CONTENTS OF VOLUME I

	Page		Page
General forestry	5	Forest botany—Continued.	
General forestry literature	5	Silviculture—Continued.	
Manuals of forestry	10	Silviculture practices	246
Bibliographies	13	Woodlot silviculture	254
Dictionaries	16	Improvement of young stands	261
Biographies	16	Pruning, artificial and natural	265
Periodicals, current (through 1939)	19	Slash disposal	267
Discontinued	21	Natural reproduction	273
Bulletins, circulars, etc.	24	Forestation	280
Annals	29	Reforestation	280
Proceedings and reports of associations, societies, and organizations	30	Forest tree seed	309
Annual reports	34	Nursery practice	317
Comments on meetings	35	Direct seeding	323
Special reports and activities	38	Windbreaks, shelterbelts	324
Official reports, State, city, and other organizations	44	Sand dune planting	337
Forest research	49	Forest management	339
Forestry research methods	58	Tree introduction	355
The profession of forestry	60	Extension of range of American trees	357
Forestry education	67	Tree breeding and genetics	358
Forest schools	76	Willow culture	362
Forestry extension	81	Street and roadside trees	366
Forestry in public schools	84	Planting	368
Arbor Day and American Forest Week	88	Shade tree care	370
Exhibits, museums	93	Tree surgery	372
Demonstration and research forests	94	Forest protection	372
History and status of forestry	97	Forest fires	372
Forestry in the States and possessions of the United States	100	Protection from fire	372
Forestry in Canada	111	Fire prevention	398
Forestry in foreign countries	113	Fire lines and roads	403
Forestry in the World War	119	Light burning	404
Forest botany	121	Detection	406
Physiology	121	Control	407
Anatomy and morphology	127	Fire manuals and instructions	410
Dendrology	133	Tools and equipment	412
Arboreta	140	Spark arresters	415
Phenology	142	Snag falling	415
Ecology	143	Fire weather	416
Forest soil relations	151	Fire damage	422
Forest soil biology	155	Animals and birds	424
Root development and relations	156	Forest pathology	426
Stem growth	153	Pathology and forest management	426
Light relations	159	Diseases, general	428
Weather and climatic relations	161	Diseases of seedlings and nursery stock	431
Silvical characteristics	163	Foreign and introduced diseases	433
Special description	163	White pine blister rust	434
Conifers	171	Chestnut blight	441
Hardwoods	177	Cankers, rusts, wilts, and virus diseases	474
Redwoods	181	Root rots	452
Exotics	183	Fungi	453
Forest distribution	187	Fungi in trees	453
Prairies—origin and development	192	Wood-rotting fungi	456
Forest types	195	Wood stains and molds	461
Forest description	197	Decays of pulp and pulpwood	463
Eastern United States	198	Mistletoe	464
Western United States	205	Forest entomology	465
Alaska	209	Insect lists and descriptions	467
Canada	210	Insects attacking foliage	471
Foreign	215	Bark beetles	471
K ₁ s, floras, and plant description	215	Insects attacking wood	472
North America	215	Minor insects	475
Foreign	229	Shade tree insects	475
Geologic history of trees	240	Damage by insects	479
Silviculture	242	Control and protective measures against insects	482
		Climatic injuries	485
		Windfall	487
		Mechanical injuries	488

INTRODUCTION

This bibliography of North American forestry includes references to the more important literature on forestry published in Canada, Mexico, and the United States prior to 1930. To a certain extent, it brings up to date the material contained in Catalogue of Publications Relating to Forestry,¹ but goes considerably further in the selection and classification of material.

The North American bibliography takes its place in a series of similar forestry bibliographies being prepared by various nations under the general impetus of the International Union of Forest Research Organizations. The idea of such an international series of bibliographies, designed to cover the more valuable forestry literature of the world was first advanced by Dr. Phillip Flury of the Swiss Forest Experiment Station at the fourth meeting of the International Union of Forest Experiment Stations held in Austria in 1903. At the next meeting in 1906, the proposal that the Union publish these bibliographies was adopted. During the World War, however, the funds collected for this purpose were lost, and the work came to a standstill. The proposal was again taken up at the seventh international meeting at Stockholm in 1929, but instead of the original plan, that the Union issue a complete international bibliography, it was decided that each country would publish its own.

The preparation of the forestry bibliography for the United States was first suggested as a project of the Forestry Committee of the Division of Biology and Agriculture of the National Research Council.² After the project had been approved by the Division and the Council it was realized that the size and complexity of the undertaking were such as to require the cooperation of the Forest Service, especially since the Forest Service library was the largest and most complete of its kind in the country and so constituted the best source for the material required. Accordingly, the bibliography was made a cooperative project of the two agencies. The National Research Council provided the initial funds for collecting the material, and the Forest Service provided the library service and technical supervision.

Originally, the bibliography was to have been restricted to material published in the United States. However, after the work got under way, it was realized that many of the publications of both Canada and Mexico contained material of immediate and direct interest to foresters of the United States, especially since climate, soils, topography, and many species and problems were similar or closely related

¹ UNITED STATES DEPARTMENT OF AGRICULTURE LIBRARY, with the cooperation of the FOREST SERVICE. CATALOGUE OF PUBLICATIONS RELATING TO FORESTRY IN THE LIBRARY OF THE UNITED STATES DEPARTMENT OF AGRICULTURE. U. S. Dept. Agr. Library Bull. 76, 302 pp. 1912.

² Membership of the Forestry Committee in 1929 when the project was approved included Raphael Zon, Director, Lake States Forest Experiment Station, St. Paul, Minn., Chairman; Henry C. Cowles, University of Chicago; S. T. Dana, University of Michigan; R. T. Fisher, Harvard Forest; W. R. Hine, State Forester, New Orleans, La.; B. P. Kirkland, University of Washington; Aldo Leopold, Forest Products Laboratory; David T. Mason, Mason and Stevens, Portland, Oreg.; E. N. Munns, Forest Service, Washington, D. C.; and L. L. Woodruff, Yale University (ex-officio).

to our own. Accordingly, the bibliography was expanded to include material published anywhere in North America and including the West Indies and the Hawaiian Islands.

The International Union recommended that the national bibliographies be arranged according to a uniform classification and format. The material listed in the present bibliography is not so arranged, however; first, because agreement on the classification was not reached until after the bibliography was well under way, and second, because the classification applied inadequately to American forestry. Instead, a classification was adopted that follows in many details the one used by the Forest Service, which in turn follows in part the classification suggested by a Committee of the Society of American Foresters.³

The format does not follow that recommended by the International Union, but instead follows the one used in other bibliographies published by the Department of Agriculture.

The bibliography contains the titles of only the more permanent literature on forestry, using the term in a broad sense. It includes a wide variety of subjects having to do with the forest and its products, stress being laid especially on the more technical phases of forestry practices as such. On the other hand, many topics pertaining to botany, soils, geography, and similar fields, which, though important or directly related to forestry, are not essential to it, are given only passing attention or omitted entirely, since the inclusion of titles in these related subjects would have made the compilation task altogether too great. Range management, highly important in the management of the western forests of America, is omitted because a bibliography on this subject has been published separately.⁴

Because it would obviously be impossible for any one individual to pass upon the lasting value of all publications in such a wide field of science as is embraced in forestry, each section was reviewed by one or more foresters having special acquaintance with and knowledge of that particular field, and titles were included or eliminated upon their recommendations. In many doubtful cases the original articles were consulted before a decision was reached. In case of real doubt as to the merits of an article, the title was included. Many foresters throughout the United States in Federal, State, and private activities and engaged in research, teaching, and administration thus have contributed heavily to this bibliography. Although this procedure has not entirely eliminated all error, it has done much toward retaining worth-while material.

In addition to the library of the Forest Service in Washington, D. C., the catalog of which probably contains more articles on forestry than that of any other library in America, the Library of Congress in Washington, D. C., and the British Columbia Library at Victoria, B. C., Canada, were referred to freely. Libraries at schools of forestry, particularly those at Yale and Cornell Universities and the Universities of Toronto, Michigan, Minnesota, and California provided additional titles; libraries of other institutions where forestry material might be found, such as the University of Chicago,

⁴ RENNER, F. G., CRAFTS, EDWARD C., HARTMAN, THEO C., and ELLISON, LINCOLN. A SELECTED BIBLIOGRAPHY ON MANAGEMENT OF WESTERN RANGES, LIVESTOCK, AND WILDLIFE. U. S. Dept. Agr. Misc. Pub. 281, 468 pp. 1938.

Columbia University, and the University of Pennsylvania, were consulted. A few State libraries furnished material of historical interest.

It is impossible here to give credit by name to all those who have aided in the preparation of this compilation. To them, grateful thanks are due. Similarly, it is impossible to mention all the librarians of many different institutions who cheerfully undertook the review and check of titles and who rendered most valuable assistance. To these, foresters are deeply indebted. However, especial credit is due the late Helen E. Stockbridge, Librarian of the Forest Service, who took great personal interest in this undertaking and gave unstintingly and wholeheartedly of her time. Those who, in addition to Miss Stockbridge, have been especially helpful in compiling the material are Helen Moore Todd, who succeeded Miss Stockbridge, James L. Averell, Perkins Coville, Marion J. Drown, Francis H. Eyre, Leonard F. Kellogg, and Ivan H. Sims.
