Target: 90.32-672 Nippon Oil Company, Kudamatsu Plant

315 Wing reports generally satisfactory results were indicated by the scope photos which could be analyzed from this mission. Of the 32 A/C over the target, 27 returned with negatives. Of these 27, only 7 were usable. Five of the 7 had release indication and could be used for calculations. In all cases the tracks crossed the target. Because the release signal is manually operated, no estimation of accuracy can be stated. However, the calculations show bombs of one A/C on target, bombs of 2 A/C on 3000' radius NE of target, and one approximately 5000' NE of target.
