1. RABIES CASE

Registered female dog, age-2 years, color-white with black spots, date of infection-19th May, 2 persons bitten, killed on 22nd May, date of autopsy-23rd May, date of confirmation-4th June.

1. Source of infection is unknown
2. This dog had suddenly been attacked by the rabies symptom and lost her appetite on 19th May 1949, and loitering around without any intention, however there had been no bit made by this dog. And same symptom continued till 22nd May, while the dog bit two occupants of the house despite the fact that the dog was tied. So the dog was killed by the occupant and carcass was sent to Lab. for autopsy.
3. Autopsy:

4. Confirmation: Negre Body (positive)
5. Disposal and Disinfection:
Two victims are now being treated at the Negro Infectious Lab.
Carcass was thoroughly disinfected and turned over to the work house/

2. RABIES CASE

Stray dog, male, age-2 years, color light gray, date of infection-19th May, persons bitten-6, killed on 19th May, autopsied on 21st May, confirmed on 4th June.

1. Source of infection is unknown.
- 2; Symptom was too violent and running around the road. The passengers were bitten one to another, so one of the passengers killed the dog with a stick. The carcass was autopsied by Dr. Akimoto, stationed at Minami-tama-H.C. and final autopsy was made at the Central Laboratory with the brain which was sent by Dr. Akimoto.
3. Autopsy:

4. Negre Body (Positive)
5. DISINFECTION and DISPOSAL
The carcass was buried in the field nearby after thorough disinfection. The victims are now being treated at Negro Infectious Lab.

3. RABIES CASE

Registered male dog, age-3 years, color-dark brown, one person bitten, date of infection-20th May, killed on 20th May, autopsied on 21st May, confirmed on 4th June.

1. Source of infection is unknown
2. From the early morning of 18th May, she continued to bark heavily; and bit the eldest son of the owner while he was watching her. The dog conducted herself very violently and strangely during whole day of 19th. Poisoned her at 1500 hours on 20th May.
3. Autopsy

4. Positive by Negre Body

5. Disposal and disinfection made.

The carcass was thoroughly disinfected and turned to the work house.

The victim is being treated now, and no symptom is occurred.

4. RABIES CASE

Non-registered dog, female, age-2 years old, color-white with brown spots, date of infection-17th May, one person bitten, killed on 19th May, autopsied on 20th May, confirmed on 4th June.

1. The dog is believed that she was bitten by rabies dog, judging from the area where rabies is very prevalent.

2. The dog didn't stay at the owner's place in the night of 16th, and when she returned in the early morning of the following day, there had been no symptom appeared, but at approximately 1500 hours of the same day, deportation of dog and appearance were changed into rabies symptom. She really made a mad attitude from 19th, in the morning. As she bit a person, the owner poisoned the dog and sent the carcass to the Tokyo Central Lab.

3. Autopsy:

4. Positive by Negre Body

5. Disposal and Disinfection:

The carcass was sent to the work house after complete disinfection, and the victim is being treated now.

5. RABIES CASE

Non-registered dog, female, age-2 years, white with brown spots, date of infection-17th May 1949, victim-one person, killed on 19th May, autopsied on 20th May, confirmed on 4th June,

1. This dog is suspected that she might have been bitten by some other rabies dog, because the area is very prevalent for rabies.

2. This dog didn't come back to the house in the night of 16th May, and when she returned in the 17th morning, she was in ordinary condition. On the following day, she became to bite everything by fits, and showed a remarkable symptom of rabies, and it was very dangerous, despite of the fact that the dog was tied, so the owner poisoned the dog, and sent the carcass to the Central Lab.

3. Autopsy findings: Pachymeninx was congested, and brain was remarkably congested.

4. Positive by Negre Body.

5. The carcass was disinfected strictly and turned it over to the work house, and victim is now being treated, and no symptom on the victim yet.

狂犬病發生報告

畜主住所氏名 荒川区尾久町292300. 増淵 惣藏

畜種 性 畜犬 牝

年令 毛色 2才 白黒

發病 年月日 昭和. 24. 5. 19.

被害者数 2名.

斃(殺)死年月日 昭和. 24. 5. 22. (殺.)

剖検年月日 " 24. 5. 23

決定年月日 " 24. 6. 4
