PREFACE.

It is confidently expected that this dictionary will commend itself to all those who favor books of reference on the *multum in parvo* plan. Every accepted word in the English language will be found in its pages; and, in addition, many technical terms which the advance of modern science and the recent rapid spread of useful knowledge in the United States have made part and parcel of our popular literature; also many old words and meanings found in the writings of the Elizabethan and Queen Anne periods. It has been found necessary to enlarge upon many words, whose full and real meaning is not adequately disclosed by a mere definition. To all definitions which do not apply in this country, the American meaning has been added. Local meanings, words and phrases; provincialisms, both English and American, and a few slang words and phrases—all of which are instructive as showing the natural growth, and in some cases the debasement, of the pure stock of our language—are given for what they are worth, and only in such instances as are to be met with in early and recent standard works.

The etymology of each word will be found at the end of the definition of the primitive word. These etymologies will be found to differ materially from those found in other dictionaries, of even recent date. As it is only within the past twenty-five years that the etymology of English words has attained even the semblance of an exact science, these new etymologies will be found, in general, more correct than those of any preceding work. The industrious labors of Skeat, Wedgwood and other recent authorities on English philology, leave the most patient lexicographer with many open questions upon his hands. For this very sufficient reason, the editors of this dictionary announce, simply, that they have given the latest and what to them seem the most imperative conclusions of the science of English philology—a science which, though rapidly progressing, is still, on the whole, quite incomplete.

We have but to add that, in general, the aim of the editors of the "American Dictionary of the English Language" has been to give to the public a convenient lexicon which will decide all questions about words, which arise in the course of general reading, and to give to the American reading public the latest, most authentic and most complete conclusions of English philology.

INTRODUCTION.

WHEN Pope wrote "The proper study of mankind is man," he gave to the world a most palpable truism. It seems to us of this age of science, that the much-quoted assertion was hardly worth the penning. Every science now leads up to and down to man. In him chemistry has its highest exponent; zoology, its acme; astronomy, the final object of its search among the planets as well as the final object of solar and planetary influences. If we search the stratified rocks of geology, we find his imprint and those of his animal "ancestors" in Evolution. Geographical exploration finds him, or the remnants of him, wellnigh everywhere. Archæology excavates and deciphers hieroglyphics, and lo! the buried city and the long-locked mausoleum give up the dead rulers and chieftains of prehistoric ages.

For centuries learned men studied the various languages and dialects of the earth. They brought the dead languages of ancient civilizations into schools and colleges. More recently they studied the rude and uncouth languages and dialects of barbarous and savage tribes. They sagely guessed at the origin of modern words, and many of their guesses were printed in books and studied as philology. Naturally, the fountain-head from which flowed the stream of their investigations was the Syro-Chaldaic, the supposed original language of the Semitic people, spoken in the cradle of the human race. On this basic line the dead languages, and many of the languages of modern Europe, were studied, their roots were unearthed and deciphered, and the older French, German and other Continental savants piled up a philological literature of enormous proportions, hopelessly locked against the nonprofessional, and for the most part utterly worthless, in the light of modern philological research.

The philological savants of England and America were content to follow the German and French scholars in this line of investigation. The old and misleading line of philological research was not seriously taken up to any extent, in even the highest English and American institutions of learning. No original investigations were attempted. The French and German scholars had pre-empted the field, and the occasional echo heard at Oxford or Harvard was from some imported Orientalist who had studied and travelled among cuneiform inscriptions and had finished his studies at Paris or Berlin.

The exception to this, in this country, is of course the great "Webster's Unabridged Dictionary," so long valued for its depth and for its patient and painstaking selection of the results of French and German philological research up to the date of its publication. But the investigations, the systematized canons of derivation, and the classification of root-forms to be found in that great work of a laborious lifetime, will live in history as the magnificent ruin of a noble structure which but for a few short years outlived its builder. In modern editions of the "Unabridged," the bulk of the philological canons and systems, which

cost their author so much to get together, must be omitted; though, despite all this, there is but one "Webster's Unabridged."

Modern English etymology divides all languages into Aryan and non-Aryan. Our language is one of the former; Hebrew and Arabic belong to the latter classification. It is easy to conclude, therefore, that no English word is derived from a Hebrew or an Arabian root; and that no word of either Hebrew or Arabian extraction could come into the English unless the word was actually borrowed and made a part of the latter through custom and constant usage. If the English-speaking people could not come in contact with the people of Arabia or Palestine, we would have no Hebrew or Arabian words in our language. In the early ages of civilization, peaceable inter-visitations between even neighboring peoples were few and infrequent; and between distant peoples, absolute non-intercourse was the rule with very slight exception. Two very important facts must be noted, as the natural and inevitable result of this.

First, the two original divisions of languages found at the dawn of written history—the Aryan and the non-Aryan—had a tendency to diverge more and more widely from each other as time advanced. Each grew and developed and changed along different basic lines, and in obedience to different climatic, social, moral and even physiological influences. Under primitive conditions the divergence of the two languages had a tendency to more and more estrange the nations and peoples speaking them, to build up widely differing systems of government, religion, and the other concomitants of civilization. At this day, therefore, we should not expect to find words in the English—one of the Aryan family of languages—whose roots are traceable to a non-Aryan language, such as the Hebrew.

We must note, secondly, that two peoples of the Aryan race, and whose remote ancestors originally spoke the same language, might, in the course of ages, become so widely separated as to develop finally into very different and differently-speaking communities. The original word—spoken exactly alike before their separation—would become modified so that it would be different in sound. The fact, therefore, that an English word sounds very much like a word we may find in some other language does not prove, or even tend to prove, that the two words are related. On the contrary, if the two words in question had been originally the same word, they would now be very different—would look but very little, if any, alike! In the study of linguistic roots we must be cautious, go slow, and not be led astray by mere appearances.

The comparative study of languages, which is now absolutely essential to the proper study of English etymology, has a most important aid in the comparative study of peoples—their manners, customs, religious beliefs and superstitions, their folk-lore and their legendary literature. And, conversely, since the new era of comparative philology has dawned upon the world of

learning, much valuable information has been obtained concerning ancient and mediæval peoples and their relations to each other at certain periods when history itself leaves many important questions in doubt. In the study of borrowed words, particularly, is this the case. Words introduced into English from the Old High German and other languages of the Continent are admirably handled by Skeat and his co-laborers, so as to throw much needed light upon even so recent a period as the seventeenth and eighteenth centuries.

In order to follow the changes and modifications of root-forms from the parent stem to the present English word, it will be necessary at the outset to have carefully studied Grimm's Law, a condensed summary of which will be found elsewhere. This Law may be justly regarded as the key to modern English etymology, as well as its foundation and vital principle.

The history of the English language most familiar to all persons of fair education is that it was at first Anglo-Saxon; that, after the Norman Conquest, in 1066, many new words were introduced from the French of that time; and that, down to our own day, new words have been constantly added, formed largely from the Latin and Greek. From the earliest Saxon times down to the present, this history has been divided into periods and epochs, each marking the rise, progress and decay of some distinctive variety of literature. We have, for example, the epochs of Chaucer, Spenser, Shakespeare, the Restoration, Queen Anne, the Georgian, and, in our own day, the modern epoch of the English language, with a well-defined and somewhat varying development in the United States and in Great Britain.

These epochs have been studied with reference to the development of English literature rather than the English language. This study has given glory and renown to the illustrious masters with whose names the English language shall be forever associated; but it tells us nothing of the birth, parentage and growth of the words which have been the masters' servants—at times their slaves and playthings.

And yet these little words in their root-forms were serving the human race long, long before the Saxon set foot on Britain; and they will continue to delight, and give comfort, and preserve for unborn generations the beautiful, the sublime, the good and the true thoughts and mind-pictures of the masters, long after the large majority of present and past *littérateurs* have ceased to be named, in literary circles!

These words have a venerable history, back in those early days when man—and lovely woman—first learned they had two tongues, one in each head! When words—these very root-forms unearthed by the learned Skeat and his co-laborers—first came into fashion the race was indeed in its infancy, non-progressive and unenterprising. At that early day, we stand truly at the dawn of a new era. Man begins to speak in words, and his fellow-man understands him. Then comes a separation, and different tribes, races and nations set up, each one for itself.

Is not the history of words, from their parent-forms to their present fair and harmonious proportions, a history worth writing and studying? In so doing we shall not be studying or glorifying the ideas of great individuals, the greatest of whom must reach total or partial oblivion with the lapse of ages; but we shall be studying and marking the progress of the human species itself, from its primitive or primeval helplessness to its reign of universal empire, acquired by the "communication of thought by means of words." We shall find men of a race all but extinct leaving perhaps

some strange inscription on a buried temple or burial vault, by which inscription the learned will discover their descendants and trace a connection between the living words of to-day and the words first uttered by the human voice. We shall see the human race in its dispersion to the various habitable portions of the globe carrying with it to its new-found homes the precious gift of articulate language, developing into forms as various as the scattered habitations themselves, but still maintaining intact the germ, the root, common to the different members of the original linguistic family.

Ages pass, and men begin to visit the homes of races that were not of the same family. A conquering stranger race brings new and strange words to its conquered foe, along with its chains and its oppressions, but the language of the enslaved and captive race does not wholly perish. After long ages words of the captive race are found in the language of the conqueror. Sometimes they are kept because they have the same sounds; but they are not of the same parent stock—one was Aryan, the other non-Aryan.

Again, two long-separated tribes, members of the same linguistic family, are brought into contact. Their words do not sound alike. Words with the same meaning have invariably a different sound, and neither tribe adopts any of the words of the other. Thus their words, descended from the same parent-form, continue to grow more and more divergent, at the same time preserving a certain *uniformity of variation*.

It is the triumph of modern etymology that it gives the rule to determine what this uniformity is and in what words it is found.

Coming down to the Fall of the Roman Empire, we find two polished, highly-finished languages in Europe, the Greek and the Latin. The northern races that completed the overthrow and shared the spoils of the Empire of the West found their richest treasure, without appreciating it, in the smooth, precise and musical language of Virgil, Horace and Cicero.

The Anglo-Saxon, or Old English, found a Celtic tongue on the island of Britain in 449. The familiar modifications of the Latin, now known to us as French, Spanish and Italian, began their development at this time. It is highly probable that the Old English, or Anglo-Saxon, had received additions from the Latin which ante-date the additions and modifications which affected it after the Norman Conquest. The same is probably true of the Teutonic dialect spoken by the German Franks before Clovis crossed into Gaul; and also of the Celtic dialects spoken in Gaul and Britain, respectively, before the Anglo-Saxon and Frankish conquests of those countries. On this view of the case, the "English" which resulted from the amalgamation of the Celtic-Latin-Germanic Norman-French with the Celtic-Saxon of England must have been a very complex and heterogeneous compound.

But time works many wonders. The Church Latin of the Ages of Faith no doubt added its contributions to the Old English vocabulary. It aided in toning down the harshness of the early French to the Romance dialects which succeeded. When the Conqueror won at Hastings, he brought a less uncouth language to enrich the vocabulary of England than that which was used by his pirate ancestors.

The study of Latin in the monasteries and universities of the eleventh and twelfth centuries, and the use of that language by the scholars and churchmen of England, gave to many of the productions of English authors of that time a decidedly Johnsonese tone and pretentiousness.

During all this time simple, short words were quietly resting in the bosom of Old English. Some were related to the Swedish, Old High German, Scandinavian and Gothic. Some were Celtic in disguise, carried captive by the Frank and Roman, in Gaul, and by the Saxon, in Britain! These little words did not die. And they were related—many of them—to the smoothly-flowing Latin of Cicero, and the roaring, rolling, resonant Greek of Demosthenes and Homer. These little words came to us from the tribal settlements of primeval man. They are Aryan or Indo-European, and they do not come to us from the Semitic Hebrew or Syro-Chaldaic, and cannot, at present, be traced to the cradle of the human race. They are the imperishable little words that Swift loved and could use so effectually to strike his hardest blows. They are also the “toughest” riddles that modern English etymology gives us to solve—they are so old, so often hunted down and so little.

We must now briefly review the different languages which have contributed to the present structure and form of English words—either by adaptation or by natural descent. There is a class of words of Old Low German descent. The term includes a limited class of words, whose precise origin is enveloped in obscurity. “If not precisely English, they come very near it,” says Skeat. The chief difficulty about them is that the time of their introduction into English is uncertain. Either they belong to Old Friesian and were introduced by the Friesians who came over to England with the Saxons, or to some form of Old Dutch or Old Saxon, and may have been introduced from Holland, possibly even in the fourteenth century, when it was not uncommon for Flemings to visit England, for commercial and other purposes, and end by taking up their residence there.

The introduction of Dutch words into English received little attention until Skeat took up the subject. History shows that England's relations with Holland were often very close. We read of Flemish mercenary soldiers being employed by the Normans, and of Flemish settlements in Wales, “where,” says old Fabyan, “they remained a long whyle, but after, they sprad all Englande ouer.”

History tells us of the alliance between Edward III. and the free towns of Flanders; and of the importation of Flemish weavers by the same monarch. The wool used by the cloth-workers of Flanders grew on the backs of English sheep; closer relations between the two countries grew out of the brewing trade and the invention of printing, and were secured by the new bond of the Protestant faith. Caxton spent thirty years in Flanders (where the first English book was printed) and translated the Low German version of “Reynard the Fox.” Tyndale settled at Antwerp to print his New Testament. After Antwerp had been captured by the Duke of Parma “a third of the merchants and manufacturers of the ruined city,” says Mr. Green, “are said to have found a refuge on the banks of the Thames.” All this must have affected the English language at that time; and it is tolerably certain that during the fourteenth, fifteenth and sixteenth centuries, particularly the last, several Dutch words were introduced into England.

Scandinavian or old Danish words were introduced into England by the Danes and Northmen who settled in the country at various times before the Conquest. Their language is best represented by Icelandic, owing to the curious fact that, ever since the first colonization of Iceland by the Northmen, about 874, the language of the settlers has been preserved with but

slight changes. Hence, instead of its being strange that English words should be borrowed from Icelandic, it must be remembered that this name represents, for philological purposes, the language of those Northmen who, settling in England, became ancestors of some of the leading families in the country; and, as they settled chiefly in Northumbria and East Anglia, parts of England not strictly represented by Anglo-Saxon, “Icelandic” has come to be English of the English. Skeat, in some cases, derives “Scandinavian” words from Swedish, Danish or Norwegian; but, he explains, this means that the Swedish, Danish or Norwegian words are the best representative of the Icelandic that can be found. The number of words adopted into modern English from the Swedish and Danish is very small.

The German language is properly called High German, to distinguish it from the other Teutonic dialects, which belong to Low German. This, of all Teutonic languages, is the furthest removed from English, and the one from which fewest words are directly borrowed, though there is a very general popular notion (due, says Skeat, to the utter want of philological training among English-speaking people) that the contrary is the case. A knowledge of German is often the sole idea by which an Englishman or an American regulates his “derivations” of Teutonic words; and he is better pleased if he can find the German equivalent of an English word than by any true account of the same word, however clearly expressed. Yet it is well-established, by Grimm's Law of sound-shiftings, that the German and the English consonantal systems are very different. Owing to the replacement of the Old High German *p* by the Modern German *b*, and other changes, English and German now approach each other more nearly than Grimm's Law suggests; but we may still observe the following very striking difference in the dental consonants:

English: *d t th day, tooth, thorn, foot.*

German: *t z (ss) d tag, zahn, dorn, fuss.*

The number of words in English that are borrowed directly from the German is quite insignificant, and they are all of late introduction. It is more to the purpose to remember that there are, nevertheless, a considerable number of German words that were borrowed indirectly, viz., through the French. Examples of such words are, *brawn, dance, gay, guard, halbert*, etc., many of which would hardly be at once suspected. It is precisely in accounting for these Frankish words that German is so useful to the English etymologist. The fact that we are highly indebted to German writers for their excellent philological work is very true and one to be thankfully acknowledged; but that is quite another matter altogether.

The influence of French upon English is too well known to require comment. But the method of the derivation of French words from Latin or German is often very difficult, and requires the greatest care. There are numerous French words in quite common use; such as *aise, case, trancher*, to cut, which have never yet been clearly solved; and the solution of many others is highly doubtful. Latin words often undergo the most curious transformations, as may be seen by consulting Brachet's Historical Grammar. What are called “learned” words, such as *mobile*, which is merely a Latin word with a French ending, present no difficulty; but the “popular” words in use since the first formation of the language are distinguished by three peculiarities: (1) the continuance of the tonic accent, (2) the suppression of the short vowel, (3) the loss of medial consonant. The last two peculiarities tend to

disguise the origin, and require much attention. Thus, in the Latin *bonitatem*, the short vowel *i*, near the middle of the word, is suppressed; whence F. *bonté*, E. *bounty*. And again, in the Latin *ligare*, to bind, the medial consonant *g*, standing between two vowels, is lost, producing the F. *lier*, whence E. *liable*.

The result is a great tendency to compression, of which an extraordinary but well-known example is the Low Latin *ataticum*, reduced to *edage* by the suppression of the short vowel *i*, and again to *eage* by the loss of the medial consonant *d*; hence F. *âge*, E. *age*.

One other peculiarity is too important to be passed over. With rare exceptions, the substantives (as in all the Romance languages) are formed from the *accusative* case of the Latin, so that it is commonly a mere absurdity to cite the Latin nominative, when the form of the accusative is absolutely necessary to show how the French word arose.

French may be considered as being a wholly unoriginal language, founded on debased Latin; but it must at the same time be remembered that, as history teaches us, a certain part of the language is necessarily of Celtic origin, and another part is necessarily Frankish, that is, Old High German. It has also clearly borrowed words freely from Old Low German dialects, from Scandinavian (due to the Normans), and, in later times, from Italian, Spanish, etc., and even from English and many entirely foreign languages.

The other Romance languages, *i. e.*, languages of Latin origin, are Italian, Spanish, Portuguese, Provençal, Romansch and Wallachian. English contains words borrowed from the first four of these, but there is not much in them that needs special remark. The Italian and Spanish forms are often useful for comparison with, and consequent restoration of, the crushed and abbreviated Old French forms. Italian is remarkable for assimilation, as in *ammirare* (for *admirare*) to admire, *ditto* (for *dicto*), a saying, whence E. *ditto*. Spanish, on the other hand, dislikes assimilation, and

carefully avoids double consonants; the only consonants that can be doubled are *c*, *n*, *r*, besides *ll*, which is sounded as E. *l* followed by *y* consonant, and is not considered as a double letter. The Spanish *ñ* is sounded by *y* consonant, and occurs in *dueña*, Englished as *duenna*. Spanish is also remarkable as containing many Arabic (Moorish) words, some of which have found their way into English. The Italian infinitives commonly end in *-are*, *-ere*, *-ire*, with corresponding past participles in *-ato*, *-uto*, *-ito*. Spanish infinitives commonly end in *-ar*, *-er*, *-ir*, with corresponding past participles in *-ado*, *-ido*, *-ido*. In all the Romance languages, substantives are most commonly formed, as in French, from the Latin accusative.

Words of Celtic origin form a particularly slippery subject to deal with, for want of definite information on their older forms in a conveniently accessible arrangement. That English has borrowed several words from Celtic cannot be doubted, but we must take care not to multiply the number of these unduly. Again, "Celtic" is merely a general term, and in itself means nothing definite, just as "Teutonic" and "Romance" are general terms. To prove that a word is Celtic, we must first show that the word is borrowed from one of the Celtic languages, as Irish, Gaelic, Welsh, Cornish or Breton, or that it is of a form which, by the help of these languages, can be fairly presumed to have existed in the Celtic of an early period. The chief difficulty lies in the fact that Welsh, Irish, Cornish and Gaelic have all borrowed English words at various periods, and Gaelic has certainly also borrowed some words from Scandinavian, as history tells us must have been the case. We gain, however, some assistance by comparing all the languages of this class together, and again, by comparing them with Latin, Greek, Sanskrit, etc., since the Celtic consonants often agree with these, and, at the same time, differ from Teutonic. Thus the word *boast* is probably Celtic, since it appears in Welsh, Cornish and Gaelic.

CANONS FOR ETYMOLOGY.

The Rev. Walter W. Skeat gives us the following excellent synopsis of this important subject in his "Etymological Dictionary of the English Language":

"In the course of the work, I have been led to adopt the following canons, which merely express well-known principles, and are nothing new. Still, in the form of definite statements, they are worth giving:

"1. Before attempting an etymology, ascertain the earliest form and use of the word; and observe chronology.

"2. Observe history and geography; borrowings are due to actual contact.

"3. Observe phonetic laws, especially those which regulate the mutual relation of consonants in the various Aryan languages, at the same time comparing the vowel-sounds.

"4. In comparing two words, A and B, belonging to the same language, of which A contains the lesser number of syllables, A must be taken to be the more original word, unless we have evidence of contraction or other corruption.

"5. In comparing two words, A and B, belonging to the same language and consisting of the same number of syllables, the older form can usually be distinguished by observing the sound of the principal vowel.

"6. Strong verbs, in the Teutonic languages, and the so-called 'irregular verbs' in Latin, are commonly to be considered as primary, other related forms being taken from them.

"7. The whole of a word, and not a portion only, ought to be reasonably accounted for; and, in tracing changes of form, any infringement of phonetic laws is to be regarded with suspicion.

"8. Mere resemblances of form and apparent connection in sense between languages which have different phonetic laws or no necessary connection are commonly a delusion, and are not to be regarded.

"9. When words in two different languages are more nearly alike than the ordinary phonetic laws would allow, there is a strong probability that one language has borrowed the word from the other. Truly cognate words ought not to be *too much* alike.

"10. It is useless to offer an explanation of an English word which will not *also* explain all the cognate forms.

"These principles, and other similar ones well known to comparative philologists, I have tried to observe. Where I have not done so, there is a chance of a mistake. Corrections can only be made by a more strict observance of the above canons.

"A few examples will make the matter clearer.

"1. The word *surloin*, or *sirloin*, is often said to be derived from the fact that the *loin* was knighted as *Sir Loin* by Charles II., or (according to Richardson) by James I. Chronology makes short work of this statement, the word being in use long before James I. was born. It is one of those unscrupulous inventions with which English 'etymology' abounds, and which many

people admire because they are 'so clever.' The number of those who literally prefer a story about a word to a more prosaic account of it is only too large.

"As to the necessity for ascertaining the oldest form and use of a word there cannot be two opinions. Yet this primary and all-important rule is continually disregarded, and men are found to rush into 'etymologies' without the slightest attempt at investigation or any knowledge of the history of the language, and think nothing of deriving words which exist in Anglo-Saxon from German or Italian. They merely 'think it over,' and take up with the first fancy that comes to hand, which they expect to be 'obvious' to others because they were themselves incapable of doing better; which is a poor argument, indeed. It would be easy to cite some specimens which I have noted (with a view to the possibility of making a small collection of such philological curiosities), but it is hardly necessary. I will rather relate my experience—viz.: that I have frequently set out to find the etymology of a word without any preconceived ideas about it, and usually found that, by the time its earliest use and sense had been fairly traced, the etymology presented itself unasked.

"2. The history of a nation generally accounts for the constituent parts of its language. When an early English word is compared with Hebrew or Coptic, as used to be done in the *old* editions of "Webster's Dictionary," history is set at defiance; and it was a good deed to clear the later editions of all such rubbish. As to geography, there must always be an intelligible geographical contact between races that are supposed to have borrowed words from one another; and this is particularly true of olden times, when travelling was less common. Old French did not borrow words from Portugal, nor did Old English borrow words from Prussia, much less from Finnish or Esthonian or Coptic, etc., etc. Yet there are people who still remain persuaded that *Whitsunday* is derived, of all things, from the German *Pfingsten*.

"3. Few delusions are more common than the comparison of L. *cura* with E. *care*, of Gr. *ἅλας* with E. *whole*, and of Gr. *χάρις* with E. *charity*. I daresay I myself believed in these things for many years, owing to that utter want of any approach to any philological training, for which England in general has long been so remarkable. Yet a very slight (but honest) attempt at understanding the English, the Latin and the Greek alphabets soon shows these notions to be untenable. The E. *care*, A. S. *cearu*, meant, originally, sorrow, which is only a secondary meaning of the Latin word; it never meant, originally, attention or painstaking. But this is not the point at present under consideration. Phonetically, the A. S. *c* and the L. *c*, when used initially, do not correspond; for where Latin writes *c* at the beginning of a word, A. S. has *h*, as in L. *cel-are*=A. S. *hel-an*, to hide. Again, the A. S. *ea*, before *r* following, stands for original *a*, *cearu* answering to an older *caru*. But

the L. *cara*, Old Latin *coira*, is spelt with a long *ā*, originally a diphthong, which cannot answer exactly to an original *a*. It remains that these words both contain the letter *r* in common, which is not denied; but this is a slight ground for the supposed equivalence of words of which the primary senses were different. The fact of the equivalence of L. *c* to A. S. *h* is commonly known as being due to Grimm's Law. The popular notions about Grimm's Law are extremely vague. Many imagine that Grimm made the law not many years ago, since which time Latin and Anglo-Saxon have been bound to obey it. But the word *law* is then strangely misapprehended; it is only a law in the sense of *an observed fact*. Latin and Anglo-Saxon were thus differentiated in times preceding the earliest record of the latter, and the difference might have been observed in the eighth century if anyone had had the wits to observe it. When the difference has once been perceived, and all other A. S. and Latin equivalent words are seen to follow it, we cannot consent to *establish an exception* to the rule in order to compare a single (supposed) pair of words which do not agree in the vowel-sound, and did not originally mean the same thing.

"As to the Gr. *ἰσος*, the aspirate (as usual) represents an original *s*, so that *ἰσος* answers to Sans. *sarva*, all, Old Lat. *sollus*, whilst it means 'whole' in the sense of entire or total. But the A. S. *hāl* (which is the old spelling of *whole*) has for its initial letter an *h*, answering to Gr. *κ*, and the original sense is 'in sound health,' or 'hale and hearty.' It may much more reasonably be compared with the Gr. *καλός*; as to which see Curtius, i. 172. As to *χάρις*, the initial letter is *χ*, a guttural sound answering to Lat. *h* or *g*, and it is, in fact, allied to L. *gratia*. But in *charity*, the *ch* is French, due to a peculiar pronunciation of the Lat. *c*, and the Fr. *charité* is, of course, due to the L. acc. *caritatem*, whence also Ital. *caritate* or *carità*, Span. *caridad*, all from L. *cārus*, with long *ā*. When we put *χάρις* and *cārus* side by side, we find that the initial letters are different, that the vowels are different, and that, just as in the case of *cearu* and *cura*, the sole resemblance is that they both contain the letter *r*! It is not worth while to pursue the subject further. Those who are confirmed in their prejudices and have no guide but the ear (which they neglect to train), will remain of the same opinion still; but some beginners may perhaps take heed, and if they do, will see matters in a new light. To all who have acquired any philological knowledge, these things are wearisome.

"4. Suppose we take two Latin words such as *caritas* and *carus*. The former has a stem *car-i-tat-*; the latter has a stem *car-o-*, which may very easily turn into *car-i-*. We are perfectly confident that the adjective came first into existence, and that the sb. was made out of it by adding a suffix; and this we can tell by a glance at the words, by the very form of them. It is a rule in all Aryan languages that words started from monosyllabic roots or bases, and were built up by supplying new suffixes at the end; and, the greater the number of suffixes, the later the formation. When apparent exceptions to this law present themselves, they require especial attention; but as long as the law is followed, it is all in the natural course of things. Simple as this canon seems, it is frequently not observed; the consequence being that a word *A* is said to be derived from *B*, whereas *B* is its own offspring. The result is a reasoning in a circle, as it is called; we go round and round, but there is no progress upward and backward, which is the direction in which we should travel. Thus Richardson derives *chine* from 'Fr. *echine*,' and this from 'Fr. *echiner*, to chine, divide, or break the back of (Cotgrave), probably from the A. S. *cinan*, to chine, chink or rive.' From the absurdity of deriving the 'Fr. *echiner*' from the 'A. S. *cinan*' he might have been saved at the outset, by remembering that, instead of *echine* being derived from the verb *echiner*, it is obvious that *echiner*, to break the back of, is derived from *echine*, the back, as Cotgrave certainly meant us to understand; see *eschine*, *eschiner* in 'Cotgrave's Dictionary.' Putting *eschine* and *eschiner* side by side, the shorter form is the more original.

"5. This canon, requiring us to compare vowel sounds, is a little more difficult, but it is extremely important. In many dictionaries it is utterly neglected, whereas the information to be obtained from vowels is often extremely certain; and few things are more beautifully regular than the occasionally complex, yet often decisive manner in which, especially in the Teutonic languages, one vowel-sound is deduced from another. The very fact that the A. S. *é* is a modification of *ó* tells us at once that *fédan*, to feed, is a derivative of *fód*, food; and that to derive *food* from *feed* is simply impossible. In the same way the vowel *e* in the verb to *set* owes its very existence to the vowel *a* in the past tense of the verb to *sit*; and so on in countless instances.

"The other canons require no particular comment."

SPEECH AS A BARRIER BETWEEN MAN AND BEAST.

If we ask, Are irrational animals endowed with the faculty of speech? we are met by three sections of advanced scientists at the very threshold of the discussion. The skeptic is in doubt as to whether there is any such distinction as the distinction between rational and irrational animals. The agnostic does not know—and claims no one else can know—whether there is any such distinction or not. The monistic philosopher, Ernst Heinrich Haeckel, endeavors to prove in "Evolution of Man" that Reason, as a frontier post between Man and Beast, is altogether untenable. Either we must take Reason in its narrow sense, argues Haeckel—and in that case it is lacking in most Men as well as in the lower animals; or we must take it in its broader and lower sense, in which case it is present in such animals as the Horse, Elephant, Dog and Ape, as well as in the human species. Under such circumstances it is evident that we cannot satisfactorily discuss the question by beginning at either Reason or Speech as a barrier between Man and Beast. If the atheistic evolution or development theory has been established, there is no distinction or barrier between Man and Beast, except a mere matter of higher development in the former than in the latter. Beasts have both Speech and Reason as well as Man has, and there is no barrier here. Going still further down the scale of organisms, we reach forms of life which have nothing but skullless brain-bladders. The Mind in these organisms cannot develop with its organ, the brain, for the brain has not yet differentiated in them. At this point in the scale, at all events, development of Mind has not yet begun.

We hold that atheistic evolution cannot stand, unless it stands as an entirety. The question is not, Does Reason develop in connection with its organ, the brain? as Haeckel discusses it; but does Reason develop gradually all along the line—from the undifferentiated Amœba, up through skullless brain-bladders, and, finally, in connection with its organ, the brain, in the higher Beasts and in Man? Was it Reason, or merely intelligence, which was developing, all along the line, until Man came upon the scene? If it is Reason, as between Man and the higher Beasts, why not Reason, as between the primitive slime and Protomonas?

If we begin to call it Reason, as distinct from intelligence, anywhere in the line of development, why not begin at Man? Does not Man—even the Australian Bushman—show an intelligence which even in its degradation is quite distinct from the intelligence of the Ape? Haeckel quotes with approval the lines of Goethe's "Mephistopheles":

"He calls it Reason, but thou see'st
Its use but makes him beastlier than the beast."

Instinct keeps the beast within the bounds of nature, but reason conferred upon the Bushman, and upon others besides the Bushman, is a dangerous possession. It controls nature. Here is the dividing line. This is human Reason, with its almost limitless

powers of investigation; its ability to stifle the voice of instinct, not only for high good, but for base evil; its strange, contradictory power of either looking forward to a higher destiny in a Hereafter, or of looking backward to the unclean Ape, as a near relative, without the faintest idea of ever associating with it, or trying to form it into a new political party. Whereas the Anthropoid Apes are supposed to have differentiated from common Apes, and finally into Men, mostly by withdrawing themselves from association with the coarser Apes, this human Reason is capable, in the case of Ernst Haeckel, of looking upon the Anthropoid Ape as a more suitable ancestor than a "God-like Adam," and nevertheless develops into a giant intellect of the nineteenth century. Man can think as he sees fit about his relations with Apes and "other cattle," and yet remain Man; but if the Anthropoid Apes had not gone off by themselves and commenced to chatter and talk and get their heads together, so the coarser Apes could not understand them, they would never have differentiated; and even Evolution itself could never have changed them into even Bushmen, much less into the sagacious Lake-Dwellers of Switzerland, or the liberty-loving Mound-Builders of these States.

With these limitations as to the development of human from brutal intelligence, we have no objections to urge against a notable article in the *Atlantic Monthly* for September, 1891, by Mr. E. P. Evans, on "Speech as a Barrier between Man and Beast." In reply to Max Müller's dictum that "no animal has ever spoken," Mr. E. P. Evans asserts that parrots and ravens utter articulate sounds as distinctly as the average cockney, and in most cases make quite as intelligent and edifying use of them for the expression of ideas. Again: "In the course of ages, and as the result of long processes of evolution and transformation, monkeys have learned to speak, but when they have acquired this faculty we call them men."

If we call them Men, instead of Monkeys, when they have gained the power of speech, the question is, Do we, as it were, call them by their right name? Is it proper, scientific, to make the distinction? If it is not, then Man is not only descended from the unclean Ape, but he is a shameless pretender, usurper and tyrant. He snatches from the monkey the priceless heritage of speech, and hies him to cities and towns, leaving in the woods of barbarous countries the sagacious little animals which he has robbed—and which now, perforce, chatter and pine away, while Man takes comfort and enjoys even free speech. On the other hand, if it is true that Man alone can justly lay claim to the power of speech, then, of course, speech is a barrier between man and beast. Is it an insurmountable barrier? According to Mr. E. P. Evans, when the Monkey speaks we call it Man. In this sense the barrier of speech is an insurmountable barrier; where speech begins the beast ends.

But does human speech develop from brutal speech?

Max Müller stops at roots or "phonetic cells" as "ultimate facts in the analysis of language," and virtually says to the philologist, "Thus far shalt thou go, and no further, and here shall thy researches be stayed." "The scholar," he declares, "begins and ends with these phonetic types; or, if he ignores them, and traces words back to the cries of animals or to the interjections of men, he does so at his peril. The philosopher goes beyond, and he discovers in the line which separates rational from emotional language, conceptual from intuitional knowledge—in the roots of language he discovers the true barrier between Man and Beast."

Replying to this argument, Mr. Evans declares that the philologist, who recognizes in the roots of language the Ultima Thule beyond which he dare not push his investigations, confesses thereby his incompetency to solve the problem of the origin of language, and must resign this field of inquiry to the zoöpsychologist, who, freeing himself from the trammels and illusions of metaphysics, seeks to find a firm basis for his science in the strict and systematic study of facts. Imagine the folly of the physiologist who should say to his fellow-scientists: "In your researches you must begin and end with cells. If, in studying organic structures, you go back of cells and endeavor to discover the laws underlying their origin, you do so at your peril. Beware of the dangerous seductions of cytoblast and cytogenesis and treacherous quagmires of protoplasm."

In this, Mr. E. P. Evans presumes that the "origin of cells" has been clearly traced. If there is good advice to be found anywhere on the subject of the shadowy development and spontaneous generation which precedes the cell in atheistic evolution, that advice would be, Do not say you understand how primitive slime in the bottom of the primordial sea ever became a thing of life and a cell—unless you do understand it. Unless you see that such might have been the fact, do not say that you so see. If the tracing of the roots of human language from the roots of brutal language is to depend on anything like the arguments adduced by Haeckel in his attempt to make cells out of primitive slime, then indeed do the roots of monkey language need careful mulling for a few more winters.

But Mr. Evans admits it is only natural that the philologist should think thus, being so absorbed in the laws which govern the transmutation of words that he comes to regard these metamorphoses as finalities, and never goes behind and beyond them. We must look, therefore, not to comparative philology, but to comparative psychology, for the discovery of the origin of language. Philology has to do with the growth and development of speech out of roots, which are assumed to be ultimate and unanalyzable elements, like the purely hypothetical particles which the physicist calls atoms; but as to the nature and genesis of roots themselves the philologist of to-day is as puzzled and perplexed as was the old Vedic poet, when, in the presence of the universe and its mysterious generation, he could only utter the pathetic and helpless cry, "Who, indeed, knows, who can declare, whence it sprang, whence this evolution?"

"Show me only one root in the language of animals," says Max Müller, "such as *ak*, to be sharp and quick, and from it two derivatives, as *aspa*, the quick one—the horse—and *acutus*, sharp or quick-witted; nay, show me one animal that has the power of forming roots, that can put one and two together, and realize the simplest dual concept; show me one animal that can think and say 'two,' and I should say that,

so far as language is concerned, we cannot oppose Mr. Darwin's argument, and that Man has, or at least may have been, developed from some lower animal."

Mr. Evans replies that according to the theory of evolution the language of animals has not yet reached the root stage and never can reach it; for it would then become articulate speech, and be no longer the language of animals, but the language of Man. But this is surely no evidence or indication that one may not grow out of the other; on the contrary, it rather suggests the possibility of such growth and development.

We cannot be certain, however, that animals may not have general concepts. When a dog, in eager pursuit of some object, yelps, *ak-ak*, how do we know that this sharp utterance, which expresses the strong and impatient desire of the dog to overtake the object, may not stand in the canine mind for the general concept of quickness? It is used in pursuing all animals and inanimate things—bird, hare, squirrel, stick or stone—and cannot therefore denote any single one of them, but must have a general signification. For aught we know, the language of animals may be made up of undeveloped roots vaguely expressive of general concepts, or may even contain derivative sounds.

Mr. Darwin asserted that, since becoming domesticated, the dog has learned to bark in as many as five or six distinct tones: eagerness, as in the chase; anger, as well as growling; the yelp or howl of despair, when shut up; the baying at night; the bark of joy, when starting on a walk with his master; and the very distinct one of demand or supplication, as when wishing for a door or window to be opened.

Says Mr. E. P. Evans: "This variety of tones, expressing different desires and emotions in an animal that, in its wild state, could not bark at all, marks a very considerable advance in the power of vocal utterance as the result of association with man."

In closing this very curious and highly entertaining article, Mr. Evans thinks it would be superfluous to multiply instances of the capability of understanding articulate speech manifested by monkeys, horses, dogs, cats, elephants, birds, and other animals that acquire this power, as children do, through the ear and by the exercise of attention. They also show a nice discrimination in distinguishing between words similar in sound. A parrot or a raven masters a new sentence by repeating it, and working at it, just as a school-boy solves a hard problem. These birds associate sounds with objects, and thus invent names for them. Every dog is a "bow-wow," and every cat a "miaumiau." The denotive term has an onomato-poetic origin, and by the process of generalization is applied to all animals of the species; it is not necessary that the parrot should have heard each individual dog bark or cat mew before giving it its appropriate name. A raven belonging to Gotthard Heidegger, a clergyman and rector of the gymnasium in Zürich, was constantly picking up words dropped in general conversation, and using them afterward in the most surprising manner.

Even animals whose laryngeal apparatus is not structurally adapted to the production of articulate sounds may be taught to utter them. Leibnitz mentions a dog which had learned to pronounce thirty words distinctly. In the *Dumfries Journal* of January, 1829, an account is given of a dog which called out "William" so as to be clearly understood; and Mr. Romanes cites the case of an English terrier which had been taught to say, "How are you, grandmam?" The careful and systematic experiments now being made in this direction by Professor A. Graham Bell

and other scientists are exceedingly interesting, and may lead to important results.

In view of these facts, it is evident that the barrier between human and animal intelligence, once deemed impassable, is becoming more and more imperceptible, and with the rapid progress of zoöpsychological research will soon disappear altogether. "When we remember," says Professor Sayce, "the inarticulate clicks which still form part of the Bushman's language, it would seem as if no line of division could be drawn between Man and Beast, even when language is made the test." Apes make use of similar clicks for a like purpose, and these sounds are doubtless survivals of speech before it became distinctively articulate.

Whatever may be the value of the facts presented by Mr. Evans, it cannot be disputed that the whole theory of atheistic evolution has one apparently insurmountable barrier to overcome before it can be generally accepted by the great majority of men. This barrier Haeckel calls "human arrogance." Man's instinctive dislike to be told that he is the same—only a little different, owing to adaptation—as the Ape that grins at him in the menagerie and pays no taxes; and that Man's mind, "the human reason" which evolutionists are wont to ridicule, does not separate him from the American Ape with the flat nose that claims relationship with the Mound-Builders, nor from the foreign Ape with the up-and-down nose, that used to throw coconuts, worth ten cents each, at English sailors, to keep the sailors from climbing the trees to get them: this instinctive dislike is called "human arrogance." Haeckel avers that this prejudice is very unbecoming in people who sometimes lay claim to a proper and highly becoming humility of spirit.

We propose to show, among other things, that in this Haeckel, and all who believe as he does, are turning traitor to their own species. If the struggle for existence and progress among organisms are at work among all living beings, let us *think* we are not related to the Ape and such cattle, even if we are. Was it not such arrogance as this, according to evolution, that caused a few choice Apes to go off by themselves as a select set and develop into Men-Apes, then into Ape-Men, and, finally, to drop the *Ape* from their family name altogether? Did not this arrogance in the course of time cause them to go in out of the rain and cold and heat, so that they eventually shed their hair, for the most part? What caused them to get their heads together and talk, instead of chattering, so that the "cawser" Apes could not know what they were saying—if it was not arrogance? Could anything but arrogance impel them to make flint arrowheads with which to kill the cave-bear for a grand reception dinner of the select set, instead of climbing a tree to get away from Bruin? Mere "humility of spirit" and knowing "Man's Place in Nature" as well as a disciple of Huxley says he does, would have caused the bottom to drop out of the whole enterprise; and the other Apes would have laugh on the select few, who had great expectations and absurd pretensions without the ability to realize on them.

Huxley's Law gives, in substance, the following account of the "Place in Nature" occupied, for example, by your baby boy, one year old, in whom neither reason nor speech has yet awakened: "Your child is less above the Ape of the future, and perhaps of the present, than a human of the future, or perhaps of the present, is above him. This child may be nearer to the Ape in every essential characteristic than he is to a highly-developed human. When your child is old enough to study, let him first learn

'Man's Place in Nature' from the 'only' Huxley. He will then entertain a fellow-feeling for the Ape as an unfortunate, poor relation who was left behind in 'natural selection or the struggle for existence,' etc., even more so than for a next-door neighbor who lacks force of character and general organic strength, because of certain habits and traits in his parents. Your child should be trained to point with pride to an ambitious, go-ahead Ape-Man from which came children who could build a fire and others *which* hung head downward from a tree by their tails—and are doing it yet—to amuse some attractive female Ape.

"It is far nobler to have such an ancestor, who had two kinds of children, some with erect mien, who broke the old Man-Ape's heart by their insubordination, arrogance and strange, outlandish, articulate chattering—this is the crowd you and your child are descended from—and others, who were only collateral relatives to your child and you, and who stayed with their progenitor, comforted his declining years by making him eat at the second table, if he could find anything, and finally let him die and rot on top of the ground to save funeral expenses. It is far nobler, we monists say, to have such a versatile, though badly used ancestor, than to be descended from a God-like Adam, whom the 'black International,' and the rest of the churches tell you about, for the sole purpose of getting your money, tickling your vanity and keeping you in ecclesiastical leading strings. Bear in mind, now, we do not say that Man is descended from the Ape. In fact, we hold that these low-down, flat-nosed, long-tailed American Apes are not in any way connected with Man's descent, and only very slightly, as a mere offshoot, with man's pedigree. What we say and can easily prove, if you will just bear in mind the natural descent of Man from the lower animal, is this: That Men and Apes are both descended from the same parent; that this same parent form is probably extinct; that if it is not, we will probably find *him* somewhere in Africa or Asia. It or he is either black, yellow or brown; either Mongolian, Malay or Ethiopian. The real Apes that you and your little boy are descended from never came to America until they became Men."

Exciting prejudice against the development theory is entirely uncalled for, as intense prejudice against it already exists. We distinctly disclaim any attempt to do so in asking the reader to take monism home to himself, especially the "Ape Question." The argument that the foregoing enforces and illustrates is this: Adaptation is one of the mechanical causes of atheistic evolution. In this a prominent factor is a sense of superiority, pride, arrogance, on the part of individuals of a species who are about to change their habits of life, to submit to the mechanical cause or law of adaptation—to develop, as man is said to have done, from the Ape-Man parent form. This is a fixed and unalterable law; it is *necessary*, this causal connection between a sense of superiority, pride and arrogance, and the change in the habits of life. If that sense of superiority was necessary as between Ape-Men and other Ape-Men—the sense of superiority on the part of Man toward Apes—the customary "arrogance" is much more necessary, and Man *cannot think* that he is allied to Apes. The atheistic evolutionists are men. Therefore they cannot think that their views on the Ape Question are anything but arrant nonsense. Their readers are Men, therefore they cannot think what these monistic books try to prove. As between Men, those individuals *compelled*, by atheistic evolution, to rise not at all or very slowly above their present condition, cannot think themselves equal to those above

them; and those who are compelled to rise cannot but look down upon their weaker brethren. This last is a distinction within the species; the other is a distinction between one species and another. Finally, what the human mind cannot think—but must think the contrary—is not true. Therefore, by the atheistic evolutionist's own laws, and according to his *necessary* connection between cause and effect, Man is not descended from, nor allied to, the Ape nor an Ape-Man form.

In this we are grasping a really vital point, if connection between cause and effect everywhere is necessary, inevitable. When Man differentiated from Ape-Men, as the latter had previously differentiated from Apes, it was *necessary* that the "progressive element," the "only" Men in the one case, and the "only" Ape-Men in the other, should consider themselves, after a few generations, as entirely distinct from Apes in the one case and Ape-Men in the other. Now, instead of a few generations, give us an epoch, or even an age, or a few thousand years; then give us a general migration

to a country where Apes and Ape-Men did not intrude to remind the emigrants of their discreditable pedigree; add Heredity and Adaptation and the Struggle for Existence; contemplate the weeding out of the ne'er-do-weels; bring Natural Selection upon the scene, whereby male and female of the weaker class, and of others more worthy, are snubbed and jilted and swindled out of their property and given over to dishonest guardians, executors, administrators and assigns, and allowed to die bachelors and old maids; let this continue among the emigrants for a few thousand years, and we will show you a race under the control of the fixed and unalterable laws of Heredity and Adaptation to such an extent that they *cannot* think themselves allied to Apes or Ape-Men. And what the human mind cannot think—but must think the contrary—is false. At all events, why waste time and talents trying to make the human species think that, the contrary of which the "only" evolution theory compels us to think?

TABLE OF DIVISIONS OF THE ARYAN LANGUAGES.

THE English language—the offspring of the Anglo-Saxon—is one of the Low German dialects which form part of the Teutonic branch of the Indo-European or Aryan languages.

The Aryan languages may be divided into six principal branches:

I. INDIAN.	II. PERSIC.	III. CELTIC.	IV. GRÆCO-LATIN.	V. TEUTONIC.	VI. SLAVONIC.
---------------	----------------	-----------------	---------------------	-----------------	------------------

The Teutonic branch is divided into three classes, the Low German, High German and Scandinavian:

GRIMM'S LAW OF THE INTERCHANGE OF CONSONANT SOUNDS.

THE evidence that the group of languages known as the Aryan languages form a family—that is, are all sister-dialects of one common mother-tongue—consists in their grammatical forms being the same, and in their having a great many words in common. In judging whether an individual word in one of these tongues is really the same with a word in another of the tongues, we are no longer guided by mere similarity of sound; on the contrary, identity of sound is generally a presumption that a proposed etymology is wrong. Words are constantly undergoing change, and each language follows its own fashion in making those changes. Corresponding words, therefore, in the several languages must, as a rule, in the long course of ages have come to differ greatly; and these differences follow certain laws which it is possible to ascertain. Unless, then, a proposed identification accord with those laws, it is inadmissible. We are not at liberty to suppose any arbitrary omission of a letter, or substitution of one letter for another, as was the fashion in the old guessing school of etymology.

Of the laws of interchange of sounds in the Indo-European family, the most important is that known as Grimm's Law, so called after the famous German philologist who investigated it. It exhibits the relations found to exist between the consonant sounds in three groups of the Aryan languages—namely, (1) the Classical, including Sanskrit, Greek and Latin; (2) Low German, which we may take Gothic and English as representing; (3) High German, especially Old High German, in which the Law is more consistently carried out than in modern High German.

The scope of the Law is confined to the interchanges among the following consonant sounds, which are here arranged so as to show their relations to one another:

	Sharp.	Flat.	Aspirate.
Labial.....	p	b	f (v)
Linguo-dental.....	t	d	th (z)
Guttural.....	k (c)	g	ch (h)

The horizontal division into three orders depends on the organ chiefly used in the utterance. The differences between the vertical series are more easily felt than described. Pronounce first *ip* and then *ib*; in the first the lips are completely closed, and the sound or voice from the larynx abruptly cut off. In the second the lips are also completely shut, but a muffled voice is continued for a moment; it is produced by the vocal chords being still kept in a state of tension, and the breath continuing to issue through them into the cavity of the mouth for a brief space after the lips are closed. Next pronounce *if*; in this, although the voice-sound abruptly ceases, the lip-aperture is not so completely

closed but that a thin stream of breath continues to escape with the sound of a whisper. Hence the name *aspirate* given to such articulations. Now, interchanges do take place between members of these vertical series—that is, one sharp takes the place of another, as in Welsh, *pen*; Gaelic, *kin*; or in Russian, *Feodor* for *Theodore*. Such instances, however, are comparatively rare and sporadic. It is between members of the horizontal orders that interchanges chiefly take place—that is, labials with labials, dentals with dentals, etc.; and it is with these interchanges that Grimm's Law deals.

The substance of the Law may be presented in a tabular form, as follows:

(1) Classical.....	Sharp.	Flat.	Aspirate
(2) Low German.....	Aspirate.	Sharp.	Flat.
(3) High German.....	Flat.	Aspirate.	Sharp.

The table may be thus read: A classical sharp labial, as *p*, is represented in Low German by the aspirate labial *f*, and in High German by the flat labial *b*; and so of the other orders.

It will be observed that there are a good many exceptions to the Law, especially in the case of the aspirates; the influence of adjoining letters often causes anomalies. The Law holds good oftenest in the beginning of words.

The same *dualism* underlies the nature and condition of man."—*Emerson*. Hence—(a) the philosophical exposition of the nature of things by the adoption of two dissimilar primitive principles not derived from each other. *Dualism* is chiefly confined to the adoption of two fundamental beings, a good and an evil one, as is done in the oriental religions, and to the adoption of two different principles in man, viz. a spiritual and a corporeal principle. In its wild state the male is characterized by the deep green of the plumage of the head and neck, by a white collar separating the green from the dark chestnut of the lower part of the neck, and by having the four middle feathers of the tail recurved. The wild-duck is taken in large quantities by decoys and other means, in Lincolnshire, England, and Picardy, France. The modern instrument consists of a shallow trapezium-shaped box without a top, across which runs a series of wires, tuned by pegs at the sides, and played on by being struck by two cork-headed hammers. It is in much less common use in Europe now than it was a century or two ago, and is interesting chiefly as being the prototype of the piano. It is still, how-

ever, occasionally to be met with on the Continent at rustic rejoicings, and in England in the hands of street musicians. In Asia it is especially used by the Arabs and Persians, as well as by the Chinese and Japanese, with, however, great modifications in structure and arrangements. The ancient eastern dulcimer, as represented in Assyrian bas-reliefs, seems to have differed from the modern instrument in being carried before the player by a belt over the shoulder, in the strings running from top to bottom, as in the violin, and in being played by one plectrum, the left hand being apparently employed either to twang the strings or to check vibration. DUTCH, dučh, *n.* originally the Germanic race: the German peoples generally: now only applied to the people of Holland. "The word comes from *theod*, people or nation; each nation, of course, thinking itself the people or nation above all others. And the opposite to *Dutch* is *Welsh*—that is, *strange*, from *wealth*, a stranger. In our forefathers' way of speaking, whatever they could understand was *Dutch*, the tongue of the people, whatever they could not understand they called *Welsh*, the tongue of the stranger. 'All lands, *Dutch* and *Welsh*,' is a common phrase to express the whole world. This is the reason why, when

our forefathers came into Britain, they called the people whom they found on the land the *Welsh*. For the same reason, the Teutons on the Continent have always called the Latin-speaking nations with whom they have had to do—Italian, Provençal, and French—*Welsh*. People who know only the modern use of the words might be puzzled if they turned to some of the old Swiss chronicles, and found the war between the Swiss and Duke Charles of Burgundy always spoken of as a war between the *Dutch* and the *Welsh*. Any one who knows German will be at once ready with instances of this use of the word, sometimes meaning *strange*, or *foreign* in the general sense, sometimes meaning particularly French or Italian. The last case which I know of the word being used in England in the wide sense is in Sir Thomas Smith's book on the Government of England, written in the time of Queen Elizabeth, where he speaks of 'such as be *walsh* and *foreign*,' not meaning Britons in particular, but any people whose tongue cannot be understood."—*E. A. Freeman*. [Ger. *deutsch*, German; O. Ger. *diutisc*, from *diot*, A.S. *theod*, Goth. *thiud*, people.]

EGG, eg, *n.* the body formed in the females of all animals (with the exception of a few of the lowest type, which are reproduced by gemmation or division), in which, by impregnation, the development of the fetus takes place. Regarded physiologically there are three essential parts in an egg, viz. the germinal spot, or Wagnerian vesicle; the germinal, or Purkinjean vesicle; and the vitellus or yolk—the first being contained in the germinal vesicle, which again is contained within the body of the yolk. The eggs of most animals lower than the bird have no more than these three parts. The eggs of birds, however, have, besides these, the white, or albumen, and the shell, which consists of a membrane coated with carbonate of lime. The yolk consists of a strong solution of albumen, in which multitudes of minute globules of oil are suspended. A hen's egg of good size weighs about 1000 grains, of which the white constitutes 600, the yolk 300, and the shell 100. Eggs of domestic fowls, and of certain wild fowls, as the plover, gulls, etc., are an important article of commerce, and furnish a wholesome, nutritious, and very pleasant article of diet. The eggs of turtles are also held in high esteem. Animals whose young do not leave the egg till after it is laid are called *oviparous*; those in which the eggs are retained within the parent body until they are hatched are called *ovoviviparous*. [A. S. *æg*; like Ice. *egg*, Dan. *æg*. The sound of *g* was sometimes softened, giving O. E. *eye* or *ey*, as "gos *eye*," goose egg, in Piers the Plowman's Crede: "an *ey* or *tweye*." *Chaucer*; cf. Ger. and Dut. *ei*. See **ELECTRIC LIGHT** below.—**ELECTRIC LIGHT**, a brilliant light, the result of heat produced by the force of electricity either evoked by the chemical reaction of a metal and an acid, or generated by a magneto-electric or other machine. The *arc light* is produced when two carbon pencils are attached to the electrodes of a powerful magneto-electric machine or galvanic battery, and their points are brought together long enough to establish the electric current. If they are then separated to a small distance, varying according to the strength of the current, the current will continue to flow, leaping across from carbon to carbon, emitting a light of great intensity at the space between the points. The name *Voltaic* or *electric arc* is given to that portion where the current leaps across from point to point, the term *arc* being suggested by the curved form which the current here takes. The *incandescence light* is obtained by the incandescence, by means of electricity, of various substances, including carbon, in a vacuum. Many forms of apparatus are in use for producing the electric light, distinguished either by the form of the generating machine, the distribution of the current, or the kind of burner. In the *Jablochkoff*

light, the burner consists of a pair of carbon spindles placed parallel to one another, with an insulating earthy substance between them. Its combustion may be roughly compared to that of an ordinary candle, where the earthy substance takes the place of the wick. Other forms of the "candle" burners are in use, such as the Lontin, the Jamin, etc. The Maxim, Edison, and Swan lights proceed from an incandescent filament of carbon in a more or less perfect vacuum.—ELECTRIC MACHINE. Besides machines in which electricity is excited by friction, electric machines are now common in which an electric current is generated by the revolution near the poles of a magnet or magnets of one or more soft-iron cores surrounded by coils of wire, these machines being known distinctively as *magneto-electric machines*. A *dynamo-electric machine* is a machine of this kind, in which the induced currents are made to circulate round the soft-iron magnet which produced them, thus increasing its magnetization. This again produces a proportionate increase in the induced currents, and thus by a successive alternation of mutual actions very intense magnetization and very powerful currents are speedily obtained. There are many forms of these machines, such as Gramme's, Siemens', Wilde's, Brush's, etc., used extensively in electric lighting, and as a motor for machinery, electric railways, etc.—ELECTRIC PENDULUM, a form of electroscope consisting of a pith ball suspended by a non-conducting thread.—ELECTRIC RAILWAY, a railway on which electricity is the motive power. Many cities in U.S. now have electric street railways. On one of these the wheels of the carriages are set in motion by a dynamo-electric machine placed between them and below the floor. This machine is actuated by an electric current produced by another dynamo-electric machine, which is stationary and driven at a high rate of speed by a steam-engine. The current is conveyed by underground wires to the rails, and these being insulated, it reaches the carriage through them. Splendid and costly temples are dedicated to these animals; hospitals are built for their reception when sick or wounded; large fortunes are bequeathed for their support; and the laws of the land, which compound for the murder of a man by a trifling fine, affix the punishment of death to the slaughter of a monkey. Thus cherished and protected, the *entellus* abounds over almost every part of India, enters the houses and gardens of the natives, and plunders them of fruit and eatables at will. At last an English brewer hit upon a beverage which was considered to combine the flavors of the other three, and to this was given the name of *entire*, as being drawn from the cask at once and not necessitating any mixing. As it was much drunk by porters and other working people, it by-and-by received the name of porter. "With righteousness shall he judge the world, and the people with equity."—*Ps. xcvi. 9*: in *law*, an equitable claim. "I consider the wife's equity to be too well settled to be shaken."—*Kent*: a term about which, when applied to a scheme of jurisprudence, there is some confusion. Its three leading senses are distinguished thus: (a) taken broadly, equity means the doing unto all men as we would that they should do unto us; (b) in a narrower sense, equity is used in contradistinction to strict law: it expounds and limits the language of the positive laws, and construes them, not according to their strict letter, but rather in their reasonable and benignant spirit; (c) in the sense in which it is to be understood as the substantial justice expounded by all courts of equity, it is the system of supplemental law administered in these, founded upon defined rules, recorded precedents, and established principles, the judges, however, liberally expounding and developing them to meet new exigencies. While it aims to assist the defects of the common law, by extending relief to those rights of property which the strict law does not recognize, and by giving more ample and distributive redress than the ordinary tribunals afford, equity by no means either controls, mitigates, or supersedes the common law, but rather guides itself by its analogies, and does not assume any power to subvert its doctrines. The Court of Chancery was formerly in England the especial court of equity, but large powers were by the Judicature Act of 1873 given to all the divisions of the Supreme Court to administer equity, although many matters of equitable jurisdiction are still left to the chancery division in the first instance. In the U. S. the circuit and county courts have original jurisdiction in most chancery or equity cases, wherein remedies and reliefs are sought which the rigid enforcement of the statutes, in civil

cases, would preclude. "Equity is a roguish thing; for law, we have a measure, know what to trust to: equity is according to the conscience of him that is chancellor, and, as that is larger or narrower, so is equity."—*Selden*.—EQUITY OF A STATUTE, the construction of a statute in accordance with its reason and spirit, and not according to the mere letter.—EQUITY OF REDEMPTION, in law, the advantage allowed to a mortgager of a reasonable time to redeem lands mortgaged, when the estate is of greater value than the sum for which it was mortgaged. ER, affix: a termination of many English nouns, converting the word to which it is added into a noun of agency. It is the Teutonic form equivalent to the Latin *-or*, and native words may be roughly distinguished from words of Latin origin by this distinction; as, hearer, learner, doer, teacher, from auditor, instructor, factor, doctor. It was formerly a sign of the masculine gender—*-stre*, *-ster* indicating the feminine; thus weaver, baker, malter, singer, brewer were masculine; *webster*, *bakester* (*baxter*), *maltester*, *songster*, *brewster*, feminine. In spinner and spinster the distinction is still to some extent observed. Generally, however, the termination does not indicate gender in any way, some nouns in *-er* signifying a person or thing indifferently, as ruler, heater, grater, poker. Added to names of places it sometimes signifies an inhabitant of, or one that belongs to a place, as Londoner, Berliner, New Yorker; though the terminations *ite*, *an*, and some others are fast supplanting *er*, in the United States, especially: the sign of the comparative degree of adjectives, and akin to Latin comparative termination *-or*, Gr. *-er* in *-eros* an affix to verbs giving them a frequentative, and probably a diminutive sense; as, *swag*, *swagger*; *spit*, *sputter*; *fret*, *fritter*; *pat*, *patter*; *wend*, *wander*.

More: in *geom.* the unfolding or open-

ing of a curve and making it describe an evolute; the equable evolution of the periphery of a circle or other curve is such a gradual approach of the circumference to rectitude as that its parts do not concur and equally evolve or unbind, so that the same line becomes successively a less arc of a reciprocally greater circle, till at last they change into a straight line: in *math.* the extraction of roots from powers; the reverse of involution: (*milit.*) the doubling of ranks or files, wheeling, countermarching, or other motion by which the disposition of troops is changed, in order to attack or defend with more advantage or to occupy a different post; (*naut.*) the change of form and disposition of a fleet or the movements of a single vessel during manœuvres: in *biology*, strictly the theory of generation, in which the germ is held to pre-exist in the parent, and its parts to be unfolded and expanded, but not actually formed by the procreative acts: that theory which sees in the history of all things, organic and inorganic, a passage from simplicity to complexity, from an undifferentiated to a differentiated condition of the elements. Thus the nebular hypothesis, which regards the planetary bodies as evolved from nebular or gaseous matter, and the history of the development of an individual plant or animal, or of society, are examples of evolution. —*Goldsmith*;
individual or particular instance of trial

or observation; "This is what distance does for us, the harsh and bitter features of this or that experience are slowly obliterated and memory begins to look on the past."—*W. Black*; "The like holds good with respect to the relations between sounds and vibrating objects which we learn only by a generalization of experiences."—*H. Spencer*: experiment;

She caused him to make experience Upon wild beasts.—*Shak.*

[Fr. *expérience*, L. *experientia*, from *experior*, to try, to prove—*ex*, and a root *per*, to try, to pass through, whence *peritus*, skilled, *periculum*, danger. The same root is seen in *ferry*, (*way*)*farer*.]

EXPERIENCE, eks-pé'ri-ens, *v.t.* to make practical acquaintance with; to try, or prove, by use, by suffering, or by enjoyment; to have happen to or befall one; as, we all experience pain, sorrow, and pleasure; we experience good and evil; we often experience a change of sentiments and views: to train by practice; to exercise;

The youthful sailors thus with early care Their arms experience and for sea prepare.—*Harte.*

EXPERIENCED, eks-pé'ri-ens-t, *adj.* taught by experience: skillful: wise.

EXPERIENTIAL, eks-pé-ri-en'shal, *adj.* relating to or having experience: derived from experience: empirical. "Again, what are called physical laws—laws of nature—are all generalizations from observation, are only empirical or experiential informations."—*Sir W. Hamilton*. "It is evident that this distinction of necessary and experiential truths involves the same antithesis which we have already considered; the antithesis of thoughts and things. Necessary truths are derived from our own thoughts; experiential truths are derived from our observation of things about us. The opposition of necessary and experiential truths is another aspect of the fundamental antithesis of philosophy."—*Whewell*.

EXPERIENTIALISM, eks-pé-ri-en'shal-izm, *n.* the doctrine that all our knowledge or ideas are derived from the experience of ourselves or others, and that none of them are intuitive.

EXPERIENTIALIST, eks-pé-ri-en'shal-ist, *n.* one who holds the doctrines of experientialism.

EXPERIENTIALIST, eks-pé-ri-en'shal-ist, *adj.* pertaining or relating to experientialism. "The experientialist doctrine thus appears wholly at fault if it means (as it has often been taken by supporters and opponents alike to mean) that all intellection was first sensation in the individual, or even (in a more refined form) that general knowledge is elaborated afresh by each of us from our own experience. . . . It is common to say that inherited aptitudes are, after all, only a slower result of experience, developed in the race instead of the individual; and the like may be said still more evidently of the social tradition deposited in the growing language of mankind. The real bond, however, between experientialists at the present day and those of an earlier time, is that both declare experience to be the test or criterion of general knowledge, let its origin for the individual be what it may. Experientialism is, in short, a philosophical or logical theory, not a psychological one."—*Prof. G. C. Robertson*.

EXPERIMENT, eks-per'i-ment, *n.* a trial: something done to prove some theory, or to discover something unknown.—*v.t.* to

H. Dyer*. [L. *expio*, *expiatum*, to make satisfaction, to purify from crime—*ex*, out, and *pio*, to appease by sacrifice, to propitiate, from *pius*, dutiful, pious, devout.]

EXPLETIVE, eks'ple-tiv, *n.* a word or syllable inserted to fill a vacancy. "What are called expletives in rhetorical treatises are grammatically allied to the interjections, though widely differenced from them by the want of meaning, which the interjection is never without. I can hardly agree with Webster in his definition of the expletive, and still less in the statement with which he concludes it. 'The expletive,' says Webster, 'is a word or syllable not necessary to the sense, but inserted to fill a vacancy or for ornament; the Greek language abounds with expletives.' So far as the word answers no other purpose than 'to fill a vacancy,' it is properly expletive: but if it be appropriate and graceful enough to deserve the name of an 'ornament,' it is not superfluous, and therefore is not an expletive."—*G. P. Marsh*.

Thus, if $z = ax^2 + 2bxy + cy^2$, z is said to be an *explicit function* of x . If, on the other hand, z were connected with x and y by an equation of any other form, it would be called an *implicit function* of the latter. *Brande*.—An **EXPLICIT PROPOSITION** or **DECLARATION** is that in which the words, in their common acceptation, express the true meaning of the person who utters them, and in which there is no ambiguity or disguise. They all approach their prey stealthily, seize it with a spring, and devour it fresh. The species are numerous, and distributed over Europe, Asia, Africa, and America, but none are found in Australia. No species is common to the Old and New Worlds. It infests sugar plantations, and is dreaded alike by man and beast. The tail ends in a horny spine, which scrapes harshly against rough objects, but does not rattle. FERMENTATION, fer'ment-ā'shun, *n.* the conversion of an organic substance into new compounds in presence of a ferment. Fermentation differs in kind according to the nature of the substance which promotes it. Sugar in solution is liable to two principal kinds of fermentation (*vinous* and *lactic*), both of which are probably due to the growth in the liquid of a mould or fungus. Fermentation may be checked or altogether prevented by anything which prevents the growth of the fungus, as by keeping away from the liquid the spores or germs from which the fungus springs, by the liquid being either too hot or too cold for its development, by its containing too much sugar, or by the presence of a substance (called an *antiseptic*) which acts as a poison on the fungus. *Vinous fermentation* is produced by the growth of the yeast-plant (see *YEAST*) ; *lactic fermentation* is due to the presence in the liquid of *Penicillium glaucum* (common blue mould). In *vinous fermentation* the sugar is converted into carbonic acid and alcohol, the nitrogenous element being assimilated by the rapidly developing ova of the ferment. *Lactic fermentation* takes place in milk in the process of becoming sour, when the sugar of the milk is converted into lactic acid. (See under *LACTIC*.) *Acetous*

fermentation occurs in liquids which have already undergone *vinous fermentation*. When exposed to the atmosphere such liquids become sour, and vinegar is produced. This change is probably due to the growth of a fungus, *Mycoderma aceti* (the vinegar-plant). Other kinds of fermentation are *benzoic fermentation*, in which, amongst other matters, the essential oil of bitter almonds is formed ; and *sinapic fermentation*, occurring in mustard moistened with water, during which oil of mustard is produced. For an explanation of fermentation, in relation to the origin and spread of contagious diseases, see *GERM THEORY*.—*Figuratively*, the state of being in high activity or commotion : agitation : excitement, as of the intellect or feelings, a society, etc. "The founders of the English Church wrote and acted in an age of violent intellectual fermentation and of constant action and reaction."—*Macaulay*. FLY-WHEEL, flī-whēl, *n.* in *mech.* a wheel with a heavy rim placed on the revolving shaft of any machinery put in motion by an irregular or intermitting force, for the purpose of rendering the motion equable and regular by means of its momentum. This effect results from a law of nature that all bodies have a tendency to continue in their state either of motion or of rest until acted upon by some extraneous force. Thus the rim of a fly-wheel, after a few revolutions, acquires a momentum sufficient to cause it to revolve with a velocity depending upon the resistance of the machinery and the augmentations and diminutions of the impelling power succeeding each other rapidly, while neither cause acts sufficiently long to either augment or diminish the velocity acquired in any considerable degree; and hence it remains equable or nearly so. A fly-wheel is often used as an accumulator of force; thus, when a small steam-engine sets in motion a very large fly-wheel, the wheel acts as a reservoir of all the small pressures which have been communicated to it, and having thus concentrated them can apply them all together and at once when some great effect is to be produced.

Fogs are more frequent at those seasons of the year when there is a considerable difference of temperature in the different parts of the day. "Have sucked up from the sea contagious fogs." . . . The most powerful of these horns is an instrument called the *siren*, or *siren fog-horn*, after the acoustic instrument of that name; the sound being produced on the same principle as in the older instrument, by means of a disc with twelve radial slits made to rotate in front of a fixed disc exactly similar, a cast-iron trumpet 20 feet long forming part of the apparatus. The moving disk revolves 2800 times a minute and in each revolution there are of course twelve coincidences between the two discs; through the openings thus made steam or air at a high pressure is made to pass, so that there are actually 33,600 puffs of steam or compressed air every minute. This causes a sound of very great power, which the trumpet collects and compresses, and the blast goes out as a sort of sound beam in the direction required. This fog-horn can be heard in all sorts of weather at from 2½ to 3 miles, and in an experiment made at Trinity House, England, under favorable circumstances, was heard 16½ miles out at sea.

FOOTBALL, foot'bawl, *n.* a ball consisting of an inflated ox-bladder, or a hollow globe of india-rubber, cased in leather, to be driven by the foot; hence (*fig.*) any object subjected to many vicissitudes or changes of condition; as, he was the *football* of fortune: a game played with a football by two parties of players, on a large level piece of ground, generally oblong in shape, and having in the middle of either of the ends a goal formed by two upright posts, 6 to 8 yards apart, with a bar or tape extended between them at the height of 8 or 10 feet from the ground. There are various styles of playing the game, but the two recognized in all important matches are the Rugby game and the Football Association game. In both games the main object is for either party to drive the ball (which is *kicked off* in the centre of the field) through the goal that their opponents are guarding, and thus count a goal against them. In the Rugby game the goal-posts are 18½ feet apart, and joined by a cross-bar at a height of 10 feet from the ground; and to score a goal the ball must be kicked over this bar by one of the opposite side. In the Association game the upright poles are 8 yards apart, and joined at 3 feet from the ground by a tape, under which the ball must pass to secure a goal. The Rugby game is much rougher and less scientific than the Association game, which discourages rough play and relies mainly on the skillful manœuvring of the ball with the feet, it being forbidden to touch the ball with the hands, while by the Rugby rules the player may catch the ball in his hands, run with it, and kick it dropping. When a goal is made, or at some other arranged interval, the parties change ground for the next struggle, so that any inequalities of situation may be balanced. The sport has lately gained considerable popularity in this country.

In most E. words it is cognate with Ger. *ver-*, O.H. Ger. *far-*, Goth. *fra-*, L. *per-*, Gr. *para-*, *par-*; but in some cases, when it comes from the Fr., as in *forfeit*, it is from the L. *foris*, abroad, away. Mechanical forces are of two sorts; one of a body at rest, being the same as pressure or tension; the other of a body in motion, being the same as impetus or momentum. The degree of resistance to any motion may be measured by the active force required to overcome that resistance, and hence writers on mechanics make use of the terms *resisting forces* and *retarding forces*. When two forces act on a body in the same *line of direction*, the resulting force, or *resultant* as it is called, will be the sum of both forces. If they act in opposite directions, the body will remain at rest if the forces be equal; or, if the forces be unequal, it will move with a force equivalent to their difference in the direction of the greater. If the lines of direction make an angle with each other, the resultant will be a mean force in an intermediate direction. [Fr.—Low L. *foreia*, *fortia*—L. *fortis*, strong.]

Friction arises from the roughness of the surface of the body moved on and that of the moving body. No such thing can be found as perfect smoothness of surface in bodies. In every case there is, to a less or greater extent, a roughness or unevenness of the parts of the surface, arising from peculiar texture, porosity, and other causes, and therefore when two surfaces come together the prominent parts of the one fall into the cavities of the other. This tends to prevent or retard motion, for in dragging the one body over the other an exertion must be used to lift the prominences over the parts which oppose them.—**COEFFICIENT OF FRICTION**, the coefficient of friction for any two surfaces is the ratio that subsists between the force necessary to move one of these surfaces horizontally over the other, and the pressure between the two surfaces. Thus the coefficient of friction for oak and cast-iron is 38: 100, or .38. [Fr.: L. *frictio*, from *frico*, *frictum*, to rub, to rub down.]

Owing to the last peculiarity frogs belong to the order of amphibians known as Anoura. Frogs are remarkable for the transformations they undergo before arriving at maturity. The young frog,

which is named a *tadpole*, lives entirely in water, breathes by external and then by internal gills, has no legs, a long tail furnished with a membranous fringe like a fin, and a horny beak, which falls off on the animal passing from the tadpole to the frog state, while the tail is absorbed and legs are developed. The mature frog breathes by lungs, and cannot exist in water without coming to the surface for air. The only British species is the common frog (*R. temporaria*), but the tribe is very numerous, other varieties being the edible frog (*R. esculenta*) of the south of Europe, eaten in France and South Germany, the hind quarters being the part chiefly used; the bullfrog of America (*R. pipiens*), 8 to 12 inches long, so named from its voice resembling the lowing of a bull; the blacksmith frog of Janeiro; the Argus frog of America, etc. The tree-frogs belong to the genus *Hyla*. Their eggs or spawn are to be seen floating in ponds and other stagnant waters in large masses of gelatinous matter. [A.S. *frooga*, *froga*, *frosco*, *froac*; Cf. GAS, gas, *n.* in popular language, coal gas: in chem. an elastic aeriform fluid, a term originally synonymous with air, but afterwards restricted to such bodies as were supposed to be incapable of being reduced to a liquid or solid state. Under this supposition gas was defined to be "a term applied to all permanently elastic fluids or airs differing from common air." Since the liquefaction of gases by Faraday, effected by combining the condensing powers of mechanical compression with that of very considerable depression of temperature, the distinction between gas and vapor,

viz., that the latter could be reduced to a liquid or solid condition by reduction of temperature and increase of pressure, while gas could not be so altered, is no longer tenable, so that the term has resumed nearly its original signification, and designates any substance in an elastic aeriform state. Gas may now be defined to be a substance possessing the condition of perfect fluid elasticity, and presenting, under a constant pressure, a uniform state of expansion for equal increments of temperature, being distinguished by this last property from vapor, which does not present such a rate of uniform expansion. Gases are distinguished from *liquids* by the name of *elastic fluids*; while liquids are termed *non-elastic*, because they have, comparatively, no elasticity. But the most prominent distinction is the following:—*Liquids* are compressible to a certain degree, and expand into their former state when the pressure is removed; and in so far they are elastic, but *gases* appear to be in a continued state of compression, for when left unconfined they expand in every direction to an extent which has not hitherto been determined. [A word invented by Van Helmont, a chemist of Flanders, 1577-1644; the form of the word was prob. suggested by Flem. *geest*, Ger. *geist*, spirit.]

GAS-METER, gas'-mēt-er, *n.* an instrument through which the gas is made to pass, in order to ascertain the number of cubic feet which are consumed in a given time in a particular place. Of this instrument there are two classes, the wet and the dry. The wet meter is composed of an outer box about three-fifths filled with water. Within this is a revolving four-chambered drum, each chamber being capable of containing a definite quantity of gas, which is admitted through a pipe

in the centre of the meter, and, owing to the arrangement of the partitions of the chambers, causes the drum to maintain a constant revolution. This sets in motion a train of wheels carrying the hands over the dials which mark the quantity of gas consumed. The dry meter consists of two or three chambers, each divided by a flexible partition or diaphragm, by the motion of which the capacity on one side is diminished while that on the other is increased. By means of slide-valves, like those of a steam-engine, worked by the movement of the diaphragms, the gas to be measured passes alternately in and out of each space. The contractions and expansions set in motion the clockwork, which marks the rate of consumption. The diaphragms in all the chambers are so connected that they move in concert.

GENITIVE, jen'it-iv, *adj.* in *gram.* pertaining to or indicating origin, source, possession, and the like: a term applied to a case in the declension of nouns, adjectives, pronouns, etc., in English called the possessive case, or to the relation expressed by such a case; as, *patris*, "of a father, a father's," is the *genitive* case of the Latin noun *pater*, a father. [L. *genitivus*, from *gigno*, *genitum*, to beget. The L. *casus genitivus*, genitive case, was a mistranslation of the Gr. *genikē ptōsis*, general case. See extract under next article.]

GENITIVE, jen'it-iv, *n.* in *gram.* a case in the declension of nouns, adjectives, pronouns, participles, etc., expressing in the widest sense the *genus* or *kind* to which something belongs, or more specifically source, origin, possession, and the like; in English grammar, the possessive case. See extract. "The Latin *genitivus* is a mere blunder, for the Greek word *genikē* could never mean *genitivus*. . . . *Genikē* in Greek had a much wider, a much more philosophical meaning. It meant *casus generalis*, the general case, or rather the case which expresses the *genus* or *kind*. This is the real power of the *genitive*. If I say 'a bird of the water,' 'of the water' defines the *genus* to which a certain bird belongs; it refers to the *genus* of water birds. 'Man of the mountains' means a mountaineer. In phrases such as 'son of the father' or 'father of the son,' the *genitives* have the same effect. They predicate something of the son or of the father, and if we distinguished between the sons of the father and the sons of the mother, the *genitives* would mark the class or *genus* to which the sons respectively belonged."—*Max Müller*.

GENIUS, jē'ni-us or jē'n'yus, *n.* a good or evil spirit, supposed by the ancients to preside over every person, place, and thing, and esp. to preside over a man's destiny from his *birth*:—*pl.* **GENII**, jē'ni-i. [L. *genius*—*gigno*, *genitus*, to beget produce. See *GENUS*.]

new combination, and may be shown in a campaign, a plan of policy, a steam-engine, a system of philosophy, or an epic poem. It seems to require seriousness and some dignity in the purpose. . . . In weaving together the parts of an argument, or the incidents of a tale, it receives the inferior name of *ingenuity*. *Wisdom* is the habitual employment of a patient and comprehensive understanding in combining various and remote means to promote the happiness of mankind. . . . *Abilities* may be exerted in conduct or in the arts and sciences, but rather in the former. . . . *Talents* are the power of executing well a conception, either original or adopted. . . . *Parts* have lost a considerable portion of their dignity. They were used in the last century perhaps almost in the sense in which we now rather employ *talents*. . . . *Capacity* is a power of acquiring. It is most remarkable in the different degrees of facility with which different men acquire a language."—*Sir J. Mackintosh*. To the above it may be added that properly *capacity* is passive power, or the power of receiving, while ability is active power, or the power of doing. *Cleverness* designates mental dexterity and quickness, and is evidenced by facility in acquiring a new subject, or by happy smartness in expressing one's conceptions.
