寄贈本

INTRODUCTORY REMARKS

1. The tables contained in the present report give statistics concerning the business of the Patent Office, and matters relating to industrial property rights, for a period from 1924 to 1926 inclusive. In general, calendar years are observed in this connection, except in tables 19, 20, and 21, where fiscal years (commencing on April 1st and ending on March 31st of the following year) are adopted.
2. Number of applications. Owing to uncertainty as to the correctness of the data, the numbers of applications made in July and August, 1923, have not been included in tabulating figures in that connection. According to Notification No. 226 of the Department of Agriculture and Commerce, September 1923, applications and accompanying papers lost on account of the earthquake disaster of September 1st 1923 were required to be refiled. The number of applications refiled in compliance with this Notification amounted at the end of 1926 to 7,311 for patents, 9,673 for utility models, 490 for designs, and 9,942 for trade marks. The number of applications presented in tables 5, 6 and 7 (classification tables) indicate the total applications, received by the examiners.
3. Number of registrations. The number of registrations for 1923 were compiled from data published in the Official Gazette. Therefore the number of registrations which were in the course of preparation for publication in the Official Gazette at the time when the earthquake disaster took place were omitted, owing to discrepancy in the data. Moreover, owing to confusion consequent on the earthquake, the number of registrations for the period from September to December 1923, inclusive, amounted to only 48 for patents, 36 for utility models, 28 for designs, and 5 for trade marks. Those are the reasons why the number of registrations was small for the year 1923. According to the amended Laws and Regulations regarding industrial property rights, of January 1922, it is provided that all applications except those for designs should be publicly notified before the conclusion of the examination of the registrations. While this provision was duly enforced, owing to the earthquake disaster of September 1923, the machinery for the publication of applications for patents was disorganised, and a considerable time was needed for its restoration. (Actually its restoration was completed in May in the following year.) This fact may be accountable for the reduction in the number of registrations for patents, utility models, and trade marks in 1924, but a considerable increase took place in the following year in 1925.
4. Number of cases of trial and trial on appeal. In regard to the number of cases of trial and of trial on appeal, owing to the loss during the earthquake disaster of the materials necessary in that connection, figures for November and December 1922 are not included in the total number for that year, and those for July and August 1923 are also omitted. In 1923 practically no cases were actually brought up after September 1st.
5. The present report does not contain tables showing the number of rights existing and causes of their expiration, owing to the loss during the earthquake disaster of materials necessary for use in that connection. Most of these materials hav not yet been recovered.
