November 2023 | WikiCon

01 What is Enterprise?

Using Wikimedia content in a third-party environment in high volume carries some challenges

1) Speed
2) Usability
3) Machine Readability
4) Content Integrity

We seek to mitigate these challenges to support the proliferation of free and open-source knowledge, engendering trust in the content and the work of the Movement

Wiki content/data are used as the backbone for training LLMs and act as information retrieval or identifiers in Knowledge Graphs

RB

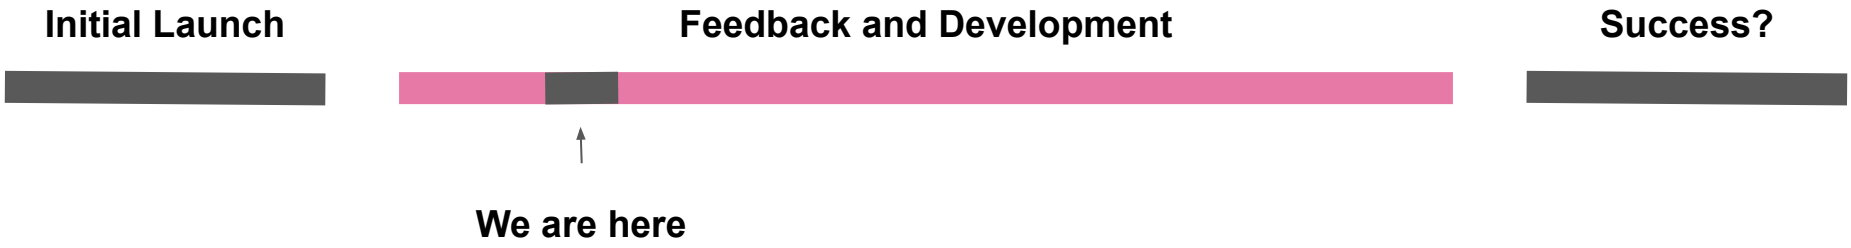
Is queen Elizabeth II alive?

As of my last knowledge update in January 2022, Queen Elizabeth II was alive. However, I do not have access to real-time information. To find out the current status of Queen Elizabeth II, I recommend checking the latest news or an official source.

02 Usability

It is difficult to learn, apply and use Wikimedia APIs at scale. We need to adapt to new technologies and users to support knowledge proliferation and sustainable reuse

Feedback is important from Enterprise organizational users and Enterprise community users



A Goal of Universal Usability

Latency of hourly vs daily endpoints?
One comment • 6 years ago

Aldebrn

Who could I ask about the latency of some of the REST endpoints? I see that I data, e.g.

What is maximum URL length I can use with Wikipedia API ? [edit]

Is the experimental mobile-html endpoint leaning towards deprecation, or stability?
2 comments • a year ago

o Long) when I pass very long requests (with more than 50 page titles). I limit it
/s that? Нирваньчик (talk) 00:20, 17 July 2016 (UTC) **Reply**

Deprecated?
2 comments • 7 years ago

GreenC

Most of the endpoints say "deprecated" .. are we supposed use them?

MediaWiki vs Wikimedia REST APIs
2 comments • 2 years ago

Diegodlh

Hi, all! I'm not sure I understand the differences between MediaWiki and Wikimedia REST APIs. I understand that the Wikimedia REST API (not included with MediaWiki) is powered by the RESTbase caching/storing API proxy, making it more appropriate for high-volume use cases. I assume that this is not the case with the MediaWiki REST API.

Why is there a separate MediaWiki API? Is this because having a RESTbase API would be an overkill for most MediaWiki installations?

Description

In the `enwiki-NS0-20220101-ENTERPRISE-HTML.json.tar.gz` fi
categories and templates, but those are not listed in the JSON itself. F

03 Credibility Signals

Credibility Signals support practices of data validation. They are not declarative.

They are community-sourced contextual information that can help our reusers make sense of when a particular edit is to their standard, in real-time.

Indicators of Reliability

- Machine learning based credibility scores
- Articles flagged as needing citations
- Auto Patrolling, Flagged Revisions, etc.
- Time of live revision
- Locked article status, changes
- Editor experience
- Editors watching data

Other

- Frequency of revisions
- Redirects and constantly moving articles
- Feed/List of perennial sources
- Feed/List of conspiracy sources
- Pageviews

Indicators of Controversy

- Recently reported vandalism or sockpuppet activity
- “Oversighted” revisions
- Events on specific time horizons
- Discussion Talk page data

Content Integrity Facts

760 Total Revisions

Event Type — **New Article Revision**

Safety	Score .22	Signif.	Score .91
Visibility	0.01	Breaking News	true
Stability	0.9	Edit type	copy
Collaboration	0.333	Topic	music
'Revertrisk' (ML)	0.21	Editor (exp.)	0.9
Controversy	0.1	Trending	true
Citations	0.77	Art. Quality (ML)	0.4

04 What can you do with Credibility Signals?

Combining credibility signals creates new types of functionality, like our “Breaking News” signal
