NOTICE.

COMMERCIAL HISTORY AND REVIEW OF 1874.

On Saturday next, the 13th of March, we shall, in continuation of the Series commenced with 1863, issue a Supplement under the above title, containing a careful Digest of the leading Merchants and Brokers' Circulars in the different branches of Trade, Returns of Prices, Accounts of the Banks of England and France, Appendices relating to special subjects of Mercantile Interest connected with the year, &c.; the objects of the Supplement being to place in possession of our readers a Commercial History of 1874 worthy of preservation and adapted for reference.

On February 27 was Published No. 2, Vol. V., New Series, Price 8d; by post, 9d,

THE INVESTOR'S MONTHLY MANUAL.

The INVESTOR'S MONTHLY MANUAL for February gives the Highest, Lowest, and Latest Prices of Stocks, Shares, and other Securities during the Month, the mode in which the Dividend in each case is payable, the last four Dividends, &c. It also contains

A FINANCIAL RECORD OF THE MONTH New Capital Created and Called; Table of Railway Traffic Receipts; Notices and Reports of Stocks, Failures, Railway, Banking, Finance, Insurance, and Miscellaneous Companies. New Companies and New Capital. Prices made up to February 24.

Advertisements for the next number, to be published on March 27, must be sent, to insure insertion, on or before March 25.

The December Number of the INVESTOR'S MONTHLY MANUAL gives, in addition to the usual information, the Highest and Lowest Prices of all Stocks and Shares for the last Three Years, the Latest Quotations for 1873 (so as to indicate the Exact Movement during the Twelve Months), a Complete Directory, the Names of the Markets where each Security is chiefly dealt in, a Financial History of the Year 1874 (including a Tabulated Chronicle of Events), besides Memoranda relating to the Financial Position of Foreign and Colonial Governments, to Railways, &c., &c. A copious Index is added for purposes of reference.

OFFICE-340 Strand.

THE BILL TO CONFINE SCOTCH BANKS TO SCOTLAND.

THE Bill which Mr Goschen has introduced to confine Scotch Banks to Scotland-for this is its real purport, though the technical language is, of course, different—is an expedient to meet a curious difficulty, which it is remarkable has not occurred before. Beforehand it might have seemed impossible that in so small a country as Great Britain there should for many years have been fundamental differences in banking laws, giving to bankers in one part much larger privileges than they gave to them in another part. It would have been thought that the privileges given to the most favoured country—especially as they are considerable ones—would have enabled its banks by degrees to overcome and supersede those less favoured. The reason why this has not happened is, that banking has, till now, been almost completely a local trade. Its essential condition is the acquisition of credit, and credit is most easily and surely given where those who give the trust have the means of seeing and watching those whom they trust. The business of a private Banker of the old class was necessarily limited to those who were conversant with his property, and who had an opportunity of observing his character. Joint Stock Banks, though having a larger range, much more easily obtained credit when the principal persons who managed them were known to the customers, and when the mode in which their business was conducted was a matter of local notoriety. But though these causes will always have some influence they have already diminished, and are daily diminishing, in effect. Locomotion and trade so much diffuse information that it is now easier to obtain good information about distant Banks than it was formerly. publication of banking accounts and the quotation of the price of shares on the Stock Exchange spread credit effectually. In consequence a difficulty has arisen which never arose before. Formerly it was very possible to give local privileges to banks without binding them to their locality, because the necessity of the case already so bound But now it is no longer possible. When a bank like the National Provincial has branches and obtains credit in every county from Northumberland to Cornwall, it is certain that any inequality in banking privileges will produce its effect—that if Scotch banks are more favoured than English they will invade England, and that if English ones are more favoured than Scottish they will invade Scotland, unless the law provides otherwise. The old natural restriction is disappearing, and either the banking law of the two countries must be made identical, or the banks of each must be kept to each. No other course is fair, for the systems are very unlike.

The greatest difference dates from the year 1826. After the great panic of that time Parliament abolished 1l notes in England, and would have abolished them in Scotland also, but it was unable to do so. The inclinations of the Scotch people and the Parliamentary interest of the Scotch banks were too strong for them. Every reader of currency literature will remember the letters of Malachi Malagrowther, and the vigour with which, in them, Sir Walter Scott attacked the proposal to abolish the "old note of Scotland." In consequence, the Government of that day had to abandon the proposal, and Scotch 11 notes remain in existence. When, then, R. Peel, in 1844 and 1845, dealt with the circulation of the two countries, he had to deal with national systems already differing in their most fundamental particular. In England

the paper currency was a supplement restricted by a high limit, and the main currency was metallic; in Scotland the paper currency was not supplementary but principal—there was no gold in circulation at all.

The states of things with which he had to deal being different, Sir R. Peel dealt with them in a very different manner. The fundamental principle of his legislation was that the amount of paper-note currency not represented by coin or bullion should be fixed, and that every note above that amount should be represented either by coin or bullion. In England he enacted that the Bank of England should be divided into two departments, and that the amount issued by the "Issue Department" on securities should be a stated amount, which he specified. He likewise enacted that the amounts issued by the country issuers should be fixed, and that no new issues should be permitted. In Scotland the essence of the legislation is identical, but its mode is different. It provided that each bank then in existence should be permitted to issue a certain stated amount not represented by gold coin; that the issues of every bank above that amount should be represented by gold coin which that bank was obliged to keep; and that no new bank should be allowed to issue notes at all. Sir R. Peel was obliged to make this difference, because he was anxious to introduce what he thought the true principle of currency with the least change in the existing practice. He left in existence the 1l note circulation of Scotland just as he left in existence the 5l note circulation of England provided by many banks. He only cared to introduce what he thought right principles-whether they were so or not we do not now discuss-in the manner in which hethought, as a practical and parliamentary statesman, it would be easiest to introduce them. And whatever may be the differences of opinion as to the correctness of the abstract principles of currency which he wished to establish, there can be no difference as to the admirable judgment with which he selected the means by which in the different countries he had to deal with those principles had to be embodied. In each case he selected the arrangements which would enable him most easily to introduce his principles, and which would most effectually support those principles when introduced. His success in this respect is a conclusive proof of his judgment. He established his principles in a way which never could have been done before or since, and they have been accepted with no effectual remonstrance for many years.

But the mode in which he introduced his principles has had a very different effect in the two countries. In England the number of banks has largely augmented, as was to be expected from the growing wealth and industry of the country. But in Scotland, though the wealth has also grown, the number of banks has not increased, but diminished. In 1844 it was 20; it now is 11. And in the face of the two legislations it is evident that Sir R. Peel gave the existing banks of Scotland a greater advantage than he gave to any English bank except the Bank of England. He allowed them to increase their issue without limit, which is always the most useful of all advertisements for a bank, and which was more than usually useful in this case, because this being a 11 issue runs through all classes of the nation-even the lowestand which is of the highest utility in business, because it enables a bank to establish any number of branch banks which, as the phrase is, "open strong" in its own notes, and need scarcely any other cash so long as their credit is accepted. A new bank starting in Scotland would not have been able to advertise itself by its own notes at all, and must have found gold coin at every branch, or Bank of England notes-both unknown commodities in Scotland—and must in consequence have been unequal to compete with existing banks whose names were before the public, and who could "manipulate the branches with their own notes. In England no bank except the Bank of England can extend its issue on any terms; in some of the most growing parts of the country there are no notes except those of the Bank of England. Ordinary English Banks have had no power of extending their issue in the same way as the Scotch, nor indeed has the Bank of England, for an issue of 5l notes spreads far more slowly than that of the 1l notes; the latter are the main ingredient of the currency, the former only an adjunct. And the Bank of England, from its mode of transacting business, and from the fewness of its branches, does not come into competition for the banking of England in the same way that the Scotch banks do with one another for the bank-

ing of Scotland. The banks of Scotland existing in 1845 obtained for themselves terms which have secured to them one of the greatest benefits which legislation ever conferred—the absolute monopoly of the deposits and of the business of banking in Scotland ever since. As this legislation has been so potent in its own country there is great reason for wishing that it should not be extended farther. It is quite true that there are grave inequalities among English Banks. Many country Joint Stock Banks which existed in 1844 have a fixed circulation, but are prohibited from carrying on business in London while they retain it; many similar private banks have a fixed circulation, but are not prohibited from coming to London. No doubt some day there will be a uniform legislation for both countries, and for all kinds of banks in both. But till this is arrived at, there is a great evil in allowing systems of local banking, which were intended to be separate, to compete with one another, as if they were formed on equal principles and were meant to compete.

The true principle is that within the range of the Imperial Government of England there should be only one banking law, and that if this cannot as yet be managed, the banks having special privileges should be kept to the places where they were meant to receive those privileges. We quite admit that there is much difficulty in applying this principle. There is the National Bank of Ireland in London, which has been there for many years, and which is exactly on the same footing as the Scotch banks, since the Irish law of banking and the Scotch are identical. There are also various colonial banks, having issues on miscellaneous principles, many of which have branches in London. But this only shows how imperfect our whole banking legislation is. There ought only to be one law for banks within the jurisdiction of the Imperial Parliament; whether in England or Ireland or the colonies the rule should be the same.

It is important to observe that this principle must be limited by its terms. If a bank is beyond the jurisdiction of Parliament in any respect, we cannot help what it does. If the Bank of France chose to register here in such a manner as to give it legal status, we could not object to its carrying on business here, but the contrary. No doubt its peculiar privileges in France would give it an advantage, but we could not object to the French lending us their money at a cheap rate. Similarly, if colonial banks, established under laws of a local legislature, come here and lend money, we cannot object, though they may have local issues or any kind of advantages. Such colonies are for such purposes independent countries. All that Parliament can do is to secure that its own laws are equal and fair; that in all countries solely subject to such laws-viz., England, Scotland, Ireland, and the Crown colonies-every one should start equal. Parliament cannot object to persons outside its jurisdiction, whether foreigners or colonists, who wish to lend money here.

The result, therefore, is that if Parliament cannot now revise our system of currency, it must adhere to the principles on which that system was founded—it was meant to be a system divided into different countries, and cannot be fairly worked except upon that basis. But such a system is plainly most imperfect, and if Parliament chose to revise it, and was so guided as to be able to do so, it would have before it an unexampled field.

A GOVERNMENT PAPER CURRENCY.

THE very able scheme for a Government paper currency which was published in our last number is well worth careful attention, for it brings into a clear view one of the principal evils of our present currency system, and suggests a possible remedy. We do not ourselves think that this remedy would be effectual, or, rather, we think that in curing a single evil it would introduce other and greater ones, but it cannot be considered or discussed without a sense of what is the state of the subject, and what are its real difficulties.

The writer says that the present system of currency depends on the Act of 1844, which divides the Bank of England into two departments—an issuing and banking department, and guides the former by an inflexible rule; that this rule has been already relaxed; that it is expected always on certain occasions to be relaxed again. And he adds:—
"This is surely a highly unsatisfactory state of things. It is objectionable that a law should remain on the statute book which it is well known will be broken whenever the

"occasion for it arrives, and that thus a discretionary power "of irregularly increasing the issues of paper should be "placed in the hands of Government and the Bank. The "danger arising from this is greater than seems to be "generally supposed. Hitherto, it is true, this power has "not been abused, it has been exercised very rarely and with "so much moderation that the convertibility of the cur-"rency has never been shaken, and after a brief interval the " suspension of the law has ceased. But who can answer for "it that such will always be the case? When the perilous "course has once been entered upon of making a discretion-"ary extension of the currency to meet an emergency, and "with no check upon over-issues except those imposed by "the judgment and firmness of the Government and of the "Bank, who can tell that the very same difficulties and the "same pressure which have caused the law to be departed "from as regards issues may not also induce the Govern-"ment to suspend cash payments, as in 1797? And it is "most especially objectionable in our present system that "the question whether the exercise of this dangerous "power shall or shall not be rendered necessary is made "practically to depend very much upon the manner in which a trading corporation manages its business."

The remedy suggested is that the issue of Bank notes should be entirely removed from the Bank of England and placed in a Government department; that it should issue notes on the deposit of equal amounts of English Government stock and bullion at the price of the day—that is, that it should issue 500,000l notes on the deposit of 250,000l stock and 250,000l bullion. And from this it would certainly follow that at a panic there would be an elastic element which would prevent the last degree of mischievous alarm. But we can hardly think that the framer of the scheme has considered how great this elastic element would be, how uncontrollable it would be, and how it would work at other times besides those of panic. When worked out in practice it would enable any one possessed of a large amount of stock and a small amount of bullion to turn the whole into Bank notes. Suppose the amount to be 5,000,000l stock and 250,000l in bullion, the operator would proceed thus. He would lodge first—

£ 250,000 bullion, 250,000 stock,

and obtain 500,000*l* notes; next, he would take these notes back to the issue department, where they are convertible into bullion, and he would then obtain 500,000*l*; then he would lodge—

£
500,000 bullion,
500,000 stock,

and obtain 1,000,000?. Then again, as before, he would obtain 1,000,000? in exchange for the notes, and would lodge—

£ 1,000,000 bullion, 1,000,000 stock,

and take away 2,000,000*l* notes, with which he would proceed as before, and so on till his stock was exhausted. Shortly described, therefore, this scheme is one for turning English Government stock into Government currency at any moment and in any amount in which it can be procured. The holder of any sum in Consols need only sell a trifling part for bullion, and then he could turn the whole into notes, which are legal tender, and for which at any moment the Government would be bound to pay him in bullion.

If this were enacted many changes would follow. First, no bank would hold any more than a paltry sum in bullion or in Government notes; it would keep all the rest of the reserve in English Government stock because it would pay an interest, and Government notes or bullion would not pay any. Not only the issue department would disappear from the weekly return of the Bank of England, but also nearly all the 9,000,000l of notes now held in the banking department of the Bank of England. Some 1,000,000l might be left for small change, but the rest would be turned into stock because the Bank would earn an extra income for it, and it would incur no risk by so doing as Government had practically undertaken to turn that stock into bullion if bullion was wanted. The Government department charged with the issue of notes would have to keep the banking reserve of the country as well as its currency reserve, for no bank would lose income by keeping anything in hard cash more than the small sum that is wanted for the counter.

Secondly,—this scheme would entirely destroy the power of the Bank of England to correct an unfavourable exchange by raising the rate of interest. If it did so any other Bank or money dealer possessed of English Government stock could and would immediately turn it into Government notes, lend those notes freely, and bring down the value of money. The operations of the Bank of England or of any other set of sound banks would be nugatory, because persons engaged in business which a high value would check could prevent it if only they could command English Government stock, which very many of them could.

Thirdly,—this plan would greatly change the mode in which the English funds are held. Instead of being held in part by English banks as a portion of their reserve, but mainly by ordinary persons of small means in the United Kingdom, they would be largely held by Exchange operators, who would know that at any moment they could turn them into bullion. It may be said that exchange dealers could do this now, because the Bank of England always does lend on English Government stock, and the notes so lent can always be changed for bullion at the issue department. But there is a great distinction between the present plan and that which this scheme would introduce. Now, the Bank of England, when large demands are made upon it for loans on consols, increases the rate at which it makes those loans; sometimes it charges 10 per cent, or more. There is no limit to what it can charge, and this effectively deters exchange operations. But under the new scheme the Government department would be forced to find bullion for the stock at the daily price of that stock, without deduction and without charge. would then be as convertible as Bank notes now are, and would be better holding because more remunerative.

Lastly,-the effect of this would be to make it most difficult to keep an adequate reserve in the Government department and to maintain the convertibility of the Bank note. There are 724,000,000l of English Government stock, and in theory the whole of this might be required in bullion. Of course no such immense sum would really be asked for, but very large amounts might and would. The exchanges might, as we have explained, long be kept adverse to this country, in spite of the Bank of England and other sound banks, by those who wanted cheap money, and the sums consequently de-manded at the Government issue department might be very large. The exchange operators would have those means in their hands and would use them unscrupulously. We must remember that a panic, though a calamity for the public, may be a great gain to persons properly prepared for it. It causes a great fall in all securities, and persons possessed of money at that moment may make large fortunes. If the English Government note-issue department and English credit generally were at the absolute mercy of a combination of operators who could obtain large amounts of our stock, it would be impossible to foresee or to assign a limit to the speculations which might be made in that stock, and it would be lamentable to record the effects of many of them.

We cannot but think that the dangers of this scheme have been concealed from its able author by its apparent resemblance to the many schemes in which notes have been issued by Government to banks on a deposit of their Government stock and a percentage of bullion. Under a former American law the New York banks had to deposit such stock and 121 per cent. of bullion. And this produced no such effects as we have described. But then these notes were issued to banks who had themselves to pay them when demanded. They were not Government notes at all; they were bank notes secured by a Government stock. And no bank can deal with its own promises to pay in the reckless manner which has been described. They would be ruined if they did, for they could not perform those promises. They could not lend money at low rates of interest during an unfavourable exchange, without having the payment of their notes demanded from them; they must themselves keep a reserve to meet those notes, and it is that reserve which would be attacked, and not, as in the suggested scheme, the Government reserve.

We think, therefore, that this scheme brings out with singular clearness the difficulties which beset a Government currency. It must be issued either by an inelastic rule, which is incompatible with, and breaks down in panic; or with an elasticity fixed by the issuing Government, which, as our correspondent says, gives that Government a dangerous discretion; or, lastly, with an elasticity fixed by the person to whom

it is issued, and this is, as we have shown, apt to be more dangerous still. We cannot, therefore, look to a Government note-issue as likely to diminish the evils which beset our present system of credit and currency; in so far from lessening, we believe it would increase them.

THE CONSERVATIVE REPUBLIC.

WE have done the National Assembly of France an injustice, and we hasten to express our satisfaction that the prudence the organisation, and the fortitude of French parties and party men have shown themselves so much greater than we had anticipated. Not only has a new Constitution been carried in an Assembly that was not, in fact, guided by any responsible Government, but it has been carried with a promptness, a display of discipline, a power of combination, an indifference to party interests and party motives, which fairly deserves the sincerest admiration. It is true that the motive power which achieved such wonders was evidently fear, and a very urgent fear, of the growing strength of Imperialism. In the present National Assembly, Imperialism has but a handful of supporters, but it is far more deeply dreaded, both by the Mcnarchists and by the Republicans, than either of these parties is dreaded by the other. It is felt that Imperialism combines that personal, and so to say, picturesque and intelligible form of Government which is, in a sense, particularly well suited to the lively, suspicious, and timid nature of the French, with the popular character essential to all government in France, and that it combines these advantages with traditional associations which, in spite of Waterloo and Sedan, have not even yet exhausted their fascination for the French people. On the other hand, Monarchy, as represented by the partisans of the Comte de Chambord, has no friends among the French people at all; while Monarchy, as represented by the partisans of the Orleanists, has but the few and cold friends which alone compromises can command in France. On the other hand, Republicanism itself is no doubt very strong. But the Monarchical party are perfectly well aware that the word Republicanism represents the most antagonistic ideas, which are quite likely to break out into conflict the moment the Republic begins to work. Now the Monarchical party see hopes for themselves in the conflict of these ideas. Should the Conservative Republicans be hard pressed by the assaults of the more socialistic and root-and-branch species of Republicans, they may be not disinclined to accept the support of the Orleanists, and transfer the elective President into an Orleanist Prince appointed for life-from which the transition to a hereditary throne might not be very violent or difficult to effect. Thus, while both Monarchists and Republicans feel that there would be something in Imperialism to bar their claims indefinitely-a throne of greater pretensions and more national prestige to bar the claims of Monarchy, and a vaunted habit of consulting the people by universal suffrage to bar the claims of popular Governmentthey do not dread each other at all in the same way. Republicans rather despise the power at the disposal of the Orleanists, who have never been strong at the hustings, and the Orleanists think they may some day find their advantage by giving a decisive victory at present to the Republic. e power which has united the Moderate Right with all the Left in the great series of victories won by them during the last fortnight has been a power of fear. They saw the inconvenience of an Imperialist victory, and they combined with a prudence that was only just in time to prevent it, and to carry a Constitution under which, at least till the end of Marshal MacMahon's term, Imperialism will become rebellion. But we do not at all mean to say that it in any way diminishes the merit and self-denial of the parties which have united to effect this great compromise, that fear has been the motive power which produced it. On the contrary, we think that the fear in question was a most reasonable and prudent fear, and that its results have been reasonable and prudent too. It has not been a fear that produced panic, but a fear that produced discipline; and fear that produces discipline is fear that answers its legitimate function in the body politic, while fear that produces panic is fear which engenders the very thing it dreads.

It is well worth showing, however, that the form of Republic which has at last been established by the combined efforts of Right and Left, has considerably more of the elements of personal government in it than any Constitution which

has yet been tried in France, except that of the Empire. focus of strength in the new Republic is the President. is a far more important officer than either the American President or the French President of 1848. He is to be elected for seven years, with a right of re-election, which enables the French people to have, if they will, any particular man as President for life. He is the head of the army, is responsible for order, nominates the Council of State, has the power of granting pardons, and can, with the consent of the Senate, dissolve the popular Chamber. And he can only be removed after a successful impeachment before the Senate as a Court of Judicature. It is clear that these are constitutional powers of the most important kind, especially when we add that the election of a President is not left to the popular vote, and that, therefore, the hope of a re-election is not likely to launch him into making ad captandum popular proposals, but depends on a majority of the popular Chamber and the Senate united, as one body, in National Assembly. As the Senate alone will command six-fifteenths of these votes, and the Senate is to be chiefly elected by decidedly Conservative colleges of electors, while the part of that body which is, in future, to be co-optative will, on the first occasion, be named by the present highly Conservative National Assembly, it is pretty clear that the President will have little motive or excuse for condescending to popular His power of flattery or dangerous popular manifestoes. dissolution indeed will depend chiefly on his influence in the Senate, and this will be a motive for a prudent and states-manlike, rather than for a flashy and declamatory attitude. Such a President may, indeed, wield in many respects decidedly greater personal powers than the late Emperor himself ever wielded after he had agreed to try the experiment of Constitutional Government; for the President will be a much less conspicuous mark for fanatical hatred than an Emperor, and he will be able, as even M. Thiers found, to put down revolution with a much stronger hand in the name of a Republic than any Monarch dare use in the name of a throne. Indeed, it is not very easy to conceive, outside Russia, a position of more influence and grandeur than that of the new French President, if only he is wise enough to foster, instead of to smother, the constitutional life over which he is to preside. He must, it is true, have a responsible Ministry, and all his orders must be countersigned by some one who is responsible to the Assembly for them, so that he cannot well do what he can get no one to de-fend before the popular body. But that very provi-sion will remove his own action from the criticism of the Assembly, while he is made far too powerful in every way to admit of his being left without the most weighty influence over the deliberations of his Ministers. For instance, if a dissolution is to take place the President must propose it, so that it will be impossible for a responsible Ministry to enter on any policy which may, under certain contingencies, lead to the necessity for a dissolution without the full advice and concurrence of the President. This alone places him in a position far above that of any really constitutional Monarch, who must dissolve when the Ministers counsel a dissolution, and still further above that of an American President, who cannot dissolve at all. In fact, the French President's position will combine the power of an American President-greatly magnified by the longer term of power and by the right of re-election-with many of the attributes of a constitutional Prime Minister, who has the right of dissolving, or at least of advising a dissolution without any fear of a refusal, as well as of choosing the colleagues by whose aid he hopes to guide Parliament. A man of strong and steady brain in the place of Marshal Mac-Mahon might acquire almost an unprecedented power. He might easily, for instance, become the guiding mind among his own Ministers, and yet incur none of that risk of discredit which a great Minister almost inevitably runs. He might use powers of oratory far greater than his own to recommend his own plans to the French nation; and if defeated, might choose other men of no less skill to recommend a plan only so far modified as to meet the chief objections of his critics. In fact, he might become, far more easily than any constitutional King-because an elective President does not excite the jealousy and suspicion of a King,—the thought which guides the win-ning party on the political chess-board, and this without being recognised as the loser when his schemes fail. Thus, if France would but be content, she has got in her new Constitution many of the advantages of Imperialism, without the

odium to which its form is always liable—without the permanent dynasty and name with which incidents of both glory and disgrace must always be associated. No doubt that dynasty and name are sources of power as well as sources of weakness. But will it not be wise for France now to try patiently the question whether as sources of weakness they are not even more to be avoided than they are to be coveted as sources of power? Assuredly it is the truest Conservatism to exhaust the facilities for government which exist, before attempting to disturb them.

THE JUDICATURE AMENDMENT BILL. WE have been so often disappointed by promises and imperfect performances since Lord Selborne's Judicature Bill was first introduced, that, although Lord Cairns' Amendment Bill passed through Committee in the House of Lords on Thursday night, we hardly dare assure ourselves that the question of Judicature Reform will be finally settled this year. Nevertheless, the Lord Chancellor was prompt and energetic in his introduction of the Judicature Amendment Bill, and when it passed the second reading there was a reasonable hope of seeing the measure on its way to the House of Commons before the Easter recess. It was eminently desirable that this should be, if possible, effected, not only to obviate the chance of having the progress of the measure blocked in the House of Commons by Bills exciting a keener political interest, but to meet the possibility of an organised opposition more formidable than any which Lord Selborne had to encounter in 1873, or Lord Cairns last year. The present measure, it is true, differs only in some unimportant details from the Bill that last year had advanced so near to legislative maturity, when it perished in the wasteful passion of the controversy upon the Public Worship Bill. The only point of difference to which the Lord Chancellor, in introducing the measure, referred as needing any special mention, was the withdrawal of the schedule of Lord Selborne's Act containing the Rules of Court. These rules formed no more than a part of the necessary regulations for the procedure and practice of the New Consolidated Tribunals that were to administer Equity and Law together, but at the time the Judges had not been able to arrive at an understanding as to the remaining matters to be determined. Last year, the Rules of Court, supplementary to those contained in the schedule to the Act of 1873, were submitted to the Queen in Council, and when sanctioned by an Order in Council, and by the lapse of a certain time within which no objection was raised by Parliament, they were to come into operation equally with the rules directly considered and approved by the legislature. Lord Cairns, however, was not satisfied that it would be convenient to "in regard to procedure, one body of rules on the "schedule of the Act of 1873, and another body of rules "not contained in that Act, or in the schedule of the Act, "but outside the Act, in a code approved by the Judges and "sanctioned by Her Majesty in Council." He proposed, therefore, to withdraw the schedule altogether, and to give effect to the one set of rules as well as to the other by Order in Council. It has been objected to this that though the change, as Lord Selborne observed, will be "merely formal," the repeal of the schedule will give the Judges a much larger descretion in altering procedure without reference to Parliament. But, in fact, Parliament must consent in a matter so technical as this to follow implicitly the advice of experts, and to leave a great deal to the responsibility of the Cabinet, represented by the Lord Chancellor. It is not likely, therefore, that the progress of the Bill will be seriously impeded by any discussion on the withdrawal of the Schedule of Rules, or the proposed sanction of the new procedure by Order in Council.

It has, however, become apparent that thus late in the day a vigorous effort will be made to procure the repeal of that fundamental part of the Act of 1873 which transferred the Appellate jurisdiction of the House of Lords to the newly constituted Supreme Court of Appeal. Lord Redesdale's opposition is quite consistent; but it would probably have dwindled to an individual protest, if it was not that a movement in favour of preserving the Appellate jurisdiction to the House has been set on foot among the members of the bar. Sir George Bowyer appears to be one of the principal leaders of this antiquarian agitation, and the names of several Queen's Counsel have, it seems, been procured for t. Lord Redesdale produced a rather ludicrous effect when

he quoted to the House of Lords as representative of the weight this movement the names of Mr Watkin of and Mr Waddy, "both advanced Liberals"—whatever that had to do with the matter—and of Mr Benjamin, who was formerly one of the Ministers of the Southern Confederacy. These are highly respectable lawyers, all three; but they have no special authority, so far as we are aware, to represent the profession in regard to Appellate practice, and the advanced Liberalism of the two first and the American career of the third have no relevancy to the controversy. The House of Lords, guided by the opinions of the eminent lawyers who are members of it, and exercising a political discretion which it has a perfect right to use, deliberately resigned its Appellate jurisdiction when it passed Lord Selborne's Bill in 1873. The Lord Chief Justice of England at the time gave his authoritative approval to the proposed transfer of appeals to the new Supreme Court, and Lord Hatherley affirms that three years ago the Judges were agreed in recommending the change. Lord Selborne further points out that when the Equity bar remonstrated against some provisions of the Judicature Bill of 1873 there was no objection raised against the abolition of the jurisdiction of the House of Nevertheless Lord Redesdale, Mr Calvert, aand other opponents of change now insist that the Judges should again be asked whether the Act of 1873 should not be altered in a material part. Lord Selborne's answer is, we think, complete. "The House," he says, "consented to the " proposed transfer not only after full opportunity of know-" ing the opinion of the Judges and the profession, but after all possible opinions had been taken. Are your lordships " now to be told that you ought to pause and take the opinion " of the Judges and the opinion of the profession before you " pass a measure which is merely complementary of the Act "to which you have given your assent ?" The opponents of the transfer, however, are prepared to argue that the Bill introduced by Lord Cairns is not merely complementary of the Act of 1873. Sir G. Bowyer, for instance, contends:—
"We are told that the question of the Appellate Jurisdic-"tion was finally decided in 1873; but this is not a correct " statement. In 1873 the Bill which was passed gave only " one step of appeal; and it was felt that without an inter-" mediate Court the mass of business would be so great that " the House of Lords could not deal with it. But this has " now been given up, for the present Bill gives an interme-"diate appeal. Under this altered state of things the case is " materially different, for the number of ultimate appeals "will not exceed the usual average, and will probably be less than hitherto, and the House of Lords would have no diffi-"culty in dealing with those appeals. It is proposed that "the House of Lords shall sit for judicial purposes during "the whole legal year. This was suggested by Lord Chief "Justice Hale." This line of reasoning has opened up all the old fallacies and appeals to prejudices, and it may be found the Government will not stand firm and use their majority with the steady pressure that will be needed to carry the Bill. The Duke of Buccleuch has announced his intention of moving an amendment that would restore the whole of the Appellate jurisdiction in all its enormity, and so worthy of consideration are the chances of this move held to be, that a special meeting of Conservative Peers was held at the Duke of Richmond's on Wednesday to arrange concerted action. It is believed that much division was found to exist; and though the Duke of Buccleuch, as well as Lord Redesdale and Lord Penzance, have withdrawn their opposition for the present, it is certain that the vital issue will be raised upon the report. Nevertheless, Lord Cairns has it in his power to secure the sucess of the measure for which he is responsible. If the Bill should escape the dangers that await it in the Lords, we trust that in the Lower House the Liberal lawyers will not endanger the progress of a great constructive measure for the sake of embarrassing their political opponents. The Conservative party will do themselves a most unnecessary injury if they refuse to advance an important reform, which is not in substance inconsistent with the interests or principles of their party.

THE FINANCIAL POSITION AND PROSPECTS OF THE SUEZ CANAL.

WE now propose to give a fuller account than we were able to give last week of the financial situation of the Suez Canal, whose admission to the London Stock Exchange we had then occasion to notice. Apart from its history the property is a peculiar one, the company having an absolute monopoly of a certain route of water traffic which must retain for an indefinite time overwhelming advantages for certain kinds of traffic over any other route, whether by land or water, or partly by land and partly by water, such as by the Euphrates valley, which can be devised to compete with it. There are few monopolies so absolute, and as the working expenses, as we shall see, are found by experiment to be small, the conditions of secure profit appear as favourable as possible. If the capital is not excessive, and the traffic is of a kind likely to increase, the shares of the Suez Canal must obviously be "worth attention."

The capital position of the company can be very simply stated. The total capital which ranks for interest and dividend is as follows:—

| | £ |
|------------------------------------------------------------|-----------|
| Share capital, 400,000 shares of 20l each | 8,000,000 |
| Loan of 1867-68, for 4,000,000/, redeemable in 50 years by | 1.000.000 |
| sinking fund—to:al annual charge about 400,000l | 4,000,000 |
| Loan of 1871, in "trentennary bonds"—total annual charge | |
| about 51,000/ | 800,000 |
| 41 | |

... 12.800,000 The "open" capital is thus 8,000,000l, and the preferential capital is, or rather was, a little more than one-half that amount, involving an annual preferential charge of about 451,0004, terminable in from thirty to fifty years. The company has in one respect been most fortunate. The cost of the canal was about 6,000,000l more than the above sum," as the capital account shows, but the company obtained the amount in various ways during the construction, principally from indemnities which the Egyptian Government had to pay on surrendering portions of its original concessions. While the company thus holds the canal at much less than cost price, it has also acquired a domain of considerable extent along the course of the Canal as well as in Ports Said and For the above 12,800,000l it thus possesses a property which cost about 19,000,000l, and an asset of territory of considerable additional value. There is one point in connection with these additional receipts during construction which it may be useful to clear up. The sum of 1,200,000*l* was raised, as we rightly stated last week, by delegations upon the shares of the Khedive of Egypt, but it is the Khedive who is liable for the amount, and the transaction simply was a mortgage of his shares to raise money to pay the company what he owed them. The other shareholders appear not to be affected by the arrangement, which may thus be left out of account.

In addition to the above facts there is also one other point in connection with the financial position of the company which it may be useful to explain. A year ago the shareholders capitalised seven half-yearly coupons of 5 per cent. interest on their shares, which had not been paid, amounting, less French income tax, to 85f per share, or 1,360,000/. For these bonds have been issued bearing 5 per cent. interest, which will come to 68,000l a year, and they are to be redeemed in forty years by a sinking fund commencing in 1882. As these bonds, however, we are informed, are not allowed on the Paris Bourse to be separated from the shares, it appears immaterial whether we treat the annual charge in respect of them as another preferential charge or ignore it altogether, for the present quotation of the shares includes both, and it does not matter to the shareholder under what head he gets the money. But the attention of all concerned here should be called to the matter, and it would, perhaps, be desirable that the rules of the Paris Bourse on the subject should be conformed to, so that the transactions here and in Paris should be in the same article.

Such being the capital position of the company, what was the expenditure and income in the last year for which we have accounts? This was for the year 1873, the accounts of expenditure in 1874 not having been issued. The receipts and working expenditure, according to our English phraseology in such matters, were in that year as follows:—

| matters, were in that year as follows:- | |
|-----------------------------------------|---------|
| RECEIPTS. | £ |
| Se vice of transit | 928,000 |
| Domain | 39,000 |
| Warehouse charges, &c | 5,000 |
| Water supply | 3,000 |
| Interest on funds in hand and exchange | 18,000 |
| | |

^{*}We find we understated the cost of the canal last week. It should have been 19,000,000/ instead of 16,000,000/, but a considerable part of the amount was for interest during construction.

| £ |
|---------|
| 27,000 |
| 25,000 |
| 61,000 |
| 93,000 |
| 9,000 |
| 225,000 |
| 766,000 |
| |

The cost of working is thus only 23 per cent., and will probably, so far as can be judged, diminish in proportion as the traffic increases and the domain becomes more valuable. The percentage is much lower than what was calculated on when the canal was opened, the maintenance of the works having really proved less costly than was expected. Whether the sum is really sufficient or not, we can of course give no opinion; but the present managers in the last report at least profess to be quite alive to the necessity of renewals, and are already laying aside funds in advance for that purpose.

The above sum of 766,000*l* having been the net income of 1873, we find that the preferential charges upon it were as follows:—

| | | £ |
|--------------------------------|---------------------|---------|
| Interest of 4,000,000l obligat | ions | 325,000 |
| Sinking fund of - | ************** | 77,000 |
| Interest of trentennary bond | 8 | 38,000 |
| Sinking fund of - | ***************** | 13,000 |
| Annual charge of obligations | , stamp duties, &c. | 8,000 |
| Control of Egpptian Govern | ment | 1,000 |
| Annual charge of shares, sta | | 9,000 |
| Commissions, &c | | 3,000 |
| m - 3 | | 100 000 |

Deducting this sum from the above 766,000l of net earnings, the available amount for the shareholders in 1873 was 297,000l, which is equal to a dividend of $3\frac{3}{4}$ per cent. on the shares. Actually the amount seems to have been used in paying the overdue half-yearly coupon of July, 1870, representing $2\frac{1}{2}$ per cent. interest; and a balance of 182,000l, including upwards of 80,000l brought forward from previous years, was carried forward to 1874.

The position of the company thus is that the shares were earning a dividend of $3\frac{3}{4}$ per cent. in 1873, and the question remaining is, What rate of growth can fairly be calculated on? It is known already that the traffic receipts of 1874 considerably exceeded those of 1873, the amount being 1,030,000l, or an increase of 39,000l, which would bring the dividend above 4 per cent., if the working expenses were not increased. Actually, we may assume, the 5 per cent. coupons will now be paid, including the annual charge for the overdue coupons, the difference being obtained from the large balance carried over from 1873; but the last annual return can hardly be taken perhaps at more than $4\frac{1}{4}$ per cent.

With regard to the prospects of increase, the progressive development of traffic during the last three years, when the undertaking may be considered to have come fully into notice, has been as follows:—

| , | | | Vessels. | | Tonnage. |
|------------|------|------------------|----------|-------|-----------|
| Traffic in | 1872 | ******* | 1,082 | ***** | 1,439,000 |
| - | 1873 | **************** | 1,173 | ***** | 2,085,000 |

- 1874 1,264 2,424,000 -which is an increase in 1873 over 1872 of 45 per cent. and in 1874 over 1873 of about 15 per cent., the diminished rate of increase in the latter case, however, being perhaps partly due to the new mode of measurement enforced on the company, and of which it incessantly complains. But in any case it would almost certainly be unsafe for an intending investor to reckon on so large an annual increase as even 15 per cent. Such a growth of traffic on almost any route after the initial stage of development is passed would be without precedent. We should be inclined to suggest, however, that a minimum increase of 5 per cent. per annum may perhaps be counted on. This is the rate of increase of traffic on railways in the United Kingdom, the rate of increase in our foreign shipping, and less than the rate of increase in our steam shipping, which is the class of shipping by which the Suez Canal is almost exclusively used. Looking also to the undeveloped state of such countries as China and Japan, with which the Canal connects Western Europe, we see no reason to doubt that perhaps an exceptional increase of business with those regions as well as with India will take place, so that the minimum of an annual 5 per cent. increase for a long while to come may really be possible. Even a less increase would be equivalent to an increase of about $\frac{1}{2}$ per cent. annually in the dividend of the company, the rate of progress in a year or two becoming even greater than that as the amounts on which the traffic increase is calculated become larger. It is necessarily a speculation, however, what the rate of increase will be, and investors must form their own opinion on that The useful formula to bear in mind, is that it requires 80,000l net to make 1 per cent. on the shares, and that 200,000 tons additional tonnage annually will yield the 80,000*l*, or, allowing for 20 per cent. working expenses, 250,000 tons. *Per contra*, the tariff, as now fixed, is to be lowered from time to time as the annual tonnage rises to certain fixed amounts, and this is an obvious deduction from the benefit to be otherwise obtained from a growing traffic. In time also, the expense of widening the canal to meet the growing traffic must be faced.

There are also several other things "to the good," which ought not to be lost sight of. The first is the possible increased value of the company's rents as the business increases and the neighbourhood of the ports and stations becomes more settled, an asset, we believe, which will ultimately be of considerable value, though it is, of course, one of the most difficult to estimate. Second, the preferential charges to the extent of about 450,000l a year are all terminable in from 30 to 50 years. This will be another 5 per cent. on the shares when it falls in, and in time will be a reversion of considerable value. Third, the company has a claim against the Turkish and Egyptian Governments in respect of the lower tariff forced on it, compared with what it claims right to under the original firman. We should not recommend any one to place much value on the successful enforcement of this claim, but the past diplomatic successes of M. de Lesseps make it impossible to pass it over. If the company succeeds at all, it will both get something by way of arrears, and come into possession of a higher tariff which may immediately add to its income.

Altogether the facts appear to us fully to bear out the statement with which we began as to the remarkable nature of this property which has now been introduced to the London Stock Exchange. It seems quite probable that it may become another illustration of the great value of an absolute monopoly of an article of increasing use, of which the shares of the New River Company, which supplies North London with water, and which has had all the benefit of the vast growth of London for nearly 200 years, have, perhaps, been the best illustration hitherto known. The position of the Suez Canal Company appears to us a commanding one of the same species, with the important exception, however, that it is exposed to political hazards and to interruptions from war, which are, of course, a drawback to every other advantage. It is also another drawback to an English investor that the company is a foreign one, and if it were partly held in England the English shareholders might practically have no control. Whether these chances and drawbacks are much worth reckoning on, it will be for those interested to consider, just as they must form a judgment for themselves on the vital points of the probable growth of traffic, and the limits of the working expenses.

BUSINESS NOTES.

COINAGE DIFFICULTIES IN GERMANY .- With reference to the remarks of our German correspondent in another column respecting the activity of the German Mints, the following statement by the Berlin Borsen Zeitung as to the scarcity of new mark coinage appears of interest :- "There are increasing "complaints," says our contemporary, "as to the restricted "circulation of the new mark coins, but with little prospect " of immediate improvement. According to our information the " requisite Imperial coinage will not be in readiness until 1880, " even if the utmost activity is displayed. Gold coins especially " are wanting in satisfactory quantities; among silver coins "one-mark and 20 pfennig-pieces are specially wanting; and " nickel coins are also very scarce, although the necessity for " these is most remarked upon." So far as we are concerned of course the want of gold coins in Germany is likely to have most importance, though it must also be kept in mind that the German Government does not apparently find it expedient to increase the gold coinage much this year, the sum set down for gold in its general coinage programme, according to the budget, being only 2,500,000l.

THE NEW TURKISH FINANCIAL CONVENTION .- An official abstract has been published this week of the detailed convention between the Turkish Government and the Imperial Ottoman Bank, by which the bank is constituted in its new capacity of Receiver-General of the revenues of the Turkish Empire. As the long delay of the Turkish Government in settling these details, and its reluctance to admit the bank to the possession of the full powers it had promised, had become notorious, we think it expedient now to give the text of the official abstract of the treaty, which has been published, so far as it bears on this point. The following is the essential clause in the convention itself :-

Art. 13. The bank is to be the treasurer and paymaster-general of the empire. One month at least before beginning the Turkish financial year a detailed copy of the budget is to be officially communicated to the bank. The Government undertakes to pay over to the bank, both at Constantinople and the provinces, all its revenues, of whatever nature, and in whatever form they may be in accordance with the regulations to this effect, and it will take all the measures necessary securing that the whole of the revenues shall by these means b paid to the bank.

The bank is to make all payments for the public service (reserving the rights of third parties for the service of certain loans, the funds for which are nevertheless to be remitted through the bank). These payments are to be within the limits of the budget, which cannot be exceeded except under extraordinary circumstances as set forth in the regulations. The bank will see to the service of the public debt by reserving (prelevant) the necessary funds from its encashments.

And the mode of carrying out this stipulation is detailed as follows in the réglement, as it is called, by which the bank's mode of carrying on business with the Government is defined :-

Art. 2. The Minister of Finance can alone issue delegations on the revenues for the different public services, and within the limits of their respective Budgets; giving the bank a list of these delegations.

The Bank to receive delegations to cover the amount required for the service of the Public Debt, carrying the sums received thereon to

the credit of a special account.

Where the bank has no branches, the agents of the Treasury are to transmit the amounts they receive in these havales (delegations) in the shortest possible delay. The note of the sums received on account of

transmit the amounts they receive in these havales (delegations) in the shortest possible delay. The note of the sums received on account of the Public Debt to be published monthly by the bank as heretofore.

Art. 3. All the revenues of Constantinople are to be paid to the Bank by the collectors, less their charges, for which they shall deliver vouchers. The bank to make all payments on the orders of the Minister of Finance, but within the limits of the Budget. In the provinces where the bank has branches it shall receive all the revenues, less the amounts expended locally, for which amounts it shall receive supplies. vouchers. Where it has no branches, the agents of the Treasury shall send to it monthly a statement of all their operations, with the vouchers and the balance of cash received by them.

Such appear to us the essential parts of the new arrangement, and, compared with what was talked of as contemplated by the Turkish Government while the negotiations were in progress, it would certainly seem that the bank has so far obtained a diplomatic victory over the Turkith Government, which has been formally bound down to what it sought to evade. At the same time it will not fail to strike those interested that the réglement has distinctly in view the mere accounting to the bank by local officers for sums which are expended by them out of moneys they receive, so that physically speaking a certain portion of the Turkish revenues will not really be received by the bank. Whether this is a material modification of the engagement that the Bank was actually to receive all the revenues of the empire it will be for those who set any store by that engagement per se to consider. Our own opinion is that no engagement is worth much in itself, and that everything depends on the actual performance, and that if the Turkish Government is disposed to keep good faith all the benefit which its creditors can expect from having the Bank acting as treasurer will be derived in the manner now proposed. The creditors can never really hope that by any hocus-pocus their claims are to be met first, and that they need not suffer when there is an actual deficit in Turkey. The maintenance of government and self-existence, on the contrary, are the first necessities of every State, and whatever money comes in will be first devoted to these purposes, leaving the creditors last. All that can be hoped is that a true account may be obtained through a receiver-general who can be trusted, and that the necessity of having such accounts prepared and then publishing them may do something to enforce economy, though it must still be kept in mind by all concerned that in a despotic country there can be no real check outside the Government, and that no promise to adhere to a Budget can be trusted. constitutional countries extraordinary occasions of expense continually arise, and a despotic Government can never want peculiar one, the company having an absolute monopoly of a certain route of water traffic which must retain for an indefinite time overwhelming advantages for certain kinds of traffic over any other route, whether by land or water, or partly by land and partly by water, such as by the Euphrates valley, which can be devised to compete with it. There are few monopolies so absolute, and as the working expenses, as we shall see, are found by experiment to be small, the conditions of secure profit appear as favourable as possible. If the capital is not excessive, and the traffic is of a kind likely to increase, the shares of the Suez Canal must obviously be "worth attention."

The capital position of the company can be very simply stated. The total capital which ranks for interest and dividend is as follows:

| and the second second | | £ |
|--------------------------------|-----------------------------|-----------|
| Share espital, 400,000 shares | of 20/ each | 8,000,000 |
| Loan of 1867-68, for 4,000,000 | , redeemable in 50 years by | |
| sinking fund-to al annual | charge about 400,000/ | 4,000,000 |
| Loan of 1871, in "trentennary | bonds"-total annual charge | |
| about 51,000/ | | 800,000 |
| | * . | - |

ences of opinion as to the correctness of the abstract principles of currency which he wished to establish, there can be no difference as to the admirable judgment with which he selected the means by which in the different countries he had to deal with those principles had to be embodied. In each case he selected the arrangements which would enable him most easily to introduce his principles, and which would most effectually support those principles when introduced. His success in this respect is a conclusive proof of his judgment. He autablished his principles in a way which never could have been done before or since, and they have been accepted with no effectual remonstrance for many years.

But the mode in which he introduced his principles ha had a very different effect in the two countries. In England the number of banks has largely augmented, as was to be expected from the growing wealth and industry of the country. But in Scotland, though the wealth has also grown, the number of banks has not increased, but diminished. In 1844 it was 20; it now is 11. And in the face of the two legislations it is evident that Sir R. Peel gave the existing banks of Scotland a greater advantage than he gave to any English bank except the Bank of England. He allowed them to increase their issue without limit, which is always the most useful of all advertisements for a bank, and which was more than usually useful in this case, because this being a 1/ issue runs through all classes of the nation—even the lowest and which is of the highest utility in business, because it enables a bank to establish any number of branch banks which, as the phrase is, "open strong" in its own notes, and need searcely any other cash so long as their credit is accepted. A new bank starting in Scotland would not have been able to advertise itself by its own notes at all, and must have found gold coin at every branch, or Bank of England notes-both unknown commodities in Scotland—and must in consequence have been unequal to compete with existing banks whose names were before the public, and who could "manipulate" the branches with their own notes. In England no bank except the Bank of England can extend its issue on any terms; in some of the most growing parts of the country there are no notes except those of the Bank of England. Ordinary English Banks have had no power of extending their issue in the same way as the Scotch, nor indeed has the Bank of England, for an issue of 5l notes spreads far more slowly than that of the 1l notes; the latter are the main ingredient of the currency, the former only an adjunct. And the Bank of England, from its mode of transacting business, and from the fewness of its branches, does not come into competition for the banking of England in the same way that the Scotch banks do with one another for the bank-

| Expenditure. | £ |
|------------------------------------------|---------|
| Administration charges | 37,000 |
| Domain | 25,000 |
| Service of transit, towing, pilotage, &c | 61,000 |
| Maintenance of canal, magazines, &c | 93,000 |
| Water supply | 9,000 |
| Total | 225,000 |
| Net revenue | 766,000 |

The cost of working is thus only 23 per cent., and will probably, so far as can be judged, diminish in proportion as the traffic increases and the domain becomes more valuable. The percentage is much lower than what was calculated on when the canal was opened, the maintenance of the works having really proved less costly than was expected. Whether the sum is really sufficient or not, we can of course give no opinion; but the present managers in the last report at least profess to be quite alive to the necessity of renewals, and are already laring acids found in a decessity of renewals,

and are already laying aside funds in advance for that purpose.

The above sum of 766,000l having been the net income of 1873, we find that the preferential charges upon it were as follows:—

| Interest of 4,000,000/ obligations Sinking fund of Interest of trentennary bonds Sinking fund of Annual charge of obligations, stamp duties, &c. Control of Egyptian Government Annual charge of shares, stamps, &c. Commissions, &c. | 325,000 77,000 38,000 13,000 8,000 1,000 9,000 3,000 |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------|
| Total | 440,000 |

Parliament; whether in England or Ireland or the colonies the rule should be the same.

It is important to observe that this principle must be limited by its terms. If a bank is beyond the jurisdiction of Parliament in any respect, we cannot help what it does. If the Bank of France chose to register here in such a manner as to give it legal status, we could not object to its carrying on business here, but the contrary. No doubt its peculiar privileges in France would give it an advantage, but we could not object to the French lending us their money at a cheap rate. Similarly, if colonial banks, established under laws of a local legislature, come here and lend money, we cannot object, though they may have local issues or any kind of advantages. Such colonies are for such purposes independent countries. All that Parliament can do is to secure that its own laws are equal and fair; that in all countries solely subject to such laws—viz., England, Scotland, Ireland, and the Crown colonies—every one should start equal. Parliament cannot object to persons outside its jurisdiction, whether foreigners or colonists, who wish to lend money here.

The result, therefore, is that if Parliament cannot now revise our system of currency, it must adhere to the principles on which that system was founded—it was meant to be a system divided into different countries, and cannot be fairly worked except upon that basis. But such a system is plainly most imperfect, and if Parliament chose to revise it, and was so guided as to be able to do so, it would have before it an unexampled field.

A GOVERNMENT PAPER CURRENCY.

THE very able scheme for a Government paper currency which was published in our last number is well worth careful attention, for it brings into a clear view one of the principal evils of our present currency system, and suggests a possible remedy. We do not ourselves think that this remedy would be effectual, or, rather, we think that in curing a single evil it would introduce other and greater ones, but it cannot be considered or discussed without a sense of what is the state of the subject, and what are its real difficulties.

The writer says that the present system of currency depends on the Act of 1844, which divides the Bank of England into two departments—an issuing and banking department, and guides the former by an inflexible rule; that this rule has been already relaxed; that it is expected always on certain occasions to be relaxed again. And he adds:—
"This is surely a highly unsatisfactory state of things. It is objectionable that a law should remain on the statute book which it is well known will be broken whenever the

or two becoming even greater than that as the amounts on which the traffic increase is calculated become larger. It is necessarily a speculation, however, what the rate of increase will be, and investors must form their own opinion on that point. The useful formula to bear in mind, is that it requires 80,000l net to make 1 per cent. on the shares, and that 200,000 tons additional tonnage annually will yield the 80,000l, or, allowing for 20 per cent. working expenses, 250,000 tons. Per contra, the tariff, as now fixed, is to be lowered from time to time as the annual tonnage rises to certain fixed amounts, and this is an obvious deduction from the benefit to be otherwise obtained from a growing traffic. In time also, the expense of widening the canal to meet the growing traffic must be faced.

There are also several other things "to the good," which ought not to be lost eight of. The first is the possible increased value of the company's rents as the business increases and the neighbourhood of the ports and stations becomes more settled, an asset, we believe, which will ultimately be of coneiderable value, though it is, of course, one of the most difficult to estimate. Second, the preferential charges to the extent of about 450,000l a year are all terminable in from 30 to 50 years. This will be another o per cent. on the considerable it falls in, and in time will be a reversion of considerable This will be another 5 per cent. on the shares when Third, the company has a claim against the Turkish and Egyptian Governments in respect of the lower tariff forced on it, compared with what it claims right to under the original firman. We should not recommend any one to place much value on the successful enforcement of this claim, ut the past diplomatic successes of M. de Lessops make it

the framer of the scheme has considered how great this elastic element would be, how uncontrollable it would be, and how it would work at other times besides those of panic. When worked out in practice it would enable any one possessed of a large amount of stock and a small amount of bullion to turn the whole into Bank notes. Suppose the amount to be 5,000,000l stock and 250,000l in bullion, the operator would proceed thus. He would lodge first-

250,000 bullion,

d obtain 500,000 notes; next, he would take these notes at to the issue department, where they are convertible into llion, and he would then obtain 500,000 ; then he would

200,000 bullion, 200,000 stock,

and obtain 1,000,000l. Then again, as before, he would obtain 1,000,000l in exchange for the notes, and would lodge—

£ 1,000,000 ballica, 1,000,000 stock,

and take away 2,000,000*l* notes, with which he would proceed as before, and so on till his stock was exhausted. Shortly described, therefore, this scheme is one for turning English Government stock into Government currency at any moment and in any amount in which it can be procured. The holder of any sum in Consols aced only sell a trifling part for bullion, and then he could turn the whole into notes, which are legal trader, and for which at any moment, the Government would tender, and for which at any moment the Government would be bound to pay him in bullion.

If this were enacted many changes would follow. no bank would hold any more than a paltry sum in bullion or in Government notes; it would keep all the rest of the reserve in English Government stock because it would pay an interest, and Government notes or bullion would not pay any. Not only the issue department would disappear from the weekly return of the Bank of England, but also nearly all the 9,000,000*l* of notes now held in the banking department of the Bank of England. Some 1,000,000*l* might be left for model change but the rest would be to be the banking department. small change, but the rest would be turned into stock because the Bank would earn an extra income for it, and it would incur no risk by so doing as Government had practically undertaken to turn that stock into bullion if bullion was wanted. The Government department charged with the issue of notes would have to keep the banking reserve of the country as well as its currency reserve, for no bank would lose income by keeping anything in hard cash more than the small sum that is wanted for the counter.

THE NEW TURKISH FINANCIAL CONVENTION .- An official abstract has been published this week of the detailed convention between the Turkish Government and the Imperial Ottoman Bank, by which the bank is constituted in its new capacity of Receiver-General of the revenues of the Turkish Empire. As the long delay of the Turkish Government in settling these details, and its reluctance to admit the bank to the possession of the full powers it had promised, had become notorious, we think it expedient now to give the text of the official abstract of the treaty, which has been published, so far as it bears on this point. The following is the essential clause in the convention itself :-

Art. 13. The bank is to be the treasurer and paymaster-general of the empire. One month at least before beginning the Turkish financial year a detailed copy of the budget is to be officially communicated to the bank. The Government undertakes to pay over to the bank, both at Constantinople and the provinces, all its revenues, of whatever nature, and in whatever form they may be in accordance with the regulations to this effect, and it will take all the measures necessary for according that the whole of the provinces shall be stated in the measures necessary. nature, and in regulations to t for securing that the whole of the revenues shall by these means

I he bank is to make all payments for the public service (reserving the rights of third parties for the service of certain leans, the funds for which are nevertheless to be remitted through the bank). These payments are to be within the limits of the budget, which reded except under extraordinary circumstances as set forth in the regulations. The lank will see to the service of the public debt by reserving (preferent) the nece

And the mode of carrying out this stipulation is detailed as follows in the reglement, as it is called, by which the bank's mode of carrying on business with Toe Government is defined :-

Lastly,-the effect of this would be to make it most difficult to keep an adequate reserve in the Government department and to maintain the convertibility of the Bank note. There are 724,000,000l of English Government stock, and in theory the whole of this might be required in bullion. Of course no such immense sum would really be asked for, but very large amounts might and would. The exchanges might, as we have explained, long be kept adverse to this country, in spite of the Bank of England and other sound banks, by shose who wanted cheap money, and the same consequently demanded at the Government issue department might be very large. The exchange operators would have those means in their hands and would use them unserrupulously. We must remember that a panie, though a calamity for the public, may be a great gain to persons properly prepared for it. It causes a great fall in all securities, and persons possessed of money at that mement may make large fortunes. If the English Government note issue department and English credit generally were at the absolute mercy of a combination of operators who could obtain large amounts of our stock, it would be impossible to foresee or to assign a limit to the speculations which might be made in that stock, and it would be lamentable to record the effects of many of them.

We cannot but think that the dangers of this scheme have been concealed from its able author by its apparent resemblance to the many schemes in which notes have been issued by Government to banks on a deposit of their Government stock and a percentage of bullion. Under a former American law the New York banks had to deposit such stock and 12½ per cent, of spite of the Bank of England and other sound banks, by those

New York banks had to deposit such stock and 12) per cent, of bullion. And this produced no such effects as we have described. But then these notes were issued to banks who had themselves to pay them when demanded. They were not Government notes at all; they were bank notes secured by a Government stock. And no bank can deal with its own promises to pay in the reckless manner which has been described. They would be ruined if they did, for they could not perform those promises. They could not lend money at low rates of interest during an unfavourable exchange, without having the payment of their notes demanded from them; they must themselves keep a reserve to meet these notes and it is that themselves keep a reserve to most those notes, and it is that reserve which would be attacked, and not, as in the suggested

scheme, the Government reserve.

We think, therefore, that this scheme brings out with singular clearness the difficulties which beset a Government currency. It must be issued either by an inelastic rule, which is incompatible with, and breaks down in panie; or with an elasticity fixed by the issuing Government, which, as our correspondent says, gives that Government a dangerous discretion; or, lastly, with an elasticity fixed by the person to whose it is issued, and this is, as we have shown, apt to be more dangerous still. We cannot, therefore, look to a Government note-issue as likely to diminish the evils which beset our present system of credit and currency; in so far from lessening, we believe it would increase them.

THE CONSERVATIVE REPUBLIC.

WE have done the National Assembly of France an injustice, and we hasten to express our satisfaction that the prudence, the organisation, and the fortitude of French parties and party men have shown themselves so much greater than we had anticipated. Not only has a new Constitution been had anticipated. Not only has a new Constitution been carried in an Assembly that was not, in fact, guided by any responsible Government, but it has been carried with a promptness, a display of discipline, a power of combination, an indifference to party interests and party motives, which fairly deserves the sincerest admiration. It is true that the motive power which achieved such wonders was evidently fear, and a very urgent fear, of the growing strength of Imperialism. In the present National Assembly, Imperialism has but a handful of supporters, but it is far more deeply dreaded, both by the Mcnarchists and by the Republicans, than either of these parties is dreaded by the other. It is felt that Imperialism combines that personal, and so to than either of these parties is dreaded by the other. It is felt that Imperialism combines that personal, and so to say, picturesque and intelligible form of Government which is, in a sense, particularly well suited to the lively, suspicious, and timid nature of the French, with the popular character essential to all government in France, and that it combines these advantages with traditional associations which, in spite of Waterloo and Sedan, have not even yet the support of the franch meaning the second of exhausted their fascination for the French people. On the other hand, Monarchy, as represented by the partisans of the Comte de Chambord, has no friends among the French people at all; while Monarchy, as represented by the partisans of the Orleanists, has but the few and cold friends which alone compromises can command in France. On the other hand, Republicanism itself is no doubt very strong. Monarchical party are perfectly well aware that the word Republicanism represents the most antagonistic ideas, which are quite likely to break out into conflict the moment the Republic begins to work. Now the Monarchical party se hopes for themselves in the conflict of these ideas. Should the Conservative Republicans be hard pressed by the assaults of the more socialistic and root-and-branch species of Republicans, they may be not disinclined to accept the support of the Orleanists, and transfer the elective President into an Orleanist Prince appointed for life-from which the transition to a hereditary throne might not be very violent or difficult to effect. Thus, while both Monarchists and Republicans feel that there would be something in Imperialism to bar their claims indefinitely-a throne of greater pretensions and more national prestige to bar the claims of Monarchy, and a vaunted habit of consulting the people by universal suffrage to bar the claims of popular Government-they do not dread each other at all in the same way. T Republicans rather despise the power at the disposal of the Orleanists, who have never been strong at the hustings, and the Orleanists think they may some day find their advantage by giving a decisive victory at present to the Republic. Thus the power which has united the Moderate Right with all the Left in the great series of victories won by them during the last fortnight has been a power of fear. They saw the inconvenience of an Imperialist victory, and they combined with a prudence that was only just in time to prevent it, and to carry a Constitution under which, at least till the end of Marshal MacMahon's term, Imperialism will become rebellion. But we do not at all mean to say that it in any way diminishes the merit and self-denial of the parties which have united to effect this great compromise, that fear has been the motive power which produced it. On the contrary, we think that the fear in question was a most reasonable and prudent fear, and that its results have been reasonable and prudent too. It has not been a fear that produced panic, but a fear that produced discipline; and fear that produces discipline is fear that answers its legitimate function in the body politic, while fear that produces panic is fear which engenders the very thing it dreads.

It is well worth showing, however, that the form of Republic which has at last been established by the combined efforts of Right and Left, has considerably more of the elements of personal government in it than any Constitution which

has yet been tried in France, except that of the Empire. The focus of strength in the new Republic is the President. He is a far more important officer than either the American President. dent or the French President of 1848. He is to be elected for seven years, with a right of re-election, which enables the French people to have, if they will, any particular man as President for life. He is the head of the army, is responsible for order, nominates the Council of State, has the power of granting pardons, and can, with the consent of the Senate, dissolve the popular Chamber. And he can call be removed after a successful Chamber. And he can only be removed after a successful impeachment before the Senate as a Court of Judicature. It is clear that these are constitutional powers of the most important kind, especially when we add that the election of a President is not left to the popular vote, and that, therefore, the hope of a re-election is not likely to launch him into making ad captandum popular proposals, but depends on a majority of the popular Chamber and the Senate united, as one body, in National Assembly. As the Senate alone will command six-fifteenths of these votes, and the Senate is to be chiefly elected by decidedly Conservative colleges of electors, while the part of that body which is, in future, to be co-optative will, on the first occasion, be named by the present highly Conservative National Assembly, it is pretty clear that the President will have little motive or excuse for condescending to popular will have little motive or excuse for condescending to popular flattery or dangerous popular manifestoes. His power of dissolution indeed will depend chiefly on his influence in the Senate, and this will be a motive for a prudent and statesmanlike, rather than for a flashy and declamatory attitude. Such a President may, indeed, wield in many respects decidedly greater personal powers than the late Emperor himself ever wielded after he had agreed to try the experiment of Constitutional Government; for the President will be a much less considerance mark for fanatical hetred than an Emperor. less conspicuous mark for fanatical hatred than an Emperor, and he will be able, as even M. Thiers found, to put down revolution with a much stronger hand in the name of a Republic than any Monarch dare use in the name of a throne. Indeed, it is not very easy to conceive, outside Russia, a position of more influence and grandeur than that of the new French President, if only he is wise enough to foster, instead of to smother, the constitutional life over which he is to preside. He must, it is true, have a responsible Ministry, and all his orders must be countersigned by some one who is responsible to the Assembly for them, so that he cannot well do what he can get no one to defend before the popular body. But that very provision will remove his own action from the criticism of the Assembly, while he is made far too powerful in every way to admit of his being left without the most weighty influence over the deliberations of his Ministers. For instance, if a dissolution is to take place the President must propose it, so that it will be impossible for a responsible Ministry to enter on any policy which may, under certain contingencies, lead to the necessity for a dissolution without the full advice and concurrence of the President. This alone places him in a posi-tion far above that of any really constitutional Monarch, who must dissolve when the Ministers counsel a dissolution, and still further above that of an American President, who cannot dissolve at all. In fact, the French President's position will combine the power of an American President—greatly magnified by the longer term of power and by the right of re-election—with many of the attributes of a constitutional Prime Minister, who has the right of dissolving, or at least of advising a dissolution without any fear of a refusal, as well as of choosing the colleagues by whose aid he hopes to guide Parliament. A man of strong and steady brain in the place of Marshal Mac-Mahon might acquire almost an unprecedented power. He might easily, for instance, become the guiding mind among his own Ministers, and yet incur none of that risk of discredit which a great Minister almost inevitably runs. He might use powers of oratory far greater than his own to recommend his own plans to the French nation; and if defeated, might choose other men of no less skill to recommend a plan only so far modified as to meet the chief objections of his critics. In fact, he might become, far more easily than any constitutional King—because an elective President does not excite the jealousy and suspicion of a King,—the thought which guides the winning party on the political chess-board, and this without being recognised as the loser when his schemes fail. Thus, if France would but be content, she has got in her new Constitution many of the advantages of Imperialism, without the

odium to which its form is always liable—without the permanent dynasty and name with which incidents of both glory and disgrace must always be associated. No doubt that dynasty and name are sources of power as well as sources of weakness. But will it not be wise for France now to try patiently the question whether as sources of weakness they are not even more to be avoided than they are to be coveted as sources of power? Assuredly it is the truest Conservatism to exhaust the facilities for government which exist, before attempting to disturb them.

THE JUDICATURE AMENDMENT BILL. Wr have been so often disappointed by promises and imperfect performances since Lord Selborne's Judicature Bill was first introduced, that, although Lord Cairns' Amendment Bill passed through Committee in the House of Lords on Thursday night, we hardly dare assure ourselves that the question of Judicature Reform will be finally settled this year. Nevertheless, the Lord Chancellor was prompt and energetic in his introduction of the Judicature Amendment Bill, and when it passed the second reading there was a reasonable hope of seeing the measure on its way to the House of Commons before the Easter recess. It was eminently desirable that this should be, if possible, effected, not only to obviate the chance of having the progress of the measure blocked in the House of Commons by Bills exciting a keener political interest, but to meet the possibility of an organised opposition more formidable than any which Lord Selborne had to encounter in 1873, or Lord Cairns last year. The present measure, it is true, differs only in some unimportant details from the Bill that last year had advanced so near to legislative maturity, when it perished in the wasteful passion of the controversy upon the Public Worship Bill. The only point of difference to which the Lord Chancellor, in introducing the measure, referred as needing any special mention, was the withdrawal of the schedule of Lord Selborne's Act containing the Rules of Court. These rules formed no more than a part of the necessary regulations for the procedure and practice of the New Consolidated Tribunals that were to administer Equity and Law together, but at the time the Judges had not been able to arrive at an understanding as to the remaining matters to be determined. Last year, the Rules of Court, supplementary to those contained in the schedule to the Act of 1873, were submitted to the Queen in Council, and when sanctioned by an Order in Council, and by the lapse of a certain time within which no objection was raised by Parliament, they were to come into operation equally with the rules directly considered and approved by the legislature. Lord Cairns, however, was not satisfied that it would be convenient to have, "in regard to procedure, one body of rules on the "schedule of the Act of 1873, and another body of rules "not contained in that Act, or in the schedule of the Act, "but outside the Act, in a code approved by the Judges and "sanctioned by Her Majesty in Council." He proposed, therefore, to withdraw the schedule altogether, and to give effect to the one set of rules as well as to the other by Order in Council. It has been objected to this that though the change, as Lord Selborne observed, will be "merely formal," the repeal of the schedule will give the Judges a much larger descretion in altering procedure without reference to Parlia-ment. But, in fact, Parliament must consent in a matter so technical as this to follow implicitly the advice of experts, and to leave a great deal to the responsibility of the Cabinet, represented by the Lord Chancellor. It is not likely, therefore, that the progress of the Bill will be seriously impeded by any discussion on the withdrawal of the Schedule of Bules, or the proposed sanction of the new procedure by Order in

It has, however, become apparent that thus late in the day a vigorous effort will be made to procure the repeal of that fundamental part of the Act of 1873 which transferred the Appellate jurisdiction of the House of Lords to the newly constituted Supreme Court of Appeal. Lord Redesdale's opposition is quite consistent; but it would probably have dwindled to an individual protest, if it was not that a movement in favour of preserving the Appellate jurisdiction to the House has been set on foot among the members of the bar. Sir George Bowyer appears to be one of the principal leaders of this antiquarian agitation, and the names of several Queen's Counsel have, it seems, been procured for t. Lord Redesdale produced a rather ludicrous effect when a occasion to notice. Apart from its history the property is a

he quoted to the House of Lords as representative of the weight of this movement the names of Mr Watkin Williams and Mr Waddy, "both advanced Liberals"—whatever that had to do with the matter—and of Mr Benjamin, who was formerly one of the Ministers of the Southern Confederacy. These are highly respectable lawyers all three, but they have no special highly respectable lawyers, all three; but they have no special authority, so far as we are aware, to represent the profession in regard to Appellate practice, and the advanced Liberalism of the two first and the American career of the third have no relevancy to the controversy. The House of Lords, guided by the opinions of the eminent lawyers who are members of it, and exercising a political discretion which it has a perfect right to use, deliberately resigned its Appellate jurisdiction when it passed Lord Selborne's Bill in 1873. The Lord Chief Institute of England at the time gave his authoritative appropriate. Justice of England at the time gave his authoritative approval to the proposed transfer of appeals to the new Supreme Court, and Lord Hatherley affirms that three years ago the Judges were agreed in recommending the change. Lord Selborne further points out that when the Equity bar remonstrated against some provisions of the Judicature Bill of 1873 there was no objection raised against the abolition of the jurisdiction of the House of Lords. Nevertheless Lord Redesdale, Mr Calvert, aand other opponents of change now insist that the Judges should again be asked whether the Act of 1873 should not be altered in a material part. Lord Selborne's answer is, we think, complete. "The House," he says, "consented to the proposed transfer not only after full opportunity of know-"ing the opinion of the Judges and the profession, but after all possible opinions had been taken. Are your lordships now to be told that you ought to pause and take the opinion of the Judges and the opinion of the profession before you pass a measure which is merely complementary of the Act "to which you have given your assent?" The opponents of the transfer, however, are prepared to argue that the Bill introduced by Lord Cairns is not merely complementary of the Act of 1873. Sir G. Bowyer, for instance, contends :-"We are told that the question of the Appellate Jurisdic-"tion was finally decided in 1873; but this is not a correct "statement. In 1873 the Bill which was passed gave only one step of appeal; and it was felt that without an intermediate Court the mass of business would be so great that "the House of Lords could not deal with it. But this has " now been given up, for the present Bill gives an interme-"diste appeal. Under this altered state of things the case is "materially different, for the number of ultimate appeals " will not exceed the usual average, and will probably be less "than hitherto, and the House of Lords would have no diffi-"culty in dealing with those appeals. It is proposed that "the House of Lords shall sit for judicial purposes during "the whole legal year. This was suggested by Lord Chief "Justice Hale." This line of reasoning has opened up all "Justice Hale." This line of reasoning has opened up all the old fallacies and appeals to prejudices, and it may be found the Government will not stand firm and use their majority with the steady pressure that will be needed to carry the Bill. The Duke of Buccleuch has announced his intention of moving an amendment that would restore the whole of the Appellate jurisdiction in all its enormity, and so worthy of consideration are the chances of this move held to be, that a special meeting of Conservative Peers was held at the Duke of Richmond's on Wednesday to arrange concerted action. It is believed that much division was found to exist; and though the Duke of Buccleuch, as well as Lord Redesdale and Lord Penzance, have withdrawn their opposition for the present, it is certain that the vital issue will be raised upon the report. Nevertheless, Lord Cairns has it in his power to cure the sucess of the measure for which he is responsible. If the Bill should escape the dangers that await it in the Lords, we trust that in the Lower House the Liberal lawyers will not endanger the progress of a great constructive measure for the sake of embarrassing their political opponents. The Conservative party will do themselves a most unnecessary injury if they refuse to advance an important reform, which is not in substance inconsistent with the interests or principles of their party.

THE FINANCIAL POSITION AND PROSPECTS OF THE SUEZ CANAL.

WE now propose to give a fuller account than we were able to give last week of the financial situation of the Suez Canal, whose admission to the London Stock Exchange we had then

peculiar one, the company having an absolute monopoly of a certain route of water traffic which must retain for an indefinite time overwhelming advantages for certain kinds of traffic over any other route, whether by land or water, or partly by land and partly by water, such as by the Euphrates valley, which can be devised to compete with it. There are few monopolies so absolute, and as the working expenses, as we shall see, are found by experiment to be small, the conditions of secure profit appear as favourable as possible. If the capital is not excessive, and the traffic is of a kind likely to increase, the shares of the Suez Canal must obviously be "worth atten-" tion.

The capital position of the company can be very simply stated. The total capital which ranks for interest and dividend is as follows :-

| Share capital, 400,000 shares of 20/ each | 8,000,000 |
|------------------------------------------------------------------------------------------------------------|-----------|
| Loan of 1867-68, for 4,000,000/, redeemable in 50 years by sinking fund—to:al annual charge about 400,000/ | 4,000,000 |
| Loan of 1871, in "trentennary bonds"—total annual charge about 51.000/ | 800,000 |

12.800.000 capital is, or rather was, a little more than one-half that amount, involving an annual preferential charge of about 451,000% terminable in from thirty to fifty years. The company has in one respect been most fortunate. The cost of the canal was about 6,000,000l more than the above sum,* as the capital account shows, but the company obtained the amount in various ways during the construction, principally from indemnities which the Egyptian Government had to pay on surrendering portions of its original concessions. While the company thus holds the canal at much less than cost price, it has also acquired a domain of considerable extent along the course of the Canal as well as in Ports Said and Suez. For the above 12,800,000l it thus possesses a property which cost about 19,000,000l, and an asset of territory of considerable additional value. There is one point in connection with these additional receipts during construction which it may be useful to clear up. The sum of 1,200,000*l* was raised, as we rightly stated last week, by delegations upon the shares of the Khedive of Egypt, but it is the Khedive who is liable for the amount, and the transaction simply was a mortgage of his shares to raise money to pay the company what he owed them. The other shareholders appear not to be affected by the arrangement, which may thus be left out of account.

In addition to the above facts there is also one other point in connection with the financial position of the company which it may be useful to explain. A year ago the shareholders capitalised seven half-yearly coupons of 5 per cent. interest on their shares, which had not been paid, amounting, less French income tax, to 85f per share, or 1,360,000%. For these bonds have been issued bearing 5 per cent. interest, which will come to 68,000% a year, and they are to be redeemed in forty years by a sinking fund commencing in 1882. As these bonds, however, we are informed, are not allowed on the Paris Bourse to be separated from the shares, it appears immaterial whether we treat the annual charge in respect of them as another preferential charge or ignore it altogether, for the present quotation of the shares includes both, and it does not matter to the shareholder under what head he gets the money. But the attention of all concerned here should be called to the matter, and it would, perhaps, be desirable that the rules of the Paris Bourse on the subject should be conformed to, so that the transactions here and in Paris should be in the same article.

Such being the capital position of the company, what was the expenditure and income in the last year for which we have accounts? This was for the year 1873, the accounts of expenditure in 1874 not having been issued. The receipts and working expenditure, according to our English phraseology in such matters, were in that year as follow-

| RECEIPTS. | £ |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Se vice of transit | 928,000 |
| Domain | 39,000 |
| Warehouse charges, &c | 5,000 |
| Water supply | - 3,000 |
| Interest ou funds in hand and exchange | 18,000 |
| SAME AND DESCRIPTION OF SAME AND ADDRESS OF SA | |

* We find we understated the cost of the canal last week. It should have been 19,000,000/ instead of 16,000,000/, but a considerable part of the amount was for interest during construction.

. 991,000

| Administration charges | £ 87,000 25,000 61,000 93,000 9,000 |
|------------------------|----------------------------------------------------|
| Total | 225,000 |
| Net revenue | 766,000 |

The cost of working is thus only 23 per cent., and will probably, so far as can be judged, diminish in proportion as the traffic increases and the domain becomes more valuable. percentage is much lower than what was calculated on when the canal was opened, the maintenance of the works having really proved less costly than was expected. Whether the sum is really sufficient or not, we can of course give no opinion; but the present managers in the last report at east profess to be quite alive to the necessity of renewals,

and are already laying aside funds in advance for that purpose.

The above sum of 766,000l having been the net income of 1873, we find that the preferential charges upon it were as

| BOK OOO |
|---------|
| 325,000 |
| 77,000 |
| 38,000 |
| 13,000 |
| 8,000 |
| 1,000 |
| 9,000 |
| 3,000 |
| 469,000 |
| |

Deducting this sum from the above 766,000l of net earnings, the available amount for the shareholders in 1873 was 297,000l, which is equal to a dividend of 34 per cent. on the shares. Actually the amount seems to have been used in paying the overdue half-yearly coupon of July, 1870, representing 2½ per cent. interest; and a balance of 182,000%, including upwards of 80,000% brought forward from previous years, was carried forward to 1874.

The position of the company thus is that the shares were earning a dividend of 34 per cent. in 1873, and the question remaining is, What rate of growth can fairly be calculated on? It is known already that the traffic receipts of 1874 considerably exceeded those of 1873, the amount being 1,030,000%, or an increase of 39,000l, which would bring the dividend above 4 per cent., if the working expenses were not increased. Actually, we may assume, the 5 per cent. coupons will now be paid, including the annual charge for the overdue coupons, the difference being obtained from the large balance carried over from 1873; but the last annual return can hardly be

taken perhaps at more than 4½ per cent.

With regard to the prospects of increase, the progressive development of traffic during the last three years, when the undertaking may be considered to have come fully into notice, has been as follows:—

| | | | Vessels. | Tonnage. | |
|------------|------|-----------------------------------------|----------|---------------|--|
| Traffic in | 1872 | **************** | 1,082 | 1,439,000 | |
| - | 1873 | **************** | 1,173 | 2,085,000 | |
| - | 1874 | *************************************** | 1.264 | 2,424,000 | |

—which is an increase in 1873 over 1872 of 45 per cent., and in 1874 over 1873 of about 15 per cent., the diminished rate of increase in the latter case, however, being perhaps partly due to the new mode of measurement enforced on the company, and of which it incessantly complains. But in any case it would almost certainly be unsafe for an intending investor to reckon on so large an annual increase as even 15 per cent. Such a growth of traffic on almost any route after the initial stage of development is passed would be without precedent. We should be inclined to suggest, however, that a minimum increase of 5 per cent. per annum may perhaps be counted on. This is the rate of increase of traffic on railways in the United Kingdom, the rate of increase in our foreign shipping, and less than the rate of increase in our steam shipping, which is the class of shipping by which the Suez Canal is almost exclusively used. Looking also to the undeveloped state of such countries as China and Japan, with which the Canal connects Western Europe, we see no reason to doubt that perhaps an exceptional increase of business with those regions as well as with India will take place, so that the minimum of an annual 5 per cent. increase for a long while to come may really be possible. Even a less increase would be equivalent to an increase of about 1 per cent. annually in the dividend of the company, the rate of progress in a year or two becoming even greater than that as the amounts on which the traffic increase is calculated become larger. It is sarily a speculation, however, what the rate of increase will be, and investors must form their own opinion on that The useful formula to bear in mind, is that it requires 80,000l net to make 1 per cent. on the shares, and that 200,000 tons additional tonnage annually will yield the 80,000l, or, allowing for 20 per cent. working expenses, 250,000 tons. Per contra, the tariff, as now fixed, is to be lowered from time to time as the annual tonnage rises to certain fixed amounts, and this is an obvious deduction from the benefit to be otherwise obtained from a growing traffic. In time also, the expense of widening the canal to meet the growing traffic must be faced.

There are also several other things "to the good," which ought not to be lost sight of. The first is the possible increased value of the company's rents as the business increases and the neighbourhood of the ports and stations becomes more settled, an asset, we believe, which will ultimately be of constitutions becomes the post difficulties. siderable value, though it is, of course, one of the most difficult to estimate. Second, the preferential charges to the extent of about 450,000% a year are all terminable in from 30 to 50 years. This will be another 5 per cent. on the shares when it falls in, and in time will be a reversion of considerable value. Third, the company has a claim against the Turkish and Egyptian Governments in respect of the lower tariff forced on it, compared with what it claims right to under the original firman. We should not recommend any one to place much value on the successful enforcement of this claim, but the past diplomatic successes of M. de Lesseps make it impossible to pass it over. If the company succeeds at all, it will both get something by way of arrears, and come into possession of a higher tariff which may immediately add to its income.

Altogether the facts appear to us fully to bear out the statement with which we began as to the remarkable nature of this property which has now been introduced to the London Stock Exchange. It seems quite probable that it may become another illustration of the great value of an absolute monopoly of an article of increasing use, of which the shares of the New River Company, which supplies North London with water, and which has had all the benefit of the vast growth of London for nearly 200 years, have, perhaps, been the best illustration hitherto known. The position of the Suez Canal Company appears to us a commanding one of the same species, with the important exception, however, that it is exposed to political hazards and to interruptions from war, which are, of course, a drawback to every other advantage. It is also another drawback to an English investor that the company is a foreign one, and if it were partly held in England the English shareholders might practically have no control. Whether these chances and drawbacks are much worth reckoning on, it will be for those interested to consider, just as they must form a judgment for themselves on the vital points of the probable growth of traffic, and the limits of the working expenses.

NOTES. BUSINESS

COINAGE DIFFICULTIES IN GERMANY .- With reference to the remarks of our German correspondent in another column respecting the activity of the German Mints, the following statement by the Berlin Borsen Zeitung as to the scarcity of new mark coinage appears of interest :- "There are increasing "complaints," says our contemporary, "as to the restricted circulation of the new mark coins, but with little prospect " of immediate improvement. According to our information the requisite Imperial coinage will not be in readiness until 1880, "even if the utmost activity is displayed. Gold coins especially are wanting in satisfactory quantities; among silver coins one-mark and 20 pfennig-pieces are specially wanting; and inickel coins are also very scarce, although the necessity for these is most remarked upon." So far as we are concerned of course the want of gold coins in Claracan is likely to be a second or the want of gold coins in Claracan is likely to be a second or the want of gold coins in Claracan is likely to be a second or the want of gold coins in Claracan is likely to be a second or the want of gold coins in Claracan is likely to be a second or the want of gold coins in Claracan is likely to be a second or the want of gold coins in Claracan is likely to be a second or the s of course the want of gold coins in Germany is likely to have most importance, though it must also be kept in mind that the German Government does not apparently find it expedient to increase the gold coinage much this year, the sum set down for gold in its general coinage programme, according to the budget, being only 2,500,000%.

THE NEW TURKISH FINANCIAL CONVENTION .- An official abstract has been published this week of the detailed convention between the Turkish Government and the Imperial Ottoman Bank, by which the bank is constituted in its new capacity of Receiver-General of the revenues of the Turkish Empire. As the long delay of the Turkish Government in settling these details, and its reluctance to admit the bank to the possession of the full powers it had promised, had become notorious, we think it expedient now to give the text of the official abstract of the treaty, which has been published, so far as it bears on this point. The following is the essential clause in the convention itself :-

Art. 13. The bank is to be the treasurer and paymaster-general of the empire. One month at least before beginning the Turkish financial year a detailed copy of the budget is to be officially communicated to the bank. The Government undertakes to pay ever to the bank, both at Constantinople and the provinces, all its revenues, of whatever nature, and in whatever form they may be in accordance with the regulations to this effect, and it will take all the measures necessary for securing that the whole of the revenues shall by these means be raid to the bank.

for securing that the whole of the revenues shall by these means be paid to the bank.

The bank is to make all payments for the public service (reserving the rights of third parties for the service of certain loans, the funds for which are nevertheless to be remitted through the bank). These payments are to be within the limits of the budget, which cannot be exceeded except under extraordinary circumstances as set forth in the regulations. The bank will see to the service of the public debt by reserving (prelevant) the necessary funds from its encashments.

And the mode of carrying out this stipulation is detailed as follows in the reglement, as it is called, by which the bank's mode of carrying on business with the Government is de-

Art. 2. The Minister of Finance can alone issue delegations on the revenues for the different public services, and within the limits of their respective Budgets; giving the bank a list of these delegations.

The Bank to receive delegations to cover the amount required for the service of the Public Debt, carrying the sums received thereon to the credit of a special account.

the service of the Public Debt, carrying the sums received thereon to the credit of a special account.

Where the bank has no branches, the agents of the Treasury are to transmit the amounts they receive in these havalés (delegations) in the shortest possible delay. The note of the sums received on account of the Public Debt to be published monthly by the bank as heretofore.

Art. 3. All the revenues of Constantinople are to be paid to the Bank by the collectors, less their charges, for which they shall deliver vouchers. The bank to make all payments on the orders of the Minister of Finance, but within the limits of the Budget. In the provinces where the bank has branches it shall receive all the revenues, less the amounts expended focally, for which amounts it shall receive vouchers. Where it has no branches, the agents of the Treasury shall send to it monthly a statement of all their operations, with the vouchers and the balance of cash received by them.

Such appear to us the essential parts of the new arrangement, and, compared with what was talked of as contemplated by the Turkish Government while the negotiations were in progress, it would certainly seem that the bank has so far obtained a diplomatic victory over the Turkish Government, which has been formally bound down to what it sought to evade. At the same time it will not fail to strike those interested that the réglement has distinctly in view the mere accounting to the bank by local officers for sums which are expended by them out of moneys they receive, so that physically speaking a certain portion of the Turkish revenues will not really be received by the bank. Whether this is a material modification of the engagement that the Bank was actually to receive all the revenues of the empire it will be for those who set any store by that engagement per se to consider. Our own opinion is that no engagement is worth much in itself, and that everything depends on the actual performance, and that if the Turkish Government is disposed to keep good faith all the benefit which its creditors can expect from having the Bank acting as treasurer will be derived in the manner now proposed. The creditors can never really hope that by any hocus-pecus their claims are to be met first, and that they need not suffer when there is an actual deficit in Turkey. The maintenance of government and self-existence, on the contrary, are the first necessities of every State, and whatever money comes in will be first devoted to these purposes, leaving the creditors last. All that can be hoped is that a true account may be obtained through a receiver-general who can be trusted, and that the necessity of having such accounts prepared and then publishing them may do something to enforce economy, though it must still be kept in mind by all concerned that in a despotic country there can be no real check outside the Government, and that no promise to adhere to a Budget can be trusted. Even in constitutional countries extraordinary occasions of expense continually arise, and a despotic Government can never want excuses for doing what it likes in spite of all paper checks. People must not expect from a convention like the present the improvement which can only result from an alteration in Turkish administration, and it would still be a question, of course, whether with the utmost goodwill any Turkish administration would now be able so to economise expenditure, and increase taxation as to cover up the formidable deficit which exists.

ENGLISH BAILWAY PROGRESS IN 1870-74.—For the convenience of our readers we subjoin a summary statement of the results of our analyses of the accounts of thirteen principal English railways during the last four years. There are some essary variations in the data for the comparison from halfyear to half-year, the most important being that prior to the second half-year of 1871, when the South-Eastern changed the date of making up its half-yearly accounts, we only dealt with twelve companies instead of thirteen. Making all allowances, however, the figures give a general outline of the progress made during the years in question, and show in what way the dividend increased up to 1872, and how since then the increase of working appropriate her divisions of the progress of working appropriate the progress of the progr then the increase of working expanses has diminished the ordinary dividend. The net average loss in the rate of dividend between 1872 and 1874 amounts to about one per cent. per annum, but this is partly caused by a conversion of preference into ordinary capital, so as to diminish the rate of dividend without diminishing the amount to a corresponding

THE SUBMARINE TELEGRAPH MONOPOLY.—The difficulties which we pointed out last year in the way of obtaining a valid monopoly for an ocean telegraph, are again re-appearing. The Canadian Parliament has for a second time had under its consideration the Marine Telegraph Bill, by which Canada seeks to regulate the rights of cable companies landing on its shores; and although clauses have been introduced, according to the telegrams received, for the reservation of the "rights of the Anglo-American Company, it does not seem to be doubtful that even these clauses must leave the monopoly of the company in danger. According to the official correspondence on the Bill of last year between Lord Carnarvon and the Canadian Government, it would appear that the latter denies that the Anglo-American Company has any rights, and asserts that it is only "by sufferance" it has hitherto laid cables on the Canadian shore. It remains to be seen what Bill the Canadian Parliament will pass; but the existence of such a declaration as that we refer to, shows the danger in which a monopoly of telegraph communication between two or three different countries is placed, unless the monopolists derive express authority from each. Any one country can destroy a monopoly right in the communication derived exclusively from another country by simply declaring that the right of landing on its own shores shall be conditional on the abandonment of monopoly elsewhere. The Canadian Parliament acts within its right in passing a Bill of this sort, and the general clauses are obviously dangerous whatever special reservations may be inserted. As a question of public policy, the conclusion is not satisfactory. Ocean Telegraph profits are not safe without a monopoly; and it is a misfortune, and not an advantage to the owners, that they did not wait till they had sufficient concessions from all the countries concerned before they proceeded to make and lay cables. It will be exceedingly difficult now alone, even in the matter of Atlantic telegraphy alone, for the various countries on the European sea-board to make the necessary arrangements for a common policy with the

Governments of Canada and the United States, and the business will thus remain exposed to all the chances of unlimited competition.

DEFAULTING AMERICAN RAILWAYS .- The New York Commercial Chronicle of the 20th ult. contains a long list of the American railway companies which have been in default in paying the interest on their mortgages since the 1st January, 1874. Altogether there are 122 companies, having an aggregate mortgage debt of 567,028,000 dols, or say 113,406,000l, in this black list, of which (1) companies representing 239,337,000 dols of debt are "involved in litigation, either "forceleaves or otherwise or in hands of receivers." (2) "foreclosure or otherwise, or in hands of receivers;" (2) companies representing 164,245,000 dols of debt are already "funded, or now settling with bondholders without litigation;" (3) companies representing 114,458,000 dols of debt remain "in statu quo, or concerning whose affairs no "late information has been received;" and (4) companies representing 48,989,000 dols of debt had their roads sold in foreclosure during 1874. The third group it is noted comprises several old roads in default long prior to the papie foreclosure during 1874. The third group it is noted comprises several old roads in default long prior to the panic. So far as we can see there are only ten companies in this long account in which English money is concerned by means of the companies in question having been admitted to the London Stock Exchange List, though there may be many others, of course, which were floated in this country or in Europe without obtaining such quotation. The following are the ten companies referred to, with the amounts of their mortgages and the date of their default:

exhibits the following changes :-

| INCREASZ. | francs. |
|------------------|------------|
| Cash | 6,187,850 |
| DECREASE. | francs. |
| Circulation | 8,207,665 |
| Treasury account | 3,572,395 |
| Private deposits | 56,472,316 |
| Discounts | 72,380,853 |

The traces of the movement of capital caused by the Municipal loan are fast disappearing from the Bank account. The discounts, after reaching 835 millions, have fallen to 652, and may be expected to become further reduced, the paper created for that operation not having yet all become due. The private deposits have also diminished from 555 millions to 398. The advances on bullion have decreased this week by one million, and those on Rente by the same amount.

No changes of note have occurred in the money market during the week. There was an abundance of money at the monthly settlement, and those buyers who had arranged last week to carry over their purchases in the expectation that high rates would be demanded, found that they had been overhasty, the charges on Monday being lower than in the preceding week. The demand for bills is quiet and discount generally firmer; the minimum rate for commercial paper is 3½. Exchange on London is heavy at 25f 15c. Paper on Amsterdam is still demanded but wanting: the rate of 213½ to ½ has been paid for small parcels. Bills on Germany are less offered, and are worth 121½ the 100 marks.

The rates of compensation for the end of February mark the ground gained during the month. For the Threes the advance was from 62.90 to 64.65 compared with the end of January, or deducting the average charge of 25 centimes for carrying over,

a rise of 1f 50c; for the Fives the advance was from 99f 80c to 102f 10c, or, allowing for the report of 35 centimes, a rise of 1f 95c. The progress continued down to yesterday, when the Fives closed at 103f 20c; there has been a little reaction to-day, due to the delay in the formation of a Ministry. The rise of the last month has been obtained without the support of the cash purchases, which have diminished in a large measure since the month of January, as shown by the falling off in the demands through the Receivers-General. Speculation is, however, brisk, and the price of 105 for the Fives which buyers are aiming at now appears quite possible of realization. Of the foreign funds, Italian still shows the greatest buoyancy, and instead of following the movements of French Rente has now taken the lead. The price of 71½ was reached yesterday; this led to some realisations, but the rise in the week is more than 1½. Spanish and Turkish securities have not kept pace in the general advance. Spanish Threes, although quoted for the account to-day at a small advance on last week—about equal to the charge paid for carrying over—are done; lower for money. Turkish Fives also have more than once lost the rate of 43. The bonds maintain their prices. The drawing for reimbursement of those of 1869 is announced by the Comptoir d'Escompte to take place to-morrow. The bonds of 1873 are firmer at 282. Egyption bonds of 1870 lost 10f to-day, at 412½; those of 1873 5f, at 398. The greatest rise in the week has been in financial companies' shares, particularly in those which are the subject of speculation. Credit Mobilier shares have gained 95f, and the new shares, the issue of which was voted at the extraordinary meeting, are done at a premium of 90f. These new shares are to receive 6 per cent. on the paid up capital before anything is distributed to the old. These fast will then receive 5 per cent., after which both will share equally in the surplus profits. Franco-Hollandaise Bank have also gained 67f at 697. Spanish Credit Mobi the profits since the commencement of the year are 40 per cent. less than in 1874, which year also showed a diminution on the same period of 1873. Paris gas shares, which a few weeks back were below 800, have to-day reached 955.

Honduras bonds have gained 7f since the subject of foreign loans was brought before the House of Commons last week, holders having apparently a vague hope that something to their advantage may result from the inquiry.

holders having apparently a vague hope that semething to their advantage may result from the inquiry.

The traffic on the railways continues active, the sixth week of the year showing an increase of 1,040,000f on the six great networks compared with the same period of 1874. The augmentation since the commencement of the year is nearly four millions. The greatest improvement is on the Orleans line, amounting to over 13 per cent. on both old and new networks; the Northern ranks next with 7.7 per cent. on the old and 12.7 on the new. The only line showing a deficit is the old network of the Paris to Mediterranean, due to the large falling off of a million in the first week of the year. The decrease on the old network is now reduced to 157,798f, but is compensated for by an increase of 169,850f on the new. The deficit of the first week has thus been quite recovered. Railway shares have largely participated in the general rise. The Lombard Company has gained 187,000f in the week, and 1,151,000f since the last January. North of Spain has also gained 253,000f since the commencement of the year. The Council of State at Madrid has approved of the convention for the sale of the Seville Xeres line to M. de Casa Loring.

Transatlantic company's shares have improved in sympathy with all the securities patronised by the Credit Mobilier Company; from 210 they have recovered to 270. Amalgamations are the order of the day, and among the rumours afloat is one of a fusion between the Transatlantic and another important steam navigation company. Suez Canal shares reached 640 this week, but that price produced realisations, and a part of the advance was lost. There is nevertheless a rise of 35f in the week. The traffic returns for February are favourable, the tolls amounting to 2,677,000f, against 2,022,384f in the same month of 1874, and 1,852,132f in 1873. The new City of Paris bonds are at 1450c premium; those of older creation continue to improve; the 1871 gained to-day 10f at 300. Subjoined are to-day's prices for the account:

The meeting of the Credit Mobilier Company, called at the demand of a group of shareholders, was held on Tuesday, and resulted in the adoption of all the resolutions proposed, and the consequent resignation of Baron Haussmann, the chairman, and all the board of directors, and the election in their places of M. Philippart and other members of the board of the Franco-Hollandaise Bank, to whom is attributed the intention to bring about an amalgamation of the two companies. The meeting also authorised the board to terminate all the pending suits with the former directors by a compromise, and to suits with the former directors by a compromise, and to increase the capital by 80 millions by the issue of 160,000 new shares. If the project of amalgamation is carried out, of which there is now little doubt, this will be the third financial institution absorbed by the Franco-Hollandaise, the others being the Belgian Bank of Commerce and the Franco-Austrian Bank. The progress of the Franco-Hollandaise Bank has caused no little alarm to the great railway companies, which find their monopoly menaced in an unexpected manner. That institution has become interested, either by direct concessions or by purchase, in a number of departmental frailways, which it is purchase, in a number of departmental railways, which it is successively placing in connection with each other so as to form a vast network spreading over a great part of France. Even the Government has been moved at the vast plans of the Franco-Hollandaise Bank, for as the State has accorded guarantees to the six great companies, it has a direct interest in maintaining their privilege intact and excluding all competition by which their receipts would be affected. The Franco-Hollandaise Bank had hitherto obtained no footing in the South of France, and the reported object of its desire to obtain possession of the Credit Mobilier is to revive the old plans of the Mobilier and Impobilier Companies for a direct compunity. the Mobilier and Immobiliere Companies for a direct communication between Marseilles and the South-west of France by a cation between Marseilles and the South-west of France by a junction with the Southern Company. The Immobiliere Company possesses a large estate at Marseilles, on which it proposed to create immense docks and basins, to profit by the trade which would be diverted to Marseilles by the opening of the Suez Canal. The project was favoured by the Emperor, and as far back as 1863 the Paris to Mediterranean Company engaged to construct within eight years a branch line from Estagne to the proposed docks. Neither railway nor docks have, however, yet been commenced, and the estate, for the purchase of which the Immobiliere had incurred heavy liabilities, has remained valueless. The Board of the Cvedit Mobilier had resisted the project of amalgamation, but found itself abandoned by the valueless. The Board of the Credit Mobilier had resisted the project of amalgamation, but found itself abandoned by the shareholders and withdrew from the contest. The more important questions on which the meeting had to pronounce deprived the report read of all interest. It, however, showed profits in the year, or rather an increased value in its assets, set down at about five millions; but as those profits have not been realised, they were carried to the reserve, and no dividend was declared for 1874.

The Civil Court of Paris gave judgment yesterday for the defendants, with costs, in the action brought by the Turkish Government against the Comptoir d'Escompte and other financial houses. Turkey did not dispute the clause of the contract by which the Comptoir d'Escompte was authorised to sell the titles given as security for the loan of forty millions of francs, if payment was not made by the date fixed, the lenders having only to give five days' notice. The plearaised was based on Article 2,078 of the civil code, which declares that a creditor cannot dispose of the pledge given without judicial authority. The Court had consequently only to decide whether the borrower in this case could be considered as an ordinary private individual, or whether it would sidered as an ordinary private individual, or whether it would not be an encroachment on the sovereign rights of a foreign Government to subject it to the civil law of France. The question had in reality been already decided by a decree of the Court of Cassation in 1849, which laid down the law that foreign Governments were not amenable to the French Tribunals for obligations contracted towards Frenchmen; also that a private individual who contracts, even in France, with a foreign Government, accepts, by the fact of so doing, the administrative jurisdiction of the country to which that Government belongs. The Ottoman Government was evidently irritated at the summer's proceeding of the Comptain d'Escepate and at the summary proceeding of the Comptoir d'Escompte, and considered that as the lender held security for a nominal sum

of 280 millions, and an actual value of 120 millions, for a loan of 40 millions, more forbearance might have been shown. The loan was for three months from the 1st April; the date was several times modified, and made to depend on the foundation of a financial institution to manage the service of the public debt. The 1st July was at last fixed definitively for the payment; a postponement of fifteen days was then granted; after which, on the 14th, the Comptoir d'Escompte gave the required five days' notice of execution. The sales of the bonds of 1873 commenced on the 22nd, and although they only lasted three days, in that time 142,000 were sold at prices which decreased from 239f to 218f. As a condition for the postponement, the Ottoman Government agreed that the security held by the Comptoir d'Escompte and the lenders associated with it should also guarantee the drafts on the Turkish Treasury they might be holders of. On the trial the advocate for the Ottoman Government charged the defendants with having taken advantage of that stipulation to buy up all the drafts they could find on the European markets and present them for payment. The accusation was, however, denied, and although the amount of the drafts thus presented amounted to 20 millions, all the parties, with one exception, offered to prove that they held them before the adjournment of the date of payment. If the object of the one exception, offered to prove that they held them before the adjournment of the date of payment. If the object of the Turkish Government in bringing this action was to expose those wrongs to the world it has succeeded, but the satisfaction has been obtained to be detriment of its own credit.

tion has been obtained to the detriment of its own credit.

The Superior Council of Commerce has had again under consideration the subject of the sugar duties. A discussion first took place on the question whether the sugar of countries out of Europe should pay the surtax of 3f per 100 kilos when not imported direct from the place of production. The Council decided in the affirmative. The Reporter then proposed an article to declare that the surtax should not be reimbursed if the sugar was re-exported. He showed that the object of the surtax was to protect the French markets from their foreign rivals, as well as to encourage the native shipping, and if the drawback was allowed the effect of the surtax would be nullified. That proposal met with some opposition, but was eventually voted by a vote of 20 to 8. The Council then had to consider whether a surtax should not be levied on sugar imported from countries in which the article The Council then had to consider whether a surfax should not be levied on sugar imported from countries in which the article was taxed, but in which the exercice was not established as the mode of collecting the revenue. The fact of this proposal being made is sufficient to prove that the complaints of the English refiners are well founded, and that the system of payment of the duty on the raw sugar, by a graduated tariff according to classes of the article, permits the exporters to obtain an indirect premium. With the system of manufacturing in bond, established in France and not in Belgium and Germany. French manufacturers would be placed under facturing in bond, established in France and not in Belgium and Germany, French manufacturers would be placed under the same disadvantage relative to those of Belgium and Germany as the English refiners are at present towards the French. The conclusion of the council was that if the law imposing the exercice in France from the 1st July next is maintained, and is not adopted in other countries, the French refiners will have a right to demand the re-establishment of premiums on exportation to permit them to compete in the premiums on exportation to permit them to compete in the foreign markets.

The Société des Depôts et Comptes Courants has thought necessary to contradict a rumour given in some journals that Baron Haussmann was about to become director of that establishment in the room of M. Gautier, who has occupied the post since the foundation.

The Italian Credit Mobilier has held its annual meeting and voted a dividend of 26f for 1874, in place of 40f paid for

The following are the latest quotations of the produce markets at Havre per 50 kilos (1 cwt), duty paid:—
Cotton.—The Syndicate of brokers, in revising the price current at the end of last week, raised most of the sorts from lf to 3f. The present rates are:—New Orleans low middling, 97f; good ordinary, 91f; Georgia, same sorts, 94f and 89f; Pernambnee fair, 96f; Sorocaba, 92f; Oomrawuttee good fair, 66f; Tinnevelly, 69f; Bengal, 52f. Sales last week, 31,538 bales; importations, 2,820. Stock, 114,720, of which 54,750 from the United States, against 143,230 and 105,880 at same date last year.

Coffee (in bond).—Hayti, 103f; Gonaives, 104f; Santos, 163f to 108f; Rio, 87f to 93f 50e; Guatimala, 110f. Sales last week, 14,137 bags; importations, 42,212; stock, 156,309, against 127,462 at same date last year.

bags; importations, x, x, x, date last year.

Hides.—Monte Video salted ox, 97f; Buenos Ayres dry, 140f; Pernambuco salted, 74f; dry, 105f; New York salted ox, 54f; cow, 55f 75c; Buenos Ayres dry horse, 10f 50c each; Monte Video salted horse, 50f to 52f 50c per 50 kiles.

Wool.—Baenos Ayres, 170f to 222f 50c; Monte Video, 160f to 205f;

Tallow.—La Plata ox, 52f; sheep, 50f.

GERMANY AND AUSTRIA.

(FROM OUR OWN CORRESPONDENT.)
VIENNA, March 2. Austria has gone through many a difficult financial crisis, and yet it has never seen a period when the fate of its ministry depended so entirely on the state of its finances and political economy as it does at present. Thus, the court of justice in which a sentence was to have been spoken on the crisis and the principal representatives of speculation, has changed into a field of battle, on which Ofenheim on one side, and the Secretary of the Board of Trade on the other, fought for their lives. The conclusion was that Ofenheim received his acquittal from the jury, and the Secretary of the Board of Trade asked a leave of two months, a step which, in the traditional customs of Austria, always ends in his finally giving in his resignation. We are far from thinking Ofenheim an outraged innocent, still we must confess that, with so little to prove his guilt, it was very hasty and unwise to accuse him, and besides that it was partial to seize upon him alone among the rest, some of whom made themselves far more conspicuous. It was not only unwise, but even somewhat against the conthe rest, some of whom made themselves far more conspicuous. It was not only unwise, but even somewhat against the constitution that the authorities tried to make use of their influence, as we know they did from the letter of President Hein, who desired the president of the court of justice to use all the severity in his power both with the accused and the attorney. This measure, once it was known, of course produced a contrary effect to what it should have on the jury—it somewhat improved the position of the accused. It also caused an interpellation of the Minister of Justice in the Reichsrath, the answer to which has been put off. Yet President Hein found himself obliged to excuse his letter publicly, and Minister Banhaus received his put off. Yet President Hein found himself obliged to excuse his letter publicly, and Minister Banhaus received his leave of absence before the verdict was spoken. The latter, it must be said, has rendered his country good services by doing all he could for increasing its industry. Thus, he established a number of drawing and technical schools, especially in the mountainous districts of Austria. What he intended, and what will most likely follow, is a greater extension to industrial occupation at home which should replace spinning and weaving, both of which have been put beyond competition by the new machines introduced in all factories. He is, however, not free from represech in having neglected to study the not free from reproach in having neglected to study the railway question. He has not brought forward a single plan as to what railways should be extended in order to complete the whole what railways should be extended in order to complete the whole system of railroads in Austria. He therefore gave out concessions for lines less important and less profitable than those would have been which are not yet constructed. It had been hoped that just after the crisis, when industry suffered most, the Government would have helped the working classes by ordering public works to be everywhere begun. The Reichsrath had voted a loan of 80 millions for this purpose, but the Board of Trade put off the execution of this project so long that the worst times passed without anything being done, and the sum destined for the purpose has not yet been entirely made use of. The consultations as to who is to be successor to Banhaus have already begun.

the sum destined for the purpose has not yet been entirely made use of. The consultations as to who is to be successor to Banhaus have already begun.

The reorganisation of the Hungarian Ministry has been accomplished. The Emperor, who had gone to Pest, after a few unsuccessful attempts at something else, commissioned one of his most faithful subjects, Baron Bela von Wenkheim, with the formation of a new Cabinet. After a whole week's treating a Ministry has been proposed, presided by Wenkheim, and consisting of Ticza, Szell, Perczel, &c. Ticza is to receive the "portefeuille" of the internal affairs; Szell that of the finances. Ghyczy has been offered the department of justice, but he has, as was to be expected, refused to accept. To all appearance the new Ministry will adopt Ghyczy's financial plan with but a very few modifications, so that it is clear that the crisis bears the political character we attributed to it some time ago. The Ministry Ghyczy-Bitto falls a sacrifice to the compromise between the Parliamentary "Left" and Deak's party, and Ticza's ambition has gained its point. We may presume that the new Ministry will have to go through many an evil experience and many a hard piece of work before it can commence where Ghyczy left off. A great loss of time is hereby to be most regretted.

The official returns of Austria and Hungary's foreign commerce in 1874 have just appeared. They give an increase on exportation, and a decrease on importation against 1873.

The Austrian Reichsrath is at present very busy with a new law for the Bourse, by which the latter is to become entirely independent. By the same law all business on time is to become actionable, which it has not been up to the present moment, thereby encouraging careless speculators on 'Change, Just after the outbreak of the crisis a great many speculators, instead of fulfilling their promises, simply stayed, away from 'Change, by which means the creditors could not get hold of them. When everyone may be forced by a court of justice to keep the pr

to desire a junction between the Austrian and Turkish railways. We now hear that Baron Hirsch has succeeded in obtaining favourable promises from the Turkish Government

at Constantinople.

We have been told by well-informed persons that in Berlin
the German Government is using every effort to put the

currency reform into action. The eight German mints are in future to work day and night. In Berlin night work has already begun, and the mints of Strasbourg will also soon be set to work. The withdrawal of silver thalers is being somewhat better looked to, and what there is too much of silver is being sent to the East Indies. The Exchequer suffers a loss of 5 per cent. by these sales; this cannot, however, be avoided, as the German Government must use its time with all speed as long as Holland leaves it undecided when it will adopt a gold currency. Should Holland soon decide to put its law on gold currency into force then the price of silver must sink still more, and the German Government incur greater losses still. The following is the present position of German coinage:—

Marks.

| | Marks. |
|--------------|---------------|
| Gold coins | 1,114,479,480 |
| Silver coins | 61,265,168 |
| Nickel coins | 7,516,917 |
| Copper coins | 2,952,784 |

Total 1,186,214,299

Besides being benefited by the increase of canals, of which we have lately spoken, German shipping is likely to be greatly improved by another measure also affecting the canal trade. A new system has been invented in Berlin by which the chains used on canals are replaced by wire cables. This system is said to be a very successful one; it is already in full action on the Oder between Stettin and Breslau, and also on the Elbe between Hamburg and Dresden. A concession for cable shipping on the Spree and the Havel has been lately granted, so that we may soon expect the passage between Berlin and Hamburg to be but 72 hours. By this line a direct connection by water between Hamburg, Berlin, and Dresden will be brought about. Similar projects are being prepared for the Weser, the Danube, and the Rhine. Inland shipping will therefore be much improved, and the transportation of coal will especially gain by it.

VIENNA, Feb. 23, 1875.

Whilst the Austrian Reichsrath is occupied with a question far more important than it is interesting, the reform of the Parliamentary "reglement," the Hungarian crisis has changed from a mere Budget question into a highly important political affair. The Ministry Ghyczy-Bitto is continuing to conduct the affairs of the State, but the Emperor has gone to Ofen to consult the principal leaders, and to look into the change caused in Parliament by the approximation of Tisza. When he has gained sufficient insight into the state of affairs, he will commence forming a new Ministry. Last week a meeting of the party leaders took place in the house of the ex-Minister Szlavy, at which Tisza and, for some time even, Bitto were present. The objects discussed in this meeting were the economical and financial questions which the approaching years will bring on for Hungary itself on one side, and for its relations to Austria on the other. These questions were the following:— Whilst the Austrian Reichsrath is occupied with a question questions were the following:-

1. The Bank busine

The Treaty of Customs and Commerce with Austria.

2. The Treaty of Customs and Commerce with Austria.
3. The Administration of Justice.
4. The Reform of the Administration in Hungary.
5. The question of Rates and Taxes, and the question how this year's deficit in the Budget can be done away with.

It is very strange that the first four questions should have been drawn into the Political Programme, when it was the fifth alone which brought about the present crisis. It is, however, still more strange that the several members of the meeting agreed on the first four points, and accepted Tisza's profifth alone which brought about the present crisis. It is, however, still more strange that the several members of the meeting agreed on the first four points, and accepted Tisza's proposal to leave the decision on the fifth point entirely to the President of the Ministry to be named by the Emperor, when it was this very fifth point which caused the present Ministers to ask for their dismissal. The points in the first four questions about which the meeting agreed are still kept secret, yet we may suppose them scarcely favourable to the Austrian half of the Empire. We may easily guess what the party evolution, to which patriotic Ghyczy falls a sacrifice, is, financially speaking. The leaders of the new majority are evidently trying to extract a part of the sacrifice necessary to cover the deficit, and which ought to be borne by the Hungarians, from their Austrian confederates. They will for this purpose try to defraud the Austrians in the new Treaty more than they have already done. The latter now have to bear 70 per cent. of the expenses common to both countries. The third and fourth questions are internal, Hungarian ones, and will not be difficult to settle, although a reform will be necessary in the regulations for commerce and bills of exchange, and in the administration which comprises a great deal too many sinecures. The question as to the Bank and the Treaty of Commerce and Customs between the two States, are of a much higher, of almost international importance. The Hungarian National Bank, independent of the Austrian National Bank, with an independent right to issue notes. This demand is made by persons who will not understand that such an institution would have much less credit, and would bring less profit than a head office of the Austrian National Bank, established in Pest expressly for Hungary, would. The question is, however, not to be settled by the mere wishes of the Hungarians, as first of all the circulation of notes for the Monarchy must be put into order. At present almost 300 millions of gulden issued by the National Bank are in circulation, and besides that 340 millions of legal tender notes, both by compulsory means. Gold premium amounts to 10 per cent., silver premium to 5½ per cent. Therefore more than 100 millions of legal tender notes would have to be withdrawn, in order to bring the circulation of notes to par, and to be able to do away with the compulsory circulation. Then the State owes the National Bank 80 millions of gulden. It was understood in the Treaty that Hungary owes it a proportionate part of this sum, that is to say, at least 30 per cent. Even if we admit that 150 millions of legal tender notes may remain in circulation for the payment of taxes to the public offices, still Hungary would have to bear its part of the withdrawal of notes and of the debt to the National Bank, amounting together to 54 millions of gulden, before the establishment of an independent Hungarian Bank can be thought of. Now, Hungary having difficulties in covering a deficit of 24 millions, we cannot comprehend what advantage it is to draw from an independent note-bank. We come to another view of the business, if we remember that, notwithstanding the loyal principles of the present Ministry on this point, the majority of Hungarians will not acknowledge either of these obligations, because they are not separately mentioned in the Treaty of 1867. From all this we see that the future brings a serious cause for dispute between Austria and Hungary with it, and that the intentions of the new Government in Hungary cannot be called friendly towards Austria, be the men named by the Emperor for the new Cabinet whoever they may. The renewal of the Treaty of Commerce and Customs the thing. A commencement of this was made last autumn, when the Austrian Ministry was forced by the Hungarian Government to abolish the exemption of corn from duty, which had been in a provisory way granted in 1873. The Austrian had been in a provisory way granted in 1873. The Austrian Minister for the Board of Trade consulted the different Chambers of Commerce on the opinion of men of business in this important question of the renewal of the Treaty. A report of this kind, whose author is the secretary of the Austrian Park Country Technology report of this kind, whose author is the secretary of the Austrian National Bank, Gustav Leonhardt, and on which the Austrian Industrial Society will give their opinion this week, shows that the principal and decisive point of the new Treaty will be to maintain the total absence of customs between Austria and Hungary, as it has been in existence for twenty-four years. There are voices in Hungary which demand a boundary of customs between the two countries.

The proceedings against Ofenheim could not be closed last week, because the President of the Court of Justice, Baron Wittmann, fainted away while he was reading his résumé of the proceedings to the Court. The unheard-of fatigues of this monster affair are enough to ruin even an iron constitution

I receive an interesting piece of news from Berlin, which is that a certain number of banks are inclined to propose to their shareholders to renounce their right of issuing notes, in cases where they will receive an indemnity from the National Bank that is to be. This example will most likely be followed by many other banks, for the reason that the new Bank Act contains a number of restrictions which will greatly diminish the extension of the private note-bank's business, and take away a part of their profits. We have already heard that German Discount Banks which do not issue notes have paid higher dividends than the banks issuing notes. However, the English Joint Stock Banks very often do the same. The Prussian Bank is beginning to establish branch offices before the great change takes place. Such a branch office has been established in Erfürt.

The Prussian Landtag is discussing a question of high importance, the law which allows Catholic communes to administrate their own property. This law again awakens the battle with the hierarchy, for the Church demands the right battle with the hierarchy, for the Church demands the right of administrating the property of the Catholic Churches. The one thing granted to the clergy is, that the priest of the parish will have the right to preside over the committee which administrates the property. We are not sure, however, that even the concession will be granted by the House. When the Bill was presented the Minister for "Cultus" informed the House that in the Episcopate of Gnesen important sums had been embezzled by the administrators of the property. On the provocation of the Ultramontane leaders, the Minister even gave the names of the priests who had pocketed thousands of thalers. sands of thalers.

About a year ago the Congress of German Agriculturists

named a committee, which was to ascertain the position of agricultural labourers in the German Empire. We have just received the report of this committee, which is contained in a volume in quarto in 550 pages. We will return to the subject of the results of this enquête another time.

The news of the probability of Bismarck's retiring need not be taken into serious consideration. The Emperor will never consent to such a step, no more than he thinks of retiring himself; of course, it is necessary to find a substitute for him, who will take the burden of daily business from his shoulders, so that Bismarck need have nothing to do but give his thought to business of importance. Two candidates for this task are being named. the Bavarian ex-President of the Ministry, and present Ambassador for the German Empire in Paris, Prince Hohenlohe; and the ex-President of the late German National "Liga," Herr von Bennigsen. Both men are known for highly estimable firm characters, although, of course, they do not equal the Chancellor of the Empire in his gifts of mind, or his untiring energy.

| Clearing-house return | *** | 138,611.000 | 161,770,000 | 144,097,000 | 148,789,000 |

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1865, a deficiency of 5,145,567l; in 1872, a deficiency of 3,007,146l; in 1873, a deficiency of 5,734,588l; and in 1874, a deficiency of 1,261,913l. In 1875, there is a deficiency of 2,106,362l.

In 1865, the news of the capture of Charleston had depressed the Confederate stocks, and the Liverpool cotton market immediately lost tone. The Bank rate had been reduced to 4½ per cent. without attracting remark.

In 1872, money was abundant, and the stock market showed a rising tendency.

In 1873, submarine telegraphy was the subject of much speculation on the Stock Exchange. The Bank of England forgeries excited alarm. Mr Gladstone's Irish University Bill met with opposition from the class it was expected to benefit.

In 1874, the usual increase of demand for money at the beginning of March had hardened its value very little, and but for the payment of revenue money into the Bank, rates outside would have been considerably under the official rate of discount. The Bank of France had reduced its rate to $4\frac{1}{2}$ per cent., the accumulation of bullion in its coffers having been ten millions in the preceding six months.

The account of the Bank of France for the week ending March 4 shows the following changes:—

| Assets. | March & | | Feb. 25. | | Increase. | | Decrease. |

DISCOUNT AND MONEY MARKET.—Bates in the open market have again been maintained during the past week, and there has also been a good demand at the Bank—the open market as usual at this season now feeling very much the continued effect of the revenue payments. Since the publication of a weak Bank-return yesterday afternoon, the impression has also been strengthened that money will increase in value during the next few weeks. This afternoon the minimum for the best bills at 2 and 3 months is maintained at 3\frac{3}{3}.

The event of the week in the market has been the withdrawal of 148,000*l* from the Bank for Germany, to complete the recent order which has been on the market. It is understood that no farther withdrawals on this account are for the present impending, the German Government proposing to coin very little new gold this year; but nothing of course can be affirmed with any certainty as to when the next order will come on the market. In addition, some small amounts have been withdrawn from the Bank for Brazil and elsewhere, so that it has lost on balance for export about 233,000*l*. The Continental exchanges remain generally favourable, and the exchange on Paris, notwithstanding this being the week of the Bourse settlement, has hardly fallen to specie point, and only a few small sums have been taken for Paris, while another small sum of bar gold from "the Continent" has been sent into the Bank. On the other hand, the New York gold premium has again risen above 115, and the exchange has fallen to 4.81, the passage of the tariff bill reimposing an additional 10 per cent. on manufactures having caused a rush to pay duties under the existing tariff.

The weakness in the Bank return is due to the usual in-

The weakness in the Bank return is due to the usual increase of the circulation at the change of the month, added to the above withdrawal of gold for export. The net decrease of the bullion, allowing for 5,000l returned from the country, is 228,000l, and the circulation has increased 680,000l, so that the total decrease of the reserve is 908,000l, and the amount now is only 9,779,000l, the proportion to the liabilities being almost exactly 40 per cent. The principal other changes are connected with the scarcity of money in the open market and the payments of the revenue. The increase in the private securities is 1,398,000l, and the money has not been borrowed by way of precaution but has all been "wanted," as the private deposits have at the same time diminished 82,000l. The increase in the public deposits is 201,000l. In view of this return, and looking to all the circumstances of the period, coupled with the approach of the usual spring demands, there is a very general feeling that an advance of the Bank rate should have taken place this week.

As usual in the last week of the Bank's financial half-year, a large sum has been added to the rest. The amount is now 3,674,000l, which will admit of a dividend of 4½ per cent., carrying forward about 20,000l over the three millions which the Bank is accustomed to retain as the minimum rest.

We subjoin our usual quotations for mercantile paper various periods to run :—

THE STOCK MARKETS .- Apart from the strong buying on Paris account, which continues to be the main feature of Stock Exchange business throughout the continent as well as in the London market, there is still comparatively little of general importance to record in the stock markets. Business here continues to be somewhat restricted, and though the tone is mostly firm, there has been little animation; and prices, though they gain on balance, are fluctuating and unsteady within narrow limits. The consolidation of prices for a farther considerable rise appears still to be in progress; but the markets are, no doubt, embarrassed by the weakness of of the speculation which has been entered into, and which causes sales and realisations on very little provocation-this feature being, of course, most marked at the period of monthly liquidation, such as has now been passed through. Thus Rentes, which were depressed when we last wrote, almost immediately afterwards recovered; but the rise was again checked by fresh realisations, and the see-saw has continued all through the week, an advance one day being partly lost the next. Turkish stock also were bought largely on the publication of the terms of the convention with the Imperial Ottoman Bank; but a similar check to the rise immediately took place, while Egyptian, Peruvian, Spanish, and (this week) Italian stocks have all exhibited similar changes—Italian, as we notice below, having been exceptionally a gainer for the week. In the home railway market the changes on balance are rather adverse; but bank and other miscellaneous shares have almost all risen, a special change to note being an advance in Suez Canal shares, which are now admitted, as noticed in our leading columns last week, to quotation on our Stock Exchange. To-day has been one of the days of upward tendency and the tone has remained good to the last.

A New Zealand Loan of 4,000,0002, bearing 41 per cent. interest, was introduced on Saturday by Messrs Rothschild, the issue price being 94, and is understood to have been readily taken, although, as usual, there is little general dealing in colonial securities.

English Government Securities.—In this department there is no change of importance to note.

COLONIAL GOVERNMENT SECURITIES .- There are no further movements of importance amongst these stocks for the week. The new New Zealand Loan is quoted at a fractional premium

on the Stock Exchange, the issue having been well applied

FOREIGN GOVERNMENT SECURITIES.—This department being mainly affected by international dealings, has, of course, sympathised more closely than the others in the Paris movements, and in almost all the leading stocks-French Rentes, Italian, Turkish, Egyptian, Peruvian, and Spanish—the dealings here have, as a matter of fact, been chiefly on French account. The continued strength of the buying for Paris attracts great attention, and whether the explanation is that the French public is now absorbing all these stocks, or simply relieves financial houses of Rentes, so as to enable them to speculate in the others, the fact of the purchases is a continued evidence of the financial strength of France. As we have stated, there has been some pusted income at times which in a sign of a good deal of unsteadiness at times, which is a sign of a good deal of weak speculation being mixed up in the general movement for a rise; but on the whole the tone has been firm, and the result of the liquidation in Paris, concluded this week, seems rather to have been encouraging to the operators for a rise. Of all the stocks named Italian have been most in favour, the improvement here being increased by the report of purchases on Italian account and the fall in the Italian exchange. Peruvian stocks have been next in favour, on the progress of the negotiations as to the new guano contract, and next Egyptian, notwithstanding the continued reports as to the magnitude of the floating debt. Turkish are less sought after, the disfavour here seeming to counteract the favour shown in Paris, and this cause of depression being likely to continue until the new convention has been shown to work. Satisfaction has so far been given this week by the publication of the terms of the convention and reglement, which we comment on elsewhere, and which appear to show conclusively that the Government was eventually obliged to abandon its attempt to evade its engagement to let the bank be its receiver-general; but the doubts as to the financial condition of the country and the had faith lately financial condition of the country, and the bad faith lately shown by the Government, induce even the speculative public here to withhold support to Turkish stocks until they see some actual evidence of improvement. Spanish have b the weakest stock of all, on account of the apparent delay which must occur in suppressing the Carlist insurrection, or concluding a convenio. Russian stocks have also generally advanced. To-day there has been a steady tone, and there is finally in most cases a moderate improvement for the week.

The following are the changes for the week, taking the

latest unofficial quotations:-

English Railways.—The greatest fluctuation this week has been in Caledonian, in anticipation of the dividend, the approach of that event, as usual in Caledonian stock, giving rise to desperate speculation. Otherwise the changes on balance are adverse, notwithstanding rather good traffic returns generally. The Southern stocks are checked in their advance by the realisations incidental to the recent great rise, and the heavy lines are still under the influence of Mr Moon's depressing speech, and the criticism on the working expenses of several companies which is still maintained. To-day there has been considerable excitement on the announcement of the Caledonian dividend at the rate of 5½ per cent, per annum against 4½ a year ago, the improvement being even greater than the most favourable reports previously circulated in the market. In some of the other stocks, especially Great Western, there has also been a sharp recovery from the depression of the early part of the week.

sion of the early part of the week.

The following shows the principal changes for the week in the quotations of ordinary stocks, comparing the latest unofficial prices:—

The traffic receipts on eighteen railways of the United Kingdom, of which a list is subjoined (including the principal railways), amounted for the week ending February 27 to 866,734l, being an increase of 6,635l as compared with the corresponding week of last year. The aggregate receipts for the half-year to date now amount to 6,783,745l, an increase of 193,693l as compared with the corresponding period last year. On Midland there is the comparatively large increase of 6,677l, that on the other lines being inconsiderable, while Great Western shows a further decrease for the week of 5,501l.

JOINT STOCK BANKS.—These shares show an advance this week on balance, which is most general among those of the semi-foreign banks quoted in London. The following archigher: — National, 2; London Joint Stock \(\frac{1}{2}\); Merchant, \(\frac{1}{2}\); Union, \(\frac{1}{2}\); Imperial Ottoman, \(\frac{1}{2}\); Ditto New, \(\frac{1}{2}\); Agra, \(\frac{1}{2}\); Anglo-Egyptian, \(\frac{1}{2}\); Bank of Alexandria, \(\frac{1}{2}\); Franco-Egyptian, \(\frac{1}{2}\); Bank of British Columbia, \(\frac{1}{2}\); British North American, 1; London and San Francisco, \(\frac{1}{2}\).

TELEGRAPHS.—The movement in values here is very general and downward, chiefly on the publication of the official correspondence, showing the danger to the Anglo-American monopoly from the legislation of the Canadian Legislature. The following have fallen:—Anglo-American, 1; Newfoundland, ½; Globe Trust, ½; Brazilian, ½; West India and Panama, ½; Western and Brazilian, ½; Eastern, ½; Mediterranean, ½; do Preference, ½.

It is reported that the directors of the Anglo-American Telegraph Company have decided to express an unfavourable opinion of the proposal to divide the stock into Preferred and Deferred. The decision will cause disappointment to some holders of stock, but although our own opinion has been frequently expressed in favour of the principle of such a division, there is, perhaps, something to be said for the resolution to which the Anglo-American directors are reported to have come, regard being had to the special conditions of their stock. Telegraph property, there is no doubt, is in a very experimental stage compared with railways, and the greater amount of risk involved makes it of course desirable that the preferred or debenture capital should be restricted within the narrowest limits because otherwise the capital which goes into preferred stocks would not be attracted, and so the whole benefit of the division, which lies in the enhanced price of the original stock through its being put into such a form as to tempt new capital, would be lost. If this view should be thought well founded by the Anglo-American directors, they are quite right to recommend their shareholders, in the special circumstances of their case, not to divide. The division, in circumstances where it is not clearly beneficial, will 'no doubt tend to do harm by making each small lump of stock less marketable than if it were part of a larger total.

Mines.—The market for British mining shares is dull, but no further general depression is apparent this week. Tin Croft are 1 better. In foreign shares, Eberhardt are 1 higher; New Quebrada, 4; New Zealand Kapanga Gold, 1; St John del Rey, 1.

del Rey, 1.

MISCELLANEOUS.—In bonds and loans there is a good deal of firmness shown, but otherwise the features of the week have been here only a rise in financial companies' shares and those of the Suez Canal. The following have advanced:—American Investment Trust Certificates, 1; City of Auckland Loan, 1½; Municipal Trust, 2; Russian Land Mortgages, 3; St. Louis City, 1; United States Mortgage, 1; Credit Fencier of England, ½; ditto of Mauritius, ½; International Financial, ½; National Discount, ½; Standard Discount, ½; Hudson's Bay, ½; Scottish Australian Land, 10; and Suez Canal shares, 2. On the other side, Crystal Palace are 1½ lower.

We subjoin our usual quotations for mercantile paper various periods to run:—

| Bank bills-2 | and 3 months | ********** | 32 | per cent. |
|---------------|----------------|------------|------|-----------|
| Do | 4 - | ********** | 13 | per cent. |
| Do | 6 — | ********** | 37 | per cent. |
| Trade bills-2 | 2 and 3 months | ******* | 3} | per cent. |
| Do | 4 - | ********** | 4 | per cent. |
| Do | 6 | ********** | 41 1 | per cent. |

The allowances for money at the private and joint stock banks and discount houses are as follow:-

| the second section and cooks second and section to t | | |

THE STOCK MARKETS .- Apart from the strong buying on Paris account, which continues to be the main feature of Stock Exchange business throughout the continent as well as in the London market, there is still comparatively little of general importance to record in the stock markets. Business here continues to be somewhat restricted, and though the tone is mostly firm, there has been little animation; and prices, though they gain on balance, are fluctuating and unsteady within narrow limits. The consolidation of prices for a farther considerable rise appears still to be in progress; but the markets are, no doubt, embarrassed by the weakness of of the speculation which has been entered into, and which causes sales and realisations on very little provocation-this feature being, of course, most marked at the period of monthly liquidation, such as has now been passed through. Thus Rentes, which were depressed when we last wrote, almost immediately afterwards recovered; but the rise was again checked by fresh realisations, and the see-saw has continued all through the week, an advance one day being partly lost the next. Turkish stock also were bought largely on the publication of the terms of the convention with the Imperial Ottoman Bank; but a similar check to the rise immediately took place, while Egyptian, Peruvian, Spanish, and (this week) Italian stocks have all exhibited similar changes—Italian, as we notice below, having been exceptionally a gainer for the week. In the home railway market the changes on balance are rather adverse; but bank and other miscellaneous shares have almost all risen, a special change to note being an advance in Suez Canal shares, which are now admitted, as noticed in our leading columns last week, to quotation on our Stock Exchange. To-day has been one of the days of upward tendency and the tone has remained good to the last.

A New Zealand Loan of 4,000,000l, bearing $4\frac{1}{3}$ per cent. interest, was introduced on Saturday by Messrs Rothschild, the issue price being 94, and is understood to have been readily taken, although, as usual, there is little general dealing in colonial securities.

ENGLISH GOVERNMENT SECURITIES.—In this department there is no change of importance to note.

on the Steek Exchange, the issue having been well applied for.

FOREIGN GOVERNMENT SECURITIES.—This department being mainly affected by international dealings, has, of course, sympathised more closely than the others in the Paris movements, and in almost all the leading stocks-French Rentes, Italian, Turkish, Egyptian, Peruvian, and Spanish—the dealings here have, as a matter of fact, been chiefly on French account. The continued strength of the buying for Paris attracts great attention, and whether the explanation is that the French public is now absorbing all these stocks, or simply relieves financial houses of Rentes, so as to enable them to speculate in the others, the fact of the purchases is a continued evidence of the financial strength of France. As we have stated, there has been some unsteadiness at times which in a simple of condided of unsteadiness at times, which is a sign of a good deal of weak speculation being mixed up in the general movement en firm, and the for a rise; but on the whole the tone has be result of the liquidation in Paris, concluded this week, seems rather to have been encouraging to the operators for a rise. Of all the stocks named Italian have been most in favour, the improvement here being increased by the report of purchases on Italian account and the fall in the Italian exchange. Peruvian stocks have been next in favour, on the progress of the negotiations as to the new guano contract, and next Egyptian, notwithstanding the continued reports as to the magnitude of the floating debt. Turkish are less sought after, the disfavour here seeming to counteract the favour shown in Paris, and this cause of depression being likely to continue until the new convention has been shown to work. Satisfaction has so far been given this week by the publication of the terms of the convention and réglement, which we comment on elsewhere, and which appear to show conclusively that the Government was eventually obliged to abandon its attempt to evade its engagement to let the bank be its receiver-general; but the doubts as to the financial condition of the country, and the bad faith lately shows by the Government industry, and the bad faith lately shows by the Government industry, and the same later while shown by the Government, induce even the speculative public here to withhold support to Turkish stocks until they see some actual evidence of improvement. Spanish have be the weakest stock of all, on account of the apparent delay which must occur in suppressing the Carlist insurrection, or concluding a convenio. Russian stocks have also generally advanced. To-day there has been a steady tone, and there is finally in most cases a moderate improvement for the week.

The following are the changes for the week, taking the

English Railways.—The greatest fluctuation this week has been in Caledonian, in anticipation of the dividend, the approach of that event, as usual in Caledonian stock, giving rise to desperate speculation. Otherwise the changes on balance are adverse, notwithstanding rather good traffic returns generally. The Southern stocks are checked in their advance by the realisations incidental to the recent great rise, and the heavy lines are still under the influence of Mr Moon's depressing speech, and the criticism on the working expenses of several companies which is still maintained. To-day there has been considerable excitement on the announcement of the Caledonian dividend at the rate of 5½ per cent, per annum against 4½ a year ago, the improvement being even greater than the most favourable reports previously circulated in the market. In some of the other stocks, especially Great Western, there has also been a sharp recovery from the depression of the early part of the week.

The following shows the principal changes for the week in the quotations of ordinary stocks, comparing the latest unofficial prices:—

The traffic receipts on eighteen railways of the United Kingdom, of which a list is subjoined (including the principal railways), amounted for the week ending February 27 to 866,734*l*, being an increase of 6,635*l* as compared with the corresponding week of last year. The aggregate receipts for the half-year to date now amount to 6,783,745*l*, an increase of 193,693*l* as compared with the corresponding period last year. On Midland there is the comparatively large increase of 6,677*l*, that on the other lines being inconsiderable, while Great Western shows a further decrease for the week of 5,501*l*.

JOINT STOCK BANKS.—These shares show an advance this week on balance, which is most general among those of the semi-foreign banks quoted in London. The following are higher:— National, 2; London Joint Stock ½; Merchant, ½; Union, ½; Imperial Ottoman, ½; Ditto New, ½; Agra, ½; Anglo-Egyptian, ½; Bank of Alexandria, ½; Franco-Egyptian, 1; Anglo-Californian, ½; Bank of British Columbia, ½; British North American, 1; London and San Francisco, ½.

TELEGRAPHS.—The movement in values here is very general and downward, chiefly on the publication of the official correspondence, showing the danger to the Anglo-American monopoly from the legislation of the Canadian Legislature. The following have fallen:—Anglo-American, 1; Newfoundland, ½; Globe Trust, ½; Brazilian, ½; West India and Panama, ½; Western and Brazilian, ½; Eastern, ½; Mediterranean, ½; do Preference, ½.

It is reported that the directors of the Anglo-American Telegraph Company have decided to express an unfavourable opinion of the proposal to divide the stock into Preferred and Deferred. The decision will cause disappointment to some holders of stock, but although our own opinion has been frequently expressed in favour of the principle of such a division, there is, perhaps, something to be said for the resolution to which the Anglo-American directors are reported to have come, regard being had to the special conditions of their stock. Telegraph property, there is no doubt, is in a very experimental stage compared with railways, and the greater amount of risk involved makes it of course desirable that the preferred or debenture capital should be restricted within the narrowest limits because otherwise the capital which goes into preferred stocks would not be attracted, and so the whole benefit of the division, which lies in the enhanced price of the original stock through its being put into such a form as to tempt new capital, would be lost. If this view should be thought well founded by the Anglo-American directors, they are quite right to recommend their shareholders, in the special circumstances of their case, not to divide. The division, in circumstances where it is not clearly beneficial, will 'no doubt tend to do harm by making each small lump of stock less marketable than if it were part of a larger total.

MINES.—The market for British mining shares is dull, but

MINES.—The market for British mining shares is dull, but no further general depression is apparent this week. Tin Croft are 1 better. In foreign shares, Eberhardt are ‡ higher; New Quebrada, ‡; New Zealand Kapanga Gold, ‡; St John del Rey, 1.

del Rey, 1.

MISCELLANEOUS.—In bonds and loans there is a good deal of firmness shown, but otherwise the features of the week have been here only a rise in financial companies' shares and those of the Suez Canal. The following have advanced:—American Investment Trust Certificates, 1; City of Auckland Loan, 1½; Municipal Trust, 2; Russian Land Mortgages, 3; St. Louis City, 1; United States Mortgage, 1; Credit Foncier of England, ½; ditto of Mauritius, ½; International Financial, ½; National Discount, ½; Standard Discount, ½; Hudson's Bay, ½; Scottish Australian Land, 10; and Suez Canal shares, 2. On the other side, Crystal Palace are 1½ lower.

NOTICES AND REPORTS.

STOCKS.

British Exchequer Bills.—Notice is given that Exchequer Bills maturing 11th March may be renewed, at the rate of 3 per

City of Brisbane Corporation 5 per Cent. Debentures.—Tenders are invited for 84,050t, being part of 121,250t authorised. Applications are to be made to the Bank of Queensland before the 10th inst., and on the following day the tenders will be opened in the presence of those who desire to attend. The opened in the presence of those who desire to attend. The minimum price will be previously fixed. The debentures are in sums of 50l and 25l, and it is anticipated that the revenue to be derived from the bridge (for the construction of which the loan is required) will be sufficient security; but in addition the loan is secured upon the general resources of the municipality, on which it is mentioned the prior charge is only 10,000l. The debentures are repayable on 1st November, 1891, either in London or Brisbane.

Spanish Debt.—The Council of Foreign Bondholders have announced that the Rio Tinto pagarés, destined for the arrangement of the three overdue Three per Cent. Spanish

rnal Coupons, have been received.
rkish—Convention with Imperial Ottoman Bank.—The text of this convention has been published, from which the following

is an extract:—
The Bank is to be the treasurer and paymaster-general of the Em-

pire. One month at least before beginning the Turkish financial year a detailed copy of the budget is to be officially communicated to the bank. The Government undertakes to pay over to the bank, both at Constantinople and in the provinces, all its revenues, of whatever nature and in whatever form they may be, in accordance with the regulations to this effect; and it will take all the measures necessary for securing that the whole of the revenues shall by those means be paid to the bank. The bank is to make all payments for the public service (reserving the rights of third parties for the service of certain loans, the funds fer which are nevertheless to be remitted through the bank). These payments are to be within the limits of the budget, which cannot be exceeded except under extraordinary circumstances, as set forth in the regulations. The bank will see to the service of the public debt by reserving (prelivant) the necessary funds from its encashments. The bank cannot interfere with the receipts and payments of the administrations which have never been included in the budget.

RAILWAY COMPANIES.

RAILWAY COMPANIES

The receipts for the Central Wales and Carmarthen Junction .-Central Wales and Carmarthen Junction.—The receipts for the half-year were 4,316l, and the expenditure 2,441l, leaving a balance of 1,875l; but the Clearing-house has called upon the company to pay 1,633l, being the balance of accounts left in suspense by instructions of the London and North-Western and Great Western Companies, thus reducing the available amount to 341l, which it was recommended should be carried

Danube and Black Sea and Kustendjie Harbour.—No satisfactory settlement has been come to with the Turkish Government, and the board have demanded the appointment of arbitrators in conformity with the company's concession, but no reply has yet been received. They further state that the result of the year's operations is a serious loss, owing to the low prices of grain low prices of grain.

Furness.—The receipts for the half-year were 235,921l, and the expenditure 108,657l, leaving a balance of 127,264l; and a dividend has been declared at the rate of 7 per cent. per annum. There has been a falling off in the receipts, owing to the depressed condition of the iron trade, but there has been a corresponding diminution in the working expenses. The debentures as they fall due are being converted into 4 per cent. debenture stock. Capital expended, 4,439,180l; leaving a balance of 132,751l. a balance of 132,7511.

a balance of 132,751t.

Glasgow and South-Western.—The dividend is announced at the rate of 3½ per cent. per annum, as compared with 4 per cent. at this time last year.

Great Western.—The last half-yearly revenue accounts compared with the corresponding six months of 1873-4.

extra cost of steel rails, it has been determined to charge a fixed sum of 30,000l a year to revenue until the whole of the charge is covered. The trial works for the Severn tunnel are being proceeded with.

Isle of Wight.—The earnings for the half-year were 16,714l. The working expenses for the whole year were 14,427l, as compared with 15,545l in 1873. The increase in the earnings for the year was 2,494l. After payment of all preference charges, there remains a balance of 1,933l, equal to nearly 2 per cent. on the ordinary stock. The line between Newport and Ryde is approaching completion, and is expected to be opened in the course of next summer. The negotiations with that company and the Cowes and Newport Company have resulted in a proposed agreement for an arrangement to work those lines. Capital expended 342,992l, and about 30,000l is owed on capital account. The directors have been authorised to apply for powers to raise 50,000l either on preference or ordinary stock to pay off the company's debts and provide rolling stock.

Midland Great Western.—The receipts for the half-year were 208,737l, and the expenditure 107,355l, leaving a balance of 101,382l. After deducting all preference charges, a dividend is recommended of 4½ per cent. per annum, leaving a balance

of 5,497l. Capital expended, 4,005,267l, leaving 60,139l against the account. The branch line to the quay of Westport was opened on 1st October. The Sligo and Ballaghaderreen Railway was opened on 1st November, and is worked under an

way was opened on 1st November, and is worked under an agreement for one year at a mileage rate.

Newry and Armayh.—The receipts for the half-year were 7,627l, and the expenditure 5,212l. The available balance was 2,183l. After paying interest on the pre-preference and the A debenture stocks, there remains 483l to be carried forward. Capital expended, 384,837l, leaving a balance against the account of 909l.

Penguth Health Control of the control of the pre-preference and the count of 909l.

Penarth Harbour, Dock, and Railway.—At the meeting a dividend of 4 per cent. was declared, but it was stated by the chairman that the working expenses had exceeded the receipts by 5,000l. The directors were authorised to convert 207,000l debenture bonds into debenture stock. The litigation with Messrs Smith, Knight, and Co. has ceased, there being no assets, and further proceedings would only result in a greater loss.

Sidmouth.—At the meeting a dividend was declared of $2\frac{1}{2}$ per cent. per annum.

Van.—A dividend has been declared for the half-year at the rate of 4 per cent. per annum, and 1,131\(lambda{l}\) carried forward.

Waterford and Central Ireland.—The gross receipts for the half-year were 74,471\(lambda{l}\), against 74,934\(lambda{l}\) for the same half of 1873, showing a decrease of 463\(lambda{l}\). After payment of the interest on the mortgage debt and debenture stock, there remains a balance of 26,606\(lambda{l}\) available for dividend. After payment of the preference charges, a dividend is recommended of $2\frac{1}{2}$ per cent. per annum, leaving 1,973\(lambda{l}\) to be carried forward. Capital expended, 1,884,020\(lambda{l}\).

Waterford and Limerick.—After payment of the debenture and preference charges, there remains an available sum of 9,380\(lambda{l}\), out of which a dividend is recommended of $2\frac{1}{2}$ per cent. per annum, leaving a balance to be carried forward of 1,973\(lambda{l}\).

Wellington, Grey, and Bruce Railway of Canada—First Mortgage.—Subscriptions are invited at the price of 92\(lambda{l}\) per 100\(lambda{l}\) bond, for a further amount of 41,600\(lambda{l}\) of this company's First Mortgage Sterling Bonds, of which 416,000\(lambda{l}\) have already been issued. Interest accrues from 1st January last, and the principal is payable on the 1st July, 1891.

cipal is payable on the 1st July, 1891.

West Cork.—A decrease is shown of 266l in the half-year's receipts. The available balance is 1,592l, which will allow of the payment of interest at the rate of 2 per cent., carrying forward 2601.

Bank of Belgium and Holland.—At the meeting a dividend for the year of 6l 10s per share was declared. The sum of 7,000l was added to reserve fund (raising it to 10,000l), and 4.626 Mcarried forward.

4,626 carried forward.

Imperial Ottoman Bank.—The committee are at length enabled to authorise the distribution of the reserve fund to the holders of the old shares. This distribution, amounting to 1l 14s 6d (or 43f 30) per share, will therefore take place on or after the 8th instant. This payment will be made on presentation of the divided coupon attached to the old shares dated 1st July, 187. The balance of dividend for the year 1874 will be paid in July next on presentation of the share certificates themselves, which will then be exchanged for fresh certificates.

London and San Francisco.—At the meeting a dividend of 6s per share was declared, making, with the distribution in September, 12s per share, or 6 per cent. for the year. The balance carried forward is 4,858l, and the reserve fund stands at 35,000l.

Mercantile Bank of the River Plate .--The accounts for the year show a net profit enabling a further division of 5 per cent., being equal to a dividend at the rate of 10 per cent. for the year. It is also notified that in consequence of the condi-

the year. It is also notated that in consequence of the condition of the trade and money markets of the River Plate it has been decided to make a call of 4l per share.

Oriental Commercial Bank, Limited.—A dividend of 6d in the pound (making 16s) is payable to creditors at the offices of Messrs Cooper Brothers and Co.

ASSURANCE COMPANIES.

New York 1 ife Assurance.—The income for the past year was 1,603,437!. The interest received was 329,021!, being 50,700! over the amount paid for death claims, and the accumulated fund is 5,429,155l. The present surplus over all liabilities amounts, it is stated, to 897,356l, or an increase of 195,000l over last year; and the increase in the income is 102,499l.

Prudential.—The new annual premium income of 1874 amounted to 12,193l. The annual premium income at the end of the year amounted to 71,847l, showing an increase of 5,432l. But it was in the industrial branch that the chief success was obtained. In that branch 880,000 new policies were issued in the twelve months, representing a new premium income of 332,000l. The annual premium income at the close of the year was 615,000l, showing an increase of 144,000l over the income of the previous year. During the year, 20,000l was added to the assurance fund, which stands at 573,524l.

Railway Passengers' Assurance.—At the meeting it was stated

that in 1874 10,183 new general accident policies had been issued, for which 30,8481 premiums had been received. The total premium income was 182,1691, and 97,9641 had been paid in compensation for 45 fatal claims and 4,581 non-fatal accidents. A dividend of 22s per share, in addition to 5 per cent. interest for the half-year, was declared. A resolution approving the company's Bill in Parliament was carried.

Star Life.—At the annual meeting it was stated that during the year 1,502 new policies had been issued, the annual premiums on which amounted to 14,552l. The annual income was 223,613l; and the assurance and annuity fund stood at 1,211,115/.

MISCELLANEOUS COMPANIES.

Brighton Gas Light and Coke.—At the meeting a dividend of 5 per cent. for the half-year was declared.

Bristol Pert and Channel Dock.—The Clifton Extension Railway was opened in October, and everything is ready to connect the Dock with the Great Western and Midland railway systems. It is stated that the dock is making satisfactory progress, and that the walling can be completed in four months. months.

Brown, Bayley, and Dixon.—A loss is shown of 133,732l up to December 31, but the directors consider that a more favourable experience is in store for the company.

able experience is in store for the company.

Central American Telegraph.—The company announce that the line from Pará to Cayenne and Demerara, as also the lines from Trinidad to St Croix and Porto Rico, have been successfully completed, thus giving direct telegraphic communication between Brazil and the West Indies and North America. These lines become the property of the West India and Panama Company.

City of Dunedin Water Works 6 per Cent. Loan.—The Bank of New Zealand invite applications for 65,000l of this 6 per cent, loan for 200,000l, in debentures of 100l each. The interest is payable in Dunedin, Melbourne, or London on the 1st Jan. and 1st July in each year; and the principal at par in January, 1925. The issue price is 99l per debenture, reduced to 97l 10s by the interest accrued.

by the interest accrued.

Diamond Rock-Boring.—The company have declared a dividend at the rate of 5 per cent. for the half-year. This, with the interim dividend paid in August, equals 10 per cent. for 1874.

Great Eastern Steamship.—A dividend is recommended of 5 per cent. in addition to the interim payment of the same amount in July last.

Great Eastern Steamship.—A dividend of 5 per cent, is recommended. The charter of the ship to the Telegraph Construction and Maintenance Company expires on the 1st September, when it is probable she will be handed over to this company. There has been no settlement of questions in company. There has been no settlement of questions in connection with the defalcations of the late secretary.

Leasehold Investment,-A dividend of 6 per cent. has been declared

London Cotton Mills, kimited,—Vice-Chancellor Hall has appointed Mr C. J. Schneidan (of the firm of G. Whiffin and Schneidan) to be the official liquidator.

London and General Water Purifying.—After writing off a

London and General Water Purifying.—After writing off a considerable sum from the cost of patents, a balance is carried forward, out of which a dividend is recommended of 5 per

forward, out of which a dividend is recommended of 5 per cent., free of income-tax.

London and Southwark Warehousing, Lamited.—Mr Charles Chatteris (of the firm of Chatteris, Nichols, and Chatteris) has been appointed official liquidator.

Manor Park Cemetery.—The first annual report states that, up to 31st December, 25,310 shares had been allotted, and the sum of 2,939t had been realised from the sale of surplus land, being sufficient to pay all expenses, and leaving 258t, from which a dividend at the rate of 4 per cent. per annum is recommended, carrying forward 39t.

Mediterranean Extension Telegraph.—At the meeting a dividend was declared at the rate of 3 per cent. per annum, and 500t was carried to reserve.

dend was declared at the rate of 3 per cent. per annum, and 500l was carried to reserve.

Municipal Trust.—The numbers have been published of seven certificates which have been drawn for repayment on the last of May, together with a bonus of 50 per cent., and the quarterly coupon then due.

New Westminster Brewery, Limited.—Measrs Price and Pott invite applications for 9,049 ordinary, and 4,690 preference shares of 4l each, being the balance of the capital. The undertaking was formed in 1873 to take over the business of the Westminster Brewery Company. The other portion of the capital was, it is stated, taken up by the directors and share-holders of the old concern.

capital was, it is stated, taken up by the directors and share-holders of the old concern.

Northern Assam Tea, Limited.—The official liquidator announces that a further dividend of 6d in the pound will be paid on the 3rd March, making, with the three dividends previously declared, 5s in the pound.

Northumberland Steam Shipping.—A petition for confirming the reduction of the capital from 140,000l to 84,000l has been presented, and a list of creditors is being made out.

Phosphor Bronze.—The profits would pay a dividend of about 20 per cent, but as these profits have been partly

carned by the property of the original company not yet paid for, it is thought right to recommend a dividend at the rate of for, it is thought right to recommend a dividend at the rate of only 10 per cent. per annum.

Rent Guarantee Society.—At the meeting a dividend of 8 per cent. was declared, and 200l was added to reserve.

Samuel Fox and Co.—An interim dividend of 4l per share is

Samuel Fox and Co.—An interim dividend of 42 per share is announced.

Sheffield Tramways.—A dividend is recommended at the rate of 7½ per cent. per annum, leaving 439l to be carried to the renewal and maintenance fund.

Surrey Commercial Dock.—A dividend of 2½ per cent. for the half-year, and a bonus of 1 per cent. are announced.

United States Rolling Stock.—No settlement has as yet been come to with Messrs Bischoffsheim and Goldschmidt, negotiations for a compromise having been interrupted by the action

United States Rolling Stock.—No settlement has as yet been come to with Messrs Bischoffsheim and Goldschmidt, negotiations for a compromise having been interrupted by the action of a committee of stockholders in London, who protested against any arrangement that did not include a settlement of the company's claims in full. The rentals due by the Atlantic and Great Western, and by the Eric Company as lessee of that railway, now form a heavy sum. The total receipts from rents last year were only \$198,000, and from the Atlantic and Great Western alone is due \$1,121,000.

Val de Travers Asphalle Paving.—The net profit for the ye'r is 2,870l, which, with 1,620l brought forward, makes a total of 4,490l. This, it is considered, would justify a dividend not exceeding 5s per share, but the directors prefer to leave the question to be decided at the meeting.

Westbourne Grove Drapery and Furnishing.—An interim dividend is announced at the rate of 10 per cent. per annum.

MINING COMPANIES.

Beechworth Gold Mining, Limited.—Capital, 200,000l, in 2l shares, of which 50,000 are now offered. It is proposed to acquire for the sum of 110,000l the mining claims of the "Sons and Doma Consols Company, registered" in the valley of the Black Dog Creek, district of Beechworth, Victoria, Australia.

Bilson and Crump Meadow Collieries.—The first annual report states that the profit for the year amounts to 12,390l, and after paying 1,792l interest on debentures, writing off 214l from "extra works account," 200l towards "preliminary expenses," 2,457l interest on unpaid capital, in addition to the ordinary working expenses, 7,725l remains for the payment of a dividend at the rate of 12 per cent. per annum, of which 4s per share has already been paid, leaving 7s 3d per share to be received. The balance carried forward is 506l.

Cape Copper Mining.—At a meeting of the directors it was resolved that a dividend of 20s per share, free of income tax, be declared.

Original Hartlepool Collieries.—At the meeting the report,

be declared.

Original Hartlepool Collieries.—At the meeting the report, which showed a net profit of 10,991!, or with the amount brought forward a total of 27,522!, was adopted.

Risca Coal and Iron.—Mr William Turquand has been appointed official liquidator.

Richmond Consolidated Mining.—The company have announced an eighth dividend, amounting to 5s per share.

Rhymney Iron.—At the meeting to-day dividends of 15s on the 50! shares and 4s 6d on the 15! shares were declared.

South Wales Colliery.—A net profit is shown for the half-year of 5,819!, which, with 315! brought forward, makes an available balance of 6,134!, and the directors recommend a dividend of 15s upon the old shares, and a pro rata dividend—viz., 13s 7d—on the new shares, free of income tax. This will absorb 5,839!, leaving 294! to be carried forward.

COM MERCIAL EPITOME. FRIDAY NIGHT.

A more present and palpable check just now to trade than the undercurrent of strikes and labour disputes is the cold weather inland and the adverse winds at sea. Manufacturers and wholesale merchants find their spring business checked by the return of winter, and importers have to wait for the arrivals of produce retarded by the rough weather. From all over the more Northern parts of Europe severe cold continues to be reported, and advices from America show trade to be considerably checked in the same manner. In the United States the reviving tendency of affairs is to a great extent considerably checked in the same manner. In the United States the reviving tendency of affairs is to a great extent stimulated by such spurious influences as the recent rise of currency prices, and the Tariff Act now passed, replacing a 10 per cent. duty on manufactured goods; but it appears that reduced production has brought down the stocks of dry goods on that side, and it is now asserted that the only restraint on activity is the weather. As regards our import and export trade, freights continue dull, and the future is deemed uncertain by those engaged in shipping business, but at present certain by those engaged in shipping business, but at present the number of steamers unemployed is stated to be unpre-

the number of steamers unemployed is stated to be unprecedentedly large.

The wintry weather has had a hardening effect on the grain trade by delaying the arrival of cargoes from the North. Stocks being low there has been some activity in the demand for wheat, and as the condition of samples in the provincial markets has rather improved, prices have sympathised with the firmness there initiated; but the trade as yet shows no confidence even in present values, much less in a rising tendency sufficient to encourage speculation. Severe cold is reported from Northern Europe, and fears have been expressed as to the coming crops, in the absence of snow as a protecas to the coming crops, in the absence of snow as a protection; some falls have taken place, but not of a heavy character. At home the rains of last month have left the low lands in an unfavourable condition, both as regards the effect

of frost and the sowing of spring corn.

The price of cotton has further hardened a little this week, but not without an occasional tendency to droop again, notwithstanding the reduced receipts at American ports. Cold weather and impeded traffic being made allowance for, however, the distribution of the control of the c ever, the diminution in those receipts have had paramount influence on the Liverpool market, where sales have been above the average in extent. Consumers have supplied themselves the average in extent. Consumers have supplied themselves freely with cotton, rather in the belief that prices are at a safe level than because their orders have increased; indeed, the quotations for yarns and goods have checked business considerably, and advices from foreign markets and the East continue to give little encouragement. These quotations have risen this week in greater proportion than the price of cotton itself, owing to a threatened strike in the Oldham and Bolton districts. districts.

districts.

Bristol wool fair opened this week with a spirit which brought up the prices of certain classes perceptibly above the rates lately current, and a more cheerful tone has consequently pervaled the trade. Prices at the London sales of Colonial wool have gained in firmness, but are still scarcely above the lowest of last year as regards Australian. Manufacturers in the North are still reported to be ill-engaged, orders for the spring trade being checked by the present and recent cold weather, but machinery having been already laid off to some extent, it is believed that a renewed demand would soon have an effect in raising prices profitably, the more so as wool is comparatively cheap. A strike of 20,000 operatives at Dewsbury has been resolved on this week. The effect in Bradford of the firmness at Bristol has been simply to arrest the downward course of prices, but business in yarns and goods is still very dull, the absence of American demand being most severely felt.

Prices in the iron trade are held up by the cessation of work in South Wales, but the tendency would otherwise appear to be still downward. The districts competing with that centre

are now fairly engaged, but the orders given out are all reported small, and of the kind denoting a restricted demand in the absence of confidence as to prices. Labour difficulties with the colliers are also probable in the North and South Staffordshire on the subject of further reductions in wages. Coal in the meantime is firm, owing to the severity of the weather, as regards household descriptions; but for manufacturing purposes it is little request. The price of coal is in fact so likely to become cheaper in the iron districts that mills and furnaces are kept inactive or blown out, and the production of pig as well as finished iron is contracted to the exduction of pig as well as finished iron is contracted to the extent of current demands, no inducement existing at present to make for stock. The freight trade is dull; shipbuilding is slack in the North, and vessels are laid up in large numbers, but the strike in the Tyne yards continues.

The produce markets continue in an inactive state. Sugar mains in but dull demand, and that chiefly confined to low remains in but dull demand, and that chiefly confined to low qualities. Coffee quiet, except for a few speculative descriptions, which have been bought at firm rates. Tea very inactive, owing to a dispute which has arisen between a large section of the trade and the importers as to conditions of sales. No change is reported in prices by private contract, whilst the public sales have been very small. Rice dull. (In anticipation of an unusually large crop, upwards of 300,000 tons of shipping, sail and steam, is engaged for the service, the bulk of which is due before the middle of April; unless, therefore, the rice is available, we shall have a repetition of the San Francisco experience of last autumn, and numbers of ships and steamers thrown up to seek employment at other ports.— San Francisco experience of last autumn, and numbers of ships and steamers thrown up to seek employment at other ports.—
From Messrs G. Offor and Co.'s Freight Circular.) Spices dull as to speculation, and lower in price. Jute and hemp quiet, with occasional weakness. Some activity has been reported in the tallow market, and the oil trade is generally rather more brisk this week. In metals, Chili copper has given way in the absence of demand, and tin is dull again after some firmness early in the week.

EXTRACTS FROM TRADE CIRCULARS.

(From Messrs Heugh, Balfour, and Co.'s Manchester Report, dated March 1.)—During the past month the course of prices in this market has been to a very great extent guided by those ruling in Liverpool. The advices from the East have done nothing to support this market, but have rather tended to depress it. In Calcutta prices are reported lower, and at the same time there has been an adverse movement in the exchange; and from no other quarter do we hear of any improvement. But for the upward movement in cotton we would probably have seen prices rather lower. They were a little weaker about the middle of the month, when cotton was at its lowest; but that feeling has entirely disappeared, and although prices are nominally the same as at the beginning of the month it is often impossible to buy on the same terms, and the market is characterised by great firmness.

(From Messrs W. Nicol and Co.'s Weekly Overland Circular, dated Bombay, February 6.)—A very firm feeling prevails, and if to-day's market in Liverpool proves to be active, we cannot fail to witness a further and material advance in values on this side. Sales for the week amount to 7,500 candies on the "green," and a large business has also been done direct with the up-country market, at prices equivalent to those paid on the spot. Quality—The quality of machineginned Broach now coming forward is superior in appearance, and, we think, equal in staple to last year's growth, and, from what we can learn, it seems likely that the average will be (From Messrs Heugh, Balfour, and Co.'s Manchester Report,

and, we think, equal in staple to last year's growth, and, from what we can learn, it seems likely that the average will be what we can learn, it seems likely that the average will be correspondingly good. We append our quotations:—New (market value per candy 784 lbs)—Hingunghât, ready (nominal) F. P., 215 rs; Oomrawuttee (Akote) delivery February F. P., 193 rs; Broach M. G., delivery February F. P., 232 rs; ditto delivery March F. P., 230 rs; Bhownuggur delivery April H. P., 188 rs. Old—Bhownuggur ready H. P., 167 rs; Compta ready H. P., 155 rs.

(From the Cotton Circular of the Imperial Ottoman Bank, dated Alexandria, February 20)—Our market has been very

dated Alexandria, February 20.)—Our market has been very dull and inactive throughout the week. One or two large transactions have taken place in Diara produce, but the general buying is exceedingly small for this season of the

general buying is exceedingly small for this season of the year. There appear to be few or no orders from spinners, and the market closes irregular with a downward tendency. We make no alteration in our last quotations.

(From Messrs Charles Balme and Co.'s Wool Report, dated March 4.)—The wool market since the opening of the current auctions on the 23rd ultimo has shown no perceptible change in value, though competition perhaps exhibits some increased steadiness. Sydney and Queensland fleeces have made no recovery from the decline established in these descriptions at the close of the previous series, but as regards greasy parcels the quotations indicate a decidedly smaller variation than similarly conditioned parcels from Port Phillip. For secured wools the demand rules fully equal to that of the closing December sales. Pieces and lambs' wool rule especially firm. The prices of Cape wool (including Natal), as compared with those of the preceding sales, indicate no substantial variation,

but the tendency all round is rather weaker than firmer, and in the case of all middle scoured shipments particularly, the rates must be quoted an average 4d in buyers' favour. To this date the quantities catalogued reach a total of 69,266 bales, of which 15,455 bales are Cape.

bales, of which 15,455 bales are Cape.

(From Messrs Ebeling and Havelaar's Monthly Tin Circular, dated Rotterdam, February 27.)—The tin market has been weak and irregular this month, prices experiencing a further decline. Bear sales have been largely entered upon, and have added not a little to the general depression now ruling. Transactions in Billiton have been extensive at gradually declining prices. A reduction of about 3f has been established, 51½f being the closing price both for parcels on the spot and forward delivery. A large quantity has been taken on speculative account. The combined returns of Banca and Billiton for 1875, compared with those for 1874, exhibit:—A decrease of the import for February of 1,452 slabs, equal to 45 tons; a decrease of the import for the two months of 3,804 slabs, equal to 118 tons; a decrease of the deliveries for February of 1,410 slabs, equal to 44 tons; an increase of the deliveries for the two months of 1,578 slabs, equal to 49 tons; an increase of the stock second-hand of 8,971 slabs, equal to 280 tons; a decrease of the unsold stock of 8,170 slabs, equal to 25 tons; an increase of the quotation of Banca of 9f, equal to 15t per ton.

(From Messrs Richardson and Co.'s Monthly Copper Circular,

decline of the quotation of Banca of 9f, equal to 15l per ton.

(From Messrs Richardson and Co.'s Monthly Copper Circular, dated Swansea, March 1.)—Total of copper unsold at Swansea—1,320 tons ore; 1,833 tons regulus; 1,022 tons copper. These totals represent about 2,220 tons fine copper, being a reduction of 160 tons since our last circular. The private sales effected during the past month have been made at from 16s to 16s 9d per unit. We have had two public sales of British and foreign produce during the past month. On the 9th, 1,090 tons—wholesale realised 16s 5\frac{3}{4}d per unit for a produce of 24\frac{3}{4} per cent.; Cape realised 16s 8d per unit for a produce of 31\frac{1}{15} per cent. On the 23rd—wholesale realised 16s 5\frac{3}{4}d per unit for a produce of 31\frac{1}{15} per cent., Cape realised 16s 6\frac{1}{4}d per unit for a produce of 32\frac{1}{10} per cent. Although the copper market continues in the same stagnant condition referred to in our last circular, prices have been maintained with great firmness. circular, prices have been maintained with great firmnes

circular, prices have been maintained with great firmness.

(From Messrs Kilburn, Kershaw, and Co.'s Silk Circular, dated March 1.)—The public sales which were held on the 23rd ultimo and three following days, formed the chief feature of the past month, and a large quantity of silk was then offered. There was good steady bidding for all China and Canton silk offered without reserve, or taxed at low prices; and such were sold at satisfactory rates, showing little or no alteration from previous quotations as regards new silk. Japan silk hardly maintained former rates and sold heavily, while Bengals, of which the large quantity of 700 bales of filatures were offered without reserve, did much better than could have been expected; and these having passed into many hands, it is just probable that a demand for the consumption of this silk will at last be found. The month opens with a steady market, and prices of all silks firm at quoted rates. Deliveries in February were only moderate. Chinas again show better figures than other silks, and are evidently entering more largely into general consumption. The stocks of all silk are less than at this time last year by about 3,000 bales.

(From Messrs F. W. Heilgers and Co.'s Jute Report, dated Calcutta, February 5.)—Since our last, there has been less doing in our bazaar, and several of the weaker holders have been forced to dispose of their stocks at a considerable reduction on former rates. The deliveries from the bazaar have fallen off, and now average about 5,000 to 6,000 maunds daily; imports have also decreased, but are in excess of the deliveries by about 2,000 maunds and in consequences of the deliveries. imports have also decreased, but are in excess of the deliveries by about 2,000 maunds, and, in consequence, our local stocks have increased to about 140,000 maunds of all descriptions. Baled jute has been almost at a stand still. To-day's closing quotations are as follows:—Good Serajgunge jute, 4.1 rs per Bazaar maund; medium ditto; 3.10 rs to 3.14 rs ditto; common ditto, 2.14 rs to 3.8 rs ditto; Naraingunge jute, 3.2 rs to 3.8 rs ditto; Dasee ditto, 3.2 rs to 3.12 rs ditto; Downah ditto, 2.5 rs to 2.12 rs ditto.

(From Mesers T. J. and T. Powell's Leather Circular.

(From Messrs T. J. and T. Powell's Leather Circular, dated March 3.)—The leather market during February has been rather barely supplied, while the demand has on the been rather barely supplied, while the demand has on the whole been of a good average extent. Prices have shown very little change, but a tendency, for some time apparent, towards higher prices for light, and rather lower rates for sole leather has become more marked during the past month. A considerable demand for leather for military purposes for France will doubtless absorb a large number of light hides. A considerable decline in the value of nearly all kinds of sole leather hides has taken place. The imports of the month are moderate, and the stocks on hand of about an average extent. (From Messrs Churchill and Sim's Timber Citcular, dated London, March 3.)—There has been a good demand for wood in London in the month of February. The deliveries from the docks have been larger than we have ever known, and this is the more satisfactory as there is an entire absence of specula-

tion. Very few sales have as yet been made of baltic deals for shipment for London next season; but some business has been done in Canadian goods.

COTTON TRADE. THE

LIVERPOOL -- MARCH 4.

Cotton continues in active demand, and prices have still a hardening tendency. In Sea Island the business has been small, and quotations are unchanged. American has been in active request, and though freely offered, quotations are advanced 10 to 10 per lb. In Brazilian the demand continues good, and with only a limited supply, quotations are partially raised 1 per lb. Egyptian is pressed for sale, and though quotations are unchanged, prices are irregular. West Indian is unaltered. Peruvian is in good request, at 10 advance for soft, and full rates for rough descriptions. In East Indian there has been a fair amount of business, with little alteration in prices. in prices.

In cotton "to arrive" and for future delivery the transactions have been large, at advancing prices.

The sales of the week, including forwarded, amount to 86,090 bales, of which 14,230 are on speculation, and 9,290 declared for export, leaving 62,570 bales to the trade.

510 bales American, 70 bales Egyptian, 130 bales Peruvian Sea Island, and 1,000 bales Surat have this week been deducted from the stock, the cotton having been burnt on the 22nd altimo.

MARCH 5.—The sales to-day will probably amount to about

MARKETS IN THE MANUFACTURING DISTRICTS

Manchester, March 4.—We have again to report a market strong in tone, though with no perceptible increase in the amount of business offering. The tendency is to slightly advance quotations, and merchants seem fully determined to pay no more money than was accepted for previous transactions. The inquiry in cloth is still confined to few varieties, such as jacconetts, dhooties, &c., heavy goods being in very poor request. Yarns for export are moving rather better, and the position of producers is slightly improved. For the home trade there there is no change to report in any class.

BRADFORD.—The firmer tone of the London wool sales and the better advices from Bristol wool fair seem to have no influence upon the wool market. Spinners cannot be induced to operate beyond their immediate requirements. On account of the hardening tendency of wool, they anticipated a more active business in yarns; but this has not been the case.

LEEDS.—The attendance of manufacturers and merchants was very thin. The severity of the weather is causing serious injury to the spring trade. Consumption goes on steadily, but the new stocks of wool have not as yet been much drawn upon.

ROCHDALE.—Manufacturers report some little improvement in the flannel trade. There is no longer any doubt as to the value of wool for some time to come. The current sales in London have decisively settled that. The orders placed were for expeditious delivery. Manufacturers are acquiring fresh stocks of wool, at firm rates.

BRISTOL.—There was a large attendance of buyers at the fair, but Scotland did not send its usual contingent. In skin wools and fleeces a good trade was done, at about ½d per lb advance on the lowest prices current during the past month. Buyers had over-estimated the quantity that would be offered.

WOLVERHAMPTON.—Finished iron makers are fairly cheerful, for though orders are all very small, they represent an encouraging aggregate. Common worked bars at works, 11l to 11l 5s 6d. Demand for pig iron not quite so brisk. Coal firm, with supply under the demand.

DUNDEE.—Our trade continues quiet in nearly all departments; complaints are general as to the difficulty of obtaining remunerative prices, and there is a want of animation even in those branches which have hitherto been the most active.

BELFAST.—The staple trade continues in a tolerably healthy state at present. Manufacturers are in general well em-

ployed, and prices keep firm, demand being on the whole satisfactory.

NOTTINGHAM.—Business in the lace trade during the last few days has been very quiet, and the continued cold weather has a tendency to check any improvement. In the hosiery trade there is a little more doing. Prices of hosiery yarns are without change.

BIRMINGHAM.—Ironmasters and buyers were better represented on 'Change than last week, but business was dull. Makers of first-class iron are better off for orders than those who manufacture unbranded iron, but they are compelled in many cases to reduce the output owing to the slackness of demand. Quotations are, however, firm.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS. NEW YORK—February 19.

There has been a decided increase in the volume of business in all grades of flours the past week, and some steadying up of prices, though no decided increase. Receipts have been small at all points, and stocks are quite moderate, low prices and the severely cold weather having combined to limit production. A much better supply of freight room by steam to English ports has also contributed to a revival of business. The wheat market has gradually gained strength, but more from the firmness of holders than from any urgency of demand. Holders have been encouraged by a great falling off in receipts at the Western market, the smaller arrivals at this port, and the decline in ocean freights. The advance in gold was neutralized by the decline in exchange. The ice in the harbour continues very heavy, and in many cases renders deliveries expensive and difficult. Indian corn has also recovered slightly from the lowest prices recently current. Oats have been in much better demand, and with limited offerings on sale. The quantity coming forward thus far this month is greatly reduced.

The following are the closing quotations:—Flour: Superfine State and Western, \$4.25 to \$4.50; extra State, &c., \$4.85 to \$5.00; Western spring wheat extras, \$4.75 to \$5.10; ditto winter wheat X. and XX. \$5.25 to \$7.75; city shipping extras, \$5.00 to \$5.50; city trade and family brands, \$5.75 to \$7.25; Southern bakers' and family brands, \$6.25 to \$7.75; Southern shipping extras, \$5.40 to \$6.00; rye flour, superfine, \$4.85 to \$5.20; corn meal, Western, &c., \$4.10 to \$4.50 per brl. Grain: Wheat, No. 1 spring, \$1.16 to \$1.20; white, \$1.25 to \$1.32. Corn, Western mixed, 83c to 84c. Rye, 90c to 95c. Oats, mixed, 68c to 71c. Peas, Canada, \$1.05 to \$1.25 per bushel.

The movement in breadstuffs at this market has been as follows:-

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK. MARK LANE, FRIDAY EVENING.

Under the influence of the prolonged severe weather the trade has continued very firm throughout the week, and though the demand was not to say brisk prices have shown a further upward tendency. The closing of the Sound, as noticed last week, has been confirmed, and shipments from that quarter must now be suspended for some little time at least. Our foreign imports of wheat have meantime rather increased, owing to the full aggregate supplies already afloat from all points, and although farmers' deliveries have further increased, owing to the full aggregate supplies already afloat from all points, and although farmers' deliveries have further fallen off, the quantity to hand and for sale in the principal markets of the kingdom have kept pretty well up with demand. Seeing this buyers have been the less disposed to accede to appreciably higher terms. Nevertheless, another 1s per qr, in addition to that noted last week, has in some instances been obtained in the provinces, whilst at Mark lane American wheat, being scarce, realised occasionally slightly stiffer rates, without, however, altering general quotations. The flour trade remains without any movement of special interest, but the market is steady as regards prices. The supplies of oats from abroad have been very light, and the markets for this grain more than any other has been influenced by the interruption of navigation above alluded. There has, however, been a considerable increase in the home deliveries from growers, which has to some extent retarded the upward movement in prices. But in most of the country markets quotations are raised 6d per quarter, and fully an equal rise has taken place in London, where only granary parcels are now on offer. It may be remarked that there are sellers for May deliveries under current rates, and for June at a much larger discount. Malting barley meets a good inquiry, and in some cases has realised rather better terms. Grinding sorts, on the other hand, continue a dragging sale, notwithstanding their cheapness as compared with other feeding stuffs, and the diminished arrivals. Beans and peas have commanded a very steady sale throughout the week, fully supporting late quotations. Maize has been less in request, and the late advance not so readily obtained, still quotations cannot be altered.

PRICES CURRENT OF CORN. &c. quotations cannot be altered.

COLONIAL AND FOREIGN PRODUCE MARKETA. TRANSACTIONS OF THE WEEK

FOR REPORT OF THIS DAY'S MARKETS SEE POST MINCING LANE, FRIDAY MORNING.

MINGING LANE, FRIDAY MORNING.

Sugar.—The market has not recovered from the depression so long existing, and business during the week chiefly confined to low qualities. These now participate in the general quietude, excepting Jaggery, which meets some inquiry. The refiners have taken very limited supplies of West India. At the public sales some few parcels crystalised. Demerara went at easier rates. Casks and barrels, 23s 9d to 24s 6d 459 bags part sold at 24s 6d to 25s for yellow. Transactions in West India to yesterday (Thursday) were only 366 casks. There have not been any further sales reported in floating cargoes. Refined and beet sugars are quiet, and the same as last quoted. The total deliveries of augar from the four chief ports of the United Kingdom were in two months about 11,000 tons larger than during the previous season, partly accounted for by the extended use of this staple for brewing. According to latest estimate the stock in the above four ports was about 162,000 tons, against 198,000 tons in 1874, and 134,300 tons in 1873 a same date.

Mauritius.—2,700 bags by private contract at 22s 6d to 25s for grainy and crystalised, and 18s 6d to 19s for syrups. 740 bags by auction part sold: brown, 17s 6d to 19s; grainy at 22s 6d, and crystalised yellow at 24s.

Bourbon.—2,351 bags were bought in at 17s 6d to 21s for brown and ellow, one since part sold at 17s 6d for soft brown.

Madras.—About 11,000 bags Jaggery have sold at 15s 3d by private

contract.

Zanzibar.—740 bags sold at 22s to 23s for low to middling dry

eyish yellow.

Manila.—2,500 bags clayed at 18s.

Other Foreign.—307 casks 77 barrels Porto Rico chiefly sold at 28 64 to 24s for low to good grocery. Privately, 4,400 bags Bahia at 19s.

Refined.—A quiet tone pervades the market generally, and there have not been any further important transactions in foreign goods. Pieces rather lower. Clyde crushed steady.

RUM.—The market has been without alteration, and several sales reported partly from second hands. Demerara at 2s 1d to 2s 3d. Business has been done in Mauritius at 1s 8d, and in Cuba at 1s 8d per proof callen.

Business has been done in Mauritius at 1s 8d, and in Cuba at 1s 8d per proof gallon.

Cocoa.—Prices are without further change to report, and the very small supply brought forward consisting of Trinidad, has realised full rates: grey and mixed, 49s to 54s; fair to good and fine, 60s to 88s per cwt. Some business has been done by private contract in colonial sorts.

SAGO FLOUR.—192 bags Singapore bought in at 14s.
PRARL TAPICCA.—157 bags sold at 17s 6d per cwt for dull bold

BLACK PEPPER.—The market is dull and lower. Some business done for arrival, including 75 tons Singapore, at 5\frac{3}{2}d spring shipment, and and 25 tons Penang at 5d. Privately, Singapore sold at 5\frac{3}{2}d to a shade over. 229 bags Siam about two-thirds sold at 5d, a decline of \frac{1}{2}d. 787 bags Singapore part sold, including first-class sea damaged, at 5\frac{3}{2}d. -The market is dull and lower. Some business d

per lb.

White Pepper.—Some few parcels sold during the week at further reduced rates, and 1,307 bags Singapore by auction only partly sold at a id under private contract rates. Low to good, 7id to 7id; very good bold, 7id to 7id per lb.

Other Spice.—Zanzibar cloves are dull in the face of expected supplies. 200 bales just landed were offered by auction yesterday and withdrawn; also 30 bales of old import. 13 cases made were nearly all bought in; also 4 cases small nutmegs above the value. 127 bags pimento part sold at 2id to 2id per lb. 100 cases ordinary unworked cassia lignea were taken in at 56s, and 100 bundles cassia vera at 50s per cwt for good quality. A further reduction of about 3s to 7s has been accepted for Cochin ginger of the new crop. 137 cases sold: ordinary rough at 73s; scraped medium, 77s to 78s; ditto bold, 84s to 87s per cwt. 54 barrels Jamaica withdrawn.

Saltpetre.—The market is quiet, with very limited transactions,

per ton. Lead 20l per bettle.

The deliveries of tin in London were unusually large during February, being 1,164 tons. Included in the present stock of tin here are 657 tons not landed.

JUTE.—There is still a want of animation in this market, but several parcels of landed jute have changed hands during the week on former terms. The decrease in the production of goods in Dundee is still going on, and trade there continues flat generally. Stock in London on 1st inst 20,500 tons, against 21,300 tons last year, and 16,000 tons in 1873 at same date.

1st inst 20,500 tons, against 21,300 tons last year, and 16,000 tons in 1873 at same date.

HEMP.—A quiet market for Manila. Deliveries have been tolerably steady. The stock on the 1st March was 2,250 tons, against 2,870 tons last year, and 2,120 tons in 1873 at same date. At auction, New Zoaland hemp part sold at a decline of 20s to 30s. 120 bales Sunn went at a similar reduction, from 15l 15s to 24l 15s. 200 bales Sisal bought in. 22 tons Riga, &c., also taken in.

LINSEED.—Some large transactions are reported this week, chiefly for seed to arrive. Calcutta, 55s to 55s 6d; Bombay, March and April, 55s 6d. The former on the spot has sold at 58s ex warehouse. Sevents at 54s. Spring shipments, 51s 6d to 52s 6d, one at 55s per quarter on the coast.

n

on the coast.

TURPENTINE.—American spirits, 25s; last six months, 26s 6d per cwt Perroleum Oil is firmer in price. On the spot, 11d; next two. months, 103d to 11d; last four months, about 1s 03d per gallon.

Oils.—Sperm has advanced, viz., 110l to 111l for crude. The market for clive is without change, Mogadore has sold at 40l 5s per tun. The market for linseed has been firmer, 25l 5s to 25l 10s on the spot, and 25l 15s the quotation for April to June. These are higher rates. English brown rape has advanced, 20l 10s paid on the spot; and for May to August the nearest price is 3ll. A good business reported. Palm dull and nominally unaltered. Lagos, 34l 10s to 35l. The market for cocca-nut is steady. Transactions in Ceylon at 37l 15s to 38l. Cochin quoted 41l to 44l per tun, and fine quality again scares.

Tallow.—The market for Russian has been chiefly influenced by

speculation, and the trade demand continues moderate. During the last two days a more steady tone has prevailed. Petersburg new, 40s; March, about the same; April to June, also. There is a fair supply of Australian, and 3,800 casks were shipped in February.

POSTSCRIPT. FRIDA! EVENING SUGAR.—The market closes flatly, and crystalises India is 6d lower for the week. Demerara by auction part sold at 23s to 24s, Berbice at 24s 6d for good yellow. 720 bags grainy white Trinidad Usine part sold at 26s. Sales of West India 299 casks, making 665 casks for the week. By private contract 2,200 baskets Penang sold at 15s. 4,300 bags clayed Manila at 18s to 18s 6d. 200 tons Jaggery to arrive

COFFEE.—108 casks 8 barrels 149 bags went at full rates for colory sorts, but flatly for pale and greyish. 180 bags native sold at 84s for mixed Galle kind; one lot 84s 6d. 302 half-bales mocha sold at 108s to 110s. 23 half-bales mixed brown at 95s 6d. 1,672 bags foreign partly sold at about previous quotations. 100 bags Courtallum brought 101s 6d to 108s 6d. 30 cases 904 bags East India part sold at 98s to 99s 6d for ralish Course.

101s 6d to 108s 6d. 30 cases 904 bags East India part sold at 98s to 99s 6d for palish Coorg.

White Pepper.—Singapore has sold at 7d per lb short prompt.

Saltpetre.—100 tons Bengal sold to arrive at 19s 9d per cwt.

Shellac.—737 chests, rather more than one-fourth sold at auction prices. Fine second orange, 14!; red and livery orange, 11! 15s to 12! 10s; liver, 11! 10s; native orange, 11! 15s to 13! 17s 6d; A C garnet, 10! 2s 6d to 10! 5s per cwt.

Metals.—Chili copper steady at 81! to 81! 10s. Scotch pig iron, 74s 9d to 75s. Straits tin, 89! per ton cash.

Ohls.—At auction 132 casks Sydney cocca-nut went at 33! to 36! 10s per tun.

Tallow.—1,338 casks Australian, by auction partly, three-fourths sold. Beef, 37s 9d to 40s 6d; mutton, 37s 3d to 40s 6d; low sorts in proportion, being 6d lower. No change in town tallow.

ADDITIONAL NOTICES.
on in quotations. Market remains very quiet.

TEA.—No alteration in quotations. Market remains very quiet. The dealer's strike being still unsettled.

Green Frutt.—The report of Messrs Keeling and Hunt states the market for oranges is better supplied, but prices are well sustained. More inquiry for lemons at advanced prices. Brazil, Barcelona, and black Spanish nuts dull of sale. Lisbon onions realising good rates.

and black Spanish nuts dull of sale. Lisbon onions realising good rates.

Dry Frutt.—The market for currants continues firm, and most holders are still keeping back their fruit for as high rates as were ruling at the commencement of the year. Dealers figured prominently in the duty payments for the last month, and there is no doubt that they held a larger proportion of the stock than by computation was thought probable. The export deliveries for February show a marked diminution as compared with the last two years, being 567 tons short of those of 1874. An inquiry from the continent has led to an extensive business in Elemes, and as the market is now clear of common qualities, exporters are obliged to use finer sorts. Valencias move offer very slowly, prices being considered too high for any large transactions. Sultanas sell freely for medium qualities, but higher descriptions are held very firmly. During the week the inquiry for French fruit and muscatels has been very general, and a few sales have been effected at late rates.

COLONIAL WOOL.—The sales continue well attended. Greasy wool is rather firmer; other kinds also firm, at fully opening rates, but Sydney wool continues flat.

FLAX.—Market steady.

FLAX.—Market steady.

HEMP.—Market steady, and rather more business passing.

SILK.—Market very dull for most classes of silk, as is to the after large public sales. usually the

TOBACCO.—There is no material change to report in our market during the past week, and the sales effected of United States tobacco-have only been of a trifling character. Buyers continue to show no inclination to buy for stock at present high prices, and holders are not inclined to submit to the least reduction, as shippers advise that higher prices may be looked for further on in the year. In other growths there has been but little done, the demand generally being trifling.

SEEDS.—There is no alteration in prices of seeds this week.

METALS.—No movement of consequence has occurred this week.

Copper has not been sufficiently in request to keep it from further slight downward course of values. Iron is steady in quotations, but it is pretty clear that the resumption of workings in Wales, when arranged, will cause over supply. Tin has been fairly dealt in, and quotations maintained. Lead and spelter are without change. Tin plates continue in fair request.

METROPOLITAN CATTLE MARKET.

Monday, March 1.—The total imports of foreign stock into Lendon last week consisted of 9,532 head. In the cerresponding week last year we received 7,076; in 1873, 12,216; in 1872, 12,775; in 1871, 6,201; and in 1870, 7,730 head.

The cattle trade to-day has been without feature of importance. The supplies offering have been moderate, and sufficient for requirements. From our own grazing districts the receipts of beasts have been about the average. Generally speaking, the trade has been slow. Prime breeds have changed hands quietly, but there has been rather more animation in the demand for secondary qualities. The best Scots and crosses have sold at 5s 10d to 6s per 3 lbs. From Norfolk, Suffolk,

Essex, and Cambridgeshire we have received about 1,800, from other parts of England about 250, and from Scotland 74 head. On the foreign side of the market there has been a more liberal supply of beasts, including some 400 Spanish, 250 Danish, and 300 Dutch. With a dull inquiry, prices have been weak. The sheep pens have been more liberally supplied, and the position of the trade has been unaltered. Business has not been brisk, but the best Downs and half-breds have realised 5s 10d to 7s per 8 hs. Calves have been in moderate supply and quiet request, at about late rates. At Deptford there have been 330 German, and 50 French beasts.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

MARCH 4.—Our market continues very quiet, and the sales this week have again been of small amount at about late rates. About 350 bags of mehair have changed hands at 3s 9d and 3s 10d per lb. Our next series of East India sales will open on the 16th inst.; the quantity to be offered will be declared next week.

HUBBUCK'S PATENT WHITE ZINC PAINT

durable and beautiful paint known, does not stain or discolour with the atm of large towns, and by their process, which is patented, is cheaper in use than White Lead

Each Cask of Pure White Zinc is stamped—"HUBBUCK'S, LONDON, PATENT."

HUBBUCK'S PALE BOILED OIL

Being much purer than raw linseed oil, is the only boiled oil that can be used for White and delicate coloured Paints. It dries quick and hard, never blisters, and is more durable.

HUBBUCK'S ANTI-OXIDATION COMPOSITION

For Ceating Iron and Wood Ships' Bottoms: a preservative against fouling and corrosion.

This composition is ready for immediate use, and obviates the waste of carrying unmixed Paints, Oils, Driers, &c. It is also applicable to all the purposes of other Paints.

Are the best and therefore the Cheapest, and are properly packed for Exportation to all Climates.

THOMAS HUBBUCK AND SON, 24 LIME STREET, LONDON.

BROWN & POLSON'S CORN FLOUR

Has nearly Twenty Years' Pre-eminent Reputation.

Every Genuine Packet bears the Fac-simile Signatures-

John Brown

GREAT IMPROVEMENT IN SPECTACLES. "NATALINE PEBBLES."

Mounted in Abyasinian Gold Frames, equal in Appearance TO REAL GOLD.

PRIZE MEDAL, 1870.

Price 15s 6d per Pair, Forwarded on receipt of P.O.O., payable at Holborn Viaduct.

Persons suffering from Weak or Defective Sight will find great relisf by wearing the New Spectacles, consisting of a brilliant Pebble of high polish, called "NATALINE," which presents qualities so long needed—LIGHTWESS, ABSENCE of COLOUR and GLARE—which render the wearing of Spectacles no longer an inconvenience, but an ornament.

gsi numerous letters of a similar description in their por [COPY.] ession, Messrs L. & A. Pyke select the following :-

COPY.]

Charleville, County Cork, 7th March, 1871.

For the latter I have to tender to make a latter in lone and frame. The frames are easy, comfortable, and secure—perfectly luxurious to wear—and a glasses are cool and glaroless. I hope the use of these new publics, by those affected with impaired sight, will come as universal as they deserve.—I remain, Gentlemen, yours most obliged.

n. yours most obliged.

CITY OF BRISBANE CORPORATION FIVE PER CENT. BRIDGE

CORPORATION FIVE PER CENT. BRIDGE DEBENTURES.

Transferable by Delivery.

HENRY BROCKETT, Esq., the voluntary liquidator of the Bank of Queensland, Limited (in liquidation), has been authorised by certain shareholders of the said Bank, in conjunction with the Messrs Brassoy, to offer for SALE by Public Tender on the 10th day of March mext the sum of £94,050 Bridge Debentures of the Brizbane, Corporation.

The Debentures are in sums of £50 and £25 each, bearing date the 1st day of June, 1874, and carry interest at the rate of 5 per cent, per annum, payable half-yearly, on the 1st day of May and the 1st day of November, at the Office of the Banking Agents of the Corporation, viz., the Australian Joint Stock Bank, 18 King William street, E.C.

The Debentures are issued by the Corporation of the

King William street, E.C.

The Debentures are issued by the Corporation of the City of Brisbane by authority of the Act 34th Victoria, No. 5, of the Parliament of Queensland, authorising the issue of Debentures for the sum of £121,250, exempt from stamp duty, and are secured upon the Brisbane Bridge lands, the rates, revenues, and endowments of the Municipality of Brisbane, and the tolls and revenues to be derived from the Brisge; by morigages dated the 15th day of October, 1864, and the 6th day of April, 1871, subject as to the revenues and endowments of the Corporation only to a prior charge of £10,000. Copy of the Act and of the two several mortgages, dated respectively the 6th day of April, 1871, and the 15th day of October, 1864, between the Brisbane Municipal Council and the Bank, can be inspected at the Office, No. 8 Finsbury Circus, London, E.C.

The principal sum will be payable on the 1st day of ovember, 1891, either in London or Brisbane, at the pion of the holder.

The total amount of these Bonds is £121,250, the annual interest charge being £6,062 10s. Bonds to the amount of £37,200, making up the said total, have been taken by the Shareholders of the Bank.

The Br dge Tolls alone are estimated to produce mura than sufficient to pay the above interest. The Ten ers will be received at the Office of the Bank, No. 8 Finsbury circus, en or before Wednesday, the 10th day of March, and will be opened on the following day at 12 o'clock noon. A sealed packet, con-taining the minimum price, will be previously laid on the table.

Six months' interest (2) per cent.) will be payable on the 1st day of May next.

Forms of application can be obtained at the Office of the Bank, 8 Finsbury circus, E.C.; the Australian Joint Stock Bank, 18 King William street, E.C.; and of Messrs Hope, Dodgson, and Newbery, 25 Royal Ex-change, E.C. London, 27th February, 1875.

COLONY OF NEW ZEALAND.

DUNEDIN, PROVINCE OF OTAGO.

CITY OF DUNEDIN WATER WORKS SIX PER CENT LOAN OF £200,000, in Debeutures to Bearer of £100 each.

PRESENT ISSUE, £117,000.

Issued under Authority of Acts of the General Assembly of New Zealand, intituled, The Municipal Corporations water Works Act, 1872. The Municipal Corporations Water Works Act, 1874; and secanced by a special annual recurring rate, and a domestic Water Rate, leviable under the provisions of The Municipal Corporations Water Works Act, 1872.

The Bonds are redeemable at par on the 1st day of January, 1925, in Dunedin, Melbourne, or London, at the option of the holder, as specified thereon.

Interest is payable by coupon half-yearly, at the Offices of the Bankers or Agents, for the time being, of the Corporation of Dunedin, Melbourne, or London, at the option of the holder, on the 1st January and 1st July in each year.

the Corporation of Dunadin, Melbourne, or London, as the option of the holder, on the 1st January and 1st July in each year.

The security consists of a special annual recurring rate, to be levied as all rateable property situate within the City of Dunadin, and an annual domestic water rate on the assessed annual value of each tenement, both rates being authorised by the Act of the General Assembly of New Zealand, 36 Victoria, No. 54, intituled "The Mandeipal Corporations Water Works Act, 1872."

It has been determined to levy a special rate, in accordance with the provisions of the above-named Act, of Is 3d in the pound for the enseing year.

This rate will, it is estimated, produce a sum of over £10,000.

This rate will, it is estimated, produce a sum of over 210,000.

In addition to this, a further income will be produced by the annual domest or water rate, and a considerable increase in the produce of both rates may be anticipated, the municipal returns showing that the value of real property is increasing at the rate of 15 per cent. per annum, or thereabouts.

The borrowing powers of the Corporation, created by the Dunedin Water Works Act above referred to, are limited to £200,000, and the present issue of debentures consists of the amount required, for the surpose of ecquiring the Dunedin Water Works, now in full and successful operation, at a price of about £117,000, under a contract with the Dunedin Water Works Company (Limited), in presume of the provisions of the Act of the General Assembly of New Zealand of 31st Angust, 1574, being "an Act to cenable the Corporation of Dunedin to purchase the rights and interests of the Dunedin Water Works Company (Limited), and to berrow such sum or sum of money as may be necessary to complete the said purchase, and to construct and maintain the works of its said Company and other water works."

The shareholders in the said Water Works Company have been allowed the option of exchanging their interest in the Company for debentures at par, and this option has resulted in applications for debentures to the extent of £32,000 in exchange for shares having been made, leaving the balance required for completion of the purchase of the works for subscription by the public.

The income of the Water Works Company for the year 1973 was over £11,000, and the consumption of water and consequent revenue is stated to be considerably on the increase.

With reference to the remedies of the debenture-holders in case of default, it is previded by "The Municipal Corporations Act, 1987," which is applicable to Dunedin, that, in the event of the principal money or interest due upon any two or more of the debenture-holders are prejudiced by them, the Court in the debenture-holders are prejudi

HOLLOWAY'S OINTMENT AND PILLS.—Abscesses, Erysipe'as, Pilea.—Unvarying success attends all who treat these diseases according to the simple printed directions wrapped round each pot and box. They are invaluable to the young and timid, whose bashfulness sometimes endangers life. A little attention, moderate perseverance, and trifling expense will enable the most diffident to conduct any case to a happy issue without exposing secret infirmities to anyone. The cintument arrests the spreading inflammation, restrains the excited vessels, cools the over-heated skin, alleviates throbbing, smarting pains, and gives great ease. The directions also clearly point out whom and how Holloway's pills are to be taxen, that their purifying and regulating powers may assist by adjusting and strengthening the continuing.

ONDON, CHATHAM, AN.

DOVER RAILWAY:

Its Position Analysed and its Prospects Reviewed.

By WILLIAM ABBOTT.

Sworn Broker, 10 Tokenbouse yard, London.

Published by Batea, Hendy, and Co., 4 Old Jewry,

London, E.C.

Published by Bates, Hendy, and Co., 4 Old Jewry, London, E.C.

OPINIORS OF THE PERS.

"To the proprietors of the London, Chatham, and Dover Railway, and to all whe are interested in the progress of Railway property generally, we recommend the parusal of Mr Abbott's will-compiled and forcibly-written pamphlet."—Financipal.

"Mr Abbott not only dissects the concern, but takes each feature of it in detail, examines it with the most painstaking minuteness, land combines the result of his investigations in a synopsis which is at once luminous and convincing. His skill in work of this kind is universally admitted. He has long exercised it in demonstration of the value of submarine telegraphs, and his recent analysis of the condition of joint-stock banking in this country is regarded as the work of a gentleman thoroughly conversant, not only with the theory, but also with the facts of finance, being, as it is, at once scientific and practical. In dealing with the brochure before us, we find ourselves in this difficulty—it is so succinct, so precise in its language, that it is almost itapossible to make a summary of it. Those who wish its see all points clearly demonstrated—here we can only sketch them—should read Mr Abbott's pamphlet, and upon that form their own opinions as to the future of this undertaking, which we believe, with the writer, to be full of promise."—Rallwax Nzws.

"Mr William Abbott has rendered good service by bringing out a pamphlet which is full of interest to the proprietors of this important, and, in a market sense, long-neglected Railway."—Monxex Marker Review.

"The London, Chatham, and Dover Railway exercises a great attraction on some persons as a kind of deferred annuity stock."—Bullionsis:

"Mr Abbott has the happy knack, only resulting from a large baniness experience, of forming definite opinions, and of expounding them in pointed and explicit language."—Inversors Guardia, only resulting from a large baniness experience, of forming definite opinions, and of expounding them in pointed and

Third Edition, with Illustrations by Gilbert,
MY NEW YEAR'S GIFT TO

MY SON.

By the Author of "Life; or the Dream of a Philanthropist," &c., &c.

"We cannot find language sufficiently strong to express our favourable opinion of this handsome volume nor can we remainstend a New Year's Gift so admirably adapted for the rising generation, on whom it is calculated to have a living and a lasting influence."

"A more profitable and ming-elevating New Year's Gift for a father to give his son, a guardian his ward, or a schoolmaster his pupil, could scarcely be devised."

London: T. H. Meredith, 340 Strand, London.

Published Monthly, price One Shilling,

CIVIL LAWS OF FRANCE TO THE PRESENT TIME

WITH NOTES ON THE ROMAN LAW.

By DAVID MITCHELL AIRD, Esq., Barrister-at-Law, Middle Temple;

Author of "Blackstone Economized," &c., &c.

Author of "Blackstone Economized," &c., &c.

LAW JOURNAL, Feb. 6, 1875.

"The student who reads Mr Aird's admirable work must have his mind opened to the change in the form of Euglish law which must inevitably come sooner or later, and in the meanwhile he is assisted to form for himself some rough outline within which to arrange the chaotic rules of English law. The Roman law forms the best reading for giving a scientific determination to the mind of the law student; but the Code Napoléon shows him how the same kind of system may be applied to the requirements of modern life. Mr Aird is alive to the convenience of reading the Code Napoléon after a study of the Roman law; and his notes, specially written for the purpose, seem well to connect the two together.

" " The simplicity of a well-arranged system of law is well brought out in the arrangement of the Code Napoléon, which is followed by Mr Aird's condensed translation. " " The work will be of the greatest service to law students, and all others who may wish to obtain a general idea of the French Code, or desire a guide with a view to deeper researches on particular points."

Weekly Register, January 30, 1875.

"The learned author of 'Blackstone Economized' has here produced a worthy companion to that admirable Text-book on the Laws of England. He has done this by very cleverly epitomising the wonderful Code given to France, or rather to Europe, by the genius of the Great Napoleon. In each instance the task undertaken by Mr Aird was hereulean; but in each instance he has triumphed over all difficulties in its accomplishment.......It must have required from him throughout the most ceaseless vigilance. He has inscribed it, we observe, to the greatest and most brilliant Judge upon the English Bench, meaning, it is needless to say, the popular Lord Chief Justice of England—doing so 'with his Lordship's kind permission.' At the end of each Chapter the analogies are drawn out between the Code Napoléon and the old Roman Law, with which the principles of the former so strikingly harmonise. As a mere work of condensation the volume is a boon, and, in its way, also a masterpiece.......In paragraph after paragraph the particulars are packed together as compactly as the figs in a fig-box. So lucid is it all, that we have failed to find a single sentence in the whole work of which the meaning is not perfectly transparent."
