THE English text was printed from a manuscript copied from Hakluyt's version published in 1601.

We learn from his " Epistle Dedicatorie," that " it was first done into our language by some honest and well affected marchant of our nation."

Hakluyt was not the man to be contented with a translation if better materials could be obtained, and he appears to have made diligent inquiry after the original, but without success.

More fortunate than he, the Hakluyt Society has been able to obtain sight of a copy of the original, published in 1563,¹ and believed to be unique. This valuable work is the property of an American gentleman, Mr. John Carter Brown, of Providence, Rhode Island, who kindly permitted Mr. R. H. Major, of the British Museum, to have it copied; from this copy

¹ The *Biographie Universelle* speaks of an edition in 12mo. printed in 1555.

the Portuguese text has been printed. The *Nouvelle Biographie Générale* calls this work "rarissime," but speaks of two copies, one in the National Library at Lisbon, the other in the Library of D. Francesco da Mello Manuel.

On comparing Hakluyt's version with the original, some omissions and additions have been noticed. It is not possible at this date to trace the causes of the former, probably they arose from inadvertence in the translator; they have been supplied within brackets: the latter are due to Hakluyt, who, failing to obtain the original work, supplied what he thought necessary from the "original histories," and to him also are probably due the marginal references.

Antonio Galvano was born at Lisbon in 1503. He embarked for India in 1527, where he soon distinguished himself.

He was selected by the Viceroy Don Nunho da Cunha, to reduce and govern the Moluccas. After a time he succeeded, as much by valour as by judicious conduct, in bringing these islands under Portuguese sway; and by exercising strict justice and kind dealing towards the natives, both rare in those days, he earned the title of the "father of the country."

But his deeds were not limited to earthly conquest. Galvano, so intrepid at the head of his troops,

might also be seen, with a crucifix in his hand, preaching the Gospel publicly, whereby he became known as the “Apostle” of the Moluccas.

Having spent many years and much treasure in benefiting the people committed to his charge, he was recalled to Europe. But calumny and envy appear to have been at work, and he was coldly received by his sovereign, John III. Finally, he was reduced to such a state of indigence, that he was fain to find refuge in the Royal Hospital at Lisbon, where he died in 1557.

Galvano was a man of rare talent, well versed in religious and secular knowledge, and also well instructed in warlike arts, both military and naval. Faria y Sousa sums up his high qualities in these words:—¹

“His fame will never perish so long as the world endures; for neither weak kings, nor wicked ministers, nor blind fortune, nor ages of ignorance, can damage a reputation so justly merited.”

He spent the latter part of his life in compiling an account of all known voyages, and thus he may be styled the founder of historical geography. His papers were left at his death to his friend Don F. y Sousa Tavares, who published them.

¹ *Asia Portuguesa.*

This short sketch of an illustrious and hardly used man is taken from the *Biographie Universelle Ancienne et Moderne*, 1816, and *Nouvelle Biographie Générale*, 1857.

The editor's labours have been confined to superintending the press, and he has been careful to retain the quaint language and spelling both in the original and translation. Perhaps an apology is due for his having undertaken this work, possessing only a slight and superficial knowledge of the Portuguese language. If excuse be necessary, he has to plead that the work was considered to possess great interest, and that no one else seemed inclined to undertake the labour. He has been relieved from some responsibility by the kindness of his Excellency the Count de Lavradio and the gentlemen of the Portuguese legation; but his special thanks are due to M. le Chevalier dos Santos, who kindly undertook to go over the proofs, and who thereby enabled him to supply many deficiencies and avoid many errors.

THE DISCOVERIES

OF THE

WORLD,

FROM THEIR FIRST ORIGINAL VNTO THE YEERE OF
OUR LORD 1555;

Briefly written in the Portugall tongue, by *Antonic
Galvano*, Gouvernor of Ternate, the chiefe
Island of the Malucos :

Corrected, quoted, and now published in English, by RICHARD HAKLUYT,
some time student of Chriftchurch, in Oxford.

LONDINI:

IMPENSIS G. BISHOP.

1601.

THE EPISTLE DEDICATORIE.

To the Right Honorable Sir Robert Cecill,
Knight, principall Secretarie to her Maiestie,
Master of the Court of Wards and Liveries,
the worthy Chancellour of the Universitie
of Cambridge, and one of her Majes-
ties most honorable privie
Counsell.

RIGHT Honorable, while I went about to publish
our English Voyages and Discoveries, I was
advised by master Walter Cope, a gentleman of rare
and excellent parts, to draw them into a short sum,
adding that in his opinion that course woulde proove
most acceptable to the world, especially to men of great
action and employment. Although in that worke then
under the presse I could not conveniently alter my
course, yet holding his advice, as in many things else,
so in this, for sound and very good, I heere present
unto your Honour a briefe Treatie most agreeable to
the same. The authour whereof was one Antonie
Galvano, a Portugall gentleman : of whose pietie to-
wards God, equitie towards men, fidelity to his Prince,
love to his countrey, skill in sea causes, experience in
histories, liberalitie towards his nation, vigilance,

valour, wisdom and diligence in restoring and settling the decayed state of the Isles of Maluco, (where he remained sixe or seven yeeres governour,) if it please your Honour to read Fernando Lopez de Castagneda, or Ioannes Maffei in their Histories of the East Indies, you shall finde more written in his singular commendation, then a large Epistle can well comprehend.

The worke though small in bulke containeth so much rare and profitable matter, as I know not where to seeke the like, within so narrow and streite a compasse. For heerein is orderly declared, who were the first discoverours of the world since the time of the flood : by what waies from age to age the spicerie, drugs, and riches of the East were conveyed into the West : what were the causes of the alterations of those courses, as namely the changes of empires and government : the ceasing of all trafficke for many yeeres by the Gothes invasion of the Romane Empire : the rising up of the Mahumetane sect ; with their overrunning of Africke and Spaine : the renewing againe, after many yeeres disturbance, of the traffic and entercourse of the East Indies ; first by the califas of the aforesaid sect : and eftsoones by the Venetians, Ienowais and Florentines. Then followeth the taking of Ceuta in Barbarie by John the first king of Portugall of that name, in the yeere of our Lord 1415, whose third sonne Don Henry (which he had by the vertuous Ladie Philippa, daughter of John of Gante, and sister to Henry the fourth, King of England) was the first beginner of all the Portugall

discoveries, and continued the same for the space of fortie and three yeeres even to his dying day. By whose encouragement the Kings of Portugall found out with much patience and constancie the last way of the bringing the Spicerie into Europe by the Cape of Buona Sperança ; and for these hundred yeeres past have become the chiefe Lords of the riches of the Orient. By emulation of which their good endeavors, the Antiles and the West Indies began to be discovered by the kings of Spaine. The infancies of both which most important enterprises, the progresse of the same from time to time, the discoveries of islands, rivers, baies and harbours, of many rich provinces, kingdomes, and countries ; the erecting of castles in sundry convenient islands and places, with the drawing of trafficke unto the same, where, when, by whom, and by whose authority is heere succinctly and faithfully recorded. So that if it please your Honour at your convenient leisure to take a sea card or a mappe of the world, and carie your eie upon the coast of Africa from Cape de Non, lying on the mayne in 29 degrees of northerly latitude, and follow the shore about the Cape of Buona Sperança till you come to the mouth of the Redde Sea, and passing thence along by the countrey of Arabia crosse over to India, and doubling Cape Comory compasse the gulfes of Bengala, and shooting by the citie of Malacca through the Streite of Cincapura, coast al the south of Asia to the northeast part of China, and comprehend in this view all the islands from the Açores and Madera in the West, to the Malucos, the Phillip-

pinas, and Japan in the East : you shall heere finde by order, who were the first discoverours, conquerours and planters in every place : as also the natures and commodities of the soyles, together with the forces, qualities, and conditions of the inhabitants. And that which I mention of the Orient, is likewise to be understood of the Occident.

Now touching the translation, it may please you, sir, to be advertised that it was first done into our language by some honest and well affected marchant of our nation, whose name by no meanes I could attaine unto, and that as it seemeth many yeeres ago. For it hath lien by me above these twelve yeeres. In all which space though I have made much inquirie, and sent to Lisbon, where it seemeth it was printed, yet to this day I could never obtaine the originall copie ; whereby I might reforme the manifold errors of the translator.

For whereas a good translator ought to be well acquainted with the proprietie of the tongue out of which and of that into which he translateth, and thirdly with the subject or matter it selfe : I found this translator very defective in all three ; especially in the last. For the supplying of whose defects I had none other remedie, but to have recourse unto the originall histories, (which as it appeereth are very many, and many of them exceeding rare and hard to come by) out of which the authour himselfe drew the greatest part of this discourse. And in very deede it cost me more travaile to search out the grounds thereof, and to annexe the marginall quotations unto the work, then the translation

of many such bookes would have put me unto. Of which quotations there is yet a farther use, to wit, that such as have leasure sufficient, and are desirous to reade these things more at large, (for brevitie oftentimes breedeth obscuritie) may fully satisfie their desires by having recourse by the help thereof to the pure fountaines, out of which those waters which are drawne are for the most part most sweet and holsome. Now if any man shall marvel, that in these Discoveries of the World for the space almost of fower thousand yeeres here set downe, our nation is scarce fower times mentioned: hee is to understand, that when this author ended this discourse, (which was about the yeere of Grace 1555) there was little extant of our mens travailes. And for ought I can see, there had no great matter yet come to light, if myselfe had not undertaken that heavie burden, being never therein entertained to any purpose, until I had recourse unto yourselfe, by whose speciall favour and bountiful patronage I have been often much encouraged, and as it were revived. Which travailes of our men, because as yet they be not come to ripenes, and have been made for the most part to places first discovered by others, when they shall come to more perfection, and become more profitable to the adventurers, will then be more fit to be reduced into briefe epitomes, by my selfe or some other endued with an honest zeale of the honour of our country. In the meane season nothing doubting of your favourable acceptation of this my labour, I humbly beseech the author of all goodnes to replenish and en-

rich you with his best blessings, long to protect and preserve your Honour to the profitable service of her Majestie, and to the common benefit and good of the Realme.

From London this
29. of October
1601.

Your Honors Chapleyn, in all dutie
most readie to be commanded,

RICHARD HAKLUYT.

FRANCIS DE SOUSA TAUARES VNTO THE
HIGH AND MIGHTIE PRINCE DON
JOHN DUKE OF AUEIRO.

ANTONIE GALUANO vpon his death bed left vnto me in his testament among his papers this booke. And because I am certaine he ordained it to bee presented vnto your Grace, I have thought good herein to fulfill his wil and testament, though in other things I have done nothing, the fault remaining not in me. And by all reason this treatie ought to be set foorth by a Portugall, seeing it intreateth of the variable waies from whence the pepper and spices came in

PROLOGO.

FRANCISCO DE SOUSA TAUAREZ, AO ILLUSTRISSIMO
SENHOR DOM JOHÃO DALEM CASTRO,
DUQUE DAUEYRO.

DEXANDO me Antonio Galuão que deos tem por seu testamenteiro, acheý entre outros seus papeis este quaderno: & porque sou certo q' elle o ordenou pera o apresentar a vossa illustrissima senhoria, quis ao menos nisto somente cumprir sua vontade, pois em seu testamento nam tenho comprido nenhũa cousa, nam por minha culpa. Com razam auia este tractado de ser de pessoa Portuguesa, pois he da materia dos caminhos desuairados, por onde a pimenta & especcaria veyo nos tempos passados ás nossa

times past into our partes, and also of all the navigations and discoureries in the old time. In both of which things the Portugals have most trauailed. In this treatie and in nine or ten bookes of things touching Maluco and India (which the Cardinall willed me to give to Damian de Goes, saying that he should content me, for otherwise I could not deliuer them) this true Portugall occupied himselfe against the vnfortunate and sorrowfull times which he had been in (which were all ended before all our daies and times): for when he received the captainship and fortresses of Maluco, all the kings and gouernours of all the ilands about being agreed to make war against the Portugals, vntill such time as they might drive them all out of the country, he fought against them all with onely 130 Portugals, when they were all together, and strong in Tidore; and he gave them the ouerthrow and killed their king, and one Ternate,¹ the principal author of that war, and he tooke from them their fortress: so upon this victorie they submitted themselves,

Antonio Galuano captaine of Maluco.

partes: & assi de todas as nauegações & descobrimentos antigos & modernos: ambas estas duas cousas os Portugueses tem feito muita auantajem ao passados. Em este tractado com noue ou dez liuros das cousas de Maluco & da India, que me o Cardeal mandou dar a Damiam de Goes, dizendo que mo² satisfaria (que doutra maneyra eu nam lhos podia dar), se ocupou este verdadeiro Portugues contra os infortunados & tristes tempos em que se via (como tudo passou ãte nossos olhos & tempo), porque entregandolhe a capitania & fortaleza de Maluco cõ todos os Reys & senhores de todas as ylhas juntos, & conformes a fazer a guerra aos Portugueses ate os deitar de todo fora da terra, pelejou com todos elles com soo cento & trinta Portugueses estando todos juntos & fortes em Tidore, & os desbaratou & matou a el rey, & do Ternate p̄ncipal autor da guerra, & lhes tomou a fortaleza: com a qual vitoria logo se renderam & vieram á obediencia & seruiço del rey nosso señor.

and came under the obeisance and service of our King of Portugall. Herein two things happened of great admiration. The first, that all the kings and governours of Maluco agreed together against vs, a thing that never fell out, nor yet credible to be like to happen: for they are ever at variance among themselves. The seconde, that the Cap-
 taine of Maluco with onely his ordinarie soldiers should have the victorie against so many being all together. For sometimes it happeneth that some of the captaines of Maluco with many extraordinarie soldiers besides their ordinarie, yea and with the aide of all the kings and lords of Maluco in their favour and aide, went againste one king onely of them, and came backe againe with losse. So there may be reckoned three notable things done in India, I say of qualitie (but of more quantitie and importance there have been others); which were the taking of Muar by Emmanuel Falcon, and the winning of Bitam by Peter Mascarenas, and this, whereof we presently treat. For all these three dedes seemed to be impossible to be atchieved, considering the small quantitie of soldiers which the captaines had in giving

Variance usually among the kings of Maluco.

Duas cousas socederam aqui de grande admiraçam: a primeira serem todos os Reys & senhores de Maluco juntos & conformes contra nos (cousa q' nunca acõteceo nẽ se cree q' possa acõtecer por quã diferentes sempre sam antre si). A segunda o capitam de Maluco com soo a gente ordinaria, auer victoria de todos elles jũtos, que per vezes aconteceo que algũs capitães de Maluco com muita gente extraordinaria, alem da sua ordinaria, & com todos os reis & senhores de Maluco em seu fauor & ajuda, foram sobre hum soo rey delles, & vieram de là cõ muita quebra. Que se pode dizer, q' tres feitos grandes se fizeram na India, digo em calidade (q' de mais importancia & de mayor quantidade ouue outros) os quas sam a tomada de Muar por Manoel falcão, a de Bitam por Pedro mascarenhas, & este de que tratamos, porq' todos estes tres feitos pareciã impossuiel auerẽ os capitães vic-

the enterprise against so many; with the order and maner by them ordained how and which waies to obtaine their purpose as well by their enimies as by themselves. And they could not be atchieved otherwise but by using a meane and order not thought of at the first by the Portugals, nor yet ever suspected by their enimies. And, besides this, his father and fower of his brethren were all slaine in the king's seruice. And he now being the last of his linage, caried with him into Maluco woorth ten thousand crusadoes [which by share of commercial speculations, and loans, and salaries paid to him, was all gained at Diu¹], which he spent not in idleness, nor yet in play, but only in bringing of many kings and innumerable townes unto our holy faith, and in the preserving of Maluco, employing all his power and strength that all the cloues might come vnto the hands of the kings highnes, which with Maluco yielded unto him every yeere five hundred thousand crusadoes; being all

torias com a gente com que os cometeram: & com a ordem ou modo que todos cuidauam, por onde a cousa se auia de cometer, assi dos amigos como dos ynmigos: & nam se acabaram por outra nenhũa cousa, se nam porque os capitães os cometeram por lugar & ordem, que nem dos Portugueses, nem dos mesmos immigos foy nunca cuidado nem pensado. E alem disto sendo seu pay & quatro yrmãos seus todos mortos em seruiço del rey: & sendo elle ja o derradeiro de sua linagem, & leuando cõsigo fazenda a Maluco que valia dez mil cruzados, de contratos q' com partes fez, & emprestemos & ordenados, que lhe pagarão, tudo empregou em Dio: & os gastou, nam em jogos, nẽ em outros maos modos, se nam soo em trazer muitos reys & innumeraueis peuos² á nossa sancta fee como em seu tempo fez, & na guerra, & em co'seruar Maluco, & em trabalhar & poer³ todas suas forças, pera que todo o crauo viesse á mão de S. to his great preiudice, let, and hinderance. For if he had gathered cloues for himselfe, as the captaines of Maluco haue done and doe, then he had come home very rich. But when he came home into Portugall in great hope (such is the simplicitie of the best natures) to be rewarded for his good service, and to be more fauored and honored, then if he had brought home with him an hundred thousand crusadoes, he was greatly deceived. For he found neither favour, nor yet honor, but onely among the poor and miserable, to wit, in an hospitall, where he was kept seventeene yeeres vntill the hower of his death; and there he had allowed vnto him his winding sheete to burie him in; and the brotherhood of the convent prepared for his buriall as for a poore courtier cast off by all men, leaving himselfe indebted in two thousand crusadoes, whereof part came out of India, and part thereof many of his friends had lent him to maintaine him in the hospitall; for in all these seventeene yeeres he had not of his highnes for to helpe himselfe with so much as one riall of plate, nor yet I of the bookes which I deliuered received any thing to discharge his will with

So that euen as he was extreme painfull in the performance of his service, so he was the like in the things sounding vnto the perfecting of the same,⁵ (which was the cause that he was brought vnto the state that he died in). For he could not see the qualitie of the time, but onely those of his great seruice, by reason of the great charges that it stood him in. In which of all these he had most contentation it cannot easily be determined. Wherefore your noble Grace may see, that this treatie and the others were made with sighes and afflictions which his inferiour will might have raised vp in him against his superiour reason. Neither was he willing to take for his remedie that which that great Turke *Zelim* sonne to the great *Mahumet* did, for he tooke Constantinople and died in Rome, who vsed to make himselfe drunke, because he would not remember the great estate which he lost: nor yet woulde he give eare vnto those things which many of his friends would tell him, wishing he would settle his mind out of the kingdome (for otherwise he should neuer be able to live): whereunto he answered, that in this point he would rather be compared vnto the great *Timocles* the Athenian, then to be like the excellent Romane *Coriolanus*. WHILE I had a desire to gather together some olde and some new discoueries, which haue beene made by sea and by land, with their iust times and situations ; they seemed to be two things of so great difficultie, that being cōfused in the authors of them, I determined once to desist frō any such purpose. For touching the course of time the Hebrewes declare, that from the beginning of the world to the flood were 1656 yeeres. The Seuentie Interpreters make mention of 2242. And S. Augustine reckoneth 2262. In the situations likewise there be many differences. For

Some there be that say, that the world hath fully beene discovered; and they alleage this reason, that as it hath beene peopled and inhabited, so it might be frequented and navigable, and the rather for that the men in that age were of a longer life, and of lawes and languages almost one.

There be others of a contrarie opinion to this, holding that all the earth could not be knowne, nor the people conuersant one with another. For though it had been so once, yet the same would haue beene lost again by the malice of men, and the want of justice among the inhabitants of the earth. But bicause the best and most famous discoveries were made by sea, and that principally in our times, I desire³ to

Who were the first discoverers since the flood.

Some affirme that they were the Greekes, others say the Phœnicians, others also the Egyptians. The people of India agree not hereunto; affirming that they were the first that sailed by sea: namely, the *Tabencos, which now we call the Chinois. And they alleage for the prooffe of this, that they be y^e lords of the Indiaes, even vnto the Cape of Bona Sperança, and the Island of S. Laurence, which is inhabited by them and al along the sea; as also the Jauaes, Timores, Celebes, Macafares, Malucos, Borneos, Mindanaos, Luçones, Lequeos, Japones, and other islands, being many in number, and the firme lands of Cauchin-China, Laos [Siamis], Bramas, Pegu, Arracones, till you come vnto Bengala: and besides this, New Spaine, Peru, Brasil, the Antiles, with the rest adioining vnto them, as appeareth by the fashions and maners of the men and women, and by their proportions, hauing small eies, flat noses, with other proportions to be seene. And to this day many of these ilands and countreies are called by the names of Batochina, Bocho-China,

which is as much to say, as the countreies of China. Further it appeareth by histories, that the arke of Noe rested upon the north parts of the mountaines of Armenia, which stands in 40 degrees and upwards: and that immediately thereupon Scythia was first peopled, for that it is an high land and appeared first after the flood. And seeing the prouince and countrey of the Tabencos is one of the chiefest of all Tartarie, as they report, it is to be thought¹ that they were of the most ancient inhabitants, and men of the most ancient nauigations² [since in them that country terminates on the east], and the seas being as calme as the riuers be in those parts [by cause of] lying between the Tropicks, where the daies and nights do not much differ, as well in the howers as in y^e temperature: where there blow no outrageous windes, to cause the waters to rise or be troubled. An high bough instead of mast and saile.

It is further said, that the people of China were sometimes lords of the most part of Scythia, and sailed ordinarily along that coast, which seemeth to reach vnto 70 degrees toward the north. Cornelius Nepos is the author of this, who particularly affirmeth, that in the time that Metellus, the fellowe consul of Afranius, was proconsul in France, the king of Sueuia sent vnto him certaine Indians, which came thither in a ship² from this countrey, comming by the north and by the flats of Germanie. And it is probable that they were people of China, for that they from 20, 30, and 40 degrees vpwards haue strong ships and clynchers,³ that can well brooke the seas, and indure the cold and intemperature of such northerly regions. As for Cambaia there is ship-

As for those which escaped the destruction of the flood, they were therewith so amazed, that they durst not descend into the plaines and lowe countreies, but kept the hills. And we reade of Nimrode, who 130 yeeres after the flood built the Tower of Babell, intending thereby to saue himselfe if there should come any more such floods.

Justinus, lib. i.

Therefore it seemeth, that they which first came to be sailers were those which dwell in the east in² the prouince of China : although others contrariwise hold them which dwell in³ the west, as in Syria, to haue vsed the trade of the sea soonest after the flood. But this contention about the antiquitie of nauigation I leaue to the Scythians and Egyptians, who were at great variance and difference in this matter ; for each of them chalenged vnto themselues the honour of the first sea trauaile. thereabouts, I will apply myselfe to my purposed discourse, and speake of that which histories haue left in record.

There be some wel seene in antiquities, which say that in the 143. yeere after the flood, Tubal came by sea into Spaine, whereby it seemeth that in those times nauigations were vsed into our parts out of Ethiopia.

Berosus.
The first nauigation after the flood, 143.

And they also say farther, that not long after this, the queene Semyramis went against the Indians in that riuier wherof they tooke their name, and therein gaue battaile vnto the king Stabrobates, wherein he lost a thousand ships. Which being credible by the ancient historie, proueth manifestly that in those parts, in those times were many ships, and the seas frequented in good numbers.

In the 650. yeere after the flood there was a king in Spaine named Hesperus, who in his time, as it is reported, went and discouered as far as Cape Verde and the Island of S. Thomas, whereof he was prince.¹ And Gonsaluo Fernandez, of Ouiedo, the chronicler of antiquities,² affirmeth, that in his³ time the Islands of the West Indies were discouered, and called somewhat after his name Hesperides :

There are others that say that the like was done from this cape vnto the Islands of S. Thomas, and the Isle De Principe, and that they be the Hesperides, and not the Antiles. And they doe not differ far from reason: seeing in those times and many yeeres after they did vse to saile onely along the coast, not passing through the maine ocean sea; for they had neither altitude nor compasse then in vse, nor any mariners so expert.

Plato saith in his dialogue of Timæus, that there were in ancient times, in the ocean sea Atlanticke, certaine great islands and countries named Atlantides, greater than Afrike and Europe: and that the kings of those parts were lords of a great part of this our countrey: but with certaine great tempests the sea did ouerflow it [with all it contained], and it remained as mud and shingle, so that in a long time after no ships could passe that way.

It is also recorded in histories, that fast by the Island of Cadiz, towards the Straights of Gibraltar, there was a certaine¹ island which was called Aphrodisias, well inhabited and planted with many gardens² and orchards, and yet at this day we haue no knowledge of this Aphrodisias, but onely a bare mention of it in ancient authors. The said Island of Cadiz is further said to haue been so large and big, that it did ioine with the firme land of Spaine.

there be great store of people, yet many writers affirme that it was once a maine sea vnto the foot of the mountaines ; and that the Cape of Comarim, and the Island of Zeilan were all one thing. As also that the Island of Samatra did ioine with the land of Malacca by the flats of Caypassia ; and not farre frō thence there stands now a little island, which few yeeres past was part of the firme land that is ouer against it.

Furthermore it is to be seene, how Ptolemey in his tables doth set the land of Malacca to the south of the line in three or fower degrees of latitude, whereas now it is at the point thereof, being called Jentana, in one degree on the north side, as appeereth in the Straight of Cincapura, where daily they doe passe through unto the coast of Sian and China, where the Island of Aynan standeth, which also they say did ioine hard to the land of China : and Ptolomey placeth it on the north side far from the line, standing now aboue 20. degrees from it towards the north, as Asia and Europe now stand.

Well it may be that in time past the land of Malacca and

For at this day the islands stand so neere the one to the other, that they seeme all but one firme land; and whosoever passeth betweene some of them may touch with the hand the boughs of the trees on the one and on the other side also. Whereunto, if credit may be given, we may conceaue that the sea was of old haunted and frequented, seeing that then they of the east had so much and so greate trafficke with them of the west, that they brought their merchandise vnto an hauen which was named Arsinoe, being that which at this day is called Suez, standing in 30 degrees on the north part of the Arabian Gulfe. It is also by authors farther written,

And there are by account from the one sea to the other 35 leagues, or 105 miles. These carriers, by reason of the heate of the countrey, traauiled in the night onely, directing themselues by stars and by marks of postes and canes, which they used to sticke in the ground as they went. Strabo, alleaging Aristonicus the grammarian, sheweth, that after the destruction of Troy, Menelaus the king came out of the straights of the Levant seas into the sea Atlanticke and coasted Africa and Guinea, and doubled the Cape of Bona Sperança, and so in time arriued in India; of which voyage of his there may be many more particulars gathered out of the histories. This Mediterrane Sea was also sometimes called the Adriaticke, the Ægæan, and the Herculean sea, with other names, according to the lands, coasts, and islands which it passeth by, running into the great sea Atlanticke, along the coast of Africa.

2 Chron., 8.

In the yeere 1300 after the flood, Solomon caused a nauie to be prepared on the Red Sea, at an hauen called Ezeon Geber, to sail to the East India, where by opinion standeth

se desfez de todo, & os que escaparam cō muito trabalho, atrauesaram por terra ao mar Oceano Dalemanha õde se embarcaram, & por la costa de Xaxonia, Frisia, Holanda, Flandres, França, Espanha, Italia, tornaram a Peloponeso, ou Morea, & Grecia, ate a prouincia da Tracia, deixando descuberto per costa a mór parte da Europa.

¶ Strabon citando Aristonico, diz que despois da destruiçã de Troya, el Rey Menalao sahio do estreyto & mar do leuante ao Athlantico, & costa de Africa, & Guine, & dobrou ho cabo de Boa esperança & em certo tempo foy ter á India. Disto se pode tomar aos autores mais astreyta conta. Este mar Mediterraneo, tambem se chamou Adriatico, Egeio, Herocleo, & outros nomes, segundo as terras, costas & ilhas, que banha ao mar grande Athlantico & costa de Africa.

¶ No anno de 1300, despois do diluio mãdou Salamão fazer hũa armada no mar do mar roxo que se chamaua Eylam, para ir a leuante da India onde dizem estar aquella jlha & terra a que

the islands called Tharsis and Ophir. This nauie was three yeeres on this voyage, and then returned, and brought with them [much] gold, siluer, cypres, [and pine wood]. Whereby it seemeth that those places and islands were those which now be called the Luçones, Lequeos, and Chinaes. For we know few other parts from whence some of those things are brought, or wherein nauigation was so long since vsed.

It is left vs also in histories, that a king of Egypt called ^{Herodotus,} Neco, desiring greatly to ioyn the Red Sea with the riuer Nilus, commanded the Phœnicians to saile from the straight of Mecca to the farther end of the Mediterrane Sea, to see if it did make any turne backe againe vnto Egypt. Which commandement they obeied, sailing towards the south all along the coast and countrey of Melinde, Quiloa, Sofala, till they came to the cape of Bona Esperança, finding the sea¹ continually on the left hand: but when they had doubled the cape, and found the coast² continually on the right hand, they maruailed much at it.

Notwithstanding they continued their course forward

In the yeere 590 before the incarnation of Christ, there went out of Spaine a fleete of Carthaginian marchants, vpon their owne proper costs and charges, which sailed toward the west through the high seas to see if they could finde any land: and they sailed so farre, that they found at last the islands which now we call the Antiles and Noua Spagna: which Gonzalo Fernandes de Ouiedo saith were then discouered, although Christopher Columbus afterwards by his trauaile got more exact knowledge of them, and hath left vs an euident notice where they be. But all these historians, which wrote of these Antiles before, as of doubtfull and vncertaine things, and of places undiscovered, doe now plainly confesse the same to be the countrey of Noua Spagna.

The time of Alexander Magnus, as appeareth by the ages of the world, was before the comming of Christ 324 yeeres: we all know that he was borne in Europe; but he traualled into Asia and Africa, and passed through Armenia, Assyria, Persia, and Bactria, standing northerly in 44 degrees of latitude,¹ which is the farthest countrey in longitude wherein he was in all his iourneyes. From thence he descended into India by the mountaines of Imaus, and the valleyes of Paropanisus, and prepared a nauie in the riuer Indus, and therewith passed into the ocean sea, where he turned by the lands of Gedrosia, Caramania, and Persia, vnto the great citie of Babylon, leauing Onesicritus and Nearcus captaines of his fleete, which afterwards came vnto him by the straight of the Persian sea, and vp the riuer of Euphrates, leauing that countrey and coast discovered.

In the yeere 277 before the Incarnation, succeeded in the government of the kingdome one Philadelphus, who brought to passe that the marchandises should come out of Europe to the citie of Alexandria, upwards by the riuier Nilus, vnto a city named Coptus, and from thence to be conueyed by land to a hauen standing vpon the Red Sea, called Myos-Hormos; which way was trauailed in the night, the pilots directing themselues by the stars, which were expert in that practise. It was a vse, also, long after those daies, to passe to India by land. For so did the kings of the Soldans and the princes of Bactria, and other famous captaines, who trauailing thither and into Scythia by land, had the view of these prouinces and countreyes so farre till they came that way vnto the west,¹ and to the seas thereof on the north part, whereunto many marchants then did trauaile.² Marcus Paulus Venetus writeth much hereof. In the 200 yeere before the Incarnation it is written, that the Romanes sent an armie into India by sea against the great Can of Cathaia, which, passing through the Straight of Gibraltar, and running to the northwest, found, right ouer against the Cape Finisterre, ten islands, wherein was much tinne. And they may be those which were called the Cassiterides, and being come to fifty degrees of latitude they found a straight;* and passing through it towards the west they arriued in the empire of India,² and fought with the king of Cathay, and so came backe againe vnto the citie of Rome. Rome taken
by the
Gothes, 412.

After that the Romanes had gotten the most part of the world, there were in that age made many and notable discoveries. But then came the Gothes, Moores, and other barbarous nations, and destroyed all. For in the yeere 412 after the Incarnation of Christ, they tooke the citie of Rome: and the Vandales came out of Spaine and conquered Africa.

And in the yeere 450, the king called Atila destroyed many cities in Italie: at which time the citie of Venice began. And in this age the Frankes and Vandals entred into France.

In the yeere 474 the empire of Rome was lost, and fell from the Romanes to the Gothes.

And after this came the Lombards into Italie, namely in the yeere 560 [in this period devils were let loose on the earth, which took the form of Moses, and many of the de-luded Jews were drowned in the sea].

Also about this time the sect of the Arrians preuailed greatly: and at this time one Merline, of England, was famous for his prophecies.

By all this it may appeere, that in that age all the world was in a hurly burly, and all places very tumultuous [and for four hundred years was so defaced and benighted], in so much that trafficke and marchandise ceased: for no nation durst trade one with another, neither by sea nor land: nothing as then remained stedfast, neither in monarchies nor kingdomes, signiories, religions, lawes, artes, sciences, nor nauigations. Nor so much as the records and writings of such things did remaine, but were all burnt and consumed by the barbarous crueltie and vnbrideled power of the Gothes: who became so couetous and ambitious, that they purposed of themselues to begin a new world, and to roote

In the yeere 1424 they write that the saide Don Henry prepared a nauie and armie to conquer these islands, wherein there went as captaine generall, one Don Fernando de Castro; and by reason of the valiantnes and warlike behaiour of the people they had the repulse: whereupon Don Ferdinando, considering the great charge, and little or no good successe, he gave ouer the action, and returned backe againe. After this Don Henry resigned ouer these islandes to the crowne of Castile, in consideration of the aides which Betancourt had receiued. But the Castillians agree not vnto this report. For they say, that neither the kings of Portugall nor Don Henry would render the islands, till they came in question before Pope Eugenius the fourth [a Venetian]; who fully vnderstanding the matter, gaue the conquest of the islands by order of iudgement vnto the king [Don John] of Castile in the yeere 1431, whereupon this contention ceased touching the title of the Canaries betweene the kings of Portugall and of Castile.

They write, spin, sew, and weave with them, and carry them to give light, and when these stars are stuck on their hands and faces they seem to be on fire.

but is smaller : it fixes itself in the flesh under the nail, and there produces so many grubs, that if not presently removed they multiply in such a way that people lose their fingers, and some become maimed for life.

There is also in these parts another vermin as large as a cat, it lives among trees, hanging from the branches by the tail, and after its young ones are born they take to a pouch, with which nature has furnished them ; in this entresol of the belly there is a teat which suckles them, whence it appears that it goes big with its young until of such age that nature delivers them, and then the young ones go to seek their own living.

There are in these islands many different fishes, and one which no one knows whether it be beast or fish : it has hands and feet like a lizard, snout and tail like a greyhound, feeds in the water, and on land among the trees, lays eggs like a fowl, from which they are produced : these have a soft shell, and if fried with oil or butter they do not thicken ; with water I do not know. When these creatures are small they pass on the surface of the water so rapidly that

they do not sink ; it further appears that at a certain season they run upon land, then turning about they go under the water along the sand, for they know not how to swim, nor have they that fashion. They are eaten during carnival and Lent.

There is also a fish called *Monatim* : it is large and indurated ; it has the head and countenance of a cow, and also resembles it much in its meat ; it has arms joined to its shoulders with which it swims ; its principal food is the grass that grows along the edge of the water ; it is very savoury ; it has some stones in its head which are profitable for the grief of stone, and the female has teats on her breast, with which she suckles her young, which are born living.

There is another fish called *Reverso*, a little greater than a span ; it has spikes like a hedgehog. They feed them in the sea in a basket tied to a long line, and take by their means *monatis* and other large fish, and use them as ferrets for rabbits. Here are many sardines ; these small fish are seen in *Maluco* and among those islands,

cisco de Almeida, Viceroy of India, tooke his course with 22 sailes towards India [by way of Brazil] as now is accustomed. He came vnto the city of Quiloa, where he built a fort, appointing one Peter Fereira to be captaine thereof; and beyond Melinde he trauersed to the Island of Augediua, where he placed as captaine one Emmanuell Passania. In Cananor also he built another fort, giuing the captainship of it to Laurence de Brito. In Cochim he did the like, where Don Alfonso de Neronia was made captaine. This yeere one Peter de Anhaya did build the fortress of Sofala, whereof also himselfe was made captaine.

In the later end of this yeere [or at the beginning of the next] the viceroy commanded his sonne, whose name was Don Laurenço, to make some entrie upon the Islands of Maldiaua, and with contrairie weather he arriued at the islands, which of ancient time were called Tragana, but the Moores called them Ytterubenero, and we call them Ceilan, where he went on land, and made peace with the people there, and afterwards came back vnto Cochim, sailing along the coast and fully discouering it. In the midst of this

Francisco Dalmeyda, Viso Rey da Indio com vinte & duas vellas, fez seu caminho na volta do Brasil, como se ja costumaua. Chegado á cidade de Quiloa, assëtou fortaleza, capitam della Pero ferreira, & alem de Melinde atraueouss a ilha Daugediua, onde fez capitã Manoel Paçanha. Em Cananor edificou outra, deu a capitania a Lourenço de Brito. Em Cochim o mesmo, & capitam dõ Affonso de Noronho. Neste anno fez Pero danhaya a fortaleza de Sofala, de que teue a capitania.

Na fim deste anno, ou na entrada do outro, mandou ho Viso rey a dom Lourenço seu filho ás ilhas de Maldiaua, & com tempo contraria, arribou às ylhas, a que os antigos chamaram Tragana & os mouros Itterubenero, & nos agora Ceilam, onde sahio em terra, & assentou paz com os della, tornou a Cochim ao longo da costa, deixando toda sabida.

In the yeere 1506, after the death of the Queene of Spain, King Philip and Queene Joan his wife came into Spaine to take possession thereof, and King Don Fernando went into Arragon, being his owne patrimonie. In this same yeere the said King Philip died, and then Fernando came againe to gouerne Spain, and he gaue licence vnto all Spaniards to goe vnto the New land, and to the Antiles, but not to the Portugals. In this yeere, and in the moneth of May, Christopher Columbus died, and his son Don Diego Columbus succeeded in his roome.

This Island of Samatra is the first land wherein we know man's flesh to be eaten by certaine people which liue in the mountaines called Bacas, who vse to gilde their teeth. They hold opinion that the flesh of the blacke people is sweeter then the flesh of the white. The buffes, kine, and hennes which are in that countrey are in their flesh as blacke as any inke. In the year 1508, one Alfonso de Hoieda, and Diego de recusa, with the fauour of Don Fernando, purposed to goe vnto tierra firma to conquer the prouince of Darien. He went foorth at his owne charges, and discovered the firme land, where it is called Vraba, which he named Castilia del Oro, that is, Golden Castilia, bicause of the gold which they found among the sand along the coast. And they were the first Spanyards that did this. For this, one governed Vraba, the other Beraga. Alfonso de Hoieda went first from the Island of Hispaniola and the cite of San Domingo with fower ships and three hundred soldiers, leauing behinde him the bachiler¹ Anciso, who afterwards compiled a booke of these discoveries. And after him there went also one ship with victuals, munition, and 150 Spanyards. In this year 1508, one Diego de Niquesa prepared seven ships in the port of Beata to goe vnto Veragua, and carried in them almost 800 men. When he came to Carthagená, he found there Alfonso de Hoieda forespoiled with his former losse;¹ but then they both ioined together, and went on land, and auenged themselves of the people [and went each to his government]. And in this voiage Diego de Niquesa went and discovered the coast called Nombre de Dios, and went vnto the sound of Darien, and called it Puerto de Misas, which is vpon the riuier of Pito. When they were come vnto Veragua, he went on shore with his armie,² his soldiers being out of hope to returne to Hispaniola. [And though this stratagem of war was put in practice afterwards by Fernan Cortez, he was not the first in that land, as some hold and believe]. Alfonso de Hoieda began a fortress in Caribana against the Caribes;³ which was the first towne that the Spanyards builded in the Firme land; and in Nom-

They had also with them a barke of Diego Velasques, who then was gouernor. They came on land in Jucatan, standing in 20 degrees of latitude, at a point which they called Punta de las Duennas; that is to say, The point of Ladies, which was the first place wherein they had seen temples and buildings of lime and stone. The people here goe better appavelled then in any other place. They haue crosses which they worship, setting them vpon their tombes when they be buried. Wherby it seemeth that in times past they had in that place the faith of Christ among them. And some say that thereabouts were the seven Cities. They went round about it towards the north, which is on the right hand: from whence they turned backe vnto the Island of Cuba with some examples of gold, and men which they had taken. And this was the first beginning of the discoverie of New Spaine.

In the yeere 1518, Lopez Suares commanded Don John de Silueira to goe to the Islands of Maldiuia [and kingdom of Bengal]: and he made peace with them [of the islands]: and from thence he went to the citie of Chatigam, situated

¹ Only in this is seen the Divine justice: and otherwise it is abundantly visible in those parts of the Antilles or Portuguese India, on account of the robberies, oppression and ills that have been committed, whence it appears that there is always a Nabuchodonosor who punishes our evil deeds, which are so great as we see. What has become of the many Spaniards, Portuguese, who gambled in the Antilles and India; of so much gold, silver, spice, drugs, pearls, jewels, and merchandise, that was brought thence? All is wasted and consumed leaving no fruit; and any one who appeared to have any soul lost his life; and besides it seems to me that whoever would embark in these matters, would never finish, not even if he lived to twice the age of Methusaleh.

He commanded also certaine brigandines to search the coast from Zacatullan vnto Panama.¹ This Christopher de Olid came to the Island of Cuba, and made a league with Diego Velasquez against Cortes, and so set saile and went on land hard by Puerto de Cauillos, standing in 10 degrees to the north, and built a towne, which he called Triumpho de la Cruz. In the yeere 1525 Francis Pizarro and Diego Almagro went from Panama to discover Peru, standing beyond the line towards the south, which they called Nueva Castillia. The governour Pedro Arias would not entermeddle with this expedition, because of the euill newes which his captaine, Francis Vezerra, had brought [who never reached further than the port of Pinas towards the north].

Francis Pizarro went first in a ship, having with him 140 soldiers, and Almagro went after him in another ship with 70 men. In the yeere 1534 Francis Pizarro, seeing that the two kings were gone, began to enlarge himselfe in his signiories, and to build cities, forts, and townes, to haue them more in subiection. He went discouering and conquering 120 leagues from the one citie to the other, east, not farre from the equinoctiall line:¹ where Peter Aluarado found mountaines full of snow, and so cold, that 70² of his men were frozen to death. When he came vnto Quito, he began to inhabite it, and named it S. Francis. In this country there is plentie of wheate, barlie, cattell and plants of Spaine, which is very strange [and not to be expected under the line]. In the yeere 1538 and 1539, after that Diego de Almagro was beheaded, the Marquis Francis Pizarro was not idle. For he sent straight one Peter de Baldiua with a good companie of men to discouer and conuere the countrey of Chili. He was wel receiued of those of the countrey, but afterwards they rose against him and would haue killed him by treason. Yet for all the warre that he had with them, he discouered much land, and the coast of the sea toward the southeast,¹ till he came into 40 degrees and more in latitude. While he was in these discoueries he heard newes of a king called Leucengolma, which commonly brought to the field two hundred thousand fighting men² against another king his neighbour [who brought as many], and that this Leucengolma had an island, and a temple therein with two thousand priestes : and that beyond them were the Amazonas, whose queene was called Guanomilla, that is to say, the golden heauen [whence the Spaniards concluded that there This might be the temple in the lake of Titicaca. There came vnto them also certaine barkes or boates handsomely decked,¹ wherein the master and principall men sate on high, and vnderneath were very blacke moores with frizled haire [as if for parade or state]: and being demanded where they had these blacke moores, they answered, that they had them from certaine islands standing fast by Sebut, where there were many of them, a thing that the Spaniards much maruailed at, because from thence it was aboute 300 leagues to the places where the black people were. Therefore it seemed, that they were not naturally borne in that climate, but that they be in certaine places scattered ouer the whole circuite of the world [like other races]. In the yeere 1544 Don Gutierre de Vargas, bishop of Placenza, sent a fleet from the city of Siuil vnto the streits of Magellan: which is reported to haue beene done by the counsel of the vizeroy Don Antonie de Mendoça his cousin.¹ Some suspected that they went to Maluco, others to China, others that they went onely to discouer the land betwixt the streite and the land of Peru on the other side of Chili, because it was reported to be very rich in gold and siluer [which would enrich them speedily]. But this fleete² by reason of contrary windes could not passe the streit, yet one small barke passed the same, and sailed along the coast [following the land on the right hand], and discouered all the land, till he came vnto Chirimai, (and Arequipa),³ which was aboue 500 leagues, for the rest was alreadie discouered by Diego de Almagro, and Francis Pizarro, and their captaines and people at diuers times. By this it appeereth, that from the streit to the equinoctial line on both sides is wholly discouered.

No anno de 1545 em mes de Janeyro, chegou Ruy lopez de Vilhalobos geral dos Castellanos, á ylha do Moro & cidade de Samofó : foy bem recebido dos Reis de Geilolo, & Tidore, & gente da terra : por Antonio galuam ser ja partido, q' deu assaz de trabalho ao capitam dom Jorge de Castro, segūdo parece que lhe socedeo, & aos Portugueses que cō elle estauam, & muyto gasto à fortaleza.

No mesmo āno de 1545 tornou mandar Ruy lopez de Vilhalabos da ylha de Tidore, onde ja estaua da parte do Sul outro nauio pera a Noua Espanha, capitam delle Ynhigo ortiz de Roda, piloto Gaspar Rico, natural Dalmada : foram ter aa costa dos Papuas, correram na toda, & como nam sabiam q' por ali andara Saauedra, adquiriram assi esta honra & descobrimēto, por a gente ser

In this yeere 1545 and in the moneth of June, there went a junk from the citie of Borneo, wherein went a Portugall called Peter Fidalgo, and by contrary windes he was driuen towards the north; where he founde an island standing in 9 or 10 degrees, that stretched it selfe to 22 degrees of latitude, which is called The Isle of the Luçones, because the inhabitants thereof were so named. It may haue some other name and harborowes, which as yet we know not: it runneth from the north vnto the south-west; and standeth betweene Mindanao and China. They say they sailed along by it 250 leagues, where the land was fruitfull¹ and well couered,² and they affirme, that there they will giue two pezos of gold for one of siluer: and yet it standeth not farre from the countrey of China.

the coast of Norway and Finmark, and from thence east, [because there is no certainty about the route they followed nor the latitude they reached, unless from a letter of the Grand Duke of Moscovy, in which it is declared that there arrived at his Port an English vessel, of which was captain Richard Trebuli, and that there was brought to him by an Englishman called Geneloux, a letter from the king, in which he asked that his subjects might come and go and trade in his country. He gave leave and safe conduct. This Muscovy, according to his description, extends from sixty to seventy degrees] (till they came betweene 70 and 80 degrees vnto Moscouia, for so far one of the ships went : but)¹ I know not what became of the rest : & this was the last discouery made vntil this time. From this lande of Moscouie eastward you saile vnto Tartary, and at the farther end of it standeth the countrey and prouince of China. It is said that betweene China and Tartary there is a wall about 200 leagues in length, standing neere vnto 50 degrees of latitude.

Now I gather by all the precedent discoveries, that the whole earth is in circuite 360 degrees according to the geometrie thereof: and to every degree the ancient writers allow 17 leagues and a halfe, which amount vnto 6,300 leagues [the moderns make the degree $16\frac{2}{3}$, making 6,000 leagues], yet I take it that euerie degree is iust 17 leagues, so that the circuit of the earth is about 6,200. Howsoever it be, all is discovered and sailed from the east vnto the west almost euen as the sunne compasseth it: but from the south to the north there is great difference; for towards the north pole there is found discovered no more then 77 or 78 degrees, which come to 1326¹ leagues: and towards the south pole there is discovered from the equinoctiall to 52 or 53 degrees, that is, to the streit which Magellan passed through (which amounteth to about 900 leagues); and putting both these saide maine sums together, they amount to 2226² leagues. Now take so many out of 6300³ leagues,

O que disto tenho alcançado he ser a redõdeza de trezentos & sessenta graos, segũdo sua geometria, a q' deram os antigos dezasete legoas & mea, em q' se montam seis mil & trezentas, os modernos poẽ o grao em xvj & dous terços por virem seis mil legoas. Com tudo eu tenho q' sam dezasete largas, em q' saem o ambito da terra en seis mil & dozentas. Como q'r q' seja toda he descuberta & nauegada de Léste oeste, quasi por onde o sol anda, mas de Sul ao norte ha muita deferença, porq' contra elle nam se acha mais descuberto, q' ate setenta & sete, ou setenta & oito graos daltura, em q' se montam mil & trezẽtas & tantas legoas. E da parte do Sul atc nouecentas, por ser descuberto cincoẽto & dous, ou cincenta & tres graos, que o estreito por onde o Magalhães passara, juntas todas fazẽ em soma duas mil & dozentas,
