

Step 1

$$V_n = An - B$$

$$V_1 = 1; \quad V_2 = 4$$

Step 2

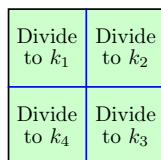

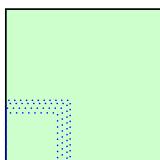

$$\sum_{i=1}^4 k_i = n$$

$$\exists i : k_i = n$$

else

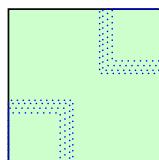

$$\exists i : k_i + k_{i+2} = n$$

Step 3

$$V_n \geq V_{k_1} + V_{k_2} + V_{k_3} + V_{k_4}$$

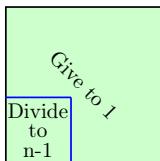

$$\Rightarrow 3B \geq 3A$$

select smallest L-shape

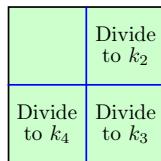

select smallest 8-shape

Step 4

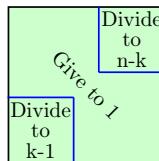

$$V_n \geq 3 + V_{n-1}$$

$$\Rightarrow A \geq 3$$

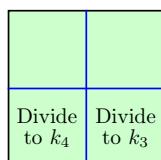

$$V_n \geq 1 + V_{k_2} + V_{k_3} + V_{k_4}$$

$$\Rightarrow 2B \geq 2A + 1$$

$$V_n \geq 2 + V_{n-k} + V_k$$

$$\Rightarrow B \geq 2$$

$$V_n \geq 1 + 1 + V_{k_3} + V_{k_4}$$

$$\Rightarrow B \geq A + 2$$

INPUT: A square;

n agents that value it as $V_n \geq 6n - 8$.

OUTPUT: Each agent can get a square with value ≥ 1 .
