REPORT OF PARK COMMISSIONERS.

At the March town meeting you voted that the park commissioners be instructed to bring Carver Green legally under the system of the park system of Carver. This matter has been attended to without any expense to the town.

As we are not allowed to overdraw our accounts we did not feel that we should go ahead with the work of putting the Green in proper condition, purchasing a new topmast and cross-trees for the flagpole and erecting the same without being sure of money enough to complete the work and attend to any other park expense that might arise.

Arrangements have been made so that this work can be begun at once.

REPORT OF GYPSY MOTH SUPERINTENDENT.

In regard to the gypsy moth, I can say that we have held them in most of the colonies and in some places have gained.

In scouting the orchards last October we found a number of new orchards infested but only a few egg clusters in each. Our worst infested woods are on Plymouth street. We have cut and burned all of the dead wood; also given it a thorough creosoting in hopes to hold them next summer.

HERBERT F. ATWOOD,

Gypsy Moth Superintendent.

REPORT OF SEALING WEIGHTS, MEASURES, ETC.,
FOR THE YEAR 1910.

Property of town in department—

One brass beam balance scale and cabinet, one 50 lbs., 25 lbs., 20 lbs., 10 lbs., 5 lbs. iron nickeled, one 4 lbs., 2 lbs., 1 lb., 8 ounces, 4 ounces, 2 ounces, 1-2 ounce, 1-8 ounce, 1-16 ounce, brass.

Dry Measures—One-half bushel, one peck, one-half peck, 2 quarts, 1 quart.

Liquid Measures—One-half gallon, 1 quart, 1 pint, 1-2 pint. One steel tape measure, 6 feet.

WORKING SET.

Five iron weights, 50 lbs. each.

Brass, with case—4 lbs., 2 lbs., 1 lb., 8 ounces, 4 ounces, 2 ounces, 1 ounce, 1-2 ounce, 1-4 ounce, 1-8 ounce, 1-16 ounce.

Liquid Measures, copper nickeled—1 gallon, 2 quarts, 1 quart, 1 pint, 1-2 pint.

Dry Measures, wood—One-half bushel, 1 peck, 1-2 peck, 2 quarts, 1 quart.

One portable balance with case.

TOWN MEETING WARRANT.

Contents of warrant for Town Meeting to be held at the Town house on Monday, March 6, at eight o'clock a. m.

The polls will be opened at 12 m. for the election of officers, and will be kept open four hours at least.

Art. 1. To choose a Moderator to preside in said meeting.

Art. 2. To see if the town will accept the report of the Selectmen and other town officers and committees.

Art. 3. To choose all necessary town officers not elected by ballot.

Art. 4. To raise and appropriate such sums that may be necessary to defray town charges the ensuing year.

Art. 5. To decide when taxes shall become due, and whether any interest shall be charged after a certain date.

Art. 6. To see if the town will make the yards of field drives town pounds, provided they are also chosen pound keepers.

Art. 7. To see if the town will instruct the treasurer to borrow money, under the direction of the Selectmen, in anticipation of taxes the ensuing year.

Art. 8. To see if the town will instruct the Selectmen to prosecute, compromise or defend any suits for or against the town.

Art. 9. To see if the town will make an appropriation for Memorial Day.

Art. 10. To see if the town will make an appropriation for a police force, or act anything thereon or thereto.

Art. 11. To choose all necessary town officers, the following officers to be voted for all one one ballot, viz: Town Clerk, three Selectmen, three Overseers of the Poor, one Assessor for three years, two Auditors, one Tree Warden, one Road Commissioner for three years, one School Committee for three

years, one Trustee of the Public Library for three years, one Trustee of the Public Library for two years, one Trustee for the Public Library for one year, one Park Commissioner for three years, one Cemetery Commissioner for three years, and to vote by ballot "yes" or "no" in answer to the following question: "Shall licenses be granted for the sale of intoxicating liquors in this town?"

REPORT OF TOWN CLERK

EXCERPTS FROM TOWN MEETING RECORDS.

(March 7, Ellis G. Cornish, Moderator.)

Voted, that the balance of eighty-eight dollars in the Military Aid account be transferred to the Soldiers' Aid account.

Voted, that the Road Commissioners print in the annual report the amount of money laid out on each street, and who paid to.

Voted, that the Town Clerk be instructed to cause to be printed five hundred copies of the Assessors' valuation list for the year 1909.

Voted, that the town hereby assumes the future liability of property owners in moth assessments.

Voted in answer to the question "Shall license be granted for the sale of intoxicating liquors in this town?" "Yes," 25; "No," 87; blanks, 33.

(Adjourned meeting, March 22.)

Voted, that the Park Commissioners be instructed to take steps to bring Carver Green legally under the park system of Carver.

Voted, (in the matter of a new town hall), that a committee of seven be chosen, one to be nominated by the Selectmen, one by the School Committee, four by the moderator and one by the Library Trustees. This committee to notify the Town

Clerk within two weeks, and the investigating committee to report at the next annual town meeting.

Voted, that the Selectmen be, and hereby are instructed to enter a remonstrance in the name of the Town against House bill No. 603 of the General Court of 1910, whenever a move is made to enact said bill.

Voted, that the matter contained in this article, 22 (relating to straightening Lakeview Street), be left to the discretion of the Road Commissioners, said Board to straighten the road in any way that may be practical without delaying the construction of stone road the ensuing year.

Voted, that the Forester be instructed to divide the town into five districts, and appoint one deputy forest warden to have charge of each district. Each deputy forest warden to appoint ten men to work with him fighting fire.

(Special Town Meeting July 23d, Ellis G. Cornish, Moderator.)

Voted, 39 "Yes," 52 "No," on a motion to accept the lay-out of the Road Commissioners straightening Lakeview street.

Voted, 61 yes, 10 no, to raise and appropriate five thousand dollars for macadamizing a section of Tremont Street, leading from South Carver post office to Plymouth line.

Voted, that in special town meetings the constable be requested to mail printed copies of the warrant to each voter seven days before said meeting.

HENRY S. GRIFFITH,

Town Clerk.

REPORT OF SCHOOL COMMITTEE

FINANCES, YEAR ENDING DECEMBER 31, 1910.

Receipts—

Surplus medical fund, 1908,	\$ 3 75	
Surplus medical fund, 1909,	50 00	
Surplus Mass. School fund, 1909,	6 40	
General appropriation,	7,000 00	
State school fund,	736 68	
Superintendent from State,	300 00	
Return on Superintendent acct.,	200 00	
Ellis fund,	630 00	
Pratt fund,	150 00	
Overdraft,	762 65	
	<hr/>	\$9,839 48

Expenditures—

Teaching,	\$4,794 00	
Janitor service,	303 25	
Cleaning buildings,	34 29	
Medical inspection,	62 50	
Transportation,	1,155 66	
Repairs,	200 74	
Fuel,	300 70	
Supplies and incidentals,	632 83	
Superintendent's salary,	650 00	
Truant officers,	27 50	
Overdraft, 1909,	1,678 01	
	<hr/>	\$9,839 48

ROLL OF HONOR.

The following names are those of pupils who have had perfect attendance for one or more terms.

Three terms—Ruth Shaw, John Blaker, Dorris Jones, Albert Linton.

Two terms—Dorothy Linton, George Perkins, Aravesta Shaw, Clara Playze, Robert Washburn, Grace Gardner, Howard Gardner, Myrtle Gardner, Elizabeth Atwood, Eunice Atwood, Hazel Griffith, Ray Atwood, John Shaw, Julia Stanley.

One term — Russell Peterson, Everett Cassidy, Leonard Shurtleff, Eleanor Washburn, William Winberg, Louise De-Moranville, Maria Macy, Eleanor Atwood, Preston McKay, Myrtle Perkins, Carrie Washburn, Everett Baker, Julia Cahoon, Alice Lees, Clyde Griffith, Otto Palm, Bernard Winberg, Walter Greene, Rodney Griffith, Lizzie Harvey, Albert Thomas.

APPROPRIATION.

We recommend a general appropriation of \$7,000 for the support of schools for the present year.

Superintendent C. W. Humphrey merits praise for what he has done for the schools of Carver during his term of service.

Your committee wish to express their thanks for the hearty co-operation of all.

Respectfully yours,

ALICE G. SHAW,

C. C. PERKINS,

E. G. CORNISH.

School Committee of Carver.

SUPERINTENDENT'S REPORT

To the School Committee and Citizens of Carver:

An annual school report is necessarily somewhat of a repetition of former reports. Changes in school matters are usually few and slight from year to year, as educational changes are of slow growth, they are evolutionary rather than revolutionary. A short time ago there was great interest and activity in industrial education. It was predicted that soon there would be industrial schools for teaching all kinds of vocations to all children and every one would be self supporting as soon as he left school. There is now even greater interest, but less activity. We are taking more time to think. Some one, more wise than the rest, said that some day we would erect a monument to the man who said go slow in industrial education. Most of us have come to be deserving of that monument. We are learning to go slowly. He is equally worthy of consideration who goes slowly in making any change he hopes will be permanent. Education, like government, is of exceedingly slow growth. We are apt to think of the makers of the Constitution as coming together and originating that great instrument in a few weeks' time. Joseph Choate, in an address delivered a few years ago, said that it was the result of the study of the principles of free government by the colonists, and especially by the lawyers of the colonies, for more than twenty years. They were studied throughout the life of the Continental Congress, which Fiske says was practically a permanent institution for thirteen years. After the Declaration of Independence an epoch of constitution making by the individual states set in, and was the one great sub-

ject of study of the whole country. Those who finally made the Constitution of the United States, he says, came to their great task as graduates of the best practical school of Constitutional Law the world has ever seen. The instrument they finally devised had little about it that was original with the makers, and as well as they did their work, it was amended ten times in the next two years. Its use has proved that it was not written for the present, only. He adds that it has been a source of frequent wonder to foreign observers that a written constitution, which was framed in the eighteenth century for thirteen feeble states, with three millions of people should be found to answer as well in the twentieth century for the needs of a nation of forty-five states and eighty millions of people. There are many able men and women seriously and laboriously working out the instrument of education: but, like the makers of the Constitution, they are not launching out on unknown waters: they are studying the fundamental principles of education as those men studied the principles of government that the final results may be as enduring as theirs, though as subject to frequent amendments to meet changing needs.

While every form of education is being studied, industrial education is receiving the greatest attention. We have had general education so long that its present form is the result of a slow growth. That we cling to it so tenaciously is not an indication of unwillingness to change, but rather a proof that it gives us what we want. There is little in it that we could wisely give up, there is no call for a radical change. But it is because we have no system of vocational education to supplement it, and it is known to be so necessary, that it is receiving so much attention. It may be of interest to know something of what has already been done in establishing industrial schools. There was held in Boston in November of this year a convention of The National Society for the Promotion of Industrial Education. This was not a gathering of school men exclusively, but also of manufacturers, commercial and railroad men, and

representatives of organized labor. As is always the case in discussions of industrial education the German schools were cited as the best example of what has been done to provide vocational training. Such training is universal and compulsory in that country; every child is taught to do something that will add to the wealth and prosperity of the nation. If a boy is to be no more than a chimneysweep, he yet goes to a school for scientific training in chimney sweeping. The same is true of all callings. The industrial schools already established in this country may be divided into four classes: Philanthropic schools, those supported wholly or in part by philanthropy; business enterprise schools, those carried on by private individuals as a business enterprise; corporation schools, those supported by corporations to train men for their work; and publicly supported schools. All these classes of schools are doing good work, but only one is getting at the root of industrial education, the publicly supported schools. All these classes of schools are doing good work, but only one is getting at the root of industrial education, the publicly supported, publicly controlled, free industrial school. The Franklin Union School of Boston is an example of the philanthropic school. It owes its foundation to Benjamin Franklin, who bequeathed one thousand pounds sterling to the town of Boston in 1791, which was placed at interest for one hundred years. At the end of that time a portion of the sum, amounting to \$400,000, was available for public purposes, and was used in establishing an industrial school. The remaining portion continues at interest for another century. The \$400,000 was used for a building and equipment, and a maintenance fund, yielding an annual income of \$20,000 was given by Andrew Carnegie. It has evening sessions only, and is open to men, sixteen years old and over. There are six courses of two years' duration: Mechanical Construction, Industrial Electricity, Steam Engines and Boilers, Structures, Architectural Working Drawing, and Industrial Chemistry. There are also other short courses. It is not entirely free. It is a typical school of

this class. Schools of this class are always likely to be very limited in number, they are not entirely free, and it is claimed that they are often unwisely influenced by the donors or those having them in charge. The so-called business colleges and private trade schools are examples of the second class. They are private schools carried on as a business enterprise. Many of them do excellent work, but their small numbers and high cost put them beyond the reach of many who need them most. Examples of the third class, the corporation schools, are those supported by the railway companies, the school of the General Electricity Company of Lynn and the Ludlow Manufacturing Associates of Ludlow, Mass. These schools are maintained solely to train young men to do the work of the corporations, although they are free to work where they choose after completing the course. It is conceded that these schools do the best work of any kind of industrial school. They teach to do a definite thing in the most direct way, and in the shortest time. Some have gone to the extent of training their apprentices so thoroughly and quickly, that at the end of two years they are able to do the work of journeymen, and have been used to supplant journeymen, each succeeding class crowding out those ahead of it until factories have been run almost entirely by apprentice labor, at apprentice wages. This is by no means true of all; many corporations are very liberal in the treatment of their apprentices. The objections to this class of schools are that they are very narrow in scope, they make good workmen, but do nothing to teach citizenship; also the temptation is great to exploit the workers, and the school gives an opportunity to do this. Yet it should be remembered that this kind of education is entirely free to the apprentices, and they are free to work where they choose after receiving it. The fourth class is the publicly supported and controlled industrial school. There are at present nineteen such schools in Massachusetts. Those of the most interest to us on account of location are the Brockton Independent Evening Industrial School, The Taunton Inde-

pendent Evening Industrial School, and the New Bedford Independent Industrial School. The Brockton school gives instruction four evenings in the week in four school buildings. The Taunton school gives instruction two evenings in the week in the High School building. The New Bedford school has both day and evening courses, and occupies a building on Water street, near the corner of William street. The day sessions are from 8.30 to 4.15, and are open to any boy of good character, physical ability to do the work, and sufficient education to pursue the studies to advantage. The course includes shop mathematics, shop English, shop drawing, shop science, civics and citizenship, industrial history, wood and metal working. Evening courses in the same building give instruction to men in house framing, architectural drawing, shop drafting, shop mathematics, motors, gas engines, steam practice, and machine shop work. Evening instruction is given to women in dressmaking and millinery at the Dennison Memorial Building on First street. Tuition in this school is \$150 per year for non residents. One-half of this is paid by the State, and one-half by the town in which the student lives. There are two agricultural schools in the state, the Montague Agricultural School, at Montague Center, and the Smith Agricultural School and Northampton School of Industries, at Northampton. There are two classes of publicly supported industrial schools, the Independent School, so called, like the three mentioned, which are not connected with any common public day school, although the instruction is often given in the regular school building, and the Part Time School, which is a part of the regular public day school. Under the part time plan boys on entering the high school are grouped in pairs. On Monday one boy of a pair goes into a shop or manufactory to work as an apprentice, and receives apprentice's wages. He works there until Friday night. While he is in the shop his mate is in the high school. Saturday forenoon both boys work in the shop together, that the one who was in school during the week may get the run of the work. Satur-

day afternoon they are free. On the next Monday morning they change places, the one who was in school goes to work in the shop, and the one who has been at work goes to school. This plan seems to be the most satisfactory of any yet tried. It somewhat resembles the German Continuation school. The trades learned are necessarily only such as are required by the local industries. The obstacles to success in teaching trades in a school not associated with an industry are lack of competent teachers, difficulty in getting suitable and sufficient work, the expense of materials, the impossibility of working under shop conditions, and the lack of a feeling of responsibility on the part of the students, well expressed by one who said, "We don't waste things and make mistakes in a shop because we would lose our job if we did." These are the kinds of industrial schools now in operation in this country. As yet hardly a beginning has been made in industrial education. Several important points relating to the matter were brought out in the convention: There are very few teachers available for industrial teaching, and as yet there is little opportunity for properly training them. Few of the best workmen are good teachers, and few good teachers have any knowledge of trades or occupations other than teaching. It is pretty generally conceded that a man or woman who has not done, in a business way, the work he would teach is worth little as an instructor. Organized labor was well represented in the convention. It demands three things of education, that it shall be entirely free to all, that it shall be publicly supported and controlled, and that it shall train for citizenship as well as for work. It does not want an education that only makes its children better workmen and workwomen, but one that gives the broader culture that is given to the children of the well to do.—a thing worth thoughtful consideration. Dr. Carver of Harvard claimed that while we are doing much to conserve our natural resources, we are wasting our greatest resource, human energy, by neglecting to train it to its highest efficiency; that the preponderance of un-

skilled labor in this country limits the producing power of the nation, and is the prime cause of much of the social inequality. He closed his remarks by saying, "He who makes two highly skilled men to grow where one grew before, does more for society than all the politicians and social reformers whatsoever."

The question that is of the most interest to us is, What can be done in industrial teaching in our schools? Under present conditions very little can be done. We have no teachers for the work. Those we have now cannot do it, and cannot be expected to do it. All mechanical teaching would have to be done at the school house. There are no mechanical industries in town which would make part time teaching possible. We would have to have a building or addition to present buildings, material, tools, and a special teacher. We could not have these for all the schools, and it is not practicable to bring children from all schools to one central point for the work. If it is done at all, it should be done at the High school. The pupils there are older, and ready for the work. It should be a part of the regular school course, compulsory for all boys, and to a certain extent for all girls. In addition to the mechanical teaching, there should be at the same place sewing and cooking for the girls, and a certain amount of the latter for the boys. These should be taught by experienced women, under as near home conditions as possible. This should be done in addition to the regular school work, and the sessions should be extended to give time for it. It should be serious work, and not play, or it should not be done at all. If we should do this work, we should go into it with the intention of making it permanent, and not as an experiment. It is not an experiment; it has been done in so many places similar to ours that we know it can be made a success. There is, however, another kind of industrial work that can be done with little expense, and could be begun at once. We all know the value of fruit in a family. It is wholesome, greatly enjoyed, and adds much to support. Yet many families raise very little of it. This is partly because its cultivation is

not well understood, but largely because we are not accustomed to raising it. We are not in the habit of having it in great variety throughout the season. We hope that all boys and girls will eventually become householders. The value of the habit and knowledge of fruit raising is so great, it adds so much to the health, happiness and support of householders in the country, and can be so easily and inexpensively taught, that I think we should begin to teach it in the High school this coming spring. The town should own a suitable lot of land as near the school as possible and should furnish tools and supply the necessary plants. This teaching, like the other industrial teaching mentioned above, should be a part of the school course, and should be compulsory for all. The primary object is not to teach fruit raising as a business, although it might lead to that, but for family supply. If we should decide to begin this work, the Agricultural college would send a horticulturalist to study the conditions and advise as to suitable land. He would also arrange to give lectures on preparing ground, fertilizing, planting, pruning, spraying, and any matters relating to cultivation. If he was called on to do this he would expect to arrange a course of lectures to cover several years. I hope this matter will be brought before the people at the coming town meeting.

Turning to the work in the schools, I am able to report a very encouraging change in the High School, in the number of pupils this year. Including the ninth grade, which numbered nineteen, there were twenty-eight at the beginning of the year. But our satisfaction in this regard is tempered by regret that already four have left the school. It is not strange that this is so if the matter of attendance is left entirely to the decision of the children. Few have a real love of study unless it is acquired early through home influence, and it can not be expected that they will realize the need of education. For this reason I would strongly urge you parents to see that all children who can possibly do so, complete a high school course. That many of you do not do so I think is because it is not generally

believed that an ordinary high school course increases one's earning capacity. It has been very difficult to prove that it does. The first attempt to prove it in a scientific manner that I have known was made by Cornell University. A report of the work, which was still going on at the time I heard it, was given by Professor Warren of Cornell last summer at a meeting of the National Educational Association. As I understood the report, that the results of the investigation might be as fair as possible it was carried on among workers engaged in the same occupation. The University being in New York state, and that being an agricultural state, farmers were chosen. A county was selected, and every farmer in every town, so far as the investigation had then gone, was interviewed. For recording and comparing the results of the investigation they were divided into three classes. The first class included those who had had only an elementary education, the common district school or the primary and grammar school; the second class included those who had had a whole or partial high school education; and the third class, those who had had a whole or partial college education. It was learned from each what the net income from his farm was for the year, and how much capital he had invested in his business. From his net income was deducted an amount equal to five per cent of his capital, that it might be found what he received in a year as the result of his individual efforts. At the time the report to which I refer was made many hundreds of farmers had been seen. The investigation showed that those who had received the elementary education averaged \$318 per year as the result of their personal efforts; those who had received the high school education averaged \$632; and those who had received the college education, \$847. The high school man had increased his earning capacity \$314. His high school education had a cash value to him of \$5,000, since it returned to him a 6 per cent income on that amount of capital. The college man had increased his earning capacity \$529. His college education re-

turned him 6 per cent on \$9,000. This education was not vocational, intended to fit directly for the special work of farming, but was the ordinary high school and college education. Many arguments were advanced to disprove the value of this investigation. It was claimed that the high school and college man had the larger capital. But it was found that while the capital of individual farmers varied from \$1,000 to \$17,000, and it was very equally divided among the different classes. It was as common to find a college man with a \$2,000 capital and an elementary man with \$15,000 capital as the other way. Also it was claimed that only the naturally brighter boys go to high school; but careful investigation has shown that this is not true, but that high school education depends largely upon location, and the ease with which a school can be reached. Lastly, it was claimed that the investigation was carried on by the university to make out a good case for itself, and therefore was prejudiced, which contention merits no reply whatever. But the fact stands that a high school and college education of the present type have a decided money value to the worker. Before leaving the subject of the high school, I wish to say that the increase in numbers in our school is due partly to the personal efforts of the committee to induce parents to send their children, and to the improved transportation which has been provided.

The changes in teachers this year are seven out of a total of eleven. Those who returned are Miss Dorothy Shaw at the South Primary, Miss Irene Nichols at the Center Primary, Miss Ida E. Torreson at the Center Grammar, and Mr. Studley at the High School. Those beginning in town this year are Miss Ethel V. Roy of Marion, South Grammar; Mrs. Bernice E. Barrows, Bates Pond; Miss Jessie M. Howland of Berkley, Pope's Point; Miss Evelyn B. Pillsbury of Malden, assistant at the High School; Miss Olga S. Merritt of Rockland, North Grammar; Miss Marguerite Sanger of Hyde Park, North Primary; and Miss Eliza Kelley of Dartmouth, East Carver.

Four of these had taught before coming to Carver, the others are beginning their work this year.

The total number of pupils in the schools on January 1, 1910, and January 1, 1911, was 205 and 200 respectively.

	Jan. 1, 1910	Jan. 1, 1911
High School,	15	24
Center Grammar,	18	18
North Grammar,	23	21
South Grammar,	26	19
Center Primary,	25	21
North Primary,	29	20
South Primary,	22	21
East Carver,	22	24
Pope's Point,	11	12
Bates Pond,	14	20
	205	200

There are five pupils in the eighth grade in the South Grammar, four in the Center Grammar, and two in the North Grammar, which will make eleven to enter the ninth grade another year, if all finish the work of their grade.

The only changes in text books have been the substitution of the Hollis Godfrey Chemistry for those formerly in use, and the addition of the Prince Grammar. Both are proving satisfactory.

Some very creditable work in design has been done in the High School; and very good work in music in two of the grammar schools.

The medical inspection of pupils this year was very thorough. I accompanied the school physician on his visits to several schools, that I might learn the physical condition of the children as he saw it. I feel justified in calling the attention of parents to two things regarding the health of the children. A number of cases of enlarged tonsils and adenoids

were found. Probably most people are more or less familiar with the tonsils and the trouble they cause, but know less about adenoids. Any one can easily see the tonsils in a child's throat, glands on either side of the passage. In several of the children these were so large as to seriously block up the opening, and needed the attention of a physician. Adenoids are a group or cluster of small bodies identical in structure with the tonsils, situated in the middle of the roof of the throat, just back of the posterior opening of the nostrils and above the soft palate. They can be seen only with the aid of a mirror. They are often the sole cause of the apparent dullness and stupidity of children, as is shown by the results of their removal. They are the cause of most cases of earache, and nearly all cases of deafness in children; they impair digestion and stunt the child. Their presence is indicated by the open mouth, short upper lip, pinched and contracted nostrils, prominent and irregular teeth, and listless expression of the eyes. Their removal is a very simple operation, and the results are often surprising. The other thing I wish to call attention to is the condition of the teeth. Many children showed strong, clean and healthy sets, but some had the opposite. The general health is so much affected by them, that the physician urged thorough and regular cleaning in all cases. There were comparatively few cases of pediculosis, head lice; but constant watchfulness is needed, as all are liable to visits from them. Following is the law regarding medical inspection in schools: "Chapt. 502, Acts of 1906, amended 1910, Section 1. The school committee of every city and town in the commonwealth shall appoint one or more school physicians, shall assign one to each public school within its city or town, and shall provide them with all proper facilities for the performance of their duties as prescribed in this act; and shall assign one or more to perform the duty of examining children who apply for health certificates in accordance with this act. Section 2. Every school physician shall make a prompt examina-

tion and diagnosis of all children referred to him as hereinafter provided, and such further examination of teachers, janitors and school buildings as in his opinion the health of the pupils may require. Every school physician who is assigned to the duty of examining children who apply for health certificates shall make a prompt examination of every child who wishes to obtain an age and schooling certificate, as provided in section sixty of chapter five hundred and fourteen of the acts of the year nineteen hundred and nine, and who presents to said physician an employment ticket, as provided in said section, and the physician shall certify in writing whether or not in his opinion such child is in sufficiently sound health and physically able to perform the work which the child intends to do: *Provided, however,* that the age and schooling certificate may be approved and issued without a physician's certificate if there shall be on file in connection with the public schools a written record in regard to the child's physical condition made within one year, and the person authorized to approve said age and schooling certificate after having examined such record shall certify that in his opinion said minor is in sufficiently sound health and physically able to perform the work which the minor intends to do. Section 3. The school committee shall cause to be referred to a school physician for examination and diagnosis every child returning to school without a certificate from the board of health after absence on account of illness or from unknown cause; and every child in the schools under its jurisdiction who shows signs of being in ill health or of suffering from infectious or contagious disease, unless he is at once excluded by the teacher; except that in schools in remote and isolated situations the school committee may make such other arrangements as may best carry out the purposes of this act. Section 4. The school committee shall cause notice of the disease or defects, if any, from which any child is found to be suffering to be sent to his parent or guardian. Whenever a child shows symptoms

of smallpox, scarlet fever, measles, chickenpox, tuberculosis, diphtheria or influenza, tonsilitis, whooping cough, mumps, scabies or trachoma, he shall be sent home immediately, or as soon as safe and proper conveyance can be found, and the board of health shall at once be notified." All minor details of the work of the school physician are regulated by the school committee. Sight and hearing tests are directed by law to be made by the teachers.

I want to close this brief report with a word to the teachers: Avoid, by every possible means, becoming narrow and prejudiced; seek to become cosmopolitan. Cultivate a spirit of universal brotherhood, and an open and receptive mind. Own and read a few books that deal with the fundamentals of life. Own a good translation of Hugo's "Les Miserables." John Fiske has called it the greatest work of one of the greatest seers of our time. Read Kingsley's "Hypatia," Dicken's "Tale of Two Cities," "A Doctor of the Old School," in Ian Maclaren's "Beside the Bonnie Brier Bush." Read also "Abraham Lincoln," "Alexander Hamilton" and "Benjamin Franklin," in Choate's "Abraham Lincoln and Other Papers," recently published by The Century Company.

To parents I would say, remember how difficult it often is for us to properly train two or three children, at home, after some years of experience; and remember that teachers try to do this for many more than that number, without any experience.

Very respectfully yours,

CHESTER W. HUMPHREY,

Superintendent.

Carver, Mass., January 1, 1911.

SCHOOL CALENDAR, 1911-1912.

Fall term—Oct. 3, 1910, to Dec. 23, 1910, 12 weeks.

Winter vacation—Dec. 23, 1910, to Jan. 2, 1911, 9 days.

Winter term—Jan. 2, 1911, to Mar. 24, 1911, 12 weeks.

Spring vacation—Mar. 24, 1911, to April 3, 1911, 9 days.

Spring term—April 3, 1911, to June 23, 1911, 12 weeks.

Summer vacation—June 23, 1911, to Oct. 2, 1911.

Fall term—Oct. 2, 1911, to Dec. 22, 1911, 12 weeks.

Winter vacation—Dec. 22, 1911, to Jan. 1, 1912, 9 days.

Winter term—Jan. 1, 1912, to March 22, 1912, 12 weeks.

Spring vacation—March 22, 1912, to April 1, 1912, 9 days.

Spring term—April 1, 1912, to June 21, 1912, 12 weeks.

Summer vacation—June 21, 1912, to Oct. 1, 1912.

PUBLIC LIBRARY

Citizens of Carver:—

As the library has increased more and more in size and circulation, it has seemed necessary to classify the books in order to find out quickly, on request, just what material the library could furnish, and to satisfactorily meet the demands of the public.

With this work in view, the librarian took a course in cataloging and general library work at a librarians' school last summer, and planned to do the work herself. Speaking of it to the State Secretary of the Massachusetts' Public Library Association at a library institute, assistance was offered, and Miss Z. Brown of the State Library Department gave three and one-half days' service in getting the work started, working with the librarian and others. The work is well begun, and steps have been taken to complete the work as speedily as possible. The library having outgrown its quarters, we trust that the town will arrange as soon as possible to relieve the crowded condition.

FINES ACCOUNT.

January 1, 1910—	
Received from librarian,	\$7 00
Paid for book,	1 57
	<hr/>
Amount on hand Jan. 1, 1911,	\$5 43

The trustees recommend the appropriation of \$150 for the ensuing year.

BENJAMIN SHURTLEFF, M. D.

Born in Carver, Sept. 7, 1821, of a long line of Old Colony ancestors, going back to the Mayflower crew. Attended Carver schools, Pierce Academy in Middleboro, and graduated from Harvard Medical school August 23, 1848.

Sailed for the Pacific coast in the schooner Boston, January 27, 1849, and arrived in San Francisco July 6th. Engaged in mine prospecting for a short time, then took up the practice of medicine in Shasta. Returned East in 1852 and married Miss Anne M. Griffith, after which he returned to California.

Shasta County's first treasurer; in the State Senate from Shasta from 1861 to 1863; County Physician ten years; alternate Pres.-Elector in 1872.

Settled in Napa in 1874. Delegate to Constitutional convention in 1878; President Board of Directors of Napa State Asylum 16 years; first mayor of Napa; and held many other positions of trust. Life member of Society of California Pioneers; member of Harvard Alumni Association, etc. Died at his home in Napa, Dec. 22, 1911.

Donor of Shurtleff Park to his native town.
