had just come from a thirst parlor, where alleged quenchers and humidity cures were doled out at so much per dole. Standing on the sidewalk he watched wheelman after wheelman shoot past him, then turning to the neighboring bootblack he unburdened his heated feelings in this fashion:

"The sun pours down large pailfuls of burning, blistering heat, the clouds drop great big hunks of humidity in the air and the zephyrs positively decline to blow, yet the bicycling enthusiast is still at large, pushing his pedals through the sunburned streets and around the dusty country. He, quite often she, does not seem to mind the heat though his clothes fairly drip with perspiration.

"Wherever I go, when I go at all this hot weather, I meet him and he seems to enjoy it, aggravating me beyond measure with his grim smile of indifference to the weather that causes me to think in words I would shudder to breathe aloud. And, what is more, none of them seem to be overcome by the heat. Guess I'll take another drink."

And once more the welcoming doors of the thirst parlor received his perspiring form.

MIXTURE OF OCCIDENT AND ORIENT.

Japanese women have adopted a queer cycling costume which consists of a combination of bloomers with the native dress. Combined with the upper part of the kamona costume the Japanese clothe their nether limbs in what are neither knickerbockers, trousers, zouaves nor bloomers. The ludicrous effect is heightened by the girl having the national habit of turning the toes in developed to its largest extent.

All that you can see when she passes you is a pair of round and pretty heels wabbling in an uncertain manner, and a little body coiled up that makes you think of a gay little monkey on the top of a pole.

CYCLE MONUMENT PROPOSED.

All the world is out of doors in these days, and if there are mortal feuds among the advocates of different machines, still the world is out of doors, getting rid of rheumatism and neuralgia and dyspepsia. And the time is not far distant when the dress of both men and women will undergo modifications for the better. Trailing skirts and trousers have had their day, and common-sense ideas are bound to prevail. The bicycle is responsible for it all, and out of sheer gratitude, declares "The New York Herald," we ought to have one on a granite pedestal in Central Park.

SAYS SANDALS ARE PROPER.

The latest suggestion of the non-riding instructor of cycling is for the wheelman to wear sandals. No doubt, when looked upon from a healthy and reasonable point of view, these light foot coverings would answer admirably. The muscles of the foot and ankle would have perfect freedom of movement, and the feet would be decidedly cooler than when covered with most of the shoes worn. In spite of these advantages, however, it will be a long time before these ancient classic articles of footwear will be very generally adopted by those who cycle.

A CASE OF TIGHT FIT.

"Niggles thinks riding a wheel is making him fat."

"Isn't it?"

"No; he's had his sweater washed and it has shrunk."

OLD IN TRADE, NEW IN TIRES.

When an old concern in a certain calling starts in on a new line, endowed with a business reputation of sterling quality and a past record that has raised them among the leaders, then half the battle is won. The name of T. C. Chase & Co., 129 Washington street, Boston, Mass., comes as a stranger to the bicycle trade, but for more than forty years they have been the leading manufacturers of various fabrics, such as horse blankets, carriage robes, car and furniture plushes, rubber cloths, etc., and the word "CHASE" has always been synonymous to the best it was possible to produce.

Recognizing in the bicycle industry a chance for the enlargement of their business, they have decided to utilize their experience in the handling of rubber, and are putting on the market what they call the "Chase Tough Tread Tire." It is of the single-tube variety, with a roughened surface. Sea Island cotton is used, and it is so constructed that the tread is reinforced with a double thickness of the fabric, making it practically puncture-proof. The best rubber that money can buy enters into its composition, and, made under the direct supervision of a rubber expert of ten years' experi-

ence, it could not be otherwise than perfect.

THE WHEEL man was shown some Chase tires that were almost impossible to puncture with a sharp knife, and to force a tack through the tread was an utter impossibility. Another good feature is the reinforcement of the valve-stem joint, and the old trouble of a cut and subsequent leak at this point is entirely done away with. The granular surface is also an excellent non-slipping device, and withal the tire shows resiliency that is surprising.

Up to the present time they have only been marketed locally and in a comparatively small way. It was a maxim with them of "Be sure you're right, then go ahead," but the results have been very gratifying, indeed. Many testimonials have been received from various sources, and all decidedly complimentary to the newcomer. Those who know the Chase Company best predict that they will prove a big factor in the trade. They have many advantages, and their success in other directions augurs well for their prosperity in the tire* business.

THIS COULD NEVER HAPPEN.

Here is the queerest story in the whole world. A wheelman and a pedestrian collided on the Boulevard, and both went to the ground. Upon rising the pedestrian apologized for being in the rider's way and not hearing him ring his bell, while the wheelman explained how sorry he was that he could not in any way avoid the accident. In the absence of sworn affidavits to the truth of this story it is believed to be pure fiction. Even with the affidavits it would be difficult of belief.

WON'T REST HERE.

"The Cyclist's Rest," which was completed by the Church Temperance Society at a cost of \$1,200, was to be a place where cooling drinks and light refreshments could be obtained without wines, liquors or beer. The structure was artistic and in every way pleasing. Before it was fully decided to build the "Cyclist's Rest" permission was obtained to have it stand, free of charge, at a point on the Riverside Drive. This permission now has been withdrawn by the Board of Aldermen without assigning cause.

WHERE SHE RESTS AND FLIRTS.

The Chalet des Cyclistes is a favorite resort for Parisian wheelwomen. It has every accommodation for guests; racks to hold the cycles are arranged surrounding the flower-beds on the grounds, which stretch far away behind the Chalet; attendants are placed about ten yards apart, down the path at the entrance, and the bicycles are passed deftly from one to the other, and stacked when they reach their destination.

AN ALL-WOOD WHEEL.

A French peasant has turned out a monument of patience and perseverance in the shape of a wooden bicycle, wherein he used only wood for every part. The very nails that rivet together the parts are of hard wood. The ingenious maker uses this rough vehicle to ride into the market town, which is several miles away.

EXPANSION AND FREE RUNNING.

It has often been remarked that during very hot weather, like that recently experienced, machines seem to run less freely than in cool weather, the cause of this naturally being attributed to the expansion of metal in various parts of the machine due to the heat.

HAD BEEN THERE.

"What's that?" asked the public official as the package was handed him. "An infernal machine?"

"Yes," replied the clerk. "That's exactly what it is. Somebody has presented you with one of those pocket tire pumps."

CYCLING TRADE REVIEW

Copyright 1896, by F. P. PRIAL.

VOL. XVIII., No. 5.

NEW YORK AND CHICAGO, SEPTEMBER 18, 1896.

WHOLE No. 447.

SOUGHT SOCIETY'S FAVOR

But Lumbermen McClave's Venture in the Cycle Trade Ends in Failure—Bamboo Bicycles First Attracted Them.

Scratch the Colonial bicycle off your list. You will probably never hear of it again. Its makers—John McClave & Sons—have, in the vernacular, "gone up the spout." Liabilities, \$100,000; nominal assets, the same.

The firm assigned, without preferences, on Friday last to William Harrison. The concern consisted of John McClave, Albert McClave, John McClave, Jr., and Stephen Wood McClave. They occupied, in the manufacture of the bicycles, the old hardwood factory at Twenty-first street, Eleventh avenue, Twenty-second street and the North River, this city.

Stephen Wood McClave made an individual assignment also to Mr. Harrison. He had indorsed some paper for his father in the lumber business. Edward M. Shepard, once the Democratic Reform candidate for Mayor of Brooklyn, is attorney for the Messrs. McClave. He says if the assets can be disposed of at their cost Mr. McClave will be able to pay his creditors in full. If the assets are sacrificed there will be a heavy loss. Two hundred bicycles are included in the stock on hand.

John McClave & Sons is one of the oldest, largest and supposedly wealthiest firms in the lumber business in this vicinity, and also because of the political prominence of the senior McClave the assignment, although it does not affect the lumber interests, created sextuplet-headed newspaper talk.

The firm first engaged in bicycle manufacture in the spring of 1895. Shortly before they had seized several bamboo bicycles for debt and so readily disposed of these that they undertook their manufacture. These did not sell so well, and the next and most natural step was a shift to the accepted wheel of steel tubing. These were named the Colonial and boomed as "Society's Favorite," "The Wheel of the 400," etc. They were good lookers and embodied a number of excellent talking points but evidently "society" proved unappreciative or was soon supplied, for early in the present season THE WHEEL was aware that Colonials, minus name-plates, were being shipped in truckload lots to one of Sixth avenue's big drygoods stores and being disposed of at bargain counter prices.

LANE LANDS ON THE LIST.

Huntingdon, Pa. Sept. 14.—The H. H. Lane Company, machinists and foundrymen, who also manufactured the Juniata bicycle, made an assignment to-day for the benefit of creditors. Liabilities will reach \$8,000; assets, about \$5,000.

WOOD RIMS IN FRANCE.

If there is no demand for wood rims in Europe, as so many English papers assert, then some European capitalists are proving themselves very foolish fellows indeed.

Although the identity of the moneyed men is shrouded by the term "syndicate," and their representative now in this country is described merely as "one of the leading makers of high-grade wheels on the Continent," it is fairly safe to say that M. Clement, of Paris, is the gentleman. His presence in this city was coincident with that of W. W. Stall and immediately following came the announcement from a source that is not to be questioned, that arrangements and contracts had been made by which Mr. Stall, president of the Boston Wood Rim Company, is to establish a factory in Europe capable of turning out 500,000 Boston laminated wood rims per year.

Experts are already preparing plans for the plant, which will be erected and operated by Mr. Stall and a corps of experts from the home works at Bedford, Mass. This plant, while not so large, is intended to be a duplicate in details of outfit of the American factory, which has a capacity of 900,000 rims per year.

BANK RUNS A CYCLE PLANT.

The factories of the crippled Telegram Cycle Company, Milwaukee, are being operated by the First National Bank, and an effort is being made to reorganize the company, and it is stated that when the organization is perfected the new company will purchase the entire plant from the bank and continue its operation, as though the failure had not occurred. Secretary Pingree, of the Telegram company, will not be connected with the new company. Joseph E. Cordes, who has long been connected with the old company, has been placed in charge of the plant as general manager.

PATTISON LEAVES THE POPE CO.

Arthur E. Pattison will leave the Pope Manufacturing Company. Why, THE WHEEL does not know. He has resigned as secretary of the company, dusted the Columbia dust off his shoes and left. Mr. Pattison was one of the right-hand men, held a high position on the Colonel's staff, travelled, represented, managed, and did a lot of important work. The resignation had not even been hinted at.

The Johnson-Field Company, manufacturers of tanning mills, farm machinery and bicycles in Racine, Wis., made an assignment Monday. No statement of the assets and liabilities is given, but it is understood that the firm is in fairly good shape.

WILL PAY DOLLAR FOR DOLLAR.

The Marion Cycle Company Temporarily Embarrassed and with Assets Exceeding Liabilities by More Than \$100,000.

Marion, Ind., Sept. 13.—The Marion Cycle Co., makers of the Halladay bicycle, assigned yesterday to J. C. Tibbits. Assets, about \$150,000; liabilities, about \$40,000.

As the figures indicate, the embarrassment is not likely to prove serious; there is scarcely a doubt but that the concern will pay dollar for dollar. The Messrs. Halladay acted for the best interests of all concerned, and sympathy for them is general. The firm was squeezed in the Porter & Gilmour failure in New York, but two or three minor creditors who endeavored to enforce collections were the immediate causes of the action, as rather than show preference, the firm assigned, much to their own surprise, as they themselves say.

It is one of the many recent troubles precipitated by slow collections and inability to affect loans from the banks on ample collateral because of the free silver agitation.

Only this season the Marion Co. had made extensive enlargements and additions, and others were in prospect, and when inventory was taken on August 1, the net worth was estimated at \$125,337.40. The plant was inventoried conservatively at \$104,593.07, of which \$57,057.52 was represented by stock, \$31,014.90 by machinery and tools, and \$15,443.90 by real estate. In good outstanding accounts alone there is due the firm sufficient to pay every dollar they owe.

A meeting of creditors will shortly be called. In the mean time Assignee Tibbits expects to operate the plant and complete the partly finished product.

SARATOGA'S SHERIFF IN POSSESSION.

Saratoga Springs, N. Y., Sept. 12.—The Sheriff is in possession of the stock and fixtures of the Hulbert Bicycle Company. Action was based on four executions issued on voluntary judgments against Charles N. Hulbert, as follows: The Gormully & Jeffery Manufacturing Company, \$1,700; the Ballston Spa National Bank, \$850; the First National Bank, \$700; the Eastman Kodak Company, \$250. The stock here and in Ballston Spa will cover the judgments. An inventory is now being taken, and the stock will probably be sold.

SAMPLES FREE.

The President of the Argentine Republic has issued a decree remitting duties on bicycles and parts thereof sent from the United States as samples.

THERE IS TROUBLE AHEAD.

That Dunlop Boom Has a Bad Puncture— Some Queer Lines in New Wheels.

London, Sept. 2.—Financial matters still worry us.

The long delayed settlement in Dunlop shares has been announced, and it is said that there will be trouble among the brokers in consequence, as so many of them have been overweighed with dealings by clients who have nothing to pay losses with, that there is bound to be a crash. So confident were the members of the Dublin Stock Exchange of this, that they refused to fix a settlement on the deferred issue corresponding to that admitted by the English exchanges, which considerably complicates matters so far as this issue is concerned. The Osmond settlement has gone through quietly, but so many have "carried over" on Cycle Manufacturers' Tubes, that the weakness of the whole market was revealed and a slump ensued. Dunlop deferred fell from 12s. 6d. to 8s. 6d., Tubes from 21s. to 17s. 6d., and other issues in proportion. It is reported that the market will soon recover, but in that opinion the wish, I fear, is father of the thought. Anyhow, other flotations are almost indefinitely postponed, and only a series of satisfactory, if not glowing, balance sheets can set matters on their old basis.

It is authoritatively stated that Messrs. Hooley and Rucker have commenced proceedings for the recovery of the £25,000 which they had posted under protest as a deposit under the agreement they had entered into in June last for the purchase of the Grappler Tire Company. So many rumors are afloat regarding this matter that it is best to ignore the whole lot and wait for developments. While on this subject, I might remark that there seems to be some difference regarding legal terms as used here and on your side. For instance, when I reported that writs had been issued against Messrs. Hooley and Rucker in the Grappler matter, it was assumed, apparently, that these gentlemen had been arrested. They were not. The writs for arrest were asked for and granted, but their use was never resorted to. Hence to say that they were arrested was too previous, and, as the present state of the matter shows, gave an erroneous implication to the affair which I am sorry should have occurred.

Quite a song has been made in the cycle press because a few American firms have had the good sense to purchase samples of our leading machines for shipment to their factories. In some way this seems to be regarded as an underhand business proceeding, but for the life of me I can't see why. If it had been a new departure on this side I might have understood the view, but when I reflect that years ago most of our now leading firms invested in one or two machines of other makes for the purposes of duplication, I can only commend the good sense which prompted a wise move, and decry the servility which finds English shrewdness in a foreign rival and calls it dishonesty. The purchase of those dozen or so English machines is a matter for which the British public has had much cause to be thankful. Other makers found after years of effort that though they had secured the look of that famous machine, they had failed to grasp some occult principle which made the better machine a class above them. Dissection in skilled hands laid this bare, and as a result even the cheap safety of to-day runs easier and stands up better than did the great majority of high-grade machines built four years ago.

American makers, I take it, have not bought English machines in order to slavishly copy them, but they must recognize the fact that having been designed to meet the demands of English riders, the points of difference and design between English built and American machines are points which are generally in favor of the English article from a selling point of view. These points of difference can be best studied by experts, and I am convinced that the American machines which will be exhibited at the shows will prove by their assimilation of the better points of each class that the move has been a wise one which does not even require success as its excuse. So far Osmonds and Humbers seem to be the guides, and it would be impossible to get two machines more dissimilar in their characteristics. The Humber is the personification of years of steady development—the Osmond unique in its successful originality.

The first of the 1897 patterns comes in the shape of a tandem designed from France.

It is built by Maison Marie et Cie., of Paris, and looks a likely design for multicycles, which at present lack rigidity badly. Tandem designs, however, do not need this complexity of struts, as the ordinary design has been found amply strong for all practical purposes.

The French press for some time past have been attacking the Minister of War for passing over Captain Gratz, the inventor of the collapsible bicycle, for military purposes, which has been under test by French military authorities.

In this the main top and bottom tubes collapse on hinged joints, which, when the machine is to be ridden, are bolted in place and a sleeve is pulled over the join, making it, it is claimed, even stronger than an ordinary frame of the same weight.

The Stanley Club are only a week behind their rivals of the Palace in their announcement of the rules and conditions governing their twentieth exhibition, which will open at the Agricultural Hall on November 20, and will close on November 28. The Stanley charges differ slightly from those of the rival show. They are: Bicycles, 10s. each; tricycles (single), 12s. 6d.; tricycles (tandem), 15s.; triplets, 17s. 6d.; quads, 20s.; juvenile machines, 7s. 6d.; per foot frontage, 5s. No re-

strictions are placed on the exhibition, beyond the fact that space will be allotted according to priority of application. Exhibits will be received on Wednesday and Thursday, November 18 and 19, and a special description of the exhibit, according to a form furnished, must be in the secretary's hand before October 21 for catalogue purposes. I believe that the majority of American makers will show at the Stanley, but the Pope Manufacturing Company will go to the Palace.

IN 1916.

Judge—What's the charge against this man?

Court Officer 3,240—The suburban cycle squad brought him in, Your Honor. He was found wandering in the outskirts. When asked what he was looking for, he said sidewalk.

Judge—Great Caesar! Doesn't he know we have no use for sidewalks during the last twenty years? Where's his wheel?

Officer—He has no wheel, Your Honor.

Judge—No wheel! What is he, anyway?

Officer—He says he's a—a—pedestrian, Your Honor.

Judge—Put him in the padded cell until I can commit him.

WOOD RIMS AND ITALIAN CUSTOMS.

A decision has recently been given by the Italian customs authorities to the effect that all wood rims imported into the country in an unvarnished condition or without holes cannot be classified as cycle wheels or as incomplete wheels, but must be entered under No. 178 of the tariff as wood material.

CYCLE BRAZIERS IN NEW ZEALAND.

The question having recently arisen as to the duty to be imposed on cycle braziers and forges imported into New Zealand, the customs authorities have given a decision that they are to be classified as "hardware," the duty being at the rate of 20 per cent ad valorem.

CLASSES WHO CYCLE.

According to carefully compiled French statistics, the professions which take most to cycling are, first, clerks, then merchants and persons living on their income, followed by doctors, civil servants, lawyers, engineers, etc., Deputies and Senators winding up the list.

On the Continent, as a rule, vehicles and cyclists keep to the right, but the civic authorities of Milan have idiotically decreed that wheelmens must now keep to the left, while all other forms of vehicles continue to the right as formerly.

A few years ago the King of Italy banished one of his cousins, the Duchess of Aosta, from the court for riding a wheel. Now his own wife is a cyclist.

Tom Linton and his less famous brother, Sam, will sail from England on November 1 for Australia, where they will race during the winter season.

It has been found that a bicycle runs easily on the sands of Africa; but that is no argument against having good roads in this country.

France has a play named "The Tandem," which is drawing crowded houses to the theatre where it is running.

Three years at hard labor is what the cycle thief gets in Holland.

Among French riders of the bicyclé women average one in twenty.

"SPANGLING PANICS OF LIGHT."

The More or Less Gorgeous Night Parade Which Begot That Brilliant Description.

New York, which is always more or less mad on Saturday nights, was particularly and peculiarly frenzied on Saturday night last. It went bicycle mad. The "Journal" was the cause of it all. Handsome and unusually valuable prizes were offered for all sorts of things at its night bicycle carnival. It was a huge success and hugely unsuccessful.

At 8 o'clock a hundred thousand folks lined the line of march, which was principally the Boulevard. The night cycle pageant did not pageant until precisely 9:46, as per the Remington clock, as with more or less frequency, interruption and intermingling, it kept it up until precisely 11:59:59 4-5, by the same Remington clock. If that is the best the marshals, aides, captains, generals, and all the other most worshipful order of officials can do, they had better stop aiding and marshalling, and all the rest of it, and leave the business to fellows who have never done any putty-soldering.

The cyclists did themselves noble. They turned out in thousands, stanch men, funny men, neat women, pretty women, flashy, garish, shameless women, dainty children—all were in the stream. They spent thousands for ribbons and lights, and flags and costumes, and spangled gowns and Chinese goatees, and all the rest of it. The effect was varied, beautiful, laughable, admirable, amusing and side-splitting, eye-opening. At points it was a moving mass of animated, intelligent and joyous fireflies.

Many houses along the route were gay with light and color. Roofs were crowded, temporary stands were packed; orchestra seats on the tall ends of trucks were sold at a premium; sixty-seven thousand soap and other boxes were sold. It was an outpouring of a people seeking free and harmless diversion. The interest in cycling in this town is feverish.

Bands were stationed along the route. They played vociferously. Review stands were at various places. The heart of the whole thing was at the Metropolitan Bicycle Academy, Pope's place, Bridg's place, which was highly garnished with gold flags and silver lights, and which kept alive with life and light and color until Sabbath sunrise; no; that's so, it rained Sunday a. m.—no sunrise, please.

And Reeze's! Praise for Reeze. Reeze's beautiful, terra cotta palace of refreshment was richly decorated, real richness. Heavy Uncle Sam flags graced it from roof to restaurant, undulating patriotically in the breeze. Streamers streamed and bunting bunted. At places burned lambently and splendidly dim, electric tongues, globe covered with globes of myriad tint. Reeze marked the night right royally inside and out.

The Harlems got a punch bowl for beauty and another punch bowl for something else. Happy, quaffing, bumping Harlems. The Century Wheelmen got a bowl and ladle for "largest numbers." Lucky lading Centuries. The Hackensacks got a tobacco jar for "largest out-of-town;" happy Hackensackers; snuffing, puffing Hackensackists.

As the parade swept past the judges' stand probably prizes were presented with pretty, promising purple badges. Then they rode into Bridg's place, where the final award was made after a careful close inspection and long-continued cogitation on the part of the eminent judges—Andrews, father of the C. Cop; Collis, father of asphalt ribbons; Dayton, Postmaster; Seligman, the enthusiastic;

Townsend, he of the eagle eye, and the precipitous intellect; William C. C. Hughes, Marshall P. Wilder and other gifted men.

M. M. Belding, Jr., was grand marshal Perhaps the delay of 1h. 47m. 35s. was not due to him. Perhaps it was not the fault of George C. Pennell, F. W. Frobisher, Julian B. Sharpe, A. H. Curtis, A. H. Gleason, Adolph Stahl, B. F. Brunner, J. M. Riggs, P. S. Tilden or J. M. Cummings, who assisted.

The Harlems had 150 out. The Stearns sextette marked a point of interest. The big, powerful gold bug was a pet with the crowd. "There were quinks and spangling panics of lights, glowing globes, a wilderness of magnificent orchids," says the "Herald" in gurgling delight. Multi-colored constellations, parterres of human faces, dense throngs, darting, rushing, beaming, gleaming, streaming, glowing, slowing, flowing, carnival of fairies, impassable brigades, endless cataracts of light, indescribable, rousing, rolling, uncoiling, moving meadow of phosphorescent flowers; dazzling, puzzling, striking—these, dear reader, that's what the "Herald" man thought of the Journal's parade. And as he wrote it he dropped a once capacious and well-stored dictionary.

From midnight of the Saturday to nearly morning of the Sunday little white-dressed girls with pink, pale blue and magnetic legs, hair-spangled girls of thirteen and fourteen, "stars of the night," Columbines, clowns, Li Hung Changs, baboons, Uncle Sams, Tom and Jerrys, Peroxides, and all the rest of it, these once proud mortals, panoplied with all the art of the costumer and the electrician, and the

artist in grease paint, pedaled home, prize-less but happy, a gay, careless, don't-care-had-a-good-time-anyhow sort of happiness.

A truthful reproduction—on a tandem—of the battleship New York, with smoking funnels, turned the heads of the crowd. Multitudinous mouths gaped at the Harlem's beautiful arch, carried on four tandems. There were military cyclists in it. The affair cost \$12,000; the bombs shot off all night to add exhilaration and intoxication cost \$800.

A number of women impersonated "Night"; others fancied "Day." Suns, moons, stars and crescents were thick as pearl seed. Li Hung Chang was there forty-one times.

The parade started from Fifty-seventh street. It turned at One Hundred and Tenth street. The head of the line had reached the starting point before the rear guard had left. This will give some idea of its magnitude. There was the usual slow ups, dismounts, gaps and scorches to close up that characterize all cycle parades.

Mr. Solomon managed the whole business.

PARADES HERE AND ABROAD.

In America, nowadays at least, a cycle parade is either an advertisement for a newspaper or a boom for a politician. In England parades are almost as frequent, but they are usually for charitable institutions. "Out-runners," afoot and in fancy costume, dart in and out among the spectators, and "pass the hat." The collection, which often amounts to hundreds of dollars, is handed over to some public charity.

"RIBBONS" OF ASPHALT.

The building of a stretch of asphalt on either side of Hudson street is another step in the right direction; also the putting down of a ribbon of asphalt on Madison avenue. The stretch of asphalt on Hudson street, when it is completed, will connect the upper West Side residential district, containing hundreds of thousands of homes, with the downtown business district, and we may expect streams of people to avail themselves of this new roadway between their homes and their businesses, and it will profit them financially, as well as physically, besides af-

fording them additional pleasure at both ends of the day.

It must be borne in mind that people will cycle, and those who believe that cycling is but a passing fad must remember that cycling will only pass when something better succeeds it. The world will continue to move about on smooth pavements and on rubber-shod vehicles, either manumotive or power-driven. The day of cobbles is gone by, just as thoroughly as has the day of the stage-coach.

NEW CLIPPER

BUSINESS BICYCLES have given almost universal satisfaction for nearly five years. Dealers who have sold them are, generally speaking, much better pleased with these wheels than most others. Very few dealers who buy and sell Clippers one season fail to renew contracts to handle them again. One of the best features of the Clipper are the

DUST-PROOF BEARINGS,

made of fine tempered tool steel.

Many makers claim tool-steel bearings; a few have them; the majority, however, use machine steel and case-harden it. The NEW CLIPPER AGENCY for 1897 will be a more valuable one than ever before. If you are a responsible dealer, and want a line of legitimate bicycles, let us hear from you. CLIPPERS are too good for dry goods and jobbing trade or auction rooms.

MADE BY THE GRAND RAPIDS CYCLE CO.

Notice to Advertisers.

WHEEL ADVERTISERS are notified that change of advertisements is not guaranteed, unless copy is received by Saturday morning.

TO FOREIGN INFORMATION SEEKERS.

Owing to the number of inquiries received from abroad in regard to the status of American firms, THE WHEEL announces that it will give to all such inquiries the most careful attention, and all foreign merchants desiring advice or information regarding American trade are invited to correspond with THE WHEEL.

RESTRICTED STREET TRAFFIC.

THE WHEEL strongly commends the idea of reserving the Boulevard from Fifty-ninth street north as a pleasure avenue, as a place devoted to the recreation of the people. A resolution has already been introduced in the Board of Aldermen, and every broad and enlightened member of that Board will vote for it. The idea is to reserve the Boulevard for cyclists and for all pleasure vehicles, to keep all heavy traffic from it, and to permit delivery wagons and other light commercial traffic to use the Boulevard only on those blocks and at those points which are their necessary destination.

The ultimate object of all labor and of all effort is recreation. In this country we have had too little of it. It has been all work and no play. Here we work to make a "pile," whereas in all foreign countries men only work to secure a permanent income, and as soon as that permanent income reaches their ideal of adequacy, they retire from business. They thus enjoy the fruits of their labor while they are yet in a position to enjoy them, and they also make room for other people, for younger men to step

into their places. That is really the ideal scheme of society.

Of course, we may expect people who do not understand pleasure and who are always prating about the "rights of the people" to make some hue and cry over the setting apart of this Boulevard for the purpose indicated. In every polished city in the world certain streets are set aside for recreation purposes. In Paris, for instance, the plan is carried to an ideal point. For instance, a builder is not permitted to drag heavy iron girders through the streets of that city except only after nightfall. We, however, are scarcely ready for that in this young country, but it is an ideal which we should keep in the mind's eye—the advancement of the comfort of all people.

The characteristics of our newer country are unevenness, roughness and jar. Everything is turmoil. There is not enough harmony. It is a grinding round all day and practically all night. As our education and our prosperity increase, our desire for evenness and restfulness also increases, and in time we are only happy when we can obtain both.

While the Board have this question before them they should also keep in view other plans of the same character. THE WHEEL suggests that Central Park West, from Fifty-ninth street to One hundred and tenth street, be asphalted from curb to curb, and also reserved for a pleasure avenue. On one side of this avenue is the Park. On the other side, extending the two and a quarter miles, is a collection of dwelling-houses which the world cannot outmatch. They are all of new and beautiful design, and this avenue will in time be one of the sights of the city. It must also be borne in mind that the majority of these houses are not the homes of the extremely wealthy, but of those who belong to the middle class, or the newly made class.

DANGER IN PREMATURE SHOWS.

IT is proposed to hold bicycle shows during the early fall in New York City, in Dallas, Tex., in Richmond, Va., and in some other cities. Besides these shows, which have already been fixed as to date, there are echoes of projected shows from all parts of the country.

The Board of Trade has publicly announced, and notified its members, that under no circumstances will any bicycle show be sanctioned until after the Board's Eastern and Western shows are held. They point out that, in the present depressed condition of the bicycle trade and of all business, it is injudicious and a waste of money to patronize any show of bicycles. The Board of Trade is taking a very firm stand in this matter, and they recall to the attention of their members the fact that they are bound by contract not to exhibit or allow their agents to exhibit at any non-sanctioned show.

The action of the Board is to be highly commended. The Board, from its entire infancy, has always had a number of leech-

like functions drawing the life out of it. The condition of the trade to-day is largely attributable to an unwise expenditure of money, to a reckless investment in the rush to get business. The fact that "getting business" is not the whole story has been largely lost sight of. There is no use of getting business which cannot be handled profitably. It is very pleasing to know that many of the members of the Board of Trade are holding their agents up to a strict accountability in regard to non-sanctioned shows, and they have so notified the Board.

THESE CAN WELL BE SPARED.

THE mongrel collection of toughs and blackguards who find amusement in loafing on street corners and curbstones has found a new social diversion in the passing of their offensive opinions regarding such wheelwomen as may be forced to pass them. To such abuse and blackguardism is indirectly due the death of one wheelwoman last week, who, in her endeavor to escape from it, crossed to the wrong side of the street, collided with another rider, was thrown and killed.

Even blackguards and corner loafers are entitled to their opinions, but they should not be allowed to foully express them in such a manner as to reach the ears of innocent and decent passersby. The close approach of election time makes it a particularly unfortunate time to call public attention to this class of offenders, and yet, from the same cause, it makes his inclination to offend all the more pronounced.

Despite this unfortunate condition of affairs, we believe that the present Board of Police Commissioners are not in sympathy with such a disgraceful condition of affairs, and in consequence of this belief we call upon them to suppress the loafer critics. An officer in citizen's dress, mounted upon a bicycle and patrolling Eighth avenue one evening between 7 and 10 o'clock, can find ample cause for a number of arrests, sufficient to make him famous and to win the gratitude of every decent man and woman. Here is an excellent chance for our cycle squad to distinguish itself in a manner more honoring than the winning of races and the giving and accepting of challenges.

FLAGMEN NEEDED.

THE Long Island Railroad is evidently so busy making travel over its lines unpleasant for wheelmen that it has but little time to devote to anything else. In consequence we find added to the already long list of those its trains have run into and injured, maimed or killed, a police patrol wagon and the officers it contained. We believe the League of American Wheelmen could perform no greater public service than to introduce a bill at Albany compelling the Long Island Railroad to keep flagmen at every road-crossing the entire length of its line. By compelling the railroad company to do this the League would enable the Long Island management

to devote its entire time and energies to harassing those wheelmen who are forced to make use of its inferior transportation facilities. Of course such a law as the one proposed would cost the Long Island management thousands of dollars annually, but the company would gladly spend the sum for the pleasure it now derives from annoying its cycle-carrying passengers.

A wheelwoman has met death by her wilful disregard, or culpable ignoring, of the laws of traffic. Riding on the wrong side of the street, a collision resulted, and the woman paid the penalty with her life. Much as such an unfortunate affair must be regretted, still, even from such a sad affair, good may come, if it impresses upon every rider of the wheel the rule of the road which tells all users thereof to keep to the right in meeting all traffic, and pass to the left when overtaking other vehicles. Daily the use of our streets and highways becomes more dangerous, owing to the rapidly increasing traffic thereon, safety and preservation of life and limb can only come by the strictest possible observance of the simple laws we have noted above. Wheelmen more than any other users of the highways should appreciate this fact and carefully avoid any infraction of the rules of the road.

It is possible with some good things to have too much thereof, but at the moment the cycle mounted policeman is an excellent thing from which no danger of surfeit yet exists. We are pleased to see that New York's Police Commissioners take this view of the matter, and propose to add materially to those officers who pedal as they patrol. With a cessation of the injudicious praise which has been unfortunately bestowed upon the cycle policeman, with his passing from a race-meeting exhibition freak to an ordinary guardian of the public safety, the cycle policeman will increase both in numbers and efficiency, to the benefit of all concerned.

As THE WHEEL is not in the penny-beautiful promoting business we pass the suggestion of a cyclists' shrub or flower planting day to those New York papers which revel in that sort of thing. The suggestion is that cyclists co-operate in the beautifying of the Boulevard by contributing hardy plants to be rooted in the neutral ground. The residents and authorities are so timorous in the matter and the Boulevard is so nearly a "cyclists' paradise" that the suggestion is not without merit.

The proposition to make the Boulevard a thoroughfare for pleasure vehicles only, not for bicycles exclusively, is excellent. The suggestion that one side of it be reserved solely for cyclists is assinine on the face of it. It would serve only to increase the danger and congestion, and result in such a state of affairs as existed on the Coney Island Wheelway before the "return path" was constructed.

The man who constantly thinks and talks of cycling until he loses sight of everything else is always in danger of parting with his judgment. When he does that, when he is entirely wrapped in the single idea of a wheel and its propulsion, he almost inevitably develops what unspecialized people call crankiness.

What stronger proof could there be of the present dominance of the wheel than the fact that the greatest of opportunists, Zola, is to take it as a foundation for a novel, just as he has used the steam engine, war and the Lourdes pilgrims?

The first study of a novice should be the anatomy of the wheel he rides; unless this be thoroughly mastered true cycling will ever be a sealed book to the ignorant one.

Sometimes a difference of opinion in cycling doesn't depend so much upon a different point of view as upon the length of time that one has viewed the thing from that point.

Pittsburg, after a trial of cycle-mounted police, declares that ten men on bicycles are equivalent in efficiency to an increase in the force of from fifteen to twenty men.

"Charge, Chester, charge!" were the last words of Marmion; and yet he never had to pay a bill at a country repair shop, or he would have died sooner.

You often hear a man say his heart is broken, but he doesn't make half the fuss over it that he does when he has a broken rim or pedal.

Paris has but just come to the cycle-mounted police. Imagine a French policeman with sword, helmet and uniform mounted on a bicycle!

The worst example of the "bicycle face" is that of the man who does not own a wheel himself, but keeps coming around to borrow yours.

Confidence is a still small voice telling you that the other fellow is doing something, and that you, also, must be up and at and about.

The trouble with the wheel of fortune is that the tire thereon sometimes punctures in an irreparable manner.

The woman who rides a wheel must be adapted to the costume she wears, as the punishment is to the crime.

A woman always means what she says about the wheel she rides at the exact moment of her saying it.

"All things come to him who waits"; but all things, in cycling, especially, are not worth waiting for.

Confidence is a subconscious protest against inactivity. Soon we shall all again be confident.

Faith in men and wheels is one of mankind's slipperiest possessions.

SANGER SCOOPS \$1,000.

**Beats Bald Decisively in Two Straight Heats—
Twelve Thousand Country Folk See
Him Do It.**

Tom Eck is a believer in the magnetism of big money prizes, which is, of course, not one whit surprising.

"You see," Eck once remarked to a WHEEL man, "there's a fascination in seeing a man win a big pile of money—in becoming rich in a minute or two, that the people can't withstand. They like to see it whether it's a horse race, a bicycle race or a prize fight."

Eck's theory panned out well at the Watertown, N. Y., Fair on the 10th, when a purse of \$1,000 was hung up for a match race, best two in three heats, between Bald and Sanger. This is the way a Watertown paper describes the crowd:

"Picture a big covered grandstand filled with over 3,000 people; an uncovered one west of it so crowded with humanity that nothing could be seen of it; thousands of people and vehicles lining the fences on either side of the track for a distance of more than a quarter of a mile; thousands of men, women and children standing upon the track. In the soft rays of a September sun glittering in a clear blue sky."

It is estimated that between 12,000 and 10,000 people were present, of whom about 4,000 overflowed on the track and hindered things generally.

Bald was the favorite, but Sanger won in two straight heats. Both were paced by Church and McCurdy, a tandem, and in both heats the men's tactics were the same. Sanger caught the pacemakers and started the sprints, and despite Bald's best efforts, won with plenty to spare. Time—First heat, first quarter, 30s., half, 59 3-5s.; three-quarters, 1:30; mile, 1:59 3-5. Second heat, 31 4-5, 1:00, 1:59 4-5. The crowd went wild when the times were announced.

Bald felt his defeat keenly. He said he had expected to win, "but," he added, "I have been off for a month. I don't expect to win all the time, but I'd like to beat out once in a while. I am petered out, I guess, but I'll get over this before the season ends.

Several amateur events were run in connection with the big race, the mile and two-mile open, tandem-paced, being won by Orley G. Tuttle, "the Rome rider who wore a red suit," in 2:12½ and 4:33, respectively.

JOHNSON WILL CRESCENT CITYIZE.

"Johnny" Johnson, who, by the mistake in the types of a New-Orleans paper, is described as "the wonderful rider," will winter in that city. He will take up his abode there late in the present month, according to the local authority, and at once begin "racing against the present world's records." E. C. Bode, of the World staff, was in the city last week, and concluded the necessary arrangements. The New-Orleans papers incidentally tell somewhat amusingly why Bode was once known as "King of the Pot Hunters." He was so dubbed, it states, "for the reason that his great speed won for him a long list of prizes, which other men were too slow to capture."

ZIM WILL NOT RACE.

Arthur Augustus Zimmerman will not go to Europe next season under Mr. Troy or under any one. He will not ride a Raleigh. He will not race at all. "No truth in the statement," wires Arthur from Freshold, here, by-the-by, he is making good money in his bicycle factory. The rumor circulated at the Waverly Fair meet. Arthur is circulating lots of "Zimmes" in Australia.

LAST LAP OF THE LADDERITES.

Nothing is easier to make mistakes in than the handling of figures. Be as careful as you will in compiling a table, sooner or later an error will creep in. The Ladderman, thanks to one of his statistical critics, has had his attention called to some minor errors in his ladder figures and this week corrects them.

The new figures in nowise alter the position of the first flight of upper rungers, and Gardiner still retains his hold upon the much coveted bag and first place. Butler's winning rush lands him in a dead heat with Cooper for second place honors. So successful has Butler proven himself at ladder-climbing that his friends are not at all backward in claiming that he will be the man on top of the ladder when the last lap of the last race of the '96 racing circuit has been run. Stranger things have happened.

Ziegler once more squeezes past Bald, gets rung four, and is into line to push those who lead him by only a narrow margin. Sanger once again gets a foothold and seems nicely graduated from the "also rans," while McFarland breaks away from the ruck and puts his foot at the bottom of the ladder, where for so long a time he occupied the top.

Points are based upon the racer's wins on the National Circuit only. A win counts three points, a second two points, and a third one point. The present ladder shows the men as they have climbed up to and including the meet at Philadelphia, Pa., on September 12.

PROMISES WELL.

The menu of the Quill Club Wheelmen's meet at Manhattan Beach to-day and tomorrow is unusually attractive. Bald, Butler, Cooper, Johnson, Kiser and nearly all of the other cracks are entered, while the hour race, in which Michael, and Waller are carded, should be worth going the proverbial miles to see. It should prove a runaway for the foreigner, but the tussle for second place between Weing and Starbuck should be spirited. Charles Murphy's twenty-five-mile match with Michael may also prove interesting, but it is necessary to linger long on the "may."

JUDGED BY BUNCHES.

The judging and scoring of the Denver twenty-five-mile road race on Labor Day was a monstrous bungle. "Here a bunch was missed" is a notation that appears half-a-dozen times in the summary of the finish. The crowd jostled the officials off their feet and caused confusion to reign supreme. One hundred and ninety men started, and, as usual, the backmarkers were practically handicapped out of the race by a ridiculous limit of 14 minutes. The race was fearfully fast, the two nine-minute men who finished in front doing 1:00:41, and all of the others riding in corresponding time.

THROWN BY A FOOL.

Con. Baker had a bad fall at the night races in Cincinnati last week. During a race a tradesman, who should have known better, ran across the track. Baker struck him and fell heavily on his head. He was picked up bleeding freely. With Baker out, Barney Oldfield, of Toledo, accounted for the two professional events in fair time, the five miles in 12:15.

Bonhours has been offered a salary of \$200 a month and all expenses to race in Australia. Bonhours has declined with thanks; he can earn three times that amount in France.

TEDDY TAKES TWO.

Teddy Goodman, who has practically been out of the public glare since placed in the professional ranks, bobbed up serenely at the Metropolitan Cycle Association's meet on Thursday night on the Olympia track, Harlem, and caught two firsts. Brock, the newly fledged professional of the South Brooklyn Wheelmen, rode second to him. Roomer and Fuller won the amateur events. The attendance was about 1,000. Night racing in New York has proved a losing game thus far. Summary:

One-mile open—1, W. C. Roome, N. J. A. C.; 2, C. J. Liebold, R. W.; 3, W. A. Brown, R. W. Time—2:38 2-5.

Half-mile scratch, professional—First heat—1, F. F. Goodman, R. W.; 2, Samuel Brock, S. B. W. Time—1:14 1-5. Second heat—1, Frank Albert, G. W.; 2, John Schuessler, R. W. Time—1:19. Final—1, F. F. Goodman, R. W.; 2, Samuel Brock, S. B. W.; 3, Frank Albert. Time—1:16 2-5.

Two-mile handicap—1, C. B. Fuller, L. W. (123 yards); 2, F. Richt, Brooklyn (90); 3, E. W. Dilts, L. I. C. (150 yards). Time—5:31.

One-mile handicap, professional—1, F. F. Goodman, R. W. (scratch); 2, Samuel Brock, S. B. W. (15 yards); 3, Herbert K. Smith, O. W., Brooklyn (40 yards). Time—2:27 3-5, track record.

HADFIELD'S EYES NEED FIXING.

Sam Brock, the fledgling pro. from Brooklyn, who suffered a fractured arm at Waverly on Saturday last, attributes his injury to the nearsightedness of Hadfield. This is fourth or fifth spill that has been laid at the Newarkian's door, and suggests that in the interests of safety the Racing Board should endeavor to find means of doing something. Hadfield's impaired vision is well known to himself and to his friends, who have several times beseeched him to wear glasses, but without effect. It seems a rather peculiar cause for official action, but the fact remains that Hadfield, unbespectacled, is a menace to the life and limb of his fellow contestants.

HACHENBERGER VERSUS SENN.

Denver, Sept. 13.—O. B. Hachenberger defeated A. L. Senn, of Buffalo, yesterday in a twenty-five-mile bicycle race, unpaced, at the Denver Wheel Club Park. The men started from opposite points on the track. Hachenberger caught Senn before five miles had been covered and easily led all the way, making the pace for him most of the time. C. R. Coulter broke the half-mile record, paced by a single, making the distance in 0:59 3-5.

NO TAPE-COUNTER COP.

Hugo von Roedeck, winner of the "one mile police State championship race" at Manhattan Beach on Labor Day, is very anxious to be "vindicated." He says he is not a "dry-goods store cop," although he has done special police duty in Brooklyn for over two years. He also holds another position at present, but has at times done regular police work and is still on the force. He is in the Twenty-second Precinct; his number is 490-D.

HAD HARD LUCK.

Fred C. Fuhrman, the Buffalo road crack, has placed the Buffalo-New York record—some 460 miles—at 54 hours 10 minutes, beating Gavin's time by nine hours. Fuhrman left Buffalo at noon on Thursday of last week, and reached City Hall Park here at 6:10 p. m. on Saturday. He had expected to touch forty-eight hours, but rain, poor roads and trouble with his wheel and with his pacemakers delayed him.

The men of action in racing are, after all, only the unconscious instruments of the men of thought who handle, train and hire them.

ALSO RANS.

The following are the men on the National Circuit whose wins have been sufficient to score for them ten points and over: Stevens, 25; Clark, 24; Coulter, 22; Kimble, 21; Kennedy, 16; Becker, 16; Parker, 14; Cohorn, 13; Loughead, 12; Mertens, 12; Wells, 12; Allen, 11; Baker, 11; McDonald, 10.

THEY HAD IT OUT,

Did Sanger and Kiser, and the Latter Got the Money—Ziegler Comes to His Own.

Philadelphia, Penn., Sept. 12.—Fresh from his \$1,000 "killing" at Watertown, and anxious to make this, his last appearance on the National circuit, one of splendor, Walter Sanger put in an appearance at the Associated Cycling Club's tournament to-day.

He won a purse the size of which means thirty days' labor to many brainy men, but there was a fatter one and he was after it. He didn't get it, and waxed warm. He had it almost won when out popped the rotund little Kiser and away went the \$250 which Sanger had longed for. He wouldn't have felt so badly had any one but Kiser done the trick. You see he and K. are not on exactly good terms. At Boston Sanger filed a protest and had Kiser disqualified, and the latter didn't relish it at all. He told Sanger so in pretty plain English, and Sanger, who understands that language as well as he does German, retorted in terms equally emphatic. Hence the feeling between the two. Kiser had his heart set on doing the big fellow. And he did it in a manner that made 7,000 people bubble over with enthusiasm.

It was in the mile open, in which a purse of \$500, divided into five lumps, was at stake. It had attracted all of the big men—Butler, Bald, Gardiner, Cooper, and even "Johnny" Johnson. Cooper was still suffering from his ugly fall at Providence, and had hardly taken the bandages from his battered caput. Five heats were run, so arranged that a crackjack should qualify in each. One man only was to qualify, excepting the second man in the fastest heat. Cooper shut out Kennedy in the first, Ziegler took Bald's measure in the second, and Tom Butler showed Kiser the way in the third, which happened to be the fast heat. In the fourth Johnson made his first appearance in competition on the National Circuit, but Gardiner rode rings around him. In the fifth, Sanger turned down Loughhead. This made a field of six starters in the final, which Rulon and Hamilton, on singles, paced, and the mile went in 2:04 4-5, single-paced State record. Sanger got away slowly, and Butler, as usual, got the pacemaker. Cooper hugged the Bostonian, with Ziegler and Gardiner trailing, and Sanger on Gardiner. Kiser hunted for the big fellow's wheel, and began his sleigh-ride at the first turn. The field never broke until Sanger started out with one of his famous finishing drives, sweeping by Butler on the backstretch and opening up a gap of fifteen lengths. Then Butler woke up and started after him, all but reaching the Milwaukeean at the tape. Kiser, who had trailed him every foot of the way, came out from cover, and, by a determined jump, poked his wheel in front at the tape. Then Sanger was mad.

Otto Zeigler not only won his heat in the mile open, but he also won his heat in the mile handicap, and then proceeded to clean up the field in the final. It was his first win in a handicap on the National circuit, and was made in good style. He jumped at the last turn after holding his own at the front of the bunch for the last half-mile, clearing the field with Loughhead on his wheel. The finish was a procession, with Ziegler, Loughhead and Aker heading it. The most interesting of the distance handicaps of the circuit was the five-mile event, which went to Clark, Wells and Bowler in that order. The backmarkers had their own troubles getting up, and Starbuck and Allen gave up the ghost early in the game. Then a bunch of

new pros, tumbled, and cleared the field for some pretty work for the old hands in the game. Mertens, Clark, Wells and Callahan kept up a running battle throughout the race, while Aker clung to Callahan from the time they left their marks together. The winners strung out in the finish, coming in two lengths apart, while Aker showed at the front of the unplaced crowd.

There were three amateur events, a mile open and two handicaps. C. W. Krick, of Reading, won the open in hollow style, and took first in his trial heat of the mile handicap, riding from scratch in 2:09 4-5. The final went to H. G. Gardiner, of Philadelphia, the limit man, with C. H. Henzel, J. A. Vernier and W. G. Douglass placed. The final of the two-thirds-mile handicap was won by W. M. Trott, who was promptly disqualified by Referee Gideon for fouling Douglass. This gave first to Vernier, second to Douglass and third to Krick. All of the amateur finals were loafing matches. The summaries:

One-mile handicap, professional—1, Ziegler (20 yards); 2, Loughhead (15); 3, Aker (40). Time, 2:22.

Five-mile handicap, professional—1, Clark (225 yards); 2, Wells (250); 3, Bowler (350). Time, 11:50 2-5.

One-mile open, professional—1, Kiser; 2, Sanger; 3, Tom Butler; 4, Ziegler; 5, Cooper. Time, 2:04 4-5.

One-mile open—1, C. W. Krick, Reading, Penn.; 2, W. M. Trott, Germantown, Penn.; 3, C. H. Henzel, Philadelphia. Time, 2:15.

Two-thirds-mile handicap, amateur—1, J. A. Vernier, Philadelphia (20 yards); 2, W. G. Douglass, Philadelphia (scratch); 3, Krick (scratch). Time, 1:45 1-5.

One-mile handicap, amateur—1, H. G. Gardiner, Philadelphia (15 yards); 2, Henzel (20); 3, Vernier (40); 4, Douglass (scratch). Time, 2:14.

UNCLE EPH AND THE RACER.

Be a real amachoor an' yo'll be a curiosity. Yesterday is a telescope yo' shu'd use in lookin' at dar finishes of toe morrer.

Improvements ar sumfin dat yo' doan want on yo' bysickle till yo' see some other feller wid it.

Lost opportunities to win ah baskets ob gold an' glory wid de handles gone.

Toe meny ob yo' settle yo' entrance fees, jes' laik clock-work—tick, tick, tick.

Some of yo' b'lieve civility is furnishin' an udder man a soft place toe fall w'en yo' elbow him on de track.

When old hard luck kaint hab his way 'bout de men who's racin' agin yo', he generally manages toe hab a han' in pickin' out de jedges.

KNOWS WHEN HE IS WELL OFF.

Platt-Betts, whose winnings so far this season foot up pleasant figures close to \$15,000, denies he will come to America. Under such circumstances, the gentleman with the double-lettered, hyphenated name would be a fool if he did come to this country.

KEENE-LY CONTESTED

Were the Circuit Races in This Thriving New Hampshire Town—Tom Butler Adds to His Bank Roll.

Keene, N. H., Sept. 9.—Of late years Keene has proven itself a good bicycle town, the tournaments of the Monadnock Cycle Club being the thermometer by which the "goodness" has been gauged.

A crowd of some 2,500 attended to-day's meet, which, while fair, wasn't quite as large as it should have been, considering that both Tom Butler, the pride of all New-England, and Ellery M. Blake, a home boy, who has developed remarkable form, were among the contestants. They both starred in their respective classes.

Butler competed in the three professional events. He won the two scratch races in splendid style, catching the pacemakers in both instances, and disposing of Gardiner, who hotly disputed him in the mile in the final jump. Butler also started in the mile handicap. He qualified in his heat, rode a third of a mile in the final and then quit, leaving Hoyt 70 yards to win. The summary:

Half-mile open—Final heat—1, E. M. Blake, Keene; 2, W. F. Chabbot, Keene; 3, C. H. Drury, Winchendon. Time—1:07 1-5.

Half-mile open, professional—First heat—1, Tom Butler; 2, Owen Kimble. Time, 1:13. Second heat—1, Joseph Nadeau, Keene; 2, W. A. Rhodes, Dorchester, Mass. Time, 1:12 4-5. Third heat—1, J. H. Fitzgerald, Manchester; 2, A. W. Porter, Newton, Mass. Time, 1:17 1-5. Fourth heat—1, Fred Loughhead; 2, Watson Coleman. Time, 1:12. Final heat—1, Butler; 2, Loughhead; 3, Coleman. Time, 1:06 1-5.

One-mile open—1, E. M. Blake, Keene; 2, J. T. Kelleher, Springfield; 3, R. F. Ludwig, Chicopee. Time, 2:13.

One-mile open, professional—First heat—1, Gardiner; 2, F. B. Rigby. Time—2:27 3-5.

Second heat—1, C. S. Wells; 2, E. A. McDuffee. Time—2:23 1-5.

Third heat—1, Butler; 2, Nadeau, Keene; 3, Kimball. Time—2:30 1-5.

Fourth heat—1, Loughhead; 2, F. C. Schrein, Toledo, O. Time—2:36 3-5.

Final—1, Butler; 2, Gardiner; 3, Loughhead. Time—2:19 3-5.

Two-mile handicap, amateur—1, E. F. Ludwig, Chicopee (scratch); 2, W. F. Chabbot, Keene (130 yards); 3, W. L. Curtis, Westboro (60 yards); 4, J. Rutherford, Winchendon (110 yards). Time—4:51.

One-mile handicap, professional—First heat—1, F. C. Hoyt, Springfield, 70; 2, E. A. McDuffee, 40; 3, Joseph Nadeau, 70; 4, J. B. Bowler; 5, J. H. Fitzgerald, 100; 6, C. J. Lewis, Northampton, 80; 7, C. S. Wells, 60. Time, 2:12 4-5.

Second heat—1, H. C. Clark, Denver, 50; 2, Tom Butler, scratch; 3, F. H. Pratt, Melrose, 90; 4, C. R. Newton, Stafford Springs, Conn., 40; 5, F. C. Schrein, 50; 6, A. C. Mertens, St. Paul, 30; 7, Allie Fuller, Malden, 130. Time, 2:16 4-5.

Final—1, Fitzgerald, 200; 2, Clark, 50; 3, Mertens, St. Paul, 30. Time, 2:11.

E. M. Blake, paced by Ludwig and Kelleher on tandem, broke half-mile paced State record. Time, 0:53. Joseph Nadeau against mile paced track record, failed, riding in 2:12 1-5.

KING OF LONG ISLAND.

H. K. Roe, of Patchogue, continues to sweep Long Island. At the Mineola races on Saturday he won the three open events without a great deal of trouble—the mile scratch in 2:38, the two-mile handicap in 4:44 2-5, and the five-mile handicap in 12:57 1-5.

DAWSON A CHAMPION.

The two-mile bicycle race at the A. A. U. championship meeting on Saturday last at Manhattan Field, fell to Ray Dawson, N. Y. A. C., in 5:35 3-5. W. C. Roome, N. J. A. C., was second, and Louis Hunter, N. J. A. C., third.

“Made by the Hartford Rubber Works Co.”

IS A GOOD GUARANTEE.

Have you ever considered what this guarantee means?
 It means that HARTFORD TIRES are as nearly perfect as money and skill can make them.
 It means that an old and strong concern puts its reputation back of them.
 It means that we have established branch houses and distributing depots all over the
 country for the convenience of dealer and rider. In short, it means that

“IF IT’S A HARTFORD TIRE IT’S RIGHT.”

To Bicycle Riders:

We make our Tube  of Fifty Carbon Steel.

Because a Tube like this of

Is just as strong as

a Tube like this of

BICYCLE safety depends almost wholly on the strength of the tubing used. The steel for our tubing is selected for its especial resistance to bicycle strains regardless of expense in the manufacture.

The margin of safety is greatly increased by the use of this tube. Every bicycle manufacturer should use it; leading ones do; every dealer should demand it; every rider should insist on having it. Send for catalogue.

THE POPE TUBE CO.,
HARTFORD,
CONN.

While weight for weight in a Bicycle **FIFTY CARBON Steel** will last so long

and **TWENTY-FIVE CARBON Steel** will last only so long

"JONAH" GETS A JAB.

An Irate Racer Resents a "Mc Brother" Roast
—Murphy Carries All Before Him
in the Pro. Events.

It was at the conclusion of the race-meet at Waverly, N. J., on Saturday last, in connection with the New Jersey State Fair. The spectators were wending their way out of the grandstand, the band were packing up their instruments and the officials were shaking hands with each other, when James Gregory, a Newark rider, approached Handicapper Wetmore, who was standing on the track, and said:

"Say, w'th'll did you mean by roasting me and me brother in the papers about the Boonton meet? You've got to pay for that!" and a right-hander followed, sending the "Czar of New Jersey" to the ground.

The blow was so sudden, the wrangle so short of duration, that few people saw it. But Wetmore was on his feet in a minute. Off came his coat, his eyes blazed with Satanic fury, and then he started in to wipe the irate Gregory from the face of the earth. But onlookers had collected by this time and the belligerents were kept apart, although if their oral expostulations had been carried out to the letter both would have been good subjects for the undertaker. It was the first fistic encounter that has taken place between an official and a contestant in the metropolitan district this season and created no end of comment.

The meet was highly satisfactory to the fair people. The grandstand was well filled and hundreds lined the track around the rail. The five-mile handicap professional was intended to be the star event of the meet, but it was marred by a spill at four miles, when Charles Murphy, the scratch man, and three others went down in a heap. Murphy escaped with a few bruises, but Brock, of Brooklyn, sustained a broken arm and Kindervatter was badly cut on the knee and arm. Jack, of Philadelphia, won the event in the sprint, with Hadfield, who jumped at the last quarter and led until within a few feet of the tape, second. The final of the novice race was ridden outside of a generous time limit and was declared off by Referee Gentle. The meet promoter declared, however, that the medals would bring but little if returned to the makers, so to get rid of them, the final was run over after the last event.

C. M. Murphy stood shoulders high in the professional event and won his heat and final of the mile open without seeming effort.

In the amateur events the star race was the final of the tandem handicap, when six teams finished almost abreast. Harrison and Lefferson, scratch, won by barely a foot. In the half-mile, scratch, Harrison and Lefferson each won their heats, but in the final Lefferson won in a grand finish, beating his clubmate, the doughty little Harrison, for the first time this season from scratch.

A special race between a bicycle "cop" and a letter carrier caused unbounded enthusiasm in the grandstand and the exchange of over \$1,000 in bets. Summary:

One-mile novice—1, W. A. Nixon; 2, T. A. Jarrochik; 3, E. B. Slater. Time—2:33 3-5.

One-mile professional—First heat: 1, H. K. Smith, of Brooklyn; 2, Jay Eaton; 3, H. H. Maddox. Time—2:17 3-5. Second heat: 1, C. M. Murphy; 2, F. F. Goodman, of New-York; 3, Sam Brock, of Brooklyn. Time—2:25 3-5. Final—1, Murphy; 2, Mosher; 3, Smith; 4, Maddox. Time—2:09 3-5.

Half-mile scratch, final heat—1, L. A. Lefferson; 2, W. S. Slavin; 3, J. T. Beam. Time—1:07.

One-mile handicap, final heat—1, B. B. Stevens, Philadelphia; 2, W. B. Crane, Hackensack; 3, J. T. Beam. Time—2:10 3-5.

Two-mile match race—1, John Letzelder, Newark Police; 2, J. T. Hood, Newark Postoffice. Time—6:09 4-5.

One-mile professional handicap—First heat: 1, H. K. Smith; 2, H. P. Mosher; 3, Turkey Smith; 4, J. M. Baldwin. Time—2:15 4-5. Second heat: 1, Carroll Jack; 2, Samuel Brock; 3, Charles Hadfield; 4, J. M. Baldwin. Time—2:12. Final heat: 1, Jack; 2, Hadfield; 3, Goodman; 4, Mosher. Time—2:14 2-5.

Two-mile tandem handicap—1, Harrison and Lefferson, scratch; 2, Shannon and Giles, 100; 3, Ripley and Slavin, 40. Time—4:21 2-5.

One-mile special—1, John Letzelder, Newark Police; 2, Fred Lumbover, Bayonne Police; 3, J. T. Hood, Newark Postoffice. Time—2:34 2-5.

Five-mile professional handicap—1, Carroll Jack; 2, C. C. Bowers; 3, Charles Hadfield; 4, H. H. Maddox. Time—12:10 2-5.

CASE OF FUNK AND FAKE.

Cleveland, Ohio, Sept. 14.—Cleveland had a fake race meet at the Newburg horse track last Saturday afternoon. It was our first, but the victims take their medicine good-naturedly, as it is a new experience. Charley Raymond is the name of the manager, and 'tis said he was assisted by "Jack" App, a trainer, quite well known among racing men. App, however, took care of the racing end, and had nothing to do with the finances. The programme included a mile professional event, in which Dr. A. I. Brown and the Johnson brothers were advertised to appear. The weather was threatening, and only about 150 people were in the grandstand when the time arrived for the events to be started. The racers were upon the track warming up, but no officials appeared to take charge. Raymond occupied a seat in the grandstand, and seemed to be waiting for something that didn't occur. Finally he got nervous at seeing the racing men begin to leave the track, and asked them why they didn't race. The crowd gathered around and a discussion arose in which it finally occurred to the manager that there had been no provision made for officials, and that there were none. About this time Raymond was overcome by a fainting spell. The people then had time to think about the money they had squandered for admissions, and a simultaneous rush was made for the ticket office, but too late; the treasurer had taken alarm and left for parts unknown. Raymond was all that was left now upon whom to wreak vengeance, so there was another rush, and this time to the spot where their prey had fainted, but too late again, as he had been spirited away by friends. Nothing was then left but to look as happy as possible as the circumstances would permit.

A JOB'S COMFORTER.

"I read some time ago an article in which the pleasures of learning to ride the bicycle were compared to that of learning to skate," said the fat man to his neighbor with the golf stockings. "I have forgotten the name of the author, but he was an ignoramus. In skating there is really only one way of falling.

"There are a thousand ways that are open to the cyclist, and he is never bothered any as to making a choice. The wheel saves you all that trouble.

"The disadvantage is that it never works in the way in which you are calculating that it will be worked. The unexpected adds greatly to the pleasure of the occasion, and also increases the demand for arnica."

Then the fat man waited for the golf stockings one to say something, but he never opened his mouth. He was going to try and teach himself to ride that very evening, and the fat one's story gave him cold shivers up and down his spinal column.

NOTHING UNCONVENTIONAL.

A Hill-Climbing Contest About the Only
Novelty at the Pennsylvania State
Meet.

Phil Collins, as befits a Philadelphian, is a quiet, rather studious appearing chap. The hairs on his head are not many, but for all that there is a deal of energy behind the quiet exterior, and since his accession to the secretary-treasurership of the Pennsylvania Division, L. A. W., the upward shoot of its new membership has been most pronounced. It may be that Collins is not responsible for the increase, but that it has come about since his election is beyond dispute. Massachusetts, which so long held second place on the League membership roll, has been crowded down and out, and the State of William Penn has a safe lead. Its annual celebration occurred on Wednesday, Thursday and Friday of last week at Pittsburg. It was quite largely attended, and was as successful as State meets usually are.

The programme did not depart from the conventional. There was a road race, a hill-climbing contest, a lantern parade, track races, a moonlight excursion and runs innumerable.

The road race—a twenty-five-mile handicap—was won by J. W. Kent (10m.) in 1:28:30. W. G. Johnson, J. Frank Starr and D. H. Challis, also ten-minute men, followed him home in the order named. W. W. Bonnell (6m.), who later won the hill-climbing contest, was fifth, and the \$400 piano offered for time prize went to R. F. Walters (scratch); time, 1:21:00 1-5. There were 101 starters. Louis Gimm was among the entries, but was protested for having raced for cash, and the protest was sustained.

The lantern parade, like all free shows, attracted an immense concourse of spectators. The McKeesport Cyclers captured the prize for the best uniformed and best appearing club. A companion bicycle on which was rigged a twenty-foot representation of the Ferris Wheel secured the award for the most novel display.

The hill climb was held on a grade on South Negley avenue, which, it was claimed, had been surmounted by but four cyclists. But ten men started, and of these seven reached the top. The grade is 1,200 feet long, and has a rise of ten feet in a hundred. The gears used by the winners were ridiculously low, and are so wholly out of date at the present time that the wonder is that they were permitted. Summary:

Name.	Gear.	Time.
W. W. Bonnell.....	50	1:06 2-5
Jacob Mazer.....	48	1:12
E. R. Johnson.....	59 1/2	1:17
R. E. Walters.....	56	1:17
George Weir.....	55	1:19
George Murdock.....	70	1:41
E. J. Sturznickle.....	77	1:43 4-5

The track races were the most successful ever held in Pittsburg, some 15,000 people being in attendance. The racing was spirited, but was confined almost solely to Pennsylvania men of little note. F. N. Orr won the novice in 2:27, W. A. McCready the half-mile handicap in 1:04 1-5, W. C. Kunkle (25 yards) the mile handicap in 2:17. R. D. Bruce won the five-mile handicap in 12:32 4-5. The one-mile open and one-mile State championship fell to C. C. Aughinbaugh.

NOT ALWAYS.

"The unexpected happens," so,
He cried in glee, "of course,
All races ought to go
Unto the darkest horse."

The scorchier is playfully referred to as being generally "a straight-haired, thin-jawed, wild-eyed idiot, with his back humped like a mad cat's tail, who tears down the road or street without consideration for the feelings of other folks."

BICYCLES

The Crime of '73

DOES NOT AFFECT US.

Our '97 line is ready, and we now offer the public

A Superb Line of High-Grades,

A Superior Line of Medium-Grades,

A Complete Line of Juveniles,

Two New Models Tandems,

FOR GOLD OR SILVER.

We number among our customers the biggest, shrewdest houses in America. They are with us for life. We have room for a few solid jobbers. We are one of the few factories that run twelve months each year at full blast. Capacity, 40,000 bicycles.

TWENTY NEW MODELS NOW ON EXHIBITION AT OUR

QUARTERS IN THE WELLINGTON HOTEL, CHICAGO.

Sieg ^{and} *Walpole Mfg Co*
KENOSHA WIS

Branch House, 285 Wabash Avenue, Chicago.

Address all mail to general offices and factories—Kenosha, Wis.

Kindly mention The Wheel.

H. W. Hackett, Pleasantville, N. J.
William Knott, Pawtucket, R. I.

SUSPENSIONS RAISED.

A. B. Goebler, Buffalo, N. Y.
W. D. Cleland, Buffalo, N. Y.
C. V. Horan, Buffalo, N. Y.
J. F. Higgins, Buffalo, N. Y.
W. E. De Temple, Buffalo, N. Y.
J. T. Finn, Buffalo, N. Y.
William Knott, Pawtucket, R. I.
Samuel Thompson, Pendleton, Ore.
Robin Fletcher, Pendleton, Ore.
M. Kennedy, New Orleans, La.
Floyd Brown, Boston, Mass.
Frank Smith, East Norwalk, Conn.
C. J. Neuman, St. Louis, Mo.
Hanson Willison, Cumberland, Md.

BLACKLISTED.

Penn Wheelmen, Reading, Penn., have been placed upon the list of those to whom the sanction privilege is denied.

SUSPENSIONS.

Thirty days from September 8, for competing in unsanctioned races—Joseph Cougan, Martin O'Brien, Lewiston, Me.; O. L. Leighton, Falmouth, Me.; John W. Morrill, Ernie Chapman, Harry Haskell and — Verrill, Gray, Me.

For competing in amateur events after having ridden for cash—Frank Eberhardt, Salina, Kan., ninety days from August 8, and E. M. Ward, Winfield, Kan., 60 days from August 8.

Thirty days from September 1, for competing in unsanctioned races—Charles S. Smith, Charles M. Evans, Salt Lake City, Utah.

Sixty days from September 8 for false entry—A. B. Miller, Jackson's Corners, N. Y., until entry fees are paid.
Thirty days from September 10, false entry—Less Hiller, Fort Wayne, Ind.; Allen Schruyer, Huntington, W. Va.; Will Overturf, Indianapolis, Ind.

Thirty days from September 11, unsanctioned races—O. F. Immell, — Kvennon, Ole Olson, Ed Bergsens and A. A. Herrick, Blair, Wis.
Sixty days from September 11, unsanctioned races—Ray Allison and F. Strantz, Mt. Carroll, Ill.

Suspension placed upon R. Guy Lee, Depere, Wis., is for ninety days from August 29, instead of thirty days, as reported in bulletin of August 29.

PERMANENT SUSPENSIONS.

Competing in unsanctioned Sunday races while under suspension—William Aldridge, Arthur Griffin, W. W. Hatton, F. W. Holbrook, W. J. Hutton, Charles Miller, J. L. Standefer, W. A. Taylor, Emil Ulbrecht, Clyde Washburn, Los Angeles, Cal.

SANCTIONS GRANTED.

September 22—Erie County Agricultural Fair Association, Hamburg, N. Y.
September 23—W. A. Walter, West Phoenix, N. Y.

September 22, 23, 24—Genesee Agricultural Society, Batavia, N. Y.

September 25—Dutchess County Agricultural Society, Poughkeepsie, N. Y.

September 29—Wyooming County Agricultural Society, Warsaw, N. Y.

September 30, October 1—Suffolk County Agricultural Society, Riverhead, N. Y.

October 3—Westchester Cycling League, White Plains, N. Y.

September 23—Humboldt County Mechanical and Agricultural Fair Association, Eureka, Cal.
September 23, 30—Hingham Agricultural and Horticultural Society, Hingham, Mass.

September 22, 23, 24—Essex Agricultural Society, Peabody, Mass.

September 30, October 1, 2—Housatonic Agricultural Society, Great Barrington, Mass.

September 24—Weymouth Agricultural Society, South Weymouth, Mass.

September 30—Bristol Fair Corporation, Bristol, Conn.

October 3—A. Putnam Woodward, Danielson, Conn.

September 30—J. M. Sosey, Palmyra, Mo.

October 5, 7—Paris Cycling Club, Paris, Ill.

October 13, 14—Wild West Wheelmen, North Platte, Neb.

September 24—Toulon Bicycle Club, Toulon, Ill.

September 24—St. James Cycle Club, St. James, Minn.

September 16, 17, 18—Jefferson County Agricultural Society, Fairbury, Neb.

September 16, 17—George S. Harrison, Cassopolis, Mich.

September 25—Huron County Agricultural Society, Bad Axe, Mich.

September 16—H. H. Waters, Monroe, Mich.

September 18—Winterset Cycle Club, Winterset, Iowa.

September 27—Haverhill Cycle Club, Haverhill, Mass.

September 17—Middlesex County Agricultural Society, South Framingham, Mass.

September 26—W. J. Corcoran, Cambridge, Mass.

September 24—Windham County Agricultural Society, Brooklyn, N. Y.

September 16, 17—Rockville Wheel Club, Rockville, Conn.

September 23—Essex Agricultural Society, Peabody, Mass.

September 24, October 3—H. J. Pote, Lynn, Mass.

September 24—Westboro Agricultural Society, Westboro, Mass.

September 26—Queen City Bicycle Meet, Newport, Ky.

October 6—Wauseon Cycling Club, Wauseon, Ohio.

September 30—Big Four Cycle Club, Mansfield, Ohio.

October 3—Alliance Bicycle Club, Alliance, Ohio.

September 23, 24, 25—Ashabula County Agricultural Society, Jefferson, Ohio.

September 30—Elyria Wheel Club, Elyria, Ohio.

September 16, 17—Columbia County Agricultural Society, Lisbon, Ohio.

September 22—Mahogany Valley Agricultural Association, Ashland, Penn.

September 22—Clearfield Fair Association, Clearfield, Penn.

September 22—Y. M. Interchurch League, Philadelphia, Penn.

September 23—Jefferson County Agricultural Association, Brookville, Penn.

September 25—Ridgway Bicycle Club, Ridgway, Penn.

September 21—Washington (D. C.) International Athletic Park and Amusement Company.

October 1—Junior Order United American Mechanics, Monongahela, Penn.

STARBUCK'S WINNING STREAK.

Philadelphia, Sept. 10.—Another large crowd assembled at the Tioga track last night to witness the postponed Warwick race meet. Fully 4,000 spectators were present. The one prominent feature of the evening's sport was the riding of J. F. Starbuck, who won three of the four races in which he started, finishing fifth in the other, and netting \$210 in cash as the result of his night's work.

In the match race between Starbuck, Bartholomew and Landis, Rumford and Jack acted as pacemakers. Landis broke his sprocket-wheel at the start and dropped out. Starbuck caught the pacemaker at the end of twenty-five yards and was never headed, winning easily.

In the five-mile match race between Starbuck and Landis, Bartholomew and Kluge and Hadfield and Hargan, on tandems, did the pacing. Landis caught the tandem at the start and held that position until the second team took hold, when his opponent, by a pretty spurt, got by on the inside and secured the coveted position, winning by three yards. The time of 12:07 3-5 is the best ever made on the track for that distance.

The ten-mile handicap proved to be one of the most exciting races ever held in Philadelphia, the crowd yelling itself hoarse as Starbuck, the scratch man, hauled in one after another of men ahead of him. At the end of the eighth mile he reached the bunch, but he was too exhausted to hold his own in the sprint. Summary:

One-mile novice, final heat—1, William Applin; 2, Leon de Fernelmont. Time—2:59.

One-mile open, professional, final heat—1, J. F. Starbuck; 2, H. E. Bartholomew; 3, C. C. Bowers; 4, Charles Hadfield. Time—2:27 4-5.

One-mile open, final heat—1, C. H. Henzel; 2, J. B. Clift; 3, J. A. Vernier; 4, L. C. Johnson. Time—2:20.

One-mile matched race for a purse of \$100, between Starbuck, Bartholomew and Landis, won by Starbuck. Time—2:21 1-5.

One-mile match race for a purse of \$500, between George M. Middlebeck and H. W. Schlichter, won by Middlebeck. Time—2:55 4-5.

One-mile handicap, final heat—1, C. Bateman, 95 yards; 2, C. H. Henzel, scratch; 3, L. C. Johnson, 30 yards; 4, W. H. H. Cressy, 90 yards. Time—2:19 3-5.

Five-mile match race between J. F. Starbuck and W. R. Landis. Won by J. F. Starbuck. Time—12:07 3-5.

Trial for one-half-mile State record of 59 1-5 seconds; J. A. Vernier, paced by Hill and Parkhill. Time—59 3-5 sec.

Ten-mile handicap, professional—1, W. E. Dickerson, 500 yards; 2, Charles Hadfield, 325 yards; 3, Charles Turville, 400 yards; 4, W. A. Rulon, 300 yards; 5, J. F. Starbuck, scratch. Time—25:25.

One-mile tandem handicap, professional—J. F. Starbuck and W. A. Rulon won. Time—2:12.

JOHNSON FINISHED SECOND.

John S. Johnson rode a half-mile against time in 1:02 2-5 at the Erie (Penn.) Wanderers, meet September 9. The mile open went to J. A. Newhouse in 2:25, Johnson second and Maya third. C. A. Mertens, of Erie, took the three miles State championship in 8:04 1-5.

SORE ON THE SUBJECT.

"Have you felt saddle covers?" asked the somewhat aged female of the cash boy who was temporarily acting as clerk in the cycle store.

"Yes'm," answered the boy, with unpleasant recollections, "many a time."

BRAINS AND THEIR DIVISION.

The combined weight of the brains of the world is said to be 1,922,712 tons; of this 1,922,711 is distributed among men who believe in the permanency of cycling, the other ton among those who are in doubt about it being anything but a passing craze.

AS HE FIGURED IT.

Walker—Er—when you run into a man, the rider is as likely to get the worst of it as the pedestrian, isn't he?

Wheeler—You bet he is! The last fellow I ran into lost only a front tooth, while I had four spokes broken and a front wheel rim that looked like a pretzel!

SHE IS NEVER AT LOSS.

When a man can't think of anything else to say about a wheel, he finds fault; when a woman can't think of anything—no, that won't work. Who ever heard of a woman being in that predicament?

THE OLD WALNUT SOFA.

A back-country editor was not alone in the possession of the following sentiments when he printed them in his paper: "The bicycle is increasing marriages. A million bicycles are now in use in the country. A young man now takes his wheel out for an airing instead of his girl. Of course girls have the wheels, too, but bicycle sparring strikes us as being a mighty poor substitute for the old-fashioned kind, the old walnut sofa, the cloth-covered sofa, the spring-seated sofa you hung on to so well. The old-style buggy-ride was good enough—that is, was good enough for us."

THE WHEEL'S WORK.

When a man is riding a wheel he is utilizing his spare forces and making room for new ones. Somebody, paraphrasing Matthew Arnold, called a human life a "stream of energy," and the wheelman is keeping this stream moving along natural courses. Possibly two generations hence it will be found that the wheel has done an incalculable work in pulling the human race back to more natural practices and customs.

The fool-killer is taking a fall out of a great number of brakeless riders this year.

"That looks like a good road straight ahead; guess I'll just hit 'er up a bit!"

SONG OF THE SIGHING SOUGH.

A new fad is gathering force in different parts of country—the stringing of elastic bands from the top to the bottom tubes of the bicycle frame. When ridden the result is a noise varying with the speed from the "sighing sough of a soulful swirl" and the whine of a sick tomcat to the inartistic touch of an aeolian harp. In Philadelphia, the childish fad has become so general that the police have been ordered to suppress it, because of its effect on skittish horses. In New York it is just making its appearance.

THE FOOL AND HIS FOLLY.

A police officer in Minnesota playfully tried to stop a wheelman, not to arrest him, but just to show a friend how easy it was to stop a wheel. The rider did not stop when ordered to do so, and the limb of the law threw his club between the spokes of the machine. The bicycle was wrecked and the wheelman was thrown and badly injured. Now the officer is serving a jail sentence in a forlorn attempt on the part of his superiors to inculcate him with the rudimentary elements of common-sense.

BEFORE THE DAY OF CENTURIES.

Years ago a man was acquitted of a charge of murder in England because he proved that twenty-four hours after the crime was committed he was a hundred miles from its scene. This was taken as a successful alibi because the jury considered it impossible for a man on horseback to cover that distance in a single day. Imagine such an alibi holding good in these cycling days!

Too late he discovers his glasses have deceived him, and what he thought was a road was only a sign of the times—and he hit it.

LOOK BEFORE YOU TURN.

There is one important point for the wheelman to always remember, and that is in passing from behind to watch carefully for anything coming in the opposite direction. If you have been riding behind a carriage, and perhaps could not see the whole road ahead, it is dangerous to turn out and pass suddenly before ascertaining whether the coast is clear.

IN THE PUBLIC'S CARE.

"These grounds are intrusted to the care of the public," is the novel sign that is being plentifully erected on the neutral ground on the Boulevard, New York's great cycling thoroughfare. The authorities are planting turf and making other endeavors to improve it.

SILENT SUCCESS.

"'Tain' de man dat makes de mos' fus' dat sells de mos' 'bysickles,'" said Uncle Eph. "De torpedo-boat swims under watah, an' doan' do no splashin' whatsoever."

FIXED CHARGES ON USEFULNESS.

Certain evils of cycling are being preached against in the pulpit, and shouted forth from the house tops. Doubtless there are some, but they are part of the cost; most of them are temporary and others will remain as the fixed charges which accompany every readjustment of life, just as the trolley and the cable take their regular toll of human life as an offset to their usefulness.

GOLDEN ROD BUGS.

These are the days when the goldenrod parade is an every Sunday affair on the Boulevard—a constant procession of home-bound riders with generous bunches of the mooted National flower secured to their handle-bars.

A Brooklyn Fire Commissioner, Mr. Barrow, who has undertaken to master the bicycle, finds it exceedingly unpleasant when anxious friends ask him, "How are you getting along with the wheel, Barrow?"

COMPARED TO OTHER PASTIMES.

Provided the rider does not indulge in the foolish practice of attempting impossible or tremendous feats in the matter of mileage, time tests, or steep-hill climbing, his cycling will do him nothing but good. Like rowing and walking, cycling is rhythmical, and though the amount of effort required varies with the character of the surface of the road, the wind and the gradient, the moments in ordinary road-riding when you must do "all you are good for" occur but seldom.

In cycling there is none of the strain which in football, in baseball, in tennis and such like games constantly obliges you to do your part in regard to the ball almost, so to speak, whether it be possible or impossible. On the bicycle you pursue the even tenor of your way, and quicken or slacken, exert yourself or relax your efforts entirely according to your own inclination and whether you feel fresh or tired. Your efforts are not regulated by the exigencies of the game, but by the strength within you.

It therefore follows that overexertion, which is bad for the strongest, is not likely to result from cycling, and is much less likely than in such games as those alluded to above. In other words, cycling is an exercise exempt from one drawback from which many other forms of exercise suffer.

Again, the usual run of active games takes the player into the open air for the specified period of time only during which the game lasts. But the cyclist is constantly tempted to spend long periods of time in the open, and among the trees and fields. He also has less railway travelling to undergo, inasmuch as—to make use of an Irishism—he does on his bicycle most of his work in the train. The young can thus be encouraged to go on and prosper and cycle as much as ever they like, and their parents should feel no anxiety as to its effects upon the health of their sons and daughters.

SPACE AND THE FILLING THEREOF.

One interesting fact may have impressed itself on the observer of the trade papers during the last year. It is a change that involves quite a revolution among the foundation stones of cycle trade advertising, without detracting from their soundness or solidity.

In former years the item of space—as "space"—was thought to be the one thing to be considered. That is, a manufacturer's opportunity to say something to the agent or the rider in print (it scarcely mattered in what way it was said, or what type was used) was the prime essence of the affair. This was supposed, even by the manufacturer, to be chiefly involved in an advertising transaction.

The space itself was generally treated as the thing representing the basis of the transaction; whereas it is at this time growing more and more apparent that the space, or the mere opportunity of inserting something regarding a bicycle in type in that space, is now a mere subsidiary part of advertising, and that the most important part of the whole affair is the preparation of the advertisement which is to be inserted in the space.

In other words, the people in cycling have become so advanced in taste that the most skilful work is absolutely necessary to induce the most profitable returns from an advertisement. This is true not only of general advertising (such as is done in magazines) but it is particularly true in advertising in the trade press, where the manufacturer addresses in his advertisement a critical and thoroughly alive class of readers, readers who in their turn instruct the vast body of riders and purchasers of bicycles.

Washington wheelmen have forced the District Commissioners to repeal the police regulations forbidding the carrying of infants on bicycles.

ALL KINDS, CLASSES AND CONDITIONS.

As a labor and time saving device the bicycle has the unique merit of saving time and labor for the toiling masses instead of for the capitalistic few. The clerk and the artisan may use it without feeling that what is saved will accrue to the benefit of their employer.

On the other hand, it is equally popular with the rich, from the standpoint of diversion, as well as utility. It makes the whole world kin, and to ride a wheel is the one thing we may all do in good fellowship, the poor to get food for their appetites and the rich to get appetites for their food.

In fact, the bicycle meets the needs of humanity, rich and poor, man, woman and child, for business, pleasure and health, combining as no other human device has done the utile dulci.

Dobler's his name—M. J. Dobler. He is described as "a type; a type of the Dobler type." He has just "gone on the road" in the interest of Persons saddles. He formerly filled a snug berth in the Warwick-Stockton Company. The Persons Manufacturing Company, looking around for an extra-good man, fixed on Mr. Dobler, and offered him inducement enough to leave that berth. They believe him a valuable man who will impress the trade most favorably.

HORSES KNEW THIS LONG AGO.

As long as vehicles were propelled by horses or driven by steam, man was content to use the old-fashioned surface bearings, lubricated by oil in order to make them run more easily. As soon as he began to propel himself on the bicycle, he discovered that ball bearings added greatly to the service by reduction of resistance and by avoidance of lubricants, the latter involving also the disadvantages of want of cleanliness and collection of grit and dust.

FOOLS AND THEIR FOLLY.

One frequently hears it said, in cases of steam and street railway accidents, that, as usual, the company was to blame, when, in nine cases out of every ten, if not in a larger proportion, the parties injured were alone to blame. This is just as true of cycling accidents as it is of those on steam and street railways.

IN DAYS TO COME.

If cycling continues to progress in the affections of the public it may not be too far-fetched to imagine the fond mother of the future proudly boasting, "Johnnie rode his wheel before he was ten months old," instead of observing that he walked at that age.

EASIEST OF ALL MOTIONS.

Cycling is (perhaps with skating) the easiest of all bodily motions; the friction and effort of locomotion are reduced to a minimum, and therefore muscular effort need never be very severe even if very rapid.

It is true that one set of muscles only appears to act, namely, those of the lower limb, and even were this so it would be immaterial, as the sinewy blacksmith only exercises the muscles of his arms, yet his whole body is iron. But in cycling all the other muscles beyond those apparently engaged do actual work in the effort of balancing.

By these muscular movements rather than by muscular effort (for when the momentum of the machine is attained very little effort is required with great movement) the circulation and respiration are increased, and this, too, in the open air, where every breath gets its fullest value, and where the circulated blood is oxygenated to the amplest degree.

That the general secretions are also increased every one knows, it being very easy, without much material access of effort, to induce most free perspiration, and other organs besides the skin—such as the liver, etc.—participate in this accelerated activity of functions. And yet with all this, fatigue is much less than with any other existing exercise. Cycling, in fact, condenses exercise and diminishes fatigue.

BEAR STORY ON WHEELS.

"I was slowly pushing my wheel over a narrow mountain road," says a wheelman who has been exploring the western portion of North Carolina, "when I heard a wagon ahead of me coming around a bend. I jumped off my wheel and stood by it until the approaching team should pass.

"Don't be skeered, stranger," the driver of the team called out. 'They won't hurt nothing.'

"He was driving a team of full grown bears. The cart was loaded with logs, and the team was making about as fast time as a yoke of oxen would have done. The bears paid no attention to me or to my machine, but went on stolidly about their business."

SNAPPERS AND RUNNERS IN.

Dogs that pursue riders and snap at their legs are not a bit more dangerous than dogs that run out from the sidewalk and get right in front of the machine. In the first instance, if the brutes bite the men they attack it will mean nothing more serious than a course of treatment at the Pasture Institute. In the other, if the dog and the rider are alike unsuccessful in dodging each other, it may mean death for both.

MUST HAVE BEEN IN GREENLAND.

"Where have you been? I haven't seen you for a week."

"Oh, visiting some of my cousins out in the country, the queerest, quaintest place you ever saw, and so impossibly old-fashioned! Why, would you believe it—not more than half the family rode bicycles!"

PUNCTURE PREVENTION.

According to an English theory, tires fitted with air tubes slightly larger than the wheel are far less liable to puncture than when tubes of the exact size are used; the reason for this, of course, being due to the fact that rubber in loose tension cuts less easily.

Annoyed by cyclists who persist in using a private path on his lands, Judge John G. Smith, of Savannah, Ga., has planted 500 yards of it with broken glass and publicly announced his act.

CHANCE FOR SAFER STREETS.

Wheelmen in future will have only themselves to blame if the streets of New York are not kept free from tire-destroying refuse. Following the example of Superintendent Waring, noted in THE WHEEL in a recent issue, Superintendent Hankinson, of the Society for the Prevention of Cruelty to Animals, secured in the Special Sessions Court on Thursday the conviction of John L. Fitzpatrick for smashing a glass bottle on the thoroughfare immediately in front of the bicycle of Charles Yunker and his brother and ruining their tires.

Upon one or two occasions persons who have thrown glass and tacks on the streets have been arrested, but have been discharged by Magistrates upon the ground that no punishment could be inflicted unless the prisoners were charged with malicious mischief, and with intent of doing injury to some particular wheel or wheels. Superintendent Hankinson, however, has found an old law, under which many years ago a large number of convictions were had. The law in question is 661 of the Penal Code, and reads as follows:

"Any person who wilfully throws, drops, or places, or causes to be dropped, thrown, or placed, upon any road, highway, street, or public place any glass, nails, pieces of metal, or other substance which might wound, disable, or injure any animal, shall be deemed guilty of a misdemeanor," etc.

The evidence showed that Fitzpatrick, who is a middle-aged man, threw the bottle immediately in front of Mr. Yunker and his brother, ruining the tires of both their wheels. The Court found him guilty and fined him \$25.

Superintendent Hankinson says he will cause the arrest of any person violating this section of the Penal Code, and he asks wheelmen to inform him of any violations. Assistant District-Attorney Berlinger says he will see that such cases are prosecuted.

YOUNG AMERICA'S RUSE.

Abroad children are not looked upon and treated as the equals of their elders, consequently among most Europeans the up-to-date bicycle for a child's use is almost entirely unknown. A young American recently rode through the streets of Geneva mounted upon a boy's wheel, a perfect duplicate, excepting in size, of a high-grade machine. Soon he was followed by a crowd of Swiss children, who shouted in evident glee at the wonderful sight.

Finally they became annoying, and the ingenious young rider hit upon a scheme to dispose of them. Dismounting for a moment, he opened his saddle-bag and took out a small bicycle pump. The boys crowded around in eager curiosity. Young America pointed his tiny pump in their midst—and, presto, not one boy was left in sight.

WHEELS AS BAGGAGE IN FRANCE.

French railways are able to transport only between 40 and 50 wheels in a single baggage-car, and yet for a charge of only 2 cents per machine the Western Railway of France on one Saturday and Sunday safely and expeditiously transported 5,133 machines. American railways might do worse than send some of their baggage-masters to France—they might there learn something of which they are now profoundly ignorant.

NO HAIRPIN HARPOONS.

Let it be understood right here once and for all, the two-hundred-pound woman who has gone on the warpath for such of her sisters as ride a bicycle can hang just as many bloomers at her belt as she can capture, but she mustn't dare to thrust a solitary hairpin into a single inflated tire, mind that.

ABOUT TWO PECKS.

Two American Pecks are going abroad. They were booked to sail on the Britannic on the 16th inst.

One is surnamed Alonzo, the other Arthur. They are brothers, Bostonese, and in defiance to mathematics, these two Pecks form a whole bushel if not several of them. Both are among the best-known wheelmen in New England. Alonzo D.—"Lon," as he is better known—is of the Pope Manufacturing Company's Boston staff. Arthur K., the younger, is manager of the Remington Arms Company's New England branch. Both have been long and prominently identified with the L. A. W. and cycling affairs generally in their part of the country. They go abroad for a three months' vacation, which will be spent awheel in England, France, Switzerland, Germany and Italy.

Of the two "Lon" is the more widely known. He has been actively in the game since 1883, and the titles of the positions he has filled would reach half way around Chestnut Hill Reservoir. He is the recognized Moses of the roads throughout New England; it is doubtful if there exists anywhere a man who can better fill the rôle of a Breathing Road Book. His fund of information, always at his tongue's tip, is marvellous; his memory seldom at fault. Touring strangers are invari-

Alonzo D. Peck.

ably referred to him, and he is ever in his element when "showing them around." Mr. Peck himself is an ardent tourist. As long ago as 1884 he was a lieutenant of the once famous Big Four tours from Boston to Chicago by way of Canada, which for a few years were features of the L. A. W. National meets, and his European trip is in the nature of a rounding out of a long list of annual outings. He is methodical, and is one of very few men who have kept a cyclometrical record of their mileage. Peck's is exactly 58,948 miles.

Of late years "Lon" Peck has shone as a "star" starter of race meets, in which respect his reputation is well deserved. Nowhere is there a man who does the work so well. There is no shillyshallying, no "jolly-ing," no quibbling. The first fighters are to him the same as the novices. He treats all alike, and rules with a firm hand and a peculiarly penetrating voice that is as clear and distinct as a megaphone. He inspires respect and receives it from racing man, trainer and pusher-off alike.

At present Peck is secretary-treasurer of the Massachusetts Division, L. A. W., and captain of the Massachusetts Bicycle Club. The latter position he has filled for ten consecutive years—probably an American record in itself.

A legal light—The one you are forced by law to carry on your wheel.

GEARS AND CRANK LENGTHS.

That one man's meat often becomes another man's poison is an adage which finds a parallel in the gearing of a bicycle, where what is perfect for one man is often a failure for his neighbor. There is not much difference between the motions of pedalling and walking. In walking the long limb takes a longer but slower stride than the short one, but in a day's march, other things being equal, the ground covered by the tall man and the short man would be much the same.

Taking the two properties of the long limb, length and slowness of stride, and applying them to the action of pedalling, the length of stride should have its analogue in the length of the crank and the slowness of stride its analogue in the height of gearing of the driving wheel. To place, then, the tall man and the short man on an equality in cycling the former should have cranks above 6½ inches and a gear above 60 inches.

To find the gear most suitable for a person take the following as a working basis. Suppose the standard man walking at his usual pace covers 15 ft. in six steps, then if a tall man walking at his usual pace covers 17½ ft. in six steps, the latter should have a 70-in. gear. As 15:17½::60:70.

NOT A "VEHICLE."

An Indianapolis judge, who has evidently learned of the recent Scotch decision that a bicycle is not a vehicle in the eyes of the law, has temporarily tied the hands of the local police so that the sidewalk fiend is safe from arrest in Indiana's capital. The Chief of Police there issued an order forbidding wheelmen riding on the sidewalks. The first disobeying the injunction was a young colored lad, and he was accordingly arraigned before His Honor. The Judge dismissed the case indefinitely. Speaking of the situation he had this to say:

"The law passed away back in the seventies prohibiting the driving of 'vehicles' on sidewalks, which is now being interpreted as relating to bicycles, was never meant to govern this modern invention. It is my opinion that, viewed from a legal standpoint, no conveyance for which the motive power is furnished by the occupant of the same can be properly termed a vehicle."

As a result of the Judge's action, the Superintendent of Police has issued an order that no further arrests are to be made until His Honor is heard from.

IN FAIR VIENNA.

There are fewer women riders in Austria than in any other European country. This is not to be wondered at when one learns from a Vienna Mrs. Grundy that the following rules are essentially the proper caper for Viennese wheelwomen:

It is good form for every Austrian man on a wheel to greet a lady cyclist with "All Hail!" and it is bad form for her part not to reply. But in towns wheelwomen are not to take any notice of one another. When a man takes a lady out he must ride ahead of her in crowded streets, but must let her set the pace on a country road. A lady may ride with a gentleman unchaperoned if the gentleman is a relation or an intimate friend. A lady may take short rides in town alone, but should not do it too often. She should not, when unattended, address a strange wheelman unless she is in trouble.

"A pound of pluck is worth a ton of luck," was a favorable maxim of the late James A. Garfield. It is needless to say that the man who punctures the tire on his new wheel the very first time it is ridden does not believe in this theory.

THE INFLUENCE OF TIRE FABRICS.

The weaving of tire-fabrics has given rise to very much study. The fabric-man has been consulted assiduously by the tire-manufacturer, and deserves a prominent place in the history of the development of this industry. It may be truly said that the initiative in the improvements which have been made have been due oftener to the weavers of fabrics and the designers of looms for this purpose than to definite demands from the tire trade for new and better things.

It might naturally have been supposed that the making of tires would grow up in connection with the fabric looms. Indeed, some tires were manufactured in one cotton mill, but the proprietors soon concluded that it might be wiser to enter the market for supplying rubber-men generally with fabrics than to antagonize all of them by dabbling in the use of rubber, and the latter was given up.

There is nothing else used in bicycle construction in such great variety as tire-fabrics. A single firm are weaving or have woven 700 different grades of these goods. They are to-day supplying the tire-makers regularly with forty or more different grades—suited to heavy and light tires, single-tube, inner-tube, and detachable tires, woven straight or on the bias, from two-ply thread to seven-ply, with "long centre" or without, and with some variations to suit the special wants of inventors and experimenters.

Many of the different weaves of fabrics are protected by patents, and other patents are now pending, which tend to keep the business for the present in a few hands. What would be the result of litigation over these patents could only be conjectured.

The prime requisite of a tire-fabric is that all the threads composing it shall be subjected in use to equal strains, and this involves the proper conformation of the tire to the wheel. This requirement has led to ingenious devices in connection with the looms.

The principal claim in the specifications for one patent for weaving a tire-fabric reads: "The fabric is not only tubular"—as in the case of the ordinary woven hose—"but it is woven with one side of the tube much longer than the other side, so that the tubular fabric assumes a circular form corresponding to the wheel to which it is to be supplied." There are two advantages, too technical to be detailed here, in a diagonal or bias construction of the tire, which may be attained by either weaving the fabric in this shape, or by the method of applying the square weave.

There are reasons, likewise, not easily described in a brief space, why a tire which might run satisfactorily in a straight line might not withstand a sudden turn in the road, and scores and scores of other considerations will be pointed out by the fabric manufacturer to the intending producer of tires, all of which may not safely be ignored. But there is one point which does not admit of a difference of opinion—no treatment of fabrics, short of reinforcing them with solid substances will render them proof against punctures.

Of all the "bicycle rests" and "wheelmen's retreats" which are to be met with between the Brooklyn Bridge and the Coney Island elephant, none is more commodious than that owned by Frank Albert, the old-time six-day racing man. His place is large and he has agreeable men, who joyously repair or cure the bewrecked wheel. He is attentive and courteous. His stand is just at the foot of the bicycle path on the Ocean Boulevard. It is a good place to leave wheels.

Too much weight on the front wheel causes stiffness and pain resulting from vibration.

KILLS CYCLE CONCUSSION.

Springfield, Mass., Sept. 13.—A cushion frame bicycle will be one of the Warwick Cycle Company's specialties next season. A few of these wheels were put on the market this year by the Warwick Company. Their reception has been so cordial that next year they will be manufactured in considerable numbers.

The cushion frame differs from the ordinary frame in that there is a cushion in the rear brace, connected with the rear brace, so as to make a spring and pneumatic movement. The cushion action is entirely concealed within the tubing, over the rear wheel. The frame is hinged at the crank hanger and wheel, but a glance at the illustration will show that in spite of great elasticity there is no deviation in the distance between the seat and the pedals, nor between the chain sprockets. The additional weight is but a few ounces. It is claimed that the cushion frame increases the durability of a wheel, as it avoids the rigidity, which is the cause of so much wear and tear.

The pneumatic tire gives from one-quarter to three-quarters of an inch of resiliency, and the cushion frame is said to add two inches more of resiliency. The cushion frame also does away with vibration of the handle-bars.

The cushion frame is especially desirable on rough roads and for women. It overcomes the jolting and vibration caused by uneven surfaces and enables even delicate women to ride with safety and comfort. The liability of being thrown by a sudden jar is greatly reduced.

From the hygienic point of view the cushion frame will be a boon to many who are not able to ride a wheel with a rigid frame on account of the injurious effects resulting from a concussion. The wheel is intended not only for invalids but for experienced cyclists, who prefer perfect ease to more or less jarring and jolting.

EITHER SIDE, ANY MAKE.

A reversible lamp bracket, one which will, with equal facility, fit either fork side of any make of bicycle, is the novelty being introduced by the Place & Terry Manufacturing Company, 247 Centre street, this city, who also make the Pathlight lamp. It is pictured herewith.

It is light, and will not rust nor bend, and requires neither wrench nor screw-driver to adjust, a thumbscrew doing the work.

WOOD RIM EXCELLENCE.

Four thousand rims per day is the capacity of the Kundtz Bending Works, of Cleveland, and if long experience in fine wood working goes for aught the rims will not lack character. The concern is the outgrowth of the business of Theodore Kundtz, who for twenty-five years has been engaged in the manufacture of fine cabinet work for sewing machines, from which, however, the Bending Works is separate and distinct, being located in a big four-story 230 by 70 building of its own, which has been equipped with special machinery and represents a valuation of some \$150,000. Each department is in charge of skilled workmen, who have been employed at the parent factory, while the entire business management devolves on H. S. Edgerly, who has been connected with the Kundtz interests for a number of years. The product of the factory includes everything connected with a bicycle which is made of wood—dress-guards, chain-guards, handle-bars, one-piece wood rims and the Kundtz Reinforced Laminated rim, which is favorably spoken of. A new adjustable wood handle-bar is something of a feature. The fastening is novel, but secure and strong. It is made in two sections, each having ridges on the inside, the sections fit into each other, and being drawn together by a tapered bolt the ridges fitting into grooves in the handle-bar, thus making a perfect grip on the bar, which cannot possibly become loose.

"TERRIBLE TIM" AND HIS WHEEL.

Mr. Tim Healy, M. P., can be seen cycling about Dublin mounted on his Rambler, fitted with G. & J. tires. Mr. Healy can wreck corporation bills, but his American Rambler shows no signs of giving way under what some of his political opponents call "Terrible Tim." He is one of the most consistent parliamentary cyclists we have, and in or out of the House of Commons always has the best interests of wheelmen at heart." The Rambler people have managed to place a large number of their wheels in England and the continental countries of Europe, where the G. & J. tire has been well known and largely used for five or six years.—(The Irish Wheelman.

Stearns & Co. have not and probably never will receive the full measure of credit due for the part they played in the recent record-breaking cross-continental relay race. That each and all of the several hundred riders who participated were mounted on Stearns bicycles is a remarkable occurrence that should leave a streak of yellow from ocean to ocean. It bespeaks most excellent organization and effort.

Insufficiently inflated tires increase the liability of accident, while at the same time decreasing speed and ease of propulsion.

TWO SALESMEN

wanted by a leading tire firm. Must be business men, and competent to handle the large trade.

Address W. N. F.,

The Wheel,

Box 444, N. Y.

HARD KNOCKS.

Of the first 100 finishers in the Columbia Wheelmen's big Labor Day Road Race in Chicago, 49 used Morgan & Wright Tires; 42 were divided among 7 other makes; the tires of 9 riders are unknown.

On the National Circuit, beginning with San Antonio, Tex., June 5, and including Keene, N. H., Sept. 10, the "good" tires have won 428 out of 886 places—almost half—against all other makes of tires. Here is the weekly list of M & W. place winnings off the Circuit:

Grand Rapids, Mich. (2 days)	24 out of 39
Valdosta, Ga.	9 out of 14
Lewiston, Me.	7 out of 10
Dubuque, Ia.	16 out of 30
Muscataine, Ia.	15 out of 15
Cincinnati, O.	16 out of 25
North Manchester, Ind.	14 out of 28
Danville, Ill.	6 out of 12

Davenport, Ia.	23 out of 25
Lebanon, Pa.	9 out of 16
Camp Point, Ill.	11 out of 20
Cambridge, Ill.	6 out of 9
St. John, N. B.	9 out of 15
Utica, N. Y.	8 out of 12
Chattanooga, Tenn.	13 out of 21

Total, 186 out of 291 places won on Morgan & Wright Tires. Far more than won on all other tires combined. In 114 meets off the National Circuit, Morgan & Wright Tires have won 1,414 out of 2,322 places. Far more than won on all other tires combined.

All reports tell the same fact—the great majority, on track or road, prefer the "good" tires, as they have for years. Don't it look that way?

MORGAN & WRIGHT,
CHICAGO.

**MORGAN & WRIGHT TIRES
ARE GOOD TIRES**

ROUND IN A CIRCLE.

So Swings the Fashion of Cycling in Everything from Handlebars to Pedals.

It is a matter of amusement to an old-timer to see the new public going through the experiences of the past years with the same faith and impetuosity which characterized the old-timer in his younger days.

At first thought the case would seem to be parallel, but the difference is that the old-timer secured the experience for himself by actual trial, and could not have secured it in any other way, while the later rider is doing the same way only because of his newness. He could learn his lesson from the testimony of the older rider instead of by actual trial if he so wished. It is the old case of father and son, in which the argument ran about as follows:

"Father, I want to go to the theatre."

"No, no, my son; it is foolishness. When I was a boy I went to the theatre, but I saw the folly of it, and have quit."

"Yes, father; but I want to see the folly, too."

So the new rider rushes into fads and follies which the old rider has tried and disproven years ago.

This tendency is again shown in the probability that elastic handle-bars made of wood will be used in quantity next year. Some five or six years ago elastic handle-bars received considerable attention from various inventors, and were tried more or less fully by the public. Rigid handle-bars were pivoted to the stem and held in place by springs, so that they would yield to the weight and permit the front wheel to rise without jolting the rider's hands, but if the rider pulled thereon they would not yield in the direction of the pull, and so were satisfactory hill-climbing assistants.

Other forms were found in the various spring handles offered. In some of these the handle was mounted on a short stud, which was held elastically in the bar. Other handles were elastic in themselves, being a coil of spring wire, a chunk of rubber or a hollow rubber handle inflated with air. Still another form of handle which probably more nearly approached the present wooden handle-bar than any other was a small, tapered bar of spring steel, called by the inventor thereof "Velvet" handle-bars, owing to the velvety feeling noticed when using said bar over ordinary pavements.

Each and all of these, however, disappeared and were replaced by the rigid bar used by the racing man. The common supposition is, and would naturally be, that, having disappeared, they were not valuable, but, as has often been the case and as always will be the case where riders, having no experience or judgment of their own to guide them, copy others, this assumption is wrong. The elastic bar was not needed on the racing track, and as for a number of years the racing or "scorching" fraternity set the fashion for every one elastic bars were not used on the road. Each year, however, sees a larger number of road riders and business riders in proportion to the sporting and scorching contingent, and the latter as fashion-makers are losing their position, much to the benefit of the business and the users of the machine, for it is plainly evident that the machine should be suited to the requirements of its users rather than to the requirements of some racing crowd.

It is very probable that the wooden handle-bar will prove a pronounced success, because of the increased comfort found therein. It will be found stiff enough for the uses of the majority of riders, and as years go by each rider adds to his experience and is better able to select those things which are comfortable and

satisfactory to him, so that it would seem that there is a future for elastic bars and also for other comfort-adding devices.

Spring frames were at one time the writer's hobby, and are yet dear to his thoughts, and it is with pleasure that an attempt to revive spring frames is noticed. There is no doubt but that increased comfort and decreased labor can be had by the use of the spring frame, while the necessary increase of weight is very slight, certainly not over 10 per cent of the weight of the bicycle, and probably not over 5 per cent. If a majority of riders could only try a satisfactory spring frame they would refuse to ride stiff frames, and it is fully believed that spring frames will attract larger attention in the future.

Only a few years back all rear forks were of flattened section, so as to give the greatest possible tire width with the narrowest tread, but to-day we find D-shaped rear forks coming into vogue as the proper thing. Why the flattened tube should ever have disappeared from use is a query; that it should come back into use is not a wonder. Merit is eternal, and sometime or other will win recognition.

By knowing the history of the past cycle experience one can predict with considerable certainty the future of cycle improvements. The narrow tread of this year was seen in the early days of the safety, and was replaced by a fad of wide crank-boxes in which the ball races were placed as far apart as possible. This we may again expect to see. The narrow tire of this year and last has probably run its course, and we may expect to return to the two-inch, or even larger, used at the beginning of the pneumatic-tire period. Certain it is that a large tire permits sand, dust and soft roads to

GOT THE MONEY AND GOT OUT.

Everything takes on a cycling tinge nowadays. People seem to think that anything which has the magic word "cycle" tacked on to it is bound to be a winner, and oftentimes it does seem as though the idea was a good one.

Some swindlers out in Illinois demonstrated this satisfactorily to themselves and to their dupes in this fashion: They announced through the local papers that a Southern Wisconsin racing circuit had been formed by J. K. Lowrie and G. H. Hamilton, for the purpose of holding road and track races early in September at Racine and Kenosha. Riders were told that their entries must be in promptly, and the alleged race meet promoters gave their address as Milwaukee.

All entry fees were forwarded to a private box in that city. The whole southern part of the State was flooded with entry blanks for the races, and some of them fell into the hands of riders who sent the blanks to Chairman Fred J. Schroeder, of the Michigan Racing Board, for investigation. He laid the matter before the postal authorities, who found that the promoters of the races had left the city. The Government detectives are now looking for the swindlers who secured the entry fees, but that is not much consolation to those whose dollars they skipped off with.

DEPARTMENT STORE CYCLE SELLING.

Obliging Clerk—Ten yards of brocaded sath—there you are, ma'm! En'g else?

Customer—Er—yes, a kit of mackerel—"

"Yes'm. Send 'em home?"

When roads and company both are good.

be ridden with less effort, and it is also certain that the large tire is more flexible and less liable to puncture than the small tire.

The last year or two have shown a majority of rat-trap pedals in use, but the experience of the past has proven that rubber is more satisfactory, and so we may look for an increased number of rubber pedals in the future.

The size of balls has fluctuated, but experience favors the smaller sizes, 3-16 and ¼, for cycling use.

When these things will come to pass is not to be told. The operations of the public mind are past finding out. Time only will tell.

CHARLES E. DURYEA.

WHY?

I wonder why
It is that on the crowded street,
Whene'er a sprinkling cart you chance to meet
A-riding by,
The driver seems to take good pains to greet
You with a deluge thrown o'er your feet,
But leaves quite dry.
•All else in sight, and blistering with heat!

"I see you have some very fine laces, I see—"

"The rarest, ma'am. A few yards off this piece?"

"Well, yes; send eight yards and a lead of coal—"

"Exactly. And the ribbons?"

"Send twenty yards of the pink and a bale of hay—"

"Um-huh! Now, as to the wrap. Here's a beauty for—"

"That will do. Send it with a barrel of turnips and a barrel of lime—"

"So. And this high-grade hundred-dollar bicycle we have just marked down to \$43.67; want it—think?"

"Oh—I—yes. You might send it with one of your \$3.44 bloomer suits, a peck of onions and a pair of tongs."

THAT REMINDED HIM.

"This reminds me of my school days," remarked Fogg, as he dropped into his Mesinger saddle. "Caned seat, you know."

PALMER TIRES

THE GREAT TRANSCONTINENTAL RELAY

conducted by the *New York Journal*, *San Francisco Examiner* and E. C. Stearns & Co., makers of the "Yellow Fellow," finished in a blaze of glory. The 400 Stearns Bicycles used were fitted with Palmer Tires.

THE BOSTON MEET,

the biggest Labor Day meet in the country, was another affair where Palmer Tires won all kinds of glory. Ten of twenty-three prizes were won on Palmer Tires—more than were won on any other tires.

COASTING CONTESTS

are daily affairs all over the country, and Palmer Tires invariably win over all competitors. The Bison Bicycle, fitted with Palmer Tires, won the big challenge contest at Buffalo, August 15th.

COLISEUM RACES

Palmer Tires secured two-thirds of all the prizes offered at the Coliseum Races, winning nearly all the firsts, and breaking fifty-four records.

**The fastest tire is the easiest tire to push.
Why push anything but Palmers?**

TO MAKE THE WHEELS GO 'ROUND.

Some Old and Some New and Odd Means of Transmitting Power—Chains vs. Bevels.

It is promised that some of the 1897 bicycles will be fitted with a bevelled gear system of driving them instead of the usual form of sprocket gearing. Manufacturers of bicycle mechanics, inventors and others have been experimenting a good deal lately, and although the sprocket and chain method has been very efficient, it has been shown that there are other forms of power transmission more suitable. The sprocket and chain system is simple and effective, but like everything else, has its drawbacks. The links will wear and the chain stretch, rust and dust gathers and the chain "rides."

For these and other reasons, new methods of transmitting the power from the crank shaft to the rear wheel, will, it is stated, appear next season. Whether the new method will possess defects also, will, of course, be ascertained after the proper trials. In either case it is wise to experiment and adopt new ideas so as to bring the wheel of 1897 to a higher degree of efficiency, the aim sought, of course, being to do away with as much friction as possible and present the simplest mechanism possible to do the work.

The resistance to moving parts, which causes friction, is the result of pressure upon bearings of revolving masses. A metallic plane cannot be made so smooth as to present a non-frictional surface. The magnifying glass will reveal cavities, swellings, etc., on the smoothest of surfaces. A good oil evens the irregularities and overcomes considerable resistance.

To discover the degree of resistance between two surfaces, drive a pin D as shown in Fig. 1, and attach thereto a testing scale E. Thus by drawing A across B and noting the registering of the scale, the amount of resistance will be known. By introducing ball as represented in Fig. 2, the degree of resistance will be much less. By enlarging the surface the friction is not reduced. Fifty pounds to five square inches would have the same effect on the power to move it as if it were distributed over fifty square inches.

Now then, whatever system of power transmission can be worked with the least frictional resistance, and do the work correctly is, of course, the best for use on bicycles. There is necessarily more or less friction in operating the best made sprocket and chain. There is friction also in bevelled gear systems. The friction on the cogs of correctly made and properly adjusted gears average from 1 to 3 per cent. The bevelled gear system which it is proposed to introduce next season is shown in Fig. 3. The sprocket has substituted for it the bevelled gear A on the crank shaft D. This gear engages with the bevelled gear E, and the latter is keyed to the shaft E, thus driving the bevels F, and turning the rear wheel.

There is certainly much to commend in such an arrangement; and if the gears are correctly cut and kept in proper alignment, there is no reason why such a method of propulsion should not prove what is wanted. There is much bevelled gear matter in use in machinery, as the method is more positive than belts, frictional rolls, chain drives, etc., but trouble has always been encountered in the matter of setting the bevels.

In Fig. 4 is shown a pair of bevelled gear, A and B, correctly meshed, the cogs of one engaging with those of the other evenly, as indicated at C. So long as they are thus set there is no danger of breakage or wear of cogs, stripping, grinding, loss of power, etc. But if the setting is as in Fig. 5, the cogs will

not mesh correctly, as shown at D, and trouble will occur. The bevelled gears for the new driving system for bicycles will of course be cut to conform to the alignment of the shafts, and if kept right by the rider, should give satisfaction.

A peculiar system of driving is shown in Fig. 6, in which a wire rope runs in a groove in the pulley of the crank shaft, A, and the

FIG 1

FIG 2

FIG 3

FIG 4

FIG 5

FIG 6

FIG 7

FIG 8

puller, B, of the rear wheel shaft. The band is endless and very strong. The grooves in the pulleys are V-shaped, like D, in Fig. 7, in which the rope, E, can get a firm grip by sinking into it. The process was made for a rider who is now running his wheel with it.

Another odd way to drive the wheel is exhibited in Fig. 8. This was made by a special order. We fixed a support to the frame into which the studs for the three wheels, B, C and D, were secured. The sprocket was substituted with wheel A. Another wheel of the same type, but smaller in diameter, was keyed on the rear wheel shaft at E. All these wheels were iron, turned smooth and the rims covered with leather. The power resulted from the friction between each. The man rides his wheel all right, and claims it to be satisfactory to him. GEO. D. RICE.

RECEIVER TO FINISH.

Robert Carey, receiver of Porter & Gilmore, obtained an order last week from Judge Beekman of the Supreme Court, to complete the manufacture of 120 bicycles now in his possession in various stages of manufacture, at an expense not to exceed \$2,000, and put them on sale as soon as possible. They will be completed within thirty days and placed at \$40 each.

GOOD WOOD

Is Not Over Plentiful and Rim Buyers Should Have a Care, Says a Rim Maker.

Overproduction of certain component parts or accessories of the bicycle is to be guarded against as jealously as is the production of a surplus of the machines in their entirety. There is no immediate cause for alarm, but particularly is there need for caution on the part of makers of wood rims and the like.

That the more far-seeing appreciate this is apparent; they are fearful that quality will be sacrificed to quantity, price and illegitimate methods, and as one of them expresses it, that "the rim business will be overdone and will suffer as much as has the cycle trade itself this season."

The Fairbanks Wood Rim Co., of Bradford, Pa., is among those who share this feeling.

"Recognizing the fact that in the East THE WHEEL reaches the thinking public and manufacturers more completely than any other paper in the vicinity," as the Fairbanks people write, they believe THE WHEEL should endeavor to checkmate impending disturbances.

"The entire cycle trade understands quite well that to make a superior rim, superior wood is a principal requisite," they say, "but just what constitutes superiority in this material is in some instances a mooted question even among lumber manufacturers themselves."

The Fairbanks company incloses an extract from an European lumber journal taking to task the American exporters for their "reckless consignments," and from an American paper catechising the shippers as a whole for the anything-is-good-enough policy which apparently prevails. This American paper, "The Tradesman," declares that such a policy is "a disgrace to the business sense and reputation of such an up to date people as we are."

The Fairbanks people say that this inattention to the selection of woods for finer uses is just as prevalent in the manufacture of American wood rims. Many established rim builders, they state, will, of course, be able to obtain ample stocks of selected lumber, but because of an existing inferior lumber supply, a considerable output of undesirable wood rims must result. In their new location at Bradford, the Fairbanks company is admirably situated. The works have been greatly enlarged and improved, and the concern has control of an immense quantity of thoroughly seasoned rim stock from their own forests. Their outputs they say will consist, "solely of the finest wood rims possible to construct, and in quantities only limited by the inclination of the cycle trade in the placing of contracts."

An artistic catalogue, plentifully embellished with photographs of their works, processes and environments, is almost ready for circulation.

THEY SAY IT'S "THAT FERRULE."

Fort Wayne, Ind., Sept. 12.—Louis Rastetter & Son, of this city, are in high feather over their prospects for 1897 business, which, in Mr. Rastetter's words, "are so good that we should almost feel justified in doubling our facilities."

They are particularly elated over their foreign trade, which but recently has meant a good many handle bars, rather laying low the old claim that the foreign market has no use for American goods made strictly in the American way. The Rastetters attribute the showing, as far as wood bars are concerned, to "that ferrule," a phrase with which readers of the cycling papers are familiar.

A GUTTER-SNIPE GOLD MINE.

Two street gamins, dirty, ragged and ferret-eyed, sat on the retaining wall of the Riverside Drive and lazily watched the cycle procession as it passed them by. Finally the one with a freckled face turned to his companion with the ventilated trousers, and said: "Saay, Willie, ol' pal, I've got the biggest graf yer ever struck yer tribbles inter, an' I tink 'll let yer in fer haf de money."

"'Wot is it, yer bloomin' napolyun uv fine ants?"

"We won't do a ting dis fall but lay 'round de Clarymount an' clean de mud of bisickles at 25c de clean, see?"

"'Wot yer talkin' 'bout. S'pose dem guys wit wheels want 'em clean w'en der on'y haf round de drive? Nixie, dey won't have 'em made purty till dey gets home, an' den dey'll make der little brudder do it fer notin'. Yer gittin' nuttier every day yer live, Dubsy. Yer graf' makes me tired."

"'Rubber? I tot yer had w'eels all de time. Jes' listen ter yer fren speel de game. Yer see dem johnny boys dat goes out wit der fairies, when dey gits ter de end of der drive are goin' ter be tired, jes de same as der bikes, on'y in a diffrent way, an' dey stops at Clarymont fer er leminade, don't dey? Well, wot'll, ders de place where we comes in. As soon as dey git of der w'eels, we's right der an' makes de speel, 'Clean yer wheel, mister?' an' one uv us takes de goil's w'eele an' jerks out de rags an' tings an' starts ter woik. We'll tell 'em dat we'll clean 'em up an' watch 'em while der inside, an' d'yer s'pose de johnny boys is goin' ter say nit wit de goll dare ter pipe his stingsies? Not on yer face he ain't. We sez notin' 'bout de coin till he comes out, see? An' den w'en we gives him de w'eels we jest tax him er'quarter 'piece, an' wot kin he do? Nothin' but shake himself fer de coin. See?"

And the two Napoleonic financiers of the gutter crawled down from the wall and strolled lazily Claremontward.

MARRIED IN HASTE.

It has come to pass that really enthusiastic cyclists cannot leave their wheels even to get married. Two of them rode into St. Joseph, Mich., and were married on the run. At any rate, they did not get off their wheels for the ceremony.

Thus the fashionable clergyman of the future will have to be an expert cyclist if he would secure any wedding fees. He must be more of an expert than either the bride or the groom, too. All that they have to do is to transfer the ring and clasp hands while in motion, but he must be able to back-pedal in front of them, holding a prayer-book in one hand while he blesses them with the other. And this is no easy thing to do when the wind is playing tag with the surplice. However, the clergyman must face the bridal couple if the knot is to be properly tied, and how can he do that unless he can back-pedal as fast as they can "scorch"?

KNEW A LOT ABOUT IT.

She was of the novice most novice. Pride had induced her to become an atom in the cycle parade. She was near the head of the procession just as it reached the point where it began to retrace its route.

"Look around," said her escort, "and see what a beautiful sight the riders make."

"When Lot's wife looked back," she said, "she turned into a pillar of salt, and if I were to look back I would turn a somersault."

The latest is a suggestion that every wheel should be stamped with the maximum weight it is intended to carry.

DIFFERENCE BETWEEN "POWER" AND "WORK."

One has to be exceedingly careful these days regarding what statements he makes concerning cycle propulsion and construction. Everybody rides a wheel to-day, and among the everybodies thus riding are any number of scientific and mechanical men who, while they will rarely condescend to write for the trade press themselves, are always ready to find fault with the ideas and words of those who do write.

Not long since in discussing the question of the varying length of crank advisable for high and low gearing, an exceedingly clever writer declared, "It requires the same amount of power to propel a machine a certain distance in a certain time with a high as well as a low gear."

No sooner had this appeared in print than the man-who-kicks comes to the front, and proceeds to discuss the statement made in this fashion: "Now that is just what it does not do. No distinction is more vital than that between power and work, and none is more completely unknown to the public. It is therefore unfortunate that your writer should adopt this misleading language. Power is force, or strain, or stress, or pull, or weight. If the gearing is lowered by half, then the power necessary to maintain the same speed will be also halved; if it were not so there would be no reason for the existence of two-speed gears, and no criterion for any gear whatever, except perhaps one of infinity, which I should in that case adopt. What the writer meant by power was work, which is power multiplied by the distance through which the point of application moves. By halving the gear this movement is doubled, the power halved, and the work done remains constant; or if the speed of the machine is also halved, the work done in a given time will be halved, the power halved, and the movement (of feet) constant.

"I also want to protest strongly against mixing up 'gearing' with length of crank. I thought I knew what 'gearing' meant—i. e., the virtual diameter of the driving wheel. But now I learn that to express gearing properly it is necessary to state the length of crank. I might as well say that to express the distance of the saddle behind the crank, it was also necessary to state the rake of the handlebar. In either case the meaning would be clear; the confusion of thought and language would be regrettable."

IN THE NAPOLEONIC ERA.

"Ma chere," observed M. Recamier, to his talented wife, as he encountered her casually in the crowded salon amid a throng of diplomats and beaux esprits, "who is that tall young man so distraught in manner, who has just passed?"

"Ah, mon ami! that is the Comte de Pedesvert; he js a strange, eccentric character—an original—vraiment."

"Ah—you pique my curiosity! Is he then so exceedingly outré?"

"Yes, indeed! Why, would you believe it? I have met him half a dozen times and he has never once asked me if I rode a bicycle."

"Oh, how absurd!" ejaculated the husband. "but, I suppose it takes all sorts of people to make a world."

COMING TO THIS.

Oh, the speed at which Americans live now and for which they are sometimes criticised is nothing compared to what it will be when the clerk "scorches" up alongside the shopper as she hums by his store and takes her order and measure for a pair of gloves and shows her samples of hats!

The clever rider who is up in towing can do wonderful things with a rope—that is if it's properly taut.

WAY ABOVE SEA LEVEL.

It seems absurd to speak of a hill in Holland, for if the best guessers are right, the name of the country is from our word hollow, meaning a depression in the land; but a Continental tourist, who included Holland in his foreign rambblings, found at Groningen a hill that was the show-place of the town. It was artificial.

"There is a fine hill in the Plantaage," said my companion, "and from the summit of it you will be able to see the country for a great distance around."

It interested me greatly to hear that there was such a thing as a hill in Holland.

"But where is it?" I asked, looking around the interminable plain on which we were riding. "I can see no hill."

"It is just over there; but you cannot see it, for it is hidden by that bush."

I ascended this fine hill, which proved to be an artificial mound not twenty feet in height; but the natives are very proud of it, and speak of it as if it were some huge mountain. As an instance of how successfully a Groningen is deceived by his admiration for it, I may mention that my companion heaved a deep sigh, placed his wheel beside him, mopped his face, and dropped exhausted into a chair—thoughtfully placed there by the corporation for this object—when he reached the summit. But to do this eminence justice, it must be allowed that the hill is, beyond dispute, above the level of the sea.

SCHEMING FOR CYCLING.

An uptown policeman, who rejoices in the name of Big Steve, has for some time been envious of those members of the force whose duty it was to ride around on bicycles. Recently he got a straight tip that the Commissioners intended shortly to largely increase the cycle squad. As soon as he learned this he purchased a machine and began the task of mastering it with the object in view of furthering his chances of promotion to the cycle squad. To all questions put to him by brother officers as to his sudden fancy Steve would shake his head and smile knowingly to himself.

The officers would whisper among themselves and many a sad sigh would tell plainer than words that they thought the wheel Steve purchased was not the only one he had about his person.

Steve allowed the feline to escape from the receptacle when he called the statesman, who is his backer, aside and said:

"Phwispur, Oi hov a secret t' tell yez. Oi hov bawt a bicycle, an' phwin Oi can roid it O'ym t' be mad a roundsmin, d'yez moind? All th' byes are wondherin' phwat th' divil has taken possession av me, but wait till Roosy axes phwat min are available for bicycle sarvice. Oi will shtep out an' say:

"'Here is wan, and an Irishman, thank hivin.'"

DISTANCES OLD AGE.

Anything which tends to keep old people young is a blessing. Who would not like to drink from the fountains of perpetual youth? Cycling may be fun for the young man, but it is in a peculiar sense both pleasure and medicine for the man past the fifties. It is an anti-rheumatic specific; will keep joints from growing stiff, wrinkles from forming in the cheeks, and compel that spectre, "Old Age," to stand off in the distance. In fact, many there are who really doubt whether old age can catch a man who learns to ride and keeps steadily at it.

The lady who, following the ideas of the Smithites, declares she will never ride a bicycle, should be named Ida Kline.

STRONG ON SHEET STEEL CONNECTIONS.

Buffalo, N. Y., Sept. 12.—The Crosby & Mayer Company, of this city, organized some months ago, has been spending its time getting ready for next year, and if advanced signs are to be relied upon, its '97 campaign will be of a sort worthy the political year.

One of the main lines which they will handle—it might almost be called the leading feather, since the goods are of their own manufacture—are sheet steel connections.

Crosby pedals are an item, also the wood rims, guards and bars of Louis Rastetter & Son, also the Springfield Drop Forge Company's forgings, Duckworth's chains, Cleveland Brazed Fork and Tube Company's fork sides, P. & F. saddles, Bay State Manufacturing Company's tool bags, United States Projectile Company's tubing, Hamilton Tube Company's brazed tubing, I. A. Weston & Co. hubs, Fay & Bowen spokes, nipples and cups, Fibre-Buckskin grips, Morse roller chains, etc., etc.

The company is well officered. W. H. Crosby, an old-timer in the parts line, is president and manager, and can be relied upon to make a good showing, while his chief lieutenants are A. G. Crosby, Charles Mayer and William H. Hill.

Their office and factory are at Nos. 506 and 508 Genesee street.

TRUSS AND FOWLER STILL FRIENDS.

Chicago, Sept. 12.—Rumors that the Fowler Cycle Manufacturing Company would abandon the truss frame in 1897 have brought out a vigorous denial from the concern. To a WHEEL representative they said that the truss frame was strictly a Fowler institution and would remain so as long as they existed, or until they discovered a better way of constructing a bicycle frame. The Fowler man further said that the report that they would be compelled to pay a royalty for the use of the truss frame was likewise untrue and without foundation. They own the patent on this as applied to a lady's wheel, and also enjoy all the rights to the truss as applied to a diamond frame wheel, without being obliged to pay for its use or running any chance of its being denied them. The Fowler people say that '97 will see the truss frame on all their high-grade wheels, as usual.

FOR CYCLE ADMITHS.

In order to advertise Monarch bicycles more effectively during 1897 than ever before, the Monarch Cycle Mfg. Co. has inaugurated a prize competition for the best original designs for Monarch advertisements. The competition is open to the world, and will close November 30. As soon thereafter as possible the Committee on Awards will render their decision. The first prize will be a \$100 Monarch bicycle, the second an \$80 Monarch bicycle, and third a \$60 Defiance bicycle. Particulars governing competition may be obtained of the Monarch Cycle Mfg. Co., Lake, Halsted and Fulton sts., Chicago, Ill.

AN ENGLISH CUSHION FRAME.

A pneumatic-framed safety is to be put on the English market. Those who have ridden the new machine declare that as an interceptor of vibration it is a great success, as practically no weight is added by the addition of the pneumatic cushions, owing to the fact that a lighter gauge of tubing may be used. These cushions are fitted between the back and front fork ends of the axles, and are contained in horizontal metal cases about six inches long. They may be inflated to suit riders of any weight, and even when deflated there is no side play in the wheels.

WILL CURE POLISHERS' STRIKES.

Whether or no the sometimes stinging air in their workrooms is responsible for it, certain it is that no class of labor has given more trouble to the cycle manufacturer than the men who do the polishing. They seem easiest aggrieved, and, during the last season have been "on strike" in some one factory or other almost constantly. It may be that

their day of reckoning is not far off. Some of the automatic polishing machines made by the Drapery Fixture Company, of Worcester, Mass., create this impression. One of them is illustrated in this column, and another is pictured in the concern's advertising space. Although these machines have been considerably used in other than cycle factories, it is comparatively recently that the Worcester firm has endeavored to interest the cycle-makers, which, in view of their labor troubles in that particular department, should be a matter of comparative ease.

Among the big concerns that use the revolving polisher shown here is the Washburn & Moen Manufacturing Company, of Worcester, who employ it on tool steel finished to micrometer gauge, and think so well of it that they permit their name to be used as a reference.

A CHICAGO KINK.

The Boston Manufacturing Company, of No. 197 South Canal street, Chicago, are the inventors and marketers of the Star pump bracket, illustrated above, which fulfils a novel purpose.

Its object is to ease the difficulties attending pumping up your tire on the road.

It will fasten to any ordinary hand pump. After this is done, you hook the brackets around a spoke and over the edge of the rim, and then simply proceed to pump. Its attachment is a matter of a few seconds.

HIGHEST OF HIGH GRADE.

Pennsylvania's most recent addition to the cycle trade, the Duquesne Mfg. Co., of Pittsburgh, last week elected these officers: President, William L. Abbott; vice-president, Henry Crowther; treasurer, Otis H. Childs; secretary, N. L. Tener; directors, William L. Abbott, D. N. Seely, Otis H. Childs, Henry Crowther and Charles Timm.

It is the intention of the Duquesne Mfg. Co. to confine itself, during the coming season, to high grade bicycles only, building one grade—the highest. They will embody in this wheel all the value that capital, skill and experience can suggest, the name of Mr. Charles Timm—who was formerly superintendent of the Sterling Cycle Works, and who has accepted the superintendency of the Duquesne Mfg. Co.—being a guarantee of the excellence and reliability with which their machines will be constructed. Mr. Crowther writes that "the new 'Duquesne Special' is intended to be essentially a gentleman's mount, and as such will appeal not only to that class of riders who are looking for the best, but also to the agents who are desirous of handling a machine that will prove thoroughly creditable as well as profitable to them."

PRICE LOW, QUALITY HIGH.

Buffalo, N. Y., Sept. 12.—A metal-working concern of this city, which made its debut into cycle parts last year, has found the business sufficiently to its liking to make a stronger effort than ever for trade of a cycle nature.

The Niagara Screw Company is the firm in question. Its specialties in the bicycle line have been, and will continue to be, hubs, cups, cones, axles, cases, etc. The Niagara people are especially adapted to taking care of the trade in hubs. Their specialty is a newly patented article, with a tool steel bearing, which, it is not inapplicable to state, can be supplied at prices which have hitherto been considered inconsistent with high-grade workmanship.

STILL ALARM CYCLE MAKER.

When it has been said that everybody is riding a bicycle these days, it might be supplemented with the statement that almost everybody was building them, too. Chicago's paid firemen are to be cruelly debarred from this cycle building craze. During the time he was not engaged in attending to putting out fires, one of the members of the Chicago Fire Department has been putting out bicycles, which he manufactured in the engine house and sold at cut rates to cash customers. Upon complaint against this new form of wheel making, it has been decided that in future Chicago's Fire Department will not be a competitor in the cycle manufacturing world.

THE EARLY BIRD.

J. W. Becker, of the Elmore Manufacturing Company, of Clyde, Ohio, fitted into New York last week for a few days, and left apparently pleased with the outlook for the disposition of his firm's product for '97. The custom of the Elmore Company has ever been that of the early bird. It is to dispose of their wheels to half a dozen good houses early in the season, and immediately commence the manufacturing of their product, which was the purpose of Mr. Becker's recent visit.

"The Frontenac Two-Step" is the style and title of a piece of music which has been gotten out by the Syracuse Specialty Manufacturing Company. The composer is Fred W. Edgecomb.

The Truth about the

Truss Frame Fowler

A Plain Statement of Facts.

We wish to deny most emphatically the statement now being industriously circulated that we shall not use the Fowler Truss Frame in 1897.

The 'truss frame,' as applied to a bicycle, and will remain so as long as the Fowler Cycle Manufacturing Company is in existence, until some better method of constructing a bicycle frame shall have been invented.

The truss frame was first used on a Fowler Bicycle, and is the necessary feature of a strictly high-grade wheel. The statement that we are, or will be, compelled to pay a royalty for its use is absolutely false and without foundation. We own the patent on the truss frame as applied to a lady's wheel and as applied to a diamond frame wheel without being compelled to pay for its use or with any chance of it being denied us.

If the facts, as we set them forth above, are not sufficiently plain to convince our agents, we should be pleased to put them to them in another light and to their entire satisfaction. We trust it is sufficient, however, to say that '97 will see the Truss Frame Fowler, as of old, the strictly high-grade product of mechanical skill.

Very truly,
FOWLER CYCLE MFG. CO.

Fowler Cycle Mfg. Co.,
CHICAGO.

NEW YORK, BOSTON, WASHINGTON, PROVIDENCE,
LONDON, ENGLAND.

SOFT SPROCKETS.

Strange as it May Seem, They Are Claimed Superior to the Hardened Articles—The Advantages Pointed Out.

Among the visitors to Gotham last week was E. F. Morse, one of the gentlemen responsible for the Morse roller joint chain.

Mr. Morse is a quiet, earnest-appearing man, full of mechanical and scientific data. He is plainly a thinker who knows what's what, and the evident sincerity of his every word impresses the stranger. He is deeply interested in the present discussion of the respective merits of chains and bevel gears.

"It's a good thing for us. It's a good thing for the riders," he remarked. "It is drawing attention to a most important part of a bicycle that is too generally overlooked, and which has but comparatively recently been given that share of improving notice by the trade which it deserved."

Mr. Morse takes issue with Julius Wilcox's contentions concerning the roller chain in last week's WHEEL. That rolling friction should prove more efficient than sliding friction, Mr. Morse readily agrees is paradoxical, but in proof that it is an actuality he refers to the tests of the Morse chains made at Cornell University, where they developed an average efficiency of 99.1-3 per cent. The small loss of power was a surprise to the experts who made the tests. Even Professor Thurston was mystified. Mr. Morse does not believe that any other chain or any bevel gearing that may be produced can approach the record.

"If there is," he added in his earnest way, "we want to know it. It is our aim to make only the best, and if there is anything better we may as well go out of business."

Mr. Morse has also been convinced on another point that is apt to amaze the average rider and, not unlikely, not a few of those engaged in the cycle trade. He believes that soft and not hardened steel should be used for sprockets.

"During the last six months," he said, "we have been making some interesting experiments on soft sprockets when used in connection with our chain, and have been surprised to find the advantages that followed their use. We found that when the sprocket was hardened the graphite would not readily adhere to its surface, but the surface rather presents a clean, metallic nature. On the other hand, if the sprocket is soft, the graphite seems to imbed into the metal and firmly adhere to it, forming a thin coating of graphite over the whole tooth, and in this efficient manner lubricating the surface of the sprocket that is exposed to the action of the chain. This coating so protects the soft metal of the sprocket that it does not wear to any perceptible extent. We had one sprocket that was particularly soft, so soft that it could be whittled with a knife, yet we found on careful examination that this sprocket after having been used on a wheel, that is, having been ridden 1,500 miles over the rough roads that surround our factory, had not worn sufficiently to remove the very fine marks resulting from the irregularities of the sprocket-cutter. One-tenth thousandth part of an inch would have removed these marks; in fact, the metallic surface of this sprocket, we believe, had never been exposed to the chain, as it required some little whittling to remove the graphite from the sprocket to reach the metallic surface. In the case-hardened sprockets in general use the objectionable feature is that where the thin hardened surface has been worn through so as to expose the softer metal beneath, the latter wears more rapidly than

that portion which still retains its case-hardening, and thus the tooth becomes irregular in shape. Of course this will not follow if it has been thoroughly coated with graphite, but in the chains which are generally used on these hard sprockets oil is used freely on the chain, and this of itself cuts the graphite off the sprocket and exposes the metal even though it is soft. Understand, however, that we do not believe it possible to use a soft sprocket in connection with a chain which requires oil, because the soft metal would probably not stand, except with the graphite coating referred to, and graphite is, by long odds, the best lubricant that can be found."

MUCH DUE TO HIM.

The Acme Manufacturing Company is one of the successes of the cycle trade. From a small beginning it has grown and flourished like the proverbial green bay tree. It is now moving into its new and enlarged plant in Reading, Pa., and at present calculations will turn out some 40,000 Stormer bicycles during the year 1897. Four juvenile models, two for adults, a combination tandem and two models equipped with cushioned frames will be included in the line. Much of the prosperity of the concern is

James C. Reber.

easily traceable to the gentleman whose features are here pictured, James C. Reber, who fills the responsible positions of treasurer and manager with credit to himself and to his company. During the present year the Acme factory was wholly unable to cope with the demand for its product, but with its extensive additions and improvements, and with the establishment of territorial depots in Chicago, Cleveland and New York, it is expected that vexatious delays will be avoided. The New York depot will be in charge of G. A. Boyer, a personification of energy and one of the splendid business developments of the last twelve months.

VARNISHING WOOD RIMS.

R. B. Abbott, who so capably looks after the interests of Vim tires in Chicago, has an idea—a good one, on the face of it. He thinks that the practice of varnishing the bed of a wood rim should be decreed. "Not only our own experience, but that of a number of manufacturers of wheels with whom we have talked," says Mr. Abbott, "demonstrates the fact that cement will not take the proper hold on top of varnish, and there are very few concerns in the country who take the trouble to sandpaper the bed of the rim and then wash off this varnish with naphtha. It seems to be in the line of improvement."

THEY MUST HAVE THEM.

People Want Bicycles and Are Prepared to Risk Their Lives to Get Them, at Least These Were.

Is cycling on the wane? Are the people looking around for a new diversion? Will the coming year see as great a demand for cycles as the present one? Does it pay to advertise bicycles in the "off season?" Here are the answers to all these and a thousand other doubting-Thomas sort of questions in relation to cycling, its present and its future.

A gigantic drygoods store was about to open its doors. Some one, name unknown, started a rumor that the concern in honor of the opening intended for the first hour of its business on Monday to sell high grade bicycles at \$10 each. Mind you, the firm had no intention of doing this, and had authorized no one to make such a statement for them, but the public did not know this.

The store was to open at 9 a. m. Monday. As early as midnight on Sunday the eager would-be purchasers of the mythical \$10 bicycle began to arrive in front of the store, determined that none should rob them of so good a bargain. Before 9 o'clock the early birds had been reinforced by 35,000 other people, all anxious to buy bicycles. Traffic for blocks was stopped by the multitude. Men, women and children fought to get to the doors, women fainted and became hysterical, a big policeman had three ribs crushed in the rush for wheels, a plate glass in one of the front doors was burst in, counters were torn down by the bicycle-hungry mob and a call for the police reserves was sent out before the authorities could regain control of the crowd.

When finally the doors of the store were thrown, or rather forced, open, there took place a wild, reckless race to the centre of the store, up the great stairway and back to the bicycle department. What happened then it would be hard to picture in words.

Those in front seized bicycles that were within reach and frantically clamored for salesmen to take their money. Those coming later rushed in to struggle for a chance at the spoils. It was a repetition of the scene outside, except that some broken wheels were soon mixed up with the crowd.

One of those in charge of the cycle counter said: "We sold about fifty, just the exact number I can't say, and then we had to quit. They tore down our counters and shelving, and began to fight for the bicycles, and several were broken to pieces. Several bicycles, too, I guess, were stolen. We proposed to deliver the wheels, but a number of them were carried off bodily, and whether they were paid for I don't know."

In consequence of the crush the sale of bicycles was stopped in about fifteen minutes, and cries were posted all over the building to announce "No more bicycles sold to-day." Notices to the same effect were posted on the windows and in the aisles as soon as possible. But still the bicycle counter was the Mecca toward which the crowd pushed, and it had to be well guarded to prevent more spoliation.

Breathless, bruised and bicycleless the crowd was finally brought into subjection, and the danger of a panic and loss of life averted. But in view of this willingness of 35,000 people to risk their very lives to purchase bicycles, can anyone for an instant believe that cycling has not such a hold upon the public as to make all question of its future popularity no longer a question? True, these people took these risks because the price for which they thought they were to be allowed to purchase a bicycle was an extremely low one, but if a man does not first want an object the price, whether low or high, does not interest him. Each and every one of that 35,000 wanted a bicycle, wanted it at \$10, if it could be gotten, but failing to get it at that price, does it not seem probable that the majority still want bicycles, and will in the end pay for them what they have to? This is not a straw showing the way the wind of cycle favor is blowing; it is a strawstick in a cyclone.

LI HUNG CHANG

Owens a Syracuse Bicycle. The Great Ambassador mightily pleased with his "Crimson Rim."

CHINA AWHEEL.

As his Excellency - the Viceroy of China - sets the fashion for the Empire, the probabilities are that "Crimson Rims" will demonstrate their popularity there, as in America.

THREE SILVER MEDALS

were presented to the Syracuse Cycle Co.—the makers—in appreciation of the high esteem in which the wheel is held.

There is but ONE "Crimson Rim"—It is the Syracuse.

TRADE CHANGES.

CALIFORNIA.

Oakland.—B. C. Lund. Attached \$900. Bill
of sale.
Stockton.—J. E. Clifford. Gives mortgage
\$800.

CANADA.

Ottawa.—The Moto-Cycle Company. Incorpor-
ation applied for by Raymond Trefontaine,
advocate, M. P., Captain Charles Joseph Que-
soel, counsel, and others, to manufacture and
deal in all kinds of horseless vehicles, includ-
ing bicycles, and whether propelled by petro-
leum, gas, steam, electricity, compressed air,
or any other motive power. Capital stock,
\$150,000.

CONNECTICUT.

Middletown.—Middletown Cycle Co. Title
transferred to Worcester Mfg. Co., Worcester,
Mass., who will continue.

COLORADO.

Denver.—Colorado Bicycle Livery and Re-
pair Co., incorporated.

ILLINOIS.

Champaign.—J. G. Nicolet & Co., bicycles,
Assigned.

Chicago.—Hales, Ansel & Son. Assigned. As-
sets, \$4,000; liabilities, \$6,000.

Chicago.—J. Duncan. Chattel mortgage to
J. H. Perkinson, \$800.

Monmouth.—Pinkerton & Evans. Closed on
chattel mortgage. Liabilities, \$8,000.

INDIANA.

Elnora.—J. J. Smiley, hardware dealers, will
add bicycles.

Middletown.—Charles C. Donley, hardware,
etc., will add bicycles.

Mitchell.—W. M. Sames, hardware, etc., will
add bicycles.

IOWA.

Des Moines.—George L. Seager. Attached.
Transfers stock to Arnold, Schwinn & Co.,
Chicago, Ill. Liabilities, \$4,000.

KANSAS.

Topeka.—Central Cycle Co. (I. P. Golms),
sued by John Deere Plow Co., of Kansas City,
for \$379.18.

MARYLAND.

Cumberland.—C. A. Pagenhart & Son, new
store.

MICHIGAN.

Detroit.—M. W. Roller. Bill of sale to
George W. Strelinger, \$450.

Detroit.—The Detroit Sprocket Chain Co.,
incorporated. L. B. Ball, for three years sec-
retary Chain Belt Co., of Milwaukee, is super-
intendent. Capital stock, \$25,000.

Saginaw.—The W. S. Marr Cycle Co. filed
two chattel mortgages, one of \$2,000 to the
Saginaw Hardware Co., and one of \$1,800 to
William Seyffardt, as trustee for several
creditors.

MISSOURI.

Springfield.—Burns & Magnien. T. J. De-
lany appointed trustee. Burns retires. Mag-
nien continues.

NEBRASKA.

Omaha.—Omaha Bicycle Co. Closed on chat-
tel mortgage.

NEW JERSEY.

Paterson.—A. L. Withers Cycle Co. Claims
returned uncollectable, covered by chattel
mortgage.

NEW YORK.

Brooklyn.—Behrmann Cycle Co. Closed by
sheriff.

Brooklyn.—A. M. Franklin. Chattel mor-
tgage, \$1,200.

Buffalo.—A. & F. Meyer Co. Judgment for
\$139.

Mt. Vernon.—Charles P. Phillips & Co. Dis-
continued.

New York.—John McClave & Sons, 371
Fifth avenue, New York. Assigned. Liabili-
ties, \$100,000. Nominal assets, same.

New York.—Porter & Gilmour. Receiver ob-
tains permission to complete and market 120
bicycles.

Syracuse.—Elbridge Cycle Co. Geo. E. Hig-
gins, Pres., transferred all his real estate.

Utica.—Unique Bicycle Store (Richard
Mortimer) foreclosed chattel mortgage.

OHIO.

Belle Centre.—L. T. Emery & Co., hardware,
will add bicycles.

Cleveland.—Likly & McNair. Claims re-
turned uncollectable. Covered by chattel
mortgage.

Sandusky.—Henry Mulleisen, new store on
Water street.

Toledo.—Colton Mfg. Co., petition to change
name to the Summit Cycle Co.

Toledo.—Dildine & Bayle. Sold out.

Toledo.—Chas. Truman & Co. reported
given lien for \$462.

Toledo.—Toledo Novelty Co., cycle sundries,
assignee's sale Sept. 19.

ONTARIO.

Toronto.—Bauckhen & Davis, bailiff in pos-
session.

Toronto.—Hyslop, Son & McBurney, stock
advertised for sale at auction.

OREGON.

Salem.—Jos. H. Albert gives deed, \$1,500.
E. Portland.—Owen & Robinson, bill of
sale \$385.

PENNSYLVANIA.

Wilkesbarre.—S. Blau & Co. Sold out.

Erie.—The Bacon Bicycle Co., organized
last spring, has made an assignment—two
judgments by H. Bacon, amounting to over
\$6,000; two in favor of Marine National
Bank, amounting to \$15,750, and four foreign
judgments. Sheriff in possession. Saml. E.
Bacon, Pres., dead.

RHODE ISLAND.

Narragansett Pier.—Caswell & Co. Fire.
Loss, \$2,000. Partially insured.

TENNESSEE.

Nashville.—Sims Bros. & Green assigned.

WASHINGTON.

Davenport.—J. D. Ricks will open repair
shop.

Seattle.—Fleenor & Gifford. E. O. Gifford
gives deed \$1.00.

WISCONSIN.

Milwaukee.—John P. Wechselberg. As-
signed to J. P. Wechselberg, jr.

TWO FROM CLEVELAND.

Cleveland, Sept. 13.—The Mechanical Rub-
ber Company, of this city, are to go into the
tire-manufacturing business upon their own
hook next season. They are not new in the
business, but their tires made in the past
have been made under contract for inventors,
promoters and other tire companies not hav-
ing factories of their own. The new tire
will be called the "High Grade," and the
name will be strictly upheld in the manu-
facture.

The Parish & Bingham Company, also of this
place, who have long been manufacturers of
steel stampings in other lines, are now mak-
ing them for bicycles. The new line, while
not large, contains some novelties worthy of
mention. One is a crank bracket without a
single seam, stamped from one piece of metal,
while another is a stamped sprocket cut in
any design to suit purchaser, and finished
for nickelling. Finished hubs, cones, etc., are
also included in the line. The entire output
will be marketed through W. A. Neff, gen-
eral sales agent, in the New England Build-
ing.

SIX DOLLARS IN COMMISSIONS.

G. G. Wickson, of San Francisco, has sued
the Monarch Cycle Manufacturing Company
for an accounting of business profits. In De-
cember, 1895, the defendant rented from
Wickson a store at 3 and 5 Front street, San
Francisco. The company, it is claimed,
agreed to pay \$200 a month rent, and, in ad-
dition, 10 per cent of all retail sales. It now
appears that on August 28, the cycle concern
vacated the store. Up to that time Wickson
had been paid \$1,600 as rent and a commis-
sion \$6. He now desires an accounting to de-
termine the amount of commissions still due.
He also demands \$5,000 damages because of
the failure of the company to occupy the store
for at least one year, as provided in the lease.

SAFES AND CYCLES.

Matthew S. Wilson, a small manufacturer
of machines, bicycles and safes, at No. 88
Fleet Place, near DeKalb avenue, Brooklyn,
N. Y., on Monday made a general assignment
for the benefit of creditors to Thomas B.
Gates. The liabilities are unknown. The
preferred creditors are: Anna M. Bunn,
\$2,000; Elizabeth Wilson, \$3,200; John W.
Bunn, \$500, and Agnes Stone, \$800, all money
loaned.

ROOM FOR THE CYCLE SHOWS.

People who have not visited the Grand Cen-
tral Palace can best form an idea of its
capacity from the following figures: The
Garden last year, including all floor space,
aisles, boxes and every other particle of
space which was used for exhibition purposes
totalled 52,000 square feet. The actual, prac-
tical, usable space at the Grand Central Pal-
ace is 91,000 square feet. These figures, how-
ever, are dwarfed entirely by the Chicago Ex-
position Building, which will furnish a space
of 210,000 square feet. In this building there
will be a main aisle sixty feet wide.

TO SELL OUT HUSEBY PLANT.

Hugo H. Casper, receiver of the Huseby
Cycle Company, Milwaukee, has been au-
thorized by the Court to sell the stock, tools
and equipment of the company at such prices
as he may obtain in the regular course of
business, and is empowered to complete the
manufacture of such bicycles as come into
his hands in an unfinished state.

An Austrian court has decided that a cycle
agent cannot have his sample wheels seized
for debt.

HAVE YOU OCCASION TO GO WEST?

The solid through train run daily via the West Shore Railroad through the State of New York, stopping at principal stations, to Erie, Cleveland and Chicago over the West Shore and New York, Chicago and St. Louis Railroad (Nickel Plate), is proving itself a great attraction to the traveling public. Passengers leaving New York on this train—station foot of West Party-second street, at 6.00 p. m.—arrive in Chicago the next evening. No annoyance of changing cars or baggage, as the entire train runs through to Chicago without any change. Buffet and dining cars are attached, and it is no wonder that with the excellent time, easy roaded, picturesque scenery of the route, this line is so profitable to its promoters. In going West you should try the West Shore and Nickel Plate Route.

HAMILTON AMONG THE GAULS.

J. C. Bowe, now on the other side, has taken the foreign pressmen into his confidence, and declares that he intends sending Hamilton over to France next season. When he has been made thoroughly fit Hamilton will introduce to Parisians that, to them, novel game of "watch the sunlight glisten," etc.

CHANCE FOR A THOUSAND.

Some newspaper man has been comparing Cooper and Johnson. He says there are lots of enthusiasts who would like to know which is the better man. And, perhaps, there are. Be that as it may, however, Assistant Manager L. M. Richardson, of the Monarch Cycle Manufacturing Company, Chicago—Cooper's employer—is anxious to remove any doubts that may exist if any one can be found to take the Johnson end of the argument. Mr. Richardson authorizes a wager of \$1,000 that Cooper will beat Johnson in three out of five races at the following distances: Quarter mile, third-mile, half-mile, one mile and two miles. The races to take place within thirty days from September 12 on a track mutually agreed upon.

PICKING COAL AND PICKING WINNERS.

Linton, the Welsh racer, who recently died, was a collier before he took to racing. That riding races was more profitable than digging coal is conclusively proven by the ex-collier leaving \$20,000 when he died, all of which was accumulated within a few years.

THE FALL.

Summer breezes now have fled,
Autumn now is here;
Bathing costumes all are shed,
And the beach is clear.

Now the leaves begin to fall,
Chilly feelings queer
Creep athwart our slender spines,
Making us feel drear.

Worse we feel if heartburn's bane
Checks our appetite—
When we chew White's YUCATAN,
Then we're out of sight.

SOME REASONS

Why Travelers Patronize the Nickel Plate Road.

- 1st—Because its rates are always the lowest.
 - 2d—Because it gives unexcelled service, including through Wagner Palace Sleeping Cars between Boston and Chicago via the Fitchburg and West Shore Railroads, and Solid Through Trains between New York and Chicago via the West Shore and Nickel Plate Roads. Its day coaches are lighted by gas, heated by steam in winter, and are in charge of uniformed colored attendants whose services are free to all passengers. Its dining car and buffet service is unsurpassed, and its meal stations serve the best of meals at the lowest rates.
 - 3d—Because it will give you stop-over privileges without extra charge at Chautauque Lake and Niagara Falls on all tourist and excursion tickets.
 - 4th—Because it runs along the shores of beautiful Lake Erie, with its cooling breezes, and delightful scenery; passing through the famous "Grape Belt" of New York, Pennsylvania and Ohio, and the "Gas Belt" of Indiana; the beautiful cities of Erie, Cleveland, Fostoria and Fort Wayne; the Summer Resort of Green Springs, and many other noted places.
 - 5th—Because the Nickel Plate Road is ever at the front in adopting every improvement tending to the Safety, Comfort, Convenience and Pleasure of its patrons, and its smoothly running rack, powerful locomotives, elegant and luxurious cars and lowest rates designate it as the POPULAR ROUTE.
- For all information, call on the nearest agent, or address F. J. MOORE, General Agent, 23 Exchange Street, Buffalo, N. Y. No. 23

"HIGH GRADE" DEFINED.

W. W. Staff Undertakes the Task and Performs it Splendidly in a Book Replete With Interest.

If one were told that around such a subject as a wood rim a forty-eight-page catalogue had been built, he could scarce be blamed if he emitted a mixture of exclamation and interrogation points, for, truth to tell, it is not a particularly promising subject. Off-hand, the average person would say that such a volume could not but be most uninteresting. But in the wood rim business is one W. W. Staff, big, broad, blunt, bustling, brimming with almost boyish good nature and as experienced and brainy as he is big and broad. He is president and manager of the Boston Wood Rim Company, and he it is that has constructed a forty-eight-page book about the rim which he manufactures, the Boston Laminated Wood Rim.

Stall himself is refreshing. The catalogue reflects the man. It is printed on extra heavy tinted super-calendered paper. It is full of pictures portraying processes. It is full of words, but they are full of meat. The whole catalogue is surprisingly interesting. The language is pleasingly unconventional; it is thoroughly readable, and may be digested with interest and profit by any one interested in the subject, whether maker, middleman or purchaser.

This chapter, "What Constitutes High Grade," will afford a clew to the character of the book:

The distinguishing mark of high grade is something apparent, yet intangible. To endeavor to explain the matter wholly and clearly would be commensurate with delineating the absolute nature of many understood laws of nature and science.

What is gravitation? What is the exact and positive base of life? What is fire? What is electricity? All these things are explained on the basis of acknowledgment of their practical existence, and we merely assume to start with the main existing facts, getting no nearer than did the old negro preacher who made the statement that the foundation of the world was rocks, and being pressed, he allowed that these rested on more rocks, and being driven into a corner he exclaimed: "Why, you fool nigger, deys rocks all the way down."

The public knows that high grade is a recognized feature, but will never allow its existence on anything new which may be brought to its attention. There is always the day when we buy a cheap hat, cheap clothes, cheap food and cheap bicycles, and we always go in with the idea that the fellow who pays a fancy price is an ass, but we always discover that he isn't, and we find that the boot is on the other leg.

Thus the neophyte buys a cheap article as a starter; he sees no reason to doubt that the low-price seller is a philanthropist and the high-price man a robber.

Old Si Price was buncoed three times before he was eighty, so it will be seen that we are all never too old to learn.

On the same principle the bicycle maker who studies "economy" is able to put cheap stuff into his wheel and "has no complaint." He has no complaint simply from the fact that his economy having been practised throughout the whole machine, the customer frequently decides that he has been buncoed, and rather than acknowledge it, keeps quiet, but you can wager that when he does unload he is careful to buy of some other fellow thereafter, and he takes pains to post himself as to the requirements of a truly high-grade article.

The beginning and growth of the concern is told in these words:

In 1893 we opened our first modest little wood rim factory, with two little rooms supplied with a main shaft about as big as a pipestem, operated by a four-inch main belt. Here we commenced with two men and an output of twelve rims a day. Orders came in with a rush, the good qualities of the Boston Laminated being at once appreciated, and we soon had thirty men

at work with orders well ahead. The succeeding season found us in new quarters, where we boomed the business to the extent of employing as many as 125 men. Removing to our third and present location (Bedford, Mass.), we completely filled our new plant, and in spite of the radical introduction of labor-saving machinery, we pushed our working force up to as high as 160 men.

There is much more in the catalogue worthy of reprint—too much for these columns. But it is to be had for the asking, and all who wish to add to their wisdom and who can relish an appetizing presentment of "facts and facts alone," as the book itself says, should ask for it.

CHINA HAD THEM YEARS AGO.

The Western world never produces, invents or uses anything that some pig-tailed Chinese does not slowly rise up and claim it was used 5,000 years ago in China. Hitherto the bicycle has been exempt from this claim, but Li Hung Chang brings his country into line as follows:

He says the wheel dates back to 2300 B. C., in the reign of the Hing dynasty. Instead of having the chain on the rear wheel it was on the front wheel, and the rear wheel was the

REQUIREMENTS OF GERMAN TRADE.

For those seeking trade in the German markets the following recommendations of the German Cycle Dealers' Union will be found useful:

The manufacturers should stamp quality numbers on their machines.

All machines should be built with equal 28-inch wheels; no 26-inch wheels should be used.

All machines should have steering locks, allowing a movement under pressure, although closed, was recommended.

Mr. Braunbeck, of Stuttgart, called attention to the fact that narrow treads did not allow the use of gear cases, and the meeting resolved that, if possible, all machines should be built so that gear cases could be fitted. Too narrow a tread had no practical value.

The brakes should be rubber ones.

The German cycle dealers do not stock cycles with wood rims.

All tires, front and back, should be 28-inch by 1 3/4-inch.

All saddles should be of the hammock pattern.

These resolutions show what native manufacturers are expected to do for the trade in Germany, and Americans must be prepared to follow if they would compete with the home manufacturers.

KEPT PACE WITH TIMES.

Newark, N. J., Sept. 13.—A saddle concern, the business of which has, with its increasing years, kept pace with the hopes of its proprietors, is the Butler & Ward Company, of this city.

The possibilities of the cycle trade seem amazing when one looks at the history of some of its members.

Take the Butler & Ward Company, for instance. It is but three scant years since they entered the trade, and to-day there is hardly a cycle man anywhere who has not at least a speaking acquaintance with B. & W. saddles. A result of this sort tells the story of success more plainly and effectively than could the most flowery words.

The Butler & Ward line of saddles is about completed for '07, and is inclusive of some radical good things. The B. & W. hygienic, for instance, combines the accepted hygienic principle with some new and clever changes of construction.

AN ANTI-STEAL COMPANY.

The Wheelmen's Guaranty Company is the title of a new cycle insurance company, organized in Grand Rapids, Mich., and incorporated for \$50,000 under Illinois laws. The stockholders are nearly all Michigan men who at one time or another have been prominent in the L. A. W. or the cycle trade, or both. They are A. B. Richmond, Leo Caro, J. A. McKelvey, F. W. Hine, Dr. H. P. Snyder and Willis B. Perkins, of Grand Rapids; Jollie Allen, of Kalamazoo, and R. G. Steele, of St. Johns. The officers are: A. B. Richmond, president; Jollie Allen, vice-president; Leo Caro, treasurer, and J. H. McKelvey, secretary.

The headquarters of the company will be located in the Michigan Trust Company Building, Grand Rapids.

After several applications, the Washington (D. C.) courts have finally granted the prayer for the removal of Charles E. Thorn, assignee of the Thorn Manufacturing Company, and a brother of one of the principals. A receiver will be appointed.

one which steered. It was very popular for 150 years, when the women got to riding so much that they neglected their household duties and their families. The population began to decrease at an alarming rate, so the Emperor had to issue a decree abolishing them. The bicycle was known as the Sheng Fo, or Happy Dragon. That was before the Chinese had begun to compress the feet of their women.

Li Hung Chang neglects to say anything about century runs, and bloomers and sweaters, cyclometers and quarrels over the merits of different makes. The world may conclude, therefore, that though the bicycle may have had quite a run in China 4,000 years and more ago, it had to wait until the end of the nineteenth century of the Christian era to do its best work.

The Plymouth wood rim people have been much exercised by printed reports indicating that Gormully & Jeffery, who have long been extensive users of Plymouth rims, had decided to make a change. The reports, they say, are utterly false, and the flattering letter from Gormully & Jeffery which is published in the Plymouth advertising space in this issue should prove a most effectual quietus.

AS SEEN THROUGH A BEER GLASS.

"I see those wheel cranks want the whole Boulevard set apart for themselves," said the man with the big horseshoe scarf-pin to his friend, the livery stable-keeper.

"Yes, I see they do. Say, they're afraid of being run over by beer wagons and coal carts, just as though the men who drive them ain't got as much right on a street as them bysickle people."

"If it keeps on, do you know what those bysicklers will do? They'll go before the Legislature and introduce a lot of bills like these:

"An act to compel all pedestrians to ring bells when crossing any street. A number of wheelmen have been severely injured by being run into and thrown by careless people who were walking.

"An act to keep all vehicles save bicycles off the parks and asphalted and macadamized roads. This act will be urged because the carriages and wagons interfere with the scorching which wheelmen delight in.

"An act to prohibit any one from riding a wheel at a rate of speed less than fifteen miles an hour.

"An act making it a capital offence to steal a bicycle, and a felony to throw on the roads anything that might puncture a tire.

"A poll tax on horses and a yearly appropriation of \$25,000,000 for the repair of State roads.

"When they've got through with this, I expect they'll pass another law hanging every man who owns, breeds or buys a horse, and then they'll be satisfied. Let's go get a drink."

YOU CAN HAVE YOUR ELECTROTYPES

MADE AT
RAISBECK ELECTROTYPE CO.
24-26 VANDEWATER STREET, NEW YORK.
Telephone Call—Cortlandt 244.

The "STAR BICYCLE ENAMEL" is air-drying, and produces a finish equal to Baked Enamel. As it dries dust free in very short time, it enables the rider to thoroughly and easily renovate his wheel without inconvenience or delay. Can be had in all the shades in which bicycles are decorated. Send for color card and prices.

The "CYCLE RIM PRESERVER" renovates and preserves the rims of bicycles by spreading a film over the rim, thus preventing water from entering the pores and keeping the nuts of the spokes from rusting out, and the rim from cracking. No wheelman can afford to be without it, as it prevents costly repairs.

"STAR BAKING ENAMELS" in black and colors; combining greatest elasticity with most intense lustre. Send for sample tins and prices.

OF THE
CYCLING DISTRICT.**

The Best Oiler

**IN THE
WORLD.**

25c.

WHY

"THE BEST?"

1. It does not leak.
2. It regulates supply of oil to a drop.
3. It has won every test in competition with other oilers.
4. It is highest grade and made in the very best manner possible.
5. Although higher in price it has been adopted by the leading makers of high-grade bicycles.

Patented August 25, 1896.

We are the inventors and sole owners of this patent. No others are authorized to make the Pliers. Reasonable quotations and electrotypes on application. Mention The Wheel

NOTICE! CAUTION!! TO JOBBERS AND WHEEL COMPANIES:

Any wheel stand with a loop or side supports, rising approximately perpendicular from a base provided with a stop on either or both sides of the centre of the wheel, not purchased from or manufactured under our license, is an infringement upon our stands. Also, any rigid stand having upright side rods or braces extending beyond the centre of the wheel, the base of the stand being provided with lateral extending feet, by which the stand is self-supporting upon the floor. A word to the wise is sufficient.

and CYCLING TRADE REVIEW

Copyright 1896, by F. P. PRIAL.

VOL. XVIII, No. 6.

NEW YORK AND CHICAGO, SEPTEMBER 25, 1896.

WHOLE No. 448.

HODGMAN HARASSED.

Pressing Creditors and Unaccommodating Banks Force the Old and Honorable Firm to Assign.

Of the many failures of firms connected with the cycle trade none was so unexpected as that of the Hodgman Rubber Company, which occurred on Monday of this week. The doors of the New York stores were closed about 3 o'clock, and notices posted that they were closed temporarily to take account of stock. This was the first intimation to the trade and to their creditors of any trouble. Judge Dykman, at White Plains, appointed Robert W. Todd, of No. 229 Broadway, receiver of the company on the application of the directors, with a bond of \$20,000.

Mr. Todd said that he was not familiar enough with the company's affairs to give any particulars as to liabilities or assets. He had closed both stores and the factories at Tuckahoe and Mount Vernon (both near this city) for the present. An inventory would be made at once and a meeting of creditors called, when it was hoped the company could get a composition and go along again. As soon as possible he would finish up whatever profitable work there was at the factory by using up the materials on hand. The company's embarrassment, he said, was due to the hard times, depression in business, and the stringency of the money market, which prevented them from getting any funds to meet obligations. At this time of the year the company has been doing a large business making up the fall and winter stock, but it could not borrow money, and was unable to get its notes extended.

The business is a very old one, having been established over fifty-five years. It was founded by Daniel Hodgman, who died in 1874. His widow retained her interest until 1885, when she died, and the sons incorporated the business under New York State laws with a capital stock of \$250,000, which was increased in 1890 to \$350,000. George F. Hodgman was president, Charles A. Hodgman vice-president, and George E. Hodgman secretary.

In April last they stated to Bradstreet's that the business of 1895 showed a net profit of \$60,000, that there were net assets of \$625,000, and that the liabilities were \$250,000. During 1895 the company put in new machinery and added other improvements to the plant. Besides making the general run of rubber goods the company manufactured mackintoshes and bicycle tires. Fifteen thousand dollars, it is stated, were spent in advertising the tires. The company has always done a large business, had a high reputation and met its obligations promptly.

FOUR MONTHS' TIME.

The embarrassed Premier Cycle Co. has passed into the hands of a receiver. Four months have been allowed for the presentation of claims.

A DUNLOP DECREE.

London, Sept. 14.—For some time past a few American makers have been sending across machines fitted with Dunlop tires for sale. The Dunlop people have hitherto levied a tax of 12s 6d per pair on these importations, but now it will be seen from the inclosed circular that the importation is prohibited. The following circular has been sent round the English cycle trade and press:

We regret to inform you that we cannot under any circumstances sanction the use in the United Kingdom of American Dunlop tires, for the following reasons:

1st. They are not manufactured under British patents, and we should, therefore, be compelled to proceed against vendors, purchasers, or users as infringers.

2d. The materials employed, though quite suitable for American roads, are altogether unsuitable for English roads.

We must ask you to have the kindness to send us a declaration setting forth the quantity of American tires sold by you, if any, in order that we may collect the royalty which we have been advised to fix upon such tires.

We regret to occasion you this trouble, but we feel sure that you will recognize that in doing so we are acting entirely in your own interests. We cannot guarantee these tires, and the absence of such guarantee could not fail to produce friction between your good selves and your customers.

ON ITS OWN LEGS AGAIN.

Congratulate the Marion Cycle Co., of Marion Ind.!

Only one week since they were forced into the hands of an assignee; eight days later the assignee is discharged, and the company is once more on its own legs. The factory will start up Monday and the wheels will whirr and the smoke curl as in the prosperous days in the past. This is authentic.

In these days, when money is so tight, the fact is remarkable, and any firm that can recover so quickly is well worthy of all the congratulations that may be bestowed upon them. There was little doubt that the Marion people would come through with flags flying, as THE WHEEL stated in reporting its embarrassment last week, the assignment being one of those unfortunate cases where the sternness of the banks prevented realization on more than ample collateral, which would have been easy at any other time than ante-election time.

The Messrs. Halliday, the owners of the Marion plant, are safe, conservative people. If confidence in them was shaken by their temporary trouble, it will be renewed with interest by their quick recovery.

POWER FROM UNITY.

At the sale of unclaimed property at the Police Headquarters one of the most magnificent collections of old crocks on record was disposed of at prices varying from 10 cents to \$16.

TIRE TRADESMEN TALK PLAINLY.

The Rubber Tire Association Adopts an Unmistakable Guarantee and Makes Little of Anti-Leak Compounds.

Hereafter there will be no reason for doubt or question as to what is meant by a guarantee on tires.

Some months since the tiremakers got together in this city and effected a provisional organization. On Thursday of last week, September 17, they congregated again, and this perfected the organization and reached some really important results, among them a standard and definite form of guarantee.

The permanent organization was titled the Rubber Tire Organization, and that gracious personage, Colonel Theodore A. Dodge, of the Boston Woven Hose and Rubber Co., chosen president. The other officers are: First vice-president, L. K. McClymonds, New York Belting and Packing Co.; second vice-president, E. T. Perkins; secretary, Kirk Brown, American Dunlop Tire Co.; treasurer, George F. Hodgman, Hodgman Rubber Co.; Executive Committee, George H. Day, J. F. Palmer, J. E. Davis, H. C. Corson and H. C. Morse.

The meeting first convened in The Arena at 10 a.m., and was promptly adjourned until 7 o'clock in the evening, when those present broke bread and drank sparkling beverages as the guests of President Dodge.

The "Association guarantee," as it is to be known, will expire on February 1 on all tires sold during the present year. Tires sold after September 1 are included in the business of the following season. The Association also delivered the "tire tonics" and "anti-leak compounds" a blow above the belt. It was announced that any tires treated with such materials, ipse facto, forfeit their guarantee. The declarations are straightforward and admit of no subterfuge.

The question of credits was also discussed, but no final action reached. It was the general opinion that the Credit Board of the Cycle Board of Trade fully covered the field, and in the opinion of those who had tried it, had proven very thorough and efficient.

The concerns represented in the Association are: Boston Woven Hose and Rubber Co., B. F. Goodrich Co., Newton Rubber Works, Gormully & Jeffery Mfg. Co., Hodgman Rubber Co., Hartford Rubber Works Co., Columbia Rubber Works, New York Tire Co., Mechanical Fabric Co., American Dunlop Tire Co., New York Belting and Packing Co., Kokomo Rubber Co., American Wringer Roll Co., Ideal Rubber Co., Spalding-Pepper Co., Peoria Rubber Co., Palmer Tire Co., L. C. Chase Co. and Diamond Rubber Co.

DEAR AT ANY PRICE.

The French Touring Club has now over 42,000 members, and is growing at the rate of 100 new members daily. Practically all the privileges French wheelmen now enjoy are due to the influence of the Touring Club.

SOME FRICTION HERE.

Chainless Gears and Differing Directors Cause a Newark Company to Close Down.

Internal dissension among the directors of the Howard & Nichols Cycle Manufacturing Company, of Newark, N. J., was aired in the courts in that city on Saturday last. The company was incorporated November 29, 1895, to make the Howard chainless bicycle, and started a factory in Sumner avenue, Newark. The officers are C. O. Howard, president; Marion L. Nichols, vice-president; John L. Travis, secretary. These, with Alexander Milne and J. Albert McGowan, form the company. Several weeks ago Nichols demanded \$6,000, which he alleged he had advanced to the company, and also \$3,500 back salary. The claims were disputed. Nichols also said he had paid \$1,600 for machinery. Other directors said he had no right to make this purchase without their consent.

On September 10 a committee of directors was appointed to look over Nichols's claims, and it is alleged that on September 14 Nichols executed a chattel mortgage for \$9,950 to himself from the company. There was another chattel mortgage given to James J. McCabe for \$1,334 65 for machinery. It is alleged that the corporate seal was used on these papers without the consent of the other directors and stockholders. Tuesday of last week notice was given that all the chattels and goods of the company would be sold at public auction on September 21. A notice was received at the factory by the man in charge that all work must be stopped, and demanding the keys. That night, it is alleged, Nichols and other men overpowered the factory watchman and took him out of the factory, and he was put under \$500 bail by a Justice of the Peace. The factory was then closed and locked. On Wednesday the other directors secured entrance, drove out the caretakers, and the next morning started work again. The case will come up on September 29.

WHERE TRIBUNES DWELL.

Erie, Pa., Sept. 19.—The addition to the plant of the Black Manufacturing Company, of this city, which has been in course of construction for several months, is practically completed, and it is already being put to practical use by the Tribune people. Roughly speaking, it is monopolized by the enameling and tool-making ends of the business.

The addition is located close to, but nevertheless, apart, from the main factory, connecting therewith, and is a two-story brick structure. The extra room is not intended to favor particularly the manufacturing of a greater yearly output than that of '96, but has extended especially to tend toward greater ease and economizing in the handling of the business.

The Black Company are among the few makers who are not permitting the political situation to steal their mastership. They are buying '97 material freely, and their factory presents the unique spectacle of two hundred and twenty men working on '97 tools and material.

DISSATISFIED AGAIN.

Toledo, Sept. 19.—The Shell Cycle Fitting Company and its employes are "out" again, this time on account of wages. The drop forgers have decided to go out rather than submit to a cut of 46 per cent, which was proposed. In nearly every department a big cut was made.

Real estate transfer—a mud-guardless wheel on a sloppy street.

THEY KNOW WHAT PARADES ARE.

New Orleans, Sept. 16.—Away back in the eighties the wheelmen of this city held a lantern parade, and while it was a success in its small way at that time, it is still a recurring memory now. There have been several attempts since, but all have been more or less failures, until the affair of last Monday eclipsed all previous efforts in the line of bicycle decoration and in point of numbers as well, and was evidence of the "pushability" of Chief Consul Harry Hodgson. He was the leader then, as he is now, and to him is due the credit for the brilliant procession.

Monday, September 14 was the day, and the propitious weather conditions and the incentive of a number of handsome prizes brought out some 300 gayly and some lavishly decorated wheels. The route was over the asphalted surface of St. Charles avenue, the principal residence thoroughfare of the city, and everybody's aunts and cousins were there to see the sight. The trade showed a most commendable interest and their "floats" were the central objects of interest throughout the entire parade and rightly. The Jackson Cycle Company represented Li Hung Chang and his suite and perfectly carried out the idea even to the coffin which his Celestial Greatness is said to carry with him. The float of E. C. Fenner & Co. was one of the beauties. It represented an ethereal car drawn by butterflies and driven by an elf of the air. The idea was perfectly carried out and so tastefully executed that it created a continuous buzz of admiration. The car of Testard & Nick counterfeited a mound of silver, on which a cornucopia emptied the wealth of the world. Phil R. Rice showed the trademark of his agency, a fairy lounging in a crescent; while the Columbia branch illustrated one of its posters in a thoroughly ingenious manner.

This city is noted for its pageants, and it is no wonder that the cycle carnival was in keeping with its predecessors in another line. There is scarcely an item of criticism to be made, beyond the delay and frequent breaks in the line of march.

CYCLE MAIL CARRIERS' CHANCE.

Proposals for star routes will be received by the Second Assistant Postmaster-General, Washington, until December 1, and bids will be announced by February 1. Full information regarding the routes, the bonds required with the bids, and the present price of the service will be furnished on application to the Department.

There are thousands of these routes throughout the country. At present nearly all are covered by horse and wagon. A large proportion of these routes can be covered by wheelmen far more expeditiously than by the present plan, and a splendid opportunity is presented for young men with bicycles to secure contracts.

The Department is favorable to any change which will expedite the star route mails and at the same time reduce their cost to the Government.

CONGRATULATIONS ARE IN ORDER.

When Chief Consul Isaac B. Potter, who was one of the Coleman party at the Atlanta Exposition last winter, reached the Georgia city he was not seen often by his fellow-excursionists. At the time nothing was thought of it, but the reason is now quite plain. "I. B.," as he is quite generally known, is soon to become a Benedict, and the future Mrs. Potter was then, as she is at present, an Atlanta lady, although formerly a resident of Brooklyn. The wedding is to take place in the early winter.

STATING HIS POSITION.

Mr. Potter Takes Care that No One Shall Accuse Him of Being a Political Boomer.

Chief Consul Potter is a Republican. So is Timothy L. Woodruff, at present a Brooklyn Park Commissioner, who, as such, did much to promote the construction of the return Coney Island cycle path. The Logan Club, of Brooklyn, is a Republican organization. The Logan Wheelmen occupy a portion of the Logan Club's headquarters. At the last Republican Convention Mr. Woodruff was made his party's nominee for the Lieutenant-Governorship. The Logan Wheelmen have promoted a parade in Mr. Woodruff's honor. Mr. Potter has been asked to grand marshal the procession.

From Cornwall-on-the-Hudson, where he is at present rusticiating, Mr. Potter has accepted. His letter of acceptance has been given to the press. It is clever and interesting. Here is an extract from it:

"I have thought over the matter of the proposed parade in honor of Commissioner Woodruff, and have wired you to-day my acceptance of your kind invitation. I do this as a wheelman of Brooklyn and a member of the same cycling club whose membership roll contains the name of our Park Commissioner, and yours and mine, and because I appreciate the energy and ability with which Mr. Woodruff has performed the duties of his office and the special service he has rendered to cyclists by his prompt and substantial recognition of their needs. I understand that the proposed parade is entirely free from political significance, and has no possible reference to the fact that Mr. Woodruff is a candidate for public office. I think that none of us can afford to take part in any public demonstration as cyclists except with this understanding. If the wheelmen of Brooklyn would do honor to any man who has appeared to earn their gratitude, it should be done with a unity of spirit which forbids the recognition of any political party or political candidate, for, as Republicans and Democrats, we must respect one another's convictions and stand together in every movement which appeals to us as cyclists only. I hope that this spirit may so far prevail as to make the parade a largely attended and most successful one."

Some Democratic wheelmen are wondering whether Mr. Potter would marshal a Democratic turnout.

NEW RAILROAD DODGE.

Railway companies throughout New England will on October 1 begin a new schedule of charges for wheels accompanied by their owners. These charges are based upon the amount of fare paid by the passenger, and vary from a minimum of 10 cents to a maximum of \$1. Before the companies will agree to carry the rider's wheel at the new scale of prices, they insist wheelmen shall sign the following:

"I personally have agreed with the railroad managers that, until the legal status of the New York law is determined, it is wise for us to give this new schedule a trial, since it in no way interferes with any future action on either side, should conditions change, and in making that agreement it is fully understood that I am acting for myself alone."

Frank T. Fowler, who has been lingering in New York for a week or more, has something important on tapis. What it is he will not say, but it is known that he is awaiting the coming of a stranger from abroad, who is due on Saturday's steamer.

ASKING QUESTIONS NOW

Are Those Interested in the Dunlop Deal—
More Tire Suits—G. & J. to
Appeal.

London, Sept. 12.—Another fresh Dunlop development! I am almost prone to think that a Dunlop Development Syndicate is at work to keep up the excitement. In any case the game is kept merrily moving. It seems that some shareholders in the old Dunlop Company have conceived the brilliant idea that Harvey Du Cros senior was a party to the secret negotiations which ended in the sale of the old business to the new for £3,000,000, which the purchasers sold to the public for £5,000,000. The difference between those figures, they allege, is an illegal profit which has gone into the pockets of Messrs. Du Cros Hooley and Rucker. Accordingly they have served writs on those gentlemen for the recovery of the £2,000,000 which they contend is rightfully due to the shareholders of the old concern. The action has commenced in the High Court of Chancery, London, and a syndicate is being formed to institute similar proceedings in the Irish courts.

I don't know who the plaintiffs in these actions are, but in the first case I consider that they will be non-suited at once as regards Messrs. Hooley and Rucker, who were merely ordinary shareholders in the old concern, and as regards Mr. Du Cros I am equally confident they will find him much too clever to be caught in a "booby trap." The action is the talk of the trade and financial circles, but that it will affect the shares of the Dunlop Company is not expected.

Regarding the latter, I am told that the deferred issue has been very largely over-sold in London—something like a million shares—and that about Thursday next they will be at a very high figure compared to their present price—33s 6d.

I believe that Dr. MacCabe, who purchased 2,000 original £ Dunlop shares from the inventor, J. B. Dunlop, at £7 each on the day that the directors agreed to recommend the acceptance of Messrs. Hooley and Rucker's offer of £13 per share, has also been served with a writ by J. B. Dunlop for the recovery of the sum of £12,000 on the ground that the purchase was arrived at from knowledge on Dr. MacCabe's part which was so obtained as to render the recovery of the difference a legal step. There seems to be a plague of writs in Dublin at present. I don't think that the plaintiffs in any of the actions are likely to succeed, but money and energy will be spent in law proceedings which will probably effect some intended end.

The news of the week is the serving of a writ on the Tubeless Pneumatic Tire Company, at the instance of the Dunlop people, who claim that the Fleuss tire is an infringement of the Clincher patent as regards the fastening to the rim. The other legal skirmishes were merely preliminaries which, from the resolute manner an apparently hopeless case was taken from court to court, even to the House of Lords, shows that the fight will be keen and bitter. Should the Tubeless Tire Company win the day, it seems inevitable that the Dunlop Company must buy them out, and should they lose, the principle embodied in the Tubeless tire will probably be worked under one of the licenses granted by the Clincher people.

The defendants base their chief defence on the fact that the Clincher patent is by argument one granted for a method of binding an endless tube containing air in compression to a suitable rim by means of a special form of cover. In the Fleuss tire

there is no air tube per se, merely a cover, identical with that of the Clincher, it is true, but still only a cover which, by the method described in THE WHEEL'S London letter some months ago, is rendered capable of containing and holding compressed air, thus dispensing with the necessity of an air tube.

The earliest Clincher patent was for a solid tire, and this was later developed into a cushion, in which a single band of rubber was bent into the rim and held in by the force of its own lateral expansion. This deviation in conjunction with the later Clincher patent, on which the Gormully & Jeffery case was decided, is held by the Dunlop people to entirely invalidate the fixing embodied in the Fleuss tire, and I must admit that this my own opinion.

At the same time I should be sorry to see anything occur which would delay what I honestly consider is to be the tire of the future. Those of the American makers who have seen the tire have been much impressed with its merits, and quite a number are having sample pairs sent across to their factories for experimental tests, with a view to its adoption on their wheels.

Of course, imitations are cropping up. One, I believe, has been purchased, or is to be pur-

V. E. BAILEY,

Of the Crosby & Mayer Co., Buffalo, who will sail for Europe October 7th, to introduce American cycle fittings in foreign lands.

chased, by the astute M. D. Rucker. It is one in which two flaps fall across the bed of the rim inside the cover, one from either side. These flaps meet and turn upward, the points of contact being fined away until a knife-edge joint is effected. It is said to hold air perfectly, but will very probably not be put into use until the result of the Dunlop-Fleuss action is decided. One hundred thousand dollars is said to be the price, and looks a fair one on a gamble pure and simple, as it is of little use without a method of fixing to a rim.

If it is true, as I believe it is, that the Palmer Shipbuilding Co., of Jarrow, near Newcastle, intend branching out into the cycle business, competition will be kept up in the northeast corner of England. Up to the present only two cycle-building firms have been located there—the Elswick Cycle Co. and J. Devery & Co. Strangely enough, the information reaches me simultaneously that the latter, who sold his business in Wolverhampton to Humber & Co. some seven years ago, and migrated to Berwick under terms of sale, has decided to return to his old town and restart his old firm. The Palmer people will be some time in getting to work, but in the hands of John Morley, well known here from his past connection with Rudge and the Manchester

Cycle Mfg. Co., they should be in time for next season's trade, or a portion of it. There can be no lack of money here, so that quite a lot of interest is being taken in the plans of the concern.

Another item of news is that the Messrs. Pugh, who did so much to bring the Whitworth into prominence and now practically manage the Rudge-Whitworth Company, are about to retire from that concern. Misfortune seemed to dog the latter concern until this year, but the trade done during the present season should have gone a good way toward placing the concern on a sound basis. Another firm which has done a large business is the Premier Cycle Co., which, Mr. W. Herbert recently assured me, had built and dispatched to their customers almost 33,000 Premiers this season. Of course, this included the output of the company's factory at Nürnberg, from which the Continental markets are supplied, from which the Continental markets are supplied.

So far from accepting Mr. Justice North's recent decision as final, I understand that Gormully & Jeffery have already lodged notice of appeal. They have opened out their advertisements, and in addition to their tires they have inaugurated a vigorous planting of Rambler agencies over the country. This latter move is, no doubt, caused by the conviction that nothing further was to be gained by confining their energies in this country to the tire trade. It was, no doubt, a judicious policy a couple of years ago, but the fact that the same firm which was endeavoring to sell tires to the English trade was also selling machines in opposition to it would have inevitably caused their tire sales to have been very small. Matters, however, have much altered now, and with a distasteful monopoly closing in on them any relief is regarded as a matter of Hobson's choice.

I believe that the Coventry Machine Company will "float" next week for £375,000, which is a fair amount of money even for such a highly successful concern as this. It is a remarkable fact that the stock of all tin-firms which have been floated for such sums as £200,000 and over now stands at a discount. I am of opinion that one-half of the recent flotations have been scandalously overcapitalized, and time will probably prove this opinion to be correct.

BOARD OF TRADE MEETING.

President Coleman has called a meeting of directorate of the Board of Trade for Monday, October 5, at the New York headquarters, No. 271 Broadway. The final adjustment of matters connected with the National shows, the election of members and other subjects of interest to the trade will be considered and settled.

NO TIME WASTED HERE.

Thirty-two Tinkham wheels were shipped on the steamer Werra to Australia, via Genoa, on Saturday. They are the first of a lot of 200, which are to go as fast as they are turned out. The order was received, wheels crated and shipped on four hours' notice. The Tinkham people are also building several bicycle ambulances for the Mexican Government.

DID SEVENTY-FIVE MINUS BARS.

A New Orleans rider, Clyde Swick, rode seventy-five miles on a machine without handle-bars on the track in that city last week. His riding time for the distance was 3 hours and 57 minutes. He started out to ride 100 miles, but darkness interfered. After finishing fifty miles he rested for an hour.

Mention The Wheel.

A Perfect Pedal.

The JANNEY for '97.

We cannot sell our pedal for as **low** prices as others, but it is **cheaper** in the end. **NO LOOSE CONES** and **NO CHECK NUTS**, hence no trouble, no binding. We have put **money, thought** and **time** in this and can give you the **result**. It is the best pedal you can get for your '97 wheels and will **SELL** them.

SIMPLE,
ARTISTIC,
AND THEREFORE
ATTRACTIVE.

Water and Dust Proof.
Absolutely Rigid Adjustment
Self-Oiling.

HAVE YOU SEEN ANY BETTER?

Notice to Advertisers.

WHEEL ADVERTISERS are notified that change of advertisements is not guaranteed, unless copy is received by Saturday morning.

TO FOREIGN INFORMATION SEEKERS.

Owing to the number of inquiries received from abroad in regard to the status of American firms, THE WHEEL announces that it will give to all such inquiries the most careful attention, and all foreign merchants desiring advice or information regarding American trade are invited to correspond with THE WHEEL.

On and after October 1 THE WHEEL AND CYCLE TRADE REVIEW and the business of THE WHEEL PRESS will be operated by the F. P. Prial Company, incorporated. The officers are: F. P. Prial, president; J. J. Prial, secretary-treasurer. The incorporation is a matter of business convenience.

WHAT WAITING IS DOING.

THE leaden heel of time never slower moved the pedal of trade than it is now doing. In every branch of business the stocks of both dealers and manufacturers are at their lowest possible point. Everything and everybody seems stricken with the palsy of procrastination, and no aid for it seems nearer than post-election time.

Not only is this to be regretted for the trouble it is now causing, but also for the outlook for future disturbances it surely presages. Plans, contracts and orders for materials, parts, sundries and output, which should now be well under way, have in many, in fact, most instances, not even been considered. The trade waits and so, perforce, must its dependencies.

The result must be one of two things, a decreased output for '97 or a crowding into three months the normal business done in six. Of the two possibilities we believe the former to be the most likely to happen. In other words, there is more likelihood at present of a wheel shortage in '97 than there is of an over production. That the demand for bicycles will be as great in '97 as it was in '96, no close student of the trade can deny. This, too, without any reference to who is elected, or what monetary standard prevails then.

If, then, at this time in '95 plans and contracts were complete for '96's product, and the turning out of the wheels themselves was well underway, how can '97's demand be met with the utter absence of a similar state of preparation in '96? Overtime, double force and such like expedients cannot be relied upon to make up, after November 7, the time lost prior to that date, and so the question of next year's supply of wheels being equal to the demand therefor is a pertinent one.

There are risks which good business men must ever be prepared to take, and this question of preparing now for the business of the season to come is one which the shrewd manufacturer should not be slow in meeting. Working overtime means paying more for the machines turned out, while risking a deterioration in their quality; rush work rarely resulting in other than unsatisfactory results.

The man who hesitates is invariably a looser, and he will so continue until the end of the chapter. The manufacturer who has machines ready for prompt delivery early in '97 will be the man who will get the cream of the trade and the cash for his wheels. To be in this position, though, no hesitancy or waiting tactics are admissible. To be ready then means to be ready now. Those who think and act differently will be those who, at the end of '97, will find themselves burdened with a stock of unsold wheels, whose forced sale will leave an unpleasant gap in many a bank account.

Election or no election, Democratic President or Republican President, silver standard or gold standard, the people will want bicycles next year, even as they have this, and the facts regarding the trade's ability to meet this demand are exactly as we have stated them. Procrastination never was a running mate for prosperity, nor will it be so in the present case.

NEEDLESS ORNAMENTS.

IF the Racing Board wishes to perform a public service and one which is justly due the racing man it will forbid the lumbering of the judges' stand with waste material, an evil which is extending and which has already assumed undesirable proportions. It will insist that the number of judges be limited to three, which is quite sufficient.

During the present season it has become the proper caper to honor prominent citizens—city officials, bankers, brokers, lawyers and the like—with appointments as judges.

The fact that the gentlemen, while eminent in their particular callings, have absolutely no qualifications for service on a racetrack is well known, but their acceptance of such offices looks well in print. The publication of their names adds to the importance and significance of a meet. It serves as a magnet to interest and attract their kind, that is, the upper classes. The shrewder race promoters have recognized it, and have "worked it for all it is worth." The result has been boards of judges consisting of two or three men who knew their business and as many more or nearly twice as many more who, while well known and respected in public life, were little more than bebadged ornaments. They serve only to confuse. The remedy is plain and can be easily and gracefully administered by the Racing Board.

The linking of conspicuous names with the sport serves a purpose—a purpose that is not to be wholly decried. Let the custom be continued, but let the Racing Board insist that it shall not be done in a manner detrimental to the racing man. Provide for a Board of Honorary Judges, and let it be as numerous and as luminous as possible, but let the gentlemen who compose it understand that they are ornaments who lend grace and not usefulness to the occasion.

TWEEDLEDEE AND TWEEDLEDUM.

A GENTLE, humane truck driver amused himself by driving amuck on the Boulevard, endangering thereby the lives of hundreds of wheelmen. Chased by the cycle policeman for several blocks he was finally captured and taken to court. With tears in his dove-like eyes he pleaded with the Judge, declaring that he could not restrain the fiery animals he employed for truck hauling purposes. The Judge, touched by the poor, misguided man's pleadings, promptly discharged him, and the gentle truckster left the court with a wink in his eye and his tongue in his cheek.

A refined woman started to ride down a steep hill with her wheel well braked and back pedalling all her strength would permit. The hill, despite her efforts, proved too much for her control of the wheel. Finding the machine was running away with her, she acted wisely in coasting until such time as the lessening grade would admit of her again recovering the mastery of her mount. Like the gentle truck driver she, too, was arrested. Like him she pleaded that her steed had temporarily passed beyond her control. Did the Judge accept her plea? Not much he did not! A fine of \$10 was imposed to teach her the criminality of allowing the machine to pass beyond her control.

Is there a law for cyclists and one for truck drivers? Indeed there is, particularly when election is only six weeks away and women are not voters.

The active production of cycle sport is today a case of 1 per cent. pure sport and 99 per cent. cash. This estimate is warranted not to be more than 1 per cent. out of the way.

TIME TO TALK BUSINESS.

THE sooner the League of American Wheelmen decides to recognize the control of racing as a business proposition, the better it will be for the League and for racing. It is manifestly unjust to ask or expect any man capable of filling the chairmanship of the Racing Board to give the office the attention and ability it requires, while accepting as his payment homoeopathic doses of glory and allopathic doses of abuse.

The constant-changing composition of the Racing Board produces a necessary shifting in the control of racing, which in turn begets lack of confidence and stability in the League's management. Both the League and the interests it controls have grown too great to longer ask for gratuitous service from any one, and this is true in racing matters more than in any other branch of the League's work. It is time to choose a competent man, place him in charge of the League's racing, assure him of a continuance in office so long as he is competent, pay him a liberal salary and give him sufficient authority to enable him to demonstrate that he is competent.

The present method of controlling, or rather of failure to control, racing men is but the futile attempt to handle a complex question on the lines of a simple proposition. When the racers in America were but few in numbers, and the trade and money-getting possibilities of those racing men were less prominent than now, the Racing Board, with its honorary workers, was, perhaps, well enough, but that day has passed, and with it passed the efficacy of the former methods of control.

What is needed now is a carefully drawn set of racing rules, based upon the needs of racing as it exists. Then a fearless, honest and competent man, well paid to enforce the rules selected, the farce of a Board done away with and business done on business principles. In no other way can the League expect to reap other than a crop of failures and discredit from its attempts at racing control.

When you invite yourself to dine with a man you must be prepared to accept such entertainment as your self-chosen host may set before you. You may not find fault with such as he himself is content, nor yet question his providing in comparison with that you are wont to enjoy at your own table. The laws of dining and the laws of trade are close akin in this respect. When you go abroad, on your own invitation, to dine at the foreign trade banquet, be prepared to feast as they feast, or starve. Do not attempt to teach the trade there how to prepare financial dishes as you have them served at your home in America. Learn what the trade does there, imitate it as closely as you can, seeking only to improve on the products when you are sure that what you consider improvements will by the foreign buyer be also at once recognized as such. Do this, observing closely trade usages and customs, and you will find the dishes not unpalatable; violate these ethics

of foreign etiquette, and your experience with trade abroad will be neither to your liking nor yet to your profit.

The man of '96! Who is he? In years gone by it has always been possible at this time to weave the laurel wreath with which to deck the brow of the greatest racer of the year. To-day the determining of who is really the best man is as far from being proven as it was at the opening of the racing season. Cooper, Gardiner, Bald and Butler each have their supporters, each has speed and a string of wins to his credit, but none has such a preponderance of these racing essentials as to stamp him the superior of his companions. Can it be that this is to be a year without a man? It certainly looks so now.

A very small percentage of regular church-goers are Sunday cyclists. They have not been trained that way. The hundreds and thousands of riders you see in streets and parks every Sunday are drawn from less attractive places than the church and Sunday-school. They, for the most part, belong to the great class who formerly spent their Sundays in close rooms, on hard doorsteps or in wandering aimlessly on the street promenade nearest to their homes. For such the Sunday cycle excursion is the most beneficent institution of our civic civilization.

Fortunate, indeed is it that the world has thousands of people who have been nurtured in the warmth of creeds broad enough to believe that the road to salvation is wide enough to accommodate those who arrive on bicycles as well as those who come afoot and on horseback. Straight is the gate and narrow is the way that leads to the higher life, but it is not so straight nor so narrow as to exclude the rider of the bicycle who seeks it in the proper spirit.

Omniscient Shakespeare paid the future popularity of cycling rather a left-handed sort of compliment when he made Menas, in "Antony and Cleopatra," say: "The third part (of the world) then is drunk; would it were all, that it might go on wheels."

Wheelmen number enough to be entitled to consideration, and when they ask for road and other reforms, which will benefit the general public as much as themselves, for a double reason their request should be granted.

Behold the bicycle; it toils not, but verily it spins. And in that spinning is there rest and recreation for him that toils six days a week and must get his rest on the seventh if ever.

The door of the Temple of Fortune opens both ways. The cycle trade had ample proof of this during the last six months.

If makers could get credit for their intentions, wheels with poor reputations would be scarce.

THOMAS WAS ONLY TALKING.

Frank T. Fowler and Tom Eck were among those who were drenched by the storm at Manhattan Beach on Saturday last. They did not mind it as much as the others. They were so warm that neither the rain nor wind could cool them. Their warmth was generated by a discussion of the merits of Starbuck and Michael, Mr. Fowler espousing the cause of the American. Eck finally shook a fat roll of green paper in front of Fowler and offered to back his man for \$500. Fowler did not have \$500 with him, but was anxious to make the match. He drew a check for the amount. He impressed R. G. Betts, of THE WHEEL, into service as stakeholder. Eck's check book had been left at home, and his green roll did not amount to the required sum, but he offered to post a forfeit. Fowler would not have it. He insisted that the cash must be in the stakeholder's hands that night.

"This is to be no talking match," he asserted, vehemently.

"You bet it ain't, Frank Fowler," as vehemently responded Eck. "Your money is as good as any one else's, and I'll teach you a trick you never knew before."

A meeting was finally arranged to occur at the Imperial Hotel that night at 10 o'clock, when the money was to be posted.

Mr. Fowler and his \$500 were there on time, but neither Eck nor his money nor any word from him put in an appearance, although the party waited until midnight.

On Monday, Mr. Fowler again posted \$500 with Mr. Betts, but word came from Eck that he would not be able to get his money together until the end of the week, and also that he would not agree to have the hour race take place within three weeks. Mr. Fowler wanted it to occur at once. Under the circumstances, Mr. Fowler's money was returned to him.

SOLDIERS LAUGH AT RAIN.

Springfield, Mass., Sept. 21.—The first military road race in New England was run Saturday. The start was in Oakland street, near where the Massachusetts Cycle Club's road race was started in June. The course was thirty-seven miles and thirteen of the twenty-one men who started finished inside the time limit of three and one-half hours. Several miles of the route were soft roads and the finish was made in a heavy rain. The contestants were all members of Company B, 2d Regiment Massachusetts Infantry. The men were in light marching order, being equipped with gun, bayonet, scabbard, cartridge and waist belts. Private Ouimette finished first in 2 hours and 45 minutes. Private Ransom and Corporal Smith came in a few minutes later. Captain McDonald, of Company B, was judge of the start and finish, and Lieutenant Young, Lieutenant Vesper and Private Ryan saw to it that every man covered the entire course.

Several merchandise prizes were offered, the men having their pick in the order in which they finished. The first eight will receive pins or medals, which will be bought with an appropriation of \$100 made by the company. Captain McDonald is elated over the success of the affair. He has had military experience on the plains and is positive that the bicycle has an important place in military service. It is probable that next year another military road race will be run from this city on a larger scale, the plan being to make it a State affair.

WANT CATALOGUES.

Jules Kossuth & Co., No. 24 Rue Albouy, Paris, France, desire the catalogues of the principal houses in the cycle trade.

LANGUISHING LADDERITES.

With the coming of winter, when no man worketh at ladder climbing, the pace of summer slackens and the game slows down. The story of the week's changes are soon told. Gardiner, from his top rung position, yet calmly views the struggle of those below him in their efforts to unseat him. Butler's rush lands him on the second rung but two points beneath Gardiner, and the promises of the Boston lad's friends that he will yet land on the top rung for keeps seems well within the bounds of probability.

Cooper, nothing doing, finds himself yoked with Bald on rung No. 3, while Ziegler gazes at the tandem team above him from position No. 4. Sanger and McFarland, acting as fillers in, seem safely anchored as tail enders, being apparently too far down to have any upper rung aspirations.

Points are based upon the racer's wins on the National Circuit only. A win counts three points, a second two points, and a third one point. The present ladder shows the men as they have climbed up to and including the meet at Manhattan Beach on September 19.

ZIM MAY RECONSIDER.

Despite Zimmerman's telegraphic denial that there is any truth in the rumor that he intended returning to the track, there is no manner of doubt that he is seriously affected by a return of the racing fever. He said as much at the Waverly meet, and at Manhattan Beach last Saturday repeated the statement. To his one-time trainer and mentor, Willis B. Troy, he expressed it characteristically.

"Will want to see you in a little while, Willis," he remarked significantly.

"Got it again?" inquired Troy.

"Yep," was Zim's response.

Troy told THE WHEEL man that he will of course acquiesce in Zim's wishes, but unless preliminary practice convinces him that the champion still retains his old form, his return to the track is naturally problematical.

Troy, looking as spick and span as ever, returned from abroad last week. He pronounces the stories that he was stranded as utterly untrue. The Frenchmen, he says, are as enthusiastic as ever, but now having no champions of their own, are not inclined to gush over imported talent as in former days. Troy says the French racing men are a warm lot, whose worth must be considered seriously. On a single occasion he has seen twelve of them timed in 220-yard trials, in which not one did worse than 12 4-5 sec. Jaap Eden, the Dutchman, is, however, the man who caught Troy's fancy. Willis B. says he's a wonder, if ever there was one.

CLIMBING BY THE HOUR.

Corey Hill, Boston, which, in the "good old days," divided the honors with Eagle Rock, is, like that famous pimple on the face of Mother Earth, to have its glory renewed. Three contests are to take place, one for singles, one for tandems and one one-hour, continuous-performance affair.

MICHAEL AND HIS PALS.

Michael will remain on this side of the pond until November. He will ride in several of the large cities, including Philadelphia, Boston and Chicago. He will appear chiefly in record-breaking attempts, although a match race or two may be arranged.

MORE BANKING.

The track at Olympia Park, Harlem, has been improved by being banked eight feet. The turns can now be negotiated at highest speed with safety. Another meet will be held on the track to-morrow night.

RACING AS A TOUGH GAME.

"Dute" Cabanne, on his return from his attempt to get among the winners at Springfield, was interviewed on the game and its changes since he was a shining light in it.

"Has the game changed any since I left the circuit one year ago? Well, I should say it has. When I was riding in Class B your fellow-competitors gave you a show. They were careful not to interfere with or throw you, but nowadays you have got to be a good pugilist as well as a cyclist to win.

"Actually, the men fight with their fists while riding at a 2:10 gait. They shove and elbow one another when they get in a bunch. They will take awful chances to get the best of you, and think nothing of smashing into you head on.

"I saw Tommie Cooper push Bald on a curve and throw him over. The whole bunch went with him. Cooper was soaked \$50 for that trick. Then in one race Pete Berio was leading the sprint, with fourteen of us chasing him close up, when he back-pedaled and threw the whole outfit. Peter was ruled off for his little fun.

"Who did the best riding? Sanger, although he did not win a thing. They are not in it with that Dutchman. They all take sleigh rides with him and jump him at the finish, but there is not a man in America today who can ride so fast.

"Sanger rides a high gear and that hurts his getting off quickly. Hence he is always last away. But when he starts to go he shoots by the bunch as if he was shot out of a cannon.

"My trouble was that I could not get off quickly. I had a small boy to push me off and I invariably found myself with Sanger.

"In the half-mile I got a big fellow to give me a shove. I was away in front and was quite desperate. When we struck the stretch I was in a good place, right between and slightly in the rear of Cooper and Bald. I thought, 'Here's a chance for you, Cabanne,' but Ziegler dropped down off the bank and hit my crank-hanger with his front wheel. I went into the grass, and when I got up Bald and Cooper had crossed the line.

"Tom Butler did some great riding, but he cannot set a yard of pace. Ingraham, the Dixon, Ill., amateur, is a great one. Old Charley Murphy and Kiser were there. My old friend Murphy was not riding fast enough to keep warm, but Kiser did very well.

"I will not join the circuit. I intend to stay at home and do a little work, but if any of the boys around here want my game they can have it."

DIVIDENDS FROM THE FOUNTAIN FLOW.

Louisville, Sept. 9.—Fountain Ferry track has declared a dividend, the first in its history. True, it is not very large, but it is a dividend nevertheless—2½ per cent.

The declaration was made at the annual meeting of the directors on the 15th inst., at which time the annual election occurred. In the new directorate four very well-known faces are missing and of their own volition. W. W. Watts, George E. Johnson, E. A. Newhaus and Howard Jeffries all declined to stand for re-election, leaving the way clear for the following netlemen: R. F. Pelouse, president; J. W. Brigman, vice-president; J. H. Page, secretary (re-elected); C. H. Jenkins, treasurer, and these directors: Tony Landenwich, M. J. Fleck, Prince Wells, T. Watts, M. Doerhoefer, F. Fehr, Jr., N. G. Crawford, P. E. Allison and G. F. Kast. There was some opposition to Allison because of his somewhat antagonistic attitude during the National Meet, but it was not strong enough to prevent his election.

A syndicate of Boston business men are considering the idea of building a covered track for winter racing.

ALSO RANS.

The following are the men on the National Circuit whose wins have been sufficient to score for them ten points and over: Stevens, 25; Clark, 25; Coulter, 22; Kimble, 21; Kennedy, 16; Becker, 16; Parker, 14; Loughhead, 14; Coburn, 13; Mertens, 12; Wells, 12; Allen, 11; Baker, 11; McDonald, 10.

QUEERED THE QUILLS.

The Elements Bring Their Meet to an Abrupt End, but Not Until Michael, Starbuck, Bald and Johnson Had Supplied a Series of Sensations.

PHEW!

Looking back as far as one will for a comparison, and knitting the brow, and scratching the head as earnestly or as vigorously as one will, it would be hard to find its parallel. It was the phewiest meet, the tartest, the gingeriest, the most sensational, that can be recalled.

This, be it understood, applies to the Quill Club Wheelmen's meet, which transpired at Manhattan Beach on Friday and Saturday of last week. The heats were run on the first day, and were as warm as could be desired. The hour race, which was also decided on that day, was sensational in the extreme.

On the morrow sensation was piled on sensation, and the whole thing wound up in such a sensational display of the elements as is seldom seen.

The Quill Club is an aggregation of New York newspaper men. Not all, but nearly all, the "cycle editors" of the great metropolitan dailies are included in its membership. As becomes critical gentlemen, they intended that their first meet should set a mark for the rest of the world; that they did not succeed entirely was no fault of theirs; that they provided the greatest excitement that has characterized any race meeting in recent years is due largely to force of circumstances, but, nevertheless, it should stand to their credit. The elements themselves helped things along, bringing the function to an abrupt end, in the midst of a display of Celestial lightning, of terrific thunder, of drenching rain, of pelting hailstones and a terrific wind which swept the grandstand on every side, thoroughly drenching every occupant and ruining thousands of dollars' worth of good clothes and milliners' confections.

Of the heats on Friday there is not much to say. They were interesting, as heats go, but, truth to tell, they do not go very far. The piece de resistance was the hour race, which marked the metropolitan debut of the wee Welshman, James Michael, who is so generally termed "Jimmy" that to write the name "James" seems forced. He is as wee as the definition and as descriptions have led one to believe. Really, he is of the "hop-o'er-your-thumb" order—a mere mite of a man, and might well be classed with the Benner brothers or other infant prodigies. Boyish of face, slight of body, but powerful of legs, he scarcely looks his nineteen years, and to fancy such a youngster a married man required a wondrous stretch of the imagination; but a more wondrous stretch to conceive where he stores his phenomenal power.

In the heats the monotony had been relieved by a very vigorous hissing of a close decision (which was afterward righted) of the judges in the tandem race and a lovely spill in the two-mile handicap, two men running over the high banking and falling out of sight behind the breastworks.

For the hour race three men lined up: Michael, on a 98-gear World; A. E. Weing, on a 92-gear Sterling, and J. F. Starbuck on an 88-gear Humber.

The French idea, separate pacemaking for each contestant, was tried in this country for the first time. Quads, triplets and one quint were circling the track. On one of the triplets were the two Jallu brothers—the American-born Frenchmen—and Louis Callahan, looking almost as French.

Announcer Burns introduced the midget. "This is little Jimmy Michael, the Welsh Wonder," is the way the introduction was worded. Michael stood first on one foot, then

on the other, smiled two or three sickly smiles, fumbled his fingers and finally, in his embarrassment, and as if half afraid to do it, touched his cap. Then he mounted and the pistol cracked. Michael jumped behind the Jallu triplet. Starbuck, forgetful of his own pacemakers, trailed him. Weing selected his own men, and so they went for the first two laps, after which Starbuck shifted to his own helpers.

For the first three miles Weing led. After that he gave way to Michael, who was never again headed during the race. On the third mile, Starbuck seemed in trouble. His pacemakers got away from him, and he rode around like a lost child, apparently in doubt what to do. The pacing was more or less mystifying to the 1,500 spectators, who vigorously demanded of the unemployed pacemakers, who were riding slowly around the track, that they pace Starbuck. Finally Starbuck tacked on to someone, and, after losing a lap, rode in fair shape until the eighth mile, where again his pacemakers got away from him, and he dropped another part of a lap. Weing's pacing had also gone wrong, and he, too, had fallen away. Until the thirteenth mile the interest was lukewarm. Michael had by far the pick of the

ner that could not but excite admiration. On the twentieth mile he lapped Weing, who then quit, being troubled with bleeding of the nose. Later he went on again, but was called off by the officials. On the twenty-third mile, Starbuck, amid the wildest excitement, made up the lost lap. Michael was only a quarter of a mile ahead of him. The Iowan laid behind the little fellow for a few moments and then shot ahead, paced by a triplet, and a tandem manned by Goodman and Williamson. He was carried along at record speed. The crowd was fairly frenzied with excitement. They stood on chairs, waved hats, and seemed to have become insane for the time.

At twenty-five miles, and with seven minutes to go, Starbuck was scarcely 250 yards behind, and going great guns, while Michael for the first time showed a flag of distress and momentarily lost his pacers. Starbuck gained yards on every lap and on the last round was not fifty yards behind. The Goodman-Williamson tandem had him in tow and the manner in which they carried him around created the wildest excitement. It surely seemed as if he would overtake the wee wonder, but time was too short, and when the pistol was fired he was some ten

Stenson Johnson, Eck Jallu, Michael, Weing, Jallu.

pacemakers, and rode as if glued to their rear wheels, changing from one to another in a manner which showed that the racing man had much to do with the perfectness of the pick-up. He is so small, being but four feet five inches high, and weighing but ninety-eight pounds, that he was perfectly shielded from the wind, and while the other two bent to their work, Michael was able to sit almost upright and pedal in a most unconcerned manner. His action is peculiar in itself, suggesting nothing so much as a piston, his knee joints seemingly being of a telescopic variety. His pedalling does not seem as easy or as finished as that of the average American, but he claws the pedal upward in a fashion that has not been seen on this side, and carries it over the dead centre with his powerful, piston-like movement.

On the thirteenth mile Weing was plainly in trouble; about the same time Starbuck seemed to find his legs again and began making up lost ground, and the crowd to warm up. He gained on every lap and soon had the entire grand stand on its feet. It was really a magnificent exhibition of pluck; one seldom, if ever, equalled. The honest Iowan laid down to his work and followed him, at times, erratic pacemakers in a man-

yards to the bad. In another hundred, at the pace he was going, there can be no question but that he would have won.

Michael's times, which stand as world's competitive records, are as follows:

Miles.	Time.	By miles.
1.....	2:06 3-5	2:06 3-5
2.....	4:10	2:03 2-5
3.....	6:12 1-5	2:02 1-5
4.....	8:22	2:09 4-5
5.....	10:29 4-5	2:07 4-5
6.....	12:33	2:03 1-5
7.....	14:34 2-5	2:01 2-5
8.....	16:35 2-5	2:01 1-5
9.....	18:41 1-5	2:08 4-5
10.....	20:49 2-5	2:06 1-5
11.....	22:58 3-5	2:09 1-5
12.....	25:11	2:12 2-5
13.....	27:23	2:12
14.....	29:36 1-5	2:08 1-5
15.....	31:54 2-5	2:08 1-5
16.....	33:41 1-5	2:06 3-5

To Bicycle Riders: We Make Our Tube — **OF FIFTY CARBON STEEL**

Because a Tube like this of

a Tube like this of

Is just as strong as

This diagram does not show how much stronger and more durable our tube is than the usual quality in the market because it does not include the always bad and more or less uncertain effects of "pickling." By ordinary methods tube is annealed in the open fire and pickled from eight to twenty times, according to finished size. By the use of a patented annealing process, controlled by us for tube making, our tube never comes in contact with the fire and is never pickled. There is no "theory" about this. Our thorough tests show that even with the greatest precautions in pickling (not usually taken), pickled tube is weaker and more brittle than tube made of the same material without pickling. Send for a Catalogue.

While weight for weight in a Bicycle FIFTY CARBON Steel will last so long

and TWENTY-FIVE CARBON Steel will last only so long

Kindly mention The Wheel.

On Saturday Michael was billed for a tennis trial against time, but as he was troubled with dysentery the distance was shortened to two miles. Following the pace-makers without a flicker, he covered the first mile in 1:52 4-5, the two miles in 3:51—eight and one-fifth seconds outside of the record. While awaiting Michael's trial the long wait was filled in by an exhibition which gave the required touch of the ludicrous to the meet—a trial for the two-mile amateur record, 4:07, by A. C. Green, of the Greenwich Wheelmen, who had no license to make the attempt. He was paced by a sextette manned by clubmates, but could not follow them, and took five minutes to cover the distance.

On Saturday a sensation rolled out of the box at the very first shake. It was in the half-mile professional handicap. Bald was on scratch, the limit man on the fifty-five yards mark. Bald caught the field on the last lap, and the big bunch opened out on the last turn, and then closed around him in what seemed like the tightest of traps. He wormed his way through, however, and half way down the straight saw a narrow opening between two of the leaders, took a desperate chance and, jumping through, won by almost a length. He seemed so hopelessly penned up, and the chance he took was so desperate, that the 4,000 onlookers were fairly electrified and were carried off their feet. They gave the Buffalonian an ovation, and one well deserved. His time, 1:00 1-5, is competition record, and speaks for itself. Had he been able to get through earlier there is no doubt that he would easily have placed it below even time.

The mile invitation was a series of sensations. It was to have been run in three heats, best two of the three to win, but as things turned out, four heats were run, and the race is still undecided. Wells and Mertens paced each of the several heats. They were started one behind the other thirty yards in advance of the tape. In the first heat McDonald tacked on with Bald, Cooper, Gardiner, Butler and Johnson trailing. Johnson immediately went up, dropped back, and endeavored to crowd off McDonald. He failed, and falling into fourth place labored so hard that he opened quite a gap between himself and those in front of him. He closed up, however, and when Cooper started the sprint he was in close attendance. Bald was intent on making a killing, however, and came with a vicious rush on the outside. Johnson was just as determined and gave him a rare tussle all the way down the stretch; had he not been so intent on watching Bald, he might have won. The latter won by twelve inches. Cooper slid back at every revolution and finished a length to the bad. Butler fourth, Gardiner fifth, McDonald last. Time—2:04 2-5.

In the second heat Butler caught the pacers with Bald, Johnson, Cooper, Gardiner and McDonald in attendance. The latter quit in the second lap. They rode in this order, entering the backstretch, where Butler attempted a remarkably long sprint. He was overhauled, however, and all bunched in the straight and spread out over the track. Johnson got the pole and finished half a wheel ahead of Butler. Time—2:07 2-5. Johnson was causing the spectators to rub their eyes. His wonderfully improved form amazed every one.

Third heat—Butler again caught on. Johnson attempted to trail him, but laboring in a distressing manner, again opened a gap, which grew wider and wider at every stroke, permitting Butler to run away with the race. Under the rules governing the contest, Gardiner and McDonald, who had fallen to run one, two, three in the previous heats, had dropped. With a certain victory for Butler, all interest was centered on the other three, Johnson, Bald and Cooper. They simply crawled along, jawing at each other,

Johnson plainly being in a temper because of being forced to make pace. He ran wide at every turn, and see-sawed all over the track. The other two dogged him like shadows, refusing resolutely to go in front. The crowd was amused, some of them to the hissing point. At the bell, Johnson, despite his imported tactics, was still in front. Rounding into the backstretch, he ran up to the extreme edge of the banking and almost came to a standstill. This move forced Bald in front. Johnson fell in behind, with Cooper trailing. The latter started the sprint and Johnson followed him in the straight, and in a red hot finish beat him by three inches. Butler had won by more than half a lap in 2:15 3-5. After this heat, there was a great confab of officials. They gathered on the track and the report spread that all three of the loafers were to be disqualified. The report proved untrue, however. Champion Zimmerman, who was one of the judges, could be seen laying down the law most vigorously, while Handicapper Batchelder and Announcer Burns were also conspicuous in the argument. Referee Robinson was as white as a sheet. No penalties were imposed.

Fourth heat—Butler and Bald made a fierce rush for the pace-makers. Butler seemed to have the best of it, but had apparently gone too fast and was forced to slow, to prevent running into the wind-breakers. As a result, Bald came abreast of him, and the two had

Judge A. A. Zimmerman in the gathering storm.

a fight for the favored berth. Butler swung wide around the first turn, and Bald, taking the desperate chances that characterized his ride in the half mile, darted inside. He miscalculated the distance, however, and locked bars with Butler. Both fell, Butler sprawling full length on the track. Johnson, who was directly behind, ran over them. Cooper cleared the wreck, and catching the pace-makers, won by nearly a lap. Bald and Johnson remounted and finished as named. Butler's tire was off his wheel, and he was unable to get up again. Time—2:21 3-5.

Johnson promptly protested Bald, and after hearing the testimony, Referee Robinson disqualified him.

Johnson's determined riding and the warmth and spirit he displayed when talking of Bald's action fairly astonished those who knew him only as a man of monosyllables, who seemed afraid to open his mouth when Eck was not near at hand.

"I never protested a man before in my life," he said, warmly, "but I'm about tired of being a good fellow. Bald has been going around calling me an 'old skate,' and saying that I'm no good, and I've just about got a stomachful, and am not going to put up with it any longer."

The mile invitation for amateurs was interesting, and had a touch of the sensational, in that Ray Dawson, the favorite, after winning one heat in hollow style, succumbed to Joe

Harrison in the deciding heat in a bruising finish, Harrison nipping him two yards from the tape.

McDuffie won the mile 2:10 class in good style, and the amateurs were just lining up for the final of the two-mile handicap when the clouds, which has been slowly obscuring the sun, assumed an angry aspect. The thunder was muttering threateningly, and flood gates had parted. The thunder roared the heavens opened. It seemed as if the flood gates had parted. The thunder roared like a menagerie of maddened lions, the lightning was incessant and spiteful and tore great gleaming gaps in the leaden clouds and lit up the darkness. The wind blew a hurricane and swept every side of the open grandstand. Few of the occupants escaped a drenching, and all were huddled like an immense cagel of half-drowned rats. The racers had been called off, but three of them persisted in riding until blinded by rain and pelted by hail, which suddenly began to fall, they ran for shelter. After ten minutes the rain ceased and the men were called out once more. They were on their marks when the storm came at them again with redoubled fury and put an end to everything. The unfinished events are to be decided to-day (Thursday) on the Waverley track.

ONE MILE INVITATION.

First heat—1, Jos. Harrison; 2, J. T. Beam; 3, C. M. Ertz; time, 2:31 2-5. Second heat—1, Ray Dawson; 2, W. H. Owen; 3, L. R. Jefferson; time, 2:28 1-5. Third heat—1, H. K. Roe; 2, Bert Ripley; 3, W. A. Barbeau; time, 2:19 4-5.

Finals, best two in three heats:
Harrison, Harlem W..... 2 1 1
Dawson, New York A. C..... 1 2 2
Beam, Riverside W..... 3 3 3
Roe, Patchogue W..... 4 0 0
Owen, Knickerbocker W..... 5 5 0
Time, 2:23, 2:12 3-5, 2:13 2-5.

ONE MILE, 2:10 CLASS, PROFESSIONAL.

First heat—1, Otto Mayer; 2, J. B. Bowler; time, 2:29 1-5. Second heat—1, L. A. Callahan; 2, J. A. Newhaus; time, 2:25 4-5. Third heat—1, Howard Mosher; 2, Watson Coleman; time, 2:32 1-5. Fourth heat—1, E. A. McDuffie; 2, A. C. Mertens; time, 2:21 3-5.

Final—1, McDuffie; 2, Callahan; 3, Mosher; time, 2:06 3-5.

FIVE MILE METROPOLITAN DISTRICT CHAMPIONSHIP. (One Mile Trial Heats)

First heat—1, Ray Dawson; 2, L. R. Jefferson; 3, A. C. Green; time, 2:29 4-5. Second heat—1, Walter C. Roome; 2, Charles O'Connor; 3, W. H. Owen; time, 2:24. Third heat—1, Jos. Harrison; 2, W. A. Barbeau; 3, C. M. Ertz; time, 2:26.

Final not run on account of rain.

HALF-MILE HANDICAP, PROFESSIONAL.

First heat—1, E. C. Bald (scratch); 2, E. P. Thompson (65 yards); 3, E. A. McDuffie (20); time, 1:02. Second heat—1, A. C. Mertens (20); 2, L. A. Callahan (5); 3, Watson Coleman (30); time, 1:05 3-5. Third heat—1, Howard Mosher (20); 2, Otto Zeigler, Jr. (00); 3, Otto Mays (53); time, 1:02 1-5. Fourth heat—1, C. W. Davis (45); 2, Jay Eaton (25); 3, A. T. Crooks (35); time, 1:02. Final—1, Bald; 2, McDuffie; 3, Coleman; 4, Eaton; time, 1:00 1-5.

ONE MILE TANDEM, AMATEUR.

First heat—1, Jos. Harrison and L. R. Jefferson; 2, H. K. Roe and Nat Roe; time, 2:22. Second heat—1, Charles O'Connor and C. C. Schwartz; 2, Oscar Hedstrom and C. S. Hedstrom; time, 2:11.

Final—1, Barbeau-Brown; 2, Roe brothers; 3, O'Connor-Schwartz; 4, Henshaw-Hedstrom.

TWO-MILE HANDICAP, AMATEUR.

First heat—1, Charles O'Connor (20); 2, G. B. Smith (30); 3, W. F. Hicks, Jr. (40); 4, F. B. Bechtel (50); 5, N. H. Reed (75); 6, F. W. Wright (100); time, 4:47. Second heat—1, W. L. Losee (20); 2, A. T. Fowler (20); 3, Nat Roe (60); 4, H. K. Roe (scratch); 5, O. Hedstrom (45); 6, C. S. Henshaw (75); time, 4:51 2-5. Third heat—1, C. A. Carlson (30); 2, C. C. Schwartz (10); 3, L. R. Jefferson (5); 4, O. V. Babcock (10); 5, W. A. Barbeau (scratch); 6, J. P. Hutcheon (80); time, 4:48 3-5.

Final interrupted by rain and called off.

ONE-MILE INVITATION, PROFESSIONAL.

E. C. Bald, Buffalo..... 1 5 4 2
T. Cooper, Detroit..... 3 3 1 1
Tom Butler, Boston..... 4 2 1 0
John S. Johnson, Minneapolis..... 2 1 2 3
A. Gardiner, Chicago..... 5 4 5 0
Ray, Macdonald, Staten Island..... 9 out
Time, 2:04 2-5, 2:07 2-5, 2:15 2-5, 2:21 3-5.

The conditions were that one man must win two heats. The deciding heat was postponed on account of rain.

RACING BOARD'S BULLETIN.

SUSPENDED PENDING INVESTIGATION.

V. Asher, McLeansboro, Ill.; W. C. Kane, Raleigh, Ill.; George McCune, Metropolis, Ill.; H. A. Koehler, Duquoin, Ill.; L. S. Beem, Duquoin, Ill.; George Van Houten, Elkhart, Ind.; A. R. Ulp, Wellsburg, W. Va.; John B. Corser, Allentown, Penn.; William Glattig, Covington, Ky.; Phil Kitchin, Los Angeles, Cal.; W. Stimson, Los Angeles, Cal.; F. A. Bell, Los Angeles, Cal.; A. D. Tompkins, Los Angeles, Cal.; James W. Cowan, Los Angeles, Cal.; H. Burroughs, Vineland, N. J.

PERMANENT SUSPENSIONS.

For officiating at unsanctioned races—J. Phil Percival, Thomas McAleer, James Ryan, Los Angeles, Cal.

Competing in unsanctioned Sunday races, after warning—George H. Black, Porter Houghton, Frank McWatters, Henry Wippner, A. Nasse, F. Davis, John Gillis, Charles Carll, L. V. Stephens, W. H. Johnson, G. J. Ellwanger, St. Louis, Mo.

SUSPENSIONS.

Thirty days from September 18, unsanctioned races—Louis Marsh, Farmington, Mo.

One year from September 16, for competing while under suspension—W. T. Bonfield, Indianapolis, Ind.

Thirty days from September 7, unsanctioned races—John Bishop, E. J. Smalley, Ed Kelley, Frank Vresland, William Ford, William Dinnen, Sid Clark, Emil Richardson, William Moffat, A. D. Kelley, E. W. Stone, Pitt Covert, Morris Dineen, Frank Lyons, Joseph O'Neal and W. Peters, Cheyenne, Wyo.

Thirty days from September 11, unsanctioned races—M. A. Lewis, M. A. Humphrey, S. Saunders, C. Johnson, D. Siddall, A. Dowling, M. E. Dillon, O. Johnson, D. Wasson, S. Payne, H. F. Smith, L. Washburn W. A. Kemp and L. Simpson, of Gainesville, Tex.

Thirty days from September 18, unsanctioned races—Russell Green, Herbert Gardner, Arthur Paulding and W. S. Litchfield, Marshfield, Mass.; James Stockbridge, Ellsworth, Me.; Allie Higgins and Charles Rankin, Bar Harbor, Me.; S. L. Burns, George Miller, Charles Closson and H. R. Pettingill, Bar Harbor, Me.

Until October 1, unsanctioned races—Charles Shively, J. B. Barnes, William Hopping, William Thompson, Oby Gultner, Howard Dobrowsky, Clarence Williams, Newt Eaton, Nels Olsen, Charles Penner, Ed Reynolds, Al Young, Fred Klemmer, Fred Smith, Redding, Cal.

One year from September 6, for wilfully competing in unsanctioned races—Godfrey Schmidt, W. E. Harmon, Los Angeles, Cal.

One year from September 6, for officiating at unsanctioned races—T. Q. Hall, Los Angeles, Cal.

Thirty days from September 14, false entry—Earl Rowan, Peru, Ind.

Thirty days from September 7, for entering races and failing to appear—Forrest Bigelow, Columbus, Ohio.

Until entry fees are paid and prizes returned—Victor S. Reed, Youngstown, Ohio.

Thirty days from September 15, unsanctioned races—Gus Gulz, Sparta, Wis.; Ole Mole, Melrose, Wis.; L. M. O'Brien, Leo H. Motl, Watertown, Wis.

One year from September 2, unsanctioned ladies' races, after warning—W. B. Beuck, Burlington, Ill.; C. F. Engstrom, Harry Blanford, Harry Sinclair, Chicago, Ill. One year from September 20, unsanctioned ladies' races—A. L. Marks, Chicago, Ill.

Thirty days from September 18, unsanctioned races—Elmer J. Marston, Farmington, Me.; Ed Steinmetz, Indianapolis, Ind.; Norval Baptit and C. W. Johnson, Bathgate, N. D.

Ninety days from September 18, unsanctioned races—John C. Van Male, Kalamazoo, Mich.

Thirty days from September 18, insubordination on race track—L. A. Chance, St. Paul, Minn.

For false entry, Frank Wallerace, Minneapolis, Minn., is suspended for six months from September 18.

For false entry, Walter Humes, Green Bay, Wis., is suspended for six months from September 18.

For competing in unsanctioned races, F. S. Deuel, W. Morse, — Broughton, B. Harrington, D. Gorham, Fred Wooten, — Hornebeck, F. Conway, Ed Cathcart Marshall, Mich., are suspended for thirty days from September 18.

Vin P. Whelan, Youngstown, Ohio, is suspended until entry fees are paid.

SUSPENSION REMOVED.

Louis Gimm, Cleveland, Ohio.

C. C. INGRAHAM.

"If ever there was a gentleman racer, Ingraham's one," is the glowing tribute paid the young man by one who has seen much of him. None will deny that he looks it. After winning right and left near his own fireside, Dixon, Ill., Ingraham went to the National meet at Louisville, where he earned wider fame, proving himself the best amateur there. He was the only "pure" with sufficient courage to get up against the pro's in the championships. At Springfield he added to his laurels, being easily the best man in his class. He is, however, shortly to doff his white mantle and cast his lot with the gold bugs—the professionals.

 Oct. 3—Apollo Cycle Club, Apollo, Penn.

BALD FINOS HIS SPRINT.

Wilkesbarre, Pa., Sept. 17.—Bald was the star at the National circuit meet yesterday, when he won the mile open in a driving finish, but Krick, the plucky Reading amateur, more than shared the honors with the Buffalo boy by winning three open races and finishing third from scratch in the handicap.

In the half-mile trial heat Bald made a fatal mistake in thinking the distance a mile and failing to sprint with the others; this shut him out of the final, but in the mile he easily qualified and won the race by one of those phenomenal sprints that have made him famous. Fred Loughead was half a wheel behind him. Krick, however, seemed to catch the popular fancy, and showed head and shoulders above the other amateurs. Counting a trial heat, he rode in all five races, winning four and then starting from scratch in the mile handicap, came up strongly at the end and gained third place in 2:11 3-5, certainly a good showing for an afternoon. So far this season Krick has been placed first twenty-nine times, second six times, and third six times. At the A. C. C. meet in Philadelphia he rode from scratch in the handicap mile, and finished first in 2:09, riding almost the entire distance alone.

Sanger went direct home from here, much disappointed that he did not get a place in the mile. He was forced to pace in his heat and was buried on the run home.

On Zeigler's trial against the watch for the half-mile State record, 55 seconds was given out, though many watches among the bystanders caught it 2-5 slower.

The races were well attended, fully 6,000 people journeying across the river to the track, which, while being merely a trotting track, has a beautiful surface, in many respects resembling Springfield. Summaries:

One-mile, novice—1, D. Brown; 2, S. W. Hender-shot; 3, E. P. Gaston. Time, 2:26 2-5.

Half-mile, professional—First heat—1, Ziegler; 2, Aker; 3, Loughead. Time, 1:36. Second heat—1, Cooper; 2, Gardiner; 3, Callahan. Time, 1:36. Third heat—1, Newhouse; 2, Sanger; 3, Eaton. Time, 1:14 3-5. Final—1, Zeigler; 2, Sanger; 3, Gardiner. Time, 1:08 1-5.

One-mile, amateur—First heat—1, J. B. Corser; 2, A. F. Diefenderfer; 3, R. N. White. Time, 2:35 2-5. Second heat—1, C. W. Krick; 2, G. W. Thorne; 3, B. F. Keller. Time, 2:20. Final—1, C. W. Krick; 2, R. N. White; 3, B. F. Keller. Time, 2:19.

One-mile, open, professional—First heat—1, Bald; 2, Gardiner; 3, Callahan. Time, 2:34 3-5. Second heat—1, Butler; 2, Loughead; 3, Aker. Time, 2:30 3-5. Third heat—1, Cooper; 2, Eaton; 3, Zeigler. Time, 2:34 1-5. Final—1, Bald; 2, Loughead; 3, Butler. Time, 2:07.

Two-mile lap race—1, C. W. Krick, 11 points; 2, W. G. Douglass, 5 points; 3, tie between J. B. Corser and G. W. Thorne, 3 points each. Time, 5:11.

Half-mile Pennsylvania State Championship—1, C. W. Krick; 2, R. Sturdevant; 3, H. E. Brong. Time, 1:03 2-5.

Two-mile handicap, professional—1, W. H. Williamson, 15 1/2 yards; 2, C. W. Davis, 12 1/2; 3, H. C. Clark, 100; 4, J. Bowler, 180. Time, 4:36. Sanger, scratch, 4:37 1-5.

One-mile handicap—1, R. Sturdevant, 110 yards; 2, G. W. Thorne, 45; 3, C. W. Krick, scratch. Time, 2:11 3-5.

RED-HOT RACING.

There was plenty of excitement at the Capital City C. C.'s night meet at Indianapolis, Ind., September 18. To begin with, Louis Gimm, paced by a quint, quad and triplet, rode ten miles in 22:13 3-5, breaking the record "for a five-lap track." De Cardy rode a paced mile in 2:05 3-5, establishing a track record, and Tom David, a local rider, made a half in 1:01 4-5, another track record. In the race for the city championship, two of the men, Steinmetz and Hoffman, lost a lap, but continued to ride. They were ordered off the track, but the latter insisted on pacing. De-

puty accepted the offer and finished first. All three men were disqualified, and the race awarded to the second man, Masquelette. Then one of the trainers put in his oar, and it was necessary to rule him off the track for using foul language and interfering with the officials. Another disgruntled trainer then accused one of the contestants, Jap Parrish, with being a professional, stating that he had accepted training expenses. Parrish was allowed to ride pending an investigation. The attendance was small, owing to threatening weather. Summary:

One mile, open—1, W. F. Becker; 2, Robert Wolfe; 3, Jap Parrish. Time—2:17.

One mile, city championship—1, Becker; 2, Alex Craig; 3, Parrish. Time—2:29 2-5.

Three-fifths mile—1, Wolfe; 2, J. Steinmetz. Time—1:32 2-5.

Two miles, handicap—1, Masquelette (250 yards); 2, Becker and David (scratch) tie for second. Time—5:08 1-5.

ELECTRICITY AIDED RACING.

Electricity was used to illuminate the track at Portsmouth, N. H., on the evening of September 18 with such good effect that J. H. Fitzgerald, of Manchester, rode a quarter-mile unpaced in thirty seconds, breaking the State record. J. C. Clark, of Dorchester, won the mile open and mile handicap. The meet was the most successful held at Portsmouth this season. Summary:

One-mile open—1, J. P. Clark; 2, A. B. Winkley; 3, H. A. Marble. Time, 2:32 3-8.

Two-mile handicap—1, Ira Newick; 2, George R. Newick; 3, C. T. Stackpole. Time, 5:05.

Two-mile open, professional—1, J. H. Fitzgerald; 2, J. H. Berwin; 3, L. N. Walleston. Time, 5:19.

One-mile handicap—1, J. P. Clark; 2, A. S. Harvey; 3, L. B. Dudley. Time, 2:32 2-5.

One-mile State championship—1, A. B. Winkley; 2, Ira Newick. Time, 2:55 3-5.

PEOPLE LIKE THIS TRACK.

So great has been the demand for the Waverly, N. J., track by race promoters this season, that the owners are thinking seriously of building a third mile exclusive cycle track within the half-mile trotting course. The last meet of the season on the track will take place on Saturday, October 3, when the Vim B. C., of Newark, will hold a National circuit meet, next to the last one of the season. Entries were secured at Springfield from many of the cracks, and the promoters are assured that about all the circuit chasers will appear. Quads will be used for pacing record-breaking attempts, and the track will be worked to a perfect condition. Entry blanks can be obtained by addressing E. T. Carrington, secretary, Box 156, Newark, N. J.

"SEX" SHOOK BUTLER.

Saunders, Crooks, F. Butler, Pierce, Caldwell and Coleman, the sextuplet team which will pace McDuffee in his ten-mile match race against Michael at Boston on Saturday night, went out on Monday afternoon to pace Tom Butler for a half in a record trial on the Charles River track. The "sex" took a flying start, with Butler hooked on behind. The third was covered in 32 seconds and the half in 48 seconds flat. Butler was on a strange wheel, and was compelled to drop out at the third. The time is the fastest ever ridden on a three-lap track, and established a record for a six-seated machine.

BRIC-A-BRAC AND BICYCLES.

Three bicycles, several silver cups and bric-a-brac amounting to some fifty articles, will constitute the prize list of "The Brooklyn Citizen's" road race on the 30th inst. The

affair has always been a most interesting scramble, and been productive of some red-hot finishes. There is no reason to doubt that it will be less entertaining this year. Entries close to-morrow with W. H. Roberts, No. 395 Fulton street, Brooklyn.

SWENSON, MONTE, AND THE MONEY.

To-morrow Carl Swenson, of Providence, will endeavor to beat Monte Scott in a twenty-five-mile match race at the Crescent track, Providence. The purse is \$250, of which the winner will receive \$200 and the loser \$50. The race is to be unpaced, but the men are to ride in opposite directions, which will insure fast time. Scott holds the record over the Irvington-Millburn course and is the favorite.

MADE MUDD FLY.

His name was Mudd, but by finishing first in the intercity team race between Washington and Baltimore at the former city on September 21, he won the event for Washington. The score was twelve points to nine. Mudd also won the mile open in 3:20. Von Boeckmann and Pitkin took the mile tandem in 2:29 2-5, and H. H. Dodge the two-mile handicap from 150 yards in 4:43 4-5.

HAD TO RIDE FIVE TIMES.

A two-mile handicap race, with eight entries, was strung out into five heats at the York County Fair, Saco, Me., September 18. All the starters were compelled to ride five times. The prizes were awarded to the winners of the greatest number of heats. Frederick Davis, of Biddeford, won two straight heats and was awarded first prize. The fastest time was 4:58 1/4.

BROKE SHARP'S JAW.

At the conclusion of the Hillsboro-Lynchburg (Ohio) road race September 17 J. M. Kilgore, the fourth man to finish, ran into one of the spectators, Daniel Sharp, after crossing the line. Sharp had his jaw and three ribs broken and also sustained fatal internal injuries. The rider escaped with a few bruises.

TANDEMS IN THE RAIN.

Rain and muddy roads interfered with the five-mile tandem race, promoted by the Newton, Mass., C. C. on Saturday last. Of the ten entries but four teams started. McKenzie and Lufton, scratch, won in 13:11 1-5; Pierce and Hart second. The ten-mile race for singles went to B. A. Barnaby, scratch, in 27:38; Urquhart, 1 min., second.

CHURCH IN FAST TIME.

C. A. Church won the mile handicap from scratch in 2:12 4-5, and the five miles handicap in 12:15 at the Wilmington, Del., meet September 19. L. C. Johnson took the five miles handicap, amateur, in 13:29. The mile handicap went to Frank Turner in 2:21.

SOME BRITISH BESTS.

Macgregor and Nelson have lowered the English tandem record, standing start, to 1:51 flat. They also beat the previous best from a quarter-mile on, as follows: one-quarter, 0:31 4-5; one-half, 0:58 4-5; three-quarters, 1:25.

W. A. Barbeau is the latest metropolitan rider to turn professional of his own accord. He intends to ride a tandem with Goodman.

A FRENCH CYCLE KING.

He Comes to America for Good Things—Tells About a Few of His Own.

Two engraved and interesting visiting cards were handed into THE WHEEL office on Friday last.

To the average American they are mystifying. One reads: "Societe des Velocipedes Clement en Commandite par Actions, Capital 4,000,000. Clement & Cie." And the other: "H. Leneveu, Ancien Capitaine d'Artilierie Ingenieur, Expert priests Tribunal de le instance de la Seine."

The first was handed in by M. Clement, the "Colonel Pope of France" as he is frequently dubbed. The other gentleman, Monsieur Leneveu, is M. Clement's chief engineer.

As THE WHEEL announced several weeks since, the two gentlemen were in America on purchasing intent. They left for home on Saturday last, highly satisfied with the result of their mission. It hardly seems necessary to say that the American concerns whom they visited were also satisfied, inasmuch as M. Clement had left orders for not less than \$100,000 worth of cycle-making machinery. Incidentally, as was also reported in last week's WHEEL, he had arranged for the construction of a laminated wood rim plant in France, on the outskirts of Paris, where the Clement factory is located. The French magnate has a great admiration of things American, and during the last three years has placed orders for no less than half a million dollars worth of American machinery. He is a very cordial gentleman, who easily wins his way into the hearts of those with whom he comes in contact. He is short, portly, black-bearded, and, like all his countrymen, gesticulative. Both himself and M. Leneveu wear the red ribbon in their buttonhole—the French decoration of honor.

M. Clement is much interested in things American and made careful question of the estimated output and the estimated sales of American bicycles during the current year. He tucked the figures away carefully in his vest pocket, as if they might prove of future value. He estimates that during 1896 the French factories alone turned out some 150,000 wheels, and that as many more were imported. His own factory produced some 20,000, and could have turned out several thousand more, but M. Clement, with his suggestive gestures and shrugs remarked that he did not believe it wise. During 1897 he expects to manufacture about five thousand more. He believes in conservatism. Price-cutting, he states, is quite general, the Societe des Velocipedes Clement being about the only concern that has maintained its catalogue figures, which this year stand at \$105 for the high grade wheel, \$80 for the second, and \$64 for the third. Last year the high grade wheel listed at \$175, but when Clement & Co. reduced, all the others reduced with them. The average discount allowed agents is 25 per cent in the larger centres, and 20 per cent in the smaller. He believes that there is room for the best American wheels abroad, and that they will prove serious competitors of those of English manufacture which at present have the upper hand. Wise man that he is, he also believes that wood rims are destined to come into general use in his country. It is because of this belief that he has arranged with the Boston Wood Rim Co. to establish the plant near Paris.

Concerning tires M. Clement remarked that he believed single tubes would gain favor, simply because of their cheapness, but that in the main Dunlop tires, which are almost universal, would prevail. "I am a stockholder and have made a large fortune out of Dunlops," he remarked, with a delicious accent

and a speaking shrug. France has no particularly new ideas on wheel construction which will prove of interest to Americans, he states, Clement wheels weigh twenty-two pounds, stripped, and twenty-four, fitted with gear case and brake.

Asked if he still supported a racing team, M. Clement, with a smile and gesture of the hands which was more speaking than words, replied, "Not since four years."

Regarding M. Clement's hospitality, a story is current on this side of the water. It seems that during Colonel Pope's recent visit, he became the guest of the French millionaire, and expressed admiration for a magnificent piece of statuary which ornamented a corner of the Clement drawing-room. "You like that, Colonel?" he asked. Naturally the Colonel responded in the affirmative. He thought nothing more of the matter until aboard the New-York bound steamer, when he was notified that a package was on the pier awaiting his order. He knew nothing of it, but as time was short, he ordered it aboard. When it was opened on this side it was found to be the statue for which he had expressed admiration, a hearty letter from M. Clement tendering the gift being also in waiting.

"BALLATANT FEMINE VULGARITIES."

Marie Corelli, who has become famous as a writer of queer stories, is very much excited over the report that she had grown sane enough to ride a bicycle. Marie gently chides her accusers thusly:

"A few liars less in the world would give us all more breathing room and a sweeter atmosphere. I do not ride a bicycle, have not invented a bicycle costume, and entirely abhor bicycling riding for women. Men look sufficiently hideous and undignified on a bike, and women are worse than hideous, they are immodest. The poet's ideal of exquisite womanhood is utterly destroyed by the sight of these perspiring, red-faced, lank-haired objects, working their legs treadmill fashion in mere ballatant feminine vulgarities."

Marie will be sure of a place in the affections of the Smithite crusaders.

PHIPPS FIRES UP AGAIN.

W. B. Phipps, the young man who once each year creates a vigorous bubbling in the cycling political pot in Albany, N. Y., is once more imparting heat to the caldron. As usual, he would like to be one of the delegates to the State Board of Officers, and, as usual, the nomination has been denied him. W. M. Honig, the present incumbent, being slated for re-election. Phipps has nominated himself, and as there has for years been more or less feeling between his club, the Albany County Wheelmen, and the Albany Bicycle Club, to which Honig vows allegiance, the likelihood is that the breach will be torn open still wider.

NO PACER RACE.

Rochester, Sept. 22.—The race between Joe Patchen, the pacer, and W. W. Hamilton, the bicyclist, which was postponed on account of rain from Saturday until this afternoon, has been declared off, the weather conditions being again unfavorable.

CROSS CONTINENT WITH A TRAILER.

Two Syracuse riders have started on a transcontinental trip to San Francisco on a tandem to which is attached a two-wheeled trailer carrying a tent and necessary supplies.

On the National Circuit the market price of single pacemakers is \$10 for half miles and \$15 for miles.

AT BUNNELL HAVEN.

Michael Made an Effort, but Failed—Johnson Got Left and Church Scooped Things.

Michael essayed to break the two-mile record at Willow Grove Park, Philadelphia, on Tuesday night, but the chilly air and stiff breeze was too much for him. Although paced by the Jallu Brothers and Callahan on a triplet, he was unable to do better than 4:26 2-5.

John S. Johnson was too late in getting out for his heat in the mile open, and was left out of that event. He started from scratch in the mile handicap, and after catching the bunch and taking the lead coming into the stretch, he was beaten out by Newhouse, Barbeau, Callahan and Thompson. He entered a protest against Buzzard, saying that he cut across him, but it was not allowed.

Church carried off the honors of the professional ranks. He won his heat and the final in the open handily, and by a magnificent spurt nipped Starbuck at the tape and won the five-mile by a few inches, although he was not feeling well. Church and Starbuck rode from scratch in this race, covering the first mile in 2:03.

Spills were numerous, there being at least half a dozen, in one of which Frank T. Schimpf broke his collarbone. It was not the fault of the lighting, for in addition to the electric lights many gasoline lamps had been put up at intervals between them, and as a result the track was very bright. About 3,500 half-frozen spectators were present. Summary:

One-mile novice—Final heat—1, William Kennedy; 2, J. Logue. Time—2:38 2-5.

One-mile, scratch, professional—First heat—1, H. E. Bartholomew; 2, B. B. Davis; 3, Carroll B. Jack. Time—2:27 4-5. Second heat—1, C. Church; 2, W. Dickerson; 3, F. T. Goodman. Time—2:38 2-5. Third heat—1, E. S. Aker; 2, E. P. Thompson; 3, J. A. Newhouse. Time—2:34 2-5. Final heat—1, Church; 2, Newhouse; 3, Aker; 4, Thompson. Time—2:22 4-5.

One-mile amateur—Final heat—1, Henzel; 2, Shomo; 3, Trot; 4, Stevens. Time—2:27 2-5.

One-third-mile exhibition tandem by the Bener Brothers, made in 1:31 2-5.

Two miles exhibition by James Michael, ridden in 4:26 2-5.

One-mile handicap, professional—Final heat—1, Meixell, 210 yards; 2, Hall, 150; 3, Cassidy, 150; 4, McCurdy, 40. Time—2:15 4-5.

One-mile handicap, amateur—Final heat—1, Boone, 90 yards; 2, Cressey, 100; 3, Massey, 120; 4, Vernier, 25. Time—2:27.

Five-mile handicap—1, C. A. Church, scratch; 2, J. T. Starbuck, scratch; 3, E. S. Aker, 40 yards; 4, L. Callahan, 40; 5, W. A. Barbeau, 200. Time—4:12 3-7.

WHAT IT COSTS TO RUN A LEAGUE MEET.

Louisville, Sept. 19.—A National League meet is not always the profitable function that outsiders imagine it to be, at least this is the experience of the '96 Meet Club, which is now winding up its affairs. The treasurer's report, which has just become public property, shows \$2,700 on hand and \$500 due from the publishers of the souvenir programme, with whom the club had considerable controversy and may yet have to resort to the courts to collect the balance due. Some \$200 is also due for advertising. In all, the stockholders' outlay represents some \$4,800, leaving a deficit of \$1,400.

There is some talk of continuing the club, not as an incorporated body as it is at present, but as a social organization, the idea of the promoters being to attend future National meets in a body.

The Kentucky Road Club has been organized with C. Daubert, president, and W. A. Rubey, chief centurion. Its objects are similar to those of the Century Road Club, but the dues being materially less, it is thought that the Kentucky organization will amass a considerable membership.

**To All Interested in the Manufacture
or Sale of Bicycles:**

GENTLEMEN:

We have noticed in the cycle papers and also by anonymous postals that have been thrown out promiscuously to the public, that papers have been filed in the United States Courts in a suit instituted by Mesinger Bros. against Humber & Co., America, Ltd., for damage by use of the saddle on Humber wheels. These statements were published as early as the middle of August. The writer has called the Humber Co. over the telephone several times and asked if there was any such suit, or if summons of any suit had been served on them, and in reply to each inquiry the answer has been that no papers have been served and nothing has been heard of any suit, either at the New York office or the office at the factory at Westboro, up to the date of this letter. As is well known, we make the Humber Saddle.

We can readily see that this is done to frighten our customers, and damage us as much as possible. In regard to the threatened suit, I have this to say, that it is our custom before putting out saddles to the trade, to have all patents bearing thereon thoroughly investigated by our patent attorneys, and also experts. We do not impose upon the manufacturers to the extent of placing upon the market an article that we feel will cause damage to our customers. Of course we cannot prevent parties, who think they are injured, from making a great big blow and endeavoring to bluff the trade.

As early as the Cycle Shows at Chicago and New York, threats were made by Mesinger Bros. and efforts were made to frighten our customers. In order to be on the right side and be prepared for anything that might come up, we retained as counsel Mr. Frederick P. Fish, of the firm of Fish, Richardson & Storror, of Boston, in addition to

our regular attorney, Mr. J. C. Dewey, of Worcester. We have such confidence in the reputation of these gentlemen and the patent experts, that we paid Mr. Fish his retainer aside from other charges, and have also paid Mr. Dewey nearly an equal sum for services in regard to these patents.

Together with this article we show you a *fac-simile* of the checks taken from photograph. This is to show the public that we are not bluffing or talking something that we cannot back up. We make these statements simply to show our customers that we employ first-class counsel, and that their interests, as well as ours, will be guarded in the best possible manner.

The above counsel are working in harmony with counsel employed in New York by the Humber Co. We have increased our capital stock to \$100,000 paid in; this, together with the fact that we are strong financially, gives additional assurance to our customers that this suit, if brought into the courts, and any other suit, will be pushed to ultimate success for the Humber Co., as well as for the Hunt Co. As Mr. A. L.

Garford is president of the Hunt Mfg. Co., as well as of the Garford Mfg. Co., being a large owner in both, any suits that may be brought against either company will be pushed through to the end. We mean business every time, and if Mesinger Bros. wish to fight we are ready for the racket, and if suit is started against any of our customers, we desire that they notify us at once. We do not infringe; our designs are different.

We also wish to state that we have eleven patent applications now pending in the Patent Office on improvements in saddles we have been making. Some of these applications have been allowed and will be issued as soon as we think the trade will warrant. We do not wish them issued at present, for we desire our competitors to be in ignorance as to the claims until there is more of a demand by the saddle trade. We shall use the same means for defending our interests, and the same care in investigating infringements on our goods. We have no anonymous postals to send out, or any underhanded means to use.

We shall take to legitimate course, and any statements that we make we shall be glad to verify to anyone calling at our office, and we can show abundant proof of the claims which we make. In the meantime, we shall keep right on manufacturing a high class of goods, spending our money freely in employing the best counsel possible to investigate any and all patents which have bearing upon the improvements which we may from time to time produce, as we believe that our customers are entitled to a most careful investigation and a judicious expenditure of the money which they may pay us for any goods sold them. We always expect to use as large a portion of our profits, above the manufacture of our goods, as is necessary for the protection of our customers.

We do not desire to manufacture cheaper than someone else, but as much better as possible. The reputation and quality of our

goods, together with the generous purchase of the same by the manufacturers and dealers in the past, will verify this statement.

We sincerely thank you for your generous patronage, and we believe that you have confidence in both our financial and business ability to protect your interests.

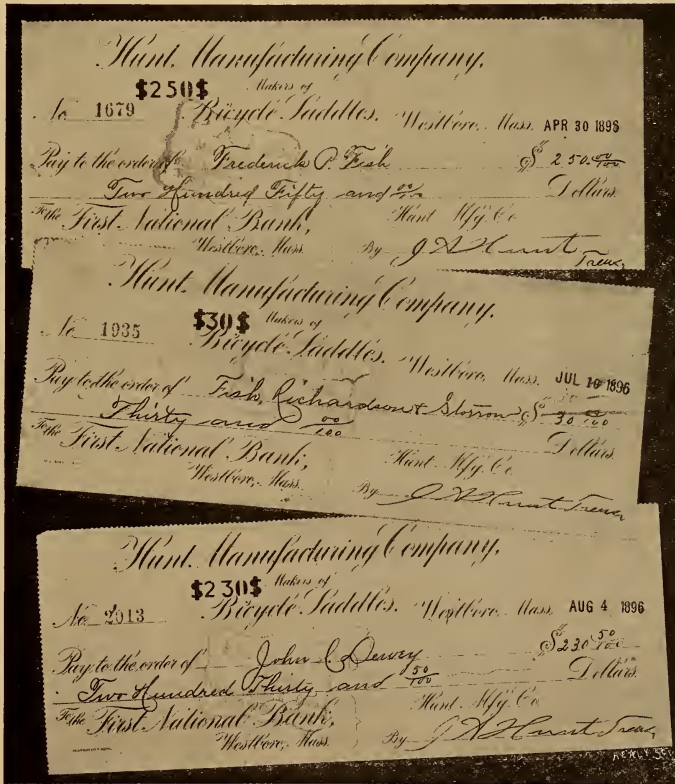

Yours respectfully,

J. A. HUNT,

Treasurer and General Manager,

HUNT MFG. CO.

WESTBORO, MASS., Sept. 14, 1896.

TALKS WITH TRADE PEOPLE.

One of The Wheel staff was recently in Chicago on a flying trip. During spare moments he brushed against several of the Chicago trades people. L. M. Richardson, assistant manager of the Monarch Cycle Company, was one of them.

Mr. Richardson is one of your deliberate, slow-speaking, careful-worded men, whose utterances, because thereof, seem the weightier. He is one of the few who is not troubled by the political disturbances. The Monarch Company, he said, had built 40,000 wheels during 1896. They would not build one wheel less during 1897 under any circumstances, but, on the contrary, were figuring on an increase of about 10,000 wheels. Mr. Richardson did not maintain that of this year's output all had been disposed of through Monarch agents; on the contrary, he stated his emphatic belief that no concern which built more than 20,000 wheels could dispose of them without intercourse with the jobber, through whom at least 50 per cent of the Monarch wheels had been disposed of. Next year he figures that some 15 per cent or 20 per cent of the total American output will be sold abroad. He bases no little hope on this export trade.

Mr. Richardson, too, has sound ideas on the racing question.

"Why," he remarked, "a good many of the firms who are supporting circuit chasing teams are simply throwing away money. The racing game positively doesn't pay unless you have a winner."

The Monarch people, of course, have a winner—Tom Cooper.

Another of Mr. Richardson's beliefs is that ultimately the exclusive cycle dealer will become but a memory. He thinks that the business must become associated with other industries, as it cannot, of itself, in and out of season, be self-supporting; barring, of

course, such branch houses and distributing depots as may be established by the manufacturers themselves.

Frank T. Fowler, of the Fowler Cycle Manufacturing Company, is another optimist. His concern built some 10,000 wheels during '96, and anticipates an increase of 5,000 during '97. Fowler has but recently returned from abroad, and his utterances concerning Fowler prospects abroad fairly glow.

"Do I believe that the trade is permanent?" he remarked. "Well, I should say I do. A turtle can travel as fast as a rabbit, and that is about the situation abroad. Until we went over, the English agent never knew what it was to be taken care of; a concession was unknown to him, and he was amazed when he found that we would replace broken parts or make allowances for other such matters without quibbling or question. You may judge of how the English agent feels when I tell you what I have told no other newspaper man—that within three weeks I received no less than 1,100 applications for Fowler agencies. Yes, I expect to go over again shortly."

Of all the Chicago optimists, however, Harry Cassidy, Parkhurst & Wilkinson's right-hand man, is the most optimistic. He frankly admits that he may be exaggeratedly so. He says that one or two of his friends, whenever they feel "blue," come over and talk with him to have their depression dissipated. According to Mr. Cassidy, of all the failures up to date not three of them have been thoroughly honest. But he does not believe that there is occasion for heart failure over the outlook. Such concerns as the Monarch Cycle Co., the Crawford Mfg. Co. and others of similar importance have, he says, placed with his concern orders that show no decrease from those of last year, which is proof enough of how they feel.

J. A. Jochum, of the Independent Electric Co., one of the men who impresses you with his "sincere sincerity," admitted, however, that orders of importance were really few and far between. Money was hard to get and big buyers few. He cited the case of a Chicago real estate man who was erecting a block of flats, and who, depending upon his possessions and his close friendship with a bank president to tide him over any momentary stringency, found it necessary to ultimately apply to his banker friend. He was flabbergasted at the latter's refusal.

"You don't mean to tell me, Mr. Jones, that you, a life-long friend of mine, will jeopardize my property by refusing to loan me a few hundred dollars, when I have property enough to secure it more than ten times over?"

"I am sorry," remarked the banker, "but, as between the bank and our life-long friendship, you must understand that the bank comes first."

Drifting to other subjects, Mr. Jochum remarked that his firm, which deals largely in parts in cycle fittings, in addition to being one of the largest electrical concerns in that business, had the proud distinction that at no time had it used any part of its stock to manufacture and assemble bicycles on the quiet and dispose of them in competition with their competitors—a practice, he stated, which had been too general among their competitors.

Thomas B. Jeffery, the mechanical head of the G. & J. factory, was among those who sided with Mr. Jochum. He was firmly convinced that the money agitation had, as it really has, played havoc with the business. Looking ahead, he could not see any relief in the event of Bryan's election; on the contrary, he remarked that if the Nebraskan should, by any chance, be chosen, legislation in favor of a free-coinage bill would continue to keep the money market so unsettled that a continuance of the uncertain feeling must result for a year or more. Conservatism, he said, was the watchword of the hour.

NATIONAL BOARD OF TRADE OF CYCLE MANUFACTURERS.

271 BROADWAY, NEW YORK.
Phone No. 4117 Cortlandt.

R. L. COLEMAN, President.

R. P. GORMULLY, First Vice-President.

GEORGE H. DAY, Second Vice-President.

W. A. REDDING, Treasurer.

JOSEPH MCKEE, Secretary.

ERNEST R. FRANKS, Ass't Sec'y.

Mercantile Agency, Collection Department and
Information Bureau.

NATIONAL CYCLE SHOWS.

Under the auspices of the National Board of Trade
of Cycle Manufacturers, National Shoe
and Leather Bank Building, 271
Broadway, New York.

January 23-30—Chicago, Collis-man.

February 6-13—New York, Grand Central Palace.

FOREIGN CYCLE SHOWS.

Nov. 20-28—Stanley; Agricultural Hall, Islington,
London, N.; E. A. Lamb, Secretary, 57 Chancery
Lane, W. C. Telegraphic address: "Insup-
pressible, London."

Dec. 4-12—London, National Show, Crystal Palace,
Frank Peach, Secretary, 48 Holborn Viaduct,
London.

TRADE CHANGES.

ARKANSAS.

Little Rock—American Bicycle Improvement
Company incorporated with J. B. Bate-
man, president, and J. Kellogg, secretary-
treasurer. Capital stock, \$50,000.

DISTRICT OF COLUMBIA.

Washington.—Thomas Sweeney, No. 66 H
street, assigned to Albert Sillers. Assets in-
clude \$475 book accounts, seventeen bicycles
and furniture and tools. Liabilities about
\$3,408.

ENGLAND.

Bridlington—O. Marshall, No. 20 Church
Grove, desires English agency for American
bicycles.

GEORGIA.

Augusta—Gus Beall, new store in the Slus-
ky Building.

ILLINOIS.

Chicago—Climax Cycle Company attach-
ment issued against them for \$4,150 in favor
of E. H. Cohen.

Chicago—Upon the petition of Morgan &
Wright Judge Gibbons this morning appointed
Charles L. Boyd receiver for the Standard
Cycle Works Company. The Standard Com-
pany assigned last June, its assets now being
in the hands of the Chicago Title and Trust
Company.

MASSACHUSETTS.

Worcester—C. B. Whitney reported to have
foreclosed mortgage.

Worcester—Decker Bicycle plant, which
was to have been sold at auction August 18,
sale has been declared off.

MICHIGAN.

Standish—Keller & Server will establish bi-
cycle factory.

MINNESOTA.

Minneapolis—New England Furniture and
Carpet Company, Sixth street and First ave-
nue, South, are selling out their stock of bi-
cycles and sundries.

Minneapolis—Swan Nelson reported record-
ed chattel mortgage for \$550.

NEW JERSEY.

Camden—Carriage Cycle Company incor-
porated by J. Buckman, L. Litchfield and L.
Schwerm. Capital stock, \$250,000.

Trenton—The Berkeley Cycle Company
assigned. Liabilities, \$27,000; assets, \$18,000.

NEW YORK.

Saratoga—Hubert Bicycle Company. Sher-
iff in possession.

Syracuse—A judgment on default was filed
against the Elbridge Cycle Company for \$10,-
565.17 in favor of C. L. Higgins.

Syracuse—The property of the Dodge Cycle
Company sold by Deputy Sheriff upon execu-
tions in favor of the Salt Springs National
Bank and another. W. T. Gridley bid in the
property for \$2,000.

Utica—Unique Bicycle Company (Richard
Mortimer). Stock sold under mortgage fore-
closure. Bid in by the mortgages, the Hunter
Arms Company, of Fulton, for \$1,000. Mr.
Mortimer will for the present conduct the
business in the interests of the new owners.

OHIO.

Newark—The Sheridan Bicycle Company
organized with these officers: President, Dr.
C. S. Morse; treasurer, H. D. Woodbridge;
superintendent, F. J. Harrington.

Toledo—Ojisto Cycle Company reported dis-
solved partnership.

Toledo—National Bicycle Company incor-
porated by E. N. Crook, C. H. Spitzer, C. H.
Masters, D. S. Heipman and M. N. Crery.
Capital stock, \$30,000.

PENNSYLVANIA.

Williamsport—A new company has been
formed with a capital stock of \$500,000 to
manufacture the C. R. Harris bicycle. Site
has been chosen and work on the factory
will shortly commence. It is estimated that
1,200 mechanics will be employed.

SOUTH CAROLINA.

Charleston—Charleston Cycle Company suc-
ceeded by Elliott R. Welch.

TEXAS.

Austin—Petmecky's bicycle store damaged
by fire; duly insured.

Waco—The Woodworth Cycle Company in-
corporated by J. B. Seeger, Tom N. Parker,
A. O. Woodworth, John P. Massey and R. O.
Rounsavall. Capital stock, \$20,000.

VIRGINIA.

Staunton—A. L. Humphreys will open new
store.

WASHINGTON.

Vancouver—W. W. Wintler, bicycles, re-
ported gave bill of sale for \$450.

MORGAN & WRIGHT TIRES
ARE GOOD TIRES

MORGAN & WRIGHT TIRES
ARE GOOD TIRES

HARD KNOCKS.

This has been a wonderful season for the "good" tires. In 116 meets not on the National Circuit, they have won 1,476 out of 2,378 places—more than won on all other tires combined. On the National Circuit, from San Antonio to Wilkes-Barre, Pa., inclusive, they have won 455 out of 945 places, nearly as much as won on all other tires combined. **The great majority on track and road, amateur and professional, use the "good" tires.**

MICHAEL, THE WELSHMAN.

"Jimmy" Michael, the Welsh wonder, whom every rider in England and France knows, rides a World and M. & W. Tires. At Manhattan Beach, N. Y., September 18th, he rode 27 miles 1,690 yards in the hour (American record). Beating Starbuck.

WORLD'S RECORD.—Barney Oldfield, on a Stearns, with M. & W. Tires, won the two-third mile open at Chester Park, Cincinnati, September 16th, in 1.22, breaking Cooper's record of 1.25.

WORLD'S RECORD.—C. R. Coulter, on a Lindsay, with M. & W. Tires, won the half-mile professional, at Denver, September 12th, in 59 3-5 (world's record).

WEEKLY WINNINGS—OFF THE CIRCUIT.

Bradford, Pa., - - - -	6 out of 11	Lockport, N. Y., - - - -	11 out of 16
Wabash, Ind., - - - -	18 out of 24	Manitowoc, Wis., - - - -	13 out of 15
Hillsboro, Ill., - - - -	13 out of 18	Royalton, Minn., - - - -	10 out of 16
Chester Pk., Cin., O., -	8 out of 8	Alton, Ill., - - - -	14 out of 28
" " Sept. 16, - - - -	8 out of 12	Total, - - - -	103 out of 148

WEEKLY WINNINGS—ON THE CIRCUIT.

Philadelphia, Pa., - - -	11 out of 21
Wilkes-Barre, Pa., - - -	16 out of 28
Total, - - - -	27 out of 49

Both on and off the Circuit M. & W. Tires win more places than all other tires combined.

THE POWER OF MYSTERY.

How It Affects All Mankind in Their Dealings With The Progressive Manufacturer.

It would seem that mankind fears the mysterious, although they should know from experience that the things we know were once mysteries, and that they were no more dangerous then than they are now. So it is or will be with every ghost. Its danger is largely imaginary, and acquaintance with it will destroy its evil qualities forever.

The writer has had considerable experience with ghosts, even in the minds of liberal-minded, broad-gauged people. An attempt to introduce new things is usually met by all sorts of objections, which seem to the objector to be reasonable and conclusive, but which in time prove to have been but ghosts.

Thus, in connection with motor vehicles, several objections are being constantly raised, viz.: noise, vibration, odor, breakages and a few others of less importance. To the rider of the cycle of to-day, with its almost absolute noiselessness, the noise of the motor might seem quite objectionable, but the writer can remember a few years back, when rattrap pedals were objected to because of their tin-pan effect. The lightweight craze killed this objection, and rattrap pedals are to-day most commonly used.

The noise objection may best be answered by citing such examples as the trolley-car versus the horse-car; the locomotive and its train versus the stage coach; the steamboat versus the sailing boat or the canal-boat, and the click of the typewriter and sewing machine as compared with the noiseless quill pen and the needle. In each case the article of to-day is far more noisy than its predecessor, but the thing is judged by its results, and if the noise cannot be obliterated the article is used anyhow.

The same is true of vibration. The motor cycles that have been shown us thus far have had considerable vibration, and while this is not offered as an argument in their favor, it is insisted that the vibration will not prove fatal to the introduction of the vehicle. The common passenger train keeps up a constant vibration, so much so that many people find it difficult to read, write or sleep on the train, and yet most people travel by rail instead of by water, because of the higher speed.

The odor objection falls to the ground at once when we see the locomotive pouring its cloud of smoke, sulphurous gases, soot and cinders into the open car windows and upon the perspiring passengers during this hot weather. A man who rides a hundred miles or so behind a locomotive these days would stand a chance of being mistaken for a coal miner, but he does not, on this account, refuse to ride on the train.

In the matter of breakages, an increased number of parts brings with it increased liability to breakage, but unless the percentage of breakages is greater than the increased results, we can feel certain that the motor complication will not be a bar to the introduction of the motor vehicle. "Vox populi, vox Dei" is a common expression accepted by many people as true, but it is not so. The voice of the public is a roar, but the voice of God is a still, small voice. It is common for the public to say, and probably believe, without thinking, that the simpler any article is the better it is. Such view is far from being the case. The old hand printing-press was a very simple affair, but no one would insist for a minute that it was better than the cylinder press of to-day. The sickle of the Egyptian was a one-piece machine, but as a grain-gatherer it could not be given to compare with the self-binding harvester.

The willow whistle of the schoolboy is a simple instrument, but it does not compare with the magnificent creation of the pipe-organ builder, and so the list could be extended indefinitely. The true test of an article is not its simplicity, but its service. The measure of value is not what a thing is, but what it does.

One need of to-day is the education of the public on practical lines. The tendency of the age is rapidly in that direction, but there yet hangs over us many of the beliefs and traditions of the past which are hampering us. Too many men to-day pride themselves on the fact that they have a splendid physique, with blue blood running through their veins, and that their ancestors can be traced back for ages. The true man is he who asks that he be judged by what he accomplishes, rather than what his ancestors accomplished. So in our mechanical products. Each day the public is becoming more willing to judge things by what they do, yet, as before stated, there is much improvement possible in this line. How often we hear the remark, "Oh, look at that horrid thing!" only to find that within a few months the so-called "horrid thing" has become the accepted article, and is pronounced "perfectly beautiful." CHAS. E. DURYEA.

REPAIRERS' BENCH DEVICES.

Bicycle repairers will find it convenient to have a device on their benches something like that shown in Figure 1, the use of which is to

pull refractory keys from cranks. Some keys are screwed to place, others are bolted, still others driven. Driven keys will stick at times, and it is not safe to trust to a key drive, cold chisel or the like to remove them. Better rig up a contrivance such as we shall describe and offer to any one who cares to make one.

Get a bracket cast like that designated A, and bolt a bearing B at the upper end in which to clasp the bar of the crank C in the manner presented. Drill a hole and cut a thread in it to reach the pressure screw F.

Have a square head G on this screw, so that the wrench may be applied, and upon turning the screw the key E will be forced out as shown. The wheel shaft is marked D.

Some riders are hard on pedals. It does not take them long to wear out the teeth of a cut pedal plate, leaving the edges ragged and worn as exhibited in Fig. 2. Such plates may be repaired for future service by grinding off the teeth to a common level as shown in Fig. 3. Next the outline of the new set of teeth should be marked upon the plate as presented in Fig. 4.

The final operation consists in cutting the teeth over again as shown in Fig. 5. A man need not be a saw filer in order to do this. The filing is all straight across, and no complicated rip and related patterns are required as would be in filing teeth of an ordinary saw. It is not advisable to have exactly a sharp point, as the sharper the point the quicker it will give out. A moderately pointed point is best. Some repairers temper the plates so as to be sure that the points will not bend readily. But this is not a good practice, for unless the rider has unusually tough soles on his shoes, the sole will be cut by the pedals.

For brazing purposes I use a device of the pattern illustrated in Fig. 6, which is homemade, and any machinist can make one like it. The pipe A is the air pipe, and B the gas. C is a sort of a chamber so arranged as to allow the contents of the air pipe to pass through D down to the common outlet at E, where both gas and air combine and pass to the brazing forge in the usual way. A mistake frequently made in brazing repaired fractures of frames is that the workman forgets that the heated tube may bend, and fails to furnish a support. The result is that some very good frames have been allowed to bend out of true while work of this nature has been performed. I use a wooden frame for each type of frame or part of frame, and secure the tubing firmly to bearings in the frame. Thus I make certain that the frame will remain in one position regardless of conditions of heat. Have a helper at your elbow when doing brazing work, for there is no telling when several hands will be required to effect a good job. GEO. D. RICE.

BEAUTY AS A TRADE FACTOR.

Most, if not all, original inventors have to run the gantlet of the public taste in the matter of beauty. The safety was derided wherever it appeared when first brought out, yet to-day people speak of its beauty in the strongest terms. The pneumatic tire, at its advent, suggested nothing beautiful, but to-day a man of the period could hardly be hired to ride the shoestring tires used previous to the advent of the pneumatic. The writer has often asked the question, "What is beauty?" He has heard critics talking about this thing being beautiful and that thing being beautiful, but in most cases when a reason is asked for, it is not forthcoming. Beauty, in the public mind, seems to be one of those things that exist without a reason for its existence, and the writer has found that his grandmother's rule, "Pretty is as pretty does," is a fairly safe one. Merit, like truth, is eternal, and will win recognition in time. We may therefore rest easy, notwithstanding certain objections to motor vehicles. The fact that a vehicle does superior work is evidence sufficient that it will be accepted by the public and become popular in spite of the seemingly apparent defects.

WABBLED, PERHAPS.

Wheeler, Jr.—She's a beautiful rider, father. Wheeler, Sr.—Yes, she is, my son, but doesn't ride beautifully.

PALMER TIRES

Kiser Wins at Philadelphia.

At the National Circuit meet at Philadelphia, Earl Kiser, the "Pocket Hercules," won the mile open and the biggest purse offered on the circuit. He defeated Cooper, Sanger and Ziegler. Kiser rides a Stearns fitted with Palmer Tires.

Fuhrman Lowers the Buffalo-New York Record.

F. C. Fuhrman, mounted on a Bison wheel, fitted with Palmer Tires, filled with nothing but good Buffalo air, rides from Buffalo to New York, 460 miles, in 54 hours and 10 minutes, without a puncture. This lowers Gavin's record almost nine hours.

President Coleman on Single Tubes.

President Coleman, of the Cycle Board of Trade, spent about a month in Europe. He made a close study of the cycle situation on the other side of the Atlantic. In speaking about the conditions there he said: "The American wheels are holding their own, and the wood rim and single-tube tires—American institutions—are gaining friends every day."—*New York Tribune*.

Palmer Tires Are the Only Sure-Enough Single Tubes.

A wheel fitted with Palmer Tires is pretty sure to be a high-grade machine. Palmer Tires are too expensive and too good for department-store bicycles.

The Palmer Pneumatic Tire Co., 133-135 S. Clinton St., Chicago.

For prices address: SELLING AGENTS, THE COLUMBIA RUBBER WORKS CO., 66 Reade St., New York, and 159 Lake St., Chicago.

Kindly mention The Wheel when writing.

HANDLE VIBRATION.

Handles in very few instances fail to transmit the vibration of the front wheel to the hands of the rider. The more vibration the handles transmit to a rider the less riding energy will such rider have. Has the loss of energy arising from the transmission of handle vibration to the rider in hard road riding, where it is greatest, been duly considered? Few believe that it has. In seeking to combat this form of vibration the chief points to be noted are that handles must be "fixed" in position relatively to the pedal crank axle and to the saddle or seat in order to allow full effectiveness when pulling hard at the handles; and that "fixed" pulling position and full vibration absorption cannot both be effected at one time in handles.

Perhaps the best place in which to combat handle vibration is either actually within the hand grasp or as near to the hand as possible. An ideal handle would yield alternately full vibration absorption and fixed pulling position merely by altering the strength of hand grasp from light to firm.

Such a handle might be constructed thus: The end five inches of the handle-bar might consist of quarter-inch diameter steel tube or rod, upon which a two-inch diameter rod of the most resilient rubber composition known could be fitted to form the grip. A handle grip such as this should absorb quite a large percentage of the whole handle vibration when grasped lightly, and when grasped tightly would yield a fairly firm and easy pulling handle.

The handle would be composed of the following parts: A steel rod (or tube) about one foot long, of quarter-inch outside diameter, with a button head and a screw-thread point. Upon this rod would fit in the following order: A one and three-quarter-inch diameter metal washer with quarter-inch central hole. A rubber composition rod four and a half inches long, two inches in mid diameter, tapered to one and three-quarter-inch diameter at the ends, with an axial quarter-inch bore. A second metal washer similar to the first. A metal cap with quarter-inch central hole and with the rim interiorly screw-threaded to fit and screw upon the end of the handle-bar, which is to be exteriorly screw-threaded to match. A wooden rod of the same diameter as the interior of the handle-bar tube, about six inches long and with an axial quarter-inch bore. A screw nut to work upon the end of the steel rod.

These seven parts when duly adjusted together would be inserted into the end of the handle-bar tube and fixed rigidly thereto by the screw cap.

For full pulling power, easy wrist position and safety of grasp the axes of the handle grips should each dip downward, outward and rearward from the forward travelling direction, and should set at an angle about 30 degrees from the horizontal and about 60 degrees from a fore-and-aft direction.

Handle grips should be made of non-conducting and non-water-absorbing materials. They will then neither be cold in winter nor warm in summer, and in wet weather will be less uncomfortable than water absorbent material. Rubber, whalebone and cork and their combinations perhaps best embody these conditions.

SHE MAKES BOTH FLY.

There was a time when live stock was used as money, and there may come a time when the bicycle will be used as a bi-metallic medium of exchange. Another claim that the bicycle is a kind of circulating medium is that the ladies make it fly.

PEDALS AND THEIR MANUFACTURE.

The manufacture of pedals has grown to be one of the most important of the auxiliary bicycle industries, but if one would but stop to think of the numberless little important details, the extreme care and the thorough knowledge of the requirements necessary in the high-grade finished product, there is scant wonder at the hesitancy of bicycle manufacturers to grapple with the problem themselves, and it is not surprising that so comparatively few concerns constitute in themselves almost the entire pedal-producing industry in this country.

Foremost can be named the Cycle Improvement Company, of Westboro, Mass., makers of the Janney Pedal. During the last two years the demand for their product has reached that stage where, although taxing their factory to

its fullest extent, they were simply unable to meet the demand. On the eve of '97 the trade was already so promising that their long-contemplated improvements in the plant were found absolutely necessary, and their facilities are now such that their output for the coming season will be just double what it was last year.

On a recent visit by a WHEEL man many new additions to the plant were shown. The rooms formerly occupied for assembling and the office have been turned into the regular factory, and new quarters opened for the enlarged office, assembling room and stockroom, while something entirely new to most factories in the way of a special model room has been added. This is being equipped with a Rivett Precision Lathe with full outfits of attachments, and all the machines and tools necessary for the finest and most accurate work in any line of manufacture; and with the increased facilities in every department in the way of special machinery indicates the character of the work that the trade may expect of the Cycle Improvement Company for the season of '97.

Mr. Janney, whose name the pedal bears, is to take immediate charge of the factory during the coming season, and his well-known ability as a mathematician and steel expert, coupled with his experience in the manufacture of the finest mathematical instruments, is sufficient guarantee that the finish and workmanship of the Janney pedal shall be as perfect as skill and machinery can make it.

Three styles of pedals will be offered to the trade—the men's rattrap, the men's rattrap with special rubber attachment, and the ladies' rubber.

On large orders the company will be prepared to supply special designs in side plates to suit the taste of the purchaser, although the beauty of the '97 model seems to leave but little to be desired in the way of design.

The construction of the pedal possesses many features entirely unique and worthy of special notice. The barrel hub will be used to correspond with the prevailing styles of barrel hubs and tubes in bicycles, but it is the ball bearings that render the pedal perhaps superior to anything yet offered. The axle is so designed as to provide its own cones, so there is no check nut, D washer nor loose cone. The ball cups screw into the ends of the forging, and are held by setscrews in such a way as to add greatly to the neatness of the pedal, while at the same time their adjustment is perfect and absolutely rigid. The inner cup, through which the axle passes, is so designed in connection with the axle that no dust nor moisture can in any way enter the bearings. This is accomplished by a mechanical device entirely new. The felt washer hitherto used in some styles of bearings in bicycles presents a broad friction surface in such a way as to deaden the motion of the bearing and to continually wear and drag across this surface any grit that might collect upon it. Mr. Janney has introduced into the '97 pedal a peculiar arrangement that furnishes no continuous metal contact with the dust screen, and entirely prevents the dragging of dust across into the bearings. Velvet, instead of felt, is made use of, and the ingenuity shown in this dust-proof design is certainly interesting, and promises to furnish the most perfect dust-proof provision yet invented. The points of contact in the bearings have been designed in a way that both theoretical and practical experience have shown to provide the greatest possible duration and smooth running under the most trying usage of the rider.

An entirely new process of hardening has also been introduced, which certainly renders the steel the most suitable for ball-bearing of any process known to the writer. The grain of the steel treated by this process, as shown under the microscope, is a fine and dense granular structure of the very finest quality of tempered tool steel, and the strength of the axle is so increased as to make them bear breaking tests almost double those borne by steel hardened in the ordinary way.

With Mr. Clement's well-known business ability to handle the finances and business management of the company, and with Mr. Gray's and Mr. Whittaker's successful experience as salesmen, the prospect of the company for '97 are certainly very flattering.

The accompanying illustration shows the design of the ladies' rubber and men's rattrap. To appreciate these fully the pedals should be seen, their running qualities tested, and the finish and the design of the bearings examined.

In the Janney pedal the bicycle trade will find an attachment worthy of the finest wheel offered by any manufacturer, and one that certainly seems to be one of the good things for 1897.

HIS BENT DISCOVERED.

"Josiar," said Mrs. Cornstossel, "ye was a sayin' the other day that Hiram didn't seem ter have no bent for anythin' in pertickler."

"Yes."

"Well, ye can't say it no more. Jes' go out an' look at 'im some time when he's scorchin' on his bisickle."

SUITABLE RAIMENT.

Oysters are seasonable only in those months whose names have an r in them; crash suits, to the contrary, are only suitable for such months as are minus the r. Eliminate the r from crash, and you have cash—cash suits are always in season, at least the tailors so declare.

TRUE PHILOSOPHY.

"Say, what's a philosopher, anyhow?"
"He's a fellow that don't care a darn what happens to his wheel."

BALD

is all right now, having somewhat recovered from his recent indisposition.

Eddie C. Bald, at Wilkes-Barre, Pa., September 16th, won the mile-open event in 2.07, his old competitor, TOM BUTLER, running third.

THE BARNES is all right all the time.

Though Bald is beaten, the winnings go on piling up just the same, and when he wins they don't stop, either.

At Wilkes-Barre, on the same day, Otto Ziegler, on a BARNES, Morgan & Wright Tires, won the half-mile open in 1 03 1-5, defeating Sanger and Gardiner, and rode a half-mile, paced by a tandem, in 55 seconds flat, breaking the State record by one-fifth of a second.

C. W. Krick, of Reading, on a BARNES, won all the amateur events but one, the mile handicap, in which he got third, starting from scratch.

THE BARNES Is the Wheel to Win On.

ROCHESTER'S "BIG FOUR."

Who They Are, What They Sell, and What They Are Doing.

"The Big Four" is what the Shone-Hanna Mfg. Co., of Rochester, N. Y., are frequently termed by their friends, and to one acquainted with the personnel of the concern, the term seems no misnomer, for it is unlikely that the trade presents a duplicate of four such energetic men linked together as partners in the parts and sundry business.

The four are J. W. Shone, who is president of the company; R. J. Hanna, vice-president; G. W. McTaggart, secretary, and A. T. Bradley, treasurer. Messrs. Shone and Hanna do the outside work for their company, and are well known to the general trade from a connection with their particular branch of it for four or five years. Mr. Shone was the organizer and manager of the Hall-Shone Co., of the same city, selling out some eighteen months ago to become interested in his present company. At its inception the company intended to restrict itself to the manufacture and jobbing of sundries, but a season of it has made them confident that they can handle a general line of fittings for both wheel manufacturers, jobbers and agents to advantage, and their experience and reputation have enabled them to secure control of some of the best lines in the country.

They start the season well qualified to tickle the fancies of the general trade with both proper goods and interesting prices.

Prominent in their line is the product of the Rochester Pedal Co., a newly organized pedal factory, whose output has been contracted for by the S.-H. Co.

Another excellent account is that of the Reading Nickel Plating and Electrical Co., makers of the P. and F. saddles—ordinary and hygienic—also tool bags.

In hubs, spokes, nipples and machined work of a like description the company represent Weston & Mott, of Jamesville, N. Y., a long established concern.

A rather novel line included are a considerable number of newly constructed jigs and tools for cycle repairers and manufacturers, made by the Reading Standard Mfg. Co. This company constructed the various devices for their own use exclusively, but the various tools proved so practicable that the S.-H. Co. prevailed upon them to seek a market for them outside of their factory walls.

It would need much space to state in detail all of the company's various lines. To put it in a word, there are included wrenches of the make of the Barnes Tool Co., wood handlebars from the Anderson Cycle Mfg. Co., a special nut made by the Electric City Wheel Co., wood rims and guards of the Hercules Wood Rim Co. and of the Wilkinson Mfg. Co., Weldon & Taylor's lacing cord, Cushman & Denison's oilers, Ames Sword Co.'s fork sides and steel handlebars, etc. etc.

The company's office and factory is located at Nos. 112, 114 and 116 Court street, Rochester, where, it can be said from experience, tradesmen are certain of a cordial greeting, whether they be on buying intent or otherwise.

BOOK OF KNOWLEDGE.

Among the makers of machinery and tools who are courting the patronage of the cycle manufacturer are the Wiley & Russell Manufacturing Company, of Greenfield, Mass., whose 208-page pocket catalogue is being extensively circulated. Taps, dies and screw-cutting and other labor-saving machinery and tools in general are described within its pages, each of which is quite comprehensive in itself.

PERSONS' PRODUCTIONS.

"Apollo" and "Venus" are the titles under which the Persons Manufacturing Company, No. 251 William street, New York, will market their saddles, the Venus, of course, being the ladies' saddle. Both embody considerable originality and seem to incorporate some of the ideas prevailing in the more popular English seats. The Apollo is shown herewith. As will be seen, its essential feature is a double truss wire frame, braced to distribute all shocks and strains, and being, its makers claim, the first completely successful attempt to prevent side-rocking. The frame really consists of six springs, passing from front to rear. The clamp used is also decidedly novel. It consists of three steel forgings and one screw, the upper forging being in the form of two disks containing grooves to receive the four lower-wires of the saddle frame, connected by bands which fasten around the seatpost, and the other two forg-

ings serving to hold the wires in position against the grooved disks. The grooves milled in the disks are arranged in two series at right angles to each other, so that the same clamp may be used either on a direct or a T-post, by swinging it around to its proper position. The saddle can be tilted to any desired position by shifting the wires in the grooves, which would appear to afford what its makers claim, a most positive grip. This clamp is also used on the Venus saddle, but the springs are of a somewhat different nature and of the sort that are designed to give elasticity at all points.

LINK IN THE BALDWIN.

A link of new design has been added to the already greatly perfected Baldwin adjustable chain, whereby the ends of the chain can be easily secured without either bolts or nuts. The side plate, too, has been altered, making it easier for the untutored to take the chain apart.

GASSY.

But Some of the Best Men in the Trade Offer Testimony as to the Machine's Worth.

When a man like George H. Day, vice-president of a concern like the Pope Manufacturing Company, permits a piece of machinery to be placed on trial in a place like the Columbia factory, no man need climb a tree to discover that Mr. Day had discerned merits in the article. And when, after due trial, he puts his pen to paper and writes that the article has "fully justified the makers' claims for it, and met the conditions upon which it was to be paid for," there would seem no shadow of doubt whatever of its value. And this praise, emphasized by similar good words from such concerns as the Sterling Cycle Works, Stover Bicycle Manufacturing Company, Ames & Frost and the Garford Manufacturing Company, would seem sufficient to attract the attention of those makers who did not already employ the article in question.

In this instance the article is the American Oil Gas Machine, made by the American Gas Furnace Company, of Elizabeth, N. J. As the title of the concern implies, they are strong on gas. They naturally claim it to be the best and most economical fuel, not only for brazing, but for every other heating operation from drop-forging to enamelling. Their claim is that five gallons of 76 degrees naphtha will do the work of 1,000 feet of the best illuminating gas made by any gas works in the United States. Their machine works automatically and converts every drop of naphtha into practically fixed gas, without residue or waste of any kind. This much they warrant. Not until a standard quality of illuminating gas can be sold for 50 cents can bicycle work be done as cheaply as with the American machine. This, at least, is a supplementary claim of the Elizabeth concern.

They not only equip factories with an entire system of fuel gas, but likewise supply brazing tables, forges and ovens, case hardening furnaces and gas blast radiators for heating japan ovens, some or all of which are in use in several of the leading bicycle plants, and, to all appearances, are giving splendid satisfaction.

E. P. Reichelm & Co., No. 80 Nassau St., this city, are selling agents for the furnace company's products.

WILL BEAR IMPORTING.

That some enterprising foreigner has not sooner invaded America and endeavored to popularize a gear case on this side of the water has been a matter of comment. That one of them would finally awaken to the possibilities of the American market was to be expected. The wonder is that it did not sooner transpire. As to the usefulness and efficiency of the gear-case there can be no doubt, and that sooner or later it must become a feature of at least a very large portion of the American output seems undoubted. For this reason, W. Bramson & Co., No. 332 Goswell Road, London, are wise in their time and will probably reap the benefit of seizing time by the forelock. Their announcement appears elsewhere, and as their chain protector has an established reputation, and has been proven true by three or four years' of use, there is little question but that it will attract the notice of the American public. It is in extensive use abroad; indeed, its makers claim that it has enjoyed the largest sale of any gear case in Great Britain. "Dust proof bearings" is an American "talking point." Dust proof chains might profitably be included in the category of "points."

COLD COMFORT FOR OUTLAWS

The Trade Proven to Be a Unit in the Support of Its Own Cycle Shows.

"Outlaw shows," like outlaws generally, will find their foundations pretty shifty in the season to come.

The cycle trade for the first time presents practically a united front in the matter of exhibiting only at sanctioned shows and the wily promoters must needs, therefore, perform some wonderful evolutions to crawl through other than the small end of the horn. This is made quite plain by the length and character of the "entry lists" of the two National shows—those in Chicago and New York.

The list closed last week and leaves no doubt of the complete success of both functions. In the face of the existing depression it will also do much to speed the dispersion of the overhanging but already scattering clouds.

For the New York show, in Grand Central Palace, February 6 to 13, 185 applications are on hand, against 112 last year, a significant increase of more than 50 per cent. The 185 applications represent 435 spaces, leaving but fourteen unapplied for and bringing the Board of Trade face to face with the fact that more room will have to be provided.

For the Chicago Show in the Coliseum, 314 spaces have been spoken for, leaving 102 still "to let."

Allocments will be made within ten days. The applicants for room at New York who have signed the agreement to exhibit only at sanctioned shows, are as follows:

Aeome Mfg. Co.; Aetna Wax Mfg. Co.; American E. H. O. and Sewing Machine Co.; American Gas Furnace Co.; Ames & Frost Co.; Julius Andrae & Sons Co.; Aurora Automatic Machine Co.; Alladin Lamp Co.; Anglo-American Cycle Fittings Co.; Armstrong Bros. Tool Co.; Arnold, Schwinn & Co.; America Cycle Mfg. Co.; American Dunlop Tire Co.; Ariel Cycle Mfg. Co.; Arnold & Daniel Co.; Eugene Armstern.

Betts Patent Headlight Co.; Bevin Bros. Mfg. Co.; Bicycle Chain Lightning Co.; Bearings Publishing Co.; Biddle Hardware Co.; Black Mfg. Co.; E. W. Bliss & Co.; Bolte Cycle Mfg. Co.; Bridgeport Gun Implement Co.; Brown-Lipe Gear Co.; Buffalo Cycle Co.; Buffalo Wheel Co.; Butler & Ward, Stephen Ballard Rubber Co.; Barnes Cycle Co.; Baldwin Adjustable Cycle Chain Co.; Bean-Chamberlain Mfg. Co.; Boston Woven Hose and Rubber Co.; Buescher Mfg. Co.; Berkeley Cycle Mfg. Co.; Boston Meter Co.; Boston Wood Rim Co.; George Barnard & Co.; Berrang & Zacharias, the Butler Co.; Billings & Spencer Co.; Ball Tire Co.; Bacon Mfg. Co.; Bridgeport Brass Co.; M. M. Brown, Brooklyn Co.; Beck Bicycle Saddle Co.

Champion Mfg. Co.; the Chandler Co., Chicago Stamping Co.; S. D. Childs & Co., Cleveland Machine Screw Co.; G. W. Cole & Co., Columbia Rubber Works Co.; Combination Cycle Co.; P. & F. Corbin, Cushman & Dennison, Cycle Improvement Company, Curtis Mfg. Co., Capitol Mfg. Co., Crosby & Mayer Co., Central Cycle Co., Chicago Tip & Tire Co., William H. Cole Sons; Cycle Trade Publishing Co., John Caldwell & Co., Corsion Cycle Mfg. Co., L. C. Chase & Co., Columbia Watch Co.

MAKES REPAIRS A PLEASURE.

"So simple that a child can use it" is the claim made by the Brooklyn Lock Company, No. 56 Ainslie street, Brooklyn, N. Y., for their hose-pipe repair kit. In addition to its simplicity and effectiveness the following points are made. The cutter makes a clean cut, avoiding the ragged edges made by straining with expanding pliers; the fabric or rubber is not injured by burning and the stem of the plug through the centre work on the back of the flange combined with the string permits an easy entrance into the tire and withdrawal of the plug up to the

flange. The mode of making a repair is shown by the cuts. It is described as follows: Moisten cutter with tongue, place over puncture and, while exerting a gentle pressure, turn to the right until it has cut through the tire. Cleanse the stem and inside flange with sand paper, put plenty of cement in hole and on parts of plug into the tire up to the flange. Replace cap on cutter and with pointer force the plug inside the tire. Pull gently on the string until the plug is drawn up against the tire. Cut off the stem of the plug even with the tire and a permanent repair is made.

H.-K. CAPTURE RUDY.

P. O. Rudy, long with the Overman Wheel Company, has engaged with the Hamilton-Kenwood Cycle Company, of Grand Rapids. He will represent that concern in Ohio, Indiana and Michigan.

MADE PERMANENT.

John R. Hardy, of Newark, N. J., temporary receiver of the Liberty Cycle Co., has been appointed permanent receiver and been authorized to wind up the affairs of the concern.

The cheap wheel builder too often "guesses" the construction of his wheel will do, because he is either too lazy or too ignorant to demonstrate the correctness of his ideas.

THE CYCLE TRADES' FOREIGN LISTS.

Contains the leading bicycle agencies and manufacturers in the following countries:

England,	Sweden,	Finland,	India,	Japan,
Italy,	Turkey,	New S. Wales,	S. Australia,	China,
France,	Holland,	Jamaica,	Barmah,	Transvaal,
Switzerland,	Greece,	Victoria,	W. Australia,	Barbados,
Germany,	Belgium,	Bahama Islands,	Cape Colony,	Egypt,
Austria,	Russia,	New Zealand,	Ceylon,	Trinidad,
Denmark,	Spain,	Cuba,	Straits Settlements,	Algiers,
Hungary,	Servia,	Queensland,	Natal,	Antigua,
Norway,	Portugal,	British Guiana,	Java,	Mexico.
Roumania,	Poland,	Tasmania,	Griguland, West,	

ALSO

A selected number of foreign buyers resident in the principal cities throughout Europe.

ALSO

A selected list of exporters of bicycles resident in New York.

All of the firms whose names are listed in this book are houses of first-class reputation.

BOOK NOW READY.

Published by F. P. PRIAL, 88 West Broadway, New York.

HAS TROUBLES OF HIS OWN.

"Me trouble's beginnin'," said the instructor of an uptown cycle academy, as he cast his eye over the school, where the cool weather had already brought out quite a respectable collection of weary, wobbling novices. "Mebbe you think this job of mine's a snap. Well, you hear me, 'talnt nothing of the kind. I don't mind the feller that comes here and says he don't know a blamed thing about a bicycle; you can kind of put up with him. But God bless the feller who thinks he knows it all, and goes to work to teach you how to teach him. You can't tell 'em anything until after they have taken a few tumbles, and then they kinder find out that mebbe we can tell em something.

"As I was sayin', those Johnny-know-it-alls are pretty bad, but it's the grandmothers and heavy-weights that are the holy terrors. If you put your arm around them, they kick, and if you let go they kick. Then, after a while, when they think they are all right and we let 'em try it and they have a spill, we're the boys who get the blessing. They ain't got any nerve, anyway.

"I near got killed yesterday. Had what we call a 'heavy' on for a lesson. She weighed about 250. I nearly pulled my arms out trying to keep her straight, and she was a-puffing and squealing all the time. After a while I let her go alone for a bit and kept running alongside her. That's where I was wrong. She was going all right until she saw another wheel in front of her. Then she went to pieces.

"Didn't do a thing but take both hands off the handles, scream and wind both arms around my neck. It was too much. I tried to hold her up, but I couldn't. I went down first and she and the machine came along, one, two, three. I couldn't breathe for about two minutes. Then she give me a calling down for letting her fall, when she had a nice easy cushion to light on. We have lots of those things happen, though. You bet, this job's no soft snap."

HAD VOTES TO SELL.

The popular voting contest is responsible for a new business. Here is one of the letters received by a cycle manufacturer whose wheel figured in one of the recent voting contests for the most popular bicycle. "We have 10,000 votes which we would like to dispose of and are collecting more every day. If you want them please make an offer." In this instance the "offer" was not forthcoming.

CHASE IN OLD KAINTUCK.

Chase tires, the new Boston article, scored early and conspicuously in the hundred-mile race from Lexington to Covington, Ky. They were attached to the Ben Hur bicycle ridden by the winner, C. E. Nadant, who broke the former record by more than fifty minutes.

MINORS BUYING BICYCLES.

A suit is pending in Syracuse which will, when decided, have something to do with settling the question of the responsibility of minors purchasing bicycles on instalments. The case is that of Clarence A. Ross, a minor, against Frank B. Smith, an agent for E. C. Stearns & Co. Ross sued to recover \$53.50, the amount he had paid for a Stearns wheel. He purchased the wheel last spring from Smith and agreed to pay \$125 for it. He paid \$30 down and was to have paid \$10 a month until the wheel was paid for. Upon his failure to make the payments the wheel was to be taken from him and the amount paid was to be accepted by Smith as rental for the wheel.

Ross failed to make the regular payments and the bicycle was taken from him. After the loss of the wheel Ross sought to recover the money he had paid, and finally brought the present suit. He claims that, being an infant, the contract is not binding, and the defendant is bound to surrender the money he has received.

AN AID TO CLEANLINESS AND COMFORT.

The cyclist who so often soils and muddies his clothing when bringing his wheel in through narrow doorways and halls will appreciate the value of this little novelty. It is a small, compact brush, which on dismount-

ing is bent around the tire, or frame, and with very little effort removes all dirt from both. It can be carried in a toolbag or in the hip pocket. The "Cycle Brush" is made by Oliver M. Farrand, No. 3 Maiden Lane, New York City.

Whatever is complicated is upon general principles objectionable in cycle mechanics; the simpler a thing is the more desirable and useful. Complicated wheel constructions get out of order easily, and the cost of repair is great.

The proper width for handle-bars is to have same just equal to the width of the shoulders of the rider. Their height should be barely sufficient to enable their rider to assume a natural upright position.

PATENTS GRANTED.

567,652. Bicycle supporting frame. Ebenezer C. Waterman, Hanover, Mass. Filed April 2, 1896. Serial No. 585,869. (No model.)

567,628. Bicycle. Carl Young, Chicago, Ill. Filed October 7, 1895. Serial No. 564,926. (No model.)

567,629. Spring motor for bicycles. Carl Young, Chicago, Ill. Filed October 28, 1895. Serial No. 567,148. (No model.)

567,630. Spring motor for bicycles. Carl Young, Chicago, Ill. Filed October 28, 1895. Serial No. 567,149. (No model.)

567,631. Bicycle. Carl Young, Chicago, Ill. Filed February 10, 1896. Serial No. 578,727. (No model.)

567,634. Bicycle saddle. Richard O. Barler, Chicago, Ill., assignor to the A. C. Barler Manufacturing Co., same place. Filed February 20, 1896. Serial No. 580,641. (No model.)

567,650. Bicycle brake. Sylvester Logan, Emmenton, Penn. Filed September 5, 1895. Serial No. 561,536. (No model.)

567,663. Handlebar for bicycles. Ransom M. Snyder, New York, N. Y. Filed May 17, 1895. Serial No. 549,621. (No model.)

567,732. Ball bearing for cycles, etc. William J. Busse, Chicago, Ill., assignor of one-half to Peter F. Quinn, same place. Filed September 3, 1895. Serial No. 561,327. (No model.)

567,732. Tire tightener. Samuel Forbes and Thomas Forbes, Dodgeville, Wis. Filed December 26, 1895. Serial No. 573,329. (No model.)

567,787. Driving-gear for cycling machines. James J. Marshall, Sydney, New South Wales. Filed June 8, 1896. Serial No. 594,136. (No model.)

567,807. Bicycle-lock. Thomas Carroll, Dayton, Ohio, assignor to Security Lock & Manufacturing Co., same place. Filed August 18, 1895. Serial No. 558,613. (No model.)

567,824. Bicycle. Alpheus Fay, Cincinnati, Ohio, and John McNab, Louisville, Ky. Filed January 4, 1896. Serial No. 574,292. (No model.)

567,835. Bicycle. Alpheus Fay, Cincinnati, Ohio, and John McNab, Louisville, Ky. Filed January 13, 1896. Serial No. 575,348. (No model.)

567,835. Wheel for bicycles. Alfred P. Le Gros, Louisville, Ky. Filed February 3, 1896. Serial No. 577,908. (No model.)

567,839. Pneumatic tire. Joseph G. Moomy, Erie, Penn., assignor of one-half to the Combination Roll and Rubber Co., Bloomfield, N. J. Filed October 26, 1895. Serial No. 566,955. (No model.)

567,849. Ball-bearing. Charles H. Chapman, Groton, Mass. Filed November 16, 1895. Serial No. 569,125. (No model.)

567,851. Bicycle-bearing. Horace E. Dodge and John F. Dodge, Detroit, Mich. Filed June 20, 1895. Serial No. 556,595. (No model.)

567,853. Adjustable handle-bar. John Galt and Archibald P. Rankin, Toronto, Canada, assignor of one-half to Peter Rutherford Wright, same place. Filed February 18, 1896. Serial No. 579,762. (No model.)

567,882. Cycle saddle. John B. Brooks, Birmingham, England. Filed March 1, 1893. Serial No. 464,224. (No model.) Patented in England May 4, 1895. No. 6,594, and July 28, 1892. No. 13,733; in France December 13, 1892. No. 226,361, and in Germany January 10, 1893. No. 74,283.

567,883. Cycle Saddle. John B. Brooks, Birmingham, England. Filed June 4, 1894. Serial No. 573,381. (No model.) Patented in England December 9, 1892. No. 22,606; March 18, 1893. No. 5,829; April 28, 1893. No. 8,553, and December 19, 1895. No. 24,371, and in France December 22, 1896. No. 235,012.

THE IDEAS OF A MAN OF IDEAS.

Chicago, Sept. 19.—F. A. Hastings is a man of ideas. As one of the heads of such a concern as the America Cycle Mfg. Co., it is necessary that he should be. Some two months since Mr. Hastings went abroad to view the "foreign situation" for himself. He has but just returned, and naturally with his fund of ideas added to. Some of them he shared with a WHEEL man in the course of a recent conversation.

"The really creditable American manufacturers that have gone into the foreign market," said Mr. Hastings, "the ones who have employed judicious and constant efforts to advance their goods, who have given the trade a good article and stood by it, and who were on the market before the English manufacturers were fully up with their orders, are having a fair trade. The papers are lending splendid assistance. I was treated very nicely by the representatives of the British press. The majority of them seem to recognize that our American wheels are an advancement over anything that has been generally furnished them by their British manufacturers. A very gratifying spirit of friendship was shown by them, and a desire to place every facility in our hands that would give the people a fair understanding of our goods and their advantages. The better element among the retail dealers welcomed the competition. Naturally we incur the enmity of the manufacturers. The retail dealers have been of great service to the American maker by their stand taken in our favor in reference to the unbusinesslike advertising schemes employed by some of the manufacturers which caused considerable comment. The retailer testified to the merit of our goods, and said that they had given his customers better satisfaction than the home product, that our facilities for quick and prompt satisfaction in case of accident were better than the home manufacturer afforded him, and that as long as that could be guaranteed the purchaser no more was wanted.

"The American to succeed abroad must build the very best that he knows how, and be as distinctively American as possible. Retrograding, with an idea of furnishing foreign trade something which their own builders furnish, and which we left behind us in 1893-94-95, will not win on that market any more than on our own. True merit will be recognized anywhere. With reference to the small details in the way of equipment, such as saddles, brake, guards and gear cases, it is proper to give them what they want. Naturally they are more conservative in their business methods than we are, and move slower, so that whoever expects to gain a footing in the foreign market must not only build satisfactory goods, but must expect to have time, patience and capital in order to properly establish himself and win the confidence of the foreign trade."

SHINES THEM UP.

Those who are inclined to "polish up their bicycles so careful" will be interested in the "Electric Cloth" being marketed by the Bicycle Appliance Company, No. 1,004 Walnut street, Philadelphia. The article has been on the market for some time, but until recently was never used for imparting a lustre to bicycles. The Philadelphia firm, however, is heading that way and claim that for polishing anything on the wheel, either enamel or nickel, there is nothing better. They offer to send a full-sized sample to any address on receipt of 10 cents. The same firm, which makes the Simplex bicycle repair tool, also state that the price of that article will be very materially reduced, both wholesale and retail.

SHOULD PROVE COMFORTABLE.

There's another new saddle in the field. W. W. Shoe, No. 428 Walnut street, Philadelphia, is responsible for it. In many respects it is a very radical departure from the conventional seat, and is certain to command a very large bit of attention.

The frame of the saddle, or, as it may be more properly called, the seat, is a rigid steel stamping; this is covered with successive layers of leather and felt, making in itself a comfortable cushion; then beneath this, as can be seen in the illustration, are strong independent coiled steel springs, which, while supporting the rider perfectly, allow of depression in any particular part without the sagging that is so noticeable in many other forms. In addition, coiled springs at the rear end thoroughly take up vibration and add all the more to the rider's comfort. Another good feature is the seat post clip; instead of a single clamping bolt, two are used, so that in case of necessity it is possible to lower the saddle so that it touches the frame, the bolts themselves being on either side of the frame tube. It is constructed on rational broad lines, being 9 inches wide and 8 inches in width, and should prove a fine thing to those cyclists who seek to add to their comfort.

MAKES ALIGNMENT PERFECT.

E. C. Boyce, No. 4 Brevortt Place, Brooklyn, is the author of this invention—a chain adjustment which requires neither wrenches nor screwdrivers to operate it. A thumbscrew

does the work. The adjustment is controlled entirely on one side, both sides adjusting simultaneously, the only movement being backward or forward as required. It is claimed that it is absolutely impossible to throw the wheel out of alignment.

WATCH THE SUN ON THEM.

Out St. Paul way they have a crimson-rimmed bicycle band—twenty players, mounted on crimson-rimmed bicycles and uniformed in white with crimson trimmings. They created something of a furor during the recent G. A. R. encampment.

SOME VERY OPINIONS.

Springfield, Mass., Sept. 18.—A WHEEL representative had an interesting talk a day or two since concerning the trade outlook with A. O. Very, treasurer and manager of the Warwick Cycle Company. Mr. Very is one of the pioneers of the business and is pretty certain to size things up correctly. Speaking of an article in a New York daily, which asserts that not half a dozen makers in the country were maintaining the \$100 price, Mr. Very mentioned offhand nine or ten companies in New England, which, he was positive, held their prices firm.

In the same article the statement was made that there were 372 bicycle factories in the United States six months ago, and that now there are but 241. The paper placed the total liabilities of the 131 embarrassed concerns at \$2,500,000. Mr. Very thought that if a third of the companies doing business six months ago had really passed out of existence, the fact ought to encourage those who were left. If the liabilities of 131 factories amounted to only \$2,500,000, the average liability—about \$19,000—he said, would seem to indicate that most of the companies were small. When a few of the large failures are taken out, the average liability of the others is still smaller.

Mr. Very is of the opinion that the manufacturers of this section have much to be thankful for. Prices have been maintained and no failures have occurred. Only two Springfield agencies have been embarrassed.

Mr. Very thinks that the foreign field is full of possibilities. In the shipping-room he showed the WHEEL representative cases containing twenty-five Warwick bicycles, which were to be shipped that day to fill an order from South Africa. The company also has a good trade in Australia, and is particularly gratified at the favor with which its wheel has been received in England.

The Warwick Company, Mr. Very says, will go slowly until after election. Mr. Very is a gold man and believes that free coinage would not prove the boon that its advocates claim.

THIS IS "DEAD SOFT."

Manufacturers who are looking for something special in the dead soft line will do well to turn to the Elliott-Washington Steel Co., New Castle, Pa. The E-W. people have already interested a portion of the cycle trade, and are desirous of interesting the balance. What they have is a special, dead soft, cold-rolled steel, for which they claim many advantages over the pickled and lime-finished metal of which it is the competitor. E-W. steel has a particularly polished, smooth, cold-rolled surface, which, it is stated, admits of the severest drawing and cupping tests, and prolongs the life of the dies fully 50 per cent. The surface is also free from scale and discoloration, admitting of the finest nickel-plating, slight buffing only being all that is necessary in most instances. It is an exclusive product, the result of twenty years' continuous experiments. The Elliott-Washington Steel Co. produce, in addition, all qualities of cold-rolled steel which are in use by cycle manufacturers. They guarantee every piece of steel that leaves their works to be equal to sample submitted.

ELLIS REPLACES PECK.

Arthur K. Peck, whose departure on an extended tour through Europe was noted in last week's WHEEL, has resigned his position as manager of the Remington Arms Company's Boston branch. The business is now in charge of W. H. Ellis, one of the travelling representatives of the company.

Merit Wins

Its Own Reward.

NEVER in the history of cycle manufacture has the record won by the famous **SYRACUSE Bicycle** been equaled.

And never before in the history of this popular wheel has the demand for it been so great. From Maine to California, from the Gulf to the St. Lawrence, Sycamore riders have led the way over the tape in the majority of races this year.

The great sextette race at Providence, R. I., September 7th, was a Sycamore feast.

On Labor Day almost five hundred prizes were won by those mounted on the Crimson Rim, demonstrating clearly that **Syracuse** Bicycles have attained that perfect state of construction productive of the very best results.

Keep Your Eye on the Crimson Rims.

HASSE HAS A WONDERFUL ELECTRIC LAMP.

Indianapolis, Sept. 17.—Robert Hasse, the well-known inventor of this city, believes he is on the high road to fortune. He is now in Washington at work on an electric bicycle lamp which is expected to revolutionize the system of lights now used in the wheeling world. Louis D. Bliss, of the Bliss School of Electricity, was shown the drawings of the electric lamp and was so favorably impressed with them that he has permitted Mr. Hasse to have the use of the school's complete electrical workshop to build the lamp. Mr. Hasse will remain in Washington until the lamp is put into practical use. In speaking of the invention, Mr. Bliss said:

"Mr. Hasse believes it will be a great success. It will cost but little to manufacture the lamp, and but a trifle to keep it lighted. It will only give light when the wheels are in motion. The battery will be a long, thin cylinder on the lower tube of the bicycle frame, so designed that the chemicals are not in contact with the electrodes except when the wheel is in motion. A solution of nitrate of silver will be used.

"The lamp will be so constructed that, if desired for economy, it will burn but one-third of the time. That is, it will throw a light ten feet ahead of the wheel while it is making a third revolution. By the time the remaining two-thirds revolves, the end of the ten feet that had been lighted up is reached, and then the light flashes up again. Many persons would not like the operations of a light not continuous, and this electric lamp will be so constructed that the light may be continuous or periodical, at the pleasure of the rider.

"An index the size of a watch will accompany the lamp, and its needle will register the amount of electricity consumed, so the rider may know just how much light remains. The light will be much brighter than the ones obtained from oils."

A GOOD THING ON THE BOWERY.

They are located on the Bowery, at No. 200.

The Bowery, be it understood, is not, as the average out-of-towners believes, all beer and skittles and buncombe. It has undergone very much of a change during recent years, and is now very much of a business thoroughfare. "They"—Hammacher & Schlemmer & Co.—as stated, are located at No. 200; they are a big firm, an important firm, a progressive firm and one whose business—supplying tools for all trades—is conducted in a manner that inspires admiration. In "all trades" the cycle industry is, of course, included. They supply pretty much everything that a cycle factory would require. To enumerate the articles would require too much space. Their catalogue, one of 400 and odd pages, illustrates and details the tools ad seriatim. It is well worth a place on the official desk-top as a book of reference. It may be had for the asking, and should be asked for.

NEW TUBE WORKS.

The Greenville Tube Company, which concern are erecting a seamless steel tubing plant at Greenville, Pa., have organized and elected a Board of Directors, consisting of F. W. Ensworth, G. B. Chase, Carl Buck, Levi Morrison and H. M. Shrom. A charter of incorporation has been applied for, and the new concern will be known as the Greenville Tube Company.

GARTERS FOR COMFORT.

The firm of Dreyfus & Waterman, makers of the well known Comfort bicycle garter, have removed and are now located at No. 52 Lispenard street, New York.

NEW CHAIN TREATMENT.

A rapid and easy method for the treatment of bicycle chains, whereby most excellent results are obtained with the least possible expenditure of time and labor: Procure a wide-mouthed bottle, holding, say, eight to twelve ounces, with a good cork (I use an empty Vichy salts bottle); put in a piece, say, four ounces long, of paraffine candle and fill up with benzine; in a day or two the benzine will dissolve the paraffine, and at a temperature of 70 degrees or over it will remain liquid; take four ounces castile soap and dissolve it in hot water (the easiest way is to shave the soap into small pieces), put in a vessel and cover with water and soak for a day or two; then heat, adding water if necessary; when dissolved add an equal quantity of the finest graphite (measure the graphite so that it will be about the same bulk as the soap); when cold, the mixture will be solid and can be kept soft enough for use by adding a little water from time to time. Keep in a tin box with a tight cover. Next get a couple of old toothbrushes and one or two ten-cent nail-brushes.

To apply, turn bicycle over, and with one of the nailbrushes clean the chain; then dip one of the toothbrushes into the paraffine mixture and brush on inside of chain and rub well into the joints (it will flow into the joints and pins), and as the benzine evaporates will leave the paraffine inside; wipe off any that runs through with a rag; next rub the other toothbrush on

MORGAN & WRIGHT TIRES

the graphite and soap mixture and brush on the inside of the chain and both sprockets. In a few moments it is dry and ready for use. It will not gather dust. If the graphite mixture is applied when chain and sprockets are new it will at once give to each a smooth, bright wearing surface. The benzine mixture must not be opened near a flame, and must be kept in a warm place, so that it will remain liquid. The chain should also be warm, so that the mixture will flow into the joints. X. X.

LACK OF KNOWLEDGE.

A large part of the injury to women with which the bicycle is charged arises directly from defective teaching and imperfect knowledge, because propulsion of the wheel, with mounting and dismounting, comprises the sum of the usual training in cycling received by a woman. One needs but to stand at the park entrance on a fair day to appreciate this. Of ten women who pass, one rides rightly—rarely two. Of the ten objections to cycling for women, eight are based on abuse and not on right use of the wheel.

WINDING UP THE WRANGLE.

If the long-drawn-out Stearns-Luminum test had concluded with the signing and publication of the judges' report it would have been surprising, indeed. No such surprise, however, was in store.

The Luminum people—that is, the St. Louis Refrigerator and Wooden Gutter Co.—are the aggrieved parties. They furnish the cycle press with a long, typewritten memoranda, which, they state, prefaced the signature of two of the judges. In short, this memoranda, by implication, charges deception on the part of Stearns & Co. It recites that a representative of the St. Louis concern, suspecting that the frames submitted for test by Stearns & Co. were not such as were regularly in use in Stearns wheels, purchased two frames from Stearns agents, and on these had special tests made. The result was that aluminum frames proved 21 per cent stronger than the Stearns frames thus purchased in the open market, whereas, according to the official test, the Stearns came out victorious by a comfortable margin. The Luminum people further charge that, as Mr. Stearns declined to affirm that he had ever manufactured as many as one hundred frames of the kind of tubing used in the frame submitted for test, and also refused to state what kind of tubing it was or where it was manufactured, the two judges in question, Messrs. Flad and Johnson, were not satisfied that the frames submitted for test were of the "regular standard manufacture, both as to material, workmanship, such as are offered to the trade on orders from the printed catalogue." Because of this belief these judges signed the report with the reservations as stated.

The heat generated in the controversy was so white that, as stated, it is not surprising that such suspicions arose, or that such charges should now result. At this late day it can do neither harm nor good, and it is unfortunate that it should now be aired. The judges all signed the report of the official test, which acquitted all concerned of fraud, and that should end the matter.

WANTS 120 GEAR NOW.

Private F. E. Farnham, Company E, Eighth Regiment, N. G., S. N. Y., has just completed a bicycle trip from New York to San Francisco in thirty-nine days. He rode a 20-pound Lyndhurst wheel geared to 80, fitted with New York single tube tires, and went through without a break of any kind, and with but five punctures, the first occurring in Nevada. He found the general condition of the roads very poor, being compelled to ride the railroad tracks through the Western part of Nebraska, the whole of Wyoming and Utah, and the greater part of Nevada. He says he is positive he is the first to cross the continent without a break of any kind with a 20-pound wheel geared to 80. He has written the Lyndhurst people asking for a 120 gear, with which he believes he can make the return in twenty-five days.

VIOLATED HIS CONTRACT.

Concerning the suit which G. G. Wickson, their San Francisco landlord, has instituted against the Monarch Cycle Manufacturing Company, Assistant Manager Richardson writes that the facts of the matter are that Mr. Wickson violated his contract with them from the very beginning. He had agreed to furnish certain assistance in the conduct of the San Francisco branch, but failed to do so. For this reason the company declined to pay commissions and felt justified in vacating the Wickson premises when they found it advantageous to do so. In future the Monarch interests in 'Frisco will be looked after by the Howe Scale Company.

NATIONAL CIRCUIT MEET

-OF THE-

VIM BICYCLE CLUB,

-AT-

Waverly Park, Newark, N. J.,

SATURDAY, OCTOBER 3, 1896.

AMATEUR EVENTS—One-Mile Novice, One-Mile Scratch, Half-Mile Scratch, One-Mile Handicap, One-Mile Triplet. Prizes—Mr. dais in novice race; diamonds in all other events.

PROFESSIONAL EVENTS—One-Mile Scratch. First, \$50; second, \$30; third, \$20; fourth, \$10; fifth, \$5; leader at 1st quarter, \$5; leader at second quarter, \$5; leader at third quarter, \$5. Mile Handicap—First, \$50; second, \$30; third, \$20; fourth, \$10; fifth, \$5.

For entry blanks or information, address

E. T. CARRINGTON, Secretary, P. O. Box 156, Newark, N. J.

HAVE YOU OCCASION TO GO WEST?

The solid through train run daily via the West Shore Railroad through the State of New York, stopping at principal stations, to Erie, Cleveland and Chicago over the West Shore and New York, Chicago and St. Louis Railroad (Nickel Plate), is proving itself a great attraction to the traveling public. Passengers leaving New York on this train—station foot of West Forty-second street, at 6.00 p. m.—arrive in Chicago the next evening. No annoyance of changing cars or baggage, as the entire train runs through to Chicago without any change. Buffet and dining cars are attached, and it is no wonder that with the excellent time, easy roadbed, picturesque scenery of the route, this line is so profitable to its promoters. In going West you should try the West Shore and Nickel Plate Route.

THE ATLANTIC CITY AND PLEASANTVILLE

BICYCLE TRACK.

The fastest five-mile track in the world. Send for prospectus. T. W. WHITE, Secretary, 1210 Atlantic Avenue, Atlantic City, N. J.

For Sale by the Principal Dealers, or by the Publisher,

R. D. SERVOSS, 21 & 23 Centre St., New York.

A WORD TO THE WISE.

You say you want something original.
Don't take any kind or be dumb.
But be firm and demand of the dealer
White's famous original gum.

If you're out with a friend that's convivial,
And with tipping he feels sort of glum,
The cost of a cure is so trivial—
Spend five cents for Yucatan Gum.

So don't be at all lackadaisical;
Give a snap of your finger and thumb
For the fellow that's so over-whimsical
That never chews Yucatan Gum.

MACHINES IN PLENTY.

Parsons, the Australian rider, left for home last week, taking with him three singles and a tandem of American make. He was much pleased with his visit to this country. His comparatively poor showing he attributes to the fact that he was not here long enough to become acclimated.

HOOR RECORD HOLDER.

N. M. B.—Arthur V. Linton, who died of typhoid fever, at Aberle, Wales, on July 23, was not the holder of the hour record. Tom Linton, a brother of the dead racer, is the rider holding the record, which became his by riding 31 miles 5 yards within the hour, at Catford, on July 7.

WANTS THE CHAIRMANSHIP.

Philadelphia intends to retain the chairmanship of the Racing Board in event of George D. Gideon's declination to again accept the office. Among the Philadelphia candidates already "in the hands of their friends" are O. S. Bunnell, C. A. Dimon and George M. Schell, the last-named being a candidate of the extreme dark horse variety.

HOT AND COLD WATER SUPPLIED.

The National Circuit meet, which is to be the feature of the Interstate Fair at Trenton, N. J., on Monday next, promises well. For the seven events prizes aggregating \$1,000 are offered. To quicken the professional purses are offered to the leaders at each quarter in the two events for the "gold bugs." The track lacks dressing-room accommodations, and to make good this failing a circus tent is to be erected, which is to be equipped with 400 cots, each curtained off and supplied with hot and cold water, lavatories and the like. It will be erected in the infield directly opposite the tape.

SOME REASONS

Why Travelers Patronize the Nickel Plate Road.

- 1st—Because its rates are always the Lowest.
- 2d—Because it gives unexcelled service, including through Wagner Palace Sleeping Cars between Boston and Chicago via the Fitchburg and West Shore Railroads, and Solid Through Trains between New York and Chicago via the West Shore and Nickel Plate Roads. Its day coaches are lighted by gas, heated by steam in winter, and are in charge of uniformed colored attendants whose services are free to all passengers. Its dining car and buffet service is unsurpassed, and its meal stations serve the best of meals at the lowest rates.
- 3d—Because it will give you stop-over privileges without extra charge at Chautauque Lake and Niagara Falls on all tourist and excursion tickets.
- 4th—Because it runs along the shores of beautiful Lake Erie, with its cooling breezes, and delightful scenery; passing through the famous "Grape Belt" of New York, Pennsylvania and Ohio, and the "Gas Belt" of Indiana; the beautiful cities of Erie, Cleveland, Potosia and Port Wayne; the Summer Resort of Green Springs, and many other noted places.
- 5th—Because the Nickel Plate Road is ever at the front in adopting every improvement tending to the Safety, Comfort, Convenience and Pleasure of its patrons, and its smoothly running track, powerful locomotives, elegant and luxurious cars and lowest rates, designate it as the POPULAR ROUTE.

For all information, call on the nearest agent, or address F. J. MOORE, General Agent, 23 Exchange Street, Buffalo, N. Y. No. 23.

PATENTS GRANTED.

567,125. Ball Bearing.—William Devoll, Erdington, England. Filed December 19, 1895. Serial No. 572,693. No model.

567,243. Adjustable Handle for Bicycles.—Phillip S. Kingsland, Chicago, Ill. Filed July 8, 1895. Serial No. 555,224. No model.

567,402. Apparatus for Repairing Pneumatic Tires.—Joseph G. Moomy, Erie, Penn. Filed March 25, 1896. Serial No. 534,805. No model.

567,430. Bicycle Frame.—Sylvester M. Williams, San Francisco, Cal. Filed November 8, 1895. Serial No. 568,267. No model.

567,433. Adjustable Handle-Bar for Bicycles.—Ben Wood, Angola, Ind., assignor of one-half to Sol A. Wood and Orville Carver, same place. Filed March 25, 1896. Serial No. 534,774. No model.

567,486. Bicycle Railway.—William F. Mangels, Brooklyn, N. Y. Filed March 31, 1896. Serial No. 555,593. No model.

567,494. Bicycle.—Thomas W. McKenzie, Indianapolis, Ind., assignor of two-thirds to A.

G. Kreitlein, same place. Filed January 17, 1896. Serial No. 575,855. No model.

567,512. Pneumatic Tire for Bicycles.—Joseph A. Rousseau Falls, Mass. Filed June 13, 1896. Serial No. 595,383. No model.

567,526. Ice Velocipede.—Eugene Ward, St. Paul, Minn. Filed November 15, 1895. Serial No. 569,107. No model.

567,565. Means for Preventing Puncture of Pneumatic Tires.—Edward E. Ellis, Washington, D. C., assignor of one-half to John C. Pennington, same place. Filed December 23, 1895. Serial No. 573,070. No model.

25,988. Foot Cycle Frame.—Robert Anderson and George Anderson, Edinburgh, Scotland. Filed June 12, 1896. Serial No. 595,302. Term of patent fourteen years.

25,999. Bicycle Frame.—Lee Sturges, Elmhurst, Ill. Filed May 16, 1896. Serial No. 591,886. Term of patent seven years.

26,000. Bicycle Support.—Logan Willard Mulford, Philadelphia, Penn., assignor of one-half to Frank L. Donley, same place. Filed July 18, 1896. Serial No. 599,744. Term of patent seven years.

TRADE-MARKS.

28,856. Bicycles, Firearms and Gymnasium Apparatus.—Hubert Bros & Co., New York, N. Y. Filed February 23, 1896. Essential Feature.—Four disconnected heavy-faced lines arranged diagonally to lines of printing there between and forming the alternate sides of a substantially octagonal figure, the opposite lines being parallel with each other and substantially at right angles to the other ones. Used since January 1, 1893.

DUNLOP CONQUERS CANADA.

Dunlop victories have been so frequent as to scarcely excite comment; therefore the suit of the American Dunlop Tire Co. against the Anderson Tire Co., of Canada, which has just been decided in favor of the former, will scarcely cause wonder. The counter suit of the Anderson against the Dunlop was dismissed without costs. Manager Kirk Brown states that this decision confirms the validity of the Dunlop patents in Canada.

RECENT PATENTS.

567,494A. BICYCLE. THOMAS W. MCKENZIE, Indianapolis, Ind., assignor of two-thirds to A. G. Kreitlein, same place. Filed Jan. 17, 1896. Serial No. 575,855. (No model.)

567,500. SPEED-MEASURER FOR VEHICLES. EDWARD E. ELLIS, Washington, D. C. Filed Aug. 27, 1895. Serial No. 569,107. (No model.)

567,512. PNEUMATIC TIRE FOR BICYCLES. JOSEPH A. ROUSSEAU FALLS, Mass. Filed June 13, 1896. Serial No. 595,383. (No model.)

567,526. ICE VELOCIPED. EUGENE WARD, St. Paul, Minn. Filed Nov. 15, 1895. Serial No. 569,107. (No model.)

567,565. MEANS FOR PREVENTING PUNCTURE OF PNEUMATIC TIRES. EDWARD E. ELLIS, Washington, D. C., assignor of one-half to JOHN C. PENNINGTON, same place. Filed Dec. 23, 1895. Serial No. 573,070. (No model.)

567,430. BICYCLE FRAME. SYLVESTER M. WILLIAMS, San Francisco, Cal. Filed Nov. 8, 1895. Serial No. 568,267. (No model.)

567,433. ADJUSTABLE HANDLE-BAR FOR BICYCLES. BEN WOOD, Angola, Ind., assignor of one-half to SOL A. WOOD and ORVILLE CARVER, same place. Filed Mar. 25, 1896. Serial No. 534,774. (No model.)

567,486. BICYCLE RAILWAY. WILLIAM F. MANGELS, Brooklyn, N. Y. Filed Mar. 31, 1896. Serial No. 555,593. (No model.)

567,494. BICYCLE. THOMAS W. MCKENZIE, Indianapolis, Ind., assignor of two-thirds to A. G. Kreitlein, same place. Filed Jan. 17, 1896. Serial No. 575,855. (No model.)

Claim-1. In a bicycle, a device including comprising a pair of separate rings forming an external bearing, a sprocket-wheel mounted in the inner periphery of such bearing, a sprocket-wheel mounted within such bearing so as to rotate upon the friction-wheel and have its spurs extend between the rings, a crank connected with such sprocket wheel, and a chain extending from the sprocket-wheel for transmitting the power.

Claim-1. The combination with the bicycle, of the speed-indicator pivotally supported on the bicycle-frame, an operative driving connection between the bicycle-frame and the speed-indicator, and a lever mechanism for tipping the indicator bodily and also throwing it out of gear, substantially as described.

Claim-1. In a pneumatic tire, the outer tire or tube E, of an inner tire or inflatable portion C, and a series of pairs of alternate plates D, the plates of each pair being hinged together, and said pairs of plates being set side by side between the inner and outer tires with their hinges in contact with the inner and outer tires, and said outer tire, inner tire and plates being molded together, substantially as described.

Claim-1. A bicycle-lamp bracket, comprising a shank adapted to be secured to the frame of the bicycle and a tongue adapted to be inserted into a socket formed on the lamp, said tongue consisting of a spring rigidly secured at one end to the tank of said bracket and

Claim-1. In a sectional tire for bicycles, circular in cross-section, and provided with an interior nipple at the opposite end of each section, and adapted to engage the nipple of the next succeeding section; openings in the said nipples registering with each other, whereby air may pass from one section to another, throughout the length of the tire, and means provided on one section whereby air may be admitted to the interior thereof.

Claim-1. In a velocipede, the combination of a frame, a case adapted to the lower ends of the bottom tube and upright tube, a pedal-shaft journaled in the forward end of said case substantially at the point of intersection of the prolongation of the bottom and upright tubes, a sprocket-wheel upon said pedal-shaft, a counter-shaft journaled in said case immediately in the rear of the pedal-shaft, a reduced sprocket-wheel on said counter-shaft, a chain connecting the two sprocket-wheels, cranks upon the ends of the counter-shaft.

Claim-1. A bicycle frame composed of spring or elastic bars bent or curved upon themselves, having connections at their extremities with the stem of the front-wheel fork, connections at their rear lower portions with the axle of the rear wheel, an saddle-peg bar extending from the upper member of the front frame to the lower member thereof, and transverse journals on the upper and lower members of the frame to which said bar is connected whereby the frame is permitted to flex freely.

Claim-1. In detachable crank, the combination of a crank-shaft, a crank mounted longitudinally from one end inwardly to receive said shaft, a key adapted to fit in said crank outside of said shaft and, a threaded flange upon the end of said crank, and a key adapted to engage said flange and lock the parts in position.

Claim-1. In a bicycle the combination with the tabular steering-bar, the socket secured thereto, formed with aligned slots, exterior screw-threads and a head with intersecting cylindrical openings of the curved handle-bars, the latter of which are provided with intersecting teeth, the both having its upper end beveled and provided with teeth, the pin, the ends of which project through said slots, and the screw-collar having an inwardly-turned flange at its lower end; substantially as described.

Claim-1. In a velocipede for army use, the combination of the top tube of the frame being made as a member of the frame and fashioned as a gun-barrel.

Claim-1. In roller-bearing, the combination of a shaft on axle, a shell or casing receiving the shaft or axle and having flanges surrounding the same, main bearing-rollers bearing against the shaft or axle and having the reduced portions adjacent to their ends and the boxes at their ends, rollers arranged intermediate of the main bearing-rollers and having the reduced intermediate portions and the enlarged portions adjacent to their ends, the latter engaging the reduced portions adjacent to the ends of the main bearing-rollers; and also having said portions bearing on the flanges at the ends of the shell or casing, suitable stop-screws extending and engaging the intermediate rollers and also surrounding the boxes of the main bearing-rollers, and a nut and bearing interposed between the main bearing-rollers and the shell or casing, the said bearing being adapted to prevent said rollers from moving in the shell or casing, substantially as and for the purpose set forth.

Claim-1. The combination of a bicycle-frame having a crank-shaft bearing end at its forward part an upper bar curved eccentrically to said bearing, the saddle-support 9 adjustably secured upon said eccentrically-curved bar, and the saddle adjustably secured on said saddle-support, whereby the height of the saddle relatively to the crank-shaft bearing may be adjusted without varying its relative position thereto from front to rear substantially as described.

Claim-1. In an adjustable handle-bar for bicycles, the combination with the screw-pin provided upon the upper end with a portion having a circular periphery to constitute a turn-table, of a journal-bar resting upon the top of said turn-table and rotatable

Claim-1. In roller-bearing, the combination of a shaft on axle, a shell or casing receiving the shaft or axle and having flanges surrounding the same, main bearing-rollers bearing against the shaft or axle and having the reduced portions adjacent to their ends and the boxes at their ends, rollers arranged intermediate of the main bearing-rollers and having the reduced intermediate portions and the enlarged portions adjacent to their ends, the latter engaging the reduced portions adjacent to the ends of the main bearing-rollers; and also having said portions bearing on the flanges at the ends of the shell or casing, suitable stop-screws extending and engaging the intermediate rollers and also surrounding the boxes of the main bearing-rollers, and a nut and bearing interposed between the main bearing-rollers and the shell or casing, the said bearing being adapted to prevent said rollers from moving in the shell or casing, substantially as and for the purpose set forth.

Claim-1. In combination with the detachable tabular frame-bar having the tapered or conical end, the screw-threaded stud or projection concentric in two diameters, the internally-screw-threaded tapered sleeve adapted to be screwed upon the larger screw-threaded portion of said stud, and the cylindrical internally-screw-threaded tapered plug fitting a thin said tabular frame-bar and screws for causing said plug and frame-bar to rotate together, for the purpose of tilting the spring, substantially as described.

Claim-1. In a spring-steel for a vehicle, the combination with a tubular frame, a tubular casing adjustably secured, in a shoulder on the inside of said casing near its lower end, and a spiral spring arranged through the casing, a cross-pin therein, and a spiral spring around said pin and one end resting on the shoulder and the other end against said pin, of a bearing member being at the opposite end of the casing, and a toggle lever pivotally connected to the upper end of the rear bar and so being arranged substantially as described.

Claim-1. In an adjustable handle-bar for bicycles, the combination with the screw-pin provided upon the upper end with a portion having a circular periphery to constitute a turn-table, of a journal-bar resting upon the top of said turn-table and rotatable

Claim-1. In roller-bearing, the combination of a shaft on axle, a shell or casing receiving the shaft or axle and having flanges surrounding the same, main bearing-rollers bearing against the shaft or axle and having the reduced portions adjacent to their ends and the boxes at their ends, rollers arranged intermediate of the main bearing-rollers and having the reduced intermediate portions and the enlarged portions adjacent to their ends, the latter engaging the reduced portions adjacent to the ends of the main bearing-rollers; and also having said portions bearing on the flanges at the ends of the shell or casing, suitable stop-screws extending and engaging the intermediate rollers and also surrounding the boxes of the main bearing-rollers, and a nut and bearing interposed between the main bearing-rollers and the shell or casing, the said bearing being adapted to prevent said rollers from moving in the shell or casing, substantially as and for the purpose set forth.

Claim-1. In combination with the detachable tabular frame-bar having the tapered or conical end, the screw-threaded stud or projection concentric in two diameters, the internally-screw-threaded tapered sleeve adapted to be screwed upon the larger screw-threaded portion of said stud, and the cylindrical internally-screw-threaded tapered plug fitting a thin said tabular frame-bar and screws for causing said plug and frame-bar to rotate together, for the purpose of tilting the spring, substantially as described.

Claim-1. In a spring-steel for a vehicle, the combination with a tubular frame, a tubular casing adjustably secured, in a shoulder on the inside of said casing near its lower end, and a spiral spring arranged through the casing, a cross-pin therein, and a spiral spring around said pin and one end resting on the shoulder and the other end against said pin, of a bearing member being at the opposite end of the casing, and a toggle lever pivotally connected to the upper end of the rear bar and so being arranged substantially as described.

"THE STEM THAT SUITS."

With the prospect of a large number of wood handle-bars being used the coming season, several different styles of stems are being offered, which are of interest not only

to makers of wood bars, but also to those bicycle manufacturers and dealers who prefer to buy the separate parts of the several manufacturers and assemble the complete bars themselves. To this portion of the trade the new stem which is being introduced by the Turner Brass Works, Chicago, will prove of interest.

The illustration quite clearly shows its construction. The cap is detachable, which is a very important feature, as it permits the bar to be inserted or reversed without removing the grips. The cap is held in position by a single bolt, which is at the back and not objectionable, the front edge being secured by V-shaped interlocking slots or grooves, which fit snugly into each other, making a perfectly smooth and unbreakable joint.

The appearance of the Turner Stem is in its favor, as the single bolt permits of a smooth finish at the front, besides which the bar can be adjusted easily, having only the single bolt to loosen. A perfectly tight grip on the bar is assured by the series of grooves on the inside of the clamp, and extended tests have proven that the Turner stem holds the bar absolutely rigid. These stems, the makers say, will undoubtedly warrant their assertion that "The Turner is the Stem that suits."

FOR VENEZUELA TRADE.

As a part of its plans for practical work in the extension of the foreign trade of the United States, the National Association of Manufacturers is now preparing to establish an exhibition warehouse in Caracas, Venezuela, for the display and sale of American products of various kinds. Circular of Information No. 10, which has just been issued by the association, gives the details of this enterprise and presents a large amount of interesting information about the trade of Venezuela.

Copies of the circulars can be obtained from the Bureau of Publicity, No. 1,751 North Fourth-st., Philadelphia, Pa.

SORT OF A SLIDING TUBE.

At first glance it looks very like a telescope itself. As a matter of fact, it is simply a telescopic pump which is being imported by M. Altstaedter, 245 Broadway, this city. It is of German manufacture, and is unlike other telescopic pumps in that it has no piston, each cylinder serving as a piston for the other. When the pump is drawn out it is filled with air throughout its whole length. It is attached to the valve by means of a rubber nozzle, as usual. When the tube is not in use, it is stowed away in an orifice in the bottom of the pump itself, the whole thing being very compact and of pocket size.

A few minutes devoted to looking over your wheel before starting for a ride will save much trouble and money, and lengthen the life of a machine considerably.

Do not continue riding a machine which is in need of adjustment, as serious damage is sure to follow.

"PERFECTION" PENETRATES DARKNESS.

"Prices to the trade are interesting" is an alluring expression. He's a flinty dispositioned dealer who can withstand it.

Elsewhere in this issue, Phil S. Mosher, 621 Broadway, New York, who is marketing the Perfection lamp, throws out the allurements and uses an "index fist" to draw special attention to it. It must signify something.

THE WHEEL has seen Mr. Mosher's lamp. It is light in weight. It is a good looker. It is beautifully lacking in complication. The lens is instantly detachable by the mere pressure of a "button," which releases a spring lock, and is as quickly replaced. The oil reservoir is readily removed, but simply cannot fall off of its own accord, being held in place

by a surprisingly simple and effective, but patented, band or collar, which turns from right to left over a small projection on the body of the lamp; and the lens is claimed to be of the sort that will throw the light yards ahead, where it is most needed, and not on the tire or directly in front of the wheel, where it is not so serviceable.

CANARY-COLORED CAT.

At the London office of E. C. Stearns they have secured the advertising services of a huge yellow cat, whose noble chest is adorned with "Yellow Fellow" souvenirs. He sits on the door mat and stares at the admiring crowd with the dignity of a commissioner. He never budes from his position, unless he wants to stretch his legs, and then he takes a little stroll down Oxford Street.

DOUBLED IN VALUE.

"When I first took hold of this place," said the new proprietor of the cycle agency on the corner, "it was doing absolutely nothing, and now the business has doubled."

FOR BUTTERFLY RIDERS.

France is responsible for some queer kinks. Few are queerer than this creation in cycle

seats—a saddle top stained to represent a butterfly.

"TIRE OF THE FUTURE."

"Tubeless tires," that is, detachable tires of the Clincher—G. & J. type, but which require no inner tube, are fairly forcing their way into prominence abroad. THE WHEEL'S

London correspondent, an unusually well informed man, speaks of them as "the tire of the future," and the fact that the Dunlop company has considered the original tubeless tire as worthy of legal attention speaks for itself. The newest tire of that type which has made its appearance in London is illustrated herewith. It is identical with the Fleuss—the original tire—but two flaps, A A, are introduced as shown in the sketch appended, and fall across the bed of the rim to meet at B. The flaps at this point are bevelled away until at the apex of the joint, B, they present a knife edge. Between the two flaps at this point a thin layer of soft soap is inserted, and the action of the compressed air forms the force requisite to a perfect air seal.

SOAKS UP TWICE ITS WEIGHT.

Do you want a sponge grip?

If so, drop a line to the Sponge Grip Company, Franklin Building, Boston.

The grip is not made of sponge, as its name might indicate, but of an asbestos composition—a non-conducting material—which is "cool in summer and warm in winter." It has great absorptive qualities and will absorb twice its weight in water, hence the name of the grip. The asbestos is fiberized to the fineness of elderdown, its cellular construction insures a rapid absorption of the moisture from the hands when riding, which speedily evaporates on exposure to heat or air.

The grips are claimed to be "always clean and pretty," and can be made in any special color to match the machine, and "give to the bicycle, even after long use, a bright, clean, well-groomed appearance." They can be had of any desired pattern or style and color of tips.

PROVING BEVEL GEARS.

The machine—the Acatene chainless—which carried Riviere upward of 530 miles in a single day, cannot be very slow or hard to propel. The driving gear of the "Acatene" is on the bevelled gear principle, and as the power is transmitted from the bracket to the rear hub by means of a revolving tube, which incloses within it the lower backstay, the appearance presented is very neat.

BICYCLES WANTED.

WANTED--5,000 BICYCLES IN LOTS OF 50 TO 500 EACH.

SPOT CASH—PRICE RIGHT.

VOL. XVIII, No. 7.

NEW YORK AND CHICAGO, OCTOBER 2, 1896.

WHOLE No. 449.

TO GO OUT OF BUSINESS.

**Hulbert Bros. & Co. in the Hands of a Receiver
But the Majestic Bicycles Will Be Marked
by their Makers.**

Hulbert Bros. & Co. are in the hands of a receiver and it is quite likely will go out of business.

The announcement, made on Tuesday, was wholly unlooked for, and will prove something of a sensation.

The decision and subsequent action was reached after long deliberation, and was purely voluntary, although somewhat hastened by the pressure of creditors and inability to realize on outstanding accounts in time to meet maturing obligations. Frederick P. Forster has been named as receiver.

The estimated liabilities are \$494,932; assets, \$378,322, but the inventory has not been fully completed and these figures may undergo some change. Of the liabilities there are for merchandise, \$178.32; due Mesinger Brothers, \$57,487; W. A. Hulbert, loan, \$26,015; M. H. Hulbert, loan, \$17,574; E. S. Hulbert, loan, \$1,046; rent, \$4,219; contingent rent, \$9,823; notes and acceptances, \$292,476; contingent liabilities on notes and acceptances, \$62,265. The assets consist of open accounts, \$86,343; merchandise and consigned merchandise on which advances have been made, \$167,483; furniture and fixtures, \$22,376; stock of the Hopkins & Allen Manufacturing Company, Norwich, Conn., \$90,000; stock of the Mesinger Bicycle Saddle Company, \$10,000; bills receivable, \$2,006; cash, \$113.

The institution was old and honored. It was carried on by Merwin & Hulbert from 1872 to 1892, when they were succeeded by the firm of Hulbert Brothers & Co., who turned the business into a stock company on January 1 last, with a capital stock of \$175,000, the shareholders being Helen Hulbert, 1,110 shares; Olive E. Hulbert, 590 shares; William A. Hulbert, 30 shares, and Milan H. Hulbert, 20 shares.

Fine arms and sporting goods was the original stock in trade, the agency for Rambler bicycles being added some six years since. Later the concern manufactured the Majestic bicycle on its own account, and still later the Mesinger bicycle saddle, the business growing to such an extent that it almost obscured the sporting goods department. When the slump came this summer the Hulberts felt its effect keenly; their main store, No. 26 West Twenty-third street, this city, being in the centre of the bargain-counter district contributed to their discomfort.

Whether or not they resume, it is reasonably certain that they will not again market the Majestic bicycle. The Hopkins & Allen Manufacturing Company, who made the wheel for them, will, however, take up the broken strand and continue to market Majestics on their own account.

The Hulbert failure does not, they say, in any way affect the Mesinger Bicycle Saddle Company, in which they are interested.

HAD PICTURES IN THEIR ADVERTISEMENTS.

It isn't often that a photograph of an actress has been responsible for entangling a business concern in the meshes of the law, and, so far as known, the Miami Cycle Co., Middletown, Ohio, who make the Racycle, is the first cycling institution to enjoy the unpleasant distinction. It came about innocently enough. Knowing the attractive powers of pretty faces and pleasing forms, the Miami advertising man set off his concern's advertisements with pictorial reproductions of such stage celebrities as Pauline Hall, Marie Burroughs and others, never dreaming of the trouble they would cause.

As luck would have it, the photographs from which the reproductions were made were copyrighted by a Chicago picture-taker, a fact which the advertising man overlooked entirely. The ads were duly inserted in "Munsey's," "Scribner's," "Forum" and other periodicals. There they met the eye of the man who had snapped the camera on the more or less beautiful women. He was not given due credit for them, and promptly placed the matter in the hands of his lawyers. They decided that balm to the extent of \$5,000 from each of the offending magazines was the only recourse, and suits were instituted. The publishers felt that they must have some one to fall back on, and as promptly called on the Miami people to shield them from loss. The Middletown firm also had its feelings in the matter, and expressed them. The result was the filing of counter suits by the publishing houses.

Congressman Paul J. Sorg, the millionaire tobaccoist, who owns the Miami company, has a few dimes to spare, and will fight. He has engaged Attorney Gordon T. Hughes, of New York, to look after his interests.

WILLARD & CONROY IN TROUBLE.

The Willard & Conroy Manufacturing Company, marketers of the Conroy bicycle, with offices at No. 310 Broadway, this city, assigned on Saturday last to Henry H. Collard, giving a preference to the Central National Bank for \$1,700. The liabilities are \$4,200; assets, \$3,700.

Mr. Conroy conducted a sporting goods establishment at the same address, and the failure of the cycle concern was due to his embarrassment in that branch of his business, his liabilities being \$24,000 and assets \$13,000. Messrs. Willard and Conroy also made personal assignments.

PROVIDENCE DEALERS IN TROUBLE.

Providence, R. I., Sept. 25.—Monroe & Williams, of Pawtucket, dealers in bicycles, etc., was adjudged insolvent in the Appellate Court yesterday. Adjustment of the firm's affairs is left to Register Cook, of this county. Liabilities will amount to between \$12,000 and \$13,000. Assets not yet determined.

STEP UP TO THE CAPTAIN'S OFFICE.

John R. Hardin, receiver of the Liberty Cycle Company, has served notice to all creditors of the Liberty Company that all claims and demands against the company must be filed with him on or before December 1.

SENSATION SPOILED.

**No Tube Combine, Say Those Whose Names
Were Linked With the
Story.**

In newspaper circles, that is certain newspaper circles, the story is that whenever a fake is to be floated or an unconfirmed sensation given to the public, the blame is always laid on Pittsburg—Pittsburg, Pa. That is to say, the yarn is written in Chicago or Philadelphia or possibly New York, but it is dated and made to appear as a message from the City of Smoke. The great green public is, of course, none the wiser.

When, late last week, a scarecrow narrative apparently wired from Pittsburg and retailing a meeting of steel tube and bicycle manufacturers at the Waldorf Hotel, this city, made its appearance in the public prints, those in the know simply winked one eye and took an extra sniff of fresh air. "Fake" was clearly readable between the lines. The utter improbability of a tube combine when every indication points to overproduction was too apparent.

The Pope Manufacturing Company and Gormully & Jeffery Company were reported as being parties to "the compact" which would "put up the price of tubing and thus drive the low-priced wheel out of the market," and but for the mention of those firms the matter would be unworthy of notice. Those names gave a faint, a very faint, shadow of fact to the story and rendered denial necessary. The denials were prompt and to the point.

"Is there any truth in the story of your connection with the alleged tube combine?" THE WHEEL asked both firms.

"No," wired Gormully & Jeffery.

"Are not in the combine and know nothing concerning it," wired the Pope Company.

No tube man has been found who knows anything of the meeting or of the combine. Manager Warwick, of the American Steel Tube Company, whose new mill in Toledo is said to be the second largest in the United States, characterized the matter as "utter nonsense," which defines it very nicely.

About this time last year the fake mongers had a sensational bicycle trust going the rounds.

GONE TO COPENHAGEN.

Samuel Snell, of the Snell Cycle Fittings Company, Toledo, Ohio, sailed for Europe last week on the Majestic. In company with him was F. W. Dewey, who has been appointed by the Toledo Local Board of Trade as representative to the Industrial Exposition at Copenhagen.

SOUTHERN CIRCUIT DOUBTFUL.

It is probable that the proposed Southern circuit will not come to pass. The Morgan & Wright team, which was expected to be the backbone of the affair, had already engaged to go to California on record-smashing intent.

MORTGAGED FOR HALF-MILLION.

Worcester, Mass., Sept. 26.—A mortgage for \$500,000, covering real estate, machinery, tools, etc., of the Worcester Cycle Manufacturing Co., executed in favor of the Central Trust Co., of New-York, is reported. The mortgage is to secure the trust company in the issuing of bonds, from the proceeds of which the business is likely to be enlarged and developed.

The mortgage covers property in Worcester, and in Middletown, Conn., where the company is carrying on the manufacture of bicycles. The land in this city is estimated at over 300,000 feet, and that at Middletown is over five acres. At Middletown the company has offices fitted with every conceivable convenience, and its manufacturing plant is one of the best in the country.

Pending the placing of the bonds, plans for the coming season are in a somewhat uncertain state, but it is quite certain that the successful sale of the securities will mean more employment for skilled workmen of Worcester and Middletown.

The Worcester Cycle Manufacturing Co. is already capitalized for \$1,000,000, and it was intended at one time to increase this to \$5,000,000. The stringency in the money market caused a change in the plans of the promoters of the company, wealthy capitalists of New-York. These men are constantly looking for ways and means by which the value of their property may be increased.

It is said members of the company are gradually absorbing the stock of the Austrian-Mannesman Tubing Co., which is now getting ready for business in North Adams, with the idea of at some time transferring the plant and its business to Worcester and thus utilizing the idle steel works on the company's hands. There is a 1,000 horsepower engine connected with boilers and the big blast furnaces, which could easily be made available in the manufacture of tubing. This tubing, in turn, could be used in the manufacture of bicycles to advantage to the Worcester Cycle Company.

SHOWING HIS '97 MODEL.

Mr. Schlueter, of the Schlueter Manufacturing Company, is at the Astor House, New York, showing the '97 Norwood, a particularly likely looking wheel. Every detail of its construction shows the result of careful study and experimentation. Mr. Schlueter's idea has been to turn out a machine that is as high-grade as it is possible to make one. The specifications of the wheels are as follows: One and one-quarter-inch tubing, two-piece crank axle made of best English spring steel, drop-forged (the two parts are put together in such a manner that it is impossible for them to work loose, yet the attachment is very simple); bearings made of the best English tool steel, three-eighths of an inch in diameter; unusually large crank-hanger; barrel hubs; Perry-Humber chain; Record pedals; fork crown of new design and of great strength; a handle-bar clamp which is a novel and clever device; option on handle-bars and saddles.

DECLARED A DIVIDEND.

At the annual meeting of the Peoria Rubber and Manufacturing Company at Marion, Ind., last week, a dividend of 25 per cent was declared on the stock and another of 6 per cent cash. It was resolved to add a department to the Peoria plant for the manufacture of pedals, and which will give employment to about thirty-five additional hands.

John C. Bowe is home again, and "tickled to death" over the manner in which the Syracuse bicycle was received abroad. He sees a big future ahead.

GOOD THING WITH A GOOD NAME.

Few would guess its object from its name—the Forciped. But it is not the intention to induce surmise. The article is designed as an aid to hill-climbing, as a conservator of energy and a consumer of otherwise lost motion. When in use it looks nothing more than a backrest, as the illustration shows, but it is intended entirely to act as a fulcrum to give power to the legs in forcing the pedals, thereby taking the strain off of the spine and breast of the rider, and relieving the weariness consequent to such strain. It is constructed to lean forward and impinge upon the lower region of the back, in a manner to prevent the rising or sliding of the body from the seat, which is unavoidable in heavy work like hill-climbing, or in pushing a large gear on up grades. It has been found by careful experiments, the makers say, that comparatively few pounds propelling force can be obtained before the body begins to yield backward and upward in a line from the pressure on the pedals. Experiments have also proven that, by the use of the Forciped, from two to three times the

pressure can be exerted without any appreciable additional effort. The contrivance is pivoted on an axis extending backwardly from the rear of the seat, and is held in a yielding manner, by means of a notched friction clutch, whereby it is adapted to be moved sidewise out of the way, by the leg of the dismounting rider, but is held sufficiently rigid by the bevelled notch to maintain its position either in or out of use. The Forciped, when not in use, is swung in a curve under the saddle. When needed, it is easily placed in position by the hand. In case of danger requiring instant dismounting, it forms no obstacle whatever, as it yields to the slightest touch of the leg.

For some months the article has been in extensive use by a number of expert riders to The Wheel's knowledge, and has been well spoken of. Recently the Forciped Company has been organized, with offices at 487 Broadway, this city, and an effort will be made to push the sale of the invention. It lists at \$3, and the concern has such faith in its merits that they offer to refund the money if, after one week's trial, it proves unsatisfactory.

AMERICANS AHEAD IN AUSTRALIA.

A. B. McDonnell, the Rochester road rider, who performed unpaced marvels on short notice and in the presence of selected crowds, and who went to Australia to show what he could do, really has done something, and in competition, too. On August 22, in a ten-mile open race at Sydney, he finished an eyelash second to William Martin, the other American who is sojourning among the Kangaroos. Time, 25:02 2-5. Twenty-two men started, the pick of the Antipodes among them.

Clothes do not make the man, but it is somewhat different with the new woman cycling is more or less responsible for.

FROM LONDON TOWN.

London, Sept. 15.—The Beeston Tire and Rim Company is one of those concerns which do not repay study, because the more you study it the more incomprehensible it seems. During the past week or so its shares have been appreciating at the rate of about 25 per cent per diem. There may be every reason for this, but it surely does not rest in the fact that three of its directors have resigned and those four such well-known men as F. W. Shorland, J. W. Barton, P. L. Gorton, H. London, leaving Mr. Harry Lawson to find substitutes who will take their places, besides the Rev. T. J. Jarrott and H. H. Griffin. The world has not been told why these resignations have taken place, but it has a shrewd suspicion that men do not throw up posts worth \$5,000 a year for nothing. When Shorland left Humber's to join the Beeston Company it was freely stated that he had made a mistake and the sequel seems to prove this. But why such sound men as the others are regarded as being have followed Shorland in his resignation would be interesting to know.

I believe that all available space for both Stanley and National shows has been applied for. Indeed, I am told that it has been considerably over-applied for, and that the sufferers in both instances, should there be any rejections, will be American firms. Under these circumstances it is urged that American makers should hold a show of their own during both the English exhibitions. I do not think that this would be a financial success, even if there was time to make adequate arrangements. Where the American machines ought to be is cheek by jowl with those manufactured on this side and against whom they must be sold.

SHOES FOR PEDAL PRESSING.

The bicycle shoes for next season show some interesting improvements over last year. Wheelmen have been reporting to the shoemakers the shortcomings of the old shoes, and not a few have had special shoes made to order carrying out original ideas of their own.

It has been found, for instance, that the heel of a cycle shoe should never exceed seven-eighths of an inch in height. The corners of these heels ought to be cut off, so as not to offer any obstruction that might catch in the spokes of the machine.

A new cycle shoe has a thin strip of steel concealed in the sole near the toe. This has a double object. It prevents the rider, when he dismounts and jumps upon the toe of one foot, from injuring any of the delicate toe joints, as is liable to happen when soft or pliable shoes are worn. Another object of this steel is to give firmness to the sole of the shoe at the point where the greatest pressure is exerted upon the pedal.

The cycle shoe should be cut high enough to come well above the ankle-joint. It should be secured by lace-strings alone, or in combination with elastic gorings. The ends of the shoestrings should be secured on the outside to prevent catching with the wheels. The materials of the new shoes are canvas, cloth, buckskin and smooth tannage, made in various colors.

GOING TO ENLARGE.

The Keystone Bicycle Co., West Reading, Penn., are making extensive preparations for '97 trade. In addition to their old plant, they are erecting a four-story building, 28x52 feet, and are preparing to cater largely to the jobbing trade. The officers are Eben L. Shomo, president; M. L. Ritter, treasurer; D. W. Deitrich, secretary.

A PIONEER IN IMPROVED PEDALS.

When some four years since the Record pedal was first produced as a part of the equipment of the Union bicycle, it created a diversity of comment. It was not only the first radical departure from forms hitherto considered standard, but was the first of the now universal screw-in-the-crank type. Like pioneers generally, it had much to contend with, much prejudice to overcome. But after the warming-up gallop it won in a walk, as the sports would put it. It proved so fetching that it was soon seen not only on the Union, but on many other wheels as well, so many, in fact, that other wits were soon at work and a general change in the shape of pedals followed. The Record Pedal Manufacturing Company, Boston, did not, however, stand still. They went right on perfecting their article. Each year has seen it improved in some way or other, and commanding a figure that conveys its own meaning. The season of 1896-97 is no exception to the rule. Few pedal purchasers will close contracts until they have seen the Record.

AN AUSTRALIAN WAIL.

Melbourne, Australia, Sept. 28.—The American makers have flooded us with machines, some of them execrable crocks, which will do them harm eventually. They must not think Australia a pit into which their rubbish may be dumped. We have already found the quality of such machines (English) as the Beeston, Humber, Singer, New Rapid, Swift, Premier, Quadrant, etc., and will not be put off with anything of less merit.

The price asked is something extortionate. The American machine is listed at \$105, several at \$150, and others at \$135.

I think the public here requires detachable tires and not those of the single tube variety. The very light weights are not standing up too well; roadsters at twenty-two pounds do not seem to have enough "body" in them, but, of course, this may be because we are not getting the best grade out here, more's the pity.

GOT IN, THEN GOT OUT.

Thos. J. Sweeney, the Washington (D. C.) dealer who assigned some two weeks since, has mysteriously disappeared. Although he had had a checkered and shaly business career, and served a term in prison, he found little trouble in establishing himself in the cycle business, securing the agency for the Telegram bicycle. The Telegram people scented something wrong and removed him. He then applied to the Zimmerman Cycle Co. and on the strength of a bond issued by a security company, they shipped him a stock of wheels. Some of these he sold before assigning and disappearing, but it is believed that his bondsmen can be held for their value.

THIS IS THE END.

Stearns & Co. do not relish the imputations of the Luminum people that for the competitive tests special tubing was submitted, and offer to wager \$500 that marketable American-made steel tubing is stronger, weight for weight, than the Luminum composition. It is to be hoped that the St. Louis people will not accept the offer. The controversy long since became tiresome. Some one must have the last word, and both parties should realize it. The Stearns wager, too, is unnecessary, the judges having dismissed the charges of deception. That should end the matter, and does forever end it so far as THE WHEEL is concerned.

Lots of riders on the road think they are showing their independence, when they are only exhibiting their ill nature.

RACING BOARD'S BULLETIN.

PROFESSIONALIZED.

SUSPENDED PENDING INVESTIGATION.
L. L. Miner, Elmira, N. Y.
F. P. Bernett, Pottsville, Pa.

SUSPENDED.

Thirty days from September 16, unsanctioned races, George Dorman, George S. Walker, J. A. Craig, Ed. Jordan and William Willseck, Cheyenne, Wyo.

Six months, from September 22, for false entry, John Gregory and James J. Gregory, Newark, N. J.

Thirty days, from September 18, unsanctioned races, W. W. Weissel, Bluffton, Ind.; E. M. Wallick, Peru, Ind.

Thirty days, from September 16, unsanctioned races, George Dorman, George S. Walker, J. A. Craig, Ed. Jordan and William Willseck, Cheyenne, Wyo.

Thirty days, from September 21, unsanctioned races, Frank Ball, Freeman Luce, Ed. Thompson, Rice Lake, Wis.; Herman Taylor, Barron, Wis.

Ninety days, from September 17, unsanctioned races, H. A. Clark, F. E. Paige, Batavia, N. Y.; Lee Nichols, Brockport, N. Y.; H. Willis, Rochester, N. Y.

Ninety days, from September 23, Harlow Talmadge, John Hubbell, Ed. Shea, Trumansburg, N. Y.; H. W. Strong, Ithaca, N. Y.

Ninety days, from September 24, unsanctioned races, after warning, Albert Gauvin, E. F. Bolger, Peter Holmes, Edward Beauchamp, Ed Smith, Ed Nelson, Louis Johnson, Joe Gouley, Walter Hessel, Martin Anderson, N. O. Green,

John Johnson, V. Aronson, M. McRae, Louis Terrien, August Aronson, Edward Swanson, of Escanaba, Mich.

Thirty days, from September 24, unsanctioned races, George P. Brooks, Guy W. Butler, Charles C. Thomas, Frank Luce, Ben Hayes, Bert Smith, Dwight Marwick, Farmington, Me.; E. E. Sawyer, Guy Everett, J. Toothaker, Phillips, Me.; Fred Muxfeldt, W. Roeder, James Dixon, Bloomington, Ill.

Thirty days, for false entry, B. C. Fuller, New-York City, N. Y.

Ninety days, for false entry, H. C. Geoghegan, Lockport, N. Y.

Thirty days from September 26, unsanctioned races, Charles Stangl, La Crosse, Wis.; C. S. Taylor, Des Moines, Iowa; Charles Smith, Garner, Iowa.

Six months, for unfair dealing in connection with cycle racing, Robert McIntyre, H. A. Seavey, Waltham, Mass.

An additional year has been added to the term of suspension of M. C. Lawrence, New-Orleans, La., making his suspension terminate August 10, 1898.

PERMANENT SUSPENSIONS.

For competing in Sunday races, unsanctioned, W. H. Norman and J. D. Loudermilk, Los Angeles, Cal.

SUSPENSIONS REMOVED.

B. T. Pringler, New-Orleans, La.
M. D. Bringler, New-Orleans, La.
J. T. Nolan, Jr., Donaldsonville, La.
Fred H. Palmer, Foxcroft, Me.
Virgil Asher, McLeansboro, Ill.
Harry Burroughs, Vineand, N. J.
E. M. Humphrey, Columbus, O.

RECORDS ACCEPTED.

Paced, flying start, against time, May 23, 1896, Amos B. Hughes, Denver, Col.—2 1/2 miles, 1:14 1/4; 3/4 mile, 1:22 4/5; 1 mile, 1:50 2/5; 2 miles, 3:56 3/5.
Paced, standing start, competition, 1 mile, 2:00 2/5, Frank F. Desmond, Jr., August 8, 1896.

SANCTIONS GRANTED.

October 5—Excelsior Ath. Club, Island Park, New York.
October 1—2-Du Quoin Driving Ass'n, Du Quoin, Ill.
October 3—Illinois State Board of Agr., Springfield, Ill.
October 3—Morgan & Wright Cycling Club, Chicago, Ill.
October 8—Meade Cycle Ass'n, Meade, Neb.
October 8—A. C. C., St. Louis, Mo.
October 5—St. Joe Fair, St. Joe, Mo.
October 1—Jackson Co. Fair, Lee's Summit, Mo.

October 2—Solid City Wheelmen, Ft. Scott, Kan.

October 12—Territorial Fair Ass'n, Albuquerque, N. Mex.

October 3—West Chester Driving Ass'n, West Chester, Penn.

October 9—Baldwin Dist. Fair Ass'n, Staunton, Va.

November 17—West Side Ath. Club and Co., New York City, N. Y.

October 1—Dallas Fair, Dallas, Pa.

October 17—Hudson Co. Wheelmen, Jersey City, N. J.

October 2—Young People's Ag. Soc., Wilbraham, Mass.

October 3—Colby Ath. Ass'n, Waterville, Me.

October 3—Ira A. Shattuck, Hardwick, Vt.

October 5—J. E. Rider, Portsmouth, N. H.

October 17—Penna. R. R. Dep't. Y. M. C. A., Phila, Penn.

October 3—R. I. Wheelmen, Riverside, R. I.

October 10—Kenoya C. Ass'n, Haverhill, Mass.

October 10—National Finance Committee, Denver, Col.

October 8—Milton Driving Park and Fair Ass'n, Milton, Penn.

STRONG CANADIAN COMBINATION.

W. W. Stall, president of the Boston Wood Rim Company; A. C. Fairbanks, vice-president of the concern; George Bischoff, Canadian manager, and R. Garland, manager of the Dunlop Tire Company, "got together" in Toronto last week, and as a result the Dunlop people will use Boston wood rims exclusively during the coming year. The Canadian plant of the Boston Wood Rim Co. will be established in Toronto at once.

Bicycles
will for
business

Have You Made Money

on the wheels you have been selling this year? Did you contract for more wheels than you could sell **at a profit**? Did your maker cut his prices before the season was over? New Clipper dealers say they have made more money on Clippers than any other wheel they sold, besides being able to sell a better bicycle for less money than their competitors. New Clipper prices were right at the beginning of the season, and remained the same until September 1st. If you are

SELLING BICYCLES

it will pay you to learn all you can about Clippers, and the people who make them. A part of our '97 line will be ready early. We are selling wheels every day. Clipper dealers are always in a position to do business. **We** make it possible and profitable for them to do business.

Notice to Advertisers.

WHEEL ADVERTISERS are notified that change of advertisements is not guaranteed, unless copy is received by Saturday morning.

TO FOREIGN INFORMATION SEEKERS.

Owing to the number of inquiries received from abroad in regard to the status of American firms, THE WHEEL announces that it will give to all such inquiries the most careful attention, and all foreign merchants desiring advice or information regarding American trade are invited to correspond with THE WHEEL.

VALIDITY OF CONTRACTS.

MUCH harm has been worked in the bicycle trade—as in many other trades—but particularly in the bicycle trade and in all new trades, through a light-hearted consideration of the meaning and value of a contract.

Now that much of the fuss-and-feathers element has been swept away by the hard times, now that we are freshening up house for another season, why should not the trade take up the question of contract—agreement between man and man, between firm and firm?

The spirit of the contract is well represented by Shylock and his pound of flesh. It will be healthy if the merchant will occasionally recall to his mind the story of the insistent Jew and his hot impersonation of Justice. Before signing a contract men should remember that a man's word still ought to be as good as his bond. True, in these days of rapid business transaction, of swift deals, of big things, the homely old phrase is often forgotten; but when it is forgotten, harm is worked on both sides.

A contract carries with it a burden of promise and of hope. For instance, suppose A wants a thousand pedals, or tires, or any other thing which is part of a bicycle. He goes to B,

who makes the pedal, or the tire, or the other thing, and signs a contract for ten thousand. He knows he only wants a thousand, yet he obtains a ten thousand price, and then by hook or by crook, usually by crook, he throws up the contract—after he has received the thousand which he needs. Meanwhile, B receiving his ten thousand contract out of hand is overjoyed. The factory is worked overtime, gas and muscle are burned up, money is burned up, all to produce the ten thousand. But after the thousand are produced, or perhaps at the nine hundred mark, there comes the kick, the groan, the objection, the claim for rebate, the goods returned and all the rest of it. A has commenced to "wriggle." It is as plain as the words written on the wall. After much vexation, and wriggling, and correspondence the contract is thrown up.

This is not a rare case. Firms mislead and firms are misled every day. It should be borne in mind that the old motto, copied a million times in schoolbooks, that "Honesty is the best policy" still holds true. The man who will order ten thousand of a thing when he only needs one thousand of it never has succeeded in business and he never will. It takes an honest man to succeed in business. A whole lot of men start out not believing it, but they eventually come back to the sound policy. The most honest man is he who has once been dishonest, the man who has found dishonesty unprofitable and who knows that the only way he can make money is to be specifically and literally honest.

So now that we are refurbishing, repainting and revarnishing our commercial edifice, let one of our choicest pieces of furniture be that which stands for contract. Go into a contract honestly, ask for no more than you want, and once your word is signed live up to it.

It should also be borne in mind that the ideal state could be produced if B, party of the second part, should hold A sharply up to his agreement. There is no reason why B should bend, or wobble or break. In the face of A's wriggling and misrepresentation he should stand firm and compel A to take the medicine which he had agreed to take. We well know that many broad firms refuse to hold a man to a contract, once he signifies his desire to break it. If the contract is with a house which one has sold for years and if one knows the house to be above reproach in all its dealings, this may be done with profit and with credit; but with any other than such a house, contracts should be strictly adhered to and lived out.

A man who makes anything should fix a price on a certain amount of that thing, and he should sell it for that price and hold to it. For instance, he should have his price for a thousand, his price for ten thousand, and his contract should contain a clause that, in case the contract should be in any way rearranged, there should be a pro rata price for the one, two and three thousand, as the case may be, so that wriggling and the breaking of contracts would then be less profitable and less frequent.

MULTIPLES AND THE LAWMAKERS.

SIGNS are not wanting that the deeper-thinking Solomons and Dogberrys whose duty it is to define and lay down the law have found in tandems, triplets and other multi-cycles causes for at least a momentary knitting of brows. From time to time reports of court cases have made this plain.

The American magistrate who not long since imposed a fine of \$5 on the riders of an unlighted tandem, holding that the man on the front seat was mainly responsible, and, accordingly, assessing him \$3.50, while his companion was mulcted but \$1.50, was wiser than most of his kind. A German court had previously rendered a somewhat similar decision, holding the steersman of a multicycle entirely responsible for a collision in which himself and fellow-riders were concerned. Only last month judgment was passed on a London cyclist and his wife, who were summoned for riding a tandem in Hyde Park during prohibited hours. The charge against the wife was dismissed, but the husband was fined 5s. and costs, the judge remarking that for once, at least, the latter was the controlling factor of the family.

That there is real justice in such decisions, and that they will multiply as the years increase, there is no reason to doubt. The same laws that apply to single bicycles cannot in every instance in strict equity be applied to those cycles carrying two or more persons. Where scorching is proven, the guilt must perforce be mutual, but in the matters of unlighted lamps, of failures to ring the bell or to apply the brake, or in the cases where the steering and guidance of the machine devolves on but one of the riders and the other or others are nominally passengers, it is manifestly unjust to maintain that all are equally culpable. It would be almost as reasonable to arrest and contend that a cabman's "fares" or a railroad's passengers are in part responsible for legal lapses of the driver or trainmen.

The subject is new. It suggests a fertile field for thought, that must attract the thinking and the judicial mind. Its discussion is certain to result in a fairer exposition and application of the statutes and to save many wholly innocent wheelmen and wheelwomen from embarrassment and unpleasant notoriety.

OVERLOOKING A GOOD THING.

THE trade in general seem not to have as keen an idea as they ought of the effective work which is now being done by their representative body, the National Board of Trade of Cycle Manufacturers. This organization now has in full working order a credit and collection bureau, both of which are of more advantage to any one engaged in the bicycle trade than are the ordinary commercial agencies. THE WHEEL has tested these bureaus and other cycling concerns have utilized them, and with flattering results. The bureaus have correspondents throughout the entire country, through which they obtain the best

and latest information. They also have competent attorneys and collection bureaus, and returns are quickly and equitably made, the charge for the service being but a minimum.

One of the chief charms of this work is that it is undertaken with willingness and dispatch. A telephone to the Board at any time secures almost immediate information of a desirable nature. Every member of the Board should join both the credit and collection bureaus. For instance, suppose a man is sent to New York to sell the local trade; if he is in doubt about a concern he can connect with the Board of Trade office and immediately become posted. THE WHEEL draws the special attention of the trade to the efficiency of these bureaus.

The haranguing of the voter, the banging of political cymbals and bass drums has produced a perfectly natural restriction in the public's purchase of bicycles, and this, in turn, has restricted the manufacturers' production and distribution. The consequence has been a decline in the volume of the cycle trade, which is bringing down with it all the manufacturers and dealers who have not sufficient capital of their own to meet their liabilities and wait for better times. Logically, those who think a transition to the silver standard to be impending should, whether they be manufacturer, dealer or rider, as largely as they can, convert into merchandise what money they possess, in order to protect themselves against its eventual depreciation, but human nature does not always obey the rules of reason. Hence, instead of buying goods people have been hoarding their means against the evil day when they think they may need them, and the natural result is a complete standstill of the cycle wheels of trade, or, if you prefer it, the wheels of the cycle trade.

Why it should enter the mind of a fool that it is necessary for him to connect his foolishness with a six-inch gong is beyond the understanding of men more fortunate. Certain it is, that the former rarely needs the latter to make itself obvious at all times and to all men. Despite this fact, however, certain riders of the bicycle have thought it smart to equip the machines they ride with gongs fit for fire engines, and to avail themselves of every possible occasion to ring the same with a nerve-destroying, ear-splitting clang which is unnecessary as it is foolish. All men have the right to be fools if they will, but no man has a right through being a fool to make his lack of brains a public nuisance. In our opinion, the gong-clang-er is of the nuisance brand of fool, and as such should be promptly and effectually squelched by the proper authorities. Cycling has enough to put up with without adding to the burden this nuisance.

In almost every instance where well-established concerns in the trade have been forced to suspend either payment or manufacture, it will be noticed that the great majority of such suspensions are not ascribed directly

to restricted sales, but are said to be owing to inability to extend old loans or procure new ones. The bankrupts seem to have been dependent upon borrowing for the means of carrying on their business, and as soon as this resource failed they had to fail, too. The margin of their assets above their liabilities was so narrow that a small depreciation of their stock, coupled with a few losses by bad debts, wiped it out, and a forced realization upon their goods would have been useless, even if it had not been impossible.

These are the times when suspensions by the Racing Board become farcical and are laughed at by those affected. In inflicting punishment the Board should not overlook the fact that there is practically no racing during the winter, and should impose penalties of such lengths as will cause the offenders to really pay the fiddler.

Do the square thing, and don't try to please everybody. The noblest men must needs have enemies as well as friends. A cast iron creed is well enough in its way, but it is better to be credulous and honest than believe all the creeds that were ever written and cheat your neighbor in the sale of your last year's mount.

Don't growl because as a racer you are brought face to face with tricks not quite as reputable as they might be, but follow the advice of grouchy old Carlyle, who said: "Make yourself an honest man, and you will be sure there is one less rascal on the footstool."

Successful men in trade seldom make much noise. The man who yells "Shine!" all day long is by no means a glittering example to follow.

There seems to be a good many defects in some of the moulds that are shaping cycling opinion nowadays in the daily papers.

It is often when the high-flyer in the trade is flying highest that his wings are clipped by the scissors of circumstance.

After all, next to absence of body, there is nothing so desirable in moments of danger as the presence of mind.

The bicycle trade is suffering from the free coinage of "high-grade" wheels on a 53-cent basis of actual value.

Figures once had a high reputation for veracity; but unscrupulous cycle statisticians led them astray.

The difference between courage and foolhardiness in trade is determined by the matter of success.

The novice's dreams of fame are not half so pathetic as are the champion's nightmares of obscurity.

When business is done in a loose manner business is apt to get into a tight place.

Everything in cycling becomes new as soon as it becomes old enough.

CASE OF GEARS AND GRADIENTS.

To the Editor of THE WHEEL.

In your issue of September 18 you make some remarks on the Pennsylvania Division L. A. W. hill-climb, that are hardly justified by the facts. Your original source of error lies in the statement that the grade is 1,200 feet long and rises ten feet in the hundred. The city survey shows length 925 feet, with a rise of one foot in each 673-100 feet. The tabulated list of gears used is erroneous. The gentleman credited with surmounting the hill on a wheel geared to 77 actually rode a 56. If he had used a 77 he wouldn't be up yet. We Pittsburghers think you "downeasters" have yet to see what we call a hill. The steepest pinch on Eagle Rock hill rises 1 in 7, parts rise 1 in 17, we call that a grade, but not a hill. Corey Hill is 1 in 14.4. Son-of-a-Gun is 1 in 10.50. Ford's Hill is 1 in 12.40. Ross Hill is 1 in 10.04. Murder Lane is 1 in 9.70. South Negley is 1 in 6.73.

From this table you will see that South Negley is a hill; it is graded, but ungraded. The winner, Mr. Bonnell, did not use a "ridiculously low gear"—in fact, he rode the writer's own wheel, which is a 62 geared 1895 Rambler, with 15 tires, and fitted with a hi-gear reducing to 59 4/10; it is a regular road wheel, and there are duplicates of it in use here as regular road wheels, same gear, and not considered "ridiculously low" by any one who is acquainted with the character of hills we encounter on an ordinary run. In your Eagle Rock contest you permitted 56 gears to compete, and if 56 is a permissible gear on that grade, then a 42 would be the proper thing on South Negley.

This annual climb for the C. W. Houston medal is an open event, and next year some of your "pushers" should come out and tackle it. Pot-hunters beware, as our hills are steep.

L. A. W. NO. 1,535, PITTSBURG, PENN.

BEHIND BARS NOW.

John E. Barr, alias Dave Lippmann, alias Lipertiz, alias Stein, an alleged notorious cycle thief, who was arrested in Brooklyn on Friday, has been held for examination by Police Justice Tighe. He is accused of having swindled twenty or more bicycle manufacturers and dealers in Brooklyn and other cities. His plan was to hire a wheel, leaving a small amount on deposit, and sell it to a fence in this city. Already six complaints have been entered against him.

THOUGHT THE MILLENNIUM WAS HERE.

Several hundred Savannah (Ga.) residents have been hoaxed in the most cold-blooded manner. A rumor was circulated in the city that Liberty cycles were being sold in lots of fifty for \$15 each, owing to the failure of the manufacturers. The managers of a music house opened a list and took orders for several hundred machines, and the would-be riders have been anxiously awaiting their arrival ever since.

ALFRED WAS AMBITIOUS.

A young man named Alfred H. Stewart, of East Boston, was arrested last week, charged with stealing bicycles. He admitted the theft of sixteen machines in Boston and vicinity to the police. The wheels were sold to various persons, at prices ranging from \$10 to \$25. Many of them have been recovered and turned over to their owners.

WHAT'S WHAT.

"We're goin' to learn percentage next year."

"What's percentage?"

"What's percentage? Don't you know what some people uses when they tries to show which is the best racin' man?"

ONE MORE LAP.

In a ding-dong finish in '95 Bald managed to defeat Cooper out for top-rung honors, and the Monarch man sat on the second rung when the game of ladder climbing ceased. The fight for the coveted position in '96 seems to have again come to a contest between the same two men. With only two meets to score, Cooper leads Bald but two points, and the final placing of the men is yet an open question.

Gardiner slides gracefully down from top to third rung, holding Butler safe in fourth place, while plucky little Ziegler, repeating his last year's mishap, hangs broken limbed on rung number five. A better bunching of the five leading racers of the season was never shown than in their positions on this week's ladder.

Points are based upon the racer's wins on the National Circuit only. A win counts three points, a second two points, and a third one point. The present ladder shows the men as they have climbed up to and including the meet at Trenton on September 28.

BUNNY DID BUSINESS.

Probably no man in the country has done more for the professional riders than O. S. Bunnell, of Philadelphia, yet through a fancied grievance the pros "struck" last week and refused to ride at the last night race meet of the season under his management, held at Tioga, Saturday evening. When made acquainted with the state of affairs, Mr. Bunnell mailed to each one of the "kickers" a bill for a long list of unpaid entrance fees for meets held during the season, and handed to Chairman Gideon a list of the same, asking that until various sums were paid, the men be suspended from the track, as is provided in the racing rules. This will doubtless be done, and Mr. Bunnell will probably end the season about \$75 richer than he would had it not been for the "strike."

HACH HAS HIS HANDS FULL.

O. B. Hachenberger, the Denver "phenom," was married on Wednesday of last week. On Thursday he rode an exhibition mile at a country fair; on Friday he began training for a twenty-five-mile match race, reported as made with Monte Scott, and on Saturday he was busy arranging to establish a cycle emporium. Hachenberger was formerly a milkman, but since he became a cycle racer a few months since it is stated that he has "developed a talent for mechanics which has already made him an expert in bicycle building."

KILLING A CRAZE.

The cycle police of Philadelphia have received orders to instruct all cyclists using rubber bands on their machines for the sake of making a noise like an aeolian harp to remove them. Those who have become addicted to this childish form of amusement have been the cause of frightening many horses.

A NEW INTERNATIONAL.

France, disgusted at being twice refused the international championship, intends to form a rival International Cyclists' Association. So far the following federations have joined: Union Cycliste Francaise, Verband (Germany), League Velocipedique Belge, and Austrian Union.

KNOCKING OFF A MINUTE.

A San Francisco dispatch states that on September 27, F. C. Krafts and George Dixon rode five miles on a tandem in 10:22 4-5, cutting the road record for that distance by over a minute.

STEALING ALONG NEW LINES.

Louisville, Sept. 25.—Two more bicycle thieves were lodged in jail in this city during the past week. The evidence in each case is very strong.

One Pollock, former residence unknown, opened a repair shop on Chestnut-st., below Fifteenth-st., and hung out a large cloth sign with the words "Free Storage" thereon. Business was very brisk, as might be expected, the place being situated on a street leading to Fountain Ferry, used daily by a large number of wheelmen going to and from work. Pollock made no effort to repair wheels left with him, but shipped numbers of them out of the city, presumably to Chicago, although no trace of them has been found. Pollock left town rather suddenly last Saturday, and on Sunday complaint was made to the local police authorities regarding his transactions, and with the assistance of the Chicago police the man was captured and returned to this city. The other, J. B. Grayson, who claims Georgia as his home, went to Harbison & Gathright's retail store, rented a wheel and did not return it. The next morning the authorities of Covington, Ky., found a man trying to dispose of a wheel, which was afterward proved to be the one in question. The man and wheel were returned to Louisville. Judge Thompson, the wheelmen's friend, will try both cases.

R. F. Pelouze, president of the Fountain Ferry Cycling and Athletic Association, has been appointed chairman of the McKinley and Hobart National Bicycle Clubs of Kentucky. He has opened headquarters at 557 Fourth avenue, and in a few days will commence the organization of clubs throughout the State.

HE IS A CONDENSER FOR FAIR.

The Detroit Wheelmen have a secretary who should be prized by any club desiring to keep down its stationery account. Charles S. Monier is the Detroit's name, and he frequently amuses himself by writing 763 words on the back of a postage stamp. Not content with this, Mr. Monier has knocked the postal card word record galleys west, having just succeeded in writing over 16,000 words on a postal card, where no one else had ever been able to put more than 7,068 before.

HIS CLAIM NOT ALLOWED.

A wheelman arrested for scorching by a New-York policeman gave his name as J. Murray Aaron, and declared he was formerly the secretary-editor of the L. A. W., though at present an actor. In lieu of \$5 which he was fined, Mr. Aaron slept in the station house. The league never had any official with the name of J. Murray Aaron; it did however, have a secretary, Eugene M. Aaron, and J. Murray may be his son.

SHOULD SUE THE ROOSTER.

Near Lima, Pa., a big rooster ran out at Professor Frank E. Wessels, who was passing on a bicycle. The professor was thrown against a fence, his wheel was bent, his eyeglasses were broken and one of his ribs was fractured. The rooster escaped injury. The professor will try for damages against the owner of the rooster.

WHAT POOR RODS COST HIM.

Arthur Munson, the veteran rider, of Stamford, Conn., who was thrown from his wheel and had a hip broken August 19, due solely to bad streets, is not yet able to sit up. An effort will be made to see if the town maintaining such execrable streets can be made to pay for some of the damages it causes.

ALSO RANS.

The following are the men on the National Circuit whose wins have been sufficient to score for these ten points and over: Clark, 27; Stevens, 25; Coulter, 22; Kimble, 21; Loughead, 18; Kennedy, 16; Becker, 16; Parker, 14; Coburn, 13; Mertens, 12; Wells, 12; Allen, 11; Baker, 11; McDonald, 10.

SOME GREAT DUST-UPS.

Chasing Father Time Around an Indoor Track
Great Sport for the Chasers—
Records Fall.

Chicago, Sept. 28.—“Give 'em records to get a gate” is a maxim that race-meet promoters have long endeavored to live up to, and one that proved its worth at the series of races held at the Coliseum all last week. Barring the opening night, Monday, records went by the board in a manner that tickled even the most callous Chicagoan. To be sure, they are all indoor figures, but that is evidently so much the better.

The Coliseum track is of wood, well banked and the week's work proved it to be fast. The tournament was managed by the National Cycle Exhibition Co., but the company scarcely experienced a profitable week, the expenses running extremely high, although the attendance was good. The races were of all kinds and lengths, a sort of please-all-tastes medley, ranging from a quarter-mile sprint to a twenty-four-hour plug, with invitation events and speed trials thrown in.

ing speed to the finish, and then kept on until the end of the hour, coming within 914 yards of tying the record made by Michael at Manhattan Beach. His times were:

5 miles.....10:48 2-5	15 miles.....32:40 1-5
10 miles.....21:47 4-5	20 miles.....43:37
25 miles.....54:35	1 hour..27 miles, 775 yds.

De Cardy won the mile handicap from scratch in 2:14 3-5; Peabody the half-mile open in 1:13 3-5; Jay Eaton the mile open in 2:07 1-5, defeating Ingraham and Kenyon.

On Wednesday night the professionals had a twenty-five-mile warm-up. Numerous tandems were used for pacing, and the crowd repeatedly hissed Holmes, the leader, because of supposed favoritism by the pace-makers. Holmes won in 57:10 3-5; Becker, second; De Cordy, third. It required five heats to weed out the half-mile novice race, which was finally won by A. Vallancourt in 1:15 2-5. The same number of heats were run in the mile professional, the final going to John Fisher in 2:09 2-5; Ingraham, second; Van Nest, third.

the last lap had been recorded, in the twentieth mile, Miller's time was 44:15, and he was one and a half lap in advance. He made it a half better when the twenty-seventh mile had been bulletined. His time then was 59:05 4-5.

At fifty miles Miller got under the record, covering that distance in 1:54:25. The fast pace was continued and the hundred-mile record next went by the board, the time being 4:07:01. While Miller and Waller were having it nip and tuck behind the tandems. Shock and Gimm plugged along at a 2:40 gait, while the rest took it easier. After finishing 100 miles, Miller dropped out for a rest and Waller took the lead. When Miller remounted the other contestants were far ahead. Then the race settled down to one of the six-day order. Gimm got in the lead at the sixth hour and maintained it to the end.

At 7 o'clock in the morning Gimm had made over 224 miles, and had been riding steadily, with the exception of a minute.

In the fourteenth hour he had ridden 309 miles, and in the sixty minutes rode twenty-one miles. In the fifteenth hour he rode twen-

The only unsatisfactory night was on the occasion of the opening, Monday. No records were broken, and 4,000 spectators went away disappointed. On the following night there was one improvement. F. H. Wilson started the ball rolling in the twenty-five-mile race, and then the scythe-bearer was kept in a continual state of worriment, until Louis Gimm finished in the twenty-four-hour race, after knocking all American records into splinters, and succeeding in getting himself into prime condition for an ambulance ride.

The feature of the opening night was a ten-mile race, paced by tandems. Tracy Holmes looked like a sure winner at five miles, when his machine broke, and before he was again seated the other contestants had gained a lap. Jay Eaton dropped out at six miles, and at the finish De Cardy and Becker were the only ones left to fight it out, the former winning by a small margin.

Tandems set such a lively pace in the twenty-five-mile amateur race on Tuesday night that but few of the fourteen starters were left after five miles. F. H. Wilson rode strong from the start, and at five miles was inside of the amateur record. He maintained his record-break-

The big card of the week, the twenty-four-hour race, started on Thursday night at 9 o'clock. Fifteen men lined up at the tape, the order at the pole being: Ned Reading, Louis Gimm, C. W. Miller, A. A. Hansen, F. Schinner, G. I. Greamer, G. W. Wolf, B. D. Blakeslee, A. Schock, G. H. Van Emburgh, Bert Harding, H. Kohl, W. H. Hyde, Frank Waller and Lyman Myers.

The band struck up “Grandfather's Clock,” and the hottest pace possible was labored for. When the tandems came on, Miller caught one and clung to it. That was the signal for the 8,000 persons present to show each other how they regarded race meets. At every lap Miller was called to from box and gallery. The band changed to a medley whenever Waller attempted to pass him, and harmony was apparent in everything.

At the close of the first hour Miller had traversed twenty-seven miles. He rode well, but never touched the record. He rode the first ten miles in 21:57 3-5, and was half a lap ahead of Waller, who acted as though he was bidding adieu to his associates. When

ty-one miles 504 yards. In the seventeenth twenty-two miles, and in the nineteenth twenty miles and three laps, doing his best work in the interval between the fourteenth and nineteenth hours after the start.

Next to the work accomplished by Gimm and Miller, that done by Waller was especially notable. He made a noble fight for the 100-mile record, and apparently in as strong form at the end of his century as at the start, with head high and the American flag sash fluttering at his waist, he pedaled on.

In the fifteenth hour, while riding the most promising race of the field, he was seized with a desire for oysters. He dismounted and refused to return to the track. Fully an hour was spent in useless arguments to no avail, and Waller donned his street clothes and was about to depart from the building when word came that oysters had been found at an all-night stand.

Mollified, he donned his racing suit and rode on. There is little doubt in the minds of those who watched the event throughout that had Waller not lost his temper and yielded to the strangest of whims he would have given Gimm a very close fight for first honors.

To Bicycle Riders: We Make Our Tube —
OF FIFTY CARBON STEEL

Because a Tube like this of

Is just as strong as

a Tube like this of

This diagram does not show how much stronger and more durable our tube is than the usual quality in the market because it does not include the always bad and more or less uncertain effects of "pickling." By ordinary methods tube is annealed in the open fire and pickled from eight to twenty times, according to finished size. By the use of a patented annealing process, controlled by us for tube making, our tube never comes in contact with the fire and is never pickled. There is no "theory" about this. Our thorough tests show that even with the greatest precautions in pickling (not usually taken), pickled tube is weaker and more brittle than tube made of the same material without pickling. No bicycle can be first grade unless it is made of first-grade materials. The best tubing makes the best bicycles. Send for a Catalogue.

Weight for weight in a Bicycle FIFTY CARBON Steel will last so long

while TWENTY-FIVE CARBON Steel will last only so long

Kindly mention The Wheel.

And so the men continued the grind throughout the day. At 7 o'clock Friday night the crowd began to arrive to witness the finish. Miller in his red suit was the first figure to attract attention, as bending low over his wheel he slowly moved around the track alone. Gimm was in an even more deplorable condition, his wheel wobbling unsteadily as he took the turns. During the night a large rubber bag, full of beef tea, had been placed within his racing shirt and a tube placed between his lips by means of which he sucked his food during the night. He was bent over his wheel, but with his head up and barely able to move the pedals.

At 8:36 his trainers and the officials decided to remove him from the track lest he fall and injure himself. He had the race won. In his final lap an American flag was handed him, and waving it feebly he rode unsteadily around once and dismounted near his tent. He was carried in and laid upon a couch, and, after a rubbing, given a light lunch.

Waller, on the contrary, with his head up, was following his pace up in a manner, that betokened the start rather than the finish.

Gimm rested about thirty-five minutes out of the twenty-four hours, taking one rest of six and another of fifteen minutes, and the remainder in short stops of two or three minutes each.

As the riders neared the end of the long race the excitement became more intense, the spectators standing up in their seats and yelling like Indians. The cheering and yelling continued until the timers announced the twenty-four hours up.

Miller sprinted in the last lap and made it in the remarkable time of 0:29, after having ridden for twenty-four hours with but a few minutes' rest.

The final score follows:

	Miles.	Yards.
Gimm	486	1,151
Waller	482	968
Schinnee	462	567
Miller	459	233

Gimm, Waller, Schinneer and Miller each broke all American records from twenty-eight miles up. The race was a wonderful exhibition of speed and endurance, and Gimm's new record will stay, in the opinion of racing men, for several years to come.

Gimm received \$250 as the winner of the race. In addition he will be allowed \$100 for breaking the twenty-four-hour and \$50 for breaking the twelve-hour American records. Had he been strong enough to have covered the fifty-seven miles additional necessary to break the world's record, he would have received \$250 more.

Miller received \$50 as fourth man and \$100 for lowering both the fifty and 100-mile American records.

Waller received \$150 as second-place man and \$37.50 for being ahead of the fifty and 100-mile American records, making a total of \$187.50.

Schinnee was entitled to \$100 as a third prize, and \$15 for breaking the fifty and 100-mile time.

The others who succeeded in covering over 400 miles and won no prize received \$25.

Jay Eaton concluded the week's sport very satisfactorily to himself by winning both professional events on Saturday night. Two amateur races attracted big fields, the tennis stirring up unbounded enthusiasm. Summary:

- One-mile handicap, seven heats, final—1, L. H. Conklin (25 yards); 2, W. B. Norton (55 yards); 3, E. Lindquist (65 yards). Time, 2:25 4-5.
- One-mile professional—Four heats—Final; 1, Eaton; 2, Sanburg; 3, Fisher. Time, 2:07 2-5.
- Ten-mile open—1, E. W. Peabody; 2, G. H. Lovell; 3, F. H. Wilson. Time, 2:23 2-5.
- Half-mile professional handicap—1, Eaton (scratch); 2, Samberg (scratch); 3, Ingraham (20 yards). Time, 1:02 1-5.

AMONG PUMPKINS AND PRIZE PIGS.

New Jersey Fair Goers Treated to Some Bang-Up Bone and Record Breaking Races.

The biggest thing that happens at Trenton, N. J., outside of the manipulations of the politicians, is the interstate fair, which attracts all the grangers for miles around to the capital of the mosquito State, each October. Monday was wheelmen's day at the fair. It proved a popular innovation. Ten thousand people passed through the gates, but instead of inspecting the prize cattle, the agricultural implements and the industries of the State, they crowded into the grandstand and lined the rail of the track until there was scarcely breathing room.

The meet was on the National circuit, over \$1,000 in prizes was offered, and all the cracks, barring Sanger, were present. Michael and Johnson contributed to the sensational features of the day by poring records, while a number of distasteful spills added to the excitement and brought broken bones and bruised bodies to a number of the riders. The most unfortunate spill occurred in a heat of the two-mile handicap, resulting in Ziegler again being laid up with a broken arm, the same arm that was broken in the West last year. "Teddy" Goodman is blamed for the accident. On the backstretch he rushed to the head of the field and then slowed up, a collision resulted, bringing down Ziegler, Mosher, Jack, Ackner and Hadfield as well as himself. Ziegler was pitched against the fence. All the other riders escaped with bruises. In another race MacDonald and Louhead fell while sprinting, caused by the former's tire bursting, and both men were badly scraped.

Michael received a royal ovation at the conclusion of his five miles exhibition. He was paced by numerous multicycles, and rode gamely from the start, frequently calling for more pace. With a flying start he rode the first mile in 1:53, two miles in 3:50, and three miles in 5:51, breaking the record of 5:55 3-5. At four miles, finished in 7:52, he cut 6 2-5 seconds from the record, and his five miles were ridden in 9:51 4-5, breaking 9:58 1-5.

Johnson, paced by two quads and a triplet, rode a mile in 1:47.

The heats of the mile open developed few surprises other than the defeat of John S. Johnson by Arthur Gardiner. For the final Cooper held the pole, Kiser, Butler, Gardiner, Ziegler, Bald, Jack, John S. Johnson, Callahan, Maddox, Mertens and Clark, the last four having qualified for pacemaking, also starting. No pacemaker was employed, special prizes being offered at the quarter posts. Callahan won the first quarter by good riding; Clark led at the half-mile, and Mertens at the three-quarters. Cooper was well to the front throughout, Bald about the centre, Gardiner also back, none of the big men fighting for the quarters. Bald was to the front swinging into the turn, but was sifted back by the bunch. Down the stretch Gardiner worked out to the front, with Butler in hot pursuit, Cooper, Kiser, Bald, Ziegler, Johnson and Callahan following. A pretty fight resulted to the tape. Gardiner won from Butler, with Cooper and Kiser very close for third, Cooper winning, with Bald, Ziegler and Johnson in the order named. The time was 2:14 3-5.

Four men were on scratch in the two-mile handicap, which Cooper won from the back mark. Gardiner finished on the outside in a winning position, but was overlooked by the judges. In the amateur events Dawson twice defeated his old-time rival, Harrison. Summary:

One-mile (novice)—1, P. P. Wilson; 2, James Woolley, Allenwood; 3, George W. Silver. Time, 2m. 37 3-5s.

Mile open (professional)—1, Gardiner; 2, Tom Butler; 3, Cooper; 4, Kiser. Time, 2m. 14 3-5s.

Mile open—1, Ray Dawson; 2, Joe Harrison; 3, Walter M. Trott. Time, 2m. 17s.

Half-mile handicap—1, Ray Dawson; 2, W. M. Trott (20 yards); 3, H. G. Gardiner (50 yards). Time, 1m. 13 1-5s.

Two-mile handicap (professional)—1, Tom Cooper (scratch); 2, Starbuck (40 yards); 3, Bowler (140 yards); 4, Bald (scratch). Time, 4m. 43 4-5s.

Two-mile handicap—1, Harry-J. Gormley (240 yards); 2, B. C. Humphrey (170 yards); 3, H. Reed (170 yards). Time, 2m. 43 3-5s.

One-and-one-half-mile tandem—1, Harrison and Leferson; 2, Williams and Vernier; 3, Shannon and Ghes. Time, 3m. 39s.

ONCE MORE THE ROSE TROPHY.

Buffalo, Sept. 26.—For another year the Rose trophy will be without a permanent home. It was ruthlessly grasped from the Rambler and Press clubs in the annual contest to-day by the Parkside Wheeling Club. The trophy has to be won three times to become the permanent property of the winner, which thus far no club has succeeded in doing. It represents the city championship, and each year causes a long, hard fight.

The weather and road conditions were but fair for the race, the riders being greatly troubled by the fine dust, which shifted its location at every puff of wind. In former years the city championship race has been started and finished at the Parade Meadow, making, with a turn at Corfu, a full course of fifty miles. This year, owing to the obstructions encountered inside the city limits, the experiment was tried of having the tape at Pine Hill, just outside of the city line. The turning point was not advanced, and consequently the riders traveled a distance estimated to be between forty and forty-five miles. The course was roped off at the finish, but the marshal and his aides were unable to keep the impatient crowd in check. However, the trouble with the mob of spectators, who gathered to the number of several hundred, was not near so great as it would have been had the race been held from the Parade.

The teams consisted of six men each. Early in the race O. J. Miller, the city champion, whom the Rambler contingent were backing for first place, fell and sustained a broken collar bone. The men finished well in a bunch, causing excitement to run high among the enthusiastic clubmen. The result follows:

	Riding Points.	Time.
1—W. Peckham, P. C. C.	23	2:06:20
2—E. Stevens, B. R. C.	22	2:06:57 2-5
3—J. T. Finn, P. W. C.	21	2:07:31 3-5
4—W. R. Blake, B. R. C.	20	2:07:03
5—F. Nehrbas, P. W. C.	19	2:07:10
6—E. E. Dennison, P. C. C.	18	2:07:12 3-5
7—Ray Duer, P. W. C.	17	2:13:30
8—Garrett Miller, P. W. C.	16	2:13:31
9—J. Pensyres, B. R. C.	15	2:13:34 2-5
10—E. Fox, B. R. C.	14	2:13:37 3-5
11—Cal Paxson, P. W. C.	13	2:13:40
12—W. S. Bertling, P. C. C.	12	2:14:06 2-5
13—E. Weller, B. R. C.	11	2:14:07 2-5
14—E. C. Haynes, P. C. C.	10	2:14:13 2-5
15—George Box, P. W. C.	9	2:18:43 4-5
16—W. D. Cleland, P. W. C.	8	2:24:08
17—J. P. Higgins, P. C. C.	7	2:24:37 2-5
18—W. Spang, C. C. C.	6	2:24:16 2-5
19—Fisher, C. C. C.	5	2:44:16
20—H. L. Frey, C. C. C.	4	2:45:00

Points—Parkides, 95; Ramblers, 82; Press, 78; Comrades, 15.

Fred Titus, barred from the path himself, has turned race promoter. His first meet will occur to-morrow night on Olympic track. Bald is billed for an exhibition ride and Teddy Goodman and W. A. Barbeau for a match race. Harrison, Leferson and Roome are among the entries.

BRANCHES IN ALL PARTS OF THE CIVILIZED WORLD.

DID NOT ENTHUSE.

With a Good Track, Better Racing and Some Amusing Incidents, Plainfielders Give Racing a Chill.

Unresponsive is the word that most politely describes the Plainfield people.

As a whole, they are a well-to-do lot. They have made their town an attractive, park-like place—a place of handsome houses, well kept lawns and tree-embowered and fairly well-kept streets. The cycling population is large, extremely large. The younger element to a child is seemingly a cycling element. There seem not half a hundred houses in Plainfield that have not at least one bicycle in the family. But for all of that the Plainfielders resolutely refuse to enthuse over cycling matters.

On the edge of the town, the comparatively few enthusiasts—Teel, Rodgers, Lister and others—banded as the Crescent Wheelmen, some three years ago, constructed a three-lap track. Each year they have given three or four meets. On but two occasions have the townspeople interested themselves sufficiently to attend in any great numbers. But the club, with a persistence deserving of better reward, has gone right on, pocketed its losses and tried again. Its last trial was on Saturday last. The affair was a National circuit meet. Cooper, Bald, Gardiner, Kiser and a lot of the other bright, shining stars were there. But once more did the Plainfield people fail to respond. Not more than 1,200 spectators were in evidence, and of these quite a few were from New-York—which is but one hour distant—and neighboring towns. They were well rewarded.

Half a dozen hurricane finishes and two roaringly funny incidents marked the afternoon. One of the latter occurred in the first heat of the novice race. Three white men and three negroes started. On the last lap two of them fell; fifty yards further and two more—one white and one black—went down. Picking themselves up, they seized their wheels only to find them interlocked. They tugged away for a moment, then dropped their wheels and sprinted to the tape. Informed that they must bring their wheels across the line, they ran back, picked up the wheels and had another tug-of-war. The negro was nearest the tape and tried to drag his white rival across. The latter resisted with all his might. While the crowd was roaring with laughter one of the negroes who had been first to fall came along, head down, and dashed into the struggling pair. He almost slid over the tape on his forehead. The scene was side-splitting and fairly convulsed the crowd. One of the negroes, Peter Simmons, finally won the race after two runovers.

The other incident was supplied by a slightly built youth with a small mustache. V. N. Hubbard, of New York, he was titled, as programmed, but Voorhis is said to be his baptismal name. He was billed to attack the two-thirds mile unpaced record. No one had heard of him before, and when he made his appearance in a black racing costume and a wealth of fringed red sash, he was promptly given the laugh. He rode a road wheel and took himself real seriously, despite the "guying" of the crowd. He covered the distance in 2:07 and finished groggy. It afterward transpired that, like a conceited amateur Thespian, he had paid for the privilege of making the trial. The Race Committee, scenting amusement, and to fill a gap in the programme, humored him.

The three professional events were as warm as could be wished for. In the half-mile, Cooper started the sprint rounding into the backstretch. Bald collared him at the head

of the straight, and, with Kiser and Murphy at his heels, penned in Cooper. They crossed the line that way. Ziegler, on the extreme outside, came like a cyclone in the last twenty yards, and seemed to have the best of Cooper by three or four inches, although the judges decided otherwise.

In the mile, Cooper again attempted a long sprint, and Bald again headed him in the straight. A bad spill in the backstretch had cleared the track, and the two had a free field. Bald was a length to the good fifty yards from home, and strove hard to hold it, but Cooper stuck to his work as gamely and poked his nose in front three yards from the line. Jack and Macdonald, the only contestants to clear the wreck on the far turn, rode in in that order. Both had qualified by pacing their heats, a practice upon which, it is understood, Chairman Gideon is inclined to frown. The final was paced by Mertens and Maddox. Those who fell were Kimble, Ziegler, Loughead, Mosher and Neville. Gardiner had qualified in his heat but did not start in the final.

In the final of the two-mile handicap the men bunched inside the first lap and finished in such a close jumble that it took the judges to place them. Church, 40 yards, got the decision.

Both amateur events resulted in blanket finishes. Dawson might have won the two-thirds mile had he not gone to sleep at the extreme end of the Indian file and not awakened until the sprint was well under way. He then came like a streak of black lightning, but too late. Harrison and Lefferson won the tandem race in a ding-dong finish with Rooome and Ripley on the last lap. Hand and Cumming, a local crew, roused the crowd to a frenzy of excitement by darting up the high banking and then coming down like an avalanche, getting a lead of six yards. The sprint was too long, however, and they died in the stretch. Summary:

One-mile novice—1, Peter Simmons, Plainfield; 2, H. L. Lester, Plainfield; 3, W. L. Abbey, Brooklyn. Time—2:46.

Two-thirds mile, final—1, Joe Harrison; 2, W. C. Rooome; 3, Ray Dawson; 4, F. W. Right; 5, E. T. Allen; 6, J. T. Beam; 7, L. R. Jefferson. Time—1:40 4-5.

Half-mile scratch, professional—First heat—1, Bald; 2, Gardiner; 3, Kiser; 4, C. A. Church; 5, R. L. Wherle; 6, Chris Hadfield. Time—1:10 3-5. Second heat—1, Ziegler; 2, Cooper; 3, Murphy; 4, Mosher; 5, C. B. Jack; 6, J. C. Bowler. Time—1:11 1-5.

Third heat—1, Kimball; 2, A. C. Mertens; 3, Loughead; 4, H. C. Clark; 5, Maddox; 6, R. P. McCurdy. Time—1:10 3-5.

Final heat—1, Bald; 2, Kiser; 3, Murphy; 4, Cooper; 5, Ziegler; 6, Kimble. Time—1:10 3-5.

One-mile handicap, final—1, B. T. Allen, Bath Beach (50); 2, C. H. Tomlinson, Riverside W. (90); 3, Charles O'Connor, Knickerbocker A. C. (60); 4, Thomas Firth (100); 5, Louis Hunter (50). Time—2:14 3-5.

One-mile scratch, professional—First heat—1, Bald; 2, Mosher; 3, McCurdy; 4, E. P. Thompson; 5, Hadfield; 6, Wehrle. Neville qualified by pacing. Time—2:20.

Second heat—1, Cooper; 2, Gardiner; 3, Loughead; 4, Maddox; 5, Bowler. C. B. Jack qualified by pacing. Time—2:17 3-5.

Third heat—1, Kimball; 2, Ziegler; 3, Kiser; 4, Maya. Time—2:17.

Final—1, Tom Cooper; 2, E. C. Bald; 3, Carroll B. Jack; 4, Ray McDonald. Time—2:13.

Two-mile professional handicap. First heat—1, H. C. Clark (80); 2, McCurdy (60); 3, Mertens (40); third; 4, C. S. Wells (120); 5, Maddox, Asbury Park (60), fifth. Time—4:45.

Second heat—1, C. A. Church (40); 2, Maya, Erie (140), second; Loughead (20), third; 3, Jack (60); 4, Hadfield (90), fifth; 6, Thompson, Newark (120), sixth. Time—4:49 4-5.

Final heat—1, C. Church, (40); 2, F. Loughead (20); 3, E. Thompson (120); 4, Wells (120). Time—4:57 3-5.

Two-mile scratch, tandem—1, Joe Harrison and L. R. Lefferson; 2, Bert Ripley and W. C. Rooome; 3, T. A. Cumming and E. T. Hand; 4, J. Giles and M. Shannon. Time—4:29.

"SKEETER" PACING TRIED.

It Was a Success as an Anti-Loafing Tonic At the Quill's Postponement.

As though ashamed for his most ungracious conduct on the occasion of the Quill Club's meet, at Manhattan Beach, two weeks ago Saturday, the clerk of the weather smiled his sweetest smile on Thursday of last week, when the postponed events were run off at the Waverly (N. J.) track. He gave to the club one of those bright September days, such as you read about. But Thursday is a work day, a day on which most people toil, and despite the allurements of the crack-jacks, Michael, the Welshman, and a race between Cooper and Johnson, scarcely a thousand spectators were present. Still the presence of the bare-legged riders was deeply appreciated by the denizens of the nearby meadows, known as Jersey 'skeeters. They turned out by the thousands, nay, by the millions, and were not at all backward in introducing themselves. They flew in swarms that almost darkened the sky outside the grounds and over the infield, and caused the riders to pedal in a manner that necessitated no time limits, to keep their skins whole. The track was in perfect condition, and the events hanging fire were run off in two hours' time.

As a result of the sudden termination of the Manhattan Beach meet, the final of the mile invitation was practically a match between Johnson and Cooper, the only contestants. Single pacing was given by Cooper and Macdonald. Cooper caught the pace and Johnson glued on behind. This position was maintained until coming into the stretch, when Johnson broke loose and strove for the tape on the outside. He worked with his head and his shoulders as well as with his legs, and fifteen yards from the tape seemingly had the best of it, when Cooper, who maintained the pole, shot forward and crossed the tape, with Johnson at his rear wheel.

A couple of quads, manned by local riders, and triplet, ridden by the Jallu brothers and Callahan, paced Michael in his five-mile record-breaking attempt. But whether it was the poor pacing of the quads or Michael's fear of the mosquitoes, he failed to cut the figures, finishing in 10:01 1-5 which is said to be the best time ever made on a trotting track.

Bald rode from scratch in the mile handicap, and easily caught the bunch. He wormed his way to the front, and looked a winner in the sprint, but Mertens had a bit more up his sleeve, and nipped the Bison at the tape. Rooome, Dawson and Harrison came together again in the five-mile metropolitan championship, and, as in the recent New Jersey Division championship race for that distance, they finished in the above-named order, inches apart. In the mile trials against the watch Harrison made the best time, doing his trial in 1:50. Summary:

Two miles (handicap)—1, C. A. Carlson, Greenwich Wheelmen (115 yards); 2, G. B. Smith, Freeport B. C. (115 yards); 3, W. L. Hicke, South Brooklyn W. (205 yards); 4, W. H. Looes, Jr., Orient W. (125 yards). Time—4:36 4-5.

One-mile handicap (professional)—1, A. C. Mertens, Chicago (40 yards); 2, E. C. Bald, Buffalo (scratch); 3, W. A. Barbeau, New York (70 yards); 4, Earl Kiser, Dayton, Ohio (40 yards). Time—2:10 1-5.

One-mile invitation (professional)—1, Tom Cooper; 2, John S. Johnson. Time—3:13 4-5.

Five miles (championship Metropolitan District)—1, Walter C. Rooome; 2, Ray Dawson; 3, Joe Harrison. Time—12:38.

One mile (trials, paced)—Joe Harrison, 1:59; Ray Dawson, 2:00; W. H. Owen, 2:01 1-5.

MAC DEFEATS MICH.

Boston's Pride Does Wales' Best-Corcoran Benefits Not Largely by His Benefit Meeting.

Boston, Sept. 26.—There was a benefit race meet at the Charles River track to-day—a benefit for Manager Corcoran—but, despite an attractive card, the attendance was light. The comparatively few spectators who occupied the grandstand were cold and unenthusiastic, and even the appearance of little Michael failed to bring out a welcoming handclap.

The star attraction was the ten-mile match race between Michael and E. A. McDuffee, but, owing to the unequal distribution of the pacing machines, Michael quit at two miles, McDuffee continuing alone. He finished in 20:18 2-5, putting up a new standing-start competitive paced record. Sextuplets, quints, quads and triplets were used to pull the men along. A pretty start was made. The six-seated pacing machines crossed the tape as the pistol was fired. McDuffee got the best of the sprint, and caught his pace the first. The first mile was ridden in 2:15, with Michael's pacers trailing McDuffee. At the mile and three-quarters the Welshman changed his pace and went up in the lead, gaining fully three lengths on the Boston rider. Michael was then riding in gallant shape, and the friends of McDuffee were not feeling as jubilant as at the start. Michael finished the second mile in the lead in 2:01 3-5.

Here a change of pace came, and McDuffee, getting the rear of the sextuplet, fairly pulled in the distance between himself and his famous adversary, so much so that as they turned from the homestretch he had gained the lead and was being rapidly pulled away, when Michael dismounted on the backstretch. He complained that his pacing was inferior to McDuffee's. From this out McDuffee rode a pretty race, and the work of his pacers was something wonderful to behold. They picked him up without the slightest hitch and brought him the last five miles under record time.

Another match race of more than ordinary interest was that between Johnson and Tom Butler, a mile. Each man had a triplet as pacemaker, for Johnson being manned by the Jallu brothers and Steenson, while Callahan, Hoyt and Walsh were up for Butler.

Butler caught his pace the first, and held the lead until the last lap, when Johnson went up and won out. The mile was in 1:56 1-5, which is a track record. The fractional times were 33 1-5, 42 3-5, 1:01 2-5, 1:21 2-5 and 2:30 1-5. Johnson came home several yards to the good, the local pacers being no match for the Frenchmen, while the spectators remained dumb.

The sextuplet, with Saunders, Crooks, Pierce, Frank Butler, Caldwell and Coleman, rode the mile in 2:04, a world's record for that machine. The amateur and professional events brought out large fields, but were devoid of particular interest. Summary:

One-third mile—1, F. A. Gately, Boston; 2, Robert Urquhart, Boston; 3, C. M. Donahoe, Lynn. Time, 42 2-5 seconds.

One Mile, Professional, Handicap—1, Frank Butler, Cambridge (60 yards); 2, Burns, W. Pierce, Boston (100 yards); 3, A. W. Crooks, Buffalo (60 yards); 4, Watson Coleman, Boston (scratch). Time, 2m. 9s.

Mile Handicap—1, H. W. Frye, Boston (110 yards); 2, James Urquhart, Boston (30 yards); 3, James Clark, Boston (30 yards); 4, F. F. Harris, Lowell (30 yards). Time, 2m. 16 1-5s.

Mile—Berto sextuplet, 1m. 41 1-5s.; intermediate times, 24 4-5s., 32 4-5s., 49 3-5s.

Mile, Professional, Tandem, Handicap—1, Hoyt and Newton (scratch); 2, Callahan and Coleman (40 yards). Time, 1m. 56 1-5s.

Mile, match between John S. Johnson and Tom Butler, triplet, paced—Won by John S. Johnson. Time, 1m. 56 1-5s.

One Mile, Invitation—1, C. H. Drury, Winchendon, Mass.; 2, E. M. Blake Keene, N. H.; 3, J. P. Clark, Boston. Time, 2m. 7s.

Mile tandem match between Urquhart brothers and Plantiff and Fowler. Won by Urquhart brothers. Time, 2m. 4s.

Ten-mile match—Won by E. A. McDuffee. Time, 20:18 2-5. Intermediate times:

AN INNOVATION THAT FAILED.

Bunnell's series of night races came to a conclusion on Saturday night at the Tioga track. The intended drawing card, a handicap hour race, fell flat. Kluge, the limit man, started three minutes before Starbuck, figuratively scratch, and made five laps in that time. The handicaps proved confusing to the contestants and spectators alike, and no one except the scorers knew at any time the relative positions of the various men. There was, as a consequence, no interest in the race until the thirty-second minute, when Starbuck, who had been trailing the limit man, spurred and gained about a quarter of a mile and lapped the bunch of lesser handicap men. Dampman dropped out after riding about fifty minutes. At this juncture Starbuck made another spurt and made up sufficient distance to place him near the men who had the handicaps. With five minutes to go, Starbuck made another one of his celebrated spurts and gained some distance, but the pace seemed to be killing and he was unable to hold his advantage. After the race was over it was some time before the officials were able to determine the winners, as it required quite an exhaustive mathematical analysis. It was the general opinion among the regulars that hour races are not destined to prove a success. About 1,500 spectators were present. Summary:

Mile handicap, amateur—Final, 1, S. Moore; 2, I. Vernier; 3, W. H. Cressy. Time, 2:15 4-5.

Mile handicap, professional—First heat, 1, W. E. Dickerson, 60 yards; 2, H. Eckhardt, 300 yards; 3, L. S. Hall, 105 yards; J. F. Starbuck, scratch. Time, 2:19 2-5. Second heat, 1, W. A. Rulon, 60 yards; 2, B. C. Betner, 65 yards; 3, A. Boone, 135 yards; 4, Charles Turville, 85 yards; 5, C. E. Kluge, 95 yards. Time, 2:12 4-5. Final heat, 1, W. E. Dickerson; 2, H. E. Eckhardt; 3, W. A. Rulon; 4, C. Turville. Time, 2:10 3-5.

Mile tandem, handicap—1, Cummings and Diddleback, scratch; 2, Neal and Burkholder. Time, 2:15 2-5.

Five-mile handicap, amateur—1, M. Massey, 300 yards; 2, James Logue, 300 yards; 3, A. Reinert, 300 yards; 4, W. A. Bell, 300 yards. Time, 12:10.

Professional, one-hour race, handicapped by seconds—1, W. A. Rulon, 45 seconds; 2, H. W. Eckhardt, 1 minute 30 seconds; 3, W. E. Dickerson, 1 minute 15 seconds; 4, C. E. Kluge, 3 minutes. Fifth place in dispute between L. S. Hall, 2 minutes; S. L. Cassidy, 2 minutes 15 seconds, and H. N. Swank, 2 minutes 30 seconds. Distance, 22 2-3 miles.

SIMILAR IN NAME ONLY.

At the Westboro (Mass.) fair, September 24, W. J. Tanzler won the mile open in 2:25 1-5; John S. Johnson, Worcester, second; F. W. Stockbridge, third. Johnson finished third in the two-thirds-mile handicap from scratch. James Rutherford, sixty-five yards, won the event in 1:31.

NOT A SINGLE NOVICE.

All Cracks in Cleveland, So It Seems—Wanted a Knockout at One Stage.

Cleveland, Ohio, Sept. 28.—Another State amateur competition record went to smash at Saturday's races at C. A. C. Park, H. E. Wood bringing the two-mile mark down to 4:34 2-5. Former record, 4:38, held by A. E. Ellis. The meet was a benefit to Cleveland's "pros," the brothers Johnson and Dr. A. J. Brown, and was a success all around, the attendance being good for this city in spite of the inclement weather of the morning, and the last professional ball game of the season as a counter attraction.

In the five-mile amateur, open, occurred the only trouble of the afternoon, but what threatened to develop into a small-sized riot was nipped in the bud by one of the principals declining to further the matter. There was a large field of starters, and as most of them objected to tandem pace it was agreed to take turns in quarter-mile pacing. The plan worked all right for about three miles, and then some whose turn it was to get to the front demurred, and in order to get inside the limit of 13:30 placed upon the race others had to go around them. The race finally narrowed down to Wood, Emerick, Glen Wiley and Blackmore. On the backstretch, in the last lap, with Emerick slightly in the lead, Wood and Wiley came together with a crash and down they went. Wood was up in an instant and put up his fists for a fight, but Wiley declined. By this time three-fourths of the people in the grounds were across the field to see the contest not on the programme, but they were doomed to disappointment. Wiley was cheered by the good-order people, who remained in their seats. Blackmore, who had been pegging away half a lap behind the bunch, took advantage of the disturbance and came in second. Our racing men have so good an opinion of themselves that we have run out of novices, the race of that character not being run for want of entries. Summaries:

Quarter-mile open, professional—1, E. C. Johnson; 2, L. C. Johnson; 3, Barney Oldfield. Time—0:34 3-5.

One-mile open—1, H. B. Wood; 2, F. R. Blackmore; 3, P. J. McIntyre. Time—2:24 1-5.

Half-mile open, professional—1, O. P. Bernhart; 2, E. C. Johnson; 3, A. J. Brown. Time—1:16 2-5. Time limit of 1:15. No race.

Two-mile open—1, Wood; 2, W. S. Emerick; 3, Glen Wiley. Time—4:34 2-5.

One-mile open, professional—1, A. J. Brown; 2, Bernhart; 3, E. C. Johnson. Time—2:22 2-5.

Five-mile open—1, Emerick; 2, Blackmore. Time—13:25.

Two-mile open, professional—1, Brown; 2, E. C. Johnson; 3, Bernhart. Time—4:44 4-5.

WILL CONGREGATE AT CANTON.

Cleveland, Sept. 28.—Saturday next is to be Wheelman's Day at Canton, Candidate McKinley's home. Cleveland will be the gathering point for the clans. The local McKinley and Hobart Cycling Club, which already numbers over a thousand members, although organized less than a week, will have the affair in charge. Not less than 2,000 wheelmen from Chicago alone are expected to arrive on Saturday morning, and this number will be swollen by delegations from Indiana, Michigan, Kentucky, Pennsylvania, Western New-York and all parts of Ohio.

CLOSE CORPORATION.

What events W. M. Pettigrew did not win at the Weymouth (Mass.) Fair met, September 24, were captured by the Clarke brothers, Pettigrew's wins were the mile handicap (70 yards), in 2:20, and half-mile open in 1:14. J. P. Clarke took the mile open in 2:54 and the five-mile handicap (100 yards), in 14:46. W. F. Clarke's win was the two-mile handicap (80 yards), in 5:12. They shut out the other riders completely.

RECORD IN TANDEM SPILLS.

Baltimore, Sept. 29.—Although tandem races have been numerous this season, accidents to the riders of two-seated machines on the track have been almost unheard of. At the meet at the Cycle Park to-day, however, two tandem teams figured in one of the most sensational spills of the year. It was at the first turn on the last lap, when all began to spurt, that the collision occurred. Two tandems came together, and the four riders shot into the air, striking the ground with great force. Three of the riders were knocked senseless, and one, LeCompte, broke his collar bone. Robert L. French, though severely shocked, never lost his nerve. Jumping from the ground, he grabbed the tandem and rode in alone, taking second prize.

In the professional two-mile race, Chairman Gideon, who was the referee, disqualified E. G. Aker, the Minneapolis flyer, for team racing with Carter. Aker had apparently been hopelessly handicapped and trailed behind, while Carter cut out a terrific pace. He gradually slowed, and while the other riders were manoeuvring for the finish, Aker came along like a shot and crossed an easy winner. Hadfield was entered in several events but did not appear. As a consequence, he will probably again figure in Gideon's bulletin. Summary:

One-mile, novice—1, W. J. Wilkinson; 2, L. Eckstein; 3, James Worth. Time—2:32.

One-mile, scratch, professional—1, E. G. Aker, Philadelphia; 2, W. W. Phelps. Time—2:16 2-5.

One-mile, scratch—1, Clarence Knight; 2, W. G. LeCompte; 3, Claude Leatherbury. Time—2:21 2-5.

Two-mile handicap, professional—1, W. W. Phelps, 80 yards; 2, J. M. White, 80 yards; 3, C. H. Shaffer, 120 yards. Time—3:14.

One-mile lap—1, W. G. LeCompte, 10 points; 2, E. G. Smith, 9 points; 3, S. Shallcross, 3 points. Time—2:37 1-5.

One-mile, tandem—1, A. C. White and A. M. Krager; 2, R. L. French and mate. Time—2:35 3-5.

Two-mile handicap—1, T. L. Leyers, 80 yards; 2, R. L. French, 100 yards. Time—5:02 1-5.

KRICK KEEPS RIGHT ON WINNING.

Reading, Pa., Sept. 26.—But few amateurs in the country have won more prizes this season than C. W. Krick, of Sinking Springs. It is seldom that he appears on the track without getting a position. At the Electric Wheelmen's meet to-day he rode in his usual winning form and captured the half and mile open, the lap race, and took second in the three-mile handicap. The meet was the most successful of the season held in this city, over 4,000 spectators being in attendance. Summary:

One mile (novice)—1, Harry D. Nein, Reading; 2, A. J. Shartle, Reading; 3, James Savage, Hyde Park. Time—2:33.

Half-mile (open)—1, C. W. Krick, Reading; 2, Charles H. Henzel, Philadelphia; 3, B. B. Stevens, Philadelphia; 4, J. A. Shomo, Philadelphia. Time—1:13.

One mile (open)—1, C. W. Krick; 2, Charles H. Henzel; 3, B. B. Stevens; 4, P. L. Davis, Bryn Mawr. Time—2:27.

Two-mile lap race—1, C. W. Krick, 16 points; 2, E. S. Youz, Reading, 8 points; 3, W. M. Trott, Germantown, 7 points; 4, Craig Stewart, Harrisburg, 4 points. Time—2:14 2-5.

Three miles (handicap)—1, A. J. Shartle, Reading (275 yards); 2, C. W. Krick (scratch); 3, W. B. Cleaver, Reading (275 yards); 4, C. H. Henzel (40 yards). Time—7:00 1/2.

LAUGHED AT IN THEIR OLD AGE.

A memory of the past in the shape of an ordinary race was gazed by the spectators at the meet held on the old Glenmere track, Lynn, Mass., September 24. There were but two contestants in the race, and their efforts to sprint was what amused the onlookers. Tom Butler had no trouble in winning the

mile open, fairly running away from Newton, Berlo, Steenson and Weing in the final. He afterwards rode against the track record of 2:08. Although poorly paced, he finished in 2:07 2-5. Summary:

One-mile, 3-minute class—Final—1, G. L. Howland; 2, J. F. Ingraham; 3, M. W. Gray. Time, 2:25 1-5.

One-mile, open, professional—Final, 1, Tom Butler; 2, C. R. Newton; 3, P. J. Berlo. Time, 2:30 2-5. J. Fitzgerald, H. H. Steenson, A. L. Weing also qualified.

One-mile, handicap, professional—1, C. R. Newton (40 yards); 2, Tom Butler (scratch); 3, H. H. Steenson (80 yards); 4, P. J. Berlo (40 yards). Time, 2:12 4-5.

One-mile, ordinary, professional—1, A. A. Jackson; 2, A. J. Hammond. Time, 4:03 2-5.

Two-mile handicap—1, G. L. Howland (60 yards); 2, J. F. Ingraham (40 yards); 3, B. Halliday (100 yards). Time, 4:58 3-5.

HE WASN'T "TERRIBLE" TO MONTE.

A twenty-five mile match race attracted over a thousand spectators to the Crescent Park track, Providence, on Saturday last. The contestants were Monte Scott, the holder of the Irvington-Millburn course record, and Carl Swenson, who is known in Providence as the "Terrible Swede." What constitutes his ferocious qualities to gain him the sobri-

Jersey A. C.; 3, William Schneider, Riverside Wheelmen. Time—2:27.

One mile (handicap, professional)—Final—1, F. Goodman, R. W. (scratch); 2, William A. Barbeau, R. W. (30 yards); 3, H. K. Smith, Brooklyn (40 yards). Time—2:27.

Two miles (handicap, professional)—Final—1, H. K. Smith (70 yards); 2, W. A. Barbeau (50 yards); 3, George P. Kuhke, South Brooklyn W. (90 yards). Time—5:22 1-5.

Two miles (handicap)—Final—1, W. C. Roome (scratch); 2, W. H. Owen (25 yards); 3, F. W. Richt (50 yards). Time—5:20 1-5.

POSTPONED, BUT PROSPERED.

A good-sized crowd attended the Capital City Cyclers' postponed meet, at Harrisburg, Penn., last week. The principal events resulted as follows:

One-mile handicap—1, W. A. Lantz, Harrisburg; 2, E. P. Youse, Reading; 3, J. A. Kepple. Time—2:31 4-5.

Third-mile, open—1, E. P. Youse; 2, W. A. Lantz; 3, C. W. Krick. Time—0:46 4-5.

Five miles, handicap—1, L. F. Smiley, 350; 2, G. S. Fenstermacher, 375; 3, A. A. Seifert, 350. Time—12:31 3-5.

THREE TIMES AND WON OUT.

Haverhill, Mass., Sept. 26.—After three postponements on account of stormy weather, the meet of the Kenozia Cyclers was successfully run to-day. The attendance was large. Summary:

One-mile handicap—1, F. P. Kent, Rowley, 90 yards; 2, C. A. Bodwell, Haverhill. Time—2:17 2-5.

Half-mile open—1, Wm. Pettigrew, Lynn; 2, F. J. Osgood; 3, C. F. Glover. Time—1:11 2-5.

Two-mile handicap—1, D. Cote, Lowell, 130 yards; 2, F. P. Kent; 3, C. F. Glover. Time—1:11 2-5.

LIKE LOT'S WIFE.

After winning the novice race at the meet of the Ridgeway (Penn.) B. C., September 25, Frank M. Holes took the two-mile handicap, but was disqualified for looking around. The race went to L. L. Miner, who won also the third mile open in 48 seconds. J. C. Murphy captured the mile open in 2:40, with Miner second.

THREE OUT OF FIVE.

Michigan riders turned out in large numbers at the Barry County Fair, Hastings, Mich., September 24, but H. Hart, of Grand Rapids, despite the rough track, captured three of the five events. E. A. Moross, Detroit, ran second to him, and finished first in the two-mile lap race.

TWO OUT OF THREE FOR BERTIE.

A series of match races were run at Omaha last week between Bertie Banks, of Denver, and Floyd McCall, of Omaha. McCall won the first mile race in 2:20 2-5; Banks the second in 2:21 2-5. The deciding race was for two miles, which Banks won in 5:28 2-5.

KRICK, ONE, TWO.

At Lancaster, Pa., September 24, C. W. Krick won the half-mile open in 1:06 3-5, the mile open in 2:28, and finished second in the five-mile handicap from scratch. W. M. Trott, 100 yards, won the latter event in 12:47 3-5.

TOOK EVERYTHING IN SIGHT.

At the county fair at Caro, Mich., September 25, J. A. Moross, of Detroit, carried off the honors of the day by winning every race on the card, barring the novice and an event for farmers. The times were slow.

FORTY AND SIX STARTED.

Forty-six riders started in a road race from Gloucester, Mass., to Manchester and return, seventeen and a half miles, September 24. T. A. Barnaby, Revere, won and also took the time prize in 48:15.

ety is a matter of conjecture. He fell a comparatively easy victim to Scott, and at twenty-three miles dropped out of the race. The men rode in opposite directions on the track. Swenson rode the regular way and had to ride wide for Scott to pass. Swenson set a hot pace and endeavored to gain a lap on his antagonist, reeling off the first mile in 2:28. For the first five miles he gained about ten yards to the mile. He continued to force the race until the seventeenth mile, when he had about 200 yards to the good. Then he renewed his efforts to gain the lap, and came within thirty yards of doing so, when he began to die. Scott then gained on him at each lap, and at twenty-three miles Swenson dismounted, completely used up. Scott finished in 1:10:02.

NIGHT RACING IMPROVED.

Higher banking on the track and improved lighting arrangements caused the meet at Olympia Park, Harlem, on Saturday evening last to be an improvement on some of the past events. The sensational win of the evening was made by Goodman, who took the mile handicap from scratch. Roome lost the mile open to Owen, but made amends by capturing the two-mile handicap from scratch, winning by a length from Owen. Summary:

One mile (open)—Final heat—1, W. Owen, Knickerbocker A. C.; 2, Walter G. Roome, New

CHANGED HIS TUNE.

Perhaps there never was a more unpromising fighter of the professional and upholder of the amateur than P. S. Collins, of Philadelphia. Himself an amateur of the amateurs, an enthusiastic Leagueite and clubman, in his paper, "The Ledger," and in private as well, he has heretofore declined to admit that the professional was worthy of anything save condemnation. Evidently Mr. Collins has had a change of heart, for he speaks by the card when he goes on record in "The Ledger" in this fashion:

"It is a noteworthy fact that the great bulk of the more trying and difficult work done by the Racing Board this year has been in connection with alleged amateurs charged with secretly accepting money for their appearance on the track while masquerading under the cloak of amateurism.

"From the outset there has been practically no trouble whatever with the professional riders, that class having been entirely free from any suspicion of crooked riding or double dealing. Almost without exception they have accepted without question the rulings of the Board and race meet promoters, and some of these rulings, it must be conceded, have been pretty severe when compared with the offences committed.

"If the present constitution of the L. A. W. bars professionals from membership on the assumption that the amateur racing men are a more desirable class of members, the sooner a change is made the better, for so long as the former conduct themselves as they have conducted themselves this year they are, to the mind of the average observer, very much more to be desired than those men who, while claiming to be amateurs riding for sport, are being subsidized."

HERE IS A FIRST-FLIGHTER.

Since Charles W. Krick first showed what was in him by unexpectedly winning one of the time prizes in the Irvington-Millburn road races, he has added greatly to his fame and to his trophies, but he still remains the same quiet, unassuming fellow, totally devoid of the air of importance and the brag and bluster which characterize so many of those who make a few "killings" on the path.

Charles W. Krick.

When he works Krick tends the toll-gate on the Lebanon Turnpike at Sinking Springs, a suburb of Reading, Penn. On play day he takes his wheel to the track, and this season has won thirty-seven firsts, seven seconds and seven thirds, and the fact that he recently won a mile handicap from scratch in 2.09 demonstrates that his victories have not been flukes.

They tell an interesting story regarding his toll-gate custodianship. It seems that on a certain day two smart but misguided youths gayly pedaled by the Sinking Springs mulcting station. On being asked for the usual fee demanded for using the road, they, as a Bowery boy would put it, gave him "the merry ha-ha." Not content with this, one of them turned in his saddle, put his thumb to his nose and wobbled the remaining four fingers in a decidedly undignified fashion. This was too much. It took but a minute for Pennsylvania's State champion to grab his wheel. Never in his experience as scratch man in a handicap did he get away quicker from his mark. That he was unspaced mattered little, and that stretch of Lebanon pike witnessed a sprint such as the paying audience of a grand-stand has never seen. He caught his field, and what happened then will never be told, but Krick is big and strong, and he was mad. He got his toll, and after all, that was what he wanted.

On the track he is a regular "horse," never seeming to tire. As an unspaced rider, it is the opinion of good judges that his equal in the amateur ranks does not exist, and while speaking of men fit to try for the hour record against Father Time, the prediction is not far wrong that Krick could make an effort would prove one of the most creditable yet made on this side of the water.

MIXING THEM UP.

The Yellow Fellow Club has offered a handsome prize for a multicycle race between a sextuplet, a quad, a triplet, a tandem and single wheels, to be held at the race meet of the Westchester County Wheelmen at White Plains to-morrow. The race will be a two-mile handicap, and as it is the first of this kind in the United States, it is attracting a deal of attention.

TRADE CHANGES.

ALABAMA.

Cullman.—Henry Schrvn, general store,
desires bicycle agency.

COLORADO.

Colorado Springs.—L. J. Parker, sold out.

CONNECTICUT.

New-Canaan.—Merritt Cycle Co. Dissolved.
Norwich.—Thames Chain and Stamping Co.
Shareholders: T. D. Robertson, F. W. Carey,
H. B. Carey and William E. Hiscock. Capital
stock, \$10,000.

FLORIDA.

St. Augustine.—Walter Henry will open
store in Cordova block.

ILLINOIS.

Chicago.—Dodson & Kerr. Stock seized
under mortgage for \$456.

Chicago.—Empress Cycle Co. reported dis-
continued.

Chicago.—Robert Preston, arrested for con-
veying property to defeat execution for \$1,895.

Chicago.—Sieg & Walpole Manufacturing
Co., Kenosha, Wis.; sued here, with others,
for \$10,000, as indorsers.

Chicago.—Oscar St. Clair, bicycle dealer,
who was arrested on a charge of obtaining
money under false pretences, did not appear
in court when his case was called. He was
arrested on a warrant sworn out by Wil-
liam H. Saunders, who declared in his com-
plaint that the defendant had taken \$200
from him, promising to give him a situation
and keeping the money as security. Some
time later St. Clair failed, and also failed
to give Saunders back his money. Charles
E. Pratt is his bondsman to the extent of
\$500. When St. Clair failed to show up,
Justice Everett continued the case for three
days, giving the bondsman leave to reinsta-
te.

Galesburg.—F. T. Peterson's bicycle estab-
lishment at 219 South Chambers street
destroyed by fire.

INDIANA.

Huntington.—William John & Son, bicycles;
reported assigned.

Logansport.—Kries Brothers Manufacturing
Co.; receiver appointed. Liabilities, \$17,000;
nominal assets, \$60,000.

Millersburg.—S. L. Thomas, general hard-
ware; will add bicycles and desires agency.

KENTUCKY.

Pilot Oak.—George C. Roach, bicycles; as-
signed.

MAINE.

Portland.—The Brown Bicycle Pump Co.;
organized with Elijah H. Austin, New-York,
president; Joseph J. Dimock, New-York,
treasurer. Capital stock, \$100,000.

MARYLAND.

Baltimore.—The Alfred Ely Co., dealers in
hardware and bicycles; assigned. It claimed
a paid-in capital of \$30,000. Estimated li-
abilities, \$35,000; assets, \$50,000.

MASSACHUSETTS.

Boston.—Columbus Cycle Co. (D. M. Keig-
win and William W. Proctor); Frank W. Brig-
ham appointed assignee.

Franklin.—Oscar J. Daniels; assigned to
William M. Comey. Liabilities, \$1,200; as-
sets, \$200.

Worcester.—Worcester Cycle Manufac-
turing Co.; mortgage for \$500,000 to secure
bonds.

MICHIGAN.

Coldwater.—Shurgers Bros.' hardware stock
purchased by D. C. Allen & Co. Messrs.
Shurgers will hereafter devote their entire at-
tention to the manufacture of bicycles.

Detroit.—Alex. E. Sprung, bicycles, report-
ed recorded chattel mortgage for \$1,200.

Ishpeming.—William Pennglase. Sold out to
Kilstrom & Lindquist.

Kalamazoo.—Celery City Cycle Company
reported succeeded by Marion E. Holmes.

MINNESOTA.

Winona.—Henry Svengsaard, of Chicago,
sued for \$40,000 by N. M. Littlejohn, a
banker of Whitewater, Wis., alleged to be
due in connection with a former partnership
in the bicycle business at St. Cloud.

NEW-JERSEY.

New Jersey Bicycle Concern. Corra N.
Williams appointed receiver. Liabilities
estimated, \$5,000; assets, estimated, \$1,500.

Newark.—Howard & Nichols Cycle Manu-
facturing Company reported recorded chattel
mortgage for \$11,284.

Newark.—Howard A. Smith Co., reported
given judgment for \$453.

Trenton.—Overton & Hawkins, bicycles, re-
ported recorded chattel mortgage for \$800.

NEW-YORK.

Brooklyn.—Arcanum Bicycle Manufac-
turing Company reported recorded chattel mor-
tgage for \$500.

Buffalo.—Globe Cycle Works. Court ordered
assignee to reconvey assets to Penseyres &
Haberer, creditors having granted extension.

Buffalo.—Buffalo Drop Forging Company
reported judgment for \$239.

Buffalo.—George N. Pierce & Co. George N.
Pierce, realty mortgage, \$10,000.

Canarsie Grove.—Allwood Cycle Company.
W. Lippman appointed receiver.

Hudson.—Edwin Groat, suspended payment.
New York.—Olympic Cycle Manufacturing
Company reported given judgment for \$439.

Saratoga Springs.—Hulbert Bicycle Com-
pany. Stock sold by Sheriff, \$1,275.

Syracuse.—Elbridge Cycle Company. Addi-
tional judgments, aggregating \$406.64.

OHIO.

Akron.—F. E. Ruede's repair shop at No.
405½ Exchange street, destroyed by fire.

Beaver.—Jacob Leist, hardware, etc., will
add bicycles.

Toledo.—M. J. Cooney & Co. Assigned after
giving thirteen chattel mortgages, aggregat-
ing \$4,974.34. Also transfers real estate.

Cincinnati.—F. B. Hewitt, bicycles. Sheriff
seized six bicycles, worth \$364, from the as-
signee, at the suit of the Chicago Stamping
Company.

Defiance.—Defiance Cycle Co. Chattel
mortgage, \$2,523.

Huntsville.—T. F. Carroll, hardware, will
add bicycles and desires agency.

Portsmouth.—J. C. Williams, of Gallipolis,
will open repair shop here.

PENNSYLVANIA.

Meadville.—The L. L. Richmond Mfg. Co.
Executions issued against it for \$3,000.

Philadelphia.—Jas. Whiteside, reported sold
out.

Lebanon.—Cilley & Krause. Krause sells
interest to Cilley, who continues.

RHODE ISLAND.

Pawtucket.—Monroe & Williams, cycles,
etc., reported recorded chattel mortgage for
\$5,000. Adjudged insolvent. Should not be
confounded with Williams & Monroe, Provi-
dence, R. I.

TEXAS.

Fort Worth.—Miller, Cherry Co., assigned to
I. S. Hampton.

Fort Worth.—Young & Baker Cycle Co., re-
ported sued for \$147.

Galveston.—Rush H. Barnes, reported sold
out.

NO PRICE LOWERING HERE.

If the early announcement of '97 prices by
a prominent concern will stiffen any back-
bone, the figures made public this week by
Humber & Co.'s American factory should do
valuable service in that direction, as, far
from being reduced, the price of Humbers
has been raised a notch. Hereafter the road-
ster will list at \$115; the tourist, \$117.50; the
ladies' wheel, \$122.50; the racer, \$150; road
tandem, \$180; combination tandem, \$190. Be-
fore he went abroad, Manager Burris had
intimated that such a move would be made,
so that it is not wholly surprising. It is due
the American Humber people to say that
despite the general paring of prices during
the current year, they held their heads high
and heaved to the marks they had set for
themselves. THE WHEEL knows men who
offered them \$100 spot (cash for their \$110
wheel, and who were refused.

BAVARIA AS A FOREIGN MARKET.

According to a consular report reaching the
State Department from Bavaria, the demand
for bicycles cannot be even partially supplied
by European makers, and Bavaria therefore
offers an excellent market for American
wheels. The strong prejudice against women
appearing on bicycles has altogether disap-
peared in Munich and other cities, and now
married women, single women, old and young,
are enthusiastic devotees of the sport. Consul
Carpenter, at Furth, thinks many thousand
American wheels can be sold next spring in
his vicinity. The roads of Bavaria are mag-
nificent, hard, smooth and clean.

SIX HUNDRED HONORED.

Brooklyn cyclists turned out in parade to
the number of about 600 on Saturday night
last in honor of Park Commissioner Timothy
L. Woodruff, who is running on the Republi-
can ticket for Lieutenant-Governor. Mr.
Woodruff reviewed the parade from his resi-
dence. Lanterns were attached to the
handlebars of all the machines, and many
riders wore fancy costumes. The parade
was marshalled by Chief Consul Potter.

AFTER THE ELECTION IS OVER.

The plant of the Bacon Cycle Mfg. Co., the
Erie, Pa., concern which got into financial
straits before it had marketed a single wheel,
was bid in by S. A. Davenport for \$2,342. It
is thought that it will be operated again after
election.

CORRECTING A PEN SLIP.

Harry J. Cassidy is not "the right-hand
man of Parkhurst & Wilkinson," as a slip of
the pen made him in last week's Wheel. He
is Roger B. McMullen & Co.'s right bow, as
nearly every one in the trade is aware.

MORGAN & WRIGHT TIRES
ARE GOOD TIRES

MORGAN & WRIGHT TIRES
ARE GOOD TIRES

THE BEST ADVERTISEMENT

for a tire is what experienced repairmen say about it. Ask them how Morgan & Wright Tires compare with others as to quality, price and guarantee, separately or combined.

Ask whether we are right in claiming that 65 out of every 100 wheels built in 1896 have

MORGAN & WRIGHT QUICK-REPAIR TIRES.

Every week we get letters like

this one from J. E. Vaughn, Hot Springs, Ark.:

I have had my little lesson, and will now go back to a decent tire and deal with M. & W., who can be depended on as living up to their guarantee. While at Cycle Show last year was induced to buy 20 pairs of _____ Co.'s tires. In these the valves were not properly seated—rubber seemed to be rotten. Sent 10 pairs back and was laughed at. No adjustment was made and tires were returned with about \$5 express charges. I have now ordered M. & W. inner tubes to put inside of them, and hope to get some service from them in this way.

ADVICE.

Don't stick tool into tire before you pump up.
Don't stick tool into the same hole after injecting cement.
Don't use any but M. & W. quick-repair cement.

REMEMBER OUR GUARANTEE.

SEND DEFECTIVE TIRES TO US, NOT TO THE MAKER OF YOUR WHEEL.

MORGAN & WRIGHT,
CHICAGO.

The practical points in our monthly magazine, "Wheel Talk," will put dollars into the pockets of every dealer or repairman.

HARD KNOCKS.

The Great Majority.

Another week of proof that, on track and road, Morgan & Wright Tires are the favorites, as they have been for years.

At the National Circuit meet at Waverly, N. J., Sept. 22, right in the "enemy's country," as W. J. B. would say, 16 out of 32 places went to the M. & W. Tires. As many as won on all other tires combined.

Of the circuit, in 15 meets so far, M. & W. Tires have won 168 out of 227 places—far more than on all other tires combined. Since last week's ad, this grist has come to our mill:

Weekly Winnings—Off the Circuit.

Roodhouse, Ill.....	22	out of 24
Hamline, Minn.....	32	" 40
Kenosha, Ill.....	9	" 13
Milwaukee (Sept. 21).....	14	" 18

A SEPTEMBER OUTING

WILSON R. YARD

PART I.

NEW YORK—BALLSTON SPA.

By thirty hills I hurry down,
Or slip between the ridges,
By twenty towns, a little town,
And half a hundred bridges.

—Tennyson.

Glad September! With her bonnie bright days, and cool, refreshing nights. The ideal month of the tourist a-wheel. That mellow season of the year when the golden sun's softening rays tint with rare, inimitable iridescent hues, and the balmy autumnal breezes, blended with all the health-giving richness of

nature's ripeness, fill one's lungs with invigorating ozone, till we feel that we could wheel forever and a day.

'Tis the year time to enjoy the mountains; for now are they arrayed in royal purple and cloth of gold, their slopes affording rare, ever-changing combinations of color that still defy the deft touch of imitation. The days are warm enough to produce a healthy glow and promote free blood circulation, without the fear of overheating or flesh reduction, while the cool nights induce sound and refreshing slumbers.

Then let us oil up our bearings, strap on our camera and travelling case and away to the lakes and hills. But where shall it be—we've but a fortnight. Some one suggests Lake George and the Berkshires. Question. And a unanimous vote. So be it. Now, for route, plans, etc. The Centurion says: "Why, wheel from New-York high along the banks of the glorious American Rhine—two days will cover it." The Scorchier acquiesces, with a responsive "Aye!" comes from the Bloomer Girl, but the Chaperon, in her precise, decided way, steps into the breach, and comes to the rescue of the Fair Novice and the Fat Man. "No! we'll take the Albany day boat, and from its upper deck enjoy a broader and far more interesting view of all the scenic beauties of the Hudson."

Signs of rebellion on the part of the long-distant contingent bid fair to cause a sectional split, but at last a compromise is effected, and the moon finds all en route on the boat.

Let the hero who has never enjoyed this river trip repent at once, or hide his unappreci-

ative soul forever more. The rare panorama of trees and bush, hill and dale, humble cot and country seat, town and city, mount and plane, coupled with an ever-changing marinorama, can nowhere find a reproduction.

We stroll the upper deck, where ever and anon are wafted on the breeze the melodious strains of the band below, while we enjoy the grand scenic treats spread so plenteous before us. The shaggy, sombre, frowning Palisades, the rolling heights of Rockland, the villa-dotted hills of Peekskill, with scar-faced Breakneck rising abruptly on the opposite shore; now the gates of the Highlands, as we round bluff Anthony's Nose; now the frowning, tier-clad heights of West Point; now under the graceful, lacelike span of the Poughkeepsie Bridge; now with the majestic, cool blue tops of the Catskills sloping from

the horizon down and across the valley, upward with the slopes of Dutchess County to the crown of the Berkshires in the dim distance beyond, till at last the imposing gabled-top of the massive Capitol building looms up before us, and we swing up to the wharf at Albany, to seek the L. A. W. headquarters, Hotel Kenmore (\$3), in Pearl street.

As only the Chaperon and the Fat Man have before visited the capital city, an early tour is suggested, and three of the morning hours are spent in viewing the State Buildings and the handsome armory, followed by a spin through the pretty park and out Madison avenue just to get our shore-legs. Then a line-up and a start for the "Queen of American Spas," now, alas! somewhat shorn of her former splendor, and our trip is well begun.

From the Kenmore we turn our faces northward and wheel out Pearl street over the paving blocks—not bad, but rather jolting on the Fat Man—with a turn to the right at the square, a short block, and left, into Broadway,

traversed by a trolley line, directly to Troy.

The pavement continues for a mile and a half, when we strike the open country and a fair bit of macadam. Off to the left the valley stretches, intersected by the river and canal, with the irregular sky-line of the Berkshires beyond. Green fields, shady groves and thickets of low brush fill up the foreground, while here and there a well-appointed residence lends color to the scene.

Now the road skirts the sluggish canal; there trudge three patient mules, stretching taut the long towline that extends to two timber-laden barges some distance behind, while, trotting merrily by their side, snapping his whip, is the conventional barefoot boy—that "may some day be President," remarks the fair novice.

We now encounter more block pavement, but, as two small boys take the smooth dirt walk, we boldly follow suit, not, however, without visions of constables and county lock-ups, and, passing the rapidly decaying Fair grounds, bear to the right, over the canal; skirt the grounds of the United States Arsenal and run into West Troy (6 m.), where we continue to Sixteenth street and turn to the left over bridge onto the towpath, to Kearny's lock. Here we cross again and wheel directly into the manufacturing town of Cohoes.

This lock is the first on the Erie Canal, and we are just in time to see a boat come through. The scenery is not over-interesting, so we follow the brisk pace of the scorchier over the cobbles to the Miller House, Cohoes (3¼—9¼). Here we turn to the left down the hill to the Waterford Bridge, over the Mohawk River. The huge slate ledges look gray and bare, while the rugged cliffs are covered with smoking, noisy factories. The waters, once forming a beautiful falls, now, save at high-water seasons, roll sluggishly down in separate channels, causing the Fair Novice to make rather pointed remarks anent rough hands and grimy factories marring the face of nature. Alas, her poetry and romance are to receive the same rude shock more than once!

The view eastward as the river sweeps toward its conflux with the Hudson is charming; it broadens and fills as it flows over the dams with a low, rhythmic rumble, then spreads before mossy, tree-dotted banks and disappears in a bit of rich green woodland, whose tree-crests blend with the lighter shades of the far-off hills.

The road is good 'now, and we follow the tracks up an easy grade, succeeded by a stretch of level, skirting the canal; then over another slight rise, where we pass on our left an old burying ground, whose mossy, time-scarred vaults overlook a winding meadow brook. We cross the bridge and enter Broad street, Waterford, tree-bowered and lined with neat residences, which we follow to Third street, and there turn to the left (2m.—1¼m.)

The road now swings eastward and follows the course of the upper Hudson, of which we catch pleasing glimpses ever and anon through the vista of waving branches.

Now we run close to the river's bank, beneath us the water's ripple and sparkle in the noonday sun, while the opposite shore rises

in a rocky, miniature, tree-crowned bluff. Southward it stretches like a silvery ribbon through the meadows, and before us it expands through lakelike in its setting of emerald hills.

Now through a stretch of grassy slopes, pasture lands and groves, taking the side-path where the road is poor, swinging back from the river, to meet it again a mile or so beyond. Several neat farms border the roadside, and then on our left we pass a little farm cottage, whose clapboards and mouldings reflect its owner's patriotism in an eye-dazzling mingling of the National colors, flecked with just a dash of Erin's emerald hue to relieve the kaleidoscopic tints. Back again from the river, and now by a tree-bowered lane, over whose entrance swings a sign bearing the inscription, "Camp McDonnell," while afar down its narrow way on the river bank we discern the shining white tents, with "Old Glory" flying over all, denoting the quiet retreat of some canoe party.

Over a tiny brook, past the quiet precincts of an ancient burying plot; again the river close beside us, rushing and seething over its rock-strewn bed, and we shortly enter Main street, Mechanicsville (8-8 m.—20-1-8 m.), where at "The Talmadge" we procure a lunch.

The road through the town is very good; we cross the bridge and at the second street (North street) turn to the left up over another

bridge. Now for a long, gradual climb up an easy grade over a bed of shale—good, smooth riding. Down in the valley on the left flows a pretty stream, through a double border of handsome trees whose dense foliage occasionally breaks enough to afford us charming little water views. On the right rise a series of low ridges—not unlike massive earthworks in their contour.

On through fields of goldenrod, bits of woodland, groves of low, scrubby trees, with here and there a wild bit of scenery, the road fair and poor, but always a bit of rideable side path. Now the country takes on a more pastoral garb, and broad, cultivated fields border the way, with occasionally a neat farmhouse. Again, the hills rise abruptly on the right, rocky, bluff and densely wooded, while the valley sweeps down on the left, a dense mass of tangled leaf and branch, causing the Fair Novice to grow rapturous as we spin through a grove of spruce and pines whose petals laden the air with a heavy, sweet scent, while from afar come the musical ripples of the brook in the vale below. There in a cut on the hillside and to the left stands an odd pulpit-like formation of sandstone, and out come the cameras; but alas, the light and the sombre background preclude success. Now through a series of low hillocks and we reach a hilltop, to see the sparkling waters of Round Lake, a noted camp-meeting resort, before us on the left, imbedded in the hills. A down run, skirting a small pond, and a dash into the little settlement of Maltaville (6¼ m.—26%).

Here, after a passing glance at an old stone house built of cobbles, on the right, we take the centre road, which makes a sharp dip down over a millstream and up a barely rideable hill, where the Fat Man comes to grief and also the Fair Novice, who dismounts to fix her bell, of course. We are in for a long, steady climb, but the grade is so good and the scorcher sets such an easy pace that all manage it admirably. From the top we all

pause to enjoy the fine view to the southward. There, eastward, their ragged tops mingling with the low-lying clouds, are the majestic Berkshires, while hill upon hill roll, like billows of the sea, with just a bit of Round Lake and a little hamlet in the foreground to give a finishing touch to the impressive landscape.

Onward and upward, with an everchanging hill-o-rama, until we reach Downing-st. cross roads (2m.—28%). Here the straight road will take us direct to Saratoga (9m.), but, as we wish also to visit Ballston Spa, we turn to the left, and have a down-hill run, keeping to the right as the road forks, then straight on at the cross-road, over the tracks twice, and keep to the right into Church Lane, cross

in close proximity. The Fat Man, who has contracted a beautiful thirst, and the Scorcher show an utter disregard for all hygienic laws and mix with indiscriminate freedom all the waters in succession, while the Fair Novice, whose first experience has been the Carlsbad, which is even more richly flavored than its Teutonic Limburger-laden sponsor, fights rather shy; prudence and experience regulate the chaperon and the centurion, while the Bloomer Girl saves her thirst for stronger waters.

From the springs right into the town we roll over a fine gravel cycle path, skirting the driveway of Saratoga avenue, where the Scorcher and the Centurion give vent to their pent-up energies in a rattling finish.

We enter lower Broadway and turn to the right on that broad, handsome, elm-shaded boulevard, down through a double row of large hotels; pass the Convention Hall, the House of Pansa, Congress Spring Park, traverse the square, and roll by those magnificent, huge caravansaries, the Grand Union, Congress Hall and the United States, to the Worden House (L. A. W., \$2.50, 6¼ m.—38¼ m.). Saratoga! Nestling in the foothills of the Adirondacks, which gives it a climate that is delightful; with its grand hotels, the largest and handsomest of any summer resort in the world; its fine bowered driveways, its pretty lake and its springs, of more variety and quantity, well accord it all the praise of its most earnest devotee and its title of "Queen of the World's Watering Places."

After a rest and supper a caucus is held in the parlors, when, everybody voting "not tired," a run is made up Broadway and through Woodlawn Park, the handsome estate of Judge Henry Hilton, with its twenty miles of beautiful drives.

The morn dawning brightly, every one is astriv with the lark, and a spin on the cycle path to the geysers is taken by wheeling down Broadway to the Aldine Hotel, where we turn to the right on the geyser road directly on to the path by which we entered the town, and have a two-mile spin to the springs. After a refreshing glass or two we take the homeward path. We retrace our way and take the fork to the right at the top of the hill just beyond the Kissengen spring, cross the railroad tracks and enter the return path. We pass the Victoria spring, a mild table water, and swing through broad fields resplendent with ox-eyed daisies and goldenrod, that, of course, bear irresistible attractions to the ladies. Then, passing one or two tiny farms, we have a fine view of the hills southward, as the road winds. We bear to the left as the road forks, and on to the next cross-road—lower Broadway—which we take—still on the path—directly into the town, with a keen appetite for breakfast after our spin of five miles.

Saratoga has so many attractions and pretty rides, notably to Glen Mitchell, a mile beyond Woodlawn Park; Bemis Heights and Schuylerville, where the battle took place, a round trip of twenty-five miles via Lake avenue; and also the ride around the lake, that one can spend several days very agreeably. But we conclude to be satisfied with a spin along the lake to the White Sulphur spring.

[To be Continued.]

High-st. and take Milton avenue to the Lincoln Hotel (5 m.—31¼m.)

Leaving, we continue up Milton-ave., cross the second bridge by the paper mill and turn to the right on to Saratoga-ave., which swings around to the leftly the Lithia Spring. A cycle path skirts the road here directly into Saratoga—in fact, we find that Saratoga is admirably supplied in this respect, as several miles of cycle paths extend in every direction in and about the town.

We pass, shortly, on the left the Carlsbad Spring, and as we reach the cross-road we see the Vichy, Kissengen and Geyser springs, all

KANSAS TO CORELLI.

After a Close and Dispassionate Study of the Wheelwoman an Editor Defends Her.

A Kansas editor, who has evidently made a close study of the wheelwoman in his vicinity, thus pays his respects to Marie Corelli anent her recent attack upon the bicycle and the riding thereof by women, in this fashion:

"Marie Corelli does not take kindly to the wheel. She says she does not ride one, and entirely abhors cycle riding for women. Furthermore, she declares that while 'men look sufficiently hideous and undignified on a wheel, women are worse than hideous; they are immodest.' Moreover, Marie says, the 'poet's ideal of exquisite womanhood is utterly destroyed by the sight of these perspiring, red-faced, lank objects, working their legs treadmill fashion in mere blatant feminine vulgarity.'

"It is clearly evident that Miss Corelli never rode a bicycle or she wouldn't talk in that fervid manner. She has never experienced the poetry of motion or the fine freedom of coasting down an incline of forty-five degrees with a pleasing uncertainty as to the road ending in an open ditch or a corduroy bridge. She has never known what it is to take a header over the handlebars or felt the chagrin of having her back tire come down in company. Hence her vigorous talk is the talk of inexperience and will have little weight.

"Another thing: Had Marie ever been in Kansas City and seen our own cyclodonnas on their wheels she would never have conversed through her fall millinery in that in-temperate fashion. However it may be elsewhere, certain it is that Kansas City girls are neither 'red-faced' nor 'lank.' On the contrary, they have that elegant peaches and cream complexion so ardently and vainly wished for by titled ladies of Europe, obtained by spinning up and down our majestic hills on the bicycle.

"As to lankness, the very word has become obsolete with the girls of this town. They are plumper than the proverbial plump partridge. Not an angle in the whole lot. Every corner neatly rounded out and trim bodies filled to bursting. And as to their—ahem—limbs working in treadmill fashion, that never happens—never. And even if it did one wouldn't know it from observation.

"Our girls, most of them, scorn the bloomer, and when they scorch along the streets a neat boot and a dainty ankle flash upon the beholder's eye for one brief moment and that is all. There is nothing resembling a treadmill when Kansas City girls ride. The motion is simply ethereal, the graceful swan gliding upon the surface of silvery water being as clumsy as a cow or a hippopotamus in comparison.

"Marie is sour; her system is jangled, out of tune, harsh, and she ought to learn to ride the wheel as soon as possible. It will be roses in her cheeks and sunshine in her heart. We are sorry for Marie."

FOR PESSIMISTS.

Its advocates acknowledge that cycling is not a complete means of attaining all-round development, and do not deny that to those who believe that the Creator never intended the hampered sex to enjoy this freedom, this freedom is objectionable. But that it is more alluring, more beneficial and more general in its action than any single outdoor exercise for women the specialists testify, with few dissenting voices.

NUMBERS TELL.

"What is the cause of so many cycle accidents?"

"So many cycles, of course."

COMING OF A CHANGE.

While it was evident he himself was not a rider, yet the pleasure he found in watching those who were was evident. He had found a seat, sheltered from the wind by a neighboring billboard, which gave him an unobstructed view of the passing host of Sunday boulevardiers. Not a rider passed but received from him attention, and sometimes caustic criticism. At last he slowly got up from the seat of stone he had occupied, straightened the kinks out of his none too young legs, removed the powerful pair of glasses he had used when watching the riders, replaced them with a pair more ornamented, but of less strength, and said:

"If I may be allowed to let my imagination do a little ground and lofty tumbling, I think I see a change for the better in woman's dress—and man's, too. The knickerbocker is no longer conspicuous. Thank heaven for that.

"Pretty soon we shall slide into knee breeches. Men will not wear suspenders, which are the invention of the evil one, and render life barely worth living, and, consequently, a better flow of spirits.

"As for women, things are drifting in the right direction. The present bicycle costume is, as a general thing, hideous beyond expression. Freedom in the use of the limbs is attained, and that is a great matter, but within two years a dress will be invented which will be comely as well as useful, and then we shall all be emancipated and sing 'Glory, hallelujah!'

"Men with knee breeches and women in short dresses! What more is there to hope for, except the millennium?"

He was an enthusiast; he believed in what he said, but the day when costumes will be such as he foretold is not yet even in sight. More's the pity.

WHAT THEY WANT TO KNOW.

The Wheelmen's Municipal League of San Francisco proposes to be strictly in it politically. Before the League will indorse any candidate's nomination, the candidate must have satisfactorily answered the following questions:

1. Are you a wheelman?
2. How long have you been a wheelman?
3. To what, if any, organization do you belong?
4. If elected to the Legislature will you vote in favor of a bill declaring the bicycle baggage?
5. If elected to the Legislature will you vote in favor of the passage of a bill extending the power, scope and facilities of the Bureau of Highways of this State?
6. If elected, will you vote in favor of the passage of a bill amending the county government act in such a manner as to provide for uniformity in bicycle ordinances passed by county Boards of Supervisors?
7. If elected, will you vote for a bill amending the county government act in such a manner as to provide for the passage by Boards of Supervisors or ordinances embodying provisions for the erection of guideboards and milestones?

Whenever a candidate dodges, shuffles, evades or ignores the questions above he is promptly blacklisted, and the full strength of the cycle vote is down to be cast against him.

SHE DREW THE CLOTHES LINE.

Her eyes were downcast as she spoke. "No, Mr. Yaption," she said, "the dream is over. I can never be your wife."

"Spare me this cruel blow," he said, in a choking voice. "I thought you loved me." "I did love you," she went on, without raising her eyes. "Perhaps I love you yet. But I can never, never wed a man who rides a wheel while wearing a sweater a la Chinese."

HER FIRST EXPERIENCE.

How She Frightened the Fat Man, Bruised Herself, and Annoyed the Teacher as a Novice.

Learning to ride a bicycle is not quite as easy for a nervous woman as falling off a log, for example, would be. It does not matter how many improvements the teacher brings to his aid to reduce the wabbling tendency of the fair novice, still does she suffer untold misery in her early attempts at acquiring cycle culture and control. A woman whose cleverness seems to have settled in the pen rather than in the pedal tells her story of her riding school trials this way:

"I took my first lesson one day this week. Directly afterward I took cold. Is it a coincidence? The lesson was awful, or rather the experience was. I went to a riding school, and was for a time deliberating whether I would mount a wheel or not. A fat man was wheeling around by himself, bumping into things occasionally, but evidently proud of his record. A slim young woman was being led around by an engaging young man, who was holding on to her by a leather strap.

"This young woman was the cause of all my temerity. She ambled around so easily and gracefully, though it was her first (?) effort, that I, though a woman who had smashed most of her bones across country in Ireland, ought to be able to manage a contemptible little bicycle. So I was belted and mounted, and, oh, what a devilish thing a bicycle is!

"I had mounted with a sort of smiling contempt, but when the thing began to go, and I forgot to pedal and lost my feet, so to speak, and had them crushed by the wheel, I shrieked dismally to the agreeable young man not to let go of me on any account. How hard the floor looked! And when the silk underforce of my skirt went rip, the cold perspiration broke out upon my face and crept down my shoulders—what a dreadful ordeal it was!

"What a wriggling, fiendish, desperate thing a bicycle is! With a mind of its own that beats an ass for obstinacy or a mule for temper it ran into the wall and barked my shins; it raced madly after the fat gentleman, who shied into the railing in a frantic effort to escape; it dashed round curves, and shot me forward and shot me backward, and nearly shot me into the insane asylum.

"The bit of a saddle flew from under me; not for two seconds was I really sitting on it. It was useless to ask the nice young man who was racing along with me where were my feet. Those wretched extremities were simply ground to abrasions beneath and between wheels or tires, or some such diabolical mechanism.

"'Press the pedal,' cried the young man. 'Where is it?' shrieked I; and when I did get it for a moment I pressed on it hard, and one foot went down and one knee sprung up; how quickly I lost them again. And then I was told how to use the handles—as if I had not concentrated all the powers of my mind on the pedals. Oh, that I were a man and could call them d—able pedals!

"I am going again when my back straightens out, though my forehead grows damp at the mere thought. I know in my bones that I shall never, never be able to circulate around this beautiful world on a wheel."

HE HAD BEEN A RACER.

Incredulous Friend—You'll never accomplish anything by trying to reach the pole.

Artic Explorer—Just wait till you see me coming down the homestretch.

HE HAD A REAL GOOD THING.

Two young men sat listlessly on one of the benches in Madison Square. One had on a pair of patent leather shoes, evidently of good make, but now much "run over" at the heels and badly cracked. His trousers wrinkled in accordion pleats horizontally across the legs. The other wore a well cut coat, from which, however, two buttons were missing, and which was frayed at the wrists. His waistcoat matched neither his coat nor his trousers. His hat, of a good block, had a large dent in it. There was no sign of a watch chain on either of the young men, nor any jewelry. They were evidently "out of it."

Suddenly there came in sight a resplendent vision—a third young man; but neither Solomon in all his glory nor yet the lilies of the field were ever so arrayed. From his gleaming tile the rays of the setting sun spattered in a fine spray of light. His linen was a snow-drift. From the centre of his shirt front a Kohinor battered the fading daylight into fragments and hurled the fragments into the eyes of those whom he met. On the hand which gracefully swung his light Penang stick a Great Mogul shone with 32-candle power. His long, bell-shaped frock coat was open, disclosing several links of a gold watch chain that would have held the frigate Constitution in a Samoan hurricane. Down the front of his light trousers two beautifully accurate creases led the admiring eye toward white "spats" and shining patent leathers. He was surely "way in it."

The two men on the bench looked with eyes that stuck out like china door knobs. "Hully gee-e-e!" said one, "If it ain't Jim!"

were first introduced in England it was considered undignified for noblemen or very wealthy men to ride on them, and when a noble lord had the temerity to ride third-class one day society was horrified.

When the novelty of a thing passes away, then it is not asked whether it is dignified or undignified; it has become a custom. Some day it will be considered undignified for a bishop to walk, and the fact that he rides a bicycle, and rides it well, may be a recommendation to his appointment as Archbishop of Canterbury.

WIND-SUPPLYING CYCLES.

In a spectacular play now running here in New York the plot calls for an unlimited display of Arctic scenery, wrecked ships, ice-floes and the like. A big circular fan was employed to cause the sails of the ships to fill and to shake the canvas employed to represent the turbulent waves. This fan has now been displaced by a half-dozen super-numeraries on bicycles. Three bicycles are mounted on stationary stands like home trainers on each side of the stage during the scenes involving the wind effects. Leather belts running over the untired rims of the rear wheels connect with the gearing, revolving large rotary fans. The fans are geared half a foot from the stage flooring for the waves, and holsted by a simple mechanism to a height of about fifteen feet for the gale effect. The names of these wind-producing will ornament Chairman Gideon's bulletin as soon as they can be ascertained.

TIME CHANGETH ALL THINGS.

It is decidedly startling to see messenger boys spinning along the streets on bicycles. It is so customary to consider messenger boys the only exponents of restfulness and complete repose that to see one astride a machine which will not admit of leisurely movement is a positive shock. There are traditions of messenger boys starting out in their early infancy to deliver a note and arriving at their destination when they were old and gray-haired, and it is even asserted that absent-minded men have from time to time tied their horses to some of them, mistaking them for stationary hitching posts. But all this is about to be changed, if the boys don't go on strike.

The innovation will rob them of many of their cherished pleasures, for how can a boy read a thrilling story of Western life while going along the street on a wheel? Exploits of "The Gory Gouger of the Gulch," and other stories dear to youthful fancy, must be studied outside of business hours.

Still, the case of the boys is not altogether hopeless. The opportune puncture of a tire would give them an excuse for delay and make it possible to sit for several hours on a curbstone or doorstep to read their favorite class of fiction.

ENDEAVORING TO MEET INSTALMENTS.

Now the bicycle is causing trouble in the ranks of the Christian Endeavorites. This, one of the officers of the Christian Endeavor organization said, was noticed particularly

Partly Pictured, But Wholly Told.

The vision saw them at the same time, and came over to the bench, smiling.

"For heaven's sake," said one of the has-beens, "where did you get it? Have you found a gold mine?"

"Better than that," said the vision. "I'm promoting bicycle parades, wheel voting contests and cycle carnivals for the boom department of The Morning Gurgle. Come have a ball."

And wondering they went.

QUICK OR DEAD.

Wheelmen have been barred out from many places, among others cemeteries. The bar, of course, being against wheelmen riding on bicycles, not in hearses. This discrimination will no longer exist. Much of the time of the annual meeting of the American Cemetery Superintendents at St. Louis was taken up with a lively discussion as to whether bicycle riders should be admitted to the cemeteries, that is, before they come to stay. It was finally decided by a vote that they should be admitted under proper restrictions.

QUESTION OF DIGNITY.

A discussion has been started in England as to whether it is dignified and proper for a bishop to ride a bicycle. It appears that the Bishop of Colchester has taken to the wheel, and the people of his diocese are much exercised over the thought of the reverend gentleman using this means to travel.

The whole matter resolves itself into what is the meaning of dignity. When railways

SAFE AS A ROCKING CHAIR.

William F. Mangels, of Brooklyn, has patented what he is pleased to term a "bicycle railway," but what is really an arrangement to permit a novice to safely learn to ride a wheel. Within a suitable building is arranged a track, preferably but little wider than the tire, and having low side guards, and adjacent to the track, at about the height of the handlebar, a continuous rail is supported by fixed standards, the top and bottom edges of the rail being adapted for engagement by grooved wheels carried by hangers on an auxiliary frame attached to the bicycle. The frame is light and readily attached to the bicycle, the latter being held securely held in vertical position on a good track, where it may be propelled with but little friction by an inexperienced rider.

STRIPPED OR NOT SHIPPED.

The Great Northern Railroad has issued orders that no wheels with cyclometers or lanterns can be accepted for carriage. The company defends its action on the ground that it is forced to pay for so many breakages where there have been lanterns or cyclometers on wheels that it is justified in refusing machines unless they are in condition for shipment.

MAY PROVE PARETIC.

The society riders' innovation of bestowing fancy names upon the wheels they ride may prove all right when the memory of the average person gets used to carrying the extra burden, but meantime a few society men are likely to succumb to paresis.

at the recent National Convention held at Washington. Very few young people, he said, attended. Upon inquiry as to the cause, he was informed that the majority had saved the cost of the trip toward purchasing wheels.

PIGEON FLYING AND PEDAL PLYING.

Experiments with wheelmen and carrier pigeons for transmitting messages are being made by the Gymnastic Society of Rome, in the interest of the Italian Army. The rider carries a small cage attached to his machine, in which are several well-trained pigeons. When important observations have been taken and jotted down they are affixed to the birds, which are liberated.

UNITED THEY STAND, DIVIDED FALL.

Toronto comes forward with the Pedestrians' Protective Association, membership in which is limited to non-cyclers. A small initiation fee is charged, and when a member is injured by a wheelman an assessment of 10 cents is levied upon each P. P. A. member, to be used in prosecuting the case in court. The enthusiastic originators of the association declare they will have 5,000 members within thirty days.

ANY ROUTE, ANY METHOD.

The following from a Mexican paper is respectfully referred to the Smithite crusaders: If a young woman is bound to ride to the devil, she can probably make as good time on a chair with casters as on a bicycle.

WHEN ABROAD YOU GO

You Must Seek Business Along the Lines that Trade Is Done in Foreign Markets.

In seeking foreign trade, the manufacturer too often is inclined to supply his customers with inferior goods. This is brought about largely by reason of the extra discounts demanded by foreign buyers, as well as the low prices obtained for his product as compared with the ruling figures of his home trade, and also from a mistaken knowledge of the ability of the foreign buyer to discriminate between the different classes of goods.

The line of policy to be pursued by every manufacturer desiring a continuous trade for his products in any foreign country must be to furnish goods at all times such as would satisfy the most intelligent and exacting purchaser, along with such other goods as will please those whose tastes are not fastidious. The manufacturer must never lose sight of the fact that an intelligent and discriminating public can be found everywhere. Their merit alone can create a reputation for goods, but it can not be unaided sell them.

Better results can be obtained in foreign markets by dealing direct with responsible houses, located in the most central points of the countries, than by any of the other methods often adopted by manufacturers.

While the manufacturer may consider the sending of a competent representative with samples direct to foreign countries as somewhat expensive, there are many reasons why this should be done. The necessity of carefully selecting responsible houses in the large commercial centres possessing facilities for showing goods to advantage, and the instructions and explanations which should be given to such houses by a representative to enable them to maintain the reputation of goods, cannot be overestimated.

As a matter of fact, the principal houses in the important cities have their branches throughout the interior, at which points goods placed under their control will be distributed, and as goods are required to be packed differently for the different ports, in accordance with the mode of transportation to the interior markets, as well as the duties paid at such ports, and as all this information is absolutely necessary to the manufacturer, so he may be thoroughly in touch with the purchaser, it again becomes obvious that a competent representative should cover the ground and obtain this information in detail.

The question of giving careful attention to the execution of orders, and the rendering of invoices is a point rarely appreciated by the manufacturer. While a shortage of some minor part or a slight defect in construction may be easily remedied by a home dealer, it would occasion untold annoyance and paralyzation of sales to a foreign dealer.

This applies particularly to those countries wherein the dealers conduct their business in a language different from ours, and while it is not absolutely necessary that invoices be rendered in the language of the country to which goods are shipped, all invoices must be in duplicate, and explicit in detail, with no abbreviations.

A description of the contents of each package must be given, corresponding to its shipping number, as well as the gross and net weights in American pounds, and the net weight of each class of articles therein. Gross weight and measurement should be plainly marked on each package, as well as on the invoice. To assist the dealer in the opening up and assembling of the goods after they reach his hands, a note or transcript of contents should be placed in each case or package, and signed by some one in authority at

the place where goods are packed. This will be found a great value in adjusting questions of shortage.

A contract should be executed between the manufacturer and his foreign buyer, wherein conditions should be explicitly embodied regarding the terms of payment as well as privileges conceded to buyer, in case of breakage, territory to be controlled by buyer, etc., etc. This will often obviate long and much correspondence.

With responsible houses you should not be too exacting as to terms of payment. But where credit is given the better method would be to always draw against shipment at such time as may be agreed upon, attaching drafts to the necessary shipping documents and placing them with some bank at home having correspondents in the countries drawn upon, with instructions to forward for acceptance and collection upon maturity, with the delivery of documents only upon acceptance of drafts.

In many foreign markets merchants are compelled by established custom to give extended credits to their trade, and it is not well to seek these markets with the idea of at once revolutionizing their customs.

England, Germany and France enjoy the benefits of a well and long established trade in foreign countries, which certainly has not been obtained by merit alone over American products. While the better banking and shipping facilities have contributed somewhat to their success, it is more largely due to a careful study of the conditions and requirements demanded by those to whom they sell.

PATCHING AND BRACING.

When a piece of the slot which supports the bearing of the rear wheel is broken off, as indicated in figure 1, in which A is the part which has separated from B, the procedure

to effect a repair is simple. A piece of sheet iron about an eighth of an inch thick need only be riveted on one or both sides of the fracture as marked C in figure 2, and a substantial job results. If, however, the fracture occurs between the tubes, as illustrated at D in figure 3, the remedy is not so easily accomplished.

The break can be fixed, however, according to the plan designated in figure 4. It will be necessary to use a little skill in shaping the piece of wrought iron to correspond to the positions of the tubes. It can be done by a series of hammerings and adjustments, but a simple process consists in making a solid pat-

tern from iron the exact shape of the slot and tubes. Then the heated piece of wrought iron which is to be used as a patch can be moulded to fit the shoulders of the tubes neatly and without much labor.

After the patch is fitted to the pattern it can be drilled for as many screws and in the order shown, there being two for the upper tube F and two for the lower tube E. One screw suffices in the flat or slot portion G, as rivets are used here also. In order that a firm union may result it is best to bring the patch way round to H, thus covering the slot completely. Such a patch will be very strong. If a like one is set to the opposite side the durability is further increased. All rivets and screw-heads should be countersunk.

Few riders desire to increase the weight of their wheels by having additional braces adjusted for strengthening purposes, yet at times we have calls from wheelmen who are chary about trusting themselves on a wheel unless the same is strengthened. Not long since a man well up in engineering called with his wheel, saying that he had figured that according to mechanical laws a bicycle ought to weigh sixty pounds to support a man of average weight. And his wheel weighed but twenty-four pounds. He wished it strengthened and the work was done, as shown in figure 5, in which an overlapping sleeve or clasp was made from sheet steel and bent around each connection of the tubing in the manner shown by A and B.

The inner side of each was made to lap and drilled for a series of small bolts, as presented at C and D respectively. These plates were afterward nickel-plated. They served to strengthen the frame of the wheel, to the satisfaction of the owner. Another type of bracing which we have had occasion to apply is shown in figure 6, consisting of clasps E, E, E, E, each being supplied with extensions, G, and the latter are bolted to the clasps F, F, on the cross tubes, as signified. The same style of braces are employed on the other connections of the frame. This form of bracing serves its purpose well and can be taken off at any time.

G. D. RICE.

CRANK LENGTH AND LEG LENGTH.

The rider's leg consists of a series of three cranks—the thigh, the leg and the foot. The motions at the joints of this series—hip, knee and ankle—actuating a pedal describing, say, a circle of forty and a half inches, will be greater if the series of cranks be short than if long. This will be shown by the height which the middle joint—the knee—rises and falls.

The greatest modification of this motion dependent on the size of the active cranks will be effected by the length of the foot, that is, the crank next the circle to be described. The longer the foot—given proper "ankle action"—the less the rise and fall of the knee. On the other hand, the greater the circle described by the pedal, that is, the longer the passive crank, the greater the rise and fall of the knee. Therefore, to equalize the motions at the knees of long legs and short legs is purely a question of the difference in the length of cranks.

A PROPOSAL IN KANSAS.

"I cannot get down on my knees," she said, "because I might bag my bloomers; but if you will swear to me that you are in favor of free silver and that you will let me carry the night-kye, I will consent to marry you."

PESSIMISTIC.

"A mortal can never tell where he's going to be next in this life," said the moralist.

"No," replied the man with a bandage over his eye, "especially if he's learning to ride a bicycle."

PALMER TIRES

Quarter-Mile $15\frac{2}{5}$ Seconds.

Stanley M. Barrows, of Denver, last Thursday rode an unpaced, straightaway quarter in .15 2-5—a mile-a-minute clip. Barrows rides a — wheel fitted with Palmer Tires.

MINNESOTA CHAMPIONSHIPS ON PALMERS.

D. F. Carmichael, of St. Paul, mounted on a Syracuse Bicycle, fitted with Palmer Tires, on September 18-19, won the following State Championships: One-fourth, one-third, one-half, one, two and five miles—a clean sweep. Carmichael rode the five miles in 12.05, lowering State record 12 seconds.

PALMERS WIN COASTING CONTEST.

The "True American Coasting Contest," at Trenton, N J., September 12, was won on a Stearns wheel fitted with Palmer Tires. There are no tires so good for up-hill, down-hill, and on-the-level riding as Palmers.

HEART-TO-HEART TALKS.

Recently we have been telling our friends a few things about tire construction—especially about Palmer Tire construction. These little heart-to-heart talks have been interrupted by a series of magnificent winnings on the track, and we couldn't resist the temptation to give the good news to our readers. We hope soon to renew these talks. But, in the meantime, don't ever forget that all Palmer Tires are made alike—with identical fabric in all styles—just more rubber on the roadster than on the racer.

The Palmer Pneumatic Tire Co., 133-135 S. Clinton St., Chicago.

For prices address: SELLING AGENTS, THE COLUMBIA RUBBER WORKS CO., 66 Reade St., New York, and 159 Lake St., Chicago.

Kindly mention The Wheel when writing.

THE RACER AS AN ADVERTISEMENT.

It has often been debated whether the manufacturer received an adequate return in advertising from the money he expended on racing. An interesting and able argument in favor of the proposition crops up in a recent interview on the part of a Trade Press reporter with T. W. Crosby, the gentleman who has shown such versatile talent in impressing upon the public the merits and superiority of the Monarch:

"I see you believe in racing men as advertising mediums. Do they pay well?"

"Yes; our rider, Cooper, is the 'crack' of the country, and he spreads the name 'Monarch' wherever he goes. Through him we supplement our regular advertising. He is like the missing link that others have lost and we have found. He clinches results from all our advertising."

"In what way do you mean?"

"Why, bicycling is a popular sport, and daily papers and others must give the people all the news about it. A winning rider soon becomes a favorite with the public, and they all wonder instinctively what wheel he rides. The advertiser must see to it that they find out. The name he has created for his wheel must be inseparably linked with that of the rider. In this way he can get his wheel talked about and advertised broadcast in the most friendly way."

"Do you follow up this kind of advertising systematically?"

"Yes; we send around with Cooper a man whom we call his press agent. When Cooper wins, which is nearly every time, this man's duty is to try to get the name of the Monarch wheel into all the newspaper dispatches toiling about Cooper's victory. He works in a story about Cooper and the Monarch not only in the Associated Press dispatches, but into the country publications all over the section in which the race took place. We are advertisers in nearly all of these publications and we are careful to be strictly up to date with our advertisements. If the dispatch says Cooper won, but says nothing about the Monarch, the readers who do not know what wheel he rides, cannot miss finding out, for our advertisement in the same paper tells in big type the story of Cooper and the Monarch very briefly, but well."

"How do you know that the people pay any attention to such an advertisement?"

"That is very clearly proved to us. When business drops down pretty low in any section of the country, we send Cooper into the races there. He cleans out everybody in the races, and our business picks up at once, for the people all talk about him and his wheel. This means that people like to ride a wheel that is popular as well as being a good one."

"Ah, I see. You have made the name 'Cooper' synonymous with 'Monarch.'"

"Yes; that's just the point. And we have done it, too. We receive hundreds of letters asking about the wheel that Cooper rides. They have come in great numbers from Europe, and even from Australia, Asia and South America. You have no doubt noticed that we call him frequently in our advertisements, 'Tom Monarch Cooper.'"

NO FURNITURE MAKING.

The rumor that the Boston Wood Rim Company were to manufacture furniture in a small way in order to use up the stock that cannot be used for wood rims is wholly untrue. While it is true that a number of furniture manufacturers are reversing this order and making rims out of stock they cannot use in furniture, the Boston Wood Rim Company are quite content to stick to their original intention of making the best laminated rim in the world, for which so many years of experience and their extensive plant at Bedford, Mass., gives them ample means.

SOME NEW BRITISH HUBS.

London, Sept. 15.—Bearing out what I wrote after last year's shows, I have a few fresh patterns on hubs to place before American makers. A glance will suffice to show that they are well on the disc-adjusting plan or imitations thereof, save one. This I will take first, as it is the greatest novelty. I cannot say that I regard it as an improvement, but since a company has been formed to manufacture and push it, some people evidently have faith in it.

It is called the side pressure ball bearing hub, because the adjustment of the ball bearing is secured automatically by the weight of the rider. The block shown illustrates the front wheel hub (b), the forks (a) being bolted to the levers (2, 2). The action of the rider's weight causes the lower ends of the levers to press against the cones (3, 3), which slide on the arch (4), and so gives a side pressure which automatically adjusts the bearing. I have not yet heard any competent critic offer a favorable opinion on the device.

This is a new hub, just marketed by R. F. Hall, who was the moving spirit in the Cycle Components Manufacturing Company last year. The cut is almost self-explanatory. In this hub it is sought to obtain the advantages of a disc-adjusting hub, with the simplicity of the cone adjusting variety. For that reason the discs or cups are screwed positively into the hub-barrel and are not intended to be moved. On the end of the axle under the chain wheel the bearing cone is part of the axle and turned on it. On the other end the cone is screwed on to the axle before the disc on that side is fixed. To slacken the bearing this cone is screwed in; to tighten it is screwed out. It is a development of an American hub which Mr. Harry James, of Birmingham

bought in 1893. This is Mr. James's hub, and, as will be seen, is very similar to the Hall. A, A1 being the discs jambed into the hub barrel, with left and right hand threads, B being the adjusting cone working on the axle F. In the original hub purchased by James the axle was split, screwed and telescoped, the adjustment being arrived at by lengthening or shortening the axle.

This is a hub, to market which a very wealthy syndicate has been formed and

whose connection with Humber & Co. causes me to prophesy that it will probably be found on Humber machines next year. The inventor is Mr. George Price, of Chester.

A—Is a cone screwed by right hand thread to collar on spindle. B—Cup screwed into hub mouth by right hand thread to reach balls. C—Primary locking ring screwed into same thread of hub mouth, as cup B, locking cup B from backward movement, and for adjustment. D—Secondary locking ring, screwed by left hand thread on extended shoulder of cup B, passing through aperture of primary locking ring C, effectually locking cup B (and chain wheel in case of back hub) into set position.

It is a very simple hub to adjust, as by unlocking D and turning the adjusting disc B all play is taken up. While locking the nut C, B must be held in place by an open jaw spanner.

This is a German invention of the famous Elswick hub. B is the adjusting disc screwing into the barrel and locked in position by the ring nut C jamming against the end face of the hub. The improvement on the Elswick is the fitting of a felt washer (a), which is held in position to the adjusting disc by the ring nut A1.

The chief merit of this description of hub is its oil containing qualities, added to which is the fact that the bearings can be made more mechanically true to each other than has been the case in the ordinary hub. In the latter any "sag" between the male and female threads of the adjusting cones permits the fork ends to pull them out of adjustment with the bearing caps.

LARGEST IN BALTIMORE.

In these days of business depression, it is refreshing to meet with a concern who are not only seeking to enlarge their business, but making preparations for a much larger trade next year. E. D. Loane, Jr., & Co., of Baltimore, Md., have removed to 14 East Lexington street, and have now at their command a building four stories high, twenty-five feet wide, and allowing a salesroom 130 feet deep, which gives them by far the largest store in the "Monumental City." The fourth floor will be devoted entirely to a nickel-plating and enamelling plant; the third floor to the manufacture of baseball and football suits; the rear part of the second floor the wheel repair department, and the front portion to a salesroom, while the main floor has been fitted up in splendid style as a show-room for wheels and sporting goods. The basement will be utilized this winter as a riding school. The Loane Company is one of the most successful concerns in Baltimore, and no doubt next year will increase their already large business.

dress for further information.

FOWLER CYCLE MANUFACTURING CO.

CHICAGO.

NEW YORK. BOSTON.
WASHINGTON. LONDON.

THE COMING OF THE TIGER.

A bicycle which should, from its name, meet with a prompt welcome from New Yorkers, especially those of Tammany persuasion, is the Tiger, built at Dayton, Ohio, by the Stoddard Manufacturing Company. Possessed of a splendid plant, long experience and a high reputation, gained through years of successful competition in the line of agricultural machinery, Stoddard & Co. do not start in the building of bicycles without that particular sort of experience which alone makes success certain in any line of manufacturing.

That the company has thoroughly grasped the situation in the wheel trade is best shown by this announcement: "There are already a great many bicycles on the market—a very few of them first class, really good machines, built on correct scientific principles; most of them of fair, medium grade, tolerably well built, and the rest but wretched affairs, selling for what they will bring, on any kind of terms.

"There is no room for us among the 'cheap' fellows; the ranks of the 'fairly good' are crowded to suffocation already—but in the highest and best class there is no crowd. In this line, as in all other lines, 'There is always room at the top.'

"Among the first-class machines there is always one best—and only one. There is room for but one at the apex of the pyramid. That place is full when it has a single occupant. That's where we are going. It is our determination to put the Tiger Wheel in that position. And it isn't such a difficult job as it might seem.

"Egotism? We think not. It is true that we are new in the bicycle business. Our practical experience in that particular line is yet to be obtained. But we have behind us a quarter century of manufacturing experience. That means something always. The dullest are forced to learn in that school. In our case it means much."

There is a boldness, confident, business-like ring about the foregoing which must command instant attention to these newcomers in the trade.

That they are not using mere empty words in their announcement above is proven by the Stoddard people declaring their position regarding manufacture to be this: "When we say that we shall build our own bicycles, we mean that we shall make all parts of them—complete—frames, wheels, cranks, bearings, sprockets, chains, forgings of all kinds, all parts except steel tubing and rubber tires. We are interested, vitally interested, in every part of the Tiger wheels. We know that we must fully and unreservedly guarantee every part. In order that we may do this in full knowledge of every part, and of just what strain each part can be expected to sustain, we must build our wheels, from the ground up, complete in every detail. Please bear in mind that our Tiger and Tigress wheels are to be built entirely regardless of first cost. That consideration shall not be allowed to enter into the matter at all. We are going to the top if merit can put us there."

From all this it seems a safe prediction that the word Tiger will occupy a very prominent place in cycle history when it comes to be written for the year 1897. There is always room and welcome for such concerns in the cycle trade as the Stoddard Company. They command respect, deserve success, and will not fail in the present case to secure both.

Two English cycle manufacturers have been drawn into a lawsuit over the word "Tribby" as a trademark. What trifling things men will quarrel over!

WHY PROSPERITY PERCHES HERE.

A prominent Chicagoan recently stated to a WHEEL man that it was his belief that ultimately the exclusive cycle dealer and exclusive dealer in sundries would become but a memory. He thinks that the business must become associated with other industries, as it cannot of itself, in and out of season, be self-supporting, barring, of course, such branch houses and distributing depots as may be established by the manufacturers themselves. Perhaps this is the real reason of the success that has followed John H. Graham & Co., No. 113 Chambers street, New York, in their dealings with the cycle trade.

Downey Wood Handle-Bar.

As is well known, they are among the largest, if not the very largest, commission hardware houses in New York city. Several years ago they undertook the entire sales agency for New Departure bells, and their success in this direction is too well known to need comment. A line of Slaymaker, Barry & Co.'s locks was next added, with the same degree of success as with the bells. Bicycle chains then came in for their share, and the entire output of the Chantrell Tool Company, of Reading, was taken and sold. Bicycle wrenches also played a prominent part in their business, and in each of these lines the trade has been conducted in the same thorough manner that has brought their hardware business to where it is to-day.

Chantrell Chain, Pattern 50.

For the coming year Graham & Co. are enlarging their line. Their latest addition is the Downey wood handle-bar, made in Lancaster, Pa., the product of Downey Bros., who for a couple of generations, have been known to the carriage trade as manufacturers of the finest grade of bent wood carriage work. The bars that they are turning out at present are beautiful examples of their work. Downey's experience of over thirty

Chantrell Chain, Pattern 150.

years in the bending of hard woods should enable them to judge both the quality and durability. Pennsylvania hard woods, hickory, oak, and ash, have always borne the very highest reputation, and it is this grade of wood that is used exclusively by them in the manufacture of these bars. They are making many shapes of bars, a perfect ram's horn that was shown the WHEEL man being particularly clever. It seems almost impossible that it could be formed without breaking the wood. In the matter of finish, their experience in the carriage trade stands them in good stead, their samples showing a finish which is seldom equalled by bar makers. The clip which they use is entirely novel. Instead of being unsightly, it is

rather ornamental, and consists of merely a thin steel strip, which is drawn down into the stem of the bar. They guarantee the bar against imperfection and breakages for a year, and this in itself would be enough to commend it to the careful buyer.

The Chantrell chain for next year has also been vastly improved. Twelve patterns are shown, which, in point of finish and excellence of workmanship, are really beautiful. The new design, with a hexagon-shaped side plate, is one of the neatest things on the market, and the blued side plates and straw-colored centres makes a chain which will prove ornamental to any wheel. Of course the prices vary, and all grades are made, but in every instance the chain is covered by a full guarantee, and their position in the trade is such that prompt deliveries can easily be promised. The chain, for many years, has been looked upon as one of the best in the market, and their output for '97 has certainly been made to keep up the standard of the past.

REAPING THE REWARD OF MERIT.

Some years ago a conscientious, industrious man of the name of Grubb, who had conducted a cycle store and repair shop, became ambitious, and began the manufacture of bicycles in a small way in Pottstown, Penn. The wheels he made were honest, were constructed in a workmanlike manner, and embodied mechanical features that quickly commended themselves to the thinking buyer. As the years rolled on the business grew steadily and healthily, until it became the Light Cycle Co., which, at the beginning of 1896, removed into a large and complete plant which had been erected especially for their use. Their growth, however, never affected the quality of their wares; it merely broadened them, and where formerly the "Light" was known only in a limited radius during the season just passed nearly every part of the world has become acquainted with the product of the little Schuylkill Valley town. A WHEEL man was shown orders from England, China, Japan, South Africa, New Zealand and Australia, delicate and lucrative compliments to the machine. In the past C. A. Warner & Co., 69 West Twenty-third street, have acted as agents for the Light, but they have abandoned the retail bicycle business, leaving an opportunity for some good house to establish an easy selling and profitable line of wheels in the metropolis.

DIFFERENT FROM ADAM AND EVE.

In the days of the Garden of Eden garters were scarcely classed as necessities, simply because Adam and Eve never wore stockings, but in these days of civilization it is of as much importance as any other portion of man's dress. Jacob Gump, No. 529 West Baltimore street, Baltimore, Md., is well known to the bicycle trade through the Antler garter, which consists of a simple band of rubber webbing. In this respect it differs but little from others, but the buckle is so constructed that any tension is allowable in an instant, has no exposed prongs to tear and is absolutely without springs. The workmanship on the garter is of the best and any color can be had. In silk-thread webbing the price is 10 cents and in silk 25 cents.

TWENTY-FOUR YARDS IN A BUNDLE.

If experience in the manufacture of woven braid cords of all descriptions goes for aught, the dress-guard cord which is being marketed by the Royal Braid Company, Williamsport, Penn., should be in brisk demand. The Royal cord is furnished either in silk or cotton stock of any pattern or weave, and manufacturers desiring a particular shade can easily be accommodated. Jobbers, too, will find this a salable article, as it is made up in twenty-four yard length bundles, enough for stringing a wheel and some to spare in case of accidents.

Highest Grade.

Highest Price.

In 1897 critical riders will look for a pedal as durable as the balance of the bicycle. This means "nuts" for us. In the origination of the

RECORD PEDAL

we had durability in view all the time. No tortured and crystalized sheet steel for us, but solid forgings, and solid forgings mean lasting results.

Higher cost, Mr. Manufacturer, but then—(your experience will enable you to finish the sentence).

RECORD PEDAL MANUFACTURING CO.,

239 COLUMBUS AVENUE,

BOSTON, MASS.

Kindly mention The Wheel.

TWO IN READING.

Reading, that good old Pennsylvania Dutch town, is becoming very much of a cycling centre. Conservative methods have made the business profitable for those already engaged, and now two new concerns are about to take a hand. The Reading Cycle Manufacturing Company, Tenth and Exeter streets, incorporated some little time ago, are getting ready for '97 trade. Their plant is well adapted for the purpose, the machinery being new and everything else up to date, and good work can be looked for. C. A. Dundore, well known in that section of the country, is superintendent, and with Henry C. England, president; Daniel J. Driscoll, treasurer, and George A. Heckman, secretary, they have a roster of officers which, no doubt, will force their company to the front. Another new concern is the Reading Standard Manufacturing Company, of which Mr. Remppis is the leading spirit. They intend making a strong bid for trade. Their wheel will be high grade in every particular. No expense is to be spared in its construction, "and while," to use the words of Mr. Remppis, "there is often a great temptation to utilize cheap material, nothing but the highest grade will be embodied in the Standard wheel." They are looking for good agents and those desiring a first-class line for '97 will do well to communicate with the firm.

EVEN THE BIRDS.

A British tire-maker is having a number of parrots taught to say his tires are the best. When the birds have sufficiently learned their parts, they are to be hung up in places where wheelmen congregate to preach the maker's tire gospel. The idea was tried in America and was not highly successful.

HAVE YOU LOST YOUR GRIP?

Is there a sadder sight in all the world than the poor, hopeless, hapless, despairing wretch who has lost his grip? Contrawise, can there be any pleasanter sight than the lucky individual whose grip is fast upon the good things of this world? Believing there is not, man is ever looking for a grip which can not slip. There are not many such grips, but the Lovell Wrench Company, of Bridgeport, Conn., have

been fortunate enough to secure the rarity and incorporate it in their new famous Lovell wrench.

Let nut or bolt be as contrary and refractory as it may, once the Lovell grips it slipping is out of the question. It has got to turn. That so much strength, grip and box wrench principles could be combined in $4\frac{1}{4}$ ounces of weight is of itself a marvel; but when the Lovell people announced that for the coming season they had even improved on last year's wrench, the man who wants more for his money than the Lovell gives him is certainly the man who wants to buy gold dollars for fifty cents.

WENT TO SEE A MAN.

He said, "I would like to see the man who could cheat me." Then, that he might be disappointed, he went to an auction sale where \$100 bicycles were being sold for \$12.

If by some sort of Roentgen-ray process you could see all the weak spots in a "just-as-good" wheel, you would think it stricken with smallpox.

THAT AMERICAN INVASION.

In speaking of the American cycle invasion the London "Ironmonger" says:

"The continued arrival of fresh American firms on this side of the Atlantic, all bent on obtaining a share of the English trade, has brought home to the minds of those who were at first inclined to be skeptical the importance of the American invasion, till the subject has lately become one of the leading topics of conversation in the trade. It is desirable that all who are connected with the trade, whether as makers or dealers, should realize the position of affairs, and remember that the Americans having found their efforts this season to some extent crowned with success are not likely to relax their endeavors to build up a large trade in this country."

MILLIONS OF MONEY.

Some figures regarding England's cycle trade have recently been made public. The annual output is estimated at 750,000, with a valuation of \$60,000,000. Last year Great Britain exported wheels and parts thereof to the value of \$9,969,050, against \$5,004,565 for the preceding year. The stock companies engaged in the cycle trade have a total capitalization of over \$85,000,000, to say nothing of the private concerns in the same business. Last year 1,955 British patents relating to cycles were granted, while pneumatic tires to the tune of 1,500,000 were turned out. These figures give some idea of the magnitude of the British wheel trade.

SPRUNG IT ON HIM.

"I understand, then," concluded the interviewer, "that your success was achieved at a bound?"

The inventor of the world's most resilient tire nodded his head gravely.

THE CYCLE TRADES' FOREIGN LISTS.

Containing the leading bicycle agencies and manufacturers in the following countries:

England, Italy, France, Switzerland, Germany, Austria, Denmark, Hungary, Norway, Romania,

Sweden, Turkey, Holland, Greece, Belgium, Russia, Spain, Servia, Portugal, Poland,

Finland, New S. Wales, Jamaica, Victoria, Bahama Islands, New Zealand, Cuba, Queensland, British Guiana, Tasmania,

India, S. Australia, Burma, W. Australia, Cape Colony, Ceylon, Straits Settlements, Natal, Java, Griguland, West,

Japan, China, Transvaal, Barbados, Egypt, Trinidad, Algiers, Antigua, Mexico.

A selected number of foreign buyers resident in the principal cities throughout Europe.

A selected list of exporters of bicycles resident in New York.

All of the firms whose names are listed in this book are houses of first-class reputation.

BOOK NOW READY.

Published by F. P. PRIAL, 88 West Broadway, New York.

RECENT PATENTS.

567,650. BICYCLE-SEAT. STEPHEN LEON, Brighton, Pa. Filed Sept. 4, 1895. Serial No. 541,555. (No model.)

Claim.—In a bicycle-seat, the combination with a fixed rod, the laterally-movable disk, the hub upon which it is mounted, the inner hub carrying the fire supports, means arranged between the inner and outer tube for shifting the latter laterally for the former use to be retained, said means including a spring mechanism for returning the outer tube to its normal position substantially as shown and described.

567,635. BICYCLE. GAN YOUNG, Chicago, Ill. Filed Oct. 7, 1895. Serial No. 540,825. (No model.)

Claim.—In a bicycle, the combination of pedal-levers, a driving-shaft with a surrounding isolated portion, an oscillating spring connected with the pedal-levers and provided with openings containing dogs adapted to engage said toothed portions, and a connection between the other lever and the shaft so as to rotate it when the pedals are moved, a brake-wheel on said pedal-shaft opposed to said ring, a connection between said levers so that a movement of one causes an opposite movement of the other, and a connection between said ring and the pedal connection whereby the brake is operated when pressure is simultaneously applied to both pedal-levers.

567,629. SPRING MOTOR FOR BICYCLES. GAN YOUNG, Chicago, Ill. Filed Oct. 28, 1895. Serial No. 541,164. (No model.)

Claim.—The combination with a bicycle, of a power-storing device connected with the part of the frame of the bicycle that connects the front fork with the crank-bearing, a controllable connection between said power-storing device and the crank-shaft of the bicycle, and a means associated with said power-storing device for supplying power thereto.

567,936. BICYCLE. WILLIAM S. BELLON, Springfield, Mass. Filed May 10, 1894. Serial No. 510,992. (No model.)

Claim.—In a bicycle, the crank-shaft bracket consisting of a tube with paired flanges or kerfs provided therein from each end and the stay member bent around to form eyes or loops said parallel members, said loop portions being fitted peripherally inside of, and within the ends of, the tube, and having the said members extended rearwardly through said kerfs and affording attachment-hubs for the rear fork members of the frame, substantially as and for the purpose described.

566,954. AIR-VALVE. THOMAS WHEATLEY, Syracuse, N. Y. Filed Apr. 29, 1895. Serial No. 541,261. (No model.)

Claim.—The combination with a steam-chamber, of an air-valve secured to the chamber and provided with an ascending-sloped passage through the wall of the chamber and projecting beyond the inner face, said nipple being formed with an inlet-passage extending from its free extremity and an annular groove in its outer face interspersed between its opposite extremities, substantially as and for the purpose described.

567,839. PNEUMATIC TIRE. JOSEPH O. MOORE, Erie, Pa., assignor of the right to the Combination Roll and Rubber Company, Bloomfield, N. J. Filed Oct. 28, 1895. Serial No. 540,560. (No model.)

Claim.—In a pneumatic tire, the combination of the outer casing thereof having a closed pocket and an open pocket on its inner periphery, and a binder running through said closed and open pockets, the said open pocket extending under and engaging said binder and said open and closed pockets forming a continuous seal for said binder throughout the periphery of the said casing.

567,860. WIND-SCREENS FOR VEHICLES. THOMAS L. MONTGOMERY, New York, N. Y. Filed May 2, 1895. Serial No. 539,084. (No model.)

Claim.—A wind-screen for a bicycle, comprising a cross-bar adapted for engaging engagement with the steering-head tube of a bicycle-frame, uprights extended therefrom, top brace-rods extended from the upper ends of the uprights and converging forwardly, bottom brace-rods extended from the cross-bar and converging forwardly, the top stay, the Serbellor or cord connection, and a covering of flexible material substantially as specified.

567,555. KEYS FOR PREVENTING FINGERING OF PNEUMATIC TIRES. EDWARD E. ELIOT, Washington, D. C., assignor of one-half to John C. Preston, same place. Filed Dec. 23, 1893. Serial No. 512,020. (No model.)

Claim.—The combination with the pneumatic tire of a bicycle or other similar vehicle, of an independent movable protecting-band of greater length than the tire, and a guide for said band supported by the machine, substantially as described.

567,663. HANDLE-BAR FOR BICYCLES. RAYMOND M. SEYMOUR, New York, N. Y. Filed May 17, 1895. Serial No. 541,851. (No model.)

Claim.—The combination of a tubular head adapted to be connected with the spring-bar of the forward fork of a bicycle, a cross-head secured on said tubular head, side arms curved forwardly, downwardly and backwardly, and connected with the sides of the outer end of the cross-head, and provided with handles, and other handles connected with the ends of the cross-head, substantially as shown and described.

567,787. DRIVING-GEAR FOR CYCLING-MACHINES. JAMES J. MARSHALL, Sydney, New South Wales. Filed June 3, 1896. Serial No. 549,126. (No model.)

Claim.—In cycling-machines, in combination vertically-oscillating pedal-levers, the rear ends of which are pivoted on or near to the axis of the driving-wheel of the cycle and provided with a longitudinal bearing or socket within which will reciprocate longitudinally a rod or arm that is secured to a crank-arm on the axis of a spur-wheel that gears with a spur-pinion secured to the driving-wheel of the cycle as herein set forth.

567,807. BICYCLE-LOCK. THOMAS CARROLL, Dayton, Ohio, assignor to Security Lock and Manufacturing Co., same place. Filed Aug. 15, 1895. Serial No. 538,843. (No model.)

Claim.—In a bicycle, the combination with a tubular saddle-post, and a toothed disk rigidly mounted on the crank-shaft in a line with said tubular post, of a sliding locking-bolt constructed substantially in one part having a vertical slot in the lower terminal of which is enlarged and one side thereof terminates in a cylindrical dot or recess which is adapted to support the key when the bolt is thrown up, a series of angled lugs being provided on each side of said bolt, and means for actuating the said tumblers and bolt, substantially as and for the purpose specified.

567,536. WHEEL FOR BICYCLES. ALFRED P. LE GROS CLUNY, Ky. Filed Feb. 1, 1895. Serial No. 517,008. (No model.)

Claim.—A wheel, comprising a steel-like hub, a chambered portion secured to the hub and provided with an angular hollow enlargement on its periphery, a metallic casing resting upon the outer portion of the cushion, a rim, and spokes connecting therein with the case, substantially as described.

567,634. BICYCLE-SADDLE. RICHARD O. BARLER, Chicago, Ill., assignor to the A. C. Barler Manufacturing Company, same place. Filed Feb. 20, 1895. Serial No. 540,941. (No model.)

Claim.—A bicycle-saddle comprising a sectional plate supported solely at its rear and center and having a split, divided or double pommel at the forward end, substantially as set forth.

567,900. PERMUTATION LOCK. STEPHEN C. HORTON, San Francisco, Cal. Filed May 28, 1895. Serial No. 540,809. (No model.)

Claim.—In a permutation lock having a casing, a series of rings therein, a bolt having sliding movement in said casing with a catch to engage the rings, said bolt being arranged to turn and operate the rings, said rings being locked within the casing, to be inaccessable except through the rotary bolt, substantially as described.

567,883. CYCLE-SADDLE. JOHN R. BROWN, Birmingham, England. Filed Dec. 4, 1894. Serial No. 512,251. (No model.) Reissued in England Dec. 9, 1895, No. 22,824, Mar. 14, 1896, No. 5,829, Apr. 28, 1896, No. 5,833, and Dec. 10, 1896, No. 54,771, and in France Dec. 22, 1895, No. 253,171.

Claim.—The wire-spring framing of cycle-saddles, consisting of a two-sided and double-membered frame, with the members of each side running one above another, and parallel or nearly so to each other, and with their front parts converging to a common point, or toward each other, and with the back ends of the said members spreading themselves into extended and separated horizontal, substantially as shown and described.

567,536. ICE-VELOCIPÈDE. EUGENE WARR, St. Paul, Minn. Filed Nov. 15, 1895. Serial No. 548,170. (No model.)

Claim.—The combination with supporting and reciprocating axles or runners having laterally-movable forward ends of means for supporting a runner on said axles and means for moving said forward ends of the axles laterally for guiding the machine, substantially as set forth.

The Wheel

and

CYCLING TRADE REVIEW

Copyright 1896, by F. P. PRIAL CO.

VOL. XVIII., No. 8.

NEW YORK AND CHICAGO, OCTOBER 9, 1896.

WHOLE No. 450.

HE WILL BE A FACTOR.

England's Trade Will Feel the Effects of Fowler's Untiring Energy and Ability.

The resignation of Frank Fowler from the presidency of the company that bears his name in Chicago caused but little stir in the inner circles of the trade: it is a well-known fact that since he sold out his interests in the Fowler Cycle Manufacturing Company last winter he has been but nominally president, and to any one who understands his hustling nature it was plain that sooner or later he would get back into active service again. His retirement from the Fowler Company comes as a sequel to his foreign trip. There are rumors in which the names of a large English manufacturer and the man from Chicago are closely connected. What gives credence to the story is the fact that a deal is now under way for the purchase of 5,000 sets of parts with an option of increasing it twofold. So it is pretty safe to hazard that the cycle world is to be treated to a brand-new sensation shortly.

It is rumored that he will start a plant in England, equipped with American machinery, to manufacture about 30,000 wheels of truss frame model. His patents on the ladies' truss frame covers eight countries. The favorable impression made by his aggressive policy during his recent visit to England in the interest of the Fowler Co. lends color to the rumor.

BOTH ABLE AND FAIR.

It is a very strange thing that A. E. Patterson should now be a show manager, but such he is, for last week R. L. Coleman engaged the late manager of the Pope Company to manage the Chicago show. No better man could be chosen, and when that is said all is said. Patterson is shrewd, diplomatic and has the necessary ability to carry out the show in the best possible manner. In his hands all the details, as well as the general matters, will be perfectly managed and give ample satisfaction on all sides.

MCCLAIVE'S MONEY.

The schedules of John McClave & Sons, manufacturers of bicycles at 371 Fifth avenue and 602 West Twenty-second street, which have been filed in court, show liabilities of \$15,221, nominal assets, \$34,765, and actual assets, \$9,430. Stephen Wood McClave, one of the partners, has no direct business liabilities, but is liable on notes to the amount of \$35,500, discounted by the Garfield National Bank for the benefit of his father, John McClave, upon the latter's indorsement.

SANGER WANTS SOME MORE.

A Milwaukee dispatch states that Walter Sanger has forwarded a challenge to E. C. Bald to ride a match race for \$1,000 a side, the race to be run in Milwaukee on October 10.

GOING TO LAW ABOUT IT.

Cleveland, Ohio, Oct. 1.—Proceedings were commenced in the Common Pleas Court yesterday by the Plugine Company, of this city, against the Boston Woven Hose and Rubber Company. The local concern wants \$25,000 damages. The plaintiff is engaged in the manufacture and sale of "plugine," an article for stopping punctures in tires. Much money has been spent, the plaintiffs say, in introducing the article. The defendant is accused of sending out postal cards to firms dealing in rubber tires and others, in which, it is alleged, the defendants say they will not handle tires previously treated with plugine, as they claimed it ruins them so they cannot be replaced.

DIFFERING GENII.

The Havell Manufacturing Company and the Aladdin Lamp Company, of Newark, N. J., are at war. The former company attempted to secure an injunction restraining the lamp concern from using their name on the lamp. The Aladdin Company has filed a crossbill praying the Vice-Chancellor to restrain the Havell Company from selling the lamps or using the name of the defendant company, whose rights, it was stated, were bought from Alfred J. Eno and George E. Huebner. The complainant claims a contract with the defendant, by which it was to be the sole manufacturer of the lamp.

THIS WOULD SETTLE IT.

It is highly probable that the tie in the number of points between Bald and Cooper will be settled by a match race. Cooper states that he will challenge Bald to race for \$500 a side to settle the matter. If the match is arranged it will come off at some place in the South or on the indoor track at the Chicago Coliseum.

BURNING OF THE IDE.

An abbreviated dispatch from Peoria, Ill., received as THE WHEEL goes to press, announces the destruction of the plant of the Ide Manufacturing Company by fire. The extent of the damage is not known at this writing.

ONLY A QUARTER OFFERED.

An offer of payment of 25 cents on the dollar within six months has been made by the Berkeley Cycle Company, of Trenton, N. J. It is believed that the compromise will be accepted by the creditors.

KANSAS' CONTRIBUTION.

Chattel mortgages amounting to \$17,000 have been filed on the stock of H. L. Stevens, a dealer in implements and bicycles at Lawrence, Kan.

BACK TO THE FOLD.

Once More the Overman Wheel Company Will Be Prominent Cycle Show Features.

No need to whisper it gently; the news comes direct from President A. H. Overman himself: The Overman Wheel Company will exhibit at both the New York and Chicago shows—those under the auspices of the National Board of Trade.

The announcement will prove in the nature of a genuine surprise. In trade circles generally it will provoke applause and satisfaction. In the camp of the 'outlaws,' the speculators who figure on conducting cycle shows without the sanction of the Board of Trade, it will bring dismay and consternation. It means that they have lost their biggest game, their stellar attraction.

Mr. Overman has so long refused to come inside the Board of Trade breastworks that outlaws generally have counted the Victor exhibit as a bird of rare plumage that was certain of hatching in their nests the moment they sought to place it there. But THE WHEEL'S interview with Mr. Overman which brought out the fact noted also inspired the conviction that a bit of persuasive pressure from the right direction will result in his carrying the time-honored Victor standard across the trocha, which he himself constructed, and planting it firmly among those which float from the Board of Trade battlements.

THE WHEEL bluntly asked Mr. Overman his objection to the Board of Trade, and asked him to point out wherein it was not a worthy institution.

"Objections in the sense of the word, I have none," he replied. "Under Mr. Coleman it has done something and proved a pretty good thing. I mean to exhibit at both of its shows."

Mr. Overman said much more, said it in his keen, incisive way. It concerned the gentleman who preceded Mr. Coleman as president of the Board of Trade, with whom Mr. Overman had and still has unsettled grievances. Mr. Overman entertains decided opinions concerning him and mimes no words in stating them. From what he said it seemed clear that to this dislike and disbelief in ex-President Spalding is due the absence of the name Overman from the roll of the Board of Trade.

"But is it fair that your dislike for one member of the organization should induce you to remain outside the fold?"

"Under his administration I had no faith in it. I couldn't be neighborly."

COLORADO CATCHES THE COLONEL.

Colonel Albert A. Pope was in New York on Tuesday. To-morrow he will leave Boston in his private car for a three weeks' trip, as far west as Denver, Col. It is a family party, including Mrs. Pope and Mr. and Mrs. A. A. Pope, jr., together with some of the younger members of the Colonel's family.

WHY HE IS A LEADER.

Possessed of Original and Practical Ideas, A. H. Overman Has Yet to Learn What Failure Means.

If Edison or any other genius ever perfects a pocket phonograph, one which may be concealed about the person and which will yet faithfully perform its duties, he should be assured of a million or so from the newspaper fraternity, if not from the public at large. Imagine the boom it would prove to the average reporter, to the people whom he interviews and in the end and in the full truthfulness of the printed conversation to the public that reads them. It would, of course, play hob with the gabblers and imaginative young men who wield pen or pencil in the interests of sensational prints, but that, too, would prove a public and private service impossible to measure.

If such a contrivance comes about the writer should like nothing better than to train it unawares on the president of the Overman Wheel Company, A. H. Overman, when he is in an interview mood. It would assure a wealth of "copy," such as could not fail to charm all who read it, "copy" that would fairly glow. Say what you will, no newspaper man, it matters not how clever, can interview Mr. Overman and leave without regret that the human mind, wondrous though it be, is yet too poor to store the many gems of thought and language which fall so freely from the Overman tongue. Many may be held, but as many more must needs be lost, and those retained when placed in a setting of cold type lose much of their lustre. It is well-nigh impossible to give to the words that fire, that force, that incisiveness, that almost passionate earnestness with which they are uttered at the rate of perhaps 200 in the minute. Get Mr. Overman warmed to his subject, ask him a question and his reply is an essay on the matter in point, an essay studded with epigrams, with picturesque similes, with the tart, crisp sentences of a Macaulay. His every sense seems keenly alert; his whole soul is in what he is talking about.

About this time last year THE WHEEL published an extended interview with Mr. Overman. It was characteristically outspoken. He did not seek to part the lilies, and it brought him no little condemnation, but subsequent events proved him right, too painfully right. He proved such a prophet that did he please he could set himself up as an I-told-you-so such as there seldom was and none could rightfully or befittingly say him nay. His forecast was correct to the letter—yes, to the very comma. He foretold the overproduction, the failures, the slump, the auction sales, the dumping of the surplus on the bargain counters at \$44.33 and other such figures.

On Saturday last THE WHEEL sought him out again. He was in cycling garb, a maroon colored jersey being part of his costume, and was about leaving his office for the day, but he obligingly postponed his departure. THE WHEEL man recalled the Overman prophecy of last season and half-laughingly suggested that he might care to try again. Mr. Overman was more cautious this time.

"To one on the inside there are sometimes apparent situations and conditions which lead to conclusions that it is best not to remark," he replied.

"But in a general way, what is your opinion of the outlook?"

"The tendency is to overproduction."

"After the overproduction and the bitter lessons of the last season?"

"Yes. There is danger in that very fact,

Americans are too rapid. They do not fully realize the meaning of conservatism."

"What of the export trade? Is it permanent?"

"I went abroad to see for myself. There is room for the best goods. We established some valuable connections from which results are already being obtained."

"Isn't there danger that American makers will overdo the business? If it is so promising will not the Europeans establish factories and themselves supply the demand?"

"The business is already overdone by cheap American wheels. The Europeans have already realized the situation and can produce all the cheap wheels that are required. Those who wish American wheels seek something better than the home-made article."

"What do you term cheap American wheels?"

"Wheels the parts of which are not interchangeable, which are bought in twenty different places and are then put together. The Europeans are not looking for that sort of thing. They can get it at home. They can't be fooled. They are better buyers than we

soft solder. It's shameful. The bottom bracket is the keystone to the arch, and when that is wrong all else is wrong." Mr. Overman warned to his subject.

"There should be a law compelling all manufacturers to state specifically in their descriptions what parts of their wheels are castings," he went on. "There are not many of them that would do it. There would soon be a great change in wheel construction. If tool steel is used pains are taken to point it out. If castings are good why are they not mentioned? Why? Because the men who use them are ashamed of it. They risk a human neck to save seven cents on this part or seventeen cents on that part of each wheel. It's wrong. Castings, I tell you, sir, are dangerous. To use them is a crime," this in sober, sombre tone. "The human neck is a high grade neck. We should build high grade bicycles for high grade necks."

The conversation turned to the chainless bicycle, which Mr. Overman described as "a will o' the wisp which is leading people astray." Friction, weight and wear, he believes, will soon prove its undoing. The

are. They understand conservatism better. It takes them longer to save \$100 and they insist on knowing what they get for it when they purchase. They want to know what this is made of, what that is for. I confess that I was amazed at their keen discrimination, their appreciation of values."

"But interchangeability is a feature of all American wheels!"

"It is claimed to be, I know, but how can it be when parts are purchased in twenty different places at twenty different times? My understanding of the word? When the bicycles can be selected at random, taken apart, the parts mixed, and then put together again without hitch or hammer. Those are the sort of wheels the Europeans want. They understand what is high grade and what is not. They insist on knowing what they are to get for their \$100. Why, sir, I could take you to our dissecting-room and show you an American wheel for which \$100 is asked—a wheel that is much advertised and much talked about, and that wheel, sir, has a casting for a bottom bracket and a ball race soft soldered in the bracket—a casting, sir, and

chain has its faults, he admits, of course; but, with all its faults, he loves it still, and knows of nothing better.

"What is wanted," he said, in supporting his contention, "is length of wing, not a cutting off of the tips." The vevel gear he places in the latter category.

The discussion led up to gear cases.

Mr. Overman thought they might prove useful, but advanced an objection which developed an original trend of thought.

"But," he said, "the matter of sail area must be considered. You've been riding when the wind struck you from this side, from that side, from the other side, and know the greater the area the harder the propulsion. A gear case adds to the area. It offers resistance to the wind. It renders the work harder."

THE WHEEL man acknowledged that the thought had not occurred to him, and remarked its refreshing novelty.

"Yes," continued Mr. Overman, "the sail area is an important factor. Large tubing, large bottom brackets, large hubs all add to it. They should be cut away—sail area to the

quarter of an inch should be cut away. Take an ordinary visiting card, fix it endwise on the head of your bicycle and note the atmospheric resistance which it affords even on a still day."

"Another idea," he went on, after an interruption, "an idea just as original, an idea which I have exploited considerably: Wheels—the wheels themselves, tires, rims, hubs—should be light. If the goose could talk—if one could get next the facts of nature—and one should ask the goose to carry two pounds of matter to London, it would throw out its breast—its body—and say, 'Secure it here and here,' and here and I will carry it.' But ask the goose to carry two ounces on the tips of its wings, and it would tell you 'Impossible—impossible. I cannot carry it.' It could not get that sweep of wing, it could not use these muscles, or these, or these (Mr. Overman illustrating his meaning by clutching his forearm, his upper arm, his shoulder). It could not fly. The wheels of a bicycle are its wings. They must not be burdened. They must be light. They must not be pinioned with heavy double-tube tires—tires clamped in the rims. Those are as weights on the goose's wings. They must have light rims, light single-tube tires, with which to fly. Some of us are pretty good mechanics, but the Lord is a better one."

THE WHEEL man asked if he understood aright that the substance of the Overman argument was in favor of small, single-tube tires.

"N-no, not exactly," somewhat dubiously answered Mr. Overman. "But you can convince yourself. Ride a bicycle fitted with big 1 7/8-inch clamped on double tube tires; then ride one fitted with light 1 3/8-inch single tubes, and note the difference. You will bound forward; you will fly like a bird released from captivity."

Mr. Overman then paid his respects to the single tube tire combination. The press man contended that it was a not unworthy institution, if for no other reason than that it prevented the members from cutting each others' throats by selling tires at all manner of prices. Mr. Overman was inclined to admit this, but that they should pay any one a license of 25 cents per pair he thought was a holdup.

"Do you have no more right to compel it than I have to tell you that I'll beat you across the head right now if you do not give me a dollar."

Those who know Mr. Overman know that while he will talk freely concerning things in general, he is disinclined to speak of matters directly concerning his business. It is only by roundabout course that he can be induced to disclose anything of the sort. That the '97 price of Victors will be \$100 he announced some time since, and he has undergone no change of mind.

"I think I would hold to that price if every one else broke away from it," he remarked on Saturday.

Flush joints? They will not be used on Victor bicycles. Drop forgings are considered best, and their use will be continued. Changes for '97? Practically none of importance. Victors are simply undergoing their annual "refining" as Mr. Overman described it. That they cost more to build than any other wheel made, he reasserted. That no one has attempted to dispute the claim or accept the standing defl, he believes is proof of its invulnerability.

"Output? We will simply do as well as we can," Mr. Overman said in response to the "feeler." "You don't see Victors everywhere," he added, "but there are plenty of them. Lots of people will buy wheels because of the prettiness of their paint, but people are not all alike; there are discriminating buyers who look beneath the enamel."

The Presidential election? "We must elect McKinley or there will be trouble," and of the Ohioan's election Mr. Overman has no doubt.

Once during the interview the interviewer chanced to refer to Mr. Overman as "Colonel," a title which has frequently been applied to him. The bubble was pricked then and there.

"Plain 'Mister,' if you please—the plainer the better. I want no varnish which does not belong to me." His only soldiering, he explained in answer to questioning, is membership in the Ancient and Honorable Artillery. "But I'm not colonel," he remarked again.

BOARD OF TRADE DIRECTORS MEET.

The Board of Directors of the National Cycle Board of Trade met in New York on Monday, and the following directors attended: F. Lindsay Coleman, R. Phillip Gormully, George H. Day, W. J. Bruff, C. W. Dickerson, A. L. Garford, Joseph McKee, Wm. A. Redding, C. P. Smith, A. G. Spalding, E. C. Stearns and Joseph L. Yost. Considerable time was devoted to the allotment of spaces at the Eastern and Western cycle shows. Owing to the unprecedented demand for space, additional room had to be provided at the Grand Central Palace of Industry, which secured sixty-four more spaces; but even with this additional number, it will be a difficult job to satisfy all who wish to exhibit. The applications of the larger manufacturers were reduced in order to provide room for all.

Among those in the New York exhibition, on

A WESTON ECLIPSE.

Frank Weston, who has been employed by the Keating Wheel Co. during the past year, has joined forces with the Eclipse Bicycle Co., of Elmira, N. Y. Previous to his engagement

F. C. Weston.

with the Keating Co. he traveled for Hulbert Bros. & Co., selling bicycles and firearms. He is well and favorably known in the trade, and has made a success of every position which he has held.

the main floor, will be the Fowler Cycle Mfg. Co., the Phillips Mfg. Co., the Barnes Cycle Co., McIntosh-Huntington Co., Gendron Wheel Works, Acme Mfg. Co., George M. Pierce & Co., Adams & Westlake, Chicago Wheel Works, Keating Wheel Co., Eagle Bicycle Mfg. Co., Syracuse Cycle Co., Gormully & Jeffery Mfg. Co., Monarch Cycle Mfg. Co., the Yost Mfg. Co., Overman Wheel Co., Sterling Cycle Works, John P. Lovell Arms Co., Remington Arms Co., H. C. Stearns & Co., Pope Mfg. Co., Iver-Johnson Arms and Cycle Works, H. A. Lozier Co., Buffalo Cycle Co., R. H. Wolff & Co., and other representative firms, most of whom will also exhibit at Chicago.

Mr. Arthur B. Pattison, formerly secretary of the Pope Mfg. Co., was appointed manager of the Chicago exhibition, and he will at once go West to take charge of exhibition matters there.

After the disposal of allotment of spaces, the

directors discussed the form of guarantee on bicycles for next year, and after hearing a report from the Rubber Tire Association that they had adopted a guarantee expiring on February 1, following the year of sale, it was unanimously decided by all the directors present that the following form of guarantee should be adopted for 1897, and every director present signed an agreement to insert such form of guarantee in catalogues for 1897:

We agree with the purchaser of each . . . bicycle to make good, by repair or replacement, when delivered at our factory, transportation prepaid, any imperfection of defect in material or manufacture of such bicycle not caused by misuse or neglect; provided that the factory serial number shall be on such bicycle at the time the claim is made, and that all imperfect or defective parts shall be referred to us before any claim for repair or replacement shall be allowed. This guarantee continues for six months from the date of the sale by the agent.

Mr. A. L. Garford was appointed a delegate to represent the Board at the forthcoming conference of the National Association of Agricultural Implement and Vehicle Manufacturers, to be held in Chicago this fall. President Coleman was authorized to appoint two delegates to attend a conference of the Philadelphia Museum Advisory Board, if in his judgment such action was advisable.

Regarding racing, it was the generally expressed sentiment of the meeting that the conduct of racing in all its aspects should be left entirely in the hands of the League of American Wheelmen; and with that end in view, the Racing Committee of the Cycle Board of Trade was discharged.

A meeting of the Executive Committee was held after the directors' meeting, and a resolution was passed that no local cycle exhibition should be sanctioned until after the Eastern National Exhibition, and no show later than March 31; and also that a fee should be charged for sanctions. All such allotment of spaces will be issued at once, and intending exhibitors may expect to receive their notifications this week.

The resignation of Joseph McKee as secretary was offered and accepted, and Ernest W. Franks was elected as secretary of the Board. Mr. McKee is too much engrossed with the business of McKee & Harrington to properly discharge the duties of his secretaryship; hence his resignation. Mr. Franks has been with the Board for two years, and has discharged his work as stenographer and under-secretary, and has given such satisfaction that the Board did not look further than their own office for Mr. McKee's successor.

TWO TAKING IN THE SIGHTS.

Ask a metropolitan visitor if he came on business and the answer in nine times out of ten is in the negative, and yet try to find this same visitor during business hours and he has invariably mysteriously disappeared. New York has this week been favored with two representative Western men, Charles Seig, of Seig & Walpole, has shaken Kenosha dust from his patent leathers for the time being to see the sights on Broadway and to enjoy a needed rest.

S. L. Kurtz, of the Gilliam Saddle Company, came from Canton, as he laughingly said, "to get away from the McKinley clans who temporarily own the little Ohio town." Both men look forward to a good year in 1897, and while they insist that this trip is purely one of pleasure, as the story has it, "they wink the other eye."

WILLIAM WAS HERE.

"Billy" Herrick is in Gotham; that is, Morgan & Wright's Herrick, but, of course, there is only one. His ears, mouth and eyes are wide open on '97 business.

Injudicious Business

Methods have ruined and crippled many bicycle dealers. Buying too many "Jobbers' wheels," and paying too many profits or commissions on "good-looking" cheap wheels, which had nothing but "looks" and price in their favor, has caused many dealers much trouble and dissatisfaction. Dealers who bought standard wheels direct from the maker and paid him a legitimate profit on them have been the most successful, and few have decided to go out of the business. **New Clippers** are made by an old maker (one of the first dozen); they are sold to dealers direct at prices as low as good goods and good business methods will warrant. No better bicycles made at any price; none so good at a less price.

MADE BY THE **GRAND RAPIDS CYCLE CO.**
GRAND RAPIDS, MICH.

No. 214. PRATT.

Mention The Wheel.

A Perfect THE JANNEY

Pedal. . . . FOR '97.

Have You Seen Any Better?

WE were incorporated in 1894.

Took the lead at the start— and have kept ahead ever since. We have been able to do this because our aim has always been to make the **best possible**.

Careful and painstaking in everything we do—see what we have produced for your and our benefit.

A Pedal with **no loose cones; no check nuts; will not bind; will not tighten.**

Absolutely dust and water proof. Rigid in adjustment. Self-oiling.

Mention The Wheel.

**SIMPLE, ARTISTIC,
and therefore
ATTRACTIVE.**

It has Drop Forged Body Axles, turned from finest steel and hardened by improved process.

**BARREL HUB.
No Unsightly Oil-cap.**

Notice to Advertisers.

WHEEL ADVERTISERS are notified that change of advertisements is not guaranteed, unless copy is received by Saturday morning.

TO FOREIGN INFORMATION SEEKERS.

Owing to the number of inquiries received from abroad in regard to the status of American firms, THE WHEEL announces that it will give to all such inquiries the most careful attention, and all foreign merchants desiring advice or information regarding American trade are invited to correspond with THE WHEEL.

"TRUSTS" AS CYCLING BUGABOOS.

WHEN for the best of all concerned the Cycle Board of Trade was organized the Erudite Organization of Mare's Nest Discoverers promptly raised their associated voices and cried "Trust." When the tire-makers followed in the footsteps of the Board and united for their own, the users and the trade's protection, the E. O. of M. N. D. again brayed forth "Trust." A rumor, which may contain some truth in its composition, declares that the tubemakers are to copy the tire-makers, and again the Mare's Nest Discoverers shout "Trust," hoping against hope to get right once out of three times attempting the prediction.

For the benefit of these gentlemen, and those who hearken to their mistaken ideas, it may be well to make perfectly plain the difference between the old-time trust and the modern trade combination, such as those above referred to.

It is due to aggregation of capital and concentration of interests that prices upon so

many manufactured products in the cycle trade have been materially reduced. Competition, aided by increasing exactions of conditions, has practically compelled manufacturers in certain lines to combine their interests so as to do business at a lowered expense, and all intelligent tradesmen know that combinations have done and will do more to bring values down to a lower basis than any other known factor in commerce.

Men who have capital extensively invested in the trade would be foolish if they did not protect their investments in every legitimate way. It is unfair to say that they become parties to an oppressive combination as members of a trust simply because they combine interests in order to keep in business.

There is too much of a disposition to condemn capitalists for all the existing troubles in the commercial world. If it is wrong for manufacturers and producers to enter into agreements to sell only at a profit, it is wrong for workmen to agree to work for certain wages only. And on the same principle it is wrong for farmers to organize alliances, for business men to effect associations.

The prosperous man is generally a generous man. It is only when he sees his capital in jeopardy that he is inclined to exert harsh measures. Of course, there may be, and doubtless are, grasping monopolies and heartless trusts, but it is unjust and foolish to call every business combination like those existing and those contemplated in the cycle trade by such names. And the sooner we realize these facts and cease harping upon them the quicker we will make the best of the opportunities and possibilities as they now obtain.

There are only three ways of getting and keeping a monopoly of anything or any industry. The first way is to own all there is of it. The second way is by unjust laws or criminal infringement of existing laws to secure unfair advantages over other people in the same industry or other owners of the same product. The third way is to produce a given article more cheaply than anybody else, so as to be able to undersell everybody. The first monopoly, namely, that of entire ownership of some important and necessary product of nature, does not and cannot exist in the cycle trade, and need not be considered for practical purposes. If there are any such attempted monopolies, they are either unsuccessful or too small to worry about. As regards the second kind of monopoly which depends upon unjust laws or upon the successful and wholesale violation of the common law, it may be said that there is no evidence that any such exist, in the cycle trade at all events. Of the third kind of monopoly we have a number of instances in other lines of trade, and the real trouble is with regard to those instances. The "Sugar Trust" is a good example and the Standard Oil Trust is another. Both are well known to the whole world, and have been invaluable to the platform orator and to space filling member of the E. O. of M. N. D. when either needed an impassioned period

designed to raise his audience to a pinnacle of predatory enthusiasm.

It is admitted for purposes of argument that the "Sugar Trust" has a practical monopoly of the sugar business, and the Standard Oil Trust a practical monopoly of the oil business. Why? Because both these concerns have placed their product on the market at prices lower than those at which others can do so. The world, we suppose, has no fault to find with the simple fact that the price of sugar has been reduced from 10 cents in 1880 to below 5 cents. We may even suppose that the reduction in the price of oil from 10½ cents in 1878 to 5½ cents is also not of itself displeasing to the people whose light and fuel come from petroleum and its products. What it primarily objects to is the fact that the Sugar company is extremely prosperous and the Standard Oil Trust immensely so, coupled with the fact that both of them, by the efficiency and economy of their operations, can undersell all competitors and still make a handsome profit.

If this is not what is the matter, perhaps some one of the Mare's Nest Discoverers will be good enough to tell us just what the matter is. In both cases the practical monopoly has been attained by the use of large capital in the hands of men with brains. Brains first and capital afterward. In neither case, however, is the monopoly complete and in both competition has to be met. Let us argue the matter out to its logical extremes and see just what is the proposition of the agitators who constantly discover "Trusts" in the wheel trade, which "Trusts" are ever and always to keep up or increase bicycles or parts thereof.

DANGER OF COUNTERFEITING.

COUNTERFEITS seldom excel the genuine. Imitations are not in anything as much sought after as originals. Along this line of thought must the American cycle manufacturer proceed in the planning of his campaign for foreign markets. To take the native models of machines and slavishly imitate them is but to attempt the sale of a fake native machine, to offer a counterfeit in place of a genuine, to stumble and fall over the very faults and imperfections which, on the part of the native manufacturer, has enabled the American one to secure an opening for his wares.

In nothing is the human desire for change more pronounced than in cycling. Make a machine ever so good, perfect or satisfactory this year, and when the next season comes round those who have bought it are anxious for a change, an anxiety which, by the way, often results in the changer being the loser. So, exactly, is it with the foreign buyer. He wants a change, he turns to the American wheel, because it offers him that very thing. He does not want another wheel like the one his own makers are turning out. If he did he would buy of them, not of the American imitator. It is in the entire difference existing between the American and the native ma-

chine that one of its strongest selling points must ever be.

Shrewd manufacturers recognize this, and change their models in the very slightest degree when submitting them to the foreign rider. If a thing has merit, no matter how odd it may at first seem to our eyes, in time we will grow used to it, and wonder that we did not do so at first sight. So, when foreign dealers tell American makers that riders will not buy American wheels because this thing or that is different from native ideas, because it does not look like a native wheel, because everybody in that country is riding wheels of another pattern or equipment; they are talking according to their lights, but the lights are dim.

American wheels, if they are to find favor abroad, must do so because they are American wheels, and as such differ from domestic ones in improvements which make them superior, therefore making them by contrast the more valuable and desirable. While this is all true, it does not mean that the American manufacturer must proceed abroad on the assumption that because his wheel is American it is per se perfect. To the contrary, he must study to make it so by taking full advantage of any improvements in construction or designing that foreign manufacturers may have applied to the wheels they offer. So far imitation is wise, and will prove profitable, but otherwise the less American manufacturers imitate their foreign competitors the wiser and richer they will be.

PROPERLY REPRESENTING THEM.

IT IS with much pleasure we commend the wise and conservative position taken by the local consulate of the League in reference to the unauthorized attempts on the part of politicians and others seeking favor with wheelmen to ask in their behalf privileges and concessions the riders themselves have not sought for.

In the case in point an Alderman introduced a bill asking that the Boulevard be set apart for the exclusive use of wheelmen and pleasure vehicles. Special stress was, of course, laid upon the wheelmen's claims by the Alderman, and yet when a public hearing was ordered by the Board of Aldermen not a single representative of the wheelmen appeared in favor of the measure.

This is as it should be. It is a fitting rebuke to those who pose as friends of the wheelmen and act in their behalf without the wheelmen's authority. The wheelman is becoming wise; he no longer asks special streets for his exclusive use, nor special privileges for the use of any street. What he wants is the free use of all streets, the proper care and construction of the streets, and a strict enforcement of the law governing street traffic; whether its enforcement falls heavily upon the wheelmen or the horsemen, matters not.

It is this position THE WHEEL has always taken when the riders, or ill-advised friends, have sought for special favor at the hands of authority, and it is a pleasure, as be-

fore stated, to record the stand taken by the New York Consulate along the line noted.

Some time since a cycle company placed a page advertisement in many of the cycling papers. THE WHEEL refused the business, being unable to locate the factory of the company. The report of the Board of Trade was to the effect that the company had no factory and employed one machinist, and that they were entirely unworthy of credit. THE WHEEL twice printed a paragraph in its reading columns, without mentioning the firm's name, asking for the location of the firm and warning the trade against it in as direct a fashion as it could. Now THE WHEEL learns that the firm obtained some considerable credit among the bicycle trade, and it is pleasing to know that one of the victims has called on the District-Attorney of New York City, and will take criminal action. This is a rare case in the bicycle trade, but it is to be hoped that the victim will succeed to the utmost limit of the law, and will make an example of this fraudulent concern, who obtained goods and credit under false pretences. Considerable blame is to be attached to those bicycle papers which published the firm's advertisement, thus giving it a place and importance in their columns, and, in a way, helping to mislead the trade.

There is an improved bicycle patented every day, but it is not practical. It succeeds in wrecking its inventor's hopes and stops right there. It has all the requisites for improvement, but it does not improve. It occurs to us that, now that everything else has been provided for, an improved bicycle that will be an improvement will be a delightful novelty. Why not invent something of that kind?

Despite would-be reformers to the contrary, riding on two wheels is exactly as immoral as walking, or riding on four wheels, or three, or one, and not half so immoral as having wheels in one's head.

Remember, even if you consider a choice between two evils in the wheel you intend to ride, it is better to make the choice yourself than to let some one else make it for you.

The League has discovered that racing is like bread buttered on both sides. It must be handled carefully to avoid a mess.

The novice in cycling frequently pays more for getting his eye teeth sharpened than the blamed things are worth.

Every manufacturer's failure is a tragedy, but he seldom invites his friends to see more than the interludes.

The racer with a fat job is often apt to spoil it with the anti-fat of trying to increase its softness.

If bloomers were pretty they would be popular, and that is the long and short of the story.

Is it because "riches have wings" that so many well paid racing men are high flyers?"

KNOW WHAT IS WANTED AND ASK IT.

A long resolution, addressed to the Board of Aldermen, was passed at a meeting of the Board of Consuls of the New York Division last week, opposing the passage of any ordinance that would regulate traffic on the Boulevard so that it should be for the exclusive use of wheelmen during certain hours of the day. The resolution concluded by saying: "It is now several months since we called your attention to the facts that drivers of heavy wagons, because of not carrying lamps at night, and because of fast driving across asphalted avenues, and because of turning corners without warning, and because of general disposition to annoy cyclists, have made this city the most dangerous on this continent for a cyclist. And we called your attention to the impropriety of permitting the cable cars to make an exchange station of the intersection of the Boulevard and Columbus avenue, to the danger of all who cross that point, and since our petition a cyclist has been killed at that point, but the cable cars still make the same use of the spot.

"Now, we again urge upon your honorable body the necessity of passing such regulations as shall correct these evils, and we feel assured that, if this be done, and if the Police Department then carry out the regulations as enacted, the cry for a restricted thoroughfare will cease."

SWALLOWED HIS GUM.

A New York rider, while scorching, was thrown, landed on his head and knocked senseless. When help reached him he was black in the face, while his legs and arms worked convulsively as though he was suffering from a fit. A doctor happening along examined the fallen rider, and at once declared he was suffocating. He opened the rider's mouth, and, with the aid of a probe, succeeded in drawing from his windpipe a ball of chewing gum as big as a walnut. The rider had been chewing the gum, and in his violent passage through the air, after he had struck, the sticky substance was forced into his throat. Moral—Do not scorch, do not get thrown, or when guilty of both, be sure your chewing gum is anchored past any possibility of its slipping.

PROMISE CONSIDERABLE.

An organization known as the Cyclists' Protective League has been formed in this city. It is proposed to establish within a radius of fifty miles of the City Hall of New York from 500 to 5,000 stations, where wheelmen can store their bicycles and where facilities for cleaning, oiling and pumping will be provided. A system of universal coupon checks will be used. It is also proposed to act as agent for insurance companies, both accidental and fire, to provide substitute wheels in case of breakage in the vicinity of any of the "bins," to provide places for repairing wheels and lockers for change of costume.

MAKING IT PLEASANT FOR THEM.

Following the example of a Western railroad, as told in THE WHEEL two weeks ago, the New York, New Haven and Hartford Railroad will in the future compel cyclists to remove lamps, cyclometers, toolbags and other attachments from their wheels when transported, unless a release from all responsibility is signed.

Sterling Elliott really would like to be president of the L. A. W. for just one more year. He has been rather backward in saying so, but his lieutenants are making it quite plainer.

1895.

AND THEY DEAD HEAT.

1896.

ALSO RANS.

Titus, 48; Bliss, 47; Jenny, 38; Brown, 36; L. C. Johnson, 35; Wells, 28; Coulter, 25; Maddox, 24; Ziegler, 23.

MONTE MAKES MORE MATCHES.

A twenty-five-mile match race has been arranged between Monte Scott and O. B. Hackenberger, of Denver. The date set is October 10, at the Denver Wheel Club's track.

"Why, how do you do, Mr. Bald? Really, I am glad to see you up here. Let me see, we met somewhere around here last year, did we not?" Thus spake the Monarch man to the White Flyer one, when he found the latter dividing the final honors of the year with him.

"Let me see; yes, I believe we did settle down, or rather up, near this locality last year," answered the White Flyer one, "though, if I remember correctly, you were a rung or two lower then than now. With me it is a case of the king come unto his own once more, while with you—well, what are you going to do about it? It is a sure thing that there cannot be two kings, nor can any tandem team occupy this narrow rung until the season opens again next year."

"Right you are, sharer of my joys and sorrows. I'm blessed if I know what's going to be done about the matter, unless Chairman Gideon will sanction another National Circuit meet just to let us settle our little differences."

"That will suit me exactly."

"Me, too."

"You know where to find me; there's my card, Syracuse, in care of the Barnes people."

"Thanks. Here's my address in case you should want to communicate with me. Chicago, you see, with the Monarch Cycle Company."

With this exchange of courtesies and formalities the twin kings of '96 each grasped a firmer hold upon the bag of boodle representative of the undivided honors and lapsed into silence too expressive for mere words to give any adequate idea of.

Talk about finishes! Phew! Isn't this one hot enough for anybody? Dead heat for the kingship of the path! The question of '96's topnotchdom as unsettled as it was at the beginning of the season, and the fight for first honors a drawn battle between the very same two who fought it out in '95.

It is not possible in the short space of time at command to go into a critical analysis of the circuit-chasing ladder-climbing contest of '96. That is worthy of careful consideration and treatment, and will follow later when it may be done justice to. That the contests between these men and their fellow-strugglers may be better appreciated THE WHEEL presents herewith the ladder of '95 and its more famous brother of '96, leaving the question at present in the form of the ex-King's famous query:

"Well, what are you going to do about it?"

THIS FAIR ALWAYS CATCHES THEM.

Riders of the metropolitan district and of Boston and vicinity turned out in large numbers at the Danbury, Conn., fair meet, October 6. The spectators numbered 5,000. Summary:

One mile, 2:40 class—1, Wm. Shepard, South Norwalk; 2, F. A. Kuhl, Jersey City; 3, H. M. Byington, South Norwalk. Time—2:32 1-5.

Half-mile professional—1, W. A. Barbeau, New York; 2, Arthur R. Ives; 3, H. K. Smith, Brooklyn. Time—1:13 4-5.

One mile open—1, J. T. Kellebar, Springfield; 2, W. C. Roome, Jersey City; 3, W. A. Ladue, Cold Spring. Time—2:27 1-5.

One mile professional—1, George L. Bates; 2, H. K. Smith; 3, R. L. Wheeler. Time—2:44 4-5.

One mile handicap—1, Alexander, 15 yards; 2, Millsbaugh, 20 yards; 3, Shepherd, 90 yards. Time—2:17 2-5.

One mile handicap, professional—1, J. L. Decker, 90 yards; 2, Barbeau, 40 yards; 3, Wherle, 120 yards. Time—2:12 3-5.

Half-mile handicap, amateur—1, Kirk, 10 yards; 2, Alexander, 10 yards; 3, Shepherd, 40 yards. Time—1:08 2-5.

ALSO RANS.

The following are the men on the National Circuit whose wins have been sufficient to score for these ten points and over: Clark, 27; Stevens, 25; Coulter, 22; Kimble, 21; Loughhead, 18; Kennedy, 16; Becker, 16; Parker, 14; Coburn, 13; Mertens, 12; Wells, 12; Allen, 11; Baker, 11; McDonald, 10.

WAS A BALD BOOM.

He Got the Lion's Share at Waverly—Threatening Weather Could Not Lessen the Enthusiasm.

Bald's star was in the ascendant at the Vim B. C.'s meet at Waverly, N. J., October 3. It was the next to the last meet on the National circuit, and the topnotch ladderies were fully conscious that a win meant three points and that three points would give him the top rung all to himself and a big boost toward the championship honors.

The final of the mile open was the crucial test. About all the ladderies and some who had failed to mount the lowest rungs of the ladder, qualified for the final, but Bald was the favorite. Tom Cooper was the only notable absentee. Ten men qualified in two heats, and lined up on the pole in the following order: Bald, Gardiner, Murphy, Butler, MacDonald, Mosher, Bowler, Clark, Mertens and Hawthorne. Special prizes offered at each quarter again drew the men out to faster time than was made with single pacing in the heats. Hawthorne, a local man, took the first quarter, and MacDonald sprinted for the second, Clark taking the third. Just after passing the three-quarter Clark fell heavily. Bald had played round the back of the field and at the three-quarters went out for the front in a sprint that rivalled his oldtime form. Gardiner came down the stretch in hot chase, but lost by a narrow margin. Mosher, Murphy and Bowler were placed in that order. The time was 2:18 1-5.

Butler was thrown out of his stride by Clark's fall, coming in seventh.

The mile handicap, being run in one heat, brought Gardiner, Bald, Murphy and Butler together on scratch. No attempt was made to overtake the long-mark men from the start. They trailed along together far in the rear, but had a lively brush among themselves for the tape after the winners had passed, in which Bald again got the best of the argument.

All the local crack amateurs were out in full force, and fought gallantly, for about the twentieth time this season, for honors and incidentally a diamond or two more to add to their already rare collections. W. C. Roome threw the dust in the faces of Harrison, Lefferson and Ripley in the mile open, and Harrison did the same trick in the half-mile, barely nipping at the tape his old antagonist, Ray Dawson. The tandem race, of course, fell to the prowess of Harrison and Lefferson, who form the gamiest tandem team in this section. A triplet race made a hit at the close of the meet, the finish being of the heart-disease order, the Vim team overtaking the New Jersey A. C. trio, who made the jump, right at the tape. Local interest was excited by a match race between the champion riders of Newark's fire and police departments, in which the copper came out the best. The weather was cold and threatening, but the attendance was fair. Summary:

One-mile, novice—Final heat, 1, W. G. Douglass; 2, Victor Hess; 3, J. W. White. Time, 2:34.
One-mile, scratch—Final heat, 1, W. C. Roome; 2, Joe Harrison; 3, L. R. Lefferson. Time, 2:21.

One-mile, handicap—Final heat, 1, F. W. Richt, Brooklyn, 70 yards; 2, Thomas Firth, Harrison, 100 yards; 3, W. C. Roome, N. J. A. C. scratch. Time, 2:19 3-5.

One-mile, professional—Final heat, 1, E. C. Bald; 2, Arthur Gardner; 3, H. P. Mosher; 4, C. M. Murphy; 5, John B. Bowler. Time, 2:18 1-5.

One-mile, handicap, professional—1, C. G. Carpenter, Rahway, 140 yards; 2, J. B. Bowler, Chicago, 50 yards; 3, Otto Maya, Erie, 90 yards; 4, W. P. Neville, Newark, 110 yards; 5, H. C. Clark, Denver, 60 yards. Time, 2:08 1-5.

Half-mile, scratch—Final heat, 1, Joe Harri-

son; 2, Ray Dawson; 3, L. R. Lefferson. Time, 1:07 4-5.

One-and-a-half-mile tandem—1, Harrison and Lefferson; 2, Bert Ripley and Jasper. Time, 3:36 1-5.

One-mile against track record of 1:57—Ray Dawson, paced by two triplets. Time, 1:58 4-5.

One-mile sextet exhibition—Greenwich Wheelmen. Time, 1:59 4-5; first half, 57 seconds.

One-mile triplet—Vim B. C. Time, 2:03 2-5.

ROMPED AWAY WITH BY THE ROYALS.

London, Ont., Oct. 4.—The twenty-mile team road race for the Dunlop trophy took place here yesterday afternoon. The Royal Canadian Bicycle Club of Toronto won with 379 points; Queen City Club, of Toronto, second, 344 points, and the Western Association of Toronto, third, 325 points. William Greatrix, of the Queen City Club, Toronto, was the first man to finish. Time, 59:43 2-5. The track was very heavy, owing to the recent rains, and there were many tumbles and broken wheels.

FOR HIS MANLY BREST.

When Officer Anthony Gavin, of the Buffalo police force, first referred to his ability as a scorcher, he was forced to stand a deal of "jollyng" from his brother officers. And so to prove that his legs were as good as his

tongue he lowered the Buffalo-New York record eleven hours, riding the 464 miles in sixty-one hours. In appreciation of his work the Palmer Pneumatic Tire Company, whose tires he rode, have presented him with a very handsome gold medal, as shown above, for the performance.

RACED ALL DAY.

West Chester, Penn., Oct. 3.—The West Chester Driving Association tried the experiment of holding all-day races to-day. Bicycles occupied the track in the morning, horses in the afternoon. Several thousand spectators were present. Summary:

One-mile novice—1, L. Gibson, Philadelphia; 2, Robert G. Sturgeon, Avondale; 3, Harry M. Hipple, West Chester. Time—2:39 1-5.

One-mile open—Final heat—1, Worthington; 2, Airhart; 3, Johnson. Time—2:40 1-5.

One-mile county championship—1, Clinton Keinar, Phoenixville; 2, F. Airhart, Phoenixville; 3, G. M. Coates, Berwyn. Time—3:14 2-5.

One-mile handicap—Final heat—1, Remmert; 2, Coates; 3, Worthington; 4, Airhart. Time—2:21.

Half-mile open—1, L. C. Johnson; 2, A. L. Worthington; 3, P. Martin; 4, Robert Sturgeon. Time—1:25.

TANDEM TAKES RECORD.

London, Sept. 30.—At the new Crystal Palace track to-day the cyclists MacGregor and Nelson beat the tandem hour record, covering 31 miles 610 yards. The distance from the twenty-fourth mile to the finish was also covered in less than previous record time.

IN A BLAZE OF GLORY.

In the Shadow of the Nation's Capitol Finishes the National Racing Circuit.

Washington, Oct. 3.—Ladder climbing has come to an end for '96 and Bald by winning two firsts and a third captures an equal position with Cooper on the top rung, the bag of gold and the glory thereof. It was a close race this year between three of the big 'uns of the path—Bald, Cooper and Gardiner—for the top notch position, and the last meet of the circuit, held at International Athletic Park to-day, was the decisive meet, and this had a tendency to make the event of more than usual interest.

The meet was under the management of the White Flyer Club, and very appropriately White Flyer Bald, with his old-time sprint, cleaned the decks in both scratch events. Although the weather was threatening, the attendance was large. To Cooper goes the honor of winning the last race in the circuit, the two miles handicap, in which all three scratch men figured in a blanket finish. The final of the mile open had six starters: Cooper, Bald, Church, Gardiner, Bowler and McCurdy, and Rumford paced. Cooper caught the pacemaker, but Bowler ran past the line and dropped back to third place, Bald having the rear wheel of Cooper. Church followed Bowler, Gardiner and McCurdy bringing up the rear. In the second lap Gardiner worked to the rear of Bowler, Church dropping back. At the bell Bowler started for the front, with Gardiner following, and the pace was warm down the back-stretch.

On the last bank Cooper went round to the front just as it looked a win for Gardiner. Bald followed Cooper and swung wide and Gardiner again came up, the three riders coming into an even fight a hundred yards from home, with no advantage for either. Bald was the stronger by six inches and Gardiner defeated Cooper by the same distance only. The time was 2:13 3-5.

The two-thirds mile, open, had nine starters and a pacemaker. The pacemaker ran away, but the race did not lack interest, as the men made a good race. Gardiner got the front at the start, with Miller, Bowler, Cooper and Bald following. At the third McCurdy led, Bald, Cooper and Gardiner being at the front. Into the stretch Bald gained the advantage by a foot, and down the stretch could just maintain this. Church came on and gained the advantage of Gardiner by a narrow margin. The time was 1:34 2-5. Summary:

Mile open, professional—1, Bald; 2, Gardiner; 3, Cooper. Time, 2:13 3-5. Single paced.

Mile open—1, F. Schade; 2, W. F. Sims; 3, E. L. Wilson. Time, 2:23 1-5.

Mile tandem—1, H. Z. Greer and George E. Smith; 2, Schade and Ball. Time, 2:23 2-5.

Two-third mile open, professional—1, Bald; 2, Cooper; 3, Church. Time, 1:34 2-5.

Two-mile handicap, professional—1, Cooper, scratch; 2, Gardiner, scratch; 3, Bald, scratch. Time, 4:37 1-5.

Two-mile handicap—1, E. L. Wilson, 75 yards; 2, H. Hardister, 200 yards; 3, W. F. Sims, 40 yards. Time, 4:51 1-5.

AMERICANS IN AUSTRALIA.

Advices from Australia state that in the August mile handicap event Martin and A. B. McDonnell, the Americans; M. Porta, the Italian champion; G. A. Meadham and Ken Lewis were entered. The final heat was won by G. A. Meadham, 25 yards, in 2:12 3-5; J. Bradley, 105 yards, second. The American entries were so heavily handicapped that they failed to get a place in the trial heats, and therefore did not qualify as starters in the final.

To Bicycle Riders: We Make Our Tube — OF FIFTY CARBON STEEL

Because a Tube like this of

Is just as strong as

a Tube like this of

This diagram does not show how much stronger and more durable our tube is than the usual quality in the market because it does not include the always bad and more or less uncertain effects of "pickling." By ordinary methods tube is annealed in the open fire and pickled from eight to twenty times, according to finished size. By the use of a patented annealing process, controlled by us for tube making, our tube never comes in contact with the fire and is never pickled. There is no "theory" about this. Our thorough tests show that even with the greatest precautions in pickling (not usually taken), pickled tube is weaker and more brittle than tube made of the same material without pickling. No bicycle can be first grade unless it is made of first-grade materials. The best tubing makes the best bicycles. Send for a Catalogue.

THE POPE TUBE CO.,
HARTFORD, CONN.

Weight for weight in a Bicycle FIFTY CARBON Steel will last so long

while TWENTY-FIVE CARBON Steel will last only so long

Kindly mention The Wheel.

CHILLY WAS THE FAREWELL.

Weather Was Unkind to Benners - Starbuck and Church Furnish the Finish of the Day.

It was rather a chilly farewell that the little Benner brothers received at the Tloga track, Philadelphia, on Saturday last. The midget riders, who have been amusing race-meet goers all the season by their exhibition rides and match races, have retired from the track "for good," and Saturday's meet was held for their benefit. The weather was chilly and raw, and the few spectators present were too uncomfortable to wait very enthusiastically.

Starbuck was the hero of the meet, and proved himself to be the speediest professional in Pennsylvania. He won the mile scratch, the five-mile handicap, and, in company with Rulon, the two-mile tandem. In the five-mile event he defeated Church, Jack, Bartholomew, Landis, Aker, Bowers and all the local men of note, finishing in 12:05 2-5.

Before four miles were covered the back-mark men had caught the bunch, and it was then a procession until the bell lap began. Goodman went out with the bell, with the field right after him. Starbuck was busy jockeying for a position, but at the same time did not allow the bunch to run away from him. At the turn Church spurred and Starbuck went out after him, and then the race commenced in earnest. They turned the stretch in the same position, and the Chester boy's admirers were just about to let out a yell when they saw Starbuck coming very fast. The last turn found Starbuck in the lead, and he crossed the tape a wheel ahead of Church.

The two-mile tandem handicap was run in two heats of four teams each. The first heat was won by Kuhke and Smith, the New York team, the second by Starbuck and Rulon, and it was thought that the final would be an interesting race. The Philadelphians, however, had things all their own way, and won easily in slow time. Summary:

One mile novice, final heat-1, Arthur Inskip; 2, James Hamilton; 3, B. Harker. Time-2:54.

One mile open, professional-First heat-1, C. P. Thompson; 2, F. F. Goodman; 3, Clarence Bowers. Time-2:27 1-5. Second heat: 1, J. F. Starbuck; 2, E. F. Miller; 3, W. R. Landis. Time-2:27. Third heat: 1, P. S. Davis; 2, E. J. Aker; 3, Carroll B. Jack. Time-2:39. Final heat: 1, J. F. Starbuck; 2, F. F. Goodman; 3, C. P. Thompson. Time-2:33 4-5.

One mile open, amateur, final heat-1, Joseph Vernier; 2, J. A. Shomo; 3, Craig Stewart. Time-2:22 1-5.

One mile handicap, amateur, final heat: 1, F. B. Marriott; 2, Gardner; 3, Cressy. Time-2:11.

One-mile professional, handicap-First heat, 1, P. S. Davis (35 yards); 2, H. K. Smith (20); 3, Josh Snidley (35); 4, A. C. Melick (35). Time, 2:14 3-5.

Second heat-1, F. H. Rumford (100 yards); 2, F. M. Dampman (125); 3, C. B. Jack (35); 4, W. A. Barbeau (40). Time, 2:40 4-5.

Third heat-1, W. A. Rulon (60 yards); 2, R. P. McCurdy (35); 3, E. S. Aker (20); 4, E. P. Thompson (40). Time, 2:12 1-5.

Final heat-1, W. A. Barbeau (45 yards); 2, R. P. McCurdy (35); 3, E. P. Thompson (30); 4, F. M. Dampman (125). Time, 2:08 3-5.

Two-mile professional tandem-Final heat: 1, Starbuck and Rulon, Philadelphia; 2, Jack and Davis, Philadelphia; 3, Smith and Kuhke, New York. Time, 5:18 3-5.

One-mile tandem exhibition by Hill and Gardner. Time, 2:09. Trial for one-mile amateur record by Walter M. Trot, paced by tandems ridden by J. Vernier and B. West and Hill and Gardner. Time, 2:04.

Five-mile professional handicap-1, J. F. Starbuck (scratch); 2, C. A. Church (scratch); 3, W. A. Barbeau (125 yards); 4, E. S. Acker (50); 5, W. H. Eckhardt (300). Time, 12:05 2-5.

The mile-a-minute cycle inventor is a sort of mechanical Mugwump.

DOING TEN IN THE MUD.

Between a thick layer of mud and a spirited ocean breeze, the contestants in the Brooklyn Citizens' annual ten-mile road race on Wednesday of last week had all they cared to contend with. The course laid out was two and a half miles each way on the Coney Island Boulevard, extending to Howe's Hotel, the starting-point being at Shaughnessy's hotelery. A heavy fall of rain on the previous evening turned the Boulevard into a sea of mud, requiring the use of a scraper and a delay of two hours for the sun to get in its work, before riding was possible.

The entry list was unusually heavy, 225 names being recorded on the programme, and all but fifteen of them started. As a consequence, the men were started in bunches varying from twenty to twenty-five, causing spills to be the order of the day. H. K. Roe, Patchogue's favorite rider, sustained a broken collarbone, while other less notable cyclists also received broken bones or bruised flesh.

C. A. Carlson, of Brooklyn, won the special time prize for five miles, covering the distance in 13 minutes 49 seconds, while G. H. Bell took the time prize for ten miles in 28:20 4-5.

The Kings County Wheelmen secured the prize for the club whose representative had the best position at the finish of the race, and also the prize awarded to the club having the largest number of finishers in the race. The order of finish was as follows:

	M. S.	M. S.
J. P. Hutcheon.....Brooklyn.....	3:15	29 32-5
C. M. Hendrickson.....Brooklyn.....	3:15	29 33
C. M. Rogers.....Avondale.....	3:15	29 43
John Smith.....Brooklyn.....	3:15	29 43 1-5
William Speer.....Brooklyn.....	3:30	29 48
A. A. Hull.....Brooklyn.....	3:15	29 33 4-5
R. Sammis.....Brooklyn.....	3:30	29 40
E. A. Laws.....Brooklyn.....	4:00	30 22
Joseph Thompson.....New York.....	3:20	28 58
T. R. Goodman.....Bath Beach.....	3:15	29 52
W. Culver.....New York.....	4:00	30 42
C. A. Carlson.....Brooklyn.....	1:30	28 21
M. C. Tattan.....Brooklyn.....	2:00	28 51 1-5
E. C. Humphrey.....Hackensack.....	3:00	29 50
A. T. Wyckoff, Jr.....Brooklyn.....	3:00	29 52
C. B. Luke.....Brooklyn.....	4:00	31 02
F. C. Hooper.....Brooklyn.....	3:30	30 53
H. B. Cashill.....Paterson.....	3:30	30 53
Thomas Ademetz.....Passaic.....	2:25	29 53
Louis P. Miller.....Brooklyn.....	3:15	30 26
J. S. Beasley.....Brooklyn.....	3:15	30 27
J. G. Stillwell.....Brooklyn.....	3:15	30 32
Henry Moller.....Brooklyn.....	3:00	30 20
F. B. Egelhoff.....New York.....	2:15	29 35 1-5
G. Munz.....Brooklyn.....	2:15	29 35 2-5
W. W. Staylor.....New York.....	3:00	30 20 3-5
G. H. Bell.....Long Island.....	1:00	28 20 4-5
W. C. Culbertson.....Paterson.....	1:30	28 52

Time prize-winners-1, G. H. Bell, 28:20 4-5; 2, C. A. Carlson, 28:21; 3, M. C. Tattan, 28:51 1-5; 4, W. C. Culbertson, 28:52; 5, E. A. Laws.

TWO G'S COLLIDE.

Hundreds of cyclists from all points in South Jersey attended the meet at Millville, N. J., on Saturday. In the mile handicap Gormully and Garton fell, the latter being rendered unconscious from a severe scalp wound. The long and fierce sprint of Harry Walls won for him the mile open and one and five mile handicaps. Summary:

One-mile novice-1, Frank Reeves; 2, F. Gager. Time-2:44.

One-mile open-1, Harry Walls, Vineland; 2, C. H. Hensell, Philadelphia; 3, C. L. Champion, Cape May. Time-2:45 1-5.

One-mile handicap-1, H. Walls, 60 yards; 2, E. C. Goodley, Wilmington, 70 yards; 3, F. Reeves, Millville, 90 yards. Time-2:19 3-5.

Five-mile handicap-1, Walls, 130 yards; 2, E. C. Goodley, 115 yards; 3, Reeves, 200 yards. Time-12:42.

Five-mile professional-1, S. L. Cassidy, 100 yards; 2, Clarence Turner, 200 yards; 3, Frank Pyle, scratch; 4, W. A. Wenzell, 50 yards. Time-13:01 1-5.

ALL KINDS TOGETHER.

Multiples Mix Up in a Grand Scramble For the Finish Line. Racing As a Farce.

A race that caused the handicapper to walk the floor o' nights and created more interest than all the prize pumpkins and fat hogs and other fakes that the grangers raise was the feature of the closing day, Saturday, at the Westchester County, N. Y., fair. It was down on the programme as a multiple handicap. It may not have been much of a success as a race, but as a novelty it caught the crowd. A sextuplet was honored with the scratch position. Sixty yards was given to the Harlem Wheelmen's triplet, 30 to the Yellow Fellow Club's trip, 100 to a tandem, with a single rider 200 yards in advance. Bets were freely made by the uninitiated in favor of the big six-seated machine, but although the track is half a mile in circumference the sex crew, piloted by C. W. Henshaw, found it difficult to navigate the turns at full speed. However, the big machine made fair progress, and succeeded in finishing but an eighth of a mile behind the Yellow Fellow triplet, manned by O'Conner, Judge and Nagel. The other trip broke down, and the single rider dropped out.

The half-mile open and county championship went to that old-timer, George C. Smith, who, in the high wheel days, electrified the spectators in many a breakneck finish. Although he has been absent from the path for the last two years, he has lost but little of his old-time speed.

W. E. Grey, a member of the Greenwich Wheelmen, was another man who captured two firsts. He won the race for novices, and at the tail end of the meet took the obstacle race. This latter was a ludicrous event. Each contestant had to ride a short distance, dismount, and pick up a cabbage, a potato, a flag, and a pail of water, and then get to the finish line as soon as possible. After securing his load no man was able to ride, and so it was a walk to the tape. Numerous stops were the result of some of the articles slipping from the grasp of the rivals. Summary:

One-mile novice-1, W. E. S. Gray; 2, Walter H. Hughes; 3, Edwin T. Christmas. Time, 2:31 2-5.

Half-mile open (final heat)-1, George C. Smith; 2, W. A. La Duc, Cold Springs; 3, J. T. Beam. Time, 1:16.

One-mile handicap-1, W. E. Kirk, New Canaan, Conn. (30 yards); 2, A. Ellis, Newark (120 yards); 3, W. A. La Duc (scratch). Time, 2:27 4-5.

One mile (championship of Westchester County)-1, George C. Smith; 2, John C. Nelson, Port Chester; 3, E. T. Christmas; 4, D. Van Tassel, M. B. C. Time, 2:37 1-5.

Two-mile multiple handicap-1, O'Conner, Judge and Nagel, triplet (30 yards); 2, Henshaw, Relyea, Hicks, jr, Leibold, La Duc and Granger on a sextuplet (scratch); 3, H. Y. Bedell and C. K. Stevens, Riverside Wheelmen, on a tandem (100 yards). Time, 4:15.

One-eighth-mile obstacle race-1, W. E. S. Grey; 2, James P. Fitzpatrick; 3, George H. New. Time, 0:50 1-5.

Five-mile handicap-1, W. E. Kirk, New Canaan, Conn. (175 yards); 2, A. Ellis, Newark (400 yards); 3, W. H. La Duc (scratch); 4, W. A. Nixon (250 yards). Time, 12:45 1-5.

RAIN RUINED HIS CHANCES.

Ed. T. Edwards's attempt to lower the New York-Philadelphia and return record on Sunday last was unsuccessful. After covering sixty miles, heavy rain was encountered, making the going very heavy. Edwards started at 1:50 a. m., reaching Philadelphia's City Hall at 10:04, being paced the entire distance. Rain caused him to abandon the return trip.

BRANCHES IN ALL PARTS OF THE CIVILIZED WORLD.

M. & W. MADE IT A SUCCESS.

Chicago, Oct. 3.—With a parade of cyclists, speech-making and record-breaking, the new Garfield cement track was appropriately dedicated to-day, in the presence of 30,000 spectators. The track, a half-mile course, is located in Garfield Park, and was built at public expense, on scientific plans. The programme was arranged by the Park Commissioners, assisted by the Morgan & Wright Cycle Club, an organization which practically had charge of the racing and was in the main responsible for the brilliant speed tests. About 1,000 cyclists took part in the parade, which terminated at the track. After the dedication speeches, the track was cleared and the half-dozen events that were run off showed the track to be speedy and safe.

Particular interest was centred in the record trials by Michael and Johnson. The latter first appeared in an exhibition mile. A quad, manned by Waller, Van Herik, Skelton and Bainbridge, led him the first quarter. At the quarter the triplet, with the Jullu brothers and Stenson aboard, led the quad and single wheel to the half in 0:49 3-5. Another quad, manned by Weinig, Newhouse, Davis and Callahan, then brought him home in 1:40 2-5.

Michael next took a try at the clock and cut the five mile record down to 9:38. The quad and triplets alternated the pacing, the pick-ups being perfect. On the last lap, Michael left the triplet and sprinted across the track in the van. His times were: 1:57 3-5, 3:53 3-5, 5:49, 7:41 and 9:38. Summaries:

Half-mile (amateur)—1, William Holmes; 2, Walter Mack; 3, John Skelton. Time—1:39 1-5.

Half-mile (professional)—1, O. F. Bohman; 2, William De Cardy; 3, J. A. Newhouse. Time—1:11 2-5.

One Mile (handicap)—1, C. H. Lepper, (25 yards); 2, Thomas Burke (35 yards); 3, Walter Mack (45 yards); 4, John Skelton (5 yards). Time—2:22 1-5.

One Mile (handicap, professional)—1, O. F. Bohman (30 yards); 2, H. P. Stenson (125 yards); 3, A. E. Weinig (125 yards). Time—2:07 3-5.

WANTED MORE AND GOT IT.

Like Oliver Twist, many of the amateurs who rode at the Waverly meet on Saturday last, were possessed with an insatiable desire for "more," and so they skurried to New York and lined up to the tape at the Olympia Park meet. F. J. Titus, the erstwhile crack, promoted the meet, and about 1,500 spectators attended it.

E. C. Bald was among the riders who made a flying trip from Waverly. He reeled off an exhibition mile in 2:07 4-5, track record, and then raced for the midnight train to Washington. Walter Roome took the event of the night, the mile open. The match race between Goodman, Barbeau and Smith went to Goodman after a struggle right to the tape. Summary:

Mile novice—Final heat: 1, E. E. Keesecken; 2, W. J. White; 3, J. Starling. Time, 2:38.

One-mile open—First heat: 1, C. J. Liebold; 2, J. Harrison. Time, 2:38. Second heat: 1, W. C. Roome; 2, L. R. Lefferson. Time, 2:29 4-5. Third heat: 1, C. M. Ertz; 2, O. V. Babcock. Time, 2:36. Fourth heat: 1, H. Bedell; 2, F. W. Richt. Time, 2:35. Final heat: 1, Roome; 2, Babcock; 3, C. M. Ertz. Time, 2:26 3-5.

Two-mile handicap—1, Roome (scratch); 2, J. W. Judge (90 yards); 3, S. R. Hall (900 yards). Time, 5:06 2-5.

Half-mile unpaced exhibition by E. C. Bald. Time, 1:37 4-5. Track record.

One-mile professional—1, F. F. Goodman; 2, W. A. Barbeau; H. K. Smith. Time, 2:39.

Ray Macdonald has about decided to retire from the track and devote himself to the bicycle business at his home, New Brighton, Staten Island.

FIZZLED THE SODA-WATERS.

"Soda-water" handicaps, a supposed innocent form of Sunday racing, which St. Louis riders have been in the habit of engaging in, have been stopped by the Racing Board. "Soda waters" were often run in as fast time as 2:06 for the mile, for, be it known, the penalty laid on the last man to finish was the purchase of soda water for the entire crowd. Speaking of the matter, Mr. Robert, the St. Louis member of the Board, says:

"You know that the prize in these handicaps was that the last man should pay for the soda water for the whole field. Everybody rode hard to keep out of last place. In fact, the affair was really a race for a prize, namely, the soda water."

"Soda-water" handicaps were in the nature of training for the men who train at the track. They were useful, as they taught many a young rider how to ride in a handicap. Many spectators have been attracted to the track each Sunday to watch the contests."

SANGER AND HIS SEASON'S WORK.

W. C. Sanger has about given up his idea of going to Denver to try for the unpaced mile record, being unable to close a satisfactory deal. Although in good form Sanger has experienced an unprofitable season. One of the causes for his having made a poor showing is that he has never had a steady mount, and during the season has ridden no less than eight different wheels. He has also met with a number of accidents, and thus has lost considerable when good prizes were offered. His expenses during the year have been heavy, and have been paid by himself, because he was not in the employ of any firm. It is understood that next season Sanger will not ride in a race until he closes a contract with some firm to pay his expenses and a salary for riding its wheel. Friends of the rider say that he has stated that he will stay at home all next year before he will go out on the circuit and pay his own expenses.

FOUR IN A BUNCH.

Four men finished almost abreast in the Berkeley Cycling Club, 11 miles race, Boston, October 3, W. Collins getting the best of the argument by a few inches. About 100 riders started in the race with Urquhart and Barnaby on scratch. They rode together throughout the race, finishing twenty-ninth and thirtieth respectively, Urquhart winning by half a wheel and getting the time prize in 30:27. The first ten men were:

W. Collins	2:15	31	8 3-5
H. McLean	1:45	30	37
L. J. Solari	2:30	31	24
R. F. Cronin	1:45	30	38 3-5
C. E. Osborn	2:30	31	25
H. A. Campbell	1:45	30	45
C. B. Woodward	2:30	31	23
G. Fitzmeyer	3:15	32	21
F. E. Miller	2:45	31	43 1-5
F. A. Nelson	2:15	31	11 3-5

ENGLISHMEN WERE NOT IN IT.

An Anglo-French match for 2,000 metres took place at the Seine track, Paris, September 20, in which the Englishmen were completely buried. Jacquelin and Gougoltz comprised the French team, while Edwards and Green represented England. The heats resulted as follows: First—1, Jacquelin; 2, Edwards. Second—1, Gougoltz; 2, Green. Third—1, Gougoltz; 2, Edwards. Fourth—1, Jacquelin; 2, Green. The French team also won in the tandem match race for 6,000 metres, leaving the Englishmen two lengths behind at the tape.

COUTLER CLIPS TIME.

Denver, Oct. 2.—On a soft track, wet in places, Clint R. Coulter lowered the world's record for an unpaced mile to-day, making the distance in 1:50 1-5, which is 1 1-5 seconds under all previous records.

(Coulter rode a Lindsay wheel, geared to 97, manufactured at Lafayette, Ind., a machine in which he is financially interested. It has a patent gear arrangement which allows the use of a much smaller sprocket than the regulation, accomplished by the use of two direct gears connecting the crank axle with the sprocket.)

COULD NOT QUITE GET THERE.

R. M. Alexander, the winner of the last Irvington-Milburn race, finished sixth from scratch, in the 15-mile road race at Chicopee, Mass., Saturday last, and failed to secure the time prize by less than 15 seconds. His time was 37:53 1-5. The time winner, I. G. Perry, of Chicopee, finished in 37:50 4-5, a New England road record. N. Hall, Springfield, won in 42:32.

THEY COULDN'T COMPLAIN.

While the week of racing at the Chicago Coliseum was unprofitable to the promoters, it was highly satisfactory to the Palmer Tire Company. Of the fifty-four prizes offered, excluding those in the twenty-four-hour race, twenty-seven, including twelve firsts, were won on Palmer tires. The other twenty-seven prizes were divided among four different makes.

LINTON LEFT BEHIND.

London, Oct. 4.—At the new Crystal Palace last night Stocks rode 31 miles 548 yards in one hour, beating the record made by Linton. He came within 62 yards of equalling the tandem record of 31 miles 610 yards made last Wednesday at the same place by MacGregor and Nolson.

RACING IN RIVERSIDE.

At Riverside Park, Danielson, Ct., Oct. 3, the track record was lowered to 2:11 by F. J. Cadwell, of Elmwood. E. C. Hausman, New Haven, won the mile open in 2:21 and finished second in the mile handicap from 20 yards. H. E. Morse, Putnam, won the event from 40 yards in 2:37 4-5.

PACERS BROKE RECORD.

On October 1 M. A. Janney and N. M. Schwartz established a new tandem record between New York and Philadelphia, covering the 100 miles in 7 hours and 16 minutes. They started to pace J. M. Fagan for the individual record. His machine broke at Rahway, so the tandemites continued alone.

SIX IN A SMASHUP.

An exhibition mile by the Berlo sextuplet was one of the features of the Brockton, Mass., fair, October 3. The big machine got off with a flying start, and was going at a 30-mile an hour gait, when a tire burst, throwing the crew in all directions. None of the men were injured, however, further than by bruises.

FLUTTER IN A DOVE COTE.

About thirty of the local amateurs in and around Boston have received letters from the Racing Board inquiring into their amateur status. As a result, there is considerable anxiety among the bean eaters.

A new track has been completed at Cannelton, Ind., modelled after the Fountain Ferry path, Louisville. It is banked five feet at the turns and has a thirty-foot homestretch.

RACING BOARD'S BULLETIN.

 Thomas N. Parker, Waco, Texas, official handicapper for Texas, has been removed.
 C. F. Williams, Dallas, Texas, has been appointed official handicapper for the State of Texas.
 Transfer to professional class on September 9, 1896, of H. E. Pierce, Kansas City, Mo., was in error.
 RECORDS ACCEPTED.
 Unpaced, flying start, against time—By A. B. Simons, Deming, N. M., May 23, 1896.
 Third-mile, 33-5 seconds; quarter-mile, 25 1/5 seconds (amateur).
 SUSPENDED.
 Six months, from October 3, unsanctioned races, W. Faustman, C. W. Purington, York, Neb.; John Kingman, J. R. Fox, Shelby, Neb.
 H. W. Hackett, Pleasantville, N. J.
 T. D. Hackett, Atlantic City, N. J.
 One year, from October 3, unsanctioned races while under suspension—W. Harker, H. Chandler, Fenimore, Wis.; W. S. Baxter, Montford, Wis.
 Sixty days, from October 3, unsanctioned races—J. J. Bezenek, Chicago, Ill.; Thomas Frankenhof, Boscobel, Wis.; George W. Graham, St. Paul, Minn.; Ben Bunker, Hudson, Wis.
 One year, from October 3, unsanctioned races after warning—Gus Goecke, York, Neb.
 Sixty days, from September 26, for false entry—Carl Stockin, Birmingham, Ala.
 Thirty days, from September 28, for false entry—Paul A. Raymond, Greenwich, Conn.
 Six months, from October 1, for competing in

unsanctioned races after warning—J. J. Nagle, Will Hyde, Spencer Roberts, Harve Carr, Oskaloosa, Ia.; Ed White, Muchaknock, Ia.; Frank Eperson, Eddyville, Ia.
 Nine months, from October 1, for false entry—A. R. Ulp, Pittsburg, Pa.
 Ninety days, from October 1, for false entry—Jasper Parish, Indianapolis.

Thirty days, from October 1, competing in races not officially handicapped—E. Higgins, H. E. Thompson, D. J. Connelly, F. C. Lawrence, L. J. Gladding, Ed Coates, G. Allum, Ike Hills, C. H. Barton, New Britain, Conn.; W. J. Phillips, Kensington, Conn., and H. H. Damon, Berlin, Conn.
 Thirty days, from October 1, competing in novice race not officially classified—J. P. Johnson, F. J. Williams, W. H. Lyndell, New Britain, Conn.
 One year, from October 2, competing in unsanctioned races, after warning—Fred Kiser, Harry Fuller, — Issler, Hamilton, N. J.; — Miller, Troquois, N. J.; — Kulge, — Eisele, Newark, N. J.; Harry Lohrs, Ed Chandler, and A. Bellof, Elizabeth, N. J.

For competing with amateurs after having become a professional, and while under suspension, one year has been added to the term of suspension of C. F. Stangl, La Crosse, Wis., making it expire October 26, 1897.

William H. Dargin, the Shooting Park track, of Newark, N. J., and the United Singers of Newark, N. J., have been placed upon the list of those to whom the sanction privilege is denied.

PERMANENT SUSPENSION.
 Alex Reinecke, Elkader, Ia., has been replaced upon the permanent suspension list for repeatedly competing while under suspension.

SUSPENSIONS REMOVED.
 Oscar Knipe, Orwigsburg, Pa.
 H. A. Koehler, Du Quoin, Ill.
 L. S. Beem, Du Quoin, Ill.
 Fred Bernet, Pottsville, Pa.
 Victor S. Reed, Youngstown, Ohio.
 John Gillis, St. Louis, Mo.

SANCTIONS GRANTED.
 October 12—Mayfield Athletic Club, Mayfield, Ky.
 October 13-16—Green County Fair, Carrollton, Ill.
 October 8—McFee & McMasters, Nashua, N. H.

October 17—Clinton Y. M. C. A., Clinton Mass.
 October 10—Warwick Cycle Club, Hills Grove, R. I.
 October 6-7—Emporia Wheelmen, Emporia, Va.
 October 17—George N. Lord, Hazleton, Pa.
 The Scottish Cyclists' Union, who will run the international championships for 1897, have provisionally fixed upon July 29, 30 and August 1 as the dates for same.

The following tracks under the jurisdiction of the Deutscher Radfahren Bund still remain proclaimed, and racing men visiting that country are warned against competing thereon, viz.: Berlin, Breslau, Eilbeck, (Hamburg), Hanover, Leipsic and Munchen-Perlach.

HE SHOULD BE SUCCESSFUL.
 George C. Smith, the old racing man and one-time quarter-mile record-holder, is holding forth in a completely equipped bicycle store on North Broadway, about a mile south of Yonkers. When in difficulties you will find him an agreeable physician, who will quickly cure your cycling ills, if cure be possible.

Jaquelin, the French champion, and Morin, the winner of the grand prize of Paris, have been matched. The race will take place on October 25.
 Dunwoody, the American who has been riding very successfully as an amateur in France for the last two years or so, has joined the professional ranks.

The world's championships will be contested at Glasgow, Scotland, next year on Friday and Saturday, July 29 and 30, and Monday, August 1.

An Australian wheelman is allowed to accept cash prizes in cycle races without his amateurism being questioned in any other branch of sport.

THEIR INTERPRETATION IS WRONG.
 Since the passage of the Armstrong law compelling railroads throughout New York State to carry bicycles as baggage, the Northern Central Company has been transporting in baggage-cars all wheels offered it, but it has enforced payment of a fee. All the other roads in the State transport bicycles free of charge.

W. R. Lansing, a member of the Rights and privileges committees of the New York Division of the L. A. W., recently wrote to the Northern Central officials asking an explanation of their course. He has received this reply:
 W. R. Lansing, Rochester, N. Y.
 Dear Sir: In reply to your favor of the 15th inst., beg to say that the law of New York, as we understand it, by its terms, seeks to impose an obligation on the company to treat bicycles as baggage, but contains no provision against making a reasonable charge for the transporting of wheels. Our practice, therefore, at present is to carry bicycles in baggage-cars, giving checks therefor, charging, however, a reasonable compensation, as is the case with other articles of similar character, such as baby carriages, etc. Very truly,
 GEORGE W. BOYD, Assistant G. P. A.

The State Division should be prompt in instructing Mr. Boyd regarding the law, which he evidently is far from understanding just at present.

GOOD MACHINES FOR POOR NOTES.
 Edward J. Norton was arrested in Boston on Monday and taken before the United States Commissioner charged with using the mails in a scheme to defraud. It is alleged that Norton received goods from various firms on the pretence of being a business man of good standing, and sold them at reduced prices. He is also charged with giving a fraudulent note on the John Hancock National Bank, of Springfield, for \$700, to the firm of George W. Pierce, of Buffalo, N. Y., and it is alleged that he received from them eleven bicycles, for which he gave the note.

RAILROADS AND THEIR RATES.
 A new schedule of minimum rate bicycle charges has gone into effect on the New England railroads, as a result of the efforts of the local divisions to compel the railroads to carry them free. The rates are in proportion to the ticket rate, and are as follows: Up to 75 cents the charge for bicycles will be 10 cents; from 75 cents to \$1 the charge will be 15 cents; from \$1 to \$1.50 the charge will be 20 cents, and so on in proportion up to a ticket charge of \$10. The railroads agree to accept and check the bicycles as baggage and to be responsible in case of accident.

PUTTING MONEY IN GOOD ROADS.
 Three hundred dollars has been invested in the Atlantic City and Pleasantville bicycle track by the Philadelphia Associated Cycling Clubs. The new track, which is to connect the two cities, and which is now being constructed, will be built of boards, and will be raised high enough above the ground to be clear of high tides. It will complete the line of good roads from Philadelphia to Atlantic City.

CIRCUS TO CHECK CYCLES.
 One of the innovations of the forthcoming season of Barnum and Bailey's circus, and an indication of the large factor the bicycle has become in the amusement business, will be the establishment of a bicycle-checking tent near the entrance to the show, where wheelmen may check their machines and feel secure that they are in responsible hands.

ASKING IN ADVANCE.
 Every candidate for election to the Michigan Legislature, is receiving a letter from the State Division of the League, asking how they will vote in case a free bicycle baggage bill appears before them.

NO LONGER A CHURCHMAN.

Every one in Buffalo knows H. C. Martin. He is one of the old guard, one of those who sold bicycles in the days when riders were called dudes and when to own and ride a wheel was to court endless ridicule from the very people that are now its most ardent supporters. He has seen the business grow, and he grew with it until he enjoyed a trade that put him among the leaders in the Queen City.

Three years ago he created a mild sensation by renting an old church on Main street and converting it into a complete bicycle establishment. The conservatives shook their heads, but "Hi," as he is called, prospered; he even enlarged his interests by forming the Martin & Gibson Manufacturing Company, and their wheel, the Kensington, enjoys more than a local reputation.

Now the church is to be torn down to make room for a modern skyscraper. Mr. Martin has bought out George B. Salisbury's share in the retail establishment and transferred the business to No. 570 Main street, so in the future the sign will read simply H. C. Martin.

WHERE CREDIT SHOULD BE GIVEN.

In all the hurrah of fireworks of the sensational finish for the premiership in the racing of '96, no people, perhaps, will receive more hearty congratulations than E. C. Bald and the Barnes Cycle Company. Taunted with being a "has been," forsaken by many of those who fawned upon him in the days of his all-conquering rush, Bald fought an uphill fight and won his honors in a manner no man can help admiring. That such a finish resulted is due in no small measure to the faith in both man and machine that the Barnes Company showed from start to finish. Believing that Bald and the White Flyer were a combination practically unbeatable, they never faltered, never seemed to doubt the final result, and they have reaped their reward. If there isn't jubilation in Syracuse and a Peck of congratulations and compliments in the Barnes office this day, then there is naught in the winning of a well-fought fight, and no glory in the greatest of all contests—that of ladder-climbing.

PRICE CHOPPING IN HENDEEVILLE.

Springfield, Mass., Oct. 5.—Trade at the agencies is practically at a standstill, owing to the widely advertised offers by department and other stores of "high-grade" wheels at ridiculously low prices. One department store placed on sale, for \$29, last week, 100 wheels which it had previously held at \$69. A tea store advertises \$100 wheels for \$25. In the latter case, however, it is apparent, even to the unexpected eye, that the wheel is cheaply constructed. The Smalley is selling at \$75. Most of the agencies of high-grade wheels are maintaining prices.

FOR FOREIGN REPRESENTATIVES.

The John Griffiths Cycle Corporation, of Coventry, England, and with depots throughout Great Britain, Australia and New Zealand, announce that they are in a position to handle American novelties and cycling accessories throughout the world. They have twenty-five important depots in the largest towns in the United Kingdom.

REMINOTON CHANGES.

Frederick J. Reville has resigned as manager of the cycle department of the Remington Arms Company. The cycling interest of the firm will in the future be looked after by James A. Robley, who has for several years been connected with the cycle trade in New York.

GROWING GREATER.

An addition to the factory of the Smith Bicycle and Light Machinery Manufacturing Company, Massillon, Ohio, is being built. New machinery is to be added and the force of workmen will be increased.

FRANKLIN W. LOUCKS.

THE WHEEL records with unusual regret the death of Franklin W. Loucks, which occurred last week, the funeral taking place from the residence of his brother at Pompton, N. J., on Saturday last. Mr. Loucks was a pioneer of the pioneers, and a potent pioneer at that. His monument is the Kings County Wheelmen's clubhouse, for in the old days, more than a decade ago, he was a prominent Brooklyn cyclist and a prominent K. C. W. man. At that time he was a bank man in the Garfield Bank, and his financial experience enabled him to carry through the Kings County's enterprise. In these days this popular and rapidly growing Brooklyn club occupied not very imposing quarters in the Eastern District. It was due to Mr. Loucks's ambition and ability that they were enabled in time to move into Brooklyn proper, and into their beautiful clubhouse. Beyond this one important event, Mr. Loucks's character percolated and affected the entire government of his club, and much of its soundness and progress are due to him.

He also served the Metropolitan Association of Cycling Clubs well and faithfully as secretary.

Mr. Loucks was a gentleman, if one will take that term to cover all the phases which are connected with that character. He was of the most gentle, kindly and obliging nature, being self-effacing and effective. No one who has met him could forget the quiet charm of his nature, and a multitude of cycling friends will regret his death in what was practically his young manhood.

Franklin Warrington Loucks was one of the early members of the Kings County Wheelmen, of Brooklyn, joining the club in 1881, and from his first introduction into club circles he had always been a consistent and conscientious worker for the best interests of the organization that he so ably represented. He served the club faithfully as president for several terms, and it was principally through his efforts that the headquarters of the organization were moved from Clymer street, E. D., to its later home at No. 1,255 Bedford avenue, where the club occupied what was then considered the finest clubhouse in the country devoted exclusively to the uses of wheelmen. It was replete with all that goes to make club life pleasant

and agreeable, and almost every detail of construction and convenience that was found in the house was planned by Mr. Loucks. More than this, it was his skill as a financier that made it possible for a club hardly exceeding a membership of forty to assume the responsibilities of a clubhouse of such vast proportions. It was through his perseverance that bonds were issued and the indebtedness of the club floated, and to-day the credit for the present Kings County Wheelmen is due as much to the deceased as to any one individual.

For years physically weak, he brought to bear on all matters of business such a powerful intellect that the largest undertakings never made him hesitate for a moment, for he believed fully in the ultimate success of his own plans and the final supremacy of the wheel. Ever watchful of passing events, he was a close student of the higher branches of learning, and delivered many addresses before scientific organizations that stamped him as having ability that few men are blessed with, and while all of this ability made him a shining light in any assemblage of highly cultivated men, it was in the matter of friendship that his true character shone forth most brilliantly, and "a friend in need is a friend indeed" is a quotation that he frequently expressed, and he used it as a guide in his personal conduct with his associates.

The kindest words ever penned could not begin to do full justice to Mr. Loucks as a man and a friend, and by his death a void has been caused among his associates that can never be filled, and in years to come, when his name is brought to mind, as it often will be, it will always give rise to the honest expression, "There was a true man."

M. L. B.

INTO LINE.

Another '97 announcement! Iver Johnson's Arms and Cycle Works, of Fitchburg, Mass., are the upholders of standard price this time. They state this week that Iver Johnson cycles, both men's and women's, in standard finish for 1897, will sell for \$100, and that the price of Fitchburg cycles will be \$75. The firm will be prepared to ship these goods on or about December 1.

GOING TO LONDON.

A former attache of the Yost Manufacturing Company, J. A. Black, has cast his lot with the Hamilton-Kenwood Cycle Company, of Grand Rapids, Mich. Mr. Black sailed on the Etruria on Saturday last, bound for London. He will place agencies for the company's wheels throughout England and the Continent.

ONCE MORE IN HARNESS.

E. W. Pope has been in retirement for about two years, which he has devoted to travelling and to the ordinary pursuits of the retired gentleman. Everybody will welcome Mr. Pope back to the Pope Manufacturing Company and business life. A visit to the company was always more pleasant for the fact of his being there. He is a quiet business man, whose gentle courtesy is often mingled with words of sound advice.

MAKE A STRONG TEAM.

M. L. Goss is in New York this week. Mr. Goss is a Boston man, but went West for a business education, and he is now with Mr. Paul, one of the managers of the Keating Company. Messrs. Paul and Goss were very prominent in the Lozier management for some years.

GOOD WITH ANY NAME.

Hereafter the Newton Rubber Works will know the Straus firm no more. Their product, both single and double tubes, will be marketed as the Newton tire, a pair of which Eddie McDuffie used when he beat Michael in the ten-mile match race at Boston.

OUT OF SIGHT, BUT WORKS.

The pros and cons of the lock question have been largely considered from the cyclists' point of view up to the present time. A rider of the wheel, Mr. Gessler, of Milwaukee, Wis., who had gone through the common experience of trying various bicycle locks without success, finally addressed himself to the task of overcoming the difficulties encountered. After deciding that the head was the proper place for a lock and a long series of experiments, the Gessler lock was the result.

The lock is placed inside the front tubing of the frame, and does not mar its appearance. It is cylindrical in form, one inch long, and is secured by means of a rubber washer expanded against the side of the tubing. Locking and unlocking is affected by means of a key which engages the bolt, forcing it outwardly or inwardly, locking the front wheel at an angle, thus bringing the bicycle out of operative position.

The device does not engage either spokes or sprockets, thereby doing away with possible injury to the wheel by attempting to ride before unlocking the machine. It is said the lock cannot be harmed by hammering, filing or the use of pliers or nippers. Its makers claim also that it cannot be picked. Being an integral part of the machine it is always in place when needed. It weighs less than two ounces, is easily operated and quickly adjusted.

When the WHEEL representative called on F. J. Arnold, manager of Walter E. Lindsay & Co., Milwaukee, who manufacture the lock, he obtained a chat which included not only a description of something entirely new and obviously ingenious in bicycle locks, but also some well-put general observations on the subject of the uses and desirability of bicycle locks. First, Mr. Arnold asked him to make a list of all the possible objections to bicycle locks, and the following list was enumerated: Easily picked; easily broken by files, nippers, etc.; breaking of spokes or chain and bending sprocket by attempting to ride before releasing lock; burdensome to carry in pocket; impossible to get at other locks in frame without taking frame apart; impossible to operate combination lock in the dark. Mr. Arnold then very clearly went over each and every one of these and demonstrated with a lock in use in his own machine that the Gessler lock positively overcame every objection.

Before offering this device to the manufacturers the firm introduced them by using them upon certain wheels sold by them in order to prove through use their practicability and value.

Newark, N. J., has a cycle mounted drum and fife corps.

TIRE CONCERNS IN A LINE.

Reade street will soon have to be nicknamed "Tire Row" if the rubber folks keep on moving into New York's hardware centre. The latest comers are the Newton Rubber Works, who have opened their office at No. 103, with L. T. Stillwell in charge. In the future the metropolitan district will be covered from this point, and will also be utilized as a repair depot, while a complete stock of both their well-known single and double-tube tires will be kept on hand. It is intended that a new policy will be inaugurated for '97, and under the new management, even more business than ever can be looked for during the coming season.

HE IS A MAN TO TIE TO.

THE WHEEL dubbed Arthur E. Flavell a Yankeeized Briton two years ago, when he took a road position with the defunct Raleigh Cycle Co. It then predicted that he was not likely to return to the other side for some time to come. The prediction has proven true. Mr. Flavell cast his lot in America about three years ago. He came here as a representative of an English cycle concern. For over a year he has been with the American Dunlop Tire Co., chiefly on the road, and he now knows that you can't enjoy breakfast in

Arthur E. Flavell.

New York, lunch in Chicago, dine in San Francisco, and attend an opera in New Orleans in one and the same day. Mr. Flavell also knows a thing or two about tires, and in the future will extort the gospel of hose pipes as illustrated in Volt tires, manufactured by the New Brunswick, N. J., Rubber Co. His territory will be chiefly in Indiana, Ohio and Michigan, where he expects to make the name of the tires a household word. While comparatively new in the business, the New Brunswick Co. intend to cut a wide swath in the trade next season, and they are getting good men to help them.

TO KEEP BOTH GOING.

The Keating Wheel Co. is preparing to move its books and papers from Holyoke, Mass., to Middletown, Conn. The formal transfer will be made December 1, after which date the office and official headquarters and address will be in the new factory in Middletown. The operation of the Holyoke plant will also be continued, for a while at least.

GOOD WHEELS IN DEMAND.

Burglars gained an entrance into the Brooklyn branch of the Walham Manufacturing Company on September 23. Two twenty-seven-inch frame Orient wheels were taken by the thieves, numbered 3,107 and 4,880, respectively, fitted with Vim tires.

WHAT IS THE GOOD OF SLIPPING?

"Get there and back," is a new catch phrase adopted by the New York Belting and Packing Company. They are showing something novel in their embossed non-slip league tire, having a roughened tread arranged in a handsome design that enhances rather than detracts from its appearance.

To quote from their circular: The League tire is first in quality in every particular. The fabric and rubber are not only admirably adapted to give great strength and durability, but are of such nature as to yield won-

derful elasticity, making the tire exceedingly easy to ride, and resilient to a very high degree. It is not readily punctured, because of the nature of the fabric, and, for the same reason, is quickly repaired.

The embossed feature gives to the tire many advantages over tires with smooth surface. It prevents slipping of the tire both sidewise and lengthwise, gives a more secure contact with the ground, and thus greater speed is attained.

RASTETTER TO THE RESCUE.

Wood handle-bars are going to be immensely popular next season, according to Louis Rastetter & Son, of Fort Wayne, Ind., where the firm has two factories. Numerous contracts for '97 business are already keeping things on a rush at their works. The firm believes that wooden bars will be sold and used extensively in every city and town in the country next year, and are ready to meet the demand. The construction of the Rastetter bar commends itself. In the centre of the bar, where the tee is fastened, they compress a steel ferrule one and a half inches long over the bar. In compressing the ferrule over the wood the fibres of the bar are compressed closer together and confined to this position; consequently the fibres cannot separate and the wooden bar cannot split. In addition to this, as the tee is fastened over the ferrule, it does not touch the wood bar, consequently does not wear or disintegrate the wood. The ferrule reinforces and also strengthens the wood bar.

This firm are putting out a new laminated rim which they have added to their already extensive line. This laminated rim is made by entirely new processes, and they claim it will never split. They will continue to manufacture very extensively the Rastetter single-piece rim, and their new joint holds without glue or cement. It is self-sustaining.

LABOR DISTURBERS AND THEIR COST.

It is not generally known that the oft-recurring labor troubles in Toledo was a big factor in influencing the removal of the Lozier plant to Westfield, Mass., which is actively preparing to receive its rich prize. Mr. Lozier figures that his losses by the labor disturbances cannot be represented by less than six figures.

WAS A HANDICAPPER ONCE.

L. M. Wainwright is in Gotham. Mr. Wainwright was once handicapper of Indiana, but now he is heavily interested in and is business manager of the Central Company of Indianapolis, a compact, profitable and thoroughbred little company.

NATIONAL BOARD OF TRADE OF CYCLE MANUFACTURERS.

271 BROADWAY, NEW YORK.
Phone No. 4117 Cortlandt.

R. L. COLEMAN, President.
R. P. GORMULLY, First Vice-President.
GEORGE H. DAY, Second Vice-President.
W. A. REDDING, Treasurer.
ERNEST R. FRANKS, Secretary.

Mercantile Agency, Collection Department and
Information Bureau.

NATIONAL CYCLE SHOWS.

Under the auspices of the National Board of Trade
of Cycle Manufacturers, National Shoe
and Leather Bank Building, 271
Broadway, New York.

January 23-30—Chicago, Coliseum.
February 6-13—New York, Grand Central Palace.

FOREIGN CYCLE SHOWS.

Nov. 20-28—Stanley; Agricultural Hall, Islington,
London, N.; E. A. Lamb, Secretary, 57 Chancery
Lane, W. C. Telegraphic address: "Insup-
pressible, London."

Dec. 4-12—London, National Show, Crystal Palace;
Frank Peach, Secretary, 48 Holborn Viaduct,
London.

Dec. 12-27—Paris, Palais d' Industrie, Champs Ely-
sees; M. Bivort, Manager.

Jan. 2-9—Manchester, Eng.

TRADE CHANGES.

ALABAMA.

Florence.—Ed. McDonald, of Florence, and
Russell Walthour, of Atlanta, new repair
establishment on Tennessee street.

CALIFORNIA.

San Francisco.—John A. Swenarton, bicy-
cles, reported attached for \$500.

CONNECTICUT.

Torrington.—Alvord & Spear, Manufac-
turing Company, manufacturers of piano stools,
wood bicycle rims, etc., entire plant pur-
chased by H. J. Hendley.

GEORGIA.

Augusta.—The Fulton Auction and Com-
mission Company will establish branch office
here. They will sell bicycles, handling Lov-
ells.

Senora.—The Senora Hardware Company,
organized, with capital stock of \$10,000, to
retail hardware, sporting and athletic goods,
etc.

ILLINOIS.

Chicago.—Raven Cycle Company, reported
succeeded by L. W. Friedburg, under same
style.

Chicago.—The Wright Manufacturing Com-
pany, incorporated by A. E. Manning,
Charles M. MacLaren and J. Cratty, to manu-
facture bicycles. Capital stock, \$10,000.

INDIANA.

Anderson.—The Hartford Bicycle Works
removed from this city to Morrow, Ohio,
where they are in operation.

KANSAS.

Lawrence.—H. L. Stevens, buggies, bicycles,
etc., assigned to I. N. Vanhoesen. Chattel
mortgages on stock to the amount of about
\$20,000, were filed. Mrs. Mary Stevens, the
mother of Stevens, is the largest creditor.

MASSACHUSETTS.

Cambridge.—Loring & O'Hara, bicycles, re-
ported recorded chattel mortgage for \$200.

Revera.—The Reners Drop Forge Com-
pany are building an addition to their plant
and will fit same for bicycles and shoe-tool work.

Windle.—The Windle Cycle Company plant
on Chandler street still idle. If the company
continues, the plant, valued at \$100,000, will
probably be removed to Worcester.

Worcester.—Casey Brothers, new store at 29
Mechanic street.

MICHIGAN.

Chelsea.—The Glazin Stove Company will
enlarge plant and equip it for the manu-
facture of high-grade bicycles, expending
\$50,000 in improvements.

MINNESOTA.

Minneapolis.—Ben Hur Cycle Co. Chattel
mortgage for \$80.

Minneapolis.—Columbus Buggy Co., car-
riages, bicycles, etc., Eighth street and First
avenue, S. (F. L. Darrow, manager), goods sold
at assignee's sale.

Morris.—A. A. Stone, bicycle livery.

NEW YORK.

Elmira.—The Clipper Chilled Plow Co., will
commence to manufacture bicycles.

New York.—Shelby Steel Tube Co., Shelby,
Ohio, have opened headquarters at 144 Cham-
bers street, where they carry a line of bicycles
and sundries.

Syracuse.—The last of the property of El-
bridge Cycle Co. was sold on execution last
week, under the judgment taken by C. M. Hig-
gins in \$10,500. It consisted of parts of wheels
and was bid in by W. B. Fuller for \$275.

PLENTY OF RIDERS WANT THIS.

This is a device that is not likely to phase
the taste of the scorcher, but one that will
appeal to the business rider, the tourist and
the easy-going pleasure seeker. It is a sup-
port and lock combined. It consists of two
telescoping tubes, which are attached to the
lower bar of a bicycle near the head. When
not in use it is scarcely noticeable, and it
weighs but a trifle. It is always ready for
quick use and will support a machine in any

desirable angle or ordinary incline. The front
wheel is held rigid by a clamp of spring tem-
pered steel attached to which is a small slid-
ing spring lock, neatly hidden in the folds of
the clamp, and an effectual barrier to the
cycle thief. Five seconds work will put the
support in position and lock the wheel.
Either the lock or the support can be used
separately. The United States Support and
Lock Company, Room 20, New York Cotton
Exchange Building, handle the device.

OHIO.

Dayton.—Daytonia Cycle Co. reported gone
out of business.

Dayton.—Herbig & Rock, bicycles, etc.
George Herbig reported conveyed real estate
for \$1,800.

Hamilton.—The Hamilton Cycle Co. is mov-
ing its plant to Grand Rapids, Mich.

Toledo.—Toledo Novelty Construction Co.,
dealers in cycle sundries, sold out by assignee.

ONTARIO.

Toronto.—The Jarvis Bicycle Saddle Co.,
Ltd., incorporated by E. Jarvis, D. O. Jones,
R. F. Scott, D. G. Lorsch and Neil McCrim-
mon; to manufacture and sell the Jarvis bi-
cycle saddle; to manufacture bicycles and bi-
cycle parts. Capital stock, \$20,000.

PENNSYLVANIA.

Beaver Falls.—John White, C. P. Wallace
and J. C. Whittier are interested in the estab-
lishment of chain works.

WISCONSIN.

Evansville.—H. Dann's bicycle store, de-
stroyed by fire.

Fort Atkinson.—Fred Dickerson, of Milton

Junction, will open bicycle livery and repair
shop.

Milwaukee.—The Davidson Cycle Co. sued
Lindsay Bros. and W. S. Stanley to recover
possession of twenty-five bicycles of the al-
leged value of \$2,800, which were levied upon
by the Sheriff.

North Milwaukee.—Machinery has been put
in place in the new plating and enamelling de-
partment of Meiselbach Bicycle Co. They re-
sumed work October 5.

HONOR WHERE HONOR IS DUE.

THE WHEEL'S report of the "Boston Her-
ald's" parade on August 29th said: "The
Chase Tough Tire Company made a very ex-
pensive one. Mounted on a tandem float was
an immense wood rim and tire, certainly ten
feet in diameter. Fastened inside the rim
was a small bicycle, seating a pretty little
girl in fancy costume. Maroon was the domi-
nating color, and the effect was heightened
by sixty red-coated and white-treched rid-
ers who followed. The sign read 'A Modern
Chase on Chase Tough Tire and Tires' and
with a picture of the Modern Chase painted
on the reverse. Half a dozen other riders
bore smaller banners similarly inscribed and
painted, and the idea was cleverly followed
out in costuming the men as they were."

At the time it was thought strange that the
Chase Company did not receive first prize in
the trade division for their exhibit, as it
was conceded by all to have been the most
elaborate and striking in the entire parade.
However, on September 30, Mayor Quincy,
in behalf of the "Herald," presented them
with a first special prize, a very handsome
silver and gold loving cup suitably inscribed.
Miss Viola Kinder, the little lady who graced
the centre of the big rim, also received a
special gold medal in the shape of a mini-
ature bicycle wheel hung from a blue ribbon.

This display was without a doubt the most
gorgeous ever attempted in this particular
line and must have cost thousands of dollars.
The Chase Company are to be complimented on
the progressiveness that prompted such an
outlay chiefly to amuse their fellow-Bos-
tonians.

FIGURES ON FOREIGN SHIPMENTS.

For three months ending June 30, bicycles
exported from this country to thirty-six
foreign countries had an export value of \$728,-
603, or at the rate of two and a half million
dollars per annum. The value of bicycle ex-
ports to Great Britain in three months were
\$427,211; to Germany, \$61,374; France, \$47,-
434; Holland, \$51,441; Australia, \$23,430.
Our exports to Mexico were only \$150; to
West Indies, \$18,000; to far off Finland,
\$2,065.

INFLUENTIAL MEN HERE.

Governor Bushnell, of Ohio, is one of the
stockholders of the newly organized Lagoda
Cycle Company, of Springfield, Ohio. The en-
tire capital stock of \$200,000 has been sub-
scribed, and operations will be commenced
immediately. Among the other principal
stockholders are General J. Warren Keifer,
ex-Mayor Oliver S. Kelly, Mayor P. P. Mast,
William N. Whitely and Amos Whitely.

WILL NOT RESUME.

Porter & Gilmour, No. 16 Warren street,
N. Y., the failure of which firm was an-
nounced several weeks ago, find the con-
ditions unfavorable for resuming business,
and the affairs of the company will be wound
up. L. H. Porter, one of the firm, a man
who has been connected with cycling from
its infancy, and the author of several books
on cycling topics, is open for an engagement
in the trade.

"To land on the top rung of the ladder of fame is easy when you ride a **BARNES WHITE FLYER.**"—E. C. BALD.

Here is good advice from a good man. Had you not better take it in time? For further particulars, address

BARNES CYCLE CO., Syracuse, N. Y.

Kindly mention *The Wheel*.

CONTRACT MAKING AND BREAKING.

The man whose "word is as good as his bond" seems to be fast passing away. His place is too often taken by the man whose "bond isn't worth the paper it is written on." The change is not a pleasant one, and the world to-day has in its trade life fewer things more discreditably than the custom of treating contracts lightly.

There are few in trade who do not have among their customers men who look upon contracts as business conveniences, whereby they can obtain bottom rates or special advantages, and live up to such contracts only when to do so is to their advantage.

Those who appear to possess a little conscience adopt the method of rejecting such stock as they do not want on the plea that it is not up to sample; others simply countermand so much of the order as they do not want, and leave the seller to do the best he can with the rejected stock. If the seller refuses to release the buyer, the latter may or may not allow the account to be sued, just as the whim suits him.

If he is cornered he is likely to set up the plea of "not according to sample," and the seller is likely to be put to an expense far in excess of the loss that results from the countermanding of the order.

In all branches of trade the cancellation of an order works loss, but it falls heaviest upon the manufacturer, because of the necessity of purchasing materials and expenses incurred during the interval between the time of booking the order and its shipment. Then, too, it often happens that orders call for special styles and conditions, which unfit the goods for the general market.

No one stands ready to justify the countermanding of orders as a moral or legal right, and yet the custom has become so prevalent that many are disposed to look upon the practice as a right. Whenever these cases have been settled in the courts, the validity of the contracts has been upheld, except in cases when buyers have been able to prove fraud.

A recent decision given by the United States Circuit Court at Albany, N. Y., giving a verdict for the full demands of the manufacturers for loss sustained through the countermanding of an order was but an act of justice. The case referred to was that of the Atlas Knitting Company of Amsterdam, N. Y., against Hart Bros., of Chicago.

WANTED AARON FOR COMPANY.

Had you heard this story told upon the stage by Frank Bush, you might have laughed, but you never would have believed it to be true, yet New-York police records show it to be an actual fact. Two brothers, Adolph and Aaron Strausman, were returning home from an out-of-town trip a wheel. Adolph was about a mile ahead of Aaron, bowling along at a great rate of speed, when he was arrested by a cycle policeman for riding a wheel without a lamp.

"If you wait here a minute my brother is coming down the avenue, and his light is out, so you can arrest him, too," said Adolph to the policeman.

In a minute Aaron came riding along. His light was out. The officer called his attention to the fact, and Aaron was allowed to go on his way, after lighting it.

When Adolph was taken to the station-house he was indignant because his brother had not been arrested. Sergeant Timms asked him why he was so anxious to get his brother into trouble.

"It is not trouble I want to give him, but I want him for company here," said the gentleman brother of the missing Aaron.

REMOVING TUBE INDENTURES.

In order to get a light frame, manufacturers make the tubing as thin as possible, consequently indentures, bends and fractures of various natures occur frequently. The tubing in the frames of some wheels is so thin that bruises are produced even by the weight of the wheel when it is hung upon a rack for a month or so. The average tube, however, will stand ordinary wear and tear and will neither become indented nor bent unless handled roughly.

There are several methods by which dents may be removed from bicycle tubing. Fig. 1 shows a simple method, as it consists in merely boring a small hole (A) through the centre of the depression, into which is inserted the wire pin C, at the end of which is a hook D. This hooked piece of wire is cut with a thread and operated in the bracket (B) by means of the thumbscrew (E). The device is easily made and used, for it is only neces-

sary to adjust the hook and manipulate the thumbscrew to bring the depression to a common level.

If the tube is bent up like A in fig. 2, the matter of strengthening comes first. The temper must be drawn from the tube, then it can be gradually straightened. To prevent the tube bending again in the weakened spot a plug of solder or other metal should be put in like B in fig. 3, which shows a sectional view.

Men whose business it is to tinker and fix all sorts of breakages and fractures on every type of wheel made soon work off on to various lines and adopt methods of their own for accomplishing certain results. In doing this the writer has recently fallen upon some novel ways of rounding up dents in tubes.

One of these is shown involving the use of a home-made and unpatented contrivance which any one with a mechanical turn can make from odd things about the shop. The object of the device is shown in fig. 3 with

the dent in the tube marked C. It is desired to elevate this bruise to a level with the rest of the tube. The tube will first be disjoined so that the dent can be reached from both ends. At one end is inserted the rod E, on one end of which is the flange D. This is secured firmly to place by bracing. Similar rod G and flange F is introduced from the other end, as shown.

It will be necessary to observe the exterior arrangement which is shown in fig. 6, in which a clasp (D D) is shown, the ends of which engage with the shoulder of the joint B at E E. The dotted lines indicate the position of the rod and flange H inside the tube C. Now, then, to work this rod and flange the former is cut with a thread and fits in the shoulder of the clasp at F. The extreme end of the rod has a square head (G), which permits it being turned with a wrench. The fixed flange (D) having been set, as in fig. 4, near the dent, a plug of wax composition is placed in the tube, and this plug is compressed so hard against the indentation by means of the opposite flange (the latter being worked by a wrench on G, fig. 6) that the dent is forced out and made smooth.

If the plug of wax is left inside the tube it will look like A in fig. 5. A very heavy pressure can be obtained by the use of such a device. The rod F (fig. 6), can be any length so as to reach an indentation in the middle of a tube. It is well known that a tube once indented will always be weak at that point. Plugging with spelter, inserting a union, patent composition, etc., and brazing over will help to make a satisfactory job.

GEO. D. RICE.

TWO VETERANS MEET.

"Stamson," an interesting old-timer and cycle writer, and Julius Wilcox, another of his kind, figuratively fell into each other's arms last week. "Stamson" himself has described the meeting. He writes:

"One day last week I had the pleasure of entertaining no less a personage than our good friend and veteran wheelman and long-time contributor to the WHEEL, Julius Wilcox, of Brooklyn. He had wheeled up here over the forty miles of hill and dale roads to Stamford, Conn. His worst drawback—or pushback—was a strong head wind that with its unseen hands seemed bent on making his ride over the old Connecticut hills as hard as it could be, and it was not a warm zephyr, either. But I started to write of the man. He actually looks younger than he did ten years ago, when I last saw him, and he was too deep in business to ride any. I lay his better and heartier appearance to the fact that this year he is doing a lot of wheeling, and I honestly believe that it will lengthen out anybody's days in this land that is really beautiful if you will only see it properly—from the saddle of a mount as good as the well-known Blank cycle.

"The old vet. speaks lovingly of the Merrick road and the Coney cycle paths, and is—sh—some day going out to Patchogue and back, not that he has been hired to, nor has to, but just to satisfy himself that "ole wrecks like myself and himself are of some use yet."

Just a word now from an old-timer. On these early morning, cool autumn rides see that your hands and arms are kept warm. This applies more to persons of middle age. Gloves with a wristband enough to take in the end of the coat sleeve are best, but should be made of warm and pliable material with buttons—no stiff leather or kid.

In case a man—an editor, for instance—cannot afford the gloves, and is caught out facing a cold wind, rubber bands around the coat sleeves are wonderfully comfortable.

STAMSON.

ARE GOOD TIRES

MORGAN & WRIGHT TIRES
ARE GOOD TIRES

HARD KNOCKS.

A SUMMING UP.

Off and on the national circuit, Morgan & Wright Tires have this season won practically as much as **all other tires combined**. At the national circuit meet at Trenton, N. J., "good" tires won 13 out of 27 places (more than all others combined). In the following 13 meets *of* the circuit, M. & W. Tires won **over two-thirds** of the places:

Oconto, Wis.....	19	out of	21
Utica, N. Y.....	7	"	8
Ridgeway, Pa.....	8	"	13
Newport, Ky.....	10	"	12
Randalia, Ia.....	14	"	18
Wayne, Neb.....	10	"	15
Bloomington, Ill.....	21	"	24
Big Rapids, Mich.....	16	"	19
Batavia, N. Y.....	9	"	13
Cleveland, O.	9	"	20
Maysville, O.....	11	"	21
Birmingham, Ala.....	15	"	18
Knoxville, Ill.....	18	"	18

Total.....167 out of 220
far more than on all other tires combined.

WORLD'S RECORDS.

John S. Johnson, on a World with M. & W. Tires, rode a public mile, paced, in 1.40 2-5, on new Garfield Park track, Chicago, October 3d. Previous record, 1.47.

C. R. Coulter, on a Lindsay with M. & W. Tires, rode two-thirds mile, competition, in 1.21 1-5, at Denver, October 3d. Previous record 1.22.

AMERICAN RECORD.

Jimmy Michael, on a World with M. & W. Tires, rode a public five mile, paced, in 9.38, on new Garfield Park track, Chicago, October 3d. Previous record 9.51.

A CYCLE SHOW COMPARISON.

At the Milwaukee Industrial Exposition, 71 machines were exhibited, and all but 11 were fitted with M. & W. Tires.

A SEPTEMBER OUTING

WILSON R. YARD

PART II.

BALLSTON SPA—SARATOGA.

Leaving the hotel, we go down Broadway to the Monument, turning to the left onto Simon avenue, broad, smooth, and shaded, by a double row of stately, waving elms, and lined for a mile or more with handsome villas. These give way to a succession of roadhouses, that, as there was no racing this year, have an appearance of semi-desertion.

Now we pass the entrance to the race-course, where, in the heyday of its glory, thousands of wealth and fashion's fair votaries have witnessed many a superb struggle of equine speed. The stately elms give

panse upon whose surface the leading oarsmen battle yearly for National honors.

But a step beyond here, also up the road, are Judge Hilton's extensive kennels, well worth a visit by any lover of man's noblest animal friend. Here, also, stands the house of the Kay Aderosseres Club, a semi-political organization, now of the past.

The run to the Spring is six miles up the lakeside, a straight road, good surface and ridable, very pretty, and replete with charming lake views; but as the ladies have still a stiff pull before them, we conclude to return to town by Lake avenue. Retracing our route one mile, to where a broad road branches to the right up over a rise (note sign), we turn upon it and swing around, and along Lake avenue to the hotel (4½m.; round trip, 8½=51½m.).

After a light lunch we make an early start for Glens Falls and Lake George. A cycle path has been constructed via Mount McGregor, and this we take by turning up Broadway one block to the town hall, then to the right one block to Maple avenue, just back of the hall. At about half a mile the road forks. We keep to the left, straight out, and shortly enter the cycle path, on the left the roadway. The scenery is very pretty here. Across the green meadows a tree-clad ridge rises like a wall, while we can see the blue

path is broad and smooth, now almost weed hidden, leaving us but a narrow lane, while the ripened weedtops play a tattoo on our fast-revolving pedals.

Here, as we swing through a bit of woodland, is a small farm and on the right a tiny boxlike, paint-bereft structure—King's Station. We cross the little narrow-gauge railway, then over the bridge under which rushes a limpid mountain stream, impatient to mingle its clear waters with those of the mightier river beyond. We still follow the path, and the scenery grows wilder; a weird stillness overhangs the sombre hills, while the distant mountains seem to grow nearer and take on height and importance till the Fair Louise grows poetical, and quotes:

"The sunshine with its golden glow,

The green earth, the laughing sky,

The fair flower scents as they come and go

On the soft air, like music wandering by." till even the Scorchers, who has been itching to take a try at the record of the path of 51 minutes from the falls to Saratoga, eases up his pace and pauses to drink in the grandeur of nature in all her pristine loveliness. A dip through a pretty glen, then a bend in the road and Mount McGregor, where General Grant spent his last days, looms up before us, tree clad from base to summit, the fast tinting leaves showing rare color combinations of lights and shades. Again a dip, and high on the left is the light trestle of the tiny railway. Its delicate flimsiness calls forth the remark from the Bloomer Girl that she feels safer on her wheel, as, puffing and snorting with more importance than the huge draught-horse of the Empire State Express,

The Ferry Boat at Chimney Point

Soldiers Monument Crown Point

Tongue Mountain, Lake George.

Fort Ticonderoga

Lake George Ft. Mt. Henry

way to borderings of scented pines as we skirt the handsome parklike estate of Spencer Trask, while through the vista of trees we have a charming view of the distant hills. The scenery grows wilder as we dash down a long, gradual incline; low, dense underbrush borders the way; coarse, weed-grown bogs, bushy thickets of tanglewood, their leaves tinted in a myriad of hues; goldenrod and sumac, elder bush and silvery birch, all mingle in a rich confusion of color. Now we pass the entrance to "Interlaken," Mr. Wilson's extensive place, and catch a view of the lake as we pull up at "Moon's," so noted for his fish dinners. (4m.)

Here a launch may be had to take a party around the lake, that beautiful silvery ex-

panse upon whose surface the leading oarsmen battle yearly for National honors. Now our mountain tops over a broad expanse on the right. We wheel through a double row of giant maples, whose tinted leaves and broad, spreading branches entwine in a dense network overhead. Well-cultivated farms follow one another in rapid succession, their broad fallow lands, interspersed with white fields of ripening buckwheat, with here and there a patch of stubble to tell of a goodly crop of corn.

Now a slight dip and then a rise, the ragged tops of those ever-distant mountains breaking the sky line, while from the hillside afar comes the tinkling of cowbells, mingling with the discordant caw of the crow. Fields of golden-rod, bits of woodland, rocky slopes, tiny dells and dark ravines follow. Now our

comes with clanging bells the diminutive engine and solitary toy car that take the tourist to the mountain top. We spin through the cut and descry the spires of the little hamlet of Wilton peeping above the trees. We bear to the right into the town by the little meeting-house to the Wilton House (\$1 00). (7½m—59¼.)

At Wilton the train may be taken to the top of Mount McGregor, and from the summit a rare vista enjoyed of the lower Adirondacks to the northwest, Prospect Mountain and the Green Mountains of Vermont, with the towns of Glens Falls, Saratoga and Fort Edward, and the narrow ribbon-like upper Hudson in the foreground.

From the Wilton House we turn left upon

the crossroad, still following the path, which traverses the top of a low ridge, with the vale on the left sloping upward to the mountain top, and rolling pasture-lands to the eastward—a very charming commingling of savagery and cultivation.

Now we sweep around the base of the mount, with here a dip and there a rise. A bit of level and a spin down under a rugged bluff. Off to the right opens a deep wooded glen, through which a tiny, rippling mountain stream threads its way, warbling its murmuring echoes through the maze of overhanging green. Suddenly a young red fox dashes boldly across our path and plunges into the glade depths, while with a whirr a plump quail starts from the roadside, rousing all the latent sportsman's blood in the veins of the Centurion, who bemoans the absence of his fowling-piece.

The path in some places is but a name, so weed-grown is it, but 'tis smooth and far preferable to the roadway—a mere ribbon of sand.

A succession of hills and hollows, and we come to an abrupt climb that only the Centurion and the Scorcher can surmount, though the Bloomer Girl makes a noble effort, while a country yokel in top boots, with a vapid grin on his befreckled face rouses the ire of the Fat Man by inquiring: "Why don't you ride it, too, mister?"

From the top we can plainly see the hotel at the apex of Mount McGregor, and enjoy an expansive view of the surrounding country. As we roll on the view broadens and we overlook the country for miles east and south. The hills stretch away, peak upon peak, in charming irregularity, a rolling sea of green, over which the lights and shadows play, here touching up some dark ravine, there crowning a peak with a sombre pall, while the autumnal tints and an occasional stretch of farm land brighten with rich coloring the rare landscape. A turn in the road reveals a pretty sheet of water nestling in the bosom of the hills westward, with a rich background of towering mountain peaks.

Now a succession of easy grades, every dip and rise affording a change in the panorama; hills, vales and mountain peaks; broad fields of buckwheat, stubble, pasture and woodland, until off to the westward, outlined against the high range of the French Mountains, we see the village of Glens Falls. A turn, and we strike the tracks of a trolley road, and, bearing to the left, follow them directly into the town, across the bridge over the massive bare ledges of rock that form the riverbed, where once, ere the vandal hand of the manufacturer turned the rushing waters from their course, seethed, and formed one of the most picturesque falls in the East.

Here is laid the vivid scene in Cooper's "Last of the Mohicans." There, close under the bridge, is the cave in which "Hawkeye" and "Uncas" defied their savage foes.

We are now traversing the hunting-grounds of the famous Six Nations, the theatre of many an aboriginal encounter, and the scene of much bloodshed during the French and Indian War. The Fair Novice begins to brush up her history, while the Scorcher gets all tangled up with Cooper and Horatio King.

While we miss the grandeur of the falls, we can still appreciate the huge gray masses of ledge and rock that narrows to the river gorge.

We have a stiff climb to the square, where stands the Rockwell House (L. A. W., \$2.50), (1½m.—70½m.).

As it is still early, and fair "Horicon," the limpid mountain pearl, is but ten miles away, we take a rest and then push on directly out Glen street, passing the handsome Y. M. C. A. building, the square and the fine house of the Glens Falls Insurance Company, keeping to the left at the monument, through an avenue of pretty residences. We spin on to the plank road, where in very dry weather care must be observed to avoid punctures from the splinters.

We dash through the toll-gate, with never a ha'penny of toll to pay, and hardly realize, so smooth and gradual is the ascent, that we are really having a climb. Before us rise the peaks of the twin ranges of the French Mountains, which form the lower watershed of the lake, Prospect Mountain and its sister, Mount Rattlesnake, looming up on the left horizon.

At last we reach an eminence to drink in an unsurpassed southward view of the roar the hills, the town and river. Then on until we reach the "Half-way House," slightly misnamed, as it is five and one-half miles from town. The scenery now grows wilder; long stretches of stunted oaks and pines, fantastic masses of rock, deep, weird glens, that, says the Fair Novice, could readily give shel-

ter to a skulking redskin or a prowling bear. A rise, and there, to the eastward, calm and mirror-like, lies Glen Lake. The road now skirts a narrow ledge, from which rises abruptly a low wooded ridge, while on our right it falls off precipitously to the ravine below, through which the tracks of the D. H. R. R. thrust their way. In and out along the ledges winds the road, now under the shadow of a frowning mass of rock, now through a piney thicket, or hickory grove, reminding one strongly of the Trossachs of Scotland, until a bend reveals the muddy, weed-grown waters of "Bloody Pond." A shudder thrills the Fair Novice as she recalls its history, while the Bloomer Girl evinces disappointment at its sorry aspect. On over a rise and before us lies the lake town of Caldwell, with the expansive roofs of Fort McHenry glistening in the setting sun.

Far up on Prospect Mountain we see the white clubhouse, and there just a bit of the lower end of the lake, with its guardian hills. We roll down the incline and through the village street to the Lake House (L. A. W., \$3) (9½ miles—80 miles), while the older hostelry, open the year round, the Carpenter House (L. A. W., \$1.50), is passed just below.

All the country round about is full of historical interest, and several of the prominent landmarks derive their names from stirring events during the French and Indian and Revolutionary wars.

The Fair Novice, who, though an up-to-date wheelwoman, is of a studious bent, brought forth an interesting little pamphlet by Elizabeth Eggleston Sulye, entitled "Lake George

in History," from which she regaled us with harrowing tales at eventide, but rudely disturbed by the snores of the Fat Man.

Lake George! the gem of inland waters, famed for the beauty of its environment, its waters of marvellous purity, its irregular shore line, its lofty mountain peaks, forest crowned and bedecked in royal robes of multi-colored hues, its rounded headlands, lordly bays and quiet coves, and its multitude of little rock-bound isles. According to tradition, says our authority, the Fair Novice, there is an island for every day in the year, and an additional mysterious, illusive, little sprite that appears and disappears each leap year; but the rude, matter-of-fact geological survey accords it but 220.

Its verdure-decked shores are dotted with handsome summer hotels, and its surface with water craft, while the large, well-appointed steamers of the Champlain Transportation

Company traverse its length several times daily. (Fare \$1.50, no charge for wheels.)

Authorities conflict upon the derivation of its numerous names. Cooper called it "Horicon," from the Indian, meaning "tail of the lake," as forming a tail to Lake Champlain, again translated "silvery waters;" but Stoddard differs and says it was known to the Indians as "Andia-ta-roc-te," the place where the waters contract;" the French Jesuits, who used its limpid waters to perform the typical purification of baptism, called it "Lac du St. Sacrement"—"the Lake of the Blessed Sacrament," or "Holy Lake"—and when, in 1755, General Johnson encamped at its head, he christened it Lake George, as a fitting honor and tribute to George II, King of Britain, a name which has since clung to it.

Multitudinous are its attractions, and we would fain spend several days in exploring its many isles and coves, but, alas! the ever necessary time, so the early morn is devoted to a visit to the fast disappearing ruins of Fort William Henry, in the extensive, handsome hotel grounds of that name, and a trip up the inclined railway to the peak of Prospect Mountain. This railway is the longest of its kind in the world, with a rise of over 60 feet to the 100 in some places. Fare 50 cents, round trip. From this lofty apex, 2,000 feet above the lake, a panoramic landscape of unsurpassable grandeur is spread before us. Southward stretches the valley, with the sparkling waters of Glen Lake and Lake Luzerne glistening like jewels in their deep hill settings of emeralds there peep the spires of Glens Falls, there, faintly discernible, those of Sandy Hill, there, the summit of Mount McGregor; then, as the eye sweeps the eastern horizon, the ragged outlines of the Green Mountains, and the wooded ridge of the French Mountains, while below us, in the foreground, the lake, in an amphitheatre of hills, with the village nestling at the water's edge, Northward stretch the silvery, rippling waters, lapping the moss-covered crags of Assembly Point, and upward, along the irregular base of Brunt Hill, Brock Mountain and Shelong Rock, to end in a seeming cul-de-sac of isles and mounts at the narrows, over which, from the two grim sentinels, Tongue Mountain and towering Black. Westward stretch the Adirondack ranges, peak upon peak, in the blue haze of distance, until the Fair Novice breathes a semi-parody on the "Charge of the Light Brigade":

Peaks to the right of us,
Peaks to the left of us,
Peaks to the north of us,
Rugged and noble,

[To be Continued.]

PALMER TIRES

KANSAS STATE CHAMPIONSHIPS.

Quarter-mile State championship.....	Frank L. Eberhard	Stearns-Palmer Tires
Half-mile State championship.	Frank L. Eberhard	Stearns-Palmer Tires
One-mile State championship.....	Frank L. Eberhard	Stearns-Palmer Tires
Two-mile State championship.....	Frank L. Eberhard	Stearns-Palmer Tires
Five-mile State championship.....	Frank L. Eberhard	Stearns-Palmer Tires

From June 19 to August 31 Eberhard had won 21 firsts, and on August 29, after turning professional, he won the mile open at Topeka in 2.06½, State record. Eberhard's career has been a notable one, and, with luck, he will hustle the leaders another season.

CORCORAN'S BOSTON BENEFIT.

Mile open, amateur.....	Won by C. H. Drury	Stearns-Palmer Tires
Mile tandem, match.....	Won by Urquhart Brothers.....	Fowler-Palmer Tires
Mile tandem, professional.....	Won by Hoyt and Newton.....	Warwick-Palmer Tires
Mile handicap, professional.....	Won by Frank Butler.....	Stearns-Palmer Tires

MORE MINNESOTA CHAMPIONSHIPS.

Five-mile professional.....	W. E. Becker.....	Dayton-Palmer Tires
Two-mile professional.....	Robert McCleary.....	Dayton-Palmer Tires
Half-mile professional.....	W. E. Becker.....	Dayton-Palmer Tires

These are in addition to the splendid string of Amateur State Championships won by Carmichael. The Minnesota State meet was certainly kind to us. Palmer Tires took nearly everything in sight.

BUTLER HEADS THE LIST.

The Bearings thermometer gives Tom Butler the post of honor among the American cracks. He has a sure grip on the position for this season. Each year develops a new champion rider, but Palmer Tires, year after year, without a break, win the championship for tires.

MORE PRIZES HAVE BEEN WON ON PALMER TIRES

Since 1892 than on all other tires combined. This statement almost paralyzes belief, but it cannot be successfully contradicted. Racing men throughout the world know that only Palmer Tires have speed.

The Palmer Pneumatic Tire Co., 133-135 S. Clinton St., Chicago.

Kindly mention The Wheel when writing.

WOES OF A LAMP USER.

He Tries Several Methods of Securing Satisfactory Cycle Illumination With Varied Results.

Among the various minor equipments which the wheelman must procure to make his outfit complete, none, probably, is more important than the lamp. His pipe may furnish the pillar of cloud by day, but it cannot give the pillar of fire by night, without which he is liable to arrest in the town, and to accident in the country. And she? Well the foolish virgins were not cyclists, or they would not have merited that adjective by leaving their lamps unfilled. But filling the lamp is the least of the labor—or, if not that exactly, it is but too often the forerunner of trouble, as the lamp itself is of the wheel and its rider.

The bicycle of to-day is not an inexpensive article; if of first-class make it costs a good round sum—but it is worth it. Every part of it has received the closest attention in regard to design, material, workmanship and inspection, and the purchaser of the best knows that it can be relied on in all circumstances, and that, barring accidents, he can ride it hundreds or thousands of miles if he give it only reasonable care; and, moreover, he has the assurance that any part of it which proves defective will be replaced by the makers without charge.

Nor is the cost of the lamp a wholly insignificant trifle, though not great as compared with that of the wheel; but, since it is to all intents an essential item in the investment, it is certain that this accessory ought to be in all respects of proportionate practical value, and of equal reliability.

But is this the case? The following experience throws a light upon this question, quite as clear, though not as satisfactory, as that produced by the lamps themselves, which were of three different makes, all regarded as among the best in the market.

In each of these the body of the lamp is hung upon two parallel bars, swinging in a vertical plane, and kept in position by helical springs acting by torsion. The cost of the first, which was the smallest and lightest of the three, was \$3. On the first or second evening the suspending spring snapped; the dealer declining to replace it, a good mechanic was employed, who made two or three new ones of the same description—which also broke one after the other. In the mean time the owner procured the second lamp, at an expense of \$4; this also proved to be a "light that failed," in precisely the same way. This trouble was finally remedied and the lamps made serviceable by introducing in each case a pair of helical springs acting by extension instead of by torsion.

The third lamp was still more expensive, its cost being \$5; the vessel containing the supply of oil was kept in place by a spring clasp of an old and familiar form, snapping under a ridge at the upper part of the fount. This ridge was not sharp and square on the lower side, as it should have been, but rounding; in consequence, the purchaser within a few days was halted by a policeman for riding without a light—much to his surprise, for he had set out with his lamp filled and burning, and supposed it was so yet. Investigation showed that the jolting, in crossing a railroad track or something of that kind, had given the rather heavy lamp a downward momentum sufficient to force back the ill-contrived spring clasp, and thus to leave wick, oil, fount and all somewhere behind him on Eighth avenue. To be sure, in this case the loss was made good; but the new fount in its turn dropped out even more promptly than the first one—fortunately, in such circumstances that the fact was at

once discovered. On the principle that

"Little fleas have other fleas to bite 'em," a keeper, formed of three-fourths of a steel ring, was sprung into the groove, so that by turning it part way round it would slide over the clasp and hold it securely in place. That overcame this difficulty; but the third lamp was not to be outdone by the other two, and soon after proceeded to break its suspension spring, just as they had theirs.

Now, putting the cost of the wheels at \$100 each, here are two cyclists, one of whom pays 7 per cent and other one 5 per cent additional for an indispensable accessory, whereof an essential part breaks down in a few evenings' riding over the city streets. Learning from them that this was not simply an unusual "streak of bad luck," but that similar misfortunes are of frequent occurrence and a common cause of complaint among their brother wheelmen, I was curious to see what

GIVING HIM THE RUSH.

"For God's sake, Walter, send me \$40 at once."

This was a telegram received by a well-known member of the New York Athletic Club recently. When he saw his brother's name attached to it the message fell fluttering to the floor from his palsied hand, his face took on an ashen hue, and he would have fallen to the floor had there not been some ladies present.

With faltering footsteps he made his way to a long-distance telephone, and, with a voice broken with emotion and his whole nervous system strained to its utmost tension, called up the town where the message came from and his brother Tom, who was there:

"Tom," he said, with tears in his voice, "what has happened? Tell me all and I will go to you," and Tom whispered back over the wide waste of distance: "Never mind coming; send me \$40; I have the greatest chance to buy a

BETWEEN THE DEVIL AND THE DEEP SEA.

SERGEANT—Why didn't you stop when the Officer called to you?

PUSHMORE—'Cause if I did my electric lamp, which is run by friction from my wheel, would have gone out, and then he'd have pulled me in for having no light on my machine.

a dealer in such articles might have to say. Inquiring, therefore, of one of these gentlemen what he thought to be the best lamp, he specified two of those above referred to; on being informed of what had occurred in the use of these, he merely replied: "Oh, that might happen to any of 'em"—and this in an easy, airy way, as if such little things were not worth mentioning, really!

But to the victims they do seem worth mentioning, and they are mentioned in most emphatic terms. The wheel itself is a splendid demonstration of what mechanical skill and care can accomplish; the purchaser can justly infer therefrom that it is within the compass of human ingenuity to produce a lamp which, with all its attachments, shall at least withstand the vicissitudes of ordinary use—and, in view of the price he has to pay, he feels entitled to it.

wheel cheap you ever heard of."

When Walter paid the 75 cents for telephone service he swore in a still, small voice.

WHERE WORDS FAIL.

As silent as the shade of night
That steals across the plain,
He comes; all careless in his flight
Of human joy or pain.

And, though you deftly choose your way,
With you he's sure to deal—
This fearful creature of dismay,
The wobbler on a wheel.

Then in the crash, when eloquence
Exhausts its phrases terse;
When you have checked your words intense,
To think of something worse,
A shock more fierce than all the rest
Your senses sets a whirl!—
The wobbler whom you thus addressed
Turns out to be a girl.

PEDAL-PUSHING POWER.

In a recent communication to the Paris Académie des Sciences, M. Bouny gives particulars of a series of experiments made to determine the power exerted in propelling a bicycle at different speeds. The method adopted was to take an autographic record of the total force exerted on the pedal throughout a complete revolution. To this end a disk was mounted on the crank concentric with the pedal pin. The pedal itself was mounted on stiff springs, and points fixed to it traced curves on the disk already mentioned. If no pressure was exerted on the pedal, these latter curves were simple concentric circles; when, however, the rider began work, the springs on which the pedal was mounted yielded proportionately to the pressure applied, and the curves then drawn showed by their deviation from the circular form the value of the force applied at any part of a revolution.

One of the pointers in question measured the force applied in a direction perpendicular to the plane of the pedal, while the other showed the pressure applied parallel to this plane. The latter is by no means an insignificant quantity, "as all good riders shove their pedal forward as well as down. The angle the pedal made at any moment with the crank was also automatically recorded.

An examination of the diagrams thus obtained showed, in the first place, that there was no absolute dead point, such as occurs with an ordinary connecting rod and crank motion, and, secondly, that there is always some pressure on the pedal during the rise, the negative work due to which has to be subtracted from that done during the down stroke to obtain the net amount used in propulsion. The experiments were made at speeds ranging from 10% to 21¼ miles per hour, the machine being run on a wooden racetrack. The results, reduced to even English measures by means of a formula of interpolation, were as follows:

Speed. Miles per hour.	Work done per Semi-revolution. Ft. lb.
10	18.58
10½	20.96
12.5	33.98
15.0	47.50
17.5	56.75
20.0	63.62
21¼	66.08

It will be seen from the above figures that the average pressure of the foot required on the pedal increases rapidly with the speed, being at twenty miles an hour nearly three and one-half times as much as at ten miles per hour. Unfortunately, the gear used is not noted by M. Bouny, and so it is impossible to deduce from the above figures the average tractive resistance of the machine at the different speeds. Probably at the higher speeds named a large proportion of the total work done was expended in overcoming atmospheric resistance, and the run of the figures might be changed considerably if the trials were conducted on a rough road instead of on a smooth track.

YESTERDAY AND TO-DAY.

In days of old,
When night were cold
And babies a yard of mouth unfurled,
Ma used to rise
And wipe her eyes,
And the hand that rocked the cradle was
The hand that rocked the world.
Now when our young
At night give tongue,
Papa is at the cradle humbled;
For ma needs sleep
Both sound and deep,
For the hand that guides the bicycle is
The hand that guides the world.

SADDLES TO SUIT EVERYONE.

He would be hard to please, indeed, who could not find something to his liking in the thirty-two styles of saddles that are being marketed by the P. & F. Manufacturing Company, of Reading, Penn.

This concern, consisting of D. F. Prinz and S. H. Fulmer, started in a very small way about five years back, and have since built up a reputation and trade that has placed them easily among the leaders in the cycle saddle business. With the same conservative force that characterizes so many

Model XX.

of the Reading industries, they have worked hard and faithfully, and to-day have the satisfaction of seeing their goods shipped to all parts of the globe. They have also been fortunate in securing as selling agents four firms with National reputations. In New-York City, the Anglo-American Cycle Fittings Company take care of the Metropolitan district. The Shone-Hanna Company look after their interests in Rochester. Crosby & Mayer, Buffalo, the well-known stampings concern, handle the saddles from that point

Model O-Hygienic.

and in the West, and Gus Boyer, of Cleveland, uses their saddles as his star line of samples.

Their Model XX is the saddle on which they have built their reputation. It is of the typical suspension type, and in the five years that the company has been in business they have made and sold close to a half million of this style. Model G is one of the new '97 patterns, and is designed especially for heavy riders; it is made in two widths, seven inches for the gentlemen's

Model S-Racing.

style, and ten inches for the ladies'. Model O is what promises to be one of the popular saddles of the year; it is of the hygienic type. It is made with a raw hide lacing, the top being of a layer of felt covered with leather. It is made in four styles, one of seven-inch width, long and short pommel, and the others ten inches, with long and short pommel. The Model S is a racing saddle, weighing ten ounces. The base of it is aluminum, covered with felt and finished off on top with leather, nicely stitched by hand, and although a hard saddle it is equally as comfortable as many so-called flexible saddles.

For '97 the P. & F. Manufacturing Company will also market a line of toolbags. Their past success in the saddle business merits the belief that they will do as well with the bags.

FAIRMINDED AND LOGICAL.

"Denouncing the bicycle from the pulpit or anywhere else is like railing at the railroad or steamship," declares Mrs. Parkhurst, wife of New-York's famous ministerial reformer. "Every great mechanical invention, each new phase of development brings to fallible humanity some opportunity of evil along with its power for good. Shall we abandon the art of writing because it has created the crime of forgery? Should women go unclad because the gowns of some are ostentatious? In my estimation it would be almost as foolish to seek to abolish the steed of steel because because now and then one rides it to perdition."

KNOWLEDGE UNDER DIFFICULTIES.

"Is Pypstems writing a book, or what is he doing? Every time I see him he is poring over a dictionary or an encyclopedia."

"No. You know he is dead anxious to be a racer, but every time he gets in a tight place he gets heart failure, lets up, and gets beaten out. He went to a doctor to find out what was the matter, and the doctor told him nothing ailed him but phobophobia. He was ashamed to ask what that means, so he's looking it up. He's already read over the f's five times, and now he's begun at the beginning and is systematically going through the dictionary."

SOLUTION OF THE DRESS PROBLEM.

Dress, like everything else, is the result of the laws of evolution. Masculine attire has developed in the direction of trousers, feminine in the direction of draperies. It is only logical to assume that there is a physiological reason. The male figure is fit for one style of dress, the female for another. To find a reason for a revolutionary change in a mere fashion of the day is absurd. A short skirt over bloomers for cycling purposes is as little in the way as the skirt of a riding habit, and women of taste and refinement are fast learning that this is so.

SHE WAS STUCK ON THE IDEA.

Shop loafers so annoyed the proprietor of a repair shop at Hinsdale, Mo., that he spread a coat of tire cement over his counter, the favorite resting-place of weary callers, and when a bloomer girl came in and plumped herself down on it, remaining seated until the repairs to her wheel were completed, there was trouble. She had to continue sitting after the wheel was ready until an application of gasoline softened the glue.

WHERE EFFORT IS WASTED.

A common fault of the novice is irregularity of effort. In the same class as spurring belongs the fitful pace of the early days, which is replaced later by the steady, unremitting swing that keeps up nearly the same amount of effort on levels and grades. Another kind of spasmodic action is the application of pressure on the down-stroke of the pedal only, in lieu of sustained use of power throughout the revolution.

WHERE THEY ARE SAFE.

A great cry is going up all over the country and an exchange despairingly asks: "Cannot something be done to prevent our young ladies from being insulted when riding alone on the streets at night?" Yes, we think something can be done, and it cannot be done too soon, either. Just have the girl's mother tuck her into her little bed about 8 p. m. and lock the door on her.

ZOLA PAYS TRIBUTE TO THE WHEEL.

Surely there is no more diligent man of letters living than Emile Zola. Though he has done much great work already, he is as ambitious and assiduous as though he had yet to win his laurels. He is now engaged on two works, an opera and a romance, both of which are bound to excite widespread interest.

The romance will be about cycling, and "The Cycle" will be its title. Zola has for some time been an enthusiastic admirer of the wheel and is never so happy as when he is speeding along the country roads near his quiet home. His health has been quite improved by this exercise, and he is now testifying his gratitude in the only way possible—namely, by making the fascinating wheel the subject of such a romance as he alone of living men knows how to write.

He is hard at work on the story. Lover of facts as he is, he spends a good deal of time on his wheel, collecting the necessary material, which he carefully jots down every day, together with his own impressions, in his indispensable notebook. Friends who call to see him find him generally in his bicycle costume and rather averse to discussing any other subject than the wonderful wheel. "The Cycle" will consist of about five hundred pages, and, according to Zola's usual fashion, will be entirely realistic.

BECAUSE TREES GROW STRAIGHT.

Were it possible to train trees so that the branches would grow in a perfect circle, the wood-rim problem would be solved, but, unfortunately, wood insists on growing in straight, or nearly straight, lines, and this necessitates bending and a joint, and one of the most ingenious of these is that standing to

the credit of J. E. Carr, of New Haven, Conn. It is a simple interlocking device, and constructed in such a way that it really holds together itself. The illustration merely shows the portion covered by the tire, while the inner side presents a straight line that, after it is finished, is absolutely invisible.

AN ITALIAN SADDLE IMPROVER.

Dr. Scaffner, an Italian medical man, has brought out an anatomical saddle which can really be sat upon without at the same time rendering it nearly impossible for the rider to propel the machine. The article in question is shaped much as an ordinary saddle, but it is much wider than usual, and the peak is not so long. The great feature is that the saddle is free to turn from side to side upon a ball-bearing placed centrally, and this motion, while not rendering the rider unsteady, allows the thighs to descend sufficiently for the feet to reach the pedals easily when the cranks are coming up.

WHY SHE IS CHARMING.

What a pretty thing some women on bicycles are! Their pose is good. They sit erect and ride easily, gracefully. Most men stoop while riding. Women sit erect. Men always seem to be on business bent and in a hurry. Women appear to ride for pleasure and in no hurry. Men too often appear weighted down with cycle care. Women have the air of easy indifference, unconsciousness of risk. They ride as the true goddess walked.

MAKES SORENESS IMPOSSIBLE.

During late years no one part of the bicycle has received more attention from inventors than the saddle, and of no one thing have there been more failures recorded. To use a poor, ill-fitting saddle not only means uncomfortable riding, but in many cases injurious results, which remarks lead up to the Hygeia saddle being marketed by the Hygeia Pneumatic Bicycle Saddle Company, No. 503 North Eutaw street, Baltimore. The Hygeia is really more of a seat than a saddle, as it has a firm frame in which are imbedded two pneumatic cushions. In the past, all cushions of this sort were liable to sag and offer the least support where it was most needed. In the Hygeia this is very ingeniously avoided by

dividing the air retainers into longitudinal cells. This prevents the shifting of the air and at all times preserves the firmness of the pad. Another good feature of the saddle is that the leather covering of the pad is sewn around the edge in such a manner that, on inflating the cushion, it forces this edge into a groove and really clinches the pad, somewhat on the style of a detachable tire. This method of fastening, of course, allows of easy access to the rubber portion of the saddle, and in case of a puncture or any other accident, makes it very easy to repair. Many testimonials from prominent physicians have been received by the company, and the saddle, as shown a WHEEL man, seems to answer every requirement of those who have been looking for comfort. It is made in two styles—men's, which sells for \$6, and ladies', for \$7, with, of course, the usual discounts to the trade.

SEVERAL GOOD THINGS.

Those who are looking for novel attachments for their wheels will find the "Locust" bicycle alarm, made by the Hall Manufacturing Company, Wallingford, Conn., something a little out of the ordinary. As can be seen by the illustration, it fastens to the head of the wheel, and, as the circular issued by the company puts it, "gives a sound unlike anything ever heard." The principle is somewhat on the style of the old watchman's rattle; but the racket can be varied from a very low buzzing to a noise that could be heard half a mile off. It is nicely

finished in natural wood and nickelplating. The Hall Company also make a telescopic parcel-carrier, the frame of which is made of aluminum, and which is very easily attached or detached. Besides these they turn out a sprocket lock of novel design, a folding screwdriver and the well-known Duplex and Surprise whistles which have been on the market for a number of years. They sell to jobbers only, and would be pleased to hear from all dealers in sundries; to those who contemplate issuing a catalogue, they will be glad to furnish electrotypes free of charge.

DANGER OF OVERDOING.

The woman unused to active exercise must take care not to travel on her excitement. She will be wise to lie down after a ride of any length. The taking of simple nourishment such as milk, chocolate or beef tea during a ride is important as a means of recuperation, whether there be hunger or not, while food preceding an early ride is most important.

Moreover, before and after a hearty meal a half-hour's rest is desirable. It is highly important, too, that the length of the trip and the difficulty of the effort should be gradually increased. Moderate muscular aching, after the first few attempts at road riding, need not prevent her from resuming cycling at once, but after-pallor and sense of exhaustion are to be carefully heeded, and if they are produced by moderate effort, call for a medical opinion as to the advisability of further riding so far as she is concerned.

HE WAS ON.

Central Park was the place; after nightfall the time, and he was riding a high wheel, one of the dear, dead, beyond-recall kind. All day and en route home he had been jeered and hooted, an object of the curious, but his senses had long been callous to "Say, your wheel's going 'round,'" and "How's the weather up there," and such scoffings fell on non-hearing ears. Suddenly a voice from the darkness called out, "Hey, there; don't you know the war's over?" The rider politely bowed his acknowledgments to the invisible wit, and rolled on, looking like a mammoth spectre.

FROM JANESVILLE TO UTICA.

Utica, N. Y., will shortly number among its industries the Weston-Mott Company. The concern has already completed arrangements for its removal from Janesville, and expects to be established in its new location before snow falls. Greater accessibility and trans-

The Weston-Mott Co.'s New Crank Hanger and Sprocket.

portation facilities are the reasons for the change of base. The Weston-Mott people report the trade outlook as most encouraging. Their orders for hubs, hangers, spokes and nipples are, they say, away in advance of last season.

THE LOGICAL CONCLUSION.

He was clad in a cycling costume and leaning dejectedly against a lamp-post, contemplating immensities, when I accidentally brushed against him.

"Look out!" he exclaimed. "Don't you dare disturb me."

"Why not?" I asked, turning as I recognized his voice.

"'Cause I'm the shentre of the unicorn—no, I mean un'ersh. I'm the hub of the un'ersh," he exclaimed, thickly.

"How did you find it out?" I asked, admiring his egotism.

"Go 'way, foolish man, before you pre-preshipitate chaos," he expostulated.

"First tell me how you know you're the centre of the universe," I insisted.

"Ain't everyshing revolving around me?" he demanded, indignantly.

ALL GOING TO SUE.

Insiders and Outsiders of the Dunlop Boom
Talk Law—Tire Troubles Multiply—
Some Racing.

London, Sept. 26.—In my last letter I stated that the idea was gaining ground that a syndicate, of which Mr. E. T. Hooley was the head, had cornered the market in Dunlop Deferred, and that unless the committee of the London Stock Exchange came to the assistance of the stock jobbers, a "squeeze" was imminent, as the market had been heavily oversold. As the result of considerable pressure, and in view of the grave delay in issuing transfers from the offices of the Dunlop Tire Co., the Stock Exchange Committee extended the date of delivery a week, and ordered the suspension of buying in on behalf of the vendors—of whom, of course, Mr. E. T. Hooley was one. The result of this is that the syndicate in question has been foiled, as the oversold jobbers can easily secure their complement of shares at ruling prices—about ½ premium—since the opposition has been removed. The fact of the matter is that the members of the London Stock Exchange have not forgotten the bulge which Mr. Hooley got on them over Humber Portugal, Limited, when he squeezed them to the extent of £14 for every oversold £1 share, most of which he had got at £2 each.

The latest information about the Dunlop Company is that out of the result of investments in other businesses, and from their sale to the French Dunlop Tire Company the directors have been able to wipe off £500,000 of one million debentures, thus setting free another £20,000 in interest, to be converted into dividends on the deferred shares.

Some time ago it was bruited about—and I hinted as much in this column—that Mr. J. B. Dunlop, the inventor of the tire of that name, felt aggrieved at the manner in which he conceived that he had been induced to part with the last 2,000 shares which he held in the old Dunlop Company, from the Board of which he had retired. On the evening of the day on which the sale of the old company was determined on by the directors for £3,000,000, Mr. Dunlop was waited on by Dr. F. F. MacCabe, who offered him a check for £42,000 in return for the scrip mentioned. As the market price was about £6 10d. for each £1 share, Mr. Dunlop evidently thought he was getting out well, for he at once closed on the offer and surrendered the holding. Next day the shares rose from £8 to £14, and Mr. Dunlop alleges that collusion between the buyer and some persons not yet mentioned, though quite understood, rendered the sale invalid, and he has now served a writ on Dr. MacCabe for the return of the shares, or as alternative, the sum of £12,000, alleged to be the difference between the sale price and actual value of the shares at time of sale. As a matter of fact, however, the shares were not worth more than the price actually paid, if as much, for, had the shareholders refused the offer of £3,000,000, Dunlop would have had considerably the best of the deal. The shareholders did not even know of the recommended sale, so that beyond a washing of dirty linen of some sort, I don't know what end the action will serve. It certainly won't get back the £12,000.

After this action, and the more foolish one against Harvey Du Coos, sr., we will be right in the thick of such tire litigation as we have never had before. As the real defendants in an action brought by the Dunlop Tire Company against a North Country agent for infringement, the makers of the Scottish tire, who comprise some exceedingly wealthy Dundee newspaper owners, announce their deter-

mination to upset the Welch patent, which they are said to have infringed. As their tire is to all intents and purposes the same as that over which the recent Dunlop-Caswell action was fought, it seems hard to imagine that Mr. Justice Kekewick's emphatic decision in the Dunlop Company's favor should be so lightly regarded. Mr. Justice Romer is to be the judge, and is considered much the most competent of our judges on patent law. The case will come on about the end of October, and a trial lasting about ten days is anticipated, in which all the strength of the English bar will be engaged. Even this verdict will not decide the matter, as the loser is sure to appeal, and it will evidently be a battle from which only one firm can emerge. If the Dunlop wins we may regard as settled all other disputes on the Welch patent, and there are not a few pending. If, on the other hand, the Scottish people eventually come out victors, the whole trade in wired on tires will be thrown open, the Continental trade and the Dunlop shares will fall to a heavy discount.

What it all means I cannot say, as I have not yet seen one. The inventor says you can adjust the gearing from the handle-bar through five different leverages—say from 120 inches to 10 inches—without dismantling, stopping or discontinuing the pedalling. So you can obtain high speed with less effort on a level road, and can ascend hills or travel against head winds without exertion, which would be difficult or impossible on the ordinary cycle.

In the descent of hills your pedals act as foot rests; they do not rotate, and by them you can instantly apply, by pressure of the feet and without muscular exertion, a perfect roller brake on the rear wheel. How you can do all this I don't very well see, and, not seeing, I am not believing.

By the time that the Dunlop and Scottish action has been fought, that of Dunlop vs. the Tubeless Pneumatic Tire Company will have come on. The writ in this case has been issued for an infringement of the English Clincher patent, which of course is now the property of the New Dunlop Tire Company. Both sides seem equally confident, and as the stakes are high, the battle will be one of the most determined animosity, personal as well as commercial. The heads of the Tubeless concern are Mr. C. A. Palmer and J. B. Dunlop, both of whom have been very intimately connected with the Dunlop tire success, and of course will be treated as seceders. They rest their case principally on the fact that the Bartlett patent was granted for a cover for a tube containing compressed air, whereas the Fleuss tire is a cover capable of containing compressed air, and so becoming a complete tire. If the plaintiffs win I shall not be surprised to find the tubeless patents passing into the Dunlop hands at a merely nominal figure, a result which I fancy will also occur should the Tubeless win, the only difference being the price—but what a difference that would be! In the latter case I know of quite half-a-dozen possessors of alleged tubeless tires who will immediately start in order to be bought up, but I am betting on the Dunlop case in this instance.

I am told that there is a likelihood of some legal friction between a syndicate of Humber shareholders and the vendors of the Humbers Extension, Limited, but I don't place much weight on these ebullitions of temper. More to the point is the statement that Humbers have bought back from Humbers Extension the sole right to retail Humber built cycles in Paris, for the solid sum of £100,000, which, I think, is more than the parent company secured for the raison d'être of Humbers Extension, Limited, in toto.

So certain is the universal adoption of disk adjusting hubs regarded here, that a company has appealed this week to the public for £70,000 to work Price's Reservoir hub, which I illustrated some weeks ago. The hub is a good one, but the price is infinitely better, I think—no pun intended. If there is a demand for it, a company with a capital of £5,000 would turn out quite as many as the trade wants, thanks to automatic machinery.

I hear the Brookses, the saddle-makers, are about to go to the public, where the response is certain to be satisfactory, as Brooks saddles are the standard goods of the cycling world, and practically rush our market here.

The racing season is fast dying here. The last of the so-called classic races—the Anchor Shield twelve hours' contest for amateurs—took place last Saturday, and, with the fifty-mile championship, unduly delayed, next Saturday the programme for 1896 will have been finished. The Anchor Shield was the first attempt to popularize distance path racing in England, and its success encouraged Hillier and his club to stage the now world-famous Cuca Cup twenty-four hours' contest. Like the latter race, however, the Anchor Shield has fallen on degenerate days, and last Saturday was a very pale reflex indeed of its whilom glory. It was held, of course, at Herne Hill, the wooden track and thanks to damp and later rain, a series of spills, which involved every starter but the three placed men, destroyed every vestige of interest in the affair, and made it a procession after the second hour. For some reason or other, the London Centre N. C. U. have made the matter of the falls a question on which to demand an explanation from the track proprietors. They have, of course, made themselves look supremely ridiculous, as everybody in England, almost, knew very well that Herne Hill slipped in wet weather. Anyhow, M. Ballan, an English-Armenian won by over eighteen miles from an unknown man named Pepper Ballan's distance was 262 miles 962 yards. Just to show how soft our distance amateur records are I may say that records were cut from 210 to 220 miles, and from 254 to 258.

To-day the new cement path at the Crystal Palace, Lydenham, will be opened with a professional meeting, consisting of a twenty-five-mile paced match between Stocks and Walters, and some handicaps. That the track is fast has been proved by some tandem records which were put up on it this week. It is rumored that the London amateur race path has had a sweeping this week and a few of the scandalous instances of paid amateurs sent over to the other side.

GATHERING HORSESHOES.

The latest edition of the wheelwoman wheeled composedly up Broadway Saturday afternoon. She wore pronounced bloomers, a man's collar and tie, and the "latest" Derby hat. She chewed gum.

Everybody stopped to watch her. Even the truckman took the pipe out of his mouth long enough to exclaim "Hully Gee!"

At Chambers street she vaulted out of the saddle, picked up a horseshoe, fastened it to the handle-bars, and rode on unmindful of the gaze of the multitude.

NATURE ALLIED WITH TRADE.

Where the Beauties of the Former Wed the Demands of the Latter in the Naugatuck.

To the lover of the beautiful in nature, the Naugatuck Valley offers many attractions. It is a gem, a masterpiece, and has long been known as Connecticut's most lovely spot. Hemmed in between high hills and rugged boulder-clad peaks, the lovely rock-strewn, brawling river wends its way to Long Island Sound amid scenes that rival in every way the many more famous mountain passes in the blue Alleghenies, forming a gateway, as it were, to that land of splendor—the Berkshires.

But man with his wonted greed has turned all this to his own advantage, pretty towns have sprung up, busy in the interest of trade. Solid, substantial factories line the river edge, deriving from the swift-running stream a power that literally flows by their doors, the gracious mountain springs bountifully, providing a seemingly inexhaustible supply and keeping the wheels of industry in motion though in the driest of seasons. Even the verdure-clad hills contribute their share, the many pretty little houses settled in the nooks and crannies afford a retreat for the busy toilers that may well be envied by the city dweller.

In the commercial world New England is synonymous with all that can be produced with economical cost, and the whole secret lies in surroundings. Skilled labor dwells here in perfect contentment; generation after generation have lived here perfectly satisfied with what the gods have brought, the sons taking up what the fathers have left, yielding mechanics who have been drilled into their work from almost infancy. To a large degree the cheap foreign element is wonderfully lacking, and the disorganizers who are only too prominent in the new Western country find there is no place for them among this domestic and peace-loving class. Then Yankee ingenuity—that term for full knowledge of the subject handled—counts for much, and as producers the States east of New York, of which Connecticut is easily the leader, stand to-day in a proud position, second to none on the globe.

A stranger riding on the cars along the Naugatuck is at once impressed with the size of the factories he can see from the windows. In many cases they are enormous. They tell a good story of an Englishman who on his maiden trip through the Naugatuck expressed much curiosity as to what the various plants they passed were used for, and was much astonished as to the varied assortment of their product. First it was brass,

then clocks, a watch factory was pointed out, and after a while a towering building marked the site of a huge cotton mill, and so it went. Presently the train rolled by a vast pile of brick and mortar, the chimneys belching forth smoke, and glimpses of the interior showing a busy hive. "And what do they make there?" he asked. "Brass tips for shoe laces," was the quiet response, and that ended the catechising. He was overcome with the energy displayed in working up a tremendous establishment like this for the manufacture of such an apparently insignificant article as shoe lace tips. And so, although nothing seems too large or too small for the ingenious Yankee to handle, to turn into money, and it was not, therefore, surprising that, on the birth of the bicycle, they should devote their talents in that direction, and, as in everything else, make of it a success.

At Derby, a pretty town, famous for its

silverware, Wilcox & Howe, for many years extensive forgers of carriage hardware, have turned over their hammers to the production of bicycle material, sprockets, cranks, frame connections, and all those parts that help make the finished machine, are made in a quantity and of quality commending them to the careful buyer. The company have recently added to their equipment a number of improved drop hammers and double presses, which put them in a position, even better than in the past, to meet the enormous pressure that their trade has brought. For 1897 they are showing a number of forgings which are up to date in every particular. A new bottom bracket, and a variety of sprocket designs with fancy centres, are among the novelties offered.

A few miles further up the river is Seymour, a typical valley town, and here the H.

A. Matthews Manufacturing Company, who have earned an enviable reputation as the manufacturers of steel stampings, occupy a plant just on the outskirts of the town. Their wares are known by all engaged in the bicycle trade, and it is the proud contention of the company that they were always able to turn out any stamping submitted them, no matter how complicated the pattern. For this year they are showing an entirely new stamped forkcrone, which they claim needs but very little finishing, and is an improvement on anything that they have shown before. A new rearfork end also comes in for much attention, and is constructed in such a way that it is composed of a single piece, allowing it to be threaded for the adjusting bolt and to be brazed to the rear fork-ends without any unnecessary finishing. Special designs, however, are their specialty, and they are in a position to successfully turn out work that at first glance it seems almost impossible to accomplish by means of a press and sheet steel.

Proceeding further up the river and the traveller comes to Torrington, where a peculiar industry in the shape of a bicycle spoke factory has been developed by the Excelsior Needle Company. This concern is the largest of its kind in the world. Starting in a small way to make needles some years ago, they were drawn into the bicycle business. Their plant soon became totally inadequate to the demands of their increasing business, and to-day they occupy a place which seems enormous for the manufacture

of a single article like bicycle spokes. They also evolved from their needle machinery a machine for swaging cycle tubing, and by this means saw their way clear to taper the tubes at the various joints in a bicycle frame.

Half a mile or so above the needle company is the Eagle bicycle factory. As the old-timers remember, the original Eagle was a high bicycle with a little wheel in front, and in the days of the ordinary this was quite an improvement over the conventional style of machine, and they met with a ready sale, but on the inception of the safety the lower type of machine soon took its place. The Eagle Company promptly turned their attention to the new pattern, and with such success that now they occupy one of the most complete plants in the country. They make a specialty of using aluminum rims, and this fact alone has done much to distinguish the 1896 Eagle from all other models. A tour of the plant by THE WHEELMAN showed how completely they were equipped for turning out high-grade goods, and in every department the factory showed a degree of neatness and attention to detail that is so often lacking in the average manufacturing plant,

TUBING BY THE MILLION FEET.

Probably there is no branch of the bicycle and allied trades of which the average cycle man has less conception of the details, than that of tube making.

The pictures which THE WHEEL presents, will give some views of the exterior and inside of the new Toledo mill—the mill of the American Weldless Steel Tube Company, a mill which was hardly conceived ere it was a finality, and which has on its list of founders such names as Garford, Snell, Warwick and Ransom. These photographs give but a faint conception of the huge single span structure which grew into being almost in a day. For a better understanding of its size and capacity, and of the intricacies of tube making, the wheel manufacturer is recommending a journey to Toledo, and, if its manager is agreeable, to examine the mill in person. A more educative day the average men could not well spend.

The mill is a single span affair, is 400 feet in length by 100 broad, is without a pillar, and is the largest single mill in the world. It has a 200 horse-power engine, and a 150 horse-power electric engine. Its entire machinery totals more than 300 tons in weight. An idea of the solidity necessary for the intense strain on its machinery can be gathered from the fact that between 300,000 and 400,000 bricks were required for the masonry under and surrounding the machinery.

It is astonishing to realize that the mill was completed and tubing drawn in less than six months from the date the first brick was laid. This preliminary event took place in the latter part of March, and in the first week of September the engine was thrumming loudly and regularly. The output has been increased daily since then, and is now turning out every day a very respectable amount of tubing.

The capacity of the mill is about 10,000,000 feet of tubing a year, but with eleven acres of ground to work upon, there is no danger of the American Weldless Company ever getting more than it can do.

"Necessarily," the company state, "our mill is adapted to turning out the best quality of tube as economically as it can be made anywhere in the world; we have culled from the mills of America and England the best machinery of each. It is all new and modern.

feet of tubing. Their prospects are bright. With a capacity for knowing their business well, with an excellent management, and a clientele of friends that includes some of the most desirable custom to be bid for, it seems as if they could hardly escape success and dividends. This is the personnel of the company: President, Samuel Snell; A. L.

We have had lots of faith, and have made a large investment for the purpose of getting the best of everything. If we cannot make the finest quality of tube, and make it cheaply, it is inexplicable. From the belting to the draw-benches, everything is new."

The office of the company stands just off the street, and perhaps 200 hundred feet from the mill. It is unique in point of hand-some fittings, and is calculated, from its furnishing and the convenience of its fixtures, to render business pleasurable.

Thus early the company has booked and is working on orders for several million

Garford, vice-president; Edward Warwick, general manager; J. R. B. Ransom, treasurer, and E. W. Gage, secretary. Apart from the officers, the list of stockholders includes the names of some of America's most prominent cycle men.

Edward Warwick, the manager, is an Englishman who believes in America. He is a gentleman who will be well liked by the trade. He has been in the cycle business practically all of his business life, his last English connections being the Cycle Components Company, and Thomas Warwick & Sons, and knows tube-making from A to Z.

DES MOINES' DAMASCUS.

Damascus steel has become a standard of excellence few have attempted to reach, but among the few who faltered not in their belief that the men of to-day are as shrewd and brainy as any that have ever lived was S. R. Dawson, of Des Moines, Iowa, who now comes forward with the claim that the best steel maker in Damascus would not be in it with the products of Mr. Dawson's discovery. Regarding Dawson steel its discoverer says: "Mine is a process of tempering wrought iron without introducing carbon, as is ordinarily used, or any other hardening element. My product is analogous, if not identical, to the famous blade of Damascus swords spoken of in history as being the finest of ancient times. The art has been lost for centuries, but a few blades are in the possession of museums and are priceless.

"Tests so far made have favored my claims without an exception. This process will harden steel to 8 degrees in the scale of hardness, while a diamond, which is the limit,

is 10 degrees. The limit of hardness of other steel is 6½ degrees. The secret of the process is in the smelting, and any article can be made by the simple process of moulding. Nothing remains to be done except the polishing.

"Notwithstanding that it is cast, the metal will forge well and temper superior to the highest tension steel. Another valuable property it possesses that no other known metal has is that of indestructibility by overheat; it simply cannot be burned. This, I know, is an astonishing statement, but it is true. I am not looking for capital, as a company has been formed by leading business men of Duluth, who will not run short of funds in introducing the metal. We have not decided where the plant will be erected.

"This steel is especially adapted for tools and all steel and wrought forgings, such as wheel manufacturers use. It is superior to Harveyized steel, because it has greater toughness and higher hardness. At its highest hardness it breaks with a ragged fracture."

TILL THE VERY LAST.

Unconscious the scorcher lay on his death-bed.

At last, with a faint glimmering of intelligence, he beckoned his tearful wife to his side.

Slowly came the solemn words: "Can—can the wheel be mended?"

PATENTS GRANTED.

567,967. Foot-rest and clamp for bicycles. Frederick C. Durant, New York, N. Y., assignor to Arthur H. Lea, Philadelphia, Pa. Filed July 17, 1895. Serial No. 556,301. (No model.)

567,979. Cycling-skirt. Pauline B. Hercht, Elizabeth, N. J. Filed March 30, 1896. Serial No. 555,320. (No model.)

567,980. Bicycle-support. Jonas A. Hirsch, Watertown, Wis. Filed July 25, 1895. Serial No. 557,057. (No model.)

568,082. Bicycle handle-bar and handle-bar stem attachment. Lucien Barnes, sr., and Charles O. Barnes, Syracuse, N. Y. Filed February 14, 1895. Serial No. 573,220. (No model.)

568,024. Shield for bicycle-handles. Dennis F. Gorman, Philadelphia, Pa. Filed November 5, 1895. Serial No. 568,047. (No model.)

567,993. Pneumatic tire. Louis K. McClymonds, New York, N. Y., assignor to the New York Belling and Packing Company, limited, same place. Filed December 7, 1895. Serial No. 571,936. (No model.)

568,085. Bicycle-wheel. Henry F. Moore, Chicago, Ill. Filed November 20, 1895. Serial No. 569,561. (No model.)

568,053. Movable stand for bicycles. Harvey N. Timms, Des Moines, Iowa. Filed April 23, 1895. Serial No. 546,841. (No model.)

568,085. Carrying attachment for bicycles. Frederick B. Finley, Cincinnati, Ohio. Filed October 1, 1895. Serial No. 566,318. (No model.)

568,154. Change-gearing for bicycles. Victor Belanger, Boston, Mass., assignor to Mary E. Brady and Mary E. Brady, trustee, same place. Filed December 17, 1895. Serial No. 572,404. (No model.)

568,164. Motor attachment for bicycles. Isaac H. Davis, Boston, Mass. Filed June 11, 1896. Serial No. 585,086. (No model.)

568,206. Electric lamp for velocipedes, etc. Alfred M. Rodriguez, Brooklyn, N. Y. Filed December 20, 1894. Serial No. 532,442. (No model.)

568,281. Wheel for velocipedes. Charles De Rosetti, London, England. Filed September 21, 1895. Serial No. 563,185. (No model.)

Designs:

26,069. Seat for bicycles. Andrew A. Munro, Flushing, N. Y. Filed June 29, 1896. Serial No. 597,477. Term of patent seven years.

567,936. Bicycle. William S. Bellows, Springfield, Mass. Filed May 10, 1894. Serial No. 510,692. (No model.)

567,949. Bicycle-brake. Edward J. De Bergue, New Orleans, La. Filed March 14, 1896. Serial No. 583,201. (No model.)

RECENT PATENTS.

567,407. COMBINED AIR-PUMP AND WRENCH. DAVID R. FETTER, Milledale, Conn. Filed 11, 1895. Serial No. 571,670. (No model.)

Claim.—1. The combination with an air-pump, the stem of which is formed as its outer end with a wrench-jaw and with grooves on top, as intermediate connecting gearing, contained by the head and operatively connected to the handle-bar and stem for holding the handle-bars in their adjusted position.

567,503. PNEUMATIC TIRE. LOUIS K. MCCLYMONDS, New York, N. Y., assignor to the New York Belling and Packing Company, Limited, same place. Filed Dec. 7, 1895. Serial No. 571,936. (No model.)

Claim.—1. In a tire-repairing apparatus, the combination of a flange having a contracted mouth of substantially uniform diameter extending outwardly from the inner end and an outer part leading from said contracted mouth with a gradually-increasing diameter;

567,161. VELOCIPED-PEDAL. ALAN LA GRAND FERRIS, Pittsburgh, Pa., inventor, by messrs assignors, to the U. S. Cycle Improvement Company, same place. Filed Oct. 1, 1895. Serial No. 564,265. (No model.)

Claim.—1. The combination of a crank with an open frame; a pedal hinged to the base of said crank and adapted to be folded up inside of the crank-frame.

568,064. CHANGEABLE-SPEED GEARING. JOHN L. ROBERT, Flushing, N. Y. Filed Jan. 14, 1896. Serial No. 573,925. (No model.)

Claim.—1. The combination of two rotative bodies, friction devices rigidly connected with one of said bodies and having an arc a hobbit or spur adapted to operate said friction devices to electrically connect said bodies and to be rotated by said arc, a projection carried by said hobbit or spur, and a projection carried by the other one of said bodies and adapted to be engaged by the first-mentioned projection to positively connect the two rotative bodies through the hobbit, substantially as described.

568,053. BICYCLE HANDLE-BAR AND HANDLE-BAR-STEM ATTACHMENT. LUCIEN BARNES, sr., and CHARLES O. BARNES, Syracuse, N. Y. Filed Feb. 14, 1895. Serial No. 573,220. (No model.)

Claim.—1. The combination of a fixed axle, a hub mounted to rotate thereon, an eccentric rotatable on the axle, an adjusting wheel at one end of the hub, lever intermeshing gear within the hub, one meshed to the adjusting wheel, and the other rotatable on the eccentric, a self-adjusting connection between the hub-mounted gear and the hub, with provision for independent lateral movement of said gear, and rod longitudinally movable in the axle, and a coupling device engaged with said rod and adapted to lock the eccentric to the axle, substantially as described.

567,980. BICYCLE-SUPPORT. JONAS A. HIRSCH, Watertown, Wis. Filed July 25, 1895. Serial No. 557,057. (No model.)

Claim.—1. A bicycle support comprising a pair of separable and adjustably-mounted semicircular clamping-pieces, bifurcated sockets arranged to slide along the spokes, pivoting lugs having rounded knobs to engage within the forks of said sockets, tubular stay-rods rigidly secured to the shafts of said pivot-pieces, sliding rods movable within the said sockets and rods provided at intervals with transverse notches, said sliding rods being bent outwardly at their lower ends, and terminating in sharp pointed feet or holding-plates, slotted openings upon the lower ends of the said tubular stay-rods, and slides having spring-controlled shafts projecting through the slots in said bearings, substantially as set forth.

568,053. MOVABLE STAND FOR BICYCLES. HARVEY N. TIMMS, Des Moines, Iowa. Filed Apr. 23, 1895. Serial No. 546,841. (No model.)

Claim.—1. In a bicycle-support, the combination with the axle-supporting pillar and side frame of a split clip embracing said pillar, having a concave bottom and an other end vertical slot, with a spring member projecting through said bottom and adapted to engage with the clip together and securing it to the side frame, substantially as described.

567,882. CYCLE-SEDLER. JOSEF R. BRONCK, Birmingham, England. Filed Mar. 1, 1893. Serial No. 464,284. (No model.) Presented in England Mar. 4, 1893. In U.S.A. and July 29, 1893. In U.S.S. in France Dec. 11, 1893. In U.S.S. 31, 1893. In Germany Jan. 11, 1893. No. 74,882.

Claim.—1. In a bicycle, the combination of an adjustably-supported handle-bar stem, a clamp hinged to the stem and formed with a cap adapted to engage the end of said stem, a reversible and removable handle-bar joinable to said clamp and yieldable to a downward pressure, a spring supported in said stem, tension on the handle-bar by which it bears on said spring to engage said bar, a nut in said stem, and a bolt bearing with its end on said cap and engaging said nut for the purpose set forth.

567,882. CYCLE-SEDLER. JOSEF R. BRONCK, Birmingham, England. Filed Mar. 1, 1893. Serial No. 464,284. (No model.) Presented in England Mar. 4, 1893. In U.S.A. and July 29, 1893. In U.S.S. in France Dec. 11, 1893. In U.S.S. 31, 1893. In Germany Jan. 11, 1893. No. 74,882.

Claim.—1. In a bicycle, the combination of an adjustably-supported handle-bar stem, a clamp hinged to the stem and formed with a cap adapted to engage the end of said stem, a reversible and removable handle-bar joinable to said clamp and yieldable to a downward pressure, a spring supported in said stem, tension on the handle-bar by which it bears on said spring to engage said bar, a nut in said stem, and a bolt bearing with its end on said cap and engaging said nut for the purpose set forth.

567,882. CYCLE-SEDLER. JOSEF R. BRONCK, Birmingham, England. Filed Mar. 1, 1893. Serial No. 464,284. (No model.) Presented in England Mar. 4, 1893. In U.S.A. and July 29, 1893. In U.S.S. in France Dec. 11, 1893. In U.S.S. 31, 1893. In Germany Jan. 11, 1893. No. 74,882.

Claim.—1. In a bicycle, the combination of an adjustably-supported handle-bar stem, a clamp hinged to the stem and formed with a cap adapted to engage the end of said stem, a reversible and removable handle-bar joinable to said clamp and yieldable to a downward pressure, a spring supported in said stem, tension on the handle-bar by which it bears on said spring to engage said bar, a nut in said stem, and a bolt bearing with its end on said cap and engaging said nut for the purpose set forth.

567,402. APPARATUS FOR REPAIRING PNEUMATIC TIRES. JOSEF A. MOORE, Paris, Fr. Filed Mar. 20, 1896. Serial No. 564,963. (No model.)

Claim.—1. In a tire-repairing apparatus, the combination of a flange having a contracted mouth of substantially uniform diameter extending outwardly from the inner end and an outer part leading from said contracted mouth with a gradually-increasing diameter;

567,924. VELOCIPED-SEAT. ALBERT ALPHAN PAT, Cincinnati, Ohio, and JOHN MOHR, Louisville, Ky. Filed Jan. 4, 1896. Serial No. 574,232. (No model.)

Claim.—1. In a bicycle, the combination with the front metal tube, having spring sockets, the hollow wooden bars, the couplings having spring sockets with which said wooden bars engage and interlocking, substantially as described.

567,924. VELOCIPED-SEAT. ALBERT ALPHAN PAT, Cincinnati, Ohio, and JOHN MOHR, Louisville, Ky. Filed Jan. 4, 1896. Serial No. 574,232. (No model.)

Claim.—1. In a bicycle, the combination with the front metal tube, having spring sockets, the hollow wooden bars, the couplings having spring sockets with which said wooden bars engage and interlocking, substantially as described.

567,924. VELOCIPED-SEAT. ALBERT ALPHAN PAT, Cincinnati, Ohio, and JOHN MOHR, Louisville, Ky. Filed Jan. 4, 1896. Serial No. 574,232. (No model.)

Claim.—1. In a bicycle, the combination with the front metal tube, having spring sockets, the hollow wooden bars, the couplings having spring sockets with which said wooden bars engage and interlocking, substantially as described.

567,924. VELOCIPED-SEAT. ALBERT ALPHAN PAT, Cincinnati, Ohio, and JOHN MOHR, Louisville, Ky. Filed Jan. 4, 1896. Serial No. 574,232. (No model.)

Claim.—1. In a bicycle, the combination with the front metal tube, having spring sockets, the hollow wooden bars, the couplings having spring sockets with which said wooden bars engage and interlocking, substantially as described.

567,924. VELOCIPED-SEAT. ALBERT ALPHAN PAT, Cincinnati, Ohio, and JOHN MOHR, Louisville, Ky. Filed Jan. 4, 1896. Serial No. 574,232. (No model.)

Claim.—1. In a bicycle, the combination with the front metal tube, having spring sockets, the hollow wooden bars, the couplings having spring sockets with which said wooden bars engage and interlocking, substantially as described.

567,924. VELOCIPED-SEAT. ALBERT ALPHAN PAT, Cincinnati, Ohio, and JOHN MOHR, Louisville, Ky. Filed Jan. 4, 1896. Serial No. 574,232. (No model.)

Claim.—1. In a bicycle, the combination with the front metal tube, having spring sockets, the hollow wooden bars, the couplings having spring sockets with which said wooden bars engage and interlocking, substantially as described.

HOW TO GET GERMAN TRADE.

United States Consuls Tell Americans the Best Way to Land the Orders of the Teuton.

One of the greatest competitors of the United States for the foreign wheel trade of the world is Germany. Cycle manufacturers are "carrying the war into Africa" by endeavoring to establish a market for American wheels in Germany itself. In response to letters sent over to Consul Wamer, at Cologne, inquiring as to the best suggestions for introducing American manufactures and products in the German market, he writes:

"I have repeatedly, in my reports to the Department of State, called special attention to what I consider to be the best method of extending American trade abroad, and that is the sending out of proper representatives, men who are thoroughly acquainted with the class of goods they wish to introduce, and who, further, have a knowledge of the language of the country they may visit. This is the way in which Germany has to a great extent built up and extended her foreign trade. I am sure that, if the American merchants would try this plan, they would soon be convinced of the great advantage it has over the present one of scattering advertising circulars through Europe.

"What the merchants here wish to see are the goods and some one who can satisfactorily explain to them their character and quality. I will give here an illustration of what happened in this respect in recent years with a firm who wished to introduce in Germany a very useful and practical patented machine. After having tried in vain to do so by sending out advertisements, an agent was sent over who thoroughly understood the construction and working of this machine. This agent has now been in Germany for about two years, and he informed me the other day that he had a business during the past year of about \$200,000 with this one machine alone.

"I think that if the various trade journals that are taking the greatest interest in ascertaining through the consuls the new enterprises, etc., requiring American manufactures would work with a view of interesting American manufacturers and exporters in this method of doing business abroad, they would achieve vastly better results than by their present mode of procedure. This should be observed especially in the case of patented articles, where, in many instances, there is no person directly interested and on the spot to prevent any infringement of the patent. Not infrequently I have heard of excellent American inventions copied or slightly altered and put on the market by Germans and sold at a much cheaper price and under their original name, thereby injuring American trade.

"Perhaps it would not be an unwise plan for leading American firms to unite in sending abroad competent persons to study the requirements and tastes of foreigners and to report the information for the benefit of the firms concerned. This is especially recommended where technical knowledge is required to explain the working and construction of machinery.

"Complaint has also been made that American merchants confine their trade too much to agents at seaport places in Europe, instead of putting themselves more in connection with the merchants in the interior.

"I would further suggest the practicability of establishing a central bureau in the United States supported by the contributions of exporting merchants. This bureau would send out capable men to study and ascertain the requirements of foreign countries and the

best means of supplying them, and report such information to the central bureau for the benefit of its members."

Consul Tingle, of Brunswick, in response to similar letters, suggests the following:

"An association of American firms, say forty in number, might agree to contribute \$50 a month per member for a year to a common fund, which would amount to \$2,000 per month, or \$24,000 annually. A competent manager should then be selected and an import headquarters established in Hamburg. The manager should employ a corps of ten German travelling men. The larger towns in Germany should be visited in turn by the entire corps, each member of which would be thoroughly familiarized with forty articles. An exhibition room would be hired, samples carefully arranged, and the different merchants of the city in the various lines personally called upon and invited to inspect the articles in which they were especially interested. The merits of the various samples would then be fully set forth and trial orders solicited. All orders, as well as business detail, would be handled and controlled by the Hamburg office. The corps of workers would remain long enough in town to exhaust its possibilities thoroughly and would then move on to another, until by the time the year was

MR. POST AND THE GARCON.

How They Met in Paris and the Episode that Happened as a Result Thereof.

It is often that an American goes three hundred miles to be buncoed. It is still less often that "Davey" Post gets buncoed whether three or thirty-three thousand miles are travelled. Despite all of these facts that same "Davey" Post journeyed clear to Paris to get flim-flamed, and by a waiter, too. Here is how it happened.

Back of the Opera is located the Café Monferino, famous to those in the Parisian know as a place where the cooking is superior, the drinkables better and the company the best. Naturally "Davey" wasn't in Paris long before he was on to all the "good things" the Café Monferino among them.

The Fourteenth of July is the Frenchman's holiday, corresponding with our Glorious Fourth. On this gala occasion "Davey" was right in the middle of the Monferino rush; the truth to tell, "Davey" was close to the leaders and well not to the front of the rush.

That he might not by any possible means be mistaken for a Russian Grand-duke or an English nobleman, "Davey" had provided himself with a silk American flag, which at the end of a cane soon caused all Americans to rally round the man from Connecticut. In the course of the rallying thus occurring, "Davey" found himself along side of a charming American woman who, in tones not too low to reach his ears, bewailed the fact that she, too, had no American flag.

Ever gallant "Davey" begged her to accept the one he had, and she was not slow in doing so. Gallantry, like virtue, is often its own reward, and in this case that wasn't enough for "Davey," so he left the push, found the proprietor, and told him that he wanted an American flag, wanted it right away, and regardless of expense. Could he get it? Certainly he could, said the obliging host.

In a few moments "Davey" had a flag slipped into his hand by a smiling waiter, and the waiter had a monetary return slapped into his hand, and once more "Davey" was in it. Suddenly an uproar arose in the party where the fair American was, and a grand hunt seemed to be under way for some article lost. It didn't take David Post long to get on. The flag he was waving was the identical one he had a short while before presented to his country woman, and the French garcon, to earn his fee, had simply watched his opportunity, purloined the flag and resold it to "Davey."

Explanations and apologies followed, and the joke cost more than one person more than one bottle of wine before adjournment, which, needless to say, was late.

MAKING WHEELS BEAUTIFUL.

An old saw has it that "fine feathers make fine birds," and fine enamelling has sold many a bicycle. The firm of A. D. Rogers, No. 43 Congress street, Newark, N. J., has for forty-five years been engaged in the enamelling business, and since the bicycle came into popularity they have turned their attention to the new industry with such good results that they enjoy the reputation of turning out some of the best work in the country. Of course any color is furnished, but white, which is acknowledged by those who know to be the most difficult to handle, is their speciality. Second-hand wheels bring better prices by being re-enamelled. The wise dealer or manufacturer will be the gainer by getting prices from the Newark concern.

at an end the entire empire would have been covered. Should the results warrant it the arrangement could then be continued another year or individual firms could establish their own agents in Hamburg on the foundations already made."

BALL BREAKAGES AND THE CAUSE.

To be at its best the ball in a bearing, contrary to the general belief, should not be of extreme hardness. Balls in cycle bearings fall in two ways—by splitting and by wearing flat. If a ball stops rolling in a bearing it at once has a flat spot formed on it, which makes it forever useless, and balls often split in two when at work. Just how a solid, sound steel ball can be split in such light company as the parts of a wheel bearing is difficult to understand. Nevertheless, the bearing balls do split, as is well known to any repairer who has played the part of doctor to a sick bicycle.

HAS A BOOK FULL.

Vice-President Howard E. Raymond, of the Sterling Cycle Co., who has been travelling abroad for several months on business and pleasure, writes that he has had a delightful time, and has a book full of impressions. He anticipated sailing for home to-morrow.

DIFFERENT WHEN RIDING.

A man or woman would not think of running all the time; in fact, they hardly ever think of going when on foot, faster than a walk; but let them mount a wheel and then the faster they go the better they like it. That is where the mistake is made.

WORM AND THE MONEY.

The worm has turned at last. A Pasadena wheelman who ran over a stone in the street a few days ago and took a header has presented a bill to the city for damages, which aggregates the cool sum of \$50.50. Good lawyers say he will get his claim, too.

NOT ON, BUT ABOUT IT.

"Wheeler must be a very good rider."
"What makes you think so?"
"I hear he has written a poem on his bicycle."

JUDGED BY APPEARANCES.

Miss Fatima Plump—Really, Mr. Plaintiff, I am so dreadfully shy and reserved that I shrink every time I go out on my wheel.

Mr. Plaintiff—Guess you haven't ridden a great deal, have you?

The bicycle has done its best to make the law of gravitation unpopular with those learning to ride.

THE "OVERLAND LIMITED."

The famous trans-continental train via the Chicago, Union Pacific and Northwestern line, leaves Chicago at 6.00 p. m. every day in the year via the Chicago and Northwestern Railway, and makes the trip to California in only three days. Double Drawing-room Sleeping Cars, Buffet, Smoking and Library Cars, Dining Cars and free Reclining Chair Cars are features of the equipment of this perfect train. Agents of connecting lines sell tickets via the Chicago and Northwestern Railway. Illustrated pamphlets and full information will be furnished on application to W. B. Kniskern, G. P. & T. A., Chicago, Ill. * * *

IN AN INDEPENDENT CONE.

A Troy, N. Y., manufacturer of baking powder, A. J. Cook, has applied for a patent on a bicycle ball-bearing device. The object of the invention is to lessen the friction and the twisting and sliding motion. The balls are confined in an independent cone in such a way that they can be handled as one piece, without the balls dropping out. Simplicity and durability are its characteristic features.

FOR RENT,

In THE WHEEL Building,
88 West Broadway and 72
Warren Street, Model, Well-
Lighted Lofts; Steam Heat,
Electric Light, Electric Power.

IN THE HEART
OF THE
CYCLING DISTRICT.

HOW'S THIS?

Some who do not read never heed,
And some who do not herd never read;
But upon one certain thing they're all agreed—
That an honest cure for heartburn's what they need.

We oftimes do our stomach overfeed,
Nor do we let the doctors intercede;
But we quickly good digestion's cause impede—
Then we suffer for our oversight and greed.

If we hasten for a cure full oft 'tis well,
But we want the best the dealers have to sell;
So ask them, and one and all will tell
That Yucatan's receipts are on the swell.

CHICAGO TO CINCINNATI IN 8 HOURS.

The Cincinnati and Washington Express, via the Big Four Route, now leaves 12th and Park Row daily, except Sunday, at 1 o'clock p. m., arriving at Indianapolis at 6 p. m., Cincinnati 9.05 p. m., and Washington at 3.45 the following afternoon. This is the popular train for the mountain and seashore resorts of Virginia. The Cincinnati and Louisville express trains leave as heretofore, 9 a. m. and 8.30 p. m. Depots, 12th and Park Row, 2d, 30th, 53d and 63d Streets. City ticket office, 232 Clark Street. * * *

FINE BICYCLE ENAMELING.

WHITE A SPECIALTY.

A. D. ROGERS, 43 Congress St., Newark, N. J.

Let us enamel a sample wheel for you.

In the darkling gloom of the midnight lone,
There came a call on my telephone,
And impressed with fears that I dare not own,
I leapt from my bed with a rueful groan;
For the floor was cold as a paving stone,
And the germs of the dread la grippe were sown,
While I waited the words of my friend unknown.

The sad wares sang in their tuneless drone,
And then, in a dreary monotone,
In my startled ears these words were blown
From the frozen poles to the torrid zone,
From the Rio Grande and the River Rhone
To Plymouth Rock and the Blarney stone.
The New Departure Bells are known,
For they have a tone that is all their own!

BOOK NOW READY.

Published by F. P. PRIAL, 88 West Broadway, New York.

IN DAYS TO COME.

It was the critical moment. The enemy had charged the right flank and scattered it to the winds. Dynamite bombs fell like rain from the airships above. The four leading generals of the Reds were lying face down on the field dead. It looked as if the Blues were going to win the day with untold defeat. They rode in solid ranks upon the ramparts, and though mowed down in tens of thousands still they persisted. The guns beyond the fortress were white hot with rapid firing, and their ammunition was momentarily growing scarcer.

On and on the Blues advanced, undismayed, confident of victory. On and on they rode over their dead comrades mountain high. They heard the roar of the guns growing fainter and fainter. They saw the inevitable downfall of the fortress if they persisted. On they rode, heeding nothing. The volleys from the guns now killed but a handful compared to the devastation they had wrought all day long, and it was plain that the Reds were reduced to the very last extremities of battle.

Suddenly the guns ceased firing. Their ammunition had given out.

"Up, guards, and at 'em!" shrieked the General in command. "Victory is ours!" Forty thousand men scorched, bent-backed and determined. It was all that was left of the 2,000,000 brave soldiers who had cycled into battle that morning. On they swept like mad. They were almost upon the ramparts when—

Good heavens! what was that which caused those 40,000 men to stop short, stand trembling there one hard and terrible moment, and then turn their wheels and fly in dismay? Oh, heavens! what was that more deadly than the roar of cannons, more devastating than shot and shell, more death-dealing than dynamite?

See! on the ramparts stand a solid phalanx. Each with a mound of tacks, which are being sowed broadcast over the route of the conquering army.

Earthquakes aren't in it with punctures. The imperial cycle guard breaks and retreats in mad dismay.

The Napoleon of the future is routed!

EITHER WOULD KEEP HIM MOVING.

"The wheel will give you the very exercise you need, my dear sir."

"But I can't afford a bicycle, doctor."

"Well, never mind, then, just go up on the Boulevard and dodge those who do ride. The beneficial effects will be the same."

IF HE WOULD HIRE.

"Where are you going, my pretty maid?"

"Going a-cycling, kind sir," she said.

"May I go with you, my pretty maid?"

"If you hire a tandem, yes, sir," she said.

GOOD AS ITS NAME.

A Champion by name, its makers confidently assert that this clip for wood handle-bars is worthy of the title. It is fashioned in seamless steel tubing and steel drop-forgings, and conforms to any size, shape or style of bar. The clip being elastic, may be sprung over the bar and because of this characteristic the bar may be entirely finished, polished and

fitted with grips before the clip is applied, without fear of damage. After the clip is placed over the handle-bar the screw ends are pressed together and the collar slipped over it and against the bar; then proceed by screwing the clamp into the stem. The adjusting of the bar is in its most convenient position when on the bicycle, as the head of the bicycle acts as a clamp by holding the stem, leaving all the adjustment to be done by the turning of the handle-bar, which may be set at any desired angle. The clip is the product of the Champion Blower and Forge Company, Lancaster, Penn.

DRY AS A BONE WITH THIS.

This combination of cap, cape and leggings is made of lightweight cloth, covered with a thin coating of rubber. The result is a valuable addition to a rider's outfit when going off for a day's trip or an extended tour,

taking up very little room and adding but twenty-four ounces in weight to the rider's load. Cleve & Krim, No. 49 Summer street, Boston, are the makers.

SHE SETS A GOOD EXAMPLE.

It is the prerogative of woman to be incontinent, and when one woman inveighs against the wheelwoman, everyone can afford to treat it as a case in which the permanent instinct of the sex has asserted itself as superior to the influence of an impulse.

It may, however, be useful as well as timely to call attention to one important respect in which the wheelwoman differs from her censors. A story is told of the Princess of Wales that in answer to the question as to what was her favorite occupation, she replied that her favorite occupation was "minding her own business." This story seems applicable to the present situation.

In contrast with the vast and varied volume of advice, reproof, criticism, censure, scorn and downright abuse poured out against the woman who rides a wheel, one cannot recall an instance in which the objects of this attention have retaliated in kind. The wheelwoman does not seem to be addicted to the habit of carping or nagging at her elder sisters. She seems rather to resemble the Princess of Wales in indulging in her favorite occupation of "minding her own business," and really her selection is one which might be commended to her censors.

LET US BE THANKFUL FOR THIS.

Still another blessing is attributed to the wheel. It is to be the means of decreasing the number of women who mistake ability to screech for ability to sing, and forthwith rush abroad to spend time and money in a forlorn attempt to become operatic stars.

Mme. Marchesi, the most famous voice culturist of Paris, has declared that she regards the attitude assumed in cycling as injurious to the chest and lungs, and the rapid progression through the air as detrimental to the vocal chords.

Mme. Marchesi carries her theory out to its logical sequence; she forbids her pupils to cycle, and will not accept any pupil who is, or has been a rider. Of course, the world shall now see how far her dictum carries weight against the example of such shining lights as Mme. Melba, Mme. Nordica and M. Jean de Reszke, who are devotees of the wheel and fair singers, besides.

STUCK.

Kitty—I won't let them repair my wheel again. They charged me a dollar for simply sticking my tire on.

Tom—For simply sticking it on?

Kitty—Yes.

Tom—By Jove! That was simply sticking it on!

POTICALLY LICENSED.

Herself upon the bicycle

The Boston maid may torture;

Alas! the lovely icicle

Can ne'er become a scorcher.

The Wheel

THE CYCLING TRADE REVIEW

Copyright 1896, by F. P. PRIAL Co.

VOL. XVIII., No. 9.

NEW YORK AND CHICAGO, OCTOBER 16, 1896.

WHOLE NO. 451.

POPE LICENSES SPALDING.

Reported the Chicopee People May Want to Build Chainless Wheels—Some Figures.

While little minds discuss, great questions solve themselves.

This aphorism, papers and people who are inclined to cry down the chainless safety, should bear in mind. On the part of certain of the papers, some of the tears and "crying down" is explicable. It arises from THE WHEEL'S exclusive publication of the fact that the Pope Manufacturing Company would engage in the manufacture of a "bevel" geared wheel. It was the "beat" of the year. None recognized it quicker than those who were beaten. Others who are inclined to belittle should recall that the practicability of the safety bicycle, the cushioned tire and the pneumatic tire was also questioned, each in turn, when they were introduced. The Pope Company is composed of farseeing and level-headed men. They know what they are about, and while they are too wise to attempt educating the public on radical lines and will not therefore "push" the sale of their chainless wheels. If it proves an improvement over the present type, it will quickly be seen how well they have cast their anchor to windward.

Their purchase of chainless patents and the construction of bevel cutting machinery, cannot but be construed as an indication of faith; other straws are not lacking. It has just come out that they are now affording other firms an opportunity to be on the right side should the chainless safety prove the wheel of the future. They are offering licenses to those who are ready to agree to their terms. One firm, none other than A. G. Spalding & Bros., has already been licensed, and others have the matter under advisement.

What are the terms is not public property, but general report has it that for a year, at least, all licensees must purchase their bevel gears from the Pope Company, and agree to maintain a price of \$150 on such chainless wheels as they manufacture. The same report also states that there is no longer doubt that the price of chain-gear Columbia will remain where they are at present, \$100, a belief that is usually accepted as little short of certainty.

ENTER THE OLIVE WHEEL.

The Dodge Cycle Company is no more. In its place is the Olive Wheel Company, with F. W. Gridley as its head. The Dodges became financially entangled and the Olive company succeeds to the factory in Syracuse and to the business generally. They will make the Olive bicycle. D. B. Smith, formerly with E. C. Stearns & Co., will have charge of the agency department.

TIGHT MONEY MARKET THE CAUSE.

Ansonia, Conn., Oct. 10.—The Wilcox & Howe Company, of Shelton, manufacturers of bicycle forgings, yesterday went into the hands of a receiver, by order of Judge Shumway, of the Superior Court. F. W. Benham, of Derby, was appointed receiver.

Up to two months ago the company was doing a large business, and the promises of more orders for next season led to the purchase of more machinery. During the summer business was so brisk that the company had to hire a shop in Ansonia. Soon after Bryan's nomination orders dropped off and later they came with the proviso that they were not to be filled unless McKinley was elected. Then came the difficulty of effecting loans from the banks and the frequent failures of small bicycle firms who were indebted to the company, one recent failure tying up \$20,000. The company's assets are \$149,000; liabilities, \$43,000, sufficient to justify the belief that the embarrassment will prove of short duration.

NOW THE OLYMPIC.

The financial troubles in the jewelry business of S. F. Myers & Co. have extended to their cycling interests, operated as the Olympic Cycle Manufacturing Company, with offices at No. 35 Liberty street, this city. On Tuesday the Sheriff received an execution against the Olympic Company for \$4,463 in favor of the New York Life Insurance and Trust Company, and executions against the Meerbolt Manufacturing Company, jewelers, at No. 45 Malden Lane, for \$1,704 in favor of the Manhattan Company and for \$1,469, in favor of the New York Life Insurance and Trust Company, all growing out of the failure of Myers & Co. On the same day judgments for \$36,171 were also entered against S. F. Myers & Co. by several creditors.

HODGMAN'S CREDITORS AGREE.

The creditors of the Hodgman Rubber Company have agreed to accept 50 per cent of their indebtedness, payable 20 per cent in three months, 15 per cent in six months and 15 per cent in twelve months; those dates to commence from the date of the receiver's discharge and the turning over of the Hodgman assets. The receiver has been requested to continue the filling of orders in hand. At the creditors' meeting it developed that of losses estimated at \$102,400, \$43,000 was chargeable to the tire department.

BOLTE BUYS OUT MOORE.

The Bolte Cycle Manufacturing Company, of Milwaukee, is on the grow. They have purchased the plant and stock of the defunct Moore Cycle Company and will consolidate it with the Bolte interests. The stock secured includes sufficient material for a thousand bicycles.

FOWLER BRINGS SUIT.

He Wants Payment for the Balance Due on a February Deal in Which Jewelry Figures.

Frank T. Fowler is as restless as a caged hornet these days. No one can tell what he will next develop.

His very latest development is a suit against the firm which bears his name, the Fowler Cycle Manufacturing Company, with which he so recently severed his connection. It seems that last February the time appointed for the purchase of the second half of the interest of Mrs. Caroline D. Hill in the Fowler Company, Messrs. Crandall, Davis and Spoehle, the latter a jeweler, in business with his brother, undertook to pay for 104 shares of stock on the following terms: One-third cash down, one-third in nine months and one-third in twelve months.

The nine months' payment was due on October 3, and the collateral was the stock. Crandall and Davis met their payments, but Spoehle told Fowler, as the agent of the Widow Hill, a month before the nine months' payment fell due that, owing to the depressed condition of business he would be unable to meet the note. Fowler and Spoehle came to an understanding whereby Fowler was to take \$1,500 worth of jewelry from Spoehle and his brother, some cash and an extension note. Everything was satisfactory, and a selection of the jewelry was made by Fowler, although no part payment in cash was made or extension note given and accepted.

On October 3 Spoehle received notice from Mrs. Hill's lawyers that the note must be paid at its face value. Mr. Spoehle is indignant and states that if he had been notified some time ago that such was to be the ending of the negotiations he could have easily made arrangements for protecting his interests. Spoehle has not been served with papers in the suit, but notice has been served on his brother, inasmuch as they are both joint owners in the stock. The suit is for \$5,000, and is brought by Fowler for the Widow Hill, who is Mr. Fowler's mother-in-law.

LIABILITIES LARGE, ASSETS SMALL.

Announcement has been made of the failure of Leo Schlaudecker & Co., cycle dealers at Erie, Penn. The execution creditor is C. M. Reed, whose judgment is \$25,000. The Overman Wheel Company has a judgment for \$2,000. Other liabilities amount to \$40,000. The assets are small.

FIVE CENTS ON THE DOLLAR.

On the report of the assignee, the Court has ordered a dividend of 5 per cent paid the creditors of J. E. Poorman, of Cincinnati, the bicycle dealer who failed during the summer.

SUMMING UP AND FORECASTING.

How the Trade and Its Future Is Looked at by as Shrewd a Pair of Eyes as There Are in It.

Every one, or nearly every one, knows that the name Maslin and the almost marvellous development and advancement of the Stearns interests are interwoven. Mr. Maslin—H. E. of the name—is a typical young American business man, whose eyes, despite their merry twinkle, do not conceal the shrewdness that lies behind. He is an easy but careful thinker, whose ideas are ever of value.

Recently in conversation with a WHEEL man he expressed the belief that the year '97 would be most prosperous for the bicycle trade. He gave his reasons:

"In the first place," he said, "the money question has tied up the bicycle trade in such a manner that but few of the manufacturers are making a pretence of getting ready for next year. The shops are idle, and valuable time is being lost, with the result that when the season does open, instead of having an over supply to meet the demand, there will be a shortage, which will extend well into the summer months.

"But," he went on, "We intend pursuing a very conservative course, a course that I think will be adopted by most of the larger manufacturers. We have no doubt as to the extent of our next year's output, but our ideas will be centred on a number much smaller than the total we have in mind, say between one-third and one-half, as it will be an easy matter to increase our product, while if, on the other hand, should calculations go astray, we will have no old stock to hamper our movements and can simply rest on what has been done."

"What figure do you think the drygoods stores will cut in the future trade?"

"Much less than in the season just past," was the quick response. "The drygoods people's clientele has now been educated to pay a certain low figure when buying of them. Next year the conditions will be such that it will be impossible for the drygoods stores to purchase wheels at wholesale for what they are now disposing of them for at retail. The very people who were forced to seek the department store trade are either out of business or have been taught such a bitter lesson in finance that it will be hard to catch them again, and when a higher price is demanded from the retail buyer it will be found that he will prefer to deal with a legitimate agent, where he is assured of fair treatment and responsible dealings."

"Chainless wheels? I can hardly say much regarding the subject, because I am not sufficiently familiar with it. However, I can easily see the possibilities that a good chainless wheel opens, but our experiments—and they date two and a half years back—proved to us that they necessarily require such delicate adjustments as render them practically useless for the average rider. Up to the present the chain gearing has answered all purposes, and until the time for a chainless is thoroughly ripe we shall devote our attention to perfecting the present style.

"Do I think gear cases will be extensively used next year? No, simply because on this side of the water we do not actually need them. We can do without them, as we have dispensed with the heavy and cumbersome mudguard, that is considered such a necessary adjunct to all foreign-made wheels. Actual statistics show that even in England, in men's wheels, but one in eight is fitted with a gear case, so you see the story that it is almost universally used over there is a canard, pure and simple. With ladies' wheels it is different. Nearly all wheels of the drop-

frame pattern have cases, but they primarily answer the same purpose as our ordinary dress or chain guards, which are not only much slighter but are of considerably less weight. We may, perhaps, fit a light gear case when desired next year, but it will be an extra in every sense of the word. Of course, some will want them. People are ever on the lookout for novelties, but it's a fad that will not last.

"My views on foreign trade?" Mr. Maslin smiled, "and do I think it will be overdone? To the latter, no! for the same reason that I gave earlier, namely, a scarcity of wheels for home consumption; but at all events, even later in the season, there are fine prospects abroad. Much more money would have been made this year had not some of the American representatives who went across lost their heads. Ridiculously low prices were quoted, when it would have been just as easy to have asked and obtained much better figures. It was a glorious chance, but the scare was on and American wheels were disposed of at values that made one wonder how it was done, and at a time when the conditions abroad were just right for profitable transactions. The famine was there, we had the wheels, and the same old bull and bear rule of the stock market holds good."

"Will the Stearns wheel turned out in your Paris factory be made after the American model?"

"Most decidedly not. While the Stearns features will, of course, be retained, foreign whims must be catered to in working up a lasting European trade. Our principle will be to give them what they want. If Dunlop tires and Westwood steel rims are necessary to effect sales, we will gladly furnish them. If gear cases, mud guards and a brake are wanted, on they go, and while I think that probably the foreign mind may in time be trained to look at bicycles through our eyes, yet it would take time, and just now time is money, and that is what we are looking for, after all. No, I most sincerely believe in doing Rome as the Romans do, especially as it pays best.

"McKinley or Bryan, did you say? The former most decidedly. If Bryan should by any chance get in, it would make a vast difference to us, but, candidly, I hardly think he stands a chance."

TO SET ASIDE A SALE.

Actions to set aside the sale of the property of the Elbridge Cycle Company are pending. The plaintiffs are the Wheelman Company of Boston, the Soper Manufacturing Company, the Bank of Syracuse and Enoch M. Chaffee.

A petition for the same object was drawn up a short time ago, and rejected on technical grounds, but was renewed on the grounds that the stock was sold in one parcel, when it would have brought a better price by selling in smaller parcels. Then it is also alleged that one block of property was sold for a price grossly under the true value. The greatest judgment creditor of the company is Mrs. Costella L. Higgins, wife of George E. Higgins, the president of the company. Her claim is for \$10,500, and she is, in fact, the prime mover in the action to set aside the sale.

WANT BALANCE DUE.

The Dauntless Bicycle Company, of Toledo, has entered suit against S. M. Jones & Co., retail dealers at Pittsburg, Penn., to recover \$4,776 97, the balance of an account, with interest. The plaintiff alleges the defendants refused payment.

In the racing of matrimony the old maid rides a waiting race.

CONCERNING CYCLE SADDLES.

A Maker Who Has Been Through the Mill Points Out Some Matters of Interest.

J. A. Hunt is neither tall nor robust. He is of not more than medium height, pale, slender, wiry, and, if anything, quiet-appearing. He lives and does business in a quiet, but nevertheless industrious New England town, West-boro, Mass. His business, as nearly every one in the cycle trade knows, is the manufacture of cycle saddles. His place of business—the factory of the Hunt Mfg. Co.—is as prim and tidy as will be found in a month's travel, the very sort of place that one would look for an output of good goods and no other. It has been added to year after year, but the management, it is easily apparent, has kept pace with the growth. It is a factory that impresses the visitor. A talk with Mr. Hunt increases the favorable impression. Incidentally, it will dispel the first conclusion that there is little fire behind the pale and quiet exterior.

When THE WHEEL man saw Mr. Hunt just enough was said to generate a gentle heat, and when the interview had ended there was no possible doubt of the Hunt people's position in the saddle trade. He illustrated it in a convincingly dangerous manner, that is, convincing for Hunt, dangerous for the other fellow. He brought out two saddles. One was of the Hunt manufacture, the other was not. He laid them upside down, and side by side on his desk. There was small need for him to say anything. The saddles told their own stories. Were they not before his eyes the visitor would not have believed the difference possible. Compare a rhinestone and a diamond, and the object lesson will be plain. The Hunt saddle was the diamond. The other may have been a diamond, but if so it was very much in the rough. The cantle, the base, the clamp, the nickelling, the finish, the general appearance of the one stood out clear and well defined. The other looked thoroughly down in the heel, so to speak. The marks of the tool had not been removed. The finish was dull and lustreless.

"I don't usually do this sort of thing," said Mr. Hunt, "but I want you to see for yourself how it is. People who buy wheels don't pay enough attention to the equipment. You can see what I mean. Isn't there as much difference in those saddles as there is between a well-dressed woman and one poorly dressed?"

To have denied it would have been to confess one's self blind.

Mr. Hunt also waxed warm on the subject of prices, which, he says, are being carved and pared in a manner which he admits he cannot well understand.

"It will result in bringing the saddle business to the very state that undid the cycle trade this year," he remarked, prophetically. "At the figures some of them are selling they can't produce good goods. I can scarcely believe they know what they are doing. Why, the waste, a few bad debts or a lawsuit would eat up every cent they may make. We've been through it all, and know what it costs. What will we do? Go right on making high-grade goods in such quantities as may be called for. I believe there are enough bicycle manufacturers who want high-grade stuff, who know it when they see it, and who are willing to pay the price. We have the orders of some already in hand."

That the Hunt Manufacturing Company is in position to cater to the widely varying fancies may be judged from the fact that they have no less than sixty different patterns of saddles which could be submitted, although their '97 line proper will consist of but fifteen models. There are no particularly radical changes, the most prominent addition

being several widths of the short, broad-cantled, so-called hygienic saddles, padded with felt.

In the matter of colors Mr. Hunt, like most far-seeing people, favors russet. The popularity of black, he said, was due to its being easily worked. The slightest stain on russet practically spoils it.

Like most American concerns, the Hunt Manufacturing Company has felt the effects of the export boom. A single order for 500 saddles was among those recently received from abroad.

At the present moment the Hunt Company is deeply concerned in patent litigation. They are very determined and express no fears of an unfavorable verdict—indeed, Mr. Hunt intimates broadly that in his own good time he will assume the aggressive and do some suing on his own account.

"WHITE AND GOLD BEAUTIES."

White and gold has ever been a dainty combination of colors. In bicycles—"white and gold beauties" they term them—it will be seen at its best in the White bicycles, the product of the White Sewing Machine Company, Cleveland, Ohio. They will be finished in white enamel, striped with gold, although other colors will be supplied if desired. The '97 model A is now being shown. It is undeniably a handsome creation. Its principal specifications are:

Weight, 23 pounds with fittings; tread, 5 inches; wheel base, 44 inches; frame, high diamond pattern $\frac{1}{4}$ inch cold drawn seamless steel tubing, $\frac{1}{2}$ inch top bar, height 24 or 26 inches, $\frac{3}{8}$ inch tubing in rear fork, $\frac{3}{4}$ inch tubing in rear upright forks; frame parts, seamless sheet steel connections, all strongly reinforced; forks, seamless steel fork sides, gracefully curved and mechanically reinforced; double fork crown; steering head, 9 inches long, $\frac{1}{4}$ inches in diameter; handle-bar, cold drawn weldless steel, tube $\frac{3}{8}$ inches in diameter, adjustable to four positions; rims, Kundtz reinforced laminated; tires, Morgan & Wright or Hartford; spokes, swaged piano wire, 25 in front, 36 in rear; swaged .080 to .060; cranks, special steel, round and tapered, with throw $\frac{6}{16}$ inches long; chain, $\frac{1}{4}$ -inch solid link with hardened rivet and steel centre; sprockets, both detachable, steel drop forgings, hardened; gear, 70 regular; higher if desired; hubs, large tubular hubs from solid bar steel.

CONSOLIDATION OF ALLIGATOR AND THREAD.

At first sight a mixture of alligator and thread does not seem to have any direct bearing upon the cycle trade, yet such will be the direct result of the Reading Rubber Tire Manufacturing Company, Reading, Mass., having acquired the plant of the Chelsea Wire Fabric Rubber Company, of Chelsea, Mass. The two plants will be run in future under the name of the Consolidated Rubber Company, with a \$500,000 capitalization.

The officers of the new concern are F. W. Hustis, general manager; F. H. Porter, treasurer, and R. A. Leigh, general superintendent. The plant at Chelsea will be devoted entirely to the manufacture of the alligator tread tire, of which 75,000 pairs have already been ordered. The Reading plant is now being equipped with machinery for the manufacture of a new type of thread tire, which, the inventors claim, can be made more cheaply and far more quickly by their process than by any other way in the world.

CHAIN FOR YOUR WATCH.

The cycling enthusiast who possesses a watch and wishes a chain emblematic of his favorite pastime can get great value for 26 cents by sending that sum to the Indiana Chain Company, of Indianapolis. The Indiana concern is making an aluminum fob representing a bicycle chain and sprocket, which is a specially fetching souvenir.

SURPASSED CAVALRY.

Springfield, Mass., Oct. 12.—An important feature of the field day of the 2d Regiment of Massachusetts Militia, at South Deerfield, Wednesday, was the bicycle reconnaissance which was participated in by about a hundred men. The largest detachment comprised fifty-four members of Company B, of this city, under Captain McDonald. The men scoured the country for twenty miles around, and in a much shorter period than the work could have been accomplished by cavalry returned with thorough information as to roads, strategic points, and the ability of the country to sustain an army. Captain McDonald made a reasonably accurate map of the region from the reports of his men.

Captain McDonald drills his bicycle squad by the bugle. A long note means "Prepare to mount!" and the short note which follows "Mount!" The call for dismounting is the same. A short, sharp note is a command for single file. Two short notes means to ride by twos, and three notes by threes, and so on.

PUZZLING OVER POTTER'S PAY.

"Potter's claim" is at last in a fair way of final disposition. A meeting of the arbiters was held in this city on Monday, when evidence was heard. R. L. Coleman, J. W. Spalding, George R. Bidwell and others equally prominent in the trade, were called as witnesses to prove the basis of Mr. Potter's contention, that "proper zeal" had not been displayed in securing support for the League's magazine Good Roads, of which Mr. Potter was editor. He was relieved of the high-salaried position by the Burdett administration, and his claim is for wages for his unexpired term. Conway W. Sams, Chief Consul of Maryland, represented the L. A. W., and George F. Miner, Potter's law partner, represented Mr. Potter. George F. Alexander, of Brooklyn, was the third and mutually chosen judge.

PRICES RIGHT; WHEELS READY.

"97 bicycles ready for shipment." This announcement indicates that the Ralph Temple Cycle Company, Chicago, have taken to heart the early bird adage, and are following it in no uncertain fashion, two of the Temple travellers being already on the road with '97 samples. The line includes five models for men and five for ladies. The price of the Temple Scorcher remains unchanged, \$100; the price of the others have been slightly reduced, and now scale \$75, \$60, \$50 and \$40.

TWO WERE STOLEN.

Two Orient wheels were stolen last week. No. 3,674, 24-inch frame, ramshorn bars, brown saddle, 72 gear and New York tires, and No. 3,293, 24-inch frame, upturn bars, Sager P saddle, 70 gear and Vim tires. The former was stolen by Joshua Cochran (colored), who bought it on the instalment plan from the Orient branch in Philadelphia. The other was stolen from a customer in the same city.

HERE IS LARGE TUBING.

The Iver Johnson is among the wheels in which larger tubing—inch and a quarter—will be used next year. A sample has already been seen, which, striped with gold, looks all over a fetching mount. Fred Johnson, the head of the firm, is shortly to go abroad and size up the foreign situation for himself.

The Syracuse (N. Y.) Arms Company has added pedal-making to its other accomplishments.

ON FOREIGN VELVET.

One of the American manufacturers who have been on velvet, so to speak, as to European trade, is the Davis Sewing Machine Company, manufacturers of the big-tubed Dayton.

Their "mortgage" on the game has arisen from the fact that, when the demand assumed shape, they were already well entrenched, with their sewing-machines in all parts of Europe, had a strong clientele of agents everywhere, and a central headquarters under their own direct management located in London. With this basis for an energetic campaign, it proved a comparatively easy matter to make the Dayton wheel a factor in European markets, that the life of its makers in the wheel line would seem to render decidedly remarkable.

The Davis Company handle all European business through their London branch, excepting that of Italy, which country is controlled for them by the firm of Conti Brothers, who might fairly deserve the name of Jones Brothers or Smith Brothers, so Yankee-like are their energetic tactics in pushing the Dayton. It was in Italy, by-the-way, that the Dayton folks got their first foothold in Europe.

During the last year Daytons have been sold and ridden in England, Italy, Belgium, Switzerland, France, Russia, Spain, Norway, Sweden, India and South Africa. And a matter of about eight thousand or so, it may be added, have been marketed in our own big country.

TO EDUCATE THE FOREIGNERS.

Although the single tube tire is of English origin and for a time all were known as the Boothroyd type—more or less in honor of the British inventor—it made little or no progress abroad. The recent "American invasion" has, however, stimulated interest in single tubes, as in everything else American. The foreign inquiries have occasioned no little comment. Manager Kelly, of the Newton Rubber Works, is among those who have been amazed by the number of the inquiries that have reached his concern without effort on their part. They appear so promising that the Newton people contemplate the establishment of a foreign depot. In this connection it is not generally known that for months past the Pope Manufacturing Company has been making a single tube tire with a corrugated tread to meet the requirements of the export trade.

TWO DECADES IN RUBBER.

Twenty years of experience in the manufacture of rubber goods and the possession of a large number of diplomas and medals attesting the quality of their wares are among the strong claims for recognition which the Brooklyn (N. Y.) Rubber Company very properly advance in making their bow as makers of single-tube tires. They say determinedly that they mean to win success by deserving it, and are already in a position to talk business.

Their factories, located in Brooklyn and occupying the larger portion of the block on Sumner avenue, between Hancock and Halsey streets, have a floor space of some 15,000 square feet, so arranged that they are enabled to lay out each department in such a manner as to insure the most systematic and perfect work. The "Bernard" will be the title under which their tire will be marketed.

BRUTAL RACING.

As a result of a wager of \$100 Max Meyer, jr., of West Chester, Penn., rode against a running horse for twelve and a half miles on the road on Saturday last. The cyclist sustained a fall and was beaten by five minutes. After the contest the driver was threatened with arrest for cruelty to animals.

WHEEL ADVERTISERS are notified that change of advertisements is not guaranteed, unless copy is received by Saturday morning.

TO FOREIGN INFORMATION SEEKERS.

Owing to the number of inquiries received from abroad in regard to the status of American firms, THE WHEEL announces that it will give to all such inquiries the most careful attention, and all foreign merchants desiring advice or information regarding American trade are invited to correspond with THE WHEEL.

WHERE STANDS THE LAW?

SCORCHING on crowded thoroughfares or park roads has never met with aught but condemnation in these columns. THE WHEEL is first, last and all the time in favor of dealing most vigorously with the scorcher. Whether he be wheelman, horseman or truckman, each is a violator of the law, and each by the law should be severely punished. But the punishment for scorching should be by lawful means accomplished, without any reference whatever as to the style of vehicle the scorcher chooses as a means of his speed exhibitions.

It cannot be denied, however, that the guardians of the law do not thus impartially regard violators of speed ordinances. Almost invariably the wheelman is the surest of arrest and punishment when he appears before the magistrates, and this, too, notwithstanding the self-proven fact that in a collision between a wheelman and a pedestrian the latter is far less liable to receive fatal injuries than when the same thing occurs between the

pedestrian and any other form of vehicle.

That this feeling exists in the none too analytical minds of park guards and cycle policemen was never more conclusively proven than in the outrage perpetrated by one of these guardians of public safety upon five wheelmen accused of, and fined for, violating the speed ordinance on Riverside Drive on Friday evening. A cycle mounted park policeman was in pursuit of the wheelmen, and as he passed one of his brethren was seen by that gentle individual to be a loser in the race.

Quick-witted, like all of his class, the guardian of the law, under cover of darkness, seized a chain, stretched it across the road and waited for the return of the flying wheelmen. Be it noted, the policemen did not know the violators of the law would return; he did not know, nor did he care, whether the first person who came in contact with the obstruction was a perfectly innocent user of the drive. To the brilliant mind of the individual it mattered not who was injured by his plan, nor how much, it was all one to him.

Had the offenders been horsemen or equestrians through the brilliant officer have placed that chain across the drive? Maybe he would, but it is not likely that even a policeman would have so little brains. Why then did he do so in the case of the wheelmen, unless there was in his mind a distinct difference before the law for the wheelmen as a speed law violator and any other violator?

Granting that the wheelmen were riding faster than the law allowed, has any policeman the right to act as judge, jury and executioner at one and the same time? If he has, then the law should be promptly changed.

Supposing in the case of these wheelmen that the policeman's method of highway obstructing had resulted in serious injury or even death to one and all of the riders he caused to be thrown, a thing very likely to have occurred if the men were riding at faster than a legal rate of speed, would not the city and its brilliant hireling both be liable to action and damages? In the light of a recent Minnesota decision, where the policeman substituted his club for the New Yorker's chain idea, the courts decided that the wheelmen had a case sufficient to send the policeman to prison for one year, and the brilliant official is now there.

That fame may not pass this brilliant chain thrower by unnoticed, it is well that Patrolman O'Brien's name be mentioned. And that even this publicity may not fail to bring him his just reward THE WHEEL calls upon the New York Consulate of the League of American Wheelmen to thoroughly investigate the affair, and if it is as reported, to bring charges against Patrolman O'Brien before his superiors and again in the courts. It is time that wheelmen learn what rights they and men of the O'Brien stamp have under the law. If it is legal for such men to risk the lives and limbs of those guilty of so trifling a misdemeanor as excessive speed work the fact cannot be learned too quickly, nor too

quickly remedied. If the latter cannot be accomplished then such corrective measures as the O'Brien ones should at once be enforced against trotters and trucks until the violators of the law be forced into line to aid the wheelmen in passing a law which will forever take from any policeman the right to kill or maim any one using a public street or park road at a rate of speed greater than he may think to be legal.

The New York Consulate owes it to itself, and to those whom it represents to at once proceed in this matter and fight it to the end. Wheelmen should be punished when they violate the law, but the question of their punishment to the extent of life and limb should be in the hands of those much higher in the scale of officials than we are prone to believe will ever be occupied by Patrolman O'Brien.

RETURNING CHAMPIONS.

A LOT of hero-worshippers, especially Zimmy-worshippers, are wondering whether the great Arthur Augustus will return to the glare and glory of the path next year. Some say he will; others say he won't. Zimmy himself, who is a diplomat, has said little or nothing. He replies only with the historic and non-communicative smile. It is a matter of fact that with men who have really been great in any branch of athletics it is usually impossible to convince them that they are "has-beens," that they are "not as young as they were," that they are no longer youthful. For instance, it is claimed by the friends of the marvellous runner, L. E. Myers—perhaps the greatest runner the world ever saw—that, though nearing forty and though proverbially fat—that is, fat for Myers—he still thinks he can outpace the greyhound and fly in the face of records.

As with Myers, so it is with many other men who were once in the first flight. They retire from active participation in athletics. They go out of training; they go into matrimony; they go in for all the good things of the world, including a bottle of Bass or a bottle of something else on the table; they go in for adipose tissue, for a general good time. The sinews slacken and lose their steeliness, the heart weakens, loses its championship form, and becomes flabby. The veins, the muscles, the nerves, the brain, the ability to bear the pain of punishment, all these things undergo change and diminution of power. They lose the qualities of speed and endurance.

Once in a while an old-timer who has forsaken the path does come back, and he is sure to do one of two things. He either is a forlorn spectacle and wobbles about the circuit upon which he was once a meteor and an undisputed king, or else he comes back and shows fair form—but not the old form. These old-timers have their best moments when they witness battles in the events which they formerly triumphed. Their eyes light up at the applause; their hearts again pump the blood through their veins; they would

leap and bound; invisible (momentary) wings have they. Again would they hear the crack of the pistol; again would they try and outrun the new man or the odd fifth of a second. But when the meet is over, this flashing of eyes is subdued and the former champion acknowledges to himself, if ever so secretly, that he is not up to the mark, and he knows that he really never can get up to it again. In America particularly champions are developed at an early age. They are practically through with their athletics at twenty-five, and most of them long before that time.

THE WHEEL does not doubt that Zimmy, on festive sporting occasions, does hanker for another try at the path, but THE WHEEL hopes he will remain in dignified retirement, and judge, clock and show himself at meets for many years to come; but as for competition THE WHEEL hopes that Zimmy has done with it forever. No man ever has made so wonderful a record and no man ever can duplicate it, because now kings are made by inches and noses, whereas Zimmy was an immeasurable distance ahead of his field; no one ever knew how far, Zimmy as a judge and a benedict is possible and admirable; as a competitor very improbable.

WORTHY OF OFFICE AND SALARY.

A MAN who writes for the press can do much harm or much good. He can fly in the face of the truth, and send that damsel into retirement with a much battered physiognomy. He can deal with facts, or, if he is lazy and unable to get about, he can string out fancy to whatever extent the man with the blue pencil will permit. Unhappily the blue pencil, especially the cycling editor's blue pencil, is not kept as busy as it might be, or else one must assume, judging from the mass of inchoate, false and fanciful paragraphs which is turned out in some of the cycling columns of the dailies, both in Gotham and elsewhere, that the average cycling editor does not know much about cycling, and, for convenience and safety, swallows all the copy that is sent to him without making an effort to masticate or digest it.

Just now, with his term still some months to run, the cycling paragraphists are having much to do with Mr. Gideon and Gideon's intentions and Gideon's successor. They have also much to do with Sterling Elliott and Elliott's chance of renomination, and also something to do with Mr. Potter and Mr. Bidwell as possible candidates for the exalted office of President of the L. A. W.

As a matter of fact, Gideon has not set the world on fire, but he has been a good, sound, sensible and reliable chairman of the Racing Board. As another matter of fact, he has taken away from a good business, in which he is a partner, much of his talent, and devoted it to the affairs of the Racing Board, with little chance of glory and no chance of profit. He has also sacrificed himself personally, because he is a devoted catboat man, and would rather spend an afternoon on the water than on the cycle-racing field. It has

taken him two years to systematize and understand his work, and now, long before his time has expired, the paragraphers want to inter him with indecent haste.

The logic of the situation is that Gideon is the right man in the right place; that racing is now a business, and should be conducted as a business, with proper headquarters both East and West, and with well-paid men in both offices. The chairman of the Racing Board is worthy of an adequate salary, and Gideon, after two years of personal and business loss, should be the first man to be compelled to accept a proper reward for his work. He should be the chairman next year, politics or no politics, personality or no personality, and THE WHEEL believes that he will be chairman.

The "probable successor" to Elliott is being handled in much the same fashion. No man can do much with the League in a year. Elliott has practically done nothing beyond detail work. The League has grown simply because cycling has increased. There may, in the near future, be much for a League president to do, and a man who has been through one term would be better equipped to do it than a new man. Outside of that fact, the time is yet some months away when the question can properly come up for reasonable and logical discussion. In view of these facts, the material which is at present being published on the chairmanship and the presidency can only be regarded in the light of space filling.

Now that cycle manufacturers are again placing their saddle contracts, THE WHEEL once more repeats its urgings in favor of the russet tops. It is one of those minor considerations that is justly due the rider. Blackened leather may be a saving for the maker and a source of profit to the scourer, but there its merits end.

A high-grade wheel cannot be bought or built for a low-grade price, and the world would be happier and more contented were this fact less often disputed.

A pessimist is a man who was once an optimist; in other words, a man who had too good an opinion of everything about a wheel and the riding thereof.

Those who believe that success in trade excuses the means employed rarely maintain success long enough to prove the correctness of their beliefs.

Dreams of fortune-making in the cycle trade do not come true quite as often as work for it does.

In racing these days the roll of honor is the roll of bills, and the roll of bills is the roll of honor.

Scorching is merely an annoying corn on the foot of cycling.

DOUGLASS HAS DETECTIVES.

President Douglass, of the Mercury Wheelmen, of Allentown, Penn., promises to make things warm for Chairman Gideon and the Racing Board for professionalizing Crouse, Corser and Daupenspeck on the charge of accepting money for racing. For a month a Pinkerton detective has been working on the case, and it is stated that Mr. Douglass is in possession of all the evidence on which the Racing Board based its action. He states that the matter is a conspiracy arranged by a rival club to injure the Mercury Wheelmen, and threatens to institute criminal proceedings against those who made the charges and Chairman Gideon. The latter claims to have the strongest kind of evidence against the men, but adds that the Board will consider any evidence which may tend to disprove the charges and will rectify any error.

WHERE ZIM WAS GOOD.

There is a ring of true sportsmanship in Parson's reply to a recent interviewer, who asked him what he thought of Zimmerman, when he said: "On every occasion when I beat Zimmerman he was not in form. He was not in form but once, and that was in the half-mile race, in which they claimed to have bought me to lose the race to him. He went by me that time as though I was standing still, and I was led to think by that finish that fortune had been kind to me in sending him to our shores in poor condition."

HOW CONSIDERATE IS THE COPPER.

Five scorchers were fast escaping from the clutches of a cycle "cop" on the Riverside Drive, near Grant's tomb, on Friday night last, when a foot policeman came to the rescue by ripping a chain from a post and throwing it in front of the scorchers. They were all pitched headlong in a heap, but luckily escaped with bruises. Then they were arrested and fined \$3, while the policeman was complimented for his happy thought.

GOLD BEAT OUT SILVER.

Politics figured conspicuously and unsatisfactorily in a tandem race at a recent meet in Denver. The contest was between two teams representing McKinley and Hobart and Bryan and Sewall. It had been arranged for the free-silver representatives to win for grandstand effect, but the gold-standard team could not resist the temptation to score a victory and dismayed the promoters by winning out a dozen lengths, amid the laughter of the crowd.

CLOSER RELATIONS SOUGHT.

President P. Anthony Brock, of the Metropolitan Association of Cycling Clubs, is figuring on reorganizing that organization. In pursuance with this idea, he will shortly send out an invitation to the presidents of all the clubs belonging to the association to attend a meeting at the Hotel Bartholdy. It is also his desire to bring the New-Jersey, Long Island and New York associations in closer relationship.

SEND HIM TO CONGRESS.

William C. Redfield, an old wheelman and new League member, who is treasurer of J. H. Williams & Co., the well-known Brooklyn drop forgers, has been nominated for Congress on the National Democratic (gold) ticket. His district comprises the First, Second, Fifth, Sixth, Seventh, Eleventh and Twentieth wards in Brooklyn.

In Paris the results of all the cycle races are sent from the tracks by specially trained carrier pigeons.

ON THE CIRCUIT IN '96.

What the Racing Men Who Followed It
Around Did and Failed To Do in
the Game.

Never since the inauguration of circuit chas-ing have there been such whirlwind finishes, such close wins and such a sharp fight for championship honors as characterized the circuiting of 1896.

The National Circuit opened at Oakland, Cal., on May 1, and ended at Washington, D. C., October 5. The work of the men from Oakland to San Antonio on June 5, comprising seven meets, was not of much importance, none of the real crackerjacks having yet entered. The stars up to this time were W. Edwards, Coulter and McFarland. At San Antonio Gardiner and Ziegler put in an appearance, the former gaining the mile open and the latter finishing second. At Laredo Gardiner again won the open, while Orlando Stevens landed the handicap. A two-day meet at Galveston's new track was next on the programme. There were five open races and no handicaps, of which Ziegler got 2, while Gardiner, Jack Coburn and Stevens had to be content with one each.

From Galveston the money-chasers went to New Orleans, where Gardiner, Ziegler and McFarland were the first over the tape in three close finishes. Little Rock's meet followed and Gardiner (twice), Clark and Stevens were the winners. The meet at Hot Springs was chiefly noticeable for the fact that Gardiner here met his first defeat, Ziegler succeeding in doing the trick. Terrill and McFarland won the two other races. Gardiner again won the open at Kansas City, where a local man had a run-away in the handicap.

The three big race meets of the year were Louisville, Springfield and Peoria, and the men next met at the last-named to do battle for the rich prizes the management had hung out. Peoria has always been a great racing town, but this year it excelled itself. In the three days of racing, June 27-29, every race was hotly contested, and the attendance reached as high as 10,000 in a day. Cooper and Sanger joined the circuit here, and scooped in most of the open events, Cooper winning four firsts and one second, while Sanger took three firsts and a second. Poor Griebler, who died about one month afterward, took three firsts and a third. At Galesburg Cooper and Sanger tied in one race and Tommie took the other. Daventport's meet was of little importance, no stars being there. Woodlieff, Starbuck and Hofer were the winners.

Two days at Appleton was the next circuit-chasers' gathering and Bald disposed of those who claimed he was a has been by winning five races over Sanger, Ziegler and Gardiner. Bald again won the open at Chicago's meet and little "Pye" Bliss got one of the handicaps, Sanger at the same time winning an unpaired, for time, race. At Battle Creek Cooper and Bald met for the first time on the circuit, and each succeeded in winning one race and getting a second to the other's first. Loughead and Mertens took the handicaps. At Windsor Cooper and Bald again broke even in two races and Harry Clark took the handicap.

At Lima, on July 29, occurred the first serious accident of the year, when Joseph Griebler, a speedy and popular rider of St. Cloud, Minn., met his death in one of the races. Cooper succeeded in winning the half-mile open, while Bald landed the mile, with Cooper second. Kimble captured the handicap. The indoor meet at Nashville was of little importance, Jay Eaton winning the majority of the races there.

August 13-15 was the date of the greatest National meet the League of American Wheelmen has ever seen. So much has been told of these contests that little more can be added except that Cooper won the quarter, third and two mile championships, Tom Butler the half and one mile, and Becker the five-mile. The latter race was the greatest exhibition of jockeying the American people had yet seen, and as a result Cooper, who finished first, was disqualified, and the place given to a "plugger." It is doubtful, though, whether Cooper was any more to blame than others were. Bald at this stage was a great disappointment, seemingly having lost all his old fire. Of the other races Tom Butler, Gardiner, W. Coburn and Nat Butler were the winners. Incompetent judging spoiled the finishes and heats of many races. C. C. Ingraham was the star amateur present. He had no difficulty in winning from the others as he wanted.

The racing from Louisville to Springfield went through Erie, Rochester, Binghamton, Saratoga, Bridgeport and Meriden. It resulted in the winning of six firsts for Tom Butler, whom none of the others seemed able to touch. The remainder of the events were divided between ten riders, Becker, Kimble and Kennedy being the only ones to score more than one win.

Whatever may be the city selected for the National assemblage, Springfield always stands out as the banner meet. The two "Toms," Cooper and Butler, divided here the open events, Butler winning the first day and Cooper the second. Cooper captured the record race, the biggest race of the year, with Fred Hoyt, who had just graduated from the amateur ranks, second, and Sanger third. Bald again made a failure, not winning a single race.

Boston's meet had the largest attendance of the year, 16,000 people going in to see Reynolds, Tom Butler and Schrien win the three races on the card. Tom Butler had walk-overs at Manchester and Keene, but Loughead succeeded in beating him out in the mile open at the first-named place.

At Philadelphia, on September 12, little Earl Kiser beat out all the great stars in a race for a \$250 first prize. Ziegler and Clark won the two handicaps. At Wilkesbarre Bald and Ziegler each won a race. Sanger left the circuit here. The snappiest meet of the year took place at the Manhattan Beach track, New York, on September 18 and 19. Bald won the half-mile handicap after one of the most sensational finishes of the year. Michael narrowly escaped defeat from Starbuck in the hour race, while the one-mile invitation race, run in heats, resulted in each of four men winning a heat; it was necessary to postpone the race on account of a terrific rainstorm, with Cooper and Johnson only eligible for the final heat, Bald having been disqualified. In the run off at Waverly Cooper won the open race, while Bald took second in a handicap won by Mertens.

At Plainfield Bald and Cooper each won a race and Church took the handicap. At Newark Bald took the open and a local rider was given the handicap. At Trenton Gardiner and Cooper were the winners, the latter scoring in a handicap.

The season went out in a burst of glory at Washington, where Cooper, Gardiner and Bald entered in each of the three races. Bald won both open events, while Cooper was content with landing the handicap, in which the three scratch men came in one, two, three. So ended the circuit of 1896.

The number of firsts, seconds and thirds scored by riders on the National Circuit who have more than ten points follow:

Name.	First.	Second.	Third.	Points.
Cooper	18	4	3	65
Bald	15	8	4	65
Gardiner	10	11	9	61
Butler	15	2	3	52
Ziegler	7	8	10	47
Sanger	6	6	5	35
McFarland	3	7	4	27
Clark	5	3	4	25
Stevens	3	5	7	26
Kimble	3	5	3	22
Coulter	3	4	4	21
Loughead	2	6	2	20
Kennedy	2	3	5	17
Mertens	3	2	3	16
Becker	5	0	1	16
Parker	3	1	3	14
Wells	2	2	2	12
W. Coburn	2	1	3	11
Allen	0	4	3	11
Baker	0	5	1	11

Off the circuit the principal meets were the Chicago Fourth of July gathering, where Cooper scooped in all the first prizes; Buffalo, August 3-5, where Ziegler, Bald and Butler won the big prizes, and the Coliseum, Chicago, during September, where Jay Eaton was the star. At indoor short distance racing Eaton has shown himself the peer of any other American rider.

If you take each man's record individually you will find Cooper has done the best work, with Butler and Bald not far behind. The number of races that the five crackerjacks entered on the National Circuit are as follows: Butler, 23; Cooper, 35; Sanger, 38; Bald, 43; Gardiner, 54. It may thus be seen that Bald entered eight more races than Cooper, so it is only fair to suppose that if the latter had entered as many races as his great racing opponent he might have at least gained sufficient points to have given him the sole ownership of the top rung of the famous ladder.

Bald began the season well and ended it magnificently, but the majority of his intermediate work was of the commonplace sort. No one would be correct in declaring that Bald has lost any speed, since from the way he finished the season, beating every other star in the last few meets, it can be seen that his failures in midseason were due more to inability to take care of himself than to lack of sufficient speed. Granting all this, however, the fact remains that Cooper beat him in nearly 65 per cent of the races in which they met.

Tom Butler's riding stamps him as the phenomenon of the year. This young 128-pound rider was on the circuit only six weeks, but in that short time he managed to beat out every other rider of note. He finished about even with Bald and Cooper in races in which they met. With a little more head work this youngster should next year be the strongest of competitors for top rung honors.

For good, steady work throughout the year one must not overlook Arthur Gardiner and Otto Ziegler. Gardiner was the first of the crackerjacks to join the circuit, and with but short absences he made the complete round of the circuit. Gardiner is speedy, but he has hardly proven himself as fast as Bald, Cooper or Butler. Ziegler's bad luck still stuck to him, and when the season was drawing to an end, and he had better than a fighting chance for championship honors, his arm was broken at Trenton, thus throwing him out of the game. Ziegler, as one of the squarest riders, deserves better luck.

Walter Sanger ("Wooden Shoes") was a disappointment. Zim's old opponent possesses speed, but he is inclined to make his jump at the finish a bit too soon, and is, in consequence, beaten at the tape, the other riders using him as a wind shield.

Of last year's amateur talent McFarland, Clark, Loughead, Kimble, Newton, Hoyt and Stevens proved to have the most speed, with Loughead and Hoyt seemingly the best of the lot.

W. M. S.

AN EASY THOUSAND.

Bald has no Trouble Winning from Sanger in a Match at the Latter's Home.

Milwaukee, Oct. 10.—Whether Bald is the champion of the year or not, he certainly showed a clean pair of heels to Sanger in both heats of the \$1,000 match race between the two notables to-day. Three thousand Milwaukeeans witnessed the contests, and although the result was a disappointment they heartily applauded Bald's clever work.

It was an ideal day for the match, the weather being bright and warm. The race was run on a half-mile dirt track, which was too slow for extra fast time. When the two crack riders appeared on the track they were greeted with a round of applause. William Sanger and Arthur Wellep, well-known local professionals, set the pace for the riders. With a flying start they got away, Bald holding the pole directly behind the tandem. Sanger was less than a length behind, and in this position the riders remained until the three-quarter post, when the tandem dropped out and Bald and Sanger rode alone. Coming in on the stretch, Bald and Sanger moved up side by side, when Bald made a sprint which the Milwaukeean could not hold. The Buffalo man won by fully a length, his time being 2:10. A strong head wind was encountered on the homestretch.

In the second heat, Anton Stoltz and C. C. Ingraham set the pace. This time Sanger took the pole, and again at the three-quarter pole the tandem dropped out, to leave the giants to battle for supremacy. Sanger had the lead and began to sprint early and came down the stretch like a whirlwind, but the Buffalo man was not napping, and immediately took up the pace set by the Milwaukeean. A few yards from the tape Bald made a final effort and the sprint that followed sent him over the tape by a length ahead of the Milwaukeean, thus winning the match amid the cheering of the crowd. The time was 2:05 1-5.

Sanger afterward rode a half mile, un-paced, in 1 minute flat, and Con Reinke cut the amateur State record to 2:05 3-5. Sanger's brother, W. F., upheld the family name by taking the half mile, open, from Ingraham and Bliss, in a stirring finish. Summary:

Half mile, open, professional—First heat—1, William F. Sanger, Milwaukee; 2, J. R. Fitzgerald, Chicago; 3, Henry Kanaska, Milwaukee. Time—1:31 1-5. Second heat—1, C. C. Ingraham, Aurora; 2, J. P. Bliss, Chicago; 3, Anton Stoltz, Milwaukee. Time—1:16. Final heat—1, William F. Sanger; 2, C. C. Ingraham; 3, J. P. Bliss. Time—1:16 1-5.

One mile, match race, flying start, paced, purse \$1,000—First heat—1, E. C. Bald, Buffalo; 2, Walter C. Sanger, Milwaukee. Time—2:10. Second heat—1, E. C. Bald; 2, W. Sanger. Time—2:05 3-5.

Two miles, handicap—1, Con Reinke, Milwaukee (scratch); 2, Albert Mueller, Milwaukee (scratch); 3, Charles Muss, Milwaukee (60 yards). Time—4:55 4-5.

One mile, handicap, professional—1, Henry Kanaska, Milwaukee (75 yards); 2, Theodore Jones, Racine (140 yards); 3, A. F. Bingenheimer, Milwaukee (60 yards). Time—2:05 1-5.

Exhibition mile against amateur State record of 2:06—Con Reinke. Time—2:05 3-5.

Exhibition mile against paced professional State record—Arthur J. Wellep established new record at 2:07 3-5.

Exhibition half-mile world's un-paced record of 0:55—Walter C. Sanger rode half in 1:00.

Exhibition half-mile State paced record of 0:57—A. F. Bingenheimer rode half in 1:00.

A wheelman of Caldwell, Ohio, has had a verdict of \$1,050 rendered against him in a suit for damages brought by a pedestrian he ran down.

WHERE RACING IS CONTINUOUS.

Scarcely a Saturday has passed since early spring without a race meet being held on the Tioga track, Philadelphia. No other city in the country has been catered to so liberally by race promoters, and if they had been it is doubtful whether sufficient support would have been forthcoming. But poor gates are exceptional in the Quaker City. Even on Saturday last, the cold and blustering weather failed to entirely dampen the ardor of the enthusiasts. About 2,000 spectators shivered through the last meet of the season.

Interest was centred in a match race between Church and Starbuck for a mile. The event resulted unsatisfactorily, the judges deciding it a dead heat, while the crowd thought Church had the best of it. Church declined to ride it over, so Starbuck was awarded the purse. The hour race was tried again under more favorable conditions than before; that is, it was a scratch event, paced. The ever-popular Starbuck won this event handily. The way he hung on to the pacing motorcycle served to warn up the spectators from time to time, and he was cheered time and again. The outcome of the race for all the places might have taken on another color had not about ten of the racers been spilled on the first lap by one of the pacing tandems.

One-mile novice—Final heat—1, by W. J. Pyle; 2, Samuel M. Johnson; 3, Emil Gurk. Time—2:50 4-5.

Five-mile handicap—1, James Shomo, 200 yards; 2, Harold McGeorge, 250 yards; 3, C. Turville, 225 yards; 4, A. Remmart, 22 5/8 yards. Time—12:42 1-5.

One-mile professional handicap—Final heat—1, C. B. Jack, 35 yards; 2, E. P. Thompson, 70 yards; 3, C. A. Bowers, 40 yards; 4, F. S. Davis, 50 yards. Time—2:26.

Half-mile handicap—Final heat—1, J. Shomo, 30 yards; 2, J. A. Vernier, 20 yards; 3, C. A. Elliott, 40 yards; 4, J. B. Clift, 20 yards. Time—1:35.

One-hour open paced professional—1, Starbuck, 25 miles 968 yards; 2, L. W. Eckhardt, 24 miles 1,320 yards; 3, Josh Lindley, 24 miles 940 yards; 4, W. E. Dickerson, 23 miles 1,380 yards; 5, L. S. Hall, 22 miles 880 yards; 6, Frank J. Pyle, 22 miles 450 yards.

COLD DAY FOR JOHNSON.

Cold weather interfered with the attendance at the meet of the Race Promoters' Association at Worcester, Mass., October 9, but few spectators witnessed the afternoon's sport. A match race between J. J. Casey and H. H. Parker excited local interest. Parker had a sprained wrist and was easily defeated by Casey. In the final of the half-mile open J. S. Johnson, of Worcester, lost to Drury by being obliged to swing wide to avoid a smashup, in which four racers went down. Summary:

Half-mile handicap—1, J. S. Johnson, scratch. Second heat—1, W. E. Tenzler, 10 yards. Third heat—1, E. R. Livermore, 20 yards. Final heat—1, C. S. Drury, scratch; 2, J. S. Johnson; 3, William Bain, 50 yards. Time—1:71 1-5.

One-mile open—First heat—1, C. H. Drury; 2, J. H. Clark. Final heat—1, W. E. Tenzler; 2, J. H. Clark; 3, J. S. Johnson. Time—2:23.

Two-mile handicap—1, C. H. Drury, scratch; 2, W. E. Tenzler, 30 yards; 3, J. P. Clark. Time—3:35.

One-mile, tandem, handicap—1, J. Collins and W. S. McRoberts, 50 yards; 2, James Wilson and F. C. Copeland, 70 yards. Time—2:11 2-5.

AS HONEST AS HE IS GAME.

J. F. Starbuck, the Iowa professional, who has become a prime favorite with the Philadelphia cycling public by his clever riding in that city throughout the season, is contemplating a trip to Australia. The stories of Martin's great success in the Antipodes has led him to believe that a fortune awaits him in the land of the cornstalks.

Members of the New York Fire Department formed a cycle club last week with about 100 charter members.

MIKE AND JOHNNIE.

They Get Among the Records in Great Shape At Chicago's New Track, Despite Poor Pacing.

Chicago, Oct. 10.—On the new track at Garfield Park, James Michael, the Welshman, clipped 18 seconds off the American five-mile record to-day, and came within three seconds of Linton's world's record. With a flying start he covered the distance in 9:20. It was expected that Johnson, too, would tussel with the record slate, but he did not feel in a fighting mood, so did not try. Seven thousand people watched the Welshman. The diminutive rider has become an idol with the Chicagoans, and was greeted with tumultuous applause when he appeared on the track.

Michael was paced by two quads, and two triplets, and to the failure of a new triplet team of green men to pick him up may be ascribed the failure to break the record of 9:17 3-5 held by Tom Linton. Michael missed the two-mile record made by Johnson on Thursday by just two seconds, doing the two miles in 3:40 3-5, some seconds inside the record of the world up to Thursday. His time by halves was: Half-mile, 56 1-5 sec.; one mile, 1:48 1-5; one and one-half miles, 2:42 4-5; two miles, 3:40 3-5; two and one-half miles, 4:36; three miles, 5:33; three and one-half miles, 6:28 3-5; four miles, 7:25 4-5; four and one-half miles, 8:22 1-5, and five miles, 9:20. The marks for three, four and five miles are American records.

Chicago, Oct. 9.—Johnson succeeded in adding a new scalp to his belt to-day, the two miles paced record. The half-mile circuit track at Garfield Park, which is as fast as any in the country, was the scene of the conquest. He rode the first mile in 1:41 2-5, two seconds slower than the record, finishing the two miles in 3:38 3-5. The record was 3:43 1-5, held by Berlo.

Johnson was paced at the outset to-day by the quad team, captained by Bowler, with Stewart, a local man; Edwards, another local man, and Mertens, of Minneapolis. This team carried him two-thirds, the second team taking about a half and the triplet team the remainder. Frank Waller, Myers, of Minneapolis; Davis and Newhouse, of Buffalo, were on the second quad, and the Jallu brothers, of France, and Steenson, of Syracuse, on the triplet.

He was poorly picked up at the close of the first mile, and kept calling for more pace throughout the last half.

MERCHANTS BACKED IT.

A bicycle parade and a twenty miles road race brought the Merchants' festival to a close at Nashau, N. H., October 8. Forty-eight riders started in the road race, with Urquhart and Barnaby on scratch. The former was compelled to drop out on account of a puncture. Barnaby worked up to fourth place. The race started and finished on a track. Result:

	H.M.	H.M.S.
J. G. Wentworth.....	3:00	1:00:10
E. O. Peabody.....	0:45	1:00:15
T. A. Barnaby.....	scratch	1:00:30

HARTFORD TIRES.

Before deciding on next year's tires remember that

Hartford Tires are the Original Single-Tubes.

We made them for years while other makers worked along a different line.

Hartford Tires are the Best-Known Single-Tubes.

When anyone speaks of a single-tube tire you think of a Hartford at once.

Use tires with an established reputation.
Your wheels will sell easier.

To Bicycle Riders: We Make Our Tube OF FIFTY CARBON STEEL

Because a Tube like this of

Is just as strong as

a Tube like this of

This diagram does not show how much stronger and more durable our tube is than the usual quality in the market because it does not include the always bad and more or less uncertain effects of "pickling." By ordinary methods tube is annealed in the open fire and pickled from eight to twenty times, according to finished size. By the use of a patented annealing process, controlled by us for tube making, our tube never comes in contact with the fire and is never pickled. There is no "theory" about this. Our thorough tests show that even with the greatest precautions in pickling (not usually taken), pickled tube is weaker and more brittle than tube made of the same material without pickling. Send for a Catalogue.

THE POPE TUBE CO.,
HARTFORD, CONN.

While weight for weight in a Bicycle FIFTY CARBON Steel will last so long

and TWENTY-FIVE CARBON Steel will last only so long

EVERYBODY IS TALKING.

All Sorts of Challenges Are Flying Around Between Cooper, Bald and Gardiner.

Detroit, Oct. 11.—Tom Cooper returned home yesterday for a brief visit. He will start for the South in a day or two, making a short stop at Chicago. He is in excellent condition, and feels more than satisfied with his season's work. He states that his actual winnings for the year so far amount to \$5,620. Cooper considers his showing for the year far superior to Bald's, taking into consideration all the meets of the season on and off the circuit.

"If all the circuit races we ran during the year were tabulated, I would be far ahead," he affirms, "having won 41 firsts and Bald 27. We have raced against each other thirty-six times, and of these I have won twenty-four, which ought to serve as a guide to the year's work."

Cooper was asked if his quarrels with Bald on the track had not lost him several races, and he admitted that such was the case. "I had to do it," he said, "in order to protect myself. Bald would ride up alongside of me and punch me in the ribs, and if I allowed him to continue he would have thought that he had an easy thing and kept it up. In the race at Springfield he did that, and I let go of my handle-bars and pushed him. At that I won the race, but was put back, and we were each fined \$50. That made me so mad that in the record race I took desperate chances and went through the bunch a winner. On September 5 both of my wrists were sprained at Providence, but I kept on riding, though I could not grasp my handle-bars, and of course lost several races. I made money all the time, however, as \$75 was offered for second prizes, and I had no trouble in getting the place.

"Yesterday I forwarded a challenge to Jay Eaton, who is said to be the champion indoor rider, and will race him whenever he cares to accept. I will not cross the ocean this year, but will go South next week and ride there for a month. Then I will return home and rest for next season."

ALL IN FOR A THOUSAND.

Chicago, Oct. 12.—Cooper's offer to ride against Bald in a series of three races to decide the tie for the championship of the year has been taken up by the Buffalo crack. Cooper, Bald says, can have any amount of his money that he can win. Arrangements and dates will probably be decided on this week. It is probable that the first race will be run at Louisville, the second at New Orleans and the third, if necessary, will be arranged after the first two have been run. Cooper and his employers are anxious for the match and Bald is wroth because the championship is claimed for Cooper. The father of Arthur Gardiner has also become active in the championship controversy. It is stated that he will back his son for \$1,000 against the winner of the Bald-Cooper races.

ACCEPTED ROAD RECORDS.

The following road records have been accepted by the Century Road Club of America: A. E. Smith, Cleveland to New York, 3:03.51, June 30-July 4, 1896. Course record. A. E. Smith, Cleveland to Rochester, 1:06.52, June 30-July 1, 1896. Course record. A. E. Smith, Rochester to New York, 2:19.41, July 1-4, 1896. Course record. E. Tyler Smith, 25 miles, 1:02.38, September 7, 1896. Colorado State record. A. L. Hachenberger, Denver-Evans century course, 6:31, September 27, 1896. Course record.

A League meet is a picnic which is prolonged several days and nights.

SUSPENSIONS.

T. O. Maxfield, Bloomfield, N. J., for thirty days from October 7.

H. Crutcher, Mitchell Merceps, — Lay, Otto Moore, Arthur Baldwin, Walter Graham and — Turner, all of Dallas, Tex., for ninety days from October 8, for competing in unsanctioned (ladies') races.

Henry Pritchett and Oscar Dolly, of St. Charles, Mo., are placed on permanent suspension list—outlawed Sunday races.

SANCTIONS GRANTED.

October 10—Ralph Stoddard, Oneonta, N. Y.

November 14—Thirteenth Regiment, New York, N. Y.

October 3, 10, 17, 24, 31—Charles Schwant, New Orleans, La.

October 20—Monett Wheel Club, Monett, Mo.

October 7, 8—S. W. Texas Fair Association, Victoria, Tex.

October 3—Rovers Wheel Club, Pueblo, Col.
October 6, 7, 8—J. C. Daniels, Denver, Col.

'SIXTEEN TO NO OTHER KIND.

Tandem road races are rare. Tandem races in which sixteen teams, all mounted on the same make of wheel, compete are rarer; indeed, it is an open question if the event in point—the Bay City Wheelmen's five-mile road race at San Francisco on September 27—was not the first to enjoy the distinction. In this race sixteen crews, all on their own Rambler tandems, started, and five of them got inside the previous record, Dixon and Craft making the best time, 10:22.4-5, an average of 2:04 1-5 per mile. As a side note to the affair, it is stated that T. H. B. Varney, the Rambler agent in San Francisco, has sold no less than 200 Rambler tandems during the current year.

ORGANIZED FOR WAR.

In the neighborhood of fifty representative cyclists of the Nutmeg State met in Meriden on October 8 and formed the Connecticut Federation of Cyclists. J. E. Brainard, of Meriden, was elected chairman of the convention, and W. H. Tomms, of Waterbury, secretary. The object of the organization is to secure the enactment of statutes regulating wheeling in the State, the use of bells, lanterns, etc., carrying wheels by railroad companies, providing for the punishment of bicycle thieves and criminals who scatter glass and tacks on cycle paths.

PETER'S BROTHER, BILLY.

Although placed on scratch in a field of sixty-seven riders, James Urquhart showed his rear wheel to the entire field in the Viking C. C.'s five-mile road race, Boston, October 7, winning first and time prizes in 12:55. William Berlo, a brother of the illustrious Peter, had the race until the last hundred yards, when Urquhart and Keller, a 1.45 man, nipped him. Another scratch man, F. P. Puy, finished fourth in 12:58, taking second time prize.

In tinkering with a wheel let well enough alone, I you can do no better.

FROM FOREIGN SHORES.

Raymond Returns from a Three Months' Trip Abroad—The European Outlook.

It is almost impossible to fancy Mr. Howard E. Raymond, formerly the chairman of the Racing Board, as he is in his present condition. During his three months' trip abroad, from which he returned on Saturday last, he has actually piled on avoirdupois, so that, instead of the lean, lustrous-eyed Raymond, he may be said to be actually fat. He admits that he has piled on some fourteen or fifteen pounds, but this he claims will be speedily got rid of as soon as he returns to his desk at the Sterling offices, for he comes back brimful of activity, full of ideas and ambition, and with a big thirst for work. Mr. Raymond was met in New York by Mr. Dickerson, of the Sterling Company, spent Saturday evening at a family reunion at his home in Brooklyn, and passed over to Chicago on Sunday.

"I had a pleasant time," said Mr. Raymond, and mingled business with pleasure, but went mostly for pleasure. For me the Continent has now lost its charm. The next vacation I take will be into some new field. I merely drifted about, of course keeping my eyes open for trade. The chance for American exportation is not what it is cracked up to be. Even in those countries in which there are only a few factories, or in which foreign makers have control, there is a strong movement already under way to increase duties on cycles. For instance, in Austria, in which there are only three factories, the duty on American wheels is \$16, and it is proposed to make an effort to increase this. Of course owing to the great demand for wheels this year and the inability to supply the same from English markets, there has appeared to be a very fertile field for the marketing of American wheels. Next year, however, the English will be overproducers, and, as they are strongly entrenched in all the markets on the Continent, they will give American firms a hard fight for trade supremacy. Of course, if business were done on good, sound, substantial lines, Americans could go abroad with some chance of success; but I fear that so many of them have gone over already that it will be the usual story of cut prices, unload at any price, and all the rest of it. So that firms who really want to do business on a sound, legitimate basis will have little or no chance.

"It is not true," said Mr. Raymond, "that the Dunlop Company is in any sense weakening. It controls practically all of Continental Europe. The company is in favor, and with its many depots and manufactories it presents a strong front in the face of all competition. Its produce is well made and gives the utmost satisfaction. The company is, in my opinion, stronger to-day that it ever was, and its patents and royalties are acknowledged throughout Europe."

McCUNE DOES A FIFTY.

A. E. Wehnig's fifty-mile road record of 2 hrs. 30 min. 40 sec. was lowered to 2 hrs. 23 min. 57 sec. by W. E. McCune, at Worcester, Mass., last week. He was paced by three tandems. His mount was a Boyd.

KNOCKS A TWO-YEAR-OLD RECORD.

W. H. Beuchler arrived in New York on Monday from Pittsburg, having ridden the distance in 3 days 14 hours. This is twenty hours less than the record made by Wolff two years ago.

It is the pace, not the distance travelled, that kills.

BRANCHES IN ALL PARTS OF THE CIVILIZED WORLD.

Kindly mention The Wheel.

FINISHED ONE, TWO, THREE.

Did the Victors in Syracuse's Coasting Contest—Protested, but Given the Victory.

What a helpless feeling it must be to strive for a prize, for honor and possibly fame, and yet not be able to so much as lift a finger to reach the coveted goal, to sit perfectly passive on an inert mass of steel and rubber, seeing its momentum growing gradually beautifully less and less, wishing, hoping, praying that its wheels may only revolve long enough to pass that ominous meaning chalk mark on the asphalt, still some distance ahead. The machine crawls slowly along, the rider a hunched-up lump doubled over the handlebars; a foot of the precious ground has been covered, and then another twelve inches, and still another; it seems wonderful how the slow-moving wheel remains upright, when suddenly there is a stop and the ride is finished.

The crowd cheers, the judges add another chalk mark to the many already there, only too often a record of blasted hopes, of wrecked aspirations; the rider eases his tensed nerves

feet apart, but the Frontenac was fourth and the first three only were eligible to compete in the final, it was a foregone conclusion that the spoils would go to the Victors. And they did, of course.

After the contest there was a row, a good-sized row at that. The Victor wheels were protested as being specially constructed for coasting, but after a session that lasted for over two and a half hours the matter was amicably settled, and the original results stood.

The hill on which the contest took place, though the best available in the immediate neighborhood, was scarcely suited for a contest of the sort. Half way down it necessitated the turning of an acutely angled corner, which was responsible for several nasty spills; from the corner down the grade was almost level for some hundred feet, then there was another slight dip, and the wheel which once reached this point, gained additional momentum and ran easily until stopped by a stretch of unpaved roadway, where the asphalt pavement ended. This, more than anything else, accounts for the great discrepancy between the distances made by the group of wheels

which were able to go over the little hump and those which failed to do so.

By the rules laid down, the first twelve men in the preliminary round were entitled to start in the second coast, and then the three furthest were to contest for premier honors. These were plucked by G. L. Potter, a local man; J. E. Whittlesy, of New York, second, and R. Thurwächter, another local man, third. Out of seventy-nine entries, fifty-seven started. To a student the table shows some curious figures. It was impossible to obtain the distances for the second round, or it might have been made even more interesting, but, as of old, the question of what makes a bicycle coast best is still unanswered.

EASILY ALTERED.

"Now," said the city editor, "it seems to me that this expression of yours about showing a clean pair of heels is not just the thing in a report of a bicycle race."

"All right," answered the lazy reporter. "Just stick in a 'w' and make it 'a clean pair of wheels' "

G. L. Potter.

J. E. Whittlesy.

R. Thurwächter

in a little laugh and the mob is cleared away to make room for the next competitor. Seventy-two times this scene was enacted, as seventy-two knickerbockered men strove to perpetuate their name by a downward career. This was in Syracuse on Saturday last, the occasion being "The Standard's" coasting contest. The free show attracted an immense crowd, which so packed the course that in many cases it seriously interfered with the contestants.

The fact that a special trophy, in the shape of a large silver cup, was to be awarded the makers of the winning wheel, added a touch of rivalry that narrowed the contest down to one between the manufacturers, and not only was Syracuse represented among the entries, but crack coasters from various sections journeyed to the "City of Salt" to throw down the gage of battle to the local champions.

The Victor clans came and conquered, carrying all before them. In the first round six Victors gained the first six places. Exactly why it is hard to say. Perhaps the rake of the fork helped, or possibly the two-inch tires were better at this game than the universally used inch and five-eighths; then again, no doubt, skill in coasting is a factor not to be overlooked. In the second round there was consternation in the Chicopee camp. De Rango, on a Frontenac, came within an ace of going over the longest mark yet made, but unfortunately the laws of nature were exercised too soon, and the wheel toppled over a loser by two feet. In this round the results were so close that the first six were but five

CABANNE A "HAS-BEEN."

St. Louis, Oct. 8.—"Dute" Cabanne's long retirement has been anything but beneficial to his speed ability. In the one-third mile match race to-day for a \$250 purse with William Coburn he was defeated by a wheel's length. Very nearly 5,000 people were present. Louis Gimm was paced by a quintet, a quad, a triplet and a tandem in the five-mile exhibition run. He went the distance in 11:58 2-5. Cabanne tackled Arthur Gardiner in the two-mile handicap, professional. Gardiner won easily, with Cabanne a close second. De Cardy was third. Time—5:03. Summaries:

One-third mile, match—1, W. Coburn; 2, Cabanne. Time—0:43 2-5.

Half-mile open, amateur—1, Peabody, Springfield, Ill.; 2, Hattersley; 3, Costello. Time—1:20.

One-mile open, professional—1, Arthur Gardiner; 2, W. De Cardy; 3, E. E. Anderson. Time—2:33.

One-mile match—1, W. Coburn; 2, Cabanne. Time—2:15.

AIR WAS TOO THIN FOR MONTE.

Denver, Col., Oct. 10.—Colorado's rarified atmosphere was too much for Monte Scott to-day, and he succumbed to the doughty Hackenberger in their 25-mile match race. The men started from opposite directions on a third of a mile track.

The Eastern man was beaten at the end of the sixth mile, when Hackenberger lapped him.

Scott made some wonderful spurts, but at the eleventh mile he was noticeably fatigued. Hackenberger finished in 1:10:4-5, a sixth of a mile ahead of Scott.

Scott's defeat was no great surprise to those in this part of the country. His forte has always been road racing, and with the aid of the Colorado air, the wonder is that the Western man did not beat him even more decisively. Five thousand people saw the race.

HURET AROUND THE CLOCK.

Paris, Oct. 12.—Huret completed a twenty-four hour ride to-day, lowering Rivierre's record by covering 545 miles and 409 yards.

HERE COMES THE GEAR CASE.

Indianapolis, Oct. 10.—H. D. Lauter, the prominent wood rim manufacturer of this city, is responsible for a new kink in gear cases which looks all over a takable and marketable novelty. While details are not yet authorized, it may be generally stated that the case is of wood—a thin and yet very strong wood—worked in either plain or fancy patterns. It is claimed to be so nearly dustproof as to practically be so, and has the advantage of extreme lightness, weighing just sixteen ounces.

AT SAINTONGE CENTURIES AGO.

In a book published in 1694 and entitled "Recreations Mathematiques et Physiques" it is related that a doctor named Elie Richard, living at Saintonge, in 1690 constructed a carriage which was driven from behind by a servant, "who worked it with two feet by means of two little wheels concealed in a box and attached to the axle."

ONE THING AT A TIME.

The Shelby Steel Tube Company deny the announcement that they intend handling bicycles and sundries at their Eastern agency, No. 144 Chambers street. They will carry a full line of cold drawn steel tubing, but nothing else.

The Town Council of Hanover have voted 9,300 marks "for the construction of a suitable place where cyclists can practice free."

ADDED TO THE BLISS LINE.

To their already extensive line of cycle-making machinery the E. W. Bliss Company, No. 25 Adams street, Brooklyn, N. Y., have just added that illustrated herewith, a press specially designed for cutting and shaping heavy cups and shells, such as crowns, hub collars and various styles of connections. The press is usually made with $4\frac{1}{2}$ inch stroke, has 6 inch back centre of slide, 8 inches from bed to slide when down with adjustment up, and 5x8 inches opening in bed. One of the novel features is the cam-actuated "knockout," which has a movement of $2\frac{1}{4}$ inches. The knockout is so arranged that it can be timed to suit any special case by adjusting the cam around the shaft. Another feature is the clutch mechanism, which, in addition to the Bliss automatic clutch on the main shaft, has a friction clutch on the back shaft, operated by a hand lever not seen, so that the operator can stop the slide at any point of the stroke. The counter shaft to run the press at 28 and 40 strokes per minute is furnished. Its weight is 6,725 pounds.

The Bliss Company is issuing a special catalogue of bicycle tools, describing many machines used in the manufacture of bicycles, which may be had by addressing them.

CHAIN WHEEL FOR POWER SAVING.

A new English invention, which professes to obviate a considerable waste of power on the part of wheelmen and to do away with the friction by the stretching of the wheel chain, has been patented. The invention, a chain wheel, is very neat looking and thoroughly mechanically arranged, and it is claimed that by its adoption a chain can be used no matter how badly worn in parts, giving, at the same time, easier running than would a new chain and wheel. The driving teeth are simultaneously adjusted according to the requirements of the chain, and thereby the perfect coincidence in the pitch is assured. The wheel seems perfect in all respects, and the chains have been thoroughly tested by experts, who pronounce them a great success.

DO UNTO OTHERS.

After all, the sovereign balm for all difficulties on the road would be a more genial and universal regard for the rights of others. There are foolish wheelmen, just as there are reckless drivers, and pedestrians with softening of the brain, but the majority of those who frequent the parks are persons who are really anxious to do all they can to make the use of the roads safe and pleasant for all users.

Now and then one runs across a new rich person out for a drive and so absorbed in the unaccustomed and luxurious sensations of a carriage ride that he forces the cyclist into the gutter, and calmly ignores everything on the road. But it isn't worth while getting excited over a little thing like that. Every one knows at first glance that he is not to the manor born, and then he may become accustomed to his new glory before long and quit being a nuisance.

And so, too, the young fellow one encounters in suburban jaunts, who takes his best girl out riding in a livery rig and goes dashing about like a polliwog on the surface of a millpond. It is rather difficult to keep out of his way, and sometimes in his effort to hold the horse and the girl at the same time considerable damage is done to innocent outsiders, but so long as there are girls, boys and livery rigs in existence, these exhibitions will occur in rural localities, and no amount of law-making would reduce the liability of accidents therefrom.

SAVED HIS BACON.

Looking into the future 600 years ago, Friar Bacon thus recorded what he say there: "We will be able to construct machines which will propel large ships with greater speed than a whole garrison of rowers, and which will need only one pilot to direct them; we will be able to propel carriages with incredible speed without the assistance of any animal; and we will be able to make machines which, by means of wings, will enable us to fly in the air like birds." Two out of three is the Friar's record to date, and the chance of his making it three straight are extremely favorable.

HERE IS A REAL GOOD THING.

Gold mines are not in it when compared with a bicycle checking stand at Coney Island. One of these from June 1 to September 1, checked 35,000 wheels at 10 cents each. Added to the \$3,500 thus taken in was a repair business, which produced an income of \$5,000 during the same short space of time. Some idea of the magnitude of the business may be gathered from the fact that there were 256 bicycle-checking establishments in full blast at Coney Island during the season just ended.

STOVER OFFICERS THE SAME.

The Stover Bicycle Company held its annual meeting on Monday last, and re-elected the old officers. D. C. Stover, president; J. F. S. Smith, secretary, and W. A. Hance, superintendent.

SAVED BY INSURANCE.

The loss to the F. F. Ide Manufacturing Company, of Peoria, by the fire reported last week is estimated at about \$40,000, with an insurance of \$110,000. The building was badly damaged, but will be rebuilt.

THE ATLANTIC CITY AND PLEASANTVILLE BICYCLE TRACK.

The fastest five-mile track in the world. Send for prospectus. T. W. WHITE, Secretary, 1210 Atlantic Avenue, Atlantic City, N. J.

HAPPENED IN A HANDCAR HANDICAP.

He came into the office in a diffident sort a way. Stray straws he shed from his garments, and millet seed ever and anon dropped from his unscissored locks. He had something on his mind, and the unusual burden bore heavily upon him. Taken in hand by the office boy, he was interviewed, with the result that he told the story of the red-hot race he and a friend of his had with a handcar. The office boy declares the facts as detailed to him were, in the language of the visitor, as follows:

"We were on our bicycles and the handcar was on the track. We started from where a red cow was enjoying a rub against a telegraph pole. The section crew were fresh, having been all day out of sight of the paycar, and they entered into the race with a spirit of earnestness.

"Going round a curve the handcar threw a shovel and two dinner pails. This did not delay matters in the least, and on we went. Where the track takes a pitch near the old school-house the handcar went a few rods on the ties, and the section boss bit his clay pipe in two and one of his men bit his lip, but they never missed a stroke, and went up on the rail again like an old handcar should.

"Then my friend took the pole; it was a telegraph pole; he stopped right there, and his bicycle blew out a cylinder head, coughed a few times, and breathed its last. I had the whole road for a short time, but met an ox team, and the driver was counting his wheat money and did not turn out. Here I lost considerable time looking for my bicycle, which was finally located in a cornfield, and the handcar was cutting the air a mile ahead."

There was more of it, so the office boy says, but the editor concluded this sample was sufficient, and let it go at that.

WHAT COLOR SHALL THEY BE?

Two aesthetic cycle authorities of Paris have declared against black stockings for use by the wheelwoman. M. Gabriel Provost and another critic, who disguises his identity under the pseudonyme of "Melanphobe," denounce the fashionable color as inelegant, intolerable, because it attenuates the leg. As soon as these high priests of art criticism had spoken, an enterprising paper sent forth interviewers to feel the public pulse on the subject of stockings.

M. Marcel Prevost, author of the "Demi-Verges," defends that popular article of attire. But he insists upon fineness of texture.

Mlle. Dupare has become eloquent in the defense of the black stocking, asking, with animation: "What would they have us wear when we ride, these gentlemen? Red?" The enterprising interviewer, however, has not as yet heard the views of Mme. Bernhard, and until this authority in all things feminine has spoken the controversy must rage.

NO MORE ROBBERY.

Heretofore when a wheelman, through his own or the fault of others, became separated from his wheel while under the jurisdiction of the Park Commissioners, he has found himself confronted with a demand for one dollar in payment of the care or storage of his wheel incurred by the Park authorities. It has at last dawned upon the Commissioners that this was both an extortion and an imposition, and henceforth no such charge will be made.

CRACKERJACKS.

The laurels that you fight to win,
And highly prize as such,
Will quickly fade if on them you
Attempt to rest too much.

HOME OF THE HERCULES.

Wallace Buell is the capable head of the Hercules Seamless Drawn Tube Company, located in Garwood, town of Westfield, New Jersey, seventeen miles from New York, on the Central Railroad of New Jersey. He has just declared himself. He says:

"Although the company's facilities would enable it to compete with the Swedish Bessemer steel, so largely used by other manufacturers (if it would use the same material), it is believed that there is a class of consumers who are looking for better and more reliable tubes, and will, therefore, appreciate the "Hercules" quality. The management of the company has had long experience in the manufacture of steel and in its manipulation by hot and cold processes; the superintendent and others having the manufacture of tubes immediately in charge have had long and continuous experience in the drawing of seamless steel tubes, therefore, the company is new to the business only in that it improves upon old methods and uses the finest steel ever applied to the purpose. The plant is now at work on contracts and orders already received, and the management offers the unengaged balance of its product for the season, with confidence that the demand will exceed the supply. The finest steel ever

ing pressure of about 1,200 pounds per square inch, so that the "high temper" steel, which has been adopted, can be reduced to accurate sizes without causing increased expense because of its great strength and resistance. The employment of gas for heating the steel, together with a special cooling process, removes all danger of crystallization, and produces the most uniform mechanical results. The finished product is subjected to the most critical examination before leaving the works to insure its quality, accuracy of size and smoothness of finish.

Anticipating an increased requirement, the works have been constructed so that extensions can be made to every department without interference with operations, and intervals have been left between the drawing machines to increase their number. Tubes four inches in diameter and smaller can be drawn with the present machines.

In New York City offices have been opened at No. 513 Postal Telegraph Building, No. 253 Broadway.

PERFECTLY STRAIGHT.

"That," he added as he succeeded in converting the customer to the superiority of the inner tube, "is inside information."

used for tubes has been selected, and no means will be neglected to make the Hercules brand the standard of excellence."

It is less than six months since THE WHEEL recorded the formation of the concern. It is much less since the company broke ground at Garwood, but already its extensive works are a familiar sight to the thousands of suburbanites who daily speed past the place on their way to and from the metropolis. The works are now in operation and the company is requesting the audience of the trade. It would seem to merit it.

The mill fronts the railroad for about 900 feet, the location being in close proximity to New York, where importations of steel are received. Coal is received directly from the mines at very economical rates, and freight rates on shipments of finished goods, from the works to all points, are the same as from New York City.

The buildings are a combination of brick, wood and iron, and are so compactly arranged that the floor space is used to the greatest advantage in handling material. The main building is about 275 feet long and 100 feet wide; adjoining this is the annealing-house, boiler-house and gas plant, all of which are brick and iron, and fitted with the most modern appliances. The boilers, engines, hydraulic pumps and machines for reducing the steel by hydraulic pressure are of the best type, developing a regular work-

MERE MEANINGLESS WORDS.

"Unthinking people use a great many expressions in speaking and writing which offend the critical ear," remarked Mr. Tetter. "Take the advice to put one's best foot foremost, which is often heard. In the first place, the superlative degree of the adjective conveys the idea to the grammarian that human beings have at least three feet, which is not true.

"Then consider what a queer sort of locomotion is suggested, if it could be called locomotion at all. The advice presupposes that one foot is better than the other, and says the better one must always be put forward. Now, will you kindly tell me how anybody is to ride a wheel, or even walk, with one foot continually in advance of the other? It cannot be done at all, which shows how thoughtless people are who give such advice."

GOING TO END THE WORLD.

The bicycle has by the pulpit been blamed for many things, but it remained for an English vicar, in a recent sermon, to put the heaviest of all burdens upon it, that of a world destroyer. He based this opinion upon the words of the prophet Daniel, when he said, "Many shall run to and fro." The modern imitator of Daniel declared that never had so much running to and fro been seen as that brought about by cycling, hence the end of all things was at hand.

TO THE TRADE

WE wish to make a short explanation relative to the page advertisement of the Hunt Mfg. Co. in the trade papers, inferring that we have not filed an application with the Court in a suit against Humber & Co., for using a saddle made by Hunt which infringes our patents. It would have been much more honorable and braver for the Hunt Mfg. Co. to have honestly stated the facts: That Bill of Complaint was filed in the U. S. Circuit Court for the Southern District of New York on August 13th, and subpoena placed in the hands of the marshal for service. This subpoena he was unable to serve because the only officer of Humber & Co. residing in this country went to Europe. The minute that any officer of the above firm sees fit to come back, papers will be served at once.

We have had three distinct and separate searches made; each upholds our patents, and we consider it our duty to prosecute anyone handling an article which infringes these rights. Should we lose the suit on technicalities (and we do not see how that is possible), it does not alter the fact that in the Hunt Saddle, as well as others now on the market, our ideas have been used. This everyone will acknowledge; and if it were merchandise that had been stolen from us, no dealer would buy it.

Yours truly,

MEESINGER BROS.

THE PAST AND THE FUTURE.

An Analysis of the Bicycle, Its Parts and Manufacture, By Two of Its Closest Students.

Forgetting those things which are behind and reaching forth unto those things which are before.—Philippians iii, 13.

Let us reason together. Less than three months hence the eyes of cycledom will open upon the National Cycle Show of '97. Are we about to revert once more to original types? Or are we to see a radical change—an entire revolution in designs and application of power? A careful review of the reading matter and illustrations of all the domestic and foreign trade journals fails to disclose anything new or startling. Yet this very apparent lack of novelty may be safely regarded as significant of something hidden beneath the surface and only waiting to be exploited at one of the great shows.

Incredible, indeed, would seem to be the statement that we have now reached a finality of construction in type and in methods of propulsion, and that we have now room for changes in the minor details of construction only. Now that all the world desires to be awheel the demand for something new should spur on the graceful designers, the clever draughtsmen and the skilled artificers of our trade to produce novelties to meet this demand, for, although it is probable that the interest in the sport will never wane, it is only by constant changes in design and construction that prices can be maintained.

Now that the modern bicycle has just completed its third cycle or decade of time, and when the history of our trade has shown that at the end of each decade there has been a revolution in design and methods of propulsion, it becomes pertinent for us to attempt to lift the curtain of the future and endeavor to see what is in store for us in a mechanical way for '97.

LOOKING BACKWARD.

Before looking forward let us take a look backward and survey the year of '96. Tenyson has said that "through the shadow of the globe we sweep into the younger day." Is the year 1897 to be our younger day? We think it is. A seeming paradox will present itself to us, inasmuch as while there will be a more general business prosperity, producing a greater demand for our product and also more riders, there will be fewer makers and dealers, resulting in a greater and better product and a more profitable year than 1896, with its shadow of general business depression and over-production in our line of manufacture, and it is evident that both the making and selling and retailing of bicycles will be done on the original plans as laid down by the pioneer makers and dealers of the trade.

It has been, indeed, an excellent lesson, and many men have learned the truth of this epigram, that you cannot go into the manufacture of bicycles with a nipple and come out of it with a whole bicycle. And it might be further said that even when great capital enters into the trade, unbacked by years of experience in the making and selling departments, it has a hard road to hoe before it can gain a reputation for its product and a dividend for the investment. Simply because the wise retail buyer and rider is apt to inquire and say, as Pharaoh said to Jacob, "How old art thou?" Notwithstanding this, some of our younger makers have shown to the older concerns advanced ideas in construction and finish and perfection of detail.

NEW TYPE POSSIBILITIES.

Looking at the bicycle as a whole, it is evident that a really new type is impossible; like a new form of triangle, it cannot be discovered, for it does not exist. The "G. O. O.,"

or Good Old Ordinary, by which name the majority of present riders will hardly recognize the "high" or big machine of the '70's, may safely have the garret door shut upon it; there are, however, two dwarf machines other than the present rear-driver which cannot so safely be pronounced done with. These are the "G. O.," or Geared Ordinary, which, in position of rider, with respect to both driving and steering, is the big one reduced in size, and the Geared Facile, which in general outline is the G. O. with a different gear and driven by levers. The Facile, in all forms, has been several years gone; the G. O. is still made. Neither the G. F. nor the G. O. has had a fair and thorough trial, and, although this looks at present improbable, it is not impossible that one or both may yet come up anew.

In cycle show nomenclature, a "freak" has been defined as something new and radical in design which was shown, but which had yet to win its place. We regret to note that none of the freaks shown at the cycle shows of '96 have won their ground as yet.

"THINGS ARE SELDOM WHAT THEY SEEM."

This is not the famous two-headed museum freak, but the Whizzer Sisters on a tandem.

In frames the pattern known the world over as the "Humber Diamond" seems to be the recognized type, the variations in it consisting only in diameter of tubing used, varying from 1 1/4 to 1 1/2 inches, and length of wheel base. It is, however, to be noted that the greatest diversity of shapes exists in frames made for ladies' bicycles. The Western makers use straight tubes as a rule, varying this sometimes by curving the upper main tube of the frame. The Western makers are inclined also to carry the crank hangers on ladies' wheels very high from the ground, using 6 1/2-inch cranks, and placing very high gears upon them. Ladies' bicycles of this type have been slow of sale in the East, for the following reasons: They are difficult to mount; the long cranks produce a disagreeable knee-action and lifting of the skirt at every stroke, the centre of gravity is carried too high, and the rider is also perched

too high in the air. The majority of our Eastern makers are inclined toward the double drop-frame, and even those who build a drop-frame with straight tubes carry the crank hangers not higher than ten or twelve inches from the ground, using cranks either 5 1/2 inches or 6 inches in length, and equip them with 56 to 63-inch gears. Eastern makers also provide the ladies' bicycles they build with wooden dress and chain guards, which are very elaborately trimmed with lacing, and also furnish them with upturned handle-bars and brakes.

The mudguard on front wheel, seemingly a fixed detail in England, appears to have quite gone out here.

THE SEAT OF DIFFICULTY.

In saddles—a vital part of the construction—the hard leather forms, moulded "hard" and made harder by many rivets on the nose, seem to have had their day; in their place the hammock idea of some years ago is coming back, the prevailing type now seeming to be that of the Mesinger and the Hunt Hygienic X, the leather cover being quite free from cantle to point. The pneumatic, which is far earlier than the air tire, has some difficulties in practice, and does not appear to be getting a hold yet.

In tires, the hosepipe seems to be steadily gaining ground, with the cemented-on inner-tube of the Morgan & Wright type second, and the detachable or mechanically fastened inner tube far away in the rear. As to size, although it has been said during the year that the Morgan & Wright men were generally using 2-inch, there has been difficulty in procuring even 1 3/4, and the present 1 1/2 seems likely to stay, at least for '97.

Perhaps the first question, unless by a novice, who is always with us, being the poor (in knowledge of the subject), will hereafter be much less, What does it weigh? The light-weight fad seems to have been somewhat pushed back, together with its twin brother, the narrow-tread fad. Neither will be any more the crucial question for determining grade. Weight seems to have settled to a recognized average of 23 to 25 pounds for road wheels, and treads to from 5 to 6 1/4 inches.

DEMAND FOR TRICYCLES.

During 1896 numerous inquiries for tricycles have been reported to the makers by leading retailers. In England the three-wheeler has been many years in vogue, and its one-track brother does not put it out. There will always be a very considerable number of persons from whose minds no argument or observation can persuade away the objection of danger and difficulty in the "balance" of the bicycle, and such persons will not become customers until their ideas are met. A really first-class tricycle, weighing not over thirty to thirty-five pounds, and capable of easily passing through a single doorway of average width, ought to be a seller, for it would answer an already existing demand, and create a further one. Now that competition is so sharp, we suggest that if three or four of the smaller makers would shape their plants to the production of such a machine they would do a good thing for themselves and for the trade generally. The concern which first starts to break the way in this particular direction will have the obvious advantage of priority.

PEDALS AND ENAMELS.

In pedals, as elsewhere, the return to old types appears. Balls of 3-16 diameter are replacing the miserable little 1/4—a sort of bird shot made in steel, instead of lead—and the entire pedal is wider, longer and stronger. Stampings of sheet steel, joined together by screws, or even by welding, are properly giving way to the forging of barrel and cross-arms in one piece, which is clearly the correct construction.

Fancy enamels appear to be in vogue again, many makers using not only the plain black, but garnet, ruby, light brown, Quaker gray, etc.; the Humber people have made a notable departure in clothing their rims and wheelguards a beautiful royal purple. These showy hues are, of course, objected to by many, but they will have their "go," even if they do not stay; yet a red frame can no longer be pronounced a Syracuse at sight, nor is a green surely the Nile green of the Sterling. It could not long be possible for a maker, even he who first started the fashion of color, to keep his product distinguishable by such a mark.

BRAKES AND D TUBES.

The brake is the Banquo's ghost of the bicycle table, and it will not down. Nearly all the leading makers are fitting some style of hand lever, with or without a concealed plunger; there is also the entirely "out-of-sight" brake, which is being pushed somewhat and will undoubtedly meet a large demand next year. Enough care in riding—for instance, in never starting down a hill which cannot be seen at the top all the way to the bottom, and is not seen to be within the degree of slope known by the rider to be in his sure control, as well as in not rushing over crossings in cities—would render a brake needless; but here is the powerful "H." Riders will not be thus self-restraining, and hence the brake must come; it waits only for the right one.

Judging from the call upon the tube-makers for it, D-shaped tubing will be very largely used in '97 for rear forks and backstays. The use of this shape for those parts of the frame is much in favor of symmetry, lessening or removing the need for different sizes in different parts.

Many leading makers have abandoned the cone adjustment for the crank shaft, using the cup adjustment there instead. This is a step in the right direction, and it might desirably be extended to the hubs of both wheels, as it produces a bearing firmer and more accurately adjustable, as well as better freedom from intrusion of dust. The "dust-proof" bearing is still not more perfectly proof than ever, and for that very ideal quality reliance must be put on accurate fitting rather than on such helps as felt washers and packings.

CRANKS AND COTTERS.

A determined effort, we regret to note, has been made to do away with the good, old-fashioned cotter-pin and place on the market continuous or semi-continuous cranks and axles. There are also in vogue a number of other methods of crank fastening by cone or heart-shaped ends on the axle, gripped usually by a split crank end; but a well-fitted key and keyway is better than all. (Here Mr. Wilcox is obliged to file a dissenting opinion. While not favoring the axle and both cranks in a single piece, he is not quite ready yet, balancing advantages and disadvantages, to give up the promised desideratum of very easy access to the interior of the crank bracket.)

The demand for tandems is increasing wonderfully, and promises to continue doing so. The tandem, if we may indulge in such a semi-bull, has a great future, which is both already here and is yet to come.
